3> include the MBMS Selected Service Info and set the Status to 'Some'.

3> for each MBMS Selected Service:

4> include the MBMS Selected Service ID.

Reference

3GPP TS 25.331, clauses 8.7.6.2, 8.7.6.2a.

8.5.4.3.3 Test purpose

To verify that the UE updates the MBMS Selected Service Information at the introduction of a MBMS Service ID on the MCCH, when the UE is in CELL_DCH state.

8.5.4.3.4 Method of test

Initial condition

System Simulator:

- 1 MBMS cell.

User Equipment:

- The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.
- The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS MCCH reception in CELL_DCH state Yes/No

Test procedure

a) The MCCH on Cell 21 is modified to indicate the availability of service 1, and the Notification Indicator on MICH corresponding to service 1 is set. The IE “MBMS re- acquire MCCH” that is included in MBMS MODIFIED SERVICES INFORMATION is set to TRUE. The SS starts service 1 using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5.

b) The SS verifies for 1 complete modification period that the UE does not send MBMS MODIFICATION REQUEST.

c) Service 1 is removed from the UE selected services.

d) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “None”).

e) Service 1 is added to the UE selected services.

f) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (service 1).

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1				The UE state in Cell 21 is: CELL_DCH UE: Service 1 only is selected.
2	←		MBMS MODIFIED SERVICES INFORMATION	SS indicates the availability of the MBMS broadcast service 1. 'MBMS re- acquire MCCH' = TRUE SS: MCCH message combination C4 for 1 modification period, then combination C2.
3				SS verifies for 1 complete modification period that the UE does not send MBMS MODIFICATION REQUEST.
4				Service 1 is removed from the UE selected services.
5	→		MBMS MODIFICATION REQUEST	MBMS Selected Service Info: Status = 'None'.
6				Service 1 is added to the UE selected services.
7	→		MBMS MODIFICATION REQUEST	MBMS Selected Service Info: Status = 'Some'. MBMS Selected Service ID = 5

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 2)

The same message found in TS 34.108 clause 9, with the following exceptions:

Information Element	Value/remark
Modified service list - MBMS Transmission identity - MBMS Service ID - MBMS Session ID - MBMS required UE action - Continue MCCH reading MBMS re- acquire MCCH	 '000005' 1 Acquire PTM RB Info FALSE TRUE

MBMS MODIFICATION REQUEST (STEP 5)

Information Element	Value/remark
MBMS Selected Service Info - CHOICE Status	 None

MBMS MODIFICATION REQUEST (STEP 7)

Information Element	Value/remark
MBMS Selected Service Info - CHOICE Status - MBMS Selected Services Full - MBMS Selected Service ID - MBMS Service ID - CHOICE PLMN identity - SameAs-MIB - explicitPLMN_Id	 Some '000005' Check to see that one of the below choice element is present (no data) Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell.

8.5.4.3.5 Test requirements

In step 3 the UE shall not send MBMS MODIFICATION REQUEST.

In step 5 the UE shall transmit MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “None”).

In step 7 the UE shall transmit MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “Some”, MBMS Service ID = ‘000005’).

8.5.5 MBMS Counting

8.5.5.1 MBMS Counting in Idle Mode / MBMS Selected Service

8.5.5.1.1 Definition

This test case is applicable for all UEs supporting MBMS broadcast services.

8.5.5.1.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: 0 ≤ rand < 1

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.3.

8.5.5.1.3 Test purpose

To confirm that the UE starts the MBMS counting procedure in idle mode upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

8.5.5.1.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21) using MCCH Longest Default scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
				The UE is in idle mode.
1	←		MBMS MODIFIED SERVICES INFORMATION	The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info”
2	←		MBMS ACCESS INFORMATION	The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1).
3	→		RRC CONNECTION REQUEST	The UE transmits the message with Establishment cause set to “MBMS reception” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity.
4	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection. RRC state indicator set to CELL_DCH.
5	→		RRC CONNECTION SETUP COMPLETE	
5a	→		MBMS MODIFICATION REQUEST	The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 5 and before step 7.
6	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”.
7	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified service list - MBMS Transmission identity - MBMS required UE action	Only 1 entry MBMS Transmission identity indicating MBMS activated service Acquire counting info

MBMS ACCESS INFORMATION (Step 2)

Information Element	Value/remark
Service list	Only 1 entry
- MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
- Access probability factor – Idle	0 (corresponding to the actual probability factor value 1)
- Connected mode counting scope	
- URA_PCH	FALSE
- CELL_PCH	FALSE
- CELL_FACH	FALSE

RRC CONNECTION REQUEST (Step 3)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered TMSI or P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	
- MBMS Selected Services	Only 1 entry
- MBMS Selected Service ID	MBMS short transmission identity referring to the service the UE has selected
- Modification period identity	Indicates the modification period the MBMS short transmission identities refer to

MBMS MODIFICATION REQUEST (steps 5a)

Information Element	Value/remark
MBMS preferred frequency request	Check that the IE is not present
MBMS RB list requested to be released	Check that the IE is not present
MBMS Selected Service Info	
- CHOICE Status	Some
- MBMS Selected Services Full	
- MBMS Selected Service ID	Only 1 entry
- MBMS Service ID	MBMS service ID of the activated MBMS service
- CHOICE PLMN identity	Check to see that one of the below choice element is present
- SameAs-MIB	(no data)
- explicitPLMN_Id	Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell.

8.5.5.1.5 Test requirement

At step 3, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including in case of MBMS Selected services the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

At step 5, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

8.5.5.1m MBMS Counting in Idle Mode / MBMS Multicast Service

8.5.5.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.5.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.1.2 except there is no reference to 3GPP TS 25.331 clause 8.1.3.3.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3.

8.5.5.1m.3 Test purpose

To confirm that the UE starts the MBMS counting procedure in idle mode upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).

8.5.5.1m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.1.4.

Expected sequence

Same expected sequence as in clause 8.5.5.1.4 except for RRC CONNECTION REQUEST message content (step 3) and MODIFICATION REQUEST procedure not required.

Step	Direction		Message	Comment
	UE	SS		
				The UE is in idle mode.
1	←		MBMS MODIFIED SERVICES INFORMATION	The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info”
2	←		MBMS ACCESS INFORMATION	The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has joined and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1).
3	→		RRC CONNECTION REQUEST	The UE transmits the message with Establishment cause set to “MBMS reception”
4	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection. RRC state indicator set to CELL_DCH.
5	→		RRC CONNECTION SETUP COMPLETE	
6	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception”.
7	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific message contents

Same specific messages contents as in clause 8.5.5.1.4 except for RRC CONNECTION REQUEST message content (step 3).

RRC CONNECTION REQUEST (Step 3)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered TMSI or P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	Not present

8.5.5.1m.5 Test requirements

At step 3, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH.

At step 5, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

8.5.5.2 MBMS Counting in CELL_FACH / MBMS Selected Service

8.5.5.2.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

8.5.5.2.2 Conformance requirement

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

…

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

2> draw a random number, "rand", uniformly distributed in the range: 0 ≤ rand < 1.

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-connected' for the concerned service:

3> if a cell update has not been successfully transmitted for this service in the current modification period:

4> initiate the cell update procedure with 'Cell update cause' set to "MBMS reception", in accordance with subclause 8.3.1;

4> if the above condition applies for more than one service, initiate a single cell update;

4> if the cell update procedure succeeds,

5> the procedure ends.

2> otherwise:

3> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

3> otherwise:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends;

Upon receiving the MBMS ACCESS INFORMATION message not including an MBMS service(s) the UE has joined:

1> the procedure ends;

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.3.1.3.

8.5.5.2.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_FACH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

8.5.5.2.4 Method of test

Initial condition

System Simulator: one MBMS cell (cell 21) using MCCH Shortest Default scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The SS sends a MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to ‘Acquire counting info’ for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has activated
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". The IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" shall be included in the counting response initiated for a MBMS Selected Service. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH.

4) The SS sends the MBMS ACCESS INFORMATION message again in the same Modification Period. The UE shall not perform the MBMS counting procedure during the same Modification Period.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MBMS MODIFIED SERVICES INFORMATION	“MBMS required UE action” IE is set to "Acquire counting info"

Step	Direction		Message	Comments
	UE	SS		
2	←		MBMS ACCESS INFORMATION	"MBMS short transmission ID" IE referring to the service the UE has activated, "Connected mode counting scope" IE set to "TRUE", "Access probability factor – connected" IE set to 0.
3	→		CELL UPDATE	The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception" and in case of MBMS Selected service the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity.
4	←		CELL UPDATE CONFIRM	
5	←		MBMS ACCESS INFORMATION	The SS sends again in the same MP a MBMS access Information message.
6				The SS check that the UE shall not perform again the counting procedure by sending another cell update message.
7	←→		CALL C.2	If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails.

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified services list	Only 1 entry
-MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
-MBMS required UE action	Acquire counting info

MBMS Access Information (Steps 2 and 5)

Information Element	Value/remark
Service list	Only 1 entry
-MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
-Access probability factor – connected	0 (corresponding to the actual probability factor value 1)
-Connected mode counting scope	
- URA_PCH	FALSE
- CELL_PCH	FALSE
- CELL_FACH	TRUE

CELL UPDATE (Step 3)

Information Element	Value/remark
Cell update cause	MBMS reception
MBMS Selected Services	present in case of MBMS Selected service
- MBMS Selected Services	Only 1 entry
- MBMS Selected Service ID	MBMS short transmission identity referring to the service the UE has selected
- Modification period identity	Indicates the modification period the MBMS short transmission identities refer to

8.5.5.2.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception" and using in case of MBMS Selected services the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

8.5.5.2m MBMS Counting in CELL_FACH / MBMS Multicast Service

8.5.5.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.5.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.2.2 except there is no reference to 3GPP TS 25.331 clause 8.3.1.3.

8.5.5.2m.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_FACH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

8.5.5.2m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.2.4 except for the points 2 and 3:

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:
   - the “MBMS short transmission ID” IE referring to the service the UE has joined
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)
3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH.

Expected sequence

Same expected sequence as in clause 8.5.5.2.4 except for CELL UPDATE message content (step 3).

Step	Direction		Message	Comments
	UE	SS		
1	←		MBMS MODIFIED SERVICES INFORMATION	“MBMS required UE action” IE is set to "Acquire counting info"
2	←		MBMS ACCESS INFORMATION	“MBMS short transmission ID” IE referring to the service the UE has joined, “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0.
3	→		CELL UPDATE	The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception".
4	←		CELL UPDATE CONFIRM	
5	←		MBMS ACCESS INFORMATION	The SS sends again in the same MP a MBMS access Information message.
6				The SS check that the UE shall not perform again the counting procedure by sending another cell update message.
7	←→		CALL C.2	If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails.

Specific message contents

Same specific messages contents as in clause 8.5.5.2.4 except for CELL UPDATE message content (step 3).

CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
Cell update cause	MBMS reception

8.5.5.2m.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

8.5.5.3 MBMS No Counting in CELL_DCH / MBMS Selected Service

8.5.5.3.1 Definition

This test is applicable for all UEs that support MBMS broadcast services and capable of reading MCCH in CELL_DCH state.

8.5.5.3.2 Conformance requirement

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the "MBMS required UE action" is set to 'None':

2> take no action with respect to this IE.

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

…

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

The UE shall acquire the MBMS ACCESS INFORMATION message without delaying reading of MCCH until the next modification period in accordance with subclause 8.7.1.3. If the procedure the UE would apply to respond to counting (Idle mode: RRC connection establishment, connected mode: Cell update) is ongoing, the UE may defer acquiring the MBMS ACCESS INFORMATION message until this procedure has completed.

The UE behaviour upon receiving an MBMS ACCESS INFORMATION message that is contained in more than one TTI is not specified.

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/or including one or more MBMS Selected Services the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

…

1> otherwise:

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.7.4.1, 8.7.4.2, 8.7.4.3.

8.5.5.3.3 Test purpose

To verify that the UE in CELL_DCH state (with the probability factor set to 1) does not perform the MBMS counting procedure.

8.5.5.3.4 Method of test

Initial condition

System Simulator: one MBMS cell (cell 21) using MCCH Default2 scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108. The UE has been registered in both CS and PS domains.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

- UE supports MCCH reception in CELL_DCH state Yes/No.

Test procedure

The UE is in CELL_DCH state. The SS transmits an MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to "Acquire counting info" for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

The UE receives an MBMS ACCESS INFORMATION message including the concerned MBMS Selected service.

The UE shall not perform the MBMS counting procedure.

The SS continues to send MBMS ACCESS INFORMATION messages including the MBMS Selected service in the same Modification Period. The UE shall not perform the MBMS counting procedure.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS Selected service in the next Modification Period. The UE shall not perform the MBMS counting procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				The UE is in CELL_DCH state.
1	←		MBMS MODIFIED SERVICES INFORMATION	“MBMS required UE action” IE is set to "Acquire counting info"
2	←		MBMS ACCESS INFORMATION	“MBMS short transmission ID” IE referring to the service the UE has activated, “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE “ set to 0 (corresponding to the actual probability factor value 1).
3				The SS checks that the UE does not perform the counting procedure.
4	←		MBMS ACCESS INFORMATION	The SS continues to send MBMS access Information messages in the same MP.
5				The SS checks that the UE does not perform the counting procedure.
6	←		MBMS ACCESS INFORMATION	The SS sends a MBMS access Information message in the next MP.
7				The SS checks that the UE does not perform the counting procedure.
8	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified service list - MBMS Transmission identity - MBMS required UE action - Continue MCCH reading	Only 1 entry MBMS Transmission identity indicating MBMS activated service Acquire counting info TRUE

MBMS ACCESS INFORMATION (Step 2, Step 4 and Step 6)

Information Element	Value/remark
Service list	Only 1 entry
- MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
- Access probability factor - Idle	0 (corresponding to the actual probability factor value 1)
- Connected mode counting scope

- CELL_PCH	TRUE
- CELL_FACH	TRUE

8.5.5.3.5 Test requirements

After step 2, the UE shall not perform the MBMS counting procedure.

After step 4, the UE shall not perform the MBMS counting procedure.

After step 6, the UE shall not perform the MBMS counting procedure.

8.5.5.3m MBMS No Counting in CELL_DCH / MBMS Multicast Service

8.5.5.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and capable of reading MCCH in CELL_DCH state.

8.5.5.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.3.2.

8.5.5.3m.3 Test purpose

Same test purpose as in clause 8.5.5.3.3.

8.5.5.3m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MCCH reception in CELL_DCH state Yes/No.

Test procedure

The UE is in CELL_DCH state. The SS transmits an MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to "Acquire counting info" for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS service the UE has joined.

The UE shall not perform the MBMS counting procedure.

The SS continues to send MBMS ACCESS INFORMATION messages including the MBMS service the UE has joined in the same Modification Period. The UE shall not perform the MBMS counting procedure.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS service the UE has joined in the next Modification Period. The UE shall not perform the MBMS counting procedure.

Expected sequence

Same expected sequence as in clause 8.5.5.3.4 except for MBMS ACCESS INFORMATION message contents (steps 2, 4 and 6).

Step	Direction		Message	Comments
	UE	SS		
				The UE is in CELL_DCH state.
1	←		MBMS MODIFIED SERVICES INFORMATION	"MBMS required UE action" IE is set to "Acquire counting info"
2	←		MBMS ACCESS INFORMATION	"MBMS short transmission ID" IE referring to the service the UE has joined.
3				The SS checks that the UE does not perform the counting procedure.
4	←		MBMS ACCESS INFORMATION	The SS continues to send MBMS access Information messages in the same MP.
5				The SS checks that the UE does not perform the counting procedure.
6	←		MBMS ACCESS INFORMATION	The SS sends a MBMS access Information message in the next MP.
7				The SS checks that the UE does not perform the counting procedure.
8	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific message contents

Same specific messages contents as in clause 8.5.5.3.4.

8.5.5.3m.5 Test requirements

Same test requirement as in clause 8.5.5.3.5.

8.5.5.4 MBMS Counting in CELL_PCH / MBMS Selected Service

8.5.5.4.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

8.5.5.4.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

2> draw a random number, "rand", uniformly distributed in the range: 0 ≤ rand < 1.

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-connected' for the concerned service:

3> if a cell update has not been successfully transmitted for this service in the current modification period:

4> initiate the cell update procedure with 'Cell update cause' set to "MBMS reception", in accordance with subclause 8.3.1;

4> if the above condition applies for more than one service, initiate a single cell update;

4> if the cell update procedure succeeds,

5> the procedure ends.

2> otherwise:

3> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

3> otherwise:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends;

Upon receiving the MBMS ACCESS INFORMATION message not including an MBMS service(s) the UE has joined:

1> the procedure ends;

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.3.1.3.

8.5.5.4.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_PCH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0 for the selected services.

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

8.5.5.4.4 Method of test

Initial condition

System Simulator: one MBMS cell (cell 21)

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The SS sends a MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to ‘Acquire counting info’ for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has activated
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". The IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" shall be included in the counting response initiated for the MBMS Selected Service. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall move to the Cell_PCH state as indicated by the IE "RRC State Indicator".

4) The SS sends the MBMS ACCESS INFORMATION message again in the same Modification Period. The UE shall not perform the MBMS counting procedure during the same Modification Period.

Expected sequence

Step	Direction	Message	Comments

	UE	SS		
				The UE is in cell_PCH
1	←		MBMS MODIFIED SERVICES INFORMATION	“MBMS required UE action” IE is set to "Acquire counting info"
2	←		MBMS ACCESS INFORMATION	“MBMS short transmission ID” IE referring to the service the UE has activated and “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0.
3	→		CELL UPDATE	The UE shall perform the MBMS counting procedure which triggers the cell updating procedure which moves the UE into CELL_FACH state. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception" and the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity.
4	←		CELL UPDATE CONFIRM	IE "RRC State Indicator” is set to CELL_PCH.
5	←		MBMS ACCESS INFORMATION	The SS sends again in the same MP a MBMS access Information message.
6				The SS check that the UE shall not perform again the counting procedure by sending another cell update message.
7	←→		CALL C.4	If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails.

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified services list	Only 1 entry
-MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
-MBMS required UE action	Acquire counting info

MBMS ACCESS INFORMATION (Steps 2 and 5)

Information Element	Value/remark
Service list	Only 1 entry
-MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
-Access probability factor – connected	0 (corresponding to the actual probability factor value 1)
-Connected mode counting scope	
- URA_PCH	TRUE
- CELL_PCH	TRUE
- CELL_FACH	TRUE

CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
Cell update cause	MBMS reception
MBMS Selected Services	
- MBMS Selected Services	Only 1 entry
- MBMS Selected Service ID	MBMS short transmission identity referring to the service the UE has selected
- Modification period identity	Indicates the modification period the MBMS short transmission identities refer to

CELL UPDATE CONFIRM (Step 4)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
RRC State Indicator	Cell_PCH
UTRAN DRX cycle length coefficient	7

8.5.5.4.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception” and using in case of MBMS Selected services the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

8.5.5.4m MBMS Counting in CELL_PCH / MBMS Multicast Service

8.5.5.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.5.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.4.2 except there is no reference to 3GPP TS 25.331 clause 8.3.1.3.

8.5.5.4m.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_PCH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

8.5.5.4m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.2.4 except for the points 2 and 3:

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has joined
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall move to the Cell_PCH state as indicated by the IE "RRC State Indicator".

Expected sequence

Same expected sequence as in clause 8.5.5.4.4 except for MBMS ACCESS INFORMATION message content (step 2) and CELL UPDATE message content (step 3).

Step	Direction		Message	Comments
	UE	SS		
				The UE is in cell_PCH
1	←		MBMS MODIFIED SERVICES INFORMATION	“MBMS required UE action” IE is set to "Acquire counting info"
2	←		MBMS ACCESS INFORMATION	“MBMS short transmission ID” IE referring to the service the UE has joined and “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0.
3	→		CELL UPDATE	The UE shall perform the MBMS counting procedure which triggers the cell updating procedure which moves the UE into CELL_FACH state. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception".
4	←		CELL UPDATE CONFIRM	IE "RRC State Indicator” is set to CELL_PCH.
5	←		MBMS ACCESS INFORMATION	The SS sends again in the same MP a MBMS access Information message.
6				The SS check that the UE shall not perform again the counting procedure by sending another cell update message.
7	←→		CALL C.4	If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails.

Specific message contents

Same specific messages contents as in clause 8.5.5.4.4.

CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
Cell update cause	MBMS reception

CELL UPDATE CONFIRM (Step 4)

Use the same specific message content as in clause 8.5.5.4.4 for CELL UPDATE CONFIRM message at Step 4.

8.5.5.4m.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

8.5.5.5 Void

8.5.5.6 Void

8.5.5.7 RRC Connection establishment for MBMS Counting :Success after T318 Timeout/ MBMS Selected Service

8.5.5.7.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

8.5.5.7.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3 including one or more MBMS service(s) it has joined and/or including one or more MBMS Selected Services, the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: 0 ≤ rand < 1

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

1> submit the RRC CONNECTION REQUEST message for transmission on the uplink CCCH;

1> set counter V300 to 1; and

1> if the variable ESTABLISHMENT_CAUSE is set to "MBMS reception":

2> when the MAC layer indicates success or failure to transmit the message:

3> if the MAC layer indicates failure:

4> enter idle mode;

4> consider the procedure to be unsuccessful;

4> perform other actions when entering idle mode from connected mode as specified in subclause 8.5.2;

4> the procedure ends.

3> else:

4> start timer T318;

4> apply value 0 for counter N300 regardless of the value included in IE "UE Timers and Constants in idle mode".

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the counting response procedure (RRC connection establishment or Cell update) fails, the UE shall:

1> if the failure occurs in the same modification period as the one in which the UE initiated the counting response procedure; or

1> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE that is applicable in the modification period in which the UE detects the failure:

2> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.2, 8.1.3.3, 8.7.4.5.

8.5.5.7.3 Test purpose

To confirm that the UE starts T318 timer once UE MAC layer indicates successful transmission of RRC Connection Request message for MBMS counting.

To verify that the UE continues to acquire MBMS ACCESS INFORMATION messages after Expiry of T318, and hence re-start RRC Connection Request procedure for counting.

8.5.5.7.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Longest MCCH scheduling configuration defined in 34.108 clause 11.1.1.3 is used.

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”. After MAC indication on successful transmission, starts T318 timer.

SS does not respond to the RRC CONNECTION REQUEST message.

After expiry of T318, UE Re-acquires MBMS ACCESS INFORMATION, and re-starts the counting procedure. The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
				The UE is in idle mode.
1	←		MBMS MODIFIED SERVICES INFORMATION	The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info”
2	←		MBMS ACCESS INFORMATION	The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1).
3	←		MBMS GENERAL INFORMATION	
4	→		RRC CONNECTION REQUEST	The UE transmits the message with Establishment cause set to “MBMS reception”
5				SS does not respond to RRC Connection Request message in step 4.
6	→		RRC CONNECTION REQUEST	The UE re-sends the message with Establishment cause set to “MBMS reception” with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity.
7	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection. RRC state indicator set to CELL_DCH.
8	→		RRC CONNECTION SETUP COMPLETE	
8a	→		MBMS MODIFICATION REQUEST	The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 8 and before step 10.
9	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”.
10	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

Information Element	Value/remark
- UE Timers and constants in idle mode	
-T300	8000 milliseconds

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified service list	Only 1 entry
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	Acquire counting info
- Continue MCCH reading	TRUE

MBMS ACCESS INFORMATION (Step 2)

Information Element	Value/remark
Service list	Only 1 entry
- MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
- Access probability factor – Idle	0 (corresponding to the actual probability factor value 1)

MBMS GENERAL INFORMATION (Step 3)

Use the default message type found in TS 34.108, 9.1.1 except for

MBMS timers and counters	
- T318	1500 ms

RRC CONNECTION REQUEST (Step 4 and 6)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered TMSI or P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	
- MBMS Selected Services	Only 1 entry
- MBMS Selected Service ID	MBMS short transmission identity referring to the service the UE has selected
- Modification period identity	Indicates the modification period the MBMS short transmission identities refer to

RRC CONNECTION SETUP (Step 7)

Use the default message type found in TS 34.108, 9.1.1.

RRC CONNECTION SETUP COMPLETE (Step 8)

Use the default message type found in TS 34.108, 9.1.1.

MBMS MODIFICATION REQUEST (steps 8a)

Information Element	Value/remark
MBMS preferred frequency request	Check that the IE is not present
MBMS RB list requested to be released	Check that the IE is not present
MBMS Selected Service Info	
- CHOICE Status	Some
- MBMS Selected Services Full	
- MBMS Selected Service ID	Only 1 entry
- MBMS Service ID	MBMS service ID of the activated MBMS service
- CHOICE PLMN identity	Check to see that one of the below choice element is present
- SameAs-MIB	(no data)
- explicitPLMN_Id	Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell.

8.5.5.7.5 Test requirement

At step 4 and 6, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

The time difference between step 4 and 6 should be at least 1500 milliseconds (T318 expiry), and less than 6 seconds (T318 [1500ms] +2*AP [1280ms] +Transmission time on PRACH)

At step 8, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

8.5.5.7m RRC Connection establishment for MBMS Counting :Success after T318 Timeout / MBMS Multicast Service

8.5.5.7m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.5.7m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.7.2.

8.5.5.7m.3 Test purpose

Same test purpose as in clause 8.5.5.7.3.

8.5.5.7m.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.7.4, except expected sequence step 8a is not applicable and at step 9 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception”.

Specific message contents

Same specific messages contents as in clause 8.5.5.7.4 except for RRC CONNECTION REQUEST message content (step 4 and 6). Step 8a contents are not applicable.

RRC CONNECTION REQUEST (Step 4 and 6)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	Not present

8.5.5.7m.5 Test requirements

Same Test Requirements as in clause 8.5.5.7.5, except UE shall not include in the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity” in step 4 and 6.

8.5.5.8 RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication/ MBMS Selected Service

8.5.5.8.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

8.5.5.8.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3 including one or more MBMS service(s) it has joined and/or including one or more MBMS Selected Services, the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: 0 ≤ rand < 1

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

1> submit the RRC CONNECTION REQUEST message for transmission on the uplink CCCH;

1> set counter V300 to 1; and

1> if the variable ESTABLISHMENT_CAUSE is set to "MBMS reception":

2> when the MAC layer indicates success or failure to transmit the message:

3> if the MAC layer indicates failure:

4> enter idle mode;

4> consider the procedure to be unsuccessful;

4> perform other actions when entering idle mode from connected mode as specified in subclause 8.5.2;

4> the procedure ends.

3> else:

4> start timer T318;

4> apply value 0 for counter N300 regardless of the value included in IE "UE Timers and Constants in idle mode".

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

3> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the counting response procedure (RRC connection establishment or Cell update) fails, the UE shall:

1> if the failure occurs in the same modification period as the one in which the UE initiated the counting response procedure; or

1> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE that is applicable in the modification period in which the UE detects the failure:

2> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.2, 8.1.3.3, 8.7.4.5.

8.5.5.8.3 Test purpose

To confirm that the UE does not start T318 timer once UE MAC layer indicates un-successful transmission of RRC Connection Request message for MBMS counting.

To verify that the UE continues to acquire MBMS ACCESS INFORMATION messages after MAC layer failure indication for first RRC Connection Request transmission, and hence re-start RRC Connection Request procedure for counting.

8.5.5.8.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Longest MCCH scheduling configuration defined in 34.108 clause 11.1.1.3 is used.

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE submits RRC CONNECTION REQUEST message for transmission, with “Establishment cause” set to “MBMS reception”.

SS does not acknowledge the RACH access on AICH.

After Failure indication by UE MAC Layer, UE Re-acquires MBMS ACCESS INFORMATION, and re-starts the counting procedure. The UE transmits RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
				The UE is in idle mode.
1	←		MBMS MODIFIED SERVICES INFORMATION	The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info”
2	←		MBMS ACCESS INFORMATION	The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1).
3	←		MBMS GENERAL INFORMATION	
4	→		ACCESS PREAMBLE(RRC CONNECTION REQUEST)	
5				SS does not respond to ACCESS PREAMBLE on AICH channel.
6				After Failure indication by MAC Layer, UE starts acquiring MBMS ACCESS INFORMATION
7	→		RRC CONNECTION REQUEST	The UE re-sends the message with Establishment cause set to “MBMS reception”. (SS ACKS on AICH for ACCESS PREAMBLE)
8	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection. RRC state indicator set to CELL_DCH.
9	→		RRC CONNECTION SETUP COMPLETE	
9a	→		MBMS MODIFICATION REQUEST	The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 9 and before step 11.
10	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”.
11	←→		CALL C.3	If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails.

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

Information Element	Value/remark
- UE Timers and constants in idle mode	
-T300	8000 milliseconds

MBMS MODIFIED SERVICES INFORMATION (Step 1)

Information Element	Value/remark
Modified service list	Only 1 entry
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	Acquire counting info
- Continue MCCH reading	TRUE

MBMS ACCESS INFORMATION (Step 2)

Information Element	Value/remark
Service list	Only 1 entry
- MBMS short transmission ID	Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION
- Access probability factor – Idle	0 (corresponding to the actual probability factor value 1)

MBMS GENERAL INFORMATION (Step 3)

Use the default message type found in TS 34.108, 9.1.1 except for

MBMS timers and counters	
- T318	16000 ms

RRC CONNECTION REQUEST (Step 7)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered TMSI or P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	
- MBMS Selected Services	Only 1 entry
- MBMS Selected Service ID	MBMS short transmission identity referring to the service the UE has selected
- Modification period identity	Indicates the modification period the MBMS short transmission identities refer to

RRC CONNECTION SETUP (Step 8)

Use the default message type found in TS 34.108, 9.1.1.

RRC CONNECTION SETUP COMPLETE (Step 9)

Use the default message type found in TS 34.108, 9.1.1.

MBMS MODIFICATION REQUEST (steps 9a)

Information Element	Value/remark
MBMS preferred frequency request	Check that the IE is not present
MBMS RB list requested to be released	Check that the IE is not present
MBMS Selected Service Info	
- CHOICE Status	Some
- MBMS Selected Services Full	
- MBMS Selected Service ID	Only 1 entry
- MBMS Service ID	MBMS service ID of the activated MBMS service
- CHOICE PLMN identity	Check to see that one of the below choice element is present
- SameAs-MIB	(no data)
- explicitPLMN_Id	Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell.

8.5.5.8.5 Test requirement

At step 7, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

The time difference between step 4(last Access Preamble Reception) and 7 should be at least 1280 milliseconds (one AP), and less than 4 seconds (2*AP[1280ms]+Transmission time on PRACH).

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

8.5.5.8m RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication / MBMS Multicast Service

8.5.5.8m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.5.8m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.8.2.

8.5.5.8m.3 Test purpose

Same test purpose as in clause 8.5.5.8.3.

8.5.5.8m.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.8.4, except expected sequence step 9a is not applicable and at step 10 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception”.

Specific message contents

Same specific messages contents as in clause 8.5.5.8.4 except for RRC CONNECTION REQUEST message content (step 7). Step 9a contents are not applicable.

RRC CONNECTION REQUEST (Step 7)

Information Element	Value/remark
Message type	
Initial UE identity	Same as the registered P-TMSI.
Establishment Cause	MBMS reception
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.
MBMS Selected Services	Not present

8.5.5.8m.5 Test requirements

Same Test Requirements as in clause 8.5.5.8.5, except UE shall not include in the IE "MBMS Selected Service ID" of the concerned MBMS selected service within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" in step 7.

8.5.6 MBMS Controlling Cell Change

8.5.6.1 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Selected Service

8.5.6.1.1 Definition

Test to verify that the UE performs the cell reselection correctly if system information parameters Qoffset, Qhyst, Qoffmbms and Treselection are applied for non-hierarchical cell structures. This test case is applicable for all UEs that support MBMS broadcast services.

8.5.6.1.2 Conformance requirement

When camped normally, the UE shall perform the following tasks:

- select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
- monitor relevant System Information. This is specified in [8];
- perform necessary measurements for the cell reselection evaluation procedure;
- execute the cell reselection evaluation process on the following occasions/triggers:
  1) UE internal triggers, so as to meet performance as specified in [22] and [23];
  2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

If the UE supports MBMS and MBMS is active in the cell and the UE is permitted to receive MBMS services in the cell, the UE shall perform MBMS tasks as specified in subclause 6.3 of TS 25.304.

…

The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s + Qoffmbms$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} + Qoffmbms - TO_n * (1 - L_n)$$

where:

the signalled value Qoffmbms is only applied to those cells (serving or neighbouring) belonging to the MBMS PL

…

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [22] and [23] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate R_s, if provided in SIB4 [see 8]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate R_s, if provided in SIB4 [see 8].

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3 of TS 25.304.

…

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 8], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 8]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

Reference

3GPP TS 25.304 clauses 5.2.5.1, 5.2.6.1.4.

8.5.6.1.3 Test purpose

1. To verify that a UE in idle mode calculates R from Qhyst, and Qoffset and Qoffmbms, which triggers the cell reselection evaluation process.
2. To verify that a UE in idle mode performs a Serving Cell Reselection to the Preferred Layer at Session Start.
3. To verify that a UE in idle mode performs an intra-frequency Cell Reselection on the Preferred Layer during an ongoing Session

8.5.6.1.4 Method of test

Initial Condition

System Simulator: 3 MBMS cells (Cell 21, Cell 24, Cell 26) with the downlink transmission power shown in column marked "T0" in table 8.5.6.1-1.

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108 and camped on Cell 21.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.6.1-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked “T0” denote the initial conditions, while columns marked “T1” are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.5.6.1-1

Parameter	Unit	Cell 21		Cell 24		Cell 26	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		High Range Test Frequency		High Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84 MHz	-60	-60	-66	-75	-75	-66
P-CCPCH RSCP (TDD)	dBm	-60	-60	-66	-75	-75	-66

The UE is in idle mode in Cell 21.

The SS notifies on MICH and MCCH in Cell 1 about the start of an MBMS session including a preferred frequency in the IE “MBMS preferred frequency”. The UE reselects to Cell 24 (Frequency Layer Convergence).

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info” and MBMS ACCESS INFORMATION message, which includes the MBMS Short Transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0 (corresponds to an actual Probability Factor = 1).

The UE shall transmit an RRC CONNECTION REQUEST message, with “Establishment cause” set to “MBMS reception”. The SS transmits a RRC CONNECTION SETUP. The UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 26. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

The SS applies the power settings of “T1” in table 8.5.6.1-1. Then the UE shall reselect to Cell 26 applying the Qoffmbms.

The UE receives an MBMS UNMODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 24. The UE shall apply the MBMS p-t-m radio bearer configuration and continues receiving the indicated p-t-m radio bearer.

SS calls for generic procedure C.1 to check that UE is in idle mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	UE			The UE is in idle mode on Cell 21.
2	←		SYSTEM INFORMATION	See specific message contents for SIB3
3	←		MBMS MODIFIED SERVICES INFORMATION	"MBMS required UE action" IE is set to "none" and the "MBMS preferred frequency" IE indicates the reference to Ch. 2.
4	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information is set to Ch. 2. Qoffmbms is set to 12 dB.
5	UE			UE reselects to Cell 24
5a	SS			The following MCCH messages are sent on Cell 24.
6	←		MBMS MODIFIED SERVICES INFORMATION	Transmitted "MBMS required UE action" IE is set to "Acquire counting info"
7	←		MBMS ACCESS INFORMATION	"MBMS short transmission ID" IE set to 1, "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).
8	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.
9	→		RRC CONNECTION REQUEST	The UE transmits the message with Establishment cause set to "MBMS reception" and in case of MBMS Selected service with the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity.
10	←		RRC CONNECTION SETUP	
11	→		RRC CONNECTION SETUP COMPLETE	
11a	→		MBMS MODIFICATION REQUEST	The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure in case of MBMS selected Service. This message may be received at any point after step 11 and before step 13.
12	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception".
13	←		RRC CONNECTION RELEASE	
14	→		RRC CONNECTION RELEASE COMPLETE	The UE shall enter idle state.
15	←		MBMS MODIFIED SERVICES INFORMATION	MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH.
16	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.
17	←		MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 26
18	SS			The SS applies the power settings of "T1" in Table 8.5.6.1-1

19	UE		UE performs reselection applying Qoffmbms and reselects the Cell 26
20	←	MBMS UNMODIFIED SERVICES INFORMATION	There is no change in MBMS services already ongoing in previous cell
21	←	MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.
22	←	MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 24
23	←→	CALL C.1	If the test result of C.1 indicates that UE is in idle mode, the test passes, otherwise it fails.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 3 (Step 2)

Information Element	Value/remark
Sintersearch	Not Present

MBMS MODIFIED SERVICES INFORMATION (Step 3)

Information Element	Value/remark
Modified service list - MBMS Transmission identity - MBMS required UE action - MBMS preferred frequency - PFL index - Continue MCCH reading	Only 1 entry MBMS Transmission identity indicating MBMS activated service None Index for Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) FALSE

MBMS GENERAL INFORMATION (Step 4)

Information Element	Value/remark
MBMS preferred frequency information - MBMS preferred frequency list - MBMS preferred frequency - CHOICE Layer convergence information - No HCS - Qoffmbms	 Only 1 entry Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) 12 dB

8.5.6.1.5 Test requirement

After step 6, the UE upon receiving an MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" set to 'Acquire counting info', shall perform the counting procedure.

At step 8, the UE shall send an RRC CONNECTION REQUEST message with "Establishment cause" set to 'MBMS reception'.

After step 15, the UE shall reselect to Cell 26 applying the Qoffmbms and the SS shall check that the UE is camped on Cell 26 in idle mode.

8.5.6.1m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Multicast Service

8.5.6.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.6.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.1.2

8.5.6.1m.3 Test purpose

Same test purpose as in clause 8.5.6.1.3.

8.5.6.1m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells , Cell 21, Cell 24, Cell 26.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.1.4, except that at step 12 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

Specific message contents

Same specific messages contents as in clause 8.5.6.1.4

8.5.6.1m.5 Test requirements

Same test requirement as in clause 8.5.6.1.5.

8.5.6.2 MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Broadcast Service

8.5.6.2.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

8.5.6.2.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state; and

1> if not receiving an MBMS service provided via a p-t-m radio bearer:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clause 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

8.5.6.2.3 Test purpose

1. To verify that a UE in CELL_FACH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.
2. To verify that a UE in CELL_FACH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.
3. To verify that the UE is able to read MCCH in combination with FACH measurements.
4. To verify that a UE in CELL_FACH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

8.5.6.2.4 Method of test

Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

Table 8.5.6.2-1 illustrates the downlink power to be applied for the 3 cells in this test case. Initially, the SS applies the power settings of column “T0”.

Table 8.5.6.2-1

Parameter	Unit	Cell 21			Cell 24			Cell 26		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			High Range Test Frequency			High Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	-80	-80	-70	-60	-70	-70	-70	-60
P-CCPCH RSCP (TDD)	dBm	-60	-80	-80	-70	-60	-70	-70	-70	-60

The UE is in CELL_FACH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH in Cell 21 on the concerned MBMS radio bearer. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDUs.

The SS applies the power settings of “T1” in table 8.5.6.2-1. Then the UE shall reselect to Cell 24 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH.

The SS provides information about the ongoing MBMS service in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24. The MBMS radio bearer on MTCH is put into loopback mode 3, and SDU counter is reset to 0.The SS transmits 10 RLC SDUs of MBMS data in Cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than zero.

The SS transmits 10 RLC SDUs of MBMS data in neighbouring Cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported previously at step 16 of expected sequence.

The SS applies the power settings of “T2” in table 8.5.6.2-1. Then the UE shall reselect to Cell 26 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH.

The SS provides information about the ongoing MBMS service in cell 26 by MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 26.

The SS transmits 10 RLC SDUs of MBMS data in Cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE previously at step 19 of expected sequence.

The SS transmits 10 RLC SDUs of MBMS data in neighbouring Cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE at step 27 of expected sequence. The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
0	←		SYSTEM INFORMATION	See specific message contents for SIB3 and SIB11
1	←		ACTIVATE RB TEST MODE	
2	→		ACTIVATE RB TEST MODE COMPLETE	
3	←		MBMS MODIFIED SERVICES INFORMATION	MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH.

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Steps 8, 16, 19, 27 and 30)

Information Element	Value/remark
RLC SDU Counter Value	Check that the number is greater than previous sub-test

8.5.6.2.5 Test requirement

After step 7 , the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 9, the UE shall transmit a CELL UPDATE message in Cell 24.

After step 15, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 18, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 16.

After step 26, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 19.

After step 29, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 27.

8.5.6.2m MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Multicast Service

8.5.6.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.6.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.2.2

8.5.6.2m.3 Test purpose

Same test purpose as in clause 8.5.6.2.3.

8.5.6.2m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.2.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.2.4

8.5.6.2m.5 Test requirements

Same test requirement as in clause 8.5.6.2.5.

8.5.6.3 MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Broadcast Service

8.5.6.3.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

8.5.6.3.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state; and

1> if not receiving an MBMS service provided via a p-t-m radio bearer:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

8.5.6.3.3 Test purpose

1. To verify that a UE in CELL_PCH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.

2. To verify that a UE in CELL_PCH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.

3. To verify that a UE in CELL_PCH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

8.5.6.3.4 Method of test

Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

Table 8.5.6.3-1 illustrates the downlink power to be applied for the 2 cells in this test case. Initially, the SS applies the power settings of column "T0".

Table 8.5.6.3-1

Parameter	Unit	Cell 21			Cell 24			Cell 26		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			High Range Test Frequency			High Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	-80	-80	-70	-60	-70	-70	-70	-60
P-CCPCH RSCP (TDD)	dBm	-60	-80	-80	-70	-60	-70	-70	-70	-60

The UE is in CELL_FACH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH".

The SS applies the power settings of "T1" in table 8.5.6.3-1. At this point the UE shall reselect to Cell 24 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH and orders the UE to stay in CELL_FACH state. The UE replies with a UTRAN MOBILITY INFORMATION CONFIRM message, and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH". The UE responds with PHYSICAL CHANNEL RECONIGURATION COMPLETE.

The SS provides information about the ongoing MBMS service in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24. The SS sends 10 RLC SDUs of MBMS data in neighbouring cell 26.

The SS transmits a PAGING TYPE 1 message to the UE on the PCH and the UE moves to CELL_FACH state, sending a CELL UPDATE message. The SS replies with a CELL UPDATE CONFIRM message and UE confirms the received C-RNTI to be used in CELL FACH state by transmitting a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

Then the SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported previously at step 14 of expected sequence.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH". When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message has been received, the SS sends 10 RLC SDUs of MBMS data in serving Cell 24.

The SS applies the power settings of "T2" in table 8.5.6.3-1. At this point the UE shall reselect to Cell 26 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH and orders the UE to stay in CELL_FACH state. The UE replies with a UTRAN MOBILITY INFORMATION CONFIRM message.

The SS provides information about the ongoing MBMS service in cell 26 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 26.

The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received greater number of RLC SDU than reported in previous step 25 of expected sequence.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to “CELL_PCH” and the UE responds with PHYSICAL CHANNEL RECONIGURATION COMPLETE.

The SS sends 10 RLC SDUs of MBMS data in neighbouring Cell 24.The SS transmits a PAGING TYPE 1 message to the UE on the PCH and the UE moves to CELL_FACH state, sending a CELL UPDATE message. The SS replies with a CELL UPDATE CONFIRM message and UE confirms the received C-RNTI to be used in CELL FACH state by transmitting a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number previously reported by the UE at step 34 of expected sequence.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		ACTIVATE RB TEST MODE

RLC SDU Counter Value	Check that the number is greater than zero

CELL UPDATE (Steps 21 and 41)

Information Element	Value/remark
Cell update cause	Check that the value is set to “Paging response”

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 25, 36 and 45)

Information Element	Value/remark
RLC SDU Counter Value	Check that the number is greater than the value reported at the previous sub-test.

8.5.6.3.5 Test requirement

After step 9, the UE shall transmit a CELL UPDATE message in Cell 24.

After step 24, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 35, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 25.

After step 44, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 36.

8.5.6.3m MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Multicast Service

8.5.6.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.6.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.3.2

8.5.6.3m.3 Test purpose

Same test purpose as in clause 8.5.6.3.3.

8.5.6.3m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.3.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.3.4

8.5.6.3m.5 Test requirements

Same test requirement as in clause 8.5.6.3.5.

8.5.6.4 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Selected Service

8.5.6.4.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures. This shall be done according to the HCS priority, the received signal quality value Q and the quality level threshold criterion H. This test case is applicable for all UEs that support MBMS broadcast services.

8.5.6.4.2 Conformance requirement

When camped normally, the UE shall perform the following tasks:

- select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
- monitor relevant System Information. This is specified in [8];
- perform necessary measurements for the cell reselection evaluation procedure;
- execute the cell reselection evaluation process on the following occasions/triggers:

1) UE internal triggers, so as to meet performance as specified in [22] and [23];

2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

If the UE supports MBMS and MBMS is active in the cell and the UE is permitted to receive MBMS services in the cell, the UE shall perform MBMS tasks as specified in subclause 6.3 of TS 25.304.

…

In the cell reselection process, an MBMS PL shall only be applicable while the UE is receiving an MBMS session from one or more of the ongoing activated MBMS services for which this PL is indicated.

…

The measurement rules below apply in Idle, URA_PCH, CELL_PCH states. In CELL_FACH state the UE is required to perform measurements on all intra-frequency, inter-frequency and inter-RAT cells listed in system information according to requirements specified in [10]. In Idle, URA_PCH, CELL_PCH and CELL_FACH states the UE shall only consider those cells the UE is mandated to measure according to the measurement rules below as measured cells in the cell reselection criteria (subclause 5.2.6.1.4).

If the system information broadcast in the serving cell indicates that HCS is used, then for intra-frequency and inter-frequency measurements, the UE shall:

use HCS priority$_1$ as the HCS priority broadcast in the system information and apply the following rule:

IF an MBMS PL is used THEN

- If the UE is in HCS low mobility state, for serving cell and neighbour cells belonging to the MBMS PL set the HCS priority = HCS priority$_1$ + HCS_OFF$_{mbms}$.
- If the UE is in HCS high mobility state, for serving cell and neighbour cells belonging to the MBMS PL set the HCS priority = HCS priority$_1$.
- for serving cell and neighbour cells not belonging to the MBMS PL, set the HCS priority = HCS priority$_1$.

IF an MBMS PL is not used THEN

For serving cell and all neighbour cells set HCS priority = HCS priority$_1$

…

The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is defined by:

$$H_s = Q_{meas,s} - Qhcs_s$$

$$H_n = Q_{meas,n} - Qhcs_n - TO_n * L_n$$

…

The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s + Qoffmbms$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} + Qoffmbms - TO_n * (1 - L_n)$$

where:

the signalled value Qoffmbms is only applied to those cells (serving or neighbouring) belonging to the MBMS PL

where:

$TO_n = TEMP_OFFSET_n * W(PENALTY_TIME_n - T_n)$

$L_n = 0$ if $HCS_PRIO_n = HCS_PRIO_s$
$L_n = 1$ if $HCS_PRIO_n <> HCS_PRIO_s$

$W(x) = 0$ for $x < 0$
$W(x) = 1$ for $x >= 0$

$TEMP_OFFSET_n$ applies an offset to the H and R criteria for the duration of $PENALTY_TIME_n$ after a timer T_n has started for that neighbouring cell.

$TEMP_OFFSET_n$ and $PENALTY_TIME_n$ are only applicable if the usage of HCS is indicated in system information.

…

If HCS is used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S among

1. when in low-mobility (see subclause 5.2.6.1.2),
   - all measured cells, that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0.
   - all measured cells, not considering HCS priority levels, if no cell fulfil the criterion H >= 0.

…

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

…

If a TDD or GSM cell is ranked as the best cell, then the UE shall perform cell re-selection to that TDD or GSM cell

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3.

…

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [22] and [23] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate R_s, if provided in SIB4 [see 8]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate R_s, if provided in SIB4 [see 8].

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3 of TS 25.304.

…

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 8], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 8]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

...

The UE shall perform the MBMS frequency layer selection procedure upon receiving the IE "MBMS Preferred frequency information", when specified explicitly e.g. as in subclause 8.6.9.2, or when the priority for an MBMS service as indicated by upper layers changes.

The UE shall:

1> if there exist two or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which a preferred frequency has been received.

1> if the UE is in idle mode:

2> if a preferred frequency layer applies for a service included in variable MBMS_ACTIVATED_SERVICES:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

Reference

3GPP TS 25.304 clauses 5.2.5.1, 5.2.6.1.0, 5.2.6.1.2, 5.2.6.1.4.

3GPP TS 25.331 clause 8.5.27.

8.5.6.4.3 Test purpose

1. To verify that a UE in idle mode ranks cells based on both HCS priority and R. Qhyst, Qoffset and PENALTY TIME are not applied so R equals CPICH_RSCP.
2. To verify that a UE in idle mode performs a Serving Cell Reselection to the Preferred Layer at Session Start.
3. To verify that a UE in idle mode performs an intra-frequency Cell Reselection on the Preferred Layer during an ongoing Session

8.5.6.4.4 Method of test

Initial Condition

System Simulator: 3 MBMS cells (Cell 21, Cell 24, Cell 26) with the downlink transmission power shown in column marked "T0" in table 8.5.6.4-1.

SS shall indicate in System Information that HCS is in use. Qhcs = 0 so all cells fulfil the criterion H >=0.

Each cell shall include the other cells as neighbouring cells in System Information Block Type 11.

UE:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.6.4-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1 are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.5.6.4-1

Parameter	Unit	Cell 21		Cell 24		Cell 26	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		High Range Test Frequency		High Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84 MHz	-60	-60	-60	-75	-75	-60
P-CCPCH RSCP (TDD)	dBm	-60	-60	-60	-75	-75	-60
HCS_PRIO		5		3		3	

Method C is applied (as described and used in clause 6 of TS 34.123-1).

The SS activates Cell 21, Cell 24 and Cell 26 and monitors them for access request from the UE. The UE is in idle mode state on Cell 21.The UE receives at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE “MBMS preferred frequency”. The HCS_OFFmbms is added to the normal HCS priority level of cells on this MBMS preferred frequency. Cell 24 and Cell 26 have the highest priority.

The UE shall consider this frequency as the preferred frequency layer for cell re-selection. The SS waits for random access requests from the UE. The UE moves to Cell 24 at session start for the concerned MBMS service. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The HCS_OFFmbms is added to the normal HCS priority level of cells on this MBMS preferred frequency. Cell 24 and Cell 26 have the highest priority.

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info” and MBMS ACCESS INFORMATION message, which includes the MBMS Short Transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0 (corresponds to an actual Probability Factor = 1).

The UE shall transmit an RRC CONNECTION REQUEST message, with “Establishment cause” set to “MBMS reception”. The SS transmits a RRC CONNECTION SETUP. The UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 26. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

The SS applies the power settings of “T1” in table 8.5.6.4-1. The SS waits for random access requests from the UE. The UE shall reselect to Cell 26.

The UE receives an MBMS UNMODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 24. The UE shall apply the MBMS p-t-m radio bearer configuration and continues receiving the indicated p-t-m radio bearer.

SS calls for generic procedure C.1 to check that UE is in idle mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	UE			The UE is in idle mode on Cell 21.
2	←		SYSTEM INFORMATION	SS indicates that HCS is used.
3	←		MBMS MODIFIED SERVICES INFORMATION	"MBMS required UE action" IE is set to "none" and the "MBMS preferred frequency" IE indicates the reference to Ch. 2.
4	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information is set to Ch. 2.
5				The SS waits for random access requests from the UE. The UE shall responds on Cell 24.
6	←		MBMS MODIFIED SERVICES INFORMATION	"MBMS required UE action" IE is set to "Acquire counting info"
7	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.
8	←		MBMS ACCESS INFORMATION	"MBMS short transmission ID" IE set to 1, "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).
9	→		RRC CONNECTION REQUEST	Establishment cause set to MBMS reception.
10	←		RRC CONNECTION SETUP	
11	→		RRC CONNECTION SETUP COMPLETE	
11a	→		MBMS MODIFICATION REQUEST	The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure in case of MBMS selected Service. This message may be received at any point after step 11 and before step 13.
12	UE			UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception".
13	←		RRC CONNECTION RELEASE	
14	→		RRC CONNECTION RELEASE COMPLETE	The UE shall enter idle state.
15	←		MBMS MODIFIED SERVICES INFORMATION	MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH.
16	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.
17	←		MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 26
18	SS			The SS applies the power settings of "T1" in Table 8.5.6.4-1
19	UE			The SS waits for random access requests from the UE. The UE shall responds on Cell 26.
20	←		MBMS UNMODIFIED SERVICES INFORMATION	There is no change in MBMS services already ongoing in previous cell
21	←		MBMS GENERAL INFORMATION	MBMS preferred frequency information set without index into SIB11 neighbour list.

22	←	MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 24
23	←→	CALL C.1	If the test result of C.1 indicates that UE is in idle mode, the test passes, otherwise it fails.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 3 (Step 2)

Information Element	Value/remark
Sintersearch	Not Present

MBMS MODIFIED SERVICES INFORMATION (Step 3)

Information Element	Value/remark
Modified service list	Only 1 Entry
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	None
- MBMS preferred frequency	
- PFL index	Index for Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated)
- Continue MCCH reading	FALSE

MBMS GENERAL INFORMATION (Step 4)

Information Element	Value/remark
MBMS preferred frequency information	
- MBMS preferred frequency list	Only 1 Entry
- MBMS preferred frequency	Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated)
- CHOICE Layer convergence information	
- HCS	
- HCS_OFFmbms	4 (Offset added to the normal HCS priority level of cells on this MBMS preferred frequency)
- MBMS PL Service Restriction Information	TRUE

MBMS MODIFIED SERVICES INFORMATION (Step 6)

Information Element	Value/remark
Modified service list	Only 1 entry
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	Acquire counting info
- Continue MCCH reading	FALSE

MBMS MODIFIED SERVICES INFORMATION (Step 15)

Information Element	Value/remark
Message type	
Modified service list	
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	Acquire PTM RB info
MBMS p-t-m activation time	Set to the first TTI of the next modification period

MBMS UNMODIFIED SERVICES INFORMATION (Step 20)

Information Element	Value/remark
Message type	
Unmodified service list	
- MBMS Transmission identity	MBMS Transmission identity indicating MBMS activated service
- MBMS required UE action	Acquire PTM RB info

8.5.6.4.5 Test requirement

At step 5, the UE shall respond on Cell 24.

At step 15, the UE shall respond on Cell 26.

8.5.6.4m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Multicast Service

8.5.6.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.6.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.4.2

8.5.6.4m.3 Test purpose

Same test purpose as in clause 8.5.6.4.3.

8.5.6.4m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24, Cell 26.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.4.4, except that at step 12 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

Specific message contents

Same specific messages contents as in clause 8.5.6.4.4

8.5.6.4m.5 Test requirements

Same test requirement as in clause 8.5.6.4.5.

8.5.6.5 MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Broadcast Service

8.5.6.5.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services and support MBMS p-t-m reception in CELL_DCH state.

8.5.6.5.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

Reference

3GPP TS 25.331 clause 8.7.2.3.

8.5.6.5.3 Test purpose

1. To verify that a UE in CELL_DCH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.
2. To verify that a UE in CELL_DCH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.
3. To verify that a UE in CELL_DCH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

8.5.6.5.4 Method of test

Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

Test Procedure

Table 8.5.6.5-1 illustrates the downlink power to be applied for the 3 cells in this test case. Initially, the SS applies the power settings of column “T0”.

Table 8.5.6.5-1

Parameter	Unit	Cell 21			Cell 24			Cell 26		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			High Range Test Frequency			High Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	-80	-80	-70	-60	-70	-70	-70	-60
P-CCPCH RSCP (TDD)	dBm	-60	-80	-80	-70	-60	-70	-70	-70	-60

The UE is in the CELL_DCH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH in Cell 21 on the concerned MBMS radio bearer. The retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU.

The SS applies the power settings of “T1” in table 8.5.6.5-1 and orders an inter-frequency hard handover to Cell 24 by transmitting a PHYSICAL CHANNEL RECONFIGURATION message. The UE establishes the dedicated physical channel in Cell 24 and replies with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message, and waits for the UE to activate MTCH reception.

The SS provides information about the ongoing MBMS services in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24.

The SS sends 10 RLC SDUs of MBMS data in cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than zero.

The SS then sends 10 RLC SDUs of MBMS data in neighbouring cell 26 and SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. UE should be able to receive the MBMS data from neighbouring Cell 26 when camped in Cell 24. The SS checks that the reported number is greater than the number reported by the UE at step 16 of expected sequence. The SS applies the power settings of “T2” in table 8.5.6.5-1 and then orders handover to Cell 26 by transmitting a PHYSICAL CHANNEL RECONFIGURATION message. The UE establishes the dedicated physical channel in Cell 26 and replies with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS provides information about the ongoing MBMS service in cell 26 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24.

The SS sends 10 RLC SDUs of MBMS data in cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE at step 19.

The SS then sends 10 RLC SDUs of MBMS data in neighbouring cell 24 and SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the previous number reported by the UE at step 27.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		ACTIVATE RB TEST MODE	
2	→		ACTIVATE RB TEST MODE COMPLETE	
3	←		MBMS MODIFIED SERVICES INFORMATION	MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH.
4	←		CLOSE UE TEST LOOP	
5	→		CLOSE UE TEST LOOP COMPLETE	Loop back mode 3 on MTCH is activated.
6	SS			The SS broadcasts 10 RLC SDUs of MBMS data in Cell 21.
7	←		UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
8	→		UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the UE has received MBMS data in Cell 21. The SS checks that the number of reported RLC PDUs is greater than zero and record the value.
9	SS			The SS applies the power settings of “T1” in table 8.5.6.5-1.
10			PHYSICAL CHANNEL RECONFIGURATION	Inter-frequency hard handover to Cell 24.
11	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The SS waits for the UE to establish the MTCH according to the messages in steps 12-13
12	←		MBMS UNMODIFIED SERVICES INFORMATION	There is no change in MBMS services already ongoing in previous cell
13	←		MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 26
13a	←		CLOSE UE TEST LOOP	
13b	→		CLOSE UE TEST LOOP COMPLETE	Loop back mode 3 on MTCH is activated.
14	SS			The SS transmits 10 RLC SDUs of MBMS data in Cell 24.
15	←		UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
16	→		UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the UE has received MBMS data also in Cell 24. The SS checks that the number of reported RLC PDUs is greater than 0.
17	SS			SS transmits 10 RLC SDUs of MBMS data in Cell 26.
18	←		UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
19	→		UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the UE has received MBMS data sent in neighbouring cell 26. The SS checks that the number of reported RLC PDUs is greater than the value at step 16.
20	SS			The SS applies the power settings of “T2” in table 8.5.6.5-1
21			PHYSICAL CHANNEL RECONFIGURATION	UE moves to Cell 26.
22	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

23	←	MBMS UNMODIFIED SERVICES INFORMATION	There is no change in MBMS services already ongoing in previous cell
24	←	MBMS NEIGHBOURING CELL P-T-M RB INFORMATION	This message has info for neighbouring cell 24
25	SS		SS transmits 10 RLC SDUs of MBMS data in Cell 26.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 10) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	Not present Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21]
- UARFCN downlink(Nd)	Same downlink UARFCN as used for Cell 24
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Timing indication	Initialise
- Default DPCH Offset Value	Arbitrary set to value 0..306688 by step of 512
Downlink information per radio link list	1 radio link
Downlink information for each radio link	
- CHOICE mode	FDD
- Primary CPICH info	
- Primary scrambling code	Set to the scrambling code for Cell 24

PHYSICAL CHANNEL RECONFIGURATION (Step 10) (1.28Mcps and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark
Frequency info	
- UARFCN (Nt)	Same UARFCN as used for cell 24
CHOICE channel requirement	Not present
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Timing indication	Initialise
- CFN-targetSFN frame offset	0
- Downlink DPCH power control information	Not Present
- MAC-d HFN initial value	Not Present
- CHOICE mode	TDD
- CHOICE mode	TDD
- CHOICE TDD option	1.28 Mcps TDD
- TSTD indicator	FALSE
- Default DPCH Offset Value	Arbitrary set to value 0..306688 by step of 512
- CHOICE mode	TDD
- Default DPCH Offset Value	0 Integer(0..7)
- MAC-hs reset indicator	FALSE
Downlink information per radio link list	1 radio link
Downlink information for each radio link	
- CHOICE mode	TDD
- Primary CCPCH info	Set to the Cell parameters ID for cell 4
- Downlink DPCH info for each RL	
- CHOICE mode	TDD
- TFCS ID	Reference to TS34.108 clause 6.11 Parameter Set
- Time info	Reference to TS34.108 clause 6.11 Parameter Set
- Common timeslot info	Reference to TS34.108 clause 6.11 Parameter Set
- Downlink DPCH timeslots and codes	as used for cell 4

PHYSICAL CHANNEL RECONFIGURATION (Step 10) (3.84Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark
Frequency info	
- UARFCN (Nt)	Same UARFCN as used for cell 4
CHOICE channel requirement	Not present
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Timing indication	Initialise
- CFN-targetSFN frame offset	0
- Downlink DPCH power control information	Not Present
- Downlink rate matching restriction information	Not Present
- Spreading factor	Reference to TS34.108 clause 6.10 Parameter Set
- Fixed or flexible position	Reference to TS34.108 clause 6.10 Parameter Set
- TFCI existence	Reference to TS34.108 clause 6.10 Parameter Set
- CHOICE SF	Reference to TS34.108 clause 6.10 Parameter Set
- DPCH compressed mode info	Not present
- TX Diversity mode	Not Present
- SSDT information	Not Present
- Default DPCH Offset Value	Arbitrary set to value 0..306688 by step of 512
- MAC-hs reset indicator	FALSE
Downlink information per radio link list	1 radio link
Downlink information for each radio link	
- CHOICE mode	TDD
- Primary CCPCH info	Set to the Cell parameters ID for cell 4
- Downlink DPCH info for each RL	
- CHOICE mode	TDD
- TFCS ID	Reference to TS34.108 clause 6.10 Parameter Set
- Time info	Reference to TS34.108 clause 6.10 Parameter Set
- Common timeslot info	Reference to TS34.108 clause 6.10 Parameter Set
- Downlink DPCH timeslots and codes	as used for cell 4

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 8)

Information Element	Value/remark
RLC SDU Counter Value	Check that the number is greater than zero

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 16,19,27,30)

Information Element	Value/remark
RLC SDU Counter Value	Check that the number is greater than the value reported at the previous sub-test.

PHYSICAL CHANNEL RECONFIGURATION (Step 21) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	Not present Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21]
- UARFCN downlink(Nd)	Same downlink UARFCN as used for Cell 26
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Timing indication	Initialise
- Default DPCH Offset Value	Arbitrary set to value 0..306688 by step of 512
Downlink information per radio link list	1 radio link
Downlink information for each radio link	
- CHOICE mode	FDD
- Primary CPICH info	
- Primary scrambling code	Set to the scrambling code for Cell 26

8.5.6.5.5 Test requirement

After step 7, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 10, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in Cell 24.

After step 15, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero

After step 18, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 16.

After step 26, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 19.

After step 29, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 27.

8.5.6.5m MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Multicast Service

8.5.6.5m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and support MBMS p-t-m reception in CELL_DCH state.

8.5.6.5m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.5.2

8.5.6.5m.3 Test purpose

Same test purpose as in clause 8.5.6.5.3.

8.5.6.5m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

Test procedure

Same test procedure as in clause 8.5.6.5.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.5.4

8.5.6.5m.5 Test requirements

Same test requirement as in clause 8.5.6.5.5.

8.5.7 MBSFN Specific Procedures (FDD/TDD)

8.5.7.1 Cell Update: cell reselection in CELL_PCH (unicast carrier) during ongoing MBMS session in MBSFN mode

8.5.7.1.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

8.5.7.1.2 Conformance requirement

The UE reception of MBMS services provided in MBSFN mode shall not affect the UE behaviour on the unicast carrier. Especially the UE mobility on the unicast carrier is not affected by the reception of MBMS services provided on a cell operating in MBSFN mode and can imply that the reception of the MBMS service on the cell operating in MBSFN mode is impossible due to the limited support of combination of frequency bands for MBMS SFN reception and unicast reception.

…

A UE that is capable of receiving MBMS services on cells operating in MBSFN mode as specified in subclause 8.1.1.6.3 is operating in idle mode and acts on RRC messages and system information received from this cell operating in MBSFN mode independently from messages received from cells not operating in MBSFN mode. This implies that procedures executed based on messages and system information received from a cell operating in MBSFN mode shall not interact with messages and system information received from a cell not operating in MBSFN mode unless explicitly specified otherwise.

NOTE 1: This implies that the UE is operating an independent stack for the reception of MBMS services on cells operating in MBSFN mode as specified in subclause 8.1.1.6.3.

NOTE 2: For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, system information and MCCH messages are transmitted on the MBSFN Special Timeslot [30].

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDDIMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

Reference

3GPP TS 25.346 clauses 7.1A.

3GPP TS 25.331 clauses 7.2.1, 8.5.43.

8.5.7.1.3 Test purpose

To verify that the UE will perform a Cell Update on the unicast carrier while receiving an ongoing MBMS service via a p-t-m radio bearer on the MBSFN cluster.

8.5.7.1.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

- Unicast carrier : 2 cells, Cell 1 and Cell 2 with default parameters.

User Equipment:

- On the unicast carrier the UE is in CELL_PCH (state 6-12) in Cell 1 as specified in clause 7.4 of TS 34.108.

