Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under
<http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the *Positioning Calculation Application Part (PCAP)* between the Radio Network Controller (RNC) and the Stand-alone A-GPS SMLC (SAS). It fulfills the RNC-SAS communication requirements specified in [6] and thus defines the Iupc interface and its associated signaling procedures.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

Standalone A-GPS SMLC (SAS): logical node that interconnects to the RNC over the Iupc interface via the PCAP protocol

An SAS performs the following procedures:

- provide GPS related data to the RNC;

- performs the position calculation function for UE assisted GPS.

Elementary Procedure: PCAP consists of Elementary Procedures (EPs)

An Elementary Procedure is a unit of interaction between the RNC and the SAS. An EP consists of an initiating message and possibly a response message. Two kinds of EPs are used:

- **Class 1:** Elementary Procedures with response (success or failure).
- **Class 2:** Elementary Procedures without response.

For Class 1 EPs, the types of responses can be as follows:

Successful:

- A signalling message explicitly indicates that the elementary procedure successfully completed with the receipt of the response.

Unsuccessful:

- A signalling message explicitly indicates that the EP failed.

Class 2 EPs are considered always successful.

Information Exchange Context: Information Exchange Context is created by the first Information Exchange Initiation Procedure initiated by the RNC and requested from the SAS

The Information Exchange Context is deleted after the Information Exchange Termination or the Information Exchange Failure procedure when there is no more Information Exchange to be provided by the RNC to the SAS. The Information Exchange Context is identified by an SCCP connection as, for Information Exchanges, only the connection oriented mode of the signalling bearer is used.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

| | |
|-------|--|
| A-GPS | Assisted GPS |
| ASN.1 | Abstract Syntax Notation One |
| CN | Core Network |
| CRNC | Controlling RNC |
| DGPS | Differential GPS |
| EP | Elementary Procedure |
| GPS | Global Positioning System |
| MSC | Mobile services Switching Center |
| PCAP | Positioning Calculation Application Part |
| PRC | Pseudorange Correction |
| RNC | Radio Network Controller |
| RNS | Radio Network Subsystem |
| RRC | Radio Resource Control |
| SAS | Standalone A-GPS SMLC |
| SCCP | Signalling Connection Control Part |
| SIB | System Information Block |
| SMLC | Serving Mobile Location Center |
| SRNC | Serving RNC |
| SRNS | Serving RNS |
| TOW | Time of Week |
| UE | User Equipment |
| UTRAN | Universal Terrestrial Radio Access Network |

4 General

4.1 Procedure Specification Principles

The principle for specifying the procedure logic is to specify the functional behaviour of the SAS exactly and completely. The RNC functional behaviour is left unspecified.

The following specification principles have been applied for the procedure text in clause 8:

- The procedure text discriminates between:
 - 1) Functionality which "shall" be executed:
 - The procedure text indicates that the receiving node "shall" perform a certain function Y under a certain condition. If the receiving node supports procedure X but cannot perform functionality Y requested in the REQUEST message of a Class 1 EP, the receiving node shall respond with the message used to report unsuccessful outcome for this procedure, containing an appropriate cause value.
 - 2) Functionality which "shall, if supported" be executed:
 - The procedure text indicates that the receiving node "shall, if supported," perform a certain function Y under a certain condition. If the receiving node supports procedure X, but does not support functionality Y, the receiving node shall proceed with the execution of the EP, possibly informing the requesting node about the not supported functionality.
- Any required inclusion of an optional IE in a response message is explicitly indicated in the procedure text. If the procedure text does not explicitly indicate that an optional IE shall be included in a response message, the optional IE shall not be included.

4.2 Forwards and Backwards Compatibility

The forwards and backwards compatibility of the protocol is assured by mechanism where all current and future messages, and IEs or groups of related IEs, include Id and criticality fields that are coded in a standard format that will not be changed in the future. These parts can always be decoded regardless of the standard version.

4.3 Specification Notations

For the purposes of the present document, the following notations apply:

| | |
|----------------|---|
| Procedure | When referring to an elementary procedure in the specification the Procedure Name is written with the first letters in each word in upper case characters followed by the word "procedure", e.g. Position Calculation procedure. |
| Message | When referring to a message in the specification the MESSAGE NAME is written with all letters in upper case characters followed by the word "message", e.g. POSITION CALCULATION REQUEST message. |
| IE | When referring to an information element (IE) in the specification the <i>Information Element Name</i> is written with the first letters in each word in upper case characters and all letters in Italic font followed by the abbreviation "IE", e.g. <i>Request Type</i> IE. |
| Value of an IE | When referring to the value of an information element (IE) in the specification the "Value" is written as it is specified in clause 9.2 enclosed by quotation marks, e.g. "Abstract Syntax Error (Reject)" or "Geographical Coordinates". |

5 PCAP Services

PCAP provides the signalling services between RNC and SAS that are required to fulfill the PCAP functions described in clause 7. PCAP services are categorized as follows:

1. Position Calculation Service: They are related to a single UE and involve the transfer of GPS measurement data and UE position estimate data over the Iupc interface between the SRNC and the SAS. They utilise connectionless signalling transport provided by the Iupc signalling bearer.
2. Information Exchange Service: They involve the transfer of GPS related data over the Iupc interface between the RNC and the SAS on demand, on modification, or at regular intervals. They utilise connection-oriented signalling transport provided by the Iupc signalling bearer.

6 Services Expected from Signalling Transport

Signalling transport [3] shall provide the following service for the PCAP.

1. Connection oriented data transfer service. This service is supported by a signalling connection between the RNC and the SAS. It shall be possible to dynamically establish and release signalling connections based on the need. Each point-to-point operation shall have its own signalling connection. The signalling connection shall provide in sequence delivery of PCAP messages. PCAP shall be notified if the signalling connection breaks.
2. Connectionless data transfer service. PCAP shall be notified in case a PCAP message did not reach the intended peer PCAP entity.

7 Functions of PCAP

PCAP has the following functions:

- Position Calculation. This function enables the SRNC to interact with an SAS in the process of performing a position estimate of a UE.
- Information Exchange. This function enables the RNC to obtain GPS related data from an SAS.
- Reporting of General Error Situations. This function allows reporting of general error situations for which function specific error messages have not been defined.

The mapping between the above functions and PCAP elementary procedures is shown in the table 1.

Table 1: Mapping between functions and PCAP elementary procedures

| Function | Elementary Procedure(s) |
|---------------------------------------|--|
| Position Calculation | a) Position Calculation |
| Information Exchange | a) b) c) d) Information Exchange Initiation Information Reporting Information Exchange Termination Information Exchange Failure |
| Reporting of General Error Situations | a) Error Indication |

8 PCAP Procedures

8.1 Elementary Procedures

In the following tables, all EPs are divided into class 1 and class 2 EPs (see clause 3.1 for explanation of the different classes).

Table 2: Class 1

| Elementary Procedure | Initiating Message | Successful Outcome | Unsuccessful Outcome |
|---------------------------------|---|--|---|
| | | Response message | Response message |
| Position Calculation | POSITION CALCULATION REQUEST | POSITION CALCULATION RESPONSE | POSITION CALCULATION FAILURE |
| Information Exchange Initiation | INFORMATION EXCHANGE INITIATION REQUEST | INFORMATION EXCHANGE INITIATION RESPONSE | INFORMATION EXCHANGE INITIATION FAILURE |

Table 3: Class 2

| Elementary Procedure | Message |
|----------------------------------|--|
| Information Reporting | INFORMATION REPORT |
| Information Exchange Termination | INFORMATION EXCHANGE TERMINATION REQUEST |
| Information Exchange Failure | INFORMATION EXCHANGE FAILURE INDICATION |
| Error Indication | ERROR INDICATION |

8.2 Position Calculation

8.2.1 General

The purpose of the Position Calculation procedure is to enable an SRNC to query an SAS for a position estimate of a UE. The procedure uses connectionless signalling.

8.2.2 Successful Operation

**Figure 1: Position Calculation procedure, Successful Operation**

The procedure is initiated with a POSITION CALCULATION REQUEST message sent from the SRNC to the SAS. When the SAS receives the POSITION CALCULATION REQUEST message, it shall calculate the UE position based on the provided measurement data.

Response Message:

If the SAS was able to calculate the position estimate, it shall respond with a POSITION CALCULATION RESPONSE message.

8.2.3 Unsuccessful Operation

Figure 2: Position Calculation procedure, Unsuccessful Operation

If the SAS is unable to perform the position estimate for any reason, it shall return a POSITION CALCULATION FAILURE message to the SRNC.

Typical cause values are:

- Invalid reference information;
- Position calculation error: invalid GPS measured results;
- Processing Overload;
- Hardware Failure;
- O&M Intervention.

8.2.4 Abnormal Conditions

If both of the *Initial UE Position Estimate* IE and the *Measured Results* IE are not included in the POSITION CALCULATION REQUEST message in this release, the SAS shall return the POSITION CALCULATION FAILURE message to the SRNC.

