Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Smart Card Platform (SCP).

It is based on work originally done in the 3GPP in TSG-terminals WG3.

The contents of the present document are subject to continuing work within TC SCP and may change following formal TC SCP approval. If TC SCP modifies the contents of the present document, it will then be republished by ETSI with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 0 early working draft;
 - 1 presented to TC SCP for information;
 - 2 presented to TC SCP for approval;
 - 3 or greater indicates TC SCP approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 2 of a multi-part deliverable covering the Test specification for the Terminal/Integrated Circuit Card (ICC) interface, as identified below:

Part 1: "Terminal features";

Part 2: "UICC features".

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document defines test cases for the UICC relating to the Terminal/UICC interface, as specified in ETSI TS 102 221 [1].

The aim of the present document is to ensure interoperability between the terminal and the UICC independently of the respective manufacturer, card issuer or operator.

Application specific tests for applications residing on an UICC are specified in ETSI TS 131 121 [3].

1 Scope

The present document covers the minimum characteristics which are considered necessary for the UICC in order to provide compliance to ETSI TS 102 221 [1].

The present document specifies the test cases for:

- the electrical characteristics of the UICC;
- the initial communication establishment and the transport protocols;
- the communication layers between the UICC and the UICC-enabled terminal.

Test cases for the USB ICC relating to ETSI TS 102 221 [1] interface as well as test cases for SWP/HCI relating to ETSI TS 102 613 [19] and ETSI TS 102 622 [i.1] are out of scope of the present document.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

- In the case of a reference to a TC SCP document, a non specific reference implicitly refers to the latest version of that document in the same Release as the present document.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] ETSI TS 102 221: "Smart cards; UICC-Terminal interface; Physical and logical characteristics".
- [2] ETSI TS 121 111: "Universal Mobile Telecommunications System (UMTS); USIM and IC card requirements (3GPP TS 21.111 Release 5)".
- [3] ETSI TS 131 121: "Universal Mobile Telecommunications System (UMTS); UICC-terminal interface; Universal Subscriber Identity Module (USIM) application test specification (3GPP TS 31.121)".
- [4] ISO/IEC 9646-7: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".
- [5] ETSI TS 102 223: "Smart Cards; Card Application Toolkit (CAT)".
- [6] Void.
- [7] ISO/IEC 7810: "Identification cards -- Physical characteristics".
- [8] ISO/IEC 7811-1: "Identification cards -- Recording technique -- Part 1: Embossing".
- [9] ISO/IEC 7816-1: "Identification cards - Integrated circuit cards -- Part 1: Cards with contacts -- Physical characteristics".
- [10] ISO/IEC 7816-2: "Identification cards -- Integrated circuit cards -- Part 2: Cards with contacts -- Dimensions and location of the contacts".
- [11] ISO/IEC 7816-3: "Identification cards -- Integrated circuit cards -- Part 3: Cards with contacts -- Electrical interface and transmission protocols".

- [12] ISO/IEC 7816-4: "Identification cards -- Integrated circuit cards -- Part 4: Organization, security and commands for interchange".
- [13] ETSI TS 102 600: "Smart Cards; UICC-Terminal Interface; Characteristics of the USB interface".
- [14] Void.
- [15] Void.
- [16] ETSI TS 131 103: "Digital cellular telecommunications system (Phase 2+); Universal Mobile Telecommunications System (UMTS); Characteristics of the IP Multimedia Services Identity Module (ISIM) application (3GPP TS 31.103)".
- [17] 3GPP2 C.S0065-B: "cdma2000 Application on UICC for Spread Spectrum Systems".
- [18] Void.
- [19] ETSI TS 102 613: "Smart Cards; UICC-CLF interface; Physical and data link layer characteristics".
- [20] Void.

- [23] JESD22-A101D: "Steady state temperature-humidity bias life test".

NOTE: Available at: <http://www.jedec.org/standards-documents/docs/jesd-22-a101c>.

- [24] ETSI TS 101 220: "Smart Cards; ETSI numbering system for telecommunication application providers".
- [25] ETSI TS 124 008: "Digital cellular telecommunications system (Phase 2+); Universal Mobile Telecommunications System (UMTS); LTE; Mobile radio interface Layer 3 specification; Core network protocols; Stage 3 (3GPP TS 24.008)".
- [26] ETSI TS 131 102: "Universal Mobile Telecommunications System (UMTS); LTE; Characteristics of the Universal Subscriber Identity Module (USIM) application (3GPP TS 31.102)".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] ETSI TS 102 622: "Smart Cards; UICC - Contactless Front-end (CLF) Interface; Host Controller Interface (HCI)".

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

1,8 V technology smart card: smart card operating at $1,8\text{ V} \pm 10\%$ and $3\text{ V} \pm 10\%$

1,8 V technology terminal: terminal operating the smart card - terminal interface at $1,8\text{ V} \pm 10\%$ and $3\text{ V} \pm 10\%$

3 V technology smart card: smart card operating at $3\text{ V} \pm 10\%$ and $5\text{ V} \pm 10\%$

3 V technology terminal: terminal operating the smart card - terminal interface at $3\text{ V} \pm 10\%$ and $5\text{ V} \pm 10\%$

access conditions: set of security attributes associated with a file

ADM: access condition to an EF which is under the control of the authority which creates this file

application DF: entry point to an application

application protocol: set of procedures required by the application

application: set of security mechanisms, files, data and protocols (excluding transmission protocols)

NOTE: An application can be a first level application and/or a second level application.

card session: link between the card and the external world, using APDUs, starting with the ATR and ending with a subsequent reset or a deactivation of the card

NOTE: A card session may take place either over the electrical interface specified in the present document or over the Smart Card functional interface specified in ETSI TS 102 600 [13].

CAT Application Toolkit procedures: See ETSI TS 102 223 [5].

channel session: link between the card and the external world during a card session on a given logical channel, starting with the opening of the logical channel and ending with the closure of the logical channel or the termination of the card session

class A operating conditions: terminal or a smart card operating at $5\text{ V} \pm 10\%$

class B operating conditions: terminal or a smart card operating at $3\text{ V} \pm 10\%$

class C operating conditions: terminal or a smart card operating at $1,8\text{ V} \pm 10\%$

current directory: latest MF, DF or ADF selected

current EF: latest EF selected

current file: current EF, if an EF is selected, else the current directory

data object: information coded as TLV objects, i.e. consisting of a Tag, a Length and a Value part

Dedicated File (DF): file containing access conditions and, optionally, Elementary Files (EFs) or other Dedicated Files (DFs)

directory: general term for MF, DF and ADF

Elementary File (EF): file containing access conditions and data and no other files

file: directory or an organized set of bytes or records in the UICC

file identifier: 2 bytes which address a file in the UICC

first level application: selectable application that is indicated in EF_{DIR} under the MF

EXAMPLE: A USIM application (see clause 4.5.2 for valid applications).

function: contains a command and a response pair

ID-1 UICC: UICC having the format of an ID-1 card

NOTE: See ISO/IEC 7816-1 [9].

Lc: length of command data sent by the application layer in a case 3 or 4 Command

Le: maximum length of data expected by the application layer in response to a case 2 or 4 Command

Lr: length of data sent back to the terminal by the UICC in response to a case 2 or 4 Command

Luicc: exact length of data available in the UICC to be returned in response to the case 2 or 4 Command received by the UICC

Master File (MF): unique mandatory file containing access conditions and optionally DFs and/or EFs

Mini-UICC: third format of UICC

multi-application capable terminal: terminal that can support more than one first level application with possibly separate user verification requirements for each application

multi-application card: card that can have more than one selectable application

multi-session card: card that supports more than one concurrent selectable application session during a card session

multi-verification capable UICC: card that can have more than one first level application and may support separate user verification requirements for each application

normal USIM operation: relating to general, PIN related, 3G and or GSM security and subscription related procedures

padding: one or more bits appended to a message in order to cause the message to contain the required number of bits or bytes

plug-in UICC: second format of UICC

proactive UICC: UICC which is capable of issuing commands to the terminal

NOTE: Part of CAT.

record number: number which identifies a record within an EF

record pointer: pointer which addresses one record in an EF

record: string of bytes within an EF handled as a single entity

second level application: application which can only be activated during the session of a first level application

NOTE: A second level application may have an AID. This AID is not to be stored in EF(DIR) unless it is also a first level application.

selectable application session: link between the application and the external world during a card session starting with the application selection and ending with de-selection or termination of the card session

selectable application: application that is selectable by an AID according to the process described in ISO/IEC 7816-4 [12] over the terminal-UICC interface

single verification capable UICC: card that only supports one user verification requirement for all first level applications

state H: high state on the I/O line (Vcc)

state L: low state on the I/O line (Gnd)

transport layer: layer responsible for transporting Secured Packets through the network

USIM session: selectable application session for a USIM application

3.2 Symbols

For the purposes of the present document, the symbols given in ETSI TS 102 221 [1] and the following apply:

| | |
|----------|-----------------------|
| Gnd | Ground |
| t_F | Fall time |
| t_R | Rise time |
| V_{CC} | Supply Voltage |
| V_{IH} | Input Voltage (high) |
| V_{IL} | Input Voltage (low) |
| V_{OH} | Output Voltage (high) |
| V_{OL} | Output Voltage (low) |
| V_{pp} | Programming Voltage |

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI TS 102 221 [1] and the following apply:

| | |
|-------------------|--|
| ADF | Application Dedicated File |
| AID | Application IDentifier |
| AM | Access Mode |
| APDU | Application Protocol Data Unit |
| AT | Authentication Template |
| ATR | Answer To Reset |
| BER | Basic Encoding Rules |
| BER-TLV | Basic encoding rules - tag, length, value |
| BGT | Block Guard Time |
| BWT | Block Waiting Time |
| C-APDU | Command - APDU |
| CAT | Card Application Toolkit |
| CLA | CLAss |
| CLK | CLocK |
| CRT | Control Reference Template |
| CWI | Character Waiting Integer |
| CWT | Character Waiting Time |
| DAD | Destination Address |
| DER | Distinguished Encoding Rule |
| DF | Dedicated File |
| DO | Data Object |
| EDC | Error Detection Code byte |
| EF | Elementary File |
| EF _{DIR} | Elementary File DIRectory |
| etu | elementary time unit |
| f | frequency |
| FCP | File Control Parameters |
| FFS | For Further Study |
| Fi | clock rate conversion factor |
| FID | File IDentifier |
| GSM | Global System for Mobile communications |
| I/O | Input/Output |
| I-block | Information-block |
| ICC | Integrated Circuit Card |
| ID | IDentifier |
| IEC | International Electrotechnical Commission |
| IFS | Information Field Sizes |
| IFSC | Information Field Size for the UICC |
| IFSD | Information Field Size for the terminal |
| INF | INFormation field |
| INS | INStruction |
| ISO | International Organization for Standardization |

| | |
|----------|---|
| LCSI | Life Cycle Status Information |
| LEN | LENgth |
| LRC | Longitudinal Redundancy Check |
| terminal | Mobile Equipment |
| MF | Master File |
| NAD | Node ADdress byte |
| P1 | Parameter 1 |
| P2 | Parameter 2 |
| P3 | Parameter 3 |
| PCB | Protocol Control Byte |
| PDC | Personal Digital Cellular |
| PIN | Personal Identification Number |
| PPS | Protocol and Parameter Selection |
| PS | PIN Status |
| PS_DO | PIN Status_Data Object |
| R-APDU | Response-APDU |
| R-block | Receive-ready block |
| RFU | Reserved for Future Use |
| RST | ReSeT |
| SAD | Source ADdress |
| S-block | Supervisory-Block |
| SC | Security Condition |
| SC_DO | Security Condition_Data Object |
| SE | Security Environment |
| SFI | Short (elementary) File Identifier |
| TETRA | TErrestrial Trunked RAdio |
| TLV | Tag Length Value |
| UE | User Equipment |
| USIM | Universal Subscriber Identity Module |
| VPP | Programming power input, optional use by the card |
| WI | Waiting time Integer |
| WTX | Waiting Time eXtension |
| WWT | Work Waiting Time |

3.4 Formats

3.4.1 Format of the table of optional features

The columns in table 4.1 have the following meaning:

| Column | Meaning |
|-----------|--|
| Option: | The optional feature supported or not by the implementation. |
| Status: | See chapter 3.4.3 'Status and Notations'. |
| Release | The Release column shows the number of the version the feature was introduced. |
| Support: | The support columns shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7 [4], are used for the support column in table 4.1. Y or y supported by the implementation N or n not supported by the implementation N/A, n/a or - no answer required (allowed only if the status is N/A, directly or after evaluation of a conditional status) |
| Mnemonic: | The mnemonic column contains mnemonic identifiers for each item. |

3.4.2 Format of the applicability table

The applicability of every test in table 4.2 a) is formally expressed by the use of Boolean expression defined in the following clause.

The columns in table 4.2 have the following meaning:

| Column | Meaning |
|--------------|--|
| Test case: | The "Test case" column gives a reference to the test case number(s) detailed in the present document and required to validate the implementation of the corresponding item in the "Description" column. |
| Description: | In the "Description" column a short non-exhaustive description of the requirement is found. |
| Release: | The "Release" column gives the Release applicable and onwards, for the item in the "Description" column. |
| Rel-x ICC: | For a given Release, the corresponding "Rel-x ICC" column lists the tests required for a ICC to be declared compliant to this Release. |
| Support: | The "Support" column is blank in the proforma, and shall be completed by the manufacturer in respect of each particular requirement to indicate the choices, which have been made in the implementation. |

3.4.3 Status and Notations

The "Rel-x Terminal" columns show the status of the entries as follows:

The following notations, defined in ISO/IEC 9646-7 [4], are used for the status column:

| | |
|-----|---|
| M | mandatory - the capability is required to be supported. |
| O | optional - the capability may be supported or not. |
| N/A | not applicable - in the given context, it is impossible to use the capability. |
| X | prohibited (excluded) - there is a requirement not to use this capability in the given context. |
| O.i | qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies an unique group of related optional items and the logic of their selection which is defined immediately following the table. |
| Ci | conditional - the requirement on the capability ("M", "O", "X" or "N/A") depends on the support of other optional or conditional items. "i" is an integer identifying an unique conditional status expression which is defined immediately following the table. For nested conditional expressions, the syntax "IF ... THEN (IF ... THEN ... ELSE...) ELSE ..." shall be used to avoid ambiguities. |

References to items

For each possible item answer (answer in the support column) there exists a unique reference, used, for example, in the conditional expressions. It is defined as the table identifier, followed by a solidus character "/", followed by the item number in the table. If there is more than one support column in a table, the columns shall be discriminated by letters (a, b, etc.), respectively.

EXAMPLE: A.1/4 is the reference to the answer of item 4 in table A.1.

3.4.4 Numbers and Strings

The following table describes the conventions used for decimal numbers, non-decimal numbers and strings.

Table 3.1: Convention of Numbering and Strings

| Convention | Description |
|--------------|--|
| nnnnn | A decimal number, e.g. PIN value or phone number |
| 'b' | A single digit binary number |
| 'bbbbbbbb' | An 8-bit binary number |
| 'hh' | A single octet hexadecimal number |
| 'hh hh...hh' | A multi-octet hexadecimal number or string |
| "SSSS" | Character string |
| NOTE: | If an 'X' is present in a binary or hexadecimal number, then that digit is "don't care". |

4 Test environment

4.1 Table of optional features

The supplier of the implementation shall state the support of possible options in table 4.1. See clause 3.4 for the format of table 4.1.

Table 4.1: Options

| Item | Option | Status | Release | Support | Mnemonic |
|------|---|--------|---------|---------|-----------------|
| 1 | ID-1 UICC | O.1 | R99 | | O_ID1_UICC |
| 2 | Plug-in UICC | O.1 | R99 | | O_PLUG_IN_UICC |
| 3 | Type 1 (i.e. UICC which always enters the negotiable mode after a warm reset) | O.2 | R99 | | O_TYPE_1 |
| 4 | Type 2 (UICC which always enters the specific mode after a warm reset) | O.2 | R99 | | O_TYPE_2 |
| 5 | T=0 | O.3 | R99 | | O_T0 |
| 6 | T=1 | O.3 | R99 | | O_T1 |
| 7 | Mono application UICC | O.4 | R99 | | O_MONO_APP |
| 8 | Multi-application UICC | O.4 | R99 | | O_MULTI_APP |
| 9 | Single verification capable UICC | O.5 | R99 | | O_SINGLE_VER |

4.3 Information provided by the device supplier

The device supplier shall provide the list of configurations used by the UICC.

4.4 Test equipment

4.4.1 Overview

The test equipment shall provide a terminal simulator which is connected to the DUT during test procedure execution, unless otherwise specified.

With respect to the UICC, the Terminal simulator shall act as a valid terminal according to ETSI TS 102 221 [1], ETSI TS 102 613 [19] and ETSI TS 102 600 [13], unless otherwise specified.

In particular, during test execution, the Terminal simulator shall fulfil the electrical requirements and signalling conditions for all interface contacts as defined in ETSI TS 102 600 [13], ETSI TS 102 613 [19] and ETSI TS 102 221 [1].

4.4.2 Measurement / setting uncertainties

4.4.2.1 V_{cc}

The voltage level for V_{cc} (contact C1) of the UICC shall be adjustable between -0,5 V and 6,0 V to an accuracy of 1% of the nominal V_{cc} voltage (e.g. 50 mV for class A operating conditions).

To be able to detect current spikes generated by the UICC, the terminal simulator shall be able to source current on the V_{cc} contact in the range -2 mA to 12 mA statically and to deliver charges of > 400 nAs without lowering the V_{cc} voltage for more than 10 % of V_{cc} nominal.

4.4.2.2 RST

The generated voltage level for RST (contact C2) of the UICC shall be adjustable between -0,5 V and 6,0 V to an accuracy of 1 % of the nominal V_{cc} voltage.

The rise and fall times shall be adjustable from 0 μ s to 500 μ s with an accuracy of 5 μ s.

To check if the UICC accepts the minimum and maximum clock-cycle values, the beginning of the rising edge on RST shall be programmable from 1 clock-cycle to 50,000 clock-cycles after enabling the CLK-line.

4.4.2.3 CLK

The Terminal simulator shall be able to generate square wave signals for the clock on the UICC, any of which can be a single-shot or continuous signal, in the range 1 MHz to 5 MHz.

It shall also provide control over the following parameters:

- The voltage levels for both high and low states shall be adjustable between -0,5 V and 6 V to an accuracy of 1 % of the nominal V_{cc} voltage.
- The duty cycle of the clock signal shall be adjustable between 40 % and 60 % to an accuracy of 1 % or 5 ns whichever the worst is.
- The rise and fall time to an accuracy of 1 % or 5 ns whichever is the worst.
(5 ns = 2,5 % accuracy for $f_{max} = 5$ MHz).

4.4.2.4 I/O

The Terminal simulator shall be able to generate I/O-Signals according to ETSI TS 102 221 [1].

The voltage levels for high and low states shall be adjustable between -0,5 V and 6,0 V to an accuracy of 1 % of the nominal V_{cc} voltage. The I/O line in transmission mode (high bit) shall be programmable between state A (active driven output) and state Z (I/O-voltage-driver inactive, current source I-I/O-high active).

It shall also provide control over the rise and fall time of 100 ns to 1 000 ns with an accuracy of 50 ns.

The Terminal simulator shall be able to source and sink currents on the I/O contact in the range -20 μ A to +20 μ A in state high and 0 mA to -1 mA in state low (receiving mode) and shall be able to switch in transmission mode (outputting a high bit) between voltage and current driving mode.

The timing of the bitstream (jitter, guardtime, etu-value, etc.) on the I/O-Line shall be programmable with an accuracy of $\leq 0,01$ etu or 2 clk-cycles whichever is the worst.

4.4.3 Precision force-inducing contacting device

This item of equipment shall be able to apply a prescribed and maintained level of force onto one or more contacts of the UICC. The range shall be between 0 and 0,5 N and accurate to 0,01 N.

4.4.4 Temperature controllable environment

This item of equipment shall be able to control the temperature of a chamber large enough to enclose the UICC and the card reader. The range of temperature control shall be between -25 °C and +85 °C to an accuracy of 0,5 °C.

4.4.5 Temperature measuring device

This item of equipment shall be able to measure the temperature of the UICC to within 0,5 °C. The range of this device shall allow measurement of temperatures between -25 °C and +85 °C.

4.4.6 Voltage measuring device

This item of equipment shall be able to measure static and transient voltages on any one of the contacts of the UICC. The measurable voltage range shall be between -2 V and +7 V to an accuracy of 1 % of the nominal V_{cc} voltage (e.g. 30 mV for class B operating conditions) with a timebase accuracy of ≤ 25 ns.

4.4.7 Precision measuring device

This item of equipment shall be able to measure both linear and radius of curvature dimensions to an accuracy of 0,01 mm.

4.4.8 Current measuring device

This item of equipment shall be able to supervise the current levels for any one of the contacts of the UICC.

The simulator shall be able to detect an over - or underload with a time resolution of ≤ 100 ns.

| Channel | Minimum | Maximum | Resolution |
|-----------------------|----------------|----------------|-------------|
| V _{cc} high | -2 mA | +12,5 mA | 125 μ A |
| V _{cc} low | -2 mA | +12,5 mA | 125 μ A |
| V _{cc} Burst | 12 mA | +250 mA | 2,5 mA |
| RST/CLK High state | -50 μ A | +50 μ A | 1 μ A |
| RST/CLK Low state | -250 μ A | +250 μ A | 2,5 μ A |
| I/O high state | -50 μ A | +50 μ A | 1 μ A |
| I/O low state | -1 500 μ A | +1 500 μ A | 15 μ A |

4.4.9 Timing Measurements on contact I/O

To verify the timing of the I/O transmission from the UICC, the Terminal simulator shall be able to measure the I/O-Bit-Timing in clk-cycles with an accuracy of $\leq 0,01$ etu or 2 clk-cycles whichever is the worst.

4.4.10 Default conditions for DUT operation

Unless otherwise stated, the UICC shall be connected to a ME simulator and the following default condition for the UICC operation apply:

- The voltage level for V_{cc} (contact C1) shall be set to 3,0 V.
- The voltage levels for CLK (contact C3) shall be set to 0 V and 3,0 V for low and high respectively.
- The clock frequency CLK (contact C3) shall be set to 5 MHz with duty cycle 50 %.
- The ME simulator generated low transmission voltage level for I/O (contact C7) shall be set to 0 V and the current sources for high transmission and reception shall be set to -20 μ A and +20 μ A respectively
- Any level 1 user verification requirement (PIN) on the UICC shall be enabled with three VERIFY PIN attempts and ten UNBLOCK PIN attempts remaining.
- Any level 2 user verification requirement (PIN2) on the UICC shall be enabled with three VERIFY PIN2 attempts and ten UNBLOCK PIN2 attempts remaining, if assigned.
- A Universal PIN on the UICC shall be enabled, if IUT is a multi-verification capable UICC.

4.5 Test execution

4.5.1 Parameter variations

Unless otherwise specified, all tests shall be carried out once for each voltage class and power mode supported by the UICC in addition to the parameter variations specified individually for each test case.

Unless otherwise specified, all tests shall be carried out at a temperature of 25 °C.

4.5.2 Required application

4.5.2.1 Application requirements

Some of the test cases specified in this document require an application residing on the UICC. The application shall support the required commands specified in ETSI TS 102 221 [1].

The following applications could be used for this purpose:

- a USIM application according to ETSI TS 121 111 [2]
- a ISIM application according to ETSI TS 131 103 [16]
- a CSIM application according to C.S0065-B [17]

4.5.2.2 Required application files

4.5.2.2.1 Requirements for file creation and update

To test functions and commands the application used shall contain the test files defined in this section. These DFs and EFs shall be created in the generic application before any test case is executed. The files are used for testing purposes only and might be deleted afterwards.

Creating the test DFs and EFs requires the SET DATA, UPDATE BINARY and UPDATE RECORD commands to be supported and to operate properly. That implies that these generic commands, that are normally subject to test in the present document are required to work properly in order to set up the initial conditions required to test during.

The application specific parameter depending on the application that will be used shall be set according to the application specification listed above.

4.5.2.2.2 EF_{TRANS16b}

This is a 16 byte transparent EF for testing purposes with fixed contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '6F FA'. If different values are used please provide them to the ME simulator where required.

| | | | | | |
|---|------------------------|------------------------|----------------------|------------------------|----------|
| Identifier: '6F XX' | | Structure: transparent | | Conditional (see note) | |

4.5.2.2.3 EF_{LF4R20b}

This is a linear fixed EF for testing purposes with 4 records and 20 bytes/record with predefined contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '6F FB'. If different values are used please provide them to the ME simulator where required.

4.5.2.2.4 EF_{LF4R10b}

This is a linear fixed EF for testing purposes with 4 records and 10 bytes/record with predefined contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '6F FC'. If different values are used please provide them to the ME simulator where required.

4.5.2.2.5 EF_{CYC4R3b}

This is a cyclic EF for testing purposes with 4 records and 3 bytes/record with predefined contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '6F FD'. If different values are used please provide them to the ME simulator where required.

4.5.2.2.6 DF on ADF (Application DF) level

A DF for testing purposes needs to be present as child directories of ADF used to execute the testing. The following DF needs to be created:

DF_{SUBDIR} '5F XX' (see note).

NOTE: A file identifier not allocated to ensure that the File ID is not used by any other DF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '5F FA'. If different values are used please provide them to the ME simulator where required.

| 1 st EF | EF _{SUBTRANS} |
| 2 nd EF | EF _{SUBLF} |
| 3 rd EF | EF _{SUBCYC} |

4.5.2.2.7 EF_{SUBTRANS}

This is a 16 byte transparent EF for testing purposes with fixed contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '4F FA'. If different values are used please provide them to the ME simulator where required.

4.5.2.2.8 EF_{SUBLF}

This is a linear fixed EF for testing purposes with 3 records and 10 bytes/record with predefined contents.

A file identifier not allocated to ensure that the File ID is not used by any other EF defined in any of the applications listed in clause 4.5.2.

The suggestion is to use '4F FB'. If different values are used please provide them to the ME simulator where required.

4.6 Pass criterion

A test shall only be considered as successful if the test procedure was carried out successfully under all parameter variations with the DUT respecting all conformance requirements referenced in the test procedure.

5 Conformance Requirements

5.1 Conformance requirement naming

This clause lists the requirements specified in ETSI TS 102 221 [1].

The following syntax has been used to define the unique RQ numbers.

RQ<XX>_<YY><ZZ>

XX: Main chapter of the core specification in which the conformance requirement is listed.

YY: Subchapter of the main chapter in the core specification in which the conformance requirement is listed.

ZZ: Continuously increasing number starting with 1.

5.2 Physical characteristics

Reference: ETSI TS 102 221 [1], clause 4.

NOTE: All references given in the requirement description are related to text or tables provided in ETSI TS 102 221 [1].

| RQ number | Clause | Description |
|-----------|---------|---|
| RQ04_0001 | 4 | The physical characteristics of all types of UICCs shall be in accordance with ISO/IEC 7816-1 [9] and ISO/IEC 7816-2 [10] unless otherwise specified by the present document. |
| RQ04_0002 | 4.1 | The physical characteristics of the ID-1 UICC shall conform to ISO/IEC 7816-1 [9] and ISO/IEC 7816-2 [10]. |
| RQ04_0003 | 4.1 | The terminal shall accept embossed ID-1 UICCs. The embossing shall be in accordance with ISO/IEC 7811-1 [8] and ISO/IEC 7816-3 [11]. The contacts of the ID-1 UICC shall be located on the front (embossed face, see ISO/IEC 7810 [7]) of the card. |
| RQ04_0004 | 4.2 | The Plug-in UICC shall have a width of 25 mm, a height of 15 mm, a thickness the same as an ID-1 UICC and a feature for orientation. |
| RQ04_0005 | 4.2 | Annex A of ISO/IEC 7816-2 [10] applies with the location of the reference points adapted to the smaller size. The three reference points P1, P2 and P3 measure 7,5 mm, 3,3 mm and 20,8 mm, respectively, from 0. The values in figure 2 of ISO/IEC 7816-2 [10] are replaced by the corresponding values of figure 4.1. |
| RQ04_0006 | 4.3 | The Mini-UICC shall have a width of 15 mm, a height of 12 mm, a thickness the same as an ID-1 UICC and a feature for orientation. |
| RQ04_0007 | 4.3 | Annex A of ISO/IEC 7816-2 [10] applies with the location of the reference points adapted to the smaller size below figure 4.2. The values in figure 2 of ISO/IEC 7816-2 [10] are replaced by the corresponding values of figure 4.2. |
| RQ04_0008 | 4.0.4 | The 4FF shall have a width of 12,3 mm ± 0,1 mm and a height of 8,8 mm ± 0,1 mm, with a thickness range of 0,67 mm + 0,03 mm/-0,07 mm. |
| RQ04_0009 | 4.0.4 | Annex A of ISO/IEC 7816-2 [10] applies with the location of the reference points adapted to the smaller size defined in figure 4.3. The values in figure 2 of the ISO/IEC 7816-2 [10] are replaced by the corresponding values of figure 4.3. |
| RQ04_0401 | 4.4 | The standard temperature range for storage and full operational use shall be between -25 °C and +85 °C. |
| RQ04_0402 | 4.4.1.1 | (Optional) Temperature class A, -40 °C to +85 °C ambient temperature range. |
| RQ04_0403 | 4.4.1.1 | (Optional) Temperature class B, -40 °C to +105 °C ambient temperature range. |
| RQ04_0404 | 4.4.1.1 | (Optional) Temperature class C, -40 °C to +125 °C ambient temperature range. |
| RQ04_0405 | 4.4.1.2 | A UICC supporting high humidity shall withstand the test conditions as described within JEDEC JESD 22-A101C [23] with 1 000 hour duration. |
| RQ04_0501 | 4.5.1.2 | Contacts C4 and C8 need not be provided by the UICC. If provided, they shall not be connected internally in the UICC if the UICC only contains a Telecom application and is not using these contacts for an additional interface. For 4FF these contacts may alternatively be connected to Gnd if the UICC is not using them for an additional interface. |
| RQ04_0502 | 4.5.1.2 | Contact C6 shall not be bonded in the UICC for any function other than supplying Vpp or when the UICC supports the optional interface defined in ETSI TS 102 613 [19]. |

5.3 Electrical specifications of the UICC - Terminal interface

Reference: ETSI TS 102 221 [1], clause 5.

NOTE: All references given in the requirement description are related to text or tables provided in ETSI TS 102 221 [1].

| RQ Number | Clause | Description |
|-----------|--------|---|
| RQ05_0001 | 5 | Vpp shall not be supported by the 3 V and 1,8 V technology terminal or the 3 V and 1,8 V technology UICC. |
| RQ05_0002 | 5 | The clock duty cycle shall be between 40 % and 60 % of the period during stable operation. A clock cycle is defined at 50 % of V _{cc} from rising to rising edge or falling to falling edge. |

| RQ Number | Clause | Description |
|-----------|--------|--|
| RQ05_0003 | 5 | When switching clock frequencies terminals shall ensure that no pulse is shorter than 80 ns which is 40 % of the shortest allowed period. |
| RQ05_0004 | 5 | When low impedance drivers are implemented on the I/O line, the I/O electrical circuit design shall insure that potential contention on the line will not result in any permanent damage of the terminal or the UICC. |
| RQ05_0101 | 5.1.1 | The terminal shall operate the UICC within the following limits. Min: 4,5 V, Max: 5,5 V ((Class A) as specified in Table 5.1). |
| RQ05_0102 | 5.1.1 | The current consumption of the UICC shall not exceed the value given in the tables in clause 6.2.2 during the ATR (including activation and deactivation). |
| RQ05_0103 | 5.1.1 | When the UICC is in idle state the current consumption of the card shall not exceed 200 μ A at 1 MHz and 25 °C. |
| RQ05_0104 | 5.1.1 | If clock stop mode is enabled, then the current consumption shall also not exceed 200 μ A while the clock is stopped. |
| RQ05_0105 | 5.1.2 | The terminal shall operate the RST contact of the UICC within the limits specified in Table 5.2. |
| RQ05_0106 | 5.1.3 | The UICC shall not require any programming voltage on Vpp. |
| RQ05_0107 | 5.1.4 | The duty cycle shall be between 40 % and 60 % of the period during stable operation. |
| RQ05_0108 | 5.1.4 | The terminal shall operate the CLK contact of the UICC within the limits specified in Table 5.3. |
| RQ05_0109 | 5.1.5 | The terminal shall operate the I/O contact of the UICC within the limits specified in Table 5.4. |
| RQ05_0201 | 5.2.1 | The terminal shall operate the UICC within the following limits. Min: 2.7 V, Max: 3.3 V ((Class B) as specified in Table 5.5). |
| RQ05_0202 | 5.2.1 | When the UICC is in idle state, the current consumption shall not exceed 200 μ A at 1 MHz at +25 °C. |
| RQ05_0203 | 5.2.1 | When the UICC is in clock stop mode and no other interface is active, the current consumption shall not exceed 100 μ A at +25 °C. |
| RQ05_0204 | 5.2.1 | When the UICC is in idle state, the current consumption shall not exceed 200 μ A at 1 MHz at +25 °C. |
| RQ05_0205 | 5.2.2 | The terminal shall operate the RST contact of the UICC within the limits specified in Table 5.6. |
| RQ05_0207 | 5.2.3 | When only the interface specified in the present document is activated, no "internal clock" shall be used in the UICC. |
| RQ05_0208 | 5.2.3 | The duty cycle shall be between 40 % and 60 % of the period during stable operation. |
| RQ05_0209 | 5.2.3 | The terminal shall operate the CLK contact of the UICC within the limits specified in Table 5.7. |
| RQ05_0210 | 5.2.4 | Table 5.8 defines the electrical characteristics of the I/O (contact C7). The values given in the table allow the derivation of the values of the pull-up resistor in the terminal and the impedance of the drivers and receivers in the terminal and UICC. |
| RQ05_0301 | 5.3.1 | The terminal shall operate the UICC within the following limits: Min: 1.62 V, Max: 1.98 V ((Class C) as specified in Table 5.9). |
| RQ05_0302 | 5.3.1 | When the UICC is in idle state, the current consumption shall not exceed 200 μ A at 1 MHz at +25 °C. |
| RQ05_0303 | 5.3.1 | When the UICC is in clock stop mode and no other interface is active, the current consumption shall not exceed 100 μ A at +25 °C. |
| RQ05_0304 | 5.3.2 | The terminal shall operate the RST contact of the UICC within the limits specified in Table 5.10. |
| RQ05_0305 | 5.3.3 | When only the interface specified in the present document is activated, no "internal clock" shall be used in the UICC. |
| RQ05_0306 | 5.3.3 | The duty cycle shall be between 40 % and 60 % of the period during stable operation. |
| RQ05_0307 | 5.3.3 | The terminal shall operate the CLK contact of the UICC within the limits specified in Table 5.11. |
| RQ05_0308 | 5.3.4 | Table 5.12 defines the electrical characteristics of the I/O (contact C7). The values given in the table allow the derivation of the values of the pull-up resistor in the terminal and the impedance of the drivers and receivers in the terminal and UICC. |

5.4 Initial communication establishment procedures

Reference: ETSI TS 102 221 [1], clause 6.

NOTE: All references given in the requirement description are related to text or tables provided in ETSI TS 102 221 [1]

| RQ Number | Clause | Description |
|-----------|--------|--|
| RQ06_0201 | 6.2.1 | The supply voltage class shall be indicated in the ATR by the UICC (TA _i , i > 2). |
| RQ06_0202 | 6.2.2 | The maximum power consumption of the UICC during ATR shall not exceed the minimum power supplied by the terminal during a UICC session as defined in clause 6.2.3. (See note 1) |
| RQ06_0203 | 6.2.3 | The power consumption of the UICC is restricted to the values indicated in Table 6.4 until an application is selected or an alternative interface using optional contacts is activated by the terminal. (See note 1) |
| RQ06_0204 | 6.3 | The ATR is the first string of bytes sent from the UICC to the terminal after a reset has been performed. The ATR is defined in ISO/IEC 7816-3 [11]. (See note 2) |
| RQ06_0301 | 6.3 | T = 15 global interface parameters shall be returned by the UICC. |
| RQ06_0302 | 6.3.1 | The historical bytes indicate to the external world how to use the card. The information carried by the historical bytes of the UICC follows ISO/IEC 7816-4 [12]. |
| RQ06_0303 | 6.3.1 | The category indicator is the first byte sent by the UICC. Its value shall be '80' which means that the historical bytes are coded in COMPACT-TLV data objects. |
| RQ06_0304 | 6.3.1 | The first information sent by the card shall be the "card data service" data object. This data object is introduced by tag '31'. |
| RQ06_0305 | 6.3.1 | The second information sent by the card shall be the "card capabilities" data object. This data object is introduced by tag '73'. |
| RQ06_0306 | 6.3.2 | The terminal and the UICC shall at least support (F,D) = (512,8) and (512,16) in addition to (372,1), the default values. |
| RQ06_0307 | 6.3.2 | When this additional Di value is supported, the interface shall meet the additional requirements specified in Table 6.6, regardless of the operating conditions used. |
| RQ06_0308 | 6.3.3 | The content and coding of the first TA _i (i > 2) after T=15 is defined in ISO/IEC 7816-3 [11] (See note 2) |
| RQ06_0309 | 6.3.3 | The content and coding of the first TB _i (i > 2) after T=15 shall be as indicated in Table 6.7. |
| RQ06_0401 | 6.4 | The terminal and the UICC shall support the PPS procedure in order to use transmission parameters other than the default values. |
| RQ06_0402 | 6.4 | The interpretation of these parameters is according to ISO/IEC 7816-3 [11] and to the first TB _i (i > 2) after T = 15 in the ATR as defined in table 6.7 in clause 6.3.3. (See note 2) |
| RQ06_0501 | 6.5.1 | The Cold Reset is performed according to of ISO/IEC 7816-3 [11] and the UICC shall enter the negotiable mode. |
| RQ06_0502 | 6.5.1 | After a Cold Reset, the security status shall be reset. |
| RQ06_0503 | 6.5.2 | The Warm Reset is performed according to of ISO/IEC 7816-3 [11] and the UICC shall enter either the negotiable or the specific mode. If the UICC enters the specific mode, it shall present the same protocol and interface parameters (F _i , D _i) as in the session prior to the Warm Reset. |
| RQ06_0504 | 6.5.2 | Respond with an identical ATR after every Warm Reset issued within the same session regardless of what application was active. |
| RQ06_0505 | 6.5.2 | After a Warm Reset, the security status shall be reset. |
| RQ06_0506 | 6.5.3 | A type 1 UICC shall always enter the negotiable mode after a Warm Reset. |
| RQ06_0507 | 6.5.3 | A type 2 UICC shall always enter the specific mode after a Warm Reset. |
| RQ06_0601 | 6.6 | The UICC shall support the Clock Stop procedure as defined in this clause. The clock stop mode is indicated in TA _i (i > 2) in T = 15 in the ATR, see ISO/IEC 7816-3 [11]. |
| RQ06_0602 | 6.6 | If the UICC supports any other operating conditions even together with class A, clock stop mode shall be supported and the indication shall be set accordingly. |

| RQ Number | Clause | Description |
|--|--------|--|
| RQ06_0701 | 6.7 | The bit/character duration and sampling time specified in ISO/IEC 7816-3 [11] are valid for all communications. |
| RQ06_0801 | 6.8 | For the UICC the error detection and character repetition procedure is mandatory for all communications using $T = 0$. |
| RQ06_0901 | 6.9 | For compatibility with existing terminals, UICCs that are used in applications where the supply voltage class indication is based on the STATUS response procedure (see clause 6.2.3) shall support this procedure in addition to the supply voltage class indication in the ATR as defined in the present document. |
| NOTE 1: For cards implemented in accordance to releases up to Rel 12.0.0 Table 6.2a and Table 6.2b are relevant. | | |
| NOTE 2: This requirement is not tested as it is outside the scope of the present document. | | |

5.5 Transmission protocols

Reference: ETSI TS 102 221 [1], clause 7.