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of transmit and receive functions available on UE Yes/No.

- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-13:

Parameter	Unit	Cell 1	Cell 2	Cell 31
UTRA RF Channel Number		Ch. 1	Ch. 1	Ch. 2
P-CCPCH RSCP	dBm	-60	-69	-60
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-60
P-CPICH (IMB)	dBm/3.84MHz			-60
T-CPICH (IMB)	dBm/3.84MHz			-50.5

Step 14-25:

Parameter	Unit	Cell 1	Cell 2	Cell 31
UTRA RF Channel Number		Ch. 1	Ch. 1	Ch. 2
P-CCPCH RSCP	dBm	-69	-60	-60
CPICH Ec (FDD)	dBm/3.84MHz	-69	-60	-60
P-CPICH (IMB)	dBm/3.84MHz			-60
T-CPICH (IMB)	dBm/3.84MHz			-50.5

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step d). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

g) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB).

h) The SS shall then send UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The UE shall respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0. The SS shall store the counter value.

i) The SS adjusts the power settings for Cell 1 and Cell 2. When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The value "cell reselection" shall be set in IE "Cell update cause" in CELL UPDATE message.

j) Upon reception of the CELL_UPDATE message, the SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_PCH". After receiving this message, the UE returns to CELL_PCH state without transmitting any uplink message.

k) The SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

l) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBSFN MBMS p-t-m radio bearer for the activated service.

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to > 0 received RLC SDUs.

NOTE: If the UE fails the test because of a failure to reselect to the right unicarrier cell (Cell 2), then the operator may re-run the test.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected local service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE 129.6(FDD) or 124(TDD) kbps PS RAB, 124.4 kbps (IMB)
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
7		SS	M		After delaying for a period equal to the MCCH modification period, the SS transmits 10 RLC SDUs on the MTCH.
8	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
9	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. SS stores value.
10			U		The SS transmits 10 RLC SDUs on the MTCH starting at the indicated activation time.
11	→		U	CELL UPDATE	The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection"
12	←		U	CELL UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_PCH".
13	UE		U		The UE is in CELL_PCH state.
14	← →		U	CALL C.4	If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails.
15		SS	M		The SS transmits 10 RLC SDUs on the MTCH.
16	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
17	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
18	←		U	OPEN UE TEST LOOP	
19	→		U	OPEN UE TEST LOOP COMPLETE	
20	←		U	DEACTIVATE RB TEST MODE	
21	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

CELL UPDATE (Step 11)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'Cell Re-selection'

CELL UPDATE CONFIRM (Step 162)

Information Element	Value/remark
RRC State Indicator	CELL_PCH
UTRAN DRX cycle length coefficient	3

8.5.7.1.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for Cell 31 MTCH.

3) After step 11, the UE shall reselect to Cell 2 and transmit a CELL UPDATE message, containing the IE "Cell update cause" set to "cell reselection".

4) After step 13, the UE shall enter CELL_PCH state.

5) After step 17, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for Cell 31 MTCH.

8.5.7.2 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / All MBSFN services notified

8.5.7.2.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

8.5.7.2.2 Conformance requirement

Upon receiving the MBMS GENERAL INFORMATION message, the UE should store all relevant IEs included in this message. The UE shall also:

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

…

For FDD 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD if the IE "MBSFN inter frequency neighbour list" is included and the UE does not receive a service from this MBSFN cluster, the UE shall:

1> consider that MBMS services transmitted in MBSFN mode are available on these frequencies;

…

1> if at least one frequency is listed for which "MBSFN services not notified" is indicated in the IE "MBSFN inter frequency neighbour list":

2> if the IE "All MBSFN services notified" is included for one frequency as defined in [21] for FDD and [22] for TDD on which the UE supports reception in MBSFN mode:

3> attempt to receive notifications on one of the frequencies for which the IE "All MBSFN services notified" is included according to subclause 8.7.3.

…

Upon receiving the MBMS MODIFIED SERVICES INFORMATION message, the UE shall act as follows for each of the services included in this messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services'):

…

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following

…

If the UE receives the IE " MBMS re- acquire MCCH", the UE shall:

1> perform the MCCH acquisition procedure as specified in subclause 8.7.2.

Reference

3GPP TS 25.331 clauses 8.7.2.5, 8.6.9.9ad, 8.7.3.4, 8.6.9.6a.

8.5.7.2.3 Test purpose

1. To verify that the UE correctly re-acquires the MCCH information when the UE receives the IE MBMS re- acquire MCCH in a received MBMS MODIFIED SERVICES INFORMATION message.
2. To verify that the UE acts upon the modified IE MBSFN inter frequency neighbour list received in the re-acquired MBMS GENERAL INFORMATION message when a service not received on the current MBSFN cluster is present in the variable MBMS_ACTIVATED_SERVICES.
3. To verify that the UE attempts to receive notifications, for the service not received on the current MBSFN cluster, on one of the frequencies for which the IE "All MBSFN services notified" is included.

8.5.7.2.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 3 cells, Cell 31, Cell 36 and Cell 38 (all PLMN1). Cell 36 and Cell 38 are powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with no activated service as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UEYes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 33	Cell 36
UTRA RF Channel Number		Ch. 1	Ch. 2	Ch. 3	Ch. 4
P-CCPCH RSCP	dBm	-60	-60	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	OFF	OFF
P-CPICH (IMB)	dBm/3.84MHz		-60	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		-50.5	OFF	OFF

Step 8-33:

Parameter	Unit	Cell 1	Cell 31	Cell 33	Cell 36
UTRA RF Channel Number		Ch. 1	Ch. 2	Ch. 3	Ch. 4
P-CCPCH RSCP	dBm	-60	-60	-60	-70
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	-60	-70
P-CPICH (IMB)	dBm/3.84MHz		-60	-60	-70
T-CPICH (IMB)	dBm/3.84MHz		-50.5	-50.5	-60.5

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. Note: The IE "MBSFN inter frequency neighbour list" is not present in MBMS GENERAL INFORMATION.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on MTCH. The Short Transmission identity is set to value "0" corresponding to National Service 5 (see TS 34.108 clause 11.2.4) on either Cell 33 or Cell 36.

d) For Cell 31 in the IE "MBSFN inter frequency neighbour list" of the MBMS GENERAL INFORMATION message the SS adds (i) the frequency for Cell 36 with the IE "MBSFN services notification" set to "MBSFN services not notified" and with the option "All MBSFN services notified" included, and (ii) the frequency for Cell 33 with the IE "MBSFN services notification" set to "MBSFN services not notified" without the option "All MBSFN services notified". The SS sends MBMS MODIFIED SERVICES INFORMATION with IE "MBMS re- acquire MCCH" set to "True".

e) The UE shall re-perform the MCCH acquisition procedure on Cell 31.

f) The SS powers on Cell 33 and Cell 36. MCCH messages are transmitted by the SS on Cell 36 using MBMS configuration C2 (one PTM session ongoing - National Service 5) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing - National Service 5) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

g) National Service 5 is activated at the UE.

h) The UE shall retune to the frequency for Cell 36, perform MBSFN cluster reselection and shall perform the MCCH acquisition procedure on Cell 36.

i) The UE immediately establishes the p-t-m radio bearer for National Service 5. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

j) On Cell 33 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 5. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that

the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

l) On Cell 36 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 5. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		M	MBMS MCCH Message Configuration C1	No sessions ongoing. IE "MBSFN inter frequency neighbour list" not present in MBMS GENERAL INFORMATION
2	←		U	ACTIVATE RB TEST MODE	
3	→		U	ACTIVATE RB TEST MODE COMPLETE	
4	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated with Short Transmission Identity = "0".
5	←		M	MBMS MCCH Message Configuration C1	Cell 31: IE "MBMS re-acquire MCCH" set to "True" in MBMS MODIFIED SERVICES INFO. Frequencies for Cell 33 and Cell 36 have been added to IE "MBSFN inter frequency neighbour list".
6	UE		M		UE re-acquires MCCH on Cell 31.
7	SS				The SS powers on Cell 33 and Cell 36.
8	←		M	MBMS MCCH Message Configuration C2	Cell 33: One PTM session ongoing (National Service 5). 129.6(FDD) or 124(TDD)kbps PS RAB, 124.4 kbps (IMB)
9	←		M	MBMS MCCH Message Configuration C2	Cell 36: One PTM session ongoing (National Service 5). 129.6(FDD) or 124(TDD)kbps PS RAB, 124.4 kbps (IMB)
10	UE		M		National Service 5 is activated at the UE.
11	UE		M		UE retunes to frequency for Cell 36 and acquires the MCCH.
12	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer for National Service 5 and close the test loop.
13	SS		M		The SS transmits 10 RLC SDUs on the MTCH for Cell 33.
14	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
15	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to zero.
16	SS		M		The SS transmits 10 RLC SDUs on the MTCH for Cell 36.
17	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
18	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
19	←		U	OPEN UE TEST LOOP	
20	→		U	OPEN UE TEST LOOP COMPLETE	
21	←		U	DEACTIVATE RB TEST MODE	
22	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

MBMS MODIFIED SERVICES INFORMATION (Step 1, Step 8, and Step 9)

- CHOICE *MBSFN services notification*	MBSFN services not notified	
- no data		

8.5.7.2.5 Test requirements

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report that zero RLC SDUs have been received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report that > 0 RLC SDUs have been received.

8.5.7.3 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / MBSFN services not notified

8.5.7.3.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

8.5.7.3.2 Conformance requirement

Upon receiving the MBMS GENERAL INFORMATION message, the UE should store all relevant IEs included in this message. The UE shall also:

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

…

For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD if the IE "MBSFN inter frequency neighbour list" is included and the UE does not receive a service from this MBSFN cluster, the UE shall:

1> consider that MBMS services transmitted in MBSFN mode are available on these frequencies;

…

1> if at least one frequency is listed for which "MBSFN services not notified" is indicated in the IE "MBSFN inter frequency neighbour list":

2> if the IE "All MBSFN services notified" is included for one frequency as defined in [21] for FDD and [22] for TDD on which the UE supports reception in MBSFN mode:

…

2> else:

3> attempt to receive notifications on all frequencies for which the IE “MBSFN services not notified” is indicated as specified in subclause 8.7.3 on that band.

…

Upon receiving the MBMS MODIFIED SERVICES INFORMATION message, the UE shall act as follows for each of the services included in this messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services'):

…

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following

…

If the UE receives the IE " MBMS re- acquire MCCH", the UE shall:

1> perform the MCCH acquisition procedure as specified in subclause 8.7.2.

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.2.5, 8.6.9.9ad, 8.7.3.4, 8.6.9.6a.

8.5.7.3.3 Test purpose

1. To verify that the UE correctly re-acquires the MCCH information when the UE receives the IE MBMS re- acquire MCCH in a received MBMS MODIFIED SERVICES INFORMATION message.
2. To verify that the UE acts upon the modified IE MBSFN inter frequency neighbour list received in the re-acquired MBMS GENERAL INFORMATION message when a service not received on the current MBSFN cluster is present in the variable MBMS_ACTIVATED_SERVICES.
3. To verify that in the absence of the IE "All MBSFN services notified" the UE attempts to receive notifications on all frequencies for which the IE “MBSFN services not notified” is indicated on that band.

8.5.7.3.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 3 cells, Cell 31, Cell 36 and Cell 38 (all PLMN1). Cell 36 and Cell 38 are powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with no activated service as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of transmit and receive functions available on UE Yes/No.

- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The test shall be performed as two independent sub-tests with the UE and SS being returned to Initial Conditions between the sub-tests. The test method shall be the same for the two sub-tests with the exception that:

- In sub-test 1, Local Service 1 in Service Area 1 (Cell 33) shall be activated in the UE;

- In sub-test 2, Local Service 1 in Service Area 4 (Cell 36) shall be activated in the UE.

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 33	Cell 36
UTRA RF Channel Number		Ch. 1	Ch. 2	Ch. 3	Ch. 4
P-CCPCH RSCP	dBm	-60	-60	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	-	-
P-CPICH (IMB)	dBm/3.84MHz		-60	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		-50.5	OFF	OFF

Step 8-33:

Parameter	Unit	Cell 1	Cell 31	Cell 33	Cell 36
UTRA RF Channel Number		Ch. 1	Ch. 2	Ch. 3	Ch. 4
P-CCPCH RSCP	dBm	-60	-60	-60	-60
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	-60	-60
P-CPICH (IMB)	dBm/3.84MHz		-60	-60	-60
T-CPICH (IMB)	dBm/3.84MHz		-50.5	-50.5	-50.5

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. Note: The IE "MBSFN inter frequency neighbour list" is not present in MBMS GENERAL INFORMATION.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on MTCH. The Short Transmission identity is set to value "2" corresponding to Local Service 1 (see TS 34.108 clause 11.2.4) on either Cell 33 or Cell 36.

d) For Cell 31 in the IE "MBSFN inter frequency neighbour list" of the MBMS GENERAL INFORMATION message the SS adds (i) the frequency for Cell 36 with the IE "MBSFN services notification" set to "MBSFN services not notified" and without the option "All MBSFN services notified", and (ii) the frequency for Cell 33 with the IE "MBSFN services notification" set to "MBSFN services not notified" without the option "All MBSFN services notified". The SS sends MBMS MODIFIED SERVICES INFORMATION with IE "MBMS re- acquire MCCH" set to "True".

e) The UE shall re-perform the MCCH acquisition procedure on Cell 31.

f) The SS powers on Cell 33 and Cell 36. MCCH messages are transmitted by the SS on Cell 36 using MBMS configuration C2 (one PTM session ongoing - Local Service 1) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing - Local Service 1) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

g) Local Service 1 for the Service Area determined by the sub-test number (see above) is activated at the UE.

h) The UE shall re-tune to the frequency for Cell 33 or Cell 36, perform MBSFN cluster reselection and shall perform the MCCH acquisition procedure. If the UE determines that the selected MBMS service is available on this cell then the UE proceeds to the next step. Otherwise, the UE re-tunes to the other frequency, performs MBSFN cluster reselection and again performs the MCCH acquisition procedure to find the selected MBMS service.

i) The UE immediately establishes the p-t-m radio bearer for Local Service 1. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

j) On Cell 33 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for Local Service 1. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS stores the value.

l) On Cell 36 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for Local Service 1. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE, using the stored initial count from step k).

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		M	MBMS MCCH Message Configuration C1	No sessions ongoing. IE "MBSFN inter frequency neighbour list" not present in MBMS GENERAL INFORMATION
2	←		U	ACTIVATE RB TEST MODE	
3	→		U	ACTIVATE RB TEST MODE COMPLETE	
4	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated with Short Transmission Identity = "2".
5	←		M	MBMS MCCH Message Configuration C1	Cell 31: IE "MBMS re-acquire MCCH" set to "True" in MBMS MODIFIED SERVICES INFO. Frequencies for Cell 33 and Cell 36 have been added to IE "MBSFN inter frequency neighbour list".
6	UE		M		UE re-acquires MCCH on Cell 31.
7	SS				The SS powers on Cell 33 and Cell 36.
8	←		M	MBMS MCCH Message Configuration C2	Cell 33: One PTM session ongoing (Local Service 1). 129.6(FDD) or 124(TDD)kbps PS RAB.
9	←		M	MBMS MCCH Message Configuration C2	Cell 36: One PTM session ongoing (Local Service 1). 129.6(FDD) or 124(TDD)kbps PS RAB.
10	UE		M		Local Service 1 is activated at the UE, for the Service Area determined by the sub-test execution number (see above).
11	SS				The SS shall set a timer value of 300 seconds to wait for CLOSE UE TEST LOOP COMPLETE from the UE. If a timeout occurs the test shall be deemed failed and execution continues from step 20.
12	UE		M		UE retunes to frequency for Cell 33 and/or Cell 36 and acquires the MCCH.
13	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer for Local Service 1 and close the test loop.
14	SS		M		The SS transmits 10 RLC SDUs on the MTCH for Cell 33.
15	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
16	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks the number of reported RLC SDUs received on the MTCH. SS stores the value.
17	SS		M		The SS transmits 10 RLC SDUs on the MTCH for Cell 36.
18	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
19	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks the number of reported RLC SDUs received on the MTCH.
20	←		U	OPEN UE TEST LOOP	
21	→		U	OPEN UE TEST LOOP COMPLETE	
22	←		U	DEACTIVATE RB TEST MODE	
23	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

8.5.7.3.5 Test requirements

For sub-test 1:

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count > 0 for the number of RLC SDUs received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count corresponding to zero RLC SDUs.

For sub-test 2:

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count = 0 for the number of RLC SDUs received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count > 0 for the number of RLC SDUs received.

8.5.7.4 MBSFN TDM Information / TDM services de-multiplexing

8.5.7.4.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

8.5.7.4.2 Conformance requirement

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 upon receiving the MBMS CURRENT CELL P-T-M RB INFORMATION message, the UE shall act as specified in subclauses 8.7.5.3.

…

The UE applies the MBMS p-t-m radio bearer configuration procedure whenever it detects that one of the activated services is provided by means of a p-t-m radio bearer. This may occur as part of the MCCH acquisition or the MBMS Notification procedure.

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION

message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

If the IE "MBSFN TDM Information List" is included, the UE shall:

1> assume that the MBMS service identified in IE "MBMS short transmission ID" can be received only in frame(s) with the CFN fulfilling the following equation:

(CFN div N) mod TDM_Rep = TDM_Offset + i, i = 0 to TDM_Length - 1

where

- N is the TTI (in number of 10ms frames) of the FACH
- TDM_Rep is the repetition period
- TDM_Offset is the offset
- TDM_Length is the number of TTIs the MBMS Service is transmitted, starting from TDM _Offset
- CFN is set according to subclause 8.5.15.3 (Initialisation for Cell_FACH).

Reference

3GPP TS 25.331 clauses 8.7.2.5, 8.7.5.2, 8.7.5.3, 8.6.9.9ae

8.5.7.4.3 Test purpose

1. To verify that the UE correctly acquires the MCCH, when two services included in the variable MBMS_ACTIVATED_SERVICES are broadcast in a time division multiplexed fashion in the current MBSFN cluster.
2. To verify that the UE correctly acts upon the IE MBSFN TDM Information List received in the MBMS CURRENT CELL P-T-M RB INFORMATION messages for the two services in the variable MBMS_ACTIVATED_SERVICES and correctly de-multiplexes the two sessions.

8.5.7.4.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (one ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UEYes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

c) The SS notifies on MCCH, for one modification period, about the start of the MBMS sessions. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (two PTM sessions starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

d) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (two PTM sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108

e) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step c). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

f) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service not activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

g) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

h) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB)or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

i) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

j) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

k) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C1 (no sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

l) The SS then delays for 5*modification period and then sends CLOSE UE TEST LOOP to re-start RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

m) The SS notifies on MCCH, for one modification period, about the start of the MBMS sessions. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (two PTM sessions starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. A different TDM configuration from that notified in step c) is used.

n) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (two PTM sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108

o) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step c). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

p) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service not activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

q) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

r) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

s) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	For one modification period. Two sessions starting, one of which is the activated service.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. Two sessions ongoing.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
7		SS	M		Then SS transmits 10 RLC SDUs on the MTCH, for the service not activated by the UE.
8	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
9	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH equals zero.

11	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
12	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
13	←		U	OPEN UE TEST LOOP	
14	→		U	OPEN UE TEST LOOP COMPLETE	
15	←		M	MBMS MCCH Message Configuration C1	No sessions ongoing
16		SS	M		SS delays for a period 5*modification period.
17	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated for the selected national service on MTCH.
18	←		M	MBMS MCCH Message Configuration C4	For one modification period. Two sessions starting, one of which is the activated service.
19	←		M	MBMS MCCH Message Configuration C2	No modified services. Two sessions ongoing
20	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
21		SS	M		Then SS transmits 10 RLC SDUs on the MTCH, for the service not activated by the UE.
22	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
23	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH equals zero.
24		SS	M		Then the SS transmits 10 RLC SDUs on the MTCH for the service activated by the UE.
25	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
26	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
27	←		U	OPEN UE TEST LOOP	
28	→		U	OPEN UE TEST LOOP COMPLETE	
29	←		U	DEACTIVATE RB TEST MODE	
30	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

MBMS CURRENT CELL P-T-M RB INFORMATION (Step 4 and Step 5)

Information Element	Value/remark	Version
…		
MBSFN TDM Info List		Rel-7
- MBMS short transmission ID	Index to the activated service	
- TDM_Rep	8	
- TDM_Offset	4	
- TDM_Length	4	
- MBMS short transmission ID	Index to the not activated service	
- TDM_Rep	8	
- TDM_Offset	0	
- TDM_Length	2	

MBMS CURRENT CELL P-T-M RB INFORMATION (Step 18 and Step 19)

Information Element	Value/remark	Version
…		
MBSFN TDM Info List		Rel-7
- MBMS short transmission ID	Index to the activated service	
- TDM_Rep	4	
- TDM_Offset	0	
- TDM_Length	1	
- MBMS short transmission ID	Index to the not activated service	
- TDM_Rep	4	
- TDM_Offset	1	
- TDM_Length	3	

8.5.7.4.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count = 0.

2) After step 12, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count > 0.

3) After step 23, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count = 0.

4) After step 26, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count > 0.

8.5.7.5 MBSFN Session Reconfiguration / Change of MBSFN Cluster frequency on notification via MCCH (FDD)

8.5.7.5.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

8.5.7.5.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. It shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. Both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message, the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

…

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH during the current or the previous modification period:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

1> for TDD, if the IE "TDD MBSFN Information" is included:

2> apply the scrambling codes (as referenced by the "Cell parameters ID") to each timeslot indicated by "TDD MBSFN Information".

Reference

3GPP TS 25.331 clauses 8.7.2.1, 8.7.2.3, 8.7.1.3, 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.7.5.3, 8.1.1.6.5

8.5.7.5.3 Test purpose

To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH indicating a change in available services.

To verify that the UE acts upon service priority indications from upper layers that require a change in MBSFN cluster frequency.

To verify that the UE acquires the MBMS information on MCCH after selecting the new MBSFN cluster.

To verify that the UE, after acquiring the MBMS information on MCCH, starts the p-t-m reception of the higher priority MBMS service according to the information on MCCH..

8.5.7.5.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 2 cells, Cell 31 and Cell 33, the tow cells are in deferent MBSFN cluster.

User Equipment:

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UEYes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE camps on Cell 31 in idle state and establish to start receiving MBMS Service_1.

b) Another MBMS Service_2 is set up in Cell 33 and the SS sends a notification to the UE about the active services in Cell 31 by MCCH.

c) The UE gets the IE“MBSFN cluster frequency” which is updated and selects MBMS Service_2,then ,the UE shall stop receiving Service_1 and perform Cell Reselection from Cell 31 to Cell 33.

d) After selecting the new MBSFN cluster, the UE acquires the MBMS information on MCCH; the UE starts the p-t-m reception of the MBMS Service_2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
				The UE camps on Cell 31 and starts reception of the MBMS Service_1
1	←		MBMS MODIFIED SERVICES INFORMATION	The MBMS Service_2 has been activated by upper layer in the other MBSFN cluster. The SS notifies the UE the MBMS Service_2 is available on the MCCH.
2	←		MBMS GENERAL INFORMATION	The UE gets the MBSFN inter frequency neighbour list including Cell 33.
3				The UE selects the MBMS Service_2
4				The UE performs Cell Reselection to select new MBSFN cluster.
5	←		MBMS MODIFIED SERVICES INFORMATION	In Cell 33, the UE acquires the MBMS information on MCCH.
6	←		MBMS COMMON P-T-M RB INFORMATION	
7	←		MBMS UNMODIFIED SERVICES INFORMATION	The UE starts reception of the MBMS Service_2 on MTCH.
8	←		CLOSE UE TEST LOOP	
9	→		CLOSE UE TEST LOOP COMPLETE	Loop back mode 3 on MTCH is activated.
10	SS			The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer.
11	←		UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
12	→		UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC PDUs is greater than zero and records the value.

Specific Message Contents.

- MBSFN cluster frequency	The Current MBSFN Cluster

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 7)

Information Element	Value/remark
RLC SDU Counter Value	Check that the number is greater than zero.

8.5.7.5.5 Test requirements

At step 4 the UE shall select new MBSFN Cluster and perform Cell Reselection from Cell 31 to Cell 33.

At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater zero.

8.6 Minimization of Drive Test Specific Procedures

8.6.1 Immediate MDT

NOTE: Immediate MDT logging and reporting is provided by the UE through normal measurement procedures (subclause 8.4).

8.6.2 Logged MDT

8.6.2.1 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode

8.6.2.1.1 Definition

8.6.2.1.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception

- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP3)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> include IE "ANR Logging Results Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE should not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

4> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2, TP4)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.1.3.6, 8.5.63.3, 8.5.64.3, 8.5.65, 8.5.65.2.

8.6.2.1.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in Idle mode.
2. Verify logging and reporting of Logged MDT Intra-frequency measurements.
3. Verify indication of availability of Logged MDT measurements at RRC connection establishment.
4. Verify presence of correct time stamp in Logged MDT measurement reports.

8.6.2.1.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active. Cell 1 and Cell 2 belongs to same PLMN, but have different Location Area Codes.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.1-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.1-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

The SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.

The UE transmits a RRC CONNECTION RELEASE COMPLETE message and enters idle mode

The SS waits 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.1-1

The SS waits for random access on Cell 2 and page the UE. The UE transmits a RRC CONNECTION REQUEST message and SS respond by transmitting a RRC CONNECTION SETUP. The UE transmits a RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.

SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

	UE	SS		
1	<--		LOGGING MEASUREMENT CONFIGURATION	
2	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
3	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
4				Wait 5s to allow UE to activate logging.
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.1-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
6	-		-	Wait for random access requests from the UE on Cell 2.
7	<--		Paging	SS transmits a Paging message on Cell 2.

Step	Direction		Message	Comment
	UE	SS		
8	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
9	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
10	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.
11	<--		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”.
12	-->		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string

Information Element	Value/remark
	contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	

Information Element	Value/remark
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.1.5 Test requirement

At step 10 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE “Logged Meas Available” (TP3).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report" with logged Measurements of Cell 2 in the “Logged Measurements Intra Frequency Neighbouring Cells list” with the IE Absolute Time Info set equal to the value configured when the logged measurement configuration was received and the Relative Time Stamp indicating a value bigger than 0 indicating the elapsed time since the logged measurement configuration was received (TP1, TP2, TP4).

8.6.2.1a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode/PLMN list

8.6.2.1a.1 Definition

8.6.2.1a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> include IE "Logged Meas Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

5> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.1.3.6, 8.5.64.3,

8.6.2.1a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements at RRC connection establishment in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in idle mode) is reported in UE INFORMATION RESPONSE message.

8.6.2.1a.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test Procedure

Table 8.6.2.1a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.1a-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60
PLMN		PLMN 1		PLMN 2	

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

The SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.

The UE transmits a RRC CONNECTION RELEASE COMPLETE message and enters idle mode

The SS waits 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.1a-1

The UE transmits a RRC CONNECTION REQUEST message and SS respond by transmitting a RRC CONNECTION SETUP. The UE transmits a RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.

Complete ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	<--		LOGGING MEASUREMENT CONFIGURATION	
2	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
3	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
4	-		-	Wait 5s to allow UE to activate logging.

Step	Direction		Message	Comment
	UE	SS		
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.1a-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
6	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
7	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
8	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.
9	-->		RRC: INITIAL DIRECT TRANSFER NAS: ROUTING AREA UPDATE REQUEST	The UE transmits a ROUTING AREA UPDATE REQUEST message.
10	<--		RRC: DOWNLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE ACCEPT	The SS transmits a ROUTING AREA UPDATE ACCEPT message.
11	-->		RRC: UPLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE COMPLETE	The UE transmits a ROUTING AREA UPDATE COMPLETE message.
12	<--		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”.
13	-->		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present
- PLMN Identity List	
- PLMN Identity	PLMN2

RRC CONNECTION SETUP COMPLETE (step 8)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION REQUEST (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of

Information Element	Value/remark
	the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.1a.5 Test requirement

At step 8 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE "Logged Meas Available" (TP1).

At step 13 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP2).

8.6.2.2 Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH

8.6.2.2.1 Definition

8.6.2.2.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP3)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

6> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.63, 8.5.65, 8.5.65.2.

8.6.2.2.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in CELL_PCH state.
2. Verify logging and reporting of Logged MDT Intra-frequency measurements.
3. Verify indication of availability of Logged MDT measurements in CELL UPDATE message.

8.6.2.2.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.2-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.2-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.2-1

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	
2	←		PHYSICAL CHANNEL RECONFIGURATION	The IE "RRC state indicator" is set to "CELL_PCH".
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE sends this message before it completes state transition.
4				Wait 5s to allow UE to activate logging.
5				SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.2-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
6	→		CELL UPDATE	The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" set as true
7	←		CELL UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_DCH".
8	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”.
9	→		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.57
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Step 8)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.2.5 Test requirement

At step 6 the UE shall transmit a CELL UPDATE message on uplink DCCH including the IE "Logged Meas Available" (TP3).

At step 9 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP1, TP2).

8.6.2.2a Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH/PLMN list

8.6.2.2a.1 Definition

8.6.2.2a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP1)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

7> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.64.3,

8.6.2.2a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements obtained in CELL_PCH state at cell update procedure in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in CELL_PCH state) is reported in UE INFORMATION RESPONSE message.

8.6.2.2a.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test Procedure

Table 8.6.2.2a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.2a-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60
PLMN		PLMN 1		PLMN 2	

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.2a-1

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

Completes ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	
2	←		PHYSICAL CHANNEL RECONFIGURATION	The IE "RRC state indicator" is set to "CELL_PCH".
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE sends this message before it completes state transition.
4	-		-	Wait 5s to allow UE to activate logging.
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.2a-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
6	→		CELL UPDATE	The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" set as true
7	←		CELL UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_DCH".
8	-->		RRC: INITIAL DIRECT TRANSFER NAS: ROUTING AREA UPDATE REQUEST	The UE transmits a ROUTING AREA UPDATE REQUEST message.
9	<--		RRC: DOWNLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE ACCEPT	The SS transmits a ROUTING AREA UPDATE ACCEPT message.
10	-->		RRC: UPLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE COMPLETE	The UE transmits a ROUTING AREA UPDATE COMPLETE message.
11	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”.
12	→		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.57
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present
- PLMN Identity List	
- PLMN Identity	PLMN2

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x'

Information Element	Value/remark
	below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.2a.5 Test requirement

At step 6 the UE shall transmit a CELL UPDATE message on uplink DCCH including the IE “Logged Meas Available” (TP1).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report" with logged Measurements of Cell 2 in the “Logged Measurements Intra Frequency Neighbouring Cells list” (TP2).

8.6.2.3 Logged MDT / Inter-frequency measurement, logging and reporting / URA_PCH

8.6.2.3.1 Definition

8.6.2.3.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP3)]

…

In case of URA update procedure the UE shall transmit a URA UPDATE message.

…

The UE shall set the IEs in the URA UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

8> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

8.6.2.3.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in URA_PCH state
2. Verify logging and reporting of Logged MDT Inter-frequency measurements
3. Verify indication of availability of Logged MDT measurements in URA UPDATE message

8.6.2.3.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 4 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.3-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.3-1

Parameter	Unit	Cell 1		Cell 4	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		High Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60
URA ID		URA-ID 1		URA-ID 2	

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters URA_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.3-1.

When the UE detects the presence of cell 4, it moves to CELL_FACH state and transmits a URA UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of URA_UPDATE message, SS replies with a URA UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	The UE is in idle mode and camped onto cell 1.
2	←		PHYSICAL CHANNEL RECONFIGURATION	The IE "RRC state indicator" is set to "URA_PCH".
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE sends this message before it completes state transition.
4				Wait 5s to allow UE to activate logging.
5				SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.3-1. The UE shall find that the Cell 4 is better and attempt to perform a cell reselection.

Step	Direction		Message	Comment
	UE	SS		
6	→		URA UPDATE	The UE transmits this message with the IE "Logged Meas Available" set as true
7	←		URA UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_DCH".
8	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
9	→		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report".

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

URA UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
URA Update Cause	Check to see if set to 'Cell Re-selection'
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Step 8)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and

Information Element	Value/remark
	writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Inter Frequency	Only 1 inter Frequency
Neighbouring Cells list[x]	
- Frequency Info	f2
- Logged Measurements Inter-frequency	Only 1 cell
Neighbouring Cells list	
- Primary CPICH info	Set to the scrambling code for cell 4
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x'

Information Element	Value/remark
	below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter Frequency Neighbouring Cells list[x]	Only 1 inter Frequency
- Frequency Info	Frequency of Cell 4
- Logged Measurements Inter-frequency Neighbouring Cells list	Only 1 cell
- Cell parameters Id	Cell parameter Id of Cell 4
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.3.5 Test requirement

At step 6 the UE shall transmit a URA UPDATE message on uplink DCCH including the IE “Logged Meas Available” (TP3).

At step 9 the UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report" with logged Measurements of Cell 4 in the “Logged Measurements Inter Frequency Neighbouring Cells list” (TP1, TP2).

8.6.2.3a Logged MDT / Intra-frequency measurement, logging and reporting / URA_PCH / PLMN list

8.6.2.3a.1 Definition

8.6.2.3a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP1)]

…

In case of URA update procedure the UE shall transmit a URA UPDATE message.

…

The UE shall set the IEs in the URA UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

9> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.64.3,

8.6.2.3a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements obtained in URA_PCH state at URA update procedure in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in URA_PCH state) is reported in UE INFORMATION RESPONSE message.

8.6.2.3a.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test Procedure

Table 8.6.2.3a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.2.3a-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60
URA ID		URA-ID 1		URA-ID 2	
PLMN		PLMN 1		PLMN 2	

T he UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters URA_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.3a-1.

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a URA UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of URA_UPDATE message, SS replies with a URA UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

Completes ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	The UE is in idle mode and camped onto cell 1.
2	←		PHYSICAL CHANNEL RECONFIGURATION	The IE "RRC state indicator" is set to "URA_PCH".
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE sends this message before it completes state transition.

Step	Direction		Message	Comment
	UE	SS		
4	-		-	Wait 5s to allow UE to activate logging.
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.3a-1. The UE shall find that the Cell 2 is better and attempt to perform a cell reselection.
6	→		URA UPDATE	The UE transmits this message with the IE "Logged Meas Available" set as true
7	←		URA UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_DCH".
8	-->		RRC: INITIAL DIRECT TRANSFER NAS: ROUTING AREA UPDATE REQUEST	The UE transmits a ROUTING AREA UPDATE REQUEST message.
9	<--		RRC: DOWNLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE ACCEPT	The SS transmits a ROUTING AREA UPDATE ACCEPT message.
10	-->		RRC: UPLINK DIRECT TRANSFER NAS: ROUTING AREA UPDATE COMPLETE	The UE transmits a ROUTING AREA UPDATE COMPLETE message.
11	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
12	→		UE INFORMATION RESPONSE	UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report".

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.57
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present
- PLMN Identity List	
- PLMN Identity	PLMN2

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

URA UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
URA Update Cause	Check to see if set to 'Cell Re-selection'
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN 1
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.3a.5 Test requirement

At step 6 the UE shall transmit a URA UPDATE message on uplink DCCH including the IE "Logged Meas Available" (TP1).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP2).

8.6.2.4 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope

8.6.2.4.1 Definition

This test is applicable for all UEs that support Logged MDT services.

8.6.2.4.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2, TP3)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in camped normally state in idle mode, CELL_PCH or URA_PCH state;

- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception

- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;

- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1, TP2, TP3)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.5.65.2

.8.6.2.4.3 Test Purpose

1. Verify limiting area scope logging of configured Logged MDT measurements when area scope based on cell list is configured

2. Verify limiting area scope logging of configured Logging MDT measurements when area scope based on list of Location Areas is configured

3. Verify limiting area scope logging of configured Logging MDT measurements when area scope based on list of Routing Areas is configured.

8.6.2.4.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.2.4.4-1 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2", “T3”,"T4", “T5” and “T6” are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

Parameter	Unit	Cell 1							Cell 2							Cell 3						
		T0	T1	T2	T3	T4	T5	T6	T0	T1	T2	T3	T4	T5	T6	T0	T1	T2	T3	T4	T5	T6
JTRA RF Channel Number		Mid Range Test Frequency							Mid Range Test Frequency							Mid Range Test Frequency						
LAC		1							2							1						
RAC		1							2							2						
CPICH Ec FDD)	dBm/3.84 MHz	-60	OFF	OFF	-60	OFF	OFF	-60	OFF	-60	OFF	OFF	-60	OFF	OFF	OFF	OFF	-60	OFF	OFF	-60	OFF
P-CCPCH RSCP(TDD)	dBm	-60	OFF	OFF	-60	OFF	OFF	-60	OFF	-60	OFF	OFF	-60	OFF	OFF	OFF	OFF	-60	OFF	OFF	-60	OFF

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

c) Re-configure logged measurement with limiting area scope using Location Areas list, only Cell 2 belongs to Location Areas in the list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 1. Verify Logging MDT measurements on Cell 1.

d) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 2. Verify Logging MDT measurements on Cell 2.

e) Re-configure logged measurement with limiting area scope using Routing Areas list and only Cell 1 belongs to Routing Areas in configured Routing Areas list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

f) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 1. Verify Logging MDT measurements on Cell 1.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		LOGGING MEASUREMENT CONFIGURATION	SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 in configured cell list.
2	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
3	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
4	-			SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 2. The UE performs a RAU procedure and the RRC Connection is released.
5	-		-	Wait 10 seconds for UE logging interval timer to expire at least once
6	<--		Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present.
10	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
12	-->		RRC CONNECTION RELEASE COMPLETE	The UE confirms the connection release and returns to Idle mode.
13	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 3. The UE performs a RAU procedure and the RRC Connection is released.
14				Wait 10 seconds for UE logging interval timer to expire at least once
15	<--		Paging	SS transmits a Paging message.
16	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
17	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
18	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”.
19	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
20	<--		UE INFORMATION REQUEST	SS send an UE INFORMATION REQUEST message to get logMeasReport.
21	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3.
22	<--		LOGGING MEASUREMENT CONFIGURATION	SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a using Location Areas list on Cell 3, only Cell 2 belongs to Location Areas in the list.
23	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode on Cell 3.
24	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode
25	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T3 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 1. The UE performs a RAU procedure and the RRC Connection is released.
26				Wait 10 seconds for UE logging interval timer to expire at least once
27	<--		Paging	SS transmits a Paging message.
28	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.

Step	Direction		Message	Comments
	UE	SS		
29	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
30	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present.
31	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
32	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
33	-->		RRC CONNECTION RELEASE COMPLETE	The UE confirms the connection release and returns to Idle mode.
34	-		-	SS changes power level of Cell 1, Cell 2, and Cell 3 according to the T4 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 2. The UE performs a RAU procedure and the RRC Connection is released.
35				Wait 10 seconds for UE logging interval timer to expire at least once.
36	<--		Paging	SS transmits a Paging message on Cell 2.
37	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message on Cell 2.
38	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message on Cell 2.
39	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”.
40	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
41	<--		UE INFORMATION REQUEST	SS send a UE INFORMATION REQUEST message to get logMeasReport.
42	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 2.
43	<--		LOGGING MEASUREMENT CONFIGURATION	SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a Routing Areas List on Cell 2. Only Cell 1 belongs to Routing Areas in configured Routing Areas list.
44	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode on Cell 2.
45	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
46	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T5 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 3. The UE performs a RAU procedure and the RRC Connection is released.
47			-	Wait 10 seconds for UE logging interval timer to expire at least once
48	<--		Paging	SS transmits a Paging message.
49	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
50	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
51	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message and IE “Logged Meas Available” is not present.
52	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
53	<--		RRC CONNECTION RELEASE	SS transmits an RRC CONNECTION RELEASE message to release the RRC connection.
54	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
55	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T6 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to cell 1. The UE performs a RAU procedure and the RRC Connection is released.
56	-		-	Wait 10 seconds for UE logging interval timer to expire at least once
57	<--		Paging	SS transmits a Paging message on Cell 1.

Step	Direction		Message	Comments
	UE	SS		
58	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message on Cell1.
59	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message on Cell 1.
60	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE Logged Meas Available.
61	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
62	<--		UE INFORMATION REQUEST	SS send a UE INFORMATION REQUEST message to get logMeasReport.
63	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1?
64	<--		RRC CONNECTION RELEASE	SS transmits an RRC CONNECTION RELEASE message to release the RRC connection.
65	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.59
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	
- Cell IDList	
- Cell ID	Cell 3

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

RRC CONNECTION SETUP COMPLETE (step 18)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.

Logged Meas Available	True

UE INFORMATION RESPONSE (FDD) (Step 21)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 3
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 21)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 3

Information Element	Value/remark
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

LOGGING MEASUREMENT CONFIGURATION (Step 22)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	
- Location Area Code List	
- LAI	
- PLMN identity	Same as MIB
- LAC	2

RRC CONNECTION SETUP COMPLETE (step 30)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

RRC CONNECTION SETUP COMPLETE (step 39)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION RESPONSE (FDD) (Step 42)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT

Information Element	Value/remark
	CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 2
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 42)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

LOGGING MEASUREMENT CONFIGURATION (Step 43)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	
- Routing Code Area List	
- RAI	
- LAI	PLMN identity set to Same as MIB, and LAC=1
- RAC	1

RRC CONNECTION SETUP COMPLETE (step 51)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

RRC CONNECTION SETUP COMPLETE (step 60)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION RESPONSE (FDD) (Step 63)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT

Information Element	Value/remark
	CONFIGURATION in step 29
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 63)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.4.5 Test requirements

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP1).

At step 18, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP1).

At step 21, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3(TP1).

At step 30, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP2).

At step 39, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP2).

At step 42, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 2 (TP2).

At step 51, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP3).

At step 60 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available” (TP3).

At step 63 the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1(TP3).

8.6.2.4a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope / Cell ID list with PLMN identity

8.6.2.4a.1 Definition

This test is applicable for all UEs that support Logged MDT services.

8.6.2.4a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is present in the "PLMN Identity List" stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval” in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

4> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

3> set the IE "PLMN Identity" of the Logged Measurements Serving Cell to indicate the PLMN Identity of the cell the UE is camping on obtained from system information;

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.5.65.2

.8.6.2.4a.3 Test Purpose

1. Verify UE is logging when area scope based on Cell ID list with PLMN identity is configured and UE is camping on a cell in the Cell ID list with PLMN identity.

2. Verify UE is not logging of configured Logging MDT measurements when area scope based on Cell ID list with PLMN identity is configured and UE is camping on a cell not included in the Cell ID list with PLMN identity

8.6.2.4a.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test procedure

Table 8.6.2.4a.4-1 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

Parameter	Unit	Cell 1			Cell 2			Cell 3		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			Mid Range Test Frequency			Mid Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
P-CCPCH RSCP(TDD)	dBm	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
PLMN		PLMN 1			PLMN 2			PLMN 2		

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		LOGGING MEASUREMENT CONFIGURATION	SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 is in a configured cell list.
2	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
3	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
4	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.4a.4-1. UE performs cell reselection and the UE moves to idle mode on Cell 2.
5	-			Wait 10 seconds for UE logging interval timer to expire at least once.
6	<--		Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present.
10	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
12	-->		RRC CONNECTION RELEASE COMPLETE	The UE confirms the connection release and returns to Idle mode.
13				SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.4a.4-1. UE performs cell reselection and the UE moves to idle mode on Cell 3.
14				Wait 10 seconds for UE logging interval timer to expire at least once
15	<--		Paging	SS transmits a Paging message.
16	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
17	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
18	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”.
19	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
20	<--		UE INFORMATION REQUEST	SS send an UE INFORMATION REQUEST message to get logMeasReport.

Step	Direction		Message	Comments
	UE	SS		
21	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3.

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	
- Cell IDList	
- Cell ID	Cell 3
- PLMN Identity	PLMN2
- PLMN Identity List	
- PLMN Identity	PLMN2

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

RRC CONNECTION SETUP COMPLETE (step 18)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION RESPONSE (FDD) (Step 21)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Information Element	Value/remark
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN2
- Cell ID[x]	Cell 3
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 21)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN2
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.4a.5 Test requirements

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP2).

At step 18, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available” (TP1).

At step 21, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3(TP1).

8.6.2.5 Logged MDT / Release of logged MDT measurement configuration / Expire of duration timer

8.6.2.5.1 Definition

8.6.2.5.2 Conformance requirement

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.63.4 (TP1)]

When timer T326 expires, the UE shall:

1> release variable LOGGED_MEAS_CONFIG.

The UE is allowed to release stored logged measurements, i.e. to release LOGGED_MEAS_REPORT_VARIABLE 48 hours after T326 expiry.

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

10> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.331 clauses 8.5.63.3, 8.5.63.4, 8.5.64.3 and 8.5.65.2

8.6.2.5.3 Test Purpose

1. Verify release of Logged MDT measurement configuration up on stop or expire of logging duration timer.
2. Verify that UE, when being requested to report logged MDT measurements before the duration timer has expired, deletes the reported logged MDT measurements.

8.6.2.5.4 Method of test

Initial Condition

System Simulator: Cell 1 is active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 5s to allow UE to activate logging.

SS request Logged Meas Report until all the Logged Meas Report has been transmitted.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report ".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10 minutes for UE performing the logging at regular time intervals as to ensure timer T326 has expired.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS request Logged Meas Report until all the Logged Meas Report has been transmitted.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10 s.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and without IE "Logged Meas Available"

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min.
2	←		RRC CONNECTION RELEASE	
3	→		RRC CONNECTION RELEASE COMPLETE	
4				Wait 5s to allow UE to active logging.
5	→		RRC CONNECTION REQUEST	By outgoing call operation.
6	←		RRC CONNECTION SETUP	
7	→		RRC CONNECTION SETUP COMPLETE	
8	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
9	→		UE INFORMATION RESPONSE	
				EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 9, steps 9a1 and 9a2 will be executed.

Step	Direction		Message	Comment
	UE	SS		
9a1	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
9a2	→		UE INFORMATION RESPONSE	
				EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 9a2, steps 9a1 and 9a2 will be executed again.
10	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
11	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report”.
12	←		RRC CONNECTION RELEASE	
13	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
14				Wait 10 min for UE performing the logging at regular time intervals as to ensure timer T326 has expired.
15	→		RRC CONNECTION REQUEST	By outgoing call operation.
16	←		RRC CONNECTION SETUP	
17	→		RRC CONNECTION SETUP COMPLETE	
18	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
19	→		UE INFORMATION RESPONSE	The UE sends a UE INFORMATION RESPONSE message; include IE “Logged Meas Report” of Cell 1.
				EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 19, steps 19a1 and 19a2 will be executed.
19a1	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
19a2	→		UE INFORMATION RESPONSE	
				EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 19a2, steps 19a1 and 19a2 will be executed again.
20	←		RRC CONNECTION RELEASE	
21	→		RRC CONNECTION RELEASE COMPLETE	
			Void	Wait 10s.

Step	Direction		Message	Comment
	UE	SS		
22	→		RRC CONNECTION REQUEST	
23	←		RRC CONNECTION SETUP	
24	→		RRC CONNECTION SETUP COMPLETE	The UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available”.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

UE INFORMATION REQUEST (Step 8 and 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1

Information Element	Value/remark
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (TDD) (Step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (FDD) (Step 9a2)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1

Information Element	Value/remark
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (TDD) (Step 9a2)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Information Element	Value/remark
Logged Meas Report	Not present

UE INFORMATION RESPONSE (FDD) (Step 19)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (TDD) (Step 19)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	

Information Element	Value/remark
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (FDD) (Step 19a2)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not present or TRUE

UE INFORMATION RESPONSE (TDD) (Step 19a2)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-TDD[x]	

Information Element	Value/remark
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not present or TRUE

RRC CONNECTION SETUP COMPLETE (step 24)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

8.6.2.5.5 Test requirement

At step 11, the UE shall send an UE INFORMATION RESPONSE message, without IE “Logged Meas Report” (TP2).

At step 24, the UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available” (TP1).

8.6.2.6 Logged MDT / Release of logged MDT measurement configuration / Reception of new logged measurement configuration, Detach or UE power off

8.6.2.6.1 Definition

8.6.2.6.2 Conformance requirement

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.66.2 (TP1, TP2)]

The UE initiates the procedure upon receiving a logged measurement configuration in UTRAN or in another RAT. The UE also shall initiate the procedure upon switch off or detach.

The UE shall:

1> if stored, discard the existing logged measurement configuration as well as the logged measurement information, i.e. release the UE variables LOGGED MEAS CONFIG and LOGGED_MEAS_REPORT_VARIABLE and stop timer T326.

Reference

TS 25.331 clauses 8.5.63.3, 8.5.66.2

8.6.2.6.3 Test Purpose

1. Verify release of logged measurement configuration and logs up on reception of new logged measurement configuration
2. Verify release of logged measurement configuration and logs upon UE switch off or detach

8.6.2.6.4 Method of test

Initial Condition

System Simulator: Cell 1 is active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

Switch off button Yes/No.

Test Procedure

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report ".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report” based on the message LOGGING MEASUREMENT CONFIGURATION in step 1.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE is switched off, or detaches from the network.

The UE is switched on, or attaches to the network.

The UE registered on the network.

Wait 10s

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and without IE "Logged Meas Available"

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min.
2	←		RRC CONNECTION RELEASE	
3	→		RRC CONNECTION RELEASE COMPLETE	
4				Wait 10s to allow UE to activate logging.
5	→		RRC CONNECTION REQUEST	By outgoing call operation.
6	←		RRC CONNECTION SETUP	
7	→		RRC CONNECTION SETUP COMPLETE	
8	←		LOGGING MEASUREMENT CONFIGURATION	Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min.
9	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.

Step	Direction		Message	Comment
	UE	SS		
10	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report”.
11	←		RRC CONNECTION RELEASE	
12	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
13				Wait 10s to allow UE to activate logging.
14	→		RRC CONNECTION REQUEST	By outgoing call operation.
15	←		RRC CONNECTION SETUP	
16	→		RRC CONNECTION SETUP COMPLETE	
17	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
18	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” present. And the IE “Logged Meas Report” does not include logged measurement reports based on the message LOGGING MEASUREMENT CONFIGURATION in step 1.
19	←		RRC CONNECTION RELEASE	
20	→		RRC CONNECTION RELEASE COMPLETE	
21				Wait 10s to allow UE to activate logging.
22				The UE is powered down or switched off and initiates a detach.
23				The UE is powered up or switched on and initiates an attach.
24-36				Steps 1 to 13 of the generic test procedure in TS 34.108 subclause 7.2.2.2.3 are performed to complete the registration on the network.
37				Wait 10s to allow UE to activate logging.
38	→		RRC CONNECTION REQUEST	
39	←		RRC CONNECTION SETUP	
40	→		RRC CONNECTION SETUP COMPLETE	The UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available”.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1 and 8)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present

RRC CONNECTION SETUP COMPLETE (step 7)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Steps 9 and 17)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (Step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	Not present

UE INFORMATION RESPONSE (FDD) (Step 18)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE.

Information Element	Value/remark
	The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 18)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

RRC CONNECTION SETUP COMPLETE (step 40)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

8.6.2.6.5 Test requirement

At step 10, the UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report” (TP1).

At step18, the UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report”. And the IE “Logged Meas Report” does not include logged measurement reports based on the message LOGGING MEASUREMENT CONFIGURATION in step 1. (TP1).

At step 40, the UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available” (TP2).

8.6.2.7 Logged MDT / Maintaining logged measurement configuration / UE state transitions and mobility

8.6.2.7.1 Definition

8.6.2.7.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2, TP3, TP4)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP2, TP3, TP4)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 13.4.48 (TP2, TP3, TP4)]

This variable contains parameters related to Logged Measurements. This variable shall not be deleted upon transition to idle mode and when the UE moves to another RAT.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Logged Measurements Configuration Info	MP		Logged Measurements Configuration Info 10.3.7.132		REL-10

[TS 25.331, clause 13.4.49 (TP2, TP3, TP4)]

This variable includes the logged measurements information. This variable shall not be deleted upon transition to Idle mode and when the UE moves to another RAT. The UE shall store the logged measurements during 48 hours after expiry of the timer T326.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Trace reference	MP		Trace Reference 10.3.7.133	Parameter trace reference: See TS 32.422 [81]	REL-10
Trace recording session	MP		Trace Recording Session 10.3.7.134	Parameter trace recording session reference: See TS 32.422 [81]	REL-10
TCE Id	MP		TCE Id 10.3.7.135	Parameter TCE Id: See TS 32.422 [81]	REL-10
PLMN Identity	MP		PLMN identity 10.3.1.11		REL-10
Absolute Time Info	MP		Bit Sting (48)	Indicates the reference to network absolute	REL-10

				time *absoluteTimeInfo* provided at the point of measurement logging configuration. Format is YY-MM-DD HH:MM:SS using BCD encoding	
CHOICE mode	MP				REL-10
>FDD					REL-10
>>List of measurements FDD		0..MaxLoggedMeas			REL-10
>>>Logged Measurement Info-FDD	MP		Logged Measurement Info-FDD 10.3.7.129		REL-10
>TDD					REL-10
>>List of measurements TDD		0..MaxLoggedMeas			REL-10

Reference

TS 25.304 clause 5.7 and TS 25.331 clauses 8.5.65.2, 13.4.48, 13.4.49

8.6.2.7.3 Test Purpose

1. Verify that UE is not indicating availability of Logged MDT measurements when UE has moved to a non MDT PLMN cell
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to CELL_FACH or CELL_DCH
3. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE change to a non MDT PLMN cell
4. Verify that logging is stopped (but duration timer is kept running) when UE changes from "camp normally" state to "any cell selection" or "camp on any cell" states and resumes logging when returning to "camp normally" state

8.6.2.7.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.7 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2”, “T3”and “T4” are applied at the points indicated described in the texts in this clause.

Table 8.6.2.7

	Parameter	Unit	Cell 1	Cell 2	Cell 3
	UTRA RF Channel Number		Mid Range Test Frequency	Mid Range Test Frequency	Mid Range Test Frequency

	PLMN		PLMN 1	PLMN 2	PLMN 1
T0	CPICH Ec (FDD)	dBm/3.84MHz	-60	Off	Off
	P-CCPCH RSCP (TDD)	dBm	-60	Off	Off
T1	CPICH Ec (FDD)	dBm/3.84MHz	-69	-60	Off
	P-CCPCH RSCP (TDD)	dBm	-69	-60	Off
T2	CPICH Ec (FDD)	dBm/3.84MHz	Off	-69	-60
	P-CCPCH RSCP (TDD)	dBm	Off	-69	-60
T3	CPICH Ec (FDD)	dBm/3.84MHz	Off	Off	Off
	P-CCPCH RSCP (TDD)	dBm	Off	Off	Off
T4	CPICH Ec (FDD)	dBm/3.84MHz	Off	Off	-60
	P-CCPCH RSCP (TDD)	dBm	Off	Off	-60

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in table 8.6.2.7.

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message without IE "Logged Meas Available".

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message, the IE "RRC State Indicator" set to "CELL_PCH".

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T2" in table 8.6.2.7.

When the UE detects the presence of cell 3, it moves to CELL_FACH state and transmits a CELL UPDATE message with IE "Logged Meas Available".

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Meas Report" including logged report of Cell 1 and Cell 3.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T3" in table 8.6.2.7.

Wait 30s.

SS configures its downlink transmission power settings according to columns "T4" in table 8.6.2.7.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE “Logged Meas Report” of Cell 2.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min.
2	←		PHYSICAL CHANNEL RECONFIGURATION	The IE "RRC state indicator" is set to "CELL_PCH".
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE sends this message before it completes state transition.
4				Wait 10s to allow UE to activate logging.
5				SS configures its downlink transmission power settings according to columns "T1" in table 8.6.2.7.
6	→		CELL UPDATE	The UE moves to CELL_FACH state and transmits this message without the IE "Logged Meas Available" on Cell 2.
7	←		CELL UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_PCH".
8				Wait 10s to allow UE to activate logging.
9				SS configures its downlink transmission power settings according to columns "T2" in table 8.6.2.7.

Step	Direction		Message	Comment
	UE	SS		
10	→		CELL UPDATE	The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" on Cell 3.
11	←		CELL UPDATE CONFIRM	IE "RRC State Indicator" is set to "CELL_DCH".
12	←		RRC CONNECTION RELEASE	
13	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
14				Wait 10s to allow UE to activate logging.
15	→		RRC CONNECTION REQUEST	By outgoing call operation.
16	←		RRC CONNECTION SETUP	
17	→		RRC CONNECTION SETUP COMPLETE	
18	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
19	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell1 and Cell 3.
20				Wait 10s to allow UE to activate logging.
21				SS configures its downlink transmission power settings according to columns "T3" in table 8.6.2.7.
22				Wait 30s to allow UE to activate logging.
23				SS configures its downlink transmission power settings according to columns "T4" in table 8.6.2.7.
24				Wait 10s to allow UE to activate logging.
25	→		RRC CONNECTION REQUEST	By outgoing call operation.
26	←		RRC CONNECTION SETUP	
27	→		RRC CONNECTION SETUP COMPLETE	
28	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
29	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell 3.

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.58
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present

CELL UPDATE (Step 6)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
Cell Update Cause	'Cell Re-selection'
Logged Meas Available	Not present

CELL UPDATE (Step 10)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

Information Element	Value/remark
Cell Update Cause	'Cell Re-selection'
Logged Meas Available	TRUE

UE INFORMATION REQUEST (Steps 18 and 28)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 19)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.

Information Element	Value/remark
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least one entry complies to entry with index 'x' below for cell 1 and at least one entry complies to entry with index 'y' below for cell 3.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurement Info-FDD[y]	
- Relative Time Stamp[y]	Not checked
- Logged Measurements Serving Cell[y]	
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 19)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least one entry complies to entry with index 'x' below for cell 1 and at least one entry complies to entry with index 'y' below for cell 3.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurement Info-TDD[y]	
- Relative Time Stamp[y]	Not checked
- Logged Measurements Serving Cell[y]	
- Cell ID	Cell 3

Information Element	Value/remark
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (FDD) (Step 29)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least one entry complies to entry with index 'x' below for cell 3 and the number of entries shall no more than 20/2.56.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 29)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least one entry complies to entry with index 'x' below for cell 3 and the number of entries shall no more than 20/2.56.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked

Information Element	Value/remark
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.7.5 Test requirement

At step 6, the UE shall transmit a CELL UPDATE message without the IE "Logged Meas Available" on Cell 2 (TP1).

At step 10, the UE shall transmit a CELL UPDATE message with the IE "Logged Meas Available" set as TRUE on Cell 3 (TP3).

At step 19, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell1 and Cell 3 (TP2).

At step 29, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell 3. And the number of entries in the List of measurements FDD or TDD shall be no more than the expected logged measurement result entries within 20 seconds of logging periods (TP4).

8.6.2.8 Logged MDT / Reporting / Location information

8.6.2.8.1 Definition

8.6.2.8.2 Conformance requirement

[TS 25.331, clause 8.5.65.2]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of

decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.331 clause 8.5.65.2.

8.6.2.8.3 Test Purpose

1. Verify presence of location information in Logged MDT measurement reports.

8.6.2.8.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

The UE's positioning engine (e.g. standalone GNSS receiver) should be provided with any necessary stimulus to allow it to provide the position. This shall be done by use of the test function Update UE Location Information defined in TS 34.109 [10], if supported by the UE according to pc_UpdateUE_LocationInformation. Otherwise, or in addition any other suitable method may also be used.

Test Procedure

Same as the test procedure in subclause 8.2.6.1.4

Specific Message Contents

All messages have the same content as the specific messages in clause 8.2.6.1.4 with the following exceptions:

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1

Information Element	Value/remark
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Primary CPICH info	Set to the scrambling code for cell 2
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- CHOICE *GNSS UE Position*	Ellipsoid or Ellipsoid with altitude
- Ellipsoid point	If CHOICE *GNSS UE Position* is 'Ellipsoid' then check to be present
- Ellipsoid point with altitude	If CHOICE *GNSS UE Position* is 'Ellipsoid with altitude' then check to be present
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1

- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Checked to be present with a value bigger than 0.
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency list[x]	Only 1 intra Frequency cell
- Cell parameters Id	Cell parameter Id of Cell 2
- Primary CCPCH RSCP	(0..91)
- CHOICE *GNSS UE Position*	Ellipsoid or Ellipsoid with altitude
- Ellipsoid point	If CHOICE *GNSS UE Position* is 'Ellipsoid' then check to be present
- Ellipsoid point with altitude	If CHOICE *GNSS UE Position* is 'Ellipsoid with altitude' then check to be present
- Logged Meas Available	Not checked

8.6.2.8.5 Test requirement

Test step numbers as per expected sequence table in subclause 8.6.2.1.4.

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" with the IE Ellipsoid point or IE Ellipsoid point with altitude present (TP1).

8.6.2.9 Logged MDT / Logging and reporting / PLMN list / PLMN change

8.6.2.9.1 Definition

This test is applicable for all UEs that support Enhancement of Logged MDT services.

8.6.2.9.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP1, TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> include IE "Logged Meas Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is present in the "PLMN Identity List" stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

4> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

3> set the IE "PLMN Identity" of the Logged Measurements Serving Cell to indicate the PLMN Identity of the cell the UE is camping on obtained from system information;

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.5.65.2

.8.6.2.9.3 Test Purpose

1. Verify that IE "Logged Meas Available" is not indicated in the cell that does not belong to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that IE "Logged Meas Available" is indicated in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

8.6.2.9.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.2.9 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

Table 8.6.2.9

Parameter	Unit	Cell 1			Cell 2			Cell 3		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			Mid Range Test Frequency			Mid Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
P-CCPCH RSCP(TDD)	dBm	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
PLMN		PLMN 1			PLMN 2			PLMN 3		

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

Step	Direction		Message	Comments
	UE	SS		
1	<--		LOGGING MEASUREMENT CONFIGURATION	SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 in configured cell list.
2	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
3	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode.
4	-		-	Wait 10 seconds for UE logging interval timer to expire at least once
5	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.9.
6	-		-	UE select PLMN 2 and Cell2. Call PS Registration procdeure in TS34.108 clause 7.2.2.2.3 on cell 2, and enter idle mode.
7	-		-	Wait 10 seconds for UE logging interval timer to expire at least once
8	<--		Paging	SS transmits a Paging message.
9	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
10	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
11	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present.
12	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.
13	-->		RRC CONNECTION RELEASE COMPLETE	The UE confirms the connection release and returns to Idle mode.
14	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.9.
15	-		-	UE select PLMN 3 and Cell3. Call PS Registration procdeure in TS34.108 clause 7.2.2.2.3 on cell 3, and enter idle mode.
16				Wait 10 seconds for UE logging interval timer to expire at least once
17	<--		Paging	SS transmits a Paging message.
18	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
19	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
20	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”.
21	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
22	<--		UE INFORMATION REQUEST	SS send an UE INFORMATION REQUEST message to get logMeasReport.
23	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3.

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Logged Measurements Configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.56
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present
- PLMN Identity List	
- PLMN Identity	PLMN3

RRC CONNECTION SETUP COMPLETE (step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	Not present

RRC CONNECTION SETUP COMPLETE (step 20)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Logged Meas Available	True

UE INFORMATION RESPONSE (FDD) (Step 23)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 2 entry where at least one entry complies to entry with index 'x' and at least one entry with index 'y' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN1
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurement Info-FDD[y]	

Information Element	Value/remark
- Relative Time Stamp[y]	Not checked
- Logged Measurements Serving Cell[y]	
- PLMN Identity[y]	PLMN3
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 23)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 2 entry where at least one entry complies to entry with index ‘x’ and at least one entry with index ’y’ below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- PLMN Identity	PLMN1
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurement Info-TDD[y]	
- Relative Time Stamp[y]	Not checked
- Logged Measurements Serving Cell[y]	
- PLMN Identity	PLMN3
- Cell ID	Cell 3
- Primary CCPCH RSCP	(0..91)
- Logged Meas Available	Not checked

8.6.2.9.5 Test requirements

At step 11, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present (TP1).

At step 20, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available” (TP2).

At step 23, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1 and Cell 3(TP2).

8.6.3.1 Logged MDT / E-UTRAN Inter-RAT measurement, logging and reporting / Idle mode

8.6.3.1.1 Definition

8.6.3.1.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

11> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.65 (TP1)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.64., 8.5.65 and 8.5.65.2.

8.6.3.1.3 Test Purpose

1. Verify logging and reporting of Logged MDT E-UTRAN Inter-RAT measurements

8.6.3.1.4 Method of test

System Simulator: 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3. SIB configuration 6 is applied in accordance with TS 34.108 clause 6.1.0a.2.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports E-UTRAN.

Test Procedure

Table 8.6.3.1illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition, while column marked "T1" and "T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.3.1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1(UTRA)	Cell 2(E-UTRA)
T0	Cell-specific RS EPRE	dBm/15kHz	-	-90
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-
T1	Cell-specific RS EPRE	dBm/15kHz	-	-70
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-100	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-100	-
T2	Cell-specific RS EPRE	dBm/15kHz	-	-90
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.

UE reselects to cell 2 and moves to RRC_IDLE.

SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.1. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

The UE performs RAU procedure on Cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD". And Logged Measurements of Cell 2 is in the Logged Measurements inter RAT Neighbouring Cells list".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min.
2	←		RRC CONNECTION RELEASE	
3	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
4	-		-	Wait 10s to allow UE to activate logging.
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
6	-		-	Call generic procedure in 36.508 subclause 6.4.2.7A-1, UE reselcts to cell 2. The UE performs a TAU procedure and the RRC Connection is released.
7	-		-	SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.1. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.
10	→		RRC CONNECTION REQUEST	
11	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	

Step	Direction		Message	Comment
	UE	SS		
13	-		-	Call steps 4 to 8 in generic procedure in 36.508 subclause 6.4.2.8-1, the UE performs a RAU procedure on Cell 1.
14	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
15	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message. And Logged Measurements of Cell 2 is in the Logged Measurements E-UTRA frequency list.
16	←		RRC CONNECTION RELEASE	
17	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.59
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

UE INFORMATION REQUEST (Step 14)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 15)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency	1 entry
Neighbours List	
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 15)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.

Information Element	Value/remark
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency Neighbours List	1 entry
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)
- Logged Meas Available	Not checked

8.6.3.1.5 Test requirement

At step 15, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Measurements Inter-RAT Neighbour cells list” include Logged Measurements of Cell 2 (TP1).

8.6.3.2 Logged MDT / GERAN Inter-RAT measurement, logging and reporting / Idle mode

8.6.3.2.1 Definition

8.6.3.2.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4> else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

12>set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 37.320, clause 5.1.1.3.1 (TP1)]

A UE configured to perform Logged MDT measurements indicates the availability of Logged MDT measurements, by means of an indicator, in RRCConnectionSetupComplete message during connection establishment. Furthermore, the indicator (possibly updated) shall be provided within E-UTRAN handover and re-establishment, and UTRAN procedures involving the change of SRNC (SRNC relocation), CELL UPDATE, URA UPDATE messages as well as MEASUREMENT REPORT message in case of state transition to CELL_FACH without CELL UPDATE. The UE includes the indication in one of these messages at every transition to RRC Connected mode even though the logging period has not ended, upon connection to RAT which configured the UE to perform Logged MDT measurements and RPLMN which is equal to a PLMN in the MDT PLMN list.

The indicator shall be also provided in UEInformationResponse message during MDT report retrieval in case the UE has not transferred the total log in one RRC message in order to indicate the remaining data availability.

The UE will not indicate the availability of MDT measurements in another RAT or in a PLMN that is not in the MDT PLMN list.

The network may decide to retrieve the logged measurements based on this indication. In case Logged MDT measurements are retrieved before the completion of the pre-defined logging duration, the reported measurement results are deleted, but MDT measurement logging will continue according to ongoing logged measurement configuration.

In case the network does not retrieve Logged MDT measurements, UE should store non-retrieved measurements for 48 hours from the moment the duration timer for logging expired. There is no requirement to store non-retrieved data beyond 48 hours. In addition, all logged measurement configuration and the log shall be removed by the UE at switch off or detach.

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.65.2, 8.5.64.3 and TS37.320 clause 5.1.1.3.1.

8.6.3.2.3 Test Purpose

1. Verify logging and reporting of Logged MDT GERAN Inter-RAT measurements

8.6.3.2.4 Method of test

Initial Condition

System Simulator: 2 cells – cell 1 and cell 9 are active. Cell 1 is UTRA FDD or TDD cells. Cell 9 is GSM cell. The PLMN of Cell 1 and Cell 9 are the same.

UE: PS-DCCH+DTCH_DCH (state 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.3.2-1and Table 8.6.3.2-2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently.

Table 8.6.3.2-1: Time instances of cell power level and parameter changes

Parameter	Unit	Cell 1 (UTRA)		
		T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency		
CPICH Ec	dBm/3.84MHz	-60	-80	-60
PCCPCH_RSCP (TDD)	dBm	-60	-80	-60

Table 8.6.3.2-2

Parameter	Unit	Cell 9 (GSM)		
		T0	T1	T2
Test Channel		1		
RF Signal Level	dBm	-90	-48	-90
RXLEV_ACCESS_MIN	dBm	-100	-100	-100
FDD_Qmin	dB	-20	-20	-20
FDD_Qoffset	dBm	0	0	0

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 9 is better and attempt to perform a cell reselection.

UE reselects to GERAN cell 9 and complete routing area update procedure on cell 9.

SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS completes routing area update procedure on cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD". And Logged Measurements of Cell 9 is in the Logged Measurements inter RAT Neighbouring Cells list".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min.
2	←		RRC CONNECTION RELEASE	
3	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
4				Wait 10s to allow UE to activate logging.
5	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 9 is better and attempt to perform a cell reselection.
6	→		CHANNEL REQUEST	The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE routing area update procedure)
7	←		IMMEDIATE ASSIGNMENT	Sent on AGCH.
8	SS			The SS completes the routing area update procedure requested by the UE.
9	-		-	SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.
10	→		RRC CONNECTION REQUEST	
11	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	
13	-		-	The SS completes the Routing Area Update procedure requested by the UE.
14	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to "true".
15	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message. And Logged Measurements of Cell 9 is in the Logged Measurements GSM frequency list.

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.60
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present

UE INFORMATION REQUEST (Step 14)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	TRUE
Logged ANR Report Request	Not Present

UE INFORMATION RESPONSE (FDD) (Step 14)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1

- Logged Meas Available	Not checked

8.6.3.2.5 Test requirement

At step 15, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Measurements Inter-RAT Neighbour cells list” include Logged Measurements of Cell 9 (TP1).

8.6.3.3 Logged MDT / Maintaining logged measurement configuration / UTRAN to E-UTRAN Inter-RAT mobility

8.6.3.3.1 Definition

8.6.3.3.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.6.3 (TP1, TP2)]

The UE shall be able to receive a HANDOVER TO UTRAN COMMAND message and perform an inter-RAT handover, even if no prior UE measurements have been performed on the target UTRAN cell and/or frequency.

The UE shall act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE shall:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

1> and the procedure ends.

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE should not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.6.3 and 8.5.63.3.

8.6.3.3.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements in HANDOVER TO UTRAN COMMAND message.
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to E-UTRAN.

8.6.3.3.4 Method of test

System Simulator: 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports E-UTRAN.

Test Procedure

Table 8.6.3.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2” are applied at the points indicated described in the texts in this clause.

T2	Cell-specific RS EPRE	dBm/15k Hz	-	-90	
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-	
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-	

Table 8.6.3.3: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1(UTRA)	Cell 2(E-UTRA)	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-	-90	
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-	
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-	
T1	Cell-specific RS EPRE	dBm/15k Hz	-	-70	The power level values are such that entering conditions for event 3a are satisfied.
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-100	-	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.28 MHz	-100	-	
T2	Cell-specific RS EPRE	dBm/15k Hz	-	-90	
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-	
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-	

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

The UE transmits SERVICE REQUEST message.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message.

SS adjusts cell power level according to columns "T1" in tables 8.6.3.3, and UE send MEASUREMENT REPORT to SS.

The UE receive “HANDOVER FROM UTRAN COMMAND” message from cell1, and handover to E-UTRAN cell 2,

SS adjust cell power level according to columns "T2" in tables 8.6.3.3, and UE sends *MeasurementReport* message to SS.

SS transmits a *MobilityFromEUTRACommand* message to UE.

The UE handover to UTRAN cell from E-UTRAN cell, and send HANDOVER TO UTRAN COMPLETE message and complete handover to Cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min.
2	←		RRC CONNECTION RELEASE	
3	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
4				Wait 10s to allow UE to activate logging.
5	→		RRC CONNECTION REQUEST	By outgoing call operation.
6	←		RRC CONNECTION SETUP	
7	→		RRC CONNECTION SETUP COMPLETE	
7a	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
-	-		-	For FDD, Steps 8 to 9 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that takes place if a capability is supported. For TDD, go to Step 10.
8	←		PHYSICAL CHANNEL RECONFIGURATION	Compressed mode pattern sequence parameters are loaded to UE.
9	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
10	←		MEASUREMENT CONTROL	SS configures event 3a in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started.
11				SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.6.3.3.
12	→		MEASUREMENT REPORT	After about 2s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3a.
13	←		HANDOVER FROM UTRAN COMMAND	The SS transmits a HANDOVER FROM UTRAN COMMAND message to UE.
14	→		*RRCConnectionReconfigurationComplete*	The UE shall send a *RRCConnectionReconfigurationComplete* message to cell 2.
15	←		*RRCConnectionReconfiguration*	The SS transmits an *RRCConnectionReconfiguration* message to setup inter RAT measurement on Cell 2.
16	→		*RRCConnectionReconfigurationComplete*	The UE transmits an *RRCConnectionReconfigurationComplete* message to confirm the setup of inter RAT measurement on Cell 2.

Step	Direction		Message	Comment
	UE	SS		
17				SS re-adjusts the downlink transmission power settings according to columns "T2" in tables 8.6.3.3.
18	→		*MeasurementReport*	The UE transmits a *MeasurementReport message to cell 2.*
19	←		*MobilityFromEUTRACommand*	The SS transmits a *MobilityFromEUTRACommand* message on Cell 2.
20	→		HANDOVER TO UTRAN COMPLETE	The UE transmit a HANDOVER TO UTRAN COMPLETE message on cell 1.
21	←		SECURITY MODE COMMAND	The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection.
22	→		SECURITY MODE COMPLETE	The UE transmits a SECURITY MODE COMPLETE message on Cell 1.
23	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”.
24	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD"

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.61
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	‘0EF’H
-Trace recording session	‘1A’H
- TCE Id	‘5’H
- CHOICE Area Configuration	Not present

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 8)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	

- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Integrity protection mode info	Not Present
Ciphering mode info	Not Present
Activation time	Not Present
Delay restriction flag	Not Present
New U-RNTI	Not Present
New C-RNTI	Not Present
New H-RNTI	Not Present
New Primary E-RNTI	Not Present
New Secondary E-RNTI	Not Present
RRC State indicator	CELL_DCH
UE Mobility State Indicator	Not Present
UTRAN DRX cycle length coefficient	Not Present
CN information info	Not Present
URA identity	Not Present
RNC support for change of UE capability	Not Present
Reconfiguration in response to requested change of UE capability	Not Present
Downlink counter synchronization info	Not Present
Frequency info	Not Present
DTX-DRX timing information	Not Present
DTX-DRX Information	Not Present
HS-SCCH less Information	Not Present
MIMO parameters	Not Present
HARQ Info	Not Present
Maximum allowed UL TX power	Not Present
CHOICE channel requirement	Not Present
E-DCH Info	Not Present
Downlink HS-PDSCH Information	Not Present
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	Not Present
- DPCH compressed mode info	
- TGPSI	1
- TGPS Status Flag	Deactivate
- TGCFN	Not Present
- Transmission gap pattern sequence configuration parameters	
- TGMP	E-UTRA measurement
- TGPRC	Infinity
- TGSN	8
- TGL1	10
- TGL2	Not Present
- TGD	undefined
- TGPL1	12
- TGPL2	Not Present
- RPP	Mode 0
- ITP	Mode 0
- CHOICE UL/DL Mode	UL and DL, UL only or DL only (depending on the UE capability)
- Downlink compressed mode method	HLS(or not sent, depending on the UE capability)
- Uplink compressed mode method	HLS(or not sent, depending on the UE capability)
- Downlink frame type	B
- DeltaSIR1	20 (2.0)
- DeltaSIRAfter1	10 (1.0)
- DeltaSIR2	Not Present
- DeltaSIRAfter2	Not Present
- N identify abort	Not Present
- T Reconfirm abort	Not Present
- TX Diversity mode	Not Present
- SSDT information	Not Present
- Default DPCH Offset Value	Not Present
Downlink information for each radio link	Not Present
MBMS PL Service Restriction Information	Not Present

MEASUREMENT CONTROL (FDD) (Step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	
- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Measurement Identity	3
Measurement Command	Setup
Measurement Reporting Mode	
- Measurement Report Transfer Mode	Acknowledged mode RLC
- Periodical Reporting/Event Trigger Reporting Mode	Event trigger
Additional measurement list	Not present
CHOICE Measurement type	Inter-RAT measurement
- CHOICE Inter-RAT measurement objects	E-UTRA frequency list
- CHOICE E-UTRA frequency removal	Remove no frequencies
- New frequencies	
- E-UTRA carrier frequency	Downlink EARFCN of E-UTRA Cell
- Measurement bandwidth	Same downlink system bandwidth as used for E-UTRA Cell
- Blacklisted cells list	Not present
- Inter-RAT measurement quantity	
- Measurement quantity for UTRAN quality estimate	
- Filter coefficient	0
- CHOICE mode	FDD
- Measurement quantity	CPICH Ec/N0
- CHOICE system	E-UTRA
- Measurement quantity	RSRP
- Filter coefficient	0
- Inter-RAT reporting quantity	
- UTRAN estimated quality	FALSE
- CHOICE system	E-UTRA
- Reporting quantity	both
- Reporting cell status	Not present
- CHOICE report criteria	Inter-RAT measurement reporting criteria
- Parameters required for each event	1 entry
- Inter-RAT event identity	Set according to specific test.
- Threshold own system	-66 dB
- W	0
- Threshold other system	-55 (-80 dBm)
- Hysteresis	0
- Time to trigger	10 ms
- Reporting cell status	
- CHOICE reported cell	Report cells within active set or within virtual active set or of the other RAT
- Maximum number of reported cells	2
- Idle Interval Information	Not present
DPCH Compressed mode status info	
- TGPS reconfiguration CFN	(Current CFN + (250 – TTI/10msec)) mod 256
- Transmission gap pattern sequence	1 entry
- TGPSI	1
- TGPS Status Flag	activate
- TGCFN	(Current CFN + (252 – TTI/10msec)) mod 256

MEASUREMENT CONTROL (TDD) (Step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	
- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Measurement Identity	3
Measurement Command	Setup
Measurement Reporting Mode	
- Measurement Report Transfer Mode	Acknowledged mode RLC
- Periodical Reporting/Event Trigger Reporting Mode	Event trigger
Additional measurement list	Not present
CHOICE Measurement type	Inter-RAT measurement
- CHOICE Inter-RAT measurement objects	E-UTRA frequency list
- CHOICE E-UTRA frequency removal	Remove no frequencies
- New frequencies	
- E-UTRA carrier frequency	Downlink EARFCN of E-UTRA Cell
- Measurement bandwidth	Same downlink system bandwidth as used for E-UTRA Cell
- Blacklisted cells list	Not present
- Inter-RAT measurement quantity	
- Measurement quantity for UTRAN quality estimate	
- Filter coefficient	0
- CHOICE mode	TDD
- Measurement quantity	Primary CCPCH RSCP
- CHOICE system	E-UTRA
- Measurement quantity	RSRP
- Filter coefficient	0
- Inter-RAT reporting quantity	
- UTRAN estimated quality	FALSE
- CHOICE system	E-UTRA
- Reporting quantity	both
- Reporting cell status	Not present
- CHOICE report criteria	Inter-RAT measurement reporting criteria
- Parameters required for each event	1 entry
- Inter-RAT event identity	Set according to specific test.
- Threshold own system	-66 dB
- W	0
- Threshold other system	-55 (-80 dBm)
- Hysteresis	0
- Time to trigger	10 ms
- Reporting cell status	
- CHOICE reported cell	Report cells within active set or within virtual active set or of the other RAT
- Maximum number of reported cells	2
- Idle Interval Information	Not present
DPCH Compressed mode status info	Not present

MEASUREMENT REPORT (Step 12)

Information Element	Value/remark
Integrity check info	
- Message authentication code	This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC Message sequence number	This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value.
Activation time	(256+CFN-(CFN MOD 8 + 8)) MOD 256
Measurement identity	3
Measured Results	Not present
Measured results on RACH	Not present
Additional measured results	Not present
Event results	Not present
Inter-RAT cell info indication	Not present
E-UTRA Measured Results	
- E-UTRA measured results list	1 entry
- E-UTRA Carrier Frequency	
- Measured E-UTRA cells	1 entry
- Physical Cell Identity	PhysicalCellIdentity of Cell 2
- RSRP	Set according to specific test.

- RSRQ	Set according to specific test.
E-UTRA Event Results	
- Inter-RAT event identity	Set according to specific test.
- E-UTRA events results list	1 entry
- E-UTRA Carrier Frequency	Downlink EARFCN of Cell 2
- Reported cells	1 entry
- Physical Cell Identity	PhysicalCellIdentity of Cell 2

HANDOVER TO UTRAN COMPLETE (Step 20)

Information Element	Value/remark
Message Type	
UE Information elements	
START list	Not checked
- CN domain identity	Not checked
- START	Not checked
RB Information elements	
- COUNT-C activation time	Not checked
Other Information elements	
- Logged Meas Available	TRUE

UE INFORMATION RESPONSE (FDD) (Step 24)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency	1 entry
Neighbours List	
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 24)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency Neighbours List	1 entry
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)
- Logged Meas Available	Not checked

8.6.3.3.5 Test requirement

At step 20, the UE shall transmit a HANDOVER TO UTRAN COMPLETE message, with the IE "Logged Meas Available" on Cell 1 (TP1).

At step 24, the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 1 and Cell 2 (TP2).

8.6.3.4 Logged MDT / Maintaining logged measurement configuration / UTRAN to GERAN Inter-RAT mobility

8.6.3.4.1 Definition

8.6.3.4.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception.
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4> else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

13> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 37.320, clause 5.1.1.3.1 (TP2)]

A UE configured to perform Logged MDT measurements indicates the availability of Logged MDT measurements, by means of an indicator, in RRCConnectionSetupComplete message during connection establishment. Furthermore, the indicator (possibly updated) shall be provided within E-UTRAN handover and re-establishment, and UTRAN procedures involving the change of SRNC (SRNC relocation), CELL UPDATE, URA UPDATE messages as well as MEASUREMENT REPORT message in case of state transition to CELL_FACH without CELL UPDATE. The UE includes the indication in one of these messages at every transition to RRC Connected mode even though the logging

period has not ended, upon connection to RAT which configured the UE to perform Logged MDT measurements and RPLMN which is equal to a PLMN in the MDT PLMN list.

The indicator shall be also provided in UEInformationResponse message during MDT report retrieval in case the UE has not transferred the total log in one RRC message in order to indicate the remaining data availability.

The UE will not indicate the availability of MDT measurements in another RAT or in a PLMN that is not in the MDT PLMN list.

The network may decide to retrieve the logged measurements based on this indication. In case Logged MDT measurements are retrieved before the completion of the pre-defined logging duration, the reported measurement results are deleted, but MDT measurement logging will continue according to ongoing logged measurement configuration.

In case the network does not retrieve Logged MDT measurements, UE should store non-retrieved measurements for 48 hours from the moment the duration timer for logging expired. There is no requirement to store non-retrieved data beyond 48 hours. In addition, all logged measurement configuration and the log shall be removed by the UE at switch off or detach.

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.65.2, 8.5.64.3 and TS37.320 clause 5.1.1.3.1.

8.6.3.4.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements in HANDOVER TO UTRAN COMMAND message.
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to other RAT.

8.6.3.4.4 Method of test

Initial Condition

System Simulator: 2 cells – cell 1 and cell 9 are active. Cell 1 is UTRA FDD or TDD cells. Cell 9 is GSM cell. The PLMN of Cell 1 and Cell 9 are the same.

UE: CELL_DCH (state 6-9) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.3.4-1

Parameter	Unit	Cell 1 (UTRA)		
		T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency		
CPICH Ec(FDD)	dBm/3.84MHz	-60	-80	-60
PCCPCH_RSCP (TDD)	dBm	-60	-80	-60

Table 8.6.3.4-2

Parameter	Unit	Cell 9 (GSM)		
		T0	T1	T2
Test Channel		1		
RF Signal Level	dBm	-90	-48	-90
RXLEV_ACCESS_MIN	dBm	-100		
FDD_Qmin	dB	-20		
FDD_Qoffset	dBm	0		

Table 8.6.3.4-1 and table 8.6.3.4-2 illustrate the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” and “T2” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is in CELL_DCH state of cell 1.

SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS disconnects the CS call.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The SS configures its downlink transmission power settings according to columns "T1" in tables' 8.6.3.4-1 and 8.6.3.4-2. The UE performs cell re-selection to Cell 9 and performs location update.

UE triggers an MO call and enters U10 call active state.

The SS configures its downlink transmission power settings according to columns "T2" in tables' 8.6.3.4-1 and 8.6.3.4-2.

The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell.

The UE sends a MEASUREMENT REPORT to SS.

The SS sends INTERSYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell.

The UE handover to UTRAN cell from GERAN cell, and send HANDOVER TO UTRAN COMMAND message.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		LOGGING MEASUREMENT CONFIGURATION	Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min.
2	<-		DISCONNECT	SS disconnects the CS call
3	->		RELEASE	
4	<-		RELEASE COMPLETE	
5	←		RRC CONNECTION RELEASE	
6	→		RRC CONNECTION RELEASE COMPLETE	The UE sends this message before it completes state transition.
7				Wait 10s to allow UE to activate logging.
8				The SS configures its downlink transmission power settings according to columns "T1" in tables' 8.6.3.4-1 and 8.6.3.4-2. The UE performs cell re-selection to Cell 9.
9	→		CHANNEL REQUEST	The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE location update procedure or RAU procedure)
10	←		IMMEDIATE ASSIGNMENT	Sent on AGCH.

Step	Direction		Message	Comment
	UE	SS		
11	SS			The SS completes the Location Update procedure or RAU procedure requested by the UE.
12-28	-		-	The generic test procedure in TS 51.010-1 sub clause 10.2.3 are performed NOTE: Mobile originating CS call is established.
29	-		-	The SS configures its downlink transmission power settings according to columns "T2" in tables' 8.6.3.4-1 and 8.6.3.4-2.
30	←		MEASUREMENT INFORMATION	
31	→		MEASUREMENT REPORT	Including Measurement Results on the UTRAN cell in Step 4
32	←		INTERSYSTEM TO UTRAN HANDOVER COMMAND	Send on cell 9 (GSM cell)
33	→		HANDOVER TO UTRAN COMPLETE	The UE transmit a HANDOVER TO UTRAN COMPLETE message on cell 1.
34	←		SECURITY MODE COMMAND	The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection.
35	→		SECURITY MODE COMPLETE	The UE transmits a SECURITY MODE COMPLETE message on Cell 1.
36	←		UE INFORMATION REQUEST	SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to "true".
37	→		UE INFORMATION RESPONSE	The UE shall send a UE INFORMATION RESPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD"

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.

Logged ANR configuration Info	
- Absolute Time Info	Set to value corresponding to the absolute time when the message is sent
- Logging Duration	10 min
- Logging Interval	2.62
- Trace reference	
- PLMN Identity	Same as MIB
- Trace ID	'0EF'H
-Trace recording session	'1A'H
- TCE Id	'5'H
- CHOICE Area Configuration	Not present

HANDOVER TO UTRAN COMPLETE (Step 33)

Information Element	Value/remark
Message Type	
UE Information elements	
START list	Not checked
- CN domain identity	Not checked
- START	Not checked
RB Information elements	
- COUNT-C activation time	Not checked
Other Information elements	
- Logged Meas Available	TRUE

FFS

UE INFORMATION RESPONSE (FDD) (Step 37)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	FDD
- List of measurements FDD	At least 1 entry where at least one entry complies to entry with index 'x' below.
- Logged Measurement Info-FDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID[x]	Cell 1
- Primary CCPCH RSCP[x]	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements GSM Neighbouring Cells list	
- BSIC	Same as cell 9
- Band indicator	Same as cell 9
- BCCH ARFCN	Same as cell 9
- GSM carrier RSSI	(0...63)
- Logged Meas Available	Not checked

UE INFORMATION RESPONSE (TDD) (Step 37)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Meas Report	
- Absolute Time Info	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace reference	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- PLMN Identity	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace ID	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- Trace recording session	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- TCE Id	Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1
- CHOICE mode	TDD
- List of measurements TDD	At least 1 entry where at least one entry complies to entry with index ‘x’ below.
- Logged Measurement Info-TDD[x]	
- Relative Time Stamp[x]	Not checked
- Logged Measurements Serving Cell[x]	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements GSM Neighbouring Cells list	1 entry
- BSIC	Same as cell 9
- Band indicator	Same as cell 9
- BCCH ARFCN	Same as cell 9
- GSM carrier RSSI	(0...63)
- Logged Meas Available	Not checked

8.6.3.4.5 Test requirement

At step 33, the UE shall transmit a HANDOVER TO UTRAN COMPLETE message, with the IE "Logged Meas Available" on Cell 1 (TP1).

At step 37, the UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report" with logged Measurements of Cell 1 and Cell 9 (TP2).

8.6.4 Connection

8.6.4.1 Connection Establishment Failure logging / Logging and reporting / T300 expiry

8.6.4.1.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.1.2 Conformance requirement

[TS 25.331, clause 8.1.3.5 (TP1)]

1> if the UE has not yet received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> if cell re-selection or expiry of timer T300 or timer T318 occurs:

the UE shall:

1> if the UE performs cell reselection:

2> clear the variable SYSTEM_INFORMATION_CONTAINER.

1> check the value of V300; and

…

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode.

3> consider the procedure to be unsuccessful;

3> Other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

3> the procedure ends.

[TS 25.331, clause 8.1.3.6 (TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE “Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP3)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.5, 8.3.1.6, 8.1.3.11 and 8.5.64.3

.8.6.4.1.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when T300 is expired and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

3. Verify that Connection Establishment Failure information is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.1.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
4	-		-	Repeat steps 2 and 3 2 times, make V300=N300.
5	-		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
6	-		-	SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging
7	<--		Paging	SS transmits a Paging message.
8	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
9	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
10	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
10a	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
12	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
13	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
14	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

RRC CONNECTION SETUP COMPLETE (step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.

Information Element	Value/remark
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.1.5 Test requirements

At step 10, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".(TP1,TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1, TP3).

8.6.4.2 Connection Establishment Failure logging / Logging and reporting / Physical channel failure

8.6.4.2.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.2.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.7 (TP1)]

1> If the UE failed to establish, per subclause 8.5.4, the physical channel(s) indicated in the RRC CONNECTION SETUP message; or

1> if the UE performs cell re-selection; or

1> if the UE will be in the CELL_FACH state at the conclusion of this procedure; and

1> if the received RRC CONNECTION SETUP message included the IE "Frequency info" and the UE could not find a suitable UTRA cell on that frequency but it could find a suitable UTRA cell on another frequency; or

1> if the received RRC CONNECTION SETUP message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE; or

1> if the contents of the variable C_RNTI is empty;

1> after having received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> before the RRC CONNECTION SETUP COMPLETE message is delivered to lower layers for transmission:

the UE shall:

1> clear the entry for the RRC CONNECTION SETUP message in the table "Accepted transactions" in the variable TRANSACTIONS;

1> clear the variable SYSTEM_INFORMATION_CONTAINER;

1> check the value of V300, and:

2> if V300 is equal to or smaller than N300:

3> set CFN in relation to SFN of current cell according to subclause 8.5.15;

3> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

3> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

3> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

3> increment counter V300; and

3> restart timer T300 when the MAC layer indicates success or failure in transmitting the message.

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode;

3> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

3> consider the RRC establishment procedure to be unsuccessful;

3> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.7, 8.1.3.11 and 8.5.64.3

8.6.4.2.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Physical channel failure is occurred and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

8.6.4.2.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION SETUP message to UE without physical channel configuration.

Repeat last procedure 3 times make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<--	Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3		<--	RRC CONNECTION SETUP	SS does not configure the physical channel in RRC CONNECTION SETUP message.
4	-		-	Repeat steps 2 and 3 3 times, make V300>N300.
5	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
6		<--	Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8		<--	RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

Step	Direction		Message	Comments
	UE	SS		
9a	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
10	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
11	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
12	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
13	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

RRC CONNECTION SETUP (Step 3)

Information Element	Value/remark
RRC State Indicator	CELL_DCH
Uplink DPCH info	Not present

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE.

Information Element	Value/remark
	The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.2.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available" (TP2).

At step 11, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 (TP1).

8.6.4.3 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION SETUP message

8.6.4.3.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.3.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.8 (TP1)]

If the UTRAN instructs the UE to use a configuration, which it does not support e.g., the message includes a pre-defined configuration that the UE has not stored and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION or the variable INVALID_CONFIGURATION to be set to TRUE the UE shall perform procedure specific error handling as specified in this subclause.

If the UE receives an RRC CONNECTION SETUP message which contains an IE "Initial UE identity" with a value which is identical to the value of the variable INITIAL_UE_IDENTITY, but the RRC CONNECTION SETUP message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION SETUP message in the table "Rejected transactions" in the variable TRANSACTIONS and proceed as below.

If the UE receives an RRC CONNECTION SETUP message which contains an IE "Initial UE identity" with a value which is identical to the value of the variable INITIAL_UE_IDENTITY:

1> if the RRC CONNECTION SETUP message contained a configuration the UE does not support; and/or

1> if the variable UNSUPPORTED_CONFIGURATION becomes set to TRUE due to the received RRC CONNECTION SETUP message; and/or

1> if the variable INVALID_CONFIGURATION becomes set to TRUE due to the received RRC CONNECTION SETUP message:

the UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION SETUP message in the table "Accepted transactions" in the variable TRANSACTIONS and proceed as below.

If V300 is equal to or smaller than N300, the UE shall:

1> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

1> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

1> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13; and

1> apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

1> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

1> increment counter V300; and

1> restart timer T300 when the MAC layer indicates success or failure in transmitting the message.

If V300 is greater than N300, the UE shall:

1> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

1> enter idle mode;

1> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

1> consider the RRC establishment procedure to be unsuccessful;

1> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in

each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.8, 8.1.3.11 and 8.5.64.3

.8.6.4.3.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Invalid RRC CONNECTION SETUP message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

8.6.4.3.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION SETUP message to UE with a unsupported frequency.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<--	Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3		<--	RRC CONNECTION SETUP	SS sends a RRC CONNECTION SETUP message with UE unsupported frequency configuration.
4	-		-	Repeat steps 2 and 3 3 times, make V300>N300.
5	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
6		<--	Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8		<--	RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
9a	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
10		<--	UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
11	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
12		<--	RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
13	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds

- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.3.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".(TP2).

At step 11, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

8.6.4.4 Connection Establishment Failure logging / Logging and reporting / RRC CONNECTION REJECT message

8.6.4.4.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.4.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1, TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.9 (TP1)]

When the UE receives an RRC CONNECTION REJECT message on the downlink CCCH, it shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION REJECT message with the value of the variable INITIAL_UE_IDENTITY:

If the values are different, the UE shall ignore the rest of the message;

If the values are identical, the UE shall:

…

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Accepted transactions" in the variable TRANSACTIONS;

1> if the UE has disabled cell reselection to a UTRA carrier due to an earlier RRC CONNECTION REJECT message, the UE shall resume cell reselection to that UTRA carrier;

1> if the Rejection Cause is 'unspecified' and the IE "Counting Completion" is present, the UE shall terminate an ongoing MBMS counting procedure according to subclause 8.7.4.4;

1> if the IE "wait time" <> '0'; and

1> if the IE "frequency info" is present and:

2> if V300 is equal to or smaller than N300:

…

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode;

3> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

3> consider the RRC establishment procedure to be unsuccessful;

3> the procedure ends.

…

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

8.6.4.4.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when RRC CONNECTION REJECT message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

8.6.4.4.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION REJECT message to UE.

Repeats last procedure 3 times make V300>N300, and waiting 1 seconds before every repeating.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction	Message	Comments

	UE	SS		
1	<--		Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3	<--		RRC CONNECTION REJECT	SS send a RRC CONNECTION REJECT message.
4	-		-	Performs the following procedure 3 times make V300>N300: "Waiting 1 second and run step 2 and step 3".
5	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
6	<--		Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
10	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
12	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
13	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
14	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

RRC CONNECTION REJECT (step 3)

Information Element	Value/remark
Wait Time	1

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and

Information Element	Value/remark
	writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.4.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available" (TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 (TP1).

8.6.4.5 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION REJECT message

8.6.4.5.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.5.2 Conformance requirement

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

…

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.5, 8.3.1.8, 8.1.3.11 and 8.5.64.3

8.6.4.5.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Invalid RRC CONNECTION REJECT message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

8.6.4.5.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION REJECT message with protocol error to UE.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<--	Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3		<--	RRC CONNECTION REJECT	SS send a RRC CONNECTION REJECT message with protocol error.
4	-		-	Performs step 2 and step 3 3 times make V300>N300.
5	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
6		<--	Paging	SS transmits a Paging message.
7	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
8		<--	RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.

Step	Direction		Message	Comments
	UE	SS		
9	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
10	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
12	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
13	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
14	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

RRC CONNECTION REJECT (step 3)

Information Element	Value/remark
Wait Time	20

RRC CONNECTION SETUP COMPLETE (step 9)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.5.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".(TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

8.6.4.6 Connection Establishment Failure logging / Logging and reporting / PLMN change

8.6.4.6.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.6.2 Conformance requirement

[TS 25.331, clause 8.1.3.5 (TP1, TP2)]

1> if the UE has not yet received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> if cell re-selection or expiry of timer T300 or timer T318 occurs:

the UE shall:

1> if the UE performs cell reselection:

2> clear the variable SYSTEM_INFORMATION_CONTAINER.

1> check the value of V300; and

2> if V300 is equal to or smaller than N300:

3> if cell re-selection occurred:

4> set CFN in relation to SFN of current cell according to subclause 8.5.15.

4> for FDD and 1.28 Mcps TDD, if the UE supports HS-DSCH reception in CELL_FACH state and if IE: "HS-DSCH common system information" is included in System Information Block type 5 or System Information Block type 5bis:

5> if variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to TRUE:

6> reset the MAC-ehs entity [15].

5> else:

6> set the variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED to TRUE;

6> start receiving the HS-DSCH according to the procedure in subclause 8.5.37.

3> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

3> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13; and

3> apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH state and Idle mode);

3> submit a new RRC CONNECTION REQUEST message to lower layers for transmission on the uplink CCCH;

3> increment counter V300;

3> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode.

3> consider the procedure to be unsuccessful;

3> Other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

3> the procedure ends.

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in

each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.5, 8.1.3.11 and 8.5.64.3

8.6.4.6.3 Test Purpose

1. Verify that IE "Logged Connection Establishment Failure Info Available" is not indicated in the cell that does not belong to the PLMN where RRC connection establishment failure was occurred.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated in the cell that belongs to the PLMN where RRC connection establishment failure was occurred.

8.6.4.6.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.4.6 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

Table 8.6.4.6

Parameter	Unit	Cell 1			Cell 2			Cell 3		
		T0	T1	T2	T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			Mid Range Test Frequency			Mid Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84 MHz	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
P-CCPCH RSCP(TDD)	dBm	-60	OFF	OFF	OFF	-60	OFF	OFF	OFF	-60
PLMN		PLMN 1			PLMN 2			PLMN 1		

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.4.6, and UE select to PLMN 2 and Cell2.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message without IE "Connection Establishment Failure Info Available".

UE registered on cell2, and enter idle mode.

SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.4.6, and UE select to PLMN 1 and Cell3.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

UE registered on cell3.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
4	-		-	Repeat steps 2 and 3 2 times, make V300=N300.
5	-		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
6	-		-	SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging

Step	Direction		Message	Comments
	UE	SS		
7	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.4.6.
8	-		-	UE select PLMN 2 and Cell2.
9	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
10	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
11	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message, and IE "Connection Establishment Failure Info Available" not present.
12	-		-	Call steps 5 to13 in TS34.108 clause 7.2.2.2.3 on cell 2, and enter idle mode.
13	-		-	SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.4.6.
14	-		-	UE select PLMN 1 and Cell3.
15	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
16	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
17	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
18	-		-	Call steps 5 to11 in TS34.108 clause 7.2.2.2.3 on cell 3.
19	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
20	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
21	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
22	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

RRC CONNECTION SETUP COMPLETE (step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	Not present

RRC CONNECTION SETUP COMPLETE (step 17)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 19)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 20)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 20)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.6.5 Test requirements

At step 17, the UE should transmit an RRC CONNECTION SETUP COMPLETE message, and IE "Connection Establishment Failure Info Available" not presents. (TP1)

At step 19, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". (TP2).

At step 20, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Reports of cell 1. (TP2)

8.6.4.7 Connection Establishment Failure logging / Logging and reporting / location information

8.6.4.7.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.7.2 Conformance requirement

[TS 25.331, clause 8.1.3.11(TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

Reference

3GPP TS 25.331 clause 8.1.3.11.

8.6.4.7.3 Test Purpose

1. Verify presence of location information in RLF measurement, triggered by RRC connection establishment failure, is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.7.4 Method of test

Initial Condition

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

The UE's positioning engine (e.g. standalone GNSS receiver) should be provided with any necessary stimulus to allow it to provide the position. This shall be done by use of the test function Update UE Location Information defined in TS 34.109 [10], if supported by the UE according to pc_UpdateUE_LocationInformation. Otherwise, or in addition any other suitable method may also be used.

Test Procedure

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
4	-		-	Repeat steps 2 and 3 2 times, make V300=N300.
5	-		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
6	-		-	SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging
7	<--		Paging	SS transmits a Paging message.
8	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
9	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
10	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
11	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
12	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
13	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
14	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
15	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
-N312	1

RRC CONNECTION SETUP COMPLETE (step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.

Information Element	Value/remark
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Access Information	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Location Information	
- CHIOCE *Location*	Ellipsoid or Ellipsoid with altitude or Ellipsoid with uncertainty circle or Ellipsoid with uncertainty ellipse or Ellipsoid with altitude and uncertainty ellipsoid.
- Ellipsoid point	If CHOICE *Location* is 'Ellipsoid' then check to be present
- Ellipsoid point with altitude	If CHOICE *Location* is ' Ellipsoid with altitude' then check to be present
- Ellipsoid point with uncertainty circle	If CHOICE *Location* is ' Ellipsoid with uncertainty circle' then check to be present
- Ellipsoid point with uncertainty ellipse	If CHOICE *Location* is ' Ellipsoid with uncertainty ellipse' then check to be present
- Ellipsoid point with altitude and uncertainty ellipsoid	If CHOICE *Location* is ' Ellipsoid with altitude and uncertainty ellipsoid' then check to be present
- Horizontal velocity	
- Bearing	(0...359)
- Horizontal Speed	(0...2^{11}-1)

UE INFORMATION RESPONSE (TDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Access Information	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	Logged Measurements Failed Cell
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

Information Element	Value/remark
- Location Information	
- CHIOCE *Location*	Ellipsoid or Ellipsoid with altitude or Ellipsoid with uncertainty circle or Ellipsoid with uncertainty ellipse or Ellipsoid with altitude and uncertainty ellipsoid.
- Ellipsoid point	If CHOICE *Location* is 'Ellipsoid' then check to be present
- Ellipsoid point with altitude	If CHOICE *Location* is ' Ellipsoid with altitude' then check to be present
- Ellipsoid point with uncertainty circle	If CHOICE *Location* is ' Ellipsoid with uncertainty circle' then check to be present
- Ellipsoid point with uncertainty ellipse	If CHOICE *Location* is ' Ellipsoid with uncertainty ellipse' then check to be present
- Ellipsoid point with altitude and uncertainty ellipsoid	If CHOICE *Location* is ' Ellipsoid with altitude and uncertainty ellipsoid' then check to be present
- Horizontal velocity	
- Bearing- Horizontal Speed	(0...359) (0...2^{11}-1)

8.6.4.7.5 Test requirement

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report including location information on cell 1. (TP1).

8.6.4.8 Connection Establishment Failure logging / Logging and reporting / Intra-frequency measurements

8.6.4.8.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.8.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

.8.6.4.8.3 Test Purpose

1. Verify that intra-frequency neighbour cell information (IE "Logged Measurements Intra Frequency Neighbouring Cells list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.8.4 Method of test

Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 2

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.4.8 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.4.8

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.

SS transmits a Paging message to UE.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE on Cell 2. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

UE performs Connection Establishment Failure logging and enter idle mod.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 2, include the "Logged Measurements Intra Frequency Neighbouring Cells list" with Cell 1 information in the Report.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	-		-	SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. The following messages are sent on Cell 2.
2	<--		Paging	SS transmits a Paging message.
3	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message on Cell 2.
4	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.

Step	Direction		Message	Comments
	UE	SS		
5	-		-	Performs “step 2 and step 3” 3 times make V300>N300.
6	-		-	UE performs Connection Establishment Failure logging and enter idle mod.
7	<--		Paging	SS transmits a Paging message.
8	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
9	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
10	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
11	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
12	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
13	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
14	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
15	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps for Cell 2)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell 1)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is listed as intra-frequency neighbour cell.

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell 2)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 1 is listed as intra-frequency neighbour cell.

RRC CONNECTION SETUP COMPLETE (step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string

Information Element	Value/remark
	contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4

- Logged Measurements Intra Frequency Neighbouring Cells list	
- Primary CPICH info	Set to the scrambling code for cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 2
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Intra Frequency Cells list	
- Cell parameters Id	Cell parameter Id of Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.8.5 Test requirements

At step 13, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 2 and include the "Logged Measurements Intra Frequency Neighbouring Cells list" with Cell 1 information in the Report. (TP1).

8.6.4.9 Connection Establishment Failure logging / Logging and reporting / Inter-frequency measurements

8.6.4.9.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.4.9.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10 (TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in

each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

8.6.4.9.3 Test Purpose

1. Verify that inter-frequency neighbour cell information (IE "Logged Measurements Inter Frequency list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.9.4 Method of test

Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 4

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Table 8.6.4.8 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.4.8

Parameter	Unit	Cell 1		Cell 4	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		High Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-69	-60
P-CCPCH RSCP (TDD)	dBm	-60	-69	-69	-60

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 4 is better and attempt to perform a cell reselection.

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE on Cell 4. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 4; include the "Logged Measurements Inter Frequency Neighbouring Cells list" with Cell 1 information.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	-		-	SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. The following messages are sent on Cell 4.
2	<--		Paging	SS transmits a Paging message.
3	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message on Cell 4.
4	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
5	-		-	Performs “step 2 and step 3” 3 times make V300>N300.
6	-		-	UE performs Connection Establishment Failure logging and enter idle mod. UE selects to Cell 4.
7	<--		Paging	SS transmits a Paging message.
8	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
9	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
10	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
11	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
12	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

Step	Direction		Message	Comments
	UE	SS		
13	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
14	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
15	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps for Cell 4)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell1)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 4 is listed as inter-frequency neighbour cell.

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell4)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 1 is listed as inter-frequency neighbour cell.

RRC CONNECTION SETUP COMPLETE (step 10)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 12)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.

Information Element	Value/remark
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 4
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Inter Frequency Neighbouring Cells list	
- Frequency Info	Frequency of Cell 1
- Logged Measurements Inter-frequency Neighbouring Cells list	Only 1 cell
- Primary CPICH info	Set to the scrambling code for cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 4
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter Frequency Cells list	
- Frequency Info	Frequency of Cell 1
- Logged Measurements Inter-frequency Neighbouring Cells list	Only 1 cell
- Cell parameters Id	Cell parameter Id of Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.4.9.5 Test requirements

At step 13, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 4 and include the "Logged Measurements Inter Frequency Neighbouring Cells list" with Cell 1 information in the Report. (TP1).

8.6.5.1 Connection Establishment Failure logging / Reporting at E-UTRAN inter-RAT handover

8.6.5.1.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.5.1.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.5.1, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1,)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clauses 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

8.6.5.1.3 Test Purpose

1. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at inter-RAT handover to UTRA.

8.6.5.1.4 Method of test

Initial conditions

System Simulator:

2 cells, 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3. SIB configuration 6 is applied in accordance with TS 34.108 clause 6.1.0a.2

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.5.1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2” are applied at the points indicated described in the texts in this clause.

Table 8.6.5.1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1(UTRA)	Cell 2(E-UTRA)	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-	-90	
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-	
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-	
T1	Cell-specific RS EPRE	dBm/15kHz	-	-70	The power level values are such that entering conditions for event 3a are satisfied.
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-100	-	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.28 MHz	-100	-	
T2	Cell-specific RS EPRE	dBm/15kHz	-	-90	
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-	
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-	

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE. Waits 2 seconds make T300 expire..

Repeats last procedure 3 times make V300>N300.

Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE transmits an RRC CONNECTION SETUP COMPLETE message.

The UE transmits SERVICE REQUEST message.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message.

SS adjusts cell power level according to columns "T1" in tables 8.6.5.1, and UE send MEASUREMENT REPORT to SS.

The UE receive “HANDOVER FROM UTRAN COMMAND” message from cell1, and handover to E-UTRAN cell 2,

SS adjust cell power level according to columns "T2" in tables 8.6.5.1, and UE sends *MeasurementReport* message to SS.

SS transmits a *MobilityFromEUTRACommand* message to UE.

The UE handover to UTRAN cell from E-UTRAN cell, and send HANDOVER TO UTRAN COMPLETE message and complete handover to Cell 1.

SS transmits a UE INFORMATION REQUEST message to get Connection Establishment Failure Report

The UE shall transmit a UE INFORMATION REPONSE message, with Connection Establishment Failure Report on cell 1

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1	<--		Paging	SS transmits a Paging message.
2	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
3	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
4	-		-	Performs “step 2 and step 3” 3 times make V300>N300.
5	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
6	<--		Paging	SS transmits a Paging message.
7	→		RRC CONNECTION REQUEST	
8	←		RRC CONNECTION SETUP	
9	→		RRC CONNECTION SETUP COMPLETE	
10	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
11	←		PHYSICAL CHANNEL RECONFIGURATION	Compressed mode pattern sequence parameters are loaded to UE.
12	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
13	←		MEASUREMENT CONTROL	SS configures event 3a in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started.
14				SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.6.5.1.
15	→		MEASUREMENT REPORT	After about 2s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3a.
16	←		HANDOVER FROM UTRAN COMMAND	The SS transmits a HANDOVER FROM UTRAN COMMAND message to UE.
17	→		*RRCConnectionReconfigurationComplete*	The UE shall send a *RRCConnectionReconfigurationComplete* message to cell 2.
18	←		*RRCConnectionReconfiguration*	The SS transmits an *RRCConnectionReconfiguration* message to setup inter RAT measurement on Cell 2.
19	→		*RRCConnectionReconfigurationComplete*	The UE transmits an *RRCConnectionReconfigurationComplete* message to confirm the setup of inter RAT measurement on Cell 2.
20				*SS* re-adjusts the downlink transmission power settings according to columns "T2" in tables 8.6.5.1.
21	→		*MeasurementReport*	The UE transmits a *MeasurementReport message to cell 2.*
22	←		*MobilityFromEUTRACommand*	The SS transmits a *MobilityFromEUTRACommand* message on Cell 2.

Step	Direction		Message	Comment
	UE	SS		
23	→		HANDOVER TO UTRAN COMPLETE	The UE transmit a HANDOVER TO UTRAN COMPLETE message on cell 1.
24	←		SECURITY MODE COMMAND	The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection.
25	→		SECURITY MODE COMPLETE	The UE transmits a SECURITY MODE COMPLETE message on Cell 1.
26	←		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
27	→		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

Specific Message Contents

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

SYSTEM INFORMATION BLOCK TYPE 19 (Initial conditions and all steps)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that frequency of Cell 2 is listed in the IE "E-UTRA frequency and priority info list".

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 11)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	
- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Integrity protection mode info	Not Present
Ciphering mode info	Not Present
Activation time	Not Present
Delay restriction flag	Not Present
New U-RNTI	Not Present
New C-RNTI	Not Present
New H-RNTI	Not Present
New Primary E-RNTI	Not Present
New Secondary E-RNTI	Not Present
RRC State indicator	CELL_DCH
UE Mobility State Indicator	Not Present
UTRAN DRX cycle length coefficient	Not Present
CN information info	Not Present
URA identity	Not Present
RNC support for change of UE capability	Not Present

Reconfiguration in response to requested change of UE capability	Not Present
Downlink counter synchronization info	Not Present
Frequency info	Not Present
DTX-DRX timing information	Not Present
DTX-DRX Information	Not Present
HS-SCCH less Information	Not Present
MIMO parameters	Not Present
HARQ Info	Not Present
Maximum allowed UL TX power	Not Present
CHOICE channel requirement	Not Present
E-DCH Info	Not Present
Downlink HS-PDSCH Information	Not Present
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	Not Present
- DPCH compressed mode info	
- TGPSI	1
- TGPS Status Flag	Deactivate
- TGCFN	Not Present
- Transmission gap pattern sequence configuration parameters	
- TGMP	E-UTRA measurement
- TGPRC	Infinity
- TGSN	8
- TGL1	10
- TGL2	Not Present
- TGD	undefined
- TGPL1	12
- TGPL2	Not Present
- RPP	Mode 0
- ITP	Mode 0
- CHOICE UL/DL Mode	UL and DL, UL only or DL only (depending on the UE capability)
- Downlink compressed mode method	HLS(or not sent, depending on the UE capability)
- Uplink compressed mode method	HLS(or not sent, depending on the UE capability)
- Downlink frame type	B
- DeltaSIR1	20 (2.0)
- DeltaSIRAfter1	10 (1.0)
- DeltaSIR2	Not Present
- DeltaSIRAfter2	Not Present
- N identify abort	Not Present
- T Reconfirm abort	Not Present
- TX Diversity mode	Not Present
- SSDT information	Not Present
- Default DPCH Offset Value	Not Present
Downlink information for each radio link	Not Present
MBMS PL Service Restriction Information	Not Present

MEASUREMENT CONTROL (FDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	
- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Measurement Identity	3
Measurement Command	Setup
Measurement Reporting Mode	
- Measurement Report Transfer Mode	Acknowledged mode RLC
- Periodical Reporting/Event Trigger Reporting Mode	Event trigger
Additional measurement list	Not present
CHOICE Measurement type	Inter-RAT measurement
- CHOICE Inter-RAT measurement objects	E-UTRA frequency list
- CHOICE E-UTRA frequency removal	Remove no frequencies

- New frequencies	
- E-UTRA carrier frequency	Downlink EARFCN of E-UTRA Cell
- Measurement bandwidth	Same downlink system bandwidth as used for E-UTRA Cell
- Blacklisted cells list	Not present
- Inter-RAT measurement quantity	
- Measurement quantity for UTRAN quality estimate	
- Filter coefficient	0
- CHOICE mode	FDD
- Measurement quantity	CPICH Ec/N0
- CHOICE system	E-UTRA
- Measurement quantity	RSRP
- Filter coefficient	0
- Inter-RAT reporting quantity	
- UTRAN estimated quality	FALSE
- CHOICE system	E-UTRA
- Reporting quantity	both
- Reporting cell status	Not present
- CHOICE report criteria	Inter-RAT measurement reporting criteria
- Parameters required for each event	1 entry
- Inter-RAT event identity	Set according to specific test.
- Threshold own system	-66 dB
- W	0
- Threshold other system	-55 (-80 dBm)
- Hysteresis	0
- Time to trigger	10 ms
- Reporting cell status	
- CHOICE reported cell	Report cells within active set or within virtual active set or of the other RAT
- Maximum number of reported cells	2
- Idle Interval Information	Not present
DPCH Compressed mode status info	
- TGPS reconfiguration CFN	(Current CFN + (250 – TTI/10msec)) mod 256
- Transmission gap pattern sequence	1 entry
- TGPSI	1
- TGPS Status Flag	activate
- TGCFN	(Current CFN + (252 – TTI/10msec)) mod 256

MEASUREMENT CONTROL (TDD) (Step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an unused integer between 0 to 3
Integrity check info	
- Message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Measurement Identity	3
Measurement Command	Setup
Measurement Reporting Mode	
- Measurement Report Transfer Mode	Acknowledged mode RLC
- Periodical Reporting/Event Trigger Reporting Mode	Event trigger
Additional measurement list	Not present
CHOICE Measurement type	Inter-RAT measurement
- CHOICE Inter-RAT measurement objects	E-UTRA frequency list
- CHOICE E-UTRA frequency removal	Remove no frequencies
- New frequencies	
- E-UTRA carrier frequency	Downlink EARFCN of E-UTRA Cell
- Measurement bandwidth	Same downlink system bandwidth as used for E-UTRA Cell
- Blacklisted cells list	Not present
- Inter-RAT measurement quantity	
- Measurement quantity for UTRAN quality estimate	
- Filter coefficient	0
- CHOICE mode	TDD
- Measurement quantity	Primary CCPCH RSCP

- CHOICE system	E-UTRA
- Measurement quantity	RSRP
- Filter coefficient	0
- Inter-RAT reporting quantity	
- UTRAN estimated quality	FALSE
- CHOICE system	E-UTRA
- Reporting quantity	both
- Reporting cell status	Not present
- CHOICE report criteria	Inter-RAT measurement reporting criteria
- Parameters required for each event	1 entry
- Inter-RAT event identity	Set according to specific test.
- Threshold own system	-66 dB
- W	0
- Threshold other system	-55 (-80 dBm)
- Hysteresis	0
- Time to trigger	10 ms
- Reporting cell status	
- CHOICE reported cell	Report cells within active set or within virtual active set or of the other RAT
- Maximum number of reported cells	2
- Idle Interval Information	Not present
DPCH Compressed mode status info	Not present

MEASUREMENT REPORT (Step 15)

Information Element	Value/remark
Integrity check info	
- Message authentication code	This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC Message sequence number	This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value.
Activation time	(256+CFN-(CFN MOD 8 + 8)) MOD 256
Measurement identity	3
Measured Results	Not present
Measured results on RACH	Not present
Additional measured results	Not present
Event results	Not present
Inter-RAT cell info indication	Not present
E-UTRA Measured Results	
- E-UTRA measured results list	1 entry
- E-UTRA Carrier Frequency	
- Measured E-UTRA cells	1 entry
- Physical Cell Identity	PhysicalCellIdentity of Cell 2
- RSRP	Set according to specific test.
- RSRQ	Set according to specific test.
E-UTRA Event Results	
- Inter-RAT event identity	Set according to specific test.
- E-UTRA events results list	1 entry
- E-UTRA Carrier Frequency	Downlink EARFCN of Cell 2
- Reported cells	1 entry
- Physical Cell Identity	PhysicalCellIdentity of Cell 2

HANDOVER TO UTRAN COMPLETE (Step 23)

Information Element	Value/remark
Message Type	
UE Information elements	
- START list	Not checked
- CN domain identity	Not checked
- START	Not checked

RB Information elements	
- COUNT-C activation time	Not checked
Other Information elements	
- Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 26)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 27)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- CPICH Ec/N0	(0..49)

UE INFORMATION RESPONSE (TDD) (Step 27)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

8.6.5.1.5 Test requirements

At step 23, The UE shall send HANDOVER TO UTRAN COMPLETE message to SS, and include IE “Connection Establishment Failure Info Available” as True (TP1).

At step 27, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

8.6.5.2 Connection Establishment Failure logging / Logging and reporting / E-UTRA Inter-RAT measurements

8.6.5.2.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.5.2.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

.8.6.5.2.3 Test Purpose

1. Verify that E-UTRA neighbour cell information (IE "Logged Measurements E-UTRA frequency list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.5.2.4 Method of test

Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 2(E-UTRA)

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.5.2 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition, while column marked "T1" and "T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.5.2: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1(UTRA)	Cell 2(E-UTRA)
T0	Cell-specific RS EPRE	dBm/15kHz	-	-90
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-
T1	Cell-specific RS EPRE	dBm/15kHz	-	-70
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-100	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-100	-
T2	Cell-specific RS EPRE	dBm/15kHz	-	-90
	CPICH Ec (UTRA FDD)	dBm/3.84 MHz	-65	-
	PCCPCH Ec(UTRA LCR TDD)	dBm/1.28 MHz	-65	-

SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.5.2. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.

UE reselects to cell 2 and moves to RRC_IDLE mode.

SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.5.2. The UE shall find that the cell 1 is and perform a cell reselection to cell1.

The SS sends Paging message to UE.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1, include the "Logged Measurements E-UTRA Frequency Neighbours List" with Cell 2 information in the Report.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	-		-	SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.5.2. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
2	-		-	Call generic procedure in 36.508 subclause 6.4.2.7A-1, UE reselcts to cell 2. The UE performs a TAU procedure and the RRC Connection is released.
3	-		-	SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.5.2. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.
4	-		-	Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselcts to Cell 1. The UE performs a RAU procedure and the RRC Connection is released.
5	<--		Paging	SS transmits a Paging message.
6	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
7	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
8	-		-	Performs “step 2 and step 3” 3 times make V300>N300.

Step	Direction		Message	Comments
	UE	SS		
9	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
10	<--		Paging	SS transmits a Paging message.
11	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
12	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
13	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
14	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
15	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
16	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
17	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
18	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

SYSTEM INFORMATION BLOCK TYPE 19 (Initial conditions and all steps)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that frequency of Cell 2 is listed in the IE "E-UTRA frequency and priority info list".

RRC CONNECTION SETUP COMPLETE (step 13)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 15)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 16)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency Neighbours List	1 entry
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)

UE INFORMATION RESPONSE (TDD) (Step 16)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements E-UTRA frequency list	1 entry
- E-UTRA Carrier Frequency	Same as cell 2
- Logged Measurements E-UTRA Frequency Neighbours List	1 entry
- Physical Cell Identity	Same as cell 2
- RSRP	(0..97)
- RSRQ	(0..34)

8.6.5.2.5 Test requirements

At step 16, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 and include the "Logged Measurements E-UTRA Frequency Neighbours List" with Cell 2 information in the Report. (TP1).

8.6.5.3 Connection Establishment Failure logging / Logging and reporting / GERAN Inter-RAT measurements

8.6.5.3.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

8.6.5.3.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in

each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

.8.6.5.3.3 Test Purpose

1. Verify that GERAN neighbour cell information (IE "Logged Measurements GSM Neighbouring Cells list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.5.3.4 Method of test

Initial conditions

System Simulator:

2 cells, Cell 1 (UTRAN) and Cell 9(GERAN)

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.5.3-1 and table 8.6.5.3-2 illustrate the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” and “T2” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.6.5.3-1

Parameter	Unit	Cell 1 (UTRA)		
		T0	T1	T2

UTRA RF Channel Number		Mid Range Test Frequency		
CPICH Ec(FDD)	dBm/3.84MHz	-60	-80	-60
PCCPCH_RSCP (TDD)	dBm	-60	-80	-60

Table 8.6.5.3-2

Parameter	Unit	Cell 9 (GSM)		
		T0	T1	T2
Test Channel		1		
RF Signal Level	dBm	-90	-48	-90
RXLEV_ACCESS_MIN	dBm	-100		
FDD_Qmin	dB	-20		
FDD_Qoffset	dBm	0		

The SS configures its downlink transmission power settings according to columns "T1" in tables 8.6.5.3-1 and 8.6.5.3-2. The UE performs cell re-selection to Cell 9 and performs location update.

The SS configures its downlink transmission power settings according to columns "T2" in tables 8.6.5.3-1 and 8.6.5.3-2. The UE performs cell re-selection to Cell 1 and performs location update.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1, include the “Logged Measurements GSM Neighbouring Cells list" with Cell 9 information in the Report.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			The SS switches its downlink transmission power settings to columns "T1" in tables 8.6.5.3-1 and 8.6.5.3-2.
2	→		CHANNEL REQUEST	The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE location update procedure)
3	←		IMMEDIATE ASSIGNMENT	Sent on AGCH.
4	SS			The SS completes the Location Update procedure requested by the UE.
5	←		CHANNEL RELEASE	The SS transmits a channel release to return the UE to idle mode on Cell 9
6	SS			The SS switches its downlink transmission power settings to columns "T2" in tables 8.6.5.3-1 and 8.6.5.3-2.
7	→		RRC CONNECTION REQUEST	The SS waits for RRC CONNECTION REQUEST on CCCH from the UE on Cell 1 (triggered by UE location update procedure).
8	←		RRC CONNECTION SETUP	
9	→		RRC CONNECTION SETUP COMPLETE	
10	SS			The SS completes the Location Update procedure requested by the UE.

Step	Direction		Message	Comments
	UE	SS		
11	←		RRC CONNECTION RELEASE	
12	→		RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 1.
13	<--		Paging	SS transmits a Paging message.
14	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
15	-		-	SS does not send any message to UE. Waits 2 seconds make T300 expire.
16	-		-	Performs “step 2 and step 3” 3 times make V300>N300.
17	-		-	Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging
18	<--		Paging	SS transmits a Paging message.
19	-->		RRC CONNECTION REQUEST	The UE transmits an RRC CONNECTION REQUEST message.
20	<--		RRC CONNECTION SETUP	SS transmit an RRC CONNECTION SETUP message.
21	-->		RRC CONNECTION SETUP COMPLETE	The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".
22	-->		RRC: INITIAL DIRECT TRANSFER NAS: SERVICE REQUEST	The UE transmits SERVICE REQUEST message.
23	<--		UE INFORMATION REQUEST	SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.
24	-->		UE INFORMATION RESPONSE	The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.
25	<--		RRC CONNECTION RELEASE	SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode.
26	-->		RRC CONNECTION RELEASE COMPLETE	UE confirms the connection release and returns to Idle mode

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

- UE Timers and constants in idle mode	
-T300	2000 milliseconds
-N300	3
-T312	10 seconds
- N312	1

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that Cell 9 is listed in the Inter-RAT cell id.

RRC CONNECTION SETUP COMPLETE (step 21)

Information Element	Value/remark
Message Type	
RRC transaction identifier	The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message.
Connection Establishment Failure Info Available	TRUE

UE INFORMATION REQUEST (Step 23)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Logged Measurements Report Request	Not Present
Logged ANR Report Request	Not Present
Connection Establishment Failure Request	TRUE

UE INFORMATION RESPONSE (FDD) (Step 24)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	FDD
- Logged Connection Establishment Failure Info-FDD	
- Number Of RRC Msg Transmitted	4
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- CPICH RSCP	(0..91)
- CPICH Ec/N0	(0..49)
- Logged Measurements Inter-RAT Neighbour cells list	1 entry
- Logged Measurements GSM Neighbouring Cells list	1 entry
- BSIC	Same as Cell 9
- Band indicator	Same as Cell 9
- BCCH ARFCN	Same as Cell 9
- GSM carrier RSSI	(0...63)

UE INFORMATION RESPONSE (TDD) (Step 24)

Information Element	Value/remark
Message Type	
RRC transaction identifier	Arbitrarily selects an integer between 0 and 3
Integrity check info	
- message authentication code	SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC message sequence number	SS provides the value of this IE, from its internal counter.
Connection Establishment Failure Report	
- Time Since Failure	[0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info.
- CHOICE mode	TDD
- Logged Connection Establishment Failure Info-TDD	
- Number Of RRC Msg Transmitted	4
- FPACH Received	Not checked
- E-RUCCH Failure	Not checked
- Logged Measurements Failed Cell	
- Cell ID	Cell 1
- Primary CCPCH RSCP	(0..91)

Information Element	Value/remark
- Logged Measurements Inter-RAT Neighbour cells list	
- Logged Measurements GSM Neighbouring Cells list	1 entry
- BSIC	Same as Cell 9
- Band indicator	Same as Cell 9
- BCCH ARFCN	Same as Cell 9
- GSM carrier RSSI	(0...63)

8.6.5.3.5 Test requirements

At step 24, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 and include the "Logged Measurements GSM Neighbouring Cells list" with Cell 9 information in the Report. (TP1).

8.7 Automatic Neighbour Relation (ANR) for UTRAN

8.7.1 Intra-UTRAN

8.7.1.1 Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in IDLE Mode / RSCP Absolute Threshold

8.7.1.1.1 Definition and applicability

All UEs supporting UTRA FDD or UTRA TDD and UTRAN ANR measurements.

8.7.1.1.2 Conformance requirement

[TS 25.304, clause 5.8.1 (TP3)]

The UE may be configured to perform UTRAN ANR measurement and logging in IDLE mode, CELL_PCH and URA_PCH state with Logging Measurement Configuration message as specified in [4]. If configured, the UE will

- perform measurements and evaluation on the cells which are not included in the neighbour cell list in IDLE mode, CELL_PCH and URA_PCH state.
- log information of the detected cells meeting the logging rules as specified in [4].

[TS 25.304, clause 5.8.2.1 (TP4)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.
- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331 [4].

[TS 25.306, clause 4.15 (TP1)]

Support of UTRAN ANR

Defines whether the UE supports measurement and logging in Idle mode, CELL_PCH and URA_PCH states for Automatic Neighbour Relation (ANR) in UTRAN.

[TS 25.331, clause 7.2.1 (TP4)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 8.1.3.6 (TP5)]

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> include IE "ANR Logging Results Available".

...

[TS 25.331, clause 8.5.63.3 (TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

...

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

...

[TS 25.331, clause 8.5.64.3 (TP6)]

UE Shall:

...

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.67 (TP4)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, clause 8.5.67.2 (TP3, TP4)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the Primary PLMN which this UTRA cell belongs to;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

...

[TS 25.331, clause 8.6.3.12 (TP1)]

If the IE "Capability Update Requirement" is included the UE shall:

1> if the IE "UE radio access FDD capability update requirement" has the value TRUE:

2> if the UE supports FDD mode:

3> store its UTRA FDD capabilities and its UTRA capabilities common to FDD and TDD in the IE "UE radio access capability" and the IE "UE radio access capability extension" in variable UE_CAPABILITY_REQUESTED as specified below:

…

1> if the IE "UE radio access 3.84 Mcps TDD capability update requirement" has the value TRUE:

2> if the UE supports 3.84 Mcps TDD mode:

3> store its UTRAN-specific 3.84 Mcps TDD capabilities and its UTRAN–specific capabilities common to FDD and TDD in the variable UE_CAPABILITY_REQUESTED.

