| Primary CPICH info | OP | | Primary CPICH info 10.3.6.60 | Indicate the new HS-DSCH serving cell | REL-6 |
| Downlink HS-PDSCH Information | OP | | Downlink HS_PDSCH Information 10.3.6.23a | | REL-6 |
| HARQ Info | OP | | HARQ info 10.3.5.7a | | REL-6 |
| MAC-hs reset indicator | OP | | Enumerated (TRUE) | TRUE Indicates the MAC-hs/ehs entity needs to be reset. | REL-6 |

10.3.6.74b Serving Cell Change Parameters

The IE "Serving Cell Change Parameters" is used prepare the UE for enhanced serving cell change.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|--|---|---------|
| Serving Cell Change MAC reset | MP | | Boolean | TRUE means the MAC-hs/ehs entity needs to be reset, FALSE means TPC combination Index is used to determine if MAC-hs/ehs reset is needed, 8.2.2.3 | REL-8 |
| Serving Cell Change Message Type | MP | | Enumerated (RadioBearerSetup, RadioBearerReconfiguration, TransportChannelReconfiguration, PhysicalChannelReconfiguration) | The reconfiguration procedure configuration used for Target cell preconfiguration, 8.2.2.4 | REL-8 |
| Serving Cell Change Transaction Id | MP | | Integer (0..3) | Transaction Id that shall be used as the RRC Transaction Identifier with the corresponding response message configured by the IE 'Serving Cell Change Message Type' | REL-8 |

10.3.6.75 SFN Time info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Activation time SFN | MP | | Integer (0..4095) | System frame number start of the physical channel existence. |
| Duration | MP | | Integer(1..4096) | Total number of frames the physical channel will exist. |

10.3.6.75a Special Burst Scheduling

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|---|
| Special Burst Generation Period | MP | | Integer (0..7) | Value represents number of radio frames
0 = 2 frames, 1 = 4 frames,
2 = 8 frames, 3 = 16 frames,
4 = 32 frames, 5 = 64 frames,
6 = 128 frames, 7 = 256 frames |

10.3.6.76 Void

10.3.6.77 Void

10.3.6.78 STTD indicator

NOTE: Only for FDD

Indicates whether STTD is used or not.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------|
| STTD Indicator | MP | | Boolean | TRUE means that STTD is used |

10.3.6.78o SYNC_UL codes bitmap

NOTE: Only for 1.28 Mcps TDD.

| Information Element/ Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|--------------------|-----------------------|---------|
| | | | | | |

| | | | | | |
|----------------------|----|--|--------------|---|-------|
| SYNC_UL codes bitmap | MP | | Bitstring(8) | Each bit indicates availability of a SYNC_UL code, where the SYNC_UL codes are numbered "code 0" to "code 7".
The value 1 of a bit indicates that the corresponding SYNC_UL code can be used.
The value 0 of a bit indicates that the corresponding SYNC_UL code can not be used. | REL-7 |
|----------------------|----|--|--------------|---|-------|

10.3.6.78a SYNC_UL info

NOTE: Only for 1.28 Mcps TDD.

| Information Element/ Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|------------------------------------|---|---------|
| SYNC_UL codes bitmap | MP | | SYNC_UL codes bitmap
10.3.6.78o | | REL-4 |
| PRX _{UpPCHdes} | MP | | Integer(-120...-58 by step of 1) | In dBm | REL-4 |
| Power Ramp Step | MP | | Integer(0,1,2,3) | In dB | REL-4 |
| Max SYNC_UL Transmissions | MP | | Integer(1,2,4,8) | Maximum numbers of SYNC_UL transmissions in a power ramping sequence. | REL-4 |
| Mmax | MP | | Integer(1..32) | Maximum number of synchronisation attempts. | REL-4 |
| E-RUCCH SYNC_UL codes bitmap | MP | | SYNC_UL codes bitmap
10.3.6.78o | | REL-7 |

10.3.6.78b TDD MBSFN Information

NOTE: Only for TDD

This information indicates which timeslots are assigned to TDD MBSFN and the scrambling codes assigned to each timeslot.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------|------------------------------|-----------------------|---------|
| Time slot list | MP | 1..
<maxTS> | | | REL-7 |
| >Timeslot Number | MP | | Timeslot Number
10.3.6.84 | | REL-7 |
| >Cell parameters ID | MP | | Cell parameters | | REL-7 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |

10.3.6.85 TPC combination index

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| TPC combination index | MP | | Integer(0..5) | Radio links with the same index have TPC bits, which for the UE are known to be the same. | |
| | | | | Radio links that are part of the E-DCH active set and with the same index have acknowledgement feedback signals on the E-HICH which for the UE are known to be the same. | REL-6 |

10.3.6.85a TSTD indicator

NOTE: Only for 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| TSTD indicator | MD | | Boolean | Default value is TRUE | REL-4 |

10.3.6.86 TX Diversity Mode

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| Tx diversity Mode | MP | | Enumerated (none, STTD, closed loop mode1) | |

10.3.6.86o UL 16QAM configuration

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---------------|-------|---------------------------------|--|---------|
| UL 16QAM settings | CV-
2msTTI | | UL 16QAM settings
10.3.6.86a | Presence of this IE indicates that the UE should operate in 16QAM mode; absence indicates that the UE is not to operate in 16QAM mode. See Note 2. | REL-7 |
| MAC-es/e reset indicator | OP | | Enumerated (TRUE) | TRUE Indicates the MAC-es/e or MAC-i/is entity needs to be reset. | REL-7 |
| E-TFCI table index | OP | | Integer (0..1) | Indicates which standardised E-TFCI TB size table shall be used. See Note 1. | REL-7 |
| NOTE 1: If the UE is operating in 16QAM mode, the value of 'E-TFCI table index' is increased by 2, and indices in the SG-Table refer to Scheduling Grant Table 2 in [15]. | | | | | |
| NOTE 2: If this IE is not present, the indices signaled on the E-AGCH refer to the Mapping of Absolute Grant Value Table 16B in [27]. | | | | | |

| Condition | Explanation |
|-----------|---|
| 2msTTI | This IE is present only if 2ms TTI is configured, otherwise it is not needed. |

10.3.6.86a UL 16QAM settings

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|--------------------|---|---------|
| BetaEd gain E-AGCH table selection | MP | | Integer (0..1) | The value 0 indicates that the indices signaled on the E-AGCH refer to the Mapping of Absolute Grant Value Table 16B in [27], and the value 1 indicates Mapping using Absolute Grant Value Table 16B.1 in [27]. | REL-7 |

10.3.6.87 UL interference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|-----------------------|
| UL interference | MP | | Integer (-110..-70) | In dBm |

NOTE: In TDD, this IE is a timeslot specific value.

10.3.6.87a UL interference TDD

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|-----------------------|
| TDD UL interference | MP | | Integer (-110..-52) | In dBm |

NOTE: This IE is a timeslot specific value.

10.3.6.87b Uplink DPCH code info for Common E-DCH

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|----------|-------|--------------------------|-----------------------|---------|
| Scrambling code type | MP | | Enumerated(short, long) | | REL-8 |
| Scrambling code number | CV-Short | | Integer(0..16 777215) | NOTE1 | REL-8 |
| NOTE1: If this IE is not included, the value is given by:
Scrambling code number = (offset + common E-DCH resource list position) mod 16777216
where
"offset" is the value of the last occurrence of the IE "scrambling code number".
"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

| Condition | Explanation |
|-----------|---|
| Short | This IE is mandatory present for the first occurrence.
Otherwise, this IE is optional. |

10.3.6.115 E-RGCH Info for Common E-DCH

Includes the configuration for the E-DCH related Relative Grant Channel to be used with common E-DCH in CELL_FACH and Idle mode. The E-RGCH is using the same channelisation code as configured for the E-HICH channel (see subclause 10.3.6.116).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|-------|--------------------|-----------------------|---------|
| Signature Sequence | MD | | Integer(0..39) | NOTE1 | REL-8 |
| NOTE1: The default value is defined by:
Signature Sequence = (offset + common E-DCH resource list position) mod 40
where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.
"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

10.3.6.116 E-HICH Info for Common E-DCH

Includes the configuration for the E-DCH related HARQ Acknowledgement Indicator Channel.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|----------|-------|--------------------|--|---------|
| Channelisation Code | CV-Short | | Integer (0..127) | If this IE is not present, the value is equal to the last occurrence of this IE. | REL-8 |
| Signature Sequence | MD | | Integer (0..39) | NOTE1 | REL-8 |
| NOTE1: The default value is defined by:
Signature Sequence = (offset + common E-DCH resource list position) mod 40
where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.
"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

| Condition | Explanation |
|-----------|---|
| Short | This IE is mandatory present for the first occurrence.
Otherwise, this IE is optional. |

10.3.7 Measurement Information elements

10.3.7.1 Additional measurements list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|------|--------------------------|--------------------------------|-----------------------|
| Additional measurements | MP | 1 to <MaxAdditionalMeas> | | |
| >Additional measurement identity | MP | | Measurement identity 10.3.7.48 | |

10.3.7.2 Cell info

Includes non-frequency related cell info used in the IE "inter-frequency cell info list" and "intra frequency cell info list".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|-------|---|--|---------|
| Cell individual offset | MD | | Real(-10..10 by step of 0.5) | In dB
Default value is 0 dB
Used to offset measured quantity value
If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | |
| Reference time difference to cell | OP | | Reference time difference to cell 10.3.7.60 | In chips.
This IE is absent for serving cell.
If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | |
| Read SFN indicator | MP | | Boolean | TRUE indicates that read of SFN is requested for the target cell
If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | |

10.3.7.101 | |

| CHOICE event result | Condition under which the given event result is chosen |
|---|--|
| Intra-frequency measurement event results | If measurement type = intra-frequency measurement |
| Inter-frequency measurement event results | If measurement type = inter-frequency measurement |
| Inter-RAT measurement event results | If measurement type = inter-RAT measurement |
| Traffic volume measurement event results | If measurement type = traffic volume measurement |
| Quality measurement event results | If measurement type = Quality measurement |
| UE internal measurement event results | If measurement type = UE internal measurement |
| UE positioning measurement event results | If measurement type = UE positioning measurement |

10.3.7.8 FACH measurement occasion info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|---------------------|---------------------------|---|---------|
| FACH Measurement occasion cycle length coefficient | OP | | Integer(1..12) | | |
| Inter-frequency FDD measurement indicator | MP | | Boolean | TRUE means that measurements are required | |
| Inter-frequency TDD 3.84 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |
| Inter-frequency TDD 7.68 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-7 |
| Inter-frequency TDD 1.28 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |
| Inter-RAT measurement indicators | OP | 1 to <maxOther RAT> | | | |
| >RAT type | MP | | Enumerated(GSM, IS2000) | | |

10.3.7.9 Filter coefficient

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Filter coefficient | MD | | Integer(0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 13, 15, 17, 19) | Default value is 0 |

10.3.7.9a GSM cell group

This IE encodes a list of GSM cells specified by their ARFCN values [45].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|--|---------|-------------------------------|--|---------|
| Starting ARFCN | MP | | Integer (0..1023) | First ARFCN value in the set | REL-8 |
| Band Indicator | MP | | Enumerated (dcs1800, pcs1900) | GSM BAND_INDICATOR [45] | REL-8 |
| CHOICE Following ARFCNs | MP | | | | REL-8 |
| >Explicit list | | | | | REL-8 |
| >>List of ARFCNs | MP | 0 to 31 | Integer (0..1023) | Following ARFCN values | REL-8 |
| >Equally spaced | | | | | REL-8 |
| >>ARFCN spacing | MP | | Integer (1..8) | Increment "d" ARFCN values | REL-8 |
| >>Number of following ARFCNs | MP | | Integer (0..31) | Number "n" of following ARFCN values, NOTE 1 | REL-8 |
| >Variable bitmap format | | | | | REL-8 |
| >>Bitmap | MP | | Octet string (1..16) | NOTE 2 | REL-8 |
| >Continuous range | | | | | REL-8 |
| >>Ending ARFCN | MP | | Integer (0..1023) | Last ARFCN value in the set, NOTE 3 | REL-8 |
| NOTE 1: | Let the IE "Starting ARFCN" = s. The complete set of (n+1) ARFCN values is defined as: {s, ((s + d) mod 1024), ((s + 2*d) mod 1024) ... ((s + n*d) mod 1024)}. | | | | |
| NOTE 2: | Bitmap representing the following ARFCN values in the set. Let the IE "Starting ARFCN" = s. The first bit of the first octet in the bitmap corresponds to ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the last bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to "1". | | | | |
| NOTE 3: | Let the IEs "Starting ARFCN" = s and "Ending ARFCN" = t. The complete set of ARFCN values is defined as: {s, ((s + 1) mod 1024), ((s + 2) mod 1024) ... ((t - 1) mod 1024), t}. | | | | |

10.3.7.10 HCS Cell re-selection information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------------------------|-------|---------------------------------------|---|
| Penalty_time | MD | | Integer(0, 10, 20, 30, 40, 50, 60) | Default value is 0 which means = not used
In seconds |
| Temporary_offsets | CV-Penalty used | | | |
| >Temporary_offset1 | MP | | Integer(3, 6, 9, 12, 15, 18, 21, inf) | [dB] |
| >Temporary_offset2 | CV-FDD-Quality-Measure | | Integer(2, 3, 4, 6, 8, 10, 12, inf) | [dB] |

| Condition | Explanation |
|---------------------|--|
| Penalty used | This IE is not needed if the IE "Penalty time" equals "not used", else it is mandatory present. |
| FDD-Quality-Measure | This IE is not needed if the IE "Cell selection and reselection quality measure" has the value CPICH RSCP, otherwise the IE is mandatory present. This conditional presence is implemented in ASN.1 by the use of a specific RSCP and EcNo variant of 10.3.7.10. |

10.3.7.11 HCS neighbouring cell information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---|-----------------------|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| HCS Cell Re-selection Information | MP | | HCS Cell Re-selection Information 10.3.7.10 | |

10.3.7.12 HCS Serving cell information

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|----------------------|-------|---|----------------------------------|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| T _{Crmax} | MD | | Enumerated(not used, 30, 60, 120, 180, 240) | [s]
Default value is not used |
| N _{CR} | CV-UE speed detector | | Integer(1..16) | Default value = 8 |
| T _{CrmaxHyst} | CV-UE speed detector | | Enumerated(not used, 10, 20, 30, 40, 50, 60, 70) | [s] |

| Condition | Explanation |
|-------------------|--|
| UE Speed detector | This IE is not needed if T _{Crmax} equals 'not used', else it is mandatory present. |

10.3.7.12a Idle Interval Information

NOTE: Used for TDD only. If the multi-RAT UE needs idle interval for E-UTRAN measurements in CELL_DCH state, this IE may be configured.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| k | MD | | Integer (2..3) | This IE is the coefficient parameter to calculate the idle interval period. Default value is 2. The actual idle interval period equal to 2^k radio frames. | REL-8 |
| Offset | MD | | Integer (0..7) | The idle interval position in the period. Default value is 0. | REL-8 |

10.3.7.13 Inter-frequency cell info list

Contains the information for the list of measurement objects for an inter-frequency measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|-----------|--------------------|-------------------------------|---|---------|
| CHOICE <i>Inter-frequency cell removal</i> | OP | | | | |
| >Remove all inter-frequency cells | | | | No data | |
| >Remove some inter-frequency cells | | | | | |
| >>Removed inter-frequency cells | MP | 1 .. <maxCellMeas> | | | |
| >>>Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| >No inter-frequency cells removed | | | | No data | |
| New inter-frequency cells | OP | 1 to <maxCellMeas> | | | |
| >Inter-frequency cell id | MD | | Integer(0 .. <maxCellMeas>-1) | | |
| >Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list.
NOTE: The first occurrence is then MP. | |
| >Cell info | MP | | Cell info 10.3.7.2 | | |
| >CHOICE mode specific info | MP | | | | REL-7 |
| >>No information | | | | No data for FDD, TDD 3.84 Mcps or TDD 7.68 Mcps | REL-7 |
| >>TDD 1.28 Mcps | | | | | REL-7 |
| >>>Intra-SecondaryFrequency Indicator | MP | | Boolean | TRUE means the inter frequency neighbour cell has a secondary frequency which is the same as the current working frequency of UE. | REL-7 |
| Cells for measurement | CV-BCHopt | 1 to <maxCellMeas> | | | |
| >Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |

| Condition | Explanation |
|-----------|--|
| BCHopt | This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional |

10.3.7.14 Inter-frequency event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------|------------------------------|
| Inter-frequency event identity | MP | | Enumerated(2a, 2b, 2c, 2d, 2e, 2f) | Two spare values are needed. |

10.3.7.15 Inter-frequency measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|----------------------|-----------------------------------|--|
| Inter-frequency measurement results | OP | 1 to <maxFreq> | | |
| >Frequency info | MD | | Frequency info
10.3.6.36 | Default value is the value of the previous "frequency info" in the list.
NOTE: The first occurrence is then MP. |
| >UTRA carrier RSSI | OP | | Integer(0..76) | According to UTRA_carrier_RSSI_LEV in [19] and [20].
Fifty-one spare values are needed. |
| >Inter-frequency cell measurement results | OP | 1 to <maxCellIM eas> | | Only cells for which all reporting quantities are available should be included. |
| >>Cell measured results | MP | | Cell measured results
10.3.7.3 | |

10.3.7.16 Inter-frequency measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|--------------|-------|---|---|---------|
| Inter-frequency measurement objects list | MP | | Inter-frequency cell info list
10.3.7.13 | | |
| Inter-frequency measurement quantity | OP | | Inter-frequency measurement quantity
10.3.7.18 | | |
| Inter-frequency reporting quantity | OP | | Inter-frequency reporting quantity
10.3.7.21 | | |
| Reporting cell status | CV-reporting | | Reporting cell status
10.3.7.61 | | |
| Measurement validity | OP | | Measurement validity
10.3.7.51 | | |
| Inter-frequency set update | OP | | Inter-frequency set update
10.3.7.22 | | |
| Adjacent frequency index | OP | | Integer (0..<maxCell Meas-1>) | Index to an element in the IE 'New inter-frequency cell' containing a cell on | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|-------|--|---|---------|
| | | | | the adjacent frequency; index = 0 corresponds to the first element in the IE | |
| CHOICE <i>report criteria</i> | MP | | | | |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | | |
| >Inter-frequency measurement reporting criteria | | | Inter-frequency measurement reporting criteria 10.3.7.19 | | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | | |
| >No reporting | | | | (no data)
Chosen when this measurement only is used as additional measurement to another measurement | |

| Condition | Explanation |
|------------------|---|
| <i>reporting</i> | This IE is optional if the CHOICE "report criteria" is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed |

10.3.7.17 Inter-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for inter-frequency measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|----------------|--|-----------------------|
| Inter-frequency event identity | MP | | Inter-frequency event identity 10.3.7.14 | |
| Inter-frequency cells | OP | 1 to <maxFreq> | | |
| >Frequency info | MP | | Frequency info 10.3.6.36 | |
| >Non frequency related measurement event results | MP | | Cell measurement event results 10.3.7.4 | |

10.3.7.18 Inter-frequency measurement quantity

The quantity the UE shall measure in case of inter-frequency measurement. It also includes the filtering of the measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|--|-----------------------|
| CHOICE reporting criteria | MP | | | |
| >Intra-frequency reporting criteria | | | | |
| >>Intra-frequency measurement quantity | MP | | Intra-frequency measurement quantity 10.3.7.38 | |
| >Inter-frequency reporting criteria | | | | |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | |
| >>CHOICE mode | MP | | | |
| >>>FDD | | | | |
| >>>Measurement quantity for frequency quality estimate | MP | | Enumerated(CPICH Ec/N0, CPICH RSCP) | |
| >>>TDD | | | | |
| >>>Measurement quantity for frequency quality estimate | MP | | Enumerated(Primary CCPCH RSCP) | |

10.3.7.19 Inter-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an inter-frequency measurements. All events concerning inter-frequency measurements are labelled 2x where x is a,b,c, ...

Event 2a: Change of best frequency.

Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

Event 2c: The estimated quality of a non-used frequency is above a certain threshold.

Event 2d: The estimated quality of the currently used frequency is below a certain threshold.

Event 2e: The estimated quality of a non-used frequency is below a certain threshold.

Event 2f: The estimated quality of the currently used frequency is above a certain threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|-------------|-----------------------|--|---|---------|
| Parameters required for each event | OP | 1 to <maxMe asEvent > | | | |
| >Inter-frequency event identity | MP | | Inter-frequency event identity 10.3.7.14 | | |
| >Threshold used frequency | CV-clause 0 | | Integer(-115..0) | Ranges used depend on measurement quantity.
CPICH Ec/No -24..0dB
CPICH/Primary CCPCH RSCP -115..-25dBm | |
| | | | Integer (-120..0) | Ranges used depend on measurement quantity.
CPICH Ec/No -24..0dB
CPICH/Primary CCPCH RSCP -120..-25dBm | REL-6 |
| >Delta _{Threshold used frequency} | CV-clause 3 | | Integer(-5..-1) | If present, the actual value of Threshold used frequency = Threshold used frequency + Delta _{Threshold used frequency} | REL-5 |
| | | | | Not used in Release 6 and later | REL-6 |
| >W used frequency | CV-clause 2 | | Real(0, 0.1..2.0 by step of 0.1) | | |
| >Hysteresis | MP | | Real(0, 0.5..14.5 by step of 0.5) | In event 2a, 2b, 2c, 2d, 2e, 2f | |
| >Time to trigger | MP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms. | |
| >Reporting cell status | OP | | Reporting cell status 10.3.7.61 | | |
| >Parameters required for each non-used frequency | OP | 1 to <maxFreq> | | In this release, the first listed threshold and W parameter shall apply to all non-used frequencies. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|-------------|-------|----------------------------------|---|---------|
| >>Threshold non used frequency | CV-clause 1 | | Integer(-115..0) | Ranges used depend on measurement quantity.
CPICH Ec/No -24..0dB
CPICH/Primary CCPCH RSCP -115..-25dBm.
This IE is not needed if the IE "Inter-frequency event identity" is set to 2a. However, it is specified to be mandatory to align with the ASN.1. | |
| | | | Integer (-120..0) | Ranges used depend on measurement quantity.
CPICH Ec/No -24..0dB
CPICH/Primary CCPCH RSCP -120..-25dBm
This IE is not needed if the IE "Inter-frequency event identity" is set to 2a. | REL-6 |
| >> Delta _{Threshold non used frequency} | CV-clause 4 | | Integer(-5..-1) | If present, the actual value of Threshold non used frequency = Threshold non used frequency + Delta _{Threshold non used frequency} | REL-5 |
| | | | | Not used in Release 6 and later | REL-6 |
| >>W non-used frequency | CV-clause 1 | | Real(0, 0.1..2.0 by step of 0.1) | | |

| Condition | Explanation |
|-----------|---|
| Clause 0 | This IE is mandatory present if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f, otherwise the IE is not needed. |
| Clause 1 | This IE is mandatory present if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e, otherwise the IE is not needed |
| Clause 2 | This IE is mandatory present if the IE "Inter-frequency event identity" is set to 2a, 2b, 2d or 2f, otherwise the IE is not needed. |
| Clause 3 | This IE is optional if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f. Otherwise the IE is not needed.
Note that in order to align with the ASN.1, this IE is always included when the IE 'Delta _{Threshold non used frequency} ' is present, but the value shall be ignored if the "Inter-frequency event identity" is not set to 2b, 2d or 2f. |
| Clause 4 | This IE is optional if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e. Otherwise the IE is not needed. |

10.3.7.20 Inter-frequency measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|-------|---|-----------------------|---------|
| Inter-frequency cell info list | OP | | Inter-frequency cell info list 10.3.7.13 | | |
| Inter-frequency RACH reporting information | OP | | Inter-frequency RACH reporting information 10.3.7.20a | | REL-6 |

10.3.7.20a Inter-frequency RACH reporting information

Contains the reporting configuration information for an inter-frequency measurement report, which is sent on the RACH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|--------|-------------------------------------|---|---------|
| CHOICE mode | MP | | | | REL-6 |
| >FDD | | | | | REL-6 |

| >>>Inter-RAT cell id | MP | | Integer(0 .. <maxCellMe as> - 1) | | |
| >Remove no inter-RAT cells | | | | (no data) | |
| New inter-RAT cells | MP | 1 to <maxCellM eas> | | Although this IE is not always required, need is MP to align with ASN.1 | |
| | OP | | | | REL-4 |
| >Inter-RAT cell id | OP | | Integer(0 .. <maxCellMe as> - 1) | | |
| >CHOICE <i>Radio Access Technology</i> | MP | | | | |
| >>GSM | | | | | |
| >>>Cell individual offset | MP | | Integer (-50..50) | In dB
Used to offset measured quantity value | |
| >>>Cell selection and re-selection info | OP | | Cell selection and re-selection info for SIB11/12 10.3.2.4 | See subclause 8.6.7.3 | |
| >>>BSIC | MP | | BSIC 10.3.8.2 | | |
| >>>Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | |
| >>>BCCH ARFCN | MP | | Integer (0..1023) | [45] | |
| >>IS-2000 | | | | | |
| >>>System specific measurement info | MP | | enumerated (frequency, timeslot, | For IS-2000, use fields from TIA/EIA/IS- | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------------|---------------------|---------------------------------------|---|---------|
| | | | colour code, output power, PN offset) | 2000.5, subclause 3. 7.3.3.2.27, Candidate Frequency Neighbour List Message | |
| >>None | | | (no data) | This value has been introduced to handle the case when IE "New inter-RAT cells" is not required | |
| Cell for measurement | OP | 1 to <maxCellM eas> | | | |
| >Inter-RAT cell id | MP | | Integer(0 .. <maxCellMe as>-1) | | |
| Inter-RAT cell info indication | CV-Message | | Integer (0..3) | NOTE 1 and 2 | REL-5 |

| Condition | Explanation |
|-----------|---|
| Message | The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed. |

NOTE 1: The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

NOTE 2: In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

NOTE 3: If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

10.3.7.24 Inter-RAT event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|-----------------------|
| Inter-RAT event identity | MP | | Enumerated (3a, 3b, 3c, 3d) | |

10.3.7.25 Inter-RAT info

Inter-RAT info defines the target system for redirected cell selection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|-----------|-------|--------------------------------|-----------------------|---------|
| Inter-RAT info | MP | | Enumerated (GSM
, E-UTRA) | | |
| | | | | | REL-8 |
| GSM target cell info | CV-GSM | | GSM target cell info 10.3.8.4g | | REL-6 |
| E-UTRA target info | CV-E-UTRA | | E-UTRA target info 10.3.8.4L | | REL-8 |

| Condition | Explanation |
|-----------|--|
| GSM | This IE is optionally present if the IE "Inter-RAT info" is set to "GSM" and not needed otherwise. |
| E-UTRA | This IE is mandatory present if the IE "Inter-RAT info" is set to "E-UTRA" and not needed otherwise. |

10.3.7.26 Inter-RAT measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------------|-----------------------------|---|
| Inter-RAT measurement results | OP | 1 to <maxOther RAT-16> | | |
| >CHOICE system | MP | | | One spare value is needed. |
| >>GSM | | | | |
| >>>Measured GSM cells | MP | 1 to <maxReportedGSMCells> | | |
| >>>>GSM carrier RSSI | OP | | bit string(6) | RXLEV is mapped to a value between 0 and 63, [46]. When mapping the RXLEV value to the RSSI bit string, the first/leftmost bit of the bit string contains the most significant bit. |
| >>>>CHOICE BS/C | MP | | | |

|--------------------------------|------|-------|-----------------------------|---|---------|
| >>SOFT SLOPE | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.3 and 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >>ADD_INTERCEPT | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >E-UTRA | | | | | REL-8 |
| >>Measurement quantity | MP | | Enumerated (RSRP, RSRQ) | This IE indicates the quantity that the UE uses to determine the event trigger. | REL-8 |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | | REL-8 |

10.3.7.30 Inter-RAT measurement reporting criteria

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of other system is below a certain threshold.

Event 3c: The estimated quality of other system is above a certain threshold.

Event 3d: Change of best cell in other system.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|-------------|----------------------|------------------------------------|---|
| Parameters required for each event | OP | 1 to <maxMeas Event> | | |
| >Inter-RAT event identity | MP | | Inter-RAT event identity 10.3.7.24 | |
| >Threshold own system | CV-clause 0 | | Integer (-115..0) | |
| >W | CV-clause 0 | | Real(0, 0.1..2.0 by step of 0.1) | In event 3a |
| >Threshold other system | CV-clause 1 | | Integer (-115..0) | In event 3a, 3b, 3c
If the other system is EUTRA, the range used depends on: if measurement quantity is RSRQ, range should be (-39..-6), the actual value = Threshold other system/2 [dB], if measurement quantity is RSRP, range should be (-115..-19), the actual value = Threshold other system - 25 [dBm]. |
| >Hysteresis | MP | | Real(0..7.5 by step of 0.5) | |
| >Time to trigger | MP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. |
| >Reporting cell status | OP | | Reporting cell status 10.3.7.61 | |

| Condition | Explanation |
|-----------|---|
| Clause 0 | The IE is mandatory present if the IE "Inter-RAT event identity" is set to "3a", otherwise the IE is not needed |
| Clause 1 | The IE is mandatory present if the IE "Inter-RAT event identity" is set to 3a, 3b or 3c, otherwise the IE is not needed |

10.3.7.31 Inter-RAT measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------|-----------------------|
| Inter-RAT cell info list | OP | | Inter-RAT cell info list 10.3.7.23 | |

10.3.7.32 Inter-RAT reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|-------|---|--|---------|
| UTRAN estimated quality | MP | | Boolean | This parameter is not used in this release and should be set to FALSE. | |
| CHOICE system | MP | | | | |
| >GSM | | | | | |
| >>GSM Carrier RSSI Reporting indicator | MP | | Boolean | | |
| >E-UTRA | | | | | REL-8 |
| >>Reporting quantity | MP | | Enumerated ("measurement quantity", "both") | This IE indicates the quantity that the UE reports; if this IE is set to "measurement quantity" the UE reports either RSRP or RSRQ which is indicated in the 'measurement quantity' (see subclause 10.3.7.29); if this IE is set to "both", the UE reports both RSRP and RSRQ. | REL-8 |

10.3.7.33 Intra-frequency cell info list

Contains the information for the list of measurement objects for an intra-frequency measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------|-----------|---------------------|---------------------------------|---|
| CHOICE Intra-frequency cell removal | OP | | | Absence of this IE is equivalent to choice "Remove no intra-frequency cells". |

10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |

10.3.7.99 | |

10.3.7.45 Measured results on RACH

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non- used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

10.3.7.48 Measurement Identity

A reference number that is used by the UTRAN at modification and release of the measurement, and by the UE in the measurement report.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Measurement identity | MP | | Integer(1..16) | |

10.3.7.49 Measurement reporting mode

Contains the type of Measurement Report transfer mode and the indication of periodical/event trigger.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|---|-----------------------|
| Measurement Report Transfer Mode | MP | | enumerated (Acknowledged mode RLC, Unacknowledged mode RLC) | |
| Periodical Reporting / Event Trigger Reporting Mode | MP | | Enumerated (Periodical reporting, Event trigger) | |

10.3.7.50 Measurement Type

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| Measurement Type | MP | | Enumerated(Intra-frequency, Inter-frequency, Inter-RAT, Traffic volume, Quality, UE internal, UE positioning) | |

10.3.7.51 Measurement validity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| UE state | MP | | Enumerated(CELL_DCH, all states except CELL_DCH, all states) | |

10.3.7.52 Void

10.3.7.53 Periodical reporting criteria

Contains the periodical reporting criteria information. It is necessary only in the periodical reporting mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|--|
| Amount of reporting | MD | | Integer(1, 2, 4, 8, 16, 32, 64, Infinity) | The default value is infinity. |
| Reporting interval | MP | | Integer(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000) | Indicates the interval of periodical report.
Interval in milliseconds |

10.3.7.53aa Periodical reporting info-1b

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---|--|---------|
| Amount of reporting | MP | | Integer(1, 2, 4, 8, 16, 32, 64, Infinity) | | REL-5 |
| Reporting interval | MP | | Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds.
0 means no periodical reporting. | REL-5 |

10.3.7.53a PLMN identities of neighbour cells

This IE contains the PLMN identities of neighbour cells.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|---------------------|--------------------|-----------------------|---------|
| PLMNs of intra-frequency cells list | OP | 1 to <maxCe llMeas> | | NOTE | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|----------------------|---|---|---------|
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-frequency cells list | OP | 1 to <maxCe II Meas> | | NOTE | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-RAT cells list | OP | 1 to <maxCe II Meas> | | | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| Multiple PLMNs of intra-frequency cells list | OP | 1 to <maxCe II Meas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11 a | | REL-8 |
| Multiple PLMNs of inter-frequency cells list | OP | 1 to <maxCe II Meas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11 a | | REL-8 |

NOTE: The IE "PLMNs of intra-frequency cells list" and/or the IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of intra-frequency cells list" and/or the IE "Multiple PLMNs of inter-frequency cells list" instead.

10.3.7.54 Primary CCPCH RSCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description | Version |
|-------------------------------------|---------|-------|-----------------------|---|---------|
| Primary CCPCH RSCP | MP | | Integer(0..91) | According to P-CCPCH_RSCP_LEV in [19] and [20]. Thirty-six spare values are needed. | |
| Delta _{Primary CCPCH RSCP} | CV-Rel5 | | Integer(-5..-1) | If present, the actual value of Primary CCPCH RSCP = Primary CCPCH RSCP + Delta _{Primary CCPCH RSCP} | REL-5 |

| Condition | Explanation |
|-----------|---|
| Rel5 | This IE is mandatory if the value of Primary CCPCH RSCP is below 0. Otherwise the IE is not needed. |

10.3.7.54a Qhcs

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--|--|---------|
| Qhcs | MP | | Integer(0..99)
...
45: -1.5
46: -1
47: -0.5
48: 0
49: (spare)
...
98: (spare)

| >>SIR measurement list | OP | 1 to <maxCCTr CH> | | SIR measurements shall be reported for all listed TFCS IDs |
| >>>TFCS ID | MP | | Integer(1...8) | |

| Condition | Explanation |
|----------------|---|
| BLER reporting | This IE is not needed if the IE "DL Transport Channel BLER" is FALSE and optional if the IE "DL Transport Channel BLER" is TRUE |

10.3.7.60 Reference time difference to cell

In the System Information message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell..

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCH of a neighbouring cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|-----------------------|
| CHOICE accuracy | MP | | | |
| >40 chips | | | | |
| >>Reference time difference | MP | | Integer(0..38
400 by step
of 40) | In chips |
| >256 chips | | | | |
| >>Reference time difference | MP | | Integer(0..
38400 by
step of 256) | In chips |
| >2560 chips | | | | |
| >>Reference time difference | MP | | Integer(0..
38400 by
step of 2560) | In chips |

10.3.7.61 Reporting Cell Status

Indicates maximum allowed number of cells to report and whether active set cells and/or virtual active set cells and/or monitored set cells on and/or detected set cells used frequency and/or monitored set cells on non used frequency should/should not be included in the IE "Measured results".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|--|--|
| CHOICE reported cell | MP | | | |
| >Report cells within active set | | | | This choice is not valid for inter-RAT measurements. For inter-frequency measurements it is only valid for reporting events 2D and 2F. See NOTE 1. |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report cells within monitored set cells on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |

If this choice is selected for intra-frequency measurements, the UE shall report cells within the active set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set. |
| >>Maximum number of reported cells | MP | | Integer (1..12) | |
| >Report cells within active | | | | This choice is not valid for |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|--------------------|---|
| and/or monitored set on used frequency or within virtual active and/or monitored set on non-used frequency | | | | inter-RAT measurements.
If this choice is selected for intra-frequency measurements, the UE shall report cells within the active and/or monitored set.
If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set and/or monitored set on non-used frequency. |
| >>Maximum number of reported cells | MP | | Integer(1..12) | |

NOTE 1: For Inter-frequency reporting events 2D and 2F, only CHOICE "Report cells within active set" is valid.

10.3.7.62 Reporting information for state CELL_DCH

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--|--|
| Intra-frequency reporting quantity | MP | | Intra-frequency reporting quantity 10.3.7.41 | |
| Measurement Reporting Mode | MP | | Measuremen t Reporting Mode 10.3.7.49 | |
| CHOICE report criteria | MP | | | |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | This IE may only contain measurement events from 1A to 1I, but not measurement event 1J. |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

10.3.7.63 SFN-SFN observed time difference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------|---|---------|
| CHOICE type | MP | | | | |
| >Type 1 | | | Integer(0.. 9830399) | According to T1_SFNSFN_TIME in [19] and [20].
For FDD and 3.84 Mcps TDD and 7.68 Mcps TDD:
6946816 spare values are needed. | |
| | | | Integer(0.. 3276799) | For 1.28 Mcps TDD:
13500416 spare values are needed. | Rel-4 |
| >Type 2 | | | Integer(0.. 40961) | According to T2_SFNSFN_TIME in [19] and [20].
24574 spare values are needed. | |
| | | | Integer(0.. 27649) | For 1.28 Mcps TDD:
37886 spare values are needed. | Rel-4 |

10.3.7.64 Time to trigger

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---|-----------------------|
| Time to trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms |

10.3.7.65 Timeslot ISCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|--|
| Timeslot ISCP | MP | | Integer(0..91) | According to UE_TS_ISCP_LEV in [20]. Thirty-six spare values are needed. |

10.3.7.66 Traffic volume event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Traffic volume event identity | MP | | Enumerated(4a, 4b) | |

10.3.7.67 Traffic volume measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|------|--------------|--|---|
| Traffic volume measurement results | OP | 1 to <maxRB> | | |
| >RB Identity | MP | | RB Identity 10.3.4.16 | |
| >RLC Buffers Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed. |
| >Average of RLC Buffer Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed. |
| >Variance of RLC Buffer Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, | In bytes And N Kbytes = N*1024 bytes. Two spare values are needed. |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|-----------------------|
| | | | 256, 512, 1024, 2K, 4K, 8K, 16K) | |

10.3.7.68 Traffic volume measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|---|-----------------------|
| Traffic volume measurement Object | OP | | Traffic volume measurement Object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measurement quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | |
| <i>CHOICE report criteria</i> | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measurement reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | (no data)
Chosen when this measurement only is used as additional measurement to another measurement | |

10.3.7.69 Traffic volume measurement event results

Contains the event result for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---------------|-------|-----------------------------|---|
| Uplink transport channel type causing the event | MP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only.
RACH is the currently configured default in the uplink.
For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| UL Transport Channel identity | CV-UL-DCH/USC | | Transport channel | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|----------|-------|--|-----------------------|
| | <i>H</i> | | identity
10.3.5.18 | |
| Traffic volume event identity | MP | | Traffic volume event identity
10.3.7.66 | |

| Condition | Explanation |
|--------------------|--|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

10.3.7.70 Traffic volume measurement object

Contains the measurement object information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|-----------------|----------------|---|--|
| Traffic volume measurement objects | MP | 1 to <maxTrCH> | | |
| >Uplink transport channel type | MP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only. RACH is the currently configured default in the uplink.
For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Target Transport Channel ID | CV-UL-DCH/USC H | | Transport channel identity
10.3.5.18 | |

| Condition | Explanation |
|--------------------|--|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

10.3.7.71 Traffic volume measurement quantity

Contains the measurement quantity information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|--------|-------|---|-----------------------------------|
| Measurement quantity | MP | | Enumerated(RLC buffer payload, Average RLC buffer payload, Variance of RLC buffer payload) | This parameter should be ignored. |
| Time Interval to take an average or a variance | CV-A/V | | Integer(20, 40, ..260, by steps of 20) | In ms |

| Condition | Explanation |
|-----------|--|
| A/V | This IE is mandatory present when "Average RLC buffer" or "Variance of RLC buffer payload" is chosen and not needed otherwise. |

10.3.7.72 Traffic volume measurement reporting criteria

Contains the measurement reporting criteria information for a traffic volume measurement.

Event 4a: Transport Channel Traffic Volume [15] exceeds an absolute threshold.