NOTE: All references given in the requirement description are related to text or tables provided in ETSI TS 102 221 [1].

| RQ Number | Clause | Description |
|-----------|---------|---|
| RQ07_0001 | 7 | The UICC shall support either $T = 0$ or $T = 1$ or both protocols. The protocols shall be supported as specified in the present document. |
| RQ07_0101 | 7.1 | Both protocols $T = 0$ and $T = 1$ shall use the physical layer and character frame as defined in clause 7.2.1. |
| RQ07_0201 | 7.2.1 | Before the transmission of a character, the I/O line shall be in state H. A character consists of 10 consecutive bits: 1 start bit in state L, 8 bits, which comprise the data byte and 1 even parity checking bit. The parity bit is set, in a way, that there is an even number of bits set to '1' including the parity bit in the character frame. |
| RQ07_0202 | 7.2.1 | The receiver shall confirm the existence of a start bit before $0,7 \text{ etu}$ (receiver time). Then the subsequent bits shall be received at intervals of $(n + 0,5 \pm 0,2) \text{ etu}$ (n being the rank of the bit). The start bit is bit 1. |
| RQ07_0203 | 7.2.1 | Within a character, the time from the leading edge of the start bit to the trailing edge of the n th bit is $(n \pm 0,2) \text{ etu}$. |
| RQ07_0204 | 7.2.1 | The interval between the leading edges of the start bits of two consecutive characters comprises the character duration $(10 \pm 0,2) \text{ etu}$, plus a guardtime. Under error free transmission, during the guardtime both the UICC and the terminal shall be in reception mode (I/O line in state H), unless specified otherwise. |
| RQ07_0205 | 7.2.1 | The data shall always be passed over the I/O line with the most significant byte first. The order of bits within a byte (that is, whether the least significant or most significant bit is transferred first) shall be specified in character TS returned in the answer to reset. |
| RQ07_0206 | 7.2.1.1 | During the transmission state the transmitter shall drive the I/O line to the desired level using the low impedance driver, with the exception of the error indication period, e.g. character guardtime of $T = 0$. |
| RQ07_0207 | 7.2.1.1 | After reception of the last character in a command or response sequence when the communication direction is changed, the entity that is in turn to transmit, terminal or UICC, shall drive the I/O line to the high level using the low impedance driver during the interface inactivity period. During clock stop the terminal shall drive the I/O line to high state. |
| RQ07_0208 | 7.2.2.1 | The minimum interval between the leading edge of the start bits of two consecutive characters shall be at least 12 etu. |
| RQ07_0209 | 7.2.2.1 | The maximum interval between the start leading edge of any character sent by the UICC and the start leading edge of the previous character sent either by the UICC or the terminal is the WWT. The value of the WWT shall not exceed $960 \times W1 \times Fi/f$. |
| RQ07_0210 | 7.2.2.3 | When the UICC has received the command header, a response containing a procedure byte or a status byte shall be sent to the terminal. |
| RQ07_0211 | 7.2.2.3 | Both the terminal and the UICC shall be able to keep track of the direction of the data flow and who has the access to the I/O-line. A normal ending of a command shall be indicated by SW1 SW2 = '90 00'. |
| RQ07_0212 | 7.2.2.4 | The error detection and correction procedure is mandatory for $T = 0$ protocol except for the terminal during the ATR-procedure. |

| RQ Number | Clause | Description |
|-----------|-------------|--|
| RQ07_0213 | 7.2.2.4 | The error is indicated on the I/O line, which is set to state L at $(10,5 \pm 0,2)$ etu after the leading edge of the start bit for the character. The I/O line shall be in state L for a maximum of 2 etu and a minimum of 1 etu. The transmitter shall check the I/O line for parity error indication at $(11 \pm 0,2)$ etu starting from the leading edge of the start bit, in the character being transmitted. |
| RQ07_0214 | 7.2.2.4 | If the UICC or terminal as receiver detects a parity error in a character just received, it shall set the I/O line to state L at $(10,5 \pm 0,2)$ etu after the leading edge of the start bit for the character for a maximum of 2 etu to indicate the error to the sender (see figure 7.2). |
| RQ07_0215 | 7.2.2.4 | If the transmitter detects an error indication at $(11 \pm 0,2)$ etu starting from the leading edge of the start bit, in the character being transmitted, the character shall be sent again after a minimum delay of 2 etu. |
| RQ07_0216 | 7.2.3 | The protocol may be initiated as follows: <ul style="list-style-type: none"> • after an ATR due to a cold reset; • after an ATR due to a warm reset; • after a successful PPS exchange. |
| RQ07_0217 | 7.2.3.1.1 | The default value of the IFSC is 32 bytes another value may be indicated in TA3 of the ATR. The maximum value of the IFSD is 254 bytes. |
| RQ07_0218 | 7.2.3.1.2 | CWI is used to calculate CWT and shall be in the range from 0 to 5. The value is set in bits b4 to b1 in TB3. CWT is defined as the maximum delay between the leading edges of two consecutive characters in the block. |
| RQ07_0219 | 7.2.3.1.5 | The delay between the last character of a block received by the UICC and the first character of the next block sent from the UICC shall be in the interval: BGT < delay < BWT. |
| RQ07_0220 | 7.2.3.1.7 | The parameter TCi in the ATR is used to define which error detection code to use. LRC shall be used (b1 = 0). All other bits in TCi are RFU and shall be set to 0. |
| RQ07_0221 | 7.2.3.2 | Table 7.3: Block frame structure The prologue field is divided into the following three mandatory fields: <ul style="list-style-type: none"> • Node Address byte (NAD), 1 byte; • Protocol Control Byte (PCB), 1 byte; • Length (LEN), 1 byte. The prologue field and the epilogue field are mandatory. The Information field is optional. |
| RQ07_0222 | 7.2.3.2.1.1 | Table 7.4: Node address byte Since b8 and b4 are not used, they shall be coded as '0'. Below is the structure of the NAD-byte. In the first block sent from the terminal, a logical connection is set up based on the addresses in SAD and DAD. Subsequent blocks with an NAD containing the same pair of addresses are associated with the same logical connection. Only the default value SAD = DAD = 0 shall be supported. All other combinations are RFU. |
| RQ07_0223 | 7.2.3.2.1.2 | In the T = 1 protocol the following three different types of blocks are supported: <ul style="list-style-type: none"> • Information block (I-block): which is used to transfer command and response APDUs; • Receive-ready block (R-block): which is used to transfer acknowledgements; • Supervisory block (S-block): which is used to send control information. Tables 7.5 to 7.9 present the coding of the PCB for each block-type, starting with the I-block. |
| RQ07_0224 | 7.2.3.2.1.3 | The length byte codes the number of bytes in the Information field of the block. The number of bytes in the information field may vary in the range from 0 byte to 254 bytes, depending on the type of block. |
| RQ07_0225 | 7.2.3.2.1.3 | The value LEN = '00' indicates that the information field is absent and the value 'FF' is RFU. |
| RQ07_0225 | 7.2.3.2.1.4 | Table 7.10: Information field. |
| RQ07_0226 | 7.2.3.2.2 | The epilogue field contains the Error Detection Code-byte (EDC), which transfers the error detection code of the transmitted block. |
| RQ07_0227 | 7.2.3.2.2 | The LRC as defined in ISO/IEC 7816-3 [11] shall be used. |
| RQ07_0228 | 7.2.3.2.3 | Block notations I-block R-block S-block |
| RQ07_0229 | 7.2.3.3 | The first block sent to the UICC shall be either an I-block with N(S) = 0 or an S-block. |

| RQ Number | Clause | Description |
|-----------|-----------|--|
| RQ07_0230 | 7.2.3.3 | If a sender S sends I(Ns(S), 0), the block is acknowledged by the receiver R with an I(Nr(S), M). The contents of I(Nr(S)) indicate data transfer data and that the receiver is ready to receive the next block from the sender. |
| RQ07_0231 | 7.2.3.3 | If a sender S sends an I(Ns(S), 1) it should be acknowledged by the receiver R with R(Nr(R)), where Ns(S) \leq Nr(R), to indicate that the received block was correct and that the receiver is ready to receive the next block. |
| RQ07_0232 | 7.2.3.3 | The UICC might need more than BWT to process the previously received block, an S(WTX request) is sent by the UICC. The terminal shall acknowledge with an S(WTX response). The new allocated time starts at the leading edge of the last character of the S(WTX response). |
| RQ07_0233 | 7.2.3.3 | To change the value of IFSD, the terminal sends an S(IFS request). The request shall be acknowledged by the UICC with an S(IFS response) with the same INF. The new IFSD is assumed to be valid as long as no new S(IFS request) has been received by the UICC. |
| RQ07_0234 | 7.2.3.3 | When the receiver has received the number of characters as indicated in the value of the LEN and EDC the receiver returns the right to send. |
| RQ07_0235 | 7.2.3.4 | Resynchronization of the protocol may be attempted at three consecutive levels. If one level is unsuccessful, then the next level is tried. For the UICC, the three levels are: <ul style="list-style-type: none"> • Retransmission of blocks. • Use of S(RESYNCH response). • Without action by the terminal, the UICC becomes unresponsive. |
| RQ07_0236 | 7.2.3.4.1 | But if the terminal fails to receive an error-free block, in the beginning of the protocol, a maximum of two more successive attempts to receive the block is allowed before resetting or a deactivation of the card takes place. |
| RQ07_0237 | 7.2.3.4.1 | When the protocol has been initiated and the first block received by the UICC is invalid, the UICC responds with an R(0). |
| RQ07_0238 | 7.2.3.4.1 | If the terminal fails to receive an error-free block during a card-session, a maximum of two further attempts is allowed before an S(RESYNCH request) is sent. |
| RQ07_0239 | 7.2.3.4.2 | When an I-block has been sent and a BWT time-out occurs or an invalid block has been received (with the terminal), an R-block is sent, which request with its N(R) for the expected I-block with N(S) = N(R). |
| RQ07_0240 | 7.2.3.4.2 | When an R-block was sent and an invalid block is received or BWT time-out, the R-block shall be resent. |
| RQ07_0241 | 7.2.3.4.2 | When an S(...request) has been sent and either a BWT time-out occurs or the received response is not an S(...response), the S(...request) shall be resent. |
| RQ07_0242 | 7.2.3.4.2 | But if an S(...response) has been sent and either an invalid block is received or a BWT time-out, an R-block shall be sent. |
| RQ07_0243 | 7.2.3.4.2 | When the UICC sends an S(IFS request) and receives an invalid block, the S(IFS request) shall be resent maximum one extra time to receive an S(IFS response). After the second failure to receive an S(IFS response), the UICC shall stay in reception mode. |
| RQ07_0244 | 7.2.3.5 | The value of the M-bit in the PCB byte of the I-block controls the chaining function according to: <ul style="list-style-type: none"> • M = 0, the block is not chained to the next block; • M = 1, the block is chained to the next block, which shall be an I-block. When a receiver receives a more-data I-block, an R(N(R)) shall be sent. N(R) = N(S) of the expected I-block. At least one chained block should follow. A physical error, e.g. buffer overrun, in the UICC can cause an error in a chaining process. To abort a chain an S(ABORT request) can be sent by either the sender or the receiver. The request shall be answered with an S(ABORT response). When the S(ABORT response) has been received an R-block may be sent to either the terminal or the UICC to give back the right to send to either. |
| RQ07_0245 | 7.2.3.5.1 | When the UICC is the receiver, the UICC shall accept a sequence of chained I-blocks sent from the terminal. The length of each block shall be equal to the value of IFSC except for the last block whose length can be any value in the range of 0 to IFSC. |
| RQ07_0246 | 7.2.3.5.1 | When the UICC is the sender, all I-blocks of a chain shall have LEN \leq IFSD bytes per block. |
| RQ07_0247 | 7.2.3.5.1 | When the UICC is the receiver and receives block with LEN > IFSC, the block shall be rejected and acknowledged with an R-block with bits b1 to b4 in the PCB having a value of 2. |
| RQ07_0248 | 7.2.3.1.7 | WTX shall be used to ask for more time to process a command. |

| RQ Number | Clause | Description |
|-----------|-------------|--|
| RQ07_0301 | 7.3.1.1.1 | On receipt of the command header the UICC, under normal processing, shall return status to the Transport Layer of the terminal. |
| RQ07_0302 | 7.3.1.1.1 | On receipt of the command header the UICC, under abnormal processing, shall return status to the Transport Layer of the terminal. |
| RQ07_0303 | 7.3.1.1.1 | The UICC shall analyse the T = 0 command header to determine whether it is processing a case 1 command or a case 2 command requesting all data up to the maximum length available. |
| RQ07_0304 | 7.3.1.1.2 | On receipt of the command header the UICC, under normal processing shall return data and status to the Transport Layer of the terminal. |
| RQ07_0305 | 7.3.1.1.2 | On receipt of the command header the UICC, under abnormal processing shall return status only to the Transport Layer of the terminal. |
| RQ07_0306 | 7.3.1.1.3 | On receipt of the command header, if the UICC: a) returns a procedure byte, the Transport Layer of the terminal shall send the data portion of the conditional body of the C-APDU to the UICC under the control of procedure bytes returned by the UICC; b) returns status, the Transport Layer of the terminal shall discontinue processing the command. |
| RQ07_0307 | 7.3.1.1.3 | If the processing was not discontinued, the UICC shall return status following receipt of the conditional body of the C-APDU and completion of processing the command. |
| RQ07_0308 | 7.3.1.1.3 | On receipt of status from the UICC, the Transport Layer of the terminal shall discontinue processing the command. |
| RQ07_0309 | 7.3.1.1.4 | On receipt of the command header, if the UICC: a) returns a procedure byte, the Transport Layer of the terminal shall send the data portion of the conditional body of the C-APDU to the UICC under the control of procedure bytes returned by the UICC; b) returns status, the Transport Layer of the terminal shall discontinue processing of the command. |
| RQ07_0310 | 7.3.1.1.4 | If processing was not discontinued, following receipt of the conditional body of the C-APDU, the UICC: a) under normal processing, shall return procedure bytes '61xx' to the Transport Layer of the terminal requesting the Transport Layer of the terminal to issue a GET RESPONSE command to retrieve the data from the UICC; b) under abnormal processing, shall return status only to the Transport Layer of the terminal. |
| RQ07_0311 | 7.3.1.1.4 | On receipt of the procedure bytes or status returned in, if the UICC: a) returned '61xx' procedure bytes, the Transport Layer of the terminal shall send a GET RESPONSE command header to the UICC with P3 set to a value less than or equal to the value contained in the 'xx' byte of '61xx' procedure bytes; b) returned status that indicates a warning ('62xx' or '63xx'), or which is application related ('9xxx' but not '9000'), the Transport Layer of the terminal shall send a GET RESPONSE command with Le = '00'; c) returned status other than that described, the Transport Layer of the terminal shall discontinue processing of the command. |
| RQ07_0312 | 7.3.1.1.4 | If processing was not discontinued, the GET RESPONSE command shall be processed according to the rules for case 2 commands. |
| RQ07_0313 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and Le = '00' (with Luicc < 256 bytes) or Le > Luicc, under normal processing it shall return procedure bytes '6C Luicc' instructing the Transport Layer of the Terminal to immediately re-send the command header with P3 = Luicc. |
| RQ07_0314 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and Le = '00' (with Luicc < 256 bytes) or Le > Luicc, under abnormal processing it shall return status indicating a warning or error condition (but not SW1 SW2 = '90 00'). |
| RQ07_0315 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and Le = '00' (with Luicc = 256 bytes) or Le = Luicc, under normal processing it shall return data of length Le (= Luicc) under the control of the INS, $\overline{\text{INS}}$, or '60' procedure bytes followed by the associated status or procedure bytes '61xx'. |
| RQ07_0316 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and Le = '00' (with Luicc = 256 bytes) or Le = Luicc, under abnormal processing it shall return status indicating a warning or error condition (but not SW1 SW2 = '90 00'). |

| RQ Number | Clause | Description |
|--|--------------------|--|
| RQ07_0317 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and $Le < Luicc$, under normal processing it shall return data of length Le under the control of the INS, \overline{INS} or '60' procedure bytes followed by procedure bytes '61xx'. |
| RQ07_0318 | 7.3.1.1.5.1 | If the UICC receives a case 2 command header and $Le < Luicc$, under abnormal processing it shall return status indicating a warning or error condition (but not SW1 SW2 = '90 00'). |
| RQ07_0319 | 7.3.1.1.5.2 | If the UICC receives a case 4 command, after processing the data sent with the C-APDU, it shall return: <ul style="list-style-type: none"> a) procedure bytes '61 xx' instructing the transport layer of the terminal to issue a GET RESPONSE command with a maximum length of 'xx'; or b) status indicating a warning or error condition (but not SW1 SW2 = '90 00'). |
| RQ07_0320 | 7.3.2 | If the UICC returns a status which indicates: <ul style="list-style-type: none"> • a warning ('62XX' or '63XX'); • an application condition ('9XXX'); • or a successful execution of the command ('9000'); • then it shall also return data (if available) associated with the processing of the command. No data shall be returned with any other status. The contents of the INF of the I-block are mapped onto the R-APDU without change and returned to the application layer of the terminal. |
| RQ07_0321 | 7.3.2.1 | The response received from the INF in the I-block is mapped unchanged to the R-APDU. |
| RQ07_0322 | 7.3.2.2 | The R-APDU consists of either the INF of the I-block or the concatenation of the INF of successive I-blocks all received in the same response, which all shall be chained. |
| RQ07_0323 | 7.3.2.1 7.3.2.2 | The INF of the I-block is mapped to the R-APDU without any changes. |
| RQ07_0324 | 7.3.2.3 | The C-APDU shall be mapped to the INF of the I-Block and the received response from the INF in the I-Block shall be mapped to R-APDU according to Figure 7.12 in ETSI TS 102 221 [1]. |
| RQ07_0325 | 7.3.2.4 | The response consists of either the INF of an I-block received in the response or the concatenation of INF of successive I-blocks in response, which all shall be chained. |
| RQ07_0326 | 7.3.1.1 | Normal status on completion of processing a command is indicated if the UICC returns status words '9000' to the transport layer of the terminal. |
| RQ07_0327 | 7.3.1.1 | The status returned by the UICC shall relate to the most recently received command. Where a GET RESPONSE command is used to complete the processing of a case 2 or case 4 command, any status returned by the UICC after receipt of the GET RESPONSE command shall relate to GET RESPONSE command, not to the case 2 or case 4 command which it completes. |
| RQ07_0401 | 7.4 | Both command and response messages may contain data. Thus, four cases shall be managed by the transmission protocols via the transport layer, as shown in table 7.11 (Definition of cases for data in APDUs). |
| RQ07_0402 | 7.4 | Each step in an Application Layer exchange consists of a command-response pair, where the Application Layer of the terminal sends a command to the UICC via the Transport Layer of the terminal, and the UICC processes it and sends a response to Application Layer of terminal using the Transport Layer of the UICC and the Transport Layer of the terminal. |
| NOTE 1: RQ07_0242 is not tested as it is not possible to force the UICC to issue a WTX request. | | |
| NOTE 2: RQ07_0241 and RQ07_0243 shall not be tested as it is not possible to meet the test criteria. | | |
| NOTE 3: RQ07_0401, RQ07_0402 are tested for each UICC commands described in clause 6.8. | | |

5.6 Application and file structure

Reference: ETSI TS 102 221 [1], clause 8.

| RQ Number | Clause | Description |
|-----------|--------|---|
| RQ08_0101 | 8.1 | All applications are uniquely identified by application identifiers that are obtained from EFDIR. These application identifiers are used to select the application. |
| RQ08_0102 | 8.1 | EF_{DIR} , E_{FPL} and EF_{ICCID} are all mandatory and reside directly under the Master File. |
| RQ08_0103 | 8.1 | $DF_{TELECOM}$ is optional. If present it resides under the MF and use the reserved FID '7F 10'. |
| RQ08_0201 | 8.2.1 | A Dedicated File (DF) allows for a functional grouping of files. It can be the parent of DFs and/or EFs. DFs are referenced by file identifiers. |

| RQ Number | Clause | Description |
|-----------|---------|--|
| RQ08_0202 | 8.2.1 | An Application DF (ADF) is a particular DF that contains all the DFs and EFs of an application. |
| RQ08_0203 | 8.2.2.1 | An EF with a transparent structure consists of a sequence of bytes. When reading or updating, the sequence of bytes to be acted upon is referenced by a relative address (offset), which indicates the start position (in bytes), and the number of bytes to be read or updated. |
| RQ08_0204 | 8.2.2.1 | The first byte of a transparent EF has the relative address '00 00'. The data length is indicated in the SELECT response of the EF. |
| RQ08_0205 | 8.2.2.2 | An EF with linear fixed structure consists of a sequence of records all having the same (fixed) length. The first record is record number 1. The length of a record as well as this value multiplied by the number of records are indicated in the SELECT response of the EF. |
| RQ08_0206 | 8.2.2.2 | There are several methods to access records within an EF of this type: <ul style="list-style-type: none"> absolutely using the record number; when the record pointer is not set it shall be possible to perform an action on the first or the last record by using the NEXT or PREVIOUS mode; when the record pointer is set it shall be possible to perform an action on this record, the next record (unless the record pointer is set to the last record) or the previous record (unless the record pointer is set to the first record); by identifying a record using pattern search. |
| RQ08_0207 | 8.2.2.2 | If an action following selection of a record is aborted (e.g. due to an unsuccessful execution of a command), then the record pointer shall remain set at the record at which it was set prior to the action. |
| RQ08_0208 | 8.2.2.2 | It is not possible, at present, to have more than 254 records in a file of this type, and each record cannot be greater than 255 bytes. |
| RQ08_0209 | 8.2.2.3 | When all records have been used for storage, then the next storage of data shall overwrite the oldest information. An EF with a cyclic structure consists of a fixed number of records with the same (fixed) length. In this file structure there is a link between the last record (n) and the first record. When the record pointer is set to the last record n, then the next record is record 1. Similarly, when the record pointer is set to record 1, then the previous record is record n. The last updated record containing the newest data is record number 1, and the oldest data is held in record number n. |
| RQ08_0210 | 8.2.2.3 | For update operations only PREVIOUS record shall be used. For reading operations, the methods of addressing are Next, Previous, Current and Record Number. |
| RQ08_0211 | 8.2.2.3 | If an action following selection of a record is aborted (e.g. due to an unsuccessful execution of a command), then the record pointer shall remain set at the record at which it was set prior to the action. |
| RQ08_0212 | 8.2.2.3 | It is not possible, at present, to have more than 254 records in a file of this type, and each record cannot be greater than 254 bytes. |
| RQ08_0213 | 8.2.2.4 | A BER-TLV structure EF is seen at the interface as a set of data objects accessible by commands for handling data objects. The type of data objects in the EF is BER-TLV. A tag can only appear once in an EF. |
| RQ08_0301 | 8.3 | A File Identifier (FID) is used to address or identify a specific file. The FID consists of two bytes and shall be coded in hexadecimal notation. FIDs shall be subject to the following conditions: <ul style="list-style-type: none"> the FID shall be assigned at the time of creation of the file concerned; no two files under the same parent shall have the same ID; the immediate children of the current DF, the parent DF or the immediate children of the parent DF shall not have the same FID. |
| RQ08_0302 | 8.3 | A path is a concatenation of FIDs. The path starts from MF or the current DF, and ends with the identifier of the file itself. The order of the FIDs is always in the direction from father to child. |
| RQ08_0303 | 8.3 | A Short File Identifier (SFI) is coded as 5 bits valued in the range from 1 to 30.. No two files under the same parent shall have the same SFI. |
| RQ08_0304 | 8.3 | A DF name is coded on 1 to 16 bytes. The DF name is the AID and shall be unique within a card. |
| RQ08_0305 | 8.3 | The reserved FID '7FFF' can be used as a FID for the ADF of the current active application on a given logical channel. |
| RQ08_0401 | 8.4 | After the UICC activation and the Answer To Reset (ATR), the Master File (MF) is implicitly selected and becomes the current directory. |
| RQ08_0402 | 8.4.1 | Selecting a DF, an ADF or the MF sets the current directory. After such a selection there is no current EF. Selecting an EF sets the current EF and the current directory remains the DF, ADF or MF, which is the parent of this EF. The current EF is always a child of the current directory. |
| RQ08_0403 | 8.4.1 | Only the ADF of the current application can be selected by FID. |
| RQ08_0404 | 8.4.1 | Any application specific command shall only be operable if it is specific to the Current Directory. |

| RQ Number | Clause | Description |
|-----------|---------|--|
| RQ08_0405 | 8.4.1 | The following files may be selected, by File Identifier (FID) referencing, from the last selected file: <ul style="list-style-type: none"> any file which is an immediate child of the current directory; any DF which is an immediate child of the parent of the current DF; the parent of the current directory; the current DF; the ADF of the current active application; the MF. |
| RQ08_0406 | 8.4.1 | Table 8.1 |
| RQ08_0407 | 8.4.2 | Table 8.3 |
| RQ08_0408 | 8.4.2 | In the case of 'select by path from MF', the terminal may use the special file-id '7FFF' (see clause 8.3) at the beginning of the path. It indicates that the path begins at the ADF of the current active application on this logical channel. The following restrictions apply: <ul style="list-style-type: none"> In the case of "select by path from MF", the terminal shall not use the file identity of the MF (i.e. '3F00') at the beginning of the path. In the case of "select by path from current DF", the terminal shall not use the special file-ID '7FFF' at the beginning of the path. In the case of "select by path from MF" or "select by path from current DF", the terminal shall not use the file identity of the current DF. In the case of "select by path from MF" or "select by path from current DF", the terminal shall not use an empty data field. |
| RQ08_0409 | 8.4.3 | Any EF within a DF can be implicitly selected without giving a SELECT command by applying one of the following commands at the DF or ADF level and giving a Short File Identifier (SFI) as a part of the command: <ul style="list-style-type: none"> READ BINARY; UPDATE BINARY; READ RECORD; UPDATE RECORD; INCREASE; SEARCH RECORD; RETRIEVE DATA; or SET DATA. |
| RQ08_0410 | 8.4.3 | Support of SFI for a specific file is indicated if the FCP of the file contains a TLV DO with tag '88'. If the length is 0 it indicates that the file does not support referencing by SFI. If the TLV DO is not present in the FCP it indicates that the 5 least significant bits of the FID are used as SFI. |
| RQ08_0411 | 8.4.3 | When the READ RECORD command contains a valid SFI, it sets the file as the current EF and resets the current record pointer. Subsequent records are read with the READ RECORD command without SFI. |
| RQ08_0412 | 8.4.3 | When the UPDATE RECORD command contains a valid SFI, it sets the file as the current EF and resets the current record pointer. Subsequent records are updated with the UPDATE RECORD command without SFI. |
| RQ08_0413 | 8.4.3 | When the INCREASE command contains a valid SFI, it sets the file as the current EF and resets the current record pointer. Subsequent records are increased with the INCREASE command without SFI. |
| RQ08_0414 | 8.4.3 | When the SEARCH RECORD command contains a valid SFI, it sets the file as the current EF and resets the current record pointer. Subsequent records are searched with the SEARCH RECORD command without SFI. |
| RQ08_0415 | 8.4.3 | When the RETRIEVE DATA command contains a valid SFI, it sets the file as the current EF and resets the current tag pointer. If segmentation over several APDUs is used to retrieve long structures, subsequent RETRIEVE DATA commands shall be used without SFI |
| RQ08_0416 | 8.4.3 | When the SET DATA command contains a valid SFI, it sets the file as the current EF and resets the current tag pointer. If segmentation over several APDUs is used to set long structures, subsequent SET DATA commands shall be used without SFI |
| RQ08_0501 | 8.5 | An application may be either explicitly or implicitly referenced. An application is activated by explicit selecting it with the AID. This sets the application's ADF as the current ADF. A current ADF can be referenced by FID with the implicit reference value '7FFF'. |
| RQ08_0502 | 8.5.1.1 | A selectable application, represented in the UICC by the AID, shall be referenced by a DF name coded on 1 byte to 16 bytes. Each name shall be unique within a UICC. A DF name can be used in the SELECT command to select a selectable application. |

| RQ Number | Clause | Description |
|-----------|---------|---|
| RQ08_0503 | 8.5.1.2 | If several applications starting with the same byte content in the AID are present on the card, the application selected is depending upon the value specified in P2. The interpretation of next, previous and first is to be specified by the application. The application that is selected using these parameters shall match the partial DF name provided in the SELECT command. |
| RQ08_0504 | 8.5.1.2 | A selectable application can also be selected using a partial DF name (when P1 = '04') using the P2 parameters first and only occurrence, next, previous or last as defined in ISO/IEC 7816-4 [12]. In this case, the DF name is right truncated. If the "last" option is indicated in P2, the selected application is the last active application matching the partial DF name, even if it was during a previous card session. Selection of an application using a partial DF name is optional for mono application cards, but a multi-application card shall support it. The card shall indicate the support of this feature in the "card service data" and the "card capabilities" compact-TLV objects of the ATR historical bytes as specified in ISO/IEC 7816-4 [12]. If the UICC does not support selection with partial DF name, the UICC shall respond with an appropriate response (e.g. command parameters not supported '6A86'). |
| RQ08_0505 | 8.5.2 | The verification status of the application PIN is updated according to the application's session activation procedure, as specified by the application. |
| RQ08_0506 | 8.5.2 | The application session is initiated when the terminal sends a SELECT command, with the application's AID, indicating in the command parameters that the application shall be activated. After having selected the application the UICC evaluates the security environment for this application. The SE is set according to the verification requirements for the application see table 9.1. The verification status of the application PIN is updated according to the application's session activation procedure, as specified by the application. There can only be one active selectable application session on a given logical channel. Therefore, in order to activate a new selectable application session in parallel to another, a new logical channel shall be opened. |
| RQ08_0507 | 8.5.3 | An application may have a session termination procedure to be performed before the application is terminated. This procedure shall be described in the application specification. Before this procedure is executed, the terminal may send to the UICC a specific STATUS command indicating that the termination procedure of the application will start. After this termination procedure has been executed the terminal and the application are in a well-defined state. The verification status of the application PIN is updated according to the application's session termination procedure, as specified by the application. |
| RQ08_0508 | 8.5.3 | An application session is then terminated if any of the following events occur on each logical channel that the application session has been activated on: Implicitly; if a SELECT by DF name command with an AID different from the currently active application is performed by the UICC, indicating in the command parameters that this new application shall be activated. Explicitly; if the application is reselected using the SELECT by DF name command with the AID corresponding to the currently active application, and indicating in the command parameters that the application shall be closed; The current directory, current EF and current application are the same as after the ATR on logical channel zero. If the logical channel is closed. An application session is also terminated when the terminal performs a reset of the UICC. |
| RQ08_0509 | 8.5.4 | An application is reset if the application is reselected using the SELECT by DF name command with the AID corresponding to the currently active application, indicating in the command parameters that the application shall be activated. |
| RQ08_0510 | 8.5.4 | Reset initializes the application session activation procedure. The security status of the application is updated according to the application's session activation procedure, as specified by the application. |
| RQ08_0601 | 8.6 | The following Application Dedicated File IDs shall be reserved for operational use by UICC: <ul style="list-style-type: none"> '7F FF'. |
| RQ08_0602 | 8.6 | The following Dedicated File IDs shall be reserved for operational use by UICC: <ul style="list-style-type: none"> '7F10' (DF_{TELECOM}), '7F20'(DF_{GSM}), '7F21'(DF_{DCS1800}), '7F22' (DF_{IS-41}), '7F23'(DF_{FP-CTS}), '7F24'(DF_{TIA/EIA-136}), '7F25'(DF_{TIA/EIA-95}) and '7F2X', where X ranges from '6' to 'F'. '7F80' (DF_{PDC}) is used for the Japanese PDC specification. '7F90' (DF_{TETRA}) is used for the TETRA specification. '7F31' (DF_{IDEN}) is used in the iDEN specification. - reserved under '7F10'; '5F50'(DF _{GRAPHICS}); '5F3A'(DF _{PHONEBOOK}) |

| RQ Number | Clause | Description |
|-----------|--------|--|
| RQ08_0603 | 8.6 | The following Elementary File Ids shall be reserved for operational use by UICC: <ul style="list-style-type: none"> - '6F 2X', '6F 3X', '6F 4X' in '7F 10' and '7F 2X'; - '4F YX', where Y ranges from '2' to 'F' in all 2nd level DFs; - '2F05', '2F06' and '2F 1X' in the MF '3F 00'; - '2F00', '2F01' in the MF '3F00'. |
| RQ08_0604 | 8.6 | The following Dedicated File IDs shall be reserved for administrative use by UICC: <ul style="list-style-type: none"> • - '7F 4X', '5F1X' and '5F2X'. This REQ shall not be tested as the administrative functionality is outside the scope of the present document. |
| RQ08_0605 | 8.6 | The following Elementary File Ids shall be reserved for administrative use by UICC: <ul style="list-style-type: none"> • '6F XX' in the DFs '7F 4X'; '4F XX' in the DFs '5F 1X', '5F2X'; • '6F 1X' in the DFs '7F 10', '7F 20', '7F 21'; • '4F 1X' in all 2nd level DFs; - '2F EX' in the MF '3F 00'. This REQ shall not be tested as the administrative functionality is outside the scope of the present document |
| RQ08_0606 | 8.6 | The following Dedicated File IDs shall be reserved for operational use by UICC: '5F50', '5F3A', '7F 10', '7F 2X', '7F 80' and '7F 90'. |
| RQ08_0701 | 8.7 | A UICC which supports logical channels indicates it in the ATR, together with the assignment methods and maximum number of logical channels it supports. The UICC supporting logical channels shall support: at least one channel in addition to the basic channel; and logical channel number assignment by the UICC. |
| RQ08_0702 | 8.7 | In order to be accessed from several logical channels at the same time, a given file (EF, DF, ADF) shall be indicated as "shareable" in its file descriptor. |
| RQ08_0703 | 8.7 | A logical channel is opened by using a MANAGE CHANNEL command, in which the card assigns a channel number and returns it in the response. |
| RQ08_0704 | 8.7 | The logical channel remains open until it is explicitly closed by a MANAGE CHANNEL command, or if the UICC is deactivated. |
| RQ08_0705 | 8.7 | When the open function is performed from the basic channel, then after a successful open, the MF shall be implicitly selected as the current DF. When the open function is performed from a logical channel which is not the basic one, then after a successful open, the current DF of the logical channel from which the command was issued shall be selected as the current DF. In both cases, no current EF is selected in the new logical channel. |
| RQ08_0706 | 8.7 | Once a new channel is opened, the current DF and the current EF are independent per each logical channel. |
| RQ08_0707 | 8.7 | If the MANAGE CHANNEL command is performed on a DF or ADF that is not shareable, the card shall respond with an appropriate error message. The response shall indicate that the command is not allowed. No new channel is opened. |
| RQ08_0801 | 8.8 | A file (EF, DF or ADF) can be accessed (selected, read, updated, deleted, deactivated, activated, increased, searched, etc.) concurrently by different applications: <ul style="list-style-type: none"> • by terminal applications through different logical channels; • by UICC-based applications such as remote file management and toolkit applications. |
| RQ08_0802 | 8.8 | If a file is indicated as shareable, then applications may perform authorized operations on the file independently of whether or not the file is the current file of any other application. A consequence of the first rule is that if changes to a shareable file are permitted by the file's security conditions, then the file can be changed by one application while it is currently selected and being used by a second application. Descriptions of individual commands include the details of behaviour interaction in the shareable case. |
| RQ08_0803 | 8.8 | If a file is indicated as not-shareable and is the current file of one application, then another application cannot perform any operation on the file regardless of authorization. A consequence of the second rule is that an application acquires exclusive access to a not-shareable file by successfully selecting it. Access by any other application, including an attempt to select the file, shall return the status word '6985' (Conditions of use not satisfied). |
| RQ08_0804 | 8.8 | For the purpose of this clause, concurrent access to a file by two executing instances of a single application is considered to be accessed by two different applications. |
| RQ08_0901 | 8.9 | Support of secure channels is optional for the Terminal and the UICC. The support by the UICC is indicated in the ATR. |

| RQ Number | Clause | Description |
|---|--------|--|
| RQ08_0902 | 8.9 | Logical channel 0 cannot be a secure channel for application to application secure channel. |
| RQ08_0903 | 8.9 | A secure channel is created by first opening a logical channel, and then securing the channel using the MANAGE SECURE CHANNEL command. |
| RQ08_0904 | 8.9 | A Platform to Platform APDU secure channel shall only be allowed on logical channel 0. Logical channel use shall be allowed within a Platform to Platform secure channel. All commands other than MANAGE SECURE CHANNEL, TRANSACT DATA and GET RESPONSE are secured by using a Platform to Platform secure channel, including proactive commands. |
| RQ08_0905 | 8.9 | For the application-to-application secure channel, a UICC application shall be selected by one of the following mechanisms: <ul style="list-style-type: none"> a UICC application becomes explicitly selected before the MANAGE SECURE CHANNEL - Establish SA - Master SA command; or a UICC application becomes implicitly selected upon successful completion of a MANAGE SECURE CHANNEL - Establish SA - Master SA command. |
| NOTE: RQ08_0201 and RQ08_0202 shall not be tested as the SELECT function requires the file ID in order to select the files. | | |

5.7 Security features

Reference: ETSI TS 102 221 [1], clause 9.

| RQ Number | Clause | Description | | | | | | | | | | | | | | | | | | |
|-----------|--------|---|-------|-------------------------|-----------|-------------------------|-----------|-------------------------|-----------|-------|-----------|-------|------|--|-------------------------|--|-------------------------|--|-------------------------|--|
| RQ09_0100 | 9.1 | A multi-verification capable UICC conforming to the present document shall, from the security context point of view, support more than one level 1 user verification requirement (PIN). The specific key reference for the level 1 PIN is specified by each application in accordance with table 9.3. A multi-verification capable UICC shall support the use of a universal PIN. A multi-verification capable UICC shall support access rules defined in security attributes indicated in tag '8B' (i.e. referenced to expanded format). | | | | | | | | | | | | | | | | | | |
| RQ09_0101 | 9.1 | A single verification capable UICC shall, from the security context point of view, support one level 1 user verification requirement (PIN) as defined in table 9.3. | | | | | | | | | | | | | | | | | | |
| RQ09_0102 | 9.1 | The coding of the level 1 and level 2 user verification requirement shall be according to table 9.3. | | | | | | | | | | | | | | | | | | |
| RQ09_0201 | 9.2 | In order to perform commands other than SELECT and STATUS/GET RESPONSE, the security condition for the file shall be met. | | | | | | | | | | | | | | | | | | |
| RQ09_0202 | 9.2 | If the UICC cannot determine the access condition for the requested access to a file, then the requested access to this file shall not be granted and the card shall return an error status word '6982' (Security status not satisfied). | | | | | | | | | | | | | | | | | | |
| RQ09_0203 | 9.2.4 | The content of each AM byte (in compact format) or AM_DO (in expanded format) shall be unique within the same access rule. | | | | | | | | | | | | | | | | | | |
| RQ09_0204 | 9.2.4 | SC_DOs OR and AND relations shall contain at least two access conditions. | | | | | | | | | | | | | | | | | | |
| RQ09_0205 | 9.2.4 | An access rule can be indicated in the FCP in one of the following ways: <ul style="list-style-type: none"> Tag '8C' Security attributes: Compact format. Tag 'AB' Security attributes: Expanded format. Tag '8B' Security attributes: Referenced to expanded format. | | | | | | | | | | | | | | | | | | |
| RQ09_0206 | 9.2.5 | The compact format is indicated by tag '8C' in the FCP. In the compact format an access rule consists of an AM byte and one or more SC bytes as defined in ISO/IEC 7816-4 [12]. | | | | | | | | | | | | | | | | | | |
| RQ09_0207 | 9.2.5 | The AM byte conveys two types of information. The interpretation of the AM byte itself (coded on b8), and the number of SC bytes following, this is equal to the number of bits set to '1' in bits b7 to b1 in the AM byte. If b8 in the AM byte is set to '0' the interpretation of bits b7 to b1 is as defined in ISO/IEC 7816-4 [12]. If b8 in the AM byte is set to '1' the usage of bits b7 to b4 is proprietary. | | | | | | | | | | | | | | | | | | |
| RQ09_0208 | 9.2.5 | When multiple sets of an AM byte and one or more corresponding SC bytes are present in the value field they present an OR condition. | | | | | | | | | | | | | | | | | | |
| RQ09_0209 | 9.2.6 | The structure of the security attribute in expanded format is as follows: | | | | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Tag</th> <th>length</th> <th>AM_DO tag</th> <th>AM_DO</th> <th>SC_DO tag</th> <th>SC_DO</th> <th>AM_DO tag</th> <th>AM_DO</th> <th>SC_DO tag</th> <th>SC_DO</th> </tr> </thead> <tbody> <tr> <td>'AB'</td> <td></td> <td>See ISO/IEC 7816-4 [12]</td> <td></td> <td>See ISO/IEC 7816-4 [12]</td> <td></td> <td>See ISO/IEC 7816-4 [12]</td> <td></td> <td>See ISO/IEC 7816-4 [12]</td> <td></td> </tr> </tbody> </table> | Tag | length | AM_DO tag | AM_DO | SC_DO tag | SC_DO | AM_DO tag | AM_DO | SC_DO tag | SC_DO | 'AB' | | See ISO/IEC 7816-4 [12] | | See ISO/IEC 7816-4 [12] | | See ISO/IEC 7816-4 [12] | |
| Tag | length | AM_DO tag | AM_DO | SC_DO tag | SC_DO | AM_DO tag | AM_DO | SC_DO tag | SC_DO | | | | | | | | | | | |
| 'AB' | | See ISO/IEC 7816-4 [12] | | See ISO/IEC 7816-4 [12] | | See ISO/IEC 7816-4 [12] | | See ISO/IEC 7816-4 [12] | | | | | | | | | | | | |

| RQ Number | Clause | Description | | | | | | | | | |
|-----------|-----------------|--|--------|--------|-------|------|------|------------------------|------|-----------------|---|
| RQ09_0210 | 9.2.7 | The structure of the access rule referencing DO is as follows: | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Tag</th> <th>Length</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>'8B'</td> <td>'03'</td> <td>File ID, record number</td> </tr> <tr> <td>'8B'</td> <td>'02' + n x '02'</td> <td>File ID, SE IDn1, Record number X, SE IDn2, Record number Y, etc.</td> </tr> </tbody> </table> | Tag | Length | Value | '8B' | '03' | File ID, record number | '8B' | '02' + n x '02' | File ID, SE IDn1, Record number X, SE IDn2, Record number Y, etc. |
| | | Tag | Length | Value | | | | | | | |
| '8B' | '03' | File ID, record number | | | | | | | | | |
| '8B' | '02' + n x '02' | File ID, SE IDn1, Record number X, SE IDn2, Record number Y, etc. | | | | | | | | | |
| | | | | | | | | | | | |
| RQ09_0211 | 9.2.7 | The option with the SE ID referencing shall be used in an application where several security environments exist. | | | | | | | | | |
| RQ09_0301 | 9.3.1 | A multi-application capability UICC shall support the use of SE00 and SE01 in order to allow application verification requirement to be replaced by the Universal PIN. | | | | | | | | | |
| RQ09_0302 | 9.3.1 | Table 9.1 of the ETSI TS 102 221 [1]: PIN mapping into SE. | | | | | | | | | |
| RQ09_0303 | 9.3.1 | The Security Environment when no application is active on a given logical channel (SE_No_Active_Application) is set as follows: all application PINs assigned on the UICC are considered as APPL_PIN; if at least one of the application PINs is disabled, the SE is SE#00 except for the case where the Universal PIN is enabled but the default usage qualifier (see clause 9.5.2) is set to "do not use" as defined in table 9.1 (DUUP). | | | | | | | | | |
| RQ09_0304 | 9.3.1 | This Security Environment is valid under the MF and under its child DFs/EFs as long as no application is active. | | | | | | | | | |
| RQ09_0305 | 9.3.1 | The Security Environment when an application is active on a given logical channel (SE_Active_Application) is determined as in table 9.1 with the APPL_PIN being the Application PIN of the active application. This Security Environment is valid under the ADF/MF and their child DFs/EFs. | | | | | | | | | |
| RQ09_0306 | 9.3.2 | A UICC supporting logical channels has the security environment set during the application activation and is valid for the logical channel on which the application is activated. The security environment remains the same on this logical channel until a new application is selected or the status of the PIN status DO has changed, i.e. the application or universal PIN status has been changed from disabled to enabled or vice versa | | | | | | | | | |
| RQ09_0307 | 9.3.2 | The security environment of an application running on a logical channel is inherited when a new channel is opened from the non-basic channel. It is evaluated as after the ATR and set as the SE_No_Active_Application when the new channel is opened from the basic channel. | | | | | | | | | |
| RQ09_0308 | 9.3.2 | Any command issued on a logical channel affecting the SE setting only affects the SE on the channel where the command was issued and other channels with inherited security from this channel. The SE change on a channel with inherited security also changes the SE on the channel from which the security status was inherited. | | | | | | | | | |
| RQ09_0401 | 9.4.1 | The Universal PIN is a global access condition that has been assigned a key reference value '11'. This key reference value shall not be used for anything else but to indicate the Universal PIN. | | | | | | | | | |
| RQ09_0402 | 9.4.1 | A multi-application UICC according to the present document shall support the usage of a Universal PIN. | | | | | | | | | |
| RQ09_0403 | 9.4.1 | If an application allows the use of the Universal PIN as replacement PIN, the Universal PIN shall be part of the access condition for this application on a multi-application UICC that complies to the present document. | | | | | | | | | |
| RQ09_0404 | 9.4.1 | In case of a single verification capable UICC the Universal PIN shall not be used. | | | | | | | | | |
| RQ09_0405 | 9.4.1 | The Universal PIN does not belong to any application, e.g. its verification status cannot be reset by the application activation or termination procedures. | | | | | | | | | |
| RQ09_0406 | 9.4.2 | The application PIN allows access to any file on the UICC where it is referenced in the access rules. i.e. this PIN has global access rights with respect to files. | | | | | | | | | |
| RQ09_0407 | 9.4.2 | All operations performed on a PIN (enable/disable/replace) covering several ADFs/DFs affects the applications where the PIN is used and the access rules where the corresponding key reference is used. | | | | | | | | | |
| RQ09_0408 | 9.4.3 | A local PIN is a PIN that uses a local key reference which is only valid within the ADF/DF where it is indicated in the FCP. It means that 2 ADFs can use the same local key reference number with two different values and two different status (enabled, disabled, verified, blocked), one for each ADF. | | | | | | | | | |
| RQ09_0409 | 9.4.3 | A local PIN shall be indicated in the FCP of child DFs. A local PIN is defined as level 2 in table 9.2 and coded as defined in table 9.3. | | | | | | | | | |
| RQ09_0410 | 9.4.3 | A local PIN referenced in an ADF or a DF, which is not DFTELECOM, does not give access to DFTELECOM. | | | | | | | | | |
| RQ09_0411 | 9.4.3 | An ADF shall use one application PIN and zero, one or more local PIN(s). | | | | | | | | | |

| RQ Number | Clause | Description | | | | | | | | | | | | | | | | | | | | | | |
|--------------------|--------|--|--------------------|--------------|-------------------|------|--------------|-------------------|------|---|-------------------|---|---|------|--|------|--|--|------|------|--|------|------|--|
| RQ09_0412 | 9.4.3 | An ADF using at least one local PIN shall have one local PIN paired with application PIN. Table 9.3 indicates how application PINS and local PINs shall be paired (the global key reference '01' is paired with the local key reference '81', the global key reference '02' is paired with the local key reference '82', etc.). | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0413 | 9.4.3 | If replacement of the application PIN by the Universal PIN is authorized, the ADF shall also use the Universal PIN. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0414 | 9.4.3 | A local PIN can be assigned to any DF. In this case, a key reference indicating a second application PIN as defined in table 9.3 shall be used. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0415 | 9.4.4 | The PIN status of local PINs exists within the ADF/DF where it is specified. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0416 | 9.4.4 | The PIN status of the Universal PIN, application PINs, and local PIN is independent from the logical channels. This means that when a PIN is verified in one logical channel, it is also verified in all other channels. Also when a PIN is enabled in one logical channel it is enabled in all other channels. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0501 | 9.5.1 | Access condition mapping, using SC_DOs, is done using the expanded format with the entries coded as CRT values, i.e. tag 'A4' is used. The CRT is a constructed TLV DO containing a usage qualifier TLV DO (tag '95') and a Key reference TLV DO (tag '83'). | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0502 | 9.5.1 | The usage of a key reference shall be in accordance with the group definition in table 9.2. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0503 | 9.5.1 | A key reference shall only be assigned for the purpose as it is defined in table 9.3, e.g. a level 1 key reference is always to be used for an application or a set of applications that share the same access conditions. A level 2 key reference is only valid within the ADF/DF where it is indicated. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0504 | 9.5.1 | A single verification capable UICC (from the security context point of view) shall use key reference '01' as PIN and key reference '81' as PIN2. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0505 | 9.5.1 | A multi-verification capable UICC shall use key references in the range of '01' to '08' as PIN and may use key references in the range from '81' to '88' as PIN2. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0506 | 9.5.1 | Multiple applications (from the security context point of view) on a UICC shall not share any key references except for key reference '11', which is used as the universal PIN. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0507 | 9.5.2 | <p>The status of a PIN that is used by an application for user verification is stored in the PS Template DO and shall be indicated in the FCP in a response to the SELECT or STATUS command issued at the application/DF level. The PIN status information is indicated in the FCP in the PS template DO using tag 'C6'. The PS template DO conveys two types of data, first the PS_DO indicated by tag '90' that indicates the status of the PIN(s) enabled/disabled. The PS_DO is followed by one or more key reference data objects indicated by tag '83'.</p> <p>Table 9.5: PS Template DO structure</p> <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>PS Template DO Tag</th> <th>L</th> <th>PS-DO Tag</th> <th>L</th> <th>V PS-byte(s)</th> <th>Key-reference tag</th> <th>L</th> <th>V</th> <th>Key-reference tag</th> <th>L</th> <th>V</th> </tr> </thead> <tbody> <tr> <td>'C6'</td> <td></td> <td>'90'</td> <td></td> <td></td> <td>'83'</td> <td>'01'</td> <td></td> <td>'83'</td> <td>'01'</td> <td></td> </tr> </tbody> </table> | PS Template DO Tag | L | PS-DO Tag | L | V PS-byte(s) | Key-reference tag | L | V | Key-reference tag | L | V | 'C6' | | '90' | | | '83' | '01' | | '83' | '01' | |
| PS Template DO Tag | L | PS-DO Tag | L | V PS-byte(s) | Key-reference tag | L | V | Key-reference tag | L | V | | | | | | | | | | | | | | |
| 'C6' | | '90' | | | '83' | '01' | | '83' | '01' | | | | | | | | | | | | | | | |
| RQ09_0508 | 9.5.2 | The usage qualifier data object indicated by tag '95' is mandatory for the universal PIN and optional for other PINs. This usage qualifier indicates whether an enabled PIN needs to be verified for access. If there is no usage qualifier, or if the associated data object is empty, in front of a key reference, this indicates that this key reference does not support this feature, and it shall always be verified if enabled. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0509 | 9.5.2 | The content of the PS_DO usage qualifier is defined in table 9.4. From table 9.4, the value to be used for user PIN verification is '08'. | | | | | | | | | | | | | | | | | | | | | | |
| RQ09_0510 | 9.5.2 | The default usage qualifier of the Universal PIN after the ATR is set to "do not use" if all application PINs are enabled or if at least one of the applications where the application PIN is disabled has the Universal PIN usage qualifier set to "do not use". | | | | | | | | | | | | | | | | | | | | | | |

