#### Important notice

The present document can be downloaded from: <u>http://www.etsi.org/standards-search</u>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the only prevailing document is the print of the Portable Document Format (PDF) version kept on a specific network drive within ETSI Secretariat.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at <u>https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx</u>

If you find errors in the present document, please send your comment to one of the following services: https://portal.etsi.org/People/CommiteeSupportStaff.aspx

#### **Copyright Notification**

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI. The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

# Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Foreword

This Technical Specification (TS) has been produced by ETSI Partnership Project oneM2M (oneM2M).

5

### 1 Scope

The present document contains an informative functional role model and normative technical requirements for oneM2M.

### 2 References

### 2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <a href="https://docbox.etsi.org/Reference/">https://docbox.etsi.org/Reference/</a>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1] ETSI TS 122 368: "Digital cellular telecommunications system (Phase 2+) (GSM); Universal Mobile Telecommunications System (UMTS); LTE; Service requirements for Machine-Type Communications (MTC); Stage 1 (3GPP TS 22.368)".

### 2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] oneM2M Drafting Rules.
- NOTE: Available at <u>http://member.onem2m.org/Static\_pages/Others/Rules\_Pages/oneM2M-Drafting-Rules-V1\_0.doc</u>.
- [i.2] ETSI TS 118 111: "oneM2M; Common Terminology (oneM2M TS-0011)".
- [i.3] ETSI TR 118 508: "Analysis of Security Solutions for the oneM2M System".

### 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in ETSI TS 118 111 [i.2] apply.

6

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AE	Application Entity
API	Application Program Interface
BBF	BroadBand Forum
CHA	Continua Health Alliance
CPU	Central Processing Unit
DM	Device Management
GBA	Generic Bootstrapping Architecture
GSMA	Global System for Mobile Communications Association
GW	Gateway
HGI	Home Gateway Initiative
HSM	Hardware Security Module
IP	Internet Protocol
MTC	Machine Type Communications
OMA	Open Mobile Alliance
OSR	Overall System Requirements
OWL	Web Ontology Language
QoS	Quality of Service
RDF	Resource Description Framework
SMS	Short Message Service
UICC	Universal Integrated Circuit Card
USIM	UMTS Subscriber Identity Module
USSD	Unstructured Supplementary Service Data
WAN	Wide Area Network
WLAN	Wireless Local Area Network

### 4 Conventions

The keywords "shall", "shall not", "should", "should not", "may", "need not" in the present document are to be interpreted as described in the oneM2M Drafting Rules [i.1].

- NOTE: According to oneM2M Drafting Rules [i.1] in order to mandate a feature in the oneM2M System but allow freedom to the individual deployment whether to use it or not subsequently requirements are often formulated like:
  - The oneM2M System shall support a mechanism [function, capability...] to ..."; or
  - "...<u>shall</u> be able to ...".

This does not mandate usage of the required feature in a M2M Solution.

### 5 Introduction to the M2M ecosystem

5.1 Functional roles description

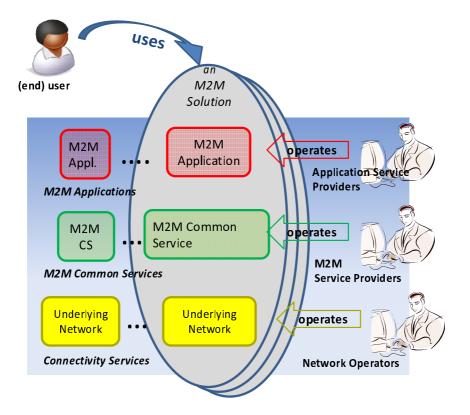

Figure 1: Functional Roles in the M2M Ecosystem

- 1) The *User* (individual or company aka: end-user) fulfils all of the following criteria:
  - Uses an M2M solution.
- 2) The Application Service Provider fulfils all of the following criteria:
  - Provides an M2M Application Service.
  - Operates M2M Applications.
- 3) The M2M Service Provider fulfils all of the following criteria:
  - Provides M2M Services to Application Service Providers.
  - Operates M2M Common Services.
- 4) The Network Operator fulfils all of the following criteria:
  - Provides Connectivity and related services for M2M Service Providers.
  - Operates an Underlying Network. Such an Underlying Network could e.g. be a telecom network.

Any of the above functional roles may coincide with any of the other roles. These functional roles do not imply business roles or architectural assumptions.

# 6 Functional Requirements

# 6.1 Overall System Requirements

#### **Table 1: Overall System Requirements**

Requirement ID	Description	Release
OSR-001	The oneM2M System shall allow communication between M2M Applications by	Implemented
	using multiple communication means based on IP access.	in Rel-1
OSR-002a	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with constrained computing (e.g. small CPU, memory,	in Rel-1
	battery) or communication capabilities (e.g. 2G wireless modem, certain WLAN	
	node).	
OSR-002b	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with rich computing capabilities (e.g. large CPU,	in Rel-1
	memory) or communication (e.g. 3/4G wireless modem, wireline).	
OSR-003	The oneM2M System shall support the ability to maintain application-to-	Not
See REQ-2015-	application communication in coordination with an application session for those	implemented
0626R01	M2M Applications that require it.	
OSR-004	The oneM2M System shall support session-less application communications for	Implemented
	those M2M Applications that require it.	in Rel-1
OSR-005	The oneM2M System shall be able to expose the services offered by	Partially
	telecommunications networks to M2M Applications (e.g. SMS, USSD,	implemented
	localization, subscription configuration, authentication (e.g. Generic	(see note 9)
	Bootstrapping Architecture), etc.), subject to restriction based on Network	
	Operator's policy.	
OSR-006	The oneM2M System shall be able to reuse the services offered by Underlying	Partially
	Networks to M2M Applications and/or M2M Services by means of open access	implemented
	models (e.g. OMA, GSMA OneAPI framework).Examples of available services	(see note 10)
	are:	
	IP Multimedia communications.	
	Messaging.	
	Location.	
	Charging and billing services.	
	Device information and profiles.	
	Configuration and management of devices.	
	Triggering, monitoring of devices.	
	Small data transmission.	
	Group management.	
	(see note 1).	
OSR-007	The oneM2M System shall provide a mechanism for M2M Applications to	Implemented
	interact with the Applications and data/information managed by a different M2M	in Rel-1
	Service Provider, subject to permissions as appropriate.	
OSR-008	The oneM2M System shall provide the capability for M2M Applications to	Implemented
	communicate with an M2M Device (i.e. application in the device) without the	in Rel-1
	need for the M2M Applications to be aware of the network technology and the	(see note 11)
	specific communication protocol of the M2M Device.	
OSR-009	The oneM2M System shall support the ability for single or multiple M2M	Implemented
	Applications to interact with a single or multiple M2M Devices/Gateways	in Rel-1
	(application in the device/gateway) (see note 2).	
OSR-010	The oneM2M System shall support mechanisms for confirmed delivery of a	Implemented
	message to its addressee to those M2M Applications requesting reliable	in Rel-1
	delivery to dectect failure of message within a given time interval.	
OSR-011a	The oneM2M System shall be able to request different communication paths,	Implemented
	from the Underlying Network based on Underlying Network Operator and/or	in Rel-1
	M2M Service Provider policies, routing mechanisms for transmission failures.	(see note 12)
OSR-011b	The oneM2M System shall be able to request different communication paths	Not
	from the Underlying Network based on request from M2M Applications.	implemented
OSR-012	The oneM2M System shall support communications between M2M Applications	Implemented
	and M2M Devices supporting M2M Services by means of continuous or non-	in Rel-1
	continuous connectivity.	

