Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

- 28.624 State Management Data Definition Integration Reference Point (IRP); Requirements;
- 28.625 State Management Data Definition Integration Reference Point (IRP); Information Service (IS);
- 28.626 State Management Data Definition Integration Reference Point (IRP); Solution Set (SS) definitions.

This specification is part of a set that has been developed for converged management solutions.

1 Scope

The present document specifies the State Management Data Definition IRP Information Service that can be communicated between an IRPAgent and an IRPManager for telecommunication network management purposes, including management of converged networks.

The present document specifies the semantics and behaviour of information object class attributes and relations visible across the reference point in a protocol and technology neutral way. It does not define their syntax and encoding.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

- [9] 3GPP TS 32.111-2: "Telecommunication management; Fault Management; Part 2: Alarm Integration Reference Point (IRP): Information Service (IS)".
- [10] 3GPP TS 32.662: "Telecommunication management; Configuration Management (CM); Kernel CM Information Service (IS)".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2] and 3GPP TS 32.600 [6] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM	Configuration Management
EM	Element Manager
IOC	Information Object Class
IRP	Integration Reference Point
IS	Information Service (see 3GPP TS 32.101 [1])
M	Mandatory
NE	Network Element
NM	Network Manager
NR	Network Resource
O	Optional
OMG	Object Management Group
OS	Operations System
QoS	Quality of Service
UML	Unified Modelling Language (OMG)

4 Model

4.1 Information entities imported and local labels

Label reference	Local label

4.2 Class diagram

4.2.1 Relationships

There is no relationship.

4.2.2 Inheritance

There are no inheritance relationships.

4.3 Class definitions

4.3.1 StateManagementEntity

4.3.1.1 Definition

StateManagementEntity is an Archetype, that may represent any IOC defined in the Network Resource Models, e.g. Generic Network Resource Model, Core Network Resource Model, UTRAN Network Resource Model or GERAN Network Resource Model.

The attributes defined for this Archetype can be imported and used in any IOC of the Network Resource Models, where such attributes are needed. These attributes shall be used in the same way as defined in the ITU-T Recommendation X.731 [7] and ITU-T Recommendation X.733 [8], unless otherwise stated. That document gives also examples of state diagrams, defining possible state transitions when one or more of the state attributes defined here are used in a class.

4.3.1.2 Attributes

The following attributes are defined for this Archetype.

Attribute Name					
operationalState					
usageState					
administrativeState					
alarmStatus					
proceduralStatus					
availabilityStatus					
controlStatus					
standbyStatus					
unknownStatus					

4.3.1.3 Attribute constraints

None.

4.4 Attribute definitions

4.4.1 Attribute properties

The following table gives the definition and legal values for each attribute.

operationalState It indicates the operational state of the object instance. "It describes whether or not the resource is physically installed and working." [7] This attribute is READ-ONLY. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: Enabled'. Disabled'. usageState It indicates the usage state of the object instance. "It describes whether or not the resource is activally in use at a specific instant, and if so, whether or not the space space opacity for additional users at that instant '[7] This attribute is READ-ONLY. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: 'Idle', "Active", "Busy'. administrativeStal It indicates the administrative state of the object instance. "It describes the permission to use or prohibition against using the resource, imposed through the management services. [7] is The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: 'Coleaned', "Shutting down", "Unlocked". alammStatus It indicates the administrative state of the object instance. This is mapped to whether the object instance. This is mapped to whether object instance. The meaning of these values is as defined for the attribute perceived severity in ITU-T Recommendation X.731 [7]. allowedValues: 'Cleaned', "Indeterminate", "Warning", "Minor", "Ordiced': NA isolnique: NA defaultValue: None shoultable: Failse whether the object instance. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: 'Cleaned', "Indeterminate", "Warning", "Indicates the indicates the procedural status of the object instance. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: 'Intest', 'Failed', 'Power off', 'Orf line', 'Off duty', 'Dependency', 'Degraded', 'Not installed', 'Log full'. solving the meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: 'Intest', 'Failed', 'Power off', 'Off line', 'Off duty', 'Reco	Attribute Name	Documentation and Allowed Values	Properties		
whether or not the resource is actively in use at a specific instant, and if so, whether or not it has spare capacity for additional users at that instant." [7] This attribute is READ-ONLY. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: "Idle", "Active", "Busy". administrativeStal tradicates the administrative state of the object instance. "It describes the permission to use or prohibition against using the resource, imposed through the management services." [7] The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: "Locked", "Shutting down", "Unlocked". alarmStatus It indicates the alarm status of the object instance. This is mapped to the object instance. The meaning of these values is as defined for the attribute perceived severity of the most severe active alarm associated to multiplicity: 1 isordered: N/A severity in ITU-T Recommendation X.733 [8]. allowedValues: "Cleared", "Indeterminate", "Warning", "Minor", "Major", "Critical". proceduralStatus It indicates the procedural status of the object instance. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. allowedValues: "Initialisation required", "Not initialised", "Initialising", "Reporting", "Terminating". The meaning of NULL value is the same as "empty set' defined in ITU-T Recommendation X.731 [7]. "If the value of this attribute is an empty set the managed object is ready, for example, the initialization is complete." availabilityStatus It indicates the availability status of the object instance. The meaning of these values is as defined in ITU-T Recommendation X.731 [7]. "If the value of this attribute is an empty set the managed object is ready, for example, the initialization is complete." availabilityStatus It indicates the availability status of the object instance.