5.8 Structure of commands and responses

Reference: ETSI TS 102 221 [1], clause 10.

| RQ Number | Clause | Description |
|-----------|------------|---|
| RQ10_0101 | 10.1.1 | The UICC shall support the CLA defined in table 10.3 and table 10.4a. |
| RQ10_0102 | 10.1.1 | An application on a UICC supporting logical channels utilizing secure messaging shall either exclude the class byte from the signature calculation for the message verification or set it to a default value. |
| RQ10_0103 | 10.1.2 | Table 10.5: Coding of Instruction Byte of the Commands for a telecom application. |
| RQ10_0104 | 10.1.6 | If Le is present in the command APDU, the data field of the response APDU is expected to consist of Le bytes. |
| RQ10_0105 | 10.1 | Table 10.2: Cases of C-APDUs. |
| RQ10_0201 | 10.2.1.1 | Table 10.7: Status byte coding - normal processing. |
| RQ10_0202 | 10.2.1.2 | Table 10.8: Status byte coding - postponed processing. |
| RQ10_0203 | 10.2.1.3 | Table 10.9: Status byte coding - warnings. |
| RQ10_0204 | 10.2.1.4 | Table 10.10: Status byte coding - execution errors. |
| RQ10_0205 | 10.2.1.5 | Table 10.11: Status byte coding - checking errors. |
| RQ10_0206 | 10.2.1.5.1 | Table 10.12: Status byte coding - functions in CLA not supported. |
| RQ10_0207 | 10.2.1.5.2 | Table 10.13: Status byte coding - command not allowed. |
| RQ10_0208 | 10.2.1.5.3 | Table 10.14: Status byte coding - wrong parameters. |
| RQ10_0209 | 10.2.1.6 | Table 10.15: Status byte coding - application errors. |
| RQ10_0210 | 10.2.2 | Table 10.16: Commands and status words. |
| RQ10_0301 | 10.3 | The MANAGE CHANNEL command shall be used to open and close a logical channel. The channel number is assigned by the UICC. |

5.9 Commands

Reference: ETSI TS 102 221 [1], clause 11.

| RQ Number | Clause | Description |
|-----------|------------|--|
| RQ11_0101 | 11.1.1.1 | <p>SELECT Input: File ID, application ID, path or empty.</p> <ul style="list-style-type: none"> Output: <ul style="list-style-type: none"> If the selected file is the MF, a DF or an ADF: File ID, total file size, PIN status and other application specific data. If the selected file is an EF: File ID, file size, total file size, access conditions, invalidated/not invalidated indicator, structure of EF, length of the records in case of linear fixed structure or cyclic structure and reserved and maximum file size in case of BER-TLV structure. |
| RQ11_0102 | 11.1.1.2 | Table 11.1: Coding of P1. |
| RQ11_0103 | 11.1.1.2 | Table 11.2: Coding of P2. |
| RQ11_0104 | 11.1.1.2 | If P1 = '00' and the data field is empty, then P2 shall be set to '0C' ('No data returned'). Then the MF is set as the Current Directory. |
| RQ11_0105 | 11.1.1.3 | The value part of the FCP template data object consists of data objects, as shown in clause 11.1.1.3.1. It is mandatory for data objects to be provided in the order given in the description of each response. |
| RQ11_0106 | 11.1.1.3.1 | Table 11.3: Response for MF, DF, or ADF with FCP template. |
| RQ11_0107 | 11.1.1.3.2 | Table 11.4: Response for an EF with FCP template. |
| RQ11_0108 | 11.1.1.4.2 | For a BER-TLV structure EF, the structural information shall include any administrative overhead that is required to store the TLV objects in the file. |
| RQ11_0109 | 11.1.1.4.2 | If a reserved file size according to clause 11.1.1.4.6.6 is defined for the file, any memory space, that is allocated for the file accordingly, but is currently not used, shall be included in the total file size. |
| RQ11_0110 | 11.1.1.4.3 | The record length shall be present if a record structured file (i.e. for linear fixed or cyclic files) is selected. In this case it indicates the length the records on 2 bytes. Most significant byte comes first in the value field. |

| RQ Number | Clause | Description |
|-----------|--------------|---|
| RQ11_0111 | 11.1.1.4.3 | The number of records shall be present if a record structured file (i.e. for linear fixed or cyclic files) is selected. In this case it indicates the number of records on 1 byte. |
| RQ11_0112 | 11.1.1.4.6.1 | Table 11.6: UICC characteristics byte If b1 is coded '0', the clock may be stopped only if the mandatory condition b3 = '1' (i.e. stop at high level) or b4 = '1' (i.e. stop at low level) is fulfilled. If all 3 bits are coded '0', then the clock shall not be stopped. |
| RQ11_0113 | 11.1.1.4.6.4 | For BER-TLV structured EF this value shall be the maximum amount of bytes that is available in the EF for the next TLV object to be created. This shall include the space required for the tag and the length field. If a maximum file size is defined for the file, it shall not be exceeded, if an object is created with the indicated available size. |
| RQ11_0114 | 11.1.1.4.6.6 | The value shall include administrative overhead (if any) that is required to store TLV objects, but not the structural information for the file itself. |
| RQ11_0115 | 11.1.1.4.6.7 | The value shall include administrative overhead (if any) that is required to store TLV objects, but not the structural information for the file itself. Thus the actually usable file size calculated according to clause 11.1.1.4.1 may be smaller. |
| RQ11_0116 | 11.1.1.4.6.8 | If an application uses this mechanism [TERMINAL CAPABILITY] it shall be used as specified in the present document. |
| RQ11_0117 | 11.1.1.4.7.1 | There shall be a SC byte present for each bit set to '1' in the AM byte except for b8. |
| RQ11_0118 | 11.1.1.4.8 | If the length of the TLV is 1, the SFI value is indicated in the 5 most significant bits (bits b8 to b4) of the TLV value field. In this case, bits b3 to b1 shall be set to 0. |
| RQ11_0119 | 11.1.1.4.10 | The usage qualifier DO indicates if the key reference data object (PIN) following it is to be used for verification or not. If this data object is present it shall precede the key reference data object it is associated with. |
| RQ11_0120 | 11.1.2.1 | Input: None. Output: One of the following: <ul style="list-style-type: none"> • FCP of the current directory. • The DF name TLV Data Object of the currently selected application. • No data returned. |
| RQ11_0121 | 11.1.2.2 | Table 11.8: Coding of P1. |
| RQ11_0122 | 11.1.2.2 | Table 11.9: Coding of P2. |
| RQ11_0123 | 11.1.3.1 | This function [READ BINARY] shall only be performed if the READ access condition for this EF is satisfied. |
| RQ11_0124 | 11.1.3.1 | Input: Relative address and the length of the string. Output: String of bytes. |
| RQ11_0125 | 11.1.3.1 | Table 11.10: Coding of P1. |
| RQ11_0126 | 11.1.4.1 | This function [UPDATE BINARY] shall only be performed if the UPDATE access condition for this EF is satisfied. |
| RQ11_0127 | 11.1.4.1 | Input: Relative address and the length of the string. String of bytes. Output: None. |
| RQ11_0128 | 11.1.4.2 | Table 11.10: Coding of P1 Coding of parameter P1 and P2 are identical to the coding of P1 and P2 in the READ BINARY command. |
| RQ11_0129 | 11.1.5.1 | This function shall only be performed if the READ access condition for this EF is satisfied. |
| RQ11_0130 | 11.1.5.1 | The record pointer shall not be changed by an unsuccessful READ RECORD function. |
| RQ11_0131 | 11.1.5.1 | Four modes are defined: CURRENT, ABSOLUTE, NEXT, PREVIOUS. |
| RQ11_0132 | 11.1.5.1 | Input: Mode, record number (ABSOLUTE mode only) and the length of the record. Output: The record. |
| RQ11_0133 | 11.1.5.2 | Table 11.11: Coding of P2. |
| RQ11_0134 | 11.1.6.1 | This function (UPDATE RECORD) shall only be performed if the UPDATE access condition for this EF is satisfied. The record pointer shall not be changed by an unsuccessful UPDATE RECORD function. |
| RQ11_0135 | 11.1.6.1 | Four modes are defined of which only PREVIOUS is allowed for cyclic files: CURRENT, ABSOLUTE, NEXT, PREVIOUS. |
| RQ11_0136 | 11.1.6.1 | Input: Mode, record number (ABSOLUTE mode only) and the length of the record. The data used for updating the record. Output: None. |
| RQ11_0137 | 11.1.6.2 | Coding of parameter P2 is identical to the coding of P2 in READ RECORD command. |
| RQ11_0138 | 11.1.6.1 | If the mode is CURRENT, the record pointer shall not be affected. |

| RQ Number | Clause | Description |
|-----------|------------|--|
| RQ11_0139 | 11.1.6.1 | If the mode is ABSOLUTE, the record given by the record number shall be updated. |
| RQ11_0140 | 11.1.6.1 | If the mode is ABSOLUTE, the record pointer shall not be affected. |
| RQ11_0141 | 11.1.6.1 | If the mode is NEXT, the record pointer shall be incremented before the function is performed and the pointed record shall be updated. |
| RQ11_0142 | 11.1.6.1 | If the mode is NEXT, and the record pointer has not previously been set within the selected EF, the first record shall be updated and the record pointer shall be set to this record. |
| RQ11_0143 | 11.1.6.1 | If the mode is NEXT, and the record pointer addresses the last record, the record pointer shall not change and no record shall be updated. |
| RQ11_0144 | 11.1.6.1 | If the mode is PREVIOUS, the record pointer shall be decremented before the function shall be performed and the pointed record shall be updated. |
| RQ11_0145 | 11.1.6.1 | If the mode is PREVIOUS, and the record pointer has not previously been set within the selected EF, the last record shall be updated and the record pointer set to this record. |
| RQ11_0146 | 11.1.6.1 | If the mode is PREVIOUS, the EF is a linear fixed, and the record pointer addresses the first record, the record pointer shall not change and no record shall be updated. |
| RQ11_0147 | 11.1.6.1 | If the mode is PREVIOUS and the EF is a cyclic file, the oldest record shall be updated, the record pointer set to this record, and this record shall become the first record. |
| RQ11_0138 | 11.1.7.1 | This function (SEARCH RECORD) shall only be performed if the READ access condition for this EF is satisfied. |
| RQ11_0139 | 11.1.7.1 | The search starts: <ul style="list-style-type: none"> • either at the first byte of the record(s) (simple search); or • from a given offset in the record(s); or • from the first occurrence of a given byte in the record(s). |
| RQ11_0140 | 11.1.7.1 | If one or more matches are found the record pointer shall be set to the first record where the search pattern was found. |
| RQ11_0141 | 11.1.7.1 | Input: Search mode (simple/enhanced), Offset, Pattern. Output: Either none, if Le is empty or no matches where found; or at most the number of record(s) number(s) defined in Le. |
| RQ11_0142 | 11.1.7.2 | Table 11.12: Coding of P2. |
| RQ11_0143 | 11.1.7.2 | Table 11.13: Coding of the first byte of the search indication for enhanced search mode. |
| RQ11_0144 | 11.1.8.1 | This function can only be used if this EF has an INCREASE access condition assigned and this condition is fulfilled. The INCREASE access condition is indicated in the access rules using AM_DO tag '84'. Tag '84' indicates that the INS code for the INCREASE command is indicated as the value in the TLV object (instruction code '32'). The INCREASE command can only be used on files that refer to an access rule where this INS code is indicated as part of the rule. |
| RQ11_0145 | 11.1.8.1 | The function does not perform the increase if the result would exceed the maximum value of the record (represented by all bytes set to 'FF'). |
| RQ11_0146 | 11.1.8.1 | Input: Value to be added. Output: Value of the increased record. Value which has been added. |
| RQ11_0147 | 11.1.8.2 | Table 11.14: Coding of P1. |
| RQ11_0148 | 11.1.9.1.1 | The security status set as a result of the verification is valid regardless on which logical channel the verification is performed. |
| RQ11_0149 | 11.1.9.1.1 | The verification process is subject to the following conditions being fulfilled: <ul style="list-style-type: none"> • PIN is not disabled; • PIN is not blocked. |
| RQ11_0150 | 11.1.9.1.1 | If the access condition for a function to be performed on the last selected file is PIN, then a successful verification of the relevant PIN is required prior to the use of the function on this file unless the PIN is disabled. |
| RQ11_0151 | 11.1.9.1.1 | If the PIN presented is correct, the number of remaining PIN attempts for that PIN shall be reset to its initial value 3. |
| RQ11_0152 | 11.1.9.1.1 | If the PIN presented is false, the number of remaining PIN attempts for that PIN shall be decremented, regardless on which logical channel the VERIFY PIN command was issued. The UICC shall return SW1 SW2 = '63C2' after the first false PIN presentation. The UICC shall return SW1 SW2 = '63C1' after the second consecutive false PIN presentation, not necessarily in the same card session. After the third consecutive false PIN presentation, not necessarily in the same card session, the respective PIN shall be blocked and the UICC shall return SW1 SW2 = '63C0'. Any subsequent VERIFY PIN command applied to this blocked PIN shall then return SW1 SW2 = '6983'. The access condition can never be fulfilled until the UNBLOCK PIN function has been successfully performed on the respective PIN. |

| RQ Number | Clause | Description |
|-----------|------------|--|
| RQ11_0153 | 11.1.9.1.1 | Input: Indication PIN. Output: None. |
| RQ11_0154 | 11.1.9.1.2 | This function (VERIFY PIN) is performed whether or not the relevant PIN is disabled or blocked (e.g. by 3 consecutive wrong PIN presentations). Input: Empty. Output: None. |
| RQ11_0155 | 11.1.9.1.2 | The VERIFY PIN command is sent to the UICC with parameter P2 indicating the PIN for which the retry counter value is to be retrieved with an empty data field. The number of retries, if any, is indicated in the response by SW1 SW2 = '63CX', where X indicates the number of retries left. A VERIFY PIN command with empty data field applied to a blocked PIN shall return SW1 SW2 = '63C0' or SW1 SW2 = '6983'. |
| RQ11_0156 | 11.1.9.1.3 | Table 11.15: Coding of P2. |
| RQ11_0157 | 11.1.10.1 | The Change PIN command is used to initiate the comparison of the verification data with the PIN, and then to conditionally replace the existing PIN with the new PIN sent to the UICC in the command. Once successfully changed on a logical channel, the new value is immediately available to all channels. Input: Indication of PIN, old PIN, new PIN. Output: None. |
| RQ11_0158 | 11.1.10.1 | This function assigns a new value to the relevant PIN subject to the following conditions being fulfilled: <ul style="list-style-type: none"> • PIN is not disabled; • PIN is not blocked. |
| RQ11_0159 | 11.1.10.1 | If the old PIN presented is correct, the number of remaining PIN attempts for that PIN shall be reset to its initial value 3 and the new value for the PIN becomes valid. |
| RQ11_0160 | 11.1.10.1 | If the old PIN presented is false, the number of remaining PIN attempts for that PIN shall be decremented and the value of the PIN is unchanged. After 3 consecutive false PIN presentations, not necessarily in the same card session, the respective PIN shall be blocked and the access condition can never be fulfilled until the UNBLOCK PIN function has been performed successfully on the respective PIN. |
| RQ11_0161 | 11.1.11.1 | The verification of the alternative global key reference shall be performed instead of the application PIN verification to get access to the application. |
| RQ11_0162 | 11.1.11.1 | The UICC shall perform a validation of the SE after the successful execution of this command as the current SE may have changed and this shall affect the access to files. |
| RQ11_0163 | 11.1.11.1 | The access rules for the application must cater for the case that an alternative global key reference replaces the application PIN. It is the responsibility of the application to specify this. |
| RQ11_0164 | 11.1.11.1 | The successful execution of this function has the effect that files protected by PIN are now accessible as if they were marked "ALWAYS", except in the case where the alternative global key reference is to be used as a replacement for the disabled PIN. In this case the access condition for files containing only a reference to the disabled PIN is the alternative global key reference. For files having more than one global key reference indicated in the access rules the access condition is "ALWAYS" after disabling on of the key references used in the access rules. Input: PIN. Output: None. |
| RQ11_0165 | 11.1.11.1 | The function DISABLE PIN shall not be executed by the selected application when PIN is already disabled or blocked. |
| RQ11_0166 | 11.1.11.1 | Every application must specify whether this function is applicable to all PINs defined for the application. |
| RQ11_0167 | 11.1.11.1 | If the PIN presented is correct, the number of remaining PIN attempts shall be reset to its initial value 3 and PIN shall be disabled. |
| RQ11_0168 | 11.1.11.1 | If the PIN presented is false, the number of remaining PIN attempts shall be decremented and PIN remains enabled. After 3 consecutive false PIN presentations, not necessarily in the same card session, the PIN shall be blocked and the access condition can never be fulfilled until the UNBLOCK PIN function has been successfully performed on PIN. |
| RQ11_0169 | 11.1.11.1 | Table 11.16: Coding of P1. |
| RQ11_0170 | 11.1.12.1 | If an alternative global key reference has been used as a replacement for the application PIN, the usage of the alternative global key reference as a replacement shall be disabled upon enabling the PIN for which the alternative global key reference has been a replacement (setting the usage qualifier in the PS_DO template data object for the alternative global key reference to do not use = '00'). |

| RQ Number | Clause | Description |
|-----------|-------------|---|
| RQ11_0171 | 11.1.12.1 | The UICC shall perform a validation of the SE after the successful execution of this command as the current SE may have changed and this shall affect the access to files. |
| RQ11_0172 | 11.1.12.1 | The function ENABLE PIN shall not be executed by the selected application when PIN is already enabled or blocked. |
| RQ11_0173 | 11.1.12.1 | Every application shall specify whether this function is applicable to all PINs defined for the application. |
| RQ11_0174 | 11.1.12.1 | If the PIN presented is correct, the number of remaining PIN attempts shall be reset to its initial value 3 and PIN shall be enabled. |
| RQ11_0175 | 11.1.12.1 | If the PIN presented is false, the number of remaining PIN attempts shall be decremented and PIN remains disabled. After 3 consecutive false PIN presentations, not necessarily in the same card session, PIN shall be blocked and may optionally be set to "enabled". Once blocked, the PIN can only be unblocked using the UNBLOCK PIN function. If the PIN is blocked and "disabled", the access condition shall remain granted. If the PIN is blocked and "enabled", the access condition can never be fulfilled until the UNBLOCK PIN function has been successfully performed on PIN. |
| RQ11_0176 | 11.1.12.1 | The Enable PIN command is used to switch on the requirement to compare the PIN verification data with the PIN reference data. It is the reverse function of DISABLE PIN. Input: PIN. Output: None. |
| RQ11_0177 | 11.1.13.1.1 | This function is used to reset the PIN retry counter to its initial value and then to conditionally set a new PIN value. This function may be performed whether or not the relevant PIN is blocked (e.g. by 3 consecutive wrong PIN presentations). This unblocking process is subject to the following condition being fulfilled: UNBLOCK PIN is not blocked Input: Indication PIN, the UNBLOCK PIN and the new PIN. Output: None. |
| RQ11_0178 | 11.1.13.1.1 | If the UNBLOCK PIN presented is correct, the value of the PIN, presented together with the UNBLOCK PIN, is assigned to that PIN, the number of remaining UNBLOCK PIN attempts for that UNBLOCK PIN is reset to its initial value 10 and the number of remaining PIN attempts for that PIN is reset to its initial value 3. After a successful unblocking attempt the PIN is enabled and the relevant access condition level is satisfied the new PIN value is available for all channels. |
| RQ11_0179 | 11.1.13.1.1 | If the presented UNBLOCK PIN is false, the number of remaining UNBLOCK PIN attempts for that UNBLOCK PIN, regardless on which logical channel the UNBLOCK PIN command was issued, shall be decremented. The UICC shall return SW1 SW2 = '63C9', '63C8', ..., '63C1' for up to the ninth consecutive false UNBLOCK PIN presentation, not necessarily in the same card session. After the tenth consecutive false UNBLOCK PIN presentation, not necessarily in the same card session, the respective UNBLOCK PIN shall be blocked and the UICC shall return SW1 SW2 = '63C0'. |
| RQ11_0180 | 11.1.13.1.1 | Any subsequent UNBLOCK PIN command applied to this blocked UNBLOCK PIN shall then return SW1 SW2 = '6983'. |
| RQ11_0181 | 11.1.13.1.1 | A false UNBLOCK PIN shall have no effect on the status of the respective PIN itself. |
| RQ11_0182 | 11.1.13.1.2 | The UNBLOCK PIN command with empty data field is used to retrieve the UNBLOCK PIN retry counter from the UICC. This function may be performed whether or not the relevant PIN is blocked (e.g. by 3 consecutive wrong PIN presentations) and whether or not the UNBLOCK PIN is blocked. Input: Empty. Output: None. |
| RQ11_0183 | 11.1.13.1.2 | The UNBLOCK PIN command is sent to the UICC with parameter P2 indicating the PIN for which the UNBLOCK PIN retry counter value is to be retrieved with an empty data field. The number of retries, if any, is indicated in the response by SW1 SW2 = '63CX', where X indicates the number of retries left. |
| RQ11_0184 | 11.1.13.1.2 | An UNBLOCK PIN command with empty data field applied to a blocked UNBLOCK PIN shall return SW1 SW2 = '63C0' or SW1 SW2 = '6983'. |
| RQ11_0185 | 11.1.14.1 | This function initiates a reversible deactivation of an EF. After a DEACTIVATE FILE function the respective flag in the file LCS1_DO shall be changed accordingly. Input: File ID, path or empty. Output: None. |
| RQ11_0186 | 11.1.14.1 | This function shall only be performed if the DEACTIVATE FILE access condition for the EF is satisfied. |
| RQ11_0187 | 11.1.14.1 | In case of successful execution of the command, the EF on which the command was applied becomes the current EF. |

| RQ Number | Clause | Description |
|------------|-----------|--|
| RQ11_0188 | 11.1.14.1 | After an unsuccessful execution, the current EF and current DF shall remain the same as prior to the execution. |
| RQ11_0189 | 11.1.14.1 | A deactivated file shall no longer be available within the selected application for any function except for the SELECT and the ACTIVATE FILE functions. |
| RQ11_0190 | 11.1.14.2 | Table 11.17: Coding of P1. |
| RQ11_0191 | 11.1.15.1 | This function reactivates a deactivated EF. After an ACTIVATE FILE function the respective flag in the file LCS1_DO shall be changed accordingly. Input: File ID, path or empty. Output: None. |
| RQ11_0192 | 11.1.15.1 | In case of successful execution of the command, the EF on which the command was applied becomes the current EF. |
| RQ11_0193 | 11.1.15.1 | After an unsuccessful execution, the current EF and current DF shall remain the same as prior the execution. |
| RQ11_0194 | 11.1.15.1 | This function shall only be performed if the ACTIVATE FILE access condition for the EF is satisfied. |
| RQ11_0195 | 11.1.15.2 | P1: As specified for the DEACTIVATE command (see clause 11.1.14.2). |
| RQ11_0196 | 11.1.16.1 | An appropriate application shall be selected in the UICC before issuing this command. |
| RQ11_0197 | 11.1.16.1 | The EVEN instruction code can be used when the challenge data provided by the terminal is not TLV encapsulated data and the length of the challenge data provided by the terminal is less than 256 bytes. Input: Challenge data. Output: Authentication and ciphering data. |
| RQ11_0198 | 11.1.16.1 | The support of the ODD instruction code is application specific. It is used when challenge and response data is TLV encapsulated regardless of their length. Terminals and UICCs that do not support applications requiring TLV format do not have to support AUTHENTICATE command with ODD instruction code. The authentication data and the authentication response data are encapsulated in BER-TLV objects structured as defined in clause 11.3 using tag '73' for BER-TLV structured data and tag '53' otherwise. |
| RQ11_0199 | 11.1.16.1 | The first AUTHENTICATE APDU is sent with P1 indicating "First block of authentication data". Following AUTHENTICATE APDUs are sent with P1 indicating "Next block of authentication data". As long as the UICC has not received all segments of the authentication data it shall answer with SW1 SW2 '63 F1'. When all segments of the authentication data are received, the UICC answer with SW1 SW2 '62 F3' Input: Authentication data encapsulated in a BER-TLV data object. Output: None. |
| RQ11_01100 | 11.1.16.1 | The authentication response data is retrieved from the UICC using one or more separate AUTHENTICATE APDUs with the same chaining mechanism as for the authentication data. The UICC performs the segmentation of the data, and the terminal the concatenation of the response data. The first AUTHENTICATE APDU is sent with P1 indicating "First block of authentication response data". When the UICC receives this first AUTHENTICATE APDU with P1 indicating "First block of authentication response data", it shall perform the command and calculate the authentication response. Following AUTHENTICATE APDUs are sent with P1 indicating "Next block of authentication response data". As long as the UICC has not sent all segments of the authentication response data it shall answer with SW1 SW2 '62 F1'. When all segments of the authentication response data are sent, the UICC shall answer with SW1 SW2 '90 00' Input: None. Output: Authentication response data encapsulated in a BER-TLV data object. |
| RQ11_01101 | 11.1.16.1 | The terminal may issue an AUTHENTICATE APDU indicating "retransmit previous block of authentication data" or "retransmit previous block of authentication response data". |
| RQ11_01102 | 11.1.16.2 | Table 11.18: Coding of P2. |
| RQ11_01103 | 11.1.16.2 | Table 11.18a: Coding of P1. |
| RQ11_01104 | 11.1.17.1 | This command opens and closes logical channels. The open function opens a new logical channel other than the basic channel '0'. Input: None. Output: None; or the channel number of the logical channel assigned by the UICC. |
| RQ11_01105 | 11.1.17.1 | The UICC shall support channel number assignment by the UICC. |
| RQ11_01106 | 11.1.17.1 | If the TERMINAL CAPABILITY command with the tag '81' (Extended logical channels terminal support) is not sent by the terminal then the UICC shall not open more than 3 logical channels in addition to the basic channel. |

| RQ Number | Clause | Description |
|------------|-------------|--|
| RQ11_01107 | 11.1.17.1 | The UICC shall first assign channel numbers in the range 1 to 3 before assigning the extended logical channels number (i.e. from 4 to 19). |
| RQ11_01108 | 11.1.17.1 | The close function explicitly closes a logical channel. When a channel has been successfully closed, the channel can be reassigned. The basic logical channel '0' is always available and cannot be closed. |
| RQ11_01109 | 11.1.17.2 | Table 11.20: Coding of P2. |
| RQ11_01110 | 11.1.18.1 | This function is used to create a random number. The generated random number is associated with the logical channel specified in the GET CHALLENGE command CLA. The maximum length of the random number returned by the UICC is specified by the Le parameter in the command parameters data. Input: None. Output: Random number. |
| RQ11_01111 | 11.1.18.1 | The validity of the random number is at least for the next command, on the same logical channel, following the GET CHALLENGE command if not specified differently by the application. The random number referenced is always the latest generated on the logical channel specified in the CLA by the command referencing the usage of a generated random number. |
| RQ11_01112 | 11.1.19.1 | This function is used to inform the UICC about terminal capability. Input: Terminal capabilities. Output: None. |
| RQ11_01113 | 11.1.19.2.1 | Terminals supporting applications requiring more power than the minimum power supply as defined in table 6.4 shall issue the TERMINAL CAPABILITY command with a terminal power supply TLV object during a new card session before the first application selection. |
| RQ11_01114 | 11.1.19.2.2 | Terminals supporting more logical channels than the standard logical channels shall indicate it to the UICC by issuing the TERMINAL CAPABILITY command with an extended logical channels terminal support TLV object during a new card session before the first application selection. a UICC implemented according to the present document shall interpret any extended logical channels terminal support TLV as if it was sent with zero length. |
| RQ11_01115 | 11.1.19.2.3 | UICC implemented according to the present document shall ignore any additional bytes in the TLV. |
| RQ11_01116 | 11.1.19.2.3 | The additional interfaces support is indicated by tag '82' within the constructed TLV object. |
| RQ11_01117 | 11.1.20.1 | This command can chain successive blocks of command data, if present, with a maximum size of 255 bytes each, required for one operation using P2 to indicate the first/next block. The terminal performs the segmentation of the data, and the UICC the concatenation of the data. The first MANAGE SECURE CHANNEL APDU is sent with P2 indicating "First block of command data". Following MANAGE SECURE CHANNEL APDUs are sent with P2 indicating "Next block of command data". As long as the UICC has not received all segments of the command data it shall answer with SW1 SW2 '63 F1'. When all segments of the command data are received and if the command produces a response, the UICC shall answer with SW1 SW2 '62 F3'. |
| RQ11_01118 | 11.1.20.1 | The command response data is retrieved from the UICC using one or more separate MANAGE SECURE CHANNEL APDUs with the same chaining mechanism as for the command data. The UICC performs the segmentation of the data, and the terminal the concatenation of the response data. The first MANAGE SECURE CHANNEL APDU is sent with P2 indicating "First block of response data". Following MANAGE SECURE CHANNEL APDUs are sent with P2 indicating "Next block of response data". As long as the UICC has not sent all segments of the response data it shall answer with SW1 SW2 '62 F1'. When all segments of the response data are sent, the UICC shall answer with SW1 SW2 '90 00'. |
| RQ11_01119 | 11.1.20.2.1 | If this command is sent via any existing secure channel, then the endpoints returned shall be the end points that are currently available at the UICC end of this secure channel. |
| RQ11_01120 | 11.1.20.2.1 | If there are endpoints available on the UICC, then an "Endpoint information" TLV shall be present for each available endpoint. |
| RQ11_01121 | 11.1.20.2.1 | If the remaining Response is greater than 255 Bytes then the next 255 bytes shall be returned and the SW1 SW2 shall be set to "More data available". |
| RQ11_01122 | 11.1.20.2.1 | If the remaining Response is less than or equal to 255 bytes then all of the bytes shall be returned and SW1 SW2 shall be set to "normal ending of command". |
| RQ11_01123 | 11.1.20.2.2 | The UICC shall return the following data encapsulated in tag '73'. |
| RQ11_01124 | 11.1.20.2.2 | Coding of UICC_ID: This shall be a unique value that identifies that UICC. This shall be the ICCID as defined for EFICCID. |

| RQ Number | Clause | Description |
|------------|-------------|---|
| RQ11_01125 | 11.1.20.2.2 | If the Endpoint Secure channel capability indicates support of TLS then the endpoint port number shall be the hex coded value of the TCP port to be used else this shall be set to 'FFFF'. |
| RQ11_01126 | 11.1.20.2.2 | Coding of the Endpoint identifier value: The endpoint identifier shall be the AID value of the application that hosts the endpoint. See ETSI TS 101 220 [24]. |
| RQ11_01127 | 11.1.20.3.2 | Coding of Terminal_ID: This shall be a unique value that identifies that terminal. This may be the IMEI as defined in ETSI TS 124 008 [25]. |
| RQ11_01128 | 11.1.20.3.2 | This shall be a unique value that identifies that UICC. This shall be the ICCID as defined for EFICCID. |
| RQ11_01129 | 11.1.20.3.2 | This shall be the AID of the application in that UICC that hosts the UICC endpoint. See ETSI TS 101 220 [24]. |
| RQ11_01130 | 11.1.20.5.2 | Coding of Algorithm and Integrity BER-TLV, tag '89': Only one bit shall be indicated. |
| RQ11_01131 | 11.1.20.5.2 | The data container size set by the terminal shall be less or equal to the value indicated in the BER-TLV object returned with Tag '82' returned by the Retrieve UICC Endpoints command. |
| RQ11_01132 | 11.1.20.5.2 | In the TRANSACT DATA command the session number shall be associated with the Endpoint data container size for the secure channel started with this command. |
| RQ11_01133 | 11.1.20.6.1 | Failure to terminate one or more Security Association(s) shall be indicated with an error status word. |
| RQ11_01134 | 11.1.20.6.1 | In case the MAC provided by the terminal is incorrect, the UICC shall indicate the error by returning SW1 SW2 '98 62'. |
| RQ11_01135 | 11.1.20.6.1 | Attempts to terminate a non-existing Security Association shall be indicated with a success status word. |
| RQ11_01136 | 11.1.20.6.2 | The command data shall contain either a Master_SA TLV only or a list of Connection_SA TLVs associated to the same MSA. |
| RQ11_01137 | 11.1.21.1 | If the UICC successfully receives the last block then SW1 SW2 shall indicate 'Data transaction ongoing'. |
| RQ11_01138 | 11.1.21.1 | If the UICC has been requested to send a block to the terminal, b3 in P1 is set to '0', and this is not the last block to be retrieved to the terminal, then SW1 SW2 shall indicate 'More data blocks pending'. |
| RQ11_01139 | 11.1.21.1 | If the UICC indicates a proactive command the terminal can send a command like STATUS that allows SW1 SW2 to be '91 XX' in a different session. The interrupted transaction is resumed afterwards. |
| RQ11_01140 | 11.1.21.2 | Table 11.30: Coding of P1 - Session control. |
| RQ11_01141 | 11.1.21.2 | Table 11.33: SW2 of '92 XX'. |
| RQ11_01142 | 11.1.21.2 | Response data shall be encoded within TLV objects with the same tag and format as the one used in the data in the TRANSACT DATA APDU command. |
| RQ11_0201 | 11.2.1.1 | This function is used by the terminal to transmit its CAT capabilities to the applications present on the UICC. Input: Terminal profile, the structure of the data is defined in ETSI TS 102 223 [5]. Output: None. |
| RQ11_0202 | 11.2.2.1 | This function is used to transfer CAT information from the UE to the UICC. Input: The structure of the data is defined in ETSI TS 102 223 [5]. Output: The structure of the data is defined in ETSI TS 102 223 [5]. |
| RQ11_0203 | 11.2.3.1 | This function is used to transfer a proactive command from the UICC to the terminal (e.g. from a CAT application). Input: None. Output: Data string containing a proactive command for the terminal (e.g. a CAT command). |
| RQ11_0204 | 11.2.4.1 | This function is used to transfer from the terminal to the UICC the response to a previously fetched proactive command (e.g. a CAT command). Input: <ul style="list-style-type: none"> • Data string containing the response. Output: <ul style="list-style-type: none"> • None. |

| RQ Number | Clause | Description |
|-----------|----------|--|
| RQ11_0301 | 11.3 | Tags of the context-specific class, coded on one to three bytes, shall be used for the TLV objects, i.e. tags shall be taken out of the following ranges: <ul style="list-style-type: none"> '80' to '9E' and '9F 1F' to '9F 7F' and '9F 81 XX' to '9F FF XX' with 'XX' from '00' to '7F' for primitive objects; and 'A0' to 'BE' and 'BF 1F' to 'BF 7F' and 'BF 81 XX' to 'BF FF XX' with 'XX' from '00' to '7F' for constructed objects. |
| RQ11_0302 | 11.3 | Tags contained in the value part of a constructed BER-TLV object shall not be included in the tag list. Tag '5C' shall not be considered as an allocated tag. |
| RQ11_0303 | 11.3 | Even though the files are referred to as BER TLV structured files and the UICC internal encoding may be according to the BER, the length coding of the TLV objects used with the commands in this clause shall use the DER encoding defined here. |
| RQ11_0304 | 11.3 | The UICC shall answer with "more data available" or "more data expected" on any but the last block. |
| RQ11_0305 | 11.3 | Any interleaved command that modifies the current EF or the current tag pointer shall abort an uncompleted data object transfer. |
| RQ11_0306 | 11.3.1 | A successful APDU indicating "First Block" sets the current tag pointer and shall abort an uncompleted data object transfer. This applies for all tags defined in this clause, even if the new tag is the same as the previous one. |
| RQ11_0307 | 11.3.1 | The current tag pointer and its associated context (e.g. current offset in the data object) shall not be changed by an APDU resulting in an error status word. |
| RQ11_0308 | 11.3.1 | For the second and all following blocks the terminal may issue a SET or RETRIEVE DATA command indicating "retransmit previous block". The setting "retransmit previous block" is only allowed if the previous command did not result in an error status word. |
| RQ11_0309 | 11.3.1.1 | This function shall only be performed if the READ access condition for this EF is satisfied. |
| RQ11_0310 | 11.3.1.1 | If the requested TLV object does not exist in the EF, the UICC shall answer with "referenced data not found". |
| RQ11_0311 | 11.3.1.1 | If a current tag pointer associated with a SET DATA operation processed by another application points to the requested TLV object, the UICC shall answer with "conditions of use not satisfied". |
| RQ11_0312 | 11.3.1.1 | If the tag of the object is not in the range specified in the present document, the UICC shall answer with "incorrect parameters in the data field". |
| RQ11_0313 | 11.3.1.1 | The status word sent by the card after a successful RETRIEVE DATA command is '62F1' or '62F2' if more data is available. |
| RQ11_0314 | 11.3.1.1 | Once a data object was fully retrieved, any subsequent RETRIEVE DATA command on this data object with parameter P2 set to "Next Block" shall be rejected with the status word '6A86'. |
| RQ11_0315 | 11.3.1.1 | The tags of not yet completed SET DATA operations processed by other applications shall also be included in the list. |
| RQ11_0316 | 11.3.1.2 | Table 11.35: Coding of P2 => check command and response data. |
| RQ11_0317 | 11.3.2.1 | If P2 indicates "first block", this command creates a new data object in the current BER-TLV structure EF or replaces an already existing data object with the same tag or deletes a data object. |
| RQ11_0318 | 11.3.2.1 | Space that is freed by such an operation shall be available for new objects. |
| RQ11_0319 | 11.3.2.1 | This command shall only be performed if the UPDATE access condition for this EF is satisfied. |
| RQ11_0320 | 11.3.2.1 | If the length requested is not available, then the card shall return '6A84'. |
| RQ11_0321 | 11.3.2.1 | If a current tag pointer associated with a SET or RETRIEVE DATA operation processed by another application points to the requested TLV object, the UICC shall answer with "conditions of use not satisfied". |
| RQ11_0322 | 11.3.2.1 | When a SET DATA command is successfully executed, the UICC shall return '9000' if it had received all expected data. |
| RQ11_0323 | 11.3.2.1 | It shall return '63F1' or '63F2' if data as indicated in the length of the TLV object is still missing. |
| RQ11_0324 | 11.3.2.1 | A data object transfer is successfully completed when the number of bytes received matches the length indicated for the data object. After that, any subsequent SET DATA command on this data object with parameter P2 set to "Next block" shall be rejected with the status word '6A86'. |
| RQ11_0325 | 11.3.2.1 | When a data object transfer is aborted, the data object with this tag shall no longer be available in the EF. |

| RQ Number | Clause | Description |
|-----------|----------|---|
| RQ11_0326 | 11.3.2.1 | If the data sent with this command is greater than the length of the value field of the BER-TLV data object, the card shall return status word '6700', the data object is not updated and the data object transfer is not completed. |
| RQ11_0327 | 11.3.2.1 | If the tag of the object is not in the range specified in the present document, the UICC shall answer with "incorrect parameters in the data field". |
| RQ11_0328 | 11.3.2.1 | If in a SET DATA command with P2 indicating "First Block", the data field only contains a tag field, i.e. the length and the value field of the BER-TLV data object are missing, the data object specified by the tag shall be deleted if present in the current context. Deleting a non-existent object shall not be considered as an error. |
| RQ11_0329 | 11.3.2.1 | If the data field contains a tag field and a length field with zero value, the object is not deleted, but a zero length object is created. |

5.10 Transmission oriented commands

Reference: ETSI TS 102 600 [13], clause 12.

| RQ Number | Clause | Description |
|-----------|----------|--|
| RQ12_0101 | 12.1.1.1 | If the command GET RESPONSE is executed, it is required that it is executed immediately after the command it is related to (no other command shall come between the command/response pair and the command GET RESPONSE). |
| RQ12_0102 | 12.1.1.1 | If the sequence is not respected, the selected application shall send the status information "technical problem, no precise diagnosis" as a reaction to the GET RESPONSE. |
| RQ12_0103 | 12.1.1.2 | Since the MF is implicitly selected after UICC activation, GET RESPONSE is also allowed as the first command after activation for only GSM terminal. |

5.11 Application independent files

Reference: ETSI TS 102 221 [1], clause 13.

| RQ Number | Clause | Description |
|-----------|--------|---|
| RQ13_0101 | 13.1 | Each existing EF shall be selectable under the MF using the identifier given in the table for that EF. |
| RQ13_0102 | 13.1 | All mandatory EFs shall exist on the UICC. |
| RQ13_0201 | 13.2 | The identifier of the EF shall be that given in the table for that EF. |
| RQ13_0301 | 13.3 | The type and structure of the EF shall be that given in the table for that EF. |
| RQ13_0401 | 13.4 | The file size shall be at least that given in the table for that EF. |
| RQ13_0501 | 13.5.1 | The short file identifier shall exist if it is mandatory in the table for that EF. |
| RQ13_0502 | 13.5.2 | The access conditions shall be those given in the table for that EF. EF _{ARR} (Access Rule Reference) |

5.12 Application independent protocol

Reference: ETSI TS 102 221 [1], clause 14.

| RQ Number | Clause | Description |
|-----------|--------|--|
| RQ14_0101 | 14.1.1 | Reading an EF |
| RQ14_0102 | 14.1.2 | Updating an EF |
| RQ14_0103 | 14.1.3 | Increasing an EF |
| RQ14_0201 | 14.2.1 | PIN verification |
| RQ14_0202 | 14.2.2 | PIN value substitution |
| RQ14_0203 | 14.2.3 | PIN disabling |
| RQ14_0204 | 14.2.4 | PIN enabling |
| RQ14_0205 | 14.2.5 | PIN unblocking |
| RQ14_0301 | 14.3.1 | Application selection by use of the EF _{DIR} file |

| RQ Number | Clause | Description |
|-----------|--------|---|
| RQ14_0302 | 14.3.2 | Direct application selection |
| RQ14_0303 | 14.3.3 | Direct application selection with partial AID |
| RQ14_0401 | 14.4.1 | Application session activation |
| RQ14_0402 | 14.4.2 | UICC application interrogation |
| RQ14_0403 | 14.4.3 | UICC application session termination |
| RQ14_0501 | 14.5.1 | UICC activation |
| RQ14_0502 | 14.5.2 | UICC presence detection |
| RQ14_0503 | 14.5.3 | UICC preferred language request |
| RQ14_0504 | 14.5.4 | UICC logical channels |
| RQ14_0601 | 14.6.1 | CAT Initialization procedure |
| RQ14_0602 | 14.6.2 | Proactive polling |
| RQ14_0603 | 14.6.3 | Support of commands |
| RQ14_0604 | 14.6.4 | Support of response codes |
| RQ14_0605 | 14.6.5 | Independence of applications and CAT tasks |
| RQ14_0606 | 14.6.6 | Use of BUSY status response |
| RQ14_0607 | 14.6.7 | Additional processing time |

5.13 Support of APDU-based UICC applications over USB

Reference: ETSI TS 102 221 [1], clause 15.

| RQ Number | Clause | Description |
|-----------|--------|--|
| RQ15_0101 | | The request for additional processing time of clause 14.6.7 of the present document shall be performed by a USB command as described in TS 102 600 [13]. |

6 Test cases

6.1 Introduction

This clause details all the tests for testing the IUT against ETSI TS 102 221 [1]. This test suite allows testing of the IUT against the base specification with respect to:

- Physical characteristics
- Electrical specifications of the UICC - Terminal interface
- Initial communication establishment procedure
- Transmission protocols
- Application and File structure
- Security features
- Structure of commands and responses
- Commands
- Transmission Oriented Commands
- Application independent files

6.2 Physical characteristic tests

6.2.1 Dimensions of the UICC card

6.2.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.2.1.2 Initial conditions

Choose the dimension design for the kind of UICC card ETSI TS 102 221 [1], ISO/IEC 7810 [7] or ISO/IEC 7816-2 [10].