Event 4b: Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|-----------------|-------------------------|--|---|
| Parameters sent for each transport channel | OP | 1 to <maxTrCH> | | This IE is always required, need is OP to align with ASN.1 |
| >Uplink transport channel type | OP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Transport Channel ID | CV-UL-DCH/USC H | | Transport channel identity 10.3.5.18 | |
| >Parameters required for each Event | OP | 1 to <maxMeas parEvent> | | |
| >>Traffic volume event identity | MP | | Traffic volume event identity 10.3.7.66 | |
| >>Reporting Threshold | MP | | Enumerated(8,16,32,64,1 28,256,512,1 024,2K,3K,4 K,6K,8K,12K ,16K,24K,32 K,48K,64K,9 6K,128K,192 K,256K,384 K,512K,768 K) | Threshold in bytes And N Kbytes = N*1024 bytes |
| >>Time to trigger | OP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms |
| >>Pending time after trigger | OP | | Integer(250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the period of time during which it is forbidden to send any new measurement reports with the same Traffic volume event identity even if the triggering condition is fulfilled. Time in milliseconds |
| >>Tx interruption after trigger | OP | | Integer (250, 500, 1000, 2000, 4000, 8000, 16000) | Time in milliseconds. Indicates how long the UE shall block DTCH transmissions on the RACH after a measurement report is triggered. |

| Condition | Explanation |
|-------------|---|
| UL-DCH/USCH | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is optional. Otherwise the IE is not needed. |

10.3.7.73 Traffic volume measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|--|--|
| Traffic volume measurement identity | MD | | Measuremen t identity 10.3.7.48 | The traffic volume measurement identity has default value 4. |
| Traffic volume measurement object | OP | | Traffic volume measuremen t object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measuremen t quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measuremen t validity 10.3.7.51 | |
| Measurement Reporting Mode | MP | | Measuremen t Reporting Mode 10.3.7.49 | |
| <i>CHOICE reporting criteria</i> | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measuremen t reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

10.3.7.74 Traffic volume reporting quantity

Contains the reporting quantity information for a traffic volume measurement.

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|--------------------|-----------------------|
| RLC Buffer Payload for each RB | MP | | Boolean | |
| Average of RLC Buffer Payload for each RB | MP | | Boolean | |
| Variance of RLC Buffer Payload for each RB | MP | | Boolean | |

10.3.7.75 UE internal event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------|-----------------------|
| UE internal event identity | MP | | Enumerated(6a,6b,6c,6d,6e, 6f, 6g) | |

10.3.7.76 UE internal measured results

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|--------------|---|---|---------|

| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | | (no data)
Chosen when this measurement only is used as additional measurement to another measurement |

| <i>CHOICE report criteria</i> | Condition under which the given <i>report criteria</i> is chosen |
|--|--|
| UE internal measurement reporting criteria | Chosen when UE internal measurement event triggering is required |
| Periodical reporting criteria | Chosen when periodical reporting is required |
| No reporting | Chosen when this measurement only is used as additional measurement to another measurement |

10.3.7.78 UE internal measurement event results

This IE contains the measurement event results that are reported to UTRAN for UE internal measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|-------------|-------|--------------------------------------|-----------------------|
| UE internal event identity | MP | | UE internal event identity 10.3.7.75 | |
| <i>CHOICE mode</i> | MP | | | |
| >FDD | | | | |
| >Primary CPICH info | CV-clause 1 | | Primary CPICH info 10.3.6.60 | |
| >TDD | | | | (no data) |

| Condition | Explanation |
|-----------|---|
| Clause 1 | This IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |

10.3.7.79 UE internal measurement quantity

The quantity the UE shall measure in case of UE internal measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---|---|---------|
| CHOICE mode | MP | | | | |
| >FDD | | | | | |
| >>Measurement quantity | MP | | Enumerated(UE Transmitted Power, UTRA Carrier RSSI, UE Rx-Tx time difference) | | |
| >TDD | | | | | |
| >>Measurement quantity | MP | | Enumerated(UE Transmitted Power, UTRA Carrier RSSI,
T _{ADV}) | Measurement on Timing Advance is for 1.28 Mcps TDD | REL-4 |
| Filter coefficient | OP | | Filter coefficient 10.3.7.9 | If the IE "Measurement quantity" is set to "Rx-Tx time difference" and this IE is present, the UE behaviour is unspecified. | |

10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c.... In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by T_{ADV} becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|----------------------|--------------------------------------|-----------------------|---------|
| Parameters sent for each UE internal measurement event | OP | 1 to <maxMeas Event> | | | |
| >UE internal event identity | MP | | UE internal event identity 10.3.7.75 | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|-------------|-------|---|--|---------|
| >Time-to-trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms. Indicates the period of time between the timing of event detection and the timing of sending Measurement Report. | |
| >UE Transmitted Power Tx power threshold | CV-clause 1 | | Integer(-50..33) | Power in dBm. In event 6a, 6b. | |
| >UE Rx-Tx time difference threshold | CV-clause 2 | | Integer(768..1280) | Time difference in chip. In event 6f, 6g. | |
| > T_{ADV} threshold | CV-clause 3 | | Real (0..63 step 0.125) | Time difference in chip. In event 6f | REL-4 |

| Condition | Explanation |
|-----------|---|
| Clause 1 | The IE is mandatory present if the IE "UE internal event identity" is set to "6a" or "6b", otherwise the IE is not needed. |
| Clause 2 | In FDD, the IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |
| Clause 3 | In 1.28 Mcps TDD the IE is mandatory present if the IE "UE internal event identity" is set to "6f", otherwise the IE is not needed. |

10.3.7.81 Void

10.3.7.82 UE Internal reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| UE Transmitted Power | MP | | Boolean | | |

10.3.7.83 UE Rx-Tx time difference type 1

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7]. This measurement is for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|---|
| UE Rx-Tx time difference type 1 | MP | | Integer(768..1280) | In chips.
511 spare values are needed. |

10.3.7.84 UE Rx-Tx time difference type 2

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|-----------------------|
| UE Rx-Tx time difference type 2 | MP | | Integer (0..8191) | According to [19]. |

10.3.7.85 UE Transmitted Power info

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|---|
| UE Transmitted Power | MP | | Integer (0..104) | According to UE_TX_POWER in [19] and [20] |

10.3.7.86 UE positioning Ciphering info

This IE contains information for the ciphering of UE positioning assistance data broadcast in System Information.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| Ciphering Key Flag | MP | | Bit string(1) | |
| Ciphering Serial Number | MP | | Integer(0..65535) | The serial number used in the DES ciphering algorithm |

10.3.7.87 UE positioning Error

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|---------------------|-------|---|-----------------------|---------|
| Error reason | MP | | Enumerated(Not Enough OTDOA Cells, Not Enough GPS Satellites, Assistance Data Missing, Not Accomplished GPS Timing Of Cell Frames, Undefined Error, Request Denied By User, Not Processed And Timeout, Reference Cell Not Serving Cell, | Note 1 | |
| | | | Not Enough GANSS Satellites, Not Accomplished GANSS Timing Of Cell Frames) | Note 1 | REL-7 |
| GPS Additional Assistance Data Request | CV-GPSdataMissing | | UE positioning GPS Additional Assistance Data Request 10.3.7.88a | | |
| GANSS Additional Assistance Data Request | CV-GANSSdataMissing | | UE positioning GANSS Additional Assistance Data Request 10.3.7.88c | | REL-7 |

NOTE 1: The following table describes each value of the IE "Error reason".

| Value | Indication |
|--|--|
| Not Enough OTDOA Cells | There were not enough cells to be received. |
| Not Enough GPS Satellites | There were not enough GPS satellites to be received. |
| Assistance Data Missing | UE positioning GANSS or/and GPS assistance data missing. |
| Not Accomplished GPS Timing Of Cell Frames | UE was not able to accomplish the GPS timing of cell frames measurement. |
| Undefined Error | Undefined error. |
| Request Denied By User | UE positioning request denied by upper layers. |
| Not Processed And Timeout | UE positioning request not processed by upper layers and timeout. |
| Reference Cell Not Serving Cell | UE was not able to read the SFN of the reference cell. |
| Not Enough GANSS Satellites | There were not enough GANSS satellites to be received. |
| Not Accomplished GANSS Timing Of Cell Frames | UE was not able to accomplish the GANSS timing of cell frames measurement. |

| Condition | Explanation |
|-------------------------|--|
| <i>GPSdataMissing</i> | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |
| <i>GANSSdataMissing</i> | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |

10.3.7.88 UE positioning GPS acquisition assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|------|---------------|--|---|---------|
| GPS TOW msec | MP | | Integer(0..6.04
8*10 ⁸ -1) | GPS Time of Week in milliseconds rounded down to the nearest millisecond unit. It is also the time when satellite information is valid. | |
| UTRAN GPS reference time | OP | | | | |
| >UTRAN GPS timing of cell frames | MP | | Integer(0 ... 2322431999999) | GPS timing of cell frames in steps of 1 chip. | |
| >CHOICE mode | OP | | | | |
| >>FDD | | | | | |
| >>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >>TDD | | | | | |
| >>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >SFN | MP | | Integer(0..4095) | The SFN which the UTRAN GPS timing of cell frames time stamps. | |
| UE Positioning GPS ReferenceTime Uncertainty | OP | | UE positioning GPS reference time uncertainty 10.3.7.96a | | REL-7 |
| Satellite information | MP | 1 to <maxSat> | | | |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >Doppler (0 th order term) | MP | | Real(-5120..5117.5 by step of 2.5) | Hz | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|------|-------|--|---|---------|
| >Extra Doppler | OP | | | | |
| >>Doppler (1 st order term) | MP | | Real (-0.966..0.483 by step of 0.023) | Hz/s | |
| >>Doppler Uncertainty | MP | | Enumerated (12.5,25,50,100,200) | Hz.
Three spare values are needed.
The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty' to 'Doppler + Doppler Uncertainty'. | |
| >Code Phase | MP | | Integer(0..1022) | GPS chips.
Increasing binary values of the field signify increasing predicted pseudoranges. | |
| >Integer Code Phase | MP | | Integer(0..19) | Number of code periods that have elapsed since the latest GPS bit boundary, in units of C/A code period. | |
| >GPS Bit number | MP | | Integer(0..3) | Specifies GPS bit number modulo 4 | |
| >Code Phase Search Window | MP | | Integer(1023,1,2,3,4,6,8,12,16,24,32,48,64,96,128,192) | Expected code-phase is in the range 'Code Phase – Code Phase Search Window' to 'Code Phase + Code Phase Search Window'. | |
| >Azimuth and Elevation | OP | | | | |
| >>Azimuth | MP | | Real(0..348.75 by step of 11.25) | Degrees
An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+11.25$ degrees. | |
| >>Elevation | MP | | Real(0..78.75 by step of 11.25) | Degrees
An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+11.25$ degrees except for $y=78.75$ where the range is extended to include 90 degrees. | |

10.3.7.88a UE positioning GPS Additional Assistance Data Request

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|----------------------------------|---------------------|-------|--------------------|---|
| Almanac | MP | | Boolean | TRUE means requested |
| UTC Model | MP | | Boolean | TRUE means requested |
| Ionospheric model | MP | | Boolean | TRUE means requested |
| Navigation Model | MP | | Boolean | TRUE means requested |
| DGPS Corrections | MP | | Boolean | TRUE means requested |
| Reference Location | MP | | Boolean | TRUE means requested |
| Reference Time | MP | | Boolean | TRUE means requested |
| Acquisition Assistance | MP | | Boolean | TRUE means requested |
| Real-Time Integrity | MP | | Boolean | TRUE means requested |
| Navigation Model Additional data | CV-Navigation Model | | | this IE is present only if "Navigation Model" is set to TRUE otherwise it is absent |
| >GPS Week | MP | | Integer (0..1023) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|---------------|--------------------|---|
| >GPS_Toe | MP | | Integer (0..167) | GPS time of ephemeris in hours of the latest ephemeris set contained by the UE. Eighty-eight spare values needed. |
| >T-Toe limit | MP | | Integer (0..10) | ephemeris age tolerance of the UE to UTRAN in hours. Five spare values needed. |
| >Satellites list related data | MP | 0 to <maxSat> | | |
| >>SatID | MP | | Integer (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >>IODE | MP | | Integer (0..255) | Issue of Data Ephemeris for SatID |

10.3.7.88b UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GANSS signals in UE-assisted GANSS positioning. If the IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GANSS reference time" IE. I.e., if IE "UE positioning GANSS reference measurement information" is included in IE "UE positioning GANSS assistance data" and IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the IE "UE positioning GANSS reference time" shall also be included. If the IE "UE positioning GPS acquisition assistance" is included in IE "UE positioning measurement", the IE "GPS TOW msec" and IE "UTRAN GPS reference time" included in IE "UE positioning GPS acquisition assistance" is also valid for the Satellite information in IE "UE positioning GANSS reference measurement information".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|------|--------------------|------------------------------------|--|---------|
| GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. If this IE is asked by SIB 15.6, the GANSS shall be solved by the scheduling information. | REL-7 |
| Satellite information | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite within a GANSS constellation. For coding description, see Note 2. | REL-7 |
| >Doppler (0 th order term) | MP | | Real(-1024..1023.5 by step of 0.5) | m/s
Conversion between m/s and Hz shall be made by using the <i>nominal</i> wavelength of the assisted signal. | REL-7 |
| >Extra Doppler | OP | | | | REL-7 |
| >>Doppler (1 st order term) | MP | | Real (-0.2..0.1 by step of 1/210) | m/s ² | REL-7 |
| >>Doppler Uncertainty | MP | | Enumerated (40,20,10,5, 2.5) | m/s.
The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty' to 'Doppler + Doppler Uncertainty'. Three spare values are needed. | REL-7 |
| >Code Phase | MP | | Integer(0..1023) | ms, scaling factor 2 ⁻¹⁰
<i>Nominal</i> chipping rate of the GNSS signal shall be used in conversion.
Increasing binary values of the field signify increasing predicted code phases. | REL-7 |
| >Integer Code Phase | MP | | Integer(0..127) | ms.
Integer code phase (expressed modulo 128 ms) currently being transmitted at the Reference Time included in either IE "UE positioning GANSS reference time" or IE "UE positioning GPS acquisition assistance", as seen by a receiver at the Reference Location.
The UE can calculate the expected code phase as | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------------|---|---------|
| | | | | follows:
Reference Time – Integer
Code Phase + Code Phase. | |
| >Code Phase Search Window | MP | | Bit string (5) | Coded expected code-phase is in the range 'Code Phase – Code Phase Search Window' to 'Code Phase + Code Phase Search Window'.
For coding description, see Note 1 | REL-7 |
| >Azimuth and Elevation | OP | | | | REL-7 |
| >>Azimuth | MP | | Real(0..348.75 by step of 11.25) | Degrees
An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+11.25$ degrees. | REL-7 |
| >>Elevation | MP | | Real(0..78.75 by step of 11.25) | Degrees
An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+11.25$ degrees except for $y=78.75$ where the range is extended to include 90 degrees. | REL-7 |

NOTE 1: Code phase search window parameter format:

| CODE_PHASE_SEARCH_WINDOW | Code Phase Search Window [ms] |
|--------------------------|-------------------------------|
| '00000' | No information |
| '00001' | 0,002 |
| '00010' | 0,004 |
| '00011' | 0,008 |
| '00100' | 0,012 |
| '00101' | 0,016 |
| '00110' | 0,024 |
| '00111' | 0,032 |
| '01000' | 0,048 |

| '11100' | 1,450 |
| '11101' | 1,600 |
| '11110' | 1,800 |
| '11111' | 2,000 |

NOTE 2: Interpretation of SatID:

| GANSS | Value of SatID | Interpretation of SatID |
|----------------|---------------------------|---|
| Galileo | TBD | TBD |
| Modernized GPS | "0" – "62"
"63" | Satellite PRN Signal No. 1 to 63
Reserved |
| SBAS | "0" – "38"
"39" – "63" | Satellite PRN Signal No. 120 to 158
Reserved |
| QZSS | "0" – "4"
"5" – "63" | Satellite PRN Signal No. 193 to 197
Reserved |
| GLONASS | "0" – "23"
"24" – "63" | Slot Number 1 to 24
Reserved |

10.3.7.88c UE positioning GANSS additional assistance data request

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|-------------------|------------------|---|--|---------|
| GANSS Reference Time | MP | | Boolean | TRUE means requested | REL-7 |
| GANSS Reference Location | MP | | Boolean | TRUE means requested | REL-7 |
| GANSS Ionospheric model | MP | | Boolean | TRUE means requested | REL-7 |
| GANSS Additional Ionospheric Model | OP | | Data ID
Bit String(2) | If present, the UE requests the 'UE positioning GANSS additional ionospheric model' for a 'Data ID' as defined in 10.3.7.92b. | REL-8 |
| GANSS Earth Orientation Parameters | OP | | Enumerated (TRUE) | If present, the UE requests the 'UE positioning GANSS Earth orientation parameters' | REL-8 |
| GANSS Requested Generic Assistance Data | MP | 1 to <maxGAN SS> | | | REL-7 |
| >GANSS ID | OP | | Integer(0..7) | Absence of this IE means Galileo
Values 0-7 reserved for future use. | REL-7 |
| | | | | Absence of this IE means Galileo.
For coding description see NOTE 1 in 10.3.7.90b. | REL-8 |
| >SBAS ID | CV-GANS S-ID-SBAS | | UE positioning GANSS SBAS ID 10.3.7.97e | | REL-8 |
| >GANSS Real-Time Integrity | MP | | Boolean | TRUE means requested | REL-7 |
| >DGANSS Signal | OP | | DGANSS Signal Id 10.3.7.88d | | REL-7 |
| >GANSS Almanac | MP | | Boolean | TRUE means requested | REL-7 |
| | | | | TRUE means requested.
If 'GANSS ID' indicates 'Modernized GPS' or 'QZSS' and IE 'GANSS additional assistance data choices' is not included, the GANSS Almanac model requested is 'Model-4' for Modernized GPS, and 'Model-2' for QZSS, as defined in 10.3.7.89a. | REL-8 |
| >GANSS Navigation Model | MP | | Boolean | TRUE means requested | REL-7 |
| >GANSS Additional Navigation Models | OP | | Enumerated (TRUE) | If present, the UE requests the 'UE positioning GANSS additional navigation models'. If 'GANSS ID' indicates 'QZSS' and IE 'GANSS additional assistance data choices' is not included, the GANSS orbit and clock model requested is 'Model-2' as defined in 10.3.7.91e and 10.3.7.91f, respectively. | REL-8 |
| >GANSS Time Model GNSS-GNSS | OP | | BIT STRING (8) | The reference system for requested GANSS time model GNSS-GNSS is as indicated in IE "GANSS ID". The models are requested for each system with respective bit set to '1'. Bit 0 is set for GPS, Bit 1 is set for Galileo. Other bits are reserved | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|--------------------------|-------------------|-----------------------------|---|----------------|
| | | | | Bit 2 is set for QZSS
Bit 3 is set for GLONASS
Other bits are reserved | REL-8 |
| >GANSS Reference Measurement Information | MP | | Boolean | TRUE means requested | REL-7 |
| >GANSS data bits | OP | | | | REL-7 |
| >>GANSS TOD | MP | | INTEGER (0..86399) | This field contains the reference time modulo 86400 seconds of the first data bit of the requested data in integer seconds in GNSS specific system time of the GNSS indicated by IE "GANSS ID". | REL-7 |
| >>Data bit assistance | MP | | | | REL-7 |
| >>>GANSS Signal ID | MP | | DGANSS Signal Id 10.3.7.88d | | REL-7 |
| >>>GANSS Data Bit Interval | MP | | Integer (0..15) | This field represents the time length for which the Data Bit Assistance is requested. The Data Bit Assistance shall be relative to the time interval (GANSS TOD, GANSS TOD + Data Bit Interval).
The Data Bit Interval r , expressed in seconds, is mapped to a binary number K with the following formula:
$r = 0.1 \cdot 2^K$
Value K=15 means that the time interval is not specified. | REL-7 |
| >>>Satellite Information | OP | 1 to <maxGANSSat> | | | REL-7 |
| >>>>Satellite ID | MP | | Integer (0..63) | Identifies the satellite for which the Data Bit Assistance request is applicable and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >GANSS UTC model | MP | | Boolean | TRUE means Requested | REL-7 |
| >GANSS Additional UTC Models | OP | | Enumerated (TRUE) | If present, the UE requests the 'UE positioning GANSS additional UTC models' | REL-8 |
| >GANSS Auxiliary Information | OP | | Enumerated (TRUE) | If present, the UE requests the 'UE positioning GANSS auxiliary information' | REL-8 |
| >GANSS Navigation Model Additional data | CV-GANSSNavigation Model | | | | REL-7 |
| >>GANSS Week/Day | MP | | Integer (0..4095) | If 'GANSS ID' does not indicate 'GLONASS', this IE defines the GANSS Week number of the assistance currently held by the MS.

If 'GANSS ID' is set to 'GLONASS', this IE defines the calendar number of day within the four-year interval starting from 1 st of January in a leap year, as defined by the parameter N _T in [73] of the assistance currently held by the MS. | REL-7
REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|-----------------------|-------------------|--------------------|--|---------|
| >>GANSS_Toe | MP | | Integer (0..167) | If 'GANSS ID' does not indicate 'GLONASS', this IE defines the GANSS time of ephemeris in hours of the latest ephemeris set contained by the UE. | REL-7 |
| | | | | If 'GANSS ID' is set to 'GLONASS', this IE defines the time of ephemeris in units of 15 minutes of the latest ephemeris set contained by the UE (range 0 to 95 representing time values between 0 and 1425 minutes). In this case, values 96 to 167 shall not be used by the sender. | REL-8 |
| >>T-Toe limit | MP | | Integer (0..10) | If 'GANSS ID' does not indicate 'GLONASS', this IE defines the ephemeris age tolerance of the UE to UTRAN in units of hours. Five spare values needed. | REL-7 |
| | | | | If 'GANSS ID' is set to 'GLONASS', this IE defines the ephemeris age tolerance of the UE to UTRAN in units of 30 minutes (range 0 to 10 representing time values of 0 to 300 minutes). | REL-8 |
| >>Satellites list related data | OP | 1 to <maxGANSSat> | | | REL-7 |
| >>>SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>>IOD | MP | | Integer (0..1023) | 10 LSBs of Issue of Data for SatID | REL-7 |
| >GANSS additional assistance data choices | CV-Assistance Choices | | | | REL-8 |
| >>Orbit Model ID | OP | | Integer (0..7) | This IE may be included if IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and defines the non-native or non-default orbit model number as defined in 10.3.7.91c/10.3.7.91e. | REL-8 |
| >>Clock Model ID | OP | | Integer (0..7) | This IE may be included if IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and defines the non-native or non-default clock model number as defined in 10.3.7.91d/10.3.7.91f. | REL-8 |
| >>UTC Model ID | OP | | Integer (0..7) | This IE may be included if IE 'GANSS Additional UTC Models' is included and defines the non-native or non-default UTC model number as defined in 10.3.7.97d. | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| >>Almanac Model ID | OP | | Integer (0..7) | This IE may be included if IE 'GANSS Almanac' set to TRUE and defines the non-native or non-default model number as defined in 10.3.7.89a. | REL-8 |

| Condition | Explanation |
|------------------------------|---|
| <i>GANSS-ID-SBAS</i> | This IE is mandatory present if the IE 'GANSS ID' is 'SBAS' and not needed otherwise. |
| <i>GANSSNavigation Model</i> | The IE is mandatory present if the IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and not needed otherwise. |
| <i>AssistanceChoices</i> | This IE is mandatory present if non-native or non-default assistance data choices are requested and not needed otherwise. |

10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

| 4-7 | Reserved for future use | |

10.3.7.91 UE positioning GPS DGPS corrections

This IE contains DGPS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|--------------------------|------------------|---|---|
| GPS TOW sec | MP | | Integer(0..60 4799) | seconds
GPS time-of-week when the DGPS corrections were calculated |
| Status/Health | MP | | Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | |
| DGPS information | CV-
Status/Hea
lth | 1 to
<maxSat> | | If the Cipher information is included these fields are ciphered. |
| >SatID | MP | | Enumerated (0...63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >IODE | MP | | Integer(0..25 5) | |
| >UDRE | MP | | Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. |
| >PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters (different from [13]) |
| >RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec (different from [13]) |
| >Delta PRC2 | MP | | Integer(-127..127) | In this version of the protocol this IE should be set to zero and the UE shall ignore it |
| >Delta RRC2 | MP | | Real(-0.224..0.224 by step of 0.032) | In this version of the protocol this IE should be set to zero and the UE shall ignore it |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| >Delta PRC3 | OP | | Integer(-127..127) | This IE should not be included in this version of the protocol and if received the UE shall ignore it |
| >Delta RRC3 | OP | | Real(-0.224..0.224 by step of 0.032) | This IE should not be included in this version of the protocol and if received the UE shall ignore it |

| Condition | Explanation |
|---------------|---|
| Status/Health | This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed. |

10.3.7.91a UE positioning GPS Ephemeris and Clock Correction parameters

This IE contains information for GPS ephemeris and clock correction.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| C/A or P on L2 | MP | | Bit string(2) | Code(s) on L2 Channel [12] |
| URA Index | MP | | Bit string(4) | User Range Accuracy [12] |
| SV Health | MP | | Bit string(6) | [12] |
| IODC | MP | | Bit string(10) | Issue of Data, Clock [12] |
| L2 P Data Flag | MP | | Bit string(1) | [12] |
| SF 1 Reserved | MP | | Bit string(87) | [12] |
| TGD | MP | | Bit string(8) | Estimated group delay differential [12] |
| t _{oc} | MP | | Bit string(16) | apparent clock correction [12] |
| a _{f2} | MP | | Bit string(8) | apparent clock correction [12] |
| a _{f1} | MP | | Bit string(16) | apparent clock correction [12] |
| a _{f0} | MP | | Bit string(22) | apparent clock correction [12] |
| C _{rs} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| Δn | MP | | Bit string(16) | Mean Motion Difference From Computed Value (semi-circles/sec) [12] |
| M ₀ | MP | | Bit string(32) | Mean Anomaly at Reference Time (semi-circles) [12] |
| C _{uc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| e | MP | | Bit string(32) | c |
| C _{us} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| (A) ^{1/2} | MP | | Bit string(32) | Semi-Major Axis (meters) ^{1/2} [12] |
| t _{oe} | MP | | Bit string(16) | Reference Time Ephemeris [12] |
| Fit Interval Flag | MP | | Bit string(1) | [12] |
| AODO | MP | | Bit string(5) | Age Of Data Offset [12] |
| C _{ic} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| OMEGA ₀ | MP | | Bit string(32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [12] |
| C _{is} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |
| i ₀ | MP | | Bit string(32) | Inclination Angle at Reference Time (semi-circles) [12] |
| C _{rc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| ω | MP | | Bit string(32) | Argument of Perigee (semi-circles) [12] |
| OMEGAdot | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [12] |
| Idot | MP | | Bit string(14) | Rate of Inclination Angle (semi-circles/sec) [12] |

10.3.7.91b UE positioning DGANSS corrections

This IE contains DGANSS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|--------------------------|------------------------|--|---|---------|
| DGANSS Reference Time | MP | | Integer(0..3570 by step of 30) | Seconds.
Time in GNSS system time (modulo 3600 s) when the DGANSS corrections were calculated | REL-7 |
| DGANSS information | MP | 1 to <maxSgnT ype> | | | REL-7 |
| >GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GNSS identified by GANSS_ID. | REL-7 |
| >Status/Health | MP | | Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | | REL-7 |
| >DGANSS signal information | CV-
Status/Hea
lth | 1 to <maxGAN
SSSat> | | If the Cipher information is included these fields are ciphered. | REL-7 |
| >>SatID | MP | | Integer (0...63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>IOD | MP | | Bit string(10) | 10 LSBs of Issue of Data field, which contains the identity of the GNSS Navigation Model. | REL-7 |
| >>UDRE | MP | | Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. | REL-7 |
| >>PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters
Pseudo-range corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |
| >>RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec
Pseudo-range rate corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |

| Condition | Explanation |
|---------------|---|
| Status/Health | This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed. |

10.3.7.91c UE positioning GANSS orbit model

This IE contains information for GANSS orbit model parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------|------|-------|--------------------|---|---------|
| Keplerian Parameters ('Model 1') | OP | | | NOTE | REL-7 |
| >toe | MP | | Bit String(14) | Time-of-Ephemeris in seconds, scale factor 60 [61] | REL-7 |
| > ω | MP | | Bit string(32) | Argument of Perigee (semi-circles) [61] | REL-7 |
| > Δn | MP | | Bit string(16) | Mean Motion Difference From Computed Value (semi-circles/sec) [61] | REL-7 |
| > M_0 | MP | | Bit string(32) | Mean Anomaly at Reference Time (semi-circles) [61] | REL-7 |
| >OMEGAdot | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [61] | REL-7 |
| > e | MP | | Bit string(32) | Eccentricity, scale factor 2^{33} [61] | REL-7 |
| > \dot{i} | MP | | Bit string(14) | Rate of Inclination Angle (semi-circles/sec) [61] | REL-7 |
| > \sqrt{A} | MP | | Bit String(32) | Semi-Major Axis in (meters) ^{1/2} , scale factor 2^{-19} [61] | REL-7 |
| > i_0 | MP | | Bit string(32) | Inclination Angle at Reference Time (semi-circles) [61] | REL-7 |
| >OMEGA ₀ | MP | | Bit string(32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [61] | REL-7 |
| > C_{rs} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [61] | REL-7 |
| > C_{is} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [61] | REL-7 |
| > C_{us} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [61] | REL-7 |
| > C_{rc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [61] | REL-7 |
| > C_{ic} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [61] | REL-7 |
| > C_{uc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [61] | REL-7 |

NOTE: This IE shall contain exactly one of the optional fields indicated by "NOTE".

10.3.7.91d UE positioning GANSS clock model

The IE contains fields needed to model the GANSS clock parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|-----------------------------------|------|--------------------------|--------------------|--|---------|
| Satellite clock model ('Model 1') | MP | 1 to <maxSatClockModels> | | There may be more than one clock model included if defined in SIS ICD (e.g. two for Galileo) | REL-7 |
| >t _{loc} | MP | | BIT STRING(14) | Time-of-Clock in seconds.
Scale factor 60 seconds. | REL-7 |
| >a _{f2} | MP | | BIT STRING (12) | sec/sec ² , scale factor 2 ⁻⁶⁵ for Galileo | REL-7 |
| >a _{f1} | MP | | BIT STRING (18) | sec/sec, scale factor 2 ⁻⁴⁵ | REL-7 |
| >a _{f0} | MP | | BIT STRING (28) | sec, scale factor 2 ⁻³³ | REL-7 |
| >T _{GD} | OP | | BIT STRING (10) | sec, scale factor 2 ⁻³² for Galileo | REL-7 |
| >Model ID | OP | | Integer(0..1) | NOTE 1 | REL-7 |

NOTE 1: Coding of Model ID:

| GNSS | Value | Explanation |
|---------|-------|-------------|
| Galileo | 0 | I/Nav |
| | 1 | F/Nav |

10.3.7.91e UE positioning GANSS additional orbit models

This IE contains information for GANSS orbit model parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |

| >>GANSS Code Phase Ambiguity | OP | | Integer (0..31) | The "GANSS Code Phase Ambiguity" field gives the ambiguity of the code phase measurement. It is given in ms and is an integer between 0 and 31. The Total Code Phase for a satellite k (Satk) is given modulo this "GANSS Code Phase Ambiguity" and is reconstructed with:

Code_Phase_Tot(Satk) = Code_Phase (Satk)+ Integer Code Phase(Satk)

If there is no code phase ambiguity, the "GANSS Code Phase Ambiguity" shall be set to 0. | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|------|-------------------|---|---|---------|
| | | | | The field is optional. If "GANSS Code Phase Ambiguity" and 'GANSS Code Phase Ambiguity Extension' is absent, the default value is 1ms. | |
| >>GANSS Code Phase Ambiguity Extension | OP | | Integer(32..127) | If the total GANSS code phase ambiguity is greater than 31 ms, then this field shall be used. The definition is the same as for the "GANSS Code Phase Ambiguity" field except the value range is from 32 to 127 ms. | REL-8 |
| >>GANSS Measurement Parameters | MP | 1 to <maxGANSSat> | | | REL-7 |
| >>>Satellite ID | MP | | Integer(0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>>C/N ₀ | MP | | Integer(0..63) | The estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (typical levels will be in the range of 20 – 50 dB-Hz). | REL-7 |
| >>>Multipath Indicator | MP | | Enumerated(NM, low, medium, high) | Coding as in 10.3.7.93 | REL-7 |
| >>>Carrier Quality Indicaton | OP | | Bit string(2) | Note 1 | REL-7 |
| >>>GANSS Code Phase | MP | | Integer(0..2 ⁻¹ -1) | Scale factor 2 ⁻¹
Code phase for the particular satellite signal at the time of measurement in the units of milliseconds. Increasing binary values of the field signify increasing measured pseudoranges. GNSS specific code phase measurements (e.g. chips) are converted into unit of ms by dividing the measurements by the nominal values of the measured signal chipping rate. | REL-7 |
| >>>GANSS Integer Code Phase | OP | | Integer(0..63) | In ms
Indicates the integer millisecond part of the code phase, that is expressed modulo the GANSS Code Phase Ambiguity. | REL-7 |
| >>>GANSS Integer Code Phase Extension | OP | | Integer(64..127) | If the total GANSS integer code phase is greater than 63 ms, then this field shall be used. The definition is the same as for the GANSS Integer Code Phase field except the value range is from 64 to 127 ms. | REL-8 |
| >>>Code Phase RMS Error | MP | | Enumerated(range index 0..range index 63) | Coding as in Note 2 of 10.3.7.93 | REL-7 |
| >>>Doppler | MP | | Integer(-) | m/s, scale factor 0.04. Doppler | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------|---|---------|
| | | | 32768..32767) | measured by the UE for the particular satellite signal | |
| >>>ADR | OP | | Integer(0..33554431) | Meters, scale factor 2^{-10}
ADR measurement measured by the UE for the particular satellite signal. | REL-7 |

NOTE 1: Coding of Carrier quality indication:

| MSB | LSB | Explanation |
|-----|-----|------------------------------|
| 0 | | Carrier phase not continuous |
| 1 | | Carrier phase continuous |
| | 0 | Data direct |
| | 1 | Data Inverted |

One spare value needed. | REL-7 |

NOTE: Definition of GNSS system time origin:

| GANSS | GNSS System Time Origin |
|---------------------|-------------------------------------|
| Galileo System Time | August 22, 1999; 00:00:00 UTC(BIPM) |
| GPS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| QZSS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| GLONASS System Time | January 1, 1996; 03:00:00 UTC(RU) |

10.3.7.96a UE positioning GPS reference time uncertainty

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|-------|--------------------|--|---------|
| UE Positioning GPS Reference Time Uncertainty | MP | | Integer (0..127) | <p>This element provides the accuracy of the provided GPS time, or alternatively the accuracy of the provided relation between GPS and UTRAN time. If "GPS TOW" is the provided GPS time, or alternatively the GPS time corresponding to the UTRAN time provided, then the true GPS time lies in the interval ["GPS TOW" – "GPS Reference Time Uncertainty", "GPS TOW" + "GPS Reference Time Uncertainty"]. The uncertainty r, expressed in microseconds, is mapped to a number K with the following formula:</p> $r = C * (((1+x)^K) - 1)$ <p>with $C = 0.0022$ and $x = 0.18$. To encode any higher value of the uncertainty than that corresponding to $K=127$ in the formula above, or to indicate an undefined value of the "GPS TOW", the same value, $K=127$, shall be used.</p> | REL-7 |

NOTE: This IE is not needed in the SRNS RELOCATION INFO message.

10.3.7.97 UE positioning GPS UTC model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| A_1 | MP | | Bit string(24) | sec/sec [12] |
| A_0 | MP | | Bit string(32) | seconds [12] |

| DN | MP | | Bit string(8) | days [12] |
| Δt_{LSF} | MP | | Bit string(8) | seconds [12] |

10.3.7.97a UE positioning GANSS time model

The GANSS time model field contains a set of parameters needed to relate GANSS time for the GANSS indicated by "GANSS ID" to selected time reference indicated by "GNSS_TO_ID".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---------------------------------|------|-------|--------------------------------------|---|---------|
| GANSS Time Model Reference Time | MP | | Integer(0..60 4784 by step of 16) | GANSS reference time of week for GANSS Time Model, given in GNSS specific system time, with a 16s scale factor. | REL-7 |
| T _{A0} | MP | | Integer (-2147483648 .. 2147483647) | Seconds, scale factor 2 ⁻³⁵ | REL-7 |
| T _{A1} | OP | | Integer (-8388608 .. 8388607) | sec/sec, scale factor 2 ⁻⁵¹ | REL-7 |
| T _{A2} | OP | | Integer (-64 .. 63) | sec/sec ² , scale factor 2 ⁻⁶⁸ | REL-7 |
| GNSS_TO_ID | MP | | Enumerated (GPS, | GNSS Time Offset ID Seven spare values needed. | REL-7 |
| | | | Galileo, QZSS, GLONASS) | GNSS Time Offset ID Four spare values needed. | REL-8 |
| Week Number | OP | | Integer(0..81 91) | Reference week of GANSS Time Model given in GNSS specific system time | REL-7 |

10.3.7.97b UE positioning GANSS data bit assistance

This element provides data bit assistance data for specific satellite signals for data wipe-off.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|--------------------|----------------------------|--|---------|
| GANSS TOD | MP | | Integer(0..59) | Reference time (modulo 1 minute) of the first bit of the data in IE 'Data Bits', in seconds | REL-7 |
| Data Bit Assistance List | MP | 1 to <maxGANSSSat> | | The following fields are present N_Sat times, with $1 \leq N_{Sat} \leq \text{maxGANSSSat}$ | REL-7 |
| >Satellite ID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >Data bit assistance Sgn List | MP | 1 to <maxSgnType> | | The following fields are present N_Sgn times, with $1 \leq N_{Sgn} \leq \text{maxSgnType}$ | REL-7 |
| >>GANSS Signal ID | MP | | GANSS Signal ID 10.3.3.45a | | REL-7 |
| >>Data Bits | MP | | Bit string (1..1024) | <p>Raw data bits as transmitted from a specific satellite at the time indicated by GANSS_TOD.</p> <p>In case of Galileo, it contains the FEC encoded and interleaved modulation symbols. The logical levels 1 and 0 correspond to signal levels -1 and +1, respectively.</p> <p>N_BIT is the actual number of elements in Data bits: $1 \leq N_{BIT} \leq 1024$.</p> <p>In case of Modernized GPS L1C, it contains the encoded and interleaved modulation symbols as defined in [70] section 3.2.3.1.</p> <p>In case of Modernized GPS L2C, it contains either the NAV data modulation bits, the FEC encoded NAV data modulation symbols, or the FEC encoded CNAV data modulation symbols, dependent on the current signal configuration of this satellite as defined in [68, Table 3-III].</p> <p>In case of Modernized GPS L5, it contains the FEC encoded CNAV data modulation symbols as defined in [69].</p> <p>In case of SBAS, it contains the FEC encoded data modulation symbols as defined in [71].</p> <p>In case of QZSS QZS-L1, it contains the NAV data modulation bits as defined in [72] section 5.2. In case of QZSS QZS-L1C, it contains the encoded and interleaved modulation symbols as defined in [72] section 5.3. In case of QZSS QZS-L2C, it contains the encoded modulation symbols as defined in [72] section 5.5. In case of QZSS QZS-L5, it contains the</p> | REL-8 |

| | | | | | |
|--|--|--|--|---|--|
| | | | | encoded modulation symbols as defined in [72] section 5.6. In case of GLONASS, it contains the 100 sps differentially Manchester encoded modulation symbols as defined in [73] section 3.3.2.2. | |
|--|--|--|--|---|--|

10.3.7.97c UE positioning GANSS UTC model

The UTC Model field contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| A_1 | MP | | Bit string(24) | |
| A_0 | MP | | Bit string(32) | |
| t_{ot} | MP | | Bit string(8) | |
| Δt_{LS} | MP | | Bit string(8) | |
| WN_t | MP | | Bit string(8) | |
| WN_{LSF} | MP | | Bit string(8) | |
| DN | MP | | Bit string(8) | |
| Δt_{LSF} | MP | | Bit string(8) | |

For a GANSS Id referring to Galileo, the definition and the unit of the elements are provided in [61].