8.3 Information Exchange Initiation

8.3.1 General

This procedure is used by a RNC to request the initiation of an information exchange with a SAS.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.3.2 Successful Operation

Figure 3: Information Exchange Initiation procedure, Successful Operation

The procedure is initiated with an INFORMATION EXCHANGE INITIATION REQUEST message sent from RNC to SAS.

If the *Information Type* IE is set to 'Implicit', the SAS is responsible for selecting the type of assistance data.

Upon reception, the SAS shall provide the requested information according to the parameters given in the request. Unless specified below, the meaning of the parameters are given in other specifications.

Information Report Characteristics:

The *Information Report Characteristics* IE indicates how the reporting of the information shall be performed.

If the *Information Report Characteristics* IE is set to 'On-Demand', the SAS shall report the requested information immediately.

If the *Information Report Characteristics* IE is set to "Periodic", the SAS shall report the requested information immediately and then shall periodically initiate the Information Reporting procedure for all the requested information, with the requested report frequency.

If the *Information Report Characteristics* IE is set to "On-Modification", the SAS shall report the requested information immediately if available. If the requested information is not available at the moment of receiving the INFORMATION EXCHANGE INITIATION REQUEST message, but expected to become available after some acquisition time, the SAS shall initiate the Information Reporting procedure when the requested information becomes available. The SAS shall then initiate the Information Reporting procedure in accordance to the following conditions:

- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Almanac and Satellite Health", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{oa} or WN_a parameter has occurred in almanac/health information for at least one visible satellite.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "UTC Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{ot} or WN_t parameter has occurred in the GPS UTC model.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to 'Explicit' and the *Explicit Information Item* IE includes "Ionospheric Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the GPS ionospheric model.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Navigation Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a

change has occurred in the clock/ephemeris information for at least one visible satellite or in the list of visible satellites.

- If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "DGPS Corrections", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the quality of the DGPS corrections information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Reference Time", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the time-of-week assistance information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Acquisition Assistance", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in acquisition assistance information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Real Time Integrity", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the real-time integrity status of at least one visible satellite.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Almanac and Satellite Health SIB", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in almanac/health information for at least one visible satellite.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If any of the above *Information Type* IEs becomes temporarily unavailable, the SAS shall initiate the Information Reporting procedure for this specific Information Item by indicating "Information Not Available" in the *Requested Data Value Information* IE. If the Information becomes available again, the SAS shall initiate the Information Reporting procedure for this specific Information.

Response message:

If the SAS is able to determine the information requested by the RNC, it shall respond with the INFORMATION EXCHANGE INITIATION RESPONSE message. The message shall include the same Information Exchange ID that was included in the INFORMATION EXCHANGE INITIATION REQUEST message. When the *Report Characteristics* IE is set to "On Modification" or "Periodic", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the *Requested Data Value* IE if the data are available. When the *Report Characteristics* IE is set to "On Demand", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the *Requested Data Value* IE.

When the response message includes data to be reported (see above), the SAS shall include at least one IE in the *Requested Data Value* IE.

8.3.3 Unsuccessful Operation

Figure 4: Information Exchange Initiation procedure, Unsuccessful Operation

If the requested Information Type received in the *Information Type* IE indicates a type of information that SAS cannot provide, the SAS shall regard the Information Exchange Initiation procedure as failed.

If the requested information provision cannot be carried out, the SAS shall send the INFORMATION EXCHANGE INITIATION FAILURE message. The message shall include the same Information Exchange ID that was used in the INFORMATION EXCHANGE INITIATION REQUEST message and the *Cause* IE set to an appropriate value.

Typical cause values are as follows:

- Information temporarily not available;
- Information Provision not supported for the object;
- Processing Overload;
- Hardware Failure;
- O&M Intervention.

8.3.4 Abnormal Conditions

8.4 Information Reporting

8.4.1 General

This procedure is used by a SAS to report the result of information requested by a RNC using the Information Exchange Initiation.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.4.2 Successful Operation

Figure 5: Information Reporting procedure, Successful Operation

If the requested information reporting criteria are met, the SAS shall initiate an Information Reporting procedure. Unless specified below, the meaning of the parameters are given in other specifications.

The *Information Exchange ID* IE shall be set to the Information Exchange ID provided by the RNC when initiating the information exchange with the Information Exchange Initiation procedure.

The *Requested Data Value* IE shall include at least one IE containing the data to be reported.

8.4.3 Abnormal Conditions

8.5 Information Exchange Termination

8.5.1 General

This procedure is used by a RNC to terminate the information exchange requested using the Information Exchange Initiation.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.5.2 Successful Operation

Figure 6: Information Exchange Termination procedure, Successful Operation

This procedure is initiated with an INFORMATION EXCHANGE TERMINATION REQUEST message.

Upon reception, the SAS shall terminate the information exchange corresponding to the Information Exchange ID.

8.5.3 Abnormal Conditions

8.6 Information Exchange Failure

8.6.1 General

This procedure is used by a SAS to notify a RNC that the information exchange it previously requested using the Information Exchange Initiation can no longer be reported.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.6.2 Successful Operation

Figure 7: Information Exchange Failure procedure, Successful Operation

This procedure is initiated with a INFORMATION EXCHANGE FAILURE INDICATION message, sent from the SAS to the RNC, to inform the RNC that information previously requested by the Information Exchange Initiation procedure can no longer be reported. The message shall include the same Information Exchange ID that was used in the INFORMATION EXCHANGE INITIATION REQUEST message and the *Cause* IE set to an appropriate value.

Typical cause values are as follows:

Radio Network Layer Cause

Information temporarily not available.

8.7 Error Indication

8.7.1 General

The Error Indication procedure is used by a node to report detected errors in one incoming message, provided they cannot be reported by an appropriate failure message.

8.7.2 Successful Operation

Figure 8: Error Indication procedure, SAS Originated, Successful Operation

Figure 9: Error Indication procedure, RNC Originated, Successful Operation

When the conditions defined in clause 10 are fulfilled, the Error Indication procedure is initiated by an ERROR INDICATION message sent from the receiving node. This message shall use the same mode of the signalling bearer and the same signalling bearer connection (if connection oriented) as the message that triggers the procedure.

The ERROR INDICATION message shall include either the *Cause* IE, or the *Criticality Diagnostics* IE, or both the *Cause* IE and the *Criticality Diagnostics* IE.

Typical cause values for the ERROR INDICATION message are:

- Transfer Syntax Error;
- Abstract Syntax Error (Reject);
- Abstract Syntax Error (Ignore and Notify);
- Message not Compatible with Receiver State;
- Unspecified.

8.7.3 Abnormal Conditions

9 Elements for PCAP Communication

9.1 Message Functional Definition and Content

9.1.1 General

Clause 9.1 presents the contents of PCAP messages in tabular format. The corresponding ASN.1 definitions are presented in clause 9.3. In case there is contradiction between the tabular format in clause 9.1 and the ASN.1 definition, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional IEs, where the tabular format shall take precedence.

NOTE: The messages have been defined in accordance to the guidelines specified in [12].

9.1.2 Message Contents

9.1.2.1 Presence

All information elements in the message descriptions below are marked mandatory, optional or conditional according to table 4.

Table 4: Meaning of abbreviations used in PCAP messages

| Abbreviation | Meaning |
|--------------|--|
| M | IEs marked as Mandatory (M) shall always be included in the message. |
| O | IEs marked as Optional (O) may or may not be included in the message. |
| C | IEs marked as Conditional (C) shall be included in a message only if the condition is satisfied. Otherwise the IE shall not be included. |

9.1.2.2 Criticality

Each Information Element or Group of Information Elements may have a criticality information applied to it. Following cases are possible.

Table 5: Meaning of content within "Criticality" column

| Abbreviation | Meaning |
|--------------|---|
| - | No criticality information is applied explicitly. |
| YES | Criticality information is applied. This is usable only for non-repeatable IEs |
| GLOBAL | The IE and all its repetitions together have one common criticality information. This is usable only for repeatable IEs. |
| EACH | Each repetition of the IE has its own criticality information. It is not allowed to assign different criticality values to the repetitions. This is usable only for repeatable IEs. |

9.1.2.3 Range

The Range column indicates the allowed number of copies of repetitive IEs/IE groups.

9.1.2.4 Assigned Criticality

This column provides the actual criticality information as defined in clause 10.3.2, if applicable.

