Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Services and Protocols for Advanced Networks (SPAN), and is now submitted for the ETSI standards One-step Approval Procedure.

The present document is part 5 of a multi-part deliverable covering the Broadband Integrated Services Digital Network (B-ISDN); Digital Subscriber Signalling System No. two (DSS2) protocol; Connection characteristics; ATM transfer capability and traffic parameter indication, as identified below:

Part 2: "Protocol Implementation Conformance Statement (PICS) proforma specification";

Part 3: "Test Suite Structure and Test Purposes (TSS&TP) specification for the user";

Part 4: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the user";

Part 5: "Test Suite and Test Purposes (TSS&TP) specification for the network";

Part 6: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the network".

Proposed national transposition dates

</table>
1 Scope

The present document specifies the network Test Suite Structure and Test Purposes (TSS&TP) for the \( T_B \) reference point or coincident \( S_B \) and \( T_B \) reference point (as defined in ITU-T Recommendation I.413 [5]) of implementations conforming to the standards for the signalling user-network layer 3 specification for ATM transfer capability and traffic parameter indication of the Digital Subscriber Signalling System No. two (DSS2) protocol for the pan-European Broadband Integrated Services Digital Network (B-ISDN), EN 301 068-1 [1].

A further part of the present document specifies the Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma based on the present document.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication and/or edition number or version number) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in EN 301 068-1 [1], EN 300 443-1 [6] and the following apply:

3.1.1 Definitions related to conformance testing

abstract test case: See ISO/IEC 9646-1 [3].

Lower Tester (LT): See ISO/IEC 9646-1 [3].

PICS proforma: See ISO/IEC 9646-1 [3].

PIXIT proforma: See ISO/IEC 9646-1 [3].

Test Purpose (TP): See ISO/IEC 9646-1 [3].

3.1.2 Definitions related to EN 301 068-1

network: DSS2 protocol entity at the Network side of the user-network interface where a T_B reference point or coincident S_B and T_B reference point applies

network (S_B/T_B): DSS2 protocol entity at the Network side of the user-network interface where a coincident S_B and T_B reference point applies

network (T_B): DSS2 protocol entity at the Network side of the user-network interface where a T_B reference point applies (user is the private ISDN)

3.2 Symbols

For the purposes of the present document, the following symbols apply:

N0 Network status 0
N3 Network status 3
N6 Network status 6
N7 Network status 7
N9 Network status 9
N10 Network status 10
S_B Interface Reference Point at S (broadband)
T_B Interface Reference Point at T (broadband)
3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

- **ABR** - Available Bit Rate
- **ABT-DT** - ATM Block Transfer with Delayed Transmission
- **ABT-IT** - ATM Block Transfer with Immediate Transmission
- **ATM** - Abstract Test Method
- **ATS** - Abstract Test Suite
- **B-ISDN** - Broadband Integrated Services Digital Network
- **DSS2** - Digital Subscriber Signalling System No. two
- **ICR** - Initial Cell Rate
- **IUT** - Implementation Under Test
- **MBS** - Maximum Burst Size
- **N0** - Null call/connection state
- **N3** - Outgoing Call Proceeding call/connection state
- **N6** - Call Present call/connection state
- **N7** - Call Received call/connection state
- **N9** - Incoming Call Proceeding call/connection state
- **N10** - Active call/connection state
- **PCR** - Peak Cell Rate
- **PICS** - Protocol Implementation Conformance Statement
- **PIXIT** - Protocol Implementation eXtra Information for Testing
- **RDF** - Rate Decrease Factor
- **RIF** - Rate Increase Factor
- **RM** - Resource Management
- **SBR** - Statistical Bit Rate ATC
- **TBE** - ABR Transient Buffer Exposure
- **TP** - Test Purpose
- **TSS** - Test Suite Structure

4 Test Suite Structure (TSS)

- Signalling procedures at the coincident S_B/T_B and at the T_B reference points
  - Additional parameter procedures at the originating interface.
    - Sustainable cell rate parameter set (01)
    - Traffic management option for support of tagging (02)
    - Broadband bearer capability (03)
    - Available bit rate setup parameter (04)
    - ATM transfer block capability (05)
    - SBR ATM transfer capability (06)
    - Handling of error conditions (07)
5 Test Purposes (TP)

5.1 Introduction
For each test requirement a TP is defined.

5.1.1 TP naming convention
TPs are numbered, starting at 01, within each group. Groups are organized according to the TSS. Additional references are added to identify the actual test suite (see table 1).