10.3.7.97d UE positioning GANSS additional UTC models

This element contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |

| >>7d | | | | | REL-7 |
| >>>Threshold SFN-GANSS TOW | MP | | Integer(1,2 ,3,5,10,20, 50,100) | Time in micro seconds. When the GANSS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | REL-7 |
| NOTE 1: In previous versions of the protocol, the IE "Threshold SFN-GPS TOW" was provided in units of milli seconds. If the information is provided in units of micro seconds, the UE shall ignore any information provided in units of milli seconds. | | | | | |

10.3.7.111 UE positioning reporting quantity

The purpose of the element is to express the allowed/required location method(s), and to provide information desired QoS.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------|-----------------------|---------|
| Method Type | MP | | Enumerated(UE assisted, UE based, | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|------------------------------------|-----------------------|-------|---|--|---------|
| | | | UE based is preferred but UE assisted is allowed, UE assisted is preferred but UE based is allowed) | | |
| Positioning Methods | MP | | Enumerated(OTDOA, GPS, OTDOA or GPS, Cell ID) | | |
| Response Time | MP | | Integer(1,2,4 , 8, 16, 32, 64, 128) | This IE shall be ignored. | |
| Horizontal Accuracy | CV- <i>MethodType</i> | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 10^{*(1.1^k - 1)}$ in meters. | |
| Vertical Accuracy | CV- <i>MethodType</i> | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 45^{*(1.025^k - 1)}$ in meters. | |
| GPS timing of Cell wanted | MP | | Boolean | If TRUE the SRNC wants the UE to report the SFN-GPS timing of the reference cell. This is however optional in the UE. | |
| Multiple Sets | MP | | Boolean | This IE shall be ignored. | |
| Additional Assistance Data Request | MP | | Boolean | TRUE indicates that the UE is requested to send the IE "GPS Additional Assistance Data Request" and/or the 'IE "GANSS Additional Assistance Data Request" (if the IE 'GANSS Positioning Methods' is included) when the IE "UE positioning Error" is present in the UE positioning measured results. FALSE indicates that the UE shall use the assistance data available. | |
| Environment Characterisation | OP | | Enumerated(possibly heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment) | One spare value is needed. | |
| Velocity Requested | OP | | Enumerated (TRUE) | If this element is present the UE is requested to send a velocity estimate | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--|------|-------|--------------------|---|---------|
| GNSS Positioning Methods | OP | | Bit string(16) | <p>For each bit, if set to "1", indicates that respective GNSS is allowed.</p> <p>bit 0: GPS
bit 1: Galileo
bit 2-15: reserved for future GNSSes</p> <p>Note 1</p> <p>bit 2: SBAS (WAAS, EGNOS, MSAS, GAGAN)
bit 3: Modernized GPS (L1C, L2C, L5)
bit 4: QZSS
bit 5: GLONASS
bit 6-15: reserved for future GNSSes</p> <p>Note 1</p> | REL-7 |
| GNSS timing of Cell wanted | OP | | Bit string(8) | <p>Each bit refers to a GNSS. Bit 0 is for Galileo. Other bits are reserved.</p> <p>If one bit is set to one the SRNC wants the UE to report the SFN-GNSS timing of the reference cell. This is however optional in the UE.</p> <p>Bit 1 is for Modernized GPS;
Bit 2 is for QZSS;
Bit 3 is for GLONASS;
Other bits are reserved.</p> <p>If one bit is set to one the SRNC wants the UE to report the SFN-GNSS timing of the reference cell. This is however optional in the UE.</p> <p>If more than one bit is set to one, the UE will select the GNSS among the allowed GNSS for the SFN-GNSS timing of the reference cell in the measurement report.</p> | REL-7 |
| GNSS Carrier-Phase Measurement Requested | OP | | Bit string(8) | <p>Each bit refers to a GNSS. Bit 0 is for Galileo. Other bits are reserved.</p> <p>This is however optional in the UE.</p> <p>Bit 1 is for SBAS;
Bit 2 is for Modernized GPS;
Bit 3 is for QZSS;
Bit 4 is for GLONASS;
Other bits are reserved.</p> <p>This is however optional in the UE.</p> | REL-7 |
| GNSS Multi-frequency Measurement Requested | OP | | Bit String(8) | <p>Each bit refers to a GNSS.</p> <p>Bit 0 is for Galileo;
Bit 1 is for SBAS;
Bit 2 is for Modernized GPS;
Bit 3 is for QZSS;
Bit 4 is for GLONASS;
Other bits are reserved.</p> <p>This is however optional in the UE.</p> | REL-8 |

| Condition | Explanation |
|--------------------|---|
| <i>Method Type</i> | The IE is optional if the IE "Method Type" is "UE assisted"; otherwise it is mandatory present. |

NOTE 1: Bit 0 of this bitmap shall not be the only one set to 1.

10.3.7.112 T_{ADV} info

NOTE: Only for 1.28 Mcps TDD.

T_{ADV} indicates the difference between the Rx timing and Tx timing of a UE.

| Information Element/group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------|---|---------|
| T _{ADV} | MP | | Integer
(0..2047,
2048..8191) | As defined in [20]. | REL-4 |
| | | | | | REL-7 |
| SFN | MP | | Integer(0..40
95) | SFN during which
the T _{ADV}
measurement was
performed. | REL-4 |

10.3.7.113 UTRA priority info list

Contains priority based reselection information for UTRA.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------------------------|----------------------------------|---|---------|
| UTRA Serving Cell | MP | | | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio -1>) | 0 is the lowest priority and maxPrio-1 is the highest | REL-8 |
| >S _{prioritysearch1} | MP | | Integer (0..62 by step of 2) | dB | REL-8 |
| >S _{prioritysearch2} | MD | | Integer (0..7 by step of 1) | dB, default value is 0 | REL-8 |
| >Thresh _{serving,low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| UTRAN FDD Frequencies | OP | 1 to < maxNumF DDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16 383) | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio -1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QqualminFDD | MD | | Integer (-24..0) | Ec/N0, [dB] Default value is Qqualmin for the serving cell | REL-8 |
| >QrxlevminFDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |
| UTRAN TDD Frequencies | OP | 1 to < maxNumT DDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16 383) | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio -1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QrxlevminTDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

10.3.7.114 GSM priority info list

Contains priority based reselection information for GSM.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------------|----------------------------------|--|---------|
| GSM Priority Info | MP | 1 to <maxNum GSMCellGroup> | | | REL-8 |
| >GSM cell group List | MP | | GSM cell group 10.3.7.9a | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio -1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >QrxlevminGSM | MP | | Integer (-115..-25 by step of 2) | GSM RSSI, [dBm] | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

10.3.7.115 E-UTRA frequency and priority info list

Contains information about neighbour E-UTRA frequencies (with associated blacklists), together with priority based reselection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|----------------------------|------------------------------------|---|---------|
| E-UTRA frequency and priority | | 1 to <maxNum EUTRAFreqs> | | | REL-8 |
| >EARFCN | MP | | Integer(0..65535) | EARFCN of the downlink carrier frequency [36.101] | REL-8 |
| >Measurement Bandwidth | MD | | Enumerated(6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, NRB [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-8 |
| >priority | MP | | Integer (0..<maxPrio-1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >QrxlevminEUTRA | MP | | Integer (-140..-44 by step of 2) | RSRP, [dBm] | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-8 |
| >E-UTRA detection | MP | | Boolean | "TRUE" means that the UE may detect the presence of a E-UTRA cell and report to NAS.
NOTE 1. | REL-8 |
| NOTE 1: If the value of 'E-UTRA detection' is not identical across the frequency layers, UE behaviour is unspecified. | | | | | |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

10.3.8 Other Information elements

10.3.8.1 BCCH modification info

Indicates modification of the System Information on BCCH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------|--|
| MIB Value tag | MP | | MIB Value tag 10.3.8.9 | |
| BCCH modification time | OP | | Integer (0..4088 in step of 8) | All SFN values in which MIB may be mapped are allowed. |

10.3.8.2 BSIC

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--------------------|--|
| Base transceiver Station Identity Code (BSIC) | MP | | | [11] |
| >Network Colour Code (NCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the NCC. |
| >Base Station Colour Code (BCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the BCC. |

10.3.8.3 CBS DRX Level 1 information

This information element contains the CBS discontinuous reception information to be broadcast for CBS DRX Level 1 calculations in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|---------|-------|-----------------------------------|--|---------|
| Period of CTCH allocation (N) | MP | | Integer (1..256) | $M_{TTI} \leq N \leq 256$,
N multiple of M_{TTI} | |
| CBS frame offset (K) | MP | | Integer (0..255) | $0 \leq K \leq N-1$,
K multiple of M_{TTI} | |
| Period of BMC scheduling messages (P) | CV-SIB5 | | Integer (8, 16, 32, 64, 128, 256) | | REL-6 |

| Condition | Explanation |
|-----------|--|
| SIB5 | The IE is optional when the IE "CBS DRX Level 1 information" in SIB5, otherwise the IE is not needed |

10.3.8.4 Cell Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Cell Value tag | MP | | Integer (1..4) | |

10.3.8.4a Ellipsoid point

This IE contains the description of an ellipsoid point as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... 2^{23} -1) | The IE value (N) is derived by this formula:
$N \leq 2^{23}$ $X/90 < N+1$
X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (- 2^{23} ... 2^{23} -1) | The IE value (N) is derived by this formula:
$N \leq 2^{24}$ $X/360 < N+1$
X being the longitude in degree (-180°..+180°) |

10.3.8.4b Ellipsoid point with Altitude

This IE contains the description of an ellipsoid point with altitude as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... 2^{23} -1) | The IE value (N) is derived by this formula:
$N \leq 2^{23}$ $X/90 < N+1$
X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (- 2^{23} ... 2^{23} -1) | The IE value (N) is derived by this formula:
$N \leq 2^{24}$ $X/360 < N+1$
X being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer (0.. 2^{15} -1) | The IE value (N) is derived by this formula:
$N \leq a < N+1$
a being the altitude in metres |

10.3.8.4c Ellipsoid point with Altitude and uncertainty ellipsoid

This IE contains the description of an ellipsoid point with altitude and uncertainty ellipsoid as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... 2^{23} -1) | The IE value (N) is derived by this formula:
$N \leq 2^{23}$ $X/90 < N+1$
X being the latitude in degree (0°.. 90°) |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| Degrees Of Longitude | MP | | Integer (- $2^{23} \dots 2^{23}-1$) | The IE value (N) is derived by this formula:
$N \leq 2^4 X / 360 < N+1$
X being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer (0.. $2^{15}-1$) | The IE value (N) is derived by this formula:
$N \leq a < N+1$
a being the altitude in metres |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by
$r = 10x(1.1^k-1)$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by
$r = 10x(1.1^k-1)$ |
| Orientation of major axis | MP | | Integer (0..89) | The IE value (N) is derived by this formula:
$2N \leq a < 2(N+1)$
a being the orientation in degree (0°.. 179°) |
| Uncertainty Altitude | MP | | Integer(0..127) | The uncertainty in altitude, h , expressed in metres is mapped from the IE value (K), with the following formula:
$h = C((1 + x)^K - 1)$ with $C = 45$ and $x = 0.025$. |
| Confidence | MP | | Integer (0..100) | in percentage |

10.3.8.4d Ellipsoid point with uncertainty Circle

This IE contains the description of an ellipsoid point with an uncertainty circle as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|--|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... $2^{23}-1$) | The IE value (N) is derived by this formula:
$N \leq 2^3 X / 90 < N+1$
X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (- $2^{23} \dots 2^{23}-1$) | The IE value (N) is derived by this formula:
$N \leq 2^4 X / 360 < N+1$
X being the longitude in degree (-180°..+180°) |
| Uncertainty Code | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by
$r = 10x(1.1^k-1)$ |

10.3.8.4e Ellipsoid point with uncertainty Ellipse

This IE contains the description of an ellipsoid point with an uncertainty ellipse as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... $2^{23}-1$) | The IE value (N) is derived by this formula:
$N \leq 2^{23}$ $X/90 < N+1$
X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (- $2^{23} \dots 2^{23}-1$) | The IE value (N) is derived by this formula:
$N \leq 2^{24}$ $X/360 < N+1$
X being the longitude in degree (-180°..+180°) |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by
$r = 10x(1.1^{k-1})$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by
$r = 10x(1.1^{k-1})$ |
| Orientation of major axis | MP | | Integer (0..89) | The IE value (N) is derived by this formula:
$2N \leq a < 2(N+1)$
a being the orientation in degree (0°.. 179°) |
| Confidence | MP | | Integer (0..100) | in percentage |

10.3.8.4ea ETWS information

Indication of an ETWS primary notification. The ETWS warning type is used to notify upper layers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------|--|---------|
| Warning Type | MP | | Octet string (1..2) | IE "Warning Type" as defined in [77] | REL-8 |
| Message Identifier | MP | | Octet string (2) | IE "Message Identifier" as defined in [77] | REL-8 |
| Serial Number | MP | | Octet string (2) | IE "Serial Number" as defined in [77] | REL-8 |

10.3.8.4eb Void

10.3.8.4f GERAN system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------|--------------------|-----------------------|---------|
| >>> GERAN System Info | MP | 1 to <maxGERAN SI> | | | REL-5 |
| >>>> GERAN | MP | | Octet | The first octet | REL-5 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| system info block | | | string(1..23) | contains octet 1 of the GERAN system information block, the second octet contains octet 2 of the GERAN system information block and so on. | |

10.3.8.4g GSM Target Cell Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|---------------------------|---|---|---------|
| GSM Target Cell Info List | MP | 1 to <maxGSMTar getCells> | | | REL-6 |
| >BCCH ARFCN | MP | | Integer (0..1023) | [45] | REL-6 |
| >Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | REL-6 |
| >BSIC | OP | | BSIC 10.3.8.2 | | REL-6 |

10.3.8.4h Horizontal Velocity

This IE contains the description of a horizontal velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|---|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where "0" represents North, "90" represents East, etc. |
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:
N ≤ h < N + 0.5, for (N=0)
N - 0.5 ≤ h < N + 0.5, for (0<N<2 ¹¹ -1)
N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |

10.3.8.4i Horizontal with Vertical Velocity

This IE contains the description of horizontal with vertical velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------|--|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where "0" represents North, "90" represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|--|
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:
N ≤ h < N + 0.5, for (N=0)
N-0.5 ≤ h < N + 0.5, for (0<N<2 ¹¹ -1)
N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula:
N ≤ v < N + 0.5, for (N=0)
N-0.5 ≤ v < N + 0.5, for (0<N<2 ⁸ -1)
N - 0.5 ≤ v, for (N = 2 ⁸ -1) |

10.3.8.4j Horizontal Velocity with Uncertainty

This IE contains the description of horizontal velocity with uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|---|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where "0" represents North, "90" represents East, etc. |
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:
N ≤ h < N + 0.5, for (N=0)
N-0.5 ≤ h < N + 0.5, for (0<N<2 ¹¹ -1)
N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

10.3.8.4k Horizontal with Vertical Velocity and Uncertainty

This IE contains the description of horizontal with vertical velocity and uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------|--|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where "0" represents North, "90" represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|--|
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:
N ≤ h < N + 0.5, for (N=0)
N-0.5 ≤ h < N + 0.5, for (0<N<2 ¹¹ -1)
N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula:
N ≤ v < N + 0.5, for (N=0)
N-0.5 ≤ v < N + 0.5, for (0<N<2 ⁸ -1)
N - 0.5 ≤ v, for (N = 2 ⁸ -1) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |
| Vertical Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

10.3.8.4L E-UTRA Target Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|----------------------------|--------------------|---|---------|
| E-UTRA Target Frequency Info List | MP | 1 to <maxEUTRATargetFreqs> | | | REL-8 |
| >DL Carrier frequency | MP | | Integer (0..65535) | EARFCN of the downlink carrier frequency [63] | REL-8 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | | REL-8 |

10.3.8.4m HNB Name

This information element is used to carry the name of the home NodeB, coded in UTF-8 with variable number of bytes per character [75].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| | | | | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------|---|---------|
| HNB Name | MP | | Octet string (1 to <maxHNBNameSize>) | Carries the name of the Home NodeB with a maximum of maxHNBNameSize octets, using UTF-8 coding. | REL-8 |

10.3.8.5 Inter-RAT change failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|--------------------|-------|--|-------------------------------|
| Inter-RAT change failure cause | MP | | Enumerated(Configuration unacceptable, physical channel failure, protocol error, unspecified) | Four spare values are needed. |
| Protocol error information | CV- <i>ProtErr</i> | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|----------------|---|
| <i>ProtErr</i> | The IE is mandatory present if the IE "Inter-RAT change failure cause" has the value "Protocol error" and not needed otherwise. |

10.3.8.6 Inter-RAT handover failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|--------------------|-------|--|---|
| Inter-RAT handover failure cause | MD | | Enumerated(Configuration unacceptable, physical channel failure, protocol error, inter-RAT protocol error, unspecified) | Default value is "unspecified". Eleven spare values are needed. |
| Protocol error information | CV- <i>ProtErr</i> | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|----------------|---|
| <i>ProtErr</i> | The IE is mandatory present if the IE "Inter-RAT handover failure cause" has the value "Protocol error" and not needed otherwise. |

10.3.8.7 Inter-RAT UE radio access capability

This Information Element contains the inter-RAT UE radio access capability that is structured and coded according to the specification used for the corresponding system type.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|----------------------------|----------------------|---|---------|
| CHOICE system | MP | | | | |
| >GSM | | | | | |
| >>Mobile Station Classmark 2 | MP | | Octet string (5) | <p>This IE is formatted as 'TLV' and is coded in the same way as the <i>Mobile Station Classmark 2</i> information element in [5]. The first octet is the <i>Mobile station classmark 2 IE</i> and its value shall be set to 33H (except in the case of NOTE 2). The second octet is the <i>Length of mobile station classmark 2</i> and its value shall be set to 3.</p> <p>The octet 3 contains the first octet of the value part of the <i>Mobile Station Classmark 2</i> information element, the octet 4 contains the second octet of the value part of the <i>Mobile Station Classmark 2</i> information element and so on. For each of these octets, the first/leftmost/most significant bit of the octet contains b8 of the corresponding octet of the <i>Mobile Station Classmark 2</i>. See NOTE 2.</p> | |
| >>Mobile Station Classmark 3 | MP | | Octet string (1..32) | <p>This IE is formatted as 'V' and is coded in the same way as the value part in the <i>Mobile station classmark 3</i> information element in [5].</p> <p>The first octet contains octet 1 of the value part of <i>Mobile station classmark 3</i>, the second octet contains octet 2 of the value part of <i>Mobile station classmark 3</i> and so on.</p> <p>See NOTE 1, NOTE 2.</p> | |
| >>MS Radio Access Capability | OP | | Octet string (1..64) | <p>This IE is formatted as 'V' and is coded in the same way as the value part in the <i>MS Radio Access Capability</i> information element in [5].</p> | REL-6 |
| >GERAN Iu | | | | | REL-5 |
| >>MS GERAN Iu mode Radio Access Capability | MP | | Bit string (1..170) | <p>Formatted and coded according to [53]. The first/leftmost/most significant bit of the bit string contains bit 8 of the first octet of the IE.</p> | REL-5 |
| >cdma2000 | | | | | |
| >>cdma2000Message | MP | 1.to.<maxInterSysMessages> | | | |
| >>>MSG_TYPE(s) | MP | | Bit string (8) | <p>Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the MSG_TYPE.</p> | |
| >>>cdma2000Message payload(s) | MP | | Bit string (1..512) | <p>Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the first octet of the cdma2000 message.</p> | |

10.3.8.16 Scheduling information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|---|--|
| CHOICE Value tag | OP | | | |
| >PLMN Value tag | | | PLMN Value tag 10.3.8.10 | This IE is included if the following conditions are fulfilled:
the SIB type equals system information block type 1
Note: IE "PLMN value tag" is used for SIB1 but the area scope for SIB 1 is Cell. |
| >Predefined configuration identity and value tag | | | Predefined configuration identity and value tag 10.3.8.11 | This IE is included if the following conditions are fulfilled:
the SIB type equals system information block type 16 |
| >Cell Value tag | | | Cell Value tag 10.3.8.4 | This IE is included if the following conditions are fulfilled:
the SIB type does not equal system information block type 1; and
the area scope for the system information block is set to "cell" in table 8.1.1; and
a value tag is used to indicate changes in the system information block. |
| >SIB occurrence identity and value tag | | | SIB occurrence identity and value tag 10.3.8.20b | This IE is included if the following conditions are fulfilled:
the SIB type equals system information block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis |
| Scheduling | MP | | | |
| >SEG_COUNT | MD | | SEG COUNT 10.3.8.17 | Default value is 1 |
| >SIB_REP | MP | | Integer (4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096) | Repetition period for the SIB in frames |
| >SIB_POS | MP | | Integer (0 ..Rep-2 by step of 2) | Position of the first segment
Rep is the value of the SIB_REP IE |
| >SIB_POS offset info | MD | 1..15 | | see below for default value |
| >>SIB_OFF | MP | | Integer(2..32 by step of 2) | Offset of subsequent segments |

| Field | Default value |
|---------------------|--|
| SIB_POS offset info | The default value is that all segments are consecutive, i.e., that the SIB_OFF = 2 for all segments except when MIB segment/complete MIB is scheduled to be transmitted in between segments from same SIB. In that case, SIB_OFF=4 in between segments which are scheduled to be transmitted at SFNprime = 8 *n-2 and 8*n + 2, and SIB_OFF=2 for the rest of the segments. |

10.3.8.17 SEG COUNT

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| SEG_COUNT | MP | | Integer (1..16) | Number of segments in the system information block |

10.3.8.18 Segment index

Each system information segment has an individual segment index.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Segment index | MP | | Integer (1..15) | Segments of a system information block are numbered starting with 0 for the first segment and 1 for the next segment, which can be the first subsequent segment or a last segment. |

10.3.8.18a SIB and SB type

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|-----------------------------|
| SIB and SB type | MP | | Enumerated, see below | Two spare values are needed |

System Information Type 15.7
System Information Type 15.8 | REL-8 |

10.3.8.19 SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| SIB data fixed | MP | | Bit string (222) | The first bit contains the first bit of the segment. |

10.3.8.20 SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|--|
| SIB data variable | MP | | Bit string (1..214) | The first bit contains the first bit of the segment. |

10.3.8.20a SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| SIB occurrence identity | MP | | Integer (0..15) | |

10.3.8.20b SIB occurrence identity and value tag

10.3.8.23 UE History Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------|--|---------|
| UE inactivity period | MP | | Integer (1..120) | Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more. | REL-8 |
| UE Mobility State indicator | OP | | Enumerated (High-mobilityDetected) | Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE. | REL-8 |
| UL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |
| DL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |

10.3.8.24 Data volume history

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|--------------|---|---|---------|
| Data volume monitoring window | MP | | Integer (1..120) | If the integer value x is between 1 and 59, it represents seconds. If the integer value is between 60 and 120, it represents the the value minus 59 in minutes. | REL-8 |
| Data transmission frequency | OP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Data transmission frequency granularity | MP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Number of data transmission occasions | MP | | Integer (0..610) | Measure of data transmission frequency. The data volume monitoring window is organised in time periods of 'Data transmission frequency granularity', and each transmission within such a period is counted. | REL-8 |
| Data volume per RB | OP | 1 to <maxRB> | | | REL-8 |
| >RB identity | MP | | RB identity 10.3.4.16 | | REL-8 |
| >Data volume | MP | | Integer (0..4294967295) | Data volume monitored during the data volume monitoring window, in byte. | REL-8 |

10.3.9 ANSI-41 Information elements

10.3.9.1 ANSI-41 Core Network Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| P_REV | MP | | P_REV 10.3.9.10 | |
| MIN_P_REV | MP | | MIN_P_REV 10.3.9.8 | |
| SID | MP | | SID 10.3.9.11 | |
| NID | MP | | NID 10.3.9.9 | |

10.3.9.2 ANSI-41 Global Service Redirection information

This Information Element contains ANSI-41 Global Service Redirection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|---------------------------------|--|
| ANSI-41 Global Service Redirection information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.3 ANSI-41 NAS parameter

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|--|
| ANSI-41 NAS parameter | MP | | Bit string (size (1..2048)) | The first bit contains the first bit of the ANSI-41 information. |

10.3.9.4 ANSI-41 NAS system information

This Information Element contains ANSI-41 system information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|------|-------|---------------------------------|--|
| NAS (ANSI-41) system information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.5 ANSI-41 Private Neighbour List information

This Information Element contains ANSI-41 Private Neighbour List information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|---------------------------------|--|
| ANSI-41 Private Neighbour List information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.6 ANSI-41 RAND information

This Information Element contains ANSI-41 RAND information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------------|--|
| ANSI-41 RAND information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.7 ANSI-41 User Zone Identification information

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|---------------------------------|--|
| ANSI-41 User Zone Identification information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.8 MIN_P_REV

This Information Element contains minimum protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| MIN_P_REV | MP | | Bit string (8) | Minimum protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the MIN_P_REV. |

10.3.9.9 NID

This Information Element contains Network identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| NID | MP | | Bit string (16) | Network identification. The first/leftmost bit of the bit string contains the most significant bit of the NID. |

10.3.9.10 P_REV

This Information Element contains protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| P_REV | MP | | Bit string (8) | Protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the P_REV. |

10.3.9.11 SID

This Information Element contains System identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| SID | MP | | Bit string (15) | System identification. The first/leftmost bit of the bit string contains the most significant bit of the SID. |

10.3.9a MBMS Information elements

10.3.9a.1 MBMS Common CCTrCH identity

Identifies a Coded Composite Transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common CCTrCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.2 MBMS Common PhyCh identity

Identifies a physical channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common PhyCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.3 MBMS Common RB identity

Identifies a radio bearer channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common RB identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.4 MBMS Common TrCh identity

Identifies a transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common TrCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.5 MBMS Current cell S-CCPCH identity

Identifies one of the current cell's Secondary CCPCH's.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|-------------------------|-----------------------|---------|
| MBMS Current cell S-CCPCH identity | MP | | Integer (1..maxSC CPCH) | | REL-6 |

10.3.9a.6 Void

10.3.9a.7 MBMS L1 combining schedule

Includes information about the MBMS L1 combining schedule.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-----------------------|---|---|---------|
| MBMS L1 combining cycle length | MP | | Enumerate d (32, 64, 128, 256, 512, 1024) | In number of radio frames | REL-6 |
| MBMS L1 combining cycle offset | MD | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Start of the L1 combining cycle (relative to the timing of the current cell) in number of radio frames.
Default value is no offset | REL-6 |
| MTCH L1- combining period list | MP | 1 to < maxMB MS-L1CP> | | One or more periods in which L1 combining is performed | REL-6 |
| >Start | MP | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Number of frames from the end of the previous combining period or the start of the cycle (for the first period) | REL-6 |
| >Duration | MP | | Integer (4.. MBMS L1 combining cycle length) by step of 4 | Number of frames (see note) | REL-6 |

NOTE: The MTCH L1- combining period should indicate one or more complete TTIs.

10.3.9a.7o MBMS p-t-m activation time

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|-------|--------------------|--------------------------------------|---------|
| MBMS p-t-m activation time | MP | | Integer (0..2047) | The 11 LSB of the SFN. Note 1 and 2. | REL-6 |
| Note 1: The 'MBMS p-t-m activation time' indicates the start of the 10 ms frame corresponding to the indicated SFN value and of the primary CCPCH of the cell where this IE is transmitted. | | | | | |
| Note 2: The range of the 'MBMS p-t-m activation time' is from 10 ms after the beginning of the MCCH modification period wherein it is transmitted and to the end of next following MCCH modification period. The UE shall consider a value out of this range as expired. | | | | | |

10.3.9a.7a MBMS p-t-m RB information

Includes information about an MBMS p-t-m radio bearers mapped on a TrCH.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|----------|-------|---|---|---------|
| RB information | CV-Curr | | MBMS Common RB identity 10.3.9a.3 | | REL-6 |
| MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| MBMS logical channel identity | MP | | Integer (1..15) | This identifier is used to distinguish different MTCH mapped on to a TrCh ('MBMS-Id' within the MAC header[15]) | REL-6 |
| L1 combining status | CV-Neigh | | Boolean | The IE is only applicable in case of partial L1 combining, in which case value TRUE means that L1 combining is used for this radio bearer | REL-6 |

| Condition | Explanation |
|-----------|--|
| Curr | The IE is mandatory present if the IE 'MBMS p-t-m RB information list' is included in the MBMS CURRENT CELL P-T-M RB INFORMATION message and not needed otherwise |
| Neigh | The IE is mandatory present if the IE 'MBMS p-t-m RB information list' is included in the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message and not needed otherwise |

10.3.9a.7b MBMS Selected Service Info

This IE indicates whether the UE has any MBMS Selected Services, and if it does it includes the list of MBMS Selected Services.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--|-----------------------|---------|
| CHOICE Status | | | | | |
| >None | | | | (no data) | |
| >Some | MP | | MBMS Selected Services Full 10.3.9a.7c | | REL-6 |

10.3.9a.7c MBMS Selected Services Full

This IE provides the MBMS Selected Services by means of the full identity.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-----------------------------|---------------------------------|-----------------------|---------|
| MBMS Selected Services | MP | 1 to < maxMBM SservSel ect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS service identity 10.3.9a.8 | | REL-6 |

10.3.9a.7d MBMS Selected Services Short

This IE indicates the MBMS Selected Services by means of a short identity to identify the MBMS transmission by referencing the services included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-----------------------------|---|---|---------|
| MBMS Selected Services | MP | 1 to < maxMBM SservSel ect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| Modification period identity | MP | | Integer (0..1) | Indicates the modification period the MBMS short transmission identities refer to | REL-6 |

10.3.9a.8 MBMS Service identity

Includes information about the identity of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------|--|---------|
| MBMS Service ID | MP | | MBMS Service ID 10.3.9a.8a | | REL-6 |
| CHOICE PLMN identity | MP | | | | REL-6 |
| >SameAs-MIB | | | | (No data) The PLMN identity is the same as indicated by the IE 'PLMN identity' in MIB | REL-6 |
| >SameAsMIB-MultiPLMN-Id | | | | | REL-6 |
| >>Multi PLMN id | MP | | Integer (1..5) | The PLMN identity is one of the PLMN identities (1 to 5) in the IE "Multiple PLMN List" in MIB | REL-6 |
| >ExplicitPLMN-Id | | | | | REL-6 |
| >>PLMN identity | MP | | PLMN identity 10.3.1.11 | | REL-6 |

10.3.9a.8a MBMS Service ID

Uniquely identifies an MBMS bearer service within a PLMN.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| MBMS Service ID | MP | | Octet string (3) | The content of the MBMS Service ID field is coded as octets 3 to 5 of the IE <i>Temporary Mobile Group Identity</i> [5] | REL-6 |

10.3.9a.9 MBMS Session identity

Includes information about the the identity of a session of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Session ID | MP | | Octet string (1) | | REL-6 |

10.3.9a.10 MBMS Short transmission identity

Includes a short identity of the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------|------|-------|-----------------------------------|---|---------|
| MBMS short transmission identity | MP | | Integer (1..maxMB MSservUn modif) | Reference/ index to a transmission listed in the MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION | REL-6 |

10.3.9a.10a MBMS Soft Combining Timing Offset

Indicates the timing offset applied in the CFN calculation in sub-clause 8.5.15.5 for a secondary CCPCH carrying only MBMS logical channels. It is used for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|-------------------------|---|---------|
| >MBMS Soft Combining Timing Offset | MP | | Integer (0, 10, 20, 40) | Timing offset applied in the CFN calculation in sub-clause 8.5.15.5, in ms. | REL-6 |

10.3.9a.11 MBMS specific timers and counters

Includes MBMS specific timers and counters.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---|---|---------|
| T318 | MD | | Integer(25 0... 2000 by step of 250, 3000, 4000, 6000, 8000, 10000, 12000, 16000) | Value in milliseconds. Default value is 1000. | REL-6 |

10.3.9a.12 MBMS Transmission identity

Includes information about the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------------------|-----------------------|---------|
| MBMS Service ID | MP | | MBMS Service identity 10.3.9a.8 | | REL-6 |
| MBMS Session ID | OP | | MBMS Session identity 10.3.9a.9 | | REL-6 |

10.3.9a.12a MBSFN frequency list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|---------------------------|----------------------------|---|---------|
| MBSFN frequency list | MP | 0 to <maxMBS FNclusters > | | | REL-7 |
| >MBSFN frequency | MP | | Frequency info 10.3.6.36 | | REL-7 |
| >IMB indication | OP | | Enumerated (TRUE) | If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency. | REL-8 |
| >Cell parameter ID | OP | <0..127> | Cell parameter Id 10.3.6.9 | Only for 1.28 Mcps TDD [32]. NOTE 1 | REL-7 |

NOTE 1: For 1.28 Mcps TDD the IE "Cell Parameter ID" indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if it is not included, the IE "MBSFN frequency" indicates the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

10.3.9a.12b MBSFN TDM Information List

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|------------------------------|---|-----------------------|---------|
| MBSFN TDM Information List | MP | 1 to <maxM BMSse rvUnmo dif> | | | REL-7 |
| >MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-7 |
| >TDM_Rep | MP | | Integer (2..9) | | REL-7 |
| >TDM_Offset | MP | | Integer (0..8) | | REL-7 |
| >TDM_Length | MP | | Integer (1..8) | | REL-7 |

10.3.9a.13 MCCH configuration information

Includes information about the MCCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|---------|-------|--------------------------|--|---------|
| Access Info Period coefficient | MP | | Integer (0..3) | Represents a , the access information coefficient. The number of repetitions per modification period equals 2^a while the actual access information period, in number of frames, equals MP DIV 2^a | REL-6 |
| Repetition Period coefficient | MP | | Integer (0..3) | Represents r , the repetition period coefficient. The number of repetitions per modification period equals 2^r while the actual repetition period, in number of frames, equals MP DIV 2^r | REL-6 |
| Modification period coefficient | MP | | Integer (7..10) | Represents m , the modification period coefficient. The actual modification period (MP), in number of frames, equals 2^m | REL-6 |
| RLC info | MP | | RLC info MBMS 10.3.4.23a | | REL-6 |
| TCTF presence | CV-MBMS | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

| Condition | Explanation |
|-----------|--|
| MBMS | This IE is not needed if the IE is contained within the IE 'Secondary CCPCH system information', otherwise the IE is optional. |

10.3.9a.14 MICH configuration information

Includes information about the MICH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|--------|---|--|---------|
| MICH Power offset | MP | | MICH Power offset 10.3.9a.15 | | REL-6 |
| CHOICE mode | MP | | | | REL-6 |
| >FDD | | | | | REL-6 |
| >>Channelisation code | MP | | Integer (0..255) | | REL-6 |
| >>Number of NI per frame | MP | | Integer (18, 36, 72, 144) | | REL-6 |
| >>STTD indicator | MP | | STTD Indicator 10.3.6.78 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE behaviour upon reception of this IE is unspecified. | REL-6 |
| >TDD | | | | | REL-6 |
| >>Timeslot number | MP | | Timeslot number 10.3.6.84 | | REL-6 |
| >>Midamble shift and burst type | MP | | Midamble shift and burst type 10.3.6.41 | For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the UE shall ignore the contents of this IE. | REL-6 |
| >>CHOICE TDD option | MP | | | | REL-6 |
| >>>3.84 Mcps TDD | | | | | REL-6 |
| >>>Channelisation code | MP | | Enumerate d ((16/1)...(16/16)) | | REL-6 |
| >>>7.68 Mcps TDD | | | | | REL-7 |
| >>>Channelisation code | MP | | Enumerate d ((32/1)...(32/32)) | | REL-7 |
| >>>1.28 Mcps TDD | | | | | REL-6 |
| >>>Codes list | MP | 1 to 2 | | | REL-6 |
| >>>>Channelisation code | MP | | Enumerate d ((16/1)...(16/16)) | | REL-6 |
| >>>> MBSFN Special Time Slot | OP | | Time Slot LCR Extension 10.3.6.83a | For 1.28 Mcps TDD MBSFN only mode, this IE indicates the SCCPCH is deployed on the MBSFN Special Time Slot [30]. The IE "Timeslot number" shall be ignored if this IE appears. | REL-7 |
| >>Repetition period/length | MD | | Enumerate d((4/2),(8/2) | Default value is '(64/2)'. | REL-6 |

| | | | | | |
|--------------------------------------|----|--|---|--|-------|
| | | |)
(8/4),(16/2)
,(16/4),
(32/2),(32/
4),(64/2),(6
4/4)) | | |
| >>Offset | MP | | Integer
(0...Repetition period - 1) | SFN mod
Repetitionperiod = Offset. | REL-6 |
| >>MBMS Notification indicator length | MD | | Integer (4, 8, 16) | Indicates the length of one MBMS Notification indicator in bits. Default value is 4. | REL-6 |
| >3.84 Mcps TDD MBSFN IMB | | | | | REL-8 |
| >>Channelisation code | MP | | Integer
(0..255) | SF = 256; only the channelisation codes 2 to 15 are applicable | REL-8 |
| >>Number of NI per frame | MP | | Integer
(16, 32, 64, 128) | | REL-8 |

10.3.9a.15 MICH Power offset

This is the power transmitted on the MICH minus power of the Primary CPICH in FDD and Primary CCPCH Tx Power in TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MICH Power offset | MP | | Integer(-10 .. +5) | Offset in dB | REL-6 |

10.3.9a.16 MSCH configuration information

Includes information about the MSCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--|--|---------|
| MSCH Scheduling information | MP | | | For FDD, scheduling information is provided starting at (SFN – (SCTO div 10ms)) mod MSCH REP = MSCH OFF
For TDD, scheduling information is provided starting at SFN mod MSCH REP = MSCH OFF | REL-6 |
| >Scheduling period | MD | | Enumerated (32, 64, 128, 256, 512, 1024) | The period, in number of frames, between MBMS scheduling messages (MSCH REP)
Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >Scheduling offset | MD | | Integer (0..(MSCH REP-1)) | The position of MBMS scheduling messages relative to timing of the corresponding cell (MSCH OFF)
Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >RLC info | MD | | RLC info MBMS 10.3.4.23a | Default value is the one included in the MBMS GENERAL INFORMATION message | REL-6 |
| TCTF presence | OP | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| Network Standard Time | MP | | BIT STRING (40) | Network Standard Time | REL-8 |
| Correlative SFN | OP | | Integer (0..4095) | System frame number which is correlative with Network Standard Time Information. If it is absent, Correlative SFN is equal to zero. | REL-8 |