Requirement ID	Description	Release
OSR-013	The oneM2M System shall be aware of the delay tolerance acceptable by the	Implemented
	M2M Application and shall schedule the communication accordingly or request	in Rel-1
	the Underlying Network to do it, based on policies criteria.	
OSR-014	The oneM2M System shall be able to communicate with M2M Devices, behind	Implemented
	an M2M Gateway that supports heterogeneous M2M Area Networks.	in Rel-1
OSR-015	The oneM2M System shall be able to assist Underlying Networks that support	Partially
	different communication patterns including infrequent communications, small	implemented
	data transfer, transfer of large file and streamed communication.	(see note 13
OSR-016	The oneM2M System shall provide the capability to notify M2M Applications of	Implemented
	the availability of, and changes to, available M2M Application/management	in Rel-1
	information on the M2M Device/Gateway, including changes to the M2M Area	
	Network.	
OSR-017	The oneM2M System shall be able to offer access to different sets of M2M	Implemente
oonon	Services to M2M Application Providers. The minimum set of services are:	in Rel-1
	Connectivity management.	
	Device management (service level management).	
	Application Data management.	
	In order to enable different deployment scenarios, these services shall be made	
	available by the oneM2M System, individually, as a subset or as a complete set	
	of services.	
OSR-018	The oneM2M System shall be able to offer M2M Services to M2M Devices	Implemente
	roaming across cellular Underlying Networks, subject to restriction based on	with some
	Network Operator's policy (see note 3).	limitations
		(see note 14
OSR-019	The oneM2M System shall support the capabilities for data repository (i.e. to	Implemente
	collect/store) and for data transfer from one or more M2M Devices or M2M	in Rel-1
	Gateways, for delivery to one or more M2M Gateways, M2M Services	
	Infrastructure, or M2M Application Infrastructure, in ways requested by the M2M	
	Application Infrastructure as listed below:	
	action initiated either by an M2M Device, M2M Gateway, M2M     Sanciasa Infrastructure, an M2M Application Infrastructure	
	Services Infrastructure, or M2M Application Infrastructure;	
	<ul> <li>when triggered by schedule or event;</li> </ul>	
	for specified data.	
OSR-020	The oneM2M System shall be able to support policies and their management	Implemente
	regarding the aspects of storage and retrieval of data/information.	in Rel-1
OSR-021	The oneM2M System shall be able to provide mechanisms to enable sharing of	Implemente
	data among multiple M2M Applications.	in Rel-1
OSR-022	When some of the components of a M2M Solution are not available (e.g. WAN	Implemente
	connection lost), the oneM2M System shall be able to support the normal	in Rel-1
	operation of components of the M2M Solution that are available.	_
OSR-023	The oneM2M System shall be able to identify the M2M Services to be used by	Implemente
0010020	M2M Service Subscriptions (see note 4).	in Rel-1
OSR-024	The oneM2M System shall be able to identify the M2M Devices used by M2M	Implemented
U3R-024		
000 005	Service Subscriptions.	in Rel-1
OSR-025	The oneM2M System shall be able to identify the M2M Applications used by	Implemente
	M2M Service Subscriptions.	in Rel-1
OSR-026	If provided by the Underlying Network, the oneM2M System shall be able to	Implementee
	associate the M2M Device used by M2M Service Subscriptions with the device	in Rel-1
	identifiers offered by the Underlying Network and the device.	
OSR-027	The oneM2M System shall provide a generic mechanism to support transparent	Not
	exchange of information between the M2M Application and the Underlying	implemente
	Network, subject to restriction based on M2M Service Provider's policy and/or	
	Network Operator's policy (see note 5).	
OSR-028	The oneM2M System shall enable an M2M Application to define trigger	Not
00.000	conditions in the oneM2M System such that the oneM2M System autonomously	implemente
	sends a series of commands to actuators on behalf of the M2M Application	
	when these contitions are met.	
000 000		Implomente
OSR-029	The oneM2M System shall be able to support sending common command(s) to	Implemented
005 005	each actuator or sensor via a group.	in Rel-1
OSR-030	The oneM2M System shall be able to support the management (i.e. addition,	Implemente
	removal, retrieval and update) of the membership of a group.	in Rel-1
OSR-031	The oneM2M System shall be able to support a group as a member of another	Implemente

Requirement ID	Description	Release
OSR-032	The oneM2M System shall be able to support Event Categories (e.g. normal, urgency) associated with data for M2M Applications when collecting, storing and reporting that data (see note 6).	Implemented in Rel-1
OSR-033	Based on the Dynamic Device/Gateway Context of the M2M Gateway and/or	Partially
	Device and the defined Event Categories, the oneM2M System shall provide	implemented
	the capability to dynamically adjust the scheduling of reporting and notification	(see note 15)
	of the M2M Device/Gateway (see note 17).	
OSR-034	The oneM2M System shall support seamless replacement of M2M Devices as	Not
	well as M2M Gateways (e.g. redirecting traffic, connection, recovery, etc.).	implemented
OSR-035	The oneM2M System shall support the exchange of non-M2M Application	Not
	related relevant information (e.g. Device/Gateway classes) between M2M	implemented
	Device/Gateway and M2M Service Infrastructure for the purpose of efficient	
	communication facilitation. This includes the capability for an M2M Device to	
	report its device class to M2M Service Infrastructure and for the M2M Service	
	Infrastructure to inform M2M Device of the M2M Service Infrastruture	
	capabilities.	
OSR-036	The oneM2M System should provide mechanisms to accept requests from	Not
	M2M Application Service Providers for compute/analytics services.	implemented
OSR-037	The oneM2M System shall enable an M2M Application to request to send data,	Not
	in a manner independent of the Underlying Network, to the M2M Applications of	implemented
	a group of M2M Devices and M2M Gateways in geographic areas that are	
005 000	specified by the M2M Application.	
OSR-038	The oneM2M System shall support the inclusion of M2M Application's QoS	Not
005 000	preference in service requests to Underlying Networks.	implemented
OSR-039	The oneM2M System shall be able to authorize service requests with QoS	Not
	preference at service level, but shall pass M2M Application's QoS preference in	implemented
	service requests to Underlying Network for authorization and granting or negotiation of the service QoS requests.	
OSR-040	The oneM2M System shall be able to leverage multiple communication	Not
0011-040	mechanisms (such as USSD or SMS) when available in the Underlying	implemented
	Networks.	(see note 16)
OSR-041	The oneM2M System shall provide a mechanism, which supports the addition	Partially
CONTON	of new M2M Services to the oneM2M System as independent portable modules	implemented
	by means of the oneM2M interfaces.	(see note 21)
OSR-042	The oneM2M System shall be able to support different QoS-levels specifying	Not
	parameters, such as guaranteed bitrate, delay, delay variation, loss ratio and	implemented
	error rate, etc.	-
OSR-043	The oneM2M System shall be able to verify that members of a group support a	Implemented
	common set of functions.	in Rel-1
OSR-044	The oneM2M System shall support communication with M2M Devices which	Implemented
	are reachable based on defined time schedules (e.g. periodic) as well as M2M	in Rel-1
	Devices which are reachable in an unpredictable and spontaneous manner.	
OSR-045a	The oneM2M System shall be able to receive and utilize information provided	Not
000 6 171	by the Underlying Network about when an M2M Device can be reached.	implemented
OSR-045b	The oneM2M System shall be able to utilize reachability schedules generated	Partially
	by either the M2M Device or the Infrastructure Domain.	implemented
	The energy OVA Overteen shall be able to every set a serie billty for the MONA	(see note 18)
OSR-046	The oneM2M System shall be able to support a capability for the M2M	Not
	Application to request/disallow acknowledgement for its communication.	implemented
OSR-047	The oneM2M System shall be able to support mechanism for the M2M Devices	Implemented
	and/or Gateways to report their geographical location information to M2M	in Rel-1
OSR-048	Applications (see note 7). The oneM2M System shall provide an M2M Service that allows M2M Devices	Implemented
031-040	and/or Gateways to share their own or other M2M Devices' geographical	in Rel-1
	location information (see note 7).	
OSR-049	The oneM2M System shall be able to provide the capability for an M2M	Implemented
	Application to selectively share data (e.g. access control) among applications.	in Rel-1
OSR-050	If communication over one communication channel provided by the Underlying	Implemented
	Network can only be triggered by one side (Infrastructure Domain or Field	in Rel-1
	Domain), and alternative channel(s) is (are) available in the other direction, the	
	oneM2M System shall be able to use the alternative channel(s) to trigger	
	bidirectional communication on the first channel.	
OSR-051	Depending on availability of suitable interfaces provided by the Underlying	Implemented
	Network the oneM2M System shall be able to request the Underlying Network	in Rel-1