1> if the IE "UE radio access 7.68 Mcps TDD capability update requirement" has the value TRUE:

2> if the UE supports 7.68 Mcps TDD mode:

3> store its UTRAN-specific 7.68 Mcps TDD capabilities and its UTRAN–specific capabilities common to FDD and TDD in the variable UE_CAPABILITY_REQUESTED.

1> if the IE "UE radio access 1.28 Mcps TDD capability update requirement" has the value TRUE:

2> if the UE supports 1.28 Mcps TDD mode:

3> store its UTRAN-specific 1.28 Mcps TDD capabilities and its UTRAN–specific capabilities common to FDD and TDD in the variable UE_CAPABILITY_REQUESTED;

…

Reference

3GPP TS 25.304 clauses 5.8.1, 5.8.2.1; 3GPP TS 25.306 clause 4.15; 3GPP TS 25.331 clauses 7.2.1, 8.1.3.6, 8.5.63.3, 8.5.64.3, 8.5.67, 8.5.67.2, 8.6.3.12

8.7.1.1.3 Test purpose

1. Verify that UE signals capability "Support of UTRAN ANR".
2. To verify that the UE correctly reads “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message for Intra-UTRA ANR case when Absolute Threshold for RSCP is configured.
3. To verify that the UE trigger and performs ANR measurements on a cell not included in the neighbour cell list when RSCP is configured as Absolute Threshold and UE measured RSCP of the cell exceeds the Absolute Threshold.
4. To verify that the UE performs Intra-frequency ANR measurement in IDLE mode on a cell not listed in the broadcasted intra-frequency cell info list.
5. To verify that the UE includes IE “ANR Logging Results Available” in RRC CONNECTION SETUP message.
6. To verify UE reporting of ANR logged data for UTRA cell.

8.7.1.1.4 Method of test

Initial Condition

System Simulator: 3 FDD or TDD cells – cell 1, cell 2 and cell 3 are active.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

NOTE: Cell 2 is listed as intra-frequency neighbour cell. Cell 3 is not included in the intra-frequency or inter-frequency cell info lists.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.1-1

Parameter	Unit	Cell 1	Cell 2	Cell 3
UTRA RF Channel Number		Mid Range Test Frequency	Mid Range Test Frequency	Mid Range Test Frequency
CPICH Ec (FDD)	dBm/3.84MHz	-60	-70	-70
PCCPCH_RSCP (TDD)	dBm	-60	-70	-70
Note: Cell 2 and Cell 3 power levels are set to make UE measured RSCP to exceed the configured RSCP absolute threshold (-100 dBm).				

Table 8.7.1.1-1 illustrates the downlink power to be applied for the 3 cells.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 3 in the intra- or inter-frequency cell info lists.

The SS transmits a UE CAPABILITY ENQUIRY message and checks that UE respond with a UE CAPABILITY INFORMATION message indicating that UE supports UTRAN ANR.

The SS configures UE to perform intra-UTRA ANR measurements triggered by RSCP absolute threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS release the RRC connection and UE enters IDLE mode state. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS page the UE to establish an RRC connection. The SS checks that the UE includes the IE "ANR Logging Results Available" in the RRC CONNECTION SETUP COMPLETE message.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 3 (not in neighbour cell info list for Cell 1), but not for Cell 2 (in neighbour cell info list for Cell 1).

Expected Sequence

Specific Message Contents

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in Cell 1
2	←		UE CAPABILITY ENQUIRY	
3	→		UE CAPABILITY INFORMATION	SS checks that IE "Support of UTRAN ANR" is indicated
4	←		UE CAPABILITY INFORMATION CONFIRM	
5	←		LOGGING MEASUREMENT CONFIGURATION	SS transmits this message in Cell 1 on downlink DCCH using AM RLC configuring the UE to perform Intra-frequency ANR measurements.
6	←		RRC CONNECTION RELEASE	
7	→		RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 1.
8	SS			Waiting for T_{wait} seconds to allow UE to activate ANR logging in IDLE mode state.

9	←	PAGING TYPE1	
10	→	RRC CONNECTION REQUEST	
11	←	RRC CONNECTION SETUP	
12	→	RRC CONNECTION SETUP COMPLETE	SS checks that the IE “ANR Logging Results Available” is included
12A	→	SERVICE REQUEST	GMM
13	←	UE INFORMATION REQUEST	
14	→	UE INFORMATION RESPONSE	SS checks that the "Logged ANR Report Info List" includes an ANR measurement for Cell 3, but not for Cell 2

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is listed as intra-frequency neighbour cell and that cell 3 is not listed as intra-frequency neighbour cell for cell 1.

UE CAPABILITY INFORMATION (Step 3)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
UE radio access capability	Check that IE “Support of UTRAN ANR” is present (TRUE).

LOGGING MEASUREMENT CONFIGURATION (Step 5)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A1 (RSCP Absolute Threshold = -100dBm).

RRC CONNECTION SETUP COMPLETE (Step 12)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is set to TRUE.

UE INFORMATION REQUEST (Step 13)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 14)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Condition	Value/remark	Version
Logged ANR Report Info			Rel-10
- Serving PLMN Identity		Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell		Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*		UTRAN	
- PLMN Identity		Checked to see that it is identical to the PLMN identify of Cell 3	
- Cell Identity		Checked to see that it is identical to the Cell ID of Cell 3	
- UARFCN		Checked to see that it is identical to the UARFCN of Cell 3	
- Cell parameter ID	TDD	This IE is checked to be present	
- Primary Scrambling Code	FDD	This IE is checked to be present	

Condition	Explanation	Version
FDD	Configuring of IE for FDD cell	Rel-10
TDD	Configuring of IE for TDD cell	Rel-10

8.7.1.1.5 Test requirement

At step 3 the UE shall transmit a UE CAPABILITY INFORMATION message with the IE “Support of UTRAN ANR” is set to TRUE (TP1).

At step 12 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE “ANR Logging Results Available” (TP5).

At step 14 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurement for Cell 3 and no ANR measurement for Cell 2 (TP2,TP3,TP4,TP6).

8.7.1.1a Void

8.7.1.2 Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in Cell_PCH / Ec/N0 Absolute Threshold (FDD)

8.7.1.2.1 Definition and applicability

All UEs supporting UTRA FDD and UTRAN ANR measurement.

8.7.1.2.2 Conformance requirement

[TS 25.304, clause 5.8.1 (TP2)]

The UE may be configured to perform UTRAN ANR measurement and logging in IDLE mode, CELL_PCH and URA_PCH state with Logging Measurement Configuration message as specified in [4]. If configured, the UE will

- perform measurements and evaluation on the cells which are not included in the neighbour cell list in IDLE mode, CELL_PCH and URA_PCH state.
- log information of the detected cells meeting the logging rules as specified in [4].

[TS 25.304, clause 5.8.2.1 (TP3)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.
- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331

[TS 25.331, clause 7.2.1 (TP3)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 7.2.2.1 (TP3)]

In the URA_PCH or CELL_PCH state the UE shall perform the following actions:

…

1> if the UE is "in service area":

…

2> perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 8.3.1.3 (TP4)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ ANR_REPORT_VARIABLE:

2>include IE "ANR Logging Results Available".

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

…

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.66;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, clause 8.5.67 (TP3)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, clause 8.5.67.2 (TP2,TP3)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the Primary PLMN which this UTRA cell belongs to;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

Reference

3GPP TS 25.304 clauses 5.8.1, 5.8.2.1; TS 25.331 clauses 7.2.1, 7.2.2.1, 8.3.1.3, 8.5.63.3, 8.5.67, 8.5.67.2

8.7.1.2.3 Test purpose

1. To verify that the UE correctly reads “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message for Intra-UTRA ANR when Absolute Threshold for Ec/N0 is configured.
2. To verify that the UE triggers and performs ANR measurements on a cell not in the intra-/inter-frequency cell in list when Ec/N0 is configured as Absolute Threshold and UE measured Ec/N0 of the cell exceeds the Absolute Threshold
3. To verify that the UE performs Intra-freq ANR measurement in CELL_PCH mode on a cell not listed in the broadcasted intra-frequency cell info list.
4. To verify that the UE includes IE “ANR Logging Results Available” in CELL UPDATE message.

8.7.1.2.4 Method of test

Initial Condition

System Simulator: 3 FDD cells – Cell 1, Cell 2 and Cell 3 are active.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

Note: Cell 2 is listed as intra-frequency neighbour cell. Cell 3 is not included in intra-frequency info list.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.2-1

Parameter	Unit	Cell 1		Cell 2		Cell 3	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec	dBm/3.84MHz	-60	-70	-70	-60	-57	-70
Note: Cell 3 power levels is set to make UE measured Ec/N0 to exceed the configured Ec/N0 absolute threshold (-10 dB) at time T0.							

Table 8.7.1.2-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 3 in the intra-frequency cell info list.

The SS configures UE to perform intra-UTRA ANR measurements triggered by Ec/N0 absolute threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH in cell 1. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.7.1. 2-1. The UE performs cell re-selection to Cell 2 and transmits a CELL UPDATE message including IE “ANR Logging Results Available” to the SS on the uplink CCCH of Cell 2 and set IE "Cell update cause" to "Cell Reselection".

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 3 (not in neighbour cell info list for Cell 1), but not for Cell 2 (Ec/N0 absolute threshold not exceeded and Cell 2 in neighbour cell info list for Cell 1).

Expected Sequence

Specific Message Contents

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in Cell 1
2	←		LOGGING MEASUREMENT CONFIGURATION	SS transmits this message in Cell 1 on downlink DCCH using AM RLC configuring the UE to perform Intra-frequency ANR measurements.
3	←		PHYSICAL CHANNEL RECONFIGURATION	IE "RRC State Indicator" set to "CELL_PCH"
4	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_PCH state in Cell 1.
5	SS			Waiting for T_{wait} seconds to allow UE to activate ANR logging in CELL_PCH state.
6	SS			The SS switches its downlink transmission power settings to columns "T1" in table 8.7.1.2-1.
7	→		CELL UPDATE	The UE enters the CELL_FACH state and transmits this message with the IE “ANR Logging Results Available” and set IE “Cell update cause” to value “cell reselection”.
8	←		CELL UPDATE CONFIRM	
9	←		UE INFORMATION REQUEST	
10	→		UE INFORMATION RESPONSE	SS checks that the "Logged ANR Report Info List" includes an ANR measurement for Cell 3, but not for Cell 2

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is listed as intra-frequency neighbour cell and that Cell 3 is not listed as intra-frequency neighbour cell.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use same message sub-clause 9.1.1 of TS 34.108 for condition A2 (Ec/N0 Absolute Threshold = -10 dB).

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

CELL UPDATE (Step 7)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
ANR Logging Results Available	TRUE

UE INFORMATION REQUEST (Step 9)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 10)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 3	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 3	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 3	
- Primary Scrambling Code	This IE is checked to be present	

8.7.1.2.5 Test requirement

At step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (TP3).

At step 7, the UE shall transmit a CELL UPDATE message on uplink CCCH with “ANR Logging Results Available” and set IE “Cell update cause” to value “cell reselection” (TP4).

At step 10 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurement for Cell 3 and no ANR measurement for Cell 2 (TP1,TP2,TP3).

8.7.1.2a Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in CELL_PCH (TDD)

8.7.1.2a.1 Definition and applicability

All UEs supporting UTRA TDD and UTRAN ANR measurement.

8.7.1.2a.2 Conformance requirement

[TS 25.304, clause 5.8.2.1 (TP1)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.

- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331

[TS 25.331, clause 7.2.1 (TP1)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 7.2.2.1 (TP1)]

In the URA_PCH or CELL_PCH state the UE shall perform the following actions:

…

1> if the UE is "in service area":

…

2> perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 8.3.1.3 (TP2)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ ANR_REPORT_VARIABLE:

2>include IE "ANR Logging Results Available".

[TS 25.331, clause 8.5.67 (TP1)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, clause 8.5.67.2 (TP1)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the Primary PLMN which this UTRA cell belongs to;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

Reference

3GPP TS 25.304 clauses 5.8.2.1; TS 25.331 clauses 7.2.1, 7.2.2.1, 8.5.63.3, 8.5.67, 8.5.67.2

8.7.1.2a.3 Test purpose

1. To verify that the UE performs Intra-freq ANR measurement in CELL_PCH mode on a cell not listed in the broadcasted intra-frequency cell info list.
2. To verify that the UE includes IE “ANR Logging Results Available” in CELL UPDATE message.

8.7.1.2a.4 Method of test

Initial Condition

System Simulator: 3 TDD cells – Cell 1, Cell 2 and Cell 3 are active.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

Note: Cell 2 is listed as intra-frequency neighbour cell. Cell 3 is not included in intra-frequency info list.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.2a-1

Parameter	Unit	Cell 1		Cell 2		Cell 3	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency		Mid Range Test Frequency	
PCCPCH_RSCP (TDD)	dBm	-60	-70	-70	-60	-70	-70
Note: Cell 2 and Cell 3 power levels at T0 are set to make UE measured RSCP to exceed the configured RSCP absolute threshold (-100 dBm).							

Table 8.7.1.2a-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 3 in the intra-frequency cell info list.

The SS configures UE to perform intra-UTRA ANR measurements triggered by RSCP absolute threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH in cell 1. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.7.1. 2-1. The UE performs cell re-selection to Cell 2 and transmits a CELL UPDATE message including IE “ANR Logging Results Available” to the SS on the uplink CCCH of Cell 2 and set IE "Cell update cause" to "Cell Reselection".

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 3 (not in neighbour cell info list for Cell 1), but not for Cell 2 (in neighbour cell info list for Cell 1).

Expected Sequence

Specific Message Contents

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in Cell 1
2	←		LOGGING MEASUREMENT CONFIGURATION	SS transmits this message in Cell 1 on downlink DCCH using AM RLC configuring the UE to perform Intra-frequency ANR measurements.

10	→		UE INFORMATION RESPONSE	SS checks that the "Logged ANR Report Info List" includes an ANR measurement for Cell 3, but not for Cell 2

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is listed as intra-frequency neighbour cell and Cell 3 is not listed as intra-frequency neighbour cell.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use same message sub-clause 9.1.1 of TS 34.108 for condition A2 (RSCP Absolute Threshold = -100 dBm).

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

CELL UPDATE (Step 7)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
ANR Logging Results Available	TRUE

UE INFORMATION REQUEST (Step 9)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 10)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 3	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 3	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 3	
- Cell parameter ID	This IE is checked to be present	

8.7.1.2a.5 Test requirement

At step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (TP1).

At step 7, the UE shall transmit a CELL UPDATE message on uplink CCCH with “ANR Logging Results Available” and set IE “Cell update cause” to value “cell reselection” (TP2).

At step 10 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurement for Cell 3 and no ANR measurement for Cell 2 (TP1,TP2).

8.7.1.3 Intra-UTRA / Inter-frequency ANR measurement, logging and reporting in URA_PCH / RSCP Relative Threshold

8.7.1.3.1 Definition and applicability

All UEs supporting UTRA FDD or UTRA TDD and UTRAN ANR measurement.

8.7.1.3.2 Conformance requirement

[TS 25.304, clause 5.8.1 (TP2)]

The UE may be configured to perform UTRAN ANR measurement and logging in IDLE mode, CELL_PCH and URA_PCH state with Logging Measurement Configuration message as specified in [4]. If configured, the UE will

- perform measurements and evaluation on the cells which are not included in the neighbour cell list in IDLE mode, CELL_PCH and URA_PCH state.
- log information of the detected cells meeting the logging rules as specified in [4].

[TS 25.304, clause 5.8.2.1 (TP3)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.
- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331

[TS 25.331, clause 7.2.1 (TP3)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 7.2.2.1 (TP3)]

In the URA_PCH or CELL_PCH state the UE shall perform the following actions:

…

1> if the UE is "in service area":

…

2> perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 8.3.1.3 (TP4)]

In case of URA update procedure the UE shall transmit a URA UPDATE message.

…

The UE shall set the IEs in the URA UPDATE message as follows:

…

1> if IE "Logged ANR report" in variable LOG_ANR_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ ANR_REPORT_VARIABLE:

2> include IE "ANR Logging Results Available".

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

…

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.66;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, clause 8.5.67 (TP3)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, clause 8.5.67.2 (TP2,TP3)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" to indicate the IE "PLMN Identity" included in MIB and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the IE "PLMN Identity" included in MIB of this UTRA cell;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

Reference

3GPP TS 25.304 clauses 5.8.1, 5.8.2.1; 3GPP TS 25.331 clauses 7.2.1, 7.2.2.1, 8.3.1.3, 8.5.63.3, 8.5.67, 8.5.67.2.

8.7.1.3.3 Test purpose

1. To verify that the UE correctly reads “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message for Intra-UTRA ANR case when Logging Relative Threshold for RSCP is configured.

2. To verify that the UE triggers and performs ANR measurements on a cell not in the intra-/inter-frequency cell info list when RSCP Relative Threshold is configured and UE measured RSCP of the cell exceeds the Absolute and Relative Thresholds.

3. To verify that the UE correctly executes inter-freq ANR measurement in URA_PCH state on a cell not listed in the broadcasted inter-frequency cell info list.

4. To verify that the UE includes IE “ANR Logging Results Available” in URA UPDATE message.

8.7.1.3.4 Method of test

Initial Condition

System Simulator: 3 FDD or TDD cells – Cell 1, Cell 4and Cell 5 are active.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

NOTE: Cell 4 is listed as inter-frequency neighbour cell. Cell 5 is not included in the inter-frequency info list.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.3-1

Parameter	Unit	Cell 1		Cell 4		Cell 5	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		High Range Test Frequency		High Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-70	-70	-60	-60	-60
PCCPCH_RSCP (TDD)	dBm	-60	-70	-70	-60	-60	-60
URA ID		URA-ID 1		URA-ID 2		URA-ID 1 and 2	
Note: Cell 5 power level is set to make UE measured RSCP to exceed the configured RSCP absolute threshold (-100 dBm) and RSCP relative threshold (-8dB).							

Table 8.7.1.3-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message has been transmitted in Cell 1 does not list Cell 5 in the inter-frequency cell info list.

The SS configures UE to perform intra-UTRA inter-frequency ANR measurements triggered by RSCP relative and absolute threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message which invokes the UE to transit from CELL_DCH to URA_PCH in Cell 1. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state. The UE is assigned with only one URA identity in Cell 1: URA-ID 1. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 5.

SS configures its downlink transmission power settings according to columns "T1" in table 8.7.1.3-1. The UE shall find Cell 4 to be more suitable than Cell 1, and Cell 4 has a different URA ID from Cell 1. The UE shall transmit a URA UPDATE message including IE “ANR Logging Results Available” for Cell 5 to the SS on the uplink CCCH of Cell 4 and set IE "URA update cause" to "change of URA".

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 5 (not in neighbour cell info list for Cell 1), but not for Cell 4 (in neighbour cell info list for Cell 1).

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in Cell 1
2	←		LOGGING MEASUREMENT CONFIGURATION	SS transmits this message in Cell 1 on downlink DCCH using AM RLC configuring the to perform Intra-frequency ANR measurements.
3	←		PHYSICAL CHANNEL RECONFIGURATION	IE "RRC State Indicator" set to "URA_PCH"
4	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to URA_PCH state in Cell 1.
5	SS			Waiting for T_{wait} seconds to allow UE to activate ANR logging in URA_PCH state.
6	SS			The SS switches its downlink transmission power settings to columns "T1" in table 8.7.1.3-1.
7	→		URA UPDATE	The UE transmits this message with the IE “ANR Logging Results Available” and set IE “URA update cause” to value “change of URA”.
8	←		URA UPDATE CONFIRM	
9	←		UE INFORMATION REQUEST	
10	→		UE INFORMATION RESPONSE	SS checks that the "Logged ANR Report Info List" includes an ANR measurement for Cell 5, but not for Cell 4

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1

Use same message sub-clause 6.1 of TS 34.108, with the exception that Cell 4 is listed as inter-frequency neighbour cell and that Cell 5 is not listed as inter-frequency neighbour cell.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use same message sub-clause 9.1.1 of TS 34.108 for condition A1 (RSCP Absolute Threshold), with the exception of the following IEs:

Information Element	Value/remark
Logged Measurements Configuration Info	
Logged ANR configuration Info	
- Intra-UTRA ANR	
- CHOICE *Absolute Threshold*	RCSP for ANR
- RSCP	Not present (default -100 dBm)
- Logging Relative *Threshold*	-4 (-8dB)

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

URA UPDATE (Step 7)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Cell Update Cause	Check to see if set to 'change of URA'
ANR Logging Results Available	TRUE

UE INFORMATION REQUEST (Step 9)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 10)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Condition	Value/remark	Version
Logged ANR Report Info			Rel-10
- Serving PLMN Identity		Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell		Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*		UTRAN	
- PLMN Identity		Checked to see that it is identical to the PLMN identify of Cell 5	
- Cell Identity		Checked to see that it is identical to the Cell ID of Cell 5	
- UARFCN		Checked to see that it is identical to the UARFCN of Cell 5	
- Cell parameter ID	TDD	This IE is checked to be present	
- Primary Scrambling Code	FDD	This IE is checked to be present	

Condition	Explanation	Version
FDD	Configuring of IE for FDD cell	Rel-10
TDD	Configuring of IE for TDD cell	Rel-10

8.7.1.3.5 Test requirement

At step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (TP3).

At step 7, the UE shall transmit a URA UPDATE message on uplink CCCH with “ANR Logging Results Available” and set IE “Cell update cause” to value “change of URA” (TP4).

At step 10 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurement for Cell 5 and no ANR measurement for Cell 4 (TP1,TP2,TP3).

8.7.1.3a Void

8.7.1.4 Intra-UTRA / Inter-frequency and Intra-frequency ANR measurement, logging and reporting in IDLE Mode / Ec/N0 Relative Threshold / T327 Expiry / Max Number of ANR Logged Items (FDD)

8.7.1.4.1 Definition and applicability

All UEs supporting UTRA FDD and UTRAN ANR measurement.

8.7.1.4.2 Conformance requirement

[TS 25.304, 5.8.1 (TP4)]

The UE may be configured to perform UTRAN ANR measurement and logging in IDLE mode, CELL_PCH and URA_PCH state with Logging Measurement Configuration message as specified in [4]. If configured, the UE will

- perform measurements and evaluation on the cells which are not included in the neighbour cell list in IDLE mode, CELL_PCH and URA_PCH state.
- log information of the detected cells meeting the logging rules as specified in [4].

[TS 25.304, clause 5.8.2.1 (TP5)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.
- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331

[TS 25.331, 7.2.1 (TP5)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, 8.5.63.3 (TP1,TP3)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

…

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.66;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, 8.5.63.5 (TP2)]

When timer T327 expires, the UE shall:

1> stop performing ANR measurement and logging, release the variable LOG_ANR_CONFIG.

NOTE: The UE should not stop timer T327 upon transition to Idle mode, when it moves to another RAT or a PLMN not included in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ ANR_REPORT_VARIABLE. The UE is allowed to keep the stored logged ANR measurements, i.e. to store LOG_ANR_REPORT_VARIABLE 48 hours after T327 starts.

[TS 25.331, clause 8.5.67 (TP5)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, 8.5.67.2 (TP4,TP5,TP6,TP7)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" to indicate the IE "PLMN Identity" included in MIB and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the IE "PLMN Identity" included in MIB of this UTRA cell;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

…

2> when maximum number of entries for the ANR logging is reached, stop timer T327 and perform the same actions as upon expiry of T327, as specified in 8.5.63.5.

[TS 25.331, 10.3.10 (TP6,TP7)]

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

Constant	Explanation	Value	Version
CN information			
maxCNdomains	Maximum number of CN domains	4	
…			
ANR information			REL-10
MaxNumANRLoggedItems	Maximum number of entries in Logged ANR Report info	4	REL-10

[TS 25.331, 13.1 (TP2)]

Timer	Start	Stop	At expiry
…			
T327	Upon receiving LOGGING MEASUREMENT CONFIGURATION including the Logged ANR Configuration Info	When reaching the maximum number of entries in the LOG_ ANR_REPORT_VARIABLE or the ANR logging info is reported to the network. When PLMN selection is triggered by NAS	See subclause 8.5.63.5

Reference

3GPP TS 25.304 clauses 5.8.1, 5.8.2.1; TS 25.331 clauses 7.2.1, 8.5.63.3, 8.5.63.5, 8.5.67.2, 10.3.7.42a, 10.3.10, 13.1

8.7.1.4.3 Test purpose

1. To verify that the UE correctly reads Logging Duration in “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message.
2. To verify the UE behaviour when T327 expires.
3. To verify that the UE correctly reads “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message for Intra-UTRA ANR case when Logging Relative Threshold for Ec/NO is configured.
4. To verify that the UE trigger and performs ANR measurements on a cell not in the intra-/inter-frequency cell info list when Ec/N0 Relative Threshold is configured and UE measured Ec/N0 of the cell exceeds the Absolute and Relative Thresholds.
5. To verify that the UE performs Inter-frequency ANR measurement in IDLE mode on a cell not listed in the broadcasted intra-frequency cell info list.
6. To verify that the UE is capable to log MaxNumANRLoggedItems.
7. To verify that UE when maximum number for ANR logging is reached stops timer T327 and deactivate ANR logging.

8.7.1.4.4 Method of test

Initial Condition

System Simulator: 7 FDD cells – Cell 1, Cell 2, Cell 3, Cell 4, Cell 5, Cell 6, Cell 7. Cell 1 is active. Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are not active.

Note 1: Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are only activated one at the time. Thus is the SS requirement for simultaneous cells for this test case limited to two cells.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

Note 2: Cell 4 is listed as inter-frequency neighbour cell. Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 are not included in intra- or inter-frequency cell info lists.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.4-1

Parameter	Unit	Cell 1	Cell 4	Cell 2, Cell 3, and Cell 7	Cell 5 and Cell 6
UTRA RF Channel Number		Mid Range Test Frequency	HIgh Range Test Frequency	Mid Range Test Frequency	High Range Test Frequency
CPICH Ec (FDD)	dBm/3.84MHz	-60	-57	-57	-57
Note: Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 power level is set to make UE measured Ec/N0 to exceed the configured Ec/N0 absolute threshold (-10 dB) and Ec/N0 relative threshold (-4 dB).					

Table 8.7.1.4-1 illustrates the downlink power to be applied for the different cells. Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are only activated one at a time as described below.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 in the intra- or inter-frequency cell info lists.

The SS configures UE to perform intra-UTRA ANR measurements triggered by Ec/N0 absolute and relative threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS release the RRC connection and UE enters IDLE mode state.

The SS activates Cell 4. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements. The UE will not perform any ANR measurements of Cell 4 as Cell 4 is listed in the inter-frequency neighbour cell list of Cell 1.

The SS deactivates Cell 4 and reconfigure it as Cell 2. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 2.

The SS deactivates Cell 2 and reconfigure it as Cell 3. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS deactivates Cell 3 and reconfigure it as Cell 5. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 5.

The SS deactivates Cell 5 and reconfigure it as Cell 6. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 6. As maximum number of entries for the ANR logging is reached (4) by logging of Cell 2, Cell 3, Cell 5 and Cell 6 then shall UE stop timer T327 and stop performing ANR measurements and logging, and release the ANR logging configuration.

The SS deactivates Cell 6 and reconfigure it as Cell 7. The SS waits T_{wait} seconds to verify that UE does not perform ANR measurement and logging of Cell 7.

The SS page the UE to establish an RRC connection. The UE respond with a RRC CONNECTION SETUP COMPLETE message.

SS transmits a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS checks that the UE includes the IE “ANR Logging Results Available” in the MEASUREMENT REPORT message.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 2, Cell 3, Cell 5 and Cell 6, but not for Cell 4 or Cell 7.

The SS deactivates Cell 7.

The SS configures UE to perform intra-UTRA ANR measurements triggered by Ec/N0 absolute and relative threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE with IE *Logging Duration* set to 10 minutes.

The SS release the RRC connection and UE enters IDLE mode state.

The SS activates Cell 2. The SS waits 10 minutes to allow UE to perform logging of ANR measurements of Cell 2 and for T327 to expire.

The SS deactivates Cell 2 and reconfigure it as Cell 3. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 2, but not for Cell 3.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 4 is listed as inter-frequency neighbour cell for cell 1; and that cell 2, cell 3, cell 5, cell 6 and cell 7 are not listed as intra- or inter-frequency neighbour cells for cell 1.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A2 (Ec/N0 Absolute Threshold), with the exception of the following IEs:

Information Element	Value/remark
Logged Measurements Configuration Info	
Logged ANR configuration Info	
- Intra-UTRA ANR	
- CHOICE *Absolute Threshold*	Ec/N0 for ANR
- Ec/N0	Not present (default -10 dB)
- Logging Relative *Threshold*	-4 (-4 dB)

UE INFORMATION REQUEST (Step 15)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 16)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN (1)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 2	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 2	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 2	
- Primary Scrambling Code	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (2)	

Information Element	Value/remark	Version
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 3	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 3	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 3	
- Primary Scrambling Code	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (3)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 5	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 5	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 5	
- Primary Scrambling Code	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (4)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 6	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 6	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 6	
- Primary Scrambling Code	This IE is checked to be present	

LOGGING MEASUREMENT CONFIGURATION (Step 18)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A2 (Ec/N0 Absolute Threshold), with the exception of the following IEs:

Information Element	Value/remark
Logged Measurements Configuration Info	
Logged ANR configuration Info	
- Logging Duration	10 minutes
- Intra-UTRA ANR	
- CHOICE *Absolute Threshold*	Ec/N0 for ANR
- Ec/N0	Not present (default -10 dB)
- Logging Relative *Threshold*	-4 (-4 dB)

UE INFORMATION RESPONSE (Step 28)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN (1)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 2	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 2	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 2	
- Primary Scrambling Code	This IE is checked to be present	

8.7.1.4.5 Test requirement

At step 16 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurements for cell 2, cell 3, cell 5 and cell 6 and no ANR measurements for cell 4 or cell 7 (TP3,TP4,TP5,TP6,TP7).

At step 28 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurements for cell 2 and no ANR measurements for cell 3 (TP1,TP2,TP3,TP4,TP5).

8.7.1.4a Intra-UTRA / Inter-frequency and Intra-frequency ANR measurement, logging and reporting in IDLE Mode / T327 Expiry / Max Number of ANR Logged Items (TDD)

8.7.1.4a.1 Definition and applicability

All UEs supporting UTRA TDD and UTRAN ANR measurement.

8.7.1.4a.2 Conformance requirement

[TS 25.304, clause 5.8.2.1 (TP3)]

If configured via the Logging Measurement Configuration message, the UE may perform intra-freq and inter-freq ANR measurements and logging only when:

- in IDLE mode, CELL_PCH and URA_PCH state.
- the UE is camping normally on a UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the intra-freq and inter-freq ANR process, the UE may measure on the frequencies associated with the cells listed in the neighbour cell list and log corresponding information of the detected set cells as specified in TS 25.331

[TS 25.331, 7.2.1 (TP3)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

…

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.66;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, 8.5.63.5 (TP2)]

When timer T327 expires, the UE shall:

1> stop performing ANR measurement and logging, release the variable LOG_ANR_CONFIG.

NOTE: The UE should not stop timer T327 upon transition to Idle mode, when it moves to another RAT or a PLMN not included in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ ANR_REPORT_VARIABLE. The UE is allowed to keep the stored logged ANR measurements, i.e. to store LOG_ANR_REPORT_VARIABLE 48 hours after T327 starts.

[TS 25.331, clause 8.5.67 (TP3)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements for ANR has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in variable LOG_ANR_CONFIG as specified in subclause 8.5.67.2.

[TS 25.331, 8.5.67.2 (TP4,TP5)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:

2> if IE "Intra-UTRA ANR" is included in variable LOG_ANR_CONFIG:

3> if the UE camps normally on an UTRA cell (serving) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the serving cell and UTRA cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE; and

3> if the quality of the UTRA cell, not included in the neighbour cell list, exceeds the quality of the serving cell with more than the value of "Logging Relative Threshold", if this IE is present in the Logging Measurement Configuration message; and

3> if the quality of UTRA cell, not included in the neighbour cell list, is above the value of "Absolute Threshold"; and

3> if both the camping UTRAN cell and UTRA cell, not included in the neighbour cell list, are not CSG cells:

4> log the ANR information into the variable LOG_ANR_REPORT_VARIABLE as follows:

5> set the IEs "Serving PLMN Identity" to indicate the IE "PLMN Identity" included in MIB and "Serving Cell" to indicate cell identity of the cell the UE is camping on;

5> try to acquire the corresponding system information of the UTRA cell and set to the variable LOG_ANR_REPORT_VARIABLE as follows:

6> set the IE "Cell Identity" to indicate cell identity of this UTRA cell;

6> set the IE "PLMN Identity" to indicate the IE "PLMN Identity" included in MIB of this UTRA cell;

6> set the IE "UARFCN" and "Cell parameter ID" for a TDD cell or "Primary Scrambling Code" for a FDD cell.

…

2> when maximum number of entries for the ANR logging is reached, stop timer T327 and perform the same actions as upon expiry of T327, as specified in 8.5.63.5.

[TS 25.331, 10.3.10 (TP4,TP5)]

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

Constant	Explanation	Value	Version
CN information			
maxCNdomains	Maximum number of CN domains	4	
…			
ANR information			REL-10
MaxNumANRLoggedItems	Maximum number of entries in Logged ANR Report info	4	REL-10

[TS 25.331, 13.1 (TP2)]

Timer	Start	Stop	At expiry
…			
T327	Upon receiving LOGGING MEASUREMENT CONFIGURATION including the Logged ANR Configuration Info	When reaching the maximum number of entries in the LOG_ ANR_REPORT_VARIABLE or the ANR logging info is reported to the network. When PLMN selection is triggered by NAS	See subclause 8.5.63.5

Reference

3GPP TS 25.304 clauses 5.8.2.1; TS 25.331 clauses 7.2.1, 8.5.63.3, 8.5.63.5, 8.5.67.2, 10.3.7.42a, 10.3.10, 13.1

8.7.1.4a.3 Test purpose

1. To verify that the UE correctly reads Logging Duration in “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message.
2. To verify the UE behaviour when T327 expires.
3. To verify that the UE performs Inter-frequency ANR measurement in IDLE mode on a cell not listed in the broadcasted intra-frequency cell info list.
4. To verify that the UE is capable to log MaxNumANRLoggedItems.
5. To verify that UE when maximum number for ANR logging is reached stops timer T327 and deactivate ANR logging.

8.7.1.4a.4 Method of test

Initial Condition

System Simulator: 7 TDD cells – Cell 1, Cell 2, Cell 3, Cell 4, Cell 5, Cell 6, Cell 7. Cell 1 is active. Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are not active.

Note 1: Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are only activated one at the time. Thus is the SS requirement for simultaneous cells for this test case limited to two cells.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

Note 2: Cell 4 is listed as inter-frequency neighbour cell. Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 are not included in intra- or inter-frequency cell info lists.

SS sets the test parameter T_{wait} to the value of PIXIT ‘Px_AnrForUtranMeasLogWaitTime’.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.4a-1

Parameter	Unit	Cell 1	Cell 4	Cell 2, Cell 3, and Cell 7	Cell 5 and Cell 6
UTRA RF Channel Number		Mid Range Test Frequency	HIgh Range Test Frequency	Mid Range Test Frequency	High Range Test Frequency
PCCPCH_RSCP (TDD)	dBm	-60	-70	-70	-70
Note: Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 power level is set to make UE measured Ec/N0 to exceed the configured RSCP absolute threshold (-100 dBm).					

Table 8.7.1.4a-1 illustrates the downlink power to be applied for the different cells. Cell 2, Cell 3, Cell 4, Cell 5, Cell 6 and Cell 7 are only activated one at a time as described below.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 2, Cell 3, Cell 5, Cell 6 and Cell 7 in the intra- or inter-frequency cell info lists.

The SS configures UE to perform intra-UTRA ANR measurements triggered by RSCP absolute threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS release the RRC connection and UE enters IDLE mode state.

The SS activates Cell 4. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements. The UE will not perform any ANR measurements of Cell 4 as Cell 4 is listed in the inter-frequency neighbour cell list of Cell 1.

The SS deactivates Cell 4 and reconfigure it as Cell 2. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 2.

The SS deactivates Cell 2 and reconfigure it as Cell 3. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS deactivates Cell 3 and reconfigure it as Cell 5. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 5.

The SS deactivates Cell 5 and reconfigure it as Cell 6. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 6. As maximum number of entries for the ANR logging is reached (4) by logging of Cell 2, Cell 3, Cell 5 and Cell 6 then shall UE stop timer T327 and stop performing ANR measurements and logging, and release the ANR logging configuration.

The SS deactivates Cell 6 and reconfigure it as Cell 7. The SS waits T_{wait} seconds to verify that UE does not perform ANR measurement and logging of Cell 7.

The SS page the UE to establish an RRC connection. The UE respond with a RRC CONNECTION SETUP COMPLETE message.

SS transmits a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS checks that the UE includes the IE “ANR Logging Results Available” in the MEASUREMENT REPORT message.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 2, Cell 3, Cell 5 and Cell 6, but not for Cell 4 or Cell 7.

The SS deactivates Cell 7.

The SS configures UE to perform intra-UTRA ANR measurements triggered by Ec/N0 absolute and relative threshold by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE with IE *Logging Duration* set to 10 minutes.

The SS release the RRC connection and UE enters IDLE mode state.

The SS activates Cell 2. The SS waits 10 minutes to allow UE to perform logging of ANR measurements of Cell 2 and for T327 to expire.

The SS deactivates Cell 2 and reconfigure it as Cell 3. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 3.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an ANR measurement for Cell 2, but not for Cell 3.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 4 is listed as inter-frequency neighbour cell for cell 1; and that cell 2, cell 3, cell 5, cell 6 and cell 7 are not listed as intra- or inter-frequency neighbour cells for cell 1.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A1 (RSCP Absolute Threshold = -100dBm).

UE INFORMATION REQUEST (Step 15)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 16)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN (1)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 2	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 2	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 2	
- Cell parameter ID	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (2)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 3	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 3	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 3	
- Cell parameter ID	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (3)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 5	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 5	

Information Element	Value/remark	Version
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 5	
- Cell parameter ID	This IE is checked to be present	
- CHOICE logged cell info	UTRAN (4)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 6	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 6	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 6	
- Cell parameter ID	This IE is checked to be present	

LOGGING MEASUREMENT CONFIGURATION (Step 18)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A1 (RSCP Absolute Threshold = -100dBm), with the exception of the following IEs:

Information Element	Value/remark
Logged Measurements Configuration Info	
Logged ANR configuration Info	
- Logging Duration	10 minutes

UE INFORMATION RESPONSE (Step 28)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	UTRAN (1)	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 2	
- Cell Identity	Checked to see that it is identical to the Cell ID of Cell 2	
- UARFCN	Checked to see that it is identical to the UARFCN of Cell 2	
- Cell parameter ID	This IE is checked to be present	

8.7.1.4a.5 Test requirement

At step 18 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurements for cell 2, cell 3, cell 5 and cell 6 and no ANR measurements for cell 4 or cell 7 (TP3,TP4,TP5).

At step 28 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurements for cell 2 and no ANR measurements for cell 3 (TP1,TP2).

8.7.1.5 Intra-UTRA / Re-configuration of ANR measurements

8.7.1.5.1 Definition and applicability

All UEs supporting UTRA FDD or UTRA TDD and UTRAN ANR measurement.

8.7.1.5.2 Conformance requirement

[TS 25.331, 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

…

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.66;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, 8.5.64.3 (TP2)]

UE Shall:

...

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.68.2 (TP1)]

The UE initiates the procedure to release the existing logging measurements configuration upon receiving a new Logged ANR Configuration in UTRAN. The UE also shall initiate the procedure after sending UE INFORMATION RESPONSE message as well as upon switch off or detach.

The UE shall:

1> if stored, discard the existing logged measurement configuration as well as the logged measurement information, i.e. release the UE variables LOG_ANR_CONFIG and LOG_ANR_REPORT_VARIABLE and stop timer T327.

[TS 25.331, 13.1 (TP1,TP2)]

Timer	Start	Stop	At expiry
T327	Upon receiving LOGGING MEASUREMENT CONFIGURATION including the Logged ANR Configuration Info	When reaching the maximum number of entries in the LOG_ ANR_REPORT_VARIABLE or the ANR logging info is reported to the network. When PLMN selection is triggered by NAS	See subclause 8.5.63.5

Reference

3GPP TS 25.331 clauses 8.5.63.3, 8.5.64.3, 8.5.68.2, 13.1

8.7.1.5.3 Test purpose

1. Verify that UE, upon reception of new LOGGING MEASUREMENT CONFIGURATION message, clears the logged ANR configuration and stored logged measurement results, stops timer T327, stores the new logged ANR configuration and restarts the T327 timer.

2. To verify that the UE clear the logged ANR configuration and stored logged measurements results and stops timer T327 after UE INFORMATION RESPONSE message has been sent to the network.

8.7.1.5.4 Method of test

Initial Condition

System Simulator: 2 FDD or TDD cells – Cell 1 and Cell 2 are active.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents.

Note: Cell 2 is not included in intra- or inter-frequency info list.

SS sets the test parameter T_{wait} to the value of PIXIT 'Px_AnrForUtranMeasLogWaitTime'.

UE: CELL_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.1.5-1

Parameter	Unit	Cell 1		Cell 2	
		T0	T1	T0	T1
UTRA RF Channel Number		Mid Range Test Frequency		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	-80	-60
PCCPCH_RSCP (TDD)	dBm	-60	-60	-80	-60

Table 8.7.1.5-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 does not list Cell 2 in the intra- or inter-frequency cell info lists.

The SS configures UE to perform intra-UTRA ANR measurements triggered by RSCP absolute threshold (-100 dBm) by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS release the RRC connection and UE enters IDLE mode state. The SS waits T_{wait} seconds to allow UE to perform logging of ANR measurements of Cell 2. See note 1.

The SS page the UE to establish an RRC connection. The SS checks that the UE includes the IE "ANR Logging Results Available" in the RRC CONNECTION SETUP COMPLETE message.

The SS reconfigures UE to perform intra-UTRA ANR measurements for a different RSCP absolute threshold (-70dBm) by sending a second LOGGING MEASUREMENT CONFIGURATION message to the UE. The new RSCP absolute threshold is not satisfied by the current power settings of Cell 2.

The SS release the RRC connection and UE enters IDLE mode state. The SS waits T_{wait} seconds to verify that UE does not perform logging of ANR measurements of Cell 2. See note 2.

The SS page the UE to establish an RRC connection. The SS checks that the UE does not include the IE "ANR Logging Results Available" in the RRC CONNECTION SETUP COMPLETE message.

The SS release the RRC connection and UE enters IDLE mode state.

SS configures its downlink transmission power settings according to columns "T1" in table 8.7.1.5-1 to satisfy the reconfigured RSCP absolute threshold.

The SS waits T_{wait} seconds to verify that UE performs logging of ANR measurements of Cell 2. See note 3.

The SS page the UE to establish an RRC connection. The SS checks that the UE includes the IE "ANR Logging Results Available" in the RRC CONNECTION SETUP COMPLETE message.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks

the logged ANR report in the UE INFORMATION RESPONSE message includes an Intra-UTRA ANR measurement for Cell 2. The UE clear the logged ANR configuration and stored logged measurement results.

The SS release the RRC connection and UE enters IDLE mode state. The SS waits T_{wait} seconds to verify that UE does not perform logging of ANR measurements of Cell 2.

The SS page the UE to establish an RRC connection. The SS checks that the UE does not include the IE "ANR Logging Results Available" in the RRC CONNECTION SETUP COMPLETE message.

Note 1: CPICH Ec of Cell 2 is -80dBm/3.84 MHz, which exceeds the configured Absolute Threshold for RSCP of -100 dBm triggering the ANR logging of Cell 2.

Note 2: CPICH Ec of Cell 2 is -80dBm/3.84 MHz, which is less than the re-configured Absolute Threshold for RSCP of -70dBm. The UE shall not trigger any ANR logging of Cell 2.

Note 3: CPICH Ec of Cell 2 is -60dBm/3.84 MHz, which exceeds the configured Absolute Threshold for RSCP of -70 dBm triggering the ANR logging of Cell 2.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11 for Cell 1

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is not listed as intra- or inter-frequency neighbour cell.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A1 (RSCP Absolute Threshold = -100dBm).

RRC CONNECTION SETUP COMPLETE (Step 9)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is set to TRUE.

LOGGING MEASUREMENT CONFIGURATION (Step 11)

Use same message sub-clause 9.1.1 of TS 34.108 for condition A1 (RSCP Absolute Threshold), with the exception of the following IEs:

Information Element	Value/remark
Logged Measurements Configuration Info	
Logged ANR configuration Info	
- Intra-UTRA ANR	
- CHOICE *Absolute Threshold*	RCSP for ANR
- RSCP	-70dBm
- Logging Relative *Threshold*	Not present
...	

RRC CONNECTION SETUP COMPLETE (Step 18)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is absent

RRC CONNECTION SETUP COMPLETE (Step 27)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is set to TRUE.

UE INFORMATION REQUEST (Step 29)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 30)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Condition	Value/remark	Version
Logged ANR Report Info			Rel-10
- Serving PLMN Identity		Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell		Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*		UTRAN	
- PLMN Identity		Checked to see that it is identical to the PLMN identify of Cell 2	
- Cell Identity		Checked to see that it is identical to the Cell ID of Cell 2	
- UARFCN		Checked to see that it is identical to the UARFCN of Cell 2	

Information Element	Condition	Value/remark	Version
- Cell parameter ID	TDD	This IE is checked to be present	
- Primary Scrambling Code	FDD	This IE is checked to be present	

Condition	Explanation	Version
FDD	Configuring of IE for FDD cell	Rel-10
TDD	Configuring of IE for TDD cell	Rel-10

RRC CONNECTION SETUP COMPLETE (Step 37)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is absent

8.7.1.5.5 Test requirement

At step 9 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE “ANR Logging Results Available” (TP1).

At step 18 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH not including the IE “ANR Logging Results Available” (TP1).

At step 27 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE “ANR Logging Results Available” (TP1).

At step 30 the UE shall transmit a UE INFORMATION RESPONSE message including an ANR measurements for cell 2 (TP1,TP2).

At step 37 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH. The IE “ANR Logging Results Available” shall not be present (TP2).

8.7.1.5a Void

8.7.2 Inter-RAT

8.7.2.1 Inter-RAT/ ANR measurement, logging and reporting / GERAN cell

8.7.2.1.1 Definition and applicability

All UEs supporting UTRA FDD or UTRA TDD, GERAN and UTRAN ANR measurements.

8.7.2.1.2 Conformance requirement

[TS 25.304, 5.8.2.2 (TP2)]

If configured to perform inter-RAT ANR via the Logging Measurement Configuration message, the UE may perform inter-RAT ANR logging only when:

- after inter-RAT cell reselection from E-UTRAN or GSM to a normal UTRAN cell belonging to the PLMN or the list of Equivalent PLMNs where the Logging Measurement Configuration is received.

During the inter-RAT ANR process, the UE may log the corresponding information of the previously camped E-UTRAN or GSM cell as specified in TS 25.331.

[TS 25.331, clause 7.2.1 (TP2)]

The UE shall perform ANR measurements and logging as specified in [4], when logged ANR measurement is configured.

[TS 25.331, clause 8.1.3.6 (TP3)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

…

If the values are identical, the UE shall:

…

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

2> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> include IE "ANR Logging Results Available".

[TS 25.331, 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

...

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

...

[TS 25.331, 8.5.64.3 (TP4)]

UE Shall:

...

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, 8.5.67.2 (TP2,TP4)]

While T327 is running, the UE shall:

1> perform the ANR measurements and evaluation on UTRAN, E-UTRAN or GERAN cells in accordance with the following:…

...

2> if IE "Inter-RAT ANR for GSM Indicator" is included in variable LOG_ANR_CONFIG:

3> if the UE reselected from a GSM cell to an UTRA cell (serving cell) that is part of the PLMN which is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE; and

3> if the previously camped GSM cell is not included in the neighbour cell list in SIB11/11bis/12 of the serving cell; and

3> if the serving cell is not a CSG cell; and

3> if the serving cell and GSM cell, not included in the neighbour cell list, together have not earlier been stored by UE in an entry of "Logged ANR Report Info" in the LOG_ANR_REPORT_VARIABLE:

4> log the ANR informaton into the variable LOG_ANR_REPORT_VARIABLE, as follows:

5> set the IEs "Serving PLMN Identity" to indicate the IE "PLMN Identity" included in MIB and "Serving Cell" to indicate cell identity of the serving cell;

5> set the IE "PLMN Identity", "Cell Identity" and "LAC" to indicate global cell identity of this previously camped GSM set cell;

5> set the IE "BSIC", "BCCH ARFCN" and "Band Indicator" of this previously camped GSM set cell.

Reference

3GPP TS 25.304 clauses 5.8.2.2; 3GPP TS 25.331 clauses 7.2.1, 8.1.3.6, 8.5.63.3, 8.5.64.3, 8.5.67.2

8.7.2.1.3 Test purpose

1. To verify that the UE correctly reads “Logged ANR configuration Info” in LOGGING MEASUREMENT CONFIGURATION message for Inter-RAT ANR case when GSM Indicator is configured.
2. To verify that the UE performs Inter-RAT ANR measurement for GERAN cells not included in the inter-RAT neighbour cell list of the serving cell.
3. To verify that the UE includes IE “ANR Logging Results Available” in RRC CONNECTION SETUP message after returning from GERAN cell and UE has logged Inter-RAT ANR measurement for GERAN cell.
4. To verify that the UE reports ANR logged data for GSM cell.

8.7.2.1.4 Method of test

Initial Condition

System Simulator: 3 cells belonging to different routing areas – cell 1, cell 2 and cell 9 are active. Cell 1 and 2 are UTRA FDD or TDD cells. Cell 9 is GSM cells. GPRS. 51.010 clauses 20.22 and 40.1.1 shall be referenced for the default parameters of cell 9. The PLMN of Cell 1 and Cell 2 are the same.

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 1: See specific message contents (cell 9 is listed as inter-RAT neighbour cell).

SYSTEM INFORMATION BLOCK TYPE 11 of Cell 2: See specific message contents (cell 9 is not listed as inter-RAT neighbour cell).

UE: CELL_DCH (state 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.7.2.1-1

Parameter	Unit	Cell 1 (UTRA)					Cell 2 (UTRA)				
		T0	T1	T2	T3	T4	T0	T1	T2	T3	T4
UTRA RF Channel Number		Mid Range Test Frequency					Mid Range Test Frequency				
CPICH Ec (FDD)	dBm/3.84MHz	-60	-80	-60	-80	-80	-80	-80	-80	-80	-60
PCCPCH_RSCP (TDD)	dBm	-60	-80	-60	-80	-80	-80	-80	-80	-80	-60

Table 8.7.2.1-2

Parameter	Unit	Cell 9 (GSM)				
		T0	T1	T2	T3	T4
Test Channel		1				
RF Signal Level	dBm	-90	-48	-90	-48	-90
RXLEV_ACCESS_MIN	dBm	-100				
FDD_Qmin	dB	-20				
FDD_Qoffset	dBm	0				

Table 8.7.2.1-1 and table 8.7.2.1-2 illustrate the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” and “T2” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is initially brought to CELL_DCH state in Cell 1. The system information block 11 message transmitted in Cell 1 list Cell 9 in the inter-RAT cell info lists.

The SS configures UE to perform inter-RAT ANR measurements for GERAN by sending a LOGGING MEASUREMENT CONFIGURATION message to the UE.

The SS releases the RRC connection and UE enters IDLE mode state.

The SS configures its downlink transmission power settings according to columns "T1" in tables 8.7.2.1-1 and 8.7.2.1-2. The UE performs cell re-selection to Cell 9 and performs Routing Area Update.

The SS configures its downlink transmission power settings according to columns "T2" in tables 8.7.2.1-1 and 8.7.2.1-2. The UE performs cell re-selection to Cell 1 and performs Routing Area Update.

The SS page the UE to establish an RRC connection. The SS checks that the UE does not includes the IE “ANR Logging Results Available” in the RRC CONNECTION SETUP COMPLETE message.

The SS configures its downlink transmission power settings according to columns "T3" in tables 8.7.2.1-1 and 8.7.2.1-2. The UE performs cell re-selection to Cell 9 and performs Routing Area Update.

The SS configures its downlink transmission power settings according to columns "T4" in tables 8.7.2.1-1 and 8.7.2.1-2. The UE performs cell re-selection to Cell 2 and performs Routing Area Update.

The SS page the UE to establish an RRC connection. The SS checks that the UE includes the IE “ANR Logging Results Available” in the RRC CONNECTION SETUP COMPLETE message.

The SS transmits a UE INFORMATION REQUEST message to retrieve the ANR logging measurements from the UE. The UE respond by a UE INFORMATION RESPONSE message including logged ANR measurements, The SS checks the logged ANR report in the UE INFORMATION RESPONSE message includes an Inter-RAT ANR measurement for Cell 9.

Expected Sequence

Specific Message Contents

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in Cell 1
2	←		LOGGING MEASUREMENT CONFIGURATION	SS transmits this message in Cell 1 on downlink DCCH using AM RLC configuring the UE to perform Inter-RAT ANR measurements for GERAN cell.
3	←		RRC CONNECTION RELEASE	
4	→		RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 1.
5	SS			The SS switches its downlink transmission power settings to columns "T1" in tables 8.7.2.1-1 and 8.7.2.1-2.
6	→		CHANNEL REQUEST	The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE Routing Area Update procedure)
7	←		IMMEDIATE ASSIGNMENT	Sent on AGCH.
8	SS			The SS completes the Routing Area Update procedure requested by the UE.
9			Void	
10	SS			The SS switches its downlink transmission power settings to columns "T2" in tables 8.7.2.1-1 and 8.7.2.1-2.
11	→		RRC CONNECTION REQUEST	The SS waits for RRC CONNECTION REQUEST on CCCH from the UE on Cell 1 (triggered by UE Routing Area Update procedure).
12	←		RRC CONNECTION SETUP	
13	→		RRC CONNECTION SETUP COMPLETE	Note 1
14	SS			The SS completes the Routing Area Update procedure requested by the UE.
15	←		RRC CONNECTION RELEASE	
16	→		RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 1.
17	←		PAGING TYPE1	Sent on Cell 1.
18	→		RRC CONNECTION REQUEST	
19	←		RRC CONNECTION SETUP	
20	→		RRC CONNECTION SETUP COMPLETE	SS checks that the IE “ANR Logging Results Available” is not included. Note 1
20A	→		SERVICE REQUEST	GMM
21	←		RRC CONNECTION RELEASE	
22	→		RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 1.
23	SS			The SS switches its downlink transmission power settings to columns "T3" in tables 8.7.2.1-1 and 8.7.2.1-2.

24	→	CHANNEL REQUEST	The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE Routing Area Update procedure)
25	←	IMMEDIATE ASSIGNMENT	Sent on AGCH.
26	SS		The SS completes the Routing Area Update procedure requested by the UE.
27		Void	
28	SS		The SS switches its downlink transmission power settings to columns "T4" in tables 8.7.2.1-1 and 8.7.2.1-2.
29	→	RRC CONNECTION REQUEST	The SS waits for RRC CONNECTION REQUEST on CCCH from the UE on Cell 2 (triggered by UE Routing Area Update procedure).
30	←	RRC CONNECTION SETUP	
31	→	RRC CONNECTION SETUP COMPLETE	Note 1
32	SS		The SS completes the Routing Area Update procedure requested by the UE.
33	←	RRC CONNECTION RELEASE	
34	→	RRC CONNECTION RELEASE COMPLETE	UE moves to IDLE mode state in Cell 2.
35	←	PAGING TYPE1	Sent on Cell 2.
36	→	RRC CONNECTION REQUEST	
37	←	RRC CONNECTION SETUP	
38	→	RRC CONNECTION SETUP COMPLETE	SS checks that the IE “ANR Logging Results Available” is included. Note 1
38A	→	SERVICE REQUEST	GMM
39	←	UE INFORMATION REQUEST	
40	→	UE INFORMATION RESPONSE	SS checks that the "Logged ANR Report Info List" includes a GERAN Inter-RAT ANR measurement for Cell 9

Note 1: The SS checking if the IE “ANR Logging Results Available” is included or not in the RRC CONNECTION COMPLETE message is done in steps 20 and 38 and not in steps 13 and 31 as the UE may not log the GSM cell in the "Logged ANR Report Info List" until after the Routing Area Update procedure has been completed.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 11 Cell 1

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 9 is listed as inter-RAT neighbour cell for cell 1.

SYSTEM INFORMATION BLOCK TYPE 11 Cell 2

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 3 is not listed as inter-RAT neighbour cell for cell 2.

LOGGING MEASUREMENT CONFIGURATION (Step 2)

Use the LOGGING MEASUREMENT CONFIGURATION message as defined in [9] (TS 34.108) Clause 9 for condition A1 (RSCP Absolute Threshold), with the exception of the following IEs:

Information Element	Value/remark

Logged ANR configuration Info - Inter-RAT ANR for GSM Indicator	 TRUE

RRC CONNECTION SETUP COMPLETE (Step 20)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is not present.

RRC CONNECTION SETUP COMPLETE (Step 38)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark
ANR Logging Results Available	Check that IE is set to TRUE.

UE INFORMATION REQUEST (Step 39)

Use the UE INFORMATION REQUEST message as defined in [9] (TS 34.108) Clause 9 for condition A1 (requesting Logged ANR Report).

UE INFORMATION RESPONSE (Step 40)

Check to see if the same message type found in [9] (TS 34.108) Clause 9 is received, with the following exceptions:

Information Element	Value/remark	Version
Logged ANR Report Info		Rel-10
- Serving PLMN Identity	Checked to see that it is identical to the PLMN identity of Cell 1	
- Serving Cell	Checked to see that it is identical to the Cell ID of Cell 1	
- CHOICE *logged cell info*	GSM	
- PLMN Identity	Checked to see that it is identical to the PLMN identify of Cell 9	
- LAC	Checked to see that it is identical to the LAC of Cell 9	

8.7.2.1.5 Test requirement

At step 20 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH. IE “ANR Logging Results Available” shall not be included. (TP2)

At step 38 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE “ANR Logging Results Available” (TP2, TP3).

At step 40 the UE shall transmit a UE INFORMATION RESPONSE message including an GERAN Inter-RAT ANR measurement for Cell 9 (TP1,TP2,TP4).

8.7.2.1a Void

9 Elementary procedures of mobility management

The tests are based on TS 24.008.

In this clause, when the expected sequence require that "a mobile originated CM connection is attempted", it shall be for a service other than emergency call.

In this clause, an initial CM message is either a SETUP message, a REGISTER message or a CP-DATA message (in that case the acknowledged mode of operation on SAPI 3 will be established and this message will be sent on SAPI 3).

All tests in this clause shall only be performed in Network Mode of Operation II, unless specifically specified otherwise in individual sub-clauses.

All test cases in this clause shall be performed either in CS mode or in CS and PS mode.

If the test cases are to be executed in CS and PS mode the System Simulator behaviour in PS mode should reflect the behaviour of a real network. This means that test cases which initially force the UE into the MM IDLE UPDATED state should force the UE in parallel to enter the GMM REGISTERED state. Test cases which initially reject a UE's attempt to get CS registered, should as well reject a UE's attempt to get PS registered.

The following consequences arise from supporting this type of behaviour:

1. GMM ATTACH REQUEST messages received in the preamble should be accepted and bring the UE into the GMM REGISTERED state

2. subsequent GMM ATTACH REQUEST messages received in the test body should be rejected with Cause value = 7 'GPRS services not allowed' (see NOTE).

3. within the test body GMM ROUTING AREA UPDATE REQUEST messages may be received and should be acknowledged resp. rejected the same way as the corresponding LOCATION AREA UPDATING REQUEST messages (see NOTE).

4. GMM DETACH REQUEST messages received within the test body should be acknowledged

5. if, at the beginning of a test case, a UE attempts to register in CS mode, and this attempt is rejected, the parallel attempt to register in PS mode should be rejected with the same cause as used to reject the CS registration

In PS mode the UE may attach automatically or not. This should be accounted for by the System Simulator. A manual Attach UE will not be triggered to perform PS registration for subsequent switch on of the UE, in the test body.

Any GMM signalling shown in the Expected Sequence Tables in the following sections is purely informative and shall not be considered to be part of the test purpose or test requirement.

NOTE: A Rel-8 UE supporting E-UTRA and CS voice emergency call may send 'signallingConnectionReleaseIndication' upon receipt of an ATTACH REJECT or a ROUTING AREA UPDATE REJECT message with one of the following causes: 'Illegal MS (cause #3)', 'GPRS service not allowed (cause #7)' or 'GPRS services and non-GPRS services not allowed (cause #8)'.

9.1 TMSI reallocation

The intention of the TMSI Reallocation procedure is to assign a new temporary identity for the UE. If the message is not understood by the UE, the network could not establish a link to the UE. As this is a common MM procedure, it can be initiated at any time.

9.1.1 Definition

9.1.2 Conformance requirement

1) A UE shall acknowledge a new TMSI when explicitly allocated during a location updating procedure or an incoming call.

2) The TMSI shall be updated on the USIM when the UE is correctly deactivated in accordance with the manufacturer's instructions.

3) A UE shall answer paging with this TMSI and includes it in the PAGING RESPONSE message.

Reference(s)

TS 24.008 clause 4.3.1.

9.1.3 Test purpose

To verify that the UE is able to receive and acknowledge a new TMSI by means of an explicit TMSI reallocation procedure.

To verify that the UE has stored the TMSI in a non-volatile memory.

The implicit reallocation procedure is tested in clause 9.4.1.

9.1.4 Method of test

Initial conditions

- System Simulator:
  - two cells A and B, belonging to different location areas a and b, default parameters.
  - The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to not allowing IMSI Attach/Detach in both the cells.
- User Equipment:
  - the UE has valid TMSI (= TMSI1), CKSN, CK, IK. It is "idle updated" on cell B.

Related ICS/IXIT statement(s)

Switch off button Yes/No.

Way to bring the UE into service.

Test Procedure

The UE is paged in cell B and the security mode is established. An explicit TMSI reallocation procedure is performed. The RRC CONNECTION is released. The UE is switched off and then its power supply is interrupted for 10 s. The power supply is resumed and then the UE is switched on and allowed sufficient time to guarantee that the UE is in service (listening to its paging subchannel). The system simulator then checks, by paging, whether the UE has stored the received TMSI.

The UE is made to select cell A. A normal location updating procedure is performed in cell A. An explicit TMSI reallocation procedure is performed and then the location updating procedure is accepted by the SS. The system simulator checks, by paging, whether the UE has stored the allocated TMSI.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B.				
1	←		Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 "Initial UE identity" = TMSI1. Establishment Cause: Terminating Conversation Call.
2	→		PAGING RESPONSE	"Mobile identity" =TMSI1
2a	←		AUTHENTICATION REQUEST	
2b	→		AUTHENTICATION RESPONSE	
3		SS		The SS starts integrity protection.
4			Void	
5	←		TMSI REALLOCATION COMMAND	"Mobile identity" = new TMSI (TMSI2) different from TMSI 1.
6	→		TMSI REALLOCATION COMPLETE	
7		SS		The SS releases the RRC connection.
8			Void	
9	UE			If possible (see ICS), the UE is switched off. A Detach Request can be received in PS mode.
9a	UE			The power supply is interrupted for 10 s.
10	UE			The UE is switched on. The subsequent GMM attach should be rejected if received in the PS mode.
11		SS		The SS waits for 5 seconds to guarantee that the UE is in service (listening to its paging subchannel).
12	←		Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 "Initial UE identity" = TMSI2. Establishment Cause: Terminating Conversation Call.
13	→		PAGING RESPONSE	"Mobile identity" =TMSI2.
14		SS		The SS releases the RRC connection. The following messages are sent and shall be received on cell A
15			Void	
16		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell" (see note)
17		SS	RRC CONNECTION REQUEST	The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
18			Void	
19			Void	
20	→		LOCATION UPDATING REQUEST	location updating type = normal, "ciphering key sequence number" = CKSN, LAI = b, "mobile identity" = TMSI2.
20a	←		AUTHENTICATION REQUEST	
20b	→		AUTHENTICATION RESPONSE	
20c		SS		The SS starts integrity protection.
20d			Void	
21	←		TMSI REALLOCATION COMMAND	TMSI = TMSI1.
22	→		TMSI REALLOCATION COMPLETE	
23	←		LOCATION UPDATING ACCEPT	This message does not contain the optional Mobile Identity field.
24		SS		The SS releases the RRC connection.
25			Void	
25a				The SS waits for 5 seconds to allow the UE to become "idle updated" on cell A.
26	←		Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 "Initial UE identity" IE contains the new TMSI (= TMSI1). "Establishment cause": Terminating Conversational Call.
27	→		PAGING RESPONSE	"Mobile identity" IE contains the new TMSI (= TMSI1).
28		SS		The SS releases the RRC connection.
29			Void	

NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

Specific message contents

None.

9.1.5 Test requirement

At step 5 the UE shall receive and acknowledge a new TMSI (TMSI2) and has stored that in the USIM, and the UE is switched off and on after step 9 and 10.

At step 13 the UE shall transmit a new TMSI2 and includes it in the PAGING RESPONSE message.

At step 27 the UE shall answer paging with this TMSI1 and includes it in the PAGING RESPONSE message.

9.2 Authentication

The purpose of this procedure is to verify the user identity. A correct response is essential to guarantee the establishment of the connection. If not, the connection will drop.