9.1.3 Position Calculation Request

Table 6

| IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality |
|------------------------------|----------|------------------|------------------------------|-----------------------|-------------|----------------------|
| Message Type | M | | 9.2.2.24 | | YES | reject |
| Transaction ID | M | | 9.2.2.28 | | – | |
| Initial UE Position Estimate | O | | Geographical Area 9.2.2.6 | | YES | reject |
| Measured Results | | 0..<maxNoOfSets> | | | GLOBAL | reject |
| >GPS Measured Results | M | | 9.2.2.12 | | – | |

Table 7

| Range bound | Explanation |
|-------------|--|
| MaxNoOfSets | Maximum number of sets of GPS Measured Results included in the Position Calculation Request message. The value for maxNoOfSets is 3. |

9.1.4 Position Calculation Response

Table 8

| IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality |
|-------------------------|----------|-------|------------------------------|-----------------------|-------------|----------------------|
| Message Type | M | | 9.2.2.24 | | YES | reject |
| Transaction ID | M | | 9.2.2.28 | | – | |
| UE Position Estimate | M | | Geographical Area 9.2.2.6 | | YES | ignore |
| Criticality Diagnostics | O | | 9.2.2.4 | | YES | ignore |

9.1.5 POSITION CALCULATION FAILURE

Table 9

| IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality |
|-------------------------|----------|-------|-----------------------|-----------------------|-------------|----------------------|
| Message Type | M | | 9.2.2.24 | | YES | reject |

9.1.12 Error Indication

Table 17

| IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality |
|-------------------------|----------|-------|-----------------------|-----------------------|-------------|----------------------|
| Message Type | M | | 9.2.2.24 | | YES | ignore |
| Transaction ID | M | | 9.2.2.28 | | – | |
| Cause | O | | 9.2.2.3 | | YES | ignore |
| Criticality Diagnostics | O | | 9.2.2.4 | | YES | ignore |

9.2 Information Element Functional Definitions and Contents

9.2.1 General

Clause 9.2 presents the PCAP IE definitions in tabular format. The corresponding ASN.1 definitions are presented in clause 9.3. In case there is contradiction between the tabular format in clause 9.2 and the ASN.1 definition, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional elements, where the tabular format shall take precedence.

When specifying information elements which are to be represented by bitstrings, if not otherwise specifically stated in the semantics description of the concerned IE or elsewhere, the following principle applies with regards to the ordering of bits:

- The first bit (leftmost bit) contains the most significant bit (MSB);
- The last bit (rightmost bit) contains the least significant bit (LSB);
- When importing bitstrings from other specifications, the first bit of the bitstring contains the first bit of the concerned information;

9.2.2 Radio Network Layer Related IEs

9.2.2.1 Almanac and Satellite Health SIB

Table 18

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|----------------------------------|----------|-------|-----------------------|--|
| GPS Almanac and Satellite Health | M | | 9.2.2.9 | |
| SatMask | M | | BIT STRING (1..32) | indicates the satellites that contain the pages being broadcast in this data set |
| LSB TOW | M | | BIT STRING (8) | |

9.2.2.2 Altitude and direction

Table 19

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|-----------------------|----------|-------|----------------------------------|--|
| Direction of Altitude | M | | ENUMERATED (Height, Depth) | |
| Altitude | M | | INTEGER (0...2 ¹⁵ -1) | The relation between the value (N) and the altitude (a) in meters it describes is N ≤ a < N+1, except for N=2 ¹⁵ -1 for which the range is extended to include all greater values of (a). |

9.2.2.3 Cause

The purpose of the cause information element is to indicate the reason for a particular event for the whole protocol.

Table 20

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-----------------------------|-----------------|--------------|---|------------------------------|
| CHOICE Cause Group | | | | |
| >Radio Network Layer | | | | |
| >>Radio Network Layer Cause | M | | ENUMERATED (invalid reference information, information temporarily not available, information provision not supported for the object, position calculation error: invalid GPS measured results, ...) | |
| >Transport Layer | | | | |
| >>Transport Layer Cause | M | | ENUMERATED (Transport Resource Unavailable, Unspecified, ...) | |
| >Protocol | | | | |
| >>Protocol Cause | M | | ENUMERATED (Transfer Syntax Error, Abstract Syntax Error (Reject), Abstract Syntax Error (Ignore and Notify), Message not Compatible with Receiver State, Semantic Error, Unspecified, Abstract Syntax Error (Falsely Constructed Message), ...) | |
| > Misc | | | | |
| >>Misc Cause | M | | ENUMERATED (Processing Overload, Hardware Failure, O&M Intervention, Unspecified, ...) | |

The meaning of the different cause values is described in the following table. In general, "not supported" cause values indicate that the concerning capability is missing. On the other hand, "not available" cause values indicate that the concerning capability is present, but insufficient resources were available to perform the requested action.

Table 21

| Radio Network Layer cause | Meaning |
|--|---|
| Invalid reference information | The reference information (GPS-UTRAN Time Relationship Uncertainty and/or Initial UE Position Estimate) provided by the RNC are invalid |
| Information temporarily not available | The information requested by RNC is temporarily not available |
| Information Provision not supported for the object | The SAS does not support provision of the requested information for the concerned object types |
| Position calculation error: invalid GPS measured results | The SAS cannot calculate position due to invalid GPS measured results |

Table 22

| Transport Network Layer cause | Meaning |
|--------------------------------------|---|
| Transport resource unavailable | The required transport resources are not available |
| Unspecified | Sent when none of the above cause values applies but still the cause is Transport Network Layer related |

Table 23

| Protocol cause | Meaning |
|---|---|
| Abstract Syntax Error (Reject) | The received message included an abstract syntax error and the concerning criticality indicated "reject" (see clause 10.3) |
| Abstract Syntax Error (Ignore and Notify) | The received message included an abstract syntax error and the concerning criticality indicated "ignore and notify" (see clause 10.3) |
| Abstract syntax error (falsely constructed message) | The received message contained IEs or IE groups in wrong order or with too many occurrences (see clause 10.3) |
| Message not Compatible with Receiver State | The received message was not compatible with the receiver state (see clause 10.4) |
| Semantic Error | The received message included a semantic error (see clause 10.4) |
| Transfer Syntax Error | The received message included a transfer syntax error (see clause 10.2) |
| Unspecified | Sent when none of the above cause values applies but still the cause is Protocol related |

Table 24

| Miscellaneous cause | Meaning |
|----------------------------|---|
| Processing Overload | RNC/SAS processing overload |
| Hardware Failure | RNC/SAS hardware failure |
| O&M Intervention | Operation and Maintenance intervention related to RNC/SAS equipment |
| Unspecified | Sent when none of the above cause values applies and the cause is not related to any of the categories Radio Network Layer, Transport Network Layer or Protocol |

9.2.2.4 Criticality Diagnostics

The *Criticality Diagnostics* IE is sent by the RNC or the SAS when parts of a received message have not been comprehended or are missing. It contains information about which IE was not comprehended or is missing.

For further details on how to use the *Criticality Diagnostics* IE, see annex A.

Table 25

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|--|----------|---------------------|--|--|
| Procedure Code | O | | INTEGER (0..255) | |
| Triggering Message | O | | ENUMERATED (initiating message, successful outcome, unsuccessful outcome, outcome) | The Triggering Message is used only if the Criticality Diagnostics is part of Error Indication. |
| Procedure Criticality | O | | ENUMERATED (reject, ignore, notify) | This Procedure Criticality is used for reporting the Criticality of the Triggering message (Procedure). |
| Transaction ID | O | | 9.2.2.28 | |
| Information Element Criticality Diagnostics | | 0..<maxnoof errors> | | |
| >IE Criticality | M | | ENUMERATED (reject, ignore, notify) | The IE Criticality is used for reporting the criticality of the triggering IE. The value "Ignore" shall never be used. |
| >IE Id | M | | INTEGER (0..65535) | The IE Id of the not understood or missing IE as defined in the ASN.1 part of the specification. |
| >Repetition Number | O | | INTEGER (0..255) | <p>The <i>Repetition Number</i> IE gives</p> <ul style="list-style-type: none"> - in case of a not understood IE: The number of occurrences of the reported IE up to and including the not understood occurrence - in case of a missing IE: The number of occurrences up to but not including the missing occurrence. <p>Note: All the counted occurrences of the reported IE must have the same topdown hierarchical message structure of IEs with assigned criticality above them.</p> |
| >Message Structure | O | | 9.2.2.23 | The <i>Message Structure</i> IE describes the structure where the not understood or missing IE was detected. This IE is included if the not understood IE is not the top level of the message. |
| >Type of Error | M | | ENUMERATED (not understood, missing, ...) | |

Table 26

| Range bound | Explanation |
|--------------------|---|
| Maxnooferrors | Maximum number of IE errors allowed to be reported with a single message. |

9.2.2.5 DGPS Corrections

This IE contains DGPS corrections, which may be employed to compensate for ranging errors due to atmospheric delay, orbital modelling, and satellite clock drift.

Table 27

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------------|-----------------|--------------|---|---|
| GPS TOW sec | M | | INTEGER (0..604799) | In seconds GPS time-of-week when the DGPS corrections were calculated |
| Status/Health | M | | ENUMERATED (UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | |
| DGPS information | C-Status/Health | 1..<maxSat> | | |
| >SatID | M | | INTEGER (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >IODE | M | | Integer(0..255) | |
| >UDRE | M | | Enumerated(UDRE ≤ 1.0m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. |
| >PRC | M | | Integer (-2047..2047) | Scaling factor 0.32 Meters |
| >Range Rate Correction | M | | Integer (-127..127) | Scaling factor 0.032 meters/sec |

Table 28

| Condition | Explanation |
|------------------|---|
| Status/Health | This IE shall be present if the <i>Status/Health</i> IE is not equal to "no data" or "invalid data" |

Table 29

| Range bound | Explanation |
|-------------|---|
| MaxSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.6 Geographical Area

Geographical Area IE is used to identify an area using geographical coordinates. The reference system is the same as the one used in [11].