<table>
<thead>
<tr>
<th>Identifier: &lt;suite_id&gt;<em>&lt;group&gt;</em>&lt;nnn&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;suite_id&gt; = service + type of IUT: &quot;INDN&quot; for connection INDication, IUT = Network</td>
</tr>
<tr>
<td>&lt;group&gt; = group number: two-character field representing the group reference according to TSS</td>
</tr>
<tr>
<td>&lt;nnn&gt; = sequential number: (01-99)</td>
</tr>
</tbody>
</table>

5.1.2 Source of TP definition
The TPs are based on EN 301 068-1 [1].

5.1.3 Test strategy
As the base standard EN 301 068-1 [1] contains no explicit requirements for testing, the TPs were generated as a result of an analysis of the base standard and the PICS specification EN 301 068-2 [2].

The TPs are only based on conformance requirements related to the externally observable behaviour of the IUT, and are limited to conceivable situations to which a real implementation is likely to be faced (see ETS 300 406 in bibliography).

5.1.4 Test of call states
Many TPs include a reference to the IUT’s final call state after the realization of the TP. In these cases the TP includes the requirement to ensure that the IUT has entered this particular final call state. Ensuring that the IUT is in a particular call state shall be realized by following the procedures described in clause 5.6.11 of EN 300 443-1 [6]. According to these procedures, the IUT on receipt of a STATUS ENQUIRY message, shall respond with a STATUS message indicating, in the fifth octet of the Call state information element, the current call state of the IUT. This exchange of messages is not mentioned explicitly in each TP but is considered to be implicit in the reference to the final call state. This way of phrasing the TPs has been used to avoid over-complicating the text and structure of the TPs and to improve the readability.
5.2 TPs for the ATM transfer capability and traffic parameter indication, network

All PICS items referred to in this clause are as specified in EN 301 068-2 [2] unless indicated otherwise by another numbered reference.

Unless specified:

- the messages indicated are valid and contain at least the mandatory information elements and possibly optional information elements;
- the information elements indicated are valid and contain at least the mandatory parameters and possibly optional parameters.

5.2.1 Signalling procedures at the coincident $S_B/T_B$ and at the $T_B$ reference points

NOTE: Unless otherwise specified, the connection defined by the requested ATM traffic descriptor is available for use.

5.2.1.1 Additional parameter procedures at the originating interface.

5.2.1.1.1 Sustainable Cell Rate parameter set (01)

NOTE: In the following test purpose Sustainable cell rate parameter set includes Sustainable cell rate and Maximum Burst size.

INDN_01_01

Ensure that the IUT in N0, on receipt of a SETUP message including a compatible ATM traffic descriptor information element (sustainable cell rate parameter set without traffic management options identifier field), sends a CALL PROCEEDING message, and enters N3.

INDN_01_02

Ensure that the IUT, having received the SETUP message including a compatible ATM traffic descriptor information element (sustainable cell rate parameter set without traffic management options identifier field), on receipt a connection indication, sends a CONNECT message (without ATM traffic descriptor information element) and enters N10.

5.2.1.1.2 Traffic management option for support of tagging (02)

INDN_02_01

Ensure that the IUT in N0, on receipt of a SETUP message including a compatible ATM traffic descriptor information element (with Tf subfield of traffic management option indicating "tagging requested"), sends a CALL PROCEEDING message and enters N3.

INDN_02_02

Ensure that the IUT in N3, having received a SETUP message including a compatible ATM traffic descriptor information element (with Tf subfield of traffic management option indicating "tagging requested"), to indicate the request of tagging is accepted, sends a CONNECT message (with Tf subfield of traffic management option set to "tagging applied") and enters N10.
INDN_02_03
Ensure that the IUT in N3, having received a SETUP message including a compatible ATM traffic descriptor information element (with Tf subfield of traffic management option indicating "tagging requested"), to indicate the request of tagging is not accepted, sends a CONNECT message including an ATM traffic descriptor information element (with Tf subfield of traffic management option set to "tagging not applied"), or sends a CONNECT message without ATM traffic descriptor information element and enters N10.