6.2.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|---|
| 1 | User | Measure the dimensions of the card and the contacts and check if they perform the dimensions of the design | RQ04_0001 RQ04_0002 RQ04_0003 RQ04_0004 RQ04_0005 RQ04_0006 RQ04_0007 RQ04_0008 RQ04_0009 |

6.2.2 Temperature range for card operation

6.2.2.1 Test execution

The test procedure shall be executed once for each of following parameters:

- If the EUT is built for the standard temperature range the temperatures given in the Test procedure apply.
- For temperature class A the temperature in Test procedure 2, step 4) shall be set to -40 °C.
- For temperature class B the temperature in Test procedure 2, step 4) shall be set to -40 °C and the temperature in step 8) shall be set to 105 °C.
- For temperature class C the temperature in Test procedure 2, step 4) shall be set to -40 °C and the temperature in step 8) shall be set to 125 °C .

6.2.2.2 Initial conditions

The UICC shall be placed in a temperature-controllable environment and connected to a ME simulator.

A temperature measuring device shall be connected to the surface of the UICC.

6.2.2.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | The temperature of the UICC shall be set to +25 °C | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) | RQ04_0401 RQ04_0402 |
| 4 | User | The temperature of the UICC shall be reduced to -25 °C | |
| 5 | T → UICC | Steps 2) and 3) shall be repeated | |
| 6 | User | The temperature of the UICC shall be increased to +70 °C | |
| 7 | T → UICC | Steps 2) and 3) shall be repeated | |

6.2.2.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | User | The temperature of the UICC shall be set to +25 °C | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) | RQ04_0401 RQ04_0402 RQ04_0403 RQ04_0404 |
| 4 | User | The temperature of the UICC shall be reduced to -25 °C | |
| 5 | T → UICC | Steps 2) and 3) shall be repeated | |
| 6 | User | The temperature of the UICC shall be increased to +85 °C | |
| 7 | T → UICC | Steps 2) and 3) shall be repeated | |

6.3 Electrical specifications of the UICC - Terminal interface

6.3.1 Supply voltage V_{cc} (contact C1)

6.3.1.1 V_{cc} - Voltage limits

6.3.1.1.1 Test execution

The following test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.3.1.1.2 Initial conditions

Set the Universal PIN to 00000000.

6.3.1.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | Set the supply voltage for contact C1 (V_{cc}) to V_{ccmin} | |
| 2 | T → UICC | Reset the UICC | |
| 3 | UICC → T | Send a valid ATR | |
| 4 | T → UICC | Send a CHANGE PIN command to the UICC with a new Universal PIN value of 11110000 | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ05_0101 RQ05_0201 RQ05_0301 |
| 6 | T → UICC | Reset the UICC | |
| 7 | UICC → T | Send a valid ATR | RQ05_0101 RQ05_0201 RQ05_0301 |
| 8 | T → UICC | Send a CHANGE PIN command to return the Universal PIN to its initial value | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ05_0101 RQ05_0201 RQ05_0301 |
| 10 | T | Set the supply voltage for contact C1 (V_{cc}) to V_{ccmax} | |
| 11 | T | Repeat steps 2 to 9 with V_{cc} set to V_{ccmax} | |

6.3.1.2 V_{cc} - Idle current limits

6.3.1.2.1 Test execution

The test case should be executed repeated for each voltage class supported by the UICC in ascending order.

6.3.1.2.2 Initial conditions

The clock frequency shall be set to 1 MHz.

The voltage on V_{cc} shall be set to V_{cc} max.

6.3.1.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 1 | T -> UICC | Reset the UICC | |
| 2 | UICC -> T | Send a valid ATR | |
| 3 | T -> UICC | Don't send further commands after PPS procedure | |
| 4 | T | The idle current consumption of the UICC is measured after receiving the ATR over a period of ten seconds | RQ05_0102 RQ05_0202 RQ05_0302 |

6.3.1.3 V_{cc} - Current limits in clock-stop-mode

6.3.1.3.1 Test execution

The test case procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.3.1.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.3.1.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | When the terminal simulator expects no transmission from the card and when I/O has remained at state H for at least 1 860 clock cycles the terminal simulator shall stop the clock according to the clock stop indicator read from the ATR | |
| 3 | T | The current consumption shall be measured during clock-stop-mode over a period of ten seconds | RQ05_0104 RQ05_0203 RQ05_0303 |

6.3.2 Reset RST (contact C2)

6.3.2.1 RST - Static operation

6.3.2.1.1 Test execution

The test cases procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.3.2.1.2 Initial conditions

The capacitance $C_{in} = C_{out}$ of RST (contact C2) shall not exceed 30 pF.

6.3.2.2 Test procedure

| Step | Direction | Description | RQ |
|------|----------------------|---|-------------------------------------|
| 1 | T | The following parameters shall be set for RST: <ul style="list-style-type: none"> V_{OH} of the RST signal shall be set to $V_{OH\ min}$ V_{OL} of the RST signal shall be set to $V_{OL\ min}$ t_R and t_F shall be set to 400 μs | |
| 2 | T \rightarrow UICC | Reset the UICC I_{OHmax} and I_{OLmax} shall be measured during static operation and not exceed the limits defined for the voltage class used | RQ05_0105 RQ05_0204 RQ05_0304 |
| 3 | T | The following parameters shall be set for RST <ul style="list-style-type: none"> V_{OH} of the RST signal shall be set to $V_{OH\ max}$ V_{OL} of the RST signal shall be set to $V_{OL\ max}$ t_R and t_F shall be set to 400 μs | |
| 4 | T \rightarrow UICC | Reset the UICC I_{OHmax} and I_{OLmax} shall be measured during static operation and not exceed the limits defined for the voltage class used | RQ05_0105 RQ05_0204 RQ05_0304 |

6.3.3 Programming voltage V_{pp} (contact C6)

6.3.3.1 V_{pp} - Static operation

6.3.3.1.1 Test execution

Test procedure 1 applies to UICC supporting class A operating conditions only.

Test procedure 2 applies to 1.8V and 3V technology UICCs if no optional interface defined in ETSI TS 102 613 [19] is supported.

6.3.3.1.2 Initial conditions

Set the Universal PIN to 00000000.

6.3.3.1.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|----------------------|---|-----------|
| 1 | T \rightarrow UICC | Contact C6 shall not be connected to the terminal simulator | |
| 2 | T \rightarrow UICC | Reset the UICC | |
| 3 | T \rightarrow UICC | Send a CHANGE PIN command to the UICC with new Universal PIN value of 11110000 | |
| 4 | UICC \rightarrow T | The UICC operates successfully without requiring to set V_{pp} at programming state in protocol level | RQ05_0106 |
| 5 | T \rightarrow UICC | Reset the UICC | |
| 6 | T \rightarrow UICC | Send a CHANGE PIN command to return the Universal PIN to its initial value | |
| 7 | UICC \rightarrow T | The UICC operates successfully without requiring to set V_{pp} at programming state in protocol level | RQ05_0106 |
| 8 | T \rightarrow UICC | Contact C6 shall be connected to V_{pp} which has the same voltage as V_{cc} . | |
| 9 | T \rightarrow UICC | Reset the UICC | |
| 10 | T \rightarrow UICC | Send a CHANGE PIN command to the UICC with new Universal PIN value of 11110000 | |
| 11 | UICC \rightarrow T | The UICC operates successfully without requiring to set V_{pp} at programming state in protocol level | |
| 12 | T \rightarrow UICC | Reset the UICC | |
| 13 | T \rightarrow UICC | Send a CHANGE PIN command to return Universal PIN to its initial value | |
| 14 | UICC \rightarrow T | The UICC operates successfully without requiring to set V_{pp} at programming state in protocol level | RQ05_0106 |

6.3.3.1.4 Test procedure 2

This test ensures that V_{pp} and V_{cc} are not bonded together in the UICC, if this would be the case V_{pp} (C6) would also supply the UICC with current.

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | V_{cc} shall be applied to contact C1 | |
| 2 | T → UICC | Reset the UICC | |
| 3 | UICC → T | No current shall be measurable on contact C6 | RQ05_0001 |

6.3.4 Clock CLK (contact C3)

6.3.4.1 Frequency and duty cycle

6.3.4.1.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.3.4.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.3.4.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|---|
| 1 | T | The following parameters shall be set for CLK: <ul style="list-style-type: none"> The clock frequency (f) shall be set to $f = 1$ MHz V_{OH} of the CLK signal shall be set to $V_{OH\ max}$ V_{OL} of the CLK signal shall be set to $V_{OL\ min}$ V_{OL} of the CLK signal shall be set to $V_{OL\ min}$ The duty cycle of the CLK signal shall be set to 40 % high | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) The UICC shall be able to properly handle the commands $I_{OH\ max}$ and $I_{OL\ max}$ shall not exceed the limits defined for the voltage class used | RQ05_0002 RQ05_0107 RQ05_0108 RQ05_0206 RQ05_0207 RQ05_0306 RQ05_0307 |
| 4 | T | The duty cycle of the CLK signal shall be set to 60 % high | |
| 5 | T → UICC | Reset the UICC using the voltage class used in step 4) | |
| 6 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) The UICC shall be able to properly handle the commands $I_{OH\ max}$ and $I_{OL\ max}$ shall not exceed the limits defined for the voltage class used | RQ05_0002 RQ05_0107 RQ05_0108 RQ05_0206 RQ05_0207 RQ05_0306 RQ05_0307 |
| 7 | T | Steps 2 to 6 shall be repeated with a clock frequency set to f_{\max} | |
| 8 | T | Steps 2 to 7 shall be repeated with V_{OH} set to $V_{OH\ min}$ and V_{OL} set to $V_{OL\ max}$ | |

6.3.4.2 Voltage and current

6.3.4.2.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.3.4.2.2 Initial conditions

The capacitance $C_{in} = C_{out}$ of CLK (contact C3) shall not exceed 30 pF.

6.3.4.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | The clock signal shall be set to 1 MHz. | |
| 2 | T | The following parameters shall be set for CLK: <ul style="list-style-type: none"> V_{OH} of the CLK signal shall be set to $V_{OH\ max}$ V_{OL} of the CLK signal shall be set to $V_{OL\ min}$ t_R and t_F shall be set to $t_{R\ max}$ and $t_{F\ max}$ | |
| 3 | T → UICC | Reset the UICC | |
| 4 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) I_{OHmax} and I_{OLmax} shall not exceed the limits defined for the voltage class used | RQ05_0108 RQ05_0207 RQ05_0208 |
| 5 | T | The following parameters shall be set for CLK: <ul style="list-style-type: none"> V_{OH} of the CLK signal shall be set to $V_{OH\ min}$ V_{OL} of the CLK signal shall be set to $V_{OL\ max}$ t_R and t_F shall be set to $t_{R\ max}$ and $t_{F\ max}$ | |
| 6 | T → UICC | Reset the UICC | |
| 7 | T → UICC | Perform an application initialisation procedure (see clause 4.5.2 for valid applications) I_{OHmax} and I_{OLmax} shall not exceed the limits defined for the voltage class used | RQ05_0108 RQ05_0207 RQ05_0208 |
| 6 | T | Steps 2 to 7 shall be repeated with $f_{clk} = f_{max}$. | |

6.3.5 I/O (contact C7)

6.3.5.1 Voltage and current

6.3.5.1.1 Test execution

The test procedures shall be repeated for each voltage class supported by the UICC in ascending order.

- Test procedure 1 applies to all UICCs supporting PPS1.
- Test procedure 2 applies to UICCs supporting speed enhancement of (F, D) = (512, 64).
- Test procedure 3 applies to UICCs supporting PPS2 with a low impedance driver on I/O.

6.3.5.1.2 Initial conditions

The capacitance, C_{out} and C_{in} , of I/O (contact C7) shall not exceed 30 pF.

6.3.5.1.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \max}$ V_{OL} to $V_{OL \min}$ and V_{OH} to $V_{OH \max}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \max}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Send a STATUS command | |
| 4 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |
| 5 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \min}$ V_{OL} to $V_{OL \max}$ and V_{OH} to $V_{OH \min}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \min}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |
| 5 | T → UICC | Reset the UICC | |
| 6 | T → UICC | Send a STATUS command to the UICC | |
| 7 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |

6.3.5.1.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \max}$ V_{OL} to $V_{OL \min}$ and V_{OH} to $V_{OH \max}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \max}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Send a PPS-Request with speed enhancement (F, D) = (512, 64) | |
| 4 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 5 | T → UICC | Send a STATUS command to the UICC | |
| 6 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |
| 7 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \min}$ V_{OL} to $V_{OL \max}$ and V_{OH} to $V_{OH \min}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \min}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 8 | T → UICC | Reset the UICC | |
| 9 | T → UICC | Send a PPS-Request with speed enhancement (F, D) = (512, 64) | |
| 10 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 11 | T → UICC | Send a STATUS command to the UICC | |
| 12 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |

6.3.5.1.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \max}$ V_{OL} to $V_{OL \min}$ and V_{OH} to $V_{OH \max}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \max}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |
| 2 | T → UICC | Reset the UICC | |
| 3 | T → UICC | Send a PPS-Request using a value of PPS2 which selects low impedance drivers | |
| 4 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 5 | T → UICC | Send a STATUS command to the UICC | |
| 5 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |
| 6 | T | In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values: <ul style="list-style-type: none"> V_{cc} to $V_{cc \min}$ V_{OL} to $V_{OL \max}$ and V_{OH} to $V_{OH \min}$ I_{IL} to $I_{IL \max}$ and I_{IH} to $I_{IH \min}$ t_R to $t_{R \max}$ and t_F to $t_{F \max}$ | |
| 7 | T → UICC | Reset the UICC | |
| 8 | T → UICC | Send a PPS-Request using a value of PPS2 which selects low impedance drivers | |
| 9 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 10 | T → UICC | Send a STATUS command to the UICC | |
| 11 | UICC → T | I_{OH} , I_{OL} , V_{IL} , V_{IH} , t_R and t_F shall not exceed the limits defined for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |

6.4 Initial communication establishment procedure

6.4.1 Supply voltage switching

6.4.1.1 Supply voltage classes

FFS

6.4.1.2 Power consumption of the UICC during ATR

6.4.1.2.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.1.2.2 Initial conditions

- In accordance to the voltage class used the currents and voltages supplied by the terminal simulator shall be set to the following values:
- V_{cc} to $V_{cc\ max}$;
- f to f_{max} (5 Mhz)

6.4.1.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 1 | T → UICC | Reset the UICC | |
| 2 | UICC → T | Send a valid ATR | |
| 3 | UICC → T | I_{cc} shall not exceed the maximum power consumption of the UICC during the UICC session for the voltage class used | RQ05_0003 RQ05_0109 RQ05_0208 RQ05_0308 |

6.4.1.3 Application related electrical parameters

6.4.1.3.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

The test procedure steps shall be repeated for each application available on the UICC.

6.4.1.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.1.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 3 | UICC → T | If the power consumption is present in the FCP data, the following steps in Condition A shall be performed ELSE follow the steps in Condition B | RQ06_0204 |

| Condition A | | | |
|-------------|----------|---|-----------|
| 4 | T → UICC | Send a VERIFY PIN command with Universal PIN to the UICC | |
| 5 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 6 | T → UICC | Send an UPDATE BINARY command with data string '11 22 33 44 55 66 77 88 99 AA BB' | RQ06_0204 |

| Condition B | | | |
|-------------|----------|--|-----------|
| 4 | T → UICC | Send a VERIFY PIN command with Universal PIN to the UICC | |
| 5 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 6 | T → UICC | Send an UPDATE BINARY command with data string '11 22 33 44 55 66 77 88 99 AA BB'. | RQ06_0205 |
| 7 | T → UICC | Send an UPDATE BINARY command with data string 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | |

6.4.2 ATR content

6.4.2.1 ATR - Major capabilities

6.4.2.1.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.2.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.2.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|---|
| 1 | T | Reset the UICC | |
| 2 | UICC → T | Send an ATR in accordance to ISO/IEC 7816-3 [11] The following parameters shall be present: <ul style="list-style-type: none"> • T = 15 parameter The following parameters shall be present and in the following order in the historical bytes: <ul style="list-style-type: none"> • The category indicator = '80' • "card service data" data object • "card capabilities" data object | RQ06_0301 RQ06_0302 RQ06_0303 RQ06_0304 RQ06_0305 |

6.4.2.2 ATR - Speed enhancement

6.4.2.2.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.2.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.2.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a PPS-Request selecting T = 0 protocol and (F, D) = (512, 8) | |
| 3 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 4 | T → UICC | Send a STATUS command with P2 = '00' at (F, D) = (512, 8) | |
| 5 | UICC → T | Send valid FCP data | RQ06_0306 |
| 6 | T → UICC | Reset the UICC | |
| 7 | T → UICC | Send a PPS-Request selecting T = 0 protocol and (F, D) = (512, 16) | |
| 8 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 9 | T → UICC | Send a STATUS command with P2 = '00' at (F, D) = (512, 16) | |
| 10 | UICC → T | Send valid FCP data | RQ06_0306 |
| 11 | T → UICC | Reset the UICC | |
| 12 | T → UICC | Send a STATUS command with P2 = '00' at (F, D) = (372, 1) | |
| 13 | T → UICC | Send valid FCP data | RQ06_0306 |
| 14 | T → UICC | Reset the UICC | |
| 15 | T → UICC | Send a PPS-Request selecting T = 0 protocol and (F, D) = (372, 1) | |
| 16 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 17 | T → UICC | Send a STATUS command with P2 = '00' at (F, D) = (372, 1) | |
| 18 | UICC → T | Send valid FCP data | RQ06_0306 |

6.4.2.3 Global Interface bytes

6.4.2.3.1 Test execution

The test procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.2.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.2.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T | Reset the UICC | |
| 2 | UICC → T | If the first T _{bi} (i > 2) is present after T = 15, then its value shall be either '00' or '90'. | RQ06_0309 |

6.4.3 PPS procedure

6.4.3.1 Test execution

The test case procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.3.3 Test procedure

| Step | Direction | Description | RQ |
|-----------|-----------|---|------------------------|
| 1 | User | Reset the UICC | |
| Condition | | Steps 2) and 3) shall only be carried out if the ATR contains the first Tbi ($i > 2$) after $T = 15$ | |
| 2 | T → UICC | Send a PPS-Request containing a value of PPS2 equal to '00' | |
| 3 | UICC → T | Send a PPS-Response indicating support for the requested parameters | RQ06_0401 RQ06_0402 |
| 4 | T → UICC | Send a STATUS command with P2 = '00' | |
| 5 | UICC → T | Send a status word indicating successful command execution | |
| 6 | T → UICC | Reset the UICC | |
| Condition | | Steps 7) to 10) shall only be carried out if the ATR contains the first Tbi ($i > 2$) after $T = 15$ with a value of '90' | |
| 7 | T → UICC | Send a PPS-Request containing a value of PPS2 equal to '90' | |
| 8 | UICC → T | Send a PPS-Response indicating support for the requested parameters | RQ06_0401 RQ06_0402 |
| 9 | T → UICC | Send a STATUS command with P2 = '00' | |
| 10 | UICC → T | Send a status word indicating successful command execution | RQ06_0402 |

6.4.4 Reset procedures

6.4.4.1 Test execution

The test case procedure shall be repeated for each voltage class supported by the UICC in ascending order.

6.4.4.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.4.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a VERIFY PIN command with PIN to the UICC | |
| 3 | T → UICC | Reset the UICC | |
| 4 | UICC → T | Send a valid ATR sequence. The specific mode byte TA(2) shall not be present within the ATR returned by the UICC | RQ06_0501 |
| 5 | T → UICC | Send a SELECT command to select EF _{PL} | |
| 6 | T → UICC | Send an UPDATE BINARY command using a length of 2 bytes, and data string '00 00' to the UICC | |
| 7 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - Security status not satisfied | RQ06_0501 |
| 8 | T → UICC | Send a VERIFY PIN command with PIN | |
| 9 | T → UICC | Perform a Warm Reset of the UICC | |
| 10 | UICC → T | Send a valid ATR sequence | RQ06_0502 RQ06_0503 |
| 11 | T → UICC | Send a SELECT command to select EF _{PL} | |
| 12 | T → UICC | Send an UPDATE BINARY command using a length of 2 bytes, and data string '00 00' to the UICC | |
| 13 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - Security status not satisfied | RQ06_0504 |

6.4.4.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Perform a Warm Reset of the UICC | |
| 3 | UICC → T | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 4 | T → UICC | Perform a Warm Reset of the UICC | |
| | UICC → T | Respond with an identical ATR to that returned in response to step 2 | RQ06_0503 |

6.4.4.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Perform a Warm Reset of the UICC | |
| 3 | UICC → T | Send a valid ATR sequence. The specific mode byte TA(2) shall not be present within the ATR returned by the UICC | RQ06_0505 |
| 4 | T → UICC | Reset the UICC | |
| 5 | T → UICC | Perform a Warm Reset of the UICC | |
| 6 | UICC → T | Send a valid ATR sequence. The specific mode byte TA(2) shall not be present within the ATR returned by the UICC | RQ06_0505 |

6.4.4.6 Test procedure 4

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Perform a Warm Reset of the UICC | |
| 3 | UICC → T | Send a valid ATR The specific mode byte TA(2) shall be present within the ATR | RQ06_0506 |
| 4 | T → UICC | Reset the UICC | |
| 5 | T → UICC | Send a PPS-Request selecting T = 0 protocol and (F, D) = (512, 8) | |
| 6 | UICC → T | Send a PPS-Response indicating support for the requested parameters | |
| 7 | T → UICC | Perform a Warm Reset of the UICC | |
| 8 | UICC → T | Send a valid ATR The specific mode byte TA(2) shall be present within the ATR The Global Interface Character TA1 shall indicate (F, D) values of (512, 8) | RQ06_0506 |

6.4.5 Clock stop mode

6.4.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.4.5.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | UICC → T | The ATR shall contain a following character: <ul style="list-style-type: none"> • TA(i) after the first occurrence of T = 15 in TD(i-1) for i > 2 • Both b8 and b7 shall not be equal to zero | RQ06_0602 |
| 3 | T → UICC | Stop CLK in accordance to the requirements for the clock stop mode after the ATR | |
| 4 | T → UICC | Pause for 10 seconds, then starts the clock again | |
| 5 | T → UICC | Wait for more than 744 clock cycles after having started the clock before sending a SELECT command to for EF _{ICCID} | |
| 6 | UICC → T | The SELECT command shall be executed successfully | RQ06_0602 |

6.4.6 Bit/character duration and sampling time

The bit and character duration is implicitly tested in clause 6.5.2.1.

6.4.7 Error handling

6.4.7.1 Test execution

The T = 0 protocol shall be used.

The test procedure shall be performed for each communication speed supported by the UICC.

6.4.7.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.4.7.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Request character repetition (i.e. transmits an error signal during the guard time) for all character frames during the ATR | |
| 3 | UICC → T | Send a valid ATR with character repetition | RQ06_0801 |
| 4 | T → UICC | Send a PPS-Request (conditional) | |
| 5 | T → UICC | Send a SELECT command to select the MF with incorrect character parity for all character frames | |
| 6 | UICC → T | Request character repetition (i.e. transmits an error signal during the guard time) for all character frames | RQ06_0801 |
| 7 | T → UICC | Receive the response data but request character repetition for all character frames | |
| 8 | UICC → T | Send valid FCP data with character repetition | RQ06_0801 |

6.4.8 Compatibility

6.4.8.1 Test execution

The supply voltage class indication in the ATR and STATUS response are tested respectively in clauses 6.4.1 and 6.9.1.2 in the present document as they are mandatory for all the UICCs except the UICCs supporting class A operating condition only.

The supply voltage class detection based on STATUS response for compatibility purpose is out of the scope of the present document.

6.5 Transmission Protocols

6.5.1 Physical Layer

6.5.1.1 Test execution

RQ07_0001 and RQ07_0101 related to this chapter are tested in clause 6.5.2.1.

6.5.2 Data Link Layer

6.5.2.1 Character Frame

6.5.2.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|---|
| 1 | T → UICC | Reset the UICC | |
| 2 | UICC → T | Send a valid ATR | RQ07_0202 |
| 3 | T → UICC | Send a PPS-Request to select a valid protocol, a valid communication speed and low impedance drivers (if relevant) to the UICC | |
| 4 | UICC → T | Send a PPS-Response indicating support for the requested parameters | RQ07_0202 |
| 5 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0202 |
| 7 | T → UICC | Send a VERIFY PIN command with Application PIN to the UICC | |
| 8 | T → UICC | Send a SELECT command to select EF _{TRANS16b} | |
| 9 | T → UICC | Send an UPDATE BINARY to update EF _{TRANS16b} with data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' | |
| 10 | UICC → T | <ul style="list-style-type: none"> Before the transmission of a character, the I/O line shall be in state H A character consists of 10 consecutive bits There is an even number of bits set to '1' including the parity bit The existence of the start bit shall be confirmed to be at least 0.7 etu The subsequent bits shall be received at intervals of $(n + 0,5 \pm 0,2)$ etu (n being the rank of the bit) The time from the leading edge of the start bit to the trailing edge of the nth bit shall be $(n \pm 0,2)$ etu The interval between the leading edges of the start bits of two consecutive characters shall comprise the character duration $(10 \pm 0,2)$ etu, plus a guardtime The data shall always be passed over the I/O line with the most significant byte first The order of bits within a byte shall be specified in character TS returned in the ATR | RQ07_0201 RQ07_0202 RQ07_0202 RQ07_0203 RQ07_0204 RQ07_0204 RQ07_0205 |
| 11 | T → UICC | Send a READ BINARY for EF _{TRANS16b} | |
| 12 | | Steps 1) to 11) shall be repeated for the all communication speeds and protocols supported by the UICC, and both with and without selecting low impedance drivers if the UICC supports low impedance drivers | |

| Step | Direction | Description | RQ |
|--|-----------|---|---|
| 13 | UICC → T | Return data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' | RQ07_0201 RQ07_0202 RQ07_0203 RQ07_0204 RQ07_0204 RQ07_0205 |
| 14 | T | The time from the leading edge of the start bit to the trailing edge of the n th bit shall be set to be (n + 0,2) etu | |
| 15 | T → UICC | Reset the UICC | |
| 16 | UICC → T | Send a valid ATR | RQ07_0202 |
| 17 | T → UICC | Send a PPS-Request to select a valid protocol, a valid communication speed and low impedance drivers (if relevant) to the UICC | |
| 18 | UICC → T | Send a PPS-Response indicating support for the requested parameters | RQ07_0202 |
| 19 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 20 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0202 |
| 21 | T → UICC | Send a VERIFY PIN command with PIN to the UICC | |
| 22 | T → UICC | Send a SELECT command to select EF _{TRANS16b} | |
| 23 | T → UICC | Send a READ BINARY to the UICC | |
| 24 | UICC → T | Return data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' | RQ07_0201 RQ07_0202 RQ07_0203 RQ07_0204 RQ07_0204 RQ07_0205 RQ07_0205 |
| 25 | UICC → T | The time from the leading edge of the start bit to the trailing edge of the n th bit shall be set to be (n - 0,2) etu. | |
| 26 | T → UICC | Reset the UICC | |
| 27 | UICC → T | Send a valid ATR | RQ07_0202 |
| 28 | T → UICC | Send a PPS-Request to select a valid protocol, a valid communication speed and low impedance drivers (if relevant) to the UICC | |
| 29 | UICC → T | Send a PPS-Response indicating support for the requested parameters | RQ07_0202 |
| 30 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 31 | UICC → T | Return status condition SW1 = '90', SW2 = '00' | RQ07_0202 |
| 32 | T → UICC | Send a VERIFY PIN command with PIN to the UICC | |
| 33 | T → UICC | Send a SELECT command to select EF _{TRANS16b} | |
| 34 | T → UICC | Send a READ BINARY to the UICC | |
| 35 | UICC → T | Return data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' | RQ07_0201 RQ07_0202 RQ07_0202 RQ07_0203 RQ07_0204 RQ07_0204 RQ07_0205 |
| NOTE 1: RQ07_0206 is not tested, with the exception of the requirement to not drive the I/O line during the error indication period. | | | |
| NOTE 2: RQ07_0207 is not tested. | | | |

6.5.2.2 Transmission Protocol T = 0

6.5.2.2.1 Test execution

The test procedure shall be repeated for all the operating conditions supported by the UICC.

6.5.2.2.2 Initial conditions

EF_{TRANS16b} shall contain the data string: '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF'.

6.5.2.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 1 | T → UICC | Reset the UICC | |
| 2 | UICC → T | Send a PPS-Request to select the T = 0 protocol and the selected communication speed. | RQ07_0001 |
| 3 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 4 | T → UICC | Send a VERIFY PIN with PIN | |
| 5 | T → UICC | Send a SELECT command to select EF _{TRANS16b} | |
| 6 | T → UICC | Send a READ BINARY command | |
| 7 | UICC → T | Send the data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' followed by SW1 = '90' and SW2 = '00' - normal ending of the command | RQ07_0216 RQ07_0208 RQ07_0209 |
| 8 | | Steps 1) to 7) shall be repeated for the all communication speeds supported by the UICC | |
| 9 | T → UICC | Reset the UICC | |
| 10 | T → UICC | Request character repetition (i.e. transmits an error signal during the guard time) to the UICC for all character frames during the ATR. | |
| 11 | UICC → T | Send a valid ATR with character repetition | RQ07_0212 |
| 12 | T → UICC | Send a PPS-Request to select the T = 0 protocol, the selected communication speed and low impedance drivers (if relevant). | |
| 13 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 14 | T → UICC | Send a VERIFY PIN with PIN | |
| 15 | T → UICC | Send a SELECT command to select EF _{TRANS16b} . | |
| 16 | T → UICC | Send a READ BINARY command to the UICC with incorrect character parity for all character frames. | |
| 17 | UICC → T | Request character repetition for all character frames, indicating the error to the sender by setting the I/O line to state L at (10,5 +- 0,2) etu after the leading edge of the start bit of each character with a parity error for a maximum of 2 etu and a minimum of 1 etu. | RQ07_0212 RQ07_0213 RQ07_0214 |
| 18 | T → UICC | Re-send a READ BINARY command | |
| 19 | T → UICC | Request character repetition for all character frames from the UICC. | |
| 20 | UICC → T | Send the data string '55 AA 0F 00 F0 FF 00 F0 FF 00 F0 FF' followed by SW1 = '90' and SW2 = '00' - normal ending of the command | RQ07_0212 RQ07_0213 RQ07_0215 RQ07_0206 |

6.5.2.3 Transmission Protocol T = 1

6.5.2.3.1 Timing and specific options for blocks sent with T = 1

6.5.2.3.1.1 Overview and applicability

This clause defines conformance tests regarding timing, information field sizes and error detection parameters for blocks sent with T = 1.

The tests defined in this clause only apply where the UICC under test supports the T = 1 protocol. If the UICC under test does not support the T = 1 protocol, then these tests do not apply.

The tests in this clause assume that the T = 1 protocol is the first indicated protocol for the UICC. If the UICC under test supports T = 1 but it is not the first indicated protocol, then each test shall be extended to configure the UICC to employ the T = 1 protocol, e.g. via the PPS mechanism.

6.5.2.3.1.2 Information field size

6.5.2.3.1.2.1 Test execution

The test procedure shall be repeated for all the operating conditions supported by the UICC.

NOTE: When EF_{SMS} is not supported by the UICC, any supported linear EF with record length more than or equal to 31 bytes may be chosen.

6.5.2.3.1.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.1.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 3 | UICC → T | Send a SELECT command to select EF_{SMS} | |
| 4 | T → UICC | Send a VERIFY command with PIN to the UICC | |
| 5 | T → UICC | Send a READ RECORD command to read record 1 from EF_{SMS} | |
| 6 | UICC → T | Return the contents of record 1 in a series of chained I-blocks, whose INF fields are \leq IFSD, i.e. less than or equal to 32 bytes in length | RQ07_0217 |
| 7 | T → UICC | Reset the UICC | |
| 8 | T → UICC | Send an IFS REQUEST to the UICC, requesting an adjustment of IFSD to 255 bytes | |
| 9 | UICC → T | Reject the request and respond with an R-block with bits b1-b4 in the PCB-byte having a value of '2' - other errors | RQ07_0217 |
| 10 | T → UICC | Reset the UICC | |
| 11 | T → UICC | Send an IFS REQUEST to the UICC, requesting an adjustment of IFSD to 254 bytes | |
| 12 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 13 | T → UICC | Send a SELECT command to select EF_{SMS} | |
| 14 | T → UICC | Send a VERIFY command with PIN to the UICC | |
| 15 | T → UICC | Send a READ RECORD command to read record 1 from EF_{SMS} | |
| 16 | UICC → T | Return the contents of record 1 in a single I-block or multiple I-blocks | RQ07_0217 |

6.5.2.3.1.3 Character waiting integer

6.5.2.3.1.3.1 Test execution

The test procedure shall be repeated for all the operating conditions supported by the UICC.

6.5.2.3.1.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.1.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T | Reset the UICC | |
| 2 | UICC → T | Send a valid ATR If TB3 is present, bits b1-b4 shall be in the range 0 to 5 | RQ07_0218 |

6.5.2.3.1.4 Character waiting time

6.5.2.3.1.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.1.4.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.1.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 3 | T | Measure the delay between the leading edges of each pair of consecutive characters sent by the UICC in its I-block response to the SELECT command The maximum delay between the leading edges of each pair of consecutive characters shall be < CWT | RQ07_0218 |

6.5.2.3.1.5 Block guard time

6.5.2.3.1.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.1.5.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.1.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 3 | T | Measure the delay between the leading edge of the last character in the I-block SELECT command received by the UICC and the leading edge of the first character in its I-block response to the SELECT command | RQ07_0219 |
| 4 | T → UICC | Send a SELECT command to select and terminate the chosen application (see clause 4.5.2 for valid applications) at 22 etu after the UICC send the last character in step 3 | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0219 |

6.5.2.3.1.6 Waiting time extension

FFS

6.5.2.3.1.7 Error detection code

6.5.2.3.1.7.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.1.7.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.1.7.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | UICC → T | Respond with sending an ATR All interface characters TC _i which are present shall have a value of 0 | RQ07_0220 |

6.5.2.3.2 Block frame structure

6.5.2.3.2.1 Prologue field

6.5.2.3.2.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.2.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.2.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications) | |
| 3 | T → UICC | Send a SELECT command to select EF _{ECC} , where the SAD and DAD are set, as default, to 0 | |
| 4 | UICC → T | Respond with an I-block where the SAD and the DAD are both set to 0 | RQ07_0222 |
| 5 | T → UICC | Send a SELECT command to select EF _{ECC} , where the SAD = 1 and DAD = 0 | |
| 6 | UICC → T | Return an R-block with N(R) equal to the next expected sequence number (ignoring the erroneous I-block), or do not return any response | RQ07_0222 |
| 7 | T → UICC | Send a SELECT command to select EF _{ECC} , where the SAD = 0 and DAD = 1 | |
| 8 | UICC → T | Return an R-block with N(R) equal to the next expected sequence number (ignoring the erroneous I-block), or do not return any response | RQ07_0222 |
| 9 | T → UICC | Send a SELECT command to select EF _{ECC} , where the SAD = 1 and DAD = 1 | |
| 10 | UICC → T | Return an R-block with N(R) equal to the next expected sequence number (ignoring the erroneous I-block), or do not return any response | RQ07_0222 |

6.5.2.3.2.2 Protocol Control Byte

FFS

6.5.2.3.2.3 Length

6.5.2.3.2.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.2.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.2.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|----|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application (see clause 4.5.2 for valid applications) | |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 3 | T → UICC | Send a SELECT command to select the EF _{ECC} , where the I-block has an invalid EDC | |
| 4 | UICC → T | Reject the command by sending an R-block response with bits b1-b4 in the PCB-byte having a value of '1' - EDC and/or parity error. The INF field shall be absent | RQ07_0225 |
| 5 | T → UICC | Send a SELECT command to select the EF _{ECC} | |
| 6 | T → UICC | Reset the UICC | |
| 7 | T → UICC | Send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to 254 bytes | |
| 8 | UICC → T | Respond with an IFS RESPONSE S-block, whose INF field is present and has the value 254 | RQ07_0225 |
| 9 | T → UICC | Send a SELECT command to select and activate the chosen application (see clause 4.5.2 for valid applications) | |
| 10 | T → UICC | Reset the UICC | |
| 11 | T → UICC | Send a SELECT command to select and activate the chosen application (see clause 4.5.2 for valid applications) | |
| 12 | T → UICC | Send a RESYNCH request S-block to the UICC | |
| 13 | UICC → T | Respond with a RESYNCH response S-block, which shall not contain an INF field | RQ07_0225 |
| 14 | T → UICC | Send a SELECT command to select EF _{ECC} . | |
| 15 | T → UICC | Reset the UICC | |
| 16 | T → UICC | Send a SELECT command to select and activate the chosen application (see clause 4.5.2 for valid applications) | |
| 17 | T → UICC | Send a SELECT command to select EF _{ECC} . | |
| 18 | T → UICC | Send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to the record length of EF _{ECC} - 1 byte | |
| 19 | T → UICC | Send a READ RECORD command to read record 1 from EF _{ECC} . | |
| 20 | T → UICC | Send an ABORT request S-block to the UICC after the 1 st chained I-block response is received from the UICC | |
| 21 | UICC → T | Respond with an ABORT response S-block, which shall not contain an INF field | RQ07_0225 |
| 22 | T → UICC | Send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to 32 bytes | |

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.2.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application (see clause 4.5.2 for valid applications) . | |
| 3 | UICC → T | Respond with an I-block containing the response to the SELECT command The epilogue field shall contain a 1 byte EDC - of type LRC - which shall be set to the correct value for the block | |
| 4 | T → UICC | Send a SELECT command to select and terminate the chosen application (see clause 4.5.2 for valid applications) with invalid EDC | |
| 5 | UICC → T | Reject the command by sending an R-block response of the format R(N), where N is the sequence number of the next expected I-block (ignoring the erroneous I-block) and with bits b1-b4 in the PCB-byte having a value of '1' - EDC and/or parity error | RQ07_0227 |

6.5.2.3.3 Error free operation

6.5.2.3.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to 254 bytes. | |
| 3 | UICC → T | Respond with an IFS RESPONSE S-block, whose INF field is present and has the value 254. | RQ07_0229 |
| 4 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 5 | UICC → T | Respond to the last I-block of the command (I(Ns(S), 0)) with the response to the SELECT command, where the first I-block of the response is of the format I(Nr(S), M) where Nr(S) = 0. | RQ07_0230 |
| 6 | T → UICC | Send a SELECT command to select EFEC. | |
| 7 | UICC → T | Respond to the last I-block of the command (I(Ns(S), 0)) with the response to the SELECT command, where the first I-block of the response is of the format I(Nr(S), M) where Nr(S) ≠ Nr(S) of the previous I-block sent by the UICC. | RQ07_0230 |
| 8 | T → UICC | Send a SELECT command to the UICC, with an invalid file ID whose length shall be 255 bytes long, where each byte shall be set to 'FF', split over at least 2 chained I-blocks. | |
| 9 | UICC → T | Respond to the first I-block from the terminal simulator with a receive ready R-block of the format R(Nr(R)) where Ns(S) ≠ Nr(R). | RQ07_0231 |

6.5.2.3.4 Error Handling for T = 1

6.5.2.3.4.1 Protocol initialisation

6.5.2.3.4.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.4.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.4.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send an R-block to the UICC, of the format R(0), to request the UICC to re-send the last block | |
| 4 | UICC → T | Re-send the I-block, the response to the first SELECT command | RQ07_0236 |
| 5 | T → UICC | Send an R-block to the UICC, of the format R(0), to request the UICC to re-send the last block | |
| 6 | UICC → T | Re-send the I-block, the response to the first SELECT command | RQ07_0236 |
| 7 | T → UICC | Reset the UICC | |
| 8 | T → UICC | Send a SELECT command to select and activate the chosen application, where the I-block has an invalid EDC | |
| 9 | UICC → T | Reject the command by sending an R-block response of the format R(0), with bits b1-b4 in the PCB-byte having a value of '1' - EDC and/or parity error | RQ07_0237 |
| 10 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 11 | T → UICC | Send a SELECT command to select EFIMSI | |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 12 | T → UICC | Send an R-block to the UICC, of the format R(0), to request the UICC to re-send the last block | |
| 13 | UICC → T | Re-send the I-block, the response to the SELECT command in step 8) | RQ07_0238 |
| 14 | T → UICC | Send an R-block to the UICC, of the format R(0), to request the UICC to re-send the last block | |
| 15 | UICC → T | Re-send the I-block, the response to the SELECT command in step 8) | RQ07_0238 |
| 16 | T → UICC | Send a S(RESYNCH, request) | |
| 17 | UICC → T | Return a S(RESYNCH, response) | RQ07_0238 |
| 18 | T → UICC | Send a VERIFY PIN command with PIN | |
| 19 | T → UICC | Send a READ BINARY command | |
| 20 | UICC → T | Return the content of EFIMSI | RQ07_0238 |

6.5.2.3.4.2 Block dependant errors

6.5.2.3.4.2.1 Sending invalid blocks to the UICC

6.5.2.3.4.2.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.2.3.4.2.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.4.2.1.3 Test procedure

| Step | Direction | Description | RQ |
|--|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send an R-block to the UICC, of the format R(N(R)) where N(R) = N(S) of the last I-block sent by the UICC, to request the UICC to re-send the last block | |
| 4 | UICC → T | Re-send the last I-block of the response to the first SELECT command | RQ07_0239 |
| 5 | T → UICC | Send another R-block to the UICC, of the format R(N(R)) where N(R) = N(S) of the last I-block sent by the UICC, to request the UICC to re-send the last block | |
| 6 | UICC → T | Re-send the last I-block of the response to the first SELECT command | RQ07_0240 |
| 7 | T → UICC | Reset the UICC | |
| 8 | T → UICC | Send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to 254 bytes | |
| 9 | T → UICC | The terminal simulator shall re-send an IFS REQUEST S-block to the UICC, requesting an adjustment of the IFSD to 254 bytes | |
| 10 | UICC → T | Re-send the IFS RESPONSE S-block, whose INF field shall have the value 254 | RQ07_0242 |
| 11 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| NOTE: RQ07_0241 and RQ07_0243 shall not be tested as it is not possible to meet the test criteria. | | | |

6.5.2.3.5 Chaining

6.5.2.3.5.1 Definition and applicability

6.5.2.3.5.1.1 Test execution

When EF_{SMS} is not supported by the UICC, any supported linear EF with record length more than or equal to 31 bytes may be chosen.