Table 30

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|--|----------|--------------------|---------------------------------|--|
| CHOICE Geographical Area | | | | |
| >Point | | | | Ellipsoid point |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >Point With Uncertainty | | | | Ellipsoid point with uncertainty circle |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >>Uncertainty Code | M | | INTEGER (0..127) | The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| >Polygon | | | | List of Ellipsoid points |
| >>Polygon | | 1..<maxnoofPoints> | | |
| >>>Geographical Coordinates | M | | 9.2.2.7 | |
| >Ellipsoid point with uncertainty Ellipse | | | | |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >>Uncertainty Ellipse | M | | 9.2.2.30 | |
| >>Confidence | M | | INTEGER (0..100) | |
| >Ellipsoid point with altitude | | | | |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >>Altitude and direction | M | | 9.2.2.2 | |
| >Ellipsoid point with altitude and uncertainty Ellipsoid | | | | |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >>Altitude and direction | M | | 9.2.2.2 | |
| >>Uncertainty Ellipse | M | | 9.2.2.30 | |
| >>Uncertainty Altitude | M | | INTEGER (0..127) | |
| >>Confidence | M | | INTEGER (0..100) | |
| >Ellipsoid Arc | | | | |
| >>Geographical Coordinates | M | | 9.2.2.7 | |
| >>Inner radius | M | | INTEGER (0..2 ¹⁶ -1) | The relation between the value (N) and the radius (r) in meters it describes is $5N \leq r < 5(N+1)$, except for $N=2^{16}-1$ for which the range is extended to include all greater values of (r). |
| >>Uncertainty radius | M | | INTEGER (0..127) | The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| >>Offset angle | M | | INTEGER (0..179) | The relation between the value (N) and the angle (a) in degrees it describes is $2N \leq a < 2(N+1)$ |

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|------------------|----------|-------|-----------------------|--|
| >>Included angle | M | | INTEGER(0..179) | The relation between the value (N) and the angle (a) in degrees it describes is $2N < a \leq 2(N+1)$ |
| >>Confidence | M | | INTEGER(0..100) | |

Table 31

| Range bound | Explanation |
|---------------|--|
| MaxnoofPoints | Maximum no. of points in polygon. Value is 15. |

9.2.2.7 Geographical Coordinates

This IE contains the geographical coordinates.

Table 32

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|----------------------|----------|-------|-------------------------------------|---|
| Latitude Sign | M | | ENUMERATED (North, South) | |
| Degrees Of Latitude | M | | INTEGER (0.. 2^{23} -1) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | M | | INTEGER (- 2^{23} .. 2^{23} -1) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |

9.2.2.8 GPS Acquisition Assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

Table 33

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|--|----------|-------------|---|--|
| GPS TOW msec | M | | INTEGER (0..6.048*10 ⁸ -1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). |
| Satellite information | | 1..<maxSat> | | |
| >SatID | M | | INTEGER(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >Doppler (0 th order term) | M | | INTEGER (-2048..2047) | Scaling factor 2.5Hz |
| > Extra Doppler | | 0..1 | | |
| >>Doppler (1 st order term) | M | | INTEGER (-42..21) | Scaling factor 1/42 |
| >>Doppler Uncertainty | M | | ENUMERATED (12.5,25,50, 100,200,...) | In Hz |
| >Code Phase | M | | INTEGER (0..1022) | In Chips, specifies the centre of the search window |
| >Integer Code Phase | M | | INTEGER (0..19) | Number of 1023 chip segments |
| >GPS Bit number | M | | INTEGER (0..3) | Specifies GPS bit number (20 1023 chip segments) |
| >Code Phase Search Window | M | | ENUMERATED (1023,1,2,3, 4,6,8,12,16,2 4,32,48,64,9 6,128,192) | Specifies the width of the search window. |
| > Azimuth and Elevation | | 0..1 | | |
| >>Azimuth | M | | INTEGER (0..31) | Scaling factor 11.25 Degrees |
| >>Elevation | M | | INTEGER (0..7) | Scaling factor 11.25 Degrees |

Table 34

| Range bound | Explanation |
|-------------|---|
| MaxSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.9 GPS Almanac and Satellite Health

This IE contains a reduced-precision subset of the clock and ephemeris parameters.

Table 35

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|------------------------------|----------|--------------------|-----------------------|--|
| WN _a | M | | BIT STRING (8) | |
| Satellite information | | 1..<maxSatAlmanac> | | |
| >DataID | M | | BIT STRING (2) | See [10] |
| >SatID | M | | INTEGER (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >e | M | | BIT STRING (16) | Eccentricity [10] |
| >t _{oa} | M | | BIT STRING (8) | Reference Time Ephemeris [10] |
| >δi | M | | BIT STRING (16) | Correction to Inclination (semi-circles) [10] |
| >OMEGADOT | M | | BIT STRING (16) | Rate of Right Ascension (semi-circles/sec) [10] |
| >SV Health | M | | BIT STRING (8) | [10] |
| >A ^{1/2} | M | | BIT STRING (24) | Semi-Major Axis (meters) ^{1/2} [10] |
| >OMEGA ₀ | M | | BIT STRING (24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [10] |
| >M ₀ | M | | BIT STRING (24) | Mean Anomaly at Reference Time (semi-circles) [10] |
| >ω | M | | BIT STRING (24) | Argument of Perigee (semi-circles) [10] |
| >af ₀ | M | | BIT STRING (11) | apparent clock correction [10] |
| >af ₁ | M | | BIT STRING (11) | apparent clock correction [10] |
| SV Global Health | O | | BIT STRING (364) | This enables GPS time recovery and possibly extended GPS correlation intervals |

Table 36

| Range bound | Explanation |
|---------------|---|
| MaxSatAlmanac | Maximum number of satellites for which data is included in this IE. |

9.2.2.10 GPS Clock and Ephemeris Parameters

The IE contains the GPS clock information and GPS Ephemeris.

Table 37

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|--------------------|----------|-------|-----------------------|---|
| C/A or P on L2 | M | | BIT STRING (2) | Code(s) on L2 Channel [10] |
| URA Index | M | | BIT STRING (4) | User Range Accuracy [10] |
| SV Health | M | | BIT STRING (6) | [10] |
| IODC | M | | BIT STRING (10) | Issue of Data, Clock [10] |
| L2 P Data Flag | M | | BIT STRING (1) | [10] |
| SF 1 Reserved | M | | BIT STRING (87) | [10] |
| T _{GD} | M | | BIT STRING (8) | Estimated group delay differential [10] |
| t _{oc} | M | | BIT STRING (16) | apparent clock correction [10] |
| a _{f2} | M | | BIT STRING (8) | apparent clock correction [10] |
| a _{f1} | M | | BIT STRING (16) | apparent clock correction [10] |
| a _{f0} | M | | BIT STRING (22) | apparent clock correction [10] |
| C _{rs} | M | | BIT STRING(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [10] |
| Δn | M | | BIT STRING (16) | Mean Motion Difference From Computed Value (semi-circles/sec) [10] |
| M ₀ | M | | BIT STRING (32) | Mean Anomaly at Reference Time (semi-circles) [10] |
| C _{uc} | M | | BIT STRING (16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [10] |
| e | M | | BIT STRING (32) | Eccentricity [10] |
| C _{us} | M | | BIT STRING (16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [10] |
| (A) ^{1/2} | M | | BIT STRING (32) | Semi-Major Axis (meters) ^{1/2} [10] |
| t _{oe} | M | | BIT STRING (16) | Reference Time Ephemeris [10] |
| Fit Interval Flag | M | | BIT STRING (1) | [10] |
| AODO | M | | BIT STRING (5) | Age Of Data Offset [10] |
| C _{ic} | M | | BIT STRING (16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [10] |
| OMEGA ₀ | M | | BIT STRING (32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [10] |
| C _{is} | M | | BIT STRING (16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [10] |

| C _{rc} | M | | BIT STRING (16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [10] |

| | | | | |
|----------|---|--|-----------------|---|
| ω | M | | BIT STRING (32) | Argument of Perigee (semi-circles) [10] |
| OMEGAdot | M | | BIT STRING (24) | Rate of Right Ascension (semi-circles/sec) [10] |
| Idot | M | | BIT STRING (14) | Rate of Inclination Angle (semi-circles/sec) [10] |

9.2.2.11 GPS Ionospheric Model

The IE contains fields needed to model the propagation delays of the GPS signals through the ionosphere.

