

DIGITAL HIERARCHY BIT RATES

Recommendation T/L 03-09 (Edinburgh 1988)

Recommendation proposed by Working Group T/WG 12 "Transmission and Multiplexing" (TM)

Text of the Recommendation adopted by the "Telecommunications" Commission:

"The European Conference of Posts and Telecommunications Administrations,

considering

- that the interconnection of digital networks requires the definition of a limited number of digital interfaces,
- that definition of digital interfaces impacts on the design and operation of digital equipment,
- that the relevant CCITT existing Recommendations contain various options and differences which are necessary on a worldwide basis,
- that CEPT Administrations support the harmonization of telecommunication equipment and systems which could lead to a reduction in the development and production costs for the manufacturers supplying equipment to several countries,

recommends

that member Administrations adhere to the specifications contained in this Recommendation."

Recommendation T/L 03-09 corresponds to the following CCITT Recommendation: Recommendation G.702: "Digital hierarchy bit rates" with the following modifications:

- 1. delete the entry in the table under the heading "1,544 kbit/s";
- 2. delete Figure 1/G.702;
- 3. delete § A1 of the Annex;
- 4. delete references to Recommendations G.745, G.753, G.754 in Figure 2/G.702.