10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

| Constant | Explanation | Value | Version |
|-----------------------------------|--|-----------------|---------|
| CN information | | | |
| maxCNdomains | Maximum number of CN domains | 4 | |
| UTRAN mobility information | | | |
| maxRAT | Maximum number of Radio Access Technologies | maxOtherRAT + 1 | |
| maxOtherRAT | Maximum number of other Radio Access Technologies | 15 | |
| maxURA | Maximum number of URAs in a cell | 8 | |
| maxInterSysMessages | Maximum number of Inter System Messages | 4 | |
| maxRABsetup | Maximum number of RABs to be established | 16 | |
| maxDedicatedCSGFreq | Maximum number of dedicated CSG frequencies | 4 | REL-8 |
| UE information | | | |
| maxtransactions | Maximum number of parallel RRC transactions in downlink | 25 | |
| maxPDCPAlgotype | Maximum number of PDCP algorithm types | 8 | |
| maxFreqBandsFDD | Maximum number of frequency bands supported by the UE as defined in [21] | 8 | |
| maxFreqBandsFDD-ext | Maximum number of frequency bands as defined in [21] and treated by RRC | 22 | REL-6 |
| maxFreqBandsTDD | Maximum number of frequency bands supported by the UE as defined in [22] | 4 | |
| maxFreqBandsTDD-ext | Maximum number of frequency bands supported by the UE as defined in [22] | 16 | REL-8 |
| maxFreqBandsGSM | Maximum number of frequency bands supported by the UE as defined in [45] | 16 | |
| maxFreqBandsEUTRA | Maximum number of frequency bands supported by the UE as defined in [36.101] | 16 | REL-8 |
| maxPage1 | Number of UEs paged in the Paging Type 1 message | 8 | |
| maxSystemCapability | Maximum number of system specific capabilities that can be requested in one message. | 16 | |
| MaxURNTIgroup | Maximum number of U-RNTI groups in one message | 8 | REL-5 |
| maxCommonHRNTI | Maximum number of common H-RNTI per cell | 4 | REL-7 |
| maxERNTIgroup | Maximum number of common E-RNTI group per cell (1.28 Mcps TDD) | 32 | REL-8 |
| maxERNTIperGroup | Maximum number of common E-RNTI in a group (1.28 Mcps TDD) | 2 | REL-8 |
| RB information | | | |
| maxPredefConfig | Maximum number of predefined configurations | 16 | |
| maxRB | Maximum number of RBs | 32 | |
| maxSRBsetup | Maximum number of signalling RBs to be established | 8 | |
| maxRBperRAB | Maximum number of RBs per RAB | 8 | |

| Constant | Explanation | Value | Version |
|--------------------------|--|---|---------|
| maxRBallRBs | Maximum number of non signalling RBs | 27 | |
| maxRBperTrCh | Maximum number of RB per TrCh | 16 | REL-6 |
| maxRBMuxOptions | Maximum number of RB multiplexing options | 8 | |
| maxLoCHperRLC | Maximum number of logical channels per RLC entity | 2 | |
| maxRLCPDUsizesPerLogChan | Maximum number of RLC PDU sizes per logical channel mapped on E-DCH | 32 | REL-6 |
| MaxROHC-PacketSizes | Maximum number of packet sizes that are allowed to be produced by ROHC. | 16 | |
| MaxROHC-Profiles | Maximum number of profiles supported by ROHC on a given RB. | 8 | |
| maxRFC 3095-CID | Maximum number of available CID values per radio bearer | 16384 | REL-5 |
| TrCH information | | | |
| maxCommonQueueID | Maximum number of common Mac-ehs queues | 2 | REL-7 |
| maxE-DCHMACdFlow | Maximum number of E-DCH MAC-d flows | 8 | REL-6 |
| MaxHProcesses | Maximum number of H-ARQ processes | 8 | REL-5 |
| MaxHSDSCH_TB_index | Maximum number of TB set size configurations for the HS-DSCH. | 64 (FDD and 1.28 MCPS TDD); 512 (3.84 Mcps TDD); 1024 (7.68 Mcps TDD) | REL-5 |
| maxMACdPDUSizes | Maximum number of MAC-d PDU sizes per queue permitted for MAC-hs | 8 | REL-5 |
| maxTrCH | Maximum number of transport channels used in one direction (UL or DL) | 32 | |
| maxTrCHpreconf | Maximum number of preconfigured Transport channels, per direction | 16 | |
| maxCCTrCH | Maximum number of CCTrCHs | 8 | |
| maxQueueID | Maximum number of Mac-hs queues | 8 | REL-5 |
| MaxTF | Maximum number of different transport formats that can be included in the Transport format set for one transport channel | 32 | |
| maxTFC | Maximum number of Transport Format Combinations | 1024 | |
| maxTFCsub | Maximum number of Transport Format Combinations Subset | 1024 | |
| maxSIBperMsg | Maximum number of complete system information blocks per SYSTEM INFORMATION message | 16 | |
| maxSIB | Maximum number of references to other system information blocks. | 32 | |
| maxSIB-FACH | Maximum number of references to system information blocks on the FACH | 8 | |
| PhyCH information | | | |
| maxHSSCCHs | Maximum number of HSSCCH codes that can be assigned to a UE | 4 | REL-5 |
| maxHS-SCCHLessTrBlk | Maximum number of HS-DSCH Transport Block Sizes used for HS-SCCH-less operation | [4] | REL-7 |
| maxTDD128Carrier | The maximum number of carriers for 1.28 Mcps TDD | 6 | REL-7 |
| maxAC | Maximum number of access classes | 16 | |
| maxASC | Maximum number of access service classes | 8 | |
| maxASCmap | Maximum number of access class to access service classes mappings | 7 | |
| maxASCpersist | Maximum number of access service classes for which persistence scaling factors are specified | 6 | |
| maxPRACH | Maximum number of PRACHs in a cell | 16 | |
| maxEDCHs | Maximum number of common E-DCH resources in a cell | 32 | REL-8 |
| MaxPRACH_FPACH | Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD) | 8 | REL-4 |
| maxFACHPCH | Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs | 8 | |
| maxRL | Maximum number of radio links | 8 | |

| Constant | Explanation | Value | Version |
|--------------------------------|---|--------------------------------------|---------|
| maxEDCHRL | Maximum number of E-DCH radio links | 4 | REL-6 |
| maxSCCPCH | Maximum number of secondary CCPCHs per cell | 16 | |
| maxDPDCH-UL | Maximum number of DPDCHs per cell | 6 | |
| maxDPCH-DLchan | Maximum number of channelisation codes used for DL DPCH | 8 | |
| maxPUSCH | Maximum number of PUSCHs | (8) | |
| maxPDSCH | Maximum number of PDSCHs | 8 | |
| maxTS | Maximum number of timeslots used in one direction (UL or DL) | 14 (3.84 Mcps TDD and 7.68 Mcps TDD) | |
| | | 6 (1.28 Mcps TDD) | REL-4 |
| hiPUSCHidentities | Maximum number of PUSCH Identities | 64 | |
| hiPDSCHidentities | Maximum number of PDSCH Identities | 64 | |
| maxNumE-AGCH | Maximum number of E-AGCHs (TDD) | 4 | REL-7 |
| maxNumE-HICH | Maximum number of E-HICHs (1.28 Mcps TDD) | 4 | REL-7 |
| maxERUCCH | Maximum number of E-RUCCH on primary frequency (1.28Mcps TDD) | 256 | REL-8 |
| Measurement information | | | |
| maxTGPS | Maximum number of transmission gap pattern sequences | 6 | |
| maxAdditionalMeas | Maximum number of additional measurements for a given measurement identity | 4 | |
| maxMeasEvent | Maximum number of events that can be listed in measurement reporting criteria | 8 | |
| maxMeasParEvent | Maximum number of measurement parameters (e.g. thresholds) per event | 2 | |
| maxMeasIntervals | Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value | 1 | |
| maxCellMeas | Maximum number of cells to measure | 32 | |
| maxReportedGSMCells | Maximum number of GSM cells to be reported | 8 | |
| maxReportedEUTRAFreqs | Maximum number of E-UTRA frequencies to report | 4 | REL-8 |
| maxReportedEUTRACellperFreq | Maximum number of E-UTRA cells to report per frequency | 4 | REL-8 |
| maxFreq | Maximum number of frequencies to measure | 8 | |
| maxNumPrio | Maximum number of priorities to store | 11 | REL-8 |
| maxPrio | Maximum number of RAT or Frequency Priority levels | 8 | REL-8 |
| maxEUTRACellPerFreq | Maximum number of E-UTRA cells per frequency | 16 | REL-8 |
| maxSat | Maximum number of satellites to measure | 16 | |
| maxGANSSSat | Maximum number of GANSS satellites to measure | 64 | REL-7 |
| maxGANSS | Maximum number of GANSS supported | 8 | REL-7 |
| maxSgnType | Maximum number of additional signals in GANSS to measure | 8 | REL-7 |
| maxSatClockModels | Maximum number of clock models in a GANSS | 4 | REL-7 |
| maxSatAlmanacStorage | Maximum number of satellites for which to store GPS Almanac information | 32 | |
| HIRM | Maximum number that could be set as rate matching attribute for a transport channel | 256 | |
| Frequency information | | | |
| MaxFDDFreqList | Maximum number of FDD carrier frequencies to be stored in USIM | 4 | |
| MaxTDDFreqList | Maximum number of TDD carrier frequencies to be stored in USIM | 4 | |
| MaxFDDFreqCellList | Maximum number of neighbouring FDD cells to be stored in USIM | 32 | |
| MaxTDDFreqCellList | Maximum number of neighbouring TDD cells to be stored in USIM | 32 | |
| MaxGSMCellList | Maximum number of GSM cells to be stored in USIM | 32 | |

| Constant | Explanation | Value | Version |
|--------------------------|---|-------|---------|
| Other information | | | |
| MaxGERANSI | Maximum number of GERAN SI blocks that can be provided as part of NACC information | 8 | REL-5 |
| maxNumGSMFreqRanges | Maximum number of GSM Frequency Ranges to store | 32 | |
| MaxNumFDDFreqs | Maximum number of FDD centre frequencies to store | 8 | |
| MaxNumTDDFreqs | Maximum number of TDD centre frequencies to store | 8 | |
| maxNumCDMA2000Freqs | Maximum number of CDMA2000 centre frequencies to store | 8 | |
| maxGSMTargetCells | Maximum number of GSM target cells | 32 | REL-6 |
| maxNumGSMCellGroup | Maximum number of GSM frequency groups to store | 16 | REL-8 |
| maxNumEUTRAFreqs | Maximum number of EUTRA centre frequencies to store | 8 | REL-8 |
| maxEUTRATargetFreqs | Maximum number of target E-UTRA frequencies | 8 | REL-8 |
| maxHNBNameSize | Maximum number of octets for the HNB Name | 48 | REL-8 |
| MBMS information | | | |
| maxMBMS-CommonCCTrCh | Maximum number of CCTrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonPhyCh | Maximum number of PhyCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonRB | Maximum number of RB configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonTrCh | Maximum number of TrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-Freq | Maximum number of MBMS preferred frequencies | 4 | REL-6 |
| maxMBMS-L1CP | Maximum number of periods in which layer 1 combining applies | 4 | REL-6 |
| maxMBMSservCount | Maximum number of MBMS services in a Access Info message | 8 | REL-6 |
| maxMBMSservModif | Maximum number of MBMS services in a MBMS MODIFIED SERVICES INFORMATION message | 32 | REL-6 |
| maxMBMSservSched | Maximum number of MBMS services in a MBMS SCHEDULING INFORMATION message | 16 | REL-6 |
| maxMBMSservSelect | Maximum number of MBMS Selected Services in a CELL UPDATE or RRC CONNECTION REQUEST message | 8 | REL-6 |
| maxMBMSservUnmodif | Maximum number of MBMS services in a MBMS UNMODIFIED SERVICES INFORMATION message | 64 | REL-6 |
| maxMBMSTransmis | Maximum number of transmissions for which scheduling information is provided within a scheduling period | 4 | REL-6 |
| maxMBMS-Services | Maximum number of MBMS services the UE stores in the variable MBMS_ACTIVATED_SERVICES | 64 | REL-6 |
| maxMBSFNclusters | Maximum number of MBSFN clusters indicated in system information | 16 | REL-7 |

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

NOTE: An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.

12 Message transfer syntax

Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in X.691 [49], and with adapted final padding. If special encoding is used, it is indicated in the ECN module defined for each ASN.1 module. The use of special encoding is defined in [14].

The following encoding rules apply in addition to what has been specified in X.691 [49]:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

12.1 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/ across the radio interface, is the concatenation of a basic production, an extension and padding, in that order.

RRC PDUs shall be mapped to and from RLC SDUs upon transmission and reception as follows:

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and
- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

12.1.1 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691, except for the 0 to 7 bits added at the end to produce a multiple of 8 bits. The basic production can have any positive number of bits, not necessarily a multiple of 8 bits.

12.1.2 Extension

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, set the extension part empty. Emitters compliant with a later version might send non-empty extensions.

12.1.3 Padding

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, pad the basic production with the smallest number of bits required to meet the size constraints of the lower layers. Padding bits shall be set to 0.

Receivers compliant with this version of the specification have no need to distinguish the extension and padding parts, and shall, unless indicated otherwise on a PDU type basis, accept RRC PDUs with any bit string in the extension and padding parts.

Figure 12.1.3-1: Padding

When using AM or UM mode, RLC requires that the RRC PDU length is a multiple of 8 bits.

When using Tr mode, RLC does neither impose size requirements nor perform padding. This implies that RRC has to take into account the transport format set defined for the transport channel across which the message is to be sent. RRC shall add the lowest number of padding bits required to fit the size specified for the selected transport format. In case of Enhanced Uplink in CELL_FACH state and Idle mode, when using Tr mode, RRC shall add the lowest number of padding bits to ensure octet alignment.

For paging type 1 messages, in case the PCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For SYSTEM INFORMATION CHANGE INDICATION message, in case the BCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For system information blocks, building the PDU involves two steps. The first step is the building of the System Information Blocks, in which step padding is not applied (the rules for extension apply). The second step is the building of the RRC PDUs, involving segmentation and concatenation of System Information Blocks, and then padding as described above for Tr mode if the BCCH carrying the System Information Blocks is mapped on BCH. The procedure is shown by means of an example as described in Figure 12.1.3-2. The example includes two System Information Blocks, SIBn and SIBn+1, of which only SIBn includes a protocol extension. The two System Information Blocks used in the example do not require segmentation and are concatenated into one SYSTEM INFORMATION message.

Note 1: RRC padding needs to be added only to octet align BCCH blocks which are mapped onto HS-DSCH

Figure 12.1.3-2: Padding for System Information

PCI: Protocol control information at SYSTEM INFORMATION message level

SI: SYSTEM INFORMATION message

For system information blocks, RRC may also add padding information at the end of IE "SIB data fixed", used both within IE "Last segment" and IE "Complete SIB". The IE "SIB data fixed" has a fixed length i.e. no length denominator used. In case the remaining amount of "SIB data" information is insufficient to fill the IE completely, RRC includes padding bits.

Since no length denominator is included, the receiving RRC cannot remove the padding added by the sender. However, since the padding used is the same as the padding added by the PER encoder to achieve octet alignment, the receiver can handle it.

NOTE 1 The mechanism described above implies that the PDU provided to the ASN.1 decoder may have more than 7 padding bits included. For a complete System Information Block of length 215 bits, 11 padding bits are added by RRC. Since the decoder requires an octet aligned input, 6 additional bits need to be added. In this (worst) case, a total of 17 padding bits is included.

NOTE 2 For the above cases, use of padding bits is possible and more efficient than including a length denominator.

When using the RRC padding described above, the segment has a fixed length, which completely fills the transport block. Therefore, in this case no RRC padding is added within the SYSTEM INFORMATION message. This is illustrated by means of the following figure.