Table 38

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|---------------|----------|-------|-----------------------|-----------------------|
| α_0 | M | | BIT STRING (8) | note 1 |
| α_1 | M | | BIT STRING (8) | note 1 |
| α_2 | M | | BIT STRING (8) | note 1 |
| α_3 | M | | BIT STRING (8) | note 1 |
| β_0 | M | | BIT STRING (8) | note 2 |
| β_1 | M | | BIT STRING (8) | note 2 |
| β_2 | M | | BIT STRING (8) | note 2 |
| β_3 | M | | BIT STRING (8) | note 2 |

NOTE 1: The parameters α_n are the coefficients of a cubic equation representing the amplitude of the vertical delay [10].

NOTE 2: The parameters β_n are the coefficients of a cubic equation representing the period of the ionospheric model [10].

9.2.2.12 GPS Measured Results

The purpose of this information element is to provide reported GPS measurement information from the SRNC to the SAS.

Table 39

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------------------|----------|-------------|--|--|
| GPS TOW msec | M | | INTEGER (0..6.048*10 ⁸ -1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). This time is the GPS TOW measured by the UE. GPS Time of Week in microseconds = 1000 * GPS TOW msec + GPS TOW rem usec |
| Measurement Parameters | | 1..<maxSat> | | |
| >Satellite ID | M | | INTEGER (0..63) | |
| >C/N _o | M | | INTEGER (0..63) | The estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (Typical levels will be in the range of 20 – 50 dB-Hz). |
| >Doppler | M | | INTEGER (-32768..-32768) | Hz, scale factor 0.2. |
| >Whole GPS Chips | M | | INTEGER (0..1022) | Unit in GPS chips |
| >Fractional GPS Chips | M | | INTEGER (0..(2 ¹⁰ -1)) | Scale factor 2 ⁻¹⁰ |
| >Multipath Indicator | M | | ENUMERATED (NM, low, medium, high) | See note 1 |
| >Pseudorange RMS Error | M | | INTEGER (0..63) | See note 2 |

NOTE 1: Table 41 gives the mapping of the multipath indicator field.

NOTE 2: Table 42 gives the bitmapping of the Pseudorange RMS Error field.

Table 40

| Range bound | Explanation |
|-------------|---|
| MaxSat | Maximum number of satellites for which data is included in this IE. |

Table 41

| Value | Multipath Indication |
|--------|----------------------|
| NM | Not measured |
| Low | MP error < 5m |
| Medium | 5m < MP error < 43m |
| High | MP error > 43m |

Table 42

| Value | Mantissa | Exponent | Floating-Point value, x_i | Pseudorange value, P |
|--------------|-----------------|-----------------|---|--|
| 0 | 000 | 000 | 0.5 | $P < 0.5$ |
| 1 | 001 | 000 | 0.5625 | $0.5 \leq P < 0.5625$ |
| i | X | Y | $0.5 * (1 + x/8) * 2^y$ | $x_{i-1} \leq P < x_i$ |
| 62 | 110 | 111 | 112 | $104 \leq P < 112$ |
| 63 | 111 | 111 | -- | $112 \leq P$ |

9.2.2.13 GPS Navigation Model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

Table 43

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------------------------|--------------------|----------------|--|--|
| Satellite information | | $1..<\maxSat>$ | | |
| >SatID | M | | INTEGER (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >Satellite Status | M | | ENUMERATED (NS_NN, ES_SN, ES_NN, REVD) | See note |
| >GPS Clock and Ephemeris parameters | C-Satellite status | | 9.2.2.10 | |

NOTE: The UE shall interpret enumerated symbols as follows.

Table 44

| Value | Indication |
|--------------|---|
| NS_NN | New satellite, new Navigation Model |
| ES_SN | Existing satellite, same Navigation Model |
| ES_NN | Existing satellite, new Navigation Model |
| REVD | Reserved |

Table 45

| Condition | Explanation |
|-------------------------|---|
| <i>Satellite status</i> | The IE shall be present if the <i>Satellite Status</i> IE is not set to ES_SN |

Table 46

| Range bound | Explanation |
|--------------------|---|
| MaxSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.14 GPS Real Time Integrity

Table 47

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|--------------------------------|----------|----------------|-----------------------|--|
| CHOICE Bad Satellites Presence | | | | |
| >Bad Satellites | | | | |
| >>Satellite information | | 1..<maxNo Sat> | | |
| >>>BadSatID | M | | INTEGER (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >No Bad Satellites | | | NULL | |

Table 48

| Range bound | Explanation |
|-------------|---|
| MaxNoSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.15 GPS Reference Time

Table 49

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|----------------|----------|-------------|---------------------------------------|--|
| GPS Week | M | | INTEGER (0..1023) | |
| GPS TOW msec | M | | INTEGER (0..6.048*10 ⁸ -1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). |
| GPS TOW Assist | | 0..<maxSat> | | |
| >SatID | M | | INTEGER (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >TLM Message | M | | BIT STRING (14) | |
| >Anti-Spoof | M | | BOOLEAN | |
| >Alert | M | | BOOLEAN | |
| >TLM Reserved | M | | BIT STRING (2) | |

Table 50

| Range bound | Explanation |
|-------------|---|
| MaxSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.16 GPS Transmission TOW

Table 51

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|----------------------|----------|-------|-----------------------|---------------------------------|
| GPS Transmission TOW | | | INTEGER (0..604799) | The GPS time-of-week in seconds |

9.2.2.17 GPS UTC Model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

Table 52

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------|----------|-------|-----------------------|-----------------------|
| A ₁ | M | | BIT STRING (24) | sec/sec [10] |
| A ₀ | M | | BIT STRING (32) | seconds [10] |
| t _{ot} | M | | BIT STRING (8) | seconds [10] |
| Δt _{LS} | M | | BIT STRING (8) | seconds [10] |
| WN _t | M | | BIT STRING (8) | weeks [10] |
| WN _{LSF} | M | | BIT STRING (8) | weeks [10] |
| DN | M | | BIT STRING (8) | days [10] |
| Δt _{LSF} | M | | BIT STRING (8) | seconds [10] |

9.2.2.18 GPS-UTRAN Time Relationship Uncertainty

This IE contains the uncertainty of the GPS and UTRAN time relationship.

Table 53

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|---|----------|-------|--|--|
| GPS-UTRAN Time Relationship Uncertainty | | | ENUMERATED (50ns, 500ns, 1us, 10us, 1ms, 10ms, 100ms, unreliable) | RNC estimate of uncertainty in GPS- UTRAN time relationship |

9.2.2.19 Information Exchange ID

The Information Exchange ID uniquely identifies any requested information per RNC-SAS pair.

Table 54

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------------|----------|-------|-----------------------|-----------------------|
| Information Exchange ID | | | INTEGER (0 .. 2^20-1) | |

9.2.2.20 Information Exchange Object Type

Void.

9.2.2.21 Information Report Characteristics

The information report characteristics define how the reporting shall be performed.

Table 56

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|--|------------|-------|---|---|
| Information Report Characteristics Type | M | | ENUMERATED(On Demand, Periodic, On Modification, ...) | |
| CHOICE <i>Information Report Periodicity</i> | C-Periodic | | | Indicates the frequency with which the SAS shall send broadcast data reports. |
| >Min | | | | |
| >>Minutes | M | | INTEGER (1..60, ...) | |
| >Hour | | | | |
| >>Hours | M | | INTEGER (1..24, ...) | |

Table 57

| Condition | Explanation |
|-----------|--|
| Periodic | This IE shall be present if the <i>Information Report Characteristics Type</i> IE indicates 'periodic' |

9.2.2.22 Information Type

The Information Type indicates which kind of information the SAS shall provide.

Table 58

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|--|----------|----------------------|-----------------------|--|
| CHOICE <i>Information Type</i> | | | | |
| > <i>Implicit</i> | | | | |

| >>>>Navigation Model | | | | |
| >>>>Transmission TOW Indicator | M | | 9.2.2.29 | |
| >>>> Nav. Model Additional Data | | 0..1 | | |
| >>>>>GPS Week | M | | INTEGER(0..1023) | |
| >>>>>GPS_Toe | M | | INTEGER(0..167) | GPS time of ephemeris in hours of the latest ephemeris set |
| >>>>>T-Toe limit | M | | INTEGER(0..10) | ephemeris age tolerance in hours |
| >>>>> Satellite related data | | 0..<maxSat> | | |
| >>>>>>SatID | M | | INTEGER(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [10]. |
| >>>>>>IODE | M | | INTEGER(0..255) | Issue of Data Ephemeris for SatID |
| >>>>DGPS Corrections | | | NULL | |
| >>>Reference Time | | | NULL | |
| >>>Acquisition Assistance | | | NULL | |
| >>>Real Time Integrity | | | NULL | |
| >>>Almanac and Satellite Health SIB | | | | |
| >>>>Transmission TOW Indicator | M | | 9.2.2.29 | |

Table 59

| Range Bound | Explanation |
|-----------------|---|
| maxnoofExplInfo | Maximum number of Explicit Information supported in one Information Exchange. |
| MaxSat | Maximum number of satellites for which data is included in this IE. |

9.2.2.23 Message Structure

The *Message Structure* IE gives information for each level with assigned criticality in an hierarchical message structure from top level down to the lowest level above the reported level for the occurred error (reported in the *Information Element Criticality Diagnostics* IE).