INDN_02_04
Ensure that the IUT in N0, on receipt of a SETUP message including a compatible ATM traffic descriptor information element (with Tf subfield of traffic management option indicating "tagging not allowed"), sends a CALL PROCEEDING message and enters N3.

INDN_02_05
Ensure that the IUT, having received the SETUP message including a compatible ATM traffic descriptor information element (with Tf subfield of traffic management option indicating "tagging not allowed"), on receipt a connection indication, sends a CONNECT message without ATM traffic descriptor information element and enters N10.

5.2.1.1.3 Broadband Bearer Capability (03)
Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.2 [9], modified).

INDN_03_01
Ensure that the IUT in N0, on receipt of a SETUP message indicating the ATM transfer capability in a valid broadband bearer capability (i.e. valid combination of the bearer class and the broadband transfer capability values), sends a CALL PROCEEDING message and enters N3.

5.2.1.1.4 Available Bit Rate set-up parameter (04)
Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.3 [10], modified).

INDN_04_01
Ensure that the IUT in N0, on receipt of a SETUP message requesting ABR transfer capability, including a compatible ABR set-up parameter information element, and the IUT is able to provide a PCR which at least equals the requested MCR, sends a CALL PROCEEDING message and enters N3.

INDN_04_02
Ensure that the IUT in N0, on receipt of a SETUP message requesting ABR transfer capability, including a compatible ABR set-up parameter information element (without optional parameters: ICR, TBE, RIF RDF), sends a CALL PROCEEDING message and enters N3.

INDN_04_03
Ensure that the IUT in N0, on receipt of a SETUP message requesting ABR transfer capability, including valid ABR set-up parameter and ATM traffic descriptor information elements, and the IUT is not able to provide a PCR greater or equal to the MCR sends a RELEASE COMPLETE message with the cause value 37 "User cell rate not available" and remains in N0.

INDN_04_04
Ensure that the IUT, having received the SETUP message requesting an ABR transfer capability, and the IUT is able to provide the requested PCR, on receipt a connection indication, sends a CONNECT message (ABR set-up parameters and ATM traffic descriptor information elements included) and enters N10.
INDN_04_05

Ensure that the IUT, having received the SETUP message requesting an ABR transfer capability, and the IUT is not able to provide the requested PCR but able to provide a PCR which at least equals to the MCR, on receipt a connection indication, sends a CONNECT message (ABR set-up parameters and adjusted ATM traffic descriptor information elements included) and enters N10.

5.2.1.1.5 ATM Block Transfer capability (05)

INDN_05_01

Ensure that the IUT in N0, on receipt of a SETUP with ABT-IT transfer capability, including Broadband bearer capability information element ("ABT-IT", "point-to-point"), and with a valid ATM traffic descriptor (including forward and backward RM PCR parameters, not including forward and backward SCR and MBS parameters) sends a CALL PROCEEDING message and enters N3.

INDN_05_02

Ensure that the IUT in N0, on receipt of a SETUP with ABT-DT transfer capability, including Broadband bearer capability information element ("ABT-DT", "point-to-point"), and with a valid ATM traffic descriptor (including forward and backward RM PCR parameters, not including forward and backward SCR and MBS parameters) sends a CALL PROCEEDING message and enters N3.

INDN_05_03

Ensure that the IUT in N0, on receipt of a SETUP with ABT-IT transfer capability, including Broadband bearer capability information element ("ABT-IT", "point-to-point"), and with a valid ATM traffic descriptor (forward and backward RM PCR, forward and backward SCR and MBS parameters are included) sends a CALL PROCEEDING message and enters N3.

INDN_05_04

Ensure that the IUT in N0, on receipt of a SETUP with ABT-DT transfer capability, including Broadband bearer capability information element ("ABT-DT", "point-to-point"), and with a valid ATM traffic descriptor (forward and backward RM PCR parameters, forward and backward SCR and MBS parameters are not included) sends a CALL PROCEEDING message and enters N3".