Requirement ID	Description	Release
OSR-052	The oneM2M System shall be able to select an appropriate Underlying Network to broadcast or multicast data depending on the network's broadcast/multicast support and the connectivity supported by the targeted group of M2M	Not implemented
	Devices/Gateways.	
OSR-053	The oneM2M System shall provide a means that enables backward	Not
	compatibility of interfaces among different releases (see note 8).	implemented
OSR-054	The oneM2M System shall be able to support an M2M Application, M2M	Implemented
	Device, or M2M Gateway to obtain access to resources of another M2M	in Rel-1
000 055	Application, M2M Device, or M2M Gateway.	line in La cara a carta al
OSR-055	The oneM2M System shall be able to provide the capability of M2M	Implemented
	Applications to exchange data with one or more authorized M2M Applications which are not known in advance.	in Rel-1 (see note 20)
OSR-056	The oneM2M System shall enable discovery of usable M2M Applications on an	Implemented
0314-030	M2M Gateway or at an M2M Device .	in Rel-1
OSR-057	The oneM2M System shall enable discovery of M2M Gateways and M2M	Implemented
	Devices available to an M2M Application for data exchange.	in Rel-1
OSR-058	The oneM2M System shall be able to provide time stamps as needed by	Implemented
	Common Service Functions.	in Rel-1
OSR-059	The oneM2M System shall be able to support Role-Based Access Control	Implemented
	based on M2M Service Subscriptions.	in Rel-1
OSR-060	The oneM2M System should support time synchronization with an external	Not
	clock source.	implemented
OSR-061	M2M Devices and M2M Gateways may support time synchronization within the	Not
	oneM2M System.	implemented
OSR-062	The oneM2M System shall enable means of testing the connectivity towards a	Not
	set of M2M Applications.	implemented
OSR-063	The oneM2M System shall be able to manage the scheduling of M2M Service	Implemented
	Layer connectivity and messaging between the Infrastracture Domain and M2M	in Rel-1
	Devices/Gateways.	
OSR-064	The oneM2M System shall be able to aggregate messages depending on	Implemented
	message delay tolerance and/or category.	in Rel-1
OSR-065	The oneM2M System shall provide mechanisms that enable a M2M Service	Not
	Provider to distribute processing functions to his M2M Devices/Gateways in the	implemented
000 000	Field Domain	
OSR-066	The oneM2M System shall be able to support the placement and operation of	Implemented
	M2M Applications in selected M2M Nodes per criteria requested by M2M	in Rel-1
OSR-067	Application Service Providers, subject to access rights. The oneM2M System shall be able to take operational and management action	Implemented
031-007	as requested by M2M Applications.	in Rel-1
OSR-068	When available from an Underlying Network, the oneM2M System shall be able	Not
	to provide the capability to retrieve and report the information regarding whether	
	an M2M Device is authorized to access Underlying Network services.	implomotiou
OSR-069	When available from the Underlying Network, the oneM2M System shall be	Not
	able to maintain the M2M Service Operational Status of a M2M Device and	implemented
	update it when the Underlying Network connectivity service status changes.	
OSR-070	The oneM2M System shall be able to provide the capability to notify an	Partially
	authorized M2M Application when the M2M Service Administrative State or	implemented
	M2M Service Operational Status of an M2M Device changes, if that M2M	(see note 19)
	Application has subscribed for such notifications.	
OSR-071	The oneM2M System shall be able to enable an authorized M2M Application to	Implemented
	set the M2M Service Administrative State of a M2M Device.	in Rel-1
OSR-072	The oneM2M System shall be able to initiate a set of well-defined actions	Not
	(e.g. trigger upon a threshold, compare a value, etc.) to one or more M2M	implemented
	Application(s) on behalf of another M2M Application.	
OSR-073	The oneM2M System shall support distributed transactions to multiple devices	Not
See REQ-2015-	or applications where the transaction includes the characteristics of atomicity,	implemented
0529R03	consistency, isolation and durability.	<b></b> .
OSR-074	The oneM2M System shall support the completion of distributed transactions to	Not
See REQ-2015-	multiple devices or applications while maintaining the order of the operations	implemented
	and performing the transaction within a given time frame.	
0529R03		Implemented
OSR-75	The oneM2M System shall be able to collect, store Time Series Data.	in Del 0
OSR-75 See REQ-2015-	The onewizm System shall be able to collect, store Time Series Data.	in Rel-2
OSR-75 See REQ-2015- 0546R01		
OSR-75 See REQ-2015-	The oneM2M System shall be able to detect and report the missing data in time series.	in Rel-2 Implemented in Rel-2