Table 60

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|--------------------------|----------|--------------------|-----------------------|--|
| Message structure | | 1..<maxnooflevels> | | The first repetition of the <i>Message Structure</i> IE corresponds to the top level of the message. The last repetition of the <i>Message Structure</i> IE corresponds to the level above the reported level for the occurred error of the message. |
| >IE ID | M | | INTEGER (0..65535) | The IE ID of this level's IE containing the not understood or missing IE. |
| >Repetition Number | O | | INTEGER (1..256) | <p>The <i>Repetition Number</i> IE gives, if applicable, the number of occurrences of this level's reported IE up to and including the occurrence containing the not understood or missing IE.</p> <p>Note: All the counted occurrences of the reported IE must have the same top-down hierarchical message structure of IEs with assigned criticality above them.</p> |

Table 61

| Range bound | Explanation |
|---------------|--|
| maxnooflevels | Maximum no. of message levels to report. The value for maxnooflevels is 256. |

9.2.2.24 Message Type

Message Type IE uniquely identifies the message being sent. It is mandatory for all messages.

Table 62

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-----------------|----------|-------|---|--|
| Procedure Code | M | | INTEGER(0..255) | '1' = Position Calculation '2' = Information Exchange Initiation '3' = Information Reporting '4' = Information Exchange Termination, '5' = Information Exchange Failure '6' = Error Indication, |
| Type of Message | M | | ENUMERATED (Initiating Message, Successful Outcome, Unsuccessful Outcome, Outcome) | |

9.2.2.25 Method Type

Table 63

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|---------------|----------|-------|--|-----------------------|
| Method Type | | | ENUMERATED (UE_Assisted, UE_Based) | |

9.2.2.26 Requested Data Value

The Requested Data Value contains the relevant data concerning the ongoing information exchange.

Table 64

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|----------------------------------|----------|-------|-----------------------|-----------------------|
| GPS Almanac and Satellite Health | O | | 9.2.2.9 | |
| GPS UTC Model | O | | 9.2.2.17 | |
| GPS Ionospheric Model | O | | 9.2.2.11 | |
| GPS Navigation Model | O | | 9.2.2.13 | |
| DGPS Corrections | O | | 9.2.2.5 | |
| GPS Reference Time | O | | 9.2.2.15 | |
| GPS Acquisition Assistance | O | | 9.2.2.8 | |
| GPS Real Time Integrity | O | | 9.2.2.14 | |
| Almanac and Satellite Health SIB | O | | 9.2.2.1 | |
| GPS Transmission TOW | O | | 9.2.2.16 | |

9.2.2.27 Requested Data Value Information

The *Requested Data Value Information* IE provides information on whether or not the Requested Data Value is available in the message and also the Requested Data Value itself if available.

In case of "Periodic" and "On Modification" reporting, "Information Not Available" shall be used when at least one part of the requested information was not available at the moment of initiating the Information Reporting procedure.

Table 65

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description | Criticality | Assigned Criticality |
|--|----------|-------|-----------------------|-----------------------|-------------|----------------------|
| CHOICE <i>Information Availability Indicator</i> | M | | | | – | |
| > Information Available | | | | | – | |
| >>Requested Data Value | M | | 9.2.2.26 | | – | |
| >>>Information not Available | | | NULL | | | |

9.2.2.28 Transaction ID

The Transaction ID is used to associate all the messages belonging to the same procedure. Messages belonging to the same procedure shall use the same Transaction ID.

The Transaction ID is determined by the initiating peer of a procedure.

The Transaction ID shall uniquely identify a procedure among all ongoing parallel procedures using the same procedure code, and initiated by the same protocol peer.

Table 66

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|-------------------------------------|----------|-------|-----------------------|--|
| CHOICE <i>Transaction ID Length</i> | | | | The Transaction ID shall be interpreted for its integer value, not for the type of encoding ("short" or "long"). |
| >Short | | | | |
| >>Transaction ID Value | M | | INTEGER (0..127) | |
| >Long | | | | |
| >>Transaction ID Value | M | | INTEGER (0..32767) | |

9.2.2.29 Transmission TOW Indicator

Table 67

| IE/Group Name | Presence | Range | IE Type and Reference | Semantics Description |
|----------------------------|----------|-------|--|-----------------------|
| Transmission TOW Indicator | | | ENUMERATE D (requested, not requested) | |

9.2.2.30 Uncertainty Ellipse

This IE contains the uncertainty ellipse of a geographical area.

Table 68

| IE/Group Name | Presence | Range | IE type and reference | Semantics description |
|---------------------------|----------|-------|-----------------------|---|
| Uncertainty semi-major | M | | INTEGER (0..127) | The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| Uncertainty semi-minor | M | | INTEGER (0..127) | The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| Orientation of major axis | M | | INTEGER (0..89) | The relation between the IE value (N) and the angle (a) in degrees it describes is $2N \leq a < 2(N+1)$ |

9.3 Message and Information Element Abstract Syntax (with ASN.1)

9.3.0 General

PCAP ASN.1 definition conforms with [7], [8], and [9].

The ASN.1 definition specifies the structure and content of PCAP messages. PCAP messages can contain any IEs specified in the object set definitions for that message without the order or number of occurrence being restricted by ASN.1. However, for this version of the standard, a sending entity shall construct a PCAP message according to the

PDU definitions module and with the following additional rules (Note that in the following IE means an IE in the object set with an explicit id. If one IE needed to appear more than once in one object set, then the different occurrences have different IE ids):

- IEs shall be ordered (in an IE container) in the order they appear in object set definitions.
- Object set definitions specify how many times IEs may appear. An IE shall appear exactly once if the presence field in an object has value "mandatory". An IE may appear at most once if the presence field in an object has value "optional" or "conditional". If in a tabular format there is multiplicity specified for an IE (i.e. an IE list) then in the corresponding ASN.1 definition the list definition is separated into two parts. The first part defines an IE container list where the list elements reside. The second part defines list elements. The IE container list appears as an IE of its own. For this version of the standard an IE container list may contain only one kind of list elements.

If a PCAP message that is not constructed as defined above is received, this shall be considered as Abstract Syntax Error, and the message shall be handled as defined for Abstract Syntax Error in clause 10.3.6.

Clause 9.3 presents the Abstract Syntax of PCAP protocol with ASN.1. In case there is contradiction between the ASN.1 definition in this clause and the tabular format in clauses 9.1 and 9.2, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional elements, where the tabular format shall take precedence.

9.3.1 Usage of private message mechanism for non-standard use

The private message mechanism for non-standard use may be used:

- for special operator- (and/or vendor) specific features considered not to be part of the basic functionality, i.e. the functionality required for a complete and high-quality specification in order to guarantee multivendor interoperability;
- by vendors for research purposes, e.g. to implement and evaluate new algorithms/features before such features are proposed for standardisation.

The private message mechanism shall not be used for basic functionality. Such functionality shall be standardised.

9.4 Message Transfer Syntax

PCAP shall use the ASN.1 Basic Packed Encoding Rules (BASIC-PER) Aligned Variant as transfer syntax, as specified in [9].

The following encoding rules apply in addition to what has been specified in X.691 [9]:

When a bitstring value is placed in a bit-field as specified in 15.6 to 15.11 in [9], the leading bit of the bitstring value shall be placed in the leading bit of the bit-field, and the trailing bit of the bitstring value shall be placed in the trailing bit of the bit-field.

NOTE - When using the "bstring" notation, the leading bit of the bitstring value is on the left, and the trailing bit of the bitstring value is on the right. The term "leading bit" is to be interpreted as equal to the term "first bit" defined in [7].

10 Handling of Unknown, Unforeseen and Erroneous Protocol Data

10.1 General

Protocol Error cases can be divided into three classes:

- Transfer Syntax Error.
- Abstract Syntax Error.
- Logical Error.

Protocol errors can occur in the following functions within a receiving node.

**Figure 10: Protocol Errors in PCAP**

The information stated in subclauses 10.2, 10.3 and 10.4, to be included in the message used when reporting an error, is what at minimum shall be included. Other optional information elements within the message may also be included, if available. This is also valid for the case when the reporting is done with a response message. The latter is an exception to what is stated in subclause 4.1.

10.2 Transfer Syntax Error

A Transfer Syntax Error occurs when the receiver is not able to decode the received physical message. Transfer syntax errors are always detected in the process of ASN.1 decoding. If a Transfer Syntax Error occurs, the receiver should initiate Error Indication procedure with appropriate cause value for the Transfer Syntax protocol error.

Examples for Transfer Syntax Errors are:

- Violation of value ranges in ASN.1 definition of messages. e.g.: If an IE has a defined value range of 0 to 10 (ASN.1: INTEGER (0..10)), and 12 will be received, then this will be treated as a transfer syntax error.
- Violation in list element constraints. e.g.: If a list is defined as containing 1 to 10 elements, and 12 elements will be received, than this case will be handled as a transfer syntax error.
- Missing mandatory elements in ASN.1 SEQUENCE definitions (as sent by the originator of the message).
- Wrong order of elements in ASN.1 SEQUENCE definitions (as sent by the originator of the message).