6.5.2.3.5.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.2.3.5.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command with an invalid file ID, whose length shall be 255 bytes, where each byte shall be set to 'FF' The SELECT command shall be spilt over at least 2 chained blocks | |
| 4 | UICC → T | For each I-block of format I(Ns(S), 1) the UICC shall respond with a receive ready R-block of the format R(Nr(R)) where Nr(R) ≠ Ns(S) For the last I-block from the terminal simulator the UICC shall respond with an R-APDU containing a status word indicating an application level error regarding the SELECT command | RQ07_0245 |
| 5 | T → UICC | Reset the UICC | |
| 6 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 7 | T → UICC | Send a VERIFY PIN command with PIN | |
| 8 | T → UICC | Send a SELECT command to select EF _{SMS} . | |
| 9 | T → UICC | Send a READ RECORD command to read record 1 from EF _{SMS} . | |
| 10 | UICC → T | Return the contents of record 1 in a series of chained I-blocks, whose INF fields are ≤ IFSD, i.e. less than or equal to 32 bytes in length | RQ07_0246 |
| 11 | T → UICC | Reset the UICC | |
| 12 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 13 | T → UICC | Send a SELECT command to the UICC, with an invalid file ID whose length shall be 255 bytes long, where each byte shall be set to 'FF', where the INF field in the I-block shall be set to 255 bytes in length | |
| 14 | UICC → T | The UICC shall reject the command by sending an R-block response of the format R(N), where N is the sequence number of the next expected I-block (ignoring the erroneous I-block) and with bits b1 to b4 in the PCB-byte having a value of '2' - other errors | RQ07_0247 |

6.5.3 Transport Layer

6.5.3.1 Transportation of an APDU using T = 0

6.5.3.1.1 Purpose

Clause 6.5.3.1 describes conformance tests relating to the mapping of C-APDUs and R-APDUs for T = 0 protocol, the APDU exchange and the use of the GET RESPONSE command as used in case 2 and case 4 commands.

6.5.3.1.2 Case 1 command

6.5.3.1.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.1.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to the UICC to select and activate the chosen application | |
| 3 | T → UICC | Send a VERIFY PIN command with parameter P2 indicating PIN and with an empty data field | |
| 4 | UICC → T | Return status condition SW1 = '63', SW2 = 'CX' - unsuccessful PIN verification, X attempts left | RQ07_0301 RQ07_0303 |
| 5 | T → UICC | Send a VERIFY PIN command with an incorrect parameter P2 and with an empty data field | |
| 6 | UICC → T | Return an error code appropriate to the command | RQ07_0302 |

6.5.3.1.3 Case 2 command

6.5.3.1.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.3.2 Initial conditions

EF_{LF4R20b} contain the data string: 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'.

6.5.3.1.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOC1} | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN | |
| 5 | T → UICC | Send a READ BINARY command using a length of 11 bytes | |
| 6 | UICC → T | Return the procedure byte 'B0' followed by the data string 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00', ending with the status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0304 |
| 7 | T → UICC | Send a READ BINARY command with an incorrect P2 parameter and a length of 11 bytes | |
| 8 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0305 |

6.5.3.1.4 Case 3

6.5.3.1.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.4.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.1.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN | |
| 5 | T → UICC | Send an UPDATE BINARY command header using a length of 11 bytes | |
| 6 | UICC → T | Return the procedure byte 'D6' to the terminal simulator | RQ07_0306 |
| 7 | T → UICC | Send the data string '11 22 33 44 55 66 77 88 99 00 11' | |
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0307 |
| 9 | T → UICC | Send an UPDATE BINARY command header with an incorrect P2 parameter, a length of 11 bytes and, if needed, data string '11 22 33 44 55 66 77 88 99 00 11' | |
| 10 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0308 |
| 11 | T → UICC | Send an UPDATE BINARY command with the data 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00' | |

6.5.3.1.5 Case 4

6.5.3.1.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.5.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.1.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command header to the UICC with P2 = '04' and a length of 2 bytes to select EF _{IMSI} | |
| 4 | UICC → T | Return the procedure byte 'A4' to the terminal simulator | RQ07_0309 |
| 5 | T → UICC | Send the file ID of the EF _{IMSI} | |
| 6 | UICC → T | Return procedure bytes '61xx' to the terminal simulator - where xx is the length of the FCP of the EF _{IMSI} | RQ07_0310 |
| 7 | T → UICC | Send a GET RESPONSE command header to the UICC with P3 set to length 'xx' | |
| 9 | UICC → T | Return the procedure byte 'C0' followed by the FCP of the EF _{IMSI} , ending with the status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0312 |
| 10 | T → UICC | Send a SELECT command header to the UICC with an incorrect P1 parameter, P2 = '04', a length of 2 bytes and, if needed, the file ID of EF _{LOCI} | |
| 11 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0309 |
| 12 | T → UICC | Send a SELECT command to select EF _{IMSI} | |
| 13 | UICC → T | Return procedure bytes '61xx' to the terminal simulator - where 'xx' is the length of the FCP of the EF _{IMSI} | RQ07_0310 |
| 14 | T → UICC | Send a GET RESPONSE command to the UICC with P3 set to 'yy' where 'yy' is less than 'xx' | |
| 15 | UICC → T | Return the first 'yy' bytes of the FCP of the EF _{IMSI} . Return status condition SW1 = '61', SW2 = 'zz' - where 'zz' is the remaining length of the FCP of the EF _{IMSI} | RQ07_0311 |
| 16 | T → UICC | Send a GET RESPONSE command to the UICC with P3 set to 'zz' | |
| 17 | UICC → T | Return the next 'zz' bytes of the FCP of the EF _{IMSI} . Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0311 |

6.5.3.1.6 Use of Procedure Bytes '61xx' and '6Cxx'

6.5.3.1.6.1 Case 2 Commands

6.5.3.1.6.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.6.1.2 Initial conditions

EF_{LOCI} shall contain the data string: 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'.

6.5.3.1.6.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN | |
| 5 | T → UICC | Send a READ BINARY command header to the UICC with the P3 parameter set to '00' | |
| 6 | UICC → T | Return the procedure bytes '6C 0B' to the terminal simulator | RQ07_0313 |
| 7 | T → UICC | Send a READ BINARY command header to the UICC with the P3 parameter set to '0B' | |
| 8 | UICC → T | Return the procedure byte 'B0' followed by the data string 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00', ending with the status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0315 |
| 9 | T → UICC | Send a READ BINARY command header to the UICC with an incorrect P2 parameter and the P3 parameter set to '00' | |
| 10 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0314 |
| 11 | T → UICC | Send a READ BINARY command header to the UICC with an incorrect P2 parameter and the P3 parameter set to '15' | |
| 12 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0314 |
| 13 | T → UICC | Send a READ BINARY command header to the UICC with an incorrect P2 parameter and the P3 parameter set to '0B' | |
| 14 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0316 |
| 15 | T → UICC | Send a READ BINARY command header to the UICC with an incorrect P2 parameter and the P3 parameter set to '05' | |
| 16 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0318 |

6.5.3.1.6.2 Case 4 Commands

6.5.3.1.6.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.1.6.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.1.6.2.3 Test procedure

FFS

6.5.3.2 Transportation of an APDU using T = 1

6.5.3.2.1 Purpose

Clause 6.5.3.2 describes conformance tests relating to the transportation of an APDU using the T = 1 protocol.

The tests defined in this clause only apply where the UICC under test supports the T = 1 protocol. If the UICC under test does not support the T = 1 protocol, then these tests do not apply.

The tests in this clause assume that the T = 1 protocol is the first indicated protocol for the UICC. If the UICC under test supports T = 1 but it is not the first indicated protocol, then each test shall be extended to configure the UICC to employ the T = 1 protocol, e.g. via the PPS mechanism.

6.5.3.2.2 Case 1

6.5.3.2.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.2.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.2.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a VERIFY PIN command with parameter P2 indicating PIN and with an empty data field | |
| 4 | UICC → T | Return status condition SW1 = '63', SW2 = 'CX' - unsuccessful PIN verification, X attempts left | RQ07_0320 RQ07_0321 |
| 5 | T → UICC | Send a VERIFY PIN command with an incorrect parameter P2 and with an empty data field | |
| 6 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0320 RQ07_0321 |

6.5.3.2.3 Case 2

6.5.3.2.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.2.3.2 Initial conditions

EF_{LOCI} shall contain the data string: 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'.

6.5.3.2.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN | |
| 5 | T → UICC | Send a READ BINARY command using a length of 11 bytes | |
| 6 | UICC → T | Return the data string 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00', ending with the status condition SW1 = '90', SW2 = '00' | RQ07_0323 |
| 7 | T → UICC | Send a READ BINARY command with an incorrect P2 parameter and a length of 11 bytes | |
| 8 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0323 |

6.5.3.2.4 Case 3

6.5.3.2.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.2.4.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.2.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOCI} | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN | |
| 5 | T → UICC | Send an UPDATE BINARY command with the data string '11 22 33 44 55 66 77 88 99 00 11' | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0324 |
| 7 | T → UICC | Send an UPDATE BINARY command header with an incorrect P2 parameter and the data string '11 22 33 44 55 66 77 88 99 00 11' | |
| 8 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0324 |
| 9 | T → UICC | Send an UPDATE BINARY command with the data 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00' | |

6.5.3.2.5 Case 4

6.5.3.2.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.5.3.2.5.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.5.3.2.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application | |
| 3 | T → UICC | Send a SELECT command with P2 = '04' to select EF _{IMSI} | |
| 4 | UICC → T | Return the FCP of the EF _{IMSI} together with the status condition SW1 = '90', SW2 = '00' - normal ending of the command | RQ07_0324 RQ07_0325 |
| 5 | T → UICC | Send a SELECT command with incorrect P1 parameter and P2 = '04' to select EF _{FLOCI} | |
| 6 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2 | RQ07_0324 RQ07_0325 |

6.5.4 Application Layer

FFS

6.6 Application and File structure

6.6.1 Purpose

The tests in clause 6.6 ensure that the IUT is tested against the specification of the logical structure, for a UICC, the code associated with it, and the structure of the files used.

6.6.2 UICC Application structure

6.6.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select EF _{DIR} . | |
| 3 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ08_0102 |
| 4 | T → UICC | Send a READ RECORD command to read record 1 of the EFDIR. The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 2. | |
| 5 | T → UICC | Send a SELECT command to select and activate the ADF stated in EFDIR of record 1. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ08_0101 |
| 7 | T → UICC | Reset the UICC. | |
| 8 | T → UICC | Send a SELECT command to select EFPL. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ08_0102 |
| 10 | T → UICC | Send a SELECT command to select EFICCID. | |
| 11 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ08_0102 |
| 12 | T → UICC | Send a SELECT command to select DFTELECOM. | |
| 13 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command, if the UICC supports DFTELECOM, otherwise return status condition SW1 = '6A', SW2 = '82' - file ID not found. | RQ08_0103 |

6.6.3 File types

6.6.3.1 Dedicated files

FFS

6.6.3.2 Elementary files

6.6.3.2.1 Introduction

Elementary Files structure the way in which information is held on the UICC and provide security on how this information is accessed.

6.6.3.2.2 Transparent EF

6.6.3.2.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.3.2.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.3.2.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{UST} . | |
| 4 | T → UICC | Fulfil the READ access condition of the EF _{UST} . | |
| 5 | T → UICC | Send a READ BINARY command to the UICC The length used shall be the TLV DO with tag '80' of the response data in step 3. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0204 |
| 7 | T → UICC | Send a READ BINARY command with offset '00 01' to the UICC The length used shall be the TLV DO with tag '80' of the response data in step 3 minus 1. | |
| 8 | UICC → T | The length of data returned shall be Le and return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0204 |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 9 | T → UICC | Send a READ BINARY command with offset '00 01' to the UICC The length used shall be the TLV DO with tag '80' of the response data in step 3. | |
| 11a | UICC → T | When T = 0 protocol is used: Return procedure bytes '6C Le-1'; or status indicating a warning or error condition (but not SW1 SW2 = '90 00'). | RQ08_0203 RQ08_0204 |
| 11b | UICC → T | When T = 1 protocol is used: The length of data returned shall be Le minus 1 and return status condition SW1 = '62', SW2 = '82' - end of file/record reached before reading Le bytes. | RQ08_0203 RQ08_0204 |

6.6.3.2.3 Linear fixed EF

6.6.3.2.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.3.2.3.2 Initial conditions

- The records in EF_{F_{DN}} shall contain the following data for the first 10 bytes:

| | |
|------------|---------------------------------|
| 1st record | 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0' |
| 2nd record | 'B0 B1 B2 A0 A1 A2 A0 A1 A2 B0' |
| 3rd record | 'B0 B1 B2 A0 A1 A2 B0 B1 B2 A0' |
| 4th record | 'A0 A1 A2 B0 B1 B2 B0 B1 B2 B0' |

- The data for the remainder of these four records and for all other records (if any) shall be 'FF'.

6.6.3.2.3.3 Test procedure

| Step | Direction | Description | RQ |
|-------|--|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 4 | T → UICC | Send a SELECT command to select EF _{F_{DN}} . | |
| 5 | UICC → T | Following shall be true for the SELECT response data: the value of TLV DO with tag '80' shall be equal to product of byte 6 and byte 7 in TLV DO with tag '82'. | RQ08_0205 |
| 6 | T → UICC | Send a READ RECORD command to the UICC using ABSOLUTE mode with record 1 and Le shall be the record length as indicated in byte 6 in TLV DO with tag '82' of the response data in step 5. | |
| 7 | UICC → T | The data returned by the UICC shall be that of the first record: The length of the data returned shall be that of byte 6 in TLV DO with tag '82' of the response data in step d) Return status condition SW1='90', SW2='00' - normal ending of the command. | RQ08_0205 |
| 8 | T → UICC | The terminal simulator shall repeat sending a READ RECORD command to the UICC using NEXT mode with Le being the record length as indicated in byte 6 in TLV DO with tag '82' of the response data in step d) until it reaches the last record whose record number is equal to the byte 7 in TLV DO with tag '82' of the response data in step 5. | |
| 9 | UICC → T | The length of the data returned in response to every READ RECORD command shall be that of byte 6 in TLV DO with tag '82' of the response data in step 5 Return status condition in response to every READ RECORD command shall be SW1='90', SW2='00' - normal ending of the command. | RQ08_0205 |
| 10 | T → UICC | Send a READ RECORD command to the UICC using NEXT mode with Le being the record length as indicated in byte 6 in TLV DO with tag '82' of the response data in step 5. | |
| 11 | UICC → T | Return an error code appropriate to the command. | RQ08_0205 |
| NOTE: | Step 11 confirms that the number of records indicated in byte 7 in the TLV DO with tag '82' of the response data is correct. | | |

6.6.3.2.4 Cyclic EF

6.6.3.2.4.1 Test execution

When EFICI is not supported by the UICC, any supported cyclic EF in ADFUSIM may be chosen.

6.6.3.2.4.2 Initial conditions

- EF_{ICI} shall have at least 4 records.
- The records in EF_{ICI} shall contain the following data:

| | |
|------------------------|----------------------------|
| 1 st record | '01' for all bytes |
| 2 nd record | '02' for all bytes |
| 3 rd record | '03' for all bytes |
| X th record | byte value X for all bytes |

6.6.3.2.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 4 | T → UICC | Send a SELECT command to select EF _{ICI} . | |
| 5 | T → UICC | Send a READ RECORD command using NEXT mode The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 6 | UICC → T | The response data shall be the data in the first record. | RQ08_0209 |
| 7 | T → UICC | Send a READ RECORD command using PREVIOUS mode The record length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 8 | UICC → T | The response data shall be the data in the last record. | RQ08_0209 |
| 9 | T → UICC | Send a READ RECORD command using NEXT mode The record length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 10 | UICC → T | The response data shall be the data in the first record. | RQ08_0209 |
| 11 | T → UICC | Send a READ RECORD command using PREVIOUS mode The record length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 12 | UICC → T | The response data shall be the data in the last record. | RQ08_0209 RQ08_0210 |
| 13 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode to the UICC with 'FF' for all the bytes. The record length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | RQ08_0209 |
| 14 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1 to the UICC. The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step d). | |
| 15 | UICC → T | The response data shall be the new data that has been updated in step 13. | RQ08_0209 |
| 16 | T → UICC | Send a READ RECORD command using PREVIOUS mode to the UICC The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step d). | |
| 17 | UICC → T | The response data shall be the previous data in the second last record. | RQ08_0209 |
| 18 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 1 to the UICC with 'FF' for all the bytes. The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 19 | UICC → T | Return an error code appropriate to the command (e.g. SW1='69', SW2='81' - command incompatible with file structure). | RQ08_0210 |

| Step | Direction | Description | RQ |
|---|-----------|---|-----------|
| 20 | T → UICC | Send an UPDATE RECORD command using CURRENT mode to the UICC with 'FF' for all the bytes. The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 21 | T → UICC | Return an error code appropriate to the command. | RQ08_0210 |
| 22 | T → UICC | Send an UPDATE RECORD command using NEXT mode to the UICC with 'FF' for all the bytes. The length used shall be that of bytes 5 and 6 in TLV DO with tag '82' of the response data in step 4. | |
| 23 | UICC → T | Return an error code appropriate to the command (e.g. SW1='69', SW2='81' - command incompatible with file structure). | RQ08_0210 |
| NOTE: When EF _{IC} is not supported by the UICC, any supported cyclic EF in ADF _{USIM} may be chosen. | | | |

6.6.3.2.5 BER-TLV structure EF

FFS

6.6.4 File referencing

FFS

6.6.5 Methods for selecting a file

6.6.5.1 SELECT by File Identifier Referencing

6.6.5.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.5.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.5.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a STATUS command to the UICC. | |
| 4 | UICC → T | if a TLV DO with tag '83' is present ,then the response data shall indicate that ADF _{USIM} is the currently selected directory. | RQ08_0402 |
| 5 | T → UICC | Send a READ BINARY command using a length of 1 byte. | |
| 6 | UICC → T | Return status condition SW1 = '69', SW2 = '86'. | RQ08_0402 |
| 7 | T → UICC | Send a SELECT command to select EF _{AD} . | |
| 8 | UICC → T | TLV DO with tag '83' of the response data shall indicate that EF _{AD} is the currently selected EF. | RQ08_0402 |
| 9 | T → UICC | Send a STATUS command. | |
| 10 | UICC → T | If a TLV DO with tag '83' is present, then the response data shall indicate that ADF _{USIM} is the currently selected directory. | RQ08_0402 |
| 11 | T → UICC | Step 12 shall be carried out for each line in Table 8.1, clause 8.4.1 of ETSI TS 102 221 [1] for which a file is defined in Table 9. | |
| 12 | T → UICC | Step 13 shall be carried out for each one of the 'valid selections' in that line of the table. | |
| 13 | T → UICC | Steps 14 and then 15 shall be carried out in turn. | |
| 14 | T → UICC | Send a SELECT command to select the 'last selected file'. | |
| 15 | T → UICC | Send a SELECT command to select the 'valid selection'. | |
| 16 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ08_0405 RQ08_0406 |

| Step | Direction | Description | RQ | | | | | | | | | | | | | | | | | | |
|---|-------------------|--|----|-------------------------|--------|----|----|------|---------------------|-----|-----------------------|-----|-------------------------|-----|---------------------|-----|-------------------|-----|------------------|-----|-------------------|
| 17 | | The following file IDs shall be used to represent the IDs in the table: | | | | | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Table</th> <th>Actual</th> </tr> </thead> <tbody> <tr> <td>MF</td> <td>MF</td> </tr> <tr> <td>ADF1</td> <td>ADF_{USIM}</td> </tr> <tr> <td>DF1</td> <td>DF_{TELECOM}</td> </tr> <tr> <td>DF4</td> <td>DF_{PHONEBOOK}</td> </tr> <tr> <td>EF1</td> <td>EF_{ICCID}</td> </tr> <tr> <td>EF2</td> <td>EF_{ADN}</td> </tr> <tr> <td>EF3</td> <td>EF_{AD}</td> </tr> <tr> <td>EF5</td> <td>EF_{PBR}</td> </tr> </tbody> </table> | | Table | Actual | MF | MF | ADF1 | ADF _{USIM} | DF1 | DF _{TELECOM} | DF4 | DF _{PHONEBOOK} | EF1 | EF _{ICCID} | EF2 | EF _{ADN} | EF3 | EF _{AD} | EF5 | EF _{PBR} |
| | | Table | | Actual | | | | | | | | | | | | | | | | | |
| | | MF | | MF | | | | | | | | | | | | | | | | | |
| | | ADF1 | | ADF _{USIM} | | | | | | | | | | | | | | | | | |
| | | DF1 | | DF _{TELECOM} | | | | | | | | | | | | | | | | | |
| | | DF4 | | DF _{PHONEBOOK} | | | | | | | | | | | | | | | | | |
| | | EF1 | | EF _{ICCID} | | | | | | | | | | | | | | | | | |
| | | EF2 | | EF _{ADN} | | | | | | | | | | | | | | | | | |
| EF3 | EF _{AD} | | | | | | | | | | | | | | | | | | | | |
| EF5 | EF _{PBR} | | | | | | | | | | | | | | | | | | | | |
| NOTE 1: When EFADN is not supported by the UICC, any supported EF in DFTELECOM may be chosen. | | | | | | | | | | | | | | | | | | | | | |
| NOTE 2: When EFPBR is not supported by the UICC, any supported EF in DFPHONEBOOK may be chosen. | | | | | | | | | | | | | | | | | | | | | |

6.6.5.2 SELECT by Path Referencing

6.6.5.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.5.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.5.2.3 Test procedure

| Step | Direction | Description | RQ | | | | | | | | | | | | | | | | | | |
|------|-------------------|--|------------------------|-------------------------|--------|----|----|------|---------------------|-----|-----------------------|-----|-------------------------|-----|---------------------|-----|-------------------|-----|------------------|-----|-------------------|
| 1 | User | Reset the UICC. | | | | | | | | | | | | | | | | | | | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | | | | | | | | | | | | | | | | | | | |
| 3 | T → UICC | Step 4) shall be carried out for each line in Table 8.2, clause 8.4.2 of ETSI TS 102 221 [1] for which a file is defined in Table 9. | | | | | | | | | | | | | | | | | | | |
| 4 | T → UICC | Step 4) shall be carried out for each one of the 'example selections' in that line of the table. | | | | | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Table</th> <th>Actual</th> </tr> </thead> <tbody> <tr> <td>MF</td> <td>MF</td> </tr> <tr> <td>ADF1</td> <td>ADF_{USIM}</td> </tr> <tr> <td>DF1</td> <td>DF_{TELECOM}</td> </tr> <tr> <td>DF4</td> <td>DF_{PHONEBOOK}</td> </tr> <tr> <td>EF1</td> <td>EF_{ICCID}</td> </tr> <tr> <td>EF2</td> <td>EF_{ADN}</td> </tr> <tr> <td>EF3</td> <td>EF_{AD}</td> </tr> <tr> <td>EF5</td> <td>EF_{PBR}</td> </tr> </tbody> </table> | | Table | Actual | MF | MF | ADF1 | ADF _{USIM} | DF1 | DF _{TELECOM} | DF4 | DF _{PHONEBOOK} | EF1 | EF _{ICCID} | EF2 | EF _{ADN} | EF3 | EF _{AD} | EF5 | EF _{PBR} |
| | | Table | | Actual | | | | | | | | | | | | | | | | | |
| | | MF | | MF | | | | | | | | | | | | | | | | | |
| | | ADF1 | | ADF _{USIM} | | | | | | | | | | | | | | | | | |
| | | DF1 | | DF _{TELECOM} | | | | | | | | | | | | | | | | | |
| | | DF4 | | DF _{PHONEBOOK} | | | | | | | | | | | | | | | | | |
| | | EF1 | | EF _{ICCID} | | | | | | | | | | | | | | | | | |
| | | EF2 | | EF _{ADN} | | | | | | | | | | | | | | | | | |
| EF3 | EF _{AD} | | | | | | | | | | | | | | | | | | | | |
| EF5 | EF _{PBR} | | | | | | | | | | | | | | | | | | | | |
| 5 | T → UICC | Steps 6) and then 7) shall be carried out in turn. | | | | | | | | | | | | | | | | | | | |
| 6 | T → UICC | Send a SELECT command to select the 'last selected DF'. | | | | | | | | | | | | | | | | | | | |
| 7 | T → UICC | Send a SELECT by path command to select the 'example selections'. | | | | | | | | | | | | | | | | | | | |
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0407 RQ08_0408 | | | | | | | | | | | | | | | | | | |

6.6.5.3 Short File Identifier

6.6.5.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.5.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.5.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{IMSI} . | |
| 4 | UICC → T | TLV DO with tag '88' of the response data shall indicate the SFI of the EF _{IMSI} . | RQ08_0410 |

6.6.6 Application characteristic

6.6.6.1 Explicit Application selection

6.6.6.1.1 SELECT by DF Name

6.6.6.1.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.6.1.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.6.1.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select EF _{DIR} . | |
| 3 | T → UICC | Send a READ RECORD command with NEXT mode. | |
| 4 | UICC → T | The length of the TLV DO with tag '4F' in the response data shall not exceed 16 bytes. The TLV DO with tag '4F' in the response data shall not be same with any other TLV DO with tag '4F' of the other records. | RQ08_0502 |
| 5 | T → UICC | Step 4 shall be repeated until it reaches the end of file. | |
| 6 | T → UICC | Following steps 7 and 8 shall be repeated for each AIDs read in the step 4. | |
| 7 | T → UICC | Reset the UICC. | |
| 8 | T → UICC | Send a SELECT command with AID to select and activate the ADF. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The FCP shall contain: <ul style="list-style-type: none"> TLV DO with tag 82 shall be '38' or '78'(File Descriptor); TLV DO with tag 84 shall be the AID of the UICC (DF name - AID). | RQ08_0502 |

6.6.6.1.2 SELECT by partial DF Name

6.6.6.1.2.1 Test execution

Selection by Partial DF name shall not be tested as it requires the interpretation of the next, previous and first occurrence.

6.6.6.1.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.6.1.2.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | T → UICC | Reset the UICC. | |
| 4 | T → UICC | Send a SELECT command with partial DF name of an chosen application and P2 indicating "last occurrence" option to select and activate the last selected application. | |
| 5 | UICC → T | If the ATR returned in step 1 indicates that partial selection by DF name is supported (as indicated in the "card service data" and the "card capabilities" compact-TLV objects of the ATR historical bytes) the UICC shall return the response indicating the chosen application is selected. If the ATR returned in step 1 indicates that partial selection by DF name is not supported the UICC shall respond with an appropriate response. | RQ08_0503 RQ08_0504 |

6.6.6.1.2.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | T → UICC | Reset the UICC. | |
| 4 | T → UICC | Send a SELECT command with partial DF name of an chosen application and P2 indicating "last occurrence" option to select and activate the last selected application. | |
| 5 | UICC → T | Return the response indicating the application selected in step 2. | RQ08_0503 |

6.6.6.1.2.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | The ATR returned by the UICC shall indicate that selection by partial DF name is supported in the "card service data" and the "card capabilities" compact-TLV objects of the ATR historical bytes. | RQ08_0504 |
| 3 | UICC → T | Send a SELECT command to select and activate the chosen application. | |
| 4 | T → UICC | Reset the UICC. | |
| 5 | T → UICC | Send a SELECT command with partial DF name of an chosen application and P2 indicating "last occurrence" option to select and activate the last selected application. | |
| 6 | UICC → T | Return the response indicating the application selected in Step 3. | RQ08_0504 RQ08_0503 |

6.6.6.2 Application session activation

6.6.6.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.6.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.6.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command with AID to select and activate application. | |
| 3 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0505 |
| 4 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 5 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' shall indicate an AID of the active application. | RQ08_0505 |

6.6.6.3 Application session termination

6.6.6.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.6.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.6.3.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | If no other application than the chosen application exists in the UICC, steps c), d) and e) shall not be carried out. -SINNFREI | |
| 3 | UICC → T | Send a SELECT command with AID to select and activate the chosen application. | |
| 4 | T → UICC | Send a SELECT command with AID to select and activate an application different from the selected chosen application. | |
| 5 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 6 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' shall indicate an AID of the selected application different from the selected chosen application in step 3. | RQ08_0508 |

6.6.6.3.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 3 | T → UICC | Send a SELECT command with AID to select and terminate the chosen application. | |
| 4 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 5 | UICC → T | The response data shall not be that of the chosen application activated in step 2. | RQ08_0506 |

6.6.6.3.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 3 | T → UICC | Send a SELECT command with AID to select and terminate the chosen application. | |
| 4 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 5 | UICC → T | The response data shall be that of the MF. | RQ08_0506 RQ08_0508 |
| 6 | T → UICC | Send a READ BINARY command without SFI referencing. | |
| 7 | UICC → T | Return status condition SW1 = '69', SW2 = '86' - command not allowed (no EF selected). | RQ08_0506 RQ08_0508 |
| 8 | T → UICC | Send a SELECT command with P1 = '00' and a data field equal to '7FFF'. | |
| 10 | UICC → T | Return an error appropriate to the command. (e.g. SW1 = '6A', SW2 = '82' - File not found). | RQ08_0506 RQ08_0508 |

6.6.6.3.6 Test procedure 4

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 3 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 4 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' is the AID of the chosen application (DF name - AID). | RQ08_0506 |
| 5 | T → UICC | Reset the UICC. | |
| 6 | T → UICC | Send a STATUS command with P2='00'. | |
| 7 | UICC → T | The response data shall not be that of the chosen application activated in step 2 . | RQ08_0508 |

6.6.6.3.7 Test procedure 5

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC. | |
| 3 | UICC → T | Return the channel number of the logical channel assigned by the UICC (channel 'a'). | RQ08_0506 |
| 4 | T → UICC | Send a SELECT command with AID to select and activate the chosen application on channel 'a'. | |
| 5 | T → UICC | Send a STATUS command with P2 = '01' to the UICC on channel 'a'. | |
| 6 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' is the AID of the chosen application (DF name - AID). | |
| 7 | T → UICC | Send a MANAGE CHANNEL (CLOSE) command to close channel 'a'. | |
| 8 | T → UICC | Repeat steps 9 and 11 for all non-basic logical channels. | |
| 9 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC. | |
| 10 | T → UICC | Send a STATUS command with P2 = '00' to the UICC on the logical channel assigned in the response to step 9. | |
| 11 | UICC → T | The response data shall not be that of the chosen application activated in step 3. | RQ08_0508 |

6.6.6.4 Application session reset

6.6.6.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.6.4.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.6.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 3 | T → UICC | Send a SELECT command to the UICC with EF _{LOCAL} . | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 5 | T → UICC | Send a READ BINARY command. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0509 |
| 7 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 8 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' is the AID of the chosen application (DF name - AID). | RQ08_0509 |
| 9 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 10 | UICC → T | The status condition returned by the USIM shall be SW1 = '90', SW2 = '00'. | RQ08_0509 |

6.6.7 Reservation of file IDs

6.6.7.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.7.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.7.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command using FID '7F FF' to select and activate chosen application. | |
| 4 | UICC → T | The response data shall contain the following: <ul style="list-style-type: none"> TLV DO with tag '84' is the AID of the UICC (DF name - AID) shall be the same as in step 2. | RQ08_0601 |

6.6.7.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | For all possible DFs and EFs on the UICC, send a SELECT command to select each file in sequence. | |
| 3 | T → UICC | For all successful selections, the ID of the selected file shall be either that of EF _{ATR} or one of those in Figures 4.1 and 4.2, clause 4.7 of ETSI TS 131 102 [26], or shall not be one of those listed as reserved for operational use in RQ08_0606. | RQ08_0606 RQ08_0603 |

6.6.7.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | For all possible DFs and EFs on the UICC, send a SELECT command to select each file in sequence. | |
| 3 | T → UICC | For all successful selections, the ID of the selected file shall be either that of EF _{ATR} or one of those in Figures 4.1 and 4.2, clause 4.7 of ETSI TS 131 102\26], or shall not be one of those listed as reserved for operational use in RQ08_0606. | RQ08_0602 RQ08_0603 |

6.6.8 Logical channels

6.6.8.1 No Logical Channel Support

6.6.8.1.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.8.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | UICC → T | Return a valid ATR. The following shall be true of the returned ATR: <ul style="list-style-type: none"> The Third Software Function in the Card Capabilities Object shall not be present or If the Third Software Function is present it shall indicate that the UICC does not support logical channels | RQ08_0701 |
| 3 | T → UICC | Send a MANAGE CHANNEL (OPEN) command | |
| 4 | UICC → T | Return an error code appropriate to the command | RQ08_0701 |
| 5 | T → UICC | Send a STATUS command to the UICC on channel 1 | |
| 6 | UICC → T | Return an error code appropriate to the command | RQ08_0701 |
| 7 | T → UICC | Send a STATUS command to the UICC on channel 2 | |
| 8 | UICC → T | Return an error code appropriate to the command | RQ08_0701 |
| 9 | T → UICC | Send a STATUS command to the UICC on channel 3 | |
| 10 | UICC → T | Return an error code appropriate to the command | RQ08_0701 |

6.6.8.2 Logical Channels - Basic Behaviour

6.6.8.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.8.2.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | UICC → T | Return a valid ATR. The Third Software Function shall be present and it shall indicate that: The UICC supports logical channels. The UICC supports logical channel number assignment by the card. The maximum number of logical channels supported is between 2 and 4. | RQ08_0701 RQ08_0705 |
| 3 | T → UICC | Send a MANAGE CHANNEL (CLOSE) command to close channel 0 (the basic channel). | |
| 4 | UICC → T | Return an error code appropriate to the command. | RQ08_0701 |
| 5 | | Send a STATUS command to the UICC on the basic channel. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0701 |
| 7 | T → UICC | Send a STATUS command to the UICC on channel 1. | |
| 8 | UICC → T | Return an error code appropriate to the command. | RQ08_0707 |
| 9 | T → UICC | Send a STATUS command to the UICC on channel 2. | |
| 10 | UICC → T | Return an error code appropriate to the command. | RQ08_0707 |
| 11 | T → UICC | Send a STATUS command to the UICC on channel 3. | |
| 12 | UICC → T | Return an error code appropriate to the command. | RQ08_0707 |
| 13 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 14 | UICC → T | Return the number of the logical channel assigned by the UICC. | RQ08_0705 RQ08_0701 RQ08_0707 |
| 15 | T → UICC | Send a STATUS command to the UICC on the logical channel assigned by the UICC in step 14. | |
| 16 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 17 | T → UICC | Steps 14 and 16 shall be repeated for each of the remaining non basic logical channels supported by the UICC | |
| 18 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel | |
| 19 | UICC → T | Return an error code appropriate to the command | RQ08_0701 |
| 20 | T → UICC | Send a MANAGE CHANNEL (CLOSE) command to the UICC on the first open non-basic channel supported by the UICC. | |
| 21 | UICC → T | Return status condition 90 00. | RQ08_0707 |
| 22 | T → UICC | Send a STATUS command to the UICC on the same logical channel used in step 20. | |
| 23 | UICC → T | Return an error code appropriate to the command. | |
| 24 | T → UICC | Steps 20 and 18 should be repeated for each of the non-basic logical channels supported by the UICC. | |

6.6.8.2.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 3 | UICC → T | Return the number of the logical channel assigned by the UICC - call this channel 'a'. | RQ08_0707 |
| 4 | T → UICC | Send a STATUS command to the UICC on channel 'a'. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 6 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on channel 'a' | |
| 7 | UICC → T | Return the number of the logical channel assigned by the UICC - call this channel 'b'. | RQ08_0701 RQ08_0707 |
| 8 | T → UICC | Send a STATUS command to the UICC on channel 'b'. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 10 | T → UICC | Reset the UICC. | |
| 11 | T → UICC | Send a STATUS command to the UICC on channel 'a'. | |
| 12 | UICC → T | Return an error code appropriate to the command. | RQ08_0707 |

6.6.8.3 Opening a Logical Channel from the Basic Channel

6.6.8.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.8.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | T → UICC | Send a SELECT command to select DF _{TELECOM} . | |
| 4 | T → UICC | Send a SELECT command to select EF _{ARR} . | |
| 5 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 6 | UICC → T | The value of the File Identifier in the response data shall be '7F 10'. | RQ08_0705 |
| 7 | T → UICC | Send a MANAGE CHANNEL (OPEN). | |
| 8 | UICC → T | Return the channel number of the logical channel assigned by the UICC - call this channel 'a'. | RQ08_0705 |
| 9 | T → UICC | Send a STATUS command on channel 'a' with P2 = '00'. | |
| 10 | UICC → T | The value of the File Identifier in the response data shall be '3F 00'. | RQ08_0705 |
| 11 | T → UICC | Send READ RECORD command using ABSOLUTE mode with record 1 on channel 'a'. | |
| 12 | UICC → T | Return an error appropriate to the command. (e.g. SW1 = '69', SW2 = '86'; - Command not allowed (no EF selected)). | RQ08_0705 |
| 13 | T → UICC | Send a SELECT command with P1 = '00' and a data field equal to '7FFF' on channel 'a'. | |
| 14 | UICC → T | Return an error appropriate to the command. (e.g. SW1 = '6A', SW2 = '82' - File not found). | RQ08_0707 |

6.6.8.4 Opening a Logical Channel from a Non-Basic Channel

6.6.8.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.4.2 Initial conditions

The MF and the chosen application shall be configured as non-shareable.

6.6.8.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | The terminal shall send a MANAGE CHANNEL (OPEN) command to the UICC from the basic channel. | |
| 3 | UICC → T | Return the assigned logical channel number 'a'. | |
| 4 | T → UICC | Send a SELECT command to select and activate the chosen application on channel 'a'. | |
| 5 | T → UICC | Send a SELECT command to select DF _{TELECOM} on channel 'a'. | |
| 6 | T → UICC | Send a SELECT command to select EF _{ARR} on channel 'a'. | |
| 7 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on channel 'a'. | |
| 8 | UICC → T | Return the assigned logical channel number 'b'. | |
| 9 | T → UICC | Send a STATUS command to the UICC on channel 'b'. | |
| 10 | UICC → T | The returned FCP shall contain the File ID of DF _{TELECOM} . | RQ08_0705 |
| 11 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on channel 'b'. | |
| 12 | UICC → T | Return an error - no EF selected. | RQ08_0705 |
| 13 | T → UICC | Send a SELECT command with P1 = '00' and a data field equal to '7FFF' on channel 'b'. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 14 | UICC → T | The returned FCP shall contain the AID of the USIM. | RQ08_0707 |
| 15 | T → UICC | Reset the UICC. | |
| 16 | T → UICC | Send a SELECT command to select and activate the chosen application on the basic channel. | |
| 17 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 18 | UICC → T | Return the assigned logical channel number 'a'. | |
| 19 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICCC on channel 'a'. | |
| 20 | UICC → T | Return the assigned logical channel number 'b'. | |
| 21 | T → UICC | Send a SELECT command with P1 = '00' and a data field equal to '7FFF' on channel 'b'. | |
| 22 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |

6.6.8.5 Opening a Logical Channel on Non-Shareable Files

6.6.8.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.5.2 Initial conditions

The MF and the chosen application shall be configured as non-shareable.

6.6.8.5.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 3 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 4 | T → UICC | Send a STATUS command to the UICC on channel 1. | |
| 5 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 6 | T → UICC | Send a STATUS command to the UICC on channel 2. | |
| 7 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 8 | T → UICC | Send a STATUS command to the UICC on channel 3. | |
| 9 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 10 | T → UICC | Send a SELECT command to select and activate the chosen application on the basic channel. | |
| 11 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 12 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 13 | T → UICC | Send a STATUS command to the UICC on channel 1. | |
| 14 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 15 | T → UICC | Send a STATUS command to the UICC on channel 2. | |
| 16 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |
| 17 | T → UICC | Send a STATUS command to the UICC on channel 3. | |
| 18 | UICC → T | Return an error appropriate to the command. | RQ08_0707 |

6.6.8.6 Logical Channels and Shareable Files

6.6.8.6.1 Test execution

For test procedure 1, EF_{ARR} (under the MF), $DF_{TELECOM}$ and the USIM shall be configured as non-shareable.

For test procedure 2, the MF, $DF_{TELECOM}$, EF_{ARR} (under $DF_{TELECOM}$) and the USIM shall be configured as shareable.

6.6.8.6.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.6.8.6.3 Test procedure 1- (non-shareable files)

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select DF _{TELECOM} on the basic channel. | |
| 3 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 4 | UICC → T | The UICC should return the assigned logical channel number - call it channel 'a'. | |
| 5 | T → UICC | Send a SELECT command to select the MF on the basic channel. | |
| 6 | T → UICC | Send a SELECT command to select EFARR (under the MF) on the basic channel. | |
| 7 | T → UICC | Send a SELECT command to select EFARR (under the MF) on channel 'a'. | |
| 8 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of used not satisfied. | RQ08_0702 RQ08_0803 |
| 9 | T → UICC | Send a SELECT command to select DFTELECOM on the basic channel. | |
| 10 | T → UICC | Send a SELECT command to select DFTELECOM on channel 'a'. | |
| 11 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of used not satisfied. | RQ08_0702 RQ08_0803 |
| 12 | T → UICC | Send a SELECT command to select and activate the chosen application on the basic channel. | |
| 13 | T → UICC | Send a SELECT command to select and activate the chosen application on channel 'a'. | |
| 14 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of used not satisfied. | RQ08_0702 RQ08_0803 |

6.6.8.6.4 Test procedure 2 - (shareable files)

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a MANAGE CHANNEL (OPEN) on the basic channel. | |
| 3 | UICC → T | The UICC should return the assigned logical channel number ('a'). | RQ08_0702 |
| 4 | T → UICC | Send a SELECT command to select DFTELECOM on the basic channel. | |
| 5 | T → UICC | Send a SELECT command to select EFARR on the basic channel. | |
| 6 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on the basic channel. | |
| 7 | UICC → T | Return the contents of the first record in EFARR. | |
| 8 | T → UICC | Send a SELECT command to select DFTELECOM on channel 'a'. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0702 RQ08_0802 |
| 10 | T → UICC | Send a SELECT command to select EFARR on channel 'a'. | |
| 11 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0702 RQ08_0802 |
| 12 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on channel 'a'. | |
| 13 | UICC → T | Return the contents of the first record in EFARR. The data received shall be the same as that received in step e). | RQ08_0702 RQ08_0802 |
| 14 | T → UICC | Send a SELECT command to select and activate the chosen application on the basic channel. | |
| 15 | T → UICC | Send a STATUS command to the UICC on the basic channel. | |
| 16 | UICC → T | The FCP returned by the UICC shall contain the AID of the USIM. | |
| 17 | T → UICC | Send a SELECT command to select and activate the chosen application on channel 'a'. | |
| 18 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0702 RQ08_0802 |
| 19 | T → UICC | Send a STATUS command to the UICC on channel 'a'. | |
| 20 | UICC → T | The FCP returned by the UICC shall contain the AID of the USIM. | RQ08_0702 RQ08_0802 |

6.6.8.7 Command Interdependencies

6.6.8.7.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.7.2 Initial conditions

$DF_{TELECOM}$, EF_{ARR} (under $DF_{TELECOM}$), EF_{FDN} and the USIM shall be configured as shareable.