The SS shall be able to handle vectors of AUTN, RAND, CK, IK, AUTS and XRES in a similar way as the MSC/BSS entities. The SS and test USIM shall incorporate a test algorithm for generating RES and CK, IK from RAND, AUTN and IK which operates as described in TS 34.108 clause 8.1.2.

9.2.1 Authentication accepted

9.2.1.1 Definition

9.2.1.2 Conformance requirement

1) A UE shall correctly respond to an AUTHENTICATION REQUEST message by sending an AUTHENTICATION RESPONSE message with the RES information field set to the same value as the one produced by the authentication algorithm in the network.

2) A UE shall indicate in a PAGING RESPONSE message the ciphering key sequence number which was allocated to it through the authentication procedure.

Reference(s)

TS 24.008 clauses 4.3.2.2 and 4.3.2.4.

9.2.1.3 Test purpose

1) To check that a UE correctly responds to an AUTHENTICATION REQUEST message by sending an AUTHENTICATION RESPONSE message with the RES information field set to the same value as the one produced by the authentication algorithm in the network.

2) To check that a UE indicates in a PAGING RESPONSE message the ciphering key sequence number which was allocated to it through the authentication procedure.

9.2.1.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has valid TMSI, CKSN (CKSN1), CK, IK. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Test Procedure

The UE is paged. After the UE has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure and checks the value RES sent by the UE in the AUTHENTICATION RESPONSE message. The RRC CONNECTION is released. The UE is paged and the SS checks the value of the ciphering key sequence number sent by the UE in the PAGING RESPONSE message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call.
2	→		PAGING RESPONSE	CKSN = CKSN1
3	←		AUTHENTICATION REQUEST	The SS initiates authentication with CKSN2 different from CKSN1.
4	→		AUTHENTICATION RESPONSE	"Auth. parameter RES" IE shall be bit exact with the value as produced by the authentication algorithm.
5		SS		The SS releases the RRC connection.
6			Void	
6a				The SS waits for 5 seconds to guarantee that the UE is in service.
7			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call.
8	→		PAGING RESPONSE	"Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST message (= CKSN2).
9		SS		The SS releases the RRC connection.
10			Void	

Specific message contents

None.

9.2.1.5 Test requirement

1) At step 4 the UE shall send an AUTHENTICATION RESPONSE message with the RES information field set to the same value as the XRES calculated by the SS.

2) At step 8 the UE shall indicate in a PAGING RESPONSE message the ciphering key sequence number which was allocated to it through the authentication procedure.

9.2.2 Authentication rejected by the network

9.2.2.1 Definition

9.2.2.2 Conformance requirement

1) After reception of an AUTHENTICATION REJECT message the UE shall:

   1.1 not perform normal location updating;

   1.2 not perform periodic location updating;

   1.3 not respond to paging with TMSI;

   1.4 reject any request from CM entity for MM connection except for emergency call;

   1.5 not perform IMSI detach if deactivated.

2) After reception of an AUTHENTICATION REJECT message the UE, if it supports emergency speech call, shall accept a request for an emergency call by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call" and include an IMEI as mobile identity in the CM SERVICE REQUEST message.

3) After reception of an AUTHENTICATION REJECT message the UE shall delete the stored LAI, CKSN and TMSI.

Reference(s)

TS 24.008 clause 4.3.2.5.

9.2.2.3 Test purpose

1) To check that ,after reception of an AUTHENTICATION REJECT message, the UE:

   1.1 does not perform normal location updating;

   1.2 does not perform periodic location updating;

   1.3 does not respond to paging with TMSI;

   1.4 rejects any request from CM entity for MM connection except for emergency call;

   1.5 does not perform IMSI detach if deactivated.

2) To check that, after reception of an AUTHENTICATION REJECT message the UE, if it supports emergency speech call, accepts a request for an emergency call by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call" and includes an IMEI as mobile identity in the CM SERVICE REQUEST message.

3) To check that, after reception of an AUTHENTICATION REJECT message and after having been deactivated and reactivated, the UE performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN.

9.2.2.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b;
  - IMSI attach/detach is allowed in both cells;
  - the T3212 time-out value is 1/10 hour in both cells.
- User Equipment:
  - the UE has valid TMSI, CKSN, CK and IK. It is "idle updated" on cell B.

Related ICS/IXIT statement(s)

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of emergency speech call Yes/No.

Test procedure

The SS rejects an authentication. The RRC CONNECTION is released. The SS checks that the UE has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if USIM detachment is performed, switch off is performed, or the power is removed, depending on the UE (see ICS/IXIT).

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B				
1			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call..
2	→		PAGING RESPONSE	"Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST.
3	←		AUTHENTICATION REQUEST	CKSN in this AUTHENTICATION REQUEST should be different from that received in PAGING RESPONSE message.
4	→		AUTHENTICATION RESPONSE	
5	←		AUTHENTICATION REJECT	
6		SS		The SS releases the RRC connection.
7			Void	
8	←		PAGING TYPE 1	The UE is paged in cell B. "UE identity " IE contains TMSI. Paging Cause: Terminating Conversational Call.
9	UE			The UE shall ignore this message. This is verified during 3 s.
10		SS		The SS waits for at least for 15 s.
11	UE			A MO CM connection is attempted.
12	UE			The UE shall not initiate an RRC connection establishment on cell A or cell B. This is checked during 30 s.
13	UE			If the UE supports emergency speech call (see ICS), an emergency call is attempted.
14		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Emergency call".
15			Void	
16			Void	
17	→		CM SERVICE REQUEST	"CM service type": Emergency call establishment. "Mobile identity": type of identity is set to IMEI.
18	←		CM SERVICE ACCEPT	
19	→		EMERGENCY SETUP	
20	←		RELEASE COMPLETE	"Cause" = unassigned number.
21		SS		The SS releases the RRC connection.
22			Void	
The following messages are sent and shall be received on cell A.				
23		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note)
24	UE			The UE performs cell reselection according to procedure as specified in (this however is not checked until step 29). The UE shall not initiate an RRC connection establishment on cell A or on cell B.
25		SS		The SS waits at least 7 minutes for a possible periodic updating.
26	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B.
27	UE			If possible (see ICS) USIM detachment is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed.
28	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is checked during 3 s.
29	UE			Depending on what has been performed in step 27 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode.
30		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
31			Void	
32			Void	

Step	Direction		Message	Comments
	UE	SS		
33	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = no key available, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE).
34	←		AUTHENTICATION REQUEST	CKSN in this AUTHENTICATION REQUEST should be different from that received in LOCATION UPDATING REQUEST message.
35	→		AUTHENTICATION RESPONSE	
36	←		LOCATION UPDATING ACCEPT	"Mobile Identity" = TMSI.
37	→		TMSI REALLOCATION COMPLETE	
38		SS		The SS releases the RRC connection.
39			Void	
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.2.2.5 Test requirement

1)

1.1 At step 24 the UE shall not send any RRC CONNECTION REQUEST on cell A or on cell B.

1.2 At step 26 the UE shall not send any RRC CONNECTION REQUEST on cell A or on cell B.

1.3 At step 9 the UE shall not respond to paging.

1.4 At step 12 the UE shall not send any RRC CONNECTION REQUEST on cell A or on cell B.

1.5 At step 28 the UE shall not send any RRC CONNECTION REQUEST on cell A or on cell B.

2) At step 14 the UE shall send a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call"; and at step 17 the UE shall send a CM SERVICE REQUEST message with the "CM service type" set to "Emergency call establishment".

3) At step 33 the UE shall perform location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN.

9.2.3 Authentication rejected by the UE (MAC code failure)

9.2.3.1 Definition

Following a UMTS authentication challenge, the UE may reject the core network, on the grounds of an incorrect AUTN parameter (see TS 33.102).

If the UE considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid, it shall send an AUTHENTICATION FAILURE message to the network, with the reject cause 'MAC failure'.

9.2.3.2 Conformance requirement

1) The UE shall respond to an AUTHENTICATION REQUEST message, with a MAC code failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'MAC failure' and start timer T3214. When an AUTHENTICATION REQUEST message containing an invalid MAC has been received by the UE from the network, the UE shall stop any of the retransmission timers that are running (i.e. T3210, T3220 or T3230).

2) Upon receipt of an AUTHENTICATION FAILURE message from the UE, with reject cause 'MAC failure' the network may initiate the identification procedure. Upon reception of an IDENTITY REQUEST message, the UE shall identify itself by sending an IDENTITY RESPONSE message including the IMSI to the network. The

network may then check that the TMSI originally used in the authentication challenge corresponded to the correct IMSI.

3) If the TMSI/IMSI mapping in the network was incorrect, the network should respond by sending a new AUTHENTICATION REQUEST message to the UE. Upon receiving the second AUTHENTICATION REQUEST message from the network, the UE shall stop the timer T3214, if running, and then process the challenge information as normal. Upon successfully validating the network (an AUTHENTICATION REQUEST that contains a valid MAC in the AUTN parameter is received), the UE shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3210, T3220 or T3230) , if they were running and stopped when the UE received the first AUTHENTICATION REQUEST message containing an incorrect MAC.

Reference(s)

TS 24.008 clauses 4.3.2.5.1 and 4.3.2.6 (c)

9.2.3.3 Test purpose

1) To check that a UE shall correctly respond to an AUTHENTICATION REQUEST message, with a MAC code failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'MAC failure'.

2) To check that upon reception of an IDENTITY REQUEST message, requesting for IMSI, the UE identifies itself by sending an IDENTITY RESPONSE message including the IMSI to the network.

3) To check that upon receiving the second AUTHENTICATION REQUEST message from the network, the UE shall stop the timer T3214, if running, and then process the challenge information as normal. To check that upon successfully validating the network (an AUTHENTICATION REQUEST that contains a valid MAC is received), the UE sends the AUTHENTICATION RESPONSE message to the network.

9.2.3.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has valid TMSI, CKSN (CKSN1), CK, IK. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Test procedure

The UE rejects an authentication. The AUTHENTICATION FAILURE is sent by UE. Upon receipt of the AUTHENTICATION FAILURE message the SS initiates identification procedure. The UE responds to the SS by sending IDENTITY RESPONSE message. The SS sends AUTHENTICATION REQUEST message with correct AUTN parameter.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call.
2	→		PAGING RESPONSE	CKSN = CKSN1
3	←		AUTHENTICATION REQUEST	With AUTN parameter having a MAC value different from what is calculated in 34.108 clause 8.1.2.1 step 4.
4	→		AUTHENTICATION FAILURE	With reject cause "MAC failure"
5	←		IDENTITY REQUEST	With identity type IMSI
6	→		IDENTITY RESPONSE	With IMSI in Mobile Identity IE
7	←		AUTHENTICATION REQUEST	With the AUTN parameter having a valid MAC code, see 34.108 clause 8.1.2.1 step 4.
8	→		AUTHENTICATION RESPONSE	Authentication Response Parameter IE (RES) shall be bit exact with the value as produced by the authentication algorithm.
9	←		RRC CONNECTION RELEASE	
10	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.2.3.5 Test requirement

1) At step 4 the UE shall send AUTHENTICATION FAILURE message with reject cause set to "MAC failure".

2) At step 6 the UE shall send an IDENTITY RESPONSE message including the IMSI.

3) At step 8 the UE shall send an AUTHENTICATION RESPONSE message.

9.2.4 Authentication rejected by the UE (SQN failure)

9.2.4.1 Definition

Following a UMTS authentication challenge, the UE may reject the core network, on the grounds of an incorrect AUTN parameter (see TS 33.102).

If the UE considers the SQN (supplied by the core network in the AUTN parameter) to be out of range, it shall send an AUTHENTICATION FAILURE message to the network, with the reject cause 'Synch failure' and a re-synchronisation token AUTS provided by the USIM (see TS 33.102).

9.2.4.2 Conformance requirement

1) The UE shall respond to an AUTHENTICATION REQUEST message, with an SQN failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'Synch failure' and start the timer T3216 and stop any of the retransmission timers that are running (i.e. T3210, T3220 or T3230). Upon receipt of an AUTHENTICATION FAILURE message from the UE with the reject cause 'synch failure,' the network shall use the returned AUTS parameter from the authentication failure parameter IE in the AUTHENTICATION FAILURE message, to re-synchronise.

2) Upon successfully validating the network (a second AUTHENTICATION REQUEST is received which contains a valid SQN in the AUTN parameter) while T3216 is running, the UE shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3210, T3220 or T3230), if they were running and stopped when the UE received the first AUTHENTICATION REQUEST message containing an invalid SQN.

Reference(s)

TS 24.008 clause 4.3.2.5.1, 4.3.2.6 (d)

9.2.4.3 Test purpose

1) To check that a UE shall correctly respond to an AUTHENTICATION REQUEST message, with an SQN failure in the AUTN parameter, by sending an AUTHENTICATION FAILURE message with the reject cause 'Synch failure'.

2) To check that upon successfully validating the network (a second AUTHENTICATION REQUEST is received which contains a valid SQN) while T3216 is running, the UE shall send the AUTHENTICATION RESPONSE message to the network.

9.2.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has valid TMSI, CKSN (CKSN1), CK, IK. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Test procedure

The SS sends an AUTHENTICATION REQUEST having an invalid SQN code (i.e. uses the predefined $AMF_{RESYNCH}$ value to trigger the SQN re-synchronisation procedure, see TS 34.108 clause 8.1.2.2) to the UE. The SS verifies that the UE rejects the authentication.

The SS sends a second AUTHENTICATION REQUEST with a valid SQN code (i.e. uses an AMF value different from $AMF_{RESYNCH}$ value, see TS 34.108 clause 8.1.2.2). The SS checks that the UE accepts the authentication request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call.
2	→		PAGING RESPONSE	CKSN = CKSN1
3	←		AUTHENTICATION REQUEST	with the AMF information field set to $AMF_{RESYNCH}$ value to trigger SQN re-synchronisation procedure in test USIM, see TS 34.108 clause 8.1.2.2.
4	→		AUTHENTICATION FAILURE	including the AUTS parameter and with the reject cause set to 'Synch failure'
5	←		AUTHENTICATION REQUEST	with the AMF information field set to value different from $AMF_{RESYNCH}$ value to cause test USIM to treat SQN value as valid, see TS 34.108 clause 8.1.2.2.
6	→		AUTHENTICATION RESPONSE	*"Auth. parameter RES" IE shall be bit exact with the value as produced by the authentication algorithm.*
7	←		RRC CONNECTION RELEASE	
8	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.2.4.5 Test requirement

1) At step 4 the UE shall reject an authentication and the AUTHENTICATION FAILURE is sent to SS with reject cause "Synch failure".

2) At step 6 the UE shall send an AUTHENTICATION RESPONSE message with the RES information field set to the same value as the XRES calculated by SS.

9.2.5 Authentication rejected by the UE / fraudulent network

9.2.5.1 Definition

9.2.5.2 Conformance requirement

R99 and REL-4:

1. It can be assumed that the source of the authentication challenge is not genuine (authentication not accepted by the UE) if any of the following occur:

   - After sending the AUTHENTICATION FAILURE message with the reject cause 'MAC failure' the timer T3214 expires;

   - Upon receipt of the second AUTHENTICATION REQUEST while T3214 is running and the MAC value cannot be resolved.

     When it has been deemed by the UE that the source of the authentication challenge is not genuine (i.e. authentication not accepted by the UE), the UE shall behave as described in 3GPP TS 24.008 clause 4.3.2.6.1.

2. In addition to the cases specified in 3GPP TS 24.008 subclause 4.3.2.6, the UE may deem that the network has failed the authentication check after any combination of three consecutive authentication failures, regardless whether 'MAC failure', 'invalid SQN', or 'GSM authentication unacceptable' was diagnosed. The authentication failures shall be considered as consecutive only, if the authentication challenges causing the second and third authentication failure are received by the UE, while the timer T3214 or T3216 started after the previous authentication failure is running.

   If the UE deems that the network has failed the authentication check, then it shall request RR or RRC to release the RR connection and the PS signalling connection, if any, and bar the active cell or cells (see 3GPP TS 25.331 and 3GPP TS 04.18).

Reference(s)

3GPP TS 24.008 clauses 4.3.2.6 (c) and 4.3.2.6.1.

REL-5 and later releases:

1. It can be assumed that the source of the authentication challenge is not genuine (authentication not accepted by the UE) if any of the following occur:

   - after sending the AUTHENTICATION FAILURE message with the reject cause "MAC failure" the timer T3214 expires;

   - the UE detects any combination of the authentication failures: "MAC failure", "invalid SQN", and "GSM authentication unacceptable", during three consecutive authentication challenges. The authentication challenges shall be considered as consecutive only, if the authentication challenges causing the second and third authentication failure are received by the UE, while the timer T3214 or T3216 started after the previous authentication failure is running.

     When it has been deemed by the UE that the source of the authentication challenge is not genuine (i.e. authentication not accepted by the UE), the UE shall behave as described in 3GPP TS 24.008 subclause 4.3.2.6.1.

2. If the UE deems that the network has failed the authentication check, then it shall request RR or RRC to release the RR connection and the PS signalling connection, if any, and bar the active cell or cells (see 3GPP TS 25.331 and 3GPP TS 44.018).

Reference(s)

3GPP TS 24.008 clauses 4.3.2.6 (c) and 4.3.2.6.1.

9.2.5.3 Test purpose

R99 and REL-4:

To test UE treating a cell as barred:

1. when the UE receives the second or third AUTHENTICATION REQUEST message with invalid MAC value during the T3214 is running.
2. when the timer T3214 has expired.

REL-5 and later releases:

To test UE treating a cell as barred:

1. when the UE receives the third AUTHENTICATION REQUEST message with invalid MAC value during the T3214 is running.
2. when the timer T3214 has expired.

9.2.5.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on cell A.

Related ICS/IXIT statement(s)

None.

Test procedure

A location updating procedure is initiated in cell B. The SS sends an AUTHENTICATION REQUEST message with invalid MAC value and the UE responds with an AUTHENTICATION FAILURE message. The SS resends an AUTHENTICATION REQUEST message with invalid MAC value.

For R99 and REL-4: The SS waits 30 seconds. If the UE sends an AUTHENTICATION FAILURE message during this time then the SS repeats the authentication procedure a third time and then waits 30 seconds. The UE moves into idle mode and do not make any access attempt on cell B.

For REL-5 and later release: The SS repeats a third time the authentication procedure, again with invalid MAC value in its AUTHENTICATION REQUEST message. The UE moves into idle mode and do not make any access attempt on cell B.

It is checked that the UE shall not attempt to access the network in cell B.

A location updating procedure is initiated in cell A. The SS sends an AUTHENTICATION REQUEST message with invalid MAC value and the UE responds with an AUTHENTICATION FAILURE message. The SS waits T3214 expiry.

It is checked that the UE shall not attempt to access the network in cell A.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages shall be sent and received on Cell B.
1		SS		Set the cell type of cell B to the “Serving cell”. Set the cell type of cell A to the “non-suitable cell”. (see note)
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to “Registration”. If PS mode: a routing area updating procedure should be performed.
3	→		LOCATION UPDATING REQUEST	
4	←		AUTHENTICATION REQUEST	with AUTN parameter having a MAC value different from what is calculated in 34.108 clause 8.1.2.1 step 4.
5	→		AUTHENTICATION FAILURE	with reject cause "MAC failure"
6	←		AUTHENTICATION REQUEST	with AUTN parameter having a MAC value different from what is calculated in 34.108 clause 8.1.2.1 step 4.
7	→		AUTHENTICATION FAILURE	with reject cause "MAC failure" R99 and REL-4: In case message is not received within 30s then the SS should continue from step 10.
8	←		AUTHENTICATION REQUEST	with AUTN parameter having a MAC value different from what is calculated in 34.108 clause 8.1.2.1 step 4. R99 and REL-4: Optional step
9		SS		The SS verifies that the UE does not attempt to access the network for 30s. R99 and REL-4: Optional step
				The following messages shall be sent and received on Cell A
10		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note)
11		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to “Registration”. If PS mode: a routing area updating procedure should be performed.
12	→		LOCATION UPDATING REQUEST	
13	←		AUTHENTICATION REQUEST	with AUTN parameter having a MAC value different from what is calculated in 34.108 clause 8.1.2.1 step 4.
14	→		AUTHENTICATION FAILURE	with reject cause "MAC failure"
15		SS		The SS waits T3214 expiry.
16		SS		The SS verifies that the UE does not attempt to access the network for 30s.
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.2.5.5 Test requirement

For R99 and REL-4 UE:

Alternative 1:

- After step 6, when the UE have received the second AUTHENTICATION REQUEST message with invalid MAC value, the UE shall not attempt to access the network in cell B.

Alternative 2:

- After step6, when the UE have received the second AUTHENTICATION REQUEST message with invalid MAC value while the timer T3214 is running, the UE shall send an AUTHENTICATION FAILURE message with reject cause "MAC failure" to the SS; and
- After step 8, when the UE have received the third AUTHENTICATION REQUEST message with invalid MAC value, the UE shall not attempt to access the network in cell B.

For REL-5 UE:

- After step 6, when the UE have received the second AUTHENTICATION REQUEST message with invalid MAC value while the timer T3214 is running, the UE shall send an AUTHENTICATION FAILURE message with reject cause "MAC failure" to the SS; and
- After step 8, when the UE have received the third AUTHENTICATION REQUEST message with invalid MAC value, the UE shall not attempt to access the network in cell B.

After step 15, when the timer T3214 has expired, the UE shall not attempt to access the network in cell A.

9.3 Identification

The purpose of this procedure is to check that the UE gives its identity as requested by the network. If this procedure does not work, it will not be possible for the network to rely on the identity claimed by the UE.

9.3.1 General Identification

9.3.1.1 Definition

9.3.1.2 Conformance requirement

1) When requested by the network the UE shall send its IMSI.
2) When requested by the network the UE shall send the TMSI which it was previously allocated.
3) When requested by the network the UE shall send its IMEI as stored in the UE.
4) When requested by the network the UE shall send its IMEISV as stored in the UE.

Reference(s)

TS 24.008 clause 4.3.3.

9.3.1.3 Test purpose

1) To verify that the UE sends identity information as requested by the system in the following cases: IMSI and TMSI are requested in non-security mode, IMEI is requested in security mode.
2) To verify that the UE sends its IMEI, when requested to do so, in non- security mode.
3) To verify that the UE sends its IMEISV, when requested to do so, in non- security mode.

9.3.1.4 Method of test

9.3.1.4.1 Identification

Initial conditions

- System Simulator:
  - 1 cell, default values.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

IMEI of the UE.

IMEISV of the UE.

Test Procedure

The SS requests identity information from the UE:

- IMSI in non security mode;
- allocated TMSI in non security mode;
- IMEI in non security mode;
- IMEISV in non security mode;
- IMEI in security mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment Cause: Terminating Conversational Call.
2	→		PAGING RESPONSE	
3	←		IDENTITY REQUEST	"Identity type" IE is IMSI.
4	→		IDENTITY RESPONSE	"Mobile identity" IE specifies the IMSI of the UE.
5	←		IDENTITY REQUEST	"Identity type" IE is TMSI.
6	→		IDENTITY RESPONSE	"Mobile identity" IE specifies the allocated TMSI of the UE.
6a	←		IDENTITY REQUEST	"Identity type" IE is IMEI.
6b	→		IDENTITY RESPONSE	"Mobile identity" IE specifies the IMEI of the UE.
6c	←		IDENTITY REQUEST	"Identity type" IE is IMEISV.
6d	→		IDENTITY RESPONSE	"Mobile identity" IE specifies the IMEISV of the UE.
7		SS		The SS starts ciphering and integrity protection.
8			Void	
9	←		IDENTITY REQUEST	"Identity type" IE is IMEI.
10	→		IDENTITY RESPONSE	"Mobile identity" IE specifies the IMEI stored in the UE.
11		SS		The SS releases the RRC connection.
12			Void	

Specific message contents

None.

9.3.1.5 Test requirement

1) At step 4 the UE shall send its IMSI.
2) At step 6 the UE shall send the TMSI which it was previously allocated.
3) At step 6b and step 10 the UE shall send its IMEI as stored in the UE.
4) At step 6d the UE shall send its IMEISV as stored in the UE.

9.3.2 Handling of IMSI shorter than the maximum length

9.3.2.1 Definition

9.3.2.2 Conformance requirement

The UE shall be capable of handling an IMSI that is not of the maximum length.

Reference(s)

TS 24.008 clause 10.5.1.4.

9.3.2.3 Test purpose

To check that the UE behaves correctly when activated with an IMSI of length less than the maximum length.

In this condition, the UE shall:

- perform location updating;
- answer to paging with IMSI;
- give the correct IMSI when asked by an IDENTITY REQUEST;
- attempt CM connection establishment when requested to;
- attempt IMSI detach when needed;
- erase its TMSI when the IMSI is sent by the network in a LOCATION UPDATING ACCEPT or a TMSI REALLOCATION COMMAND message.

9.3.2.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default values;
  - IMSI attach/detach bit set to "1".
- User Equipment:
  - the UE has no valid TMSI;
  - it is "idle updated";
  - the IMSI has the value 001011234.

Related ICS/IXIT statement(s)

On/Off switch - Yes/No.

Foreseen final state of UE

The UE has no valid TMSI. It is in "idle, updated".

Test Procedure

The UE is paged with its IMSI. The UE shall answer to paging and include the correct IMSI in the PAGING RESPONSE message. During call establishment, the SS asks for the IMSI of the UE. The UE shall answer by an IDENTITY RESPONSE message including the correct IMSI. During the active phase of the call, the SS modifies the scrambling code of DL DPCH. The UE performs call re-establishment. The TMSI REALLOCATION COMMAND including a TMSI is sent to the UE. The UE acknowledges this message. The call is released.

The UE is paged with its TMSI. The UE shall answer to paging and includes its TMSI in the PAGING RESPONSE message. During call establishment, the SS sends a TMSI REALLOCATION COMMAND including the IMSI to the UE. The UE shall acknowledge this message. The UE shall erase its TMSI. The call is released.

The UE is switched off or has its power source removed. The UE performs IMSI detach. The UE shall include the correct IMSI in the IMSI DETACH INDICATION message.

The UE is switched on or powered on. The UE performs IMSI attach. The UE shall include the correct IMSI in the LOCATION UPDATING REQUEST message. A TMSI is allocated to the UE.

The LAC of the cell is changed. The UE performs location updating. The SS includes the IMSI in the LOCATION UPDATING ACCEPT message.

A mobile originated CM connection is attempted. The UE shall include the correct IMSI in the CM SERVICE REQUEST message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 "Initial UE identity" IE contains IMSI of UE. Establishment cause: Terminating Conversational Call.
2	→		PAGING RESPONSE	"mobile identity" contains the IMSI of the UE.
3	←		IDENTITY REQUEST	"identity type" IE is IMSI.
4	→		IDENTITY RESPONSE	"mobile identity" IE contains the IMSI of the UE.
5				The call is established using the sequence of the generic terminating call set-up procedure.

Specific message contents

None.

9.3.2.5 Test requirement

At step 2 the UE shall answer to paging with IMSI.

At step 4 the UE shall answer to the SS with the correct IMSI in an IDENTITY RESPONSE message.

At step 19 the IMSI is sent by the network in a TMSI REALLOCATION COMMAND message, at step 27 the UE shall attempt IMSI detach.

At step 34 the UE shall perform location updating.

At step 44 the IMSI is sent by the network in a LOCATION UPDATING ACCEPT message, at step 51 the UE shall attempt CM connection establishment and include the correct IMSI in the CM SERVICE REQUEST message.

9.4 Location updating

This procedure is used to register the UE in the network. If it is not performed correctly, no call can be established.

9.4.1 Location updating / accepted

9.4.1.1 Definition

9.4.1.2 Conformance requirement

1.

1.1 if the network accepts a location updating from the UE and reallocates a TMSI in the LOCATION UPDATING ACCEPT message the UE shall acknowledge the reception of the new TMSI;

1.2 the UE shall answer to paging with this TMSI and include it in a PAGING RESPONSE message.

2 If the network accepts a location updating from the UE and the LOCATION UPDATING ACCEPT message contains neither TMSI nor IMSI, the UE shall answer to paging when addressed with the last allocated TMSI and include it in the PAGING RESPONSE message.

3.

3.1 if the network accepts a location updating from the UE by use of a LOCATION UPDATING ACCEPT message containing the IMSI of the UE, the UE shall not answer paging with the last allocated TMSI;

3.2 the UE shall still answer paging with IMSI.

Reference(s)

TS 24.008 clause 4.4.4.6.

9.4.1.3 Test purpose

1) To test the behaviour of the UE if the network accepts the location updating of the UE.

For the network response three different cases are identified:

1.1) TMSI is allocated;

1.2) location updating accept contains neither TMSI nor IMSI;

1.3) location updating accept contains IMSI.

9.4.1.4 Method of test

Initial conditions:

- System Simulator:
  - two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN;
  - IMSI attach/detach is allowed in both cells;
  - the T3212 time-out value is 1/10 hour in both cells.
- User Equipment:
  - the UE has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.

Related ICS/IXIT statement(s)

None.

Test Procedure

The UE is made to select cell B. A normal location updating with TMSI reallocation is performed in cell B. The RRC CONNECTION is released. The SS checks, by paging, that the UE has stored the newly allocated TMSI. The RRC CONNECTION is released. The UE is made to select cell A. A normal location updating is performed in cell A. The LOCATION UPDATING ACCEPT message contains neither IMSI nor TMSI. The SS checks, by paging, that the UE has kept the old TMSI. The RRC CONNECTION is released. The UE is made to select cell B. A normal location updating is performed in cell B. The LOCATION UPDATING ACCEPT message contains an IMSI. The SS checks, by paging, that the UE has deleted its TMSI and responds to paging with IMSI.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)

9.4.1.5 Test requirement

At step 7 the UE shall acknowledge the reception of the new TMSI (TMSI2).

At step 11 the UE shall answer to paging with this TMSI (TMSI2).

At step 23 the UE shall answer to paging with the last allocated TMSI (TMSI2).

At step 35 the UE shall not answer paging with the last allocated TMSI, but at step 37 the UE shall still answer paging with IMSI.

9.4.2 Location updating / rejected

9.4.2.1 Location updating / rejected / IMSI invalid

9.4.2.1.1 Definition

9.4.2.1.2 Conformance requirement

1) If the network rejects a location updating from the UE with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the UE shall:

   1.1 not perform normal location updating;

   1.2 not perform periodic location updating;

   1.3 not respond to paging with IMSI;

   1.4 not respond to paging with TMSI;

   1.5 reject any request from CM entity for MM connection other than for emergency call;

   1.6 not perform IMSI detach if it is switched off or has its power source removed.

2) If the network rejects a location updating from the UE with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the UE, if it supports emergency speech call, shall accept a request for an emergency call by sending a RRC CONNECTION Request message with the establishment cause set to "emergency call" and include an IMEI as mobile identity in the CM SERVICE REQUEST message.

3) If the network rejects a location updating from the UE with the cause "IMSI unknown in HLR", "Illegal MS" or "Illegal ME" the UE shall delete the stored LAI, CKSN and TMSI.

Reference(s)

TS 24.008 clause 4.4.4.7.

9.4.2.1.3 Test purpose

To test the behaviour of the UE if the network rejects the location updating of the UE with the cause "IMSI unknown in HLR", "illegal MS" or "Illegal ME".

9.4.2.1.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas of the same PLMN;
  - IMSI attach/detach is allowed in both cells;
  - the T3212 time-out value is 1/10 hour in both cells.
- User Equipment:
  - the UE has valid TMSI(= TMSI1), CKSN and CK, IK. It is "idle updated" on cell A.

Related ICS/IXIT statement(s)

USIM removal possible while the UE is powered Yes/No.

Switch off on button Yes/No.

Support for emergency speech call Yes/No.

Test Procedure

The SS rejects a normal location updating with the cause value "IMSI unknown in HLR". The RRC CONNECTION is released. The SS checks that the UE has entered the state MM IDLE and the substate NO IMSI, i.e. does not perform normal location updating when a new cell of the same or another PLMN is entered, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls, does not perform IMSI detach if it is switched off or has its power source removed and deletes the stored LAI, CKSN and TMSI.

The test is repeated with cause value "Illegal MS" and with cause value "Illegal ME".

Expected sequence

The sequence is executed for execution counter k = 1, 2, 3.

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell B.
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)

None.

9.4.2.1.5 Test requirement

1) 1.1 At step 10 the UE shall not perform normal location updating.

   1.2 At step 12 the UE shall not perform periodic location updating.

   1.3 At step 14 the UE shall not respond to paging with IMSI.

   1.4 At step 16 the UE shall not respond to paging with TMSI.

   1.5 At step 18 the UE shall reject a MO CM connection.

   1.6 At step 30 the UE shall not initiate an RRC connection establishment on cell A or on cell B.

2) At step 20 the UE shall accept a request for an emergency call with the establishment cause set to "Emergency call".

3) At step 35 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the LAI IE set to "deleted LAI" on cell A.

9.4.2.2 Location updating / rejected / PLMN not allowed

9.4.2.2.1 Definition

9.4.2.2.2 Conformance requirement

1) If the network reject a location updating from the UE with the cause "PLMN not allowed" the UE shall:

   1.1 not perform periodic updating;

1.2 not perform IMSI detach when switched off;

1.3 not perform IMSI attach when switched on in the same location area;

1.4 not perform normal location updating when in the same PLMN and when that PLMN is not selected manually;

1.5 reject any request from CM entity for MM connection other than for emergency call.

2) If the network rejects a location updating from the UE with the cause "PLMN not allowed" the UE shall:

2.1 perform normal location updating when a new PLMN is entered;

2.2 accept a request for an emergency call, if it supports emergency speech call h, by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call".

3) If the network rejects a location updating from the UE with the cause "PLMN not allowed" and if after that the PLMN from which this rejection was received, is manually selected, the UE shall perform a normal location updating procedure.

4) If the network rejects a location updating from the UE with the cause "PLMN not allowed" the UE shall delete the stored LAI, CKSN and TMSI.

Reference(s)

TS 24.008 clause 4.4.4.7.

9.4.2.2.3 Test purpose

To test the behaviour of the UE if the network rejects the location updating of the UE with the cause "PLMN not allowed".

9.4.2.2.4 Method of test

Proc 1: Test procedure 1: Location updating / rejected / PLMN not allowed / test 1

Initial conditions

- System Simulator:
  - one cell: C, belonging to PLMN1;
  - two cells: A and B, belonging to different location areas a and b and belonging to PLMN2. PLMN2 is different from HPLMN and from PLMN1;
  - IMSI attach/detach is allowed in cells A and B but not in cell C;
  - the T3212 time-out value is 1/10 hour in cells A and B.

  NB: i) Cell C will be mapped to Cell 1 as found in TS 34.108 clause 6.1.4.1.

  ii) Cell A and B will be mapped to Cell 4 and 5 respectively, as found in TS 34.108 clause 6.1.4.1.

- User Equipment:
  - the UE has a valid TMSI(= TMSI1) and CKSN(= CKSN1). It is "idle updated" on cell C;
  - the UE is in manual mode for PLMN selection.

Related ICS/IXIT statement(s)

USIM removal possible while the UE is powered Yes/No.

Switch off on button Yes/No.

Support for emergency speech call Yes/No.

Test Procedure

The SS rejects a normal location updating with the cause value "PLMN not allowed". The RRC CONNECTION is released. The SS checks that the UE does not perform periodic updating, does not perform IMSI detach, does not perform IMSI attach if activated in the same location area, rejects any request for CM connection establishment other than emergency call, accepts a request for an emergency call, performs normal location updating only when a new PLMN is entered and deletes the stored LAI, CKSN and TMSI.

Expected sequence

9.4.2.2.5 Test requirement

1) 1.1 At step 12 in test 1 the UE shall not perform periodic updating.

   1.2 At step 14 in test 1 the UE shall not initiate an RRC connection establishment (IMSI detach).

   1.3 At step 16 in test 1 the UE shall not initiate an RRC connection establishment (IMSI attach).

   1.4 At step 16 in test 1 the UE shall not perform normal location updating.

   1.5 At step 30 in test 1 the UE shall reject a MO CM connection.

2) 2.1 At step 37 in test 1 the UE shall perform normal location updating.

   2.2 At step 20 in test 1 the UE shall accept a request for an emergency call with the establishment cause set to "Emergency call".

3) At step 11 in test 2 the UE is made to search for PLMNs and the PLMN indicated by the SS is manually selected, and at step 15 the UE shall perform a normal location updating procedure.

4) At step 37 in test 1 the UE shall send a LOCATION UPDATING REQUEST message with Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and LAI IE set to "deleted LAI" on cell C.

9.4.2.3 Location updating / rejected / location area not allowed

9.4.2.3.1 Definition

9.4.2.3.2 Conformance requirement

1) If the network rejects a location updating from the UE with the cause "Location Area not allowed" the UE shall:

   1.1 not perform periodic updating;

   1.2 not respond to paging with TMSI;

   1.3 reject any request from CM entity for MM connection other than for emergency call;

   1.4 not perform IMSI detach.

   1.5 not delete the list of "equivalent PLMNs".

2) If the network rejects a location updating from the UE with the cause "Location Area not allowed" the UE shall:

   2.1 perform normal location updating when a new location area is entered;

   2.2 accept a request for an emergency call, if it supports emergency speech call h, by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call";

   2.3 delete the list of forbidden LAs after switch off (power off).

3) If the network rejects a location updating from the UE with the cause "Location Area not allowed" the UE shall delete the stored LAI, CKSN and TMSI.

Reference(s)

TS 24.008 clause 4.4.4.7.

9.4.2.3.3 Test purpose

To test the behaviour of the UE if the network rejects the location updating of the UE with the cause "Location Area not allowed".

To test that the UE deletes the list of forbidden LAs after switch off (power off).

9.4.2.3.4 Method of test

Initial conditions

- System Simulator:
  - three cells: A, B and C, belonging to different location areas a, b and c. Cell A and B belongs to PLMN1. Cell C belongs to PLMN2.
  - IMSI attach/detach is allowed in both cells;
  - the T3212 time-out value is 1/10 hour in both cells;
  - Sintersearch values for cells A and B are 20 dB.

  NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.
- User Equipment:
  - the UE has a valid TMSI(= TMSI1) and CKSN(= CKSN1). It is "idle updated" on cell A.
  - the UE has a list of "equivalent PLMNs" containing PLMN1 and PLMN2.

Related ICS/IXIT statement(s)

Switch off on button Yes/No.

Support for emergency speech call Yes/No.

Method to clear the list of forbidden location areas periodically.

Test Procedure

The SS rejects a normal location updating with the cause value "Location Area not allowed". The RRC CONNECTION is released. The SS checks that the UE deletes the stored LAI, CKSN and TMSI, does not perform periodic updating, does not respond to paging with TMSI, rejects any requests from CM entities for MM-connections except emergency calls, does not perform IMSI detach, does not delete the list of "equivalent PLMNs", performs normal location updating when a new location area is entered, deletes the list of forbidden LAs when switched off.

Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell B.
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the " Suitable neighbour cell ". Set the cell type of cell C to the " Suitable neighbour cell ". (see note).
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = CKSN1, "LAI" = a, "Mobile Identity" = TMSI1
6	←		LOCATION UPDATING REJECT	"Reject cause" = "Location Area not allowed".
7		SS		After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS releases the RRC connection.
8			Void	
9		SS		SS waits for a possible location updating for 7 minutes.
10		UE		The UE shall not initiate an RRC-connection establishment either on cell A, C or cell B.
11	←		PAGING TYPE 1	The UE is paged in cell B. "UE identity" = TMSI. Paging Cause: Terminating Conversational Call.
12		UE		The UE shall ignore this message. This is checked during 30 s.
13		UE		A MO CM connection is attempted.
14		UE		The UE shall not initiate an RRC connection establishment on cell A, C or cell B. This is checked during 30 s.
15		UE		If the UE supports emergency speech call (see ICS), it is made to perform an emergency call.
16		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Emergency call".
17			Void	
18			Void	
19	→		CM SERVICE REQUEST	"CM service type": Emergency call establishment.
20	←		CM SERVICE ACCEPT	
21	→		EMERGENCY SETUP	
22	←		RELEASE COMPLETE	Cause: "unassigned number".
23		SS		The SS releases the RRC connection.
24			Void	
25		UE		If possible (see ICS) switch off is performed. Otherwise the power is removed.
26		UE		The UE shall not initiate an RRC connection establishment on cell A, C or on cell B (check for IMSI detach) This is checked during 3 s.
27		UE		The SS sets the cell type of cells A and C to "non-suitable cell". Depending on what has been performed in step 25 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode with the same cause as used in the LOCATION UPDATING REJECT.
28		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
29			Void	
30			Void	

Step	Direction		Message	Comments
	UE	SS		
31	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = no key available, "LAI" = deleted LAI, "mobile identity" = IMSI (This checks the deletion of the forbidden lists)
32	←		LOCATION UPDATING REJECT	"Reject cause" = "Location Area not allowed".
33	SS			The SS releases the RRC connection.
34			Void	
The following messages are sent and shall be received on cell C.				
35	SS			Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell C to the "Serving cell". Set the cell type of cell B to the " Suitable neighbour cell ". (see note).
36	SS			The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
37			Void	
38			Void	
39	→		LOCATION UPDATING REQUEST	
40	←		AUTHENTICATION REQUEST	
41	→		AUTHENTICATION RESPONSE	
41a	SS			The SS starts integrity protection.
42	←		LOCATION UPDATING ACCEPT	Mobile identity = TMSI.
43	→		TMSI REALLOCATION COMPLETE	
44	SS			The SS releases the RRC connection.
45			Void	
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.2.3.5 Test requirement

1) 1.1 At step 10 the UE shall not perform periodic updating.

   1.2 At step 12 the UE shall not respond to paging with TMSI.

   1.3 At step 14 the UE shall not initiate an RRC connection establishment.

   1.4 At step 26 the UE shall not initiate an RRC connection establishment (IMSI detach).

   1.5 At step 39 the UE shall perform normal location updating on cell C.

2) 2.1 At step 39 the UE shall perform normal location updating.

   2.2 At step 16 the UE shall accept a request for an emergency call.

   2.3 At step 31 the UE shall send a LOCATION UPDATING REQUEST message on cell B.

3) At step 31 the UE shall send a LOCATION UPDATING REQUEST message with Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and LAI IE set to "deleted LAI" on cell B.

9.4.2.4 Location updating / rejected / roaming not allowed in this location area

9.4.2.4.1 Definition

9.4.2.4.2 Conformance requirement

1) If the network rejects a location updating from the UE with the cause "Roaming not allowed in this location area" the UE shall:

   1.1 not perform periodic updating;

1.2 void;

1.3 reject any request from CM entity for MM connection other than for emergency call;

1.4 not perform IMSI detach.

2) If the network rejects a location updating from the UE with the cause "Roaming not allowed in this location area" the UE shall:

2.1 perform normal location updating when a new location area is entered;

2.2 accept a request for an emergency call, if it supports emergency speech call, by sending a RRC CONNECTION Request message with the establishment cause set to "emergency call";

2.3 periodically search for its HPLMN.

3) The UE shall reset the list of "Forbidden location areas for roaming" when it is switched off or has its power source removed or when the USIM is removed.

4) The UE shall contain a list of "forbidden location areas for roaming". The location area identification received on the BCCH that triggered the location updating request shall be added to the suitable list whenever a LOCATION UPDATE REJECT message is received with the cause "Roaming not allowed in this location area". The lists shall accommodate each 10 or more location area identifications.

Reference(s)

TS 24.008 clause 4.4.4.7.

9.4.2.4.3 Test purposes

Test purpose 1

To test that on receipt of a rejection using the Roaming cause code, the UE ceases trying to update on that cell, that this situation continues for at least one periodic location interval period, and that the corresponding list is re-set by switching off the UE or removing its power source.

Test purpose 2

To test that if no cell is available, the UE rejects a request from CM entity other than for emergency calls.

Test purpose 3

To test that at least 6 entries can be held in the list of "forbidden location areas for roaming" (the requirement in is to store at least 10 entries. This is not fully tested by the third procedure).

Test purpose 4

To test that if a cell of the Home PLMN is available then the UE returns to it in preference to any other available cell.

Test purpose 5

To test that if the USIM is removed the list of "forbidden location areas for roaming" is cleared.

9.4.2.4.4 Method of test

Initial conditions

The initial conditions shall be met before each of the different procedures.

- System Simulator:
  - for procedures 1, 2, 3 and 5: Two cells A and B, belonging to different location areas of the same PLMN with LAI a and b. The MCC of that PLMN is the same as that of the HPLMN. The MNC of that PLMN is different from that of the HPLMN. For procedure 2, Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1 and Qqualmin values for cells A and B are -16 dB (FDD only);

- for procedure 4: three cells A, B, C of the same PLMN which is not the HPLMN with 3 different location area codes. Cells should differ in signal strength by 10 dB with cell A being the strongest and cell C the weakest. There should be a 20 dB range between A and C. A should be set to a level of - 40 dBm;

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

- IMSI attach/detach is allowed in every cell;
- the T3212 time-out value is 1/10 hour in every cell,

- User Equipment:
  - procedures 1, 2, 3 and 5: The UE has valid TMSI, CKSN and CK, IK. It is "idle updated" on cell B;
  - procedure 4: The UE has valid TMSI, CKSN and CK, IK. It is "idle updated" on cell A;
  - the list of "forbidden location areas for roaming" shall be empty (this may be achieved by either removing the USIM or switching the UE OFF then ON or removing the UE power source depending on ICS).

Related ICS/IXIT statement(s)

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of emergency speech call Yes/No.

Method to clear the list of location areas for roaming periodically.

The UE is automatically in automatic mode after switch on Yes/No.

9.4.2.4.4.1 Test Procedures

Proc 1: Test procedure 1

- The SS rejects a normal location updating with the cause value "Roaming not allowed in this location area". The RRC CONNECTION is released. The SS checks that the UE does not perform periodic location updating procedure. The UE is turned off and then on. The SS checks that the UE performs location updating on the cell on which its location update request had been rejected (this checks that the LA is not the forbidden list after switch on). This procedure is performed another time but the deletion of the list is checked while removing the USIM (instead of turning off the UE).

Proc 2: Test procedure 2

- The SS rejects a normal location updating with the cause value "Roaming not allowed in this location area". The RRC CONNECTION is released. The SS checks that the UE rejects a request from CM entity but supports an emergency call.

Proc 3: Test procedure 3

- The SS rejects a normal location updating with the cause value "Roaming not allowed in this location area". This is done for 6 different location areas. Then the SS checks that the UE does not attempt to begin a location updating procedure on the non-allowed location areas.

Proc 4: Test procedure 4

- The SS accepts a periodic location updating on a cell not belonging to the HPLMN. Then when the UE attempts to perform a periodic location updating to this cell, the SS rejects this location updating with the cause value "Roaming not allowed in this location area". Three cells are then available, one of them belonging to the HPLMN. It is checked that the UE returns to its HPLMN.

Proc 5: Test procedure 5

If USIM removal is possible while UE is powered:

- The SS rejects a normal location updating with the cause value "Roaming not allowed in this location area". The RRC CONNECTION is released. The SS checks that the UE does not perform periodic location updating procedure. The USIM is removed and inserted in the UE. The SS checks that the UE performs location updating on the cell on which its location update request had been rejected (this checks that the LA is not the forbidden list after switch on).

Different types of UE may use different methods to periodically clear the list of forbidden areas (e.g. every day at 12am) for roaming. If the list is cleared while the test is being run, it may be necessary to re-run the test.

Expected sequence

The following procedure is used during the test:

- change_LAI (x):
  - the purpose of this procedure is to change the value of Location Area Identifier of cell x;
  - the Location Area Identifier of cell x shall be changed. The code shall be chosen arbitrarily but shall be different from any previously used in this procedure. The code shall have the same MCC as the Home PLMN and shall not have the same MNC as the Home PLMN.

Procedure 1

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note).
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	Location Updating Type = normal.
6	←		LOCATION UPDATING REJECT	"Reject cause" IE is "Roaming not allowed in this location area".
7		SS		The SS releases the RRC connection
8			Void	
9		SS		The SS waits at least 7 minutes for a possible location updating.
10		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B.
11		UE		If possible (see ICS) the UE is switched off. Otherwise if possible the power is removed.
12		UE		Depending on what has been performed in step 11 the UE is brought back to operation and placed in an automatic mode. The subsequent GMM attach should be rejected if received in the PS mode.
13		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
14			Void	
15			Void	
16	→		LOCATION UPDATING REQUEST	Location Updating Type = normal.
16a		SS		The SS starts integrity protection.
17	←		LOCATION UPDATING ACCEPT	"Mobile Identity" not IE included.
18		SS		The SS releases the RRC connection.
19			Void	

NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

Procedure 2

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the “Suitable neighbour inter-frequency cell”. (see note).
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". This message is sent on cell A. If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	
6	←		LOCATION UPDATING REJECT	"Reject cause" IE is "Roaming not allowed in this location area".
7		SS		The SS releases the RRC connection.
8		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the “Suitable neighbour inter-frequency cell”. (see note).
				The following messages are sent and shall be received on cell B.
9		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.
10			Void	
11			Void	
12	→		LOCATION UPDATING REQUEST	
13	←		LOCATION UPDATING REJECT	"Reject cause" IE is "Roaming not allowed in this location area".
14		SS		The SS releases the RRC connection.
15			Void	
16		SS		The SS waits for a possible location updating procedure on both cells A and B for 2 minutes.
17		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B within 2 minutes after the end of step 15.
18			Void	
19			Void	
20		UE		A MO CM connection is attempted.
21		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is checked during 30 s.
The following messages are sent and shall be received on cell B. Steps 22 to 31 are performed if the UE supports emergency speech call.				
22		UE		An emergency call is attempted.
23		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Emergency Call".
24			Void	
25			Void	
26	→		CM SERVICE REQUEST	"CM service type": Emergency call establishment.
27	←		CM SERVICE ACCEPT	
28	→		EMERGENCY SETUP	
29	←		RELEASE COMPLETE	"Cause" = unassigned number.
30		SS		The SS releases the RRC connection.

31		Void	
NOTE:	The definitions for "Serving cell" and “Suitable neighbour inter-frequency cell” are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".		

Procedure 3

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell A				
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". (see note)

7				The SS releases the RRC connection.
8			Void	
9		SS		The SS waits at least 7 minutes for a possible location updating.
10		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B.
11		UE		The USIM is removed.
12		UE		The USIM is inserted into the ME. The subsequent GMM attach should be rejected if received in the PS mode.
13		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
14			Void	
15			Void	
16	→		LOCATION UPDATING REQUEST	Location Updating Type = normal.
16a	←		AUTHENTICATION REQUEST	
16b	→		AUTHENTICATION RESPONSE	
16c		SS		The SS starts integrity protection.
17	←		LOCATION UPDATING ACCEPT	"Mobile Identity" not IE included.
18		SS		The SS releases the RRC connection.
19			Void	
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.2.4.5 Test requirement

1) 1.1 At step 10 in Procedure 1 the UE shall not perform periodic updating.

   1.2 Void.

   1.3 At step 21 in procedure 2 the UE shall not initiate an RRC connection establishment.

   1.4 After step 13 in Procedure 5 the UE shall perform location updating (at step 16; not perform IMSI detach).

2) 2.1 After step 9 in Procedure 2 the UE perform normal location updating (at step 12).

   2.2 At step 23 in Procedure 2 the UE shall initiate a RRC CONNECTION REQUEST message with the establishment cause set to "Emergency call";

2.3At step 14 in Procedure 4 the UE shall attempt to location updating with location updating type "periodic" (at step 21: UE returns to HPLMN in preference to any other available cell).

3) After step 12 in Procedure 5 the UE shall perform location updating (at step 16) when the USIM is inserted.

4) At step 49 in Procedure 3 the UE shall not attempt to begin a location updating procedure.

9.4.2.5 Location updating / rejected / No Suitable Cells In Location Area

9.4.2.5.1 Definition

9.4.2.5.2 Conformance requirement

1) If the network rejects a location updating from the UE with the cause " No Suitable Cells In Location Area " the UE shall:

1.1perform normal location updating at a suitable cell in another location area in the same PLMN,

1.2not delete the list of "equivalent PLMNs".

Reference(s)

TS 24.008 clause 4.4.4.7.

9.4.2.5.3 Test purpose

To test the behaviour of the UE if the network rejects the location updating of the UE with the cause "No Suitable Cells In Location Area".

9.4.2.5.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b and belonging to PLMN1;
  - one cell: C, belonging to PLMN2;
  - one cell: D, belonging to PLMN3;
  - IMSI attach/detach is allowed in cells A, B, C and D;

  NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.2.

  ii) Cell D will be mapped to Cell 7 as found in TS 34.108 clause 6.1.4.2.
- User Equipment:
  - the UE has a valid TMSI(= TMSI1) and CKSN(= CKSN1). It is "idle updated" on cell A.
  - the UE has a list of "equivalent PLMNs" containing PLMN1 and PLMN2.

Related ICS/IXIT statement(s)

None.

Test Procedure

The SS rejects a normal location updating with the cause value "No Suitable Cells In Location Area". The RRC CONNECTION is released. The SS checks that the UE shall search for a suitable cell in a different location area on the equivalent PLMN, which is equal condition for the UE as same PLMN, and shall perform normal location updating procedure in that cell

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B.				
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". Set the cell type of cell C to the "Suitable neighbour cell". Set the cell type of cell D to the "Suitable neighbour cell". (see note)
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.

Specific message contents

None.

9.4.2.5.5 Test requirement

At step 12 the UE shall perform normal location updating on cell C.

9.4.2.6 Location updating / rejected / Not authorized for this CSG

9.4.2.6.1 Definition

9.4.2.6.2 Conformance requirement

1) If the network rejects a location updating procedure from the User Equipment with the cause ' Not authorized for this CSG ' the User Equipment shall:

1.1 not delete the list of "equivalent PLMNs"

1.2 remove the CSG ID of the cell where the UE has sent the LOCATION UPDATING REQUEST message from the allowed CSG list stored in the UE.

1.3 perform normal location updating at a suitable cell in the same PLMN.

Reference

3GPP TS 24.008 clause 4.4.4.7.

9.4.2.6.3 Test purpose

To verify that the UE removes the CSG ID from the Allowed CSG list and searches for a suitable cell in the same PLMN If the network rejects the location updating of the UE with the cause ' Not authorized for this CSG '.

9.4.2.6.4 Method of test

Initial conditions

System Simulator:

- Three cells: A, B and C, belonging to different location areas a, b and c. Cell A, B and C belong to PLMN1 and operating in network operation mode II.
- IMSI attach/detach is allowed in all cells;

NB: i) Cell A, B and C will be mapped to Cell 1, 2 and 3 respectively as found in TS 34.108 clause 6.1.4.1.

ii) Cell A shall also include a CSG ID as CSG 1 for PLMN 1.

iii) Cell C shall also include a CSG ID as CSG 2 for PLMN 1.

User Equipment:

The UE has a valid TMSI(= TMSI1), KSI and CK, IK. It is "idle updated" on cell B.

UE Allowed CSG List contains CSG1 and CSG2 for PLMN 1.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EF_{ACSGL}	PLMN 1	CSG 1,CSG 2

UE is previously registered on PLMN1, before switched off.

Related ICS/IXIT statement(s)

Switch off on button Yes/No

Test procedure

The SS rejects a normal location updating with the cause value 'Not authorized for this CSG'. The RRC CONNECTION is released. The SS checks that the UE shall search for a suitable cell in the same PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". Set the cell type of cell C to the "Suitable neighbour cell". (see NOTE)
The following messages are sent and shall be received on cell A.				
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "LAI" = b, "Mobile Identity" = TMSI1
3a				The SS starts integrity protection
4	←		LOCATION UPDATING REJECT	"Reject cause" = "Not authorized for this CSG ".
5		SS		The SS releases the RRC connection.
The following messages are sent and shall be received on cell C.				
6		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
7	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "LAI" = b, "Mobile Identity" = TMSI1.
8		SS		The SS starts integrity protection.
9	←		LOCATION UPDATING ACCEPT	Mobile identity = TMSI, LAI =c.
10	→		TMSI REALLOCATION COMPLETE	
11		SS		The SS releases the RRC connection.
12				Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell".
13				SS checks that UE does not initiate a RRC Connection on Cell A
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

9.4.2.6.5 Test requirements

At step 1, UE Allowed CSG List shall contain CSG 1 and CSG 2.

At step 4, when the UE receives LOCATION UPDATING REJECT, UE shall:

- delete the CSG1 from the Allowed CSG List.
- Allowed CSG List shall contain only CSG 2.

At step 7, the UE shall perform normal location updating on Cell C.

9.4.3 Location updating / abnormal cases

9.4.3.1 Void

9.4.3.2 Location updating / abnormal cases / attempt counter less or equal to 4, LAI different

9.4.3.2.1 Definition

9.4.3.2.2 Conformance requirement

1) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure, if the attempt counter is smaller than 4 and after expiry of T3211, the UE shall resend its LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating".

2) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure the UE shall:

   2.1not answer to paging with the previously allocated TMSI;

   2.2not perform the IMSI detach procedure, when switched off.

3) When a failure such as case e) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure and when an emergency call establishment is requested by the user the UE, if it supports emergency speech call, shall send a CM SERVICE REQUEST message with CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI and after acceptance by the network it shall send an EMERGENCY SETUP message.

4) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure the UE shall use a request from CM entity other than emergency call as a trigger for a normal location updating procedure and shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating".

5) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure the UE shall answer to paging with IMSI and shall send a PAGING RESPONSE message with CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI.

6) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a normal location updating procedure the UE shall perform a normal location updating procedure as soon as it enters a new cell.

References

TS 24.008 clauses 4.4.4.2, 4.4.4.9.

9.4.3.2.3 Test purpose

To verify that the UE performs normal location updating procedures when its attempt counter is smaller than 4.

To check that the UE does not perform the IMSI detach procedure when "idle not updated".

To verify that when "idle not updated" the UE can perform an emergency call.

To verify that when "idle not updated" the UE uses requests from CM layer other than emergency call as triggering of a normal location updating procedure.

To verify that the UE performs a normal location updating procedure if it enters a new cell while being "idle not updated".

9.4.3.2.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B of the same PLMN, belonging to different location areas with LAI a and b;
  - ATT flag shall be set to IMSI attach/detach allowed.
- User Equipment:
  - the UE is "idle updated" on cell A. A valid CKSN value is stored in the USIM and is noted "initial CKSN". A TMSI is allocated.

Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support for emergency speech call Yes/No.

Test Procedure

The UE is made to perform a normal location updating procedure. Five types of failure cases are triggered:

- sending of a Location Updating Reject with cause randomly chosen between all defined cause values except 2, 3, 6, 11, 12 and 13 (which trigger a different action) (case g of TS 24.008 clause 4.4.4.9);
- RRC connection failure (case d);
- sending of a RRC CONNECTION RELEASE message before the normal end of the procedure (case f);
- T3210 time-out (case e);
- RR connection establishment failure (case h).

As there is no stored LAI or the stored LAI is different from the broadcast LAI, and the attempt counter in the UE shall be lower than 4, the UE enters the state MM IDLE and substate ATTEMPTING TO UPDATE and waits for T3211 seconds before trying again a location updating procedure.

Then the behaviour of the UE in the MM IDLE state and ATTEMPTING TO UPDATE substate is checked, that is:

- not answer to paging with TMSI;
- not perform an IMSI detach procedure;
- support request for emergency call;
- use requests from CM layer other than emergency call as triggering of a normal location updating procedure;
- perform normal location updating procedure when a new cell is entered.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B.				
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2	→		RRC CONNECTION REQUEST	Establishment cause: Registration. If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the same cause as used in the LOCATION UPDATING REJECT.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = initial value, LAI = a, mobile station classmark 1 as given by the ICS and mobile identity = TMSI.
6	←		LOCATION UPDATING REJECT	IE Reject cause is set to #X in table 10.5.95 of TS 24.008, causes #2, #3, #6, #11, #12, #13 and #15 being excluded.
7	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the RRC connection is released.
8	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
9	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	
13	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI.
14		SS		The SS modifies the scrambling code of DL DPCH for generating lower layer failure.
15			(void)	
15a	→		CELL UPDATE	CCCH.
15b	←		RRC CONNECTION RELEASE	CCCH.
15c		SS		The SS re-modifies the scrambling code of DL DPCH to the original one.
15d		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the RRC connection is released.
16	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
17	←		RRC CONNECTION SETUP	
18	→		RRC CONNECTION SETUP COMPLETE	
19	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI.
20	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
21	→		RRC CONNECTION RELEASE COMPLETE	
22		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the RRC connection is released.

Specific message contents

None.

9.4.3.2.5 Test requirement

1) At step 13 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key available" and the Location Updating Type IE set to "normal location updating".

2)

2.1 At step 40 the UE shall not answer to paging with the previously allocated TMSI.

2.2 At step 43 the UE shall not perform the IMSI detach procedure.

3) At step 67 the UE shall send a CM SERVICE REQUEST message with CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI.

At step 69 the UE shall send an EMERGENCY SETUP message.

4) At step 93 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating".

5) At step 112 the UE shall send a PAGING RESPONSE message with CKSN IE set to "no key available" and Mobile Identity IE set to its IMSI.

6) At step 110d the UE shall perform a normal location updating procedure.

9.4.3.3 Location updating / abnormal cases / attempt counter equal to 4

9.4.3.3.1 Definition

9.4.3.3.2 Conformance requirement

1) When four failures such as cases d) to h) of clause 4.4.4.9 of TS 24.008 have occurred during a normal location updating procedure the UE shall:

1.1 For Rel-6 and later, the UE shall:

Optionally enter the MM IDLE sub-state PLMN SEARCH (according to subclause 4.2.1.2).

1.2 Or according to subclause 4.2.2.2 the UE shall

1.2.1 perform location updating after T3212 expiry by sending a LOCATION UPATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type set to "normal location updating";

1.2.2 if the T3212 initiated location updating was unsuccessful, then after T3211 expiry the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating".

2) When four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a normal location updating procedure the UE shall not perform the IMSI detach procedure, when switched off.

3) When four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a normal location updating procedure the UE, if it supports emergency speech call, shall be able to perform an emergency call i.e. the UE is able to send a CM SERVICE REQUEST message with the CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key is available" and Mobile Identity IE set to its IMSI and then send an EMERGENCY SETUP message.

4) When four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a normal location updating procedure:

4.1 the UE shall use a request from CM entity for MM connection for a service other than emergency call as a trigger for a normal location updating procedure and shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating";

4.2 after a location updating triggered by a request from the CM layer which was .unsuccessful, after T3211 expiry the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal location updating".

5) When four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a normal location updating procedure:

5.1 the UE shall perform a normal location updating procedure if it enters a new cell;

5.2 if this location updating is unsuccessful, after T3211 expiry the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

References

TS 24.008 Clause 4.2.1.2, 4.2.2.2, 4.4.4.9.

9.4.3.3.3 Test purpose

To verify that the UE performs normal location updating procedures after T3212 expiry, when its attempt counter has reached value 4 and that the UE reset its attempt counter after a timer T3212 expiry.

To verify that the UE still follows the MM IDLE state and ATTEMPTING TO UPDATE substate requirements after its attempt counter has reached value 4. A Rel-6 or above UE may optionally enter the MM IDLE sub-state PLMN SEARCH (according to subclause 4.2.1.2) in order to perform a PLMN selection.

To verify that the attempt counter is reset in the cases where it has to be done.

9.4.3.3.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b;
  - IMSI attach/detach is allowed in both cells;
  - T3212 is set to 6 minutes.

- User Equipment:
  - the UE is "Idle updated" on cell B with a valid CKSN and a TMSI.

Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of emergency speech call Yes/No.

Test Procedure

The UE is made to perform a normal location updating. The SS triggers a failure in this procedure by modifying scrambling code of DL DPCH. After T3211 expiry the UE will try again the location updating procedure. The SS triggers again a failure by modifying it. This is done again 2 times. At this point the attempt counter shall be equal to 4.

It is then checked that T3212 has been started and that at its expiry the UE will try a normal location updating procedure. It is verified that the UE has reset its attempt counter after timer T3212 expiry.

Then it is checked that, when the attempt counter has reached the value of 4, the UE is in the MM IDLE state and ATTEMPTING TO UPDATE substate, that is:

- not perform an IMSI detach procedure;
- support request for emergency call;
- use requests from CM layer other than emergency call as triggering of a normal location updating procedure;
- perform normal location updating procedure when a new cell is entered.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell A.				
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note).
2	→		RRC CONNECTION REQUEST	Establishment cause: Registration. If PS mode: a ROUTING AREA UPDATE REQUEST should be rejected with the cause “GPRS services not allowed.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the ICS and mobile identity = TMSI.
6	←		LOCATION UPDATING REJECT	IE Reject cause is set to #22 in table 10.5.95 of TS 24.008, causes #2, #3, #6, #11, #12, #13 and #15 being excluded.
7	←		RRC CONNECTION RELEASE	The SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the RRC connection is released.
10	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
11	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	
13	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI.
14		SS		The SS modifies the scrambling code of DL DPCH for generating lower layer failure.
15			(void)	
15a	→		CELL UPDATE	CCCH.
15b	←		RRC CONNECTION RELEASE	CCCH.
15c		SS		The SS re-modifies the scrambling code of DL DPCH to the original one.
15d		UE		The UE shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the RRC connection is released.
16	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
17	←		RRC CONNECTION SETUP	
18	→		RRC CONNECTION SETUP COMPLETE	
19	→		LOCATION UPDATING REQUEST	location updating type = normal, CKSN = no key available, LAI = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE), Mobile Identity = IMSI.
20	←		AUTHENTICATION REQUEST	
21	→		AUTHENTICATION RESPONSE	Steps 20 and 21 are performed N times. N shall be chosen in such a way that the Authentication Request is not sent after (T3210 - applicable tolerance) is reached.
21a	→		SIGNALLING CONNECTION RELEASE INDICATION	The UE shall abort the RR connection. CN domain identity = CS domain
21b	←		RRC CONNECTION RELEASE	The SS waits for the disconnection of the main signalling link.
21c	→		RRC CONNECTION RELEASE COMPLETE	
22		UE		The UE shall cease transmission and then shall not initiate an RRC connection establishment on cell A or on cell B during T3211 seconds at least after the expiry of T3210.