Requirement ID	Description	Release
OSR-077	The oneM2M System shall be capable of collecting asynchronous responses	Not
See REQ-2015-	pertaining to the broadcasted messages.	implemented
0558R01		
OSR-078	The oneM2M System shall support gateway-based capabilities for Event	Not
See REQ-2015-	management, e.g. capability for arbitration of the resulting processing.	implemented
573R01		
OSR-079	The oneM2M System shall provide the capability to notify a device hosting a	Not
See REQ-2015-	group of applications when alternative registration points for that group of	implemented
574R01	applications are available (e.g. via different underlying networks) based on the	
01 11 10 1	service requirements of each of the applications hosted.	
OSR-080	The oneM2M System shall provide the capability to register applications in	Not
See REQ-2015-	group or independently, based on their service requirements.	implemented
574R01		implemented
OSR-081	The oneM2M System shall be able to collect data that is broadcast (e.g. in	Not
See REQ-2015-		
	industrial bus systems) according to data collection policies.	implemented
0553R02	The enclosed on the light of the subject of the starting and the starting of t	NI-4
OSR-082	The oneM2M System shall allow the update, modification, or deletion of data	Not
See REQ-2015-	collection policies within an M2M Application.	implemented
0553R02		
OSR-083	The oneM2M System shall be able to filter information from oneM2M Devices	Not
See REQ-2015-	for a given set of parameters.	implemented
0593R02		
OSR-084	The oneM2M System shall be able to handle an event notification from an	Not
See REQ-2015-	authorized M2M Application which triggers actions to be performed on the M2M	implemented
0595R04	Device (example: Turn on or off the monitoring).	
OSR-085	The oneM2M System shall support resource caching of registered M2M	Not
See REQ-2015-	Devices. Resource caching is a mechanism through which the oneM2M System	implemented
0608	retains resources of a registered M2M Device in temporarily inactive state by	
	moving the resources to a temporary storage e.g. cache bin.	
OSR-086	The oneM2M System shall enable M2M Gateways to discover M2M	Not
See REQ-2015-	Infrastructure Nodes and M2M Devices available for data exchange.	implemented
0611R02		implomotiou
OSR-087	The oneM2M System shall enable M2M Infrastructure Nodes and M2M Device	Not
See REQ-2015-	to discover M2M Gateways available for data exchange.	implemented
0611R02	to discover mizin Oateways available for data excitatige.	implemented
OSR-088	The oneM2M System shall be able to support the capabilities for data	Not
See REQ-2015-	repository (i.e. to collect/store) and for data transfer among authorized M2M	
0611R02		implemented
0011R02	Devices and M2M Gateways via M2M Area Networks without involvement of	
	the Infrastructure Domain.	Niat
OSR-089	The oneM2M System shall enable the cancellation of continuous data collection	Not
See REQ-2015-	and/or the deletion of collected data when pre-defined conditions are met.	implemented
0620		<b>.</b>
OSR-090	The oneM2M System shall be able to forward the M2M Application Data to	Partially
See REQ-2015-	M2M Application without storing the Data.	implementd
0622R02		(see note 22)
OSR-091	The oneM2M System shall be able to notify interested oneM2M entities when it	Not
See REQ-2015-	detects forwarded M2M Application Data was not delivered within expected	implemented
0622R02	time duration.	
OSR-092	The oneM2M System shall provide the capability for monitoring and describing	Not
See REQ-2015-	data streams with associated attributes e.g. data freshness, accuracy, sampling	implemented
0629	rate, data integrity.	
OSR-093	The oneM2M System shall support transaction management to multiple devices	Not
See REQ-2015-	or applications providing policy based mechanism that should be invoked	implemented
0630	(e.g. keep status, re-schedule, rollback) depending on the outcome of the	
	desired operation.	
OSR-094	The oneM2M System shall provide Information Model(s) to support	Implemented
See REQ-2015-	interoperability among different devices/applications.	in Rel-2
0631R02		
OSR-095	The oneM2M System should provide mappings between different Information	Not
See REQ-2015-		
	Models from non-oneM2M System(s).	implemented
0604000		
0631R02	The enclude of the state of the	loss of the second seco
OSR-096	The oneM2M System should be able to interwork with non-oneM2M System(s).	Implemented
	The oneM2M System should be able to interwork with non-oneM2M System(s).	Implemented in Rel-2

Requirem	ent ID	Description	Release
OSR-0	97	The oneM2M System shall be able to share data collection policies among	Not
See REQ-	2015-	multiple M2M Devices/Gateways within an M2M Application Service, or among	implemented
0583R	01	different M2M Application Services.	
OSR-0	98	The oneM2M system shall be able to support machine socialization	Not
See REQ-	2016-	functionalities (such as existence discovery, correlated task discovery,	implemented
0055R	02	message interface discovery and process optimization for multiple machines	-
		with same tasks).	
NOTE 1: 1	The set o	of features or APIs to be supported depends on the M2M Common Services and a	access to
a	available	APIs.	
		ion M2M Network Application to M2M Device/Gateway may be 1:1, 1:n, n:1 and/c	or n:m.
		ing on M2M Service level is assumed by this requirement.	
NOTE 4: N	M2M Se	vice Subscriptions are not Application subscriptions (e.g. Home Energy Managen	nent).
		ent exchange of information implies information that is mainly interpreted by the M	//2M
		on and the Underlying Network Provider.	
NOTE 6: E	Based or	n the Event Categories and via interworking with Underlying Networks, the oneM2	M System car
S	support of	lifferentiated services (by providing Quality-of-Service) requested by M2M Applica	ations.
		hical location information can be more than simply longitude, latitude and Geo-fer	
NOTE 8: "	means"	above does not imply only technical mechanisms, e.g. there is no protocol version	n negociation.
NOTE 9: I	n Rel-1	only GBA and localization are available.	
NOTE 10: F	Rel-1 co	vers: Location, Charging and billing services, Configuration and management of d	evices, Device
		on and profiles, Triggering.	
		irement applies to M2M Devices but not to devices interworked via M2M Area Ne	etworks.
NOTE 12: E	Based or	n device triggering.	
		ort for streamed communication.	
		ns to trigger (via Tsp interface) devices in a roamed-to network.	
		ntax to describe Dynamic Context is not specified.	
	t is poss defined.	ible to deliver CoAP over SMS, but currently SMS message delivery interfaces an	e not expicitel
NOTE 17: F	or exan	uple, if the battery of Gateway is remained only 10% or below, the Gateway notifie	s the M2M
		latform of the status. The M2M Application in the Infrastructure node will adjust th	
		and notification based on the Event Categories associated with each message. C	
		Gateway operates longer.	. ,
NOTE 18: \			
		M2M Service Administrative State can be notified. M2M Service Operational State	us is not
	mpleme		
		be implemented based on preconfigured access rights.	
		this is supported by means of the Mca interfaces, mapping the new service modul	e to an AE.
NOTE 22: I	n Rei-2	data are stored in the CSE but never get retrieved by other entities except by subs	scribe/notifv