6.6.8.7.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select $DF_{TELECOM}$ on the basic channel. | |
| 3 | T → UICC | Send a SELECT command to select EF_{ARR} on the basic channel. | |
| 4 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on the basic channel. | |
| 5 | UICC → T | Return the contents of the first record in EFARR. | |
| 6 | T → UICC | Send a MANAGE CHANNEL (OPEN) command on the basic channel. | |
| 7 | UICC → T | Return the logical channel number assigned by the UICC - call this channel 'a'. | |
| 8 | T → UICC | Send a SELECT command to select DFTELECOM on channel 'a'. | |
| 9 | T → UICC | Send a SELECT command to select EFARR on channel 'a'. | |
| 10 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 11 | UICC → T | Return the contents of the first record in EFARR. The data shall be the same as that received in step d). | RQ08_0706 |
| 12 | T → UICC | Send a SELECT command to select EFADN on channel 'a'. | |
| 13 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 14 | UICC → T | Return the contents of the first record in EFARR. The data shall be the same as that received in step d). | RQ08_0706 RQ08_0802 |
| 15 | T → UICC | Send a SELECT command to select the MF on channel 'a'. | |
| 16 | T → UICC | Send a STATUS command with P1 P2 = '00 00' to the UICC on the basic channel. | |
| 17 | UICC → T | The FCP returned by the UICC shall contain the File Identifier of DFTELECOM. | RQ08_0802 |
| 18 | T → UICC | Send a SELECT command to select and activate the chosen application on channel 'a'. | |
| 19 | T → UICC | Send a STATUS command with P1 P2 = '00 00' to the UICC on the basic channel. | |
| 20 | UICC → T | The FCP returned by the UICC shall contain the File Identifier of DFTELECOM. | RQ08_0802 |
| 21 | | Send a SELECT command with P1 = '00' and the data field equal to '7FFF' to the UICC on the basic channel. | |
| 22 | T → UICC | Return an error appropriate to the command. | RQ08_0802 |
| 23 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 24 | UICC → T | Return the contents of the first record in EFARR. The data shall be the same as that received in step 5. | |
| 25 | T → UICC | Send a SELECT command to select and activate the USIM on the basic channel. | |
| 26 | | Send a SELECT command to deselect the USIM on channel 'a'. | |
| 27 | | Send a STATUS command to the UICC on the basic channel. | |
| 28 | UICC → T | The FCP returned by the UICC shall contain the AID of the USIM. | RQ08_0802 |
| 29 | T → UICC | Reset the UICC. | |
| 30 | T → UICC | Send a SELECT command to select DFTELECOM on the basic channel. | |
| 31 | T → UICC | Send a MANAGE CHANNEL (OPEN) to the UICC on the basic channel. | |
| 32 | UICC → T | Return the logical channel number assigned by the UICC - call this channel 'a'. | |
| 33 | T → UICC | Send a SELECT command to select EFARR on the basic channel. | |
| 34 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on the basic channel. | |
| 35 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on channel 'a'. | |
| 36 | UICC → T | Return an error appropriate to the command (e.g. 69 86 - Command not allowed (no EF selected)). | RQ08_0802 |
| 37 | T → UICC | Reset the UICC. | |
| 38 | T → UICC | Send a VERIFY PIN command with PIN to gain the READ access condition for EFFDN. | |
| 39 | T → UICC | Send a MANAGE CHANNEL (OPEN). | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 40 | UICC → T | Return the channel number of the logical channel assigned by the UICC channel 'a'. | |
| 41 | T → UICC | Send a SELECT command to the UICC on the basic channel to select and activate the chosen application. | |
| 42 | T → UICC | Send a SELECT command to the UICC on the basic channel to select EFFDN. | |
| 43 | T → UICC | Send a SELECT command to the UICC on the channel 'a' to select and activate the chosen application. | |
| 44 | T → UICC | Send a SELECT command to the UICC on channel 'a' to select EFFDN. | |
| 45 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on the basic channel. | |
| 46 | UICC → T | The first 10 bytes of the data string returned by the UICC shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. | RQ08_0802 |
| 47 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on channel 'a'. | |
| 48 | UICC → T | The first 10 bytes of the data string returned by the UICC shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. | RQ08_0802 |
| 49 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 50 | UICC → T | The first 10 bytes of the data string returned by the UICC shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. | |
| 51 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on channel 'a'. | |
| 52 | UICC → T | The first 10 bytes of the data string returned by the UICC shall be 'B0 B1 B2 A0 A1 A2 A0 B0'. | RQ08_0802 |
| 53 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 54 | UICC → T | The first 10 bytes of the data string returned by the UICC shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. | RQ08_0802 |

6.6.8.8 Consistency of File Updates

6.6.8.8.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.6.8.8.2 Initial conditions

- EF_{LOCI} shall be shareable
- EF_{CCP2} shall be shareable

6.6.8.8.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|----|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 3 | T → UICC | Send a MANAGE CHANNEL (OPEN) command. | |
| 4 | UICC → T | Return the assigned logical channel number ('a'). | |
| 5 | T → UICC | Send a SELECT command to the UICC on the basic channel to select and activate the USIM. | |
| 6 | T → UICC | Send a SELECT command to the UICC on the basic channel to select EF_{CCP2} . | |
| 7 | T → UICC | Send a SELECT command to the UICC on channel 'a' to select and activate the USIM. | |
| 8 | T → UICC | Send a SELECT command to the UICC on channel 'a' to select EF_{CCP2} . | |
| 9 | T → UICC | Send a READ RECORD (NEXT) command to the UICC on the basic channel. | |
| 10 | UICC → T | The data string returned by the UICC shall be the contents of the first record in EF_{CCP2} i.e. '10 11 12 13 14 15 16 17 18 19 1A 1B 1C 1D 1E'. | |
| 11 | T → UICC | Send a READ RECORD (NEXT) to the UICC on channel 'a'. | |
| 12 | UICC → T | The data string returned by the UICC shall be the contents of the first record in EF_{CCP2} i.e. '10 11 12 13 14 15 16 17 18 19 1A 1B 1C 1D 1E'. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 13 | T → UICC | Send an UPDATE RECORD (CURRENT) command to the UICC on channel 'a' using a data string of 'C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1'. | |
| 14 | T → UICC | Send a READ RECORD (CURRENT) command to the UICC on the basic channel. | |
| 15 | UICC → T | The data string returned by the UICC shall be ' C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1 C1'. | RQ08_0801 |
| 16 | T → UICC | Send a SELECT command to select EFLOCI on the basic channel. | |
| 17 | T → UICC | Send a SELECT command to select EFLOCI on channel 'a'. | |
| 18 | T → UICC | Send a READ BINARY command to the UICC on the basic channel using a length of 11 bytes. | |
| 19 | UICC → T | The data string returned by the UICC shall be 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | |
| 20 | T → UICC | Send a READ BINARY command to the UICC on channel 'a' using a length of 11 bytes. | |
| 21 | UICC → T | The data string returned by the UICC shall be 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | |
| 22 | T → UICC | Send an UPDATE BINARY command to the UICC on channel 'a' using a data string of 'FF FF FF FF FF FF FF FF FF FF 00 00'. | |
| 23 | T → UICC | Send a READ BINARY command to the UICC on the basic channel using a length of 11 bytes. | |
| 24 | UICC → T | The data string returned by the UICC shall be ' FF FF FF FF FF FF FF FF FF FF 00 00'. | RQ08_0801 |

6.7 Security features

6.7.1 Foreword

Two types of UICC are defined in ETSI TS 102 221 [1], single verification capable UICC and multi-verification capable UICC. Every application shall conform to the security features defined in ETSI TS 102 221 [1].

6.7.2 Supported security features

6.7.2.1 Test execution

The test procedure 1 and test procedure 2 shall be repeated for all the other applications in the UICC.

6.7.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.7.2.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The following shall be true for PS Template DO (tag 'C6') in the response data: <ul style="list-style-type: none"> • TLV DO with tag '83' shall be '11' (Universal PIN); • TLV DO with tag '83' shall be '01' (PIN Application 1); • TLV DO with tag '83' shall be '81' (Second PIN Application 1), if assigned. The response data shall also contain TLV DO with tag '8B'. | RQ09_0100 RQ09_0101 RQ09_0102 |

6.7.2.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). The following shall be true for PS Template DO (tag 'C6') in the response data: <ul style="list-style-type: none"> • TLV DO with tag '83' shall be '01' (PIN); • TLV DO with tag '83' shall be '81' (PIN2), if assigned. | RQ09_0101 |

6.7.3 Security architecture

6.7.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.7.3.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.7.3.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{IMSI} . | |
| 4 | UICC → T | The response data shall contain either TLV DO with tag '8B', '8C' or 'AB'. <ul style="list-style-type: none"> • If the TLV DO with tag '8B' is present, the structure shall be the same as stated in clause 9.2.7 of ETSI TS 102 221 [1] and the AM_DO and SC_DO shall be stored in EFARR. • If the TLV DO with tag '8C' is present, the AM_DO and SC_DO shall be in a compact format according to ISO/IEC 7816-4 [12]. • If the TLV DO with tag 'AB' is present, the AM_DO and SC_DO shall be in an expanded format according to ISO/IEC 7816-4 [12]. | RQ09_0209 RQ09_0210 |
| 5 | T → UICC | Send a SELECT command to select EF _{ARR} if the TLV DO with tag '8B' is present in the response data returned in step 4. | RQ09_0209 |
| 6 | T → UICC | Send a READ RECORD command to read record 1 of EF _{ARR} . | |
| 7 | UICC → T | The response data shall contain the AM_DO and SC_DO in an expanded format according to ISO/IEC 7816-4 [12]. | RQ09_0204 RQ09_0209 |
| 8 | T → UICC | Step 6 shall be repeated for all the records in EF _{ARR} . | RQ09_0209 |
| 9 | UICC → T | The content of each AM byte (in compact format) or AM_DO (in expanded format) shall be unique within the same access rule. | RQ09_0203 |

6.7.3.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | T → UICC | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select EF _{ICCID} . | |
| 3 | UICC → T | If the TLV DO with tag '8B' is present in the response data returned in step 2 the following steps shall be carried out: | RQ09_0209 |
| 4 | T → UICC | Send a SELECT command to select EF _{ARR} . | |
| 5 | T → UICC | Send a VERIFY PIN command using ADM. | |
| 6 | T → UICC | Send a READ RECORD command to determine the access rules specified in the record number specified by tag '8B' of the response data returned in step b). | |
| 7 | T → UICC | Send a UPDATE RECORD command to modify the record number specified in tag '8B' of the response data returned in step b) so as to remove the READ access condition. | |
| 8 | T → UICC | Send a SELECT command to select EF _{ICCID} . | |
| 9 | T → UICC | Send a READ BINARY command. | |
| 10 | UICC → T | The response data returned by the UICC shall be SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0202 |
| 11 | T → UICC | Send a READ BINARY command. | |
| 12 | UICC → T | The response data returned by the UICC shall be SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0202 |
| 13 | T → UICC | Send a SELECT command to select EF _{ARR} . | |
| 14 | T → UICC | Send a UPDATE RECORD command to modify the record number specified in tag '8B' so as to return it to the value prior to step 4. | |

6.7.4 Security environment

6.7.4.1 Test execution

The following test procedures shall be applicable only to a multi-verification capable UICC.

6.7.4.2 Initial conditions

SE01 shall be active.

6.7.4.3 Test procedure

| Step | Direction | Description | RQ | | | | | |
|-----------------------|-----------|--|-----------------------|-------------|-------------|--------|-------------|-----------|
| 1 | User | Reset the UICC. | | | | | | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | | | | | | |
| 3 | UICC → T | <p>The following shall be true of the response data:</p> <ul style="list-style-type: none"> TLV DO with tag '90' (PIN Status) under TLV DO with tag 'C6' shall indicate that the Application PINs and the Universal PIN are enabled; TLV DO with tag '8B' shall be as follows: <table border="1" style="margin-left: 40px;"> <tr> <td>EF_{ARR} FID</td> <td>SE ID1</td> <td>Record No X</td> <td>SE ID2</td> <td>Record No Y</td> </tr> </table> <p>where</p> <ul style="list-style-type: none"> SE ID1 and SE ID2 can be either 00 or 01, but SE ID1 shall not be the same as SE ID2. Record No X and Y are the record number of the EFARR. | EF _{ARR} FID | SE ID1 | Record No X | SE ID2 | Record No Y | RQ09_0301 |
| EF _{ARR} FID | SE ID1 | Record No X | SE ID2 | Record No Y | | | | |
| 4 | T → UICC | Send a READ RECORD command to read the record number X of EFARR. | RQ09_0302 | | | | | |
| 5 | UICC → T | <p>If SE ID1 is 00, either one of the following shall be true of the response data: The TLV_DO with tag '83' in the SC_DO shall be '11'; The SC_DO shall be '90 00'.</p> <ul style="list-style-type: none"> If SE ID1 is 01, either one of the following shall be true of the response data: <ul style="list-style-type: none"> The TLV_DO with tag '83' in the SC_DO shall be '01'; The SC_DO shall be '90 00'. | RQ09_0302 | | | | | |
| 6 | T → UICC | Step 5 shall be repeated for record number Y for SE ID2. | RQ09_0302 | | | | | |
| 7 | T → UICC | If the TLV_DO with tag 83 is '01' for SE01, steps f) to v shall be carried out. | | | | | | |

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 8 | T → UICC | Send a SELECT command to select EFICCID. | |
| 9 | T → UICC | Send a READ BINARY command. | |
| 10 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 11 | T → UICC | Send a SELECT command to select EFIMSI under ADFUSIM. | |
| 12 | T → UICC | Send a READ BINARY command. | |
| 13 | UICC → T | The response data returned by the UICC shall be SW1 = '69', SW2 = '82' - security status not satisfied. | |
| 14 | T → UICC | Send a VERIFY PIN command using Universal PIN. | |
| 15 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 16 | T → UICC | Send a READ BINARY command. | |
| 17 | UICC → T | The response data returned by the UICC shall be SW1 = '69', SW2 = '82' - security status not satisfied. | |
| 18 | T → UICC | Send a VERIFY PIN command using PIN Application 1 to the UICC. | |
| 19 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 20 | T → UICC | The terminal simulator shall send a READ BINARY command. | |
| 21 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 RQ09_0302 |
| 22 | T → UICC | Send a DISABLE PIN command to disable the PIN Application 1. | |
| 23 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 24 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' (PIN Status) under TLV DO with tag 'C6' shall indicate that the PIN Application 1 is disabled, and the Universal PIN is enabled and its Usage Qualifier is set to '00'. | |
| 25 | T → UICC | Send a SELECT command to select EFICCID. | |
| 26 | T → UICC | Send a READ BINARY command. | |
| 27 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 28 | T → UICC | Send a SELECT command to select EFIMSI under ADFUSIM. | |
| 29 | T → UICC | Send a READ BINARY command. | |
| 30 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 31 | T → UICC | Send an ENABLE PIN command to enable the PIN Application 1. | |
| 32 | UICC → T | Send a DISABLE PIN command to disable and indicate the Universal PIN as a replacement of the PIN Application 1. | RQ09_0306 |
| 33 | T → UICC | Reset the UICC. | |
| 34 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 35 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' (PIN Status) under TLV DO with tag 'C6' shall indicate that the PIN Application 1 is disabled and the Universal Pin is enabled. | RQ09_0302 |
| 36 | T → UICC | If the TLV_DO with tag 83 is '11' for SE00, steps 37 to 59 shall be carried out. | |
| 37 | T → UICC | Send a SELECT command to select EFICCID. | |
| 38 | T → UICC | Send a READ BINARY command. | |
| 39 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 40 | T → UICC | Send a SELECT command to select EFIMSI under ADFUSIM. | |
| 41 | T → UICC | Send a READ BINARY command. | |
| 42 | UICC → T | The response data returned by the UICC shall be SW1 = '69', SW2 = '82' - security status not satisfied. | |
| 43 | T → UICC | Send a VERIFY PIN command using PIN Application 1. | |
| 45 | UICC → T | The response data returned by the UICC shall indicate an error. | |
| 46 | T → UICC | Send a VERIFY PIN command using Universal PIN. | |
| 47 | T → UICC | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 48 | T → UICC | Send a READ BINARY command. | |
| 49 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 50 | T → UICC | Send a DISABLE PIN command to disable the Universal PIN. | |
| 51 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 52 | UICC → T | The response data shall contain: TLV DO with tag '90' (PIN Status) under TLV DO with tag 'C6' shall indicate that the PIN Application 1 and the Universal Pin are disabled. | |
| 53 | T → UICC | Send a SELECT command to select EFICCID. | |
| 54 | T → UICC | Send a READ BINARY command. | |
| 55 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 56 | T → UICC | Send a SELECT command to select EFIMSI under ADFUSIM. | |
| 57 | T → UICC | Send a READ BINARY command. | |
| 58 | UICC → T | The response data returned by the UICC shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0302 |
| 59 | T → UICC | Send an ENABLE PIN command to enable the Universal PIN. | |
| 60 | T → UICC | Send an ENABLE PIN command to enable the PIN Application 1. | |

6.7.5 PIN definitions

6.7.5.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.7.5.2 Initial conditions

For test procedure 1 and test procedure 2, SE01 shall be active.

6.7.5.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The response data shall contain PS Template DO with tag 'C6'. The following shall be true of the PS Template DO: <ul style="list-style-type: none"> One of the TLV DO with tag '83' shall be '11' indicating the key reference value for Universal PIN; One of the TLV DO with tag '83' shall be '01' indicating the key reference value for PIN Application 1; One of the TLV DO with tag '83' shall be '81' indicating the key reference value for second Application/local PIN. | RQ09_0401 RQ09_0402 RQ09_0406 RQ09_0408 |

6.7.5.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The response data shall contain PS Template DO with tag 'C6'. The following shall be true of the PS Template DO: <ul style="list-style-type: none"> One of the TLV DO with tag '83' shall be '11' indicating the key reference value for Universal PIN; One of the TLV DO with tag '83' shall be '01' indicating the key reference value for PIN Application 1; One of the TLV DO with tag '83' shall be '81' indicating the key reference value for second Application/local PIN. | RQ09_0401 RQ09_0402 RQ09_0406 RQ09_0408 |
| 4 | | Step 2 shall be repeated for the remaining ADF _{USIM} s and DFs. | |

6.7.5.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The response data shall contain PS Template DO with tag 'C6'. The following shall be true of the PS Template DO: <ul style="list-style-type: none"> Any of the TLV DO with tag '83' shall not be '11' indicating the key reference value for Universal PIN; One of the TLV DO with tag '83' shall be '01' indicating the key reference value for PIN Application 1; One of the TLV DO with tag '83' shall be '81' indicating the key reference value for second Application/local PIN. | RQ09_0404 RQ09_0406 RQ09_0408 |

6.7.6 PIN and key reference relationship

6.7.6.1 Test execution

When EFFDN is not supported by the UICC, any supported linear EF in ADFUSIM may be chosen.

6.7.6.2 Initial conditions

The records in EF_{F_{DN}} shall contain the following data for the first 10 bytes:

| | |
|------------------------|---------------------------------|
| 1 st record | 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0' |
| 2 nd record | 'B0 B1 B2 A0 A1 A2 A0 A1 A2 B0' |
| 3 rd record | 'B0 B1 B2 A0 A1 A2 B0 B1 B2 A0' |
| 4 th record | 'A0 A1 A2 B0 B1 B2 B0 B1 B2 B0' |

- The data for the remainder of these four records and for all other records (if any) shall be 'FF'.
- In case of an multi-verification capable UICC SE01 shall be active.
- Allocation of ADM levels and the respective requirements for their fulfilment are the responsibility of the appropriate administrative authority.

6.7.6.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The response data shall indicate the PS Template DO with tag 'C6'. The PS Template DO with tag 'C6' shall contain for the Universal PIN the TLV DO with tag '95' indicating the usage qualifier. Return status condition Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0507 RQ07_0211 RQ09_0501 |
| 4 | T → UICC | Send a STATUS command. | |
| 5 | UICC → T | The response data shall indicate the PS Template DO with tag 'C6'. The PS Template DO with tag 'C6' shall contain for the Universal PIN the TLV DO with tag '95' indicating the usage qualifier. | RQ09_0507 |
| 6 | T → UICC | Send a SELECT command to select EF _{F_{DN}} . | |
| 7 | UICC → T | The response data shall not contain the PS Template DO with tag 'C6'. | RQ09_0507 |
| 8 | T → UICC | Send a READ RECORD command to read the first record in EF _{F_{DN}} . | |
| 9 | UICC → T | Return status condition Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0504 |
| 10 | T → UICC | The ME simulator shall gain PIN Application 1 security access. | |
| 11 | T → UICC | Send a READ RECORD command to read the first record in EF _{F_{DN}} . | |
| 12 | UICC → T | The data string returned shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. The data for the remainder of the returned data string shall be 'FF'. Return status condition Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 13 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'B0' for all bytes to update the first record in EF _{FDN} . | |
| 14 | UICC → T | Return status condition Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | |
| 15 | T → UICC | Send a READ RECORD command using NEXT mode to read the first record in EF _{FDN} . | |
| 16 | UICC → T | The data string returned shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. The data for the remainder of the returned data string shall be 'FF' Return status condition Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |
| 17 | T → UICC | The ME simulator shall gain the second PIN Application 2 security access. | |
| 18 | UICC → T | Send an UPDATE RECORD command using CURRENT mode with data string 'B1' for all bytes to update the first record in EF _{FDN} Return status condition Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 19 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 20 | UICC → T | The data string returned shall be 'B1' for all bytes Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |
| 21 | T → UICC | Send a SELECT command to select MF. | |
| 22 | T → UICC | Send a SELECT command to select EF _{ICCID} . | |
| 23 | T → UICC | Send a READ BINARY command to read the byte in the EF _{ICCID} . | |
| 24 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0501 |
| 25 | T → UICC | Send an UPDATE BINARY command to update the byte in EF _{ICCID} . | |
| 26 | | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0510 |
| 27 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 28 | T → UICC | Send a DISABLE PIN command to disable and indicate the Universal PIN as a replacement of the PIN Application 1. | |
| 29 | T → UICC | Send a SELECT command to select EF _{FDN} . | |
| 30 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} | |
| 31 | | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0504 |
| 32 | T → UICC | The ME simulator shall gain Universal PIN security access. | |
| 33 | T → UICC | Send a READ RECORD command using NEXT mode to read the first record in EF _{FDN} . | |
| 34 | UICC → T | The data string returned shall be 'B1' for all bytes <ul style="list-style-type: none"> Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 RQ07_0211 |
| 35 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'B2' for all bytes to update the first record in EF _{FDN} . | |
| 36 | | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | |
| 37 | T → UICC | The ME simulator shall gain the second PIN Application 2 security access. | |
| 38 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'B3' for all bytes to update the first record in EF _{FDN} . | |
| 39 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ07_0211 |
| 40 | T → UICC | Send an ENABLE PIN command to enable PIN Application 1. | |
| 41 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 42 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 43 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0504 |
| 44 | T → UICC | The ME simulator shall gain PIN Application 1 security access. | |
| 45 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 46 | UICC → T | The data string returned shall be 'B3' for all bytes. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 47 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'B4' for all bytes to update the first record in EF _{FDN} . | |
| 48 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0202 |
| 49 | T → UICC | The ME simulator shall gain the second PIN Application 2 security access. | |
| 50 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0' to update record in EF _{FDN} . | |
| 51 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ07_0211 |

6.7.6.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | The response data shall indicate the PS Template DO with tag 'C6'. The PS Template DO with tag 'C6' shall not contain the Universal PIN key reference '11'. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0507 RQ09_0401 RQ09_0501 |
| 4 | T → UICC | Send a STATUS command. | |
| 5 | UICC → T | The response data shall indicate the PS Template DO with tag 'C6'. The PS Template DO with tag 'C6' shall not contain the Universal PIN key reference '11'. | RQ09_0507 RQ09_0401 |
| 6 | T → UICC | Send a SELECT command to select EF _{FDN} . | |
| 7 | UICC → T | The response data shall not contain the PS Template DO with tag 'C6'. | RQ09_0507 |
| 8 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 9 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0504 |
| 10 | T → UICC | The ME simulator shall gain PIN security access. | |
| 11 | T → UICC | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 12 | UICC → T | The data string returned shall be 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0'. The data for the remainder of the returned data string shall be 'FF'. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |
| 13 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'C0' for all bytes to update the first record in EF _{FDN} . | |
| 14 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0202 |
| 15 | T → UICC | The ME simulator shall gain the PIN2 security access. | |
| 16 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'C1' for all bytes to update the first record in EF _{FDN} . | |
| 17 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ07_0211 |
| 18 | | Send a READ RECORD command to read the first record in EF _{FDN} . | |
| 19 | UICC → T | The data string returned shall be 'C1' for all bytes. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0504 |
| 20 | T → UICC | Send an UPDATE RECORD command using CURRENT mode with data string 'A0 A1 A2 B0 B1 B2 A0 A1 A2 A0' to update record in EF _{FDN} . | |
| 21 | T → UICC | Send a SELECT command to select MF. | |
| 22 | T → UICC | Send a SELECT command to select EF _{ICCID} . | |
| 23 | T → UICC | Send a READ BINARY command to read the byte in the EF _{ICCID} . | |
| 24 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ09_0501 |
| 25 | T → UICC | Send an UPDATE BINARY command to update the byte in EF _{ICCID} . | |
| 26 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ09_0510 |

6.8 Structure of commands and responses

6.8.1 Purpose

The tests in clause 6.8.1 ensure that the IUT conforms to the specification for the mapping of functions onto Application Protocol Data Units (APDUs) which are used by the transmission protocol.

6.8.2 Mapping principles

6.8.2.1 Test execution

There are no test cases-specific parameters for this test case.

6.8.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.8.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select MF with P2 = '04'. [Bytes: CLA = '00', INS = 'A4', P1 = '00', P2 = '04', Lc = '02', data = '3F 00', Le = '00' (Case 4)]. | |
| 3 | UICC → T | Return status condition SW1 = '90', SW2 = '00' normal ending of the command. | RQ10_0101 RQ10_0105 RQ10_0201 RQ10_0202 RQ10_0203 RQ10_0204 RQ10_0205 RQ10_0206 RQ10_0207 RQ10_0208 RQ10_0209 RQ10_0210 |
| 4 | T → UICC | Send a SELECT command to select MF with P2 = '0C'. [Bytes: CLA = '00', INS = 'A4', P1 = '00', P2 = '0C', Lc = '02', data = '3F 00' (Case 3)]. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ10_0101 RQ10_0105 RQ10_0201 RQ10_0202 RQ10_0203 RQ10_0204 RQ10_0205 RQ10_0206 RQ10_0207 RQ10_0208 RQ10_0209 RQ10_0210 |
| 6 | T → UICC | Send a STATUS command with P2 = '00'. [Bytes: CLA = '80', INS = 'F2', P1 = '00', P2 = '00', Le = '00' (Case 2)]. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ10_0101 RQ10_0105 RQ10_0201 RQ10_0202 RQ10_0203 RQ10_0204 RQ10_0205 RQ10_0206 RQ10_0207 RQ10_0208 RQ10_0209 RQ10_0210 |

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 8 | T → UICC | Send a STATUS command [Bytest: CLA = '80', INS = 'F2', P1 = '00', P2 = '0C' (Case 1)]. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command]. | RQ10_0101 RQ10_0105 RQ10_0201 RQ10_0202 RQ10_0203 RQ10_0204 RQ10_0205 RQ10_0206 RQ10_0207 RQ10_0208 RQ10_0209 RQ10_0210 |

6.8.3 Response APDU Structure

6.8.3.1 Status Conditions Returned by the UICC

6.8.3.1.1 Test execution

RQ10_0204 and RQ10_0301 is not tested as it is not possible to force a UICC to produce an execution error.

6.8.3.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.8.3.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a VERIFY PIN command with Universal PIN. | |
| 3 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ10_0201 RQ10_0301 |
| 4 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 5 | | Send a READ BINARY command without SFI referencing. | |
| 6 | UICC → T | Return status condition SW1 = '69', SW2 = '86' - command not allowed (no EF selected). | RQ10_0205 RQ10_0301 |
| 7 | T → UICC | Send a SELECT command to select EF _{IMSI} . | |
| 8 | T → UICC | Send a READ BINARY command with P2 = '0F'. | |
| 9 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1-P2, or SW1 = '6A', SW2 = '86' - incorrect parameters P1-P2. | RQ10_0205 RQ10_0301 |
| 10 | T → UICC | Send a SELECT command to select EF _{ECC} . | |
| 11 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 12 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 13 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | RQ10_0205 RQ10_0301 |
| 14 | T → UICC | Send a READ BINARY command using a length of 1 byte. | |
| 15 | UICC → T | Return status condition SW1 = '69', SW2 = '81' - command incompatible with file structure. | RQ10_0205 RQ10_0301 |
| 16 | T → UICC | Send a SELECT command to select EFLOCI with Lc = 1. | |
| 17 | UICC → T | Return status condition SW1 = '67', SW2 = '00' - wrong length, or SW1 = '6A', SW2 = '87' - Lc inconsistent with P1 - P2. | RQ10_0205 RQ10_0301 |
| 18 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 19 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - security status not satisfied. | RQ10_0203 RQ10_0301 |
| 20 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 21 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - security status not satisfied. | RQ10_0203 RQ10_0301 |
| 22 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 23 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - security status not satisfied. | |
| 24 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 25 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - authentication method blocked. | RQ10_0205 RQ10_0301 |
| 26 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN. | |
| 27 | T → UICC | Send a READ RECORD command using P2 = '01'. | |
| 28 | UICC → T | Return status condition SW1 = '6B', SW2 = '00' - wrong parameter(s) P1 - P2, or SW1 = '6A', SW2 = '86' - incorrect parameter P1 or P2. | RQ10_0205 RQ10_0301 |
| 29 | T → UICC | Send the following APDU [Bytes: CLA = '00', INS = '6F', P1 = '00', P2 = '00', P3 = '00']. | |
| 30 | UICC → T | Return status condition SW1 = '6D', SW2 = '00' - instruction code not supported or invalid. | RQ10_0205 RQ10_0301 |
| 31 | T → UICC | Send a GET RESPONSE command. | |
| 32 | UICC → T | Return status condition SW1 = '6F', SW2 = '00' - technical problem, no precise diagnosis. | RQ10_0205 RQ10_0301 |
| 33 | T → UICC | Send the following APDU [Bytes: CLA = '30', INS = 'C0', P1 = '00', P2 = '00', P3 = '00']. | |
| 34 | UICC → T | Return status condition SW1 = '6E', SW2 = '00' - class not supported. | |
| 35 | T → UICC | Send a STATUS command with CLA = '81'. | |
| 36 | UICC → T | Return status condition SW1 = '68', SW2 = '81' - logical channel not supported or SW1 = '6E', SW2 = '00' - class not supported. | RQ10_0205 RQ10_0301 |
| 37 | UICC → T | Send a STATUS command with CLA = '84' [Bytes: CLA = '84', INS = 'F2', P1 = '00', P2 = '00', Le = '02']. | RQ10_0205 RQ10_0301 |
| 38 | T → UICC | Reset the UICC. | |
| 39 | T → UICC | Send a SELECT command with an incorrect file ID [Bytes: CLA = '00', INS = 'A4', P1 = '00', P2 = '04', Lc = '02', data = '12 34']. | |
| 40 | UICC → T | Return status condition SW1 = '6A', SW2 = '82' - file not found. | RQ10_0205 RQ10_0301 |
| 41 | T → UICC | Send a SELECT command to select EF _{ICCID} . | |
| 42 | T → UICC | Send an UPDATE BINARY command. The data used shall be '00 00'. | |
| 43 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ10_0205 RQ10_0301 |

6.9 Commands

6.9.1 Generic Commands

6.9.1.1 SELECT

6.9.1.1.1 Test execution

There are no test cases-specific parameters for this test case.

6.9.1.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.1.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select DF _{TELECOM} . | |
| 3 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The FCP shall contain the following tags: - Tag '82' (File Descriptor) The first byte shall be '38' or '78' (indicating a DF or ADF); - Tag '83' (File Identifier) The value shall be '7F 10' (indicating DF _{TELECOM}); - Tag '8A' (Life Cycle Status Integer); - Tag 'C6' (PIN Status Template DO) It shall contain tag '90' (PS_DO). The FCP shall contain exactly one of the following tags: Tag '8C' (Compact format); Tag 'AB' (Expanded format); Tag '8B' (Referenced to Expanded Format). The TLV DOs with the above Tags shall be provided in FCP in order given in Table 11.3 of clause 11.1.1.3 of the ETSI TS 102 221 [1]. | RQ11_0101 RQ11_0105 RQ11_0106 |
| 4 | T → UICC | Send a SELECT command to select the MF. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The FCP shall contain the following tags: Tag '82' (File Descriptor) The first byte shall be '38' or '78' (indicating a DF or ADF); Tag '83' (File Identifier) The value shall be '3F 00' (indicating MF); Tag 'A5' (Proprietary information) It shall contain tag '80' (UICC characteristics); Tag '8A' (Life Cycle Status Integer); Tag 'C6' (PIN Status Template DO) It shall contain tag '90' (PS_DO). The FCP shall contain exactly one of the following tags: Tag '8C' (Compact format); Tag 'AB' (Expanded format); Tag '8B' (Referenced to Expanded Format). The TLV DOs with the above Tags shall be provided in FCP in order given in Table 11.3 of clause 11.1.1.3 of the ETSI TS 102 221 [1]. | RQ11_0106 RQ11_0105 |
| 6 | T → UICC | Send a SELECT command to select EFDIR. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The FCP shall contain the following tags: - Tag '82' (File Descriptor) The first byte shall be '02' or '42' (indicating a linear fixed EF); The length shall be '05' (i.e. containing record length etc.); - Tag '83' (File Identifier) The value shall be '2F 00' (indicating EFDIR); Tag '8A' (Life Cycle Status Integer); Tag '80' (File size). The FCP shall contain exactly one of the following tags: Tag '8C' (Compact format); Tag 'AB' (Expanded format); Tag '8B' (Referenced to Expanded Format). The TLV DOs with the above Tags shall be provided in FCP in order given in Table 11.4 of clause 11.1.1.3 of the ETSI TS 102 221 [1]. | RQ11_0101 RQ11_0105 RQ11_0107 |
| 8 | T → UICC | Send a READ RECORD command using CURRENT mode | |
| 9 | UICC → T | Return an error code appropriate to the command (e.g. SW1 = '6A', SW2 = '83' - Record not found). | |
| 10 | T → UICC | Send a SELECT command with P2 = '0C' to select the MF. | |
| 11 | UICC → T | The response from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0103 |
| 12 | T → UICC | Send a SELECT command to select the EFARR under DF _{TELECOM} by path selection. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 13 | UICC → T | The response from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. The TLV DO with Tag '83' in the FCP shall indicate the current EF is EFARR. | RQ11_0101 |
| 14 | T → UICC | Send a SELECT command to select the parent DF. | |
| 15 | UICC → T | The response from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. The TLV DO with Tag '83' in the FCP shall indicate the current DF is MF. | RQ11_0101 |
| 16 | T → UICC | Send a SELECT command with AID to select and activate the chosen application. | |
| 17 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The FCP shall contain the following tags: - Tag '82' (File Descriptor) The first byte shall be '38' or '78' (indicating a DF or ADF); - Tag '84' (DF name - AID) The value shall be the AID of the chosen application; - Tag '8A' (Life Cycle Status Integer); - Tag 'C6' (PIN Status Template DO) It shall contain tag '90' (PS_DO). The FCP shall contain exactly one of the following tags: Tag '8C' (Compact format); Tag 'AB' (Expanded format); Tag '8B' (Referenced to Expanded Format). The TLV DOs with the above Tags shall be provided in FCP in order given in Table 11.4 of clause 11.1.1.3 of the ETSI TS 102 221 [1]. | RQ11_0101 RQ11_0106 RQ11_0105 |
| 18 | T → UICC | Send a SELECT command with P1 = '00', P2 = '0C' and with empty data field. | |
| 19 | UICC → T | The response from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0103 RQ11_0104 |

6.9.1.1.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command with P1 = '00', P2 = '0C' and with empty data field. | |
| 4 | UICC → T | The response from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0103 RQ11_0104 |
| 5 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 6 | UICC → T | The FCP returned shall contain the File ID of the MF. | RQ11_0104 |

6.9.1.2 STATUS

6.9.1.2.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.9.1.2.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.2.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 3 | UICC → T | <p>The FCP shall contain the following tags:</p> <ul style="list-style-type: none"> • Tag '82' (File Descriptor); • he first byte shall be '38' or '78' (indicating a DF); • Tag '83' (File Identifier); • he value shall be '3F 00' (indicating MF); • Tag 'A5' (Proprietary information); • It shall contain tag '80' (UICC characteristics); • Tag '8A' (Life Cycle Status Integer); • Tag 'C6' (PIN Status Template DO); • It shall contain tag '90' (PS_DO). <p>The FCP shall contain exactly one of the following tags:</p> <ul style="list-style-type: none"> • Tag '8C' (Compact format); • Tag 'AB' (Expanded format); • Tag '8B' (Referenced to Expanded Format). | RQ11_0120 |
| 4 | T → UICC | Send a SELECT command to select DF _{TELECOM} . | |
| 5 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 6 | UICC → T | <p>The FCP shall contain the following tags:</p> <ul style="list-style-type: none"> • Tag '82' (File Descriptor); • The first byte shall be '38' or '78' (indicating a DF); • Tag '83' (File Identifier); • The value shall be '7F 10' (indicating DF_{TELECOM}); • Tag '8A' (Life Cycle Status Integer); • Tag 'C6' (PIN Status Template DO); • It shall contain tag '90' (PS_DO). <p>The FCP shall contain exactly one of the following tags:</p> <ul style="list-style-type: none"> • Tag '8C' (Compact format); • Tag 'AB' (Expanded format); • Tag '8B' (Referenced to Expanded Format). | RQ11_0120 |
| 7 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 8 | UICC → T | Return an error code appropriate to the command. | RQ11_0122 |
| 9 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 10 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 11 | UICC → T | <p>The FCP shall contain the following tags:</p> <ul style="list-style-type: none"> • Tag '82' (File Descriptor); • The first byte shall be '38' or '78' (indicating an ADF); • Tag '84' (DF name - AID); • The value shall be the AID of the chosen application; • Tag '8A' (Life Cycle Status Integer); • Tag 'C6' (PIN Status Template DO); • It shall contain tag '90' (PS_DO). <p>The FCP shall contain exactly one of the following tags:</p> <ul style="list-style-type: none"> • Tag '8C' (Compact format); • Tag 'AB' (Expanded format); • Tag '8B' (Referenced to Expanded Format). | RQ11_0120 |
| 12 | T → UICC | Send a SELECT command to select the DF _{PHONEBOOK} . | |
| 13 | T → UICC | Send a STATUS command with P2 = '00'. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 14 | UICC → T | <p>The FCP shall contain the following tags:</p> <ul style="list-style-type: none"> • Tag '82' (File Descriptor); • The first byte shall be '38' or '78' (indicating a DF); • Tag '83' (File identifier); • The value shall be '5F 3A' (indicating DF_{PHONEBOOK}); • Tag '8A' (Life Cycle Status Integer); • Tag 'C6' (PIN Status Template DO); • It shall contain tag '90' (PS_DO). <p>The FCP shall contain exactly one of the following tags:</p> <ul style="list-style-type: none"> • Tag '8C' (Compact format); • Tag 'AB' (Expanded format); • Tag '8B' (Referenced to Expanded Format). | RQ11_0120 |
| 15 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 16 | UICC → T | The following shall be true of the response data: Value of tag '84' shall be the AID of the chosen application. | RQ11_0122 |
| 17 | T → UICC | Send a STATUS command with P2 = '0C'. | |
| 18 | UICC → T | The following shall be true of the response data: The response data from the UICC shall be only SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0122 |
| 19 | T → UICC | Send a SELECT command to select DF _{TELECOM} . | |
| 20 | T → UICC | Send a STATUS command with P2 = '00'. | |
| 21 | UICC → T | <p>The FCP shall contain the following tags:</p> <ul style="list-style-type: none"> • Tag '82' (File Descriptor); • The first byte shall be '38' or '78' (indicating a DF); • Tag '83' (File Identifier); • The value shall be '7F 10' (indicating DF_{TELECOM}); • Tag '8A' (Life Cycle Status Integer); • Tag 'C6' (PIN Status Template DO); • It shall contain tag '90' (PS_DO). <p>The FCP shall contain exactly one of the following tags:</p> <ul style="list-style-type: none"> • Tag '8C' (Compact format); • Tag 'AB' (Expanded format); • Tag '8B' (Referenced to Expanded Format). | RQ11_0120 |
| 22 | T → UICC | Send a STATUS command with P2 = '01'. | |
| 23 | UICC → T | The following shall be true of the response data: Value of tag '84' shall be the AID of the chosen application. | RQ11_0122 |

6.9.1.3 READ BINARY

6.9.1.3.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.9.1.3.2 Initial conditions

EF_{LOC1} shall contain the data string: 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'.

6.9.1.3.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | T | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select the chosen application. | |
| 3 | UICC → T | Send a SELECT command to select EF _{LOCI} . | |
| 4 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0126 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN to gain the access condition for EF _{LOCI} . | |
| 7 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data string returned shall be 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | RQ11_0123 RQ11_0124 RQ11_0126 RQ11_0127 |
| 9 | T → UICC | Send a READ BINARY command using a length of 1 byte. | |
| 10 | | The data string returned shall be 'A1'. | |
| 11 | T → UICC | Send a READ BINARY command using an offset of '00 01' and length 10 bytes. | |
| 12 | UICC → T | The data string returned shall be 'A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | RQ11_0124 |
| 13 | T → UICC | Send a SELECT command to select EFKeys. | |
| 14 | T → UICC | Send a READ BINARY command using SFI reference to select EF _{LOCI} and length 11 bytes. | |
| 15 | UICC → T | The data string returned shall be 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | RQ11_0127 RQ11_0118 |
| 16 | T → UICC | Send a SELECT command to select MF. | |
| 17 | T → UICC | Send a SELECT command to select EFDIR. | |
| 18 | T → UICC | Send a READ BINARY command using a length of 1 byte. | |
| 19 | UICC → T | Return status condition SW1 = '69', SW2 = '81' - command incompatible with file structure. | RQ11_0123 |

6.9.1.4 UPDATE BINARY

6.9.1.4.1 Test execution

There are no test case-specific parameters to be set or conditions to be fulfilled.

6.9.1.4.2 Method of test Initial conditions

EF_{LOCI} shall contain the data string: 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'.

6.9.1.4.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{LOCI} . | |
| 4 | T → UICC | Send an UPDATE BINARY command using a length of 11 bytes, and data string 'FF FF FF FF FF FF FF FF FF FF 00 00'. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0126 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN to gain the access condition for the EF _{LOCI} . | |
| 7 | T → UICC | Send a READ BINARY command using a length of 11 bytes to the UICC. | |
| 8 | T → UICC | The data string returned shall be ' A1 A2 A3 A4 A5 A6 A7 A8 A9 00'. | |
| 9 | T → UICC | Send an UPDATE BINARY command using a length of 11 bytes, and data string 'FF FF FF FF FF FF FF FF FF FF 00 00' to the UICC. | |
| 10 | UICC → T | Return status condition SW1 = '90', SW2 = '00'. | RQ11_0126 |
| 11 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |
| 12 | UICC → T | The data string returned shall be 'FF FF FF FF FF FF FF FF FF FF 00 00'. | RQ11_0126 |
| 13 | T → UICC | Send an UPDATE BINARY command using a length of 1 byte, and data string 'E4'. | |
| 14 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 15 | UICC → T | The data string returned shall be 'E4 FF FF FF FF FF FF FF FF 00 00'. | RQ11_0126 |
| 16 | T → UICC | Send an UPDATE BINARY command using an offset of '00 01', a length 1 byte, and data string 'E5'. | |
| 17 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |
| 18 | UICC → T | The data string returned shall be 'E4 E5 FF FF FF FF FF FF FF 00 00'. | RQ11_0126 RQ11_0127 |
| 19 | T → UICC | Send a SELECT command to select EFKeys. | |
| 20 | T → UICC | Send an UPDATE BINARY command using SFI reference to select EFLOC1 and a length 1 byte, and string 'D1'. | |
| 21 | T → UICC | Send a READ BINARY command using a length of 11 bytes. | |
| 22 | UICC → T | The data string returned shall be 'D1 E5 FF FF FF FF FF FF FF 00 00'. | RQ11_0126 RQ11_0127 |
| 23 | T → UICC | Send a SELECT command to select EFSMS. | |
| 24 | T → UICC | Send an UPDATE BINARY command using a length 1 byte and data string 'D2'. | |
| 25 | UICC → T | Return status condition SW1 = '69', SW2 = '81' - command incompatible with file structure. | RQ11_0127 |
| 26 | T → UICC | Send an UPDATE BINARY command using SFI reference to select EF _{Loc1} and a length 11 byte, and string 'A1 A2 A3 A4 A5 A6 A7 A8 A9 00 00'. | |

6.9.1.5 READ RECORD

6.9.1.5.1 Test execution

Test procedures have been separated into 3 parts. The first part is for testing CURRENT and ABSOLUTE mode, the second part is for testing NEXT and PREVIOUS mode and the third part is for testing the SFI referencing.