5.2.1.1.6 SBR ATM transfer capability (06)

INDN_06_01

Ensure that the IUT in N0, on receipt of a SETUP with SBR2 transfer capability, including a Broadband bearer capability information element ("SBR2") and with a valid ATM traffic descriptor (including forward and backward PCR (CLP = 0 + 1) and SCR/MBS (CLP = 0) parameters, traffic management options field not present), sends a CALL PROCEEDING message and enters N3".

INDN_06_02

Ensure that the IUT in N0, on receipt of a SETUP with SBR3 transfer capability, including a Broadband bearer capability information element ("SBR3") and with a valid ATM traffic descriptor (including forward and backward PCR (CLP = 0 + 1) and SCR/MBS (CLP = 0) parameters, traffic management options field not present), sends a CALL PROCEEDING message and enters N3".

INDN_06_03

Ensure that the IUT in N0, on receipt of a SETUP with SBR2 transfer capability, when the IUT is not able to provide the SBR2 capability, sends a RELEASE COMPLETE message with cause value 65 "Bearer capability not implemented" and remains in N0.
INDN_06_04

Ensure that the IUT in N0, on receipt of a SETUP with SBR3 transfer capability, when the IUT is not able to provide the SBR3 capability, sends a RELEASE COMPLETE message with cause value 65 "Bearer capability not implemented" and remains in N0.

5.2.1.1.7 Handling of error conditions (07)

INDN_07_01

Ensure that the IUT in N0, on receipt of a SETUP message including a incompatible ATM traffic descriptor information element (Combination of traffic parameters not allowed, with IE instruction field flag set to "not significant"), sends a RELEASE COMPLETE message with a cause value 100 "invalid information element contents", and remains in N0.

Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.2 [9], modified).

INDN_07_02

Ensure that the IUT in N0, on receipt of a SETUP message indicating the ATM transfer capability including a not supported broadband bearer capability (i.e. a not supported combination of the bearer class and the broadband transfer capability values), sends a RELEASE COMPLETE message with a cause value 65 "bearer capability not supported", and remains in N0.

INDN_07_03

Ensure that the IUT in N0, on receipt of a SETUP message indicating a valid broadband bearer capability and valid ATM traffic descriptor information element, the combination of the two is valid but not supported by the IUT, sends a RELEASE COMPLETE message with a cause value 73 "Unsupported combination of traffic parameters" and remains in N0.

Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.3 [10], modified).

INDN_07_04

Ensure that the IUT in N0, on receipt of a SETUP message requesting ABR transfer capability, but including an invalid ATM traffic descriptor information element (with IE instruction field flag set to "not significant"), sends a RELEASE COMPLETE message with a cause value 100 "invalid information element contents" and remains in N0.

INDN_07_05

Ensure that the IUT in N0, on receipt of a SETUP message requesting ABR set-up parameter information element (with IE instruction field flag set to "not significant"), sends a RELEASE COMPLETE message with a cause value 100 "invalid information element contents" and remains in N0.

INDN_07_06

Ensure that the IUT in N0, on receipt of a SETUP message requesting ABT transfer capability, but including an invalid ATM traffic descriptor information element (with IE instruction field flag set to "not significant"), sends a RELEASE COMPLETE message with a cause value 100 "invalid information element contents" and remains in N0.

Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.6 [12], modified).

INDN_07_07

Ensure that the IUT in N0, on receipt of a SETUP message requesting SBR2 transfer capability, but including an invalid ATM traffic descriptor information element (with IE instruction field flag set to "not significant"), sends a RELEASE COMPLETE message with a cause value 100 "invalid information element contents" and remains in N0.
INDN_07_08

Ensure that the IUT in N0, on receipt of a SETUP message requesting SBR3 transfer capability, but including an invalid
ATM traffic descriptor information element (with IE instruction field flag set to “not significant”), sends a RELEASE
COMPLETE message with a cause value 100 “invalid information element contents” and remains in N0.

5.2.1.2 Additional parameter procedures at the destination interface

Test purposes for EN 301 068-1 [1].

5.2.1.2.1 Sustainable Cell Rate parameter set (08)

NOTE: In the following test purpose Sustainable cell rate parameter set includes Sustainable cell rate and
Maximum Burst size.