Specific message contents

None.

9.4.3.3.5 Test requirement

1) 1.1 At step 33 the UE shall perform location updating procedure.

   1.2 At step 41 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

2) At step78 the UE shall send a CM SERVICE REQUEST message with the CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key is available" and Mobile Identity IE set to its IMSI.

   At step 80 the UE shall send an EMERGENCY SETUP message.

3) At step 85 the UE shall not perform the IMSI detach procedure.

4)

   4.1 At step128 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating" (Applicable only for R5 or earlier UE);

   4.2 At step 134 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

5)

   5.1 At step 179 the UE shall perform a normal location updating procedure if it enters a new cell;

   5.2 At step 185 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

9.4.3.3a Location updating / abnormal cases / attempt counter equal to 4

9.4.3.3a.1 Definition and applicability

9.4.3.3a.2 Conformance requirement

….

The state PLMN SEARCH is also entered in the following cases:

- in state NO IMSI, a SIM/USIM is inserted;

- in any state except NO IMSI, NO CELL AVAILABLE, NORMAL SERVICE and RECEIVING GROUP CALL (NORMAL SERVICE) after the user has asked for a PLMN selection;
- in any state except NO IMSI and NO CELL AVAILABLE, coverage is lost;
- roaming is denied;
- optionally, when the mobile station is in the ATTEMPTING TO UPDATE state and is in Automatic Network Selection mode and location update attempt counter is greater than or equal to 4.

The service state when the PLMN SEARCH is left depends on the outcome of the search and on the presence of the SIM/USIM as specified in subclause 4.2.1.1.

[…]

…..

When in state MM IDLE and service state ATTEMPTING TO UPDATE the mobile station shall:

- perform location updating procedure at expiry of timer T3211, T3213 or T3246;
- perform normal location updating when the location area identification of the serving cell changes, if timer T3246 is not running;
- if entry into this state was caused by c) or d) or f) (with cause different from "abnormal release, unspecified") or g) (with cause "retry upon entry into a new cell") of subclause 4.4.4.9, then location updating shall be performed when a new cell is entered;
- if entry into this state was caused by e) or f) (with cause "abnormal release, unspecified"), g) (with cause different from "retry upon entry into a new cell"), i) or j) of subclause 4.4.4.9, then location updating shall not be performed because a new cell is entered;
- perform normal location updating at expiry of timer T3212;
- not perform IMSI detach;
- support request for emergency calls;
- use other request from CM layer as triggering of normal location updating procedure (if the location updating procedure is successful, then the request for MM connection is accepted, see subclause 4.5.1), if timer T3246 is not running;
- respond to paging (with IMSI); and
- for an eCall only mobile station (as determined by information configured in USIM), perform the eCall inactivity procedure at expiry of timer T3242 or timer T3243.

In addition, mobile stations supporting VGCS listening or VBS listening shall:

- indicate notifications to the GCC or BCC sublayer for which a channel description has been received in the notification by the RR sublayer;
- reject requests of the GCC or BCC sublayer to respond to notifications for which no channel description has been received in the notification by the RR sublayer;
- request the RR sublayer to receive a voice group or broadcast call if the GCC or BCC sublayer requests the reception of a voice group or broadcast call for which a channel description has been received in the notification by the RR sublayer and then go to the service state RECEIVING GROUP CALL (LIMITED SERVICE).

…..

[…]

If the location updating cannot be accepted, the network sends a LOCATION UPDATING REJECT message to the mobile station. The mobile station receiving a LOCATION UPDATING REJECT message containing a reject cause other than MM cause value #25, shall stop the timer T3210, store the reject cause, start T3240, enter state LOCATION UPDATING REJECTED await the release of the RR connection triggered by the network, and for all causes except

#12, #15, #22 and #25 deletes the list of "equivalent PLMNs". If the location updating is rejected due to general NAS level mobility management congestion control, the network shall set the MM cause value to #22 "congestion" and assign a back-off timer T3246 (see 3GPP TS 23.012 [140]).

Upon the release of the RR connection, the mobile station shall take the following actions depending on the stored reject cause:

…

22: (Congestion).

If the T3246 value IE is present in the LOCATION UPDATING REJECT message and the value indicates that this timer is neither zero nor deactivated, the mobile station shall proceed as described below, otherwise it shall be considered as an abnormal case and the behaviour of the MS for this case is specified in subclause 4.4.4.9.

The mobile station shall abort the location updating procedure, reset the attempt counter, set the MM update status to U2 NOT UPDATED and change to state MM IDLE sub-state ATTEMPTING TO UPDATE.

The MS shall stop timer T3246 if it is running.

If the LOCATION UPDATING REJECT message is integrity protected, the mobile station shall start timer T3246 with the value provided in the T3246 value IE.

If the LOCATION UPDATING REJECT message is not integrity protected, the mobile station shall start timer T3246 with a random value from the default range specified in table 11.1.

The mobile station stays in the current serving cell and applies the normal cell reselection process. The MM connection establishment is started, if still necessary, when timer T3246 expires or is stopped.

…

[…]

…

g) Location updating reject, other causes than those treated in subclause 4.4.4.7, and cases of MM cause #22, if considered as abnormal cases according to subclause 4.4.4.7

Upon reception of the cause codes #22, # 95, # 96, # 97, # 99 and # 111 the MS should set the attempt counter to 4. The MS waits for release of the RR connection as specified in subclause 4.4.4.8, and then proceeds as specified below.

…

In cases d) to i) (except in the case f.1) above, and, for repeated failures as defined in c) above, and for the case of cause code #22 received (as described in subclause 4.4.4.7 and 4.5.1.1) the mobile station proceeds as follows. Timer T3210 is stopped if still running. The RR Connection is aborted in case of timer T3210 timeout. The attempt counter is incremented. The next actions depend on the Location Area Identities (stored and received from the BCCH of the current serving cell) and the value of the attempt counter.

– the update status is UPDATED, and the stored LAI is equal to the one received on the BCCH from the current serving cell and the attempt counter is smaller than 4:

The mobile station shall keep the update status to UPDATED, the MM IDLE sub-state after the RR connection release is NORMAL SERVICE. The mobile station shall memorize the location updating type used in the location updating procedure. It shall start timer T3211 (or, if the conditions for cause code #22 specified in subclause 4.4.4.7 or subclause 4.5.1.1 are met, shall start timer T3246 and not start timer T3211) when the RR connection is released. When timer T3211 or T3246 expires, the location updating procedure is triggered again with the memorized location updating type;

– either the update status is different from UPDATED, or the stored LAI is different from the one received on the BCCH from the current serving cell, or the attempt counter is greater or equal to 4:

When the RR connection is released the mobile station shall delete any LAI, TMSI, ciphering key sequence number stored in the SIM/USIM, and set the update status to NOT UPDATED. A mobile station which is not a GPRS MS shall also delete the list of equivalent PLMNs. The mobile station shall enter the MM IDLE sub-state

ATTEMPTING TO UPDATE (see subclause 4.2.2.2 for the subsequent actions) or optionally the MM IDLE sub-state PLMN SEARCH (see subclause 4.2.1.2) in order to perform a PLMN selection according to 3GPP TS 23.122 [14]. If the attempt counter is smaller than 4, the mobile station shall memorize that timer T3211 (or, if the conditions for cause code #22 specified in subclause 4.4.4.7 or subclause 4.5.1.1 are met, shall start timer T3246 and not start timer T3211) is to be started when the RR connection is released, otherwise it shall memorize that timer T3212 (or, if the conditions for cause code #22 specified in subclause 4.4.4.7 or subclause 4.5.1.1 are met, shall start timer T3246 and not start timer T3212) is to be started when the RR connection is released.

[…]

References

TS 24.008 Clauses 4.2.1.2, 4.2.2.2, 4.4.4.7, 4.4.4.9.

9.4.3.3a.3 Test purpose

1. To verify that the UE performs normal location updating procedures after T3211 expiry, when its attempt counter has reached value 4 and that the UE reset its attempt counter after a timer T3211 expiry.

2. To verify that the UE still follows the MM IDLE state and ATTEMPTING TO UPDATE substate requirements after its attempt counter has reached value 4. A Rel-10 or later UE may optionally enter the MM IDLE sub-state PLMN SEARCH (according to subclause 4.2.1.2) in order to perform a PLMN selection.

3. To verify that the attempt counter is reset in the cases where required.

9.4.3.3a.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b;
  - IMSI attach/detach is allowed in both cells;
  - T3212 is set to 6 minutes.
- User Equipment:
  - the UE is "Idle updated" on cell B with a valid CKSN and a TMSI.

Related ICS/IXIT statements

- USIM removal possible while UE is powered Yes/No.
- Switch off on button Yes/No.
- Support of emergency speech call Yes/No.

Test Procedure

The UE is made to perform a normal location updating. The SS triggers Reject cause #22. At this point the attempt counter shall be set to 4.

It is then checked that T3212 has been started and that at its expiry the UE will try a normal location updating procedure. It is verified that the UE has reset its attempt counter after timer T3212 expiry.

Then it is checked that, when the attempt counter has reached the value of 4, the UE is in the MM IDLE state and ATTEMPTING TO UPDATE substate, that is:

- not perform an IMSI detach procedure;
- support request for emergency call;
- use requests from CM layer other than emergency call as triggering of a normal location updating procedure;

- perform normal location updating procedure when a new cell is entered.

Expected sequence

Step	Direction		Message	Comments

189	→		RRC CONNECTION RELEASE COMPLETE	

NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

Specific message contents

None.

9.4.3.3a.5 Test requirement

1.1) At step 13 the UE shall perform location updating procedure.

1.2) At step 21 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

2) At step 64 the UE shall send a CM SERVICE REQUEST message with the CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key is available" and Mobile Identity IE set to its IMSI.

At step 66 the UE shall send an EMERGENCY SETUP message.

3) At step 71 the UE shall not perform the IMSI detach procedure.

4) At step 120 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

5.1) At step 172 the UE shall perform a normal location updating procedure if it enters a new cell;

5.2) At step 181 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

9.4.3.4 Location updating / abnormal cases / attempt counter less or equal to 4, stored LAI equal to broadcast LAI

9.4.3.4.1 Definition

9.4.3.4.2 Conformance requirement

1) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a periodic location updating procedure (the broadcast LAI is equal to the stored LAI):

1.1 the UE shall be able to establish an MM connection i.e. send a RRC CONNECTION REQUEST message and then a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

1.2 then the UE shall not attempt a location updating procedure.

2) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during an IMSI attach procedure (the broadcast LAI is equal to the stored LAI):

2.1 the UE shall be able to establish an MM connection i.e. send a RRC CONNECTION REQUEST message and then a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

2.2 then the UE shall not attempt a location updating procedure.

3) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a periodic location updating procedure and the attempt counter is smaller than 4 the UE shall send, after T3211 expiry, a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "periodic updating".

3.1 When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a periodic location updating procedure) after T3212 expiry it shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

4) When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a periodic location updating procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.

5) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during an IMSI attach procedure and the attempt counter is smaller than 4 the UE shall send, after T3211 expiry, a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating type set to "IMSI attach".

   5.1When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during an IMSI attach procedure) after T3212 expiry it shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal".

6) When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during an IMSI attach procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.

References

TS 24.008 clause 4.4.4.9.

9.4.3.4.3 Test purpose

To verify that in the case when the attempt counter is smaller than 4 and the broadcast LAI is equal to the stored LAI, the UE is in the MM IDLE state and NORMAL SERVICE substate. To verify that timer T3211 is stopped after a MM connection establishment.

To verify that the UE uses the T3211 timer. and that it enters the MM IDLE state and NORMAL SERVICE substate when its attempt counter reaches value 4 even in the case where the stored LAI is equal to the broadcast LAI.

9.4.3.4.4 Method of test

Initial conditions

- System Simulator:
  - one cell: B, belonging to location area b;
  - IMSI attach/detach is allowed;
  - T3212 is set to 6 minutes.
- User Equipment:
  - the UE is "Idle updated" on cell B with a valid CKSN and a TMSI.

Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Test Procedure

A failure during the periodic location updating is triggered: as the broadcast LAI is equal to the stored LAI, the UE is still in the MM IDLE state and NORMAL SERVICE substate and timer T3211 is started. A CM connection other than for emergency call is attempted. It is checked that this is possible and that T3211 is stopped. Same test is performed with a failure during an IMSI attach procedure.

Then failures are triggered during the periodic location updating to let the attempt counter to reach the value of 4. The UE shall enter the MM IDLE state and ATTEMPTING TO UPDATE substate and delete any TMSI, stored LAI, ciphering key sequence number and ciphering key. When the attempt counter reaches the value of 4, timer T3212 shall be started. At timer T3212 expiry a location updating procedure is started. A request for CM connection other for than emergency call shall trigger a location updating procedure.

Same tests are performed when the failures are triggered during an IMSI attach procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS shall wait at most T3212 + 45 s.
2	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	location updating type = periodic, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the ICS and mobile identity = TMSI.
6		SS		performs step 6, of 9.4.3.2 with cause #17 and step 7 of 9.4.3.2.
6a	UE			performs step 8 of 9.4.3.2.
7	UE			A MO CM connection is attempted before T3211 expiry.
8	→		RRC CONNECTION REQUEST	
9	←		RRC CONNECTION SETUP	
10	→		RRC CONNECTION SETUP COMPLETE	
11	→		CM SERVICE REQUEST	CKSN = initial CKSN, Mobile Identity = TMSI.
12	←		CM SERVICE ACCEPT	
13	→		An initial CM message	
14	←		RRC CONNECTION RELEASE	The SS waits for the disconnection of the main signalling link.
15	→		RRC CONNECTION RELEASE COMPLETE	
16		SS		The UE shall not initiate an RRC connection establishment. This is checked during T3211.
17	UE			If possible (see ICS) USIM detachment is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed. A Detach Request can be received in PS mode.
Steps 18 to 23 are optional.				
18	→		RRC CONNECTION REQUEST	Establishment Cause: Detach
19	←		RRC CONNECTION SETUP	
20	→		RRC CONNECTION SETUP COMPLETE	
21	→		IMSI DETACH INDICATION	
22	←		RRC CONNECTION RELEASE	
23	→		RRC CONNECTION RELEASE COMPLETE	
24	UE			Depending on what has been performed in step 17 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode.
25	→		RRC CONNECTION REQUEST	Establishment cause: Registration.
26	←		RRC CONNECTION SETUP	
27	→		RRC CONNECTION SETUP COMPLETE	
28	→		LOCATION UPDATING REQUEST	location updating type = IMSI attach, CKSN = initial value, LAI = b, mobile station classmark 1 as given by the ICS and mobile identity = TMSI.
29		SS		performs step 14 of 9.4.3.2.
29a			(void)	
29b	→		CELL UPDATE	CCCH.
29c	←		RRC CONNECTION RELEASE	CCCH.
29d		SS		performs step 15c of 9.4.3.2.

Step	Direction		Message	Comments

Specific message contents

None.

9.4.3.4.5 Test requirement

1)

1.1 At step 8 the UE shall send a RRC CONNECTION REQUEST message and at step 11 the UE shall send a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

1.2 At step 11 the UE shall not attempt a location updating procedure.

2)

2.1 At step 31 the UE shall send a RRC CONNECTION REQUEST message and at step 34 the UE shall send a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

2.2 At step 39 the UE shall not attempt a location updating procedure.

3) At step 51 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "periodic updating".

3.1 At step 69 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

4) At step 103 the UE shall send a LOCATION UPDATING REQUEST message.

5) At step 132 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "IMSI attach".

5.1 At step 152 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

6) At step 194 the UE shall send a LOCATION UPDATING REQUEST message.

9.4.3.5 Location updating / abnormal cases / Failure due to non-integrity protection

9.4.3.5.1 Definition

9.4.3.5.2 Conformance requirement

Except the messages listed below, no layer 3 signalling messages shall be processed by the receiving MM and GMM entities or forwarded to the CM entities, unless the security mode control procedure is activated for that domain.

- MM messages:
  - AUTHENTICATION REQUEST
  - AUTHENTICATION REJECT
  - IDENTITY REQUEST
  - LOCATION UPDATING ACCEPT (at periodic location update with no change of location area or temporary identity)
  - LOCATION UPDATING REJECT
  - CM SERVICE ACCEPT, if the following two conditions apply:
    - no other MM connection is established; and
    - the CM SERVICE ACCEPT is the response to a CM SERVICE REQUEST with CM SERVICE TYPE IE set to 'emergency call establishment'
  - CM SERVICE REJECT
  - ABORT

TS 24.008 clauses 4.1.1.1.1

9.4.3.5.3 Test purpose

To verify that the UE ignores NAS signalling messages when the security mode procedure is not activated.

9.4.3.5.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on cell A.

Related ICS/IXIT statements

None.

Test Procedure

The location updating procedure is started. Upon reception of LOCATION UPDATING REQUEST message from the UE, the SS responds to LOCATION UPDATING ACCEPT message without the integrity protection. The UE shall ignore this message and restart the location updating procedure at expiry of timer T3211. This time the SS starts the authentication procedure and initiates the integrity protection. After receiving LOCATION UPDATING ACCEPT message, the UE shall respond to TMSI REALLOCATION COMPLETE message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be rejected with cause “GPRS services not allowed”.
3	→		LOCATION UPDATING REQUEST	
4	←		AUTHENTICATION REQUEST	
5	→		AUTHENTICATION RESPONSE	
6		SS		The SS does not initiate the security mode procedure.
7	←		LOCATION UPDATING ACCEPT	
8	UE			The UE ignores LOCATION UPDATING ACCEPT message.
9		SS		The SS waits T3210 expiry.
10	UE			The UE aborts the RR connection.
11		SS		The SS releases the RRC connection.
12		SS		The SS waits T3211 expiry.
13		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
14	→		LOCATION UPDATING REQUEST	
15	←		AUTHENTICATION REQUEST	
16	→		AUTHENTICATION RESPONSE	
17		SS		The SS starts the security mode procedure with the integrity protection.
18	←		LOCATION UPDATING ACCEPT	
19	→		TMSI REALLOCATION COMPLETE	
20		SS		The SS releases the RRC connection.
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.3.5.5 Test requirement

At step 8 the UE shall ignore the first LOCATION UPDATING ACCEPT message.

At step 14 the UE shall send LOCATION UPDATING REQUEST message after expiry of timer T3211.

At step 16 the UE shall respond to TMSI REALLOCATION COMPLITE message after the UE receives the second LOCATION UPDATING ACCEPT message.

9.4.3.6 Location updating /abnormal cases / CS domain is changed from barred to unbarred because of domain specific access control

9.4.3.6.1 Definition

This test is applicable for Rel-5 UEs supporting DSAC and Rel-6 or later UEs.

9.4.3.6.2 Conformance requirement

TS 24.008 clause 4.1.1.2.2

> If the PS or CS domain is barred because of domain specific access control, a GPRS MS operating in mode A or B in a network that operates in mode II or III shall use the MM specific procedures or GMM specific procedures,

respectively, in the domain which is unbarred. If the MS detects that a domain changes from barred to unbarred, it shall behave as specified in subclauses 4.4.4.9, 4.5.1.2, 4.7.3.1.5, 4.7.5.1.5, and 4.7.13.5.

TS 24.008 clause 4.4.4.9

a) Access barred because of common access class control or CS domain specific access control

The location updating procedure is not started. The mobile station stays in the current serving cell and applies normal cell reselection process. The procedure is started as soon as possible and if still necessary (when the barred state is ended or because of a cell change).

Reference

3GPP TS 24.008 clause 4.1.1.2.2; 4.4.4.9

9.4.3.6.3 Test purpose

To test the behaviour of the UE if the CS domain is barred and if it is then changed from barred to unbarred because of domain specific access control in a network that operates mode II.

9.4.3.6.4 Method of test

Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. The UE is informed that the CS domain specific access class x is barred in cell B.

System Simulator:

- two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN and operating in network operation mode II;
- IMSI attach/detach is allowed in both cells;
- the T3212 time-out value is 1/10 hour in both cells.

User Equipment:

The UE has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.

Related ICS/IXIT statements

Support of DSAC Yes/No.

Test procedure

1) The UE is made to select cell B. The CS domain specific access class x is barred: the UE shall not initiate a location updating procedure in the CS domain.

2) The SS informs the UE by paging that the CS domain specific access class x is not barred: The UE shall initiate a location updating procedure. The SS checks, by paging, that the UE has stored the newly allocated TMSI. The RRC CONNECTION is released.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2	UE			The UE shall not initiate a location updating procedure as CS domain specific access class x is barred . If PS mode: a routing area updating procedure should be performed.
3		SS		The SS informs the UE by paging that the CS domain specific access class x is not barred anymore.
4	UE			The UE shall initiate a location updating procedure.

Step	Direction		Message	Comments
	UE	SS		
5	SS			The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to: Registration.
6	→		LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a, "mobile station classmark 1" as given by the ICS and "mobile identity" = TMSI1. The MM message is included in the RRC message INITIAL DIRECT TRANSFER with the CN domain identity set to CS domain.
7	SS			The SS starts integrity protection.
8	←		LOCATION UPDATING ACCEPT	"Mobile identity" = new TMSI (=TMSI2), LAI = b.
9	→		TMSI REALLOCATION COMPLETE	
9a				The SS releases the RRC Connection.
10	SS			SS waits 5 seconds to guarantee that the UE is in service.
11	←		Mobile terminated establishment of RRC Connection	See TS 34.108 clause 7.1.2 "Initial UE identity" IE contains the new TMSI (= TMSI2) and the new LAI (=b). Establishment Cause: Terminating Conversational Call, or Supplementary Service Terminating High Priority Signalling, or SMS Terminating Low Priority Signalling.
12	→		PAGING RESPONSE	"Mobile identity" IE contains the new TMSI (= TMSI2).
13	SS			The SS releases the RRC Connection.
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". Only one operation is applicable at step 11 based on the type of CS call that is being made.				

Specific message contents

None.

9.4.3.6.5 Test requirements

At step 2, cell B is serving cell, the CS domain specific access class x is barred:

- the UE shall not use the specific MM location updating procedure.

At step 6, cell B is serving cell, the CS domain specific access class x is not barred anymore:

- the UE shall initiate a location updating procedure.

9.4.3.7 Location updating / abnormal cases / Network reject with Extended Wait Timer

9.4.3.7.1 Definition

9.4.3.7.2 Conformance requirement

The different abnormal cases that can be identified are the following:

a) Access barred because of access class control

The location updating procedure is not started. The mobile station stays in the current serving cell and applies normal cell reselection process. The procedure is started as soon as possible and if still necessary (when the barred state is ended or because of a cell change).

b) The answer to random access is an IMMEDIATE ASSIGNMENT REJECT message (A/Gb mode only).

The location updating is not started. The mobile station stays in the chosen cell and applies normal cell selection process. The waiting timer T3122 is reset when a cell change occurs. The procedure is started as soon as possible after T3122 timeout if still necessary.

c) Random access failure (A/Gb mode only).

Timer T3213 is started. When it expires the procedure is attempted again if still necessary.

NOTE 1: As specified in 3GPP TS 45.008 [34], a cell reselection then takes place, with return to the cell inhibited for 5 seconds if there is at least one other suitable cell. Typically the selection process will take the mobile station back to the cell where the random access failed after 5 seconds.

If at the expiry of timer T3213 a new cell has not been selected due to the lack of valid information (see 3GPP TS 45.008 [34]), the mobile station may as an option delay the repeated attempt for up to 8 seconds to allow cell re-selection to take place. In this case the procedure is attempted as soon as a new cell has been selected or the mobile station has concluded that no other cell can be selected.

If random access failure occurs for two successive random access attempts for location updating the mobile station proceeds as specified below.

d) RR connection failure

The procedure is aborted and the mobile station proceeds as specified below.

e) T3210 timeout

The procedure is aborted, the RR connection is aborted and the MS proceeds as specified below.

f) RR release without "Extended wait time" received from lower layers before the normal end of procedure.

The procedure is aborted and the mobile station proceeds as specified below, except in the following implementation option case f.1.

f.1) RR release in Iu mode (i.e. RRC connection release) with, for example, cause "Normal", "User inactivity" or "Directed signalling connection re-establishment" (see 3GPP TS 25.331 [32c] and 3GPP TS 44.118 [111])

The location updating procedure shall be initiated again, if the following conditions apply:

i) The original location updating procedure was initiated over an existing RRC connection; and

ii) No SECURITY MODE COMMAND message and no Non-Access Stratum (NAS) messages relating to the CS signalling connection (e.g. CS authentication procedures, see subclause 4.3.2), were received after the LOCATION UPDATING REQUEST message was transmitted.

NOTE 2: The RRC connection release cause that triggers the re-initiation of the location updating procedure is implementation specific.

g) Location updating reject, other causes than those treated in subclause 4.4.4.7, and cases of MM cause #22, if considered as abnormal cases according to subclause 4.4.4.7

Upon reception of the cause codes #22, # 95, # 96, # 97, # 99 and # 111 the MS should set the attempt counter to 4. The MS waits for release of the RR connection as specified in subclause 4.4.4.8, and then proceeds as specified below.

h) RR connection establishment failure without "Extended wait time" received from lower layers (Iu mode only).

The procedure is aborted and the mobile station proceeds as specified below.

NOTE 3: Case h) covers all cases when the signalling connection cannot be established, including random access failure and access reject. As the RRC protocol has error specific retransmission mechanisms (see 3GPP TS 25.331 [23c]), there is no need to distinguish between the different error cases within MM.

i) "Extended wait time" for CS domain from the lower layers.

The MS shall abort the MM connection establishment and stop timer T3230 if still running.

If the LOCATION UPDATING REQUEST message contained the NAS signalling low priority indication set to "MS is configured for NAS signalling low priority", the MS shall start timer T3246 with the "Extended wait time" value.

In other cases the MS shall ignore the "Extended wait time".

The MM connection establishment is started, if still necessary, when timer T3246 expires or is stopped.

References

TS 24.368

TS 24.008 clauses 1.8, 4.4.4.9, L.1

9.4.3.7.3 Test purpose

1) To verify that the LAP indicator can be set in the UE.
2) To verify that the Delay Tolerant indicator is sent by the UE.
3) To verify that the UE uses the back-off timer if the network reject a request with the Extended Wait timer.

9.4.3.7.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b.
- User Equipment:
- the UE has a valid TMSI. It is "idle updated" on cell A.
- The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to "NAS signalling low priority" as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

None.

Test Procedure

The location updating procedure is started. Upon reception of LOCATION UPDATING REQUEST message from the UE, the SS verifies that the UE is configured for NAS signalling low priority. The SS responds by sending an RRC Disconnect including the "Extended Wait Time" IE, indicating that the UE shall use the extended back-off timer. The SS verifies that the UE does not initiate any signalling for the duration of timer T3246.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2	→		RRC CONNECTION REQUEST	The SS verifies that the IE "Establishment cause" is set to "Delay Tolerant Access". If PS mode: a routing area updating procedure should be performed.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	

5	→	LOCATION UPDATING REQUEST	The SS verifies that the IE “Device properties” is set to “MS is configured for NAS signalling low priority”
6	←	RRC CONNECTION RELEASE	The SS includes the IE “Extended Wait Time” in the RRC CONNECTION RELEASE message. MS starts timer T3246 with the value of 5 seconds.
7	→	RRC CONNECTION RELEASE COMPLETE	
8	SS		The SS verifies that the UE does not initiate any communication before the T3246 timer has expired
9	→	RRC CONNECTION REQUEST	The SS verifies that the IE "Establishment cause" is set to "Delay Tolerant Access".
10	←	RRC CONNECTION SETUP	
11	→	RRC CONNECTION SETUP COMPLETE	
12	→	LOCATION UPDATING REQUEST	
13	←	LOCATION UPDATING ACCEPT	
14	→	TMSI REALLOCATION COMPLETE	
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".			

Specific message contents

None.

9.4.3.7.5 Test requirement

1) At step 5 the UE shall include the IE “Device properties", set to “MS is configured for NAS signalling low priority”, in the LOCATION UPDATING REQUEST.

2)

2.1 At step 6 the UE shall set the timer T3246 to 5 seconds, as received in the RRC CONNECTION RELEASE message.

2.2 At step 8 the UE shall not initiate any communication attempts.

9.4.4 Location updating / release / expiry of T3240

9.4.4.1 Definition

9.4.4.2 Conformance requirement

The UE receiving a LOCATION UPDATING ACCEPT message shall start T3240: it shall abort the RR connection at the expiry of timer T3240.

References

TS 24.008 clauses 4.4.4.8 and 11.2.

9.4.4.3 Test purpose

To verify that the UE aborts the RR-connection at the expiry of timer T3240.

9.4.4.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on cell A.

Related ICS/IXIT statements

None.

Test Procedure

A normal location updating procedure is performed. The RR-connection is not released by the SS within the timer T3240. It is checked that the UE aborts the RR-connection.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note 1)
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be rejected with cause value #7 “GPRS Services not allowed”.
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	
5a		SS		The SS starts integrity protection.
6	←		LOCATION UPDATING ACCEPT	
7		SS		The SS waits T3240 expiry.
8	→		SIGNALLING CONNECTION RELEASE INDICATION	The UE shall abort the RR connection. (see note 2) CN domain identity = CS domain
9		SS		The SS releases the RRC connection.
10			Void	
NOTE1: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				
NOTE2: At the expiration of T3240, as per TS 24.008, RR connection shall be aborted. In UMTS, UE cannot release RRC connection on its own. Instead, UE can abort the RR connection ("CS signalling connection") and send a Signalling Connection Release Indication to the UTRAN, in order to initiate the release of RRC connection.				

Specific message contents

None.

9.4.4.5 Test requirement

At step 8 the UE shall abort the RR connection.

9.4.5 Location updating / periodic

9.4.5.1 Location updating / periodic spread

9.4.5.1.1 Definition

9.4.5.1.2 Conformance requirement

1) The UEs shall perform spreading of the time before performing a periodic location updating when the location updating timer value is reduced.

2) The UE shall reset timer T3212 when the UE is deactivated, and shall start with a value between zero and the broadcasted value when reactivated in the same cell, IMSI attach being forbidden.

3) When activated the UE shall start timer T3212 with a value randomly drawn in the allowed range.

NOTE: This conformance requirement is not covered by a test purpose. It is intended to be covered by a manufacturer declaration.

References

TS 24.008 clause 4.4.2.

9.4.5.1.3 Test purpose

1) To check that when the location updating timer is reduced, the timer running in the UE is started with a value depending on the current timer value and the new broadcasted T3212 value.

2) To verify that when the UE is reactivated in the same cell (as the one in which it was deactivated), IMSI attach being forbidden, the UE starts the timer T3212 with a value between zero and the broadcasted value.

NOTE: It is not tested that the value is random.

9.4.5.1.4 Method of test

Initial conditions

- System Simulator:
  - one cell, T3212 is set to 30 minutes;
  - IMSI attach is allowed in the cell;
- User Equipment:
  - the UE is deactivated. The stored MCC, MNC and LAC correspond to the broadcasted values. The stored update status is "updated".

Related ICS/IXIT statements

None.

Test procedure

The UE is activated. It performs IMSI attach. 3 minutes after the end of the IMSI attach procedure, the value of T3212 is set to 6 minutes. The UE shall perform periodic location updating 6 minutes after the end of the IMSI attach procedure.

Then, the IMSI attach/detach is forbidden. T3212 is still set to 6 minutes.

The UE is deactivated. The UE is reactivated. It is checked that the UE performs a periodic location updating during the 6 minutes following activation.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is activated.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"location updating type": IMSI attach.
6	←		LOCATION UPDATING ACCEPT	
7	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9	SS			3 minutes after step 8 the value of T3212 is set to 6 minutes.
10	→		RRC CONNECTION REQUEST	"Establishment cause": Registration. This message shall be sent by the UE between 5 minutes 45 s and 6 minutes 15 s after step 8.
11	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	
13	→		LOCATION UPDATING REQUEST	"location updating type": periodic updating.
14	←		LOCATION UPDATING ACCEPT	
15	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
16	→		RRC CONNECTION RELEASE COMPLETE	
17	SS			IMSI attach/detach is not allowed.
18	UE			The UE is deactivated.
19	UE			The UE is activated.
20	SS			The SS waits until the periodic location updating.
21	→		RRC CONNECTION REQUEST	"Establishment cause": Registration. This message shall arrive during the 6 minutes following the UE activation.
22	←		RRC CONNECTION SETUP	
23	→		RRC CONNECTION SETUP COMPLETE	
24	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic.
25	←		LOCATION UPDATING ACCEPT	
26	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
27	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.4.5.1.5 Test requirement

At step 10 the UE shall send an RRC CONNECTION REQUEST for a periodic location updating.

At step 21 the UE shall send an RRC CONNECTION REQUEST for a periodic location updating.

9.4.5.2 Location updating / periodic normal / test 1

9.4.5.2.1 Definition

9.4.5.2.2 Conformance requirement

1 The UE shall stop and reset the timer T3212 of the periodic location updating procedure when the first MM message is received or SECURITY mode setting is completed in the case of MM connection establishment.

2 The UE shall stop and reset the timer T3212 of the periodic location updating procedure when the UE has responded to paging and thereafter has received the first correct L3 message that is not an RRC message.

References

TS 24.008 clause 4.4.2.

9.4.5.2.3 Test purpose

To verify that the UE stops and resets the timer T3212 of the periodic location updating procedure when:

- the first MM-message is received in the case of MM-connection establishment, security mode being not set;
- the UE has responded to paging and the first correct L3 message that is not an RRC message is received.

NOTE: T3212 is stopped when the MM-idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.

9.4.5.2.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - IMSI attach/detach is allowed;
  - the T3212 time-out value is 2/10 hour.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

Related ICS/IXIT statements

None.

Test procedure

An UE originated MM connection is established and cleared. The RRC CONNECTION is released. It is checked that the UE performs a periodic location updating 12 minutes after the release of the RRC CONNECTION.

One minute after the periodic location updating, the UE is paged, it sends a RRC CONNECTION REQUEST message and the SS responds with an RRC CONNECTION SETUP message, a call is established and then cleared. It is checked that the UE performs a periodic location updating 12 minutes after the release of the link.

Expected sequence

Step	Direction		Message	Comments

23			Void	
24		SS		The SS waits until the periodic location updating.
25		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". This message shall arrive between 11 minutes 45 s and 12 minutes 15 s after the last release of the RRC connection by the SS.
26			Void	
27			Void	
28	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic.
29	←		LOCATION UPDATING ACCEPT	
30		SS		The SS releases the RRC connection.
31			Void	

Specific message contents

None.

9.4.5.2.5 Test requirement

At step 10 the UE shall initiate an RRC CONNECTION REQUEST 12 minutes after the release of the RRC CONNECTION (at step 7).

At step 25 the UE shall initiate an RRC CONNECTION REQUEST 12 minutes after the release of the RRC CONNECTION (at step 22).

9.4.5.3 Location updating / periodic normal / test 2

9.4.5.3.1 Definition

9.4.5.3.2 Conformance requirement

When a LOCATION UPDATING ACCEPT or a LOCATION UPDATING REJECT message is received, the timer T3212 is stopped and reset and the UE shall perform a periodic location updating after T3212 expiry.

References

TS 24.008 clause 4.4.2.

9.4.5.3.3 Test purpose

To verify that the UE stops and resets the timer T3212 of the periodic location updating procedure when a LOCATION UPDATING ACCEPT message is received.

NOTE: T3212 is stopped when the MM-idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.

9.4.5.3.4 Method of test

Initial conditions

- System Simulator:
  - 2 cells, IMSI attach/detach is allowed in both cells;
  - T3212 is set to 6 minutes;
  - two cells: A and B of the same PLMN, belonging to different location areas with LAI a and b.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on cell A.

Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button yes/No.

Test procedure

A normal location updating is performed. The RRC CONNECTION is released. One minute later, the UE is deactivated, then reactivated in the same cell. It is checked that the UE performs an IMSI attach and a periodic location updating 6 minutes after the IMSI attach.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell B.
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2		SS		The SS verifies that the IE "establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be performed.
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	"location updating type" = normal.
5a		SS		The SS starts integrity protection.
6	←		LOCATION UPDATING ACCEPT	
7		SS		The SS releases the RRC connection.
8			Void	
9		SS		The SS waits until the periodic location updating.
10		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". This message shall arrive between 5 minutes 45s and 6 minutes 15 s after the last release of the RRC connection by the SS.
11			Void	
12			Void	
13	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic.
14	←		LOCATION UPDATING ACCEPT	
15		SS		The SS releases the RRC connection.
16			Void	
17		UE		If possible (see ICS) USIM removal is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed. A Detach Request can be received in PS mode. In case USIM removal is performed then “Power Off” can be set to “Any value”. Steps 18 to 23 may be performed or not depending on the action made in step 17.
18		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
19			Void	
20			Void	
21	→		IMSI DETACH INDICATION	
22		SS		The SS releases the RRC connection.
23			Void	
24		UE		Depending on what has been performed in step 17 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode.
25		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
26			Void	
27			Void	
28	→		LOCATION UPDATING REQUEST	"Location updating type" = IMSI attach.
28a		SS		The SS starts integrity protection.
29	←		LOCATION UPDATING ACCEPT	
30		SS		The SS releases the RRC connection.
31			Void	
32		SS		The SS waits until the periodic location updating.

Step	Direction		Message	Comments
	UE	SS		
33		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". This message shall arrive between 5 minutes 45 s and 6 minutes 15s after the last release of the RRC connection by the SS.
34			Void	
35			Void	
36	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic.
37	←		LOCATION UPDATING ACCEPT	
38		SS		The SS releases the RRC connection.
39			Void	
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.5.3.5 Test requirement

After step 28 the UE shall performs an IMSI attach.

After step 33 the UE shall performs periodic location updating 6 minutes after step 28.

9.4.5.4 Location updating / periodic search for HPLMN or higher priority PLMN when in VPLMN

9.4.5.4.1 Location updating / periodic search for HPLMN or higher priority PLMN / UE waits time T

9.4.5.4.1.1 Definition

9.4.5.4.1.2 Conformance requirement

1. In the case that the mobile has a stored "Equivalent PLMNs" list the mobile shall only select a PLMN if it is of a higher priority than those of the same country as the current serving PLMN which are stored in the "Equivalent PLMNs" list.

2. In steps i), ii) and iii) of the Automatic Network Selection Mode Procedure, the MS shall limit its attempts to access higher priority PLMNs to PLMNs of the same country as the current serving VPLMN;

3. If the MS is in idle mode in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN or higher priority PLMN listed in "user controlled PLMN selector" or "operator controlled PLMN selector". The MS shall make an attempt if the MS is on the VPLMN at time T after the last attempt.

References

TS 22.011 clause 3.2.2.5. and TS 23.122 4.4.3.3.

9.4.5.4.1.3 Test purpose

To verify that if a UE is camped on a VPLMN it will perform a search for higher priority networks (e.g. HPLMN) with a periodicity of T, which is the Search Period stored in the USIM.

This test will confirm that, if a cell from a new PLMN becomes available, within a time T the UE will perform a location updating on it only if the following requirements are met:

- The PLMN of this new cell if from the same country as the VPLMN, and

- This PLMN is the HPLMN stored in the USIM, or has a higher priority than the serving VPLMN or any PLMN from the country of the VPLMN that is stored in the equivalent PLMN list.

9.4.5.4.1.4 Method of test

Initial conditions

- System Simulator:
  - four cells A, B, C and D, belonging to different location areas with location identification a, b, c and d. Their country codes and mobile network codes are defined as follows:

Cell	Cell No.	MCC	MNC	Test channel
A	1	001	01	1
B	2	022	02	2
C	7	001	10	3
D	4	001	11	4
E	3	001	30	-

  - the test channels are defined in clause 6, table 6.3
  - initially Cells A, B and C shall not be broadcasting.
  - Cell E is not activated.
- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".
  - The following USIM fields are configured:

USIM field	Priority	PLMN
$EF_{HPLMNwAcT}$	1st	A
$EF_{PLMNwAcT}$	1st	B
	2nd	E
$EF_{OPLMNwAcT}$	1st	C
	2nd	D

In the table PLMN X is the PLMN code from cell X (see above).

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell D shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell D. The SS shall include the PLMN E in the list of equivalent PLMNs that is sent in the Location Update Accept message. Cells B and C shall be made available after 7 minutes from switched on, thus ensuring the UE fails to find any higher priority PLMN during its first attempt. It is verified that the UE does not perform a location update request on Cell B or C (waiting for at least 7 minutes after broadcasting of Cells B and C).Then Cell A is also made available, and it is verified that the UE performs a location update request on Cell A within 7 minutes after broadcasting of Cell A. During the test, SIB18 is not broadcast in cell A, B, C, D.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell D.
1		SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "non-suitable cell". Set the cell type of Cell C to the "non-suitable cell". Set the cell type of Cell D to the "Suitable neighbour cell". (see note)
1a		UE		The UE is switched on by either using the Power Switch or by applying power. If PS Mode: The subsequent GMM attach should be accepted with "Equivalent PLMNs": PLMN E..
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3			Void	
4			Void	
5	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
5a.1	←		AUTHENTICATION REQUEST	
5a.2	→		AUTHENTICATION RESPONSE	
5a		SS		The SS starts integrity protection.
6	←		LOCATION UPDATING ACCEPT	"Equivalent PLMNs": PLMN E
7		SS		The SS releases the RRC connection.
8			Void	
8a		SS		The SS waits a period of 7 minutes after the UE is switched on, this allowing the UE to make its first periodic search.
8b		SS		Set the cell type of cell B to the "Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell". (see note)
8b.1			Void	
8b.2			Void	
8b.3			Void	
8b.4			Void	
8b.5			Void	
8b.6			Void	
8c		SS		The SS shall wait for 7 minutes during which no messages should be received.
9		SS		Set the cell type of cell A to the "Suitable neighbour cell". (see note) Within 7 minutes after step 9, the following messages shall be sent and received on Cell A. The lower boundary of time T shall not be checked in this test step.
10		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be performed.
11			Void	
12			Void	
13	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
13a		SS		The SS starts integrity protection.
14	←		LOCATION UPDATING ACCEPT	
15		SS		The SS releases the RRC connection.
16			Void	
NOTE: The definitions for "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

9.4.5.4.1.5 Test requirement

1. At step 8c, the UE shall not send any LOCATION UPDATING REQUEST on cell C.

2. At step 8c, the UE shall not send any LOCATION UPDATING REQUEST on cell B.
3. At step 13 the UE shall send a LOCATION UPDATING REQUEST message on Cell A within 7mins.

9.4.5.4.2 Location updating / periodic search for HPLMN or higher priority PLMN / UE in manual mode

9.4.5.4.2.1 Definition

9.4.5.4.2.2 Conformance requirement

The periodic attempts shall only be performed if in automatic mode when the UE is in a VPLMN.

References

TS 22.011 clause 3.2.2.5. and TS 23.122 clause 4.4.3.3.

9.4.5.4.2.3 Test purpose

To verify that no Search for HPLMN or Higher Priority PLMN is performed when the UE is not in automatic mode.

9.4.5.4.2.4 Method of test

Initial conditions

- System Simulator:
  - two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

  NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.
- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The UE is forced into manual selection mode. Cell A is made available. It is verified that the UE does not attempt to perform a location update on Cell A.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell B.
1		SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "Serving cell". (see note)
1a		UE		The UE is switched on by either using the Power Switch or by applying power.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
6	←		LOCATION UPDATING ACCEPT	
7	←		RRC CONNECTION RELEASE	After sending this message the SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9		UE		The UE is forced into manual selection mode.
10		SS		Set the cell type of cell A to the "Suitable neighbour cell". (see note) If PS mode: a routing area updating procedure should be performed.
11		SS		The SS waits a period of 6 minutes. During this time no messages shall be received on Cell A.
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.5.4.2.5 Test requirement

At step 11 the UE shall not attempt to perform a location update.

9.4.5.4.3 Location updating / periodic search for HPLMN or higher priority PLMN / UE waits at least two minutes and at most T minutes

9.4.5.4.3.1 Definition

9.4.5.4.3.2 Conformance requirement

After switch on, the UE waits at least 2 minutes and at most T minutes before the first Search for HPLMN or higher priority PLMN is attempted.

References

TS 22.011 clause 3.2.2.5. and TS 23.122 4.4.3.3.

9.4.5.4.3.3 Test purpose

To verify that the UE waits at least 2 minutes and at most T minutes before attempting its first Search for HPLMN or higher priority PLMN.

9.4.5.4.3.4 Method of test

Initial Conditions

- System Simulator:
  - two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the

same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. Cell A is made available. It is verified that the UE attempts to perform a location update on Cell A, after at least 2 minutes have passed following power on and at most T minutes after successful registration.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell B.
1		SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "Serving cell". (see note)
1a	UE			The UE is switched on by either using the Power Switch or by applying power.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
6	←		LOCATION UPDATING ACCEPT	
7	←		RRC CONNECTION RELEASE	After sending this message the SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9		SS		Set the cell type of cell A to the "Suitable neighbour cell". (see note) If PS mode: a routing area updating procedure should be performed.
10		SS		The SS waits a period of 2 minutes after the UE is switched on. During this time no messages shall be received on Cell A. The following messages shall be sent and received on cell A. Within 6 minutes after step 6 the following messages shall be sent and received on cell A.
11	→		RRC CONNECTION REQUEST	"Establishment cause": Registration. This message shall be sent between 2 and 6 minutes after step 1
12	←		RRC CONNECTION SETUP	
13	→		RRC CONNECTION SETUP COMPLETE	
14	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
15	←		LOCATION UPDATING ACCEPT	
16	←		RRC CONNECTION RELEASE	After sending this message the SS waits for the disconnection of the main signalling link.
17	→		RRC CONNECTION RELEASE COMPLETE	

NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

Specific message contents

None.

9.4.5.4.3.5 Test requirement

At step 11 the UE shall attempt to perform a location update.

9.4.5.4.4 Location updating/periodic search of the higher priority PLMN, VPLMN in a foreign country – higher priority/UE is in automatic mode.

9.4.5.4.4.1 Definition

9.4.5.4.4.2 Conformance requirement

A UE in Automatic Mode shall make periodic attempts to look for a higher priority PLMN of the same country as the currently received PLMN.

References

TS 22.011 clause 3.2.2.5

9.4.5.4.4.3 Test purpose

To verify that the UE selects the highest priority network if the HPLMN/higher priority PLMN Search is performed, when a UE is receiving foreign country's VPLMN and UE is in automatic mode.

9.4.5.4.4.4 Method of test

Initial conditions

- System Simulator:
- Three cells A, B and C, belonging to different location areas with location identification a, b and c. Cell A shall be a cell of the HPLMN, Cell B shall be a cell of the VPLMN with a different Mobile Country Codes that of Cell A and Cell C shall be a cell of a higher priority VPLMN but of the same Mobile Country Code as Cell B. Initially Cell A and Cell C shall not be broadcasting. IMSI attach/detach is not allowed on any cell.
- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted". The PLMN Selector on the USIM shall contain entries for both PLMNs of Cell B and Cell C, where PLMN C is of a higher priority than PLMN B.

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The MS is in automatic selection mode. Cell A and Cell C are made available. It is verified that the MS does not attempt to perform a location update on Cell A. It is verified that the MS does perform a location update on Cell C.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
1		SS		The following messages shall be sent and received on Cell B. Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "Serving cell". Set the cell type of Cell C to the "non-suitable cell". (see note)
1a	UE			The UE is switched on by either using the Power Switch or by applying power.
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
4	←		AUTHENTICATION REQUEST	
5	→		AUTHENTICATION RESPONSE	
6		SS		The SS starts integrity protection.

9.4.5.4.5.5 Test requirement

1. At step 10, the UE shall not send any LOCATION UPDATING REQUEST on Cell A or Cell C.

9.4.5.4.6 Location updating/periodic search of the higher priority PLMN, VPLMN in a foreign country – List of EPLMN contain HPLMN /UE is in automatic mode.

9.4.5.4.6.1 Definition

9.4.5.4.6.2 Conformance requirement

A UE in Automatic Mode shall make periodic attempts to look for a higher priority PLMN of the same country as the currently registered PLMN. For the ranking of PLMNs the UE shall use the order used in subclause 3.2.2.2. In the case that the MS has stored a list of equivalent PLMNs, the UE shall only select a PLMN if it has a higher priority than all the PLMNs, in the list of equivalent PLMNs, which are of the same country as the currently registered PLMN

The Mobile Equipment stores a list of "equivalent PLMNs". This list is replaced or deleted at the end of each location update procedure, routing area update procedure and GPRS attach procedure. The stored list consists of a list of equivalent PLMNs as downloaded by the network plus the PLMN code of the network that downloaded the list. All PLMNs in the stored list are regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover.

References

TS 22.011 clause 3.2.2.5
TS 23.122 clause 4.4.3

9.4.5.4.6.3 Test purpose

To verify that, in automatic mode, when registered on a VPLMN of a country different to it's HPLMN, the MS only selects the highest priority network available from upon those of the same country as the serving PLMN. It also verifies that the MS does not take into account PLMNs, including the HPLMN, which are included in the Equivalent PLMN list.

9.4.5.4.6.4 Method of test

Initial conditions

- System Simulator:
- Three cells; Cell A be mapped to Cell 1, Cell B mapped to Cell 4, Cell C mapped to Cell 7, as found in TS 34.108 clause 6.1.4.2.
- Three cells A, B and C, belonging to different location areas with location identification a, b and c. Cell A shall be a cell of the HPLMN, Cell B shall be a cell of the VPLMN with a different Mobile Country Codes that of Cell A and Cell C shall be a cell of a higher priority VPLMN but of the same Mobile Country Code as Cell B. Initially Cell A and Cell C shall not be broadcasting. IMSI attach/detach is not allowed on any cell.
- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted". The PLMN Selector on the USIM shall contain entries for both PLMNs of Cell B and Cell C, where PLMN C is of a higher priority than PLMN B.

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. During the location update procedure Cell B sends an equivalent PLMN list which includes the HPLMN (Cell A). The MS is in automatic selection mode. The MS receives and store the equivalent PLMN list. Cell A and Cell C are made available. It is verified that the MS does not attempt to perform a location update on Cell A. It is verified that the MS does perform a location update on Cell C.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell B.
1		SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "Serving cell". Set the cell type of Cell C to the "non-suitable cell". (see note)
1a	UE			The UE is switched on by either using the Power Switch or by applying power. Any subsequent GMM attach from the UE shall be accepted by the SS including the same EPLMN list as sent in the LAU accept in step 7.
2		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
4	←		AUTHENTICATION REQUEST	
5	→		AUTHENTICATION RESPONSE	
6		SS		The SS starts integrity protection.
7	←		LOCATION UPDATING ACCEPT	EPLMN list containing HPLMN (Cell A)
8		SS		The SS releases the RRC connection.
9		SS		Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell". (see note)
10		SS		The SS waits a period of 6 minutes. During this time no messages shall be received on Cell A but the following messages are received on Cell C.
11	→		LOCATION UPDATING REQUEST	"Location Update Type": normal. Any ROUTING AREA UPDATE REQUEST from the UE shall be accepted by the SS.
12		SS		The SS starts integrity protection.
13	←		LOCATION UPDATING ACCEPT	
14		SS		The SS releases the RRC connection.
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

9.4.5.4.6.5 Test requirement

1. At step 10, the UE shall not send any LOCATION UPDATING REQUEST on Cell A.
2. At step 11, the UE shall send a LOCATION UPDATING REQUEST message on Cell C.

9.4.5.4.7 Location updating / periodic search for HPLMN or higher priority PLMN / UE waits UE waits Minimum Periodic search timer

9.4.5.4.7.1 Definition

9.4.5.4.7.2 Conformance requirement

1. In the case that the mobile has a stored "Equivalent PLMNs" list the mobile shall only select a PLMN if it is of a higher priority than those of the same country as the current serving PLMN which are stored in the "Equivalent PLMNs" list.

2. In steps i), ii) and iii) of the Automatic Network Selection Mode Procedure, the MS shall limit its attempts to access higher priority PLMNs to PLMNs of the same country as the current serving VPLMN;

3. If the MS is in idle mode in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN or higher priority PLMN listed in "user controlled PLMN selector" or "operator controlled PLMN selector". The MS shall make an attempt if the MS is on the VPLMN at time T after the last attempt.

4. If the MS is configured with the MinimumPeriodicSearchTimer, the MS shall not use a value for T that is less than the MinimumPeriodicSearchTimer. If the value stored in the SIM, or the default value for T (when no value is stored in the SIM), is less than the MinimumPeriodicSearchTimer, then T shall be set to the MinimumPeriodicSearchTimer

References

TS 23.122 4.4.3.3.

9.4.5.4.7.3 Test purpose

To verify that if a UE is camped on a VPLMN it will perform a search for higher priority networks (e.g. HPLMN) with a periodicity of T, where T is the largest value of the Search Period stored in the USIM and the Minimum Periodic search timer, if present.

This test will confirm that, if a cell from a new PLMN becomes available, within a time T the UE will perform a location updating on it only if the following requirements are met:

- The PLMN of this new cell if from the same country as the VPLMN, and

- This PLMN is the HPLMN stored in the USIM, or has a higher priority than the serving VPLMN or any PLMN from the country of the VPLMN that is stored in the equivalent PLMN list.

9.4.5.4.7.4 Method of test

Initial conditions

- System Simulator:

  - four cells A, B, C and D, belonging to different location areas with location identification a, b, c and d. Their country codes and mobile network codes are defined as follows:

Cell	Cell No.	MCC	MNC	Test channel
A	1	001	01	1
B	2	022	02	2
C	7	001	10	3
D	4	001	11	4
E	3	001	30	-

  - the test channels are defined in clause 6, table 6.3

  - initially Cells A, B and C shall not be broadcasting.

  - Cell E is not activated.

- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".
  - the UE is configured with the Minimum Periodic search timer that shall be set to 7 minutes.
  - The following USIM fields are configured:

USIM field	Priority	PLMN
$EF_{HPLMNwAcT}$	1st	A
$EF_{PLMNwAcT}$	1st	B
	2nd	E
$EF_{OPLMNwAcT}$	1st	C
	2nd	D
EF_{UST}	Services 96 is supported.	
$EF_{NASCONFIG}$	"Minimum Periodic Search Timer value" as defined in TS 24.368, clause 5.5 is set to 7 minutes	

In the table PLMN X is the PLMN code from cell X (see above).

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell D shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell D. The SS shall include the PLMN E in the list of equivalent PLMNs that is sent in the Location Update Accept message. Cells B and C shall be made available after 8 minutes from switched on, thus ensuring the UE fails to find any higher priority PLMN during its first attempt. It is verified that the UE does not perform a location update request on Cell B or C (waiting for at least 8 minutes after broadcasting of Cells B and C).Then Cell A is also made available, and it is verified that the UE performs a location update request on Cell A within 8 minutes after broadcasting of Cell A. During the test, SIB18 is not broadcast in cell A, B, C, D.

Expected sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell D.
1		SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "non-suitable cell". Set the cell type of Cell C to the "non-suitable cell". Set the cell type of Cell D to the "Suitable neighbour cell". (see note)
2		UE		The UE is switched on by either using the Power Switch or by applying power. If PS Mode: The subsequent GMM attach should be accepted with "Equivalent PLMNs": PLMN E. If PS mode: a routing area updating procedure should be performed.
3		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	→		LOCATION UPDATING REQUEST	"Location Update Type": Normal.
5	←		AUTHENTICATION REQUEST	
6	→		AUTHENTICATION RESPONSE	
7		SS		The SS starts integrity protection.
8	←		LOCATION UPDATING ACCEPT	"Equivalent PLMNs": PLMN E
9		SS		The SS releases the RRC connection.
10		SS		The SS waits a period of 8 minutes after the UE is switched on, this allowing the UE to make its first periodic search.
11		SS		Set the cell type of cell B to the "Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell". (see note)
12		SS		The SS shall wait for 8 minutes during which no messages should be received.
13		SS		Set the cell type of cell A to the "Suitable neighbour cell". (see note) Within 8 minutes after step 9, the following messages shall be sent and received on Cell A. The lower boundary of time T shall not be checked in this test step.
14		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be performed.
15	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
16		SS		The SS starts integrity protection.
17	←		LOCATION UPDATING ACCEPT	
18	→		TMSI REALLOCATION COMPLETE	
19		SS		The SS releases the RRC connection.
NOTE: The definitions for "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

9.4.5.4.7.5 Test requirement

1. At step 12, the UE shall not send any LOCATION UPDATING REQUEST on cell C.
2. At step 12, the UE shall not send any LOCATION UPDATING REQUEST on cell B.
3. At step 15 the UE shall send a LOCATION UPDATING REQUEST message on Cell A within 8 minutes.

9.4.5.5 Location updating / periodic per-device timer

9.4.5.5.1 Definition

9.4.5.5.2 Conformance requirement

Periodic updating may be used to notify periodically the availability of the mobile station to the network. Periodic updating is performed by using the location updating procedure. The location updating type information element in the LOCATION UPDATING REQUEST message shall indicate periodic updating.

The procedure is controlled by the timer T3212 in the mobile station. The MS indicates in the MS network feature support IE whether it supports the extended value for timer T3212. If the MS receives the Per MS T3212 IE in the Location Updating Accept message, the MS shall use this IE to determine the value of T3212 instead of the value of T3212 that is broadcast.

References

TS 24.008 clause 4.4.2

9.4.5.5.3 Test purpose

To verify that the UE uses the per-device timer value for Periodic Location Area Update broadcast by the network.

9.4.5.5.4 Method of test

Initial conditions

- System Simulator:
  - one cell, T3212 is set to 30 minutes;
  - IMSI attach is allowed in the cell;
- User Equipment:
  - the UE is deactivated. The stored MCC, MNC and LAC correspond to the broadcasted values. The stored update status is "updated".
  - The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to "NAS signalling low priority" as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

None.

Test procedure

The UE is activated. It performs IMSI attach. The UE signals that it supports the extender periodic timer. The SS provides the per device timer, T3212, with a value of 6 minutes. The UE shall perform periodic location updating 6 minutes after the end of the IMSI attach procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is activated. If PS mode: Any subsequent GMM attach from the UE shall be accepted by the SS.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"location updating type": IMSI attach. “MS network feature support”: 1 (MS supports the extended periodic timer in this domain)
6	←		LOCATION UPDATING ACCEPT	“Per MS T3212” : 6 minutes
7	→		TMSI REALLOCATION COMPLETE	
8	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
9	→		RRC CONNECTION RELEASE COMPLETE	
10	→		RRC CONNECTION REQUEST	"Establishment cause": Registration. This message shall be sent by the UE between 5 minutes 45 s and 6 minutes 15 s after step 9.
11	←		RRC CONNECTION SETUP	
12	→		RRC CONNECTION SETUP COMPLETE	
13	→		LOCATION UPDATING REQUEST	"location updating type": periodic updating.
14	←		LOCATION UPDATING ACCEPT	
15	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
16	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.4.6 Location updating / interworking of attach and periodic

9.4.6.1 Definition

9.4.6.2 Conformance requirement

1) If the UE is in service state NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH or PLMN SEARCH-NORMAL SERVICE when the timer T3212 expires the location updating procedure is delayed until this service state is left.

2) The T3212 time-out value shall not be changed in the NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH and PLMN SEARCH-NORMAL SERVICE states.

3) If the selected cell is in the location area where the UE is registered and IMSI ATTACH is not required and timer T3212 has not expired, then the state is NORMAL SERVICE.

References

1) TS 24.008 clause 4.4.2.

2) TS 24.008 clause 4.4.2.

3) TS 24.008 clause 4.2.1.1.

9.4.6.3 Test purpose

1) To check that if the PLU timer expires while the UE is out of coverage, the UE informs the network of its return to coverage.

2) To check that the PLU timer is not disturbed by cells of forbidden PLMNs.

3) To check that if the PLU timer does not expire while out of coverage and if the mobile returns to the LA where it is updated, the UE does not inform the network of its return to coverage.

9.4.6.4 Method of test

Initial conditions

- System Simulator:
  - two cells, a and b, of different PLMNs;
  - T3212 is set to 12 minutes on cell a;
  - T3212 is set to 6 minutes on cell b;
  - IMSI attach is allowed in both cells.

  NB: i) Cell b will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.
- User Equipment:
  - the UE is deactivated. The PLMN of cell b is entered in the USIM's forbidden PLMN list.

Related ICS/IXIT statements

None.

Test procedure

The UE is activated and placed in automatic network selection mode. It performs IMSI attach. 1 minute after the end of the IMSI attach procedure, cell a is made unavailable. The UE shall not location update on cell b. 8 minutes after the end of the IMSI attach procedure, cell a is made available. The UE shall not location update on cell a before 11,75 minutes after the end of the IMSI attach procedure. The UE shall perform a periodic location update on cell a between 11,75 minutes and 12,25 minutes after the end of the IMSI attach procedure.

3 minutes after the end of the periodic location updating procedure, cell a is made unavailable. The UE shall not location update on cell b. 14 minutes after the end of the periodic location updating procedure, cell a is made available and cell b is made unavailable. The UE shall perform a location update on cell a before 17 minutes after the end of the periodic location updating procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". (see note)
1a	UE			The UE is activated in automatic network selection mode.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"location updating type": IMSI attach.
6	←		LOCATION UPDATING ACCEPT	
7	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
8	→		RRC CONNECTION RELEASE COMPLETE	
9		SS		The SS waits 1 minute after step 8. Set the cell type of cell A to the "non-suitable cell". (see note)
10		SS		The SS waits 8 minutes after step 8. Set the cell type of cell A to the "Serving cell". (see note)
11	→		RRC CONNECTION REQUEST	This message shall be sent by the UE between 11 minutes 45s and 12 minutes 15s after step 8.
12	←		RRC CONNECTION SETUP	
13	→		RRC CONNECTION SETUP COMPLETE	
14	→		LOCATION UPDATING REQUEST	"location updating type": periodic.
15	←		LOCATION UPDATING ACCEPT	
16	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
17	→		RRC CONNECTION RELEASE COMPLETE	
18		SS		The SS waits 3 minutes after step 17. Set the cell type of cell A to the "non-suitable cell". (see note)
19		SS		The SS waits 14 minutes after step 17. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note)
20	→		RRC CONNECTION REQUEST	This message shall be sent by the UE before 17 minutes after step 17.
21	←		RRC CONNECTION SETUP	
22	→		RRC CONNECTION SETUP COMPLETE	
23	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic.
24	←		LOCATION UPDATING ACCEPT	
25	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
26	→		RRC CONNECTION RELEASE COMPLETE	
27	UE			The UE shall not initiate an RRC connection establishment. This is checked during 12 minutes.
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.6.5 Test requirement

1) At step 20 the UE shall send an RRC CONNECTION REQUEST and at step 23 the UE shall attempt to perform a location update.

2) At step 11 the UE shall send an RRC CONNECTION REQUEST and at step 14 the UE shall attempt to perform a location update.

3) At step 27 the UE shall not initiate an RRC connection during 12minutes.

9.4.7 Location Updating / accept with replacement or deletion of Equivalent PLMN list

9.4.7.1 Definition

Test to verify that the UE replaces or deletes its stored Equivalent PLMN list when no Equivalent PLMN list is included in the LOCATION UPDATING ACCEPT message from the network during a Location Update.

9.4.7.2 Conformance requirement

1) The stored list in the mobile station shall be replaced on each occurrence of the LOCATION UPDATING ACCEPT message.

2) If no equivalent PLMN list is contained in the LOCATION UPDATING ACCEPT message, then the stored equivalent PLMN list in the mobile station shall be deleted.

References

TS 24.008 4.4.4.6

9.4.7.3 Test purpose

1) To verify that the UE replaces its stored equivalent PLMN list if the equivalent PLMN list is contained in the LOCATION UPDATING ACCEPT message received from the network during a location updating procedure.

2) To verify that the UE deletes its stored equivalent PLMN list if no equivalent PLMN list is contained in the LOCATION UPDATING ACCEPT message received from the network during a location updating procedure.

9.4.7.4 Method of test

Initial conditions:

- System Simulator:
  - two cells: A and B, with different PLMN Codes (PLMN 1 and PLMN 2 respectively);
  - Qqualmin values for cells A and B are -16 dB (FDD only)

  NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.
- User Equipment:
  - the UE is switched off. The HPLMN is PLMN 3 and no other information about PLMN priorities or forbidden PLMNs is stored in the USIM. The equivalent PLMN list in the mobile station is empty.
  - the UE is "Idle updated" on cell B.

Related ICS/IXIT statement(s)

Switch off on button Yes/No.

Test procedure

When the UE is initially switched on it will perform a normal location updating in Cell A, which is the only suitable cell available. The LOCATION UPDATING ACCEPT message sent by the SS on reception of the LOCATION UPDATING REQUEST message shall include PLMN 2 in the equivalent PLMN list. When Cell B is made available

and its RF signal level is higher than that of Cell A the UE will perform a normal location updating in this cell. The LOCATION UPDATING ACCEPT message sent by the SS shall include PLMN 1 in the equivalent PLMN list. When Cell B is made unavailable the UE shall perform a normal location updating again in Cell A, but in this occasion the LOCATION UPDATING ACCEPT message shall contain an empty equivalent PLMN list. When Cell B is made available again and its RF signal level is higher than that of Cell A the UE shall not perform a normal location updating in this cell since it is not in the ePLMN list.