When EF_{CCP2} is not supported by the UICC, any supported linear EF in ADF_{USIM} supporting SFI may be chosen.

When EF_{ACM} is not supported by the UICC, any supported cyclic EF in ADF_{USIM} may be chosen.

6.9.1.5.2 Initial conditions

- The records in EF_{CCP2} shall contain the following data:

| | |
|-----------------------------|--|
| 1 st record | '10 11 12 13 14 15 16 17 18 19 1A 1B 1C 1D 1E' |
| 2 nd record | '20 21 22 23 24 25 26 27 28 29 2A 2B 2C 2D 2E' |
| 2 nd last record | 'E0 E1 E2 E3 E4 E5 E6 E7 E8 E9 EA EB EC ED EE' |
| Last record | 'F0 F1 F2 F3 F4 F5 F6 F7 F8 F9 FA FB FC FD FE' |

- The records in EF_{ACM} shall contain the following data, if it is supported:

| | |
|------------------------|---|
| 1 st record | '00 00 01'(last updated record) |
| 2 nd record | '00 00 02' |
| 3 rd record | '00 00 03' |
| X th record | '00 00' followed by byte value X (first updated record) |

6.9.1.5.3 Test procedure 1 (CURRENT and ABSOLUTE mode)

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 4 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0130 RQ11_0134 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 7 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |

| Step | Direction | Description | RQ |
|------|-----------|--|--|
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The record data returned shall be that of the first record in the EF _{CCP2} . | RQ11_0130 RQ11_0131 RQ11_0134 RQ11_0136 |
| 9 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 10 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 11 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | |
| 12 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 2. | |
| 13 | UICC → T | The record data returned shall be that of the second record in the EF _{CCP2} . | RQ11_0131 RQ11_0136 |
| 14 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 15 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | RQ11_0131 RQ11_0136 |
| 16 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 17 | UICC → T | The record data returned shall be that of the second record in the EF _{CCP2} . | |
| 18 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the last record. | |
| 19 | UICC → T | The record data returned shall be that of the last record in the EF _{CCP2} . | RQ11_0131 RQ11_0136 |
| 20 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the last record + 1. | |
| 21 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | |
| 22 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 23 | UICC → T | The record data returned shall be that of the second record in the EF _{CCP2} . | |
| 24 | T → UICC | Send a SELECT command to select EF _{ACM} . | |
| 25 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 26 | UICC → T | The record data returned shall be that of the first record in the EF _{ACM} . | RQ11_0130 |
| 27 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 28 | UICC → T | The record data returned shall be that of the first record in the EF _{ACM} . | RQ11_0131 |
| 29 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 3. | |
| 30 | UICC → T | The record data returned shall be that of the record 3 in the EF _{ACM} . | RQ11_0130 RQ11_0131 RQ11_0136 |
| 31 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the last record + 1. | |
| 32 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | |
| 33 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 34 | UICC → T | The record data returned shall be that of the first record in the EF _{ACM} . | |

6.9.1.5.4 Test procedure 2 (NEXT and PREVIOUS mode)

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 5 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 6 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | |
| 7 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 8 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | |
| 9 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 10 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The record data returned shall be that of the second record in the EF _{CCP2} . | RQ11_0131 |
| 11 | T → UICC | Send a READ RECORD command using CURRENT mode | |
| 12 | UICC → T | The record data returned shall be that of the second record in the EF _{CCP2} . | RQ11_0131 |
| 13 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 14 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 15 | T → UICC | The record data returned shall be that of the last record in the EF _{CCP2} . | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 16 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 17 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - Record not found. | |
| 18 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 19 | UICC → T | The record data returned shall be that of the last record in the EF _{CCP2} . | |
| 20 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 21 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The record data returned shall be that of the second last record in the EF _{CCP2} . | RQ11_0131 |
| 22 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 23 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 24 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | |
| 25 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 26 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | RQ11_0324 |
| 27 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 28 | UICC → T | The record data returned shall be that of the first record in the EF _{CCP2} . | RQ11_0324 |
| 29 | T → UICC | Send a SELECT command to select EFACM. | |
| 30 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 31 | UICC → T | The record data returned shall be that of the last record (record X) in the EF _{ACM} . | RQ08_0209 |
| 32 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 33 | UICC → T | The record data returned shall be that of the last record (record X) in the EF _{ACM} . | RQ08_0209 |
| 34 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 35 | UICC → T | The record data returned shall be that of the first record (record 1) in the EF _{ACM} . | RQ08_0206 |
| 36 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 37 | UICC → T | The record data returned shall be that of the last record (record X) in the EF _{ACM} . | RQ11_0131 |

6.9.1.5.5 Test procedure 3 (SFI referencing)

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a VERIFY PIN command with PIN. | |
| 4 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1 and with SFI to select EF _{CCP2} . | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The record data returned shall be that of the first record in the EF _{CCP2} . | RQ07_0320 |
| 6 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 7 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | RQ08_0206 |
| 8 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 9 | UICC → T | The record data returned shall be that of the first record (record 1) in the EF _{CCP2} . | RQ08_0206 |

6.9.1.6 UPDATE RECORD

6.9.1.6.1 Test execution

Test procedures have been separated into 3 parts. The first part is for testing CURRENT and ABSOLUTE mode, and the second part is for testing NEXT and PREVIOUS mode and the third part is for testing the SFI referencing.

When EF_{CCP2} is not supported by the UICC, any supported linear EF in ADFUSIM supporting SFI may be chosen.

When EF_{ACM} is not supported by the UICC, any supported cyclic EF in ADFUSIM may be chosen.

6.9.1.6.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.6.3 Test procedure 1 (CURRENT and ABSOLUTE mode)

| Step | Direction | Description | RQ |
|------|-----------|---|--|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 4 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 1 The data used shall be 'C1' for all bytes. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0134 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 7 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 1 The data used shall be 'C2' for all bytes. | |
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0134 |
| 9 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 10 | UICC → T | The record data returned shall be 'C2' for all bytes. | RQ11_0135 RQ11_0134 RQ11_0135 RQ11_0139 |
| 11 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 12 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'FF' for all bytes. | |
| 13 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 14 | UICC → T | The record data returned shall be 'FF' for all bytes. | RQ11_0139 |
| 15 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 2 The data used shall be 'C3' for all bytes. | |
| 16 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 2. | |
| 17 | UICC → T | The record data returned shall be 'C3' for all bytes. | RQ11_0139 |
| 18 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C4' for all bytes. | |
| 19 | | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 20 | UICC → T | The record data returned shall be 'C4' for all bytes. | RQ11_0131 |
| 21 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'C5' for all bytes. | |
| 22 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 2. | |
| 23 | UICC → T | The record data returned shall be 'C5' for all bytes. | RQ11_0140 |
| 24 | UICC → T | Send an UPDATE RECORD command using ABSOLUTE mode with the last record The data used shall be 'C6' for all bytes. | |
| 25 | UICC → T | Send a READ RECORD command using ABSOLUTE mode with the last record. | |
| 26 | UICC → T | The record data returned shall be 'C6' for all bytes. | RQ11_0137 |
| 27 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with the last record + 1 The data used shall be 'C7' for all bytes. | |
| 28 | | Return status condition SW1 = '6A', SW2 = '83' - record not found. | |
| 29 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C8' for all bytes. | |
| 30 | | Send a READ RECORD command using ABSOLUTE mode with record 2 | |
| 31 | UICC → T | The record data returned shall be 'C8' for all bytes. | RQ11_0130 RQ11_0134 |
| 32 | T → UICC | Send a SELECT command to select EF _{ACM} . | |
| 33 | T → UICC | Send a VERIFY PIN command with the relevant PIN. | |
| 34 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C9' for all bytes. | |
| 35 | UICC → T | Return an error code appropriate to the command. | RQ11_0135 |
| 36 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 3 The data used shall be 'CA' for all bytes. | |
| 37 | UICC → T | Return an error code appropriate to the command. | RQ11_0135 |
| 38 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'CB' for all bytes. | |
| 39 | UICC → T | Return an error code appropriate to the command. | RQ11_0135 |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 40 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode The data used shall be 'CC' for all bytes. | |
| 41 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0135 |
| 42 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 43 | UICC → T | The record data returned shall be 'CC' for all bytes. | RQ11_0130 RQ11_0134 |
| 44 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode The data used shall be '00 00 01'. | |
| 45 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0135 |

6.9.1.6.4 Test procedure 2 (NEXT and PREVIOUS mode)

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 5 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'C2' for all bytes. | |
| 6 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 7 | UICC → T | The record data returned shall be 'C2' for all bytes. | RQ11_0130 RQ11_0134 |
| 8 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C3' for all bytes. | |
| 9 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 10 | UICC → T | The record data returned shall be 'C3' for all bytes. | RQ11_0130 RQ11_0134 |
| 11 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'C4' for all bytes. | |
| 12 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 13 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 2. | |
| 14 | UICC → T | The record data returned shall be 'C4' for all bytes. | RQ11_0141 |
| 15 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C5' for all bytes. | |
| 16 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 2. | |
| 17 | UICC → T | The record data returned shall be 'C5' for all bytes. | RQ11_0141 |
| 18 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 19 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode The data used shall be 'C6' for all bytes. | |
| 20 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the last record. | |
| 21 | UICC → T | The record data returned shall be 'C6' for all bytes. | RQ11_0145 |
| 22 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'C7' for all bytes. | |
| 23 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | RQ11_0143 |
| 24 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'C8' for all bytes. | |
| 25 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the last record. | |
| 26 | UICC → T | The record data returned shall be 'C8' for all bytes. | RQ11_0130 RQ11_0134 |
| 27 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode The data used shall be 'C9' for all bytes. | |
| 28 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 29 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with the second last record. | |
| 30 | UICC → T | The record data returned shall be 'C9' for all bytes. | RQ08_0206 RQ11_0144 |
| 31 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 32 | T → UICC | Send an UPDATE RECORD command using NEXT mode The data used shall be 'CA' for all bytes. | |
| 33 | T → UICC | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 34 | T → UICC | Send an UPDATE RECORD command using PREVIOUS mode The data used shall be 'CB' for all bytes. | |
| 35 | UICC → T | Return status condition SW1 = '6A', SW2 = '83' - record not found. | RQ11_0145 |
| 36 | T → UICC | Send an UPDATE RECORD command using CURRENT mode The data used shall be 'CC' for all bytes. | |
| 37 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0145 |
| 38 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1 to the UICC. | |
| 39 | UICC → T | The record data returned shall be 'CC' for all bytes. | RQ11_0130 RQ11_0134 |

6.9.1.6.5 Test procedure 3 (SFI referencing)

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 4 | T → UICC | Send an UPDATE RECORD command using ABSOLUTE mode with record 1 and with SFI to select EF _{CCP2} under ADF _{USIM} The data used shall be 'C0' for all bytes. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ08_0409 |
| 6 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 7 | UICC → T | Return an error code appropriate to the command (e.g. SW1 = '6A', SW2 = '83' - record not found). | RQ08_0412 |
| 8 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 9 | UICC → T | The record data returned shall be 'C0' for all bytes. | RQ08_0412 |

6.9.1.7 SEARCH RECORD

6.9.1.7.1 Test execution

RQ11_0141 cannot be tested for T = 0 protocol as the Le byte is not transmitted It is dependent on the design of the transport layer of a ME whether to pass all the response data bytes from the UICC to its application layer according to the Le byte. (RQ11_0141 is tested in test procedure 4).

6.9.1.7.2 Initial condition

There are no test case-specific initial conditions to be fulfilled.

6.9.1.7.3 Test procedure 1 (simple search)

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a SELECT command to select EFSMS. | |
| 4 | T → UICC | Send a SEARCH RECORD command using the record number '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0138 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 7 | T → UICC | Send a SEARCH RECORD command using the record number '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with Le = '00'. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 8 | UICC → T | Return '01 02 03 04' indicating that first, second, third and fourth record have been found. | RQ11_0138 RQ11_0142 |
| 9 | UICC → T | Return status condition SW1='90', SW2='00' - normal ending of the command. | RQ11_0139 RQ11_0138 RQ11_0141 |
| 10 | T → UICC | Send a SEARCH RECORD command using the record number '02', the 'simple backward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 11 | UICC → T | The response data shall be '02 01' indicating that the first and second record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0142 |
| 12 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 13 | UICC → T | The record data returned shall be that of the second record in EFSMS. | RQ11_0140 |
| 14 | T → UICC | Send a SEARCH RECORD command using the record number '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A2 A3 A4' with Le = '00' to the UICC. | |
| 15 | UICC → T | No data shall be returned by the UICC as this search pattern cannot be found in any of the records. | RQ11_0141 |
| 16 | T → UICC | Send a READ RECORD command using CURRENT mode to the UICC. | |
| 17 | UICC → T | The record data returned shall be that of the second record in EFSMS. | RQ11_0142 |
| 18 | T → UICC | Send a SELECT command to select EFSMS. | |
| 19 | T → UICC | Send a SEARCH RECORD command using the record number '00' (current record), the 'simple forward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 20 | T → UICC | Return an error code appropriate to the command, as no current record exists. | |
| 21 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 22 | T → UICC | Send a SEARCH RECORD command using the record number '00' (current record), the 'simple forward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 23 | UICC → T | The response data shall be '01 02 03 04' indicating that the first, second, third and fourth record have been found. | |
| 24 | T → UICC | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 25 | T → UICC | Send a SELECT command to select EFSMS. | |
| 26 | T → UICC | Send a SEARCH RECORD command using the record number '00' (current record), the 'simple backward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 27 | UICC → T | Return an error code appropriate to the command, as no current record exists. | |
| 28 | T → UICC | Send a READ RECORD command using PREVIOUS mode. | |
| 29 | T → UICC | Send a SEARCH RECORD command using the record number '00' (current record), the 'simple backward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00'. | |
| 30 | UICC → T | The response data shall be '04 03 02 01' indicating that the first, second, third and fourth record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0142 |

6.9.1.7.4 Test procedure 2 (enhanced search)

| Step | Direction | Description | RQ |
|------|-----------|--|----|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a SELECT command to select EFSMS. | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN. | |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 5 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'enhanced forward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '03' indicating that the search shall start from that offset. | |
| 6 | UICC → T | The data returned shall be '02 03' indicating that the second and third records have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 7 | T → UICC | Send a SEARCH RECORD command using the record number = '02', the 'enhanced backward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '03' indicating that the search shall start from that offset. | |
| 8 | UICC → T | The response data shall be '02' indicating that the second record has been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 9 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from next record' mode, search pattern 'A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '07' indicating that the search shall start from that offset. | |
| 10 | UICC → T | The response data shall be '03' indicating that the third record has been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 11 | T → UICC | Send a SEARCH RECORD command using the P1 = '01', the 'enhanced forward search from next record' mode, search pattern 'A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '07' indicating that the search shall start from that offset. | |
| 12 | UICC → T | Return an error code appropriate to the command. | RQ11_0141 |
| 13 | T → UICC | Send a SEARCH RECORD command using the P1 = '04', the 'enhanced backward search from previous record' mode, search pattern 'A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '07' indicating that the search shall start from that offset. | |
| 14 | UICC → T | Return an error code appropriate to the command. | RQ11_0141 |
| 15 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced backward search from previous record' mode, search pattern 'B1 B2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '07' indicating that the search shall start from that offset. | |
| 16 | UICC → T | The response data shall be '02' indicating that the second record has been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 17 | T → UICC | Send a SEARCH RECORD command using the record number = '03', the 'enhanced forward search from record indicated in P1' mode, search pattern 'B1 B2 A0' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '1' and the second byte shall be set to 'B0' indicating that the search shall start after the first occurrence of the value. | |
| 18 | UICC → T | The response data shall be '03' indicating that the third record has been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 19 | T → UICC | Send a SEARCH RECORD command using the record number = '02', the 'enhanced backward search from record indicated in P1' mode, search pattern 'B1 B2 A0' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '1' and the second byte shall be set to 'B0' indicating that the search shall start after the first occurrence of the value. | |
| 20 | UICC → T | The response data shall be '02 01' indicating that the first and second record has been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 21 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from next record' mode, search pattern 'B0 B1' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '1' and the second byte shall be set to 'A2' indicating that the search shall start after the first occurrence of the value. | |
| 22 | UICC → T | The response data shall be '03 04' indicating that the third and fourth record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 23 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced backward search from previous record' mode, search pattern 'B0 B1' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '1' and the second byte shall be set to 'A2' indicating that the search shall start after the first occurrence of the value. | |
| 24 | UICC → T | The response data shall be '02 01' indicating that the first and second record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0139 RQ11_0143 |
| 25 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from next record' mode, search pattern 'FF B0' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '1' and the second byte shall be set to 'FF' indicating that the search shall start after the first occurrence of the value. | |
| 26 | UICC → T | No data shall be returned by the UICC as this search pattern cannot be found in any of the records. | RQ11_0141 |
| 27 | T → UICC | Send a SELECT command to select EFSMS. | |
| 28 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from record indicated in P1' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 29 | UICC → T | Return an error code appropriate to the command, as no current record exists. | |
| 30 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from next record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 31 | UICC → T | The response data shall be '01 02 03 04' indicating that the first, second, third and fourth record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0142 |
| 32 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced forward search from next record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 33 | UICC → T | The response data shall be '02 03 04' indicating that the second, third and fourth record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0140 RQ11_0143 |
| 34 | T → UICC | Send a SELECT command to select EFSMS. | |
| 35 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced backward search from record indicated in P1' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 36 | UICC → T | Return an error code appropriate to the command, as no current record exists. | |
| 37 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced backward search from previous record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 38 | UICC → T | The response data shall be '04 03 02 01' indicating that the first, second, third and fourth record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0142 |
| 39 | T → UICC | Send a SEARCH RECORD command using the P1 = '00', the 'enhanced backward search from previous record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 40 | UICC → T | The response data shall be '03 02 01' indicating that the first, second and third record have been found. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 41 | T → UICC | Send a SEARCH RECORD command using the P1 = '01', the 'enhanced forward search from next record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 42 | UICC → T | Return an error code appropriate to the command. | RQ11_0141 |
| 43 | T → UICC | Send a SEARCH RECORD command using the P1 = '01', the 'enhanced backward search from previous record' mode, search pattern 'A0 A1 A2' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '00' indicating that the search shall start from that offset. | |
| 44 | UICC → T | Return an error code appropriate to the command. | RQ11_0141 |
| 45 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'enhanced forward search from record indicated in P1' mode and search pattern 'A0 A2 A3 A4' with Le = '00' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '03' indicating that the search shall start from that offset. | |
| 46 | UICC → T | No data shall be returned by the UICC as this search pattern cannot be found in any of the records. | RQ11_0141 |
| 47 | T → UICC | Send a READ RECORD command using CURRENT mode. | |
| 48 | UICC → T | The record data returned shall be that of the third record in EFSMS. | RQ11_0142 |

6.9.1.7.5 Test procedure 3 (SFI)

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 4 | T → UICC | Send a SEARCH RECORD command using the SFI of EF _{ECC} , the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern '21 F2 FF' with Le = '00' to the UICC. | |
| 5 | UICC → T | The data returned shall be '01' indicating that the first record has been found. The status condition returned shall be SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0142 |
| 6 | T → UICC | Send a SEARCH RECORD command using the SFI of EF _{ECC} , the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern '22 F2 FF' with Le = '00'. | |
| 7 | UICC → T | No data shall be returned by the UICC as this search pattern cannot be found in any of the records. | |
| 8 | T → UICC | Send a READ RECORD command using NEXT mode. | |
| 9 | UICC → T | The record data returned shall be that of the first record in EF _{ECC} . | RQ11_0141 |

6.9.1.7.6 Test procedure 4 (Only applicable for T=1 protocol)

This test procedure is only applicable for T=1 protocol.

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a SELECT command to select EFSMS. | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 5 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with an empty Le. | |
| 6 | UICC → T | The UICC shall not return any response data bytes. Return status condition SW1='90', SW2='00' - normal ending of the command. | RQ11_0141 |
| 7 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A2 A3 A4' with Le = '01'. | |
| 8 | UICC → T | No data shall be returned by the UICC as this search pattern cannot be found in any of the records. | RQ11_0141 |
| 9 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with Le = '01'. | |
| 10 | UICC → T | The data returned shall be '01' indicating that the first record has been found. Return status condition SW1='90', SW2='00' - normal ending of the command. | RQ11_0141 |
| 11 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'simple forward search from record indicated in P1' mode and search pattern 'A0 A1 A2 B0' with Le = '04'. | |
| 12 | UICC → T | The data returned shall be '01 02 03 04' indicating that the first, second, third and fourth record have been found. Return status condition SW1='90', SW2='00' - normal ending of the command. | RQ11_0141 |
| 13 | T → UICC | Send a SEARCH RECORD command using the record number = '01', the 'enhanced forward search from record indicated in P1' mode, search pattern 'A0 A1 A2 B0' with Le = '04' The bit 4 of the first byte in the search indication shall be set to '0' and the second byte shall be set to '03' indicating that the search shall start from that offset. | |
| 14 | UICC → T | The data returned shall be '02 03' indicating that the second and third record have been found. | RQ11_0141 |

6.9.1.8 INCREASE

6.9.1.8.1 Test execution

When EF_{ACM} is not supported by the chosen application (see clause 4.5.2 for valid applications), any other cyclic EF which have the INCREASE access condition assigned may be used. In such case, the length of the value to be sent with an INCREASE command shall be equal to the record length of that EF.

6.9.1.8.2 Initial condition

Each record in EF_{ACM} shall contain the data '00 00 01'.

6.9.1.8.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EF_{ACM} . | |
| 4 | T → UICC | Send an INCREASE command with value '00 00 02'. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0144 |
| 6 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 7 | T → UICC | Send an INCREASE command with value '00 00 03'. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 8 | UICC → T | The response data shall be '00 00 04 00 00 03'. | RQ11_0144 RQ11_0146 RQ11_0146 |
| 9 | T → UICC | Send an INCREASE command with value '01 02 00'. | |
| 10 | UICC → T | The response data shall be '01 02 04 01 02 00'. | RQ11_0144 |
| 11 | T → UICC | Send a READ RECORD command using ABSOLUTE mode with record 1. | |
| 12 | UICC → T | The data read shall be '01 02 04'. | RQ11_0144 |
| 13 | T → UICC | Send an INCREASE command with value 'FF 00 00'. | |
| 14 | UICC → T | Return status condition SW1 = '98', SW2 = '50' - INCREASE cannot be performed, maximum value reached. | RQ11_0145 |
| 15 | T → UICC | Send an INCREASE command with value '00 FF FD'. | |
| 16 | UICC → T | The response data shall be '02 02 01 00 FF FD'. | RQ11_0146 |
| 17 | T → UICC | Send a SELECT command to select EFIC1. | |
| 18 | T → UICC | Send an INCREASE command with value '01 02 00'. | |
| 19 | UICC → T | Return an error code appropriate to the command. | RQ11_0144 RQ11_0147 |

6.9.1.9 VERIFY PIN

6.9.1.9.1 Test execution

This function is only tested for PIN. It is assumed that if the function operates correctly for PIN, it will also operate correctly for PIN2 or other PIN.

6.9.1.9.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.9.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 4 | T → UICC | Send a READ BINARY command using a length of 2 bytes to the UICC. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | |
| 6 | T → UICC | Send a VERIFY PIN command with PIN to the UICC. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0149 RQ11_0155 |
| 8 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0150 |
| 10 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 11 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0155 |
| 12 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 13 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 14 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0155 |
| 15 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 16 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | RQ11_0152 |
| 17 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 18 | T → UICC | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | RQ11_0152 |
| 19 | T → UICC | Reset the UICC and select chosen application. | |
| 20 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 21 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempts left. | RQ11_0152 |
| 22 | UICC → T | Send a VERIFY PIN command with incorrect PIN Return status condition SW1 = '69', SW2 = '83' - unsuccessful PIN verification, no attempts left. | RQ11_0152 |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 23 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 24 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0149 RQ11_0152 |
| 25 | T → UICC | Reset the UICC and select and activate chosen application. | |
| 26 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 27 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0149 RQ11_0152 |
| 28 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 29 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 30 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0152 |
| 31 | T → UICC | Send an UNBLOCK PIN command. | |
| 32 | T → UICC | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 33 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 34 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0177 |
| 35 | T → UICC | Send a DISABLE PIN command. | |
| 36 | | Reset the UICC. | |
| 37 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 38 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 39 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 41 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0150 |
| 42 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 43 | UICC → T | Return an error code appropriate to the command. | RQ11_0149 |
| 44 | T → UICC | Send an ENABLE PIN command with PIN. | |

6.9.1.9.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 3 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0152 RQ11_0155 |
| 4 | T → UICC | Send a MANAGE CHANNEL (OPEN) command. | |
| 5 | UICC → T | Return the number of the assigned logical channel - call this channel 'a.' | |
| 6 | T → UICC | Send a VERIFY PIN command with an empty data field to the UICC on channel 'a'. | |
| 7 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0152 RQ11_0155 |

6.9.1.9.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 3 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | RQ11_0152 |
| 4 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 5 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | RQ11_0152 |
| 6 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 7 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempts left. | RQ11_0152 |
| 7 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 9 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, 0 attempts left or SW1 = '69', SW2 = '83' - authentication/PIN method blocked. | RQ11_0154 |

6.9.1.10 CHANGE PIN

6.9.1.10.1 Test execution

This function is only tested for PIN. It is assumed that if the function operates correctly for PIN, it will also operate correctly for PIN2 or other PIN.

6.9.1.10.2 Initial conditions

PIN of the UICC shall be set to '00000000'.

6.9.1.10.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | UICC → T | Send a CHANGE PIN command with an incorrect old PIN and new PIN of '33333333'. | |
| 4 | T → UICC | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0160 |
| 5 | T → UICC | Send a CHANGE PIN command with a correct old PIN and new PIN of '33333333'. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0157 RQ11_0158 RQ11_0157 |
| 7 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0159 |
| 9 | T → UICC | Send a VERIFY PIN command with a new PIN of '33333333'. | |
| 10 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0157 RQ11_0159 |
| 11 | T → UICC | Send a CHANGE PIN command with an incorrect old PIN and new PIN of '55555555'. | |
| 12 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0160 |
| 13 | T → UICC | Send a CHANGE PIN command with an incorrect old PIN and new PIN of '55555555'. | |
| 14 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | RQ11_0160 |
| 15 | T → UICC | Reset the UICC. | |
| 16 | T → UICC | Send a CHANGE PIN command with an incorrect old PIN and new PIN of '55555555'. | |
| 17 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempt left. | RQ11_0160 |
| 18 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 19 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0160 |
| 20 | T → UICC | Reset the UICC. | |
| 21 | T → UICC | Send a CHANGE PIN command with an old PIN of '33333333' and new PIN of '55555555'. | |
| 22 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0158 |
| 23 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0158 |
| 24 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN and a new PIN of '55555555' to the UICC. | |
| 25 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 26 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0177 |
| 27 | T → UICC | Send a VERIFY PIN command with a new PIN of '55555555'. | |
| 28 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0157 |
| 29 | T → UICC | Send a DISABLE PIN command. | |
| 30 | T → UICC | Reset the UICC. | |
| 31 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 32 | T → UICC | Send a CHANGE PIN command with an old PIN '55555555' and new PIN of '77777777'. | |
| 33 | UICC → T | Return an error code appropriate to the command. | RQ11_0158 |
| 34 | T → UICC | Send an ENABLE PIN command to the UICC with PIN '55555555'. | |
| 35 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 36 | T → UICC | Send a CHANGE PIN command with an old PIN '55555555' and new PIN of '00000000'. | |

6.9.1.10.4 Test procedure 2

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a CHANGE PIN command with an old PIN '00000000' and new PIN of '55555555'. | |
| 3 | T → UICC | Send a MANAGE CHANNEL (OPEN) command. | |
| 4 | UICC → T | Return the number of the assigned logical channel - call this channel 'a'. | |
| 5 | T → UICC | Send a VERIFY PIN command with a PIN of '55555555' to the UICC on channel 'a'. | |
| 6 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0157 |
| 7 | T → UICC | Send a CHANGE PIN command with an old PIN '55555555' and new PIN of '00000000'. | |

6.9.1.11 DISABLE PIN

6.9.1.11.1 Test execution

The test procedure for an alternative global key reference is not included as it is out of the scope of the present document.

6.9.1.11.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.11.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 4 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 5 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | RQ11_0168 |
| 6 | T → UICC | Send a DISABLE PIN command with incorrect PIN. | |
| 7 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0168 |
| 8 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 9 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | RQ11_0168 |
| 10 | T → UICC | Send a STATUS command. | |
| 11 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in tag 'C6' in tag '62' shall be '80' indicating that PIN is still enabled. | RQ11_0168 |
| 12 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 1 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | |
| 13 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 14 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0164 |
| 15 | T → UICC | Send a STATUS command. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 16 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is disabled. | RQ11_0167 |
| 17 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 18 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | |
| 19 | T → UICC | Reset the UICC. | |
| 20 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 21 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 22 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 23 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0161 |
| 24 | T → UICC | Send an ENABLE PIN command with PIN. | |
| 25 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0161 |
| 26 | T → UICC | Send a DISABLE PIN command with incorrect PIN. | |
| 27 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | |
| 28 | T → UICC | Send a DISABLE PIN command with incorrect PIN. | |
| 29 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | |
| 30 | T → UICC | Reset the UICC. | |
| 31 | T → UICC | Send a DISABLE PIN command with incorrect PIN. | |
| 32 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempt left. | RQ11_0168 |
| 33 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 34 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - unsuccessful PIN verification, no attempt left. | RQ11_0164 |
| 35 | T → UICC | Reset the UICC. | |
| 36 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 37 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0165 |
| 38 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN. | |
| 39 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 40 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 41 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0177 |
| 42 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 43 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0164 |
| 44 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 45 | UICC → T | Return an error code appropriate to the command. | RQ11_0165 |
| 46 | T → UICC | Send an ENABLE PIN command with PIN. | |

6.9.1.12 ENABLE PIN

6.9.1.12.1 Test execution

There are no test cases-specific parameters for this test case.

6.9.1.12.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.12.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|----|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 3 | T → UICC | Reset the UICC. | |
| 4 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 5 | T → UICC | Send a SELECT command to select EFIMSI. | |

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 6 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 8 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 9 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | RQ11_0171 |
| 10 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 11 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0171 |
| 12 | T → UICC | Send a STATUS command. | |
| 13 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is still disabled. | RQ11_0171 |
| 14 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 15 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | |
| 16 | T → UICC | Send an ENABLE PIN command with PIN. | |
| 17 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0172 RQ11_0176 |
| 18 | T → UICC | Send a STATUS command. | |
| 19 | UICC → T | The following shall be true of the response data : TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is now enabled. | RQ11_0171 |
| 20 | T → UICC | Send a VERIFY PIN command with an empty data field Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0174 |
| 21 | T → UICC | Reset the UICC. | |
| 22 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 23 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 24 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 25 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | RQ11_0171 |
| 26 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 27 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 28 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 29 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | |
| 30 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 31 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | |
| 32 | T → UICC | Reset the UICC. | |
| 33 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 34 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempt left. | RQ11_0175 |
| 35 | T → UICC | Send an ENABLE PIN command with incorrect PIN. | |
| 36 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0175 |
| 37 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 38 | T → UICC | Send a SELECT command to select EFIMSI. | |
| 39 | T → UICC | Send a STATUS command. | |
| 40 | T → UICC | If TLV DO with tag '90' in the PS template DO of the response data indicates that PIN is enabled, then step 41 to step 45 shall be carried out. If TLV DO with tag '90' in the PS template DO of the response data indicates that PIN is disabled, then step 47 to step 51 shall be carried out. | |
| 41 | T → UICC | Send a READ BINARY command using a length of 2 bytes. | |
| 42 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0175 |
| 43 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 44 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | |
| 45 | T → UICC | Send a UNBLOCK PIN command with Unblock PIN. | |
| 46 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 47 | T → UICC | Send a READ BINARY command using a length of 2 bytes | |
| 48 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0175 |
| 49 | T → UICC | Send an ENABLE PIN command with PIN. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 50 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - PIN blocked. | RQ11_0172 |
| 51 | T → UICC | Send a UNBLOCK PIN command with Unblock PIN. | |
| 52 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 53 | T → UICC | Reset the UICC. | |
| 54 | T → UICC | Send a STATUS command. | |
| 55 | UICC → T | The following shall be true of the response data: The TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is enabled. | RQ11_0175 |
| 56 | T → UICC | Send an ENABLE PIN command with PIN. | |
| 57 | UICC → T | Return an error or warning code appropriate to the command. | RQ11_0172 |

6.9.1.13 UNBLOCK PIN

6.9.1.13.1 Test execution

This function is only tested for the Universal PIN. It is assumed that if the function operates correctly for the Universal PIN, it will also operate correctly for Universal PIN2 or other PIN.

There are no test cases-specific parameters for this test case.

6.9.1.13.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.13.3 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send an UNBLOCK PIN command with incorrect Unblock PIN. | |
| 4 | UICC → T | Return status condition SW1 = '63', SW2 = 'C9' - unsuccessful Unblock PIN verification, 9 attempts left. | RQ11_0177 RQ11_0179 |
| 5 | T → UICC | Send a STATUS command. | |
| 6 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is enabled. | RQ11_0181 |
| 7 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | |
| 9 | T → UICC | Send an UNBLOCK PIN command with an empty data field. | |
| 10 | UICC → T | Return status condition SW1 = '63', SW2 = 'C9' - unsuccessful PIN verification, 9 attempts left. | RQ11_0182 RQ11_0183 |
| 11 | T → UICC | Send a DISABLE PIN command with PIN. | |
| 12 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 12 | T → UICC | Send an UNBLOCK PIN command with incorrect Unblock PIN | |
| 13 | UICC → T | Return status condition SW1 = '63', SW2 = 'C8' - unsuccessful Unblock PIN verification, 8 attempts left. | RQ11_0179 |
| 14 | T → UICC | Send a STATUS command. | |
| 15 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is disabled. | RQ11_0181 |
| 16 | T → UICC | Send an ENABLE PIN command with PIN. | |
| 17 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 18 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 19 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempts left. | |
| 20 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN and new PIN '33333333'. | |
| 21 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0177 |
| 22 | T → UICC | Send a STATUS command. | |
| 23 | UICC → T | The following shall be true of the response data: TLV DO with tag '90' in the PS template DO of the response data shall indicate that PIN is enabled. | RQ11_0178 |

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 24 | T → UICC | Send a VERIFY PIN command with an empty data field. | |
| 25 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0178 |
| 26 | T → UICC | Send a VERIFY PIN command with the new PIN | |
| 27 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0177 |
| 28 | T → UICC | Send an UNBLOCK PIN command with an empty data field | |
| 29 | UICC → T | Return status condition SW1 = '63', SW2 = 'CA' - unsuccessful PIN verification, 10 attempts left. | RQ11_0178 RQ11_0182 RQ11_0183 |
| 30 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 31 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | |
| 32 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 33 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | |
| 34 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 35 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempt left. | |
| 36 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 37 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - unsuccessful PIN verification, no attempt left. | |
| 38 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN and new PIN '00000000'. | |
| 39 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0177 |
| 40 | T → UICC | Send a VERIFY PIN command with an empty data field | |
| 41 | UICC → T | Return status condition SW1 = '63', SW2 = 'C3' - unsuccessful PIN verification, 3 attempts left. | RQ11_0177 |

6.9.1.13.4 Test procedure 2 (Destructive test)

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send 9 UNBLOCK PIN command with incorrect Unblock PIN. | |
| 3 | UICC → T | The status condition returned by the UICC each time shall be SW1 = '63', SW2 = 'CX' - unsuccessful Unblock PIN verification 'X' retries remaining. After 9 times of unsuccessful Unblock PIN verification, the SW shall be SW1 = '63', SW2 = 'C1', at least one attempt left. | RQ11_0179 |
| 4 | T → UICC | Reset the UICC. | |
| 5 | T → UICC | Send an UNBLOCK PIN command with incorrect Unblock PIN. | |
| 6 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful Unblock PIN verification, no attempt left. | RQ11_0179 |
| 7 | T → UICC | Send an UNBLOCK PIN command with Unblock PIN. | |
| 8 | UICC → T | Return status condition SW1 = '69', SW2 = '83' - Unblock PIN blocked. | RQ11_0179 |

6.9.1.13.5 Test procedure 3

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 3 | T → UICC | Send an UNBLOCK PIN command with incorrect Unblock PIN. | |
| 4 | UICC → T | Return status condition SW1 = '63', SW2 = 'C9' - unsuccessful Unblock PIN verification, 9 attempts left. | RQ11_0177 RQ11_0179 |
| 5 | T → UICC | Send an UNBLOCK PIN command with incorrect Unblock PIN. | |
| 6 | UICC → T | Return status condition SW1 = '63', SW2 = 'C8' - unsuccessful Unblock PIN verification, 8 attempts left. | RQ11_0179 |
| 7 | T → UICC | Send an UNBLOCK PIN command with an empty data field. | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'C8' - unsuccessful PIN verification, 8 attempts left. | RQ11_0182 |
| 9 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 10 | UICC → T | Return status condition SW1 = '63', SW2 = 'C2' - unsuccessful PIN verification, 2 attempt left. | |
| 11 | T → UICC | Send a VERIFY PIN command with incorrect PIN | |
| 12 | UICC → T | Return status condition SW1 = '63', SW2 = 'C1' - unsuccessful PIN verification, 1 attempt left. | |
| 13 | T → UICC | Send a VERIFY PIN command with incorrect PIN. | |
| 14 | UICC → T | Return status condition SW1 = '63', SW2 = 'C0' - unsuccessful PIN verification, no attempt left. | |
| 15 | T → UICC | Send an UNBLOCK PIN command with an empty data field. | |
| 16 | UICC → T | Return status condition SW1 = '63', SW2 = 'CA' - unsuccessful PIN verification, 10 attempts left. | RQ11_0182 RQ11_0184 |

6.9.1.13.6 Test procedure 4

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | T | Send a MANAGE CHANNEL (OPEN) command. | |
| 2 | | Return the assigned logical channel - call this channel 'a'. | |
| 3 | T → UICC | Send a VERIFY PIN command with a PIN of '00000000' to the UICC on channel 'a'. | |
| 4 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0178 |
| 5 | T → UICC | Send an UNBLOCK PIN command with an incorrect Unblock PIN to the UICC on the basic channel. | |
| 6 | UICC → T | Return status condition SW1 = '63', SW2 = 'C9' - unsuccessful Unblock PIN verification, 9 attempts left. | RQ11_0177 RQ11_0179 |
| 7 | T → UICC | Send an UNBLOCK PIN command with an incorrect Unblock PIN to the UICC on channel 'a'. | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'C8' - unsuccessful Unblock PIN verification, 8 attempts left. | RQ11_0179 |

6.9.1.14 DEACTIVATE FILE

6.9.1.14.1 Foreword

Deactivation requires the verification of ADM, and the respective requirements for their fulfilment are the responsibility of the appropriate administrative authority. Therefore, the following test procedure shall be understood as an example.

6.9.1.14.2 Test execution

When EF_{CCP2} under ADFUSIM is not supported by the UICC, any supported linear fixed EF in the chosen application may be chosen.

There are no test cases-specific parameters for this test case.

6.9.1.14.3 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.14.4 Test procedure 1

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | T → UICC | Send a DEACTIVATE FILE command using "file ID selection" to deactivate EF _{CCP2} . | |
| 4 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | RQ11_0186 |
| 5 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 6 | T → UICC | Send a READ RECORD command to read record 1. | |
| 7 | UICC → T | Return status condition SW1 = '69', SW2 = '86' - command not allowed (no EF selected). | RQ11_0188 |
| 8 | T → UICC | Reset the UICC. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 9 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 10 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps). | |
| 11 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 12 | UICC → T | The following shall be true of the response data: The value of Life Cycle Status Integer of the response data shall indicate that the EF is activated. | |
| 13 | T → UICC | Send a DEACTIVATE FILE command using 'file ID selection' to deactivate EF _{CCP2} . | |
| 14 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0185 RQ11_0185 RQ11_0186 |
| 15 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 16 | T → UICC | Send an UPDATE RECORD command to update record 1. | |
| 17 | UICC → T | Return an error code appropriate to the command. | RQ11_0187 RQ11_0189 |
| 18 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 19 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is deactivated. Return status condition SW1 = '62', SW2 = '83' - selected file invalidated. | |
| 20 | T → UICC | Send an UPDATE RECORD command to update record 1. | |
| 21 | | Return an error code appropriate to the command. | RQ11_0189 |
| 22 | T → UICC | Send an ACTIVATE FILE command to select and activate EF _{CCP2} . | |
| 23 | T → UICC | Reset the UICC. | |
| 24 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 25 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 26 | T → UICC | Send a DEACTIVATE command using 'path selection from MF' to deactivate EF _{CCP2} . | |
| 27 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 28 | T → UICC | Send a SELECT command to select the EF _{CCP2} . | |
| 29 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is deactivated. Return status condition SW1 = '62', SW2 = '83' - selected file invalidated. | RQ11_0185 |
| 30 | T → UICC | Send an ACTIVATE FILE command to select and activate EF _{CCP2} . | |
| 31 | T → UICC | Reset the UICC. | |
| 32 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 33 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 34 | T → UICC | Send a DEACTIVATE FILE command using 'path selection from current DF' to deactivate EF _{CCP2} . | |
| 35 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 36 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 37 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is deactivated. Return status condition SW1 = '62', SW2 = '83' - selected file invalidated. | RQ11_0185 |
| 38 | T → UICC | Send an ACTIVATE FILE command to select and activate EF _{CCP2} . | |
| 39 | T → UICC | Reset the UICC. | |
| 40 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 41 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 42 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 43 | T → UICC | Send a DEACTIVATE FILE command with P1 = P2 = '00' and with the empty data field. | |
| 44 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0190 |
| 45 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 46 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is deactivated. Return status condition SW1 = '62', SW2 = '83' - selected file invalidated. | RQ11_0190 |
| 47 | T → UICC | Send an ACTIVATE FILE command to select and activate EF _{CCP2} . | |

6.9.1.15 ACTIVATE FILE

6.9.1.15.1 Foreword

Activation requires the verification of ADM, and the respective requirements for their fulfilment are the responsibility of the appropriate administrative authority. Therefore, the following test procedure shall be understood as an example.

6.9.1.15.2 Test execution

When EF_{CCP2} under ADFUSIM is not supported by the UICC, any supported linear fixed EF in the chosen application may be chosen.