# 6.2 Management Requirements

#### **Table 2: Management Requirements**

Requirement ID	Description	Release
MGR-001		Implemented
	M2M Gateways/ Devices including resource constrained M2M Devices.	in Rel-1
MGR-002	The oneM2M System shall provide the capability to discover the M2M Area	Implemented
	Networks including information about devices on those networks and the	in Rel-1
	parameters (e.g. topology, protocol) of those networks.	
MGR-003	The oneM2M System shall be able to provide the capability to maintain and	Implemented
	describe the management Information Model of devices and parameters	in Rel-1
	(e.g. topology, protocol) of M2M Area Networks.	
MGR-004	The oneM2M System shall support common means to manage devices	Implemented
	enabled by different management technologies (e.g. OMA DM, BBF TR069).	in Rel-1
MGR-005	The oneM2M System shall provide the capability to manage multiple devices in	Implemented
	a grouped manner.	in Rel-1
MGR-006	The oneM2M System shall provide the capability for provisioning and	Implemented
	configuration of devices in M2M Area Networks.	in Rel-1
MGR-007	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Gateways/Devices in M2M Area Networks.	in Rel-1
MGR-008	The oneM2M System shall provide the capability for software management of	Implemented
	devices in M2M Area Networks.	in Rel-1

Requirement ID	Description	Release
MGR-009	The oneM2M System shall provide the capability for rebooting and/or resetting of M2M Gateways/Devices and other devices in M2M Area Networks.	Implemented in Rel-1
MGR-010	The oneM2M System shall provide the capability for authorizing devices to access M2M Area Networks.	Implemented in Rel-1
MGR-011	The oneM2M System shall provide the capability for modifying the topology of devices in M2M Area Networks, subject to restriction based on M2M Area Network policies.	Implemented in Rel-1
MGR-012	Upon detection of a new device the M2M Gateway shall be able to be provisioned by the M2M Service Infrastructure with an appropriate configuration which is required to handle the detected device.	Partially implemented (see note)
MGR-013	Void.	
MGR-014	The oneM2M System shall be able to retrieve events and information logged by M2M Gateways/ Devices and other devices in M2M Area Networks.	Implemented in Rel-1
MGR-015	The oneM2M System shall be able to support firmware management (e.g. update) of M2M Gateways/ Devices and other devices in M2M Area Networks.	Implemented in Rel-1
MGR-016	The oneM2M System shall be able to retrieve information related to the Static and Dynamic Device/Gateway Context for M2M Gateways/Devices as well as Device Context for other devices in M2M Area Networks.	Implemented in Rel-1
MGR-017	The oneM2M System shall be capable of correlating Access Management elements provided by the technology specific Device Management Protocols to Access Management elements used by the oneM2M System.	Implemented in Rel-1
MGR-018	The M2M Service Infrastructure shall be able to accept standardized	Not
See REQ-2015-	configuration settings from an external configuration server to allow the M2M	implemented
0555R02	Devices to register.	
MGR-019	The M2M Device shall be able to accept standardized configuration cettings	Not
See REQ-2015- 0555R02	from an external configuration server in order to register to the oneM2M System.	implemented
NOTE: In Rel-1 no detection mechanism exists, but once an M2M Device is known at the Gateway it can be configured via the GW through DM.		

# 6.3 Semantics Requirements

# 6.3.1 Ontology Related Requirements

#### **Table 3: Ontology Requirements**

Requirement ID	Description	Release
ONT-001 See REQ-2015- 0521R01	The M2M System shall support a standardized format for the rules/policies used to define service logic.	Not implemented
ONT-002 See REQ-2015- 0521R01	The M2M System shall support modelling semantic descriptions of Things (including relationships among them) by using ontologies.	Implemented in Rel-2
ONT-003 See REQ-2015- 0521R01	The M2M System shall support a common modeling language for ontologies (e.g. OWL).	Implemented in Rel-2
ONT-004 See REQ-2015- 0521R01	The M2M System should be able to provide translation capabilities from different modeling languages for ontologies to the language adopted by oneM2M if the expressiveness of the imported ontology allows.	Not implemented
ONT-005 See REQ-2015- 0521R01	The M2M System shall provide the capability to retrieve semantic descriptions and ontologies stored outside of the M2M System.	Not implemented
ONT-006 See REQ-2015- 0521R01	The M2M System shall provide support for linking ontologies defined in the context of the M2M System with ontologies defined outside this context.	Not implemented
ONT-007 See REQ-2015- 0521R01	The M2M System shall be able to support extending ontologies in the M2M System.	Not implemented
ONT-008 See REQ-2015- 0521R01	The M2M System shall be able to use ontologies that contain concepts representing aspects (e.g. a room) that are not represented by resources of the M2M System.	Implemented in Rel-2

Requirement ID	Description	Release
ONT-009 See REQ-2015- 0521R01	The M2M System shall be able to re-use common ontologies (e.g. location, time ontologies, etc.) which are commonly used in M2M Applications.	Not implemented
ONT-010 See REQ-2015- 0521R01	The M2M System shall be able to support simultaneous usage of multiple ontologies for the same M2M resource.	Implemented in Rel-2
ONT-011 See REQ-2015- 0521R01	The M2M System shall provide the capability for making ontology available in the M2M System, e.g. through announcement.	Not implemented
ONT-012 See REQ-2015- 0521R01	The M2M System shall be able to support mechanisms to import external ontologies into the M2M System.	Not implemented
ONT-013 See REQ-2015- 0521R01	The M2M System shall be able to support update of ontologies.	Not implemented
ONT-014 See REQ-2015- 0521R01	The M2M System shall enable functions for data conversion based on ontologies.	Not implemented
ONT-015 See REQ-2015- 0521R01	The M2M System shall be able to model devices based on ontologies which may be available outside the M2M System (e.g. HGI device template).	Implemented in Rel-2
ONT-016 See REQ-2015- 0521R01	The M2M System shall support storage, management and discovery of ontologies.	Not implemented
ONT-017 See REQ-2015- 0609	The oneM2M System shall support a semantic relation ("Is Paired To") between two M2M Devices.	Not implemented

# 6.3.2 Semantics Annotation Requirements

#### **Table 4: Semantics Annotation Requirements**

Requirement ID	Description	Release
ANN-001	The oneM2M System shall provide capabilities to manage semantic information	Implemente
See REQ-2015-	about the oneM2M resources, e.g, create, retrieve, update, delete,	d in Rel-2
0521R01	associate/link.	
ANN-002	The oneM2M System shall support a common language for semantic	Implemente
See REQ-2015-	description, e.g. RDF.	d in Rel-2
0521R01		
ANN-003	The oneM2M System shall support semantic annotation of oneM2M resources	Implemente
See REQ-2015-	for example application related data contained in containers.	d in Rel-2
0521R01		
ANN-004	The oneM2M System shall support semantic annotation based on related	Implemente
See <u>REQ-2015-</u>	ontologies.	d in Rel-2
<u>0521R01</u>		
ANN-005	The oneM2M System shall provide the capability for making semantic	Implemente
See REQ-2015-	descriptions available in the M2M System, e.g. announcement.	d in Rel-2
0521R01		
ANN-006	The oneM2M System shall enable applications to retrieve an ontology	Not
See REQ-2015-	representation related to semantic information used in the M2M System.	implemented
0521R01		
ANN-007	The oneM2M system shall provide capabilities to manage data quality	Not
See REQ-2015-	descriptions of resource.	implemented
0521R01		

### 6.3.3 Semantics Query Requirements

Requirement ID	Description	Release
	The oneM2M System shall provide capabilities to discover M2M Resources based on semantic descriptions.	Implemente d in Rel-2