Figure 12.1.3-3: No RRC padding for System Information

12.2 ECN link module for RRC

```

12.4 RRC messages encoded otherwise

NOTE: The messages included in this section are not specified by means of ASN.1.

12.4.1 Messages using tabular encoding specification

The encoding of the message is specified by means of a table listing the information elements known in the message and their order of their appearance in the message.

When a field extends over more than one octet, the order of bit values progressively decreases as the octet number increases. The least significant bit of the field is represented by the lowest numbered bit of the highest numbered octet of the field.

12.4.1.1 TRANSPORT FORMAT COMBINATION CONTROL using transparent DCCH

12.4.1.1.1 TRANSPORT FORMAT COMBINATION CONTROL, 3 bit format

The 3 bit format is as follows:

| 3 | 2 | 1 | Transport Format Combination Set Identity value |
|---|---|---|---|
| 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 1 |
| 0 | 1 | 0 | 2 |
| | | | |
| 1 | 1 | 1 | 7 |

12.4.1.1.2 Void

12.4.1.1.3 Void

13 Protocol timers, counters, other parameters and default configurations

The information provided in subclauses 13.1 and 13.2 shall be treated as informative. The normative text is specified in the relevant subclauses in clause 8 and clause 8 shall prevail.

13.1 Timers for UE

| Timer | Start | Stop | At expiry |
|-------|---|--|---|
| T300 | Transmission of RRC CONNECTION REQUEST in case of connection establishment for reasons other than MBMS reception | Reception of RRC CONNECTION SETUP | Retransmit RRC CONNECTION REQUEST if V300 =< N300, else go to Idle mode |
| T302 | Transmission of CELL UPDATE/URA UPDATE | Reception of CELL UPDATE CONFIRM/URA UPDATE CONFIRM | Retransmit CELL UPDATE/URA UPDATE if V302 =< N302, else, go to Idle mode |
| T304 | Transmission of UE CAPABILITY INFORMATION | Reception of UE CAPABILITY INFORMATION CONFIRM | Retransmit UE CAPABILITY INFORMATION if V304 =< N304, else initiate a cell update procedure |
| T305 | Entering CELL_FACH or URA_PCH or CELL_PCH state. Reception of CELL UPDATE CONFIRM/URA UPDATE CONFIRM. | Entering another state. | Transmit CELL UPDATE if T307 is not activated and the UE detects "in service area". Otherwise, if T307 is not active, start T307. |
| T307 | When the timer T305 has expired and the UE detects "out of service area". | When the UE detects "in service area". | Transit to idle mode |
| T308 | Transmission of RRC CONNECTION RELEASE COMPLETE | Not stopped | Transmit RRC CONNECTION RELEASE COMPLETE if V308 <=N308, else go to idle mode. |
| T309 | Upon reception of CELL CHANGE ORDER FROM UTRAN message | Successful response to a connection establishment request in the new cell. | Resume the connection to UTRAN |
| T310 | Transmission of PUSCH CAPACITY REQUEST | Reception of PHYSICAL SHARED CHANNEL ALLOCATION | Transmit PUSCH CAPACITY REQUEST if V310 =< N310, else procedure stops. |
| T311 | Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with the CHOICE "PUSCH allocation" set to "PUSCH allocation pending". | Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with CHOICE "PUSCH allocation" set to "PUSCH allocation assignment". | UE may initiate a PUSCH capacity request procedure. |
| T312 | When the UE starts to establish dedicated CH. For 1.28 Mcps TDD, it can also apply for physical shared channel establishment. | When the UE detects N312 "in sync" indication from L1. | The criteria for physical channel establishment failure is fulfilled |
| T313 | When the UE detects consecutive N313 "out of sync" indication from L1. | When the UE detects consecutive N315 "in sync" indication from L1. | The criteria for Radio Link failure is fulfilled. |

| Timer | Start | Stop | At expiry |
|-------|---|--|--|
| T314 | When the criteria for radio link failure are fulfilled.
The timer is started if radio bearer(s) that are associated with T314 exist or if only RRC connection exists only to the CS domain. | When the Cell Update procedure has been completed. | See subclause 8.3.1.13. |
| T315 | When the criteria for radio link failure are fulfilled.
The timer is started only if radio bearer(s) that are associated with T315 exist or if RRC connection exists to PS domain. | When the Cell Update procedure has been completed. | See subclause 8.3.1.14. |
| T316 | When the UE detects "out of service area" in URA_PCH or CELL_PCH state | When the UE detects "in service area". | Initiate cell update procedure if in service area is detected.
Otherwise start timer T317, transit to CELL_FACH state and initiate cell update procedure when the UE detects "in service area". |
| T317 | When the T316 expires or when in CELL_FACH state, the UE detects "out of service area". | When the UE detects "in service area". | T317 never expires. |
| T318 | Transmission of RRC CONNECTION REQUEST in case of connection establishment for MBMS reception | Reception of RRC CONNECTION SETUP | Enter idle mode |
| T319 | When entering CELL_PCH or URA_PCH. | When leaving CELL_PCH or URA_PCH state. | The UE activates starts the DRX cycle based on 'DRX cycle length coefficient'. |
| T320 | When receiving the CELL UPDATE CONFIRM message with IE 'Wait time' and IE 'RRC State Indicator' set to the value 'CELL_PCH' or 'URA_PCH'. | When initiating the cell update or URA update procedure, see subclause 8.3.1.2. | See subclause 8.3.1.16. |
| T321 | See subclause 8.5.49. | See subclause 8.5.49. | See subclause 8.5.49. |
| T322 | When received in UTRAN MOBILITY INFORMATION message in the IE 'Dedicated Priority Information' or upon cell (re)selection to UTRA from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied). | When dedicated priorities are cleared, when new dedicated priorities are received, when PLMN selection is performed on request by NAS, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT). | See subclause 8.3.3.7 |
| T323 | When transmitting a SIGNALLING CONNECTION RELEASE INDICATION message including the IE "Signalling Connection Release Indication Cause" | See subclauses 8.2.2.3 and 8.3.1.6. In this version of specification, UE may or may not stop the timer upon release of RRC connection. | See subclause 8.1.14.4 |

| Timer | Start | Stop | At expiry |
|-------|--|---|-------------------------------------|
| T324 | When a measurement report is triggered by intra frequency event 1d and the table 'Target cell preconfigurations' in the variable TARGET_CELL_PRECO_NFIGURATION includes the cell that triggered the event and an Activation time offset equal to 0 is configured | Upon successful reception of a Target cell HS-SCCH order or after 4 seconds or upon reception of any RRC reconfiguration message or ACTIVE SET UPDATE message | Stop monitoring target cell HS-SCCH |

13.2 Counters for UE

| Counter | Reset | Incremented | When reaching max value |
|---------|--|---|---|
| V300 | When initiating the procedure RRC connection establishment | Upon expiry of T300. | When V300 > N300, the UE enters idle mode. |
| V302 | When initiating the procedure Cell update or URA update | Upon expiry of T302 | When V302 > N302 the UE enters idle mode. |
| V304 | When sending the first UE CAPABILITY INFORMATION message. | Upon expiry of T304 | When V304 > N304 the UE initiates the Cell update procedure |
| V308 | When sending the first RRC CONNECTION RELEASE COMPLETE message in a RRC connection release procedure. | Upon expiry of T308 | When V308 > N308 the UE stops re-transmitting the RRC CONNECTION RELEASE COMPLETE message. |
| V310 | When sending the first PUSCH CAPACITY REQUEST message in a PUSCH capacity request procedure | Upon expiry of T310 | When V310 > N310 the UE stops re-transmitting the PUSCH CAPACITY REQUEST message. |
| V316 | At transmission or reception of PS data or signalling on SRB3 or upwards, or entering RRC Connected mode, or successful SRNS relocation. | Upon sending the SIGNALLING CONNECTION RELEASE INDICATION message, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state and the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain and V316 < 1. | When V316 >= 1 the UE stops sending any further SIGNALLING CONNECTION RELEASE INDICATION messages, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state for as long as the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain. |

13.3 UE constants and parameters

| Constant | Usage |
|----------|---|
| N300 | Maximum number of retransmissions of the RRC CONNECTION REQUEST message |
| N302 | Maximum number of retransmissions of the CELL UPDATE / URA UPDATE message |
| N304 | Maximum number of retransmissions of the UE CAPABILITY INFORMATION message |
| N308 | Maximum number of retransmissions of the RRC CONNECTION RELEASE COMPLETE message |
| N310 | Maximum number of retransmission of the PUSCH CAPACITY REQUEST message |
| N312 | Maximum number of "in sync" received from L1. |
| N313 | Maximum number of successive "out of sync" received from L1. |
| N315 | Maximum number of successive "in sync" received from L1 during T313 is activated. |

13.4 UE variables

13.4.ob AM_RLC_ERROR_PENDING_RB234

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 2, 3, or 4.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| AM RLC error pending | MP | | Boolean | TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure..
Set to FALSE when the cell update procedure is completed. |

13.4.oc AM_RLC_ERROR_PENDING_RB5_AND_UP

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 5 or above.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| AM RLC error pending | MP | | Boolean | TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure..
Set to FALSE when the cell update procedure is completed. |

13.4.0 CELL_INFO_LIST

This variable contains cell information on intra-frequency, inter-frequency and inter-RAT cells, as received in messages System Information Block Type 11, System Information Block Type 12, and MEASUREMENT CONTROL.

The first position in Intra-frequency cell info list corresponds to Intra-frequency cell id 0, the second to Intra-frequency cell id 1, etc.

The first position in Inter-frequency cell info list corresponds to Inter-frequency cell id 0, the second to Inter-frequency cell id 1, etc.

The first position in Inter-RAT cell info list corresponds to Inter-RAT cell id 0, the second to Inter-RAT cell id 1, etc.

This variable shall be cleared at cell re-selection, when leaving UTRA RRC connected mode, when switched off as well as at selection of a new PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|------------------|--|---|---------|
| Intra-frequency cell info | OP | 1..<maxCellMeas> | | | |
| >CHOICE position status | MP | | | | |
| >>Occupied | | | | | |

| >>Not present | | | | No data | REL-5 |

13.4.00 Void

13.4.0a CELL_UPDATE_STARTED

This variable indicates whether a cell update or URA update procedure is in progress.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Cell update started | MP | | Boolean | TRUE means a cell or URA update procedure is in progress.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.1 CIPHERING_STATUS

This variable contains information about the current status of ciphering in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|---------------------|----------------------------------|--|
| Status for each CN domain | MP | <1 to maxCNDomains> | | |
| >CN domain identity | MP | | CN domain identity 10.3.1.1 | |
| >Status | MP | | Enumerated(Not started, Started) | Set to "Not started" when entering UTRA RRC connected mode.
Set to "Not started" when leaving UTRA RRC connected mode. |
| Reconfiguration | MP | | Boolean | TRUE means an RRC procedure performing reconfiguration of ciphering is ongoing.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.1a COMMON_E_DCH_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCH and E-PUCH transmission procedure for 1.28 Mcps TDD in CELL_FACH state or Idle mode are ongoing. See subclause 8.5.46 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Common E-DCH transmission | MP | | Boolean | See subclause 8.5.46 | REL-8 |

13.4.2 Void

13.4.2a CONFIGURATION_INCOMPLETE

This variable indicates whether a received measurement control message contains invalid an incomplete measurement configuration.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| Configuration incomplete | MP | | Boolean | TRUE: An incomplete configuration has been detected.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.3 C_RNTI

This variable stores the assigned C-RNTI for this UE when in CELL_FACH state. For FDD and 1.28 Mcps TDD, this variable stores the assigned C-RNTI for this UE in CELL_PCH state, if in CELL_PCH state a HS-DSCH transport channel has been allocated.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| C-RNTI | OP | | C-RNTI
10.3.3.8 | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. |

13.4.3a DEFERRED_MEASUREMENT_STATUS

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| Deferred measurement status | MP | | Boolean | If TRUE, the UE can transmit RRC messages on RACH and receive RRC messages commanding it to enter CELL_DCH without having read and acted on SIB11, SIB11bis and 12. | REL-7 |

13.4.3b DTX_DRX_PARAMS

NOTE: For FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------|-----------------------|---------|
| UE parameters for DTX-DRX | MD | | DTX-DRX Information in 10.3.6.34a | | REL-7 |

13.4.3c DTX_DRX_STATUS

NOTE: For FDD only.

This variable indicates whether discontinuous UL DPCCH transmission and discontinuous reception of F-DPCH and HSPA DL channel procedures are ongoing. See subclause 8.5.34 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| DTX_DRX_STATUS | MP | | Boolean | TRUE:
discontinuous transmission and reception is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-7 |

13.4.3d DSAC_PARAM

This variable contains Domain Specific Access Restriction Parameters during the connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|-------|-------------------------------------|---|---------|
| CS Domain Specific Access Restriction | MP | | Domain Access Restriction 10.3.1.3b | This IE contains CS Domain Specific Access Restriction Parameters Cleared when leaving UTRA RRC connected mode. | REL-6 |
| PS Domain Specific Access Restriction | MP | | Domain Access Restriction 10.3.1.3b | This IE contains PS Domain Specific Access Restriction Parameters Cleared when leaving UTRA RRC connected mode. | REL-6 |

13.4.3e DSCH_RNTI

In TDD this variable stores the assigned DSCH-RNTI for this UE when in CELL_DCH state.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|--|
| DSCH-RNTI | OP | | DSCH-RNTI 10.3.3.9a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. |

13.4.4 Void

13.4.4o E_DCH_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures are ongoing. See subclause 8.5.28 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| E-DCH transmission | MP | | Boolean | TRUE: E-DCH transmission is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-6 |

13.4.4a E_RNTI

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------|--|---------|
| Primary E-RNTI | OP | | E-RNTI
10.3.3.10a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. | REL-6 |
| Secondary E-RNTI | OP | | E-RNTI
10.3.3.10a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. | REL-6 |

13.4.5 ESTABLISHED_RABS

This variable is used to store information about the established radio access bearers and signalling radio bearers in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|---------------------|--------------------------|---|
| RAB information | OP | 1 to <maxRABs etup> | | For each RAB established.
Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. |
| >RAB info | MP | | RAB info
10.3.4.8 | |
| >RB information | MP | 1 to <maxRBper RAB> | | For each RB belonging to the RAB |
| >>RB identity | MP | | RB identity
10.3.4.16 | |
| >>Subflow | MP | | Integer(0..< | Reference to the RAB subflow |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------|------|----------------------|-------------------------------|---|
| | | | maxSubflow count>) | implemented by this RB |
| >>RB started | MD | | Enumerated(stopped, started) | Default value is started |
| Signalling radio bearer information | OP | 1 to < maxSRBse tup> | | In the order of RBO and upwards.
Cleared when leaving UTRA RRC connected mode. |
| >RB started | MD | | Enumerated(stopped, started) | Default value is started |

13.4.5a ESTABLISHED_SIGNALLING_CONNECTIONS

This variable is used to store information about established signalling connections.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|----------------------|--------------------------------|---|
| Signalling connection list | OP | 1 to <maxCNdo mains> | | For each established signalling connection.
Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. |
| >Signalling connection identity | MP | | CN domain identity
10.3.1.1 | |

13.4.6 ESTABLISHMENT_CAUSE

This variable is used to store the cause for establishment of a signalling connection received by upper layers, to be used at RRC connection establishment or Initial Direct Transfer.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|---|
| Establishment cause | OP | | Establishment cause
10.3.3.11 | Cleared when leaving UTRA RRC connected mode. |

13.4.6a EUTRA_FREQUENCY_INFO_LIST

This variable contains cell information on E-UTRA frequencies (possibly with associated blacklists), as received in messages System Information Block Type 19 and MEASUREMENT CONTROL.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------|------|----------------------------|------------------------------------|---|---------|
| Frequency Info List | MP | 1 to <maxNumEUTRAFreqs> | | | REL-8 |
| >EARFCN | MP | | Integer(0 .. 65535) | EARFCN of the downlink carrier frequency [36.101] | REL-8 |
| >Measurement Bandwidth | MD | | Enumerated(6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, N _{RB} [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-8 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-8 |

13.4.6b ETWS_DUPLICATE_DETECT_PARAM

This variable contains duplicate detection parameter for the ETWS information until the upper layer indicates to clear the variable. The UE should remove entries in this variable when they have been stored for three hours.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|--------|--------------------|--|---------|
| Duplication detection parameters list | MP | 0 to 2 | | | REL-8 |
| >Message Identifier | MP | | Octet String (2) | IE "Message Identifier" as defined in [77] | REL-8 |
| >Serial Number | MP | | Octet string (2) | IE "Serial Number" as defined in [77] | REL-8 |

13.4.6c ETWS_INFO_IN_PROGRESS

This variable is not used in this version of the specification.

13.4.7 FAILURE_CAUSE

This variable contains the cause for failure of a UE initiated procedure, to be reported in a retransmitted message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------|---|
| Failure cause | OP | | Failure cause 10.3.3.13 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.8 FAILURE_INDICATOR

This variable indicates whether the procedure has failed for a UE initiated procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Failure indicator | MP | | Boolean | TRUE: Procedure has failed.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.8o H_RNTI

This variable stores the assigned H-RNTI for this UE when in CELL-DCH, CELL_FACH (FDD and 1.28 Mcps TDD only) or CELL_PCH (FDD and 1.28 Mcps TDD only) state, and when an HS-DSCH transport channel has been allocated.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| H-RNTI | OP | | H-RNTI 10.3.3.14a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Cleared when leaving UTRA RRC connected mode. | REL-5 |

13.4.8oo HS_DSCH_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing. See subclause 8.5.25 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| HS-DSCH reception | MP | | Boolean | TRUE: HS-DSCH reception is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-5 |

13.4.8oa HS_DSCH_RECEPTION_CELL_FACH_STATE

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL_FACH for BCCH, DCCH and, if configured, DTCH reception. See subclause 8.5.36 for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------|------|-------|--------------------|---|---------|
| HS-DSCH reception in CELL_FACH state | MP | | Boolean | TRUE: HS-DSCH reception in CELL_FACH is ongoing.
Set to FALSE when entering UTRA RRC connected mode, CELL_PCH, URA_PCH and CELL_DCH.
Set to FALSE when leaving UTRA RRC connected mode, | REL-7 |

13.4.8ob HS_DSCH_RECEPTION_OF_CCCH_ENABLED

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are enabled for CCCH and BCCH, and for SRB1 if the UE is in CELL_FACH state. See subclause 8.5.37 for actions related to the setting of this variable.

NOTE: For FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| HS-DSCH reception of CCCH | MP | | Boolean | TRUE: HS-DSCH reception for the CCCH is enabled.
Set to FALSE when leaving UTRA RRC connected mode.
Set to FALSE when entering CELL_PCH, URA_PCH and CELL_DCH. | REL-7 |

13.4.8oc HS_DSCH_RECEPTION_GENERAL

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL_DCH, CELL_FACH, CELL_PCH, or URA_PCH. See subclause 8.5.37a for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|--------------------|--|---------|
| HS-DSCH reception in all states | MP | | Boolean | TRUE: HS-DSCH reception in CELL_DCH, CELL_FACH, CELL_PCH or URA_PCH is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode | REL-7 |

13.4.8od SECONDARY_CELL_HS_DSCH_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are configured for a secondary serving HS-DSCH cell. See subclause 8.5.51 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| HS-DSCH reception | MP | | Boolean | TRUE: HS-DSCH reception is configured for a secondary serving HS-DSCH cell.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

13.4.8oe HS_DSCH_DRX_CELL_FACH_STATUS

This variable indicates whether HS-DSCH DRX operation is supported in CELL_FACH. See subclause 8.5.48 for actions related to the setting of this variable.

NOTE: FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|--------------------|--|---------|
| HS-DSCH DRX in CELL_FACH status | MP | | Boolean | TRUE: HS-DSCH DRX operation in CELL_FACH is supported.
Set to FALSE when leaving CELL_FACH or when dedicated H-RNTI is cleared. | REL-8 |

13.4.8of HS_DSCH_RECEPTION_OF_ETWS_ENABLED

This variable is not used in this version of the specification.

13.4.8000 HS_SCCH_LESS_PARAMS

NOTE: For FDD only.

This variable contains the parameters for UE operation in HS-SCCH less mode. The parameters are listed in subclause 10.3.6.36ab.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---|-----------------------|---------|
| UE parameters for HS-SCCH less | MD | | HS-SCCH less Information in 10.3.6.36ab | | REL-7 |

13.4.80000 HS_SCCH_LESS_STATUS

NOTE: For FDD only.

This variable indicates whether HS-SCCH less HS-DSCH transmission procedures are ongoing. See subclause 8.5.35 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| HS_SCCH_LESS_STATUS | MP | | Boolean | TRUE: HS-SCCH less HS-DSCH transmission is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-7 |

13.4.8a INCOMPATIBLE_SECURITY_RECONFIGURATION

This variable indicates whether an incompatible simultaneous reconfiguration of a security function has been received.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------------|------|-------|--------------------|---|
| Incompatible security reconfiguration | MP | | Boolean | TRUE: An incompatible simultaneous security reconfiguration has been detected.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.8b Void

13.4.8c Void

13.4.8d HSPA_RNTI_STORED_CELL_PCH

This variable indicates whether variables H_RNTI, C_RNTI and E_RNTI are stored in CELL_PCH state.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| HSPA_RNTI_STORED_CELL_PCH | MP | | Boolean | TRUE: variables H_RNTI, C_RNTI and E_RNTI are stored in CELL_PCH state.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

13.4.9 INITIAL_UE_IDENTITY

In this variable the identity used by the UE when establishing an RRC connection is stored.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------|---|
| Initial UE identity | OP | | Initial UE identity 10.3.3.15 | Cleared when leaving UTRA RRC connected mode. |

13.4.9a INTEGRITY_PROTECTION_ACTIVATION_INFO

This variable contains information to be sent to UTRAN about when a new integrity protection configuration shall be activated in the uplink for signalling radio bearers in case of modification of integrity protection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|---|---|
| Uplink Integrity protection activation info | OP | | Integrity protection activation info
10.3.3.17 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.10 INTEGRITY_PROTECTION_INFO

This variable contains information about the current status of the integrity protection in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|---------------------|----------------------------------|---|
| Status | MP | | Enumerated(Not started, Started) | Set to "Not started" when entering UTRA RRC connected mode.
Set to "Not started" when leaving UTRA RRC connected mode. |
| Reconfiguration | MP | | Boolean | TRUE means a reconfiguration of integrity protection is ongoing.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |
| Signalling radio bearer specific integrity protection information | OP | 1 to <maxSRBs etup> | | When integrity protection is started, status information for RB0- RB4 in that order.
Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |
| >Uplink RRC HFN | MP | | Bit string (28) | |
| >Downlink RRC HFN | MP | | Bit string (28) | |
| >Uplink RRC Message sequence number | MP | | Integer (0.. 15) | |
| >Downlink RRC Message sequence number | OP | | Integer (0.. 15) | |

13.4.10a INTER_RAT_HANDOVER_INFO_TRANSFERRED

This variable stores information about the inter RAT handover info that has been transferred to another RAT.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|----------------------------|---|---|---------|
| Predefined configuration status information | OP | | Predefined configuration status information 10.3.4.5 a | Cleared upon entering connected mode in another RAT | |
| Predefined configuration status information compressed | OP | | Predefined configuration status information compressed 10.3.4.5 b | Cleared upon entering connected mode in another RAT | REL-5 |
| UE security information | OP | | UE security information 10.3.3.4 2b | Cleared upon entering connected mode in another RAT | |
| UE security information2 | OP | | UE security information2 10.3.3.4 2c | Cleared upon entering connected mode in another RAT | REL-6 |
| UE radio access capability | OP | | UE radio access capability 10.3.3.4 2 | Cleared upon entering connected mode in another RAT | |
| UE radio access capability extension | OP | | UE radio access capability extension 10.3.3.4 2a | Cleared upon entering connected mode in another RAT | |
| UE radio access capability compressed | OP | | UE radio access capability compressed 10.3.3.4 2o | | REL-5 |
| UE system specific capability | OP | 1 to <maxSystemCapability> | Inter-RAT UE radio access capability 10.3.8.7 | Cleared upon entering connected mode in another RAT | |
| >Inter-RAT UE radio access capability | MP | | Inter-RAT UE radio | | |

| | | | | | |
|--|--|--|-------------------------------|--|--|
| | | | access capability
10.3.8.7 | | |
|--|--|--|-------------------------------|--|--|

13.4.11 INVALID_CONFIGURATION

This variable indicates whether a received message contained an invalid configuration, by means of invalid values or invalid combinations of information elements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Invalid configuration | MP | | Boolean | TRUE: An invalid configuration has been detected.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.11a LATEST_CONFIGURED_CN_DOMAIN

This variable stores the CN-domain that was most recently configured to be used for ciphering and integrity protection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------|--|
| Latest configured CN domain | OP | | CN domain identity
10.3.1.1 | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.
Cleared when leaving UTRA RRC connected mode. |

13.4.11b LATEST_CONFIGURED_SRBDelay_AND_PC_PREAMBLE

This variable stores the SRB delay and PC preamble to be used for establishing the DPCH after failure of hard handover, inter-RAT handover from UTRAN, or cell change order from UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| SRB delay | OP | | Integer (0..7) | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. |
| PC preamble | OP | | Integer (0..7) | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. |

13.4.11c MBMS_ACTIVATED_services

This variable stores the MBMS multicast services the UE has joined as well as the MBMS broadcast services the UE is interested to receive. Whenever the list of joined multicast services and/ or interested broadcast services changes, upper layers provide an indication upon which the UE shall update the variable accordingly. In case upper layers de-select an MBMS Selected Services, the UE shall remove the concerned service from the variable. Likewise, when upper layers select an MBMS Selected Services, the UE shall add the concerned service to the variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|--------------|---------------------------|-----------------------------------|--|
| Activated service list | OP | 1 to <maxMBMS S-Services> | | |
| >Service Identity | MP | | MBMS Service identity 10.3.9a.8 | |
| >Service type | MP | | Enumerated (Multicast, Broadcast) | |
| >MBMS Selected Services Indicator | CV-Broadcast | | Boolean | TRUE means that the service is currently a MBMS Selected Service |

| Condition | Explanation |
|-----------|---|
| Broadcast | This IE is mandatory present if the IE "Service type" is set to "Broadcast" and not needed otherwise. |

NOTE: An independent instance of the variable MBMS_ACTIVATED_SERVICES is used by UEs supporting reception of MBMS services from cells operating in MBSFN mode and will contain the services available in MBSFN mode only as indicated by higher layers.

13.4.11d MBMS_PREV_FREQUENCY_INFO

This variable stores the frequency information of the cell the UE is camped on, upon moving to the MBMS preferred layer indicated MBMS FLC preferred frequency information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------|-----------------------|---------|
| PREV Frequency Information | | | | | |
| CHOICE mode | | | | | |
| >FDD cell | | | | | |
| >>UARFCN downlink (Nd) | MP | | Integer(0 .. 16383) | [21] | |

| >>UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | |
| >1.28 Mcps TDD cell list | | | | | |
| >>UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | |

13.4.11e MBMS_PL_Service_Restriction_Info_dedicated

This variable stores the value of the IE "MBMS PL Service Restriction Information" restriction applicable to preferred frequency received in the latest RadioBearerControl or CellUpdateConfirm message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--|------|-------|--------------------------|---|---------|
| MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED | MP | | Enumerated (TRUE, FALSE) | Set to FALSE when entering UTRA connected mode. | REL-6 |

13.4.12 MEASUREMENT_IDENTITY

This variable stores the measurements configured in the UE. For each configured measurement, the information below shall be stored.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--|--|
| MEASUREMENT CONTROL | OP | | MEASUREMENT CONTROL
10.2.17,
System Information Block type
11
10.2.48.8.12,

| >>>> Reference Signal Midamble configuration | MP | | Integer (2, 4, 6, 8, 10, 12, 14, 16) | Midamble Allocation mode is UE specific midamble allocation | REL-8 |
| >>>>Reference Signal Midamble Shift | MP | | Integer (0..15) | The allocated midamble shift. | REL-8 |
| >>>>Reference Signal Timeslot number | MP | | Integer (1..5) | | REL-8 |
| >>>3.84 Mcps TDD or 7.68 Mcps TDD | | | | (no data) | REL-8 |

13.4.13b MIMO_STATUS

This variable indicates whether the UE is operating in MIMO mode. See subclause 8.5.ww for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--|---------|
| MIMO status | MP | | Boolean | TRUE means the UE is operating in MIMO mode.

Cleared when leaving CELL_DCH state. | |

13.4.14 ORDERED_RECONFIGURATION

This variable stores information about an ongoing Reconfiguration procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Ordered reconfiguration | MP | | Boolean | TRUE means that a Reconfiguration procedure is ongoing.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.14a PDCP_ROHC_TARGET_MODE

This variable contains the ROHC target mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------|---|---------|
| Target Mode | OP | | Enumerated (O-mode, R-mode) | The UE shall only transit to the signalled mode for operation of ROHC as described in [36]. | REL-5 |

13.4.15 PDCP_SN_INFO

This variable contains PDCP receive sequence numbers for one or several radio bearers to be included in a response message to UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------------|---|
| RB with PDCP information list | OP | 1 to <maxRBall RABs> | | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |
| >RB with PDCP information | MP | | RB with PDCP information 10.3.4.22 | |

13.4.15a PHYSICAL_SHARED_CHANNEL_CONFIGURATION

This variable is used only for TDD to store information about the physical shared channel configuration in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|------------|------------------------------------|---|
| PUSCH configuration | OP | | | Cleared when entering and leaving UTRA RRC connected mode. |
| >PUSCH info | MP | | PUSCH info 10.3.6.63 | |
| >PUSCH Identity | OP | | Integer(1..hiPUSCHide nties) | |
| >PUSCH power control info | OP | | PUSCH power control info 10.3.6.65 | |
| PDSCH configuration | OP | | | Cleared when entering and leaving UTRA RRC connected mode. |
| >PDSCH Info | MP | | PDSCH Info 10.3.6.44 | |
| >PDSCH Identity | OP | | Integer(1..hi PDSCHident ities) | |
| >PDSCH power control info | OP | | PDSCH power control info 10.3.6.45 | |
| ISCP Timeslot list | OP | 1 to maxTS | | Cleared when entering and leaving UTRA RRC connected mode. |
| >Timeslot number | MP | | Timeslot number 10.3.6.84 | Timeslot numbers, for which the UE shall report the timeslot ISCP in PUSCH CAPACITY REQUEST message |

13.4.15b PPAC_PARAM

This variable contains Paging Permission with Access Control Parameters during the connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|-------|--|---|---------|
| Paging Response Restriction Indication | MP | | Enumerated(All, CS, PS, None) | Cleared when leaving UTRA RRC connected mode. | REL-8 |
| Location/Registration Restriction Indicator | MP | | Enumerated(All, CS, PS) | Cleared when leaving UTRA RRC connected mode. | REL-8 |
| Location/Registration | MP | | Location /Registration Parameters 10.3.1.7oa | Cleared when leaving UTRA RRC connected mode. | REL-8 |

13.4.15c PRIORITY_INFO_LIST

This variable contains cell information on UTRA and inter-RAT priorities to be applied to neighbour cells stored in CELL_INFO_LIST and EUTRA_FREQUENCY_INFO_LIST, as received in messages System Information Block Type 19 and UTRAN MOBILITY INFORMATION.

The contents of this variable are inherited at inter-RAT cell (re)selection, including the remaining validity time (i.e., T320 in E-UTRAN, T322 in UTRAN, and T3230 in GERAN), if configured.

This variable can be configured in CELL_DCH, CELL_FACH, CELL_PCH, URA_PCH and Idle states. However, it is only used in CELL_FACH, CELL_PCH, URA_PCH and Idle states.

In *Camped on any cell* in [4], the UE implicitly takes actions as described in subclause 8.1.1.6.19 assuming the IE "Priority status" equals "sys_info_priority" using stored System information Block type 19. In *Camped normally* in [4], if the UE assumes it has valid UE specific priorities according to [4], the UE implicitly takes actions as described in subclause 8.6.7.23 without stopping T322 using stored IE "Dedicated Priority Information".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|------------------------|--|---|---------|
| Priority status | MP | | Enumerated (sys_info_priority, dedicated_priority) | | REL-8 |
| UTRA Serving Cell | OP | | | | REL-8 |
| >priority | OP | | Integer (0..<maxPrio-1>) | Absence of this IE indicates that the lowest priority is assigned to the serving frequency (lower than any assigned priority) | REL-8 |
| >S _{prioritysearch1} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >S _{prioritysearch2} | MD | | Integer (0..7 by step of 1) | dB, default value is 0 | REL-8 |

| >>>Thresh _{x, low} | OP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| E-UTRA detection | OP | | Boolean | "TRUE" means that the UE may detect the presence of a E-UTRA cell and report to NAS | REL-8 |

13.4.16 PROTOCOL_ERROR_INDICATOR

This variable indicates whether there exist a protocol error that is to be reported to UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------|---|
| Protocol error indicator | MP | | Protocol error indicator 10.3.3.27 | Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.17 PROTOCOL_ERROR_INFORMATION

This variable contains diagnostics to be reported to UTRAN for a message that was not completely understood.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---|
| Protocol error information | OP | | Protocol error information 10.3.8.12 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.18 PROTOCOL_ERROR_REJECT

This variable indicates whether there has occurred a severe protocol error causing the ongoing procedure to fail.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--|
| Protocol error reject | MP | | Boolean | TRUE: a severe protocol error has occurred.
Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.19 RB_TIMER_INDICATOR

This variable contains information to be sent to UTRAN if any of the timers T314 or T315 has expired when the UE sends a cell update with cause RL failure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------|---|
| RB timer indicator | OP | | RB timer indicator 10.3.3.28 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.20 RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO

This variable contains information to be sent to UTRAN about when a new ciphering configuration shall be activated in the uplink for radio bearers using RLC-AM or RLC-UM.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|-------|-----------------------------------|---|
| RB uplink ciphering activation time info | OP | | RB activation time info 10.3.4.13 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.20o RNC_CAPABILITY_CHANGE_SUPPORT

This variable indicates whether the serving RNC supports changes of UE capability in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--------------------|---|
| RNC support for change of UE capability | MP | | Boolean | Cleared when leaving UTRA RRC connected mode. |

13.4.20oo READY_FOR_COMMON_EDCH

In CELL_FACH state or Idle mode, this variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCCH and E-PUCH transmission procedure for 1.28 Mcps TDD can be immediately started by the UE. See subclause 8.5.47 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Ready for common EDCH | MP | | Boolean | See subclause 8.5.47 | REL-8 |

13.4.20a SECURITY_MODIFICATION

This variable contains information on which CN domain is affected by the ongoing security reconfiguration.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|---------------------|------------------------------------|-----------------------|
| Status for each CN domain | MP | <1 to maxCNDomains> | | |
| >CN domain identity | MP | | CN domain identity 10.3.1.1 | |
| >Status | MP | | Enumerated(Affected, Not Affected) | |

13.4.21 Void

13.4.22 START_THRESHOLD

This variable contains information about the maximum allowed value of the START for a CN domain.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------|--|
| THRESHOLD | OP | | Integer (0..1048576) | 20 bits.
Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.
Cleared when leaving UTRA RRC connected mode. |

13.4.23 START_VALUE_TO_TRANSMIT

This variable contains the value of START for new radio bearer(s) to be transmitted in a response message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| START | OP | | START 10.3.3.38 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.23a TARGET_CELL_PRECONFIGURATION

This variable indicates whether HS-SCCH reception procedures are configured for a target cell for which HS-DSCH serving Cell Change may be initiated by HS-SCCH order sent from target cell. See subclause 8.3.4.3 and 8.5.52 for actions related to the setting of this variable.

NOTE: FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|------|--------------|--|-----------------------|---------|
| Serving Cell Change MAC reset | OP | | Boolean | | REL-8 |
| Serving Cell Change Message Type | OP | | Enumerated (RadioBearerSetup, RadioBearerReconfiguration, TransportChannelReconfiguration, PhysicalChannelReconfiguration) | | REL-8 |
| Serving Cell Change Transaction Id | OP | | Integer (0..3) | | REL-8 |
| Target cell preconfigurations | OP | 1 to <maxRL> | | | REL-8 |
| >Primary scrambling code | MP | | Integer(0..511) | | REL-8 |
| >Target cell preconfiguration information | MP | | Target cell preconfiguration information 10.3.6.79a | | REL-8 |

13.4.24 TFC_SUBSET

This variable contains information about the TFC subset(s) applicable to the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---|--|---------|
| CHOICE mode | MP | | | | |
| >FDD | | | | | |
| >>Current TFC subset | MP | | Transport Format Combination Subset 10.3.5.22 | Set to "Full transport format set" when entering UTRA RRC connected mode when not stated otherwise in the procedure. | |
| >>Duration | OP | | TFC Control duration 10.3.6.80 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >>Default TFC subset | OP | | Transport Format Combination Subset 10.3.5.22 | The TFC subset to go back to when any temporary limitation is released. Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------|---|---|---------|

13.4.25 TGPS_IDENTITY

This variable contains the configuration parameters of all the configured compressed mode transmission gap pattern sequences.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|-----------|-----------------|-----------------------------------|--|
| Transmission gap pattern sequence | OP | 1 to <maxTGP S> | | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |
| >TGPSI | MP | | TGPSI 10.3.6.82 | |
| >TGPS Status Flag | MP | | Enumerated(activate, deactivate) | This flag indicates whether the Transmission Gap Pattern Sequence shall be activated or deactivated. |
| > Current TGPS Status Flag | MP | | Enumerated(active, inactive) | This flag indicates the current status of the Transmission Gap Pattern Sequence, whether it is active or inactive |
| >TGCFN | CV-Active | | Integer (0..255) | Connection Frame Number of the first frame of the first pattern within the Transmission Gap Pattern Sequence. |
| >Transmission gap pattern sequence configuration parameters | MP | | | Information as contained in the IE group "Transmission gap pattern sequence configuration parameters" in IE "DPCH compressed mode info" 10.3.6.33. |

| Condition | Explanation |
|-----------|--|
| Active | This IE is mandatory present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |

13.4.26 TGSN_REPORTED

This variable specifies whether an IE "Proposed TGSN" was reported to the UTRAN

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---|
| Proposed TGSN reported | MP | | Boolean | Set to FALSE when entering UTRA RRC connected mode.
Set to FALSE when leaving UTRA RRC connected mode. |

13.4.26a TIMERS_AND_CONSTANTS

This variable contains the values for all timers and constants used in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|------|-------|--|--|
| UE Timers and constants in connected mode | MD | | UE Timers and constants in connected mode
10.3.3.43 | <p>Default value means that for all timers and constants</p> <ul style="list-style-type: none"> - for parameters with need MD, the defaults specified in 10.3.3.43 apply and - for parameters with need OP, the parameters are absent. <p>All parameters are set to the default value when leaving UTRA RRC connected mode to another RAT.</p> |

13.4.27 TRANSACTIONS

This variable stores the identifications of the ongoing RRC procedure transactions.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------------------------|---|---|
| Accepted transactions | OP | 1 to <maxtrans actions> | | Cleared when leaving UTRA RRC connected mode. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier
10.3.3.36 | |
| Rejected transactions | OP | 1 to <maxtrans actions> | | Cleared when leaving UTRA RRC connected mode. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier
10.3.3.36 | |
| Processed transactions | OP | 1 to <maxtrans actions> | | Cleared when leaving UTRA RRC connected. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier
10.3.3.36 | |

13.4.27o Void

13.4.27a TRIGGERED_1A_EVENT

This variable contains information about a 1a event that has been triggered in the UE. There is one such variable per 1a event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|--------|--------------------|----------------------------|
| Cells triggered | OP | 1 to < | | Cleared when entering UTRA |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|---------------------|------------------------------|---|
| | | maxCellMeas> | | RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Cells recently triggered | OP | 1 to < maxCellMeas> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Periodical reporting running | MP | | Boolean | |

13.4.27b TRIGGERED_1B_EVENT

This variable contains information about a 1b event that has been triggered in the UE. There is one such variable per 1b event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------|------------------------------|--|---------|
| Cells triggered | OP | 1 to < maxCell Meas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | | |

| >sent reports | MP | | Integer(1..Inf inity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Periodical reporting running | MP | | Boolean | |

13.4.27d BEST_CELL_1D_EVENT

This variable contains information about a 1d event that has been triggered in the UE. There is one such variable per 1d event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------|---|
| Best cell | OP | | Primary CPICH info 10.3.6.60 | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |

13.4.27e TRIGGERED_1E_EVENT

This variable contains information about a 1e event that has been triggered in the UE. There is one such variable per 1e event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------|---|
| Cells triggered | OP | 1 to < maxCellMe as> | | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| Cells recently triggered | OP | 1 to < maxCellMe as> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |

13.4.27f TRIGGERED_1F_EVENT

This variable contains information about a 1f event that has been triggered in the UE. There is one such variable per 1f event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------|---|
| Cells triggered | OP | 1 to < maxCellMe as> | | Cleared when entering UTRA RRC connected mode.
Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| Cells recently triggered | OP | 1 to < maxCellMe as> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |

13.4.27f1 TRIGGERED_1G_EVENT

This variable contains information about a 1g event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------|-----------------------|
| Cells triggered | OP | 1 to < maxCellMe as> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

13.4.27f2 TRIGGERED_1H_EVENT

This variable contains information about a 1h event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------|-----------------------|
| Cells triggered | OP | 1 to < maxCellMe as> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

13.4.27f3 TRIGGERED_1I_EVENT

This variable contains information about a 1i event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|----------------------|------------------------------|-----------------------|
| Cells triggered | OP | 1 to < maxCellMe as> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

13.4.27f4 BEST_FREQUENCY_2A_EVENT

This variable contains information about a 2a event that has been configured in the UE. There is one such variable per 2a event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|-----------------------|
| Best frequency | MP | | Frequency info
10.3.6.36 | |

13.4.27f5 TRIGGERED_2B_EVENT

This variable contains information about a 2b event that has been configured in the UE. There is one such variable per 2b event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-----------------------------|--------------------|-----------------------|
| Frequency triggered | OP | 1 to <maxCellMeas> | | |
| >Frequency | MP | Frequency info
10.3.6.36 | | |

13.4.27f6 TRIGGERED_2C_EVENT

This variable contains information about a 2c event that has been configured in the UE. There is one such variable per 2c event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-----------------------------|--------------------|-----------------------|
| Frequency triggered | OP | 1 to <maxCellMeas> | | |
| >Frequency | MP | Frequency info
10.3.6.36 | | |

13.4.27f7 TRIGGERED_2D_EVENT

This variable contains information about a 2d event that has been configured in the UE. There is one such variable per 2d event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Event triggered | OP | | Boolean | |

13.4.27f8 TRIGGERED_2E_EVENT

This variable contains information about a 2e event that has been configured in the UE. There is one such variable per 2e event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-----------------------------|--------------------|-----------------------|
| Frequency triggered | OP | 1 to <maxCellMeas> | | |
| >Frequency | MP | Frequency info
10.3.6.36 | | |

13.4.27f9 TRIGGERED_2F_EVENT

This variable contains information about a 2f event that have been configured in the UE. There is one such variable per 2f event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Event triggered | OP | | Boolean | |

13.4.27f10 TRIGGERED_3A_EVENT

This variable contains information about a 3a event that has been configured in the UE. There is one such variable per event 3a configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |

|--------------------------------|------|-------|--------------------|---|
| U-RNTI | OP | | U-RNTI 10.3.3.47 | Cleared when leaving UTRA RRC connected mode. |

13.4.32 VALUE_TAG

This variable contains information about the value tag for the last received system information block of a given type, for all system information blocks using value tags. The UE shall maintain one instance of this variable for the current selected cell. The UE may store several instances of this variable, one for each cell, to be used if the UE returns to these cells.

All IEs in this variable shall be cleared when switched off. All IEs in this variable except for the IE "SIB 16 value tag list" shall be cleared at selection of a new cell and this cell broadcasts an IE "PLMN Identity" in the MIB which is different from the IE "PLMN Identity" broadcast in the MIB in the previously selected cell. The IE "SIB 16 value tag list" is cleared when NAS informs AS about a new selected PLMN.

NOTE: For 1.28 Mcps only.

This variable indicates whether HS-DSCH Semi-persistent Scheduling procedures are ongoing. See subclause 8.5.55 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---|---------|
| HS_DSCH_SPS_STATUS | MP | | Boolean | TRUE: HS-DSCH SPS is ongoing.
Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.
Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

13.5 UE RRC Procedure Performance

This subclause defines the performance requirements related to RRC procedures in the UE. Where the total delay is impacted by processing of variable length on the physical layer (e.g. physical layer synchronisation), references to appropriate specifications are given.

13.5.1 Definitions

The following definitions of N1 and N2 are valid only for this UE RRC Procedure Performance specification.

N1 = upper limit on the time required to execute modifications in UE after the reception of a UTRAN -> UE message has been completed. Where applicable (e.g. the physical layer transmission is impacted), the changes shall be adopted in the beginning of the next TTI starting after N1. N1 is specified as a multiple of 10 ms.

N2 = number of 10 ms radio frames from end of reception of UTRAN -> UE message on UE physical layer before the transmission of the UE -> UTRAN response message must be ready to start on a transport channel with no access delay other than the TTI alignment (e.g. DCH, therefore excluding delays caused by RACH procedure etc). The UE response message transmission from the physical layer shall begin at the latest (N2*10)+TTI ms after completion of the reception of the last TTI carrying the triggering UTRAN -> UE message. When Target State is CELL_DCH, the UE response message transmission from the physical layer may be additionally delayed by the value of IE "SRB delay".

N1 and N2 are independent (e.g. N2-N1 is not restricted to being less than or equal to 10ms).

13.5.2 RRC procedure performance values

NOTE: Times indicated in the table do not include cell reselection.

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|---|-----------------------|-----------------------|-----------|-----------|--|
| RRC Connection Management Procedures | | | | | |
| Broadcast of system information | SYSTEM INFORMATION | | | | N2 is not applicable for any system information messages, because there is no response message from the UE. |
| Master Information Block | SYSTEM INFORMATION | | 5 | NA | No system information data shall be lost due to processing of a MIB received with no detectable errors. This means that the UE shall buffer all system information data received after the MIB until the data can be processed according to the information in the MIB, unless the MIB was received erroneously. |
| System Information Block type 1 | SYSTEM INFORMATION | | 10 | NA | |
| System Information Block type 2 | SYSTEM INFORMATION | | 10 | NA | |

| System Information Change Indication | SYSTEM INFORMATION | | 10 | NA | |
| RRC connection establishment
<i>Target state CELL_DCH</i> | RRC CONNECTION SETUP | RRC CONNECTION SETUP COMPLETE | 10 | NA | N1 measures time to the start of tx / rx on DPCH. N2 cannot be specified, because RRC CONNECTION SETUP COMPLETE message is transmitted only after physical layer synchronisation, which also depends on the Node B.

The performance of the physical layer synchronisation procedure is specified in [19] and [20] |
| RRC connection establishment
<i>Target state CELL_FACH</i> | RRC CONNECTION SETUP | RRC CONNECTION SETUP COMPLETE | 10 | 11 | N1 and N2 applicable as defined (N2 can be tested from the initiation of the power ramp on RACH). |
| RRC connection release
<i>From CELL_DCH state</i> | RRC CONNECTION RELEASE | RRC CONNECTION RELEASE COMPLETE | 5 | 8 | N1 sets the requirement for the time from the completion of the last repetition of the RRC CONNECTION RELEASE COMPLETE message to the release of the physical channel.

N2 sets the requirement from the end of successful reception of the RRC CONNECTION RELEASE message to the start of the first transmission of the RRC CONNECTION RELEASE COMPLETE message. |
| RRC connection release
<i>From CELL_FACH state</i> | RRC CONNECTION RELEASE | RRC CONNECTION RELEASE COMPLETE | NA | 11 | N1 represents UE internal configuration that cannot be externally observed. |
| Paging | PAGING TYPE 1 | CELL UPDATE | 10 | 11+ T | T is the repetition period of SIB7 (applicable for FDD) and SIB14 (applicable for TDD) |
| UE capability enquiry | UE CAPABILITY ENQUIRY | UE CAPABILITY INFORMATION | NA | 8 | N1 is not applicable because the UE configuration does not change. |
| Security mode control | SECURITY MODE COMMAND | SECURITY MODE COMPLETE | 5 | 8 | |
| Signalling connection release procedure | SIGNALLING CONNECTION RELEASE | | 5 | NA | N2 is not applicable because there is no response message. |
| Counter check | COUNTER CHECK | COUNTER CHECK RESPONSE | NA | 8 | N1 is not applicable because the UE configuration does not change. |

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|---|---|---|-----------|-----------|---|
| ETWS Primary Notification with Security | ETWS PRIMARY NOTIFICATION WITH SECURITY | | 10 | NA | N2 is not applicable because there is no response message. |
| Radio Bearer control procedures | | | | | |
| Radio bearer establishment
<i>Target state CELL_DCH</i> | RADIO BEARER SETUP | RADIO BEARER SETUP COMPLETE / FAILURE | 10 | NA | N2 cannot be specified, because the RADIO BEARER SETUP COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B. |
| Radio bearer establishment
<i>From state CELL_FACH to state CELL_FACH</i> | RADIO BEARER SETUP | RADIO BEARER SETUP COMPLETE / FAILURE | 10 | 11 | |
| Radio bearer establishment
<i>From CELL_DCH to CELL_FACH</i> | RADIO BEARER SETUP | RADIO BEARER SETUP COMPLETE | NA | NA | N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER SETUP COMPLETE |
| Radio bearer reconfiguration
<i>Target state CELL_DCH</i> | RADIO BEARER RECONFIGURATION | RADIO BEARER RECONFIGURATION COMPLETE / FAILURE | 5 or 10 | NA | N2 cannot be specified, because the RADIO BEARER RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
NOTE 1 |
| Radio bearer reconfiguration
<i>From Idle Mode and state CELL_FACH to state CELL_DCH</i> | RADIO BEARER RECONFIGURATION | RADIO BEARER RECONFIGURATION COMPLETE / FAILURE | 10 | 11 | This requirement applies when the UE has a common E-DCH resource and is not required to perform any synchronization. |
| Radio bearer reconfiguration
<i>From state CELL_FACH to state CELL_FACH</i> | RADIO BEARER RECONFIGURATION | RADIO BEARER RECONFIGURATION COMPLETE / FAILURE | 10 | 11 | |
| Radio bearer reconfiguration
<i>From state CELL_DCH to state CELL_FACH</i> | RADIO BEARER RECONFIGURATION | RADIO BEARER RECONFIGURATION COMPLETE | NA | NA | N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER RECONFIGURATION COMPLETE |
| Radio bearer release
<i>Target state CELL_DCH</i> | RADIO BEARER RELEASE | RADIO BEARER RELEASE COMPLETE / FAILURE | 10 | 11 | |
| Radio bearer release
<i>From state CELL_FACH to state CELL_FACH</i> | RADIO BEARER RELEASE | RADIO BEARER RELEASE COMPLETE / FAILURE | 10 | 11 | |
| Radio bearer release