Expected Sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell A
1		SS		Set the cell type of Cell A to the "Suitable neighbour cell". Set the cell type of Cell B to the "non-suitable cell". (see note)
2	UE			The UE is switched on by either using the Power Switch or by applying power.
3		SS	RRC CONNECTION REQUEST	The IE "Establishment cause" in the received RRC CONNECTION REQUEST message is not checked.
4			Void	
5			Void	
6	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
6a		SS		The SS starts integrity protection.
7	←		LOCATION UPDATING ACCEPT	Equivalent PLMNs: PLMN 2
8		SS		The SS releases the RRC connection.
9			Void	
				The following messages shall be sent and received on Cell B.
10		SS		Set the cell type of Cell B to the "Serving cell". (see note)
11		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
12			Void	
13			Void	
14	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
14a		SS		The SS starts integrity protection.
15	←		LOCATION UPDATING ACCEPT	Equivalent PLMNs : PLMN 1
16		SS		The SS releases the RRC connection.
17			Void	
				The following messages shall be sent and received on Cell A.
18		SS		Set the cell type of Cell B to the "non-suitable cell". (see note)
19		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
20			Void	
21			Void	
22	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
22a		SS		The SS starts integrity protection.
23	←		LOCATION UPDATING ACCEPT	Equivalent PLMNs : empty
24		SS		The SS releases the RRC connection.
25			Void	
26		SS		Set the cell type of Cell B to the "Serving cell". (see note)
27		SS		The SS shall wait for 7 minutes during which no messages should be received.

NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

Specific message contents

None.

9.4.7.5 Test requirements

1) At step 14 the UE shall perform a normal location updating in Cell B.

2) At step 27 the UE shall not perform a normal location updating in Cell B.

9.4.8 Location Updating after UE power off

9.4.8.1 Definition

Test to verify that the UE stores the equivalent PLMN list at UE power off and uses the stored equivalent PLMN list after UE switch on.

9.4.8.2 Conformance requirement

The equivalent PLMN list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch on.

References

TS 24.008 4.4.4.6

9.4.8.3 Test purpose

To verify that the UE stores the equivalent PLMN list at UE switch off and uses the stored equivalent PLMN list after UE switch on.

9.4.8.4 Method of test

Initial conditions

- System Simulator:
  - three cells: A, B and C. Cell A belongs to PLMN1 which is HPLMN. Cell B belongs to PLMN2. Cell C belongs to PLMN3. The PLMNs are defined as follows:

Cell	MCC	MNC	PLMN
A	001	01	PLMN1
B	022	002	PLMN2
C	001	03	PLMN3

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.2.

ii) Cell C will be mapped to Cell 7 as found in TS 34.108 clause 6.1.4.2.

- User Equipment:
  - the UE has a valid TMSI(= TMSI1) and CKSN(= CKSN1). It is "idle updated" on cell B,
  - the UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
$EF_{HPLMNwAcT}$	1st	PLMN 1
$EF_{PLMNwAcT}$	Empty	
$EF_{OPLMNwAcT}$	1st	PLMN 3
	2nd	PLMN 2

UE is previously registered on PLMN 2.

Related ICS/IXIT statement(s)

Switch off on button Yes/No.

Test procedure

The UE is switched on and is in idle-updated state on Cell B. Cell A and C are not available. Cell type of Cell A is then changed to make it available, cell types of Cell B are C are changed to make them unavailable. The UE will perform a normal location updating in Cell A, which is the only suitable cell available and belongs to the HPLMN. The LOCATION UPDATING ACCEPT message sent by the SS shall include PLMN2 in the equivalent PLMN list. The UE shall be switched-off. Cell A shall be made unavailable and Cells B and C shall be made available. When the UE is switched-on again, the UE shall perform a normal location updating in Cell B and not in Cell C because PLMN2 is stored in the UE equivalent PLMN list.

Expected Sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell A
1		SS		Set the cell type of Cell A to the "Serving cell". Set the cell type of Cell B and Cell C to the "non-suitable cell". (see note)
2	UE			void
3		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration". If PS mode: a routing area updating procedure should be performed.
4			Void	
5			Void	
6	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
6a	←		AUTHENTICATION REQUEST	

6b	→	AUTHENTICATION RESPONSE	
6c	SS		The SS starts integrity protection.
7	←	LOCATION UPDATING ACCEPT	Equivalent PLMN List: PLMN 2
8	SS		The SS releases the RRC connection.
9	UE		If possible (see ICS) switch off is performed. Otherwise the power is removed. Steps 9a to 9c may be performed or not depending on the action made in step 9. A Detach Request can be received in PS mode.
9a	SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
9b	→	IMSI DETACH INDICATION	
9c	SS		The SS releases the RRC connection.
			The following messages shall be sent and received on Cell B.
10		Void	
11	SS		Set the cell type of Cell A to the "non-suitable cell". Set the cell type of Cell B to the "suitable neighbour cell". Set the cell type of Cell C to the "suitable neighbour cell". (see note)
12	UE		Depending on what has been performed in step 9 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode.
13	SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
14		Void	
15		Void	
16	→	LOCATION UPDATING REQUEST	"Location Update Type": normal.
16a			The SS starts integrity protection.
17	←	LOCATION UPDATING ACCEPT	
18	SS		The SS releases the RRC connection.
19		Void	
NOTE: The definitions for "Serving cell", "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".			

Specific message contents

None.

9.4.8.5 Test requirements

At step 16 the UE shall perform a normal location updating in Cell B.

9.4.9 Location Updating / Accept, Interaction between Equivalent PLMNs and Forbidden PLMNs.

9.4.9.1 Definition

Test to verify that, before storing the 'equivalent PLMN list' received from the network during a Location Update, the UE removes any PLMN already included in the 'forbidden PLMN list'. Consequently the UE shall not select a PLMN Equivalent to the registered PLMN if it is included in the 'forbidden PLMN list' in the USIM.

9.4.9.2 Conformance requirement

The mobile station shall store the equivalent PLMNs list, as provided by the network, except that any PLMN code that is already in the "forbidden PLMN list" shall be removed from the "equivalent PLMNs" list before it is stored by the mobile station.

References

TS 24.008, 4.4.4.6

9.4.9.3 Test purpose

To verify that the UE shall not select a forbidden PLMN even though it is included in the equivalent PLMN list provided by the network because forbidden PLMNs shall not be stored in the mobile's equivalent PLMN list.

9.4.9.4 Method of test

Initial conditions

- System Simulator:
  - two cells: A, and B. Cell A belongs to PLMN1. Cell B belongs to PLMN2.

  NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.
- User Equipment:
  - the UE is switched off;
  - the UE is in automatic PLMN selection mode.
  - the UE is equipped with a USIM containing default values.
  - prior to performing the actual test procedure PLMN2 is set as forbidden PLMN, so that the USIM will contain the following information

USIM field	Priority	PLMN
EF_{FPLMN}	PLMN 2	

Related ICS/IXIT statement(s)

Switch off on button Yes/No.

Test procedure

Cells A and B are made available. When the UE is switched-on it will perform a normal location updating in Cell A, since Cell B belongs to a forbidden PLMN. The SS will respond sending a LOCATION UPDATING ACCEPT message that includes PLMN2 in the equivalent PLMN list. However the UE shall not store PLMN 2 in its equivalent PLMN list as it is a forbidden PLMN. Therefore, when Cell A is made unavailable the UE will not select the only remaining cell (Cell B), remaining in limited service state.

Expected Sequence

Step	Direction		Message	Contents
	UE	SS		
				The following messages shall be sent and received on Cell A
1		SS		Set the cell type of Cell A to the "Suitable neighbour cell". Set the cell type of Cell B to the "Suitable neighbour cell". (see note)
2	UE			The UE is switched on by either using the Power Switch or by applying power.
3		SS		The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4			Void	
5			Void	
6	→		LOCATION UPDATING REQUEST	"Location Update Type": normal.
6a		SS		The SS starts integrity protection.
7	←		LOCATION UPDATING ACCEPT	Equivalent PLMN List: PLMN 2
8		SS		The SS releases the RRC connection.
9			Void	
10		SS		Set the cell type of Cell A to the "non-suitable cell". (see note)
11		SS		The SS shall wait for 7 minutes during which no messages should be received.
NOTE: The definitions for "Suitable neighbour cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.9.5 Test requirements

At step 11 the UE shall not perform a normal location updating in Cell B.

9.4.10 NITZ / MM/ Time zone, Time and DST Handling

9.4.10.1 Definition

To check that the UE correctly handles time zone, time and DST.

9.4.10.2 Conformance requirement

The feature Network Identities and Timezone shall make it possible for a serving PLMN to transfer its current identity, universal time, DST and LTZ to MSs, and for the MS to store and use this information. Each one of these elements is optional. The feature significantly enhances roaming as it enables the accurate indication of network identities that are either newer than the ME or have changed their name since the ME was manufactured or sold. Additionally time and timezone information can be utilised by MEs as desired.

When using the default character set (see 3GPP TS 23.038 [3]), the serving PLMN shall make both a "short" and a "long" name available to the MS. As an alternative or, in addition, to the default character set, the serving PLMN can make a name available in UCS2. The MS shall be free to choose one of these names depending upon its own characteristics and/or limitations, such as those of its display.

NOTE: Guidance is sought, particularly from non-European operators, as to whether long and short name is required in UCS2 format.

The Network Operator may change the network identity at any time. However the change of network identity need not force immediate transfer of information to the MS.

As a network option, it shall be possible to send universal time (UT) by the network. Time information shall include: Year, Month, Day, Hour, Minute, Second, Timezone and DST. The expected accuracy of the time information is in the order of minutes.

NOTE: Universal time indicates the time at which this information element (see 3GPP TS 24.008 [2]) may have been sent by the network. Thus it can be assumed that the accuracy of the time information when it arrives at the MS is usually within a couple minutes.

The serving PLMN shall make Local Time Zone (LTZ) available to the MS as an offset from Universal Time in units of 15 minutes.

When the LTZ is compensated for DST (summertime), the serving PLMN shall provide a DST parameter to indicate this. The adjustment for DST can be +1h or +2h.

The TP-Service-Centre-Time-Stamp field is given in semi-octet representation, and represents the local time in the following way:

	Year:	Month:	Day:	Hour:	Minute:	Second:	Time Zone
Digits: (Semi-octets)	2	2	2	2	2	2	2

The Time Zone indicates the difference, expressed in quarters of an hour, between the local time and GMT. In the first of the two semi-octets, the first bit (bit 3 of the seventh octet of the TP-Service-Centre-Time-Stamp field) represents the algebraic sign of this difference (0: positive, 1: negative).

The Service-Centre-Time-Stamp, and any other times coded in this format that are defined in the present document, represent the time local to the sending entity.

If the MS has knowledge of the local time zone, then any time received (e.g. Service-Centre-Time-Stamp) at the MS may be displayed in the local time rather than the time local to the sending entity. Messages shall be stored as received without change to any time contained therein.

The Time Zone code enables the receiver to calculate the equivalent time in GMT from the other semi-octets in the Service-Centre-Time-Stamp, or indicate the time zone (GMT, GMT+1H etc.), or perform other similar calculations as required by the implementation. The value contained in the Time Zone field must take into account daylight saving time, such that when the sending entity changes from regular (winter) time to daylight saving (summer) time, there is a change to the value in the Time Zone field, for example in the UK the winter setting is 00000000 and the summer setting is 01000000.

If the MS receives a non-integer value in the SCTS, it shall assume that the digit is set to 0 but shall store the entire field exactly as received.

The mobile station should assume that this time zone applies to the Location Area of the cell to which the Channel Request message was sent.

If the local time zone has been adjusted for Daylight Saving Time, the network shall indicate this by including the IE Network Daylight Saving Time.

The MM information procedure consists only of the MM INFORMATION message sent from the network to the mobile station. During an RR connection, the network shall send none, one, or more MM INFORMATION messages to the mobile station. If more than one MM INFORMATION message is sent, the messages need not have the same content.

NOTE: The network may be able to select particular instants where it can send the MM INFORMATION message without adding delay to, or interrupting, any CM layer transaction, e.g. immediately after the AUTHENTICATION REQUEST message.

3GPP TS 22.042 sub clause 4

3GPP TS 23.040 sub clause 9.2.3.11

3GPP TS 24.008 sub clause 9.4.15a.3, 9.4.15a.4, 4.3.6

9.4.10.3 Test purpose

To verify that a UE supporting any of the NITZ Time related feature (Local Time Zone, Universal Time and DST IE (and thus MM Information) is able to handle them properly.

9.4.10.4 Method of test

Related ICS/IXIT statements

- Switch on off button Yes/No
- Use of NITZ DST Yes/No
- Use of NITZ Universal Time for PLMN Yes/No
- Use of NITZ Local Time Zone for PLMN Yes/No

Initial conditions

System Simulator:

One cell (cell A) operating in network operation mode II

IMSI attach/detach allowed in the cell

User Equipment:

The UE is switched off with a valid USIM inserted.

Test procedure

During the Location Update procedure on Cell A, SS sends its local time and date (UK, Winter Time) using the MM INFORMATION Message to the UE. The operator verifies then the supported parameters and/or the time and date stored in the UE.

The UE is powered off and then powered on. During the location update the SS sets local time and date (UK, Summer Time). The operator verifies then the supported parameters and/or the time and date stored in the UE.

This is then repeated for the follow scenarios: US East coast summer time (GMT–5+1), US West coast summer time (GMT–8+1), US Mountain time (no summer adjustment) (GMT–7).

Expected sequence

	UE	SS		
1	UE			The UE is powered up or switched on and initiates an attach (see PICS).
2				If PS mode: a GMM attach procedure should be performed
3	->		LOCATION UPDATE REQUEST	
4	<-		AUTHENTICATION REQUEST	
5	->		AUTHENTICATION RESPONSE	
6	SS			The SS starts integrity protection.
7	<-		MM INFORMATION	Universal Time IE is included: "< Current Year >/ 05/15 06:25:00" for UT "0 hour" for Timezone Local Time Zone IE included: "0 hour" for Timezone No DST IE included See specific message content
8	<-		LOCATION UPDATE ACCEPT	
9	SS			The SS releases the RRC connection
10	SS			**Operator Action:** The use of the supported Fields is checked: Universal Time: Year: < Current Year > Month: May Day: 15th Hour: 6 Hours Minute: 25 Minutes Timezone: GMT+0 Local Time Zone: Timezone: GMT+0 DST: Daylight Saving Time not in use (i.e. winter time) (see note)
11	UE			The UE is switched off or power is removed (see PICS).
12	->		IMSI DETACH	Message not sent if power is removed. Detach type = IMSI detach
13	SS			The UE is powered up or switched on and initiates an attach (see PICS).

31	<-		MM INFORMATION	UniversalTime IE is included: "< Current Year >/ 05/15 06:25:00" for UT "-4 hours" for Timezone (including DST) DST = +1 hour See specific message content

Specific message contents:

MM Information, step 7:

Information element	Value/remark
Universal Time IE	47
Year	40 - < Current Year >
Month	50 – May
Day	51 - 15th
Hour	60 - 6 hours
Minute	52 - 25 Minutes
Second	00 - 0 second
Time Zone	00 - GMT+0 (0*15 minutes + 0*15 minutes DST)
Local Time Zone IE	46
Time Zone	00 - GMT+0 (0*15 minutes + 0*15 minutes DST)

MM Information, step 19:

Information element	Value/remark
UniversalTime IE	47
Year	40 - < Current Year >
Month	50 - May
Day	51 - 15th
Hour	60 - 6 hours
Minute	52 - 25 Minutes
Second	00 - 0 second
Time Zone	40 - GMT+0+1 (0*15 minutes + (1*4)*15 minutes DST)
Daylight Saving Time IE	49
Length of DST Content	1
Value	1 - + 1 hour (summer time)

MM Information, step 31:

Information element	Value/remark
Universal Time IE	47
Year	40 - < Current Year >
Month	50 - May
Day	51 - 15th
Hour	60 - 6 hours
Minute	52 - 25 Minutes
Second	00 - 0 second
Time Zone	69 - GMT-5+1 ((-5*4)*15 minutes + (1*4)*15 minutes DST)
Daylight Saving Time IE	49
Length of DST Content	1
Value	1 - + 1 hour (summer time)

MM Information, step 43:

Information element	Value/remark
UniversalTime IE	47
Year	40 - < Current Year >
Month	50 – May
Day	51 - 15th
Hour	60 - 6 hours
Minute	52 - 25 Minutes
Second	00 - 0 second
Time Zone	8A - GMT-8+1 ((-8*4)*15 minutes + (1*4)*15 minutes DST)
Daylight Saving Time IE	49
Length of DST Content	1
Value	1 - + 1 hour (summer time)

MM Information, step 55:

Information element	Value/remark
Universal Time IE	47
Year	40 - < Current Year >
Month	50 – May
Day	51 - 15th
Hour	60 - 6 hours
Minute	52 - 25 Minutes
Second	00 - 0 second
Time Zone	8A - GMT-7 ((-7*4)*15 minutes)

9.4.10.5 Test requirements

In steps 10, 22, 34, 46 and 58 the UE populates the supported fields with the correct received values.

9.4.11 Location Updating / EAB active

9.4.11.1 Definition

Test to verify that the UE does not perform LAU if the network broadcast EAB and EAB is enabled in the UE.

9.4.11.2 Conformance requirement

- For generic location updating, GPRS attach and routing area updating procedures the mobile station shall evaluate the control information for:
  - common access control (as specified in 3GPP TS 44.018 [84], 3GPP TS 44.060 [76], and 3GPP TS 25.331 [23c]);
  - domain specific access control (as specified in 3GPP TS 44.018 [84] and 3GPP TS 25.331 [23c]);
  - specific control information for location registration (as specified in 3GPP TS 25.331 [23c]; see "Paging Permission with Access Control"); and
  - EAB as specified for A/Gb mode in 3GPP TS 44.018 [84], and for Iu mode in 3GPP TS 25.331 [23c].

References

TS 24.008, 4.1.1.5

9.4.11.3 Test purpose

To verify that the UE does not perform LAU if the network broadcast EAB and EAB is enabled in the UE

9.4.11.4 Method of test

Initial conditions:

- System Simulator:
  - two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN;
- User Equipment:
  - the UE has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.
  - An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x.
- The UE is equipped with a USIM containing values shown in Table 9.4.11.4–1.

Table 9.4.11.4–1: USIM Configuration

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"ExtendedAccessBarring is set to 1 which indicate the extended access barring is applied for the UE" as defined in TS 24.368, clause 5.6.

Related ICS/IXIT statement(s)

None.

Test Procedure

The SS indicates access class x barred in EAB information.

The UE is made to select cell B. The UE will not initiate a Location Update procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "non-suitable cell". (see note)
2		SS		SS transmits SYSTEM INFORMATION BLOCK TYPE 21 on cell B. SIB_REP=5.12s and access class x is present in IE "common EAB information".
3	UE			The UE shall not initiate a location updating procedure as access class x is barred. (SS waits 3minutes).
4		SS		SS updates system information and stops transmitting SYSTEM INFORMATION BLOCK TYPE 21.
5	UE			The UE shall transmit a RRC CONNECTION REQUESTmessage on cell B to initiate a location updating procedure. And the RRC Connection is established.
6	→		LOCATION UPDATING REQUEST	The UE transmits LOCATION UPDATING REQUEST message.
7		SS		The SS starts integrity protection.
8	←		LOCATION UPDATING ACCEPT	The SS transmits LOCATION UPDATING ACCEPT message.
9	→		TMSI REALLOCATION COMPLETE	
10		SS		The SS releases the RRC Connection.
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.4.11.5 Test requirement

At step 3, The UE shall not initiate a location updating procedure as access class x is barred in EAB information.

At step 5, The UE shall transmit a RRC CONNECTION REQUEST message on cell B to initiate a location updating procedure.

9.5 MM connection

9.5.1 Introduction

[tbd]

9.5.2 MM connection / establishment in security mode

9.5.2.1 Definition

9.5.2.2 Conformance requirement

1) The UE shall be able to correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to the TMSI.

2) The UE shall be able to interpret security mode setting as acceptance of its CM service request i.e. send a CM message.

References

TS 24.008 clause 4.5.1.1.

9.5.2.3 Test purpose

To verify that the UE can correctly set up an MM connection in an origination and interpret security mode setting as acceptance of its CM service request.

9.5.2.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

Related ICS/IXIT statements

None.

Test Procedure

A mobile originating CM connection is initiated. After the UE has sent the CM SERVICE REQUEST message to the SS, an authentication procedure and a security mode setting procedure are performed. Then, the UE sends a CM message and the SS clears the call and releases the RRC CONNECTION.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			A MO CM connection is attempted.
2			Void	
3			Void	
4			Void	
5	→		CM SERVICE REQUEST	
6	←		AUTHENTICATION REQUEST	
7	→		AUTHENTICATION RESPONSE	
8	SS			The SS starts ciphering and integrity protection.
9			Void	
A10	→		SETUP	The SS expects a SETUP message from the UE, when a call is attempted
A11	←		RELEASE COMPLETE	"Cause" IE: "unassigned number".
B10	→		REGISTER	The SS expects a REGISTER message from the UE, when a Non call related Supplementary service is attempted
B11	←		RELEASE COMPLETE	
C10	→		CP-DATA	The SS expects a CP-DATA message from the UE, when SMS is attempted
C11	←		CP-ACK	
C12	←		CP-DATA	
C13	→		CP-ACK	
14	SS			The SS releases the RRC connection.
15			Void	
Note:	Only one set of messages are applicable at step A10, B10 or C10 based on the type of CS call that is being made			

Specific message contents

None.

9.5.2.5 Test requirement

At step 5 the UE shall send the CM SERVICE REQUEST message to the SS.

At step A10 or B10 or C10 the UE shall send a CM message and the SS shall release the RRC connection (step 14).

9.5.3 Void

9.5.4 MM connection / establishment rejected

9.5.4.1 Definition

9.5.4.2 Conformance requirement

If a CM SERVICE REJECT message is received by the mobile station, timer T3230 shall be stopped, the requesting CM sublayer entity informed. Then the mobile station shall proceed as follows:

- If the cause value is not #4 or #6 the MM sublayer returns to the previous state (the state where the request was received). Other MM connections shall not be affected by the CM SERVICE REJECT message.

References

TS 24.008 clause 4.5.1.1.

9.5.4.3 Test purpose

To verify that the UE stops timer T3230, informs the requesting CM sublayer entity and returns to the previous state.

9.5.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

Related ICS/IXIT statements

None.

Test Procedure

A mobile originating CM connection is attempted. After the UE has sent the CM SERVICE REQUEST message to the SS, the SS responds with a CM SERVICE REJECT message with reject cause "requested service option not subscribed". It is checked that the UE does not send a layer 3 message via the rejected MM connection.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			A MO CM connection is attempted
2			Void	
3			Void	
4			Void	
5	→		CM SERVICE REQUEST	A mobile originating CM connection is attempted
6	←		CM SERVICE REJECT	"Reject cause" IE: "requested service option not subscribed".
7		SS		The UE shall not send a layer 3 message. This is checked during 5 s. Note: During this period, a new mobile originating CM connection should not be attempted, since then UE would send a new CM SERVICE REQUEST.
8		SS		SS releases the RRC connection.

Specific message contents

None.

9.5.4.5 Test requirement

The UE shall attempt MO CM connection (step 1).

At step 5 the UE shall send a CM SERVICE REQUEST.

After step 6 the UE shall not send a layer 3 message.

9.5.5 MM connection / establishment rejected cause 4

9.5.5.1 Definition

9.5.5.2 Conformance requirement

The CM SERVICE REQUEST message contains the:

- mobile identity according to clause 10.5.1.4;
- mobile station classmark 2;
- ciphering key sequence number; and

- CM service type identifying the requested type of transaction (e.g. mobile originating call establishment, emergency call establishment, short message service, supplementary service activation, location services)

…

If a CM SERVICE REJECT message is received by the mobile station, timer T3230 shall be stopped, the requesting CM sublayer entity informed. Then the mobile station shall proceed as follows:

…

- If cause value #4 is received, the mobile station aborts any MM connection, deletes any TMSI, LAI and ciphering key sequence number in the SIM, changes the update status to NOT UPDATED (and stores it in the SIM according to clause 4.1.2.2), and enters the MM sublayer state WAIT FOR NETWORK COMMAND. If subsequently the RR connection is released or aborted, this will force the mobile station to initiate a normal location updating). Whether the CM request shall be memorized during the location updating procedure, is a choice of implementation.

References

TS 24.008 clause 4.5.1.1.

9.5.5.3 Test purpose

To verify that the UE can correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to TMSI.

To verify that the UE, when receiving a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR" shall wait for the network to release the RRC connection.

To verify that the UE shall then perform a normal location updating procedure.

9.5.5.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

Related ICS/IXIT statements

None.

Test Procedure

A mobile originating CM connection is attempted. After the UE has sent the CM SERVICE REQUEST message to the SS, the SS responds with a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR". On receipt of this message, the UE shall delete any TMSI, LAI, cipher key and cipher key sequence number. The RRC CONNECTION is released. It is checked that the UE performs a normal location updating procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			A MO CM connection is attempted.
2			Void	
3			Void	
4			Void	
5	→		CM SERVICE REQUEST	CKSN = initial value, Mobile identity = TMSI.
6	←		CM SERVICE REJECT	"Reject cause" = "IMSI unknown in VLR".
7	SS			SS releases the RRC connection.
8			Void	
9	SS			SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to: "Registration".
10			Void	
11			Void	
12	→		LOCATION UPDATING REQUEST	"Ciphering key sequence number" = "No key is available". "Mobile identity" = IMSI. "Location area identification" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE).
13	←		AUTHENTICATION REQUEST	
14	→		AUTHENTICATION RESPONSE	
14a	←		SECURITY MODE COMMAND	
14b	→		SECURITY MODE COMPLETE	
15	←		LOCATION UPDATING ACCEPT	"Mobile identity" = new TMSI.
16	→		TMSI REALLOCATION COMPLETE	
17	SS			SS releases the RRC connection.
18			Void	

Specific message contents

None.

9.5.5.5 Test requirement

1) The UE shall attempt MO CM connection (at step 1) and at step 5 the UE shall send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to the TMSI.

2) At step 6 the SS should send a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR", and at step 9 the UE shall initiate RRC connection establishment with establishment cause set to "Registration".

3) At step 12 the UE send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "deleted LAI".

9.5.6 MM connection / expiry T3230

9.5.6.1 Definition

9.5.6.2 Conformance requirement

At T3230 expiry (i.e. no response is given but an RRC connection is available) the MM connection establishment shall be aborted.

References

TS 24.008 clauses 4.5.1.2 and 11.2.

9.5.6.3 Test purpose

To verify that at T3230 expiry, the UE aborts the MM-connection establishment.

9.5.6.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

Related ICS/IXIT statements

None.

Test Procedure

A mobile originating CM connection is attempted. After the UE has sent the CM SERVICE REQUEST message to the SS, the SS waits for expiry of timer T3230. It is checked that the UE send a MM STATUS message and waits for the release of the RRC-connection.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			A MO CM connection is attempted.
2	→		RRC CONNECTION REQUEST	
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		CM SERVICE REQUEST	
6	SS			The SS waits for expiry of timer T3230.
7	←		CM SERVICE ACCEPT	
8	→		MM STATUS	"Reject cause" IE is "message type not compatible with protocol state".
9	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
10	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.5.6.5 Test requirement

The UE shall attempt MO CM connection (step 1).

At step 8 the UE shall send a MM STATUS message.

9.5.7 MM connection / abortion by the network

9.5.7.1 MM connection / abortion by the network / cause #6

9.5.7.1.1 Definition

9.5.7.1.2 Conformance requirement

At the receipt of the ABORT message the mobile station shall abort any MM connection establishment or call re-establishment procedure and release all MM connections (if any). If cause value #6 is received the mobile station shall delete any TMSI, LAI and ciphering key sequence number stored in the SIM, set the update status to ROAMING NOT ALLOWED (and store it in the SIM according to clause 4.1.2.2) and consider the SIM invalid until switch off or the SIM is removed. As a consequence the mobile station enters state MM IDLE, substate NO IMSI after the release of the RR connection.

The mobile station shall then wait for the network to release the RR connection - see clause 4.5.3.1.

Reference(s)

TS 24.008 clause 4.3.5.2.

9.5.7.1.3 Test purpose

To check that upon reception of an ABORT message with cause #6 during call establishment:

- the UE does not send any layer 3 message;
- after reception of an ABORT message and after having been deactivated and reactivated, the UE performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN;
- the UE does not perform location updating, does not answer to paging with TMSI, rejects any request for mobile originating call except emergency call, does not perform IMSI detach;
- the UE accepts a request for emergency call.

9.5.7.1.4 Method of test

Initial Conditions

- System Simulator:
  - 2 cells, default parameters.
- User Equipment:
  - the UE has a valid TMSI, CKSN and CK, IK. It is "idle updated" on cell B.

Related ICS/IXIT Statement(s)

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of emergency speech call Yes/No.

Test procedure

A mobile originating CM connection is attempted. Upon reception of the AUTHENTICATION RESPONSE message, the SS sends an ABORT message with cause #6. The SS waits for 5 s. The UE shall not send any layer 3 message. The SS releases the RRC connection.

The SS checks that the UE has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if deactivated.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B				
1	UE			A mobile originating CM connection is attempted.
2			Void	
3			Void	
4			Void	
5	→		CM SERVICE REQUEST	CKSN = initial value, Mobile identity = TMSI
6	←		AUTHENTICATION REQUEST	
7	→		AUTHENTICATION RESPONSE	
8	←		ABORT	"reject cause" = #6.
9	SS			The SS waits for 5 s.
10	UE			The UE shall not send any layer 3 message during that time.

Step	Direction		Message	Comments
	UE	SS		
11		SS		SS releases the RRC connection.
12			Void	
The following messages are sent and shall be received on cell A.				
13		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "non-suitable cell". (see note) If PS mode: a routing area updating procedure should be rejected with cause “GPRS services not allowed”.
14	UE			The UE performs cell reselection according to procedure as specified in (this however is not checked until step 27). The UE shall not initiate an RRC connection establishment on cell A or on cell B.
15		SS		The SS waits at least 7 minutes for a possible periodic updating.
16	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B.
17		←	PAGING TYPE 1	"UE identity" IE contains TMSI. Paging Cause: Terminating Conversational Call.
18	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is verified during 3 s.
19	UE			A MO CM connection is attempted.
20	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is checked during 30 s.
21	UE			If the UE supports emergency speech call (see ICS), an emergency call is attempted.
22		SS		SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to: "Emergency call".
23			Void	
24			Void	
25		→	CM SERVICE REQUEST	"CM service type": Emergency call establishment. CKSN = No key is available, Mobile identity = IMEI
26		←	CM SERVICE ACCEPT	
27		→	EMERGENCY SETUP	
28		←	RELEASE COMPLETE	"Cause" = unassigned number.
29		SS		SS releases the RRC connection.
30			Void	
31	UE			If possible (see ICS) USIM detachment is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed. A Detach Request can be received in PS mode.
32	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is checked during 3 s.
33	UE			Depending on what has been performed in step 31 the UE is brought back to operation. The subsequent GMM attach should be rejected if received in the PS mode.
34		SS		SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to: "Registration".
35			Void	
36			Void	
37		→	LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = no key available, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE).
38		←	AUTHENTICATION REQUEST	"CKSN" = CKSN1.

Step	Direction		Message	Comments
	UE	SS		
39	→		AUTHENTICATION RESPONSE	
39a		SS		The SS starts integrity protection
40	←		LOCATION UPDATING ACCEPT	"Mobile Identity" = TMSI.
41	→		TMSI REALLOCATION COMPLETE	
42		SS		SS releases the RRC connection.
43			Void	
NOTE: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".				

Specific message contents

None.

9.5.7.1.5 Test requirement

1) At step 10 the UE shall not send any layer 3 message.

2)

2.1 At step 14 the UE shall not initiate an RRC connection establishment (not perform normal location updating).

2.2 At step 16 the UE shall not initiate an RRC connection establishment.(not perform periodic location updating).

2.3 At step 18 the UE shall not initiate an RRC connection establishment (not respond to paging with TMSI).

2.4 At step 20 the UE shall not initiate an RRC connection establishment (reject any request for Mobile Originating call establishment).

2.5 At step 32 the UE shall not initiate an RRC connection establishment.(not perform IMSI detach).

3) At step 22 the UE shall initiate RRC connection establishment with the establishment cause set to "emergency call".

4) At step 37 the UE send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "deleted LAI".

9.5.7.2 MM connection / abortion by the network / cause not equal to #6

9.5.7.2.1 Definition

9.5.7.2.2 Conformance requirement

At the receipt of the ABORT message the mobile station shall abort any MM connection establishment or call re-establishment procedure and release all MM connections (if any). If cause value #6 is received the mobile station shall delete any TMSI, LAI and ciphering key sequence number stored in the USIM, set the update status to ROAMING NOT ALLOWED (and store it in the USIM according to TS 24.008 clause 4.1.2.2) and consider the USIM invalid until switch off or the USIM is removed. As a consequence the mobile station enters state MM IDLE, substate NO IMSI after the release of the RR connection.

The mobile station shall then wait for the network to release the RR connection - see TS 24.008 clause 4.5.3.1.

Reference(s)

TS 24.008 clause 4.3.5.

9.5.7.2.3 Test purpose

To check that when multiple MM connections are established, the UE releases all MM connections upon reception of an ABORT message, in the case when the two MM connections are established for a mobile terminating call and a non call related supplementary service operation.

To check that the TMSI is not deleted from UE after reception of ABORT message with cause another than #6.

9.5.7.2.4 Method of test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - T3212 is set to 6 minutes.
- User Equipment:
  - the UE is in state U10 of a mobile terminating call.

Related ICS/IXIT Statement(s)

The UE supports a non call related supplementary service operation during an active call Yes/No.

Test procedure

A non call related supplementary service operation is attempted at the UE. Upon reception of the REGISTER message, the SS sends an ABORT message with cause # 17. The SS waits for 5 s. The UE shall not send any layer 3 message. The SS releases the RRC connection. The UE shall perform periodic location updating 6 minutes after the SS releases the RRC connection. TMSI shall be used as Mobile Identity in LOCATION UPDATING REQUEST message.

Expected Sequence

This procedure is performed if the UE supports non call related supplementary service operation.

Step	Direction		Message	Comments
	UE	SS		
1	UE			A non call related supplementary service operation is attempted at the UE.
2			Void	
3			Void	
4			Void	
5	→		CM SERVICE REQUEST	The SS verifies that the IE " CM service type" in the received CM SERVICE REQUEST is set to "Supplementary service activation".
6	←		CM SERVICE ACCEPT	
7	→		REGISTER	
8	←		ABORT	"reject cause" = #17.
9	SS			The SS waits for 5 seconds. The UE shall not send any layer 3 message during that time.
9a			Void	
10			Void	
11	SS			The UE indicates the signalling connection release. The SS releases the RRC connection.
12			Void	
13	SS			The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST is set to "Registration". This message shall be sent by the UE between 5 minutes 45s and 6 minutes 15s after step 11.
14	→		LOCATION UPDATING REQUEST	"Location updating type" = periodic updating, "Mobile Identity" = TMSI
15	←		LOCATION UPDATING ACCEPT	"Mobile identity" = TMSI.
16	SS			The SS releases the RRC connection.

Specific message contents

None.

9.5.7.2.5 Test requirement

After step 8 the UE shall release all MM connections.

After step 12 the UE shall perform periodic location updating with TMSI used as Mobile Identity.

9.5.8 MM connection / follow-on request pending

9.5.8.1 MM connection / follow-on request pending / test 1

9.5.8.1.1 Definition

9.5.8.1.2 Conformance requirement

The UE shall not attempt to establish a new MM connection after location updating on the same RRC connection if not allowed by the network.

Reference(s)

TS 24.008 clause 4.4.4.6.

9.5.8.1.3 Test purpose

To check that when the network does not include the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a UE that has a CM application request pending does not attempt to establish a new MM connection on that RRC connection.

9.5.8.1.4 Method of test

Initial Conditions

- System Simulator:
  - 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".
- User Equipment:
  - the UE has a valid TMSI and is deactivated.

Related ICS/IXIT Statement(s)

None.

Test procedure

The UE is activated and a CM connection is attempted during the location updating procedure. The SS does not include the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for at least 8 s. The UE shall not send any layer 3 message for 8 s.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is activated.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	location updating type = IMSI attach. Then the SS waits for 15 s. During this delay a CM connection is attempted.
6	←		LOCATION UPDATING ACCEPT	follow on proceed IE not included.
7	SS			The SS wait for at least 8 s.
8	UE			The UE shall not send any layer 3 message for 8 s after reception of the LOCATION UPDATING ACCEPT message.
9	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
10	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.5.8.1.5 Test requirement

After step 8 the UE shall not send any layer 3 messages.

9.5.8.2 MM connection / follow-on request pending / test 2

9.5.8.2.1 Definition

9.5.8.2.2 Conformance requirement

A UE supporting the follow-on request procedure and having a CM connection request pending shall correctly establish an MM connection following a location update when allowed by the network.

Reference(s)

TS 24.008 clause 4.4.4.6.

9.5.8.2.3 Test purpose

To check that when the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a UE that supports the follow on request procedure and that has a CM application request pending establishes successfully a new MM connection on that RRC connection.

9.5.8.2.4 Method of test

Initial Conditions

- System Simulator:
  - 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".
- User Equipment:
  - the UE has a valid TMSI and is deactivated.

Related ICS/IXIT Statement(s)

UE supports the follow on request procedure Yes/No.

Test procedure

The UE is activated and a CM connection is attempted during the location updating procedure. The SS includes the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for at least 8 s.

If the UE supports the follow on request procedure:

- the UE shall send a CM SERVICE REQUEST. Upon reception of that message, the SS sends a CM SERVICE ACCEPT message. The UE shall send an initial CM message. Upon reception of that message, the SS releases the RRC connection.

If the UE does not support the follow on request procedure:

- the UE shall not send any layer 3 message for 8 s.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is activated.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	Location updating type = IMSI attach. Then the SS waits for 15 s. During this delay a CM connection is attempted.
6	←		LOCATION UPDATING ACCEPT	follow on proceed IE included.
				If the UE supports the follow on request procedure (see ICS) steps A7 to A9 are performed, otherwise steps B7 to B8 are performed.
A7	→		CM SERVICE REQUEST	
A8	←		CM SERVICE ACCEPT	
A9	→		An initial CM message	
B7	SS			The SS wait for at least 8 s.
B8	UE			The UE shall not send any layer 3 message for 8 s after reception of the LOCATION UPDATING ACCEPT message.
10	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
11	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.5.8.2.5 Test requirement

After step 6:

The UE shall send a CM SERVICE REQUEST if the UE supports the follow on request procedure.

The UE shall not send any layer 3 message if the UE does not support the follow on request procedure.

9.5.8.3 MM connection / follow-on request pending / test 3

9.5.8.3.1 Definition

9.5.8.3.2 Conformance requirement

1) The UE shall not set the follow on proceed IE in a LOCATION UPDATING REQUEST message if no MM connection request is pending.

2) When the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a UE that has no CM application request pending shall not attempt to establish a new MM connection on that RRC connection.

3) The UE shall correctly handle a CM connection established by the network on the RRC connection that was used for the location updating procedure.

Reference(s)

TS 24.008 clause 4.4.4.6.

9.5.8.3.3 Test purpose

1) To check that a UE that has no CM application request pending sets the follow on proceed IE to No follow-on request pending in a LOCATION UPDATING REQUEST message.

2) To check that when the network includes the follow on proceed IE in a LOCATION UPDATING ACCEPT message, a UE that has no CM application request pending does not attempt to establish a new MM connection on that RRC connection.

3) To check that the UE accepts establishment by the network of a new MM connection on the existing RRC connection.

9.5.8.3.4 Method of test

Initial Conditions

- System Simulator:
  - 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".
- User Equipment:
  - the UE has a valid TMSI and is deactivated.

Related ICS/IXIT Statement(s)

Supported services on TCH.

Test procedure

The UE is activated. The UE performs location updating. The UE shall set the follow on proceed IE to No follow-on request pending in the LOCATION UPDATING REQUEST message. The SS includes the follow on proceed IE in the LOCATION UPDATING ACCEPT message. The SS waits for 5 s. The UE shall not send any layer 3 message for 5 s. The SS sends a SETUP message to the UE requesting a basic service supported by the UE. The UE shall send either a CALL CONFIRMED message if it supports a service on TCH or a RELEASE COMPLETE with cause #88.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is activated.
2	→		RRC CONNECTION REQUEST	"Establishment cause": Registration.
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	→		LOCATION UPDATING REQUEST	"Location updating type" = IMSI attach. The FOR bit is set to No follow-on request pending.
6	←		LOCATION UPDATING ACCEPT	follow on proceed IE is included.
7	SS			The SS wait for 5 s.
8	UE			The UE shall not send any layer 3 message for 5 s after reception of the LOCATION UPDATING ACCEPT message.
9	←		SETUP	
A10	→		CALL CONFIRMED	If the UE supports a basic service on TCH.
B10	→		RELEASE COMPLETE	If the UE does not support any basic service on TCH. cause #88.
11	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
12	→		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

9.5.8.3.5 Test requirement

At step 8 the UE shall not send any layer 3 message.

After step 9:

The UE shall send CALL CONFIRMED message if the UE supports a basic service on TCH.

The UE shall send RELEASE COMPLETE message if the UE does not support a basic service on TCH.

9.5.9 MM connection / abnormal cases / CS domain barred because of domain specific access control

9.5.9.1 Definition

This test is applicable for Rel-5 UEs supporting DSAC and Rel-6 or later UEs.

9.5.9.2 Conformance requirement

TS 24.008 clause 4.1.1.2.2

> If the PS or CS domain is barred because of domain specific access control, a GPRS MS operating in mode A or B in a network that operates in mode II or III shall use the MM specific procedures or GMM specific procedures, respectively, in the domain which is unbarred. If the MS detects that a domain changes from barred to unbarred, it shall behave as specified in subclauses 4.4.4.9, 4.5.1.2, 4.7.3.1.5, 4.7.5.1.5, and 4.7.13.5.

TS 24.008 clause 4.5.1.2

e) Access barred because of CS domain specific access control

> The MM connection establishment shall not be initiated. The MS stays in the current serving cell and applies normal cell reselection process. The MM connection establishment may be initiated by CM layer if it is still necessary, i.e. when access is granted or because of a cell change.

Reference

3GPP TS 24.008 clause 4.1.1.2.2 , 4.5.1.2

9.5.9.3 Test purpose

To test the behaviour of the UE if the CS domain is changed from unbarred to barred because of domain specific access control in a network that operates mode II.

9.5.9.4 Method of test

Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. The UE is informed that the CS domain specific access class x is barred.

System Simulator:

> One cell operating in network operation mode II.
> CS domain specific access class x is barred .

User Equipment:

> The UE has a valid TMSI and is in idle state .

Related ICS/IXIT statements

Support of DSAC Yes/No.

Test procedure

1) The CS domain specific access class x is barred: a Mobile Originating CM connection is attempted, but: the MM connection establishment shall not be initiated.

2) The SS informs the UE by paging that the CS domain specific access class x is not barred: a Mobile Originating CM connection is attempted and the MM connection establishment is initiated, the UE sends a CM SERVICE REQUEST message. Then the UE sends a CM message and the SS clears the call and releases the RRC connection.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			An MO CM connection is attempted.
2	UE			Check that no CM service request is sent as CS domain specific access class x is barred .
3	SS			The SS informs the UE by paging that the CS domain changes from barred to unbarred.
4	UE			An MO CM connection is attempted.
5	SS			The IE "Establishment cause" in the received RRC CONNECTION REQUEST is not checked.
6	→		CM SERVICE REQUEST	
7	←		AUTHENTICATION REQUEST	
8	→		AUTHENTICATION RESPONSE	
9	SS			The SS starts ciphering and integrity protection.
A10	→		SETUP	The SS expects a SETUP message from the UE, when a call is attempted
A11	←		RELEASE COMPLETE	"Cause" IE: "unassigned number".
B10	→		REGISTER	The SS expects a REGISTER message from the UE, when a Non call related Supplementary service is attempted
B11	←		RELEASE COMPLETE	
C10	→		CP-DATA	The SS expects a CP-DATA message from the UE, when SMS is attempted
C11	←		CP-ACK	
C12	←		CP-DATA	
C13	→		CP-ACK	
12	SS			The SS releases the RRC connection.
Note:	Only one set of messages are applicable at step A10, B10 or C10 based on the type of CS call that is being made.			

Specific message contents

None.

9.5.9.5 Test requirements

At step 2, the CS domain specific access class x is barred , the UE shall:

- not send a CM SERVICE REQUEST message.

At step 6, the CS domain specific access class x is not barred, the UE shall:

- send a CM SERVICE REQUEST message.

10 Circuit Switched Call Control (CC)

10.1 Circuit switched Call Control (CC) state machine verification

10.1.1 General on CC state machine verification

The principle of checking the call control functions consists in the validation of each call control identified state.

State U0 as an initial state is not verified in the tests of 10.1.2 (establishment of an outgoing call).

State U0.1 is never verified.

The steps to be followed within each performed test are:

- bring the UE into the required state;
- trigger the tested event;
- check the UE response and new state.

In clauses 10.1.2 and 10.1.3 different tables are defined to bring the UE into the required initial state. The exact table to be chosen is specified individually in clause "Initial conditions" of "Method of test" for each test case.

For each test, unless otherwise specified, a circuit switched basic service among those supported by the UE but excluding the emergency call teleservice shall be chosen arbitrarily, and the test shall be performed according to that basic service. If the only circuit switched basic service supported by the mobile is emergency call, then the incoming call tests shall not be performed and the other call control tests shall be performed with the EMERGENCY SETUP message replacing the SETUP message.

The initial states are to be checked through STATUS ENQUIRY messages sent by the SS, when feasible. This is not explicitly stated in the tables of expected sequences of signalling messages. The checking of final states are explicitly included into the expected sequences of signalling messages.

The following postamble may be used by the SS to bring UE back to idle mode in those test cases, in which it is not already included into expected sequence of signalling messages:

Table 10.1.1/1: A postamble to bring the UE back to idle mode.

Step	Direction		Message	Comments
	UE	SS		
N	<--		RRC CONNECTION RELEASE	
n+1	-->		RRC CONNECTION RELEASE COMPLETE	
n+2	UE			the UE releases the RRC connection

The postamble has not been included into the all of the tests in order to leave an option to concatenate the procedures in the future by using a final state of a test case as an initial state to another one.

For the special case of U0, the state is checked by sending STATUS ENQUIRY message with all possible values of transaction identifier (seven values) as U0 is the only state in which for every TI the UE will answer with release complete with cause #81. If U0 is to be verified when no RRC connection exists, first a mobile terminating radio connection must be established.

The UE responses are either call management messages received by the SS or lower layers functions activated within the UE or MMI actions (e.g. the buzzing of an alerting tone).

A time-out within the UE is triggered by the SS when it does not answer back an UE expected response.

The test sequences may be split in 3 main groups:

- establishment and release of an outgoing call;
- establishment and release of an incoming call;

- in-call functions.

Some test cases use Basic Generic Procedures, "Mobile terminated establishment of Radio Resource Connection" and "Radio Bearer Setup Procedure" defined in TS34.108 clause 7.

General tolerance value on protocol timers defined in TS34.108 is used in some test cases if no specific tolerance on timer is defined in a test case.

Remark on verification of transient states

Some call control states of the user equipment may be transient, depending on implementation, configuration of the UE and previous messages.

If a test starts in a transient state, then the test is executed without verification of the starting state.

10.1.2 Establishment of an outgoing call

Initial conditions

As a minimum requirement the UE is updated and has been given a TMSI, a ciphering key and cipher key sequence number, and the layer 2, RRC and MM functionalities have been verified.

There are as many CM initial conditions as states to be checked.

The tables below describe message exchanges which bring the UE in the requested initial states.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order followed in the test procedure will be U0, U0.1, U1, U3, U4, U10, U12, U19, U11 as seen in the table underneath.

The UE is brought again in the initial state starting with U0 at each new test performed.

Table 10.1.2/1: Establishment of an outgoing call, procedure 1 (late assignment)

Step	Direction		Message	Comments
	UE	SS		
1			Mobile Originated establishment of Radio Resource Connection	Establishment cause: Originating Conversational Call

10.1.2.1 Outgoing call / U0 null state

10.1.2.1.1 Outgoing call / U0 null state / MM connection requested

10.1.2.1.1.1 Definition

The call control entity of the User Equipment requests the MM-sublayer to establish a mobile originating MM-connection.

10.1.2.1.1.2 Conformance requirement

If no RR connection exists, the MM sublayer requests the RR sublayer to establish an RR connection and enters MM sublayer state WAIT FOR RR CONNECTION (MM CONNECTION). This request contains an establishment cause and a CM SERVICE REQUEST message.

References

TS 24.008 clause 5.2.1.1 and clause 4.5.1.1

10.1.2.1.1.3 Test purpose

To verify that upon initiation of an outgoing basic call by user the UE initiates establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment" or " Emergency call establishment ".

10.1.2.1.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	->			UE initiates outgoing call
2			Void	
3			Void	
4	->		CM SERVICE REQUEST	SS shall verify the CM service type requested by the UE
5	<-			The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.1.1.5 Test requirements

After step 2 the UE shall initiate establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment" or "Emergency call establishment".

10.1.2.2 Outgoing call / U0.1 MM connection pending

10.1.2.2.1 Outgoing call / U0.1 MM connection pending / CM service rejected

10.1.2.2.1.1 Definition

A request for MM connection is rejected by the SS.

10.1.2.2.1.2 Conformance requirement

If a CM SERVICE REJECT message is received by the UE, timer T3230 shall be stopped, the requesting CM sublayer entity informed. Then the UE shall proceed as follows:

- If the cause value is not #4 or #6 the MM sublayer returns to the previous state (the state where the request was received). Other MM connections shall not be affected by the CM SERVICE REJECT message.

- If cause value #4 is received, the UE aborts any MM connection, deletes any TMSI, LAI and ciphering key sequence number in the SIM, changes the update status to NOT UPDATED (and stores it in the SIM according to clause 4.1.2.2), and enters the MM sublayer state WAIT FOR NETWORK COMMAND. If subsequently the RR connection is released or aborted, this will force the UE to initiate a normal location updating). Whether the CM request shall be memorized during the location updating procedure, is a choice of implementation.

- If cause value #6 is received, the UE aborts any MM connection, deletes any TMSI, LAI and ciphering key sequence number in the SIM, changes the update status to ROAMING NOT ALLOWED (and stores it in the SIM according to clause 4.1.2.2), and enters the MM sublayer state WAIT FOR NETWORK COMMAND. The UE shall consider the SIM as invalid for non-GPRS services until switch-off or the SIM is removed.

References

TS 24.008, clause 4.5.1.1.

10.1.2.2.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U0.1, "MM-connection pending", upon the UE receiving a CM SERVICE REJECT message, returns to CC state U0, "Null".

10.1.2.2.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked. The SS rejects it by CM SERVICE REJECT. The SS performs authentication and starts integrity. Then the SS will check the state of the UE by using STATUS ENQUIRY with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		CM SERVICE REJECT	
1a	<-		AUTHENTICATION REQUEST	
1b	->		AUTHENTICATION RESPONSE	
1c				SS starts integrity
2	<-		STATUS ENQUIRY	
3	->		RELEASE COMPLETE	cause shall be #81 (invalid TI value)
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000 ...110
5	<-			The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.2.1.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.2.2 Outgoing call / U0.1 MM connection pending / CM service accepted

10.1.2.2.2.1 Definition

A CM request is accepted for the MM-connection by the SS.

10.1.2.2.2.2 Conformance requirement

Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

- a SETUP message, if the call to be established is a basic call.

It then enters the "call initiated" state.

References

TS 24.008 clause 5.2.1.

10.1.2.2.2.3 Test purpose

To verify that a CC entity of the UE in CC-state U0.1, "MM connection pending", after completion of the security mode control procedure, sends a SETUP message specifying the Called party BCD number that was entered into the UE and then enters CC state U1, "Call initiated".

10.1.2.2.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the UE is requesting a MM-connection, the SS performs authentication and starts integrity. The UE shall respond with SETUP. Then the SS will check the state of the call control entity by STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	Void	
1a		<-	AUTHENTICATION REQUEST	
1b		->	AUTHENTICATION RESPONSE	
1c				SS starts integrity
2		->	SETUP	with called party BCD number.
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause shall be #30 (response to enq.) and state U1 call initiated.

Specific message contents:

None.

10.1.2.2.2.5 Test requirements

After step 1 the UE shall send a SETUP message specifying the Called party BCD number that was entered into the UE and then enter CC state U1, "Call initiated".

10.1.2.2.3 Outgoing call / U0.1 MM connection pending / lower layer failure

10.1.2.2.3.1 Definition

The call control entity of the UE being in the state, U0.1, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.2.3.2 Conformance requirement

1. RR connection failure or IMSI deactivation

   If an RR connection failure occurs or the IMSI is deactivated during the establishment of an MM connection, the MM connection establishment is aborted, timers T3230 is stopped, and an indication is given to the CM entity that requested the MM connection establishment. This shall be treated as a rejection for establishment of the new MM connection, and the MM sublayer shall release all active MM connections.

2. In CELL_DCH State, after receiving N313 consecutive "out of sync" indications from layer 1 for the established DPCCH physical channel in FDD, and the DPCH associated with mapped DCCHs in TDD, the UE shall:

   1> start timer T313;

   1> upon receiving N315 successive "in sync" indications from layer 1 and upon change of UE state:

   2> stop and reset timer T313.

   1> if T313 expires:

   2> consider it as a "Radio link failure".

   Periods in time where neither "in sync" nor "out of sync" is reported by layer 1 do not affect the evaluation of the number of consecutive (resp. successive) "in sync" or "out of sync" indications.

   When a radio link failure occurs, the UE shall:

   1> clear the dedicated physical channel configuration;

1> perform actions as specified for the ongoing procedure;

1> if no procedure is ongoing or no actions are specified for the ongoing procedure:

2> perform a cell update procedure according to subclause 8.3.1 using the cause "radio link failure".

2. In addition, the cell update procedure also serves the following purposes:

…

- to act on a radio link failure in the CELL_DCH state;

References

TS 24.008, clause 4.5.1.2 a), TS 25.331 clause 8.5.6 and 8.3.1.1.

10.1.2.2.3.3 Test purpose

To verify that the UE with a CC entity in state U0.1, "MM connection pending", aborts MM connection establishment, stops timer T3230 and returns to idle mode in case an RR connection failure occurs.

10.1.2.2.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the UE has sent a CM SERVICE REQUEST message, the SS release the DPCH configuration to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS checks that the UE does not initiate RRC connection establishment during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS release the DPCH configuration to generate lower layer failure (radio link failure)
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		For a period of 60 s the SS checks that the UE does not initiate RRC connection establishment (since it should not re-attempt MM connection establishment).

Specific message contents:

None.

10.1.2.2.3.5 Test requirements

After step 4 the UE shall not initiate RRC connection establishment during 60 s.

10.1.2.3 Outgoing call / U1 call initiated

10.1.2.3.1 Outgoing call / U1 call initiated / receiving CALL PROCEEDING

10.1.2.3.1.1 Definition

The call control entity of the UE being in the state, U1, a CALL PROCEEDING message is sent by the SS.

10.1.2.3.1.2 Conformance requirement

Having entered the "call initiated" state, when the call control entity of the UE receives a CALL PROCEEDING message, it shall enter the "mobile originating call proceeding" state.

References

TS 24.008, clauses 5.2.1.1, 5.2.1.2 and 5.2.1.3.

10.1.2.3.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a CALL PROCEEDING message, enters CC state U3, "Mobile originating call proceeding".

10.1.2.3.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends a CALL PROCEEDING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U3.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	CALL PROCEEDING	tone generation not mandatory
2		<-	STATUS ENQUIRY	
3		->	STATUS	cause #30, state U3

Specific message contents:

None.

10.1.2.3.1.5 Test requirements

After step 1 the UE shall enter CC state U3, "Mobile originating call proceeding".

10.1.2.3.2 Outgoing call / U1 call initiated / rejecting with RELEASE COMPLETE

10.1.2.3.2.1 Definition

The call control entity of the UE being in the state, U1, the call is rejected by a RELEASE COMPLETE message sent by the SS.

10.1.2.3.2.2 Conformance requirement

A call control entity of the UE in any call control state shall, upon receipt of a RELEASE COMPLETE message from its peer entity in the network: stop all running call control timers ; release the MM connection; and return to the "null" state.

References

TS 24.008, clause 5.4.4.1.3.

10.1.2.3.2.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

10.1.2.3.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE COMPLETE	This test case does not require a specific cause value. E.g. value #47, resources unavailable, is a suitable value
2		<-	STATUS ENQUIRY	
3		->	RELEASE COMPLETE	cause #81 (invalid TI value)
4		SS		repeat steps 2-3 to cover all the transaction identifiers from 000...110
5		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.3.2.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.3.3 Outgoing call / U1 call initiated / T303 expiry

10.1.2.3.3.1 Definition

The call control entity of the UE being in the state, U1, if no response is then received from the SS, timer T303 expires at the UE side.

10.1.2.3.3.2 Conformance requirement

If timer T303 elapses in the "call initiated" state before any of the CALL PROCEEDING, ALERTING, CONNECT or RELEASE COMPLETE messages has been received, the clearing procedure described in TS 24.008 clause 5.4 is performed.

References

TS 24.008, clause 5.2.1.1 and clause 5.4.

10.1.2.3.3.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon expiry of T303 sends a DISCONNECT message to its peer entity and enters state U11, "Disconnect request".

10.1.2.3.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. When T303 expires at the UE, the UE shall send DISCONNECT. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits for T303 expiry.
2	->		DISCONNECT	Shall be transmitted 30 s after the CM SERVICE REQUEST, check the timer T303 accuracy, see TS34.108 clause 4.2.3.
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, status U11

Specific message contents:

None.

10.1.2.3.3.5 Test requirements

After step 1 upon expiry of timer T303 the UE shall send a DISCONNECT message and enter state U11, "Disconnect request".

10.1.2.3.4 Outgoing call / U1 call initiated / lower layer failure

10.1.2.3.4.1 Definition

The call control entity of the UE being in the state, U1, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.3.4.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

10.1.2.3.4.3 Test purpose

To verify that after the UE with a CC entity in state U1 "Call initiated", has detected a lower layer failure and has returned to idle mode, the CC entity is in state U0, "Null".

10.1.2.3.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U1. The SS modifies the scrambling code of downlink transmission (DL

DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4	SS			SS re-modifies the scrambling code of DPCH to the original one.
5	SS			SS waits 60 s. UE shall send no message on DCCH

Specific message contents:

None.

10.1.2.3.4.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.2.3.5 Outgoing call / U1 call initiated / receiving ALERTING

10.1.2.3.5.1 Definition

The call control entity of the UE being in the state, U1, an ALERTING message is sent to the UE as an indication that a call is being alerted at a called end.

10.1.2.3.5.2 Conformance requirement

When the call control entity of the UE in the "call initiated" state or "mobile originating call proceeding" state receives an ALERTING message then, the call control entity of the UE shall stop timer T303 and T310 (if running) and shall enter the "call delivered" state.

References

TS 24.008, clause 5.2.1.1 and clause 5.2.1.5.

10.1.2.3.5.3 Test purpose

To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of an ALERTING message, enters CC state U4, "Call delivered".

10.1.2.3.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends an ALERTING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	ALERTING	
2		<-	STATUS ENQUIRY	
3		->	STATUS	cause #30, state U4

Specific message contents:

None.

10.1.2.3.5.5 Test requirements

After step 1 the UE shall enter CC state U4, "Call delivered".

10.1.2.3.6 Outgoing call / U1 call initiated / entering state U10

10.1.2.3.6.1 Definition

The call control entity of the UE being in the state, U1, a CONNECT message is received by the UE.

10.1.2.3.6.2 Conformance requirement

The call control entity of the UE in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

- attach the user connection;
- return a CONNECT ACKNOWLEDGE message;
- stop any locally generated alerting indication (if applied);
- stop timer T303 and T310 (if running);
- enter the "active" state.

References

TS 24.008, clause 5.2.1.1 and clause 5.2.1.6.

10.1.2.3.6.3 Test purpose

To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a CONNECT message, sends a CONNECT ACKNOWLEDGE message to its peer entity and enters CC state U10, "Active".

10.1.2.3.6.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS sends a CONNECT message to the UE. The UE shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	See TS 34.108 clause 7.1.3
2	<-		CONNECT	the UE shall stop locally generated alerting indication, if any
3	->		CONNECT ACKNOWLEDGE	
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause #30, state U10

Specific message contents:

None.

10.1.2.4.2.5 Test requirements

After step 1 the UE shall return a "CONNECT ACKNOWLEDGE" message and enter the CC state U10, "Active".

The UE shall stop locally generated alerting indication.

10.1.2.4.3 Outgoing call / U3 Mobile originating call proceeding / PROGRESS received without in band information

10.1.2.4.3.1 Definition

The call control entity of the UE being in the state, U3, a PROGRESS message is received by the UE. The PROGRESS message does not contain indication of in-band information availability.

10.1.2.4.3.2 Conformance requirement

1) In order to inform the UE that the call is progressing in the PLMN/ISDN environment the network may send a progress indicator information element to the calling UE either:

   a) in an appropriate call control message, if a state change is required (e.g., ALERTING or CONNECT); or

   b) in the PROGRESS message, if no state change is appropriate.

   This progress indicator information element shall contain progress description value #32 "Call is end-to-end ISDN/PLMN".

2) At any time during the establishment or release of a call and during an active call the network may send a PROGRESS message to the UE.

   On receipt of a PROGRESS message during the establishment or release of a call the UE shall stop all call control timers related to that call.

References

Conformance requirement 1: TS 24.008 clause 5.2.1.4.2

Conformance requirement 2: TS 24.008 clause 5.5.6

10.1.2.4.3.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message with valid cause values stays in CC-state U3.

2) To verify that after receipt of the PROGRESS message timer T310 is stopped.

10.1.2.4.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a PROGRESS message not containing indication of in-band information availability to the UE. The SS checks that the UE has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the UE. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		PROGRESS	(note)
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause #30, state U3
4	SS			SS waits at least 45 s and checks no DISCONNECT is sent by the UE
5	<-		STATUS ENQUIRY	
6	->		STATUS	cause #30, state U3

NOTE: Tested with a valid Progress Indicator, Progress description value among:

- #32 call is end-to-end PLMN/ISDN.

Specific message contents:

None.

10.1.2.4.3.5 Test requirements

After step 1 the UE shall stay in CC-state U3.

After step 3 SS waits at least 45 s and checks no DISCONNECT is sent by the UE.

10.1.2.4.4 Outgoing call / U3 Mobile originating call proceeding / PROGRESS with in band information

10.1.2.4.4.1 Definition

The call control entity of the UE being in the state, U3, a PROGRESS message indicating availability of in band information is received by the UE.

10.1.2.4.4.2 Conformance requirement

1) When the network wants to make the UE attach the user connection (e.g. in order to provide in-band tones/announcement) before the UE has reached the "active" state of a call, the network may include a progress indicator IE indicating user attachment in a suitable CC message:

   - Either it includes the IE in a SETUP, CALL PROCEEDING, ALERTING, or CONNECT message that is send during call establishment
   - it sends a PROGRESS message containing the IE.

   On reception of a SETUP, CALL PROCEEDING, ALERTING, CONNECT, or PROGRESS message the UE shall proceed as specified elsewhere in TS 24.008 clause 5; if the progress indicator IE indicated user attachment and a speech mode traffic channel is appropriate for the call the UE shall in addition: attach the user connection for speech as soon as an appropriate channel in speech mode is available.

2) At any time during the establishment or release of a call and during an active call the network may send a PROGRESS message to the UE.

   On receipt of a PROGRESS message during the establishment or release of a call the UE shall stop all call control timers related to that call.

References

Conformance requirement 1: TS 24.008 clause 5.5.1

Conformance requirement 2: TS 24.008 clause 5.5.6

10.1.2.4.4.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement through-connects the traffic channel for speech, if DTCH is in speech mode. If DTCH is not in a speech mode, the UE does not through-connect the DTCH.

2) To verify that after receipt of the PROGRESS message, T310 is stopped.

10.1.2.4.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic

channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS sends a PROGRESS message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected. If channel mode is not speech, the DTCH shall not be through connected. Also the SS checks that the UE has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the UE. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	See TS34.108 clause 7.1.3

8		SS		If the channel mode is speech the SS will check that the user connection for speech is attached (both downlink and uplink).

Specific message contents:

NOTE: Tested with a valid Progress Indicator, Progress description value among:

- #1 call is not end to end PLMN/ISDN;
- #2 destination address is non PLMN/ISDN;
- #3 originating address is non PLMN/ISDN;
- #8 in band information or appropriate pattern now available.

10.1.2.4.4.5 Test requirements

After step 2 the UE shall through-connect the traffic channel for speech, if DTCH is in a speech mode. If DTCH is not in speech mode, the UE shall not through-connect the DTCH.