### 6.3.4 Semantics Mashup Requirements

#### **Table 6: Semantics Mashup Requirements**

Requirement ID	Description	Release
MSH-001	The oneM2M System shall provide the capability to host processing functions	Not
See <u>REQ-2015-</u>	for mash-up.	implemented
<u>0521R01</u>		
MSH-002	The oneM2M System shall enable M2M Applications to provide processing	Not
See <u>REQ-2015-</u>	functions for mash-up.	implemented
<u>0521R01</u>		
MSH-003	The oneM2M System itself may provide pre-provisioned or dynamically created	Not
See <u>REQ-2015-</u>	processing functions for mash-up.	implemented
<u>0521R01</u>		
MSH-004	The oneM2M System shall be able to create and execute mash-ups based on	Not
See <u>REQ-2015-</u>	processing functions.	implemented
<u>0521R01</u>		
MSH-005	The oneM2M System shall be able to expose mash-ups as resources e.g.	Not
See <u>REQ-2015-</u>	virtual devices.	implemented
<u>0521R01</u>		

### 6.3.5 Semantics Reasoning Requirements

#### **Table 7: Semantics Reasoning Requirements**

Requirement ID	Description	Release
RES-001	The oneM2M System shall be able to update ontologies as a result of the	Not
See <u>REQ-2015-</u>	ontology reasoning.	implemented
<u>0521R01</u>		
RES-002	The oneM2M System shall be able to support semantic reasoning e.g. ontology	Not
See <u>REQ-2015-</u>	reasoning or semantic rule-based reasoning.	implemented
<u>0521R01</u>		
RES-003	The oneM2M System shall be able to support adding and updating semantic	Not
See <u>REQ-2015-</u>	information based on semantic reasoning.	implemented
0521R01		

### 6.3.6 Data Analytics Requirements

Requirement ID	Description	Release
ANA-001	The oneM2M System shall be able to support capabilities (e.g. processing	Not
See REQ-2015-	function) for performing M2M data analytics based on semantic descriptions	implemented
0521R01	from M2M Applications and /or from the M2M System.	-
ANA-002	The oneM2M System shall provide the capability of interpreting and applying	Not
See REQ-2015-	service logic (e.g. rules/policies of triggering operations upon other resources or	implemented
0521R01	attributes according to the change of the monitored resource) described with	
	semantic annotation and ontology.	
ANA-003	The oneM2M System shall support a standardized format for the rules/policies	Not
See REQ-2015-	used to define service logic.	implemented
0521R01		

# 6.4 Security Requirements

**Table 9: Security Requirements** 

Requirement ID	Description	Release
SER-001	The oneM2M System shall incorporate protection against threats to its availability such as Denial of Service attacks.	Partially Implemented in Rel-1
SER-002	The oneM2M System shall be able to ensure the Confidentiality of data.	Implemented in Rel-1
SER-003	The oneM2M System shall be able to ensure the Integrity of data.	Implemented in Rel-1
SER-004	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC credentials and network's security capability e.g. 3GPP GBA for establishing the M2M Services and M2M Applications level security through interfaces to Underlying Network.	Implemented in Rel-1
SER-005	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, and when the oneM2M System is aware of Underlying Network's bootstrapping capability e.g. 3GPP GBA, the oneM2M System shall be able to expose this capability to M2M Services and M2M Applications through API.	Implemented in Rel-1
SER-006	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC Credentials when available to bootstrap M2M Security Association.	Implemented in Rel-1
SER-007	When some of the components of an M2M Solution are not available (e.g. WAN connection lost), the oneM2M System shall be able to support the Confidentiality and the Integrity of data between authorized components of the M2M Solution that are available.	Implemented in Rel-1
SER-008	The oneM2M System shall support countermeasures against unauthorized access to M2M Services and M2M Application Services.	Implemented in Rel-1
SER-009	The oneM2M System shall be able to support Mutual Authentication for interaction with Underlying Networks, M2M Services and M2M Application Services.	Implemented in Rel-1
SER-010	The oneM2M System shall be able to support mechanisms for protection against misuse, cloning, substitution or theft of security credentials.	Implemented in Rel-1
SER-011	The oneM2M System shall protect the use of the identity of an M2M Stakeholder within the oneM2M System against discovery and misuse by other stakeholders.	Implemented in Rel-1
SER-012	The oneM2M System shall be able to support countermeasures against Impersonation attacks and replay attacks.	Partially implemented in Rel-1 (see note 3)
SER-013	The oneM2M System shall be able to provide the mechanism for integrity- checking on boot, periodically on run-time, and on software upgrades for software/hardware/firmware component(s) on M2M Device(s).	Not implemented
SER-014	The oneM2M System shall be able to provide configuration data to an authenticated and authorized M2M Application in the M2M Gateway/Device.	Implemented in Rel-1
SER-015	The oneM2M System shall be able to support mechanisms to provide M2M Service Subscriber identity to authorized and authenticated M2M Applications when the oneM2M System has the M2M Service Subscriber's consent.	Partially implemented (see note 4)
SER-016	The oneM2M System shall be able to support non repudiation within the M2M service layer and in its authorized interactions with the network and application layers.	Implemented in Rel-1
SER-017	The oneM2M System shall be able to mitigate threats identified in ETSI TR 118 508 [i.3].	Implemented in Rel-1
SER-018	The oneM2M System shall enable an M2M Stakeholder to use a resource or service and be accountable for that use without exposing its identity to other stakeholders.	Partially implemented
SER-019	The oneM2M System shall be able to use service-level Credentials present inside the M2M Device for establishing the M2M Services and M2M Applications level security.	Implemented in Rel-1