<i>From state CELL_DCH to state CELL_FACH</i> | RADIO BEARER RELEASE | RADIO BEARER RELEASE COMPLETE | NA | NA | N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER RECONFIGURATION COMPLETE |

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|---|--------------------------------------|--|-----------|-----------|--|
| Transport channel reconfiguration
<i>Target state CELL_DCH</i> | TRANSPORT CHANNEL RECONFIGURATION | TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE | 5 or 10 | NA | N2 cannot be specified, because the TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
NOTE 1 |
| Transport channel reconfiguration
<i>From state CELL_FACH to state CELL_FACH</i> | TRANSPORT CHANNEL RECONFIGURATION | TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE | 10 | 11 | |
| Transport channel reconfiguration
<i>From state CELL_DCH to state CELL_FACH</i> | TRANSPORT CHANNEL RECONFIGURATION | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | NA | NA | N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending TRANSPORT CHANNEL RECONFIGURATION COMPLETE |
| Transport format combination control
<i>AM or UM RLC mode</i> | TRANSPORT FORMAT COMBINATION CONTROL | TRANSPORT FORMAT COMBINATION CONTROL FAILURE | 5 | 8 | |
| Transport format combination control
<i>Transparent mode</i> | TRANSPORT FORMAT COMBINATION CONTROL | | 5 | NA | N2 is not applicable because no response message is defined. |
| Physical channel reconfiguration
<i>Target state CELL_DCH</i> | PHYSICAL CHANNEL RECONFIGURATION | PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE | 5 or 8 | NA | N2 cannot be specified, because the PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
NOTE 1 |
| Physical channel reconfiguration
<i>From state CELL_FACH to state CELL_FACH</i> | PHYSICAL CHANNEL RECONFIGURATION | PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE | 8 | 9 | |
| Physical channel reconfiguration
<i>From state CELL_DCH to state CELL_FACH</i> | PHYSICAL CHANNEL RECONFIGURATION | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | NA | NA | N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE |
| Physical Shared Channel Allocation [TDD only] | PHYSICAL SHARED CHANNEL ALLOCATION | | 5 | NA | N2 is not applicable because no response message is defined. |
| Uplink Physical Channel Control [TDD only] | UPLINK PHYSICAL CHANNEL CONTROL | | 8 | NA | Requirements for outer loop and timing advance adjustments are defined in [22] and [20]. N2 is not applicable because there is no response message. |

| URA update | URA UPDATE CONFIRM | UTRAN MOBILITY INFORMATION CONFIRM | 5 | 8 | |
| UTRAN mobility information | UTRAN MOBILITY INFORMATION | UTRAN MOBILITY INFORMATION CONFIRM / FAILURE | 5 | 8 | |

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|-------------------------------|--|--------------------------------------|----|----|---|
| Active set update | ACTIVE SET UPDATE | ACTIVE SET UPDATE COMPLETE / FAILURE | NA | 5 | The requirements on UE combining and power control performance for both UL and DL are specified by RAN WG4 in [21] and [19].

Also in case of branch addition the COMPLETE / FAILURE message is transmitted without waiting for the new branch to stabilise, therefore N2 is specified. |
| Inter-RAT handover to UTRAN | HANDOVER TO UTRAN COMMAND (other system) | HANDOVER TO UTRAN COMPLETE | NA | NA | The performance of this procedure is specified in 3GPP TS 45.010 in case of handover from GSM and 3GPP TS 36.133 in case of handover from E-UTRA. |
| Inter-RAT handover from UTRAN | HANDOVER FROM UTRAN COMMAND | HANDOVER FROM UTRAN FAILURE | NA | NA | The performance of this procedure is specified in [19] and [20]. |
| Measurement procedures | | | | | |
| Measurement control | MEASUREMENT CONTROL | MEASUREMENT CONTROL FAILURE | 5 | 8 | Response to measurement inquiry depends on physical layer measurement. Response time is defined in [19] and [20]. N1 and N2 only define the processing of the message. |

NOTE 1: The lower value applies when the UE is ordered to do a serving HS-DSCH cell change, changing no other information than contained in the IE "H-RNTI", the IE "Downlink HS-PDSCH information", the IE "Uplink DPCH power control info" and/or the IE "Serving HS-DSCH radio link indicator" (FDD only).

13.6 RB information parameters for signalling radio bearer RB 0

The following Radio Bearer parameter values apply for signalling radio bearer RB0 for TDD and for FDD, if either UE or UTRAN do not support common channel mapping on HS-DSCH:

| Information element/ Group name | Value | Comment |
|---------------------------------|---------|--|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>DL UM RLC LI size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | If available the size in the IE 'Additional Dynamic Transport Format Information for CCCH' for the transport channel used.
Else the first TF defined in the Transport Format Set for the transport channel is used. |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | FACH | |

Procedure descriptions in subclause 8.6.4.8 shall not be applied for the IE "RB mapping info" that is used for signalling radio bearer RB0.

13.6a RB information parameters for SHCCH

The following Radio Bearer parameter values apply for SHCCH:

| Information element/ Group name | Value | Comment |
|---------------------------------|---------|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| RB mapping info | | |
| >Uplink mapping info | | Option 1 |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | The first TF defined in the Transport Format Set for the transport channel that is used |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | FACH | |
| >Uplink mapping info | | Option 2 |
| >>UL transport channel | USCH | |
| >>UL Transport Channel Identity | 1 | |
| >>MAC logical channel priority | 1 | |
| >>RLC size list | N/A | The first TF defined in the Transport Format Set for the transport channel that is used |
| >Downlink mapping info | | |
| >>DL transport channel | DSCH | |
| >>DL Transport Channel Identity | 1 | |

13.6b RB information parameters for BCCH mapped to FACH

The following Radio Bearer parameter values apply for BCCH mapped to FACH:

| Information element/ Group name | Value | Comment |
|---------------------------------|-------|---------|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |

13.6c RB information parameters for PCCH mapped to PCH

The following Radio Bearer parameter values apply for PCCH mapped to PCH:

| Information element/ Group name | Value | Comment |
|---------------------------------|-------|---------|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |

13.6d Parameters for BCCH mapped to BCH

The transport format parameters for BCH are specified in [34].

13.6e RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and RACH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH:

NOTE: FDD only.

| Information element/ Group name | Value | Comment |
|---------------------------------|---------|--|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>Length indicator size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | If available the size in the IE 'Additional Dynamic Transport Format Information for CCCH' for the transport channel used.
Else the first TF defined in the Transport Format Set for the transport channel is used. |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | HS-DSCH | |

13.6f RB information parameters for BCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for BCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---------------------------------|-------|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |
| MAC-ehs reordering queue | N/A | No MAC-ehs reordering queue is configured for BCCH reception. |

13.6g RB information parameters for PCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for PCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---------------------------------|-------|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |
| MAC-ehs reordering queue | N/A | No MAC-ehs reordering queue is configured for PCCH reception. |

13.6h RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and common E-DCH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH and E-DCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---------------------------------|---------|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>Length indicator size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | E-DCH | E-DCH corresponding with the Node B allocated common E-DCH resource, i.e. UL DPCCH/E-DPCCH/E-DPDCH. |
| >>RLC size list | N/A | |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | HS-DSCH | |

13.7 Parameter values for default radio configurations

The UE shall support the use of the default radio configurations that are specified in the following.

NOTE 1: These configurations are based on [41] and cover a number of RAB and signalling connection configurations.

In the table that is used to specify the parameter values for these default configurations, the following principles are used:

- Optional IEs that are not used are omitted;
- In case no parameter value is specified in a column, this means the value given the previous (left side) column applies.

NOTE 2: If needed, signalling radio bearer RB4 is established after the completion of handover.

NOTE 3: For each default configuration, the value of FDD, 3.84 Mcps TDD, 7.68 Mcps TDD and 1.28 Mcps TDD parameters are specified. All parameters apply to FDD, 3.84 Mcps TDD, 7.68 Mcps and 1.28 Mcps TDD modes, unless explicitly stated otherwise. It should be noted that in this respect default configurations differ from pre-defined configurations, which only include parameter values for one mode.

NOTE 4: The transport format sizes, indicated in the following table, concern the RLC PDU size, since all configurations concern dedicated channels. The transport block sizes indicated in TS 34.108 are different since these include the size of the MAC header.

NOTE 5: The tabular values included in this subclause, represent the actual IE values as in clause 10, and not the ASN.1 representation of these values.

NOTE 5A: For TDD, default configurations 0, 1, 5, 6, 7 and 22 are incorrect and they should not be used in this version of the specification.

NOTE 6: The difference between default configuration #22 and default configuration #1 (13.6 kbps signalling) resides in the RLC configuration and the DCH quality target.

13.8 Parameter values for default radio configurations in CELL_FACH

This section is not used in this version of the specifications.

14 Specific functions

14.1 Intra-frequency measurements

14.1.1 Intra-frequency measurement quantities

A measurement quantity is used to evaluate whether an intra-frequency event has occurred or not. It can be:

- 1 Downlink E_c/N_0 .
- 2 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.

CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.

Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 3 Downlink received signal code power (RSCP) after despreading.
- 4 ISCP measured on Timeslot basis.

A description of those values can be found in [7] and [8].

14.1.2 Intra-frequency reporting events for FDD

Within the measurement reporting criteria field in the Measurement Control message the UTRAN notifies the UE which events should trigger a measurement report. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All the specified events are measured with respect to any of the measurement quantities given in subclause 14.1.1. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) of the cell defined in the measurement object.

Special mechanisms for the events are illustrated in subclause 14.1.4 and 14.1.5.

NOTE: The events below are numbered 1A, 1B, 1C,... since all intra-frequency reporting events would be labelled 1X, inter-frequency reporting events would be labelled 2X, and so on for the other measurement types.

When one intra-frequency measurement identity corresponds to multiple intra-frequency events with identical event identities, the UE behaviour is not specified.

14.1.2.1 Reporting event 1A: A Primary CPICH enters the reporting range

When an intra-frequency measurement configuring event 1a is set up, the UE shall:

- 1> create a variable TRIGGERED_1A_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1A is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
 - 2> if all required reporting quantities are available for that cell; and
 - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and if that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1A_EVENT:
 - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1A_EVENT.
 - 1> if the value of "Reporting deactivations threshold" for this event is greater than or equal to the current number of cells in the active set or equal to 0 and any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1A_EVENT:
 - 2> if "Reporting interval" for this event is not equal to 0:
 - 3> if the IE "Periodical reporting running" in the variable TRIGGERED_1A_EVENT is set to FALSE:
 - 4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1A_EVENT to TRUE;
 - 3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the variable TRIGGERED_1A_EVENT to 1.
 - 2> send a measurement report with IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1a"; and
 - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1A_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
 - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
 - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1A_EVENT.
 - 1> if the timer for the periodical reporting has expired:
 - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1A_EVENT:
 - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the variable TRIGGERED_1A_EVENT:
 - 4> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in variable TRIGGERED_1A_EVENT;
 - 4> start a timer with the value of "Reporting interval" for this event;

- 4> send a measurement report with IEs set as below:
- 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1a"; and
 - 5> include in "cell measurement event results" all entries of the variable TRIGGERED_1A_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
 - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 4> if "sent reports" in variable TRIGGERED_1A_EVENT is equal to "Amount of reporting" for all entries:
- 5> set the IE "Periodical Reporting running" in the variable TRIGGERED_1A_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or
- 1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":
- 2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1A_EVENT:
- 3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1A_EVENT.
 - 3> if no entry in the variable TRIGGERED_1A_EVENT has a value of "sent reports" smaller than "Amount of reporting"; or
 - 3> if there is no entry in the variable TRIGGERED_1A_EVENT:
- 4> if the reporting interval timer is running:
- 5> stop the reporting interval timer;
 - 5> set the IE "Periodical reporting running" in the variable TRIGGERED_1A_EVENT to FALSE.

This event is only applicable to the CELL_DCH state. When the measurement is setup in CELL_DCH or upon transition to CELL_DCH the UE shall:

- 1> if the "Triggering condition 2" includes active set cells:

- 2> include the primary CPICH of all cells in the current active set into the "cells triggered" in the variable TRIGGERED_1A_EVENT with the counter "sent reports" set to "Amount of reporting".

Equation 1 (Triggering condition for pathloss)

$$10 \cdot \text{Log}M_{\text{New}} + \text{CIO}_{\text{New}} \leq W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} (1/M_i) \right) + (1-W) \cdot 10 \cdot \text{Log}M_{\text{Best}} + (R_{1a} - H_{1a}/2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{\text{New}} + \text{CIO}_{\text{New}} \geq W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} M_i \right) + (1-W) \cdot 10 \cdot \text{Log}M_{\text{Best}} - (R_{1a} - H_{1a}/2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot \text{Log}M_{\text{New}} + \text{CIO}_{\text{New}} > W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} (1/M_i) \right) + (1-W) \cdot 10 \cdot \text{Log}M_{\text{Best}} + (R_{1a} + H_{1a}/2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{\text{New}} + \text{CIO}_{\text{New}} < W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} M_i \right) + (1-W) \cdot 10 \cdot \text{Log}M_{\text{Best}} - (R_{1a} + H_{1a}/2),$$

The variables in the formula are defined as follows:

M_{New} is the measurement result of the cell entering the reporting range.

CIO_{New} is the individual cell offset for the cell entering the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

M_i is a measurement result of a cell not forbidden to affect reporting range in the active set.

N_A is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

M_{Best} is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

M_{Best} is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

W is a parameter sent from UTRAN to UE.

R_{1a} is the reporting range constant.

H_{1a} is the hysteresis parameter for the event 1a.

If the measurement results are pathloss or CPICH-Ec/No then M_{New} , M_i and M_{Best} are expressed as ratios.

If the measurement result is CPICH-RSCP then M_{New} , M_i and M_{Best} are expressed in mW.

14.1.2.2 Reporting event 1B: A primary CPICH leaves the reporting range

When an intra-frequency measurement configuring event 1b is set up, the UE shall:

- 1> create a variable TRIGGERED_1B_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1B is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
 - 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and if that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:
 - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1B_EVENT.
- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1B_EVENT:
 - 2> if "Periodic reporting info-1b" is present, and "Reporting interval" for this event is not equal to 0:
 - 3> if the IE "Periodical reporting running" in the variable TRIGGERED_1B_EVENT is set to FALSE:
 - 4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1B_EVENT to TRUE;

3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the variable TRIGGERED_1B_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and

3> include in "cell measurement event results" all entries of "cells recently triggered" in the variable TRIGGERED_1B_EVENT in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from IE "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1B_EVENT.

1> if the timer for the periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:

3> if "Periodic reporting info-1b" is present:

4> if "Reporting interval" is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the variable TRIGGERED_1B_EVENT:

5> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in variable TRIGGERED_1B_EVENT;

5> start a timer with the value of "Reporting interval-1b" for this event;

5> send a measurement report with IEs set as below:

6> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and

6> include in "cell measurement event results" all entries of the variable TRIGGERED_1B_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

6> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

5> if "sent reports" in variable TRIGGERED_1B_EVENT is equal to "Amount of reporting" for all entries:

6> set the IE "Periodical Reporting running" in the variable TRIGGERED_1B_EVENT to FALSE and disable the timer for the periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":

2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" in the variable TRIGGERED_1B_EVENT;

3> if there is no entry in the variable TRIGGERED_1B_EVENT:

4> if the reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the variable TRIGGERED_1B_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \cdot \text{Log}M_{\text{Old}} + \text{CIO}_{\text{Old}} \geq W \cdot 10 \cdot \text{Log} \left(1 / \sum_{i=1}^{N_A} (1 / M_i) \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{\text{Best}} + (R_{1b} + H_{1b} / 2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{\text{Old}} + \text{CIO}_{\text{Old}} \leq W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{\text{Best}} - (R_{1b} + H_{1b} / 2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot \text{Log}M_{\text{Old}} + \text{CIO}_{\text{Old}} < W \cdot 10 \cdot \text{Log} \left(1 / \sum_{i=1}^{N_A} (1 / M_i) \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{\text{Best}} + (R_{1b} - H_{1b} / 2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{\text{Old}} + \text{CIO}_{\text{Old}} > W \cdot 10 \cdot \text{Log} \left(\sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{\text{Best}} - (R_{1b} - H_{1b} / 2),$$

The variables in the formula are defined as follows:

M_{Old} is the measurement result of the cell leaving the reporting range.

CIO_{Old} is the individual cell offset for the cell leaving the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

M_i is a measurement result of a cell not forbidden to affect reporting range in the active set.

N_A is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

M_{Best} is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

M_{Best} is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

W is a parameter sent from UTRAN to UE.

R_{1b} is the reporting range constant.

H_{1b} is the hysteresis parameter for the event 1b.

If the measurement results are pathloss or CPICH-Ec/No then **M_{Old}**, **M_i** and **M_{Best}** are expressed as ratios.

If the measurement result is CPICH-RSCP then **M_{Old}**, **M_i** and **M_{Best}** are expressed in mW.

14.1.2.3 Reporting event 1C: A non-active primary CPICH becomes better than an active primary CPICH

When an intra-frequency measurement configuring event 1c is set up, the UE shall:

1> create a variable TRIGGERED_1C_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1C is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
 - 2> if all required reporting quantities are available for that cell; and
 - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the active set but the other primary CPICH is any of the primary CPICHs included in the active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1C_EVENT:
 - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1C_EVENT.
 - 1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1C_EVENT:
 - 2> if "Reporting interval" for this event is not equal to 0:
 - 3> if the IE "Periodical reporting running" in the variable TRIGGERED_1C_EVENT is set to FALSE:
 - 4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1C_EVENT to TRUE.
 - 3> set "sent reports" for that primary CPICH in the variable TRIGGERED_1C_EVENT to 1.
 - 2> send a measurement report with IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1c"; and
 - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1C_EVENT not in the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;
 - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
 - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1C_EVENT.
 - 1> if the timer for the periodical reporting has expired:
 - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1C_EVENT, and not included in the current active set:
 - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the variable TRIGGERED_1C_EVENT:
 - 4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in variable TRIGGERED_1C_EVENT;
 - 4> start a timer with the value of "Reporting interval" for this event;
 - 4> send a measurement report with IEs set as below:
 - 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1c"; and

5> include in "cell measurement event results" all entries of the variable TRIGGERED_1C_EVENT with value of IE "sent report" equal to or smaller than value of "Amount of reporting" and that are not part of the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

4> if "sent reports" in variable TRIGGERED_1C_EVENT is equal to "Amount of reporting" for all entries:

5> set the IE "Periodical Reporting running" in the variable TRIGGERED_1C_EVENT to FALSE and disable the timer for the periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;

1> if a primary CPICH is added to the active set:

2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1C_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1C_EVENT.

3> if no entry in the variable TRIGGERED_1C_EVENT has a value of "sent reports" smaller than "Amount of reporting" or

3> if there is no entry in the variable TRIGGERED_1C_EVENT:

4> if the reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the variable TRIGGERED_1C_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{New} + CIQ_{New} \leq 10 \log M_{thAS} + CIQ_{thAS} - H_{lc}/2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIQ_{New} \geq 10 \log M_{thAS} + CIQ_{thAS} + H_{lc}/2$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{New} + CIQ_{New} > 10 \log M_{thAS} + CIQ_{thAS} + H_{lc}/2$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIQ_{New} < 10 \log M_{thAS} + CIQ_{thAS} - H_{lc}/2$$

The variables in the formula are defined as follows:

M_{New} is the measurement result of the cell not included in the active set.

CIQ_{New} is the individual cell offset for the cell becoming better than the cell in the active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

M_{InAS} is the measurement result of the cell in the active set with the highest measurement result.

For other measurement quantities:

M_{InAS} is the measurement result of the cell in the active set with the lowest measurement result.

CIO_{InAS} is the individual cell offset for the cell in the active set that is becoming worse than the new cell.

H_{lc} is the hysteresis parameter for the event 1c.

If the measurement results are pathloss or CPICH-Ec/No then M_{New} and M_{inAS} are expressed as ratios.

If the measurement result is CPICH-RSCP then M_{New} and M_{inAS} are expressed in mW.

Figure 14.1.2.3-1 [Informative]: A primary CPICH that is not included in the active set becomes better than a primary CPICH that is in the active set

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0. In this example the cells belonging to primary CPICH 1 and 2 are in the active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the active set has been updated after the first measurement report (active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

14.1.2.4 Reporting event 1D: Change of best cell

When an intra-frequency measurement configuring event 1d is set up, the UE shall:

- 1> create a variable TRIGGERED_1D_EVENT related to that measurement, which shall initially contain the best cell in the active set when the measurement is initiated;
- 1> delete this variable when the measurement is released.
- 1> As soon as the best cell in the active set has been evaluated by the UE (and stored in the TRIGGERED_1D_EVENT variable) and provided that there is more than one cell in the active set, trigger an immediate measurement report with IEs set as below:
- 2> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH stored in the TRIGGERED_1D_EVENT variable;
- 2> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2

When event 1D is configured in the UE, the UE shall:

1> if IE "useCIO" is present and its value is TRUE, take into account the Cell Individual Offset for evaluation of the Equation 1 and 2, otherwise do not take it into account.

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT:

NOTE: If the equations are simultaneously fulfilled for more than one primary CPICH, the UE should report only one event 1D, triggered by the best primary CPICH.

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger" and if IE "Triggering condition 2" is absent or if it is present and that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2":

3> set "best cell" in the variable BEST_CELL_1D_EVENT to that primary CPICH that triggered the event;

3> send a measurement report with IEs set as below:

4> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH that triggered the report.

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

This event is only applicable to the CELL_DCH state. Upon transition to CELL_DCH the UE shall:

1> set "best cell" in the variable BEST_CELL_1D_EVENT to the best cell of the primary CPICHs included in the active set.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{NotBest} + CIO_{NotBest} \leq 10 \log M_{Best} + CIO_{Best} - H_{1d}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{NotBest} + CIO_{NotBest} \geq 10 \log M_{Best} + CIO_{Best} + H_{1d}/2,$$

The variables in the formula are defined as follows:

$M_{NotBest}$ is the measurement result of a cell not stored in "best cell" in the variable BEST_CELL_1D_EVENT.

$CIO_{NotBest}$ is the cell individual offset of a cell not stored in "best cell" in the variable BEST_CELL_1D_EVENT.

M_{Best} is the measurement result of the cell stored in "best cell" in variable BEST_CELL_1D_EVENT.

CIO_{Best} is the cell individual offset of a cell stored in "best cell" in the variable BEST_CELL_1D_EVENT.

H_{1d} is the hysteresis parameter for the event 1d.

If the measurement results are pathloss or CPICH-Ec/No then $M_{Not Best}$ and M_{Best} are expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{Not Best}$ and M_{Best} are expressed in mW.

Figure 14.1.2.4-1 [Informative]: A primary CPICH becomes better than the previously best primary CPICH

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

14.1.2.5 Reporting event 1E: A Primary CPICH becomes better than an absolute threshold

When an intra-frequency measurement configuring event 1e is set up, the UE shall:

- 1> create a variable TRIGGERED_1E_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1E is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
- 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1E_EVENT:
- 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1E_EVENT.
- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1E_EVENT:
- 2> send a measurement report with IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1e"; and
 - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1E_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
 - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1E_EVENT.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":

2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1E_EVENT:

3> remove that primary CPICH and sent reports from "cells triggered" in the variable TRIGGERED_1E_EVENT.

This event is only applicable to the CELL_DCH state. When the measurement is setup in CELL_DCH or upon transition to CELL_DCH the UE shall:

1> if the "Triggering condition 2" includes active set cells:

2> include the primary CPICH of all cells in the current active set that fulfil the equations 1 or 2 according to the "Measurement quantity" of event 1e into the "cells triggered" in the variable TRIGGERED_1E_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} \leq T_{1e} - H_{1e}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} \geq T_{1e} + H_{1e}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} > T_{1e} + H_{1e}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} < T_{1e} - H_{1e}/2,$$

The variables in the formula are defined as follows:

M_{New} is the measurement result of a cell that becomes better than an absolute threshold.

CIQ_{New} is the individual cell offset for the cell becoming better than the absolute threshold. Otherwise it is equal to 0.

T_{1e} is an absolute threshold.

H_{1e} is the hysteresis parameter for the event 1e.

If the measurement results are pathloss or CPICH-Ec/No then M_{New} is expressed as ratios.

If the measurement result is CPICH-RSCP then M_{New} is expressed in mW.

Figure 14.1.2.5-1 [Informative]: Event-triggered report when a Primary CPICH becomes better than an absolute threshold

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

14.1.2.6 Reporting event 1F: A Primary CPICH becomes worse than an absolute threshold

When an intra-frequency measurement configuring event 1F is set up, the UE shall:

- 1> create a variable TRIGGERED_1F_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1F is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

- 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1F_EVENT:

- 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1F_EVENT.

- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1F_EVENT:

- 2> send a measurement report with IEs set as below:

- 3> set in "intra-frequency event measurement results": "Intrafrequency event identity" to "1f"; and

- 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1F_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

- 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell;

- 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1F_EVENT.

- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":

2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1F_EVENT:

3> remove that primary CPICH from "cells triggered" in the variable TRIGGERED_1F_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{ld} + CIQ_{ld} \geq T_{lf} + H_{lf}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{ld} + CIQ_{ld} \leq T_{lf} - H_{lf}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{ld} + CIQ_{ld} < T_{lf} - H_{lf}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{ld} + CIQ_{ld} > T_{lf} + H_{lf}/2,$$

The variables in the formula are defined as follows:

M_{ld} is the measurement result of a cell that becomes worse than an absolute threshold

CIQ_{old} is the individual cell offset for the cell becoming worse than the absolute threshold. Otherwise it is equal to 0.

T_{lf} is an absolute threshold

H_{lf} is the hysteresis parameter for the event 1f.

If the measurement results are pathloss or CPICH-Ec/No then M_{old} is expressed as ratios.

If the measurement result is CPICH-RSCP then M_{old} is expressed in mW.

Figure 14.1.2.6-1 [Informative]: Event-triggered report when a Primary CPICH becomes worse than an absolute threshold

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

14.1.2.7 Reporting event 1J: A non-active E-DCH but active DCH primary CPICH becomes better than an active E-DCH primary CPICH

When an intra-frequency measurement configuring event 1j is set up, the UE shall:

- 1> create a variable TRIGGERED_1J_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1J is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
 - 2> if all required reporting quantities are available for that cell; and
 - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the E-DCH active set but included in DCH active set and the other primary CPICH is any of the primary CPICHs included in the E-DCH active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1J_EVENT:
 - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT.
- 1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the E-DCH active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT:
 - 2> if "Reporting interval" for this event is not equal to 0:
 - 3> if the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT is set to FALSE:
 - 4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT to TRUE.
 - 3> set "sent reports" for that primary CPICH in the variable TRIGGERED_1J_EVENT to 1.
 - 2> send a measurement report with IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and
 - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1J_EVENT not in the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;
 - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
 - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1J_EVENT. - 1> if the timer for the periodical reporting has expired:
 - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1J_EVENT, and not included in the current E-DCH active set but included in DCH active set:
 - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the variable TRIGGERED_1J_EVENT:
 - 4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in variable TRIGGERED_1J_EVENT;
 - 4> start a timer with the value of "Reporting interval" for this event;

- 4> send a measurement report with IEs set as below:
- 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and
- 5> include in "cell measurement event results" all entries of the variable TRIGGERED_1J_EVENT with value of IE "sent report" equal to or smaller than value of "Amount of reporting" and that are not part of the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;
- 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 4> if "sent reports" in variable TRIGGERED_1J_EVENT is equal to "Amount of reporting" for all entries:
- 5> set the IE "Periodical Reporting running" in the variable TRIGGERED_1J_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;
- 1> if a primary CPICH is added to the E-DCH active set:
- 2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1J_EVENT:
- 3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1J_EVENT.
- 3> if no entry in the variable TRIGGERED_1J_EVENT has a value of "sent reports" smaller than "Amount of reporting" or
- 3> if there is no entry in the variable TRIGGERED_1J_EVENT:
- 4> if the reporting interval timer is running:
- 5> stop the reporting interval timer;
- 5> set the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} \leq 10 \log M_{\text{MAS}} + CIQ_{\text{MAS}} - H_{ij} / 2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} \geq 10 \log M_{\text{MAS}} + CIQ_{\text{MAS}} + H_{ij} / 2$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} > 10 \log M_{\text{MAS}} + CIQ_{\text{MAS}} + H_{ij} / 2$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{\text{New}} + CIQ_{\text{New}} < 10 \log M_{\text{MAS}} + CIQ_{\text{MAS}} - H_{ij} / 2$$

The variables in the formula are defined as follows:

M_{New} is the measurement result of the cell not included in the E-DCH active set but included in DCH active set.

CIO_{New} is the individual cell offset for the cell not included in the E-DCH active set but included in DCH active set becoming better than the cell in the E-DCH active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

M_{InAS} is the measurement result of the cell in the E-DCH active set with the highest measurement result.

For other measurement quantities:

M_{InAS} is the measurement result of the cell in the E-DCH active set with the lowest measurement result.

CIO_{InAS} is the individual cell offset for the cell in the E-DCH active set that is becoming worse than the new cell.

H_{IJ} is the hysteresis parameter for the event 1J.

If the measurement results are pathloss or CPICH-Ec/No then M_{New} and M_{inAS} are expressed as ratios.

If the measurement result is CPICH-RSCP then M_{New} and M_{inAS} are expressed in mW.

Figure 14.1.2.7-1 [Informative]: A primary CPICH that is not included in the E-DCH active set but included in DCH active set becomes better than a primary CPICH that is in the E-DCH active set

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0 and replacement activation threshold is equal to 0 or 1 or 2. In this example the cells belonging to primary CPICH 1 and 2 are in the E-DCH active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the E-DCH active set but included in DCH active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the E-DCH active set has been updated after the first measurement report (E-DCH active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

14.1.3 Intra-frequency reporting events for TDD

14.1.3.1 Reporting event 1G: Change of best cell (TDD)

When an intra-frequency measurement configuring event 1g is set up, the UE shall

- 1> create a variable TRIGGERED_1G_EVENT related to that measurement, which shall initially be empty.
- 1> store the P-CCPCH of the serving cell in the variable TRIGGERED_1G_EVENT as the best cell .
- 1> delete this variable when the measurement is released.

When event 1G is configured in the UE, the UE shall:

- 1> if the equation 1 is fulfilled for one or more P-CCPCHs during the time "Time to trigger"
- 2> if those P-CCPCHs are not included in the "primary CCPCH info" in the variable TRIGGERED_1G_EVENT:
 - 3> include those P-CCPCH in "cells triggered" in the variable TRIGGERED_1G_EVENT;
- 2> update the prebest cell to the best P-CCPCH and for each cell in the variable TRIGGERED_1G_EVENT:
 - 3> if Equation 2 below is fulfilled for a primary CCPCH:
 - 4> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1G_EVENT;
- 2> send a measurement report with IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1g";
 - 3> set the first entry in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH which was stored in the variable TRIGGERED_1G_EVENT;
 - 3> include all entries in "cells triggered" in variable TRIGGERED_1G_EVENT in "cell measurement event results" in the measurement report in descending order according to:

$$10 \cdot \log M + O$$

where M is the P-CCPCH RSCP and O the individual offset of a cell;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

- 1> if Equation 2 below is fulfilled for a primary CCPCH:
- 2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1G_EVENT:
 - 3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1G_EVENT;

The UE shall use the equations below for evaluation of reporting event 1g:

Equation 1

$$10 \cdot \log M_i + O_i - H_{lg} > 10 \cdot \log M_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

M_i is the current P-CCPCH RSCP of the currently evaluated cell i expressed in mW

O_i is the cell individual offset of the currently evaluated cell i

H_{lg} is the hysteresis parameter for the event 1g.

Equation 2

$$10 \cdot \log M_i + O_i + H_{lg} < 10 \cdot \log M_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

M_i is the current P-CCPCH RSCP of the currently evaluated cell i expressed in mW

O_i is the cell individual offset of the currently evaluated cell i

H_{Ig} is the hysteresis parameter for the event 1g.

Figure 14.1.3.1-1: A P-CCPCH RSCP becomes better than the previous best P-CCPCH RSCP

14.1.3.2 Reporting event 1H: Timeslot ISCP below a certain threshold (TDD)

When an intra-frequency measurement configuring event 1h is set up, the UE shall:

- 1> create a variable TRIGGERED_1H_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1h is configured in the UE, the UE shall:

- 1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT:

2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT;

2> send a measurement report with the IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1h" and in "cell measurement event results" the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> include in "Cell measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1H_EVENT and "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

- 1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1H_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1H_EVENT.

The UE shall use the equations below for evaluation of reporting event 1h:

Equation 1

$$10 \cdot \log M_i + H_{1h} + O_i < T_{1h},$$

Equation 2

$$10 \cdot \log M_i - H_{1h} + O_i > T_{1h},$$

The variables in the formula are defined as follows:

M_i is the Timeslot ISCP of the currently evaluated cell i expressed in mW

O_i is the cell individual offset of the currently evaluated cell i

T_{1h} is the Threshold for event 1h

H_{1h} is the hysteresis parameter for the event 1h.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

Figure 14.1.3.2-1: An ISCP value of a timeslot drops below an absolute threshold

14.1.3.3 Reporting event 1I: Timeslot ISCP above a certain threshold (TDD)

When an intra-frequency measurement configuring event 1I is set up, the UE shall:

- 1> create a variable TRIGGERED_1I_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1I is configured in the UE, the UE shall:

- 1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT:
 - 2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT;
 - 2> send a measurement report with the IEs set as below:
 - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1I" and in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH that triggered the report;
 - 3> include in "measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1I_EVENT and "additional measured results" according to 8.4.2, not taking into account the cell individual offset for each cell.

- 1> if Equation 2 below is fulfilled for a primary CCPCH:

- 2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1I_EVENT:
 - 3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1I_EVENT.

The UE shall use the equation below for evaluation of reporting event 1i:

Equation 1

$$10 \cdot \log M_i - H_{1i} + O_i > T_{1i},$$

Equation 2

$$10 \cdot \log M_i - H_{1i} + O_i < T_{1i},$$

The variables in the formula are defined as follows:

M_i is the Timeslot ISCP of the currently evaluated cell i expressed in mW

O_i is the cell individual offset of the currently evaluated cell i

T_{1i} is the Threshold for event 1i

H_{1i} is the hysteresis parameter for the event 1i.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

Figure 14.1.3.3-1: An ISCP value of a timeslot exceeds a certain threshold

14.1.4 Event-triggered periodic intra-frequency measurement reports (informative)

14.1.4.1 Cell addition failure (FDD only)

Figure 14.1.4.1-1: Periodic reporting triggered by event 1A

When a cell enters the reporting range and triggers event 1A, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in an update of the active set. However, in some situations the UTRAN may be unable to add a strong cell to the active set typically due to capacity shortage for example.

The UE shall continue reporting after the initial report by reverting to periodical measurement reporting if the reported cell is not added to the active set. This is illustrated in Figure 14.1.4.1-1. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the reporting range.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the reporting range; or
- 1> the UTRAN has added cells to the active set so that it includes the maximum number of cells (defined by the **reporting deactivation threshold** parameter), which are allowed for event 1A to be triggered; or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero event-triggered periodic measurement reporting shall not be applied.

14.1.4.1a Cell removal failure (FDD only)

Figure 14.1.4.1a: Periodic reporting triggered by event 1B

When a cell enters the removal range and triggers event 1B, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the removal of the weakest active cell. If the UTRAN is unable to receive MEASUREMENT REPORT after the maximum retransmission, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1a. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the removal range; or
- 1> the UTRAN has removed cells from the active set so that there are no longer the minimum amount of active cells for event 1B to be triggered; or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the "amount of reporting" parameter).

The reporting period is assigned by the UTRAN (with the "Reporting interval" parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

14.1.4.2 Cell replacement failure (FDD only)

Figure 14.1.4.1-2: Periodic reporting triggered by event 1C

When a cell enters the replacement range and triggers event 1C, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the replacement of the weakest active cell. If the UTRAN is unable to replace the cell due to for example capacity shortage, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1-2. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the replacement range.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the replacement range; or
- 1> the UTRAN has removed cells from the active set so that there are no longer the minimum amount of active cells for event 1C to be triggered (as defined by the **replacement activation threshold** parameter); or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

14.1.5 Mechanisms available for modifying intra-frequency measurement reporting behaviour (informative)

14.1.5.1 Hysteresis

To limit the amount of event-triggered reports, a hysteresis parameter may be connected with each reporting event given above. The value of the hysteresis is given to the UE in the Reporting criteria field of the Measurement Control message.

In the example in Figure 14.1.5.1-1, the hysteresis ensures that the event 1D (FDD) or IG(TDD) (primary CPICH(FDD)/CCPCH(TDD) 2 becomes the best cell) is not reported until the difference is equal to the hysteresis value. The fact that primary CPICH(FDD)/CCPCH(TDD) 1 becomes best afterwards is not reported at all in the example since the primary CPICH(FDD)/CCPCH(TDD) 1 does not become sufficiently better than the primary CPICH(FDD)/CCPCH(TDD) 2.

Figure 14.1.5.1-1: Hysteresis limits the amount of measurement reports

14.1.5.2 Time-to-trigger

To limit the measurement signalling load, a time-to-trigger parameter could be connected with each reporting event given above. The value of the time-to-trigger is given to the UE in the Reporting criteria field of the Measurement Control message.

The effect of the time-to-trigger is that the report is triggered only after the conditions for the event have existed for the specified time-to-trigger. In the following FDD example in Figure 14.1.5.2-1, the use of time-to-trigger means that the event (primary CPICH 3 enters the reporting range) is not reported until it has been within the range for the time given by the time-to-trigger parameter.

Figure 14.1.5.2-1: Time-to-trigger limits the amount of measurement reports

In the following TDD example in Figure 14.1.5.2-2, the use of time-to-trigger means that the event (Timeslot ISCP upon certain threshold) is not reported until it has been upon the threshold for the time given by the time-to trigger parameter.

Figure 14.1.5.2-2: Time-to-trigger limits the amount of measurement reports

NOTE: The time-to-trigger could be combined with hysteresis, i.e. a hysteresis value is added to the measurement quantity before evaluating if the time-to-trigger timer should be started.

14.1.5.3 Cell individual offsets

For each cell that is monitored, an offset can be assigned with inband signalling. The offset can be either positive or negative. The offset is added to the measurement quantity before the UE evaluates if an event has occurred. The UE receives the cell individual offsets for each primary CPICH(FDD)/CCPCH(TDD) in the IE "Cell individual offset" included in the IE "Cell info" associated with each measurement object included in the MEASUREMENT CONTROL message.

For the FDD example, in Figure 14.1.5.3-1, since an offset is added to primary CPICH 3, it is the dotted curve that is used to evaluate if an event occurs. Hence, this means that measurement reports from UE to UTRAN are triggered when primary CPICH plus the corresponding offset, i.e. the dotted curve, leaves and enters the reporting range and when it gets better than primary CPICH 1 (if these events have been ordered by UTRAN). This offset mechanism provides the network with an efficient tool to change the reporting of an individual primary CPICH.

By applying a positive offset, as in Figure 14.1.5.3-1, the UE will send measurement reports as if the primary CPICH is offset x dB better than what it really is. This could be useful if the operator knows that a specific cell is interesting to monitor more carefully, even though it is not so good for the moment. In the example in Figure 14.1.5.3-1, the operator might know by experience that in this area primary CPICH 3 can become good very quickly (e.g. due to street corners) and therefore that it is worth reporting more intensively. Depending on the implemented handover evaluation algorithm, this may result in the cell with primary CPICH 3 being included in the active set earlier than would have been the case without the positive offset.

Figure 14.1.5.3-1: A positive offset is applied to primary CPICH 3 before event evaluation in the UE

For the TDD example, in Figure 14.1.5.3-2, an offset is added to primary CCPCH2, it is the dotted curve that is used to evaluate if the primary CCPCH2 becomes better than primary CCPCH1 (ordered by the UTRAN).

Figure 14.1.5.3-2: A positive offset is applied to primary CCPCH 2

Correspondingly, the operator can choose to apply a negative offset to a primary CCPCH. Then the reporting on that primary CCPCH is limited and the corresponding cell may be, at least temporarily excluded from the active set or as a target cell for handover.

It is important to note that the offset is added before triggering events, i.e. the offset is added by the UE before evaluating if a measurement report should be sent as opposed to offsets that are applied in the network and used for the actual handover evaluation. It should also be noted that the cell individual offset is not used in all measurement reporting events, and that it is not applied to all events in the same way.

14.1.5.4 Forbid a Primary CPICH to affect the reporting range (FDD only)

The reporting range affects the reporting events 1A and 1B presented above. The reporting range is defined as a function of all the Primary CPICHs in the active set (see 14.1.2.1 and 14.1.2.2). If the parameter W is set to 0, the reporting range is defined relative to the best Primary CPICH. However, there could be cases where it is good to forbid a specific Primary CPICH to affect the reporting range. For example in Figure 14.1.5.4-1 the network has requested the UE to not let Primary CPICH 3 affect the reporting range. This mechanism could be effective if the operator knows by experience that the quality of Primary CPICH 3 is very unstable in a specific area and therefore should not affect the reporting of the other Primary CPICHs.

The UE shall ignore that a Primary CPICH is forbidden to affect the reporting range if all of the following conditions are fulfilled:

- the Primary CPICH is included in active set; and
- all cells in active set are defined as Primary CPICHs forbidden to affect the reporting range.

Figure 14.1.5.4-1: Primary CPICH 3 is forbidden to affect the reporting range

14.1.6 Report quantities in intra-frequency measurements

The quantities that the UE shall report to UTRAN when the event is triggered for an intra-frequency measurement are given by the IE "Intra-frequency reporting quantity" stored for this measurement and can be the following:

- 1 SFN-SFN observed time difference
- 2 Cell synchronisation information
- 3 Cell Identity
- 4 Downlink E_c/N_0 (FDD).
- 5 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP}.$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP}.$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).
- 7 ISCP measured on Timeslot basis. (TDD)

8 Proposed TGSN (TDD)

A description of those values can be found in [7] and [8].

14.2 Inter-frequency measurements

14.2.0a Inter-frequency measurement quantities

The two first measurement quantities listed below are used by the UE to evaluate whether an inter-frequency measurement event has occurred or not, through the computation of a frequency quality estimate. The quantity to use to compute the frequency quality estimate for an inter-frequency measurement is given in the "Inter-frequency measurement quantity" stored for that measurement.

- 1 Downlink Ec/No (FDD)
- 2 Downlink received signal code power (RSCP) after despreading.
- 3 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP}.$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP}.$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

A description of those values can be found in [7] and [8].

14.2.0b Frequency quality estimate

14.2.0b.1 FDD cells

The frequency quality estimate used in events 2a, 2b 2c, 2d, 2e and 2f is defined as:

$$Q_{frequency_j} = 10 \cdot \log M_{frequency_j} = W_j \cdot 10 \cdot \log \left(\sum_{i=1}^{N_{A,j}} M_{i,j} \right) + (1 - W_j) \cdot 10 \cdot \log M_{Best,j},$$

The variables in the formula are defined as follows ("the virtual active set on frequency j" should be understood as the active set if frequency j is the used frequency. If frequency j is a non-used frequency, the way the virtual active set is initiated and updated is described in subclause 14.11):

$Q_{frequency_j}$ is the estimated quality of the virtual active set on frequency j.

$M_{frequency_j}$ is the estimated quality of the virtual active set on frequency j.

$M_{i,j}$ is a measurement result of cell i in the virtual active set on frequency j.

$N_{A,j}$ is the number of cells in the virtual active set on frequency j.

$M_{Best,j}$ is the measurement result of the cell in the virtual active set on frequency j with the highest measurement result.

W_j is a parameter sent from UTRAN to UE and used for frequency j.

If the measurement result is CPICH-Ec/No then $M_{Frequency}$, M_{ij} and M_{Best} are expressed as ratios.

If the measurement result is CPICH-RSCP or CCPCH-RSCP then $M_{Frequency}$, M_{ij} and M_{Best} are expressed in mW.

14.2.0b.2 TDD cells

$$Q_{i,frequency\ j} = 10 \cdot \log M_i + O_{i,j},$$

$Q_{i,frequency\ j}$ is the estimated quality of cell i on frequency j.

M_i is the measurement result for Primary CCPCH RSCP of cell i on the primary frequency expressed in mW.

$O_{i,j}$ is the cell individual offset of the currently evaluated cell i on frequency j. O_{ij} is set by IE "Cell individual offset"

14.2.0c Inter-frequency reporting quantities

The quantities that the UE shall report for each cell to UTRAN when the event is triggered for an inter-frequency measurement is given by the "Inter-frequency reporting quantity" IE stored for this measurement and can be the following, from 1 to 8. The quantity number 9 can be reported for each frequency that triggered the report.

- 1 Cell identity
- 2 SFN-SFN observed time difference
- 3 Cell synchronisation information
- 4 Downlink Ec/No (FDD)
- 5 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP}.$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP}.$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).
- 7 ISCP measured on Timeslot basis. (TDD)
- 8 Proposed TGSN (TDD)
- 9 UTRA carrier RSSI

A description of those values can be found in [7] and [8].

14.2.1 Inter-frequency reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are evaluated with respect to one of the measurement quantities given in subclause 14.2.0a. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. A "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection. An exception to the definition of used and non-used frequency is the frequency of the secondary serving HS-DSCH cell which shall be treated as a non-used frequency for measurement purposes.

The "monitored set on non-used frequency" consists of cells in "cells for measurement" (or all cells in CELL_INFO_LIST if "cells for measurement" is not present) that are not part of the virtual active set on that non-used frequency.

When one inter-frequency measurement identity corresponds to multiple inter-frequency events with identical event identities, the UE behaviour is not specified.