INDN_08_01

Ensure that the IUT in N0, to indicate the arrival of a call with additional traffic parameter selection, sends a SETUP
message with the ATM traffic descriptor information element (including sustainable cell rate parameter set) and enters
N6.

INDN_08_02

Ensure that the IUT, having sent a SETUP message with the ATM traffic descriptor information element including
sustainable cell rate parameter set), on receipt of a CONNECT message without ATM traffic descriptor information
element, sends a CONNECT ACKNOWLEDGE message and enters N10.

5.2.1.2.2 Traffic management option for support of tagging (09)

INDN_09_01

Ensure that the IUT in N0, to indicate the arrival of a call and tagging option supported, sends a SETUP message with
the ATM traffic descriptor information element (including the traffic management option field with Tb subfield
“tagging supported”) and enters N6.

INDN_09_02

Ensure that the IUT in N0, to indicate the arrival of a call and tagging option not supported, sends a SETUP message
with the ATM traffic descriptor information element (including the traffic management option field with Tb subfield
“tagging not supported”) and enters N6.

INDN_09_03

Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element
including backward tagging information indicating “tagging supported”), on receipt of a CONNECT message including
a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating
“tagging requested”), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_04

Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element
including backward tagging information indicating “tagging supported”), on receipt of a CONNECT message including
a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating
“tagging not allowed”), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_05

Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element
including backward tagging information indicating “tagging supported”) on receipt of a CONNECT message without
ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10.
INDN_09_06
Ensure that the IUT in N9 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported"), on receipt of a CONNECT message including a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating "tagging requested"), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_07
Ensure that the IUT in N9 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported"), on receipt of a CONNECT message including a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating "tagging not allowed"), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_08
Ensure that the IUT in N9 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported") on receipt of a CONNECT message without ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_09
Ensure that the IUT in N7 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported"), on receipt of a CONNECT message including a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating "tagging requested"), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_10
Ensure that the IUT in N7 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported"), on receipt of a CONNECT message including a compatible ATM traffic descriptor information element (with Tb subfield of traffic management option indicating "tagging not allowed"), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_11
Ensure that the IUT in N7 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information indicating "tagging supported") on receipt of a CONNECT message without ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_12
Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message without ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_13
Ensure that the IUT in N9 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message without ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_09_14
Ensure that the IUT in N7 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message without ATM traffic descriptor information element, sends a CONNECT ACKNOWLEDGE message and enters N10."
5.2.1.2.3 Broadband Bearer Capability (10)
Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.2 [9], modified).

**INDN_10_01**
Ensure that the IUT in N0, to indicate the arrival of a call including ATM transfer capability information, sends a SETUP message with a valid Broadband bearer capability information element (broadband transfer capability field present) and enters N6.

5.2.1.2.4 Available Bit Rate set-up parameter (11)
Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.3 [10], modified).

**INDN_11_01**
Ensure that the IUT in N0, to indicate the arrival of a call with ABR transfer capability, sends a SETUP message with a corresponding Broadband bearer capability information element ("ABR", "point-to-point"), with a valid ABR set-up parameter information element and a valid ATM traffic descriptor information element and enters N6.

**INDN_11_02**
Ensure that the IUT in N0, to indicate the arrival of a call with ABR transfer capability (without specification of optional parameter in ABR set-up parameter information element: ICR, TBE, RIF, RDF), sends a SETUP message with a corresponding Broadband bearer capability information element ("ABR", "point-to-point"), default value for ABR setup parameter information element, and a valid ATM traffic descriptor information element and enters N6.

**INDN_11_03**
Ensure that the IUT in N6, (having sent a SETUP message requesting ABR transfer capability), on receipt of a compatible CONNECT message (including ABR set-up parameter information element, ATM traffic descriptor information element) sends a CONNECT ACKNOWLEDGE message and enters N10.

5.2.1.2.5 ATM Block Transfer capability (12)

**INDN_12_01**
Ensure that the IUT in N0, to indicate the arrival of a call with ABT-IT transfer capability, sends a SETUP message with a corresponding Broadband bearer capability information element ("ABT-IT", "point-to-point"), and with a valid ATM traffic descriptor (including forward and backward RM PCR parameters) and enters N6.