Requirement ID	Description	Release
SER-020	The oneM2M System shall enable legitimate M2M Service Providers to	Implemented
	provision their own Credentials into the M2M Devices/Gateways.	in Rel-1
	The successful the state to sense take and a successful many ising MOM	(see note 5)
SER-021	The oneM2M System shall be able to remotely and securely provision M2M	Implemented
	security Credentials in M2M Devices and/or M2M Gateways.	in Rel-1
	The eneM2M System shall enable M2M Application Service Draviders to	(see note 5)
SER-022	The oneM2M System shall enable M2M Application Service Providers to	Implemented
	authorize interactions involving their M2M Applications on supporting entities (e.g. Devices/ Gateways/ Service infrastructure).	in Rel-1
SER-023	Where a Hardware Security Module (HSM) is supported, the oneM2M System	Partially
5LI1-025	shall be able torely on the HSM to provide local security.	implemented
SER-024	The oneM2M System shall enable M2M Applications to use different and	Partially
OLIV OZ I	segregated security environments.	implemented
SER-025	The oneM2M System shall be able to prevent unauthorized M2M Stakeholders	Implemented
01.000	from identifying and/or observing the actions of other M2M Stakeholders in the	in Rel-1
	oneM2M System, e.g. access to resources and services (see note 1).	
SER-026	The oneM2M System shall be able to provide mechanism for the protection of	Implemented
	Confidentiality of the geographical location information (see note 2).	in Rel-1
SER-027	The M2M System shall support grouping of M2M Applications that have the	Implemented
See REQ-2015-	same access control rights towards one specific resources, together so that	in Rel-2
0558R01	access control validation can be performed by validating if the M2M Application	
	is a member of certain group.	
SER-028	The oneM2M System shall enable security protocol end-points to protect	Implemented
See REQ-2015-	portions of individual application-generated data so that intermediate entities	in Rel-2
0568R04	(whether trusted or untrusted) forwarding the data are unable to access the	
	protected portions of the data in clear text.	
SER-029	The oneM2M System shall enable security protocol end-points to protect	Implemented
See REQ-2015-	portions of individual application-generated data so that security protocol end-	in Rel-2
0568R04	points can detect modification, including modification by intermediate service	
	layer entities (whether trusted or untrusted) forwarding the data.	
SER-030	The oneM2M System shall enable security protocol end-points to protect	Implemented
	portions of individual oneM2M messages so that intermediate entities (whether	in Rel-2
	trusted or untrusted) forwarding the messages are unable to access the	
	protected portions of the messages in clear text.	
SER-031	The oneM2M System shall enable security protocol end-points to protect	Implemented in Rel-2
See REQ-2015- 0569R03	portions of individual oneM2M messages so that security protocol end-points can detect modification, including modification by intermediate service layer	III Rei-2
0009000	entities (whether trusted or untrusted) forwarding the messages.	
SER-032	The oneM2M System shall enable security protocol end-points to establish	Implemented
See REQ-2015-	security sessions which are used for protecting portions of one or more	in Rel-2
0569R03	oneM2M messages so that intermediate entities (whether trusted or untrusted)	
00001100	forwarding the messages are unable to access the protected portions of the	
	messages in clear text.	
SER-033		
355-033		Implemented
See REQ-2015-	The oneM2M System shall enable security protocol end-points to establish	Implemented in Rel-2
	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more oneM2M messages so that security protocol end-points can detect modification,	
See REQ-2015-	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more	
See REQ-2015- 0569R03	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more oneM2M messages so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the messages.	in Rel-2
See REQ-2015- 0569R03 SER-034	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more oneM2M messages so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the messages. The oneM2M System shall enable security protocol end-points to protect	in Rel-2 Partially
See REQ-2015- 0569R03 SER-034 See REQ-2015-	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more oneM2M messages so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the messages. The oneM2M System shall enable security protocol end-points to protect portions of messages or data so that intermediate entities (whether trusted or	in Rel-2 Partially
See REQ-2015- 0569R03 SER-034	The oneM2M System shall enable security protocol end-points to establish security sessions which are used for protecting portions of one or more oneM2M messages so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the messages. 	ve requirement does not cover items outside of the oneM2M System, e.g. Underly	ing Networks.
	hical location information can be more than simply longitude and latitude.	
NOTE 3: Partly supported for Impersonation attacks not supported for Replay attacks.		
NOTE 4: The oneM2M System has no means to verify a subscriber's consent. This requirement is only fulfillable		
	ation level.	
	ng remote provisioning, Release 1 supports remote provisioning of symmetric key	credentials
only.		

# 6.5 Charging Requirements

#### Table 10: Charging Requirements

Requirement ID	Description	Release
CHG-001	The oneM2M System shall support collection of charging specific information related to the individual services facilitated by the oneM2M System (e.g. Data	Implemented in Rel-1
	Management, Device Management and/or Connectivity Management).	(see note 4)
	Collection of charging specific information shall be possible concurrent with the resource usage. The format of the recorded information shall be fully specified	
	including mandatory and optional elements.	
CHG-002	The oneM2M System shall support mechanisms to facilitate correlation of	Partially
	charging information (e.g. of a User) collected for M2M Services, M2M	implemented
	Application Services and services provided by Underlying Network Operators.	(see note 2)
CHG-003	The oneM2M System shall provide means to coordinate charging data records	Not
	for data usages with differentiated QoS from the Underlying Network.	implemented
CHG-004	The oneM2M System shall be able to utilize existing charging mechanisms of	Not
	Underlying Networks.	implemented
		(see note 3)
CHG-005	The oneM2M System shall support transfer of the charging information records	Implemented
	to the billing domain of the M2M Service Provider, for the purpose of:	in Rel-1
	subscriber billing;	
	<ul> <li>inter-provider billing;</li> </ul>	
	provider-to-subscriber accounting including additional functions like	
	statistics.	
CHG-006	The oneM2M System should support generation of charging events for the	Not
	purpose of requesting resource usage Authorization from the real time credit	implemented
	control system where the subscriber account is located. The information	
	contained in the charging events and the relevant chargeable events shall be	
	fully specified including mandatory and optional elements (see note 1).	

21

Requirement ID		Description	Release
NOTE1:	related M	able event is any activity, a provider may want to charge for that utilizes the resound I2M Services offered by such provider. A charging event is the set of charging info by the credit control system for resource authorization.	
NOTE 3:	The onel mechania	on collected can be sent to the Underlying Networks which may used it for chargin M2M service layer can pass info to Underlying Networks but cannot use Underlying sm. Charging can be done by Underlying Network. This is covered by CHG-002. ported in the Infrastructure Node.	

### 6.6 Operational Requirements

#### **Table 11: Charging Requirements**

Requirement ID	Description			
OPR-001	The oneM2M System shall provide the capability for monitoring and diagnostics of M2M Applications.	Implemented in Rel-1		
OPR-002	The oneM2M System shall provide the capability for software management of M2M Applications.			
OPR-003	The oneM2M System shall be able to configure the execution state an M2M Application (start, stop, restart).	Implemented in Rel-1		
OPR-004	When suitable interfaces are provided by the Underlying Network, the oneM2M System shall have the ability to schedule traffic via the Underlying Network based on instructions received from the Underlying Network.			
OPR-005	The oneM2M System shall be able to exchange information with M2M Applications related to usage and traffic characteristics of M2M Devices or M2M Gateways by the M2M Application. This should include support for the 3GPP feature called: "Time controlled" (see note).	Implemented in Rel-2		
OPR-006	Depending on availability of suitable interfaces provided by the Underlying Network the oneM2M System shall be able to provide information related to usage and traffic characteristics of M2M Devices or M2M Gateways to the Underlying Network.	Implemented in Rel-2		
OPR-007 See REQ-2015- 0550R03	The oneM2M System shall be able to support receipt of the status information of the Underlying Network if supported by the Underlying Network.	Not implemented		
OPR-008 See REQ-2015- 0550R03	The oneM2M System shall be able to provide the M2M Applications with status information received from the Underlying Network.	Not implemented		
OPR-009 See 0585R01- App-ID Requirements	See 0585R01- App-IDsystems to readily determine whether the App-ID is registered and the Registration Authority which issued the App-ID, App Developer and App Nam			
OPR-010 See 0585R01- App-ID Requirements	The oneM2M System Registration Authorities shall be able to collect and maintain supporting required information when assigning an App-ID.	Implemented in Rel-2		
NOTE: "Time co	ontrolled" is equivalent to the MTC Features specified in clause 7.2 of ETSI TS 122	2 368 [1].		