10.3 Abstract Syntax Error

10.3.1 General

An Abstract Syntax Error occurs when the receiving functional PCAP entity:

- 1) receives IEs or IE groups that cannot be understood (unknown IE id);
- 2) receives IEs for which the logical range is violated (e.g.: ASN.1 definition: 0 to 15, the logical range is 0 to 10 (values 11 to 15 are undefined), and 12 will be received; this case will be handled as an abstract syntax error using criticality information sent by the originator of the message);
- 3) does not receive IEs or IE groups but according to the specified presence of the concerning object, the IEs or IE groups should have been present in the received message;
- 4) receives IEs or IE groups that are defined to be part of that message in wrong order or with too many occurrences of the same IE or IE group;
- 5) receives IEs or IE groups but according to the conditional presence of the concerning object and the specified condition, the IEs or IE groups should not have been present in the received message.

Cases 1 and 2 (not comprehended IE/IE group) are handled based on received Criticality information. Case 3 (missing IE/IE group) is handled based on Criticality information and Presence information for the missing IE/IE group specified in the version of the specification used by the receiver. Case 4 (IEs or IE groups in wrong order or with too many occurrences) and Case 5 (erroneously present conditional IEs or IE groups) result in rejecting the procedure.

If an Abstract Syntax Error occurs, the receiver shall read the remaining message and shall then for each detected Abstract Syntax Error that belong to cases 1-3 act according to the Criticality Information and Presence Information for the IE/IE group due to which Abstract Syntax Error occurred in accordance with subclauses 10.3.4 and 10.3.5. The handling of cases 4 and 5 is specified in subclause 10.3.6.

10.3.2 Criticality Information

In the PCAP messages there is criticality information set for individual IEs and/or IE groups. This criticality information instructs the receiver how to act when receiving an IE or an IE group that is not comprehended, i.e. the entire item (IE or IE group) which is not (fully or partially) comprehended shall be treated in accordance with its own criticality information as specified in subclause 10.3.4.

In addition, the criticality information is used in case of the missing IE/IE group abstract syntax error (see subclause 10.3.5).

The receiving node shall take different actions depending on the value of the Criticality Information. The three possible values of the Criticality Information for an IE/IE group are:

- Reject IE.
- Ignore IE and Notify Sender.
- Ignore IE.

The following rules restrict when a receiving entity may consider an IE, an IE group, or an EP not comprehended (not implemented), and when action based on criticality information is applicable:

1. IE or IE group: When one new or modified IE or IE group is implemented for one EP from a standard version, then other new or modified IEs or IE groups specified for that EP in that standard version shall be considered comprehended by a receiving entity (some may still remain unsupported).
2. EP: The comprehension of different EPs within a standard version or between different standard versions is not mandated. Any EP that is not supported may be considered not comprehended, even if another EP from that standard version is comprehended, and action based on criticality shall be applied.

10.3.3 Presence Information

For many IEs/IE groups which are optional according to the ASN.1 transfer syntax, PCAP specifies separately if the presence of these IEs/IE groups is optional or mandatory with respect to RNS application by means of the presence field of the concerning object of class PCAP-PROTOCOL-IES, PCAP -PROTOCOL-IES-PAIR, PCAP -PROTOCOL-EXTENSION or PCAP -PRIVATE-IES.

The presence field of the indicated classes supports three values:

1. Optional;
2. Conditional;
3. Mandatory.

If an IE/IE group is not included in a received message and the presence of the IE/IE group is mandatory or the presence is conditional and the condition is true according to the version of the specification used by the receiver, an abstract syntax error occurs due to a missing IE/IE group.

If an IE/IE group is included in a received message and the presence of the IE/IE group is conditional and the condition is false according to the version of the specification used by the receiver, an abstract syntax error occurs due to this erroneously present conditional IE/IE group.

10.3.4 Not comprehended IE/IE group

10.3.4.1 Procedure Code

The receiving node shall treat the different types of received criticality information of the *Procedure Code* IE according to the following:

Reject IE:

- If a message is received with a *Procedure Code* IE marked with "*Reject IE*" which the receiving node does not comprehend, the receiving node shall reject the procedure using the Error Indication procedure.

Ignore IE and Notify Sender:

- If a message is received with a *Procedure Code* IE marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the procedure and initiate the Error Indication procedure.

Ignore IE:

- If a message is received with a *Procedure Code* IE marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the procedure.

When using the Error Indication procedure to reject a procedure or to report an ignored procedure it shall include the *Procedure Code* IE, the *Triggering Message* IE, and the *Procedure Criticality* IE in the *Criticality Diagnostics* IE.

10.3.4.1A Type of Message

When the receiving node cannot decode the *Type of Message* IE, the Error Indication procedure shall be initiated with an appropriate cause value.

10.3.4.2 IEs other than the Procedure Code and Type of Message

The receiving node shall treat the different types of received criticality information of an IE/IE group other than the *Procedure Code* IE and *Type of Message* IE according to the following:

Reject IE:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Reject IE*" which the receiving node does not comprehend; none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the rejection of one or more IEs/IE groups using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a message *initiating* a procedure that does not have a message to report unsuccessful outcome is received containing one or more IEs/IE groups marked with "*Reject IE*" which the receiving node does not comprehend, the receiving node shall terminate the procedure and initiate the Error Indication procedure.
- If a *response* message is received containing one or more IEs/IE groups marked with "*Reject IE*", that the receiving node does not comprehend, the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

Ignore IE and Notify Sender:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups, and report in the response message of the procedure that one or more IEs/IE groups have been ignored. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the response message, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.

- If a message *initiating* a procedure that does not have a message to report the outcome of the procedure is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups, and initiate the Error Indication procedure to report that one or more IEs/IE groups have been ignored.
- If a *response* message is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups and initiate the Error Indication procedure.

Ignore IE:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups and continue with the procedure as if the not comprehended IEs/IE groups were not received using the understood IEs/IE groups.
- If a *response* message is received containing one or more IEs/IE groups marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups.

When reporting not comprehended IEs/IE groups marked with "*Reject IE*" or "*Ignore IE and Notify Sender*" using a response message defined for the procedure, the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group. The *Repetition Number* IE shall be included in the *Information Element Criticality Diagnostics* IE if the reported IE/IE group was part of a "SEQUENCE OF" definition.

When reporting not comprehended IEs/IE groups marked with "*Reject IE*" or "*Ignore IE and Notify Sender*" using the Error Indication procedure, the *Procedure Code* IE, the *Triggering Message* IE, *Procedure Criticality* IE, the *Transaction Id* IE, and the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group. The *Repetition Number* IE shall be included in the *Information Element Criticality Diagnostics* IE if the reported IE/IE group was part of a "SEQUENCE OF" definition.

10.3.5 Missing IE or IE group

The receiving node shall treat the missing IE/IE group according to the criticality information for the missing IE/IE group in the received message specified in the version of the present document used by the receiver:

Reject IE:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Reject IE*"; none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the missing IEs/IE groups using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a received message *initiating* a procedure that does not have a message to report unsuccessful outcome is missing one or more IEs/IE groups with specified criticality "*Reject IE*", the receiving node shall initiate the Error Indication procedure.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Reject IE*", the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

Ignore IE and Notify Sender:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and report in the response message of the procedure that one or more IEs/IE groups were missing. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the response message, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.

- If a received message *initiating* a procedure that does not have a message to report the outcome of the procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and initiate the Error Indication procedure to report that one or more IEs/IE groups were missing.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and initiate the Error Indication procedure to report that one or more IEs/IE groups were missing.

Ignore IE:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Ignore IE*", the receiving node shall ignore that those IEs/IE groups are missing.

When reporting missing IEs/IE groups with specified criticality "*Reject IE*" or "*Ignore IE and Notify Sender*" using a response message defined for the procedure, the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group.

When reporting missing IEs/IE groups with specified criticality "*Reject IE*" or "*Ignore IE and Notify Sender*" using the Error Indication procedure, the *Procedure Code* IE, the *Triggering Message* IE, *Procedure Criticality* IE, the *Transaction Id* IE, and the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group.

10.3.6 IEs or IE groups received in wrong order or with too many occurrences or erroneously present

If a message with IEs or IE groups in wrong order or with too many occurrences is received or if IEs or IE groups with a conditional presence are present when the condition is not met (i.e. erroneously present), the receiving node shall behave according to the following:

- If a message *initiating* a procedure is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the cause value "Abstract Syntax Error (Falsely Constructed Message)" using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication.
- If a message *initiating* a procedure that does not have a message to report unsuccessful outcome is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, the receiving node shall terminate the procedure and initiate the Error Indication procedure, and use cause value "Abstract Syntax Error (Falsely Constructed Message)".
- If a *response* message is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

10.4 Logical Error

Logical error situations occur when a message is comprehended correctly, but the information contained within the message is not valid (i.e. semantic error), or describes a procedure which is not compatible with the state of the receiver. In these conditions, the following behaviour shall be performed (unless otherwise specified) as defined by the class of the elementary procedure, irrespective of the criticality of the IEs/IE groups containing the erroneous values.