6.9.1.15.3 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.15.4 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 3 | UICC → T | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 4 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 5 | T → UICC | Send a DEACTIVATE FILE command to deactivate EF _{CCP2} . | |
| 6 | T → UICC | Reset the UICC. | |
| 7 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 8 | T → UICC | Send an ACTIVATE FILE command using 'file ID selection' to select and activate EF _{CCP2} . | |
| 9 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - access condition not fulfilled. | RQ11_0194 |
| 10 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 11 | T → UICC | Send a READ RECORD command to read record 1. | |
| 12 | UICC → T | Return status condition SW1 = '69', SW2 = '86' - command not allowed (no EF selected). | RQ11_0193 |
| 13 | T → UICC | Reset the UICC. | |
| 14 | T → UICC | Send a SELECT command to select and activate the chosen application. | |
| 15 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 16 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 17 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is deactivated. Return status condition SW1 = '62', SW2 = '83' - selected file invalidated. | |

| Step | Direction | Description | RQ |
|------|-----------|---|-------------------------------------|
| 18 | T → UICC | Send an ACTIVATE FILE command using 'file ID selection' to select and activate EF _{CCP2} . | |
| 19 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0191 RQ11_0194 RQ11_0195 |
| 20 | T → UICC | Send a VERIFY PIN command with PIN. | |
| 21 | T → UICC | Send a READ RECORD command. | |
| 22 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 23 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 24 | | The value of Life Cycle Status Integer of the response data shall indicate that the EF is activated. | |
| 25 | T → UICC | Send a DEACTIVATE FILE command to deactivate EF _{CCP2} . | |
| 26 | T → UICC | Reset the UICC. | |
| 27 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 28 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 29 | T → UICC | Send an ACTIVATE command using 'path selection from MF' to select and activate EF _{CCP2} . | |
| 30 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 31 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 32 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is activated. | RQ11_0185 |
| 33 | T → UICC | Send a DEACTIVATE FILE command to deactivate EF _{CCP2} . | |
| 34 | T → UICC | Reset the UICC. | |
| 35 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 36 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 37 | T → UICC | Send an ACTIVATE FILE command using 'path selection from current DF' to select and activate EF _{CCP2} . | |
| 38 | | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 39 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 40 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is activated. | RQ11_0185 |
| 41 | T → UICC | Send a DEACTIVATE FILE command to deactivate EF _{CCP2} . | |
| 42 | T → UICC | Reset the UICC. | |
| 43 | T → UICC | Send a SELECT command to select and activate an application (see clause 4.5.2 for valid applications). | |
| 44 | T → UICC | The ME simulator shall gain the security access condition(s) specified for both DEACTIVATE and ACTIVATE on EF _{CCP2} . (This procedure is dependent on the respective requirements of appropriate administrative authority and may require several steps.) | |
| 45 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 46 | T → UICC | Send an ACTIVATE FILE command with P1 = P2 = '00' and with the empty data field. | |
| 47 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0195 |
| 48 | T → UICC | Send a SELECT command to select EF _{CCP2} . | |
| 49 | UICC → T | The value of Life Cycle Status Integer of the response data shall indicate that the EF is activated. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0195 |

6.9.1.16 AUTHENTICATE

FFS

6.9.1.17 MANAGE CHANNEL

FFS

6.9.1.18 GET CHALLENGE

6.9.1.18.1 Foreword

The testing of the quality of the random number generated by this command is outside the scope of the present document.

6.9.1.18.2 Test execution

The tests defined in this clause only apply where the UICC under test supports the GET CHALLENGE command. If the UICC under test does not support the GET CHALLENGE command, then these tests do not apply.

6.9.1.18.3 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.9.1.18.4 Test procedure

| Step | Direction | Description | RQ |
|---|-----------|--|--------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select the chosen application. | |
| 3 | T → UICC | Send a GET CHALLENGE command to the UICC with a length value of 8. | |
| 4 | UICC → T | Return a data string containing a maximum of 8 bytes of response data. | RQ11_01110 RQ11_01110 |
| 5 | T | Step 3 shall be repeated a further 99 times. | |
| 6 | UICC → T | For each repetition return a data string containing a maximum of 8 bytes of response data that is different to that has been returned previously in this test. | RQ11_01110 |
| NOTE: This does not test the quality of the returned Random Number merely that the same number is not returned twice in 100 calls of the GET CHALLENGE command. | | | |

6.9.2 Data Oriented Commands

6.9.2.1 RETRIEVE DATA

6.9.2.1.1 Test execution

For RQ11_0313, only '62F1' is accepted as a status word, as the relevant test procedures do not send a TERMINAL PROFILE and therefore the UICC should never indicate that a proactive command is pending.

For each of the commands in the following table, steps 5 to 15 shall be repeated for test procedure 2.

| Command | Expected status condition | CRs tested |
|---|--|------------------------|
| STATUS | SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0304 |
| VERIFY PIN with PIN | SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0304 |
| SELECT with file ID '2F 34' | An error code appropriate to the command. | RQ11_0307 RQ11_0304 |
| READ BINARY | An error code appropriate to the command. | RQ11_0307 RQ11_0304 |
| RETRIEVE DATA indicating "First block" and with tag '86' | An error code appropriate to the command. | RQ11_0307 RQ11_0304 |
| SET DATA indicating "Next block" and with data '85 01 01' | An error code appropriate to the command. | RQ11_0307 RQ11_0304 |

6.9.2.1.2 Initial conditions

EF_{MMDf} shall contain only the following data objects:

| Tag | Length field | Value |
|------|--------------|---|
| '81' | '02' | '01 02' |
| 'A2' | '82 05 A0' | 1 440 bytes: '80 0E 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D' repeated 90 times. |
| '83' | '00' | ' ' - i.e. empty value. |

EF_{MMDf} shall not contain the following data objects:

| Tag |
|------|
| '86' |

EF_{MML} shall be present.

6.9.2.1.3 Test procedure 1 (basic)

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDf} . | |
| 3 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '81' | |
| 4 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_0309 |
| 5 | T → UICC | Send a VERIFY PIN command with PIN to gain the READ access condition for EF _{MMDf} . | |
| 6 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '81' to the UICC. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data returned shall be '81 02 01 02'. | RQ11_0309 RQ11_0316 |
| 8 | T → UICC | Send a RETRIEVE DATA command indicating "Next block". | |
| 9 | UICC → T | Return status condition SW1 = '6A', SW2 = '86' - Incorrect parameters P1 to P2. | RQ11_0314 |
| 10 | T → UICC | Select EF _{MMDf} . | |
| 11 | T → UICC | Send a RETRIEVE DATA command indicating "Next block". | |
| 12 | UICC → T | Return an error code appropriate to the command. | |
| 13 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2'. | |
| 14 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2'. | RQ11_0313 RQ11_0316 |
| 15 | T → UICC | Send RETRIEVE DATA commands indicating "Next block" to the UICC until the status condition returned by the UICC is not SW1 = '62', SW2 = 'F1' - More data available. | |
| 16 | UICC → T | For the last command, Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. For all commands, the response data returned by the UICC shall contain the next part of the data object with tag 'A2'. The last command shall contain the last part of the data object with tag 'A2'. | RQ11_0316 |
| 17 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" | |
| 18 | UICC → T | Return status condition SW1 = '6A', SW2 = '86' - Incorrect parameters P1 to P2. | RQ11_0314 |
| 19 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '86' to the UICC | |
| 20 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0310 |
| 21 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '83' | |
| 22 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data returned shall be '83 00'. | RQ11_0316 |
| 23 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 24 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2', with a length less than or equal to the maximum length of data expected by the terminal as encoded in the Le byte in the command. | RQ11_0313 |
| 25 | T → UICC | Send RETRIEVE DATA commands indicating "Next block", and with Le the smaller of the number of bytes still to be transferred and 50, to the UICC, until the status condition returned by the UICC is not SW1 = '62', SW2 = 'F1' - More data available. | |
| 26 | UICC → T | For the last command, Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. For all commands, the response data returned by the UICC shall contain the next part of the data object with tag 'A2', with a length less than or equal to 50. The last command shall contain the last part of the data object with tag 'A2'. | RQ11_0313 |

6.9.2.1.4 Test procedure 2 (interleaving and aborting)

| Step | Direction | Description | RQ | | | | | | | | | | | | | | |
|---|---|--|---------|---------------------------|--------|---|---------------------|---|-----------------------------|--|-------------|--|--|--|---|--|------------------------|
| 1 | User | Reset the UICC. | | | | | | | | | | | | | | | |
| 2 | T → UICC | Select EF _{MMDf} . | | | | | | | | | | | | | | | |
| 3 | UICC → T | Send a VERIFY PIN command with PIN to gain the access condition for EF _{MMDf} . | | | | | | | | | | | | | | | |
| 4 | UICC → T | For each of the commands in the following table, steps 5 to j) shall be repeated. <table border="1" data-bbox="427 958 1230 1328"> <thead> <tr> <th>Command</th> <th>Expected status condition</th> </tr> </thead> <tbody> <tr> <td>STATUS</td> <td>SW1 = '90', SW2 = '00' - normal ending of the command</td> </tr> <tr> <td>VERIFY PIN with PIN</td> <td>SW1 = '90', SW2 = '00' - normal ending of the command</td> </tr> <tr> <td>SELECT with file ID '2F 34'</td> <td>An error code appropriate to the command</td> </tr> <tr> <td>READ BINARY</td> <td>An error code appropriate to the command</td> </tr> <tr> <td>RETRIEVE DATA indicating "First block" and with tag '86'</td> <td>An error code appropriate to the command</td> </tr> <tr> <td>SET DATA indicating "Next block" and with data '85 01 01'</td> <td>An error code appropriate to the command</td> </tr> </tbody> </table> | Command | Expected status condition | STATUS | SW1 = '90', SW2 = '00' - normal ending of the command | VERIFY PIN with PIN | SW1 = '90', SW2 = '00' - normal ending of the command | SELECT with file ID '2F 34' | An error code appropriate to the command | READ BINARY | An error code appropriate to the command | RETRIEVE DATA indicating "First block" and with tag '86' | An error code appropriate to the command | SET DATA indicating "Next block" and with data '85 01 01' | An error code appropriate to the command | RQ11_0304 RQ11_0307 |
| Command | Expected status condition | | | | | | | | | | | | | | | | |
| STATUS | SW1 = '90', SW2 = '00' - normal ending of the command | | | | | | | | | | | | | | | | |
| VERIFY PIN with PIN | SW1 = '90', SW2 = '00' - normal ending of the command | | | | | | | | | | | | | | | | |
| SELECT with file ID '2F 34' | An error code appropriate to the command | | | | | | | | | | | | | | | | |
| READ BINARY | An error code appropriate to the command | | | | | | | | | | | | | | | | |
| RETRIEVE DATA indicating "First block" and with tag '86' | An error code appropriate to the command | | | | | | | | | | | | | | | | |
| SET DATA indicating "Next block" and with data '85 01 01' | An error code appropriate to the command | | | | | | | | | | | | | | | | |
| 5 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2'. | | | | | | | | | | | | | | | |
| 6 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2'. | | | | | | | | | | | | | | | |
| 7 | T → UICC | Send the command indicated in the table in step d). | | | | | | | | | | | | | | | |
| 8 | UICC → T | Return the status condition indicated in the table in step d). | | | | | | | | | | | | | | | |
| 9 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC. | | | | | | | | | | | | | | | |
| 10 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2'. | | | | | | | | | | | | | | | |
| 11 | T → UICC | Send the command indicated in the table in step 4). | | | | | | | | | | | | | | | |
| 12 | UICC → T | Return the status condition indicated in the table in step 4). | | | | | | | | | | | | | | | |
| 13 | T → UICC | Send a RETRIEVE DATA command indicating "Next block". | | | | | | | | | | | | | | | |
| 14 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2'. | | | | | | | | | | | | | | | |
| 15 | T → UICC | The ME simulator shall continue sending RETRIEVE DATA commands indicating "Next block" to the UICC until the status condition returned by the UICC is not SW1 = '62', SW2 = 'F1' - More data available. | | | | | | | | | | | | | | | |
| 16 | UICC → T | For the last command, Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. For all commands, the response data returned by the UICC shall contain the next part of the data object with tag 'A2'. The last command shall contain the last part of the data object with tag 'A2'. | | | | | | | | | | | | | | | |
| 17 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | | | | | | | | | | | | | | | |
| 18 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | | | | | | | | | | | | | | | |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 19 | T → UICC | Send a SELECT command to select EFMML. | |
| 20 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" | |
| 21 | UICC → T | Return an error code appropriate to the command. | RQ11_0305 |
| 22 | T → UICC | Send a SELECT command to select EF _{MMDF} . | |
| 23 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | |
| 24 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The data returned shall be the start of the TLV with tag 'A2'. | RQ11_0306 |
| 25 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | |
| 26 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The data returned shall be the start of the TLV with tag 'A2'. | |
| 27 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '81' | |
| 28 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data returned shall be '81 02 01 02'. | RQ11_0306 |
| 29 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | |
| 30 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The data returned shall be the start of the TLV with tag 'A2'. | |
| 31 | T → UICC | Send a SET DATA command indicating "First block" and with data '81 02 03 04' | |
| 32 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 33 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" | |
| 34 | UICC → T | Return an error code appropriate to the command. | RQ11_0306 |
| 35 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' | |
| 36 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | RQ11_0306 |
| 37 | T → UICC | Send a SET DATA command indicating "First block" and with data 'A2 03 01 01 00' | |
| 38 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 39 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" | |
| 40 | UICC → T | Return an error code appropriate to the command. | RQ11_0306 |

6.9.2.1.5 Test procedure 3 (retransmitting)

| Step | Direction | Description | RQ |
|------|-----------|---|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDF} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the access condition for EF _{MMDF} . | |
| 4 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '81'. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data returned shall be '81 02 01 02'. | |
| 6e | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2'. | |
| 7 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | |
| 8 | T → UICC | Send a RETRIEVE DATA command indicating "Next block". | |
| 9 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | |
| 10 | T → UICC | Send a RETRIEVE DATA command indicating "Retransmit previous block". | |
| 11 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The data returned shall be the same as in step 8. | RQ11_0308 RQ11_0316 |
| 12H | T → UICC | The ME simulator shall continue sending RETRIEVE DATA commands indicating "Next block" to the UICC until the UICC returns status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 13 | T → UICC | Send a RETRIEVE DATA command indicating "Retransmit previous block" to the UICC. | |
| 14 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The data returned shall be the same as for the last RETRIEVE DATA command sent in step 12. | RQ11_0308 RQ11_0316 |

6.9.2.2 SET DATA

6.9.2.2.1 Test execution

For RQ11_0323, only '63F1' is accepted as a status word, as the relevant test procedures do not send a TERMINAL PROFILE and therefore the UICC should never indicate that a proactive command is pending.

Test procedure 2 shall be repeated for the commands listed in the table below.

| Command | Expected status condition | CRs tested |
|---|---|------------------------|
| STATUS | SW1 = '90', SW2 = '00' - normal ending of the command | RQ11_0305 |
| VERIFY PIN with PIN | SW1 = '90', SW2 = '00' - normal ending of the command | RQ11_0305 |
| SELECT with file ID '2F 34' | An error code appropriate to the command | RQ11_0305 RQ11_0307 |
| READ BINARY | An error code appropriate to the command | RQ11_0305 RQ11_0307 |
| RETRIEVE DATA indicating "First block" and with tag '86' | An error code appropriate to the command | RQ11_0305 RQ11_0307 |
| SET DATA indicating "First block" and with data '85 01 01 02' | An error code appropriate to the command | RQ11_0305 RQ11_0307 |

6.9.2.2.2 Initial conditions

EF_{MMDf} shall contain the following data objects:

| Tag | Value | Reason |
|------|---|----------------------------|
| '81' | '01 02' | Existing - to be replaced. |
| '82' | 1 440 bytes: '80 0E 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D' repeated 90 times. | Existing - to be replaced. |

EF_{MMDf} shall not contain the following data objects:

| Tag | Reason |
|------|-------------------------------|
| '86' | |
| '87' | Not existing - to be created. |
| '88' | Not existing - to be created. |

EF_{MML} shall be present.

6.9.2.2.3 Test procedure 1 (basic)

| Step | Direction | Description | RQ |
|------|-----------|---|--------------------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDf} . | |
| 3 | T → UICC | Send a SET DATA command indicating "First block" and with data '81 02 03 04'. | |
| 4 | UICC → T | Return status condition SW1 = '69', SW2 = '82' - security status not satisfied. | RQ11_01317 |
| 5 | T → UICC | Send a VERIFY PIN command with PIN to gain the UPDATE access condition for EF _{MMDf} . | |
| 6 | T → UICC | Send a SET DATA command indicating "First block" and with data '81 02 03 04'. | |
| 7 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_01317 RQ11_0322 RQ11_0324 |
| 8 | T → UICC | Send a SET DATA command indicating "Next block" and with data '81 02 05 06'. | |
| 9 | UICC → T | Return status condition SW1 = '6A', SW2 = '86' - Incorrect parameters P1 to P2. | RQ11_0324 |
| 10 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '81'. | |

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 11 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '81 02 03 04' (including the tag and length fields). | RQ11_0324 |
| 12 | T → UICC | Send a SET DATA command indicating "First block" and with data '87 02 05 06'. | |
| 13 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0322 RQ11_0324 |
| 14 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '87'. | |
| 15 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '87 02 05 06' (including the tag and length fields). | RQ11_0324 |
| 16 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 17 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0317 RQ11_0323 |
| 18 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 19 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0323 RQ11_0324 |
| 20 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. 13 14'. | |
| 21 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0322 RQ11_0324 |
| 22 | T → UICC | Send a SET DATA command indicating "Next block" and with data '11 12 .. 23 24'. | |
| 23 | UICC → T | Return status condition SW1 = '6A', SW2 = '86' - Incorrect parameters P1 to P2. | RQ11_0324 |
| 24 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 25 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 82 02 0E 01 02 .. FA FB 01 02 .. FE FF 01 02 .. 13 14' (including the tag and length fields). | RQ11_0324 |
| 26 | T → UICC | Send a SET DATA command indicating "First block" and with data '88 82 02 0E 01 02. FA FB'. | |
| 27 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0317 RQ11_0323 |
| 28 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 29 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0323 RQ11_0324 |
| 30 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 13 14' | |
| 31 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0322 RQ11_0324 |
| 32 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. 13 14'. | |
| 33 | UICC → T | Return status condition SW1 = '6A', SW2 = '86' - Incorrect parameters P1 to P2. | RQ11_0324 |
| 34 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '88'. | |
| 35 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '88 82 02 0E 01 02 .. FA FB 01 02 .. FE FF 01 02 .. 13 14' (including the tag and length fields). | RQ11_0324 |
| 36 | T → UICC | Send a SET DATA command indicating "First block" and with data '81 00'. | |
| 37 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ07_0211 |
| 38 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '81' | |
| 39 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '81 00' (including the tag and length fields). | RQ11_0329 |
| 40 | T → UICC | Send a SET DATA command indicating "First block" and with data '87' | |
| 41 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 42 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '87' | |
| 43 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0328 |

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 44 | T → UICC | Send a SET DATA command indicating "First block" and with data '87'. | |
| 45 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0329 |
| 46 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '87' to the UICC. | |
| 47 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0328 |

6.9.2.2.4 Test procedure 2 (interleaving and aborting)

| Step | Direction | Description | RQ |
|------|-----------|--|------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDf} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the UPDATE access condition for EF _{MMDf} . | |
| 4 | UICC → T | For each of the commands in the table in the test case execution section, steps 5 to 17 shall be repeated. | |
| 5e | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 6 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_01100 |
| 7 | T → UICC | Send the command indicated in the table in step 3. | |
| 8 | UICC → T | Return the status condition indicated in the table in step 4. | |
| 9 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 10 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_01100 |
| 11 | T → UICC | Send the command indicated in the table in step d). | |
| 12 | UICC → T | Return the status condition indicated in the table in step d). | |
| 13 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. 13 14'. | |
| 14 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 15 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 16 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 82 02 0E 01 02 .. FA FB 01 02 .. FE FF 01 02 .. 13 14' (including the tag and length fields). | |
| 17 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 18 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 19 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 20 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 21 | T → UICC | Select EFMML. | |
| 22 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 23 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 24 | UICC → T | Return an error code appropriate to the command. | |
| 25 | T → UICC | Select EF _{MMDf} . | |
| 26 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 27 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82'. | |
| 28 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0305 RQ11_0325 |
| 29 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 30 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 31 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 32 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 33 | T → UICC | Select EF _{MMDF} . | |
| 34 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 35 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 36 | UICC → T | Return an error code appropriate to the command. | |
| 37 | T → UICC | Select EF _{MMDF} . | |
| 38 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 39 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82' to the UICC. | |
| 40 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0305 RQ11_0325 |
| 41 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04' to the UICC. | |
| 42 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 43 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB' to the UICC. | |
| 44 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 45 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82' to the UICC. | |
| 46 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0306 RQ11_0305 RQ11_0325 |
| 47 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 48 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 49 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 50 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 51 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '81'. | |
| 52 | UICC → T | Return status condition either SW1 = '90', SW2 = '00' - normal ending of the command, or SW1 = '62', SW2 = 'F1' - More data available. | |
| 53 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82'. | |
| 54 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0305 RQ11_0306 RQ11_0325 |
| 55 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 56 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 57 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 58 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 59 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 60 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 61 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 62 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 02 03 04' (including the tag and length fields). | RQ11_0305 RQ11_0306 |
| 63 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 03 04'. | |
| 64 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 65 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 66 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 67 | T → UICC | Send a SET DATA command indicating "First block" and with data '81 02 03 04'. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------------------|
| 68 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 69 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82'. | |
| 70 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0305 RQ11_0306 RQ11_0325 |

6.9.2.2.5 Test procedure 3 (retransmitting)

| Step | Direction | Description | RQ |
|------|-----------|--|------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDF} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the UPDATE access condition for EF _{MMDF} . | |
| 4 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 82 02 0E 01 02 .. FA FB'. | |
| 5 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 6 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. FE FF'. | |
| 7 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 8 | T → UICC | Send a SET DATA command indicating "Retransmit previous block" and with data '01 02 .. FE FF'. | |
| 9 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0308 |
| 10 | T → UICC | Send a SET DATA command indicating "Next block" and with data '01 02 .. 13 14'. | |
| 11 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 12 | T → UICC | Send a SET DATA command indicating "Retransmit previous block" and with data '01 02 .. 13 14'. | |
| 13 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0308 |
| 14 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 15 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 82 02 0E 01 02 .. FA FB 01 02 .. FE FF 01 02 .. 13 14' (including the tag and length fields). | RQ11_01101 |

6.9.2.2.6 Test procedure 4 (segmentation of data)

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDF} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the access condition for EF _{MMDF} . | |
| 4 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02'. | |
| 5 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0326 |
| 6 | T → UICC | Send a SET DATA command indicating "Next block" and with data '03'. | |
| 7 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 8 | T → UICC | Send a SET DATA command indicating "Next block" and with data '04'. | |
| 9 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 10 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 11 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 02 03 04' (including the tag and length fields). | RQ11_0305 |
| 12 | T → UICC | Send a SET DATA command indicating "First block" and with data '9F 1F'. | |
| 13 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0329 |
| 14 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02 05 06 01 02 03 04'. | |
| 15 | UICC → T | Return status condition SW1 = '67', SW2 = '00' - Wrong length. | RQ11_0326 |

| | | | |
|----|----------|---|-----------|
| 16 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '82'. | |
| 17 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '82 02 03 04' (including the tag and length fields). | RQ11_0305 |
| 18 | T → UICC | Send a SET DATA command indicating "First block" and with data '82 02'. | |
| 19 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 20 | T → UICC | Send a SET DATA command indicating "Next block" and with data '05 06 07 08'. | |
| 21 | UICC → T | Return status condition SW1 = '67', SW2 = '00' - Wrong length. | RQ11_0326 |
| 22 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '82'. | |
| 23 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0325 |

6.9.2.3 BER-TLV structure files

6.9.2.3.1 Purpose

Clause 6.9.2.3 specifies test cases to verify that the UICC under test uses '5C' correctly, uses the specified tag ranges correctly and uses the correct FCP content.

6.9.2.3.2 Test execution

There are no test cases-specific parameters for this test case.

6.9.2.3.3 Initial conditions

EF_{MMDF} shall contain only the following data objects:

| Tag | Length field | Value |
|------|--------------|--|
| '81' | '02' | '01 02' |
| 'A2' | '82 05 A0' | 1440 bytes: '80 0E 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D' repeated 90 times. |
| '83' | '00' | ' ' - i.e. empty value. |

6.9.2.3.4 Initial conditions 1 (usage of '5C')

| Step | Direction | Description | RQ | | | | | | | | | | | | |
|----------|-----------|--|-------------------------------------|-----|----------------------------|---------|------|---------|--------|------|-----|--------|------|---------|--|
| 1 | User | Reset the UICC. | | | | | | | | | | | | | |
| 2 | T → UICC | Select EF _{MMDF} . | | | | | | | | | | | | | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the READ and UPDATE access conditions for EF _{MMDF} . | | | | | | | | | | | | | |
| 4 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '5C'. | | | | | | | | | | | | | |
| 5 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '5C 03' followed by '81', 'A2' and '83' in any order. | RQ11_0199 RQ11_0302 | | | | | | | | | | | | |
| 6 | T → UICC | Send appropriate SET DATA commands in order to achieve the updates indicated in the following table: <table border="1" data-bbox="518 1599 1137 1718"> <thead> <tr> <th>Function</th> <th>Tag</th> <th>Value (for create/replace)</th> </tr> </thead> <tbody> <tr> <td>Replace</td> <td>'81'</td> <td>'03 04'</td> </tr> <tr> <td>Delete</td> <td>'A2'</td> <td>N/A</td> </tr> <tr> <td>Create</td> <td>'85'</td> <td>'01 02'</td> </tr> </tbody> </table> | Function | Tag | Value (for create/replace) | Replace | '81' | '03 04' | Delete | 'A2' | N/A | Create | '85' | '01 02' | |
| Function | Tag | Value (for create/replace) | | | | | | | | | | | | | |
| Replace | '81' | '03 04' | | | | | | | | | | | | | |
| Delete | 'A2' | N/A | | | | | | | | | | | | | |
| Create | '85' | '01 02' | | | | | | | | | | | | | |
| 7 | T → UICC | Send a SET DATA command indicating "First block" and with data '89 82 01 00 01 02 .. FA FB'. | | | | | | | | | | | | | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | | | | | | | | | | | | | |
| 9 | T → UICC | Select EF _{MMDF} . | | | | | | | | | | | | | |
| 10 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '5C'. | | | | | | | | | | | | | |
| 11 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '5C 03' followed by '81', '83' and '85' in any order. | RQ11_0199 RQ11_0302 RQ11_0324 | | | | | | | | | | | | |
| 12 | T → UICC | Send a SET DATA command indicating "First block" and with data '5C 02 01 02'. | | | | | | | | | | | | | |
| 13 | UICC → T | Return an error code appropriate to the command. | RQ11_0302 | | | | | | | | | | | | |

6.9.2.3.5 Test procedure 2 (supported tag values)

| Step | Direction | Description | RQ | | |
|------|-----------|--|------------------------|------------|--|
| 1 | User | Reset the UICC. | | | |
| 2 | T → UICC | Select EF _{MMDF} . | | | |
| 3 | UICC → T | Send a VERIFY PIN command with PIN to gain the READ and UPDATE access conditions for EF _{MMDF} . | | | |
| 4 | T → UICC | For each tag in the table below, Send a RETRIEVE DATA command indicating "First block" and with the tag from the table | | | |
| | | '80' | '8F' | '9E' | |
| | | '9F 1F' | '9F 4F' | '9F 7F' | |
| | | '9F 81 00' | '9F C3 40' | '9F FF 7F' | |
| | | 'A0' | 'AF' | 'BE' | |
| | | 'BF 1F' | 'BF 4F' | 'BF 7F' | |
| | | 'BF 81 00' | 'BF C3 40' | 'BF FF 7F' | |
| 5 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | RQ11_0301 | | |
| 6 | | For each tag in the table in step 4), steps 7) to 9) shall be repeated. | | | |
| 7 | T → UICC | Send a SET DATA command indicating "First block" and with data consisting of the tag indicated in the table in step d) followed by '02 01 04'. | | | |
| 8 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0301 | | |
| 9 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with the tag indicated in the table in step d). | | | |
| 10 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data consisting of the tag indicated in the table in step d) followed by '02 01 04' (including the tag and length fields). | | | |
| 11 | T → UICC | For each tag in the table below, Send a RETRIEVE DATA command indicating "First block" and with the tag from the table | | | |
| | | '01' | '40' | 'C0' | |
| | | '9F 00' | '9F 80 00' | | |
| | | '9F 01' | '9F 1E' | | |
| | | '9F 81 80 00' | | | |
| | | 'BF 00' | 'BF 80 00' | | |
| | | 'BF 01' | 'BF 1E' | | |
| | | 'BF 81 80 00' | | | |
| 12 | UICC → T | Return status condition SW1 = '6A', SW2 = '80' - Incorrect parameters in the data field. | RQ11_0301 RQ11_0312 | | |
| 13 | T → UICC | For each tag in the table in step 11, Send a SET DATA command indicating "First block" and with data consisting of the tag followed by '02 03 04'. | | | |
| 14 | UICC → T | Return status condition SW1 = '6A', SW2 = '80' - Incorrect parameters in the data field. | RQ11_0301 RQ11_0312 | | |

6.9.2.3.6 Test procedure 3 (FCP)

| Step | Direction | Description | RQ | | | | | | | | | | | | |
|---|-----------|--|-----------|-----|----------------------------|---------|------|---------------|--------|------|-----|--------|------|---------|--|
| 1 | User | Reset the UICC. | | | | | | | | | | | | | |
| 2 | T → UICC | Select EF _{MMDF} . | | | | | | | | | | | | | |
| 3 | UICC → T | The contents of the TLV with tag '80' (File size) shall be equal to the value 1 450 (decimal). | RQ11_0317 | | | | | | | | | | | | |
| 4 | T → UICC | Send a VERIFY PIN command with PIN to gain the UPDATE access condition for EF _{MMDF} . | | | | | | | | | | | | | |
| 5 | T → UICC | Send appropriate SET DATA commands in order to achieve the updates indicated in the following table: <table border="1" data-bbox="523 510 1136 629"> <thead> <tr> <th>Function</th> <th>Tag</th> <th>Value (for create/replace)</th> </tr> </thead> <tbody> <tr> <td>Replace</td> <td>'81'</td> <td>'03 04 05 06'</td> </tr> <tr> <td>Delete</td> <td>'A2'</td> <td>N/A</td> </tr> <tr> <td>Create</td> <td>'85'</td> <td>'01 02'</td> </tr> </tbody> </table> | Function | Tag | Value (for create/replace) | Replace | '81' | '03 04 05 06' | Delete | 'A2' | N/A | Create | '85' | '01 02' | |
| Function | Tag | Value (for create/replace) | | | | | | | | | | | | | |
| Replace | '81' | '03 04 05 06' | | | | | | | | | | | | | |
| Delete | 'A2' | N/A | | | | | | | | | | | | | |
| Create | '85' | '01 02' | | | | | | | | | | | | | |
| 6 | T → UICC | Select EF _{MMDF} . | | | | | | | | | | | | | |
| 7 | | The contents of the TLV with tag '80' (File size) in the FCP shall be equal to the value 12 (decimal). (See note 1) | RQ11_0317 | | | | | | | | | | | | |
| 8 | T → UICC | Send appropriate SET DATA command(s) in order to create a new (i.e. currently non-existing) data object such that the number of bytes in the TLV (including the tag, length and value fields) is the largest possible that does not exceed the amount of available memory. A tag of '91', '9F1F' or '9F8100' shall be used according to whether a 1-, 2- or 3-byte tag is used. | | | | | | | | | | | | | |
| 9 | | The UICC shall successfully execute all the SET DATA commands, such that the data object transfer is successfully completed. | RQ11_0113 | | | | | | | | | | | | |
| 10 | T → UICC | Send a SET DATA command to delete the data object created in step 8. | | | | | | | | | | | | | |
| 11 | T → UICC | Select EF _{MMDF} . | | | | | | | | | | | | | |
| 12 | | Step 13 shall only be carried out if the contents of the TLV with tag '83' (Amount of available memory) contained in the TLV with tag 'A5' (Proprietary information) in the FCP returned in step h) has a value of less than 16 777 222 (decimal). (See note 2) | | | | | | | | | | | | | |
| 13 | | Send a SET DATA command indicating "First block" and with data containing a tag field of a tag which does not currently exist in the file and a length field containing a length such that the number of bytes in the TLV (including the tag, length and value fields) would exceed the amount of available memory by the smallest amount possible. A tag of '91', '9F1F' or '9F8100' shall be used according to whether a 1-, 2- or 3-byte tag is used. | | | | | | | | | | | | | |
| 14 | | Return status condition SW1 = '6A', SW2 = '84' - Not enough memory space. | RQ11_0320 | | | | | | | | | | | | |
| NOTE 1: Steps 8 and g) shall only be carried out if the contents of the TLV with tag '83' (Amount of available memory) contained in the TLV with tag 'A5' (Proprietary information) in the FCP returned in step e) has a value of at least 2 (decimal). | | | | | | | | | | | | | | | |
| NOTE 2: 16 777 222 is the number of bytes in the largest possible TLV - that having a 3-byte tag and a length of 'FF FF FF'. | | | | | | | | | | | | | | | |

6.9.2.4 Logical channel interactions

6.9.2.4.1 Purpose

To verify that the UICC under test functions correctly when a BER-TLV structure file is accessed on more than one channel simultaneously.

6.9.2.4.2 Test execution

There are no test cases-specific parameters for this test case.

6.9.2.4.3 Initial conditions

- EF_{MMDF} shall contain only the following data objects:

| Tag | Length field | Value |
|------|--------------|--|
| '81' | '02' | '01 02' |
| 'A2' | '82 05 A0' | 1440 bytes: '80 0E 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D' repeated 90 times. |
| '83' | '00' | ' ' - i.e. empty value. |

- $DF_{MULTIMEDIA}$ and EF_{MMDF} shall be configured as shareable.

6.9.2.4.4 Test procedure 1 (management of tag pointers)

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF_{MMDF} . | |
| 3 | UICC → T | Send a VERIFY PIN command with PIN to gain the READ and UPDATE access conditions for EF_{MMDF} . | |
| 4 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 5 | UICC → T | The UICC should return the assigned logical channel number - call it channel 'a'. | |
| 6 | T → UICC | Select EF_{MMDF} on channel 'a'. | |
| 7 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' to the UICC on the basic channel. | |
| 8 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2'. | RQ11_01100 |
| 9 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' to the UICC on channel 'a'. | |
| 10 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2'. | RQ11_01100 |
| 11 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on the basic channel. | |
| 12 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2' as transferred on the basic channel. | RQ11_01100 RQ11_0305 |
| 13 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on the basic channel. | |
| 14 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2' as transferred on the basic channel. | RQ11_01100 RQ11_0305 |
| 15 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on channel 'a'. | |
| 16 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2' as transferred on channel 'a'. | RQ11_01100 RQ11_0305 |
| 17 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' to the UICC on channel 'a'. | |
| 18 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the first part of the data object with tag 'A2'. | RQ11_0305 |
| 19 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on the basic channel. | |
| 20 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. The response data returned by the UICC shall contain the next part of the data object with tag 'A2' as transferred on the basic channel. | RQ11_01100 RQ11_0305 |
| 21 | T → UICC | Select EF_{MMDF} on channel 'a'. | |
| 22 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on the basic channel. | |
| 23 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | RQ11_01100 RQ11_0305 |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------|
| | | The response data returned by the UICC shall contain the next part of the data object with tag 'A2' as transferred on the basic channel. | |
| 24 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 1E 01 02 03 04 05' to the UICC on the basic channel. | |
| 25 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 26 | T → UICC | Send a SET DATA command indicating "First block" and with data '85 1E 81 82 83 84 85' to the UICC on channel 'a'. | |
| 27 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 28 | T → UICC | Send a SET DATA command indicating "Next block" and with data '06 07 08 09 0A' to the UICC on the basic channel. | |
| 29 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected . | RQ11_0305 |
| 30 | T → UICC | Send a SET DATA command indicating "Next block" and with data '11 12 13 14 15' to the UICC on the basic channel. | |
| 31 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0305 |
| 32 | T → UICC | Send a SET DATA command indicating "Next block" and with data '86 87 88 89 8A' to the UICC on channel 'a'. | |
| 33 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0305 |
| 34 | T → UICC | Send a SET DATA command indicating "Next block" and with data '16 17 18 19 1A' to the UICC on the basic channel. | |
| 35 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0305 |
| 36 | T → UICC | Send a SET DATA command indicating "First block" and with data '85 1E 81 82 83 84 85' to the UICC on channel 'a'. | |
| 37 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 38 | T → UICC | Send a SET DATA command indicating "Next block" and with data '21 22 23 24 25' to the UICC on the basic channel. | |
| 39 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | RQ11_0305 |
| 40 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 41 | T → UICC | Send a SET DATA command indicating "Next block" and with data '26 27 28 29 2A' to the UICC on the basic channel. | |
| 42 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_01100 RQ11_0305 |
| 43 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '84' to the UICC on the basic channel. | |
| 44 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '81 2A 01 02 03 04 05 06 07 08 09 0A 11 12 13 14 15 16 17 18 19 1A 21 22 23 24 25 26 27 28 29 2A ' (including the tag and length fields). | RQ11_01100 |
| 45 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '85' to the UICC on the basic channel. | |
| 46 | UICC → T | Return status condition SW1 = '6A', SW2 = '88' - Referenced data not found. | |

6.9.2.4.5 Test procedure 2 (concurrent access to data object)

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDf} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the READ and UPDATE access conditions for EF _{MMDf} . | |
| 4 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 5 | UICC → T | The UICC should return the assigned logical channel number - call it channel 'a'. | |
| 6 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 7 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 0A 01 02 03 04 05' to the UICC on channel 'a'. | |
| 8 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 9 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '84' to the UICC on the basic channel. | |
| 10 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0321 |
| 11 | T → UICC | Send a SET DATA command indicating "Next block" and with data '06 07 08 09 0A' to the UICC on channel 'a'. | |

| Step | Direction | Description | RQ |
|------|-----------|--|-------------------------|
| 12 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_01100 RQ11_0305 |
| 13 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '84' to the UICC on the basic channel. | |
| 14 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0321 |
| 15 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 16 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag '84' to the UICC on the basic channel. | |
| 17 | UICC → T | Return status condition either SW1 = '90', SW2 = '00' - normal ending of the command, or SW1 = '62', SW2 = 'F1' - More data available. | |
| 18 | T → UICC | Select EF _{MMDf} . | |
| 19 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 0A 01 02 03 04 05' to the UICC on channel 'a'. | |
| 20 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 21 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 22 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0321 |
| 23 | T → UICC | Send a SET DATA command indicating "Next block" and with data '06 07 08 09 0A' to the UICC on channel 'a'. | |
| 24 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0305 |
| 25 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 26 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0321 |
| 27 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 28 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 29 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | |
| 30 | T → UICC | Select EF _{MMDf} . | |
| 31 | T → UICC | Send a RETRIEVE DATA command indicating "First block" and with tag 'A2' to the UICC on channel 'a'. | |
| 32 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | |
| 33 | T → UICC | Send a SET DATA command indicating "First block" and with data 'A2 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 34 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0311 |
| 35 | T → UICC | Send a RETRIEVE DATA command indicating "Next block" to the UICC on channel 'a'. | |
| 36 | UICC → T | Return status condition SW1 = '62', SW2 = 'F1' - More data available. | |
| 37 | T → UICC | Send a SET DATA command indicating "First block" and with data 'A2 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 38 | UICC → T | Return status condition SW1 = '69', SW2 = '85' - Conditions of use not satisfied. | RQ11_0311 |
| 39 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 40 | T → UICC | Send a SET DATA command indicating "First block" and with data 'A2 05 81 82 83 84 85' to the UICC on the basic channel. | |
| 41 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ11_0311 |

6.9.2.4.6 Test procedure 3 (usage of '5C')

| Step | Direction | Description | RQ |
|------|-----------|--|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Select EF _{MMDf} . | |
| 3 | T → UICC | Send a VERIFY PIN command with PIN to gain the READ and UPDATE access conditions for EF _{MMDf} . | |
| 4 | T → UICC | Send a MANAGE CHANNEL (OPEN) command to the UICC on the basic channel. | |
| 5 | UICC → T | The UICC should return the assigned logical channel number - call it channel 'a'. | |
| 6 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 7 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '5C' to the UICC on the basic channel. | |
| 8 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '5C 03' followed by '81', 'A2' and '83' in any order (including the tag and length fields of the '5C' TLV). | RQ11_0324 |
| 9 | T → UICC | Send a SET DATA command indicating "First block" and with data '84 0A 01 02 03 04 05' to the UICC on channel 'a'. | |
| 10 | UICC → T | Return status condition SW1 = '63', SW2 = 'F1' - More data expected. | |
| 11 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '5C' to the UICC on the basic channel. | |
| 12 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '5C 03' followed by '81', 'A2', '83' and '84' in any order (including the tag and length fields of the '5C' TLV). | RQ11_0315 |
| 13 | T → UICC | Select EF _{MMDf} on channel 'a'. | |
| 14 | T → UICC | Send appropriate RETRIEVE DATA command(s) in order to read the data object with tag '5C' to the UICC on the basic channel. | |
| 15 | UICC → T | The data object retrieved by the RETRIEVE DATA command(s) shall contain the data '5C 03' followed by '81', 'A2' and '83' in any order (including the tag and length fields of the '5C' TLV). | RQ11_0325 |

6.10 Transmission Oriented Commands

6.10.1 T = 0 specific commands

6.10.1.1 GET RESPONSE

6.10.1.1.1 Test execution

There are no test case specific parameters for this test case.

6.10.1.1.2 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.10.1.1.3 Test procedure

| Step | Direction | Description | RQ |
|------|-----------|---|-----------|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a SELECT command to select the MF. | |
| 3 | T → UICC | Send a GET RESPONSE command. | |
| 4 | UICC → T | The UICC shall Send valid FCP data. TLV DO with tag '83' in tag '62' shall indicate that MF is the currently selected file. | RQ12_0101 |
| 5 | T → UICC | Send a STATUS command to the UICC with P2 = '0C'. | |
| 6 | T → UICC | Send a GET RESPONSE command. | |
| 7 | UICC → T | Return status condition SW1 = '6F', SW2 = '00' - technical problem, no precise diagnosis. | RQ12_0101 |

6.11 Application independent files

6.11.1 Purpose

The clause provides tests to ensure that the IUT contains all of the EFs needed for a 3GPP session.

6.11.2 Test execution

The contents and coding of the data within the files are not tested, but shall conform to the respective contents and coding of the data given for each of the following files:

- EF_{DIR}
- EF_{ICCID} (ICC Identification)
- EF_{PL} (Preferred Languages)
- EF_{ARR} (Access Rule Reference)
- DF_{CD} - Configuration Data (EF_{LAUNCH PAD}, EF_{ICON})

6.11.3 Initial conditions

There are no test case-specific initial conditions to be fulfilled.

6.11.4 Test procedure

| Step | Direction | Description | RQ |
|--|-----------|---|--|
| 1 | User | Reset the UICC. | |
| 2 | T → UICC | Send a STATUS command. | |
| 3 | UICC → T | TLV DO with tag '83' in the response data shall indicate the identifier of the MF '3F 00'. Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. | RQ13_0101 |
| 4 | T → UICC | Send a SELECT command to select the first EF listed in the test execution clause. | |
| 5 | UICC → T | Return status condition SW1 = '90', SW2 = '00' - normal ending of the command. The following shall be true of the response data: <ul style="list-style-type: none"> • TLV DO with tag '83' shall indicate the identifier of the file selected; • TLV DO with tag '82' shall not be '38' and '78' indicating EF; • TLV DO with tag '82' shall indicate the structure given for the file in the test execution clause; • TLV DO with tag '80' shall be at least the minimum file size given in the table for the file in test execution clause, if the EF is transparent; • Byte 5 and 6 of TLV DO with tag '82' shall be in accordance with the record length given for the files in the test execution clause, if the EF is linear fixed or cyclic; • TLV DO with tag '80' shall be an integer multiple of the record length if the EF is linear fixed or cyclic; • TLV DO with tag '88' shall indicate the short file identifier given in the table for the file in the test execution clause; • TLV DO with tag '86' or '8B' or '8C' or 'AB' shall indicate the access conditions given in the table for the file in the test execution clause. (See note) | RQ13_0101 RQ13_0102 RQ13_0103 RQ13_0104 RQ13_0105 RQ13_0106 |
| 6 | T → UICC | Steps 1 to 2 shall be repeated for the remaining mandatory EFs in test execution clause. | |
| NOTE: If the access conditions indicate referenced security, the referenced record in the EFARR may be read at this point if necessary | | | |

Annex A (informative): List of test cases for each conformance requirement

FFS

Annex B (informative): Bibliography

ETSI TS 102 484: "Smart Cards; Secure channel between a UICC and an end-point terminal".

ETSI TS 102 225: "Smart Cards; Secured packet structure for UICC based applications".

Annex C (informative): Change history

The table below indicates all changes requests (CR) applied to the present document since it was created by ETSI TC SCP.

| Change history | | | | | | | | |