## 6.7 Communication Management Requirements

#### **Table 12: Communication Management Requirements**

Requirement ID	equirement ID Description	
CMR-001	CMR-001 The oneM2M System shall provide to M2M Applications a communication service which provides buffering of messages to/from M2M Gateway/Device/ Infrastructure Domain.	
CMR-002 The oneM2M System shall be able to support forwarding buffered mess depending on communication policies and based on service preference associated with the buffered messages.		Implemented in Rel-1

Requirement ID	Description	
CMR-003	The oneM2M System shall enable an M2M Application to send a	Implemented
	communication request with the following service preference:	in Rel-1
	QoS parameters, including delay tolerance, for initiating the delivery of	
	data;	
	categorizing communication requests into different levels of priority or	
	QoS classes.	
CMR-004	The oneM2M System shall be able to support concurrent processing of	Implemented
	messages within M2M Gateways and/or M2M Devices from different sources	in Rel-1
	with awareness for the service preference associated with the messages while	
	observing the provisioned communication policies.	
CMR-005	The oneM2M System shall be able to maintain context associated with M2M	Partially
	sessions (e.g. security context or network connectivity context during the	implemented
	interruption of the session).	(see note 1)
CMR-006	The oneM2M System shall support the ability for applications to categorize	Implemented
See REQ-2015-	requested communications (priority, importance, etc.), so that the oneM2M	in Rel-1
0564R02	System can adapt its actual communications (scheduling, aggregation,	
	compression, etc.) by taking this categorization into account.	
CMR-007	The oneM2M System shall support configurable communication policies that	Partially
See REQ-2015-	will define its communication patterns. Such policies shall take into account	Implemented
0564R02	information received from the Underlying Network (such as information referred	(see note 2)
	to in OPR-004) as well as information received from the Applications (such as	
	the information referred to in OPR-005 or categorization of communications	
	requested by the applications).	
CMR-008	The oneM2M System shall support data aggregation based on communication	Implemented
See REQ-2015-	policies when exchanging data between the M2M	in Rel-1
0564R02	Gateway/Device/Infrastructure Domain.	
CMR-009	The oneM2M System should support data compression based on	Not
See REQ-2015-	communication policies when exchanging data between the M2M	Implemented
0564R02	Gateway/Device/Infrastructure Domain.	
CMR-010	The oneM2M System shall support an additional randomized delay of	Implemented
See REQ-2015-	communications, based on communication policies, when exchanging data	in Rel-2
0564R02	between the M2M Gateway/Device/Infrastructure Domain.	
CMR-011	The oneM2M System shall be able to monitor its own usage of the Underlying	Implemented
See REQ-2015-	Networks over given periods of time: attempted communications, failed	in Rel-2
0564R02	attempts and successful attempts.	
CMR-012	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented
See REQ-2015-	Networks, based on communication policies and on its monitored usage of	in Rel-2
0564R02	them, when exchanging data between the M2M Gateway/Device/Infrastructure	
	Domain.	
CMR-013	The oneM2M System shall be able to refrain from using its own usage of the	Implemented
See REQ-2015-	Underlying Networks, based on a time-based back-off procedure configurable	in Rel-2
0564R02	in communication policies, when exchanging data between the M2M	
	Gateway/Device/Infrastructure Domain.	
CMR-014	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented
See REQ-2015-	Networks, based on communication policies and on the date and time, when	in Rel-1
0564R02	exchanging data between the M2M Gateway/Device/Infrastructure Domain.	
CMR-015	The oneM2M System shall be able to identify a series of data (e.g. Time Series	Implemented
See REQ-2015-	Data) and indicate individual data belonging to this series.	in Rel-2
0601R01		L
	ed security context and registration is covered, M2M Sessions are not covered.	
	olicies (application side) is implemented, information from the Underlying Network	can be
utilized b	but the method for provisioning via Mcn is not covered.	

# 6.8 LWM2M Interworking Requirements

Requirement ID	Description	Release
LWM2M-001	The oneM2M System shall provide the capability to transparently transport	Implemented
See REQ-2015-	LWM2M Objects between LWM2M Clients and M2M Applications.	in Rel-2
0517R04		
LWM2M-002	The oneM2M System shall provide the capability to translate LWM2M Objects	Implemented
See REQ-2015-	into a semantic representation of the LWM2M Object as oneM2M resources.	in Rel-2
0517R04		
LWM2M-003	The oneM2M System shall provide the capabilities of the LWM2M Server in	Implemented
See REQ-2015-	order to interwork between LWM2M Clients and M2M Applications.	in Rel-2
0517R04		
LWM2M-004	The oneM2M System shall provide the capability for M2M Applications to	Implemented
See REQ-2015-	discover LWM2M Clients using the LWM2M Client's Endpoint Name.	in Rel-2
0517R04		
LWM2M-005	When transparently transporting LWM2M Objects, the oneM2M System shall	Not
See REQ-2015-	provide the capability for M2M Applications to discover the definion of LWM2M	implemented
0517R04	Objects transported by the oneM2M System.	
LWM2M-006	When interworking with LWM2M Objects, the oneM2M System shall provide the	Implemented
See REQ-2015-	capability for M2M Applications to discover a LWM2M Object using the LWM2M	in Rel-2
0517R04	Object's identifier.	
LWM2M-007	The oneM2M System shall provide capability to onboard devices that	Implemented
See REQ-2015-	incorporate a LWM2M Client.	in Rel-2
0517R04		
LWM2M-008	The oneM2M System shall provide the capability to interoperate the underlying	Implemented
See REQ-2015-	security mechanisms of the LWM2M Client with the security capabililities	in Rel-2
0517R04	provided by the oneM2M System.	

#### Table 13: LWM2M Interworking Requirements

# 7 Non-Functional Requirements (informative)

This clause is intended to gather high-level principles and guidelines that shall govern the design of the oneM2M System. Such principles and guidelines are fundamental to the design of the oneM2M System. But as they cannot necessarily be expressed as requirements per se, they shall be introduced and expressed in this clause.

#### **Table 14: Non-Functional Requirements**

Requirement ID	Description	
NFR-001	NFR-001 Continua Health Alliance is incorporating a RESTful approach to its design. To support CHA, oneM2M should consider RESTful styles and approaches while designing the M2M architecture.	
NFR-002		

# Annex A (informative): Requirements for the next release

The requirements contained in this Annex are gathered and targeted for the next release of oneM2M:

- 1 Functional Requirements
  - 1.1 Overall System Requirements
  - 1.2 Management Requirements
  - 1.3 Semantics Requirements
    - 1.3.1 Ontology Related Requirements
    - 1.3.2 Semantics Annotation Requirements
    - 1.3.3 Semantics Query Requirements
    - 1.3.4 Semantics Mashup Requirements
    - 1.3.5 Semantics Reasoning Requirements
    - 1.3.6 Data Analytics Requirements
  - 1.4 Security Requirements
  - 1.5 Charging Requirements
  - 1.6 Operational Requirements
  - 1.7 Communication Management Requirements
  - 1.8 LWM2M Interworking Requirements