14.2.1.1 Event 2a: Change of best frequency.

When event 2a is configured in the UE within a measurement, the UE shall:

- 1> when the measurement is initiated or resumed:
- 2> store the used frequency in the variable BEST_FREQUENCY_2A_EVENT.
- 1> if equation 1 below has been fulfilled for a time period indicated by "Time to trigger" for a frequency included for that event and which is not stored in the variable BEST_FREQUENCY_2A_EVENT:
 - 2> send a measurement report with IEs set as below:
 - 3> set in "inter-frequency measurement event results":
 - 4> "inter-frequency event identity" to "2a"; and
 - 4> "Frequency info" to the frequency that triggered the event; and
 - 4> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cells parameters ID" of the best primary CCPCH for TDD cells on that frequency, not taking into account the cell individual offset.
 - 3> if a non-used frequency triggered the measurement report:
 - 4> include in IE "Inter-frequency measured results list" the measured results for the non-used frequency that triggered the event, not taking into account the cell individual offset.
 - 3> if the used frequency triggered the measurement report:
 - 4> do not include the IE "Inter-frequency measured results list" in the measurement report.
 - 3> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset;
 - 2> update the variable BEST_FREQUENCY_2A_EVENT with that frequency.

Equation 1:

$$Q_{NotBest} \geq Q_{Best} + H_{2a}/2$$

The variables in the formula are defined as follows:

$Q_{Not\ Best}$ is the quality estimate of a frequency not stored the "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

Q_{Best} is the quality estimate of the frequency stored in "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

H_{2a} is the hysteresis parameter for the event 2a in that measurement.

14.2.1.2 Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

When an inter-frequency measurement configuring event 2b is set up, the UE shall:

- 1> create a variable TRIGGERED_2B_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 2b is configured in the UE within a measurement, the UE shall:

- 1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:
- 2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT:
- 3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;
- 3> send a measurement report with IEs set as below:
 - 4> set in "inter-frequency measurement event results":
 - 5> "inter-frequency event identity" to "2b"; and
 - 5> for each non-used frequency that triggered the event, beginning with the best frequency:
 - 6> "Frequency info" to that non-used frequency; and
 - 6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.
 - 4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;
 - 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
- 1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:
 - 2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.
- 1> if equation 4 below is fulfilled for the used frequency:
 - 2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ db} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

H_{2b} is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

H_{2b} is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Nonused} < T_{Nonused2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

H_{2b} is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

H_{2b} is the hysteresis parameter for the event 2b.

14.2.1.3 Event 2c: The estimated quality of a non-used frequency is above a certain threshold

When an inter-frequency measurement configuring event 2c is set up, the UE shall:

- 1> create a variable TRIGGERED_2C_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 2c is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":
- 2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2C_EVENT:
- 3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2C_EVENT into that variable;
- 3> send a measurement report with IEs set as below:
- 4> set in "inter-frequency measurement event results":
- 5> "inter-frequency event identity" to "2c"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2 not taking into account the cell individual offset.

1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2C_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2C_EVENT.

Triggering condition:

Equation 1:

$$Q_{\text{Non used}} \geq T_{\text{Non used } 2c} + H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{\text{Non used}}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{\text{Non used } 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

H_{2c} is the hysteresis parameter for the event 2c.

Leaving triggered state condition:

Equation 2:

$$Q_{\text{Non used}} < T_{\text{Non used } 2c} - H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{\text{Non used}}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2C_EVENT.

$T_{\text{Non used } 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

H_{2c} is the hysteresis parameter for the event 2c.

14.2.1.4 Event 2d: The estimated quality of the currently used frequency is below a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2d is set up, the UE shall:

1> create a variable TRIGGERED_2D_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When event 2d is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":

2> if the variable TRIGGERED_2D_EVENT is set to FALSE:

3> set the variable TRIGGERED_2D_EVENT to TRUE;

3> send a measurement report with IEs set as below:

- 4> set in "inter-frequency event results": "inter-frequency event identity" to "2d" and no IE "Inter-frequency cells", not taking into account the cell individual offset;
- 4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;
- 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the variable TRIGGERED_2D_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

- 2> set the variable TRIGGERED_2D_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \leq T_{Used2d} - H_{2d}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

T_{Used2d} is the absolute threshold that applies for the used frequency and event 2d.

H_{2d} is the hysteresis parameter for the event 2d.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} > T_{Used2d} + H_{2d}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

T_{Used2d} is the absolute threshold that applies for the used frequency and event 2d.

H_{2d} is the hysteresis parameter for the event 2d.

14.2.1.5 Event 2e: The estimated quality of a non-used frequency is below a certain threshold

When an inter-frequency measurement configuring event 2e is set up, the UE shall:

- 1> create a variable TRIGGERED_2E_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 2e is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":
- 2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2E_EVENT:
- 3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2E_EVENT into that variable;
- 3> send a measurement report with IEs set as below:
- 4> set in "inter-frequency measurement event results":

- 5> "inter-frequency event identity" to "2e"; and
- 5> for each non-used frequency that triggered the event, beginning with the best frequency:
 - 6> "Frequency info" to that non-used frequency; and
 - 6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.
 - 4> include in the IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;
 - 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
- 1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2E_EVENT:
 - 2> remove that non-used frequency from the variable TRIGGERED_2E_EVENT.

Triggering condition:

Equation 1:

$$Q_{\text{Non used}} \leq T_{\text{Non used}2e} - H_{2e}/2$$

The variables in the formula are defined as follows:

$Q_{\text{Non used}}$ is the quality estimate of a non-used frequency that becomes worse than an absolute threshold.

$T_{\text{Non used}2e}$ is the absolute threshold that applies for that non-used frequency for that event.

H_{2e} is the hysteresis parameter for the event 2e.

Leaving triggered state condition:

Equation 2:

$$Q_{\text{Non used}} > T_{\text{Non used}2e} + H_{2e}/2$$

The variables in the formula are defined as follows:

$Q_{\text{Non used}}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2E_EVENT.

$T_{\text{Non used}2e}$ is the absolute threshold that applies for that non-used frequency for that event.

H_{2e} is the hysteresis parameter for the event 2e.

14.2.1.6 Event 2 f: The estimated quality of the currently used frequency is above a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2f is set up, the UE shall:

- 1> create a variable TRIGGERED_2F_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When event 2f is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":
- 2> if the variable TRIGGERED_2F_EVENT is set to FALSE:

- 3> set the variable TRIGGERED_2F_EVENT to TRUE;
- 3> send a measurement report with IEs set as below:
 - 4> set in "inter-frequency event results": "inter-frequency event identity" to "2f", and no IE "Inter-frequency cells";
 - 4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;
 - 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
- 1> if the variable TRIGGERED_2F_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:
 - 2> set the variable TRIGGERED_2F_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \geq T_{Used2f} + H_{2f}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

T_{Used2f} is the absolute threshold that applies for the used frequency and event 2f.

H_{2f} is the hysteresis parameter for the event 2f.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} < T_{Used2f} - H_{2f}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used frequency.

T_{Used2f} is the absolute threshold that applies for the used frequency and event 2f.

H_{2f} is the hysteresis parameter for the event 2f.

14.3 Inter-RAT measurements

14.3.0a Inter-RAT measurement quantities

A measurement quantity is used by the UE to evaluate whether an inter-RAT measurement event has occurred or not.

The measurement quantity for UTRAN is used to compute the frequency quality estimate for the active set, as described in the next subclause, and can be:

- 1 Downlink Ec/No.
- 2 Downlink received signal code power (RSCP) after despreading.

The measurement quantity for GSM can be:

- 1 GSM Carrier RSSI

The measurement quantity for E-UTRA can be:

- 1 E-UTRA RSRP

2 E-UTRA RSRQ

A description of those values can be found in [7] and [8].

14.3.0b Frequency quality estimate of the UTRAN frequency

The estimated quality of the active set in UTRAN in event 3a is defined as:

$$Q_{UTRAN} = 10 \cdot \log M_{UTRAN} = W \cdot 10 \cdot \log \left(\sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \log M_{Best},$$

The variables in the formula are defined as follows:

Q_{UTRAN} is the estimated quality of the active set on the currently used UTRAN frequency.

M_{UTRAN} is the estimated quality of the active set on currently used UTRAN frequency expressed in another unit.

M_i is the measurement result of cell i in the active set, according to what is indicated in the IE "Measurement quantity for UTRAN quality estimate".

N_A is the number of cells in the active set.

M_{Best} is the measurement result of the cell in the active set with the highest measurement result.

W is a parameter sent from UTRAN to UE.

If the measurement result is CPICH-Ec/No M_{UTRAN} , M_i and M_{Best} are expressed as ratios.

If the measurement result is CPICH-RSCP or PCCPCH-RSCP, M_{UTRAN} , M_i and M_{Best} are expressed in mW.

14.3.0c Inter-RAT reporting quantities

The quantities that the UE shall report to UTRAN when the event is triggered for an inter-RAT measurement are given by the IE "Inter-RAT reporting quantity" stored for that measurement, and can be the following:

In the case the other RAT is GSM:

- 1 GSM carrier RSSI

In the case the other RAT is E-UTRA:

- 1 Measurement Quantity: In case the measurement quantity is RSRP then only RSRP is reported; in case the measurement quantity is RSRQ then only RSRQ is reported.
- 2 Both: both RSRP and RSRQ are reported.

A description of those values can be found in [7], [8] and [74].

14.3.1 Inter-RAT reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message the UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are measured with respect to one of the measurement quantities given in subclause 14.3.0a, and of the frequency quality estimate given in subclause 14.3.0b. For UTRAN the measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. For other RATs the measurement quantities are system-specific. A "used UTRAN frequency" is a frequency that the UE have been ordered to measure upon and is also currently used for the connection to UTRAN. "Other system" is e.g. GSM or E-UTRA.

In the text below describing the events:

- "The BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement" shall be understood as the BCCH ARFCN and BSIC combinations of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL_INFO LIST.
- "The BCCH ARFCNs considered in that inter-RAT measurement" shall be understood as the BCCH ARFCNs of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL_INFO LIST.
- "The E-UTRA frequencies considered in that inter-RAT measurement" shall be understood as the E-UTRA frequencies whose EARFCNs are included in the variable EUTRA_FREQUENCY_INFO LIST.

When one inter-RAT measurement identity corresponds to multiple inter-RAT events with identical event identities, the UE behaviour is not specified.

14.3.1.1 Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

When an inter-RAT measurement configuring event 3a is set up, the UE shall:

- 1> create a variable TRIGGERED_3A_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3a is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
 - 2> if equations 1 and 2 below have both been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
 - 3> if the Inter-RAT cell id of any of those GSM cells is not stored in the variable TRIGGERED_3A_EVENT:
 - 4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable.
 - 4> send a measurement report with IEs set as below:
 - 5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
 - 5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
 - 2> if equation 4 is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3A_EVENT:
 - 3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3A_EVENT.
 - 2> if equation 3 is fulfilled for the used frequency in UTRAN:
 - 3> clear the variable TRIGGERED_3A_EVENT.
 - 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
 - 2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several BCCH ARFCNs considered in that inter-RAT measurement:
 - 3> if any of those BCCH ARFCNs is not stored into the variable TRIGGERED_3A_EVENT:

- 4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;
- 4> send a measurement report with IEs set as below:
 - 5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
 - 5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
- 2> if equation 4 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3A_EVENT:
 - 3> remove that BCCH ARFCN from the variable TRIGGERED_3A_EVENT.
- 2> if equation 3 is fulfilled for the used frequency in UTRAN:
 - 3> clear the variable TRIGGERED_3A_EVENT.
- 1> if the other RAT is E-UTRA:
 - 2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:
 - 3> if any of those E-UTRA cells are not stored into the variable TRIGGERED_3A_EVENT:
 - 4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;
 - 4> send a measurement report with IEs set as below:
 - 5> in "E-UTRA event results": "inter-RAT event identity" to "3a", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);
 - 5> "E-UTRA measured results" according to subclause 8.6.7.5.
 - 2> if equation 4 is fulfilled for a cell that is stored in the variable TRIGGERED_3A_EVENT:
 - 3> remove that cell from the variable TRIGGERED_3A_EVENT.
 - 2> if equation 3 is fulfilled for the used frequency in UTRAN:
 - 3> clear the variable TRIGGERED_3A_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Used} \leq T_{Used} - H_{3a}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used UTRAN frequency.

T_{Used} is the absolute threshold that applies for the used frequency in that measurement.

H_{3a} is the hysteresis parameter for event 3a.

Equation 2:

$$M_{OtherRAT} + CIQ_{OtherRAT} \geq T_{OtherRAT} + H_{3a}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

H_{3a} is the hysteresis parameter for event 3a.

Leaving triggered state conditions:

Equation 3:

$$Q_{Used} > T_{Used} + H_{3a}/2$$

The variables in the formula are defined as follows:

Q_{Used} is the quality estimate of the used UTRAN frequency.

T_{Used} is the absolute threshold that applies for the used frequency in that measurement.

H_{3a} is the hysteresis parameter for event 3a.

Equation 4:

$$M_{Other\ RAT} + CIO_{Other\ RAT} < T_{Other\ RAT} - H_{3a}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

H_{3a} is the hysteresis parameter for event 3a.

14.3.1.2 Event 3b: The estimated quality of other system is below a certain threshold

When an inter-RAT measurement configuring event 3b is set up, the UE shall:

- 1> create a variable TRIGGERED_3B_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3b is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
- 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
- 3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3B_EVENT:
 - 4> store the inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;
 - 4> send a measurement report with IEs set as below:
 - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;
 - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3B_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3B_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3B_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 below is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3B_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3B_EVENT.

1> if the other RAT is E-UTRA:

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:

3> if any of those E-UTRA cells is not stored into the variable TRIGGERED_3B_EVENT:

4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "E-UTRA event results": "inter-RAT event identity" to "3b", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (worst one first);

5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 2 below is fulfilled for a cell that is stored in the variable TRIGGERED_3B_EVENT:

3> remove that cell from the variable TRIGGERED_3B_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT} + CIO_{Other\ RAT} \leq T_{Other\ RAT} - H_{3b}/2$$

The variables in the formula are defined as follows:

M_{Other RAT} is the measurement quantity for the cell of the other system.

CIO_{Other RAT} is the cell individual offset for the cell of the other system.

T_{Other RAT} is the absolute threshold that applies for the other system in that measurement.

H_{3b} is the hysteresis parameter for event 3b.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT} + CIO_{Other\ RAT} > T_{Other\ RAT} + H_{3b}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

H_{3b} is the hysteresis parameter for event 3b.

14.3.1.3 Event 3c: The estimated quality of other system is above a certain threshold

When an inter-RAT measurement configuring event 3c is set up, the UE shall:

- 1> create a variable TRIGGERED_3C_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3c is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
- 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
- 3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3C_EVENT:
 - 4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;
 - 4> send a measurement report with IEs set as below:
 - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
 - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
- 2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3C_EVENT:
 - 3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3C_EVENT.
- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
- 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:
- 3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3C_EVENT:
 - 4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;
 - 4> send a measurement report with IEs set as below:
 - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3C_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3C_EVENT.

1> if the other RAT is E-UTRA:

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:

3> if any of those E-UTRA cells is not stored into the variable TRIGGERED_3C_EVENT:

4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "E-UTRA event results": "inter-RAT event identity" to "3c", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);

5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 2 is fulfilled for a cell that is stored in the variable TRIGGERED_3C_EVENT:

3> remove that cell from the variable TRIGGERED_3C_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT} + CIO_{Other\ RAT} \geq T_{Other\ RAT} + H_{3c}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

H_{3c} is the hysteresis parameter for event 3c.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT} + CIO_{Other\ RAT} < T_{Other\ RAT} - H_{3c}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

H_{3c} is the hysteresis parameter for event 3c.

14.3.1.4 Event 3d: Change of best cell in other system

When an inter-RAT measurement configuring event 3d is set up, the UE shall:

1> create a variable BEST_CELL_3D_EVENT related to that measurement;

1> delete this variable when the measurement is released.

When event 3d is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the Inter-RAT cell id of the GSM cell that has the best measured quantity among the GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement, not taking into account the cell individual offset of the GSM cells;

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 1 has been fulfilled for a time period indicated by "time to trigger" for a GSM cell that is different from the one stored in BEST_CELL_3D_EVENT and that matches any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> store the Inter-RAT cell id of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell is now stored in BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the BCCH ARFCN of the GSM cell that has the best measured quantity among the BCCH ARFCNs considered in that inter-RAT measurement;

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCCH ARFCN that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one of the BCCH ARFCNs considered in that inter-RAT measurement and different from the one stored in BEST_CELL_3D_EVENT:

3> store the BCCH ARFCN of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCCH ARFCN that is now stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the other RAT is E-UTRA:

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the EARFCN and Physical Cell Identity of the E-UTRA cell that has the best measured quantity among the EARFCNs considered in that inter-RAT measurement;

3> send a measurement report with IE set as below:

4> set in "E-UTRA measurement results": "inter-RAT event identity" to "3d", and "E-UTRA Carrier Frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for a cell on one of the EARFCNs considered in that inter-RAT measurement and different from the cell stored in BEST_CELL_3D_EVENT:

3> store the EARFCN and Physical Cell Identity of that E-UTRA cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "E-UTRA event results": "inter-RAT event identity" to "3d", and "E-UTRA carrier frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are now stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

Equation 1:

$$M_{New} \geq M_{Best} + H_{3d}/2$$

The variables in the formula are defined as follows:

M_{New} is the measurement quantity for a cell of the other system that is not stored in the variable BEST_CELL_3D_EVENT.

M_{Best} is the measurement quantity for a cell of the other system that is stored in the variable BEST_CELL_3D_EVENT.

H_{3d} is the hysteresis parameter for event 3d.

14.3.2 GSM measurements in compressed mode

14.3.2.1 GSM RSSI measurements

The UE shall perform GSM RSSI measurements in the gaps of compressed mode pattern sequence specified for GSM RSSI measurement purpose.

14.3.2.2 Initial BSIC identification

The UE shall perform Initial BSIC identification in compressed mode pattern sequence specified for Initial BSIC identification measurement purpose.

The parameter "N identify abort" in the IE "DPCH compressed mode info" indicates the maximum number of patterns that the UE shall use to attempt to decode the unknown BSIC of the GSM cell in the initial BSIC identification procedure.

The BSIC identification procedure is defined in detail in [19].

14.3.2.3 BSIC re-confirmation

The UE shall perform BSIC re-confirmation in compressed mode pattern sequence specified for BSIC re-confirmation measurement purpose.

The parameter "T reconfirm abort" in the IE "DPCH compressed mode info" indicates the maximum time allowed for the re-confirmation of the BSIC of one GSM cell in the BSIC re-confirmation procedure.

The BSIC re-confirmation procedure is defined in detail in [19].

14.3.3 E-UTRA measurements in compressed mode

14.3.3.1 E-UTRA RSRP measurements

The UE shall perform E-UTRA RSRP measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

14.3.3.2 E-UTRA RSRQ measurements

The UE shall perform E-UTRA RSRQ measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

14.4 Traffic Volume Measurements

14.4.1 Traffic Volume Measurement Quantity

Traffic volume measurements may be configured by RRC to assist with dynamic radio bearer control. The reported quantities that can be configured are:

- 1 Buffer Occupancy.
- 2 Average of Buffer Occupancy.
- 3 Variance of Buffer Occupancy.

A description of these values can be found in [15].

When a report is triggered, the UE shall provide the requested quantities for the acknowledged and unacknowledged mode RBs mapped onto the transport channels identified.

When the RLC buffer payload, Average of RLC buffer payload or Variance of RLC buffer payload is reported, the measured quantity shall be rounded upwards to the closest higher value possible to report. When the measured quantity is over the highest value possible to report, it shall be set to the highest value.

14.4.2 Traffic Volume reporting triggers

Traffic volume measurement reports can be triggered using two different mechanisms, periodical and event triggered. The reporting criteria are specified in the measurement control message.

All the specified events are evaluated with respect to the Transport Channel Traffic Volume (TCTV). This quantity is equal to the sum of the Buffer Occupancy for all logical channels mapped onto a transport channel. The events on a given transport channel shall be evaluated at least at every TTI (may be more often) as described in [15].

When one traffic volume measurement identity corresponds to multiple traffic volume events with identical event identities for the same transport channel, the UE behaviour is not specified.

When a traffic volume measurement is set up, the UE shall:

- 1> for FDD, if variable READY_FOR_COMMON_EDCH is set to TRUE:

- 2> if one transport channel that is referenced in the IE "Traffic volume measurement object" as "DCH" and IE "measurement validity" is set to "all states except CELL_DCH":
 - 3> the uplink transport channel on which the UE is supposed to report in CELL_FACH state is of type E-DCH.
 - 1> for 1.28 Mcps TDD, if one transport channel that is referenced in the IE "Traffic volume measurement object" as "USCH" and the IE "UL target transport channel id" is set to 32 and and IE "measurement validity" is set to "all states" or "all states except CELL_DCH":
 - 2> the uplink transport channel on which the UE is supposed to report is of type E-DCH.
 - 1> if the IE "report criteria" is set to "Traffic volume measurement reporting criteria":
 - 2> for each IE "Parameters sent for each transport channel":
 - 3> if the IE "Uplink transport channel type" is not included; or
 - 3> if the IE "Uplink Transport Channel Type" has the value "DCH" or "USCH" and the IE "UL transport channel id" is not included:
 - 4> for each IE "Parameters required for each Event":
 - 5> for each uplink transport channel on which the UE is supposed to report (see below):
 - 6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".
 - 3> else:
 - 4> for each IE "Parameters required for each Event":
 - 5> for the uplink transport channel defined by the IEs "Uplink transport channel type" and "UL transport channel id":
 - 6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".
 - 1> else:
 - 2> if the IE "report criteria" is set to "Periodical reporting criteria":
 - 2> configure periodical triggers with period equal to the value in the IE "Reporting Interval" and with number of transmissions equal to the value in the IE "Amount of reporting" for the measurement identified by the IE "Measurement Identity".
- For each transport channel for which an event trigger has been configured, the UE shall:
- 1> for each event configured for this transport channel:
 - 2> if the TCTV is larger than the threshold in IE "Reporting threshold" at TVM setup or modify; or
 - 2> if the TCTV becomes larger than the threshold in IE "Reporting threshold" while the event is configured:
 - 3> if the IE "Traffic volume event identity" has value "4a":
 - 4> if the IE "Time to trigger" is not present; and
 - 4> if the Pending-time-after-trigger timer for this event is not active:
 - 5> if the IE "Pending time after trigger" is included:
 - 6> start the Pending-time-after-trigger timer for this event with the value in this IE.
 - 5> trigger a report for the measurement identified by the IE "Measurement Identity".

4> else:

5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

3> if the IE "Traffic volume event identity" has value "4b":

4> if the Time-to-trigger timer for this event is active:

5> stop this timer.

2> if the TCTV is smaller than the threshold in IE "Reporting threshold" at TVM setup or modify; or

2> if the TCTV becomes smaller than the threshold in IE "Reporting threshold" while the event is configured:

3> if the IE "Traffic volume event identity" has value "4a":

4> if the Time-to-trigger timer for this event is active:

5> stop this timer.

3> if the IE "Traffic volume event identity" has value "4b":

4> if the IE "Time to trigger" is not present; and

4> if the Pending-time-after-trigger timer for this event is not active:

5> if the IE "Pending time after trigger" is included:

6> start the Pending-time-after-trigger timer for this event with the value in this IE.

5> trigger a report for the measurement identified by the IE "Measurement Identity".

4> else:

5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When the Time-to-trigger timer for an event elapses:

1> if the Pending-time-after-trigger timer for this event is not active:

2> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;

2> if the IE "Pending time after trigger" is included:

3> start the Pending-time-after-trigger timer for this event with the value in this IE.

When the Pending-time-after-trigger for an event elapses:

1> if the IE "Traffic volume event identity" has value "4a":

2> if the TCTV is larger than the threshold in IE "Reporting threshold":

3> if the IE "Time to trigger" is not present:

4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;

4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".

3> else:

4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

1> if the IE "Traffic volume event identity" has value "4b":

2> if the TCTV is smaller than the threshold in IE "Reporting threshold":

3> if the IE "Time to trigger" is not present:

- 4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;
- 4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".
- 3> else:
 - 4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When a periodical trigger elapses, the UE shall:

- 1> trigger a report for the measurement identified by the IE "Measurement Identity";
- 1> if the number of reports triggered by this periodical trigger reaches the value in the IE "Amount of reporting":
- 2> disable this periodical trigger.

When a report is triggered for a given IE "Measurement Identity", the UE shall:

- 1> consider the variable MEASUREMENT_IDENTITY corresponding to this measurement identity;
- 1> if the report is triggered by an event trigger:
 - 2> include the IE "Event results";
 - 2> if variable READY_FOR_COMMON_EDCH is set to FALSE:
 - 3> set the IE "Uplink transport channel type causing the event" to the type of the transport channel which triggered the report;
 - 3> if the transport channel type is "DCH" or "USCH":
 - 4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.
 - 3> else:
 - 4> not include the IE "UL Transport Channel identity".
 - 2> else:
 - 3> for FDD:
 - 4> set the IE "Uplink transport channel type causing the event" to the value "DCH";
 - 4> include the IE "UL Transport Channel identity" and set it to any value.
 - 3> for 1.28 Mcps TDD:
 - 4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.
 - 2> set the IE "Traffic volume event identity" to the identity of the event that triggered the report;
 - 2> if the IE "Tx interruption after trigger" for the event that triggered the report is included:
 - 3> if the UE is in CELL_FACH state and
 - 3> if the variable READY_FOR_COMMON_EDCH is set to FALSE:
 - 4> prohibit DTCH transmissions on the RACH;
 - 4> if the Tx interruption timer is not running; or
 - 4> if the Tx interruption timer is running and still has a value larger than the IE "Tx interruption after trigger" for the event, i.e. it was started earlier by another event with a larger value in IE "Tx interruption after trigger":

- 5> start the Tx interruption timer with the value in the IE "Tx interruption after trigger" for this event.
- 4> when it receives from the UTRAN a message causing the transition to CELL_DCH state; or
- 4> when the Tx interruption timer elapses:
 - 5> stop the timer;
 - 5> resume these transmissions.
- 1> if the IE "Traffic volume measurement object" is not included:
 - 2> report on all the uplink transport channels as specified below.
- 1> if the IE "Traffic volume measurement object" is included:
 - 2> report on the uplink transport channels identified in this IE as specified below.
- 1> for each UM or AM RB mapped onto a transport channel on which the UE is expected to report:
 - 2> add an element in the IE "Traffic volume measurement results";
 - 2> set the value of the IE "RB Identity" to the identity of the considered radio bearer;
 - 2> if the RB is mapped onto one logical channel:
 - 3> if the IE "RLC Buffer Payload for each RB" is set to TRUE:
 - 4> include the IE "RLC Buffers Payload" and set it to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.
 - 3> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
 - 4> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
 - 3> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
 - 4> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
 - 2> if the RB is mapped onto two logical channels:
 - 3> if one logical channel is mapped onto transport channels on which the UE is supposed to report:
 - 4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:
 - 5> include and set the IE "RLC Buffers Payload" to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.
 - 4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
 - 5> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
 - 4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
 - 5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
 - 3> if both logical channels are mapped onto transport channels on which the UE is supposed to report:
 - 4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:

- 5> include and set the IE "RLC Buffers Payload" to the sum of the Buffer Occupancy values for the two logical channels, rounded up to the next allowed value.
- 4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
- 5> include and set the IE "Average of RLC Buffer Payload" to the sum of the Buffer Occupancy for the two logical channels averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.
- 4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
- 5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the sum of the Buffer Occupancy for the two logical channels, computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.

14.4.2.1 Reporting event 4 A: Transport Channel Traffic Volume becomes larger than an absolute threshold

Figure 14.4.2.1-1: Event triggered report when Transport Channel Traffic Volume becomes larger than a certain threshold

If the monitored Transport Channel Traffic Volume (TCTV) [15] is larger than an absolute threshold at TVM setup or modify, or is larger at activation of the monitored transport channel, or becomes larger than an absolute threshold while the event is configured i.e. if $\text{TCTV} > \text{Reporting threshold}$, this event could trigger a report. The event could be triggered again only if TCTV becomes smaller than the Reporting threshold and later $\text{TCTV} > \text{Reporting threshold}$ is verified again.

14.4.2.2 Reporting event 4 B: Transport Channel Traffic Volume becomes smaller than an absolute threshold

Figure 14.4.2.1-2: Event triggered report when Transport Channel Traffic Volume becomes smaller than certain threshold

If the monitored Transport Channel Traffic Volume (TCTV) [15] is smaller than an absolute threshold at TVM setup or modify, or is smaller at activation of the monitored transport channel, or becomes smaller than an absolute threshold while the event is configured i.e. if $\text{TCTV} < \text{Reporting threshold}$, this event could trigger a report. The event could be triggered again only if TCTV becomes bigger than the Reporting threshold and later $\text{TCTV} < \text{Reporting threshold}$ is verified again.

14.4.3 Traffic volume reporting mechanisms

Traffic volume measurement triggering could be associated with both a *time-to-trigger* and a *pending time after trigger*. The time-to-trigger is used to get time domain hysteresis, i.e. the condition must be fulfilled during the time-to-trigger time before a report is sent. Pending time after trigger is used to limit consecutive reports when one traffic volume measurement report already has been sent and enables periodic reporting while the TCTV remains above(4a) or below(4b) the threshold. This is described in detail below.

14.4.3.1 Pending time after trigger

This timer is started in the UE when a measurement report has been triggered by a given event. The UE is then forbidden to send new measurement reports triggered by the same event during this time period. Instead the UE waits until the timer has expired. If the Transport Channel Traffic Volume [15] is still above the threshold for event 4a, or below the threshold for event 4b when the timer expires, the UE sends a new measurement report, and the timer is restarted. Otherwise it waits for a new triggering.

Figure 14.4.3.1-1: Pending time after trigger limits the amount of consecutive measurement reports

Figure 14.4.3.1-1 shows that by increasing the pending time after trigger a triggered second event does not result in a measurement report. The figure assumes absence of the IE "Time to trigger".

14.4.3.2 Time-to-trigger

The timer is started in the UE when the Transport Channel Traffic Volume triggers the event. If the TCTV crosses the threshold before the timer expires, the timer is stopped. If the timer expires then a report is triggered.

Figure 14.4.3.1-2: Time-to-trigger is used to achieve time hysteresis

Figure 14.4.3.1-2 shows that by increasing the time-to-trigger the report is not triggered.

14.4.4 Interruption of user data transmission

By including the IE "Tx Interruption after trigger", a UE in CELL_FACH state may be instructed by the UTRAN to prohibit transmission of user data on the RACH temporarily after a measurement report has been triggered.

The UE shall only resume transmission of user data, when:

- 1> it receives from the UTRAN a message allocating a dedicated physical channel, leading to the transition to CELL_DCH state; or

1> the time period indicated by the IE "Tx Interruption after trigger" elapses.

The transmission on signalling radio bearers shall not be interrupted.

14.5 Quality Measurements

14.5.1 Quality reporting measurement quantities

For quality measurements, the following measurement quantities are used:

1. Downlink transport channel BLER
2. Timeslot SIR (TDD only)

14.5.2 Quality reporting events

When one measurement identity corresponds to multiple quality events for the same transport channel, the UE behaviour is not specified.

14.5.2.1 Reporting event 5A: A predefined number of bad CRCs is exceeded

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the amount of bad CRCs during a predefined sliding window exceeds a predefined number.

The following three parameters are used in the scheme:

- **Total CRC** = the length of the sliding window over which the number of bad CRCs are counted.
- **Bad CRC** = the number of bad CRC that is required within the latest "Total CRC" received CRCs for the event to be triggered.
- **Pending after trigger** = a new event can not be triggered until "Pending after trigger" CRCs have been received,

When a DCH is established, the UE shall begin to count the number of bad CRCs within the last "Total CRC" received CRCs. No event can be triggered until at least "Total CRC" CRCs have been received. For each new received CRC, the UE shall compare the number of bad CRCs within the latest "Total CRC" received CRCs with the parameter "Bad CRC". An event shall be triggered if the number of bad CRCs is equal or larger than "Bad CRC".

At the time when the event is triggered a pending time after trigger timer is started with the length of "Pending after trigger" CRCs. A new event can not be triggered until Pending after trigger" CRCs have been received. When Pending after trigger" CRCs have been received the event evaluation start again and a new event can be triggered.

Figure 14.5.2.1-1: Event triggered CRC error reporting

14.6 UE internal measurements

14.6.1 UE internal measurement quantities

For UE internal measurements the following measurement quantities exist:

1. UE transmission (Tx) power, for TDD measured on a timeslot basis.
2. UE received signal strength power (RSSI).
3. UE Rx-Tx time difference (FDD only).
4. T_{ADV} (1.28 Mcps TDD).

14.6.2 UE internal measurement reporting events

In the Measurement reporting criteria field in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE internal measurement reporting events that can trigger a report are given below. The reporting events are marked with vertical arrows in the figures below. All events can be combined with time-to-trigger.

NOTE: The reporting events are numbered 6A, 6B, 6C,.. where 6 denotes that the event belongs to the type UE internal measurements.

When one measurement identity corresponds to multiple internal events with identical event identities, the UE behaviour is not defined.

14.6.2.1 Reporting event 6A: The UE Tx power becomes larger than an absolute threshold

When a UE internal measurement configuring event 6a is set up, the UE shall:

- 1> create a variable TRIGGERED_6A_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power (for TDD within a single TS) is greater than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6A_EVENT is set to FALSE:

3> set the variable TRIGGERED_6A_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6a";

4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.

- 1> if the variable TRIGGERED_6A_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is less or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6A_EVENT to FALSE.

14.6.2.2 Reporting event 6B: The UE Tx power becomes less than an absolute threshold

When a UE internal measurement configuring event 6b is set up, the UE shall:

- 1> create a variable TRIGGERED_6B_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power (for TDD within a single TS) is less than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":
- 2> if the variable TRIGGERED_6B_EVENT is set to FALSE:
 - 3> set the variable TRIGGERED_6B_EVENT to TRUE;
 - 3> send a measurement report with IEs set as below:
 - 4> set in "UE internal measurement event results": "UE internal event identity" to "6b";
 - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
- 1> if the variable TRIGGERED_6B_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is greater or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY:
 - 2> set the variable TRIGGERED_6B_EVENT to FALSE.

Figure 14.6.2.2-1: Event-triggered measurement reports when the UE Tx power becomes larger or less than absolute thresholds

14.6.2.3 Reporting event 6C: The UE Tx power reaches its minimum value

When a UE internal measurement configuring event 6c is set up, the UE shall:

- 1> create a variable TRIGGERED_6C_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power is equal its minimum value (for TDD its minimum value on a single TS) for a time period indicated by the IE "time_to_trigger":
- 2> if the variable TRIGGERED_6C_EVENT is set to FALSE:
 - 3> set the variable TRIGGERED_6C_EVENT to TRUE;
 - 3> send a measurement report with IEs set as below:

- 4> set in "UE internal measurement event results": "UE internal event identity" to "6c";
 - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
- 1> if the variable TRIGGERED_6C_EVENT is set to TRUE and if the UE Tx power is greater than its minimum value:
- 2> set the variable TRIGGERED_6C_EVENT to FALSE.

Figure 14.6.2.3-1: Event-triggered measurement report when the UE Tx power reaches its minimum value

14.6.2.4 Reporting event 6D: The UE Tx power reaches its maximum value

When a UE internal measurement configuring event 6d is set up, the UE shall:

- 1> create a variable TRIGGERED_6D_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power equals the maximum power the UE can transmit, i.e. the maximum UE TX power reduced by the power reduction used by the UE (for TDD its maximum value on a single TS) for a time period indicated by the IE "time_to_trigger":
- 2> if the variable TRIGGERED_6D_EVENT is set to FALSE:
 - 3> set the variable TRIGGERED_6D_EVENT to TRUE;
 - 3> send a measurement report with IEs set as below:
 - 4> set in "UE internal measurement event results": "UE internal event identity" to "6d";
 - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
- 1> if the variable TRIGGERED_6D_EVENT is set to TRUE and if the UE Tx power is less than the maximum UE TX power:
 - 2> set the variable TRIGGERED_6D_EVENT to FALSE.

NOTE: The maximum UE TX power is defined in subclause 8.6.6.8 and the maximum allowed power reduction is defined in subclause 6.2.2 in [21].

Figure 14.6.2.4-1: Event-triggered report when the UE Tx power reaches its maximum value

14.6.2.5 Reporting event 6E: The UE RSSI reaches the UE's dynamic receiver range

When a UE internal measurement configuring event 6e is set up, the UE shall:

- 1> create a variable TRIGGERED_6E_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE RSSI is greater or equal the UE's dynamic receiver range for a time period indicated by the IE "time_to_trigger":
- 2> if the variable TRIGGERED_6E_EVENT is set to FALSE:
 - 3> set the variable TRIGGERED_6E_EVENT to TRUE;
 - 3> send a measurement report with IEs set as below:
 - 4> set in "UE internal measurement event results": "UE internal event identity" to "6e";
 - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.
- 1> if the variable TRIGGERED_6E_EVENT is set to TRUE and if the UE RSSI is less than the UE's dynamic receiver range:
 - 2> set the variable TRIGGERED_6E_EVENT to FALSE.

14.6.2.6 Reporting event 6F (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

- 1> create a variable TRIGGERED_6F_EVENT related to that measurement, which shall initially be set to FALSE for each RL;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Rx-Tx time difference for a RL included in the active set is greater than the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":
- 2> if the variable TRIGGERED_6F_EVENT is set to FALSE for this RL:

- 3> set the variable TRIGGERED_6F_EVENT to TRUE for this RL;
- 3> send a measurement report with IEs set as below:
 - 4> set in "UE internal measurement event results": "UE internal event identity" to "6f";
 - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.
- 1> if the variable TRIGGERED_6F_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is less than or equal to the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY:
 - 2> set the variable TRIGGERED_6F_EVENT to FALSE for this RL.

14.6.2.6a Reporting event 6F (1.28 Mcps TDD): The time difference indicated by T_{ADV} becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

- 1> create a variable TRIGGERED_6F_EVENT related to that measurement, which shall initially be set to the currently measured T_{ADV} ;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the absolute value of the difference between the measured T_{ADV} and the T_{ADV} stored in the variable TRIGGERED_6F_EVENT is greater than the predefined threshold configured with the IE " T_{ADV} Threshold" for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":
 - 2> set the variable TRIGGERED_6F_EVENT to the currently measured T_{ADV} ;
 - 2> send a measurement report with IEs set as below:
 - 3> set the IE " T_{ADV} " to the measured value, and the IE "SFN" to the SFN during which the latest measurement was performed, in the IE " T_{ADV} Info";
 - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

14.6.2.7 Reporting event 6G: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

When a UE internal measurement configuring event 6g is set up, the UE shall:

- 1> create a variable TRIGGERED_6G_EVENT related to that measurement, which shall initially be set to FALSE for each RL;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Rx-Tx time difference for a RL included in the active set is less than the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":
 - 2> if the variable TRIGGERED_6G_EVENT is set to FALSE for this RL:
 - 3> set the variable TRIGGERED_6G_EVENT to TRUE for this RL;
 - 3> send a measurement report with IEs set as below:
 - 4> set in "UE internal measurement event results": "UE internal event identity" to "6g";
 - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

1> if the variable TRIGGERED_6G_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is greater or equal the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6G_EVENT to FALSE for this RL.

14.7 UE positioning measurements

14.7.1 UE positioning measurement quantities

The quantity to measure for UE positioning is dependent on the positioning method and the method type requested in the IE "UE positioning reporting quantity".

- 1 SFN-SFN observed time difference type 2, optional.
- 2 Rx-Tx time difference type 2, optional.
- 3 GPS timing of cell frames, optional.

The definition of other GPS measurements is not within the scope of this specification.

14.7.2 Void

14.7.3 UE positioning reporting events

In the IE "UE positioning reporting criteria" in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE positioning reporting events that can trigger a report are given below. The content of the measurement report is dependant on the positioning method and method type requested in the IE "UE positioning reporting quantity" of the Measurement Control message and is described in detail in [18].

When one measurement identity corresponds to multiple positioning events with identical event identities, the UE behaviour is not defined.

14.7.3.1 Reporting Event 7a: The UE position changes more than an absolute threshold

This event is used for UE-based methods only.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE changes its position compared to the last reported position by more than the threshold defined by the IE "Threshold position change"; or
- 1> if no position has been reported since the event was configured and the UE changes its position compared to the first position estimate obtained after the event was configured by more than the threshold defined by the IE "Threshold position change":
- 2> send a measurement report as specified in subclause 8.6.7.19.1b;
- 2> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:
 - 3> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.
- 2> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:
 - 3> delete this event from the list of events in variable MEASUREMENT_IDENTITY.
- 1> if the UE is unable to evaluate the event because a position measurement is not available:
 - 2> not send a report.

14.7.3.2 Reporting Event 7b: SFN-SFN measurement changes more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the SFN-SFN time difference measurement type 2 of any measured cell changes more than the threshold defined by the IE "Threshold SFN-SFN change"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-based":
 - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted":
 - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted preferred but UE-based allowed" or "UE-based preferred but UE-assisted allowed":
 - 2> the UE may choose to act according to either subclause 8.6.7.19.1a or 8.6.7.19.1b.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:
 - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:
 - 2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

14.7.3.3 Reporting Event 7c: GPS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the GPS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GPS TOW"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":
 - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":
 - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":
 - 2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:
 - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:
 - 2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

14.7.3.4 Reporting Event 7d: GANSS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the GANSS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GANSS TOW"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":
 - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":
 - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":
 - 2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:
 - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:
 - 2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

14.8 Void

14.9 Downlink power control

14.9.1 Generalities

This function is implemented in the UE in order to set the SIR target value on each CCTrCH used for the downlink power control. This SIR value shall be adjusted according to an autonomous function in the UE in order to achieve the same measured quality as the quality target set by UTRAN. The quality target is set as the transport channel BLER value for each transport channel as signalled by UTRAN.

When transport channel BLER is used the UE shall run a quality target control loop such that the quality requirement is met for each transport channel, which has been assigned a BLER target.

The UE shall set the SIR target when the physical channel has been set up or reconfigured. It shall not increase the SIR target value before the power control has converged on the current value. The UE may estimate whether the power control has converged on the current value, by comparing the averaged measured SIR to the SIR target value.

NOTE: The power control function for F-DPCH is specified in [29].

14.9.2 Downlink power control in compressed mode

In compressed mode, the target SIR needs to be changed in several frames compared to normal mode. For this purpose, four values DeltaSIR1, DeltaSIRafter1, DeltaSIR2 and DeltaSIRafter2 are signalled by the UTRAN to the UE (see subclause 10.3.6.33).

For each frame, the target SIR offset during compressed mode, compared to normal mode is:

$$\Delta\text{SIR} = \max(\Delta\text{SIR}_1\text{compression}, \dots, \Delta\text{SIR}_n\text{compression}) + \Delta\text{SIR}_1\text{coding} + \Delta\text{SIR}_2\text{coding}$$

where n is the number of TTI lengths for all TrChs of the CCTrCh, F_i is the length in number of frames of the i-th TTI and where $\Delta\text{SIR_coding}$ fulfils:

- $\Delta\text{SIR}_1\text{coding} = \text{DeltaSIR}_1$ if the start of the first transmission gap in the transmission gap pattern is within the current frame.
- $\Delta\text{SIR}_1\text{coding} = \text{DeltaSIR}_{\text{after}1}$ if the current frame just follows a frame containing the start of the first transmission gap in the transmission gap pattern.
- $\Delta\text{SIR}_2\text{coding} = \text{DeltaSIR}_2$ if the start of the second transmission gap in the transmission gap pattern is within the current frame.
- $\Delta\text{SIR}_2\text{coding} = \text{DeltaSIR}_{\text{after}2}$ if the current frame just follows a frame containing the start of the second transmission gap in the transmission gap pattern.
- $\Delta\text{SIR}_1\text{coding} = 0$ and $\Delta\text{SIR}_2\text{coding} = 0$ otherwise.

and $\Delta\text{SIR}_i\text{compression}$ is defined by :

- $\Delta\text{SIR}_i\text{compression} = 3$ dB for downlink frames compressed by reducing the spreading factor by 2.
- $\Delta\text{SIR}_i\text{compression} = 0$ dB in all other cases.

Several compressed mode patterns applying to the same frames should be avoided as much as possible.

In case several compressed mode patterns are used simultaneously, a ΔSIR offset is computed for each compressed mode pattern and the sum of all ΔSIR offsets is applied to the frame.

14.10 Calculated Transport Format Combination

The Calculated Transport Format Combination (CTFC) is a tool for efficient signalling of transport format combinations.

Let I be the number of transport channels that are included in the transport format combination. For DCHs, all configured DCHs are included in the transport format combination. Each transport channel TrCH_i , $i = 1, 2, \dots, I$, has L_i transport formats, i.e. the transport format indicator TFI_i can take L_i values, $\text{TFI}_i \in \{0, 1, 2, \dots, L_i - 1\}$.

Define $P_i = \prod_{j=0}^{i-1} L_j$, where $i = 1, 2, \dots, I$, and $L_0 = 1$.

Let $\text{TFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I)$ be the transport format combination for which TrCH_1 has transport format TFI_1 , TrCH_2 has transport format TFI_2 , etc. The corresponding $\text{CTFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I)$ is then computed as:

$$\text{CTFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I) = \sum_{i=1}^I \text{TFI}_i \cdot P_i.$$

