ETSI releases first use cases for Reconfigurable Intelligent Surface
ETSI is pleased to announce the release of the first Group Report developed by its Reconfigurable Intelligent Surface Industry Specification Group. The ETSI Report ETSI GR RIS-001 identifies and defines relevant RIS use cases, with corresponding general Key Performance Indicators (KPIs). It also describes deployment scenarios as well as potential requirements for each identified use case, to enable interoperability with existing and upcoming wireless technologies and networks.

New White Paper on evolving NFV towards the next decade
ETSI is pleased to publish its new White Paper on "Evolving NFV towards the next decade" written by delegates of the ETSI Industry Specification Group on Network Function Virtualization (ISG NFV). Building on previous achievements, this White Paper analyzes different challenges and technology trends, and proposes several potential directions on how ETSI ISG NFV can evolve in the next decade. Aspects about API development, open source, NFV multi-cloud, unified management, declarative intent driven automation and AI are considered as key drivers for the evolution.

Whitepapers

ETSI WHITE PAPERS

ETSI White Papers provide informal overviews of various technical topics related to our activity. They summarize the work that we and other organizations have been doing on each topic, as well as highlighting broader issues related to the successful deployment of the technologies and services discussed.

Please note: The White Papers do not constitute an official or agreed position of ETSI, nor of our Members. The views expressed are entirely those of the authors.