**INDN_12_02**
Ensure that the IUT in N0, to indicate the arrival of a call with ABT-DT transfer capability, sends a SETUP message with a corresponding Broadband bearer capability information element ("ABT-DT", "point-to-point"), and with a valid ATM traffic descriptor (including forward and backward RM PCR parameters) and enters N6.

5.2.1.2.6 SBR ATM transfer capability (13)

**INDN_13_01**
Ensure that the IUT in N0, to indicate the arrival of a call with SBR2 transfer capability, sends a SETUP message with a corresponding Broadband bearer capability information element ("SBR2"), and with a valid ATM traffic descriptor (including forward and backward PCR (CLP = 0 + 1) and SCR/MBS (CLP = 0) parameters, traffic management options field not present) and enters N6.

**INDN_13_02**
Ensure that the IUT in N0, to indicate the arrival of a call with SBR3 transfer capability, sends a SETUP message with a corresponding Broadband bearer capability information element ("SBR3"), and with a valid ATM traffic descriptor (including forward and backward PCR (CLP = 0 + 1) and SCR/MBS (CLP = 0) parameters, traffic management options field not present) and enters N6.
5.2.1.2.7 Handling of error conditions (14)

Test purposes for EN 301 068-1 [1] (ITU-T Recommendation Q.2961.3 [10], modified).

INDN_14_01

Ensure that the IUT in N6, (having sent a SETUP message requesting ABR transfer capability), on receipt of a incomplete CONNECT message (not including ABR set-up parameter information element) sends a STATUS message with a cause value 96 "mandatory information element missing" and remains in N6.

INDN_14_02

Ensure that the IUT in N6, (having sent a SETUP message requesting ABR transfer capability), on receipt of a incomplete CONNECT message (not including ATM traffic descriptor information element) sends a STATUS message with a cause value 96 "mandatory information element missing" and remains in N6.

INDN_14_03

Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element including sustainable cell rate parameter set without the traffic management options field), on receipt of a CONNECT message including an ATM traffic descriptor information element, ignores the wrong information element (resulting in the sending of a CONNECT message without ATM traffic descriptor information element to the originating side), optionally sends a STATUS message (cause value = 99, call state = 8 or 10 dependant on the order of transmission), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_14_04

Ensure that the IUT in N6 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message with ATM traffic descriptor information element, ignores the wrong information element (resulting in the sending of a CONNECT message without ATM traffic descriptor information element to the originating side), optionally sends a STATUS message (cause value = 99, call state = 8 or 10 dependant on the order of transmission), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_14_05

Ensure that the IUT in N7 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message with ATM traffic descriptor information element, ignores the wrong information element (resulting in the sending of a CONNECT message without ATM traffic descriptor information element to the originating side), optionally sends a STATUS message (cause value = 99, call state = 8 or 10 dependant on the order of transmission), sends a CONNECT ACKNOWLEDGE message and enters N10.

INDN_14_06

Ensure that the IUT in N9 (having sent a SETUP message with the ATM traffic descriptor information element including backward tagging information "tagging not supported") on receipt of a CONNECT message with ATM traffic descriptor information element, ignores the wrong information element (resulting in the sending of a CONNECT message without ATM traffic descriptor information element to the originating side), optionally sends a STATUS message (cause value = 99, call state = 8 or 10 dependant on the order of transmission), sends a CONNECT ACKNOWLEDGE message and enters N10.

6 Compliance

An ATS which complies with this TSS&TP specification shall:

a) consist of a set of test cases corresponding to the set or to a subset of the TPs specified in clause 5;

b) use a TSS which is an appropriate subset of the whole of the TSS specified in clause 4;

c) use the same naming conventions for the test groups and test cases;
d) maintain the relationship specified in clause 5 between the test groups and TPs and the entries in the PICS proforma to be used for test case deselection;

e) comply with ISO/IEC 9646-2 [4].

In the case of a) or b) above, a subset shall be used only where a particular Abstract Test Method (ATM) makes some TPs untestable. All testable TPs from clause 5 shall be included in a compliant ATS.

### 7 Requirements for a comprehensive testing service

As a minimum the Remote test method, as specified in ISO/IEC 9646-2 [4], shall be used by any organization claiming to provide a comprehensive testing service for network equipment claiming conformance to EN 301 068-1 [1].