For FACH and PCH transport channels, " TrCH_1 " corresponds to the transport channel listed at the first position in IE "FACH/PCH information" in IE "Secondary CCPCH System Information", " TrCH_2 " corresponds to the transport channel listed at the second position in IE "FACH/PCH information" and so on.

For all other transport channels in FDD and for all configured transport channels of the same transport channel type (i.e. DCH, DSCH, USCH) in TDD, " TrCH_1 " corresponds to the transport channel having the lowest transport channel identity in the transport format combination mapped to the TFCI field. " TrCH_2 " corresponds to the transport channel having the next lowest transport channel identity, and so on.

14.10.1 Default TFCS for MBMS

14.10.1.1 S-CCPCH configuration including a FACH carrying MSCH

In case the S-CCPCH configuration includes a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the FACH carrying MSCH, TrCH 2 be the first TrCH carrying MTCH listed in the IE "TrCh information list", TrCH 3 be the second TrCH carrying MTCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH carrying MTCH listed in the IE "TrCh information list".

Each transport channel TrCH_i, $i = 1, 2, \dots, I$, has L_i transport formats, i.e. the transport format indicator TFI_i can take L_i values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

$$\text{TFC} = (\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I).$$

The "MBMS implicit TFCS" contains then the following set of TFCs:

$$\begin{aligned} \text{TFCS} = \{ & (0,0,\dots,0), (0,1,\dots,0), \dots, (0,L_2,\dots,0), (0,0,1,\dots,0), \dots, (0,0,L_3,\dots,0), \dots, (0,0,0,\dots,1), \dots, (0,0,0,\dots,L_1), \\ & (1,0,\dots,0), (1,1,\dots,0), \dots, (1,L_2,\dots,0), (1,0,1,\dots,0), \dots, (1,0,L_3,\dots,0), \dots, (1,0,0,\dots,1), \dots, (1,0,0,\dots,L_1), \\ & (2,0,\dots,0), \dots, (L_1,0,\dots,0) \} \end{aligned}$$

14.10.1.2 S-CCPCH configuration not including a FACH carrying MSCH

In case the S-CCPCH configuration does not include a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the first TrCH listed in the IE "TrCh information list", TrCH 2 be the second TrCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH listed in the IE "TrCh information list".

Each transport channel TrCH_i, $i = 1, 2, \dots, I$, has L_i transport formats, i.e. the transport format indicator TFI_i can take L_i values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

$$\text{TFC} = (\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I).$$

The "MBMS implicit TFCS" contains then the following set of TFCs:

$$\text{TFCS} = \{ (0,\dots,0), (1,\dots,0), \dots, (L_1,\dots,0), (0,1,\dots,0), \dots, (0,L_2,\dots,0), \dots, (0,0,\dots,1), \dots, (0,0,\dots,L_1) \}$$

14.11 UE autonomous update of virtual active set on non-used frequency (FDD only)

In the text that follows:

- a "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection;
- a "non-used frequency (resp. cell) considered in an inter-frequency measurement" shall be understood as a non-used frequency (resp. cell) included in the list of cells pointed at in the IE "cells for measurement" if it was received for that measurement, or otherwise as a non-used frequency (resp. cell) included in the "Inter-frequency cell info" part of the variable CELL_INFO_LIST.

For event-triggered inter frequency measurements it is possible to use intra-frequency measurement reporting events for support of maintenance of an active set associated with a non-used frequency considered in that measurement, a "virtual

"active set" and used in the evaluation of the frequency quality estimates. The "initial virtual active set" for a frequency is the virtual active set that is associated to that frequency just after a message was received that sets up or modifies the inter-frequency measurement.

The way the virtual active sets are initiated and updated for the non-used frequencies considered in an inter-frequency measurement is described in the two subclauses below.

The UE shall support a single virtual active set per non-used frequency.

The virtual active set is not initialised and maintained for an inter frequency measurement with periodic reporting. A virtual active set initialised and maintained by another inter-frequency measurement does not affect reporting of the periodic inter-frequency measurement.

14.11.1 Initial virtual active set

If the UE receives a MEASUREMENT CONTROL message that sets up or modifies an inter-frequency measurement and includes the IE "Inter-frequency set update"; or

If at least one cell can be measured on a non-used frequency for which the current virtual active set is empty (see subclause 14.11.2), the UE shall:

1> for each non-used frequency F_i considered in the measurement where cells can be measured:

2> if event 1a is configured for the used frequency in an intra-frequency measurement:

3> include in the initial virtual active set the N_i cells that have either the greatest downlink E_c/N_0 or the greatest downlink RSCP after despreading or the lowest pathloss (the measurement quantity to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the event 1a configuration is taken), among the cells on frequency F_i considered in that inter-frequency measurement, where:

$$N_i = \min(N_{1a}, N_{\text{Cells } F_i}) \text{ if } N_{1a} \neq 0 \text{ and } N_i = N_{\text{Cells } F_i} \text{ otherwise.}$$

where:

N_{1a} is the "Reporting deactivation threshold" included in the intra-frequency measurement for the first event 1a defined in the intra-frequency measurement with the lowest identity at the time the inter-frequency measurement was received with the IE "Inter-frequency set update" present.

$N_{\text{Cells } F_i}$ is the number of cells on frequency F_i considered in that inter-frequency measurement.

2> else:

$$N_i = N_{\text{Cells } F_i}$$

where:

$N_{\text{Cells } F_i}$ is the number of cells on frequency F_i considered in that inter-frequency measurement.

NOTE1: The UE initialises the virtual active set with up to the maximum number of inter-frequency cells supported by the UE as defined in [19].

NOTE2: If the UTRAN configures more than one measurement using events 2A, 2B, 2C or 2E the UE measurement capabilities may be exceeded due to the necessary copying of 1A, 1B, 1C criteria. To avoid this the UTRAN may configure one measurement to apply to multiple frequencies so that the 1A, 1B, and 1C criteria will only be copied once.

NOTE3: After a hard handover (see subclause 8.3.5), if the MEASUREMENT CONTROL message that restarts an inter-frequency measurement using the virtual active set does not include the IE "Inter-frequency set update", the UE behaviour regarding the virtual active set is not specified.

14.11.2 Virtual active set update during an inter-frequency measurement

For an inter-frequency measurement, the UE shall:

- 1> apply the events of type 1a, 1b and 1c that were defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was last received with the IE "Inter-frequency set update" present; and
- 1> update the virtual active set for the non-used frequencies considered in that measurement according to the following rules:
 - 2> if several events of type 1a (resp. 1b, 1c) were defined for the used frequency when the inter-frequency measurement was last received with the IE "Inter-frequency set update" present, only the first 1a event (resp 1b, 1c) that was defined in the measurement with the lowest measurement identity shall apply to the non-used frequencies;
 - 2> all the cells considered in the inter-frequency measurements shall be able to affect the reporting range for event 1a and 1b. (i.e. the IE "Cells forbidden to affect reporting range" possibly stored for the intra-frequency measurements on the used frequency does not apply to the non-used frequencies considered in the inter-frequency measurement);
 - 2> the IEs "amount of reporting" and "reporting interval" that were stored for the intra-frequency measurements on the used frequency shall not be considered if reports of the virtual active set updates are needed.
 - 2> the measurement quantity and filter coefficient to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the intra-frequency event configuration is taken.

NOTE: If the measurement quantity and filter coefficients to be used differ for the 1a, 1b, and 1c events applied then the UE behaviour is unspecified.

- 1> if event 1a is applicable to the non-used frequencies considered in the inter-frequency measurement, always only consider monitored cells that are not in the virtual active set for this event, and:
 - 2> when this event is triggered (according to the criteria described in subclause 14.1.2.1) by a cell for a non-used frequency considered in that measurement:
 - 3> if the "Reporting deactivation threshold" is equal to 0, or if the "Reporting deactivation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is less than or equal to the "Reporting deactivation threshold":
 - 4> add the primary CPICH that enters the reporting range to the "virtual active set".
 - 2> if event 1b is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider cells in the virtual active set for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.2) by a cell for a non-used frequency considered in that measurement:
 - 3> if the number of cells included in the virtual active set is greater than 1:
 - 4> remove the primary CPICH that leaves the reporting range from the "virtual active set".
 - 2> if event 1c is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider monitored cells for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.3) by a cell for a non-used frequency considered in that measurement:
 - 3> if the "Replacement activation threshold" is equal to 0, or if the "Replacement activation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is greater than or equal to the "Replacement activation threshold":
 - 4> rank all active and non-active primary CPICHs and take the n best cells to create a new "virtual active set", where n is the number of active primary CPICHs in the "virtual active set".
- 1> if Event 1a is not defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was set up:

2> the UE shall continuously update the virtual active set to consist of all cells on frequency F_i considered in that inter-frequency measurement.

NOTE: The UE needs to only update the virtual active set with up to the maximum number of interfrequency cells supported by the UE as defined in [19].

If none of the cells that are considered in the measurement on this frequency were measured, the UE may treat the virtual active set as empty and follow the appropriate initialisation procedure in subclause 14.11.1 when any relevant cell can first be measured.

If a cell is a member of the virtual active set and is removed from the variable CELL_INFO_LIST or removed from the list of cells pointed at by the IE "Cells for measurement" for the inter-frequency measurement then the UE shall remove the cell from the virtual active set.

If an inter-frequency measurement that initialised a virtual active set is released, then any virtual active set associated with this measurement shall also be released.

14.12 Provision and reception of RRC information between network nodes

14.12.0 General

In certain cases, e.g., when performing handover to UTRAN or when performing SRNC relocation, RRC information may need to be transferred between UTRAN nodes, between UTRAN and another RAT, between nodes within another RAT or between the UE and another RAT.

The RRC information exchanged between network nodes or between the UE and another RAT is typically transferred by means of RRC information containers. An RRC information container is a self-contained and extensible RRC information unit that may be used to transfer a number of different RRC messages, one at a time. As stated before, RRC information containers may be used to transfer RRC messages across interfaces other than the Uu interface. The RRC messages that may be included in RRC information containers have similar characteristics as the RRC messages that are transferred across the Uu interface.

The RRC messages that are sent to/ from the UE, e.g., HANDOVER TO UTRAN COMMAND, INTER RAT HANDOVER INFO are covered by (sub)clauses 8, 9, 10, 11.0-11.4 and 12 of this specification. The following subclauses concern RRC messages exchanged between network nodes.

In future versions of this specification, it is possible to extend the RRC messages transferred across interfaces other than Uu. For these RRC messages the same extension mechanism applies as defined for RRC messages transferred across the Uu interface, as is specified in subclause 10.1, i.e., both critical and non-critical extensions may be added.

The transfer syntax for RRC information containers and RRC messages transferred between network nodes is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned (X.691). It should be noted that the encoder adds final padding to achieve octet alignment. The resulting octet string is, carried in a container, transferred between the network nodes.

When using a separate RRC information container for each endpoint, the receiving RRC protocol entity is able to interpret the received container; this means that the receiver need not take into account information about the (network interface) message used in transferring the container.

The following encoding rules apply in addition to what has been specified in X.691 [49]:

1> When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

14.12.0a General error handling for RRC messages exchanged between network nodes

The error handling for RRC messages that are exchanged between network nodes applies the same principles as defined for other RRC messages.

Although the same principles apply for network nodes receiving unknown, unforeseen and erroneous RRC messages received in RRC information containers, the notification of the error should be done in a different manner, as specified in the following:

The network node receiving an invalid RRC message from another network node should:

- 1> if the received RRC message was unknown, unforeseen or erroneous:
- 2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to "Protocol error" and the IE "Protocol error information" including an IE "Protocol error cause" which should be set as follows:
 - 3> to "ASN.1 violation or encoding error" upon receiving an RRC message for which the encoded message does not result in any valid abstract syntax value;
 - 3> to "Message type non-existent or not implemented" upon receiving an unknown RRC message type;
 - 3> to "Message extension not comprehended" upon receiving an RRC message including an undefined critical message extension;
 - 3> to "Information element value not comprehended" upon receiving an RRC message including an mandatory IE for which no default value is defined and for which either the value is set to spare or for which the encoded IE does not result in a valid transfer syntax. The same applies for conditional IEs, for which the conditions for presence are met, the IE is present but has a value set to spare or for which the encoded IE does not result in a valid transfer syntax;
 - 3> to "Information element missing" upon receiving an RRC information container with an absent conditional IE for which the conditions for presence are met.

- 1> if there was another failure to perform the operation requested by the received RRC message:

- 2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to a value that reflects the failure cause.

- 1> send the RRC FAILURE INFO message to the network node from which the invalid RRC protocol information was received.

NOTE 1: The appropriate (failure) messages used across the network interfaces may not support the inclusion of a RRC information container. In this case, the information contained in the RRC FAILURE INFO message may need to be transferred otherwise e.g. by mapping to a cause value (e.g. a cause value in the RR-HANDOVER FAILURE message when there is an error associated with the RRC-HANDOVER TO UTRAN COMMAND message).

NOTE 2 In case the RRC procedure used to perform SRNS relocation fails e.g. due to non comprehension, the source RNC may notify the target RNC by including the diagnostics information (IEs "Protocol error" and "Protocol error information") in the "RRC message "SRNS Relocation" Info sent in the RRC information container" used for a subsequent relocation request.

14.12.1 RRC Information to target RNC

The RRC information container "RRC Information to target RNC" may either be sent from source RNC or from another RAT. In case of handover to UTRAN, this information originates from another RAT, while in case of SRNC relocation the RRC information originates from the source RNC. In case of handover to UTRAN, the RRC information transferred may provide UTRAN specific information, as defined in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, that the target RNC needs when preparing the handover command message. In case of SRNC relocation and handover/cell reselection from GERAN *Iu mode*, the RRC information transferred specifies the configuration of RRC and the lower layers it controls, e.g., including the radio bearer and transport channel configuration. It is used by the target RNC to initialise RRC and the lower layer protocols to facilitate SRNC relocation and handover/cell reselection from GERAN *Iu mode* in a manner transparent to the UE.

RFC 3095 CONTEXT INFO is used to transfer the compressor and decompressor context information of the RFC 3095 protocol from source RNC to target RNC.

| Information Element/Group Name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--|---|---------|
| CHOICE case | MP | | | At least one spare choice, Criticality: Reject, is needed | |

14.12.4.2 | | |
| >RFC 3095 context info | | | RFC 3095 CONTEXT INFO
14.12.4.4 | | REL-5 |

14.12.2 RRC information, target RNC to source RNC

There are 2 possible cases for RNC relocation:

1. The UE is already under control of target RNC; and
2. The SRNC Relocation with Hard Handover (UE still under control of SRNC), but UE is moving to a location controlled by the target RNC (based on measurement information).

In case 1 the relocation is transparent to the UE and there is no "reverse" direction container. The SRNC just assigns the 'serving' function to the target RNC, which then becomes the Serving RNC.

In case 2 the relocation is initiated by SRNC, which also provides the RRC Initialisation Information to the target RNC. Base on this information, the target RNC prepares the Hard Handover Message ("Physical channel reconfiguration" (subclause 8.2.6), "radio bearer establishment" (subclause 8.2.1), "Radio bearer reconfiguration" (subclause 8.2.2), "Radio bearer release" (subclause 8.2.3) or "Transport channel reconfiguration" (subclause 8.2.4)).

In case 2 two possibilities are defined in order to transmit the relocation message from the target RNC to the source RNC which can be chosen by the source RNC by including or not including the IE "RB Id for handover message" in the IE "SRNS Relocation Info".

In case the IE "RB Id for handover message" has been received by the target RNC in the IE "SRNS Relocation Info", the target RNC should choose the IE "DL DCCH message" and include the DL DCCH message that should be transmitted transparently to the UE by the source RNC. In that case, the target RNC is integrity protecting the message if applicable.

If the target RNC did not receive the IE "RB Id for handover message" in the IE "SRNS Relocation Info" the target RNC should use another choice. In that case, the source RNC should integrity protect the message before transmitting it to the UE if applicable.

The source RNC then transmits the Handover Message to the UE, which then performs the handover.

In the successful case, the UE transmits an XXX COMPLETE message, using the new configuration, to the target RNC.

In case of failure, the UE transmits an XXX FAILURE, using the old configuration, to the source RNC and the RRC context remains unchanged (has to be confirmed and checked with the SRNS relocation procedure).

14.12.3 Void

14.12.4 RRC messages exchanged between network nodes

14.12.4.0 HANOVER TO UTRAN COMMAND

This RRC message is sent between network nodes to transfer the actual handover command including the details of the radio configuration to be used upon handover to UTRAN as compiled by the target RNC.

Direction: target RNC →source RAT

The message is exactly the same as the HANOVER TO UTRAN COMMAND defined in subclause 10.2.16a.

14.12.4.0a INTER RAT HANOVER INFO

This RRC message is sent between network nodes to transfer information relevant for the target RNC when preparing for handover to UTRAN.

Direction: source RAT node→target RAT node

The message is exactly the same as the INTER RAT HANOVER INFO defined in subclause 10.2.16d.

14.12.4.1 INTER RAT HANOVER INFO WITH INTER RAT CAPABILITIES

This RRC message is sent between network nodes when preparing for an inter RAT handover to UTRAN.

The radio access capabilities for the source RAT and target RAT shall always be included; the radio access capabilities for other RATs may be included if available at the source RAT.

Direction: source RAT→target RNC

| Failure cause | OP | | Failure cause 10.3.3.13 | Diagnostics information related to an earlier handover to UTRAN request | |
| Protocol error information | CV-ProtErr | | Protocol error information 10.3.8.12 | | |

| Condition | Explanation |
|-----------|---|
| ProtErr | This IE is mandatory present if the IE "Protocol error indicator" is included and has the value TRUE. Otherwise it is not needed. |

NOTE1: To facilitate that network nodes can transparently forward the RRC information received, the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES should include the entire INTER RAT HANDOVER INFO message. The network node, which may not be able to decode the information received, may only append some information to what was received.

NOTE2: The above table does not need to reflect the order of the information elements in the actual encoded message. The order, that is reflected in the ASN.1, should be chosen in a manner that avoids that network nodes need to perform reordering of information elements.

14.12.4.2 SRNS RELOCATION INFO

This RRC message is sent between network nodes when preparing for an SRNS relocation or a handover/cell reselection from GERAN *Iu mode*.

With the presence or absence of the IE "RB identity for Hard Handover message" the source RNC indicates to the target SRNC whether the source RNC expects to receive the choice "DL DCCH message" in the IE "RRC information, target RNC to source RNC" in case the SRNS relocation is of type "UE involved". Furthermore the target RNC uses this information for the calculation of the MAC-I.

Direction: source RNC/RAT→target RNC

| Information Element/Group Name | Need | Multi | Type and reference | Semantics description | Version |

| Condition | Explanation |
|-----------------|--|
| Setup | The IE is mandatory present when the IE Measurement command has the value "Setup", otherwise the IE is not needed. |
| Ciphering | The IE is mandatory present when the IE Ciphering Status has the value "started" and the ciphering counters need not be reinitialised, otherwise the IE is not needed. |
| IP | The IE is mandatory present when the IE Integrity protection status has the value "started" and the integrity protection counters need not be reinitialised, otherwise the IE is not needed. |
| ProtErr | This IE is mandatory present if the IE "Protocol error indicator" is included and has the value TRUE. Otherwise it is not needed. |
| SRB1 | The IE is mandatory present for RB1. Otherwise it is not needed. |
| Active | This IE is mandatory present when the value of the IE "Current TGPS Status Flag" is "Active" and not needed otherwise. |
| Initial BSIC | This IE is mandatory present when the value of the IE "TGMP" is set to "GSM Initial BSIC identification" and not needed otherwise. |
| Re-confirm BSIC | This IE is mandatory present when the value of the IE "TGMP" is set to "GSM BSIC re-confirmation" and not needed otherwise. |
| SF/2 | The IE is mandatory present if the IE 'Transmission Gap Pattern Sequence' is included and has the value 'SF/2' as the compressed mode method, and already sent the UE the IE 'Scrambling Code Change' for each RL in the active set. Otherwise the IE is not needed. |

14.12.4.3 Void

14.12.4.4 RFC 3095 CONTEXT INFO

This RRC message is sent between network nodes in SRNS relocation. It is used to transfer the compressor and decompressor context information of the RFC 3095 protocol.

Direction: source RNC → target RNC

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|-----------------------|-------------------------|--|---------|
| RFC 3095 context | MP | 1 to <maxRBall RABs> | | | REL-5 |

| | | | | the reference packet, respectively. The unit of SYN_SLOPE_TS depends on whether TS is scaled before compression or not. | |
| >>>DYN_CHANGED | MP | | Boolean | Information whether dynamic fields other than RTP SN, RTP TS and IP-ID have changed in the headers that are stored in the sliding window. Set to TRUE if changed and FALSE if not changed. | REL-5 |
| >>>Uplink RFC 3095 context | OP | | | | REL-5 |
| >>>Uplink RFC 3095 context identity | MP | | Integer (0..16383) | | REL-5 |
| >>>UL_MODE | MP | | Enumerated (u, o, r) | RFC 3095 mode in uplink | REL-5 |
| >>>REF_IR | MP | | Octet string (1..3000) | The RTP IR header (see section 5.7.7 of IETF RFC3095 for detailed format) corresponding to the last correctly decompressed header. | REL-5 |
| >>>REF_TIME | OP | | Integer (0..4294967295) | Arrival time (at the decompressor) of REF_IR in milliseconds. See sections 4.5.4 and 6.5.1 of RFC3095. | REL-5 |
| >>>CURR_TIME | OP | | Integer (0..4294967295) | Current time in milliseconds. See section 6.5.1 of RFC3095. | REL-5 |
| >>>SYN_OFFSET_ID | OP | | Integer (0..65535) | Last synchronized offset of IP-ID. See sections 4.5.5 and 6.5.1 of RFC3095 (termed "Offset_I").

It is related to the compression and decompression of IP-ID and is the synchronized offset between the IP-ID value and the SN value (in the same header) during the last SO state before the relocation | REL-5 |

| | | | | | |
|-----------------|----|--|--------------------------------|--|-------|
| | | | | procedure. | |
| >>>SYN_SLOPE_TS | OP | | Integer
(0..4294967
295) | Last synchronized slope of TS.
See sections 5.5.1.2 and 5.7 of RFC3095.

In SO state, $TS(n) = TS(m) + (n-m) * SYN_SLOPE_TS$, where n and m are, the RTP SN of the current and the reference packet, respectively. The unit of SYN_SLOPE_TS depends on whether TS is scaled before compression or not. | REL-5 |
| >>>REF_SN_1 | OP | | Integer
(0..65535) | Corresponds to the RTP Sequence Number of the predecessor of the latest RTP packet. This could be used to perform local repair of context by decompressor in U or O mode (see 'ref - 1' in section 5.3.2.2.5 in IETF RFC3095 for further explanation). | REL-5 |

Annex A (informative): USIM parameters

A.1 Introduction

This annex contains recommendations about the RRC parameters to be stored in the USIM.

A.2 Ciphering information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--|------|---------------------|--------------------|--|
| Cipher key for each CN domain | MP | <1 to maxCNDomains> | | Cipher key is described in [40]. |
| >CK | MP | | Bit string (128) | |
| Integrity key for each CN domain | MP | <1 to maxCNDomains> | | Integrity key is described in [40]. |
| >IK | MP | | Bit string (128) | |
| THRESHOLD | MP | | Bit string (20) | |
| START value for each CN domain | MP | <1 to maxCNDomains> | | START value is described in [40]. |
| >START | MP | | Bit string (20) | |
| KSI, Key set identifier for each CN domain | MP | <1 to maxCNDomains> | | Key set identifier is described in [40]. |
| >KSI | MP | | Bit string (3) | |

A.3 Frequency information

Neighbour cell list.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------------|------------------------------|--|---------|
| FDD cell list | OP | <1 to maxFDDFr eqList> | | | |
| >UARFCN downlink (Nd) | MP | | Integer(0 .. 16383) | [21] | |
| >Primary scrambling code | OP | <1 to maxFDDFr eqCellList> | Primary CPICH info 10.3.6.60 | | |
| 3.84 Mcps TDD cell list | OP | <1 to maxTDDFr eqList> | | | |
| >UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | |
| >Cell parameters ID | OP | <1 to maxTDDFr eqCellList> | Integer (0..127) | The Cell parameters ID is described in [32]. | |
| 1.28 Mcps TDD cell list | OP | <1 to maxTDDFr eqList> | | | REL-4 |
| >UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | REL-4 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------------|--------------------|--|---------|
| | | | 16383) | | |
| >Cell parameters ID | OP | <1 to maxTDDFr eqCellList> | Integer (0..127) | The Cell parameters ID is described in [32]. | REL-4 |
| GSM Neighbour cell list | OP | | | | |
| >GSM neighbour cell info | MP | <1 to maxGSMCellList> | | | |
| >>BSIC | MP | | | | |
| >>BCCH ARFCN | MP | | | | |

A.4 Multiplicity values and type constraint values

| Constant | Explanation | Value |
|------------------------------|--|-------|
| Ciphering information | | |
| maxCNDomains | Maximum number of CN domains | 4 |
| Frequency information | | |
| maxFDDFreqList | Maximum number of FDD carrier frequencies to be stored in USIM | 4 |
| maxTDDFreqList | Maximum number of TDD carrier frequencies to be stored in USIM | 4 |
| maxFDDFreqCellList | Maximum number of neighbouring FDD cells on one carrier to be stored in USIM | 32 |
| maxTDDFreqCellList | Maximum number of neighbouring TDD cells on one carrier to be stored in USIM | 32 |
| maxGSMCellList | Maximum number of GSM cells to be stored in USIM | 32 |

Annex B (informative): Description of RRC state transitions including GSM and E-UTRA

This annex contains Stage 2 description of RRC states and state transitions.

B.1 RRC states and state transitions

After power on, the UE stays in Idle Mode until it transmits a request to establish an RRC Connection. In Idle Mode the connection of the UE is closed on all layers of the access stratum. In Idle Mode the UE is identified by non-access stratum identities such as IMSI, TMSI and P-TMSI. In addition, the UTRAN has no own information about the individual Idle Mode UEs, and it can only address e.g. all UEs in a cell or all UEs monitoring a paging occasion. The UE behaviour within this mode is described in [4].

The UTRA RRC Connected Mode is entered when the RRC Connection is established. The UE is assigned a radio network temporary identity (RNTI) to be used as UE identity on common transport channels.

The RRC states within UTRA RRC Connected Mode reflect the level of UE connection and which transport channels that can be used by the UE.

For inactive stationary data users the UE may fall back to PCH on both the Cell and URA levels. That is, upon the need for paging, the UTRAN checks the current level of connection of the given UE, and decides whether the paging message is sent within the URA, or should it be sent via a specific cell.

B.2 Transition from Idle Mode to UTRA RRC Connected Mode

The transition to the UTRA RRC Connected Mode from the Idle Mode can only be initiated by the UE by transmitting a request for an RRC Connection. The event is triggered either by a paging request from the network or by a request from upper layers in the UE.

When the UE receives a message from the network that confirms the RRC connection establishment, the UE enters the CELL_FACH or CELL_DCH state of UTRA RRC Connected Mode.

In the case of a failure to establish the RRC Connection the UE goes back to Idle Mode. Possible causes are radio link failure, a received reject response from the network or lack of response from the network (timeout).

B.2.1 Transitions for Emergency Calls

Refer to [4] for all states and procedures referred to in this subclause. When UE leaves idle mode from state *Camped on any cell* in order to make an emergency call, moving to state *Connected mode (emergency calls only)*, the UE shall attempt to access the current serving cell. If the access attempt to the serving cell fails the UE shall use the *Cell Reselection* procedure. If no acceptable cell is found, the UE shall use the *Any cell selection*. When returning to idle mode, the UE shall use the procedure *Cell selection when leaving connected mode* in order to find an acceptable cell to camp on, state *Camped on any cell*.

B.3 UTRA RRC Connected Mode States and Transitions

B.3.1 CELL_DCH state

The CELL_DCH state is characterised by

- For TDD: A dedicated physical channel is allocated to the UE in uplink and downlink or a dedicated physical channel is allocated to the UE in the uplink and HS_DSCH_RECEPTION is set to TRUE.

- A dedicated physical channel is allocated to the UE in uplink and downlink.
- For TDD:
 - E_DCH_TRANSMISSION is set to TRUE and HS_DSCH_RECEPTION is set to TRUE.
 - E_DCH_TRANSMISSION is set to TRUE and a dedicated physical channel is allocated to the UE in the downlink.
- The UE is known on cell level according to its current active set.
- Dedicated transport channels, downlink and uplink (TDD) shared transport channels, and a combination of these transport channels can be used by the UE.

The CELL_DCH-state is entered from the Idle Mode through the setup of an RRC connection, or by establishing a dedicated physical channel from the CELL_FACH state.

In TDD a PDSCH may be assigned to the UE in this state, to be used for a DSCH. A PUSCH may also be assigned to the UE in this state, to be used for a USCH. If PDSCH or PUSCH are used for TDD, a FACH transport channel may be assigned to the UE for reception of physical shared channel allocation messages.

B.3.1.1 Transition from CELL_DCH to Idle Mode

Transition to Idle Mode is realised through the release of the RRC connection.

B.3.1.2 Transition from CELL_DCH to CELL_FACH state

Transition to CELL_FACH state occurs when all dedicated channels have been released, which may be

- a) via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

at the end of the time period for which the dedicated channel was allocated (TDD)

B.3.1.3 Transition from CELL_DCH to CELL_PCH state

Transition to CELL_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

B.3.1.4 Transition from CELL_DCH to URA_PCH state

Transition to URA_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

B.3.1.5 Radio Resource Allocation tasks (CELL_DCH)

For the DCH, several physical channel allocation strategies may be applied. The allocations can be either permanent (needing a DCH release message) or based on time or amount-of-data.

Resource allocation can be done separately for each packet burst with fast signalling on the DCH

For each radio frame the UE and the network indicate the current data rate (in uplink and downlink respectively) using the transport format combination indicator (TFCI). However, in TDD, DCH and DSCH or USCH may be mapped on different CCTrCHs, their TFCI are totally independent. DCH transmission is not modified by the simultaneous existence of DSCH/USCH. If the configured set of combinations (i.e. transport format set for one transport channel) are found to be insufficient to retain the QoS requirements for a transport channel, the network initiates a reconfiguration of the transport format set (TFS) for that transport channel. This reconfiguration can be done during or in between data transmission. Further, the network can reconfigure the physical channel allowing an increase or decrease of the peak data rate.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

B.3.1.6 RRC Connection mobility tasks (CELL_DCH)

Depending on the amount and frequency of data macrodiversity (soft handover) may or may not be applied.

The RRC Connection mobility is handled by measurement reporting, soft handover and Timing re-initialised or Timing-maintained hard handover procedures.

B.3.1.7 UE Measurements (CELL_DCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the connected mode measurement control information received in other states until new measurement control information has been assigned to the UE.

B.3.1.8 Acquisition of system information (CELL_DCH)

FDD UEs with certain capabilities reads system information broadcast on FACH.

TDD UEs reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

B.3.2 CELL_FACH state

The CELL_FACH state is characterised by:

- No dedicated physical channel is allocated to the UE.
- The UE continuously monitors in the downlink:
 - In 3.84 Mcps TDD and 7.68 Mcps TDD mode:
 - a FACH.
 - In FDD and 1.28 Mcps TDD mode:
 - a FACH; or
 - an HS-DSCHs and optionally a FACH for MBMS reception.
- The UE is assigned a default common or shared transport channel in the uplink (e.g. RACH or common E-DCH (FDD and 1.28 Mcps TDD only)) that it can use anytime according to the access procedure for that transport channel.
- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update.
- In TDD mode, one or several USCH or DSCH transport channels may have been established.

B.3.2.1 Transition from CELL_FACH to CELL_DCH state

A transition occurs, when a dedicated physical channel is established via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

B.3.2.2 Transition from CELL_FACH to CELL_PCH state

The transition occurs when UTRAN orders the UE to move to CELL_PCH state, which is done via explicit signalling (e.g. CELL UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

B.3.2.3 Transition from CELL_FACH to Idle Mode

Upon release of the RRC connection, the UE moves to the idle mode.

B.3.2.4 Transition from CELL_FACH to URA_PCH State

The transition occurs when UTRAN orders the UE to move to URA_PCH state, which is done via explicit signalling (e.g. URA UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

B.3.2.5 Radio Resource Allocation Tasks (CELL_FACH)

For 3.84 Mcps TDD and 7.68 Mcps TDD, in the CELL_FACH state the UE will monitor a FACH.

For FDD in the CELL_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception in CELL_FACH state or IE "HS-DSCH common system information" is not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 1.28 Mcps TDD in the CELL_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception or IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 3.84 Mcps TDD and 7.68 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH.

For FDD and 1.28 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH, if the UE does not support Enhanced Uplink in CELL_FACH state and Idle mode, and if IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE enabled to transmit uplink control signals and it may be able to transmit data packets on common E-DCH.

The network can assign the UE transport channel parameters (e.g. transport format sets) in advance, to be used when a DCH is used. Upon assignment of the physical channel for DCH, the UE moves to CELL_DCH state and uses the pre-assigned TFS for the DCH.

If no UE dedicated physical channel or transport channel configuration has been assigned, the UE uses the common physical channel and transport channel configuration according to the system information.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

When there is either user or control data to transmit, a selection procedure determines whether the data should be transmitted on a common transport channel, or if a transition to CELL_DCH should be executed. The selection is dynamic and depends on e.g. traffic parameters (amount of data, packet burst frequency).

In the TDD mode, the UTRAN can assign USCH / DSCH resources to the UE in CELL_FACH state. When USCH / DSCH resources are assigned, the UE will continue to monitor FACHs, depending on the UE capability. The UE may use the USCH / DSCH to transmit signalling messages or user data in the uplink and / or the downlink using USCH and / or DSCH when resources are allocated to cell and UE is assigned use of those USCH / DSCH.

For the uplink data transmission on USCH the UE reports to the network the traffic volume (current size of RLC data buffers), The UTRAN can use these measurement reports to re-evaluate the current allocation of the USCH / DSCH resources.

B.3.2.6 RRC Connection mobility tasks (CELL_FACH)

In this state the location of the UE is known on cell level. A cell update procedure is used to report to the UTRAN, when the UE selects a new cell to observe the common downlink channels of a new cell. Downlink data transmission on the FACH or HS-DSCH (FDD and 1.28 Mcps TDD only) can be started without prior paging.

The UE monitors the broadcast channel and system information on BCCH of its own and neighbour cells and from this the need for the updating of cell location is identified.

The UE performs cell reselection and upon selecting a new UTRA cell, it initiates a cell update procedure. Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

B.3.2.7 UE Measurements (CELL_FACH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

By default, the UE uses the measurement control information broadcast within the system information. However, for measurements for which the network also provides measurement control information within a MEASUREMENT CONTROL message, the latter information takes precedence.

B.3.2.8 Transfer and update of system information (CELL_FACH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

When the system information is modified, the scheduling information is updated to reflect the changes in system information transmitted on BCH. The new scheduling information is broadcast on FACH and/or on the common HS-DSCH(s) (FDD and 1.28 Mcps TDD only) in order to inform UEs about the changes. If the changes are applicable for the UE, the modified system information is read on BCH.

B.3.3 CELL_PCH state

The CELL_PCH state is characterised by:

- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, no dedicated physical channel is allocated to the UE.

For FDD, if "HS-DSCH paging system information" is included in System Information and the UE does support HS-DSCH reception in CELL_PCH and URA_PCH state, dedicated physical channel may be allocated to the UE.

- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.
- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL_PCH and URA_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.
- No uplink activity is possible.
- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update in CELL_FACH state.

The DCCH and DTCH logical channels can only be used in this state if HS-DSCH is used and a dedicated H-RNTI is configured and for 1.28 Mcps TDD a dedicated E-RNTI is configured. Otherwise, if the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel in the known cell to initiate any downlink activity.

B.3.3.1 Transition from CELL_PCH to CELL_FACH state

The UE is transferred to CELL_FACH state:

- a) by paging from UTRAN (PAGING TYPE1 message)
- b) through any uplink access

B.3.3.2 Radio Resource Allocation Tasks (CELL_PCH)

In CELL_PCH state no resources have been granted for data transmission. For this purpose, a transition to another state has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

B.3.3.3 RRC Connection mobility tasks (CELL_PCH)

In the CELL_PCH state, the UE mobility is performed through cell reselection procedures, which may differ from the one defined in [4].

The UE performs cell reselection and upon selecting a new UTRA cell, it moves to CELL_FACH state and initiates a cell update procedure in the new cell. After the cell update procedure has been performed, the UE changes its state back to CELL_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and make an access to that system according to its specifications.

In case of low UE activity, UTRAN may want to reduce the cell-updating overhead by ordering the UE to move to the URA_PCH State. This transition is made via the CELL_FACH state. UTRAN may apply an inactivity timer, and optionally, a counter, which counts the number of cell updates e.g. UTRAN orders the UE to move to URA_PCH when the number of cell updates has exceeded certain limits (network parameter).

B.3.3.4 UE Measurements (CELL_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

B.3.3.5 Transfer and update of system information (CELL_PCH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

B.3.4 URA_PCH State

The URA_PCH state is characterised by:

- No dedicated channel is allocated to the UE.
- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.

- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL_PCH and URA_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.
- No uplink activity is possible.
- The location of the UE is known on UTRAN Registration area level according to the URA assigned to the UE during the last URA update in CELL_FACH state.

The DCCH logical channel cannot be used in this state. If the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel within the URA where the location of the UE is known. If the UE needs to transmit anything to the network, it goes to the CELL_FACH state. The transition to URA_PCH State can be controlled with an inactivity timer, and optionally, with a counter that counts the number of cell updates. When the number of cell updates has exceeded certain limits (a network parameter), then the UE changes to the URA_PCH State.

URA updating is initiated by the UE, which, upon the detection of the Registration area, sends the network the Registration area update information on the RACH of the new cell.

B.3.4.1 Transition from URA_PCH State to CELL_FACH State (URA_PCH)

Any activity causes the UE to be transferred to CELL_FACH State.

- a) Uplink access is performed by RACH.
- b) by paging from UTRAN (PAGING TYPE1 message).

NOTE: The release of an RRC connection is possible in the URA_PCH state. UE in URA_PCH is able to go to idle when triggered by paging type 1 message in case "Release indicator" has the value "Release".

B.3.4.2 Radio Resource Allocation Tasks (URA_PCH)

In URA_PCH State no resources have been granted for data transmission. For this purpose, a transition to CELL_FACH State has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

B.3.4.3 RRC Connection mobility tasks (URA_PCH)

In URA_PCH State the location of a UE is known on UTRAN Registration area level.

In this state, the UE mobility is performed through URA reselection procedures, which may differ from the definitions in [4]. The UE performs cell reselection and upon selecting a new UTRA cell belonging to a URA that does not match the URA used by the UE, the UE moves to CELL_FACH state and initiates a URA update towards the network. After the URA update procedure has been performed, the UE changes its state back to URA_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

B.3.4.4 UE Measurements (URA_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

B.3.4.5 Transfer and update of system information (URA_PCH)

The same mechanisms to transfer and update system information as for state CELL_PCH are applicable for UEs in URA_PCH state.

B.3.5 States and Transitions for Cell Reselection in URA_PCH, CELL_PCH, and CELL_FACH

Figure B.3.5-1: UTRA RRC Connected mode cell reselection for URA_PCH, CELL_PCH, and CELL_FACH

In some states the UE performs cell reselection procedures. The UE selects a suitable cell (defined in [4]) and radio access technology based on connected mode radio measurements and cell reselection criteria.

Figure B.3.5-1 shows the states and procedures in the cell reselection process in connected mode.

When a cell reselection is triggered, the UE evaluates the cell reselection criteria based on radio measurements, and if a better cell is found that cell is selected, procedure Cell reselection (see [4]). If the change of cell implies a change of radio access technology, the RRC connection is released, and the UE enters idle mode of the other RAT. If no suitable cell is found in the cell reselection procedure, the UE eventually enters idle mode.

When an Initial cell reselection is triggered, the UE shall use the Initial cell reselection procedure (see [4]) to find a suitable cell. One example where this procedure is triggered is at radio link failure, where the UE may trigger an initial cell reselection in order to request re-establishment of the RRC connection. If the UE is unable to find a suitable cell, the UE eventually enters idle mode.

B.4 Inter-RAT handover with CS domain services

When using CS domain services, UTRAN is using an Inter-Radio access system Handover Procedure and GSM is using a Handover procedure for the transition from UTRA RRC Connected Mode to GSM Connected Mode.

B.5 Inter-RAT handover with PS domain services

When using PS domain services, the UE can initiate cell reselection from a GSM/GPRS cell to a UTRAN cell and then uses the RRC Connection Establishment procedure for the transition to UTRA RRC Connected mode. It is also possible for the BSS to initiate a UTRA Inter-RAT Handover to seamlessly relocate the UE to UTRAN. In this latter case there is no need to return the UE to Idle Mode (GPRS Packet Idle Mode) and the UE immediately moves to RRC connected state in the UTRAN.

In the case that cell reselection is used, when the RRC Connection is established from Idle Mode (GPRS Packet Idle Mode) the RRC CONNECTION REQUEST message contains an indication, that UTRAN needs to continue an already established GPRS UE context from the CN. This indication allows UTRAN to e.g. prioritise the RRC CONNECTION REQUEST from the UE.

It is possible for a E-UTRA eNodeB to initiate a Inter-RAT Handover to UTRAN to seamlessly relocate the UE to the RRC connected state in UTRAN.

In UTRA RRC connected mode UTRAN may use UE or network initiated cell reselection to change from a UTRAN cell to a GSM/GPRS cell. If the cell reselection was successful the UE enters Idle Mode (GPRS Packet Idle Mode). The UE sends a packet channel request from Idle Mode (GPRS Packet Idle mode) to establish a Temporary Block flow and enter GPRS Packet Transfer Mode. In the GPRS Packet Transfer Mode the UE sends a RA Update request message. The RA Update Request message sent from the UE contains an indication that GSM/GPRS need to continue an already established UTRAN UE context from the CN. This means that the RA Update request is always sent for the transition from UTRA RRC Connected Mode to GSM/GPRS regardless if the RA is changed or not.

Alternatively, the UTRAN may use an Inter-System Relocation (PS Handover) to relocate a UTRA RRC connected UE directly to GPRS Packet Transfer Mode in GERAN.

NOTE: The reason for using RA update instead of a new message is to reduce the impact on the existing GSM/GPRS specification.

The UTRAN may use an Inter-RAT Handover to relocate a UTRA RRC connected UE directly to RRC_CONNECTED mode in E-UTRAN.

B.6 Inter-RAT handover with simultaneous PS and CS domain services

B.6.1 Inter-RAT handover UTRAN to GSM / BSS

For a UE in CELL_DCH state using both CS and PS Domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from UTRAN.

The UE performs the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode first. When the UE has sent handover complete message to GSM / BSS the UE initiates a temporary block flow towards GPRS and sends a RA update request.

If the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode was successful the handover is considered as successful regardless if the UE was able to establish a temporary block flow or not towards GPRS.

In case of Inter-RAT handover failure the UE has the possibility to go back to UTRA RRC Connected Mode and re-establish the connection in the state it originated from.

B.6.2 Inter-RAT handover GSM / BSS to UTRAN

For a UE in GSM Connected Mode using both CS and PS domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from GSM / BSS.

The UE performs the Inter-RAT handover from GSM Connected Mode to UTRA RRC Connected Mode.

In UTRA RRC Connected Mode both services are established in parallel.

If the Inter-RAT handover from GSM Connected mode to UTRA RRC Connected Mode was successful the handover is considered as successful.

In case of Inter-RAT handover failure the UE has the possibility to go back to GSM Connected Mode and re-establish the connection in the state it originated from.

Annex C (informative):

Description for the Compressed Coding of Pre-defined configurations included in the INTER RAT HANDOVER INFO message

This annex contains a description of the compressed coding of the IE "Predefined configuration status information compressed" (see subclause 10.3.4.5b) included in the INTER RAT HANDOVER INFO message.

C.1 Definitions

Pre-defined configuration set with different value tags: This is a set of consecutive positions for which pre-defined configurations are stored with different value tags. The set cannot include positions for which no pre-defined configuration is stored.

Pre-defined configuration list with variable size: This is the variable sized list consisting of the value tags corresponding to the remaining positions after the "Pre-defined configuration sets with different value tags" have been formed. This will also indicate not stored pre-defined configurations, either explicitly or implicitly (i.e. in the case that there are no more stored configurations until the end of the variable sized list). This is highlighted in figures C.2-1 and C.2-2.

C.2 Examples of the methodology

From figure C.2-1 it can be seen that there are two "Pre-defined configuration sets with different value tags".

The start position of Set1 is "1" with a list of 7 pre-defined configurations {1, 2, 3, 4, 5, 6, 7}.

The start position of Set2 is "10" with a list of 6 pre-defined configurations {10, 11, 12, 13, 14, 15}.

The "Pre-defined configurations list with variable size" has a start position of 0, and includes all of the pre-defined configurations not included in the sets {0, 8, 9}. The value tag at position 9 is not stored. This does not need to be explicitly indicated in the coding as "not stored" because there are no stored pre-defined configurations positioned after this in the list.

Figure C.2-1: Example scenario where non-stored pre-defined configurations do not need to be explicitly indicated

Figure C.2-2 is similar to Figure C.2-1. However in this case for the "Pre-defined configurations list with variable size", the pre-defined configuration in position 8 is not stored. This needs to be explicitly indicated in the coding as "not stored" because there is a stored pre-defined configuration (position 9) positioned after this in the list.

Figure C.2-2: Example scenario where non-stored pre-defined configurations need to be explicitly indicated

Annex D (Normative): Implementation of Domain Specific Access Control (DSAC) in UEs of 3GPP Release 5

UEs of 3GPP Release 5 implementing the domain specific access class control feature but not implementing the network sharing feature shall act on the domain specific access class restriction indicated by the IE "Domain Specific Access Restriction Parameters For PLMN Of MIB" if present, and otherwise apply the access restrictions indicated by the IE "Cell Access Restriction".

Annex E (Normative): EUTRA Feature group indicators

This annex contains the definitions of the bits in EUTRA Feature Group Indicators.

In this release of the specification the UE shall include the optional EUTRA Feature Group Indicators IE in the UE multi-mode/multi RAT capability IE of the RRC message. For a specific indicator, if all functionalities for a feature group listed in Table E.1 have been implemented and tested, the UE shall set the indicator as "true" (as one), else (i.e. if any one of the functionalities in a feature group listed in Table E.1 have not been implemented or tested), the UE shall set the indicator as zero.

The UE shall set all indicators, which do not have a definition in the table E.1, as "false" (as zero).

If the optional EUTRA Feature Group Indicators IE is not included by a UE supporting a future release of the specification, the network may assume the UE supports all features in the feature groups listed in table E.1 and deployed in the network.

Table E.1: Definitions of feature group indicators

| Index of indicator
(bit number) | Definition
(description of the supported functionality, if indicator set to "true") | Notes |
|------------------------------------|---|-------|
| 1 (leftmost bit) | <ul style="list-style-type: none"> - UTRA CELL_PCH to EUTRA RRC_IDLE cell reselection - UTRA URA_PCH to EUTRA RRC_IDLE cell reselection | |
| 2 | EUTRAN measurements and reporting in connected mode | |
| 3 | <ul style="list-style-type: none"> - UTRA CELL_FACH absolute priority cell reselection for high priority layers | |
| 4 | <ul style="list-style-type: none"> - UTRA CELL_FACH absolute priority cell reselection for all layers | |

Clarification for mobility to EUTRAN

For mobility to E-UTRAN, it is assumed that we have 8 main "functions":

- A. Support of measurements and cell reselection procedure in idle mode
- B. Support of measurements and cell reselection procedure in CELL/URA_PCH
- C. Support of RRC release with redirection procedure
- D. Support of RRC reject with redirection procedure
- E. Support of EUTRAN measurements and reporting in connected mode
- F. Support of handover procedure in connected mode
- G. Support of high priority layer measurements and cell reselection procedure in CELL_FACH
- H. Support of all priority layer measurements and cell reselection procedure in CELL_FACH

Of the above, all UEs that indicate support of E-UTRA in UE capability signalling "Support of E-UTRA FDD" or "Support of E-UTRA TDD" support A), C) and D)ll EUTRA bands they support.

For B) above, UEs indicate support by the Group 1 indicator bit (if Group 1 is set to "true", it is supported for all EUTRA bands the UE supports).

For E) above, UEs indicate support by the Group 2 indicator bit (if Group 2 is set to "true", it is supported for all EUTRA bands the UE supports). The compressed mode capability for supported E-UTRA frequency bands ("Need for compressed mode") in "Measurement capability extension" is ignored by the network when Group 2 is set to "false".

For F) above, UEs indicate support by the separate UE capability signaling "Support of Inter-RAT PS Handover to E-UTRA FDD/TDD" defined in TS 25.306 (if this bit is set to "true", PS handover is supported for all EUTRA bands the UE supports). This bit can only be set to "true" if the UE has set the Group 2 indicator bit to "true".

For G) above, UEs indicates support by the Group 3 indicator bit (if Group 3 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL_FACH also for UTRA inter-frequency.

For H) above, UEs indicates support by the Group 4 indicator bit (if Group 4 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL_FACH also for UTRA inter-frequency. UEs that indicate support for H also indicate support for G.