Class 1:

Protocol Causes:

Where the logical error occurs in a request message of a class 1 procedure, and the procedure has a message to report this unsuccessful outcome, this message shall be sent with an appropriate cause value. Typical cause values are:

1. Semantic Error.
2. Message not compatible with receiver state.

Where the logical error is contained in a request message of a class 1 procedure, and the procedure does not have a message to report this unsuccessful outcome, the procedure shall be terminated and the Error Indication procedure shall be initiated with an appropriate cause value.

Where the logical error exists in a response message of a class 1 procedure, the procedure shall be considered as unsuccessfully terminated and local error handling shall be initiated.

Class 2:

Where the logical error occurs in a message of a class 2 procedure, the procedure shall be terminated and the Error Indication procedure shall be initiated with an appropriate cause value.

10.5 Exceptions

The error handling for all the cases described hereafter shall take precedence over any other error handling described in the other subclauses of clause 10.

- If any type of error (Transfer Syntax Error, Abstract Syntax Error or Logical Error) is detected in the ERROR INDICATION message, it shall not trigger the Error Indication procedure in the receiving Node but local error handling.
- In case a response message or Error Indication message needs to be returned, but the information necessary to determine the receiver of that message is missing, the procedure shall be considered as unsuccessfully terminated and local error handling shall be initiated.
- If an error that terminates a procedure occurs, the returned cause value shall reflect the error that caused the termination of the procedure even if one or more abstract syntax errors with criticality 'ignore and notify' have earlier occurred within the same procedure.

Annex A (informative): Guidelines for Usage of the Criticality Diagnostics IE

A.1 EXAMPLE MESSAGE Layout

Assume the following message format:

Table A.1

| IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality |
|----------------|----------|-----------|-----------------------|-----------------------|-------------|----------------------|
| Message Type | M | | | | YES | Reject |
| Transaction ID | M | | | | - | |
| A | M | | | | YES | reject |
| B | M | | | | YES | reject |
| >E | | 1..<maxE> | | | EACH | ignore |
| >>F | | 1..<maxF> | | | - | |
| >>>G | | 0..3, ... | | | EACH | ignore |
| >>H | | 1..<maxH> | | | EACH | ignore |
| >>>G | | 0..3, ... | | | EACH | ignore and notify |
| >>G | M | | | | YES | reject |
| >>J | | 1..<maxJ> | | | - | |
| >>>G | | 0..3, ... | | | EACH | reject |
| C | M | | | | YES | reject |
| >K | | 1..<maxK> | | | EACH | ignore and notify |
| >>L | | 1..<maxL> | | | - | |
| >>>M | O | | | | - | |
| D | M | | | | YES | reject |

NOTE: The IEs F, J, and L do not have assigned criticality. The IEs F, J, and L are consequently realised as the ASN.1 type SEQUENCE OF of "ordinary" ASN.1 type, e.g. INTEGER. On the other hand, the repeatable IEs with assigned criticality are realised as the ASN.1 type SEQUENCE OF of an IE object, e.g. ProtocolIE-Single-Container.

For the corresponding ASN.1 layout, see clause A.4.

A.2 Example on a Received EXAMPLE MESSAGE

Assume further more that a received message based on the above tabular format is according to figure A.1.

Figure A.1: Example of content of a received PCAP message based on the EXAMPLE MESSAGE

A.3 Content of Criticality Diagnostics

A.3.1 Example 1

Figure A.2: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE J shown in the figure A.2, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*s in table A.2.

Table A.2

| IE name | Value | Comment |
|---|----------------|---|
| IE Criticality | Reject | Criticality for IE on the reported level, i.e. level 4. |
| IE ID | id-G | IE ID from the reported level, i.e. level 4. |
| Repetition Number | 11 | Repetition number on the reported level, i.e. level 4. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure IE</i> this is the eleventh occurrence of IE G within the IE E (level 2).) |
| Type of Error | not understood | |
| <i>Message Structure, first repetition</i> | | |
| >IE ID | id-B | IE ID from level 1. |
| <i>Message Structure, second repetition</i> | | |
| >IE ID | id-E | IE ID from the lowest level above the reported level, i.e. level 2. |
| >Repetition Number | 3 | Repetition number from the lowest level above the reported level, i.e. level 2. |

NOTE 1: The IE J on level 3 cannot be included in the *Message Structure IE* since they have no criticality of their own.

NOTE 2: The repetition number of the reported IE indicates the number of repetitions of IE G received up to the detected erroneous repetition, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.3.2 Example 2

Figure A.3: Example of a received PCAP message containing a not comprehended IE

If there is an error within the second instance (marked as grey) in the sequence (IE L in the tabular format) on level 3 below IE K in the structure shown in the figure A.3, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*s in table A.3.

Table A.3

| IE name | Value | Comment |
|--|-------------------|---|
| IE Criticality | ignore and notify | Criticality for IE on the reported level, i.e. level 2. |
| IE ID | id-K | IE ID from the reported level, i.e. level 2. |
| Repetition Number | 3 | Repetition number on the reported level, i.e. level 2. |
| Type of Error | not understood | |
| <i>Message Structure, first repetition</i> | | |
| >IE ID | id-C | IE ID from the lowest level above the reported level, i.e. level 1. |

NOTE: The IE L on level 3 cannot be reported individually included in the *Message Structure IE* since it has no criticality of its own.

A.3.3 Example 3

Figure A.4: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE H shown in the figure A.4, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*s in table A.4.

Table A.4

| IE name | Value | Comment |
|---|-------------------|---|
| IE Criticality | ignore and notify | Criticality for IE on the reported level, i.e. level 4. |
| IE ID | id-G | IE ID from the reported level, i.e. level 4. |
| Repetition Number | 2 | Repetition number on the reported level, i.e. level 4. |
| Type of Error | not understood | |
| <i>Message Structure, first repetition</i> | | |
| >IE ID | id-B | IE ID from level 1. |
| <i>Message Structure, second repetition</i> | | |
| >IE ID | id-E | IE ID from level 2. |
| >Repetition Number | 3 | Repetition number from level 2. |
| <i>Message Structure, third repetition</i> | | |
| >IE ID | id-H | IE ID from the lowest level above the reported level, i.e. level 3. |
| >Repetition Number | 1 | Repetition number from the lowest level above the reported level, i.e. level 3. |

NOTE: The repetition number of level 4 indicates the number of repetitions of IE G received up to the detected erroneous repetition, counted below the same instance of the previous level with assigned criticality (instance 1 of IE H on level 3).

A.3.4 Example 4

Figure A.5: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE E shown in the figure A.5, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*, as in table A.5.

Table A.5

| IE name | Value | Comment |
|---|----------------|--|
| IE Criticality | Reject | Criticality for IE on the reported level, i.e. level 3. |
| IE ID | id-G | IE ID from the reported level, i.e. level 3. |
| Repetition Number | 5 | Repetition number on the reported level, i.e. level 3. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure IE</i> this is the fifth occurrence of IE G within the IE E (level 2).) |
| Type of Error | not understood | |
| <i>Message Structure, first repetition</i> | | |
| >IE ID | id-B | IE ID from level 1. |
| <i>Message Structure, second repetition</i> | | |
| >IE ID | id-E | IE ID from the lowest level above the reported level, i.e. level 2. |
| >Repetition Number | 3 | Repetition number from the lowest level above the reported level, i.e. level 2. |

NOTE: The repetition number of the reported IE indicates the number of repetitions of IE G received up to the detected erroneous repetition, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.3.5 Example 5

Figure A.6: Example of a received PCAP message with a missing IE

If the instance marked as grey in the IE G in the IE E shown in the figure A.6, is missing this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*, as in table A.6.

Table A.6

| IE name | Value | Comment |
|---|---------|--|
| IE Criticality | reject | Criticality for IE on the reported level, i.e. level 3. |
| IE ID | id-G | IE ID from the reported level, i.e. level 3. |
| Repetition Number | 4 | Repetition number up to the missing IE on the reported level, i.e. level 3. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure IE</i> there have been four occurrences of IE G within the IE E (level 2) up to the missing occurrence.) |
| Type of Error | missing | |
| <i>Message Structure, first repetition</i> | | |
| >IE ID | id-B | IE ID from level 1. |
| <i>Message Structure, second repetition</i> | | |
| >IE ID | id-E | IE ID from the lowest level above the reported level, i.e. level 2. |
| >Repetition Number | 3 | Repetition number from the lowest level above the reported level, i.e. level 2. |

NOTE: The repetition number of the reported IE indicates the number of repetitions of IE G received up to but not including the missing occurrence, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.4 ASN.1 of EXAMPLE MESSAGE

```

ExampleMessage ::= SEQUENCE {
    ProtocolIES          ProtocolIE-Container      {{ExampleMessage-IEs}} ,