After step 4 the SS waits at least 45 s and checks no DISCONNECT is sent by the UE.

After step 7 the SS checks that the user connection for speech is attached (both downlink and uplink), if the channel mode is speech.

10.1.2.4.5 Outgoing call / U3 Mobile originating call proceeding / DISCONNECT with in band tones

10.1.2.4.5.1 Definition

The call control entity of the UE being in the state, U3, a DISCONNECT message indicating availability of in band information is received by the UE.

10.1.2.4.5.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8:

i) if an appropriate speech traffic channel is not connected, continue clearing as defined in TS24.008 clause 5.4.4.1.2.1 without connecting to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the UE shall proceed as defined in TS24.008 clause 5.4.4.1.2.1.

….

The call control entity of the MS in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8 and, either not containing an *Allowed Actions* IE or containing an *Allowed Actions* IE indicating "CCBS activation is not possible":

i) if an appropriate speech traffic channel is not connected,

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.
- not connect to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the MS shall:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 and clause 5.4.4.1.1.1 and 5.4.4.2.1.1.

10.1.2.4.5.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8 through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.

10.1.2.4.5.4 Method of test

After step 1 the UE shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.2.4.9 Outgoing call / U3 Mobile originating call proceeding / traffic channel allocation

10.1.2.4.9.1 Definition

The call control entity of the UE being in the state, U3, a radio bearer establishment procedure is performed.

10.1.2.4.9.2 Conformance requirement

It is a network dependent decision when to initiate the assignment of an appropriate traffic channel during the mobile originating call establishment phase. Initiation of a suitable RR procedure to assign an appropriate traffic channel does neither change the state of a call control entity nor affect any call control timer.

References

TS 24.008 clause 5.2.1.9.

10.1.2.4.9.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U3.

10.1.2.4.9.4 Method of test

10.1.2.4.11 Outgoing call / U3 Mobile originating call proceeding / lower layer failure

10.1.2.4.11.1 Definition

The call control entity of the UE being in the state, U3, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.4.11.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

….

The re-establishment procedure allows a MS to resume a connection in progress after a radio link failure, possibly in a new cell and possibly in a new location area. The conditions in which to attempt call re-establishment or not depend on the call control state, see clause 5.5.4 and, whether or not a cell allowing call re-establishment has been found (as described in GSM 05.08). MM connections are identified by their protocol discriminators and transaction identifiers: these shall not be changed during call re-establishment.

The re-establishment takes place when a lower layer failure occurs and at least one MM connection is active (i.e.. the mobile station's MM sublayer is either in state 6 "MM CONNECTION ACTIVE" or state 20 "WAIT FOR ADDITIONAL OUTGOING MM CONNECTION").

….

When a MM connection is active, an indication may be given by the MM sublayer to the call control entity to announce that the current MM connection has been interrupted but might be re-established on request of call control.

Depending whether call re-establishment is allowed or not and on its actual state, call control shall decide to either request re-establishment or to release the MM connection.

a) Re-establishment not required

If the call is in the call establishment or call clearing phase, i.e. any state other than the "active" state or the "mobile originating modify" state, call control shall release the MM connection

….

In CELL_DCH State, after receiving N313 consecutive "out of sync" indications from layer 1 for the established DPCCH physical channel in FDD, and the DPCH associated with mapped DCCHs in TDD, the UE shall:

1> start timer T313;

1> upon receiving N315 successive "in sync" indications from layer 1 and upon change of UE state:

2> stop and reset timer T313.

1> if T313 expires:

2> consider it as a "Radio link failure".

Periods in time where neither "in sync" nor "out of sync" is reported by layer 1 do not affect the evaluation of the number of consecutive (resp. successive) "in sync" or "out of sync" indications.

When a radio link failure occurs, the UE shall:

1> clear the dedicated physical channel configuration;

1> perform actions as specified for the ongoing procedure;

1> if no procedure is ongoing or no actions are specified for the ongoing procedure:

2> perform a cell update procedure according to subclause 8.3.1 using the cause "radio link failure".

In addition, the cell update procedure also serves the following purposes:

…

- to act on a radio link failure in the CELL_DCH state;

References

TS 24.008 clause 4.5.2.3, 4.5.1.6, and 5.5.4, TS 25.331 clause 8.5.6 and 8.3.1.1.

10.1.2.4.11.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having detected a lower layer failure and having returned to idle mode, the CC entity is in state U0, "Null".

10.1.2.4.11.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U3. The SS releases the DPCH configuration to generate a lower layer failure at the UE. The SS waits long enough to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE.. The SS checks that the UE does not initiate RRC connection establishment during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS releases the DPCH configuration to generate lower layer failure(radio link failure)
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		For a period of 60 s the SS checks that the UE does not initiate RRC connection establishment (since it should not re-attempt MM connection establishment)

Specific message contents:

None.

10.1.2.4.11.5 Test requirements

After step 4 the UE shall not initiate RRC Connection Establishment for 60 s.

10.1.2.4.12 Outgoing call / U3 Mobile originating call proceeding / unknown message received

10.1.2.4.12.1 Definition

The call control entity of the UE being in the state, U3, an unknown message is received by the UE.

10.1.2.4.12.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.2.4.12.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity returns a STATUS message.

10.1.2.4.12.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause #97, state U3
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U3

Specific message contents:

None.

10.1.2.4.12.5 Test requirements

After step 1 the UE shall return a STATUS message.

10.1.2.4.13 Outgoing call / U3 Mobile originating call proceeding / Internal alerting indication

10.1.2.4.13.1 Definition

The call control entity of the UE being in the state, U3, an ALERTING message is sent to the UE when the user connection is not attached to the radio path.

10.1.2.4.13.2 Conformance requirement

When the call control entity of the UE in the "call initiated" state or "mobile originating call proceeding" state receives an ALERTING message then, the call control entity of the UE shall stop timer T303 and T310 (if running) and shall enter the "call delivered" state. In this state, for speech calls:

- an alerting indication should be given to the user. If the UE has not attached the user connection then the UE shall internally generate an alerting indication. If the UE has attached the user connection then the network is responsible for generating the alerting indication and the UE need not generate one.

References

TS 24.008 clause 5.2.1.5.

10.1.2.4.13.3 Test purpose

When the call control entity of the UE in the "mobile originating call proceeding" state receives an ALERTING message then it enters "call delivered" state and, for speech calls, if the user connection is not attached to the radio path, the UE generates internally an alerting indication.

10.1.2.4.13.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.
- way to give internally generated alerting indication for outgoing calls.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/1.

Test procedure

The SS sends an ALERTING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered. Also it is checked that the UE generates internally alerting indication to the user in the way described in the ICS/IXIT statements.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	ALERTING	the UE shall generate an alerting indication to the user in the way described in the ICS/IXIT statements
2		<-	STATUS ENQUIRY	
3		->	STATUS	cause #30, state U4

Specific message contents:

None.

10.1.2.4.13.5 Test requirements

After step 1 the UE shall enter "Call Delivered" state and, for speech calls, if the user connection is not attached to the radio path, the UE shall internally generate an alerting indication.

10.1.2.5 Outgoing call / U4 call delivered

10.1.2.5.1 Outgoing call / U4 call delivered / CONNECT received

10.1.2.5.1.1 Definition

The call control entity of the UE being in the state, U4, a CONNECT message is received by the UE.

10.1.2.5.1.2 Conformance requirement

The call control entity of the UE in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

- attach the user connection;
- return a CONNECT ACKNOWLEDGE message;
- stop any locally generated alerting indication (if applied);
- stop timer T303 and T310 (if running);
- enter the "active" state.

References

TS 24.008 clause 5.2.1.6.

10.1.2.5.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the CONNECT message returns a CONNECT ACKNOWLEDGE to its peer entity and enters the CC-state U10, "Active".

10.1.2.5.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a CONNECT message to the UE. The UE shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	CONNECT	
2		->	CONNECT ACKNOWLEDGE	UE stops locally generated alerting indication, if applicable
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U10

Specific message contents:

None.

10.1.2.5.1.5 Test requirements

After step 1 the UE shall return a CONNECT ACKNOWLEDGE message and enter the CC state U10, "Active".

10.1.2.5.2 Outgoing call / U4 call delivered / termination requested by the user

10.1.2.5.2.1 Definition

The call control entity of the UE being in the state, U4, the user requests to terminate the call.

10.1.2.5.2.2 Conformance requirement

Apart from the exceptions identified in TS 24.008 clause 5.4.2, the call control entity of the UE shall initiate clearing by: stopping all running call control timers, sending a DISCONNECT message; starting timer T305; and entering the "disconnect request" state.

References

TS 24.008 clause 5.4.3.1

10.1.2.5.2.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.2.5.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The user requests termination of the call. The UE shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action, terminate call
2	->		DISCONNECT	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U11

Specific message contents:

None.

10.1.2.5.2.5 Test requirements

After step 1 the UE shall send a DISCONNECT message and enter the CC state U11, "Disconnect Request".

10.1.2.5.3 Outgoing call / U4 call delivered / DISCONNECT with in band tones

10.1.2.5.3.1 Definition

The call control entity of the UE being in the state, U4, a DISCONNECT message indicating availability of in band information is received by the UE.

10.1.2.5.3.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8:

i) if an appropriate speech traffic channel is not connected, continue clearing as defined in TS 24.008 clause 5.4.4.1.2.1 without connecting to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the UE shall proceed as defined in TS 24.008 clause 5.4.4.1.2.1.

….

The call control entity of the MS in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8 and, either not containing an *Allowed Actions* IE or containing an *Allowed Actions* IE indicating "CCBS activation is not possible":

i) if an appropriate speech traffic channel is not connected,

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.
- not connect to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the MS shall:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.1.1 and 5.4.4.2.1.1.

10.1.2.5.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT with a progress indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.5.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is MO telephony, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE shall enter state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		DISCONNECT	(note)
A2	SS			DTCH in speech mode: the SS will check that the audio path for in band tones is attached.
A3	<-		STATUS ENQUIRY	
A4	->		STATUS	cause #30, state U12
B2	->		RELEASE	DTCH is not in speech mode:
B3	<-		STATUS ENQUIRY	
B4	->		STATUS	cause #30, state U19

Specific message contents:

NOTE: the Progress Indicator, Progress Description value:

- #8 in band information or appropriate pattern now available.

10.1.2.5.3.5 Test requirements

After step 1 the UE shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.5.4 Outgoing call / U4 call delivered / DISCONNECT without in band tones

10.1.2.5.4.1 Definition

The call control entity of the UE being in the state, U4, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability.

10.1.2.5.4.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message without progress indicator information element or with progress indicator different from #8:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

…..

The call control entity of the mobile station in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message either without progress indicator information element or with progress indicator different from #8, and, either without the *Allowed Actions* IE or with the *Allowed Actions* IE indicating that "CCBS is not possible":

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.2.1 and 5.4.4.2.3.1.

10.1.2.5.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.5.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	without progress indicator
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U19

Specific message contents:

None.

10.1.2.5.4.5 Test requirements

After step 1 the UE shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.5.5 Outgoing call / U4 call delivered / RELEASE received

10.1.2.5.5.1 Definition

The call control entity of the UE being in the state, U4, a RELEASE message is received by the UE.

10.1.2.5.5.2 Conformance requirement

The call control entity of the UE in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.3.3.

10.1.2.5.5.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the RELEASE message will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".

10.1.2.5.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2	->		RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4	->		RELEASE COMPLETE	cause #81 (invalid TI value)
5			Void	
6		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.5.5.5 Test requirements

After step 1 the UE shall respond with the RELEASE COMPLETE message.

10.1.2.5.6 Outgoing call / U4 call delivered / lower layer failure

10.1.2.5.6.1 Definition

The call control entity of the UE being in the state, U4, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.5.6.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

TS 24.008 clause 4.5.2.3 and clause 4.5.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

10.1.2.5.6.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered" having detected a lower layer failure and has returned to idle mode, the CC-entity is in CC-state U0, "Null".

10.1.2.5.6.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U4. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.2.5.6.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.2.5.7 Outgoing call / U4 call delivered / traffic channel allocation

10.1.2.5.7.1 Definition

The call control entity of the UE being in the state, U4, a radio bearer establishment procedure is performed.

10.1.2.5.7.2 Conformance requirement

It is a network dependent decision when to initiate the assignment of an appropriate traffic channel during the mobile originating call establishment phase. Initiation of a suitable RR procedure to assign an appropriate traffic channel does neither change the state of a call control entity nor affect any call control timer.

References

TS 24.008 clause 5.2.1.9.

10.1.2.5.7.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U4.

	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2	->		RELEASE COMPLETE	the UE starts T3240
3		<-	STATUS ENQUIRY	
4	->		RELEASE COMPLETE	cause #81 (invalid TI value)
5			Void	
6		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.6.2.5 Test requirements

After step 1 the UE shall return a RELEASE COMPLETE message.

10.1.2.6.3 U10 active / DISCONNECT with in band tones

10.1.2.6.3.1 Definition

The call control entity of the UE being in the state, U10, a DISCONNECT message indicating availability of in band information is received by the UE.

10.1.2.6.3.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8:

i) if an appropriate speech traffic channel is not connected, continue clearing as defined in TS 24.008 clause 5.4.4.1.2.1 without connecting to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the UE shall proceed as defined in TS 24.008 clause 5.4.4.1.2.1.

…

The call control entity of the MS in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8 and, either not containing an *Allowed Actions* IE or containing an *Allowed Actions* IE indicating "CCBS activation is not possible":

i) if an appropriate speech traffic channel is not connected,

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.
- not connect to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the MS shall:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and

- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.1.1 and clause 5.4.4.2.1.1

10.1.2.6.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U10, "Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.

10.1.2.6.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE enters state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		DISCONNECT	(note)
A2	SS			DTCH in speech mode: the SS will check that the audio path for in band tones is attached.
A3	<-		STATUS ENQUIRY	
A4	->		STATUS	cause #30, state U12
B2	->		RELEASE	DTCH is not in speech mode:
B3	<-		STATUS ENQUIRY	
B4	->		STATUS	cause #30, state U19

Specific message contents:

NOTE: the Progress Indicator, Progress Description value:

#8 in band information or appropriate pattern now available.

10.1.2.6.3.5 Test requirements

After step 1 the UE shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.6.4 U10 active / DISCONNECT without in band tones

10.1.2.6.4.1 Definition

The call control entity of the UE being in the state, U10, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability.

10.1.2.6.4.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message without progress indicator information element or with progress indicator different from #8:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

….

The call control entity of the mobile station in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message either without progress indicator information element or with progress indicator different from #8, and, either without the *Allowed Actions* IE or with the *Allowed Actions* IE indicating that "CCBS is not possible":

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.2.1 and 5.4.4.2.3.1.

10.1.2.6.4.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U10, "Active", upon receipt of a DISCONNECT message without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.6.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	without progress indicator
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U19

Specific message contents:

None.

10.1.2.6.4.5 Test requirements

After step 1 the UE shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.6.5 U10 active / RELEASE COMPLETE received

10.1.2.6.5.1 Definition

The call control entity of the UE being in the state, U10, the call is cleared by a RELEASE COMPLETE message sent by the SS.

10.1.2.6.5.2 Conformance requirement

1) A call control entity shall accept an incoming RELEASE COMPLETE message used to initiate the call clearing even though the cause information element is not included.

2) A call control entity of the UE in any call control state shall, upon receipt of a RELEASE COMPLETE message from its peer entity in the network: stop all running call control timers ; release the MM connection; and return to the "null" state.

References

Conformance requirement 1: TS 24.008 clause 5.4.2.

Conformance requirement 2: TS 24.008 clause 5.4.4.1.3.

10.1.2.6.5.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U10, "Active" upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

10.1.2.6.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		RELEASE COMPLETE	note 1
2	<-		STATUS ENQUIRY	note 2
3	->		RELEASE COMPLETE	cause #81 (invalid TI value),
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000...110
5	<-			The SS releases the RRC connection.

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily or cause value not included.

NOTE 2: TI flag has the value indicating the UE as an originator of the call.

10.1.2.6.5.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.6.6 U10 active / SETUP received

10.1.2.6.6.1 Definition

If the UE does not react correctly when receiving a SETUP message on a new Transaction Identifier during an active call, the active call may be lost.

10.1.2.6.6.2 Conformance requirement

1) A busy UE which satisfies the compatibility requirements indicated in the SETUP message shall respond either with a CALL CONFIRMED message if the call setup is allowed to continue or a RELEASE COMPLETE message if the call setup is not allowed to continue, both with cause #17 "user busy".

References:

TS 24.008 clause 5.2.2.3.1.

10.1.2.6.6.3 Test purpose

1) To verify that a User Equipment that has a call established and receives a SETUP message answers either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.

2) To verify that after having sent this message, the UE is still in state U10 for the established call.

10.1.2.6.6.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

- support of call waiting Y/N.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is idle updated with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test Procedure

The UE has a mobile originated call in the U10 state. When UE sends a SETUP message and SS receives it in the first call establishment, SS sends a CALL PROCEEDING message without Network Call Control Capabilities IE.

The SS sends a SETUP message to the UE (with signal IE indicating "call waiting tone on" and without Network Call Control Capabilities IE).

If the UE does not support call waiting it shall answer by a RELEASE COMPLETE message.

If the UE supports call waiting it shall answer by a CALL CONFIRMED message followed by an ALERTING. The second transaction is then released by the SS with a RELEASE COMPLETE message.

In both cases the SS checks by using the status enquiry procedure that the CC entity of the UE is still in state U10, active call for the original call.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	SETUP	this message establishes a second transaction The TI value shall be the same as the one that is in use for the MO call. The TI flag shall have the value specified for an MT call.
A2		->	RELEASE COMPLETE	if the UE does not support call waiting with cause "user busy" with the TI of the second transaction
B2		->	CALL CONFIRMED	if the UE supports call waiting with cause "user busy" with the TI of the second transaction
B3		->	ALERTING	with the TI of the second transaction
B4		<-	RELEASE COMPLETE	with the TI of the second transaction
5		<-	STATUS ENQUIRY	with the TI of the original transaction
6		->	STATUS	cause #30, state U10 with the TI of the original transaction

Specific message contents

SETUP message contains a Signal IE with value "call waiting tone on" (H'07).

10.1.2.6.6.5 Test requirements

After step 1 a UE that has a call established shall answer either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.

After step A2 or B4 the UE shall be in state U10 for the established call.

10.1.2.7 U11 disconnect request

10.1.2.7.1 U11 disconnect request / clear collision

10.1.2.7.1.1 Definition

The call control entity of the UE being in the state, U11, a DISCONNECT message is received by the UE.

10.1.2.7.1.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message without progress indicator information element or with progress indicator different from #8:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

….

The call control entity of the mobile station in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message either without progress indicator information element or with progress indicator different from #8, and, either without the *Allowed Actions* IE or with the *Allowed Actions* IE indicating that "CCBS is not possible":

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.2.1 and 5.4.4.2.3.1.

10.1.2.7.1.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, returns to its peer entity the RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.7.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a DISCONNECT message to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U19

Specific message contents:

None.

10.1.2.7.1.5 Test requirements

After step 1 the UE shall return the RELEASE message.

After step 3 the UE shall return a STATUS message with "Call state" set to state U19, "Release Request".

10.1.2.7.2 U11 disconnect request / RELEASE received

10.1.2.7.2.1 Definition

The call control entity of the UE being in the state, U11, a RELEASE message is received by the UE.

10.1.2.7.2.2 Conformance requirement

The call control entity of the UE in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.3.3

10.1.2.7.2.3 Test purpose

1) To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of the RELEASE message shall return RELEASE COMPLETE and enter the CC-state U0, "Null".

10.1.2.7.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause #81 (invalid TI value)
5			Void	
6				The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.7.2.5 Test requirements

After step 1 the UE shall return the RELEASE COMPLETE.

10.1.2.7.3 U11 disconnect request / timer T305 time-out

10.1.2.7.3.1 Definition

The call control entity of the UE being in the state, U11, if no response is then received from the SS, timer T305 expires at the UE side.

10.1.2.7.3.2 Conformance requirement

The call control entity of the UE in the "disconnect request" state, shall upon expiry of timer T305: send a RELEASE message to the network with the cause number originally contained in the DISCONNECT message and optionally, a second cause information element with cause #102 "recovery on timer expiry", start timer T308, and enter the "release request" state.

References

TS 24.008 clause 5.4.3.5.

10.1.2.7.3.3 Test purpose

To verify that the CC-entity of the UE in CC-state U11, "Disconnect Request" shall on expiry of T305, proceed with the connection release procedure by sending the RELEASE message to its peer entity and enters the CC-state U19, "Release Request".

10.1.2.7.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. Then T305 expires at the UE and the UE shall send a RELEASE message. The SS checks timer T305 accuracy and that the CC entity has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T305 expires at the UE
2	->		RELEASE	SS checks the time between DISCONNECT and RELEASE (note), check the timer T305 accuracy, see TS34.108 clause 4.2.3
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U19

Specific message contents:

NOTE: With the same cause value as originally contained in the DISCONNECT message. An additional cause information element (#102 recovery on timer expiry) may be included.

10.1.2.7.3.5 Test requirements

After step 1 upon expiry of timer T305 the UE shall proceed with the connection release procedure by sending the RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.7.4 U11 disconnect request / lower layer failure

10.1.2.7.4.1 Definition

The call control entity of the UE being in the state, U11, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.7.4.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

10.1.2.7.4.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request" having detected a lower layer failure returns to the idle mode. The CC entity is thus in state U0, "Null".

10.1.2.7.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U11. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s.

Specific message contents:

None.

10.1.2.7.4.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.2.7.5 U11 disconnect request / unknown message received

10.1.2.7.5.1 Definition

The call control entity of the UE being in the state, U11, an unknown message is received by the UE.

10.1.2.7.5.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.2.7.5.3 Test purpose

To verify that a CC-entity of the UE in CC-state U11, "Disconnect Request", having received an unknown message from its peer entity returns a STATUS message.

10.1.2.7.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause #97, state U11
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U11

Specific message contents:

None.

10.1.2.7.5.5 Test requirements

After step 1 the UE shall return a STATUS message.

10.1.2.8 U12 disconnect indication

10.1.2.8.1 U12 disconnect indication / call releasing requested by the user

10.1.2.8.1.1 Definition

The call control entity of the UE being in the state, U12, the user requests to terminate the call.

10.1.2.8.1.2 Conformance requirement

Response from the upper layers:

i) If the upper layers request the clearing of the call, the call control entity of the UE shall:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.2.2.1

10.1.2.8.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall, upon receiving a call release request from the user sends a RELEASE to its peer entity and enters CC-state U19, "Release Request"

The UE is brought into the state U12 by using Option A of table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause #81 (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-		The SS releases the RRC connection

Specific message contents:

None.

10.1.2.8.2.5 Test requirements

After step 1 the UE shall return the RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.8.3 U12 disconnect indication / lower layer failure

10.1.2.8.3.1 Definition

The call control entity of the UE being in the state, U12, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.2.8.3.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

References

TS 24.008 clause 4.5.2.3 and clause 4.5.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

10.1.2.8.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" having detected a lower layer failure returns to idle mode. The CC-entity is thus in state U0, "Null".

10.1.2.8.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U12. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.2.8.3.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.2.8.4 U12 disconnect indication / unknown message received

10.1.2.8.4.1 Definition

The call control entity of the UE being in the state, U12, an unknown message is received by the UE.

10.1.2.8.4.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.2.8.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" having received an unknown message from its peer entity returns a STATUS message.

10.1.2.8.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	unknown message	message type not defined for PD
2		->	STATUS	cause #97, state U12
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U12

Specific message contents:

None.

10.1.2.8.4.5 Test requirements

After step 1 the UE shall return a STATUS message.

10.1.2.9 Outgoing call / U19 release request

10.1.2.9.1 Outgoing call / U19 release request / timer T308 time-out

10.1.2.9.1.1 Definition

The call control entity of the UE being in the state, U19, if no response is then received from the SS, timer T308 expires at the UE side.

10.1.2.9.1.2 Conformance requirement

The call control entity of the UE in the "release request" state shall at first expiry of timer T308 retransmit the RELEASE message and restart timer T308.

References

TS 24.008 clause 5.4.4.1.3.1.

10.1.2.9.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request" will, upon the first expiry of timer T308 send the RELEASE message to its peer entity and remain in the CC-state U19.

10.1.2.9.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. When T308 expires at the UE, the UE shall send a RELEASE message. The SS checks timer T308 accuracy and that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T308 at the UE
2	->		RELEASE	SS checks the time between the two RELEASE messages check the timer T308 accuracy, see TS34.108 clause 4.2.3
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U19

Specific message contents:

None.

10.1.2.9.1.5 Test requirements

After step 1 upon the first expiry of timer T308 the UE shall send the RELEASE message and remain in the CC-state U19.

10.1.2.9.2 Outgoing call / U19 release request / 2nd timer T308 time-out

10.1.2.9.2.1 Definition

The call control entity of the UE being in the state, U19, if no response is then received after timer T308 has expired two times in success at the UE.

10.1.2.9.2.2 Conformance requirement

At second expiry of timer T308, the call control entity of the UE shall: release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.4.1.3.1.

10.1.2.9.2.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, enters the CC-state U0, "Null".

2) To verify that subsequently the UE proceeds with releasing the MM-connection and enters the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

10.1.2.9.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS allows T308 expiry at the UE, and the UE shall repeat sending the RELEASE message and start timer T308 again. The SS allows again T308 expiry at the UE. The UE shall abort the RRC connection. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. The SS performs authentication and starts integrity. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T308 expiry at the UE
2	->		RELEASE	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U19
5		SS		SS waits until the second T308 expiry at the UE
6		SS		SS waits T3240 expiry at the UE
7		UE		The SS releases the RRC connection
8		SS		SS waits 10 s for the UE to return to listening to paging
9			Mobile terminated establishment of Radio Resource Connection	See TS34.108
9a	->		PAGING RESPONSE	
9b	<-		AUTHENTICATION REQUEST	
9c	->		AUTHENTICATION RESPONSE	
9d				SS starts integrity
10	<-		STATUS ENQUIRY	
11	->		RELEASE COMPLETE	cause #81 (invalid TI value)
12		SS		repeat steps 10-11 to cover all the transaction identifiers from 000...110
13				The SS releases the RRC connection.

Specific message contents:

None.

10.1.2.9.2.5 Test requirements

After step 5 upon the 2nd expiry of the timer T308 the UE shall enter the CC-state U0, "Null".

After step 10 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.9.3 Outgoing call / U19 release request / RELEASE received

10.1.2.9.3.1 Definition

The call control entity of the UE being in the state, U19, a RELEASE message is received by the UE.

10.1.2.9.3.2 Conformance requirement

Clear collision can also occur when both sides simultaneously transfer RELEASE messages related to the same call. The entity receiving such a RELEASE message whilst within the "release request" state shall: stop timer T308; release the MM connection; and enter the "null" state (without sending a RELEASE COMPLETE message).

References

TS 24.008 clause 5.4.4.2.5.1

10.1.2.9.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request", upon receipt of a RELEASE, shall release the MM-connection and enters the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

10.1.2.9.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS sends a RELEASE message to the UE. The UE shall release the MM-connection. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

10.1.2.9.5.3 Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request", having detected a lower layer failure, returns to the idle mode, the CC entity is in state U0, "Null".

10.1.2.9.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U19. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.2.9.5.5 Test requirements

After step 4 CC the UE shall not send any message to the SS during 60 s.

10.1.3 Establishment of an incoming call / Initial conditions

The tables below describe message exchanges which bring the UE in the requested initial states in case of an incoming call.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order will be U0, U6, U9, U7, U8, U10, U26 etc. as in the following tables.

Table 10.1.3/1: Establishment of an incoming call, procedure 1

Step	Direction		Message	Comments
	UE	SS		
1			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2 Establishment cause: Terminating Conversational Call.

NOTE 1: The signal information element is not included in the SETUP message. NOTE 2: The UE is supporting immediate connect (p = Y/N). See ICS/IXIT statement. NOTE 3: If necessary (see ICS/IXIT statement), the UE is made to accept the call in the way described in a ICS/IXIT statement.				

10.1.3.1 Incoming call / U0 null state

10.1.3.1.1 Incoming call / U0 null state / SETUP received with a non supported bearer capability

10.1.3.1.1.1 Definition

The call control entity of the UE being in the state, U0, a SETUP message is received with only one bearer capability and this bearer capability is not supported by the UE.

10.1.3.1.1.2 Conformance requirement

When the network is providing a basic service at the called side, the UE shall check that the basic service(s) offered by the network in the Bearer Capability information element(s) match(es) the basic services that the UE is able to support. If a mismatch is detected, then the UE shall proceed as follows:

- if the SETUP message contained two bearer capability information elements for only one of which a mismatch is detected, the UE shall either:
  - under the conditions specified in 3GPP TS 27.001 (e.g. TS 61 and TS 62), accept the SETUP message with a CALL CONFIRMED message containing the, possibly negotiated, bearer capability information element for which no mismatch is detected, or
  - reject the call using cause No. 88 "incompatible destination".
- otherwise the UE shall reject the offered call using a RELEASE COMPLETE message with cause No. 88 "incompatible destination".

References

TS 24.008 clause 5.2.2.2 and annex B.3.2

10.1.3.1.1.3 Test purpose

To verify that a CC entity of the UE, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, returns a RELEASE COMPLETE with correct cause value to its peer entity, and returns to the idle

mode. To verify that the CC-entities relating to the seven mobile terminating transaction identifiers are then in the state U0, "Null".

10.1.3.1.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

A mobile terminated call is initiated. The UE receives a SETUP message that contains a bearer capability not supported by the UE. The UE returns a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity is still in the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Mobile terminated establishment of Radio Resource Connection	SS sends paging, See TS34.108
2	->		PAGING RESPONSE	
3	<-		AUTHENTICATION REQUEST	
4	->		AUTHENTICATION RESPONSE	
5	<-			The SS starts integrity protection.
6			Void	
7	<-		SETUP	(note 1)
8	->		RELEASE COMPLETE	(note 2)
9	<-		STATUS ENQUIRY	
10	->		RELEASE COMPLETE	Cause #81 (invalid TI value).
11	SS			Repeat steps 9-10 to cover all the transaction identifiers from 000... 110.

Specific message contents:

NOTE 1: With one bearer capability and that bearer capability is not supported by the UE.

NOTE 2: With cause #88 incompatible destination.

10.1.3.1.1.5 Test requirements

After step 7 the UE shall return a RELEASE COMPLETE message with cause value #88 (incompatible destination) and return to the idle mode.

After step 9 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.2 Incoming call / U6 call present

10.1.3.2.1 Incoming call / U6 call present / automatic call rejection

10.1.3.2.1.1 Definition

Although the state U6 is transient, the ability to refuse a call (automatically) in this state is tested, if it is implemented at the UE.

10.1.3.2.1.2 Conformance requirement

If the mobile user wishes to refuse the call, a RELEASE COMPLETE message shall be sent with the cause #21 "call rejected".

References

TS 24.008 clause 5.2.2.3.1

10.1.3.2.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U6, "Call Present", shall upon receipt of a rejection indication of the incoming call from the user, shall send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers are then in state U0, "Null".

10.1.3.2.1.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- the UE supports an ability to refuse a call after receipt of a SETUP message.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U6 by using table 10.1.3/2.

Test procedure

A teleservice is selected that is supported by the UE; if the UE supports speech, the selected teleservice is speech. If necessary, the UE is configured for that teleservice. Then a mobile terminated call is initiated. The call control entire of the UE is brought to the state U6 (Note: The state U6 is not checked, since it is not stable). The UE is made to refuse the call (the refusal may require some preliminary preparations in order to achieve refusal at this point). The UE shall send a RELEASE COMPLETE message and enter a call control state U0. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to refuse the call
2	->		RELEASE COMPLETE	(note)
3	<-		STATUS ENQUIRY	
4	->		RELEASE COMPLETE	cause #81 (invalid TI value)
5	SS			repeat steps 3-4 to cover all the transaction identifiers from 000...110
6	<-			The SS releases the RRC connection.

Specific message contents:

NOTE: With cause value #21 call rejected.

10.1.3.2.1.5 Test requirements

After step 1 the UE shall return a RELEASE COMPLETE message with cause value #21 (call rejected) and return to the idle mode.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.3 Incoming call / U9 mobile terminating call confirmed

10.1.3.3.1 Incoming call / U9 mobile terminating call confirmed / alerting or immediate connecting

10.1.3.3.1.1 Definition

The call control entity of the UE having entered the state, U9, with signal information received in the preceding SETUP message, the subsequent behaviour of the UE is tested.

10.1.3.3.1.2 Conformance requirement

1) The call control entity of the UE having entered the "mobile terminating call confirmed" state, if the call is accepted at the called user side, the UE proceeds as described in TS 24.008 clause 5.2.2.5. Otherwise, if the signal information element was present in the SETUP message user alerting is initiated at the UE side; if the signal information element was not present in the SETUP message, user alerting is initiated when an appropriate channel is available.

   Here, initiation of user alerting means:

   - the generation of an appropriate tone or indication at the UE; and
   - sending of an ALERTING message by the call control entity of the MS to its peer entity in the network and entering the "call received" state.

2) In the "mobile terminating call confirmed" state or the "call received" state, the call control entity in the UE indicates acceptance of a mobile terminating call by:

   - sending a CONNECT message to its peer entity in the network;
   - starting Timer T313; and
   - entering the "connect request" state.

References

Conformance requirement 1: TS 24.008 clause 5.2.2.3.2

Conformance requirement 2: TS 24.008 clause 5.2.2.5.

10.1.3.3.1.3 Test purpose

To verify that a CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) will either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

10.1.3.3.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 by using a SETUP message containing signalling information element. (The state U9 is not a stable state in this case, and consequently it is not checked as an initial state.) If the UE supports immediate connect for the selected basic service (p = Y), it sends a CONNECT message and enters the state U8, connect request. Otherwise (p = N) the UE sends an ALERTING message and enters the state U7, call received. The SS checks by using the status enquiry procedure that the CC entity has entered its state as described.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1	->		CONNECT	p = Y
A2	<-		STATUS ENQUIRY	
A3	->		STATUS	cause #30, state U8
B1	->		ALERTING	p = N
B2	<-		STATUS ENQUIRY	
B3	->		STATUS	cause #30, state U7

Specific message contents:

None.

10.1.3.3.1.5 Test requirements

At step A1 the UE shall send a CONNECT message and enter U8 if the network has signalled in previous SETUP message that UE may not alert.

At step B1 the UE shall send an ALERTING message and enter state U7 if the network has signalled in previous SETUP message that UE may alert.

10.1.3.3.2 Incoming call / U9 mobile terminating call confirmed / DTCH assignment

10.1.3.3.2.1 Definition

The call control entity of the UE being in the state, U9, a radio bearer establishment procedure is performed for traffic channel.

10.1.3.3.2.2 Conformance requirement

1) It is a network dependent decision when to initiate the assignment of a traffic channel during the mobile terminating call establishment phase.

   Initiation of the assignment phase does not directly change the state of a CC entity nor affect any call control timer, but may have some secondary effects (see e.g. TS 24.008 clause 5.2.2.3.2).

2) The call control entity of the UE having entered the "mobile terminating call confirmed" state, if the call is accepted at the called user side, the UE proceeds as described in TS24.008 clause 5.2.2.5. Otherwise, if the signal information element was present in the SETUP message user alerting is initiated at the UE side; if the signal information element was not present in the SETUP message, user alerting is initiated when an appropriate channel is available.

   Here, initiation of user alerting means:

   - the generation of an appropriate tone or indication at the UE; and
   - sending of an ALERTING message by the call control entity of the MS to its peer entity in the network and entering the "call received" state.

References

Conformance requirement 1: TS 24.008 clause 5.2.2.7

Conformance requirement 2: TS 24.008 clause 5.2.2.3.2.

10.1.3.3.2.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall sends an ALERTING message and enters state U7.

10.1.3.3.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 (by using a SETUP message not containing the signal information element). The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The UE sends an ALERTING message and enters state U7, call received. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	See TS 34.108 clause 7.1.3
2		->	ALERTING	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U7

Specific message contents:

None.

10.1.3.3.2.5 Test requirements

After step 1 the UE shall send an ALERTING message and enter state U7.

10.1.3.3.3 Void

10.1.3.3.4 Incoming call / U9 mobile terminating call confirmed / DISCONNECT received

10.1.3.3.4.1 Definition

The call control entity of the UE being in the state, U9, a DISCONNECT message is received by the UE.

10.1.3.3.4.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message without progress indicator information element or with progress indicator different from #8:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

…

The call control entity of the mobile station in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message either without progress indicator information element or with progress indicator different from #8, and, either without the *Allowed Actions* IE or with the *Allowed Actions* IE indicating that "CCBS is not possible":

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.2.1 and 5.4.4.2.3.1

10.1.3.3.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a DISCONNECT returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.3.3.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a DISCONNECT message to the UE. The UE responds by sending a RELEASE message and enters state U19, release request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U19

Specific message contents:

None.

10.1.3.3.4.5 Test requirements

After step 1 the UE shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.3.3.5 Incoming call / U9 mobile terminating call confirmed / RELEASE received

10.1.3.3.5.1 Definition

The call control entity of the UE being in the state, U9, a RELEASE message is received by the UE.

10.1.3.3.5.2 Conformance requirement

The call control entity of the UE in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.3.3

10.1.3.3.5.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

10.1.3.3.5.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a RELEASE message to the UE. The UE responds by sending a RELEASE COMPLETE message and enters state U0, null. The SS verifies by using the status enquiry procedure that the UE has entered the correct state with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause #81 (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.3.3.5.5 Test requirements

After step 1 the UE shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.3.6 Incoming call / U9 mobile terminating call confirmed / lower layer failure

10.1.3.3.6.1 Definition

The call control entity of the UE being in the state, U9, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.3.3.6.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

References

TS 24.008 clause 4.5.2.3 and clause 4.5.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

10.1.3.3.6.3 Test purpose

To verify that a CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", having detected a lower layer failure returns to idle mode, the CC entity is in state U0, "Null".

10.1.3.3.6.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U9. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.3.3.6.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.3.3.7 Incoming call / U9 mobile terminating call confirmed / unknown message received

10.1.3.3.7.1 Definition

The call control entity of the UE being in the state, U9, an unknown message is received by the UE.

10.1.3.3.7.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.3.3.7.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed" having received an unknown message from its peer entity returns a STATUS message.

10.1.3.3.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

A MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause #97, state U9
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U9

Specific message contents:

None.

10.1.3.3.7.5 Test requirements

After step 1 the UE shall return a STATUS message.

10.1.3.4 Incoming call / U7 call received

10.1.3.4.1 Incoming call / U7 call received / call accepted

10.1.3.4.1.1 Definition

The call control entity of the UE being in the state, U7, a user accepts the incoming call.

10.1.3.4.1.2 Conformance requirement

In the "mobile terminating call confirmed" state or the "call received" state, the call control entity in the UE indicates acceptance of a mobile terminating call by:

- sending a CONNECT message to its peer entity in the network;
- starting Timer T313; and
- entering the "connect request" state.

References

TS 24.008 clause 5.2.2.5.

10.1.3.4.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", upon a user accepting the incoming call, shall send a CONNECT message to its peer entity and enter the CC-state U8, "Connect Request".

10.1.3.4.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The user accepts the incoming call. The UE sends a CONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered state U8, connect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to accept the call by the user
2	->		CONNECT	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U8

Specific message contents:

None.

10.1.3.4.1.5 Test requirements

After step 1 a UE shall send a CONNECT message and enter the CC-state U8, "Connect Request".

10.1.3.4.2 Incoming call / U7 call received / termination requested by the user

10.1.3.4.2.1 Definition

The call control entity of the UE being in the state, U7, a user requests to terminate incoming call.

10.1.3.4.2.2 Conformance requirement

Apart from the exceptions identified in TS 24.008 clause 5.4.2, the call control entity of the UE shall initiate clearing by: stopping all running call control timers, sending a DISCONNECT message; starting timer T305; and entering the "disconnect request" state.

References

TS 24.008 clause 5.4.3.1

10.1.3.4.2.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.4.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The user initiates clearing the incoming call. The UE sends a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered state U11, disconnect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to terminate/reject the call
2		->	DISCONNECT	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U11

Specific message contents:

None.

10.1.3.4.2.5 Test requirements

After step 1 a UE shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.4.3 Incoming call / U7 call received / DISCONNECT received

10.1.3.4.3.1 Definition

The call control entity of the UE being in the state, U7, a DISCONNECT message is received by the UE.

10.1.3.4.3.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8:

i) if an appropriate speech traffic channel is not connected, continue clearing as defined in TS 24.008 clause 5.4.4.1.2.1 without connecting to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the UE shall proceed as defined in TS 24.008 clause 5.4.4.1.2.1.

….

The call control entity of the MS in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8 and, either not containing an *Allowed Actions* IE or containing an *Allowed Actions* IE indicating "CCBS activation is not possible":

i) if an appropriate speech traffic channel is not connected,

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.
- not connect to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the MS shall:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.1.1 and 5.4.4.2.1.1.

10.1.3.4.3.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", upon receipt of a DISCONNECT with a progress indicator indicating in-band information from network, if a DTCH was not assigned, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.3.4.3.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a DISCONNECT message. The UE responds with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	(note)
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U19

Specific message contents:

NOTE: The Progress Indicator, Progress Description value:
#8 in band information or appropriate pattern now available.

10.1.3.4.3.5 Test requirements

After step 1 a UE if a DTCH was not assigned, shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.3.4.4 Incoming call / U7 call received / RELEASE received

10.1.3.4.4.1 Definition

The call control entity of the UE being in the state, U7, a RELEASE message is received by the UE.

10.1.3.4.4.2 Conformance requirement

The call control entity of the UE in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.3.3

10.1.3.4.4.3 Test purpose

1) To verify that a CC entity of a UE in CC-state U7, "Call Received", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

10.1.3.4.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause #81 (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.3.4.4.5 Test requirements

After step 1 a UE shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.4.5 Incoming call / U7 call received / lower layer failure

10.1.3.4.5.1 Definition

The call control entity of the UE being in the state, U7, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.3.4.5.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

TS 24.008 clause 4.5.2.3 and clause 4.5.3, TS 25.331 clause 8.3.1, and clause 8.5.6.

10.1.3.4.5.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", having detected a lower layer failure returns to idle mode, the CC entity is in state U0, "Null".

10.1.3.4.5.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U7. The SS modifies the scrambling code of downlink transmission(DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission(DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.3.4.5.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.3.4.6 Incoming call / U7 call received / unknown message received

10.1.3.4.6.1 Definition

The call control entity of the UE being in the state, U7, an unknown message is received by the UE.

10.1.3.4.6.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.3.4.6.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", having received an unknown message from its peer entity returns a STATUS message.

10.1.3.4.6.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	unknown message	message type not defined for PD
2		->	STATUS	cause #97, state U7
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U7

Specific message contents:

None.

10.1.3.4.6.5 Test requirements

After step 1 a UE shall return a STATUS message.

10.1.3.4.7 Incoming call / U7 call received / DTCH assignment

10.1.3.4.7.1 Definition

The call control entity of the UE being in the state, U7, a radio bearer establishment procedure is performed for traffic channel.

10.1.3.4.7.2 Conformance requirement

It is a network dependent decision when to initiate the assignment of a traffic channel during the mobile terminating call establishment phase.

Initiation of the assignment phase does not directly change the state of a CC entity nor affect any call control timer, but may have some secondary effects (see e.g. TS 24.008 clause 5.2.2.3.2).

References

TS 24.008 clause 5.2.2.7.

10.1.3.4.7.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U7.

10.1.3.4.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	See TS 34.108 clause 7.1.3
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause #30, state U7

Specific message contents:

None.

10.1.3.4.7.5 Test requirements

After step 1 the CC state U7, "Call Received", shall remain unchanged.

10.1.3.4.8 Incoming call / U7 call received / RELEASE COMPLETE received

10.1.3.4.8.1 Definition

The call control entity of the UE being in the state, U7, the call is cleared by a RELEASE COMPLETE message sent by the SS.

10.1.3.4.8.2 Conformance requirement

1) A call control entity shall accept an incoming RELEASE COMPLETE message used to initiate the call clearing even though the cause information element is not included.

2) A call control entity of the UE in any call control state shall, upon receipt of a RELEASE COMPLETE message from its peer entity in the network: stop all running call control timers ; release the MM connection; and return to the "null" state.

References

Conformance requirement 1: TS 24.008 clause 5.4.2

Conformance requirement 2: TS 24.008 clause 5.4.4.1.3

10.1.3.4.8.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U7, "Call received", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile terminating transaction identifiers are in state U0, "Null".

10.1.3.4.8.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected service is telephony. If necessary, the UE is configured for that basic service. The mobile terminated call is initiated. The CC entity of the UE is brought to U7. The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		RELEASE COMPLETE	note 1
2	<-		STATUS ENQUIRY	
3	->		RELEASE COMPLETE	cause #81 (invalid TI value), note 2
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000...110
5	<-			The SS releases the RRC connection.

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the SS as an originator of the call.

10.1.3.4.8.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.5 Incoming call / U8 connect request

10.1.3.5.1 Incoming call / U8 connect request / CONNECT acknowledged

10.1.3.5.1.1 Definition

The call control entity of the UE being in the state, U8, a CONNECT ACKNOWLEDGE message is received by the UE.

10.1.3.5.1.2 Conformance requirement

In the "connect request" state, the call control entity of the UE shall, upon receipt of a CONNECT ACKNOWLEDGE message: stop timer T313 and enter the "active" state.

References

TS 24.008 clause 5.2.2.6.

10.1.3.5.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of CONNECT ACKNOWLEDGE shall enter the CC-state U10, " Active".

10.1.3.5.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then p = Y, otherwise p = N). The SS sends a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2	<-		CONNECT ACKNOWLEDGE	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U10

Specific message contents:

None.

10.1.3.5.1.5 Test requirements

After step 2 a UE shall enter the CC-state U10, "Active".

10.1.3.5.2 Incoming call / U8 connect request / timer T313 time-out

10.1.3.5.2.1 Definition

The call control entity of the UE being in the state, U8, if no response is then received from the SS, timer T313 expires at the UE side.

10.1.3.5.2.2 Conformance requirement

1) When timer T313 expires prior to the receipt of a CONNECT ACKNOWLEDGE message, the UE shall initiate clearing in accordance with clause 5.4.3.

2) Apart from the exceptions identified in TS 24.008 clause 5.4.2, the call control entity of the UE shall initiate clearing by: stopping all running call control timers, sending a DISCONNECT message; starting timer T305; and entering the "disconnect request" state.

References

Conformance requirement 1: TS 24.008 clause 5.2.2.6

Conformance requirement 2: TS 24.008 clause 5.4.3.1

10.1.3.5.2.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having waited for a reasonable length of time (e.g. expiry of timer T313) without receiving the appropriate protocol message to complete the incoming call, shall initiate the clearing of that incoming call by sending the CC message DISCONNECT and enter the CC-state U11, "Disconnect Request".

10.1.3.5.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then p = Y, otherwise p = N). The T313 expires at the UE and the UE sends a DISCONNECT message and enters state U11, disconnect request. The SS checks by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2	->		DISCONNECT	Shall not be sent before 15 s after entry into state U8. But, shall be sent before 1,1 * T313 after entry into state U8.
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U11

Specific message contents:

None.

10.1.3.5.2.5 Test requirements

After step A1 a UE shall initiate the clearing of that incoming call by sending a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.3 Incoming call / U8 connect request / termination requested by the user

10.1.3.5.3.1 Definition

The call control entity of the UE being in the state, U8, the user requests for releasing of the call.

10.1.3.5.3.2 Conformance requirement

Apart from the exceptions identified in TS 24.008 clause 5.4.2, the call control entity of the UE shall initiate clearing by: stopping all running call control timers, sending a DISCONNECT message; starting timer T305; and entering the "disconnect request" state.

References

TS 24.008 clause 5.4.3.1

10.1.3.5.3.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.3.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the

selected basic service then p = Y, otherwise p = N). Then the user requests termination of the call. The UE sends a DISCONNECT message and enters state U11, disconnect request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2				the user requests to clear the call
3	->		DISCONNECT	
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause #30, state U11

Specific message contents:

None.

10.1.3.5.3.5 Test requirements

After step 2 a UE shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.4 Incoming call / U8 connect request / DISCONNECT received with in-band information

10.1.3.5.4.1 Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message indicating availability of in band information is received by the UE.

10.1.3.5.4.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8:

i) if an appropriate speech traffic channel is not connected, continue clearing as defined in TS 24.008 clause 5.4.4.1.2.1 without connecting to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the UE shall proceed as defined in TS 24.008 clause 5.4.4.1.2.1.

….

The call control entity of the MS in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon receipt of a DISCONNECT message with progress indicator #8 and, either not containing an *Allowed Actions* IE or containing an *Allowed Actions* IE indicating "CCBS activation is not possible":

i) if an appropriate speech traffic channel is not connected,

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.
- not connect to the in-band tone/announcement;

ii) if an appropriate speech traffic channel is connected, attach the user connection for speech if it is not yet attached and enter the "disconnect indication" state. In that state, if upper layers request the clearing of the call, the call control entity of the MS shall:

- stop all running call control timers;

- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.1.1 and 5.4.4.2.1.1.

10.1.3.5.4.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 enters CC-state U12, if the traffic channel is in speech mode, and that the UE sends a RELEASE message and enters CC-state U19 if the DTCH is not in speech mode.

10.1.3.5.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. If channel mode is speech, the UE enters state U12, disconnect indication. If channel mode is not speech, the UE sends a RELEASE message and enters state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	(note)
				DTCH in speech mode:
A2		<-	STATUS ENQUIRY	
A3		->	STATUS	cause #30, state U12
				DTCH is not in speech mode:
B2		->	RELEASE	
B3		<-	STATUS ENQUIRY	
B4		->	STATUS	cause #30, state U19

Specific message contents:

NOTE: The Progress Indicator, Progress description value:

#8 in band information or appropriate pattern now available.

10.1.3.5.4.5 Test requirements

After step 1 a UE shall enter CC-state U12, if the traffic channel is in speech mode. If the DTCH is not in speech mode, the UE shall send a RELEASE message and enter CC-state U19.

10.1.3.5.5 Incoming call / U8 connect request / DISCONNECT received without in-band information

10.1.3.5.5.1 Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability.

10.1.3.5.5.2 Conformance requirement

The call control entity of the UE in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message without progress indicator information element or with progress indicator different from #8:

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

….

The call control entity of the mobile station in any state except the "null" state, the "disconnect indication" state, and the "release request" state, shall, upon the receipt of a DISCONNECT message either without progress indicator information element or with progress indicator different from #8, and, either without the *Allowed Actions* IE or with the *Allowed Actions* IE indicating that "CCBS is not possible":

- stop all running call control timers;
- send a RELEASE message;
- start timer T308; and
- enter the "release request" state.

References

TS 24.008 clause 5.4.4.1.2.1 and 5.4.4.2.3.1.

10.1.3.5.5.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.3.5.5.4 Method of test

10.1.3.5.6 Incoming call / U8 connect request / RELEASE received

10.1.3.5.6.1 Definition

The call control entity of the UE being in the state, U8, a RELEASE message is received by the UE.

10.1.3.5.6.2 Conformance requirement

The call control entity of the UE in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

References

TS 24.008 clause 5.4.3.3

10.1.3.5.6.3 Test purpose

1) To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

10.1.3.5.6.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause #81 (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-		The SS releases the RRC connection.

Specific message contents:

None.

10.1.3.5.6.5 Test requirements

After step 1 a UE shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.5.7 Incoming call / U8 connect request / lower layer failure

10.1.3.5.7.1 Definition

The call control entity of the UE being in the state, U8, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

10.1.3.5.7.2 Conformance requirement

The MM sublayer shall indicate to all CM entities associated with active MM connections that the MM connection is interrupted, the subsequent action of the MM sublayer (call re-establishment, see TS 24.008 clause 4.5.1.6, or local release) will then depend on the decisions by the CM entities.

References

TS 24.008 clause 4.5.2.3 and clause 4.5.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

10.1.3.5.7.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having detected a lower layer failure returns to idle mode, the CC entity is in state U0, "Null".

10.1.3.5.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U8. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS modifies the scrambling code of DPCH for generating lower layer failure
2	->		CELL UPDATE	CCCH
3	<-		RRC CONNECTION RELEASE	CCCH
4		SS		SS re-modifies the scrambling code of DPCH to the original one.
5		SS		SS waits 60 s. UE shall send no message on the DCCH

Specific message contents:

None.

10.1.3.5.7.5 Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

10.1.3.5.8 Incoming call / U8 connect request / DTCH assignment

10.1.3.5.8.1 Definition

The call control entity of the UE being in the state, U8, a radio bearer establishment procedure is performed for traffic channel.

10.1.3.5.8.2 Conformance requirement

It is a network dependent decision when to initiate the assignment of a traffic channel during the mobile terminating call establishment phase.

Initiation of the assignment phase does not directly change the state of a CC entity nor affect any call control timer, but may have some secondary effects (see e.g. TS 24.008 clause 5.2.2.3.2

References

TS 24.008 clause 5.2.2.7.

10.1.3.5.8.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in the CC-state U8.

10.1.3.5.8.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	See TS 34.108 clause 7.1.3
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause #30, state U8

Specific message contents:

None.

10.1.3.5.8.5 Test requirements

After step 1 the CC-state U8, "Connect Request", shall remain unchanged.

10.1.3.5.9 Incoming call / U8 connect request / unknown message received

10.1.3.5.9.1 Definition

The call control entity of the UE being in the state, U8, an unknown message is received by the UE.

10.1.3.5.9.2 Conformance requirement

If a UE receives an RR, MM or CC message with message type not defined for the PD or not implemented by the receiver in acknowledged mode, it shall return a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause # 97 "message type non-existent or not implemented".

References

TS 24.008 clause 8.4.

10.1.3.5.9.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having received an unknown message from its peer entity returns a STATUS message.

10.1.3.5.9.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	unknown message	message type not defined for PD
2		->	STATUS	cause #97, state U8
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U8

Specific message contents:

None.

10.1.3.5.9.5 Test requirements

After step 1 a UE shall return a STATUS message.

10.1.4 In call functions

10.1.4.1 In-call functions / DTMF information transfer

10.1.4.1.1 In-call functions / DTMF information transfer / basic procedures

10.1.4.1.1.1 Definition

Dual Tone Multi Frequency (DTMF) is an inband one out of four plus one out of four signalling system primarily used from terminal instruments in telecommunication networks.

10.1.4.1.1.2 Conformance requirement

1) A user may cause a DTMF tone to be generated e.g. by depression of a key in the UE. The relevant action is interpreted by the UE as a requirement for a DTMF digit to be sent in a START DTMF message on an established FACCH. This message contains the value of the digit to be transmitted (0, 1, ..., 9, A, B, C, D, *, #).

   Only a single digit will be transferred in each START DTMF message.

2) Upon receiving the START DTMF message the network will reconvert the received digit back into a DTMF tone which is applied toward the remote user and returns a START DTMF ACKNOWLEDGE message to the UE. This acknowledgement may be used in the UE to generate an indication as a feedback for a successful transmission.

3) When the user indicates that the DTMF sending should cease e.g. by releasing the key the UE will send a STOP DTMF message to the network.

References

Conformance requirement 1: TS 24.008 clause 5.5.7.1

Conformance requirement 2 and 4: TS 24.008 clause 5.5.7.2

Conformance requirement 3: TS 24.008 clause 5.5.7.3

10.1.4.1.1.3 Test purpose

1) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, sends a START DTMF message.

2) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), sends a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element and to verify that acknowledgement send by the SS is used in the UE to generate a feedback indication for a successful transmission, if applicable.

3) To verify that the UE will send a STOP DTMF message to the network.

4) To verify that the state U10 of the UE CC entity has remained unchanged throughout the test procedure.

10.1.4.1.1.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- supported character set (e.g. 0-9, #, *, A, B, C, D);
- if and how DTMF tone is indicated to the user.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 "Active" by using table 10.1.2/1.

Test procedure

The UE being in the active state, a user causes a DTMF tone to be generated e.g. by depression of a key in the UE. A DTMF digit corresponding to the digit indicated by the user is sent in a START DTMF message by the UE. The SS will return a START DTMF ACKNOWLEDGE message to the UE. This acknowledgement may be used in the UE to generate an indication as a feedback for a successful transmission. Then the user indicates that the DTMF sending should cease e.g. by releasing the key. The UE will send a STOP DTMF message to the network which is acknowledged with STOP DTMF ACKNOWLEDGE by the SS.

The sequence described above is repeated for each of the applicable characters 0-9, #, *, A, B, C, and D.

Then a case of rejecting a DTMF tone is tested.

The state of the UE is verified throughout the test procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		Request the user to cause a DTMF tone to be generated
	->		START DTMF	the SS will verify that the transmitted information corresponds to the digit pressed
2	<-		START DTMF ACKNOWLEDGE	possible indication of a DTMF tone depending the ICS/IXIT statements
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U10
5	->		STOP DTMF	
6	<-		STOP DTMF ACKNOWLEDGE	the DTMF tone indication shall be stopped
7				the steps 1-6 shall be repeated for each of the applicable characters 0-9, #, *, A, B, C, D.
8	<-		STATUS ENQUIRY	
9	->		STATUS	cause #30, state U10
10		SS		Request the user to cause a DTMF tone to be generated.
11	->		START DTMF	
12	<-		START DTMF REJECT	
13	<-		STATUS ENQUIRY	
14	->		STATUS	cause #30, state U10

Specific message contents:

None.

10.1.4.1.1.5 Test requirements

Upon a user making to send a DTMF tone the UE shall send a START DTMF message on the FACCH to SS.

The SS will verify that the transmitted information corresponds to the digit pressed in the UE.

After step s 2 and 7 (successful DTMF transmission) the CC-state U10, "Active", shall remain unchanged.

After step 12 (unsuccessful DTMF transmission) the CC-state U10, "Active", shall remain unchanged.

10.1.4.2 In-call functions / user notification

10.1.4.2.1 In-call functions / User notification / UE terminated

10.1.4.2.1.1 Definition

This is a case for testing user notification procedure terminated by the user equipment.

10.1.4.2.1.2 Conformance requirement

The mobile terminating user notification procedure allows the network to notify a mobile station of any appropriate call-related event during the "active" state of a call. The procedure consists in the network sending a NOTIFY message to the mobile station. No state change occurs at any of the interface sides following the sending or the receipt of this message (but an appropriate indication may optionally be generated in the mobile station).

References

TS 24.008 clause 5.3.1.

10.1.4.2.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U10, "active", upon receiving of a NOTIFY message remains in the active state.

10.1.4.2.1.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 "Active" by using table 10.1.2/1.

Test procedure

The UE being in the active state, the SS will send a NOTIFY message to the UE. The state of the UE is checked after that.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		NOTIFY	
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause #30, state U10

Specific message contents:

None.

10.1.4.2.1.5 Test requirements

After step 1 the CC-state U10, "active", shall remain unchanged.

10.1.4.3 In-call functions / channel changes

The two following test cases are for testing some elementary radio resource level procedures during an active state of a call to ensure call maintenance also during Hard handover.

10.1.4.3.1 In-call functions / channel changes / a successful channel change in active state/ Hard handover

10.1.4.3.1.1 Definition

This is a case to test a change of the frequency of a physical channel during active state of a call.

10.1.4.3.1.2 Conformance requirement

1) The UE being in the active state after having successful completed a physical channel reconfiguration, shall remain in the active state.

References

TS 24.008 clause 5.3.4.3.2, TS 25.331 clause 8.3.5.

10.1.4.3.1.3 Test purpose

To verify that the UE being in the active state after having successful completed a physical channel reconfiguration remains in the active state.

10.1.4.3.1.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services;

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 "Active" by using table 10.1.2/1.

Test procedure

The UE being in the active state, the SS initiated physical channel reconfiguration procedure causing an intracell change of channel by sending a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE performs physical channel reconfiguration procedure and after the main signalling link is successfully established, the UE returns a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	PHYSICAL CHANNEL RECONFIGURATION	
2		->	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause #30, state U10

Specific message contents:

None.

10.1.4.3.1.5 Test requirements

After step 2 the UE shall remain in the active state.

10.1.4.3.2 In-call functions / channel changes / an unsuccessful channel change in active mode/Hard handover

10.1.4.3.2.1 Definition

This is a case to test an unsuccessful change of the frequency of a physical channel during active state of a call.

10.1.4.3.2.2 Conformance requirement

1) The UE, when returning to the old channel after physical channel reconfiguration failure, shall remain in the active state.

References

TS 24.008 clause 5.3.4.3.

10.1.4.3.2.3 Test purpose

To verify that the UE, when returning to the old channel after physical channel reconfiguration failure, will remain in the active state.

10.1.4.3.2.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 "Active" by using table 10.1.2/1.

Test procedure

The SS sends a PHYSICAL CHANNEL RECONFIGURATION message, but does not activate the assigned physical channel. The UE shall attempt try to activate the new channel (this is not verified) and shall then reactivate the "old" channel. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and shall set the cause value in IE "failure cause" to "physical channel failure". The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	PHYSICAL CHANNEL RECONFIGURATION	The UE attempts and fails to re-configure the physical channel.
2	->		PHYSICAL CHANNEL RECONFIGURATION FAILURE	NOTE
3		<-	STATUS ENQUIRY	
4	->		STATUS	cause #30, state U10

Specific message contents:

NOTE: With the cause value "physical channel failure".

10.1.4.3.2.5 Test requirements

After step 2 the UE shall remain in the active state.

10.1.4.4 In-call functions / UE terminated in-call modification

10.1.4.4.1 In-call functions / UE terminated in-call modification / modify when new mode is not supported

This test is not applicable for R99.

10.1.4.5 In-call functions / UE originated in-call modification

10.1.4.5.1 In-call functions / UE originated in-call modification / a successful case of modifying

This test is not applicable for R99.

10.1.4.5.2 In-call functions / UE originated in-call modification / modify rejected

This test is not applicable for R99.

10.1.4.5.3 In-call functions / UE originated in-call modification / an abnormal case of acceptance

This test is not applicable for R99.

10.1.4.5.4 In-call functions / UE originated in-call modification / an abnormal case of rejection

This test is not applicable for R99.

10.1.4.5.5 In-call functions / UE originated in-call modification / time-out of timer T323

This test is not applicable for R99.

10.1.4.5.6 In-call functions / UE originated in-call modification / a successful channel change in state mobile originating modify

This test is not applicable for R99.

This test is not applicable for R99.

10.1.4.5.8 In-call functions / UE originated in-call modification / unknown message received

This test is not applicable for R99.

10.1.4.5.9 In-call functions / UE originated in-call modification / a release complete received

This test is not applicable for R99.

10.2 Call Re-establishment

10.2.1 Void

10.3 User to user signalling

10.3.1 Definition

The "user to user" information element is used to convey information between the mobile user and a remote ISDN user.

NOTE: There is no test for an UE originating call including a "user-user" information element since it is not a mandatory UE feature.

10.3.2 Conformance requirement

The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.

References

TS 24.008 clauses 9.3.7, 9.3.23.1 and 10.5.4.25.

10.3.3 Purpose of the test

The purpose of this test is to verify that inclusion of the "user-user" information element in either of the down link messages, SETUP or DISCONNECT causes no adverse effects on the operation of the UE.

10.3.4 Method of test

Related ICS/IXIT statements

- Supported MT circuit switched basic services.

- Support of user-user information element, and details of suitable codings.

Initial conditions.

System Simulator:

The SS simulates 1 cell, with default parameters.

User Equipment:

The UE is in MM-state "idle updated", with a valid TMSI and CKSN.

Test procedure

The SS attempts to set up a mobile terminated call, with one of the supported circuit switched basic services which has been arbitrarily chosen, the generic call set up procedures for mobile terminating circuit switched calls,(either speech or data) as specified in TS 34.108 clause 7. The default SETUP message contents are modified to include the user-user Information Element. The UE shall not respond adversely to the inclusion of the user-user information element.

After 30 s the SS sends a DISCONNECT message, again the UE shall not respond adversely to the inclusion of the user-user information element, but shall continue to clear down the call normally.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				Generic Call Setup procedure for mobile terminating circuit switched calls defined in TS 34.108, depending on choice of Bearer Capability. The SETUP message contains the user-user IE, see Specific message contents.
2				The SS waits 30 s.
3	<-		DISCONNECT	Message contains the user-user IE, see Specific message contents
4	->		RELEASE	
5	<-		RELEASE COMPLETE	
6	<-			The SS releases the RRC connection.

Specific message contents:

SETUP message contains user-user IE with the string coded in IA5 characters: for example "Call Setup".

DISCONNECT message contains user-user IE with the string coded in IA5 characters: for example "Call Disconnect". (The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statements.)

NOTE: The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statements.

10.3.5 Test requirements

After steps 1 and 3 the inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.

11 Session Management Procedures

11.1 PDP context activation

11.1.1 Initiated by the UE

11.1.1.1 Attach initiated by context activation/QoS Offered by Network is the QoS Requested

11.1.1.1.1 Definition

11.1.1.1.2 Conformance requirement

SM procedures for identified access can only be performed if a GMM context has been established between the UE and the network. If no GMM context has been established, the MM sublayer has to initiate the establishment of a GMM context by use of the GMM procedures as described in chapter 4, 3GPP TS 24.008. After GMM context establishment, SM uses services offered by GMM (see 3GPP TS 24.007). Ongoing SM procedures are suspended during GMM procedure execution.

In UMTS only, integrity protected signalling (see 3GPP TS 24.008 clause 4.1.1.1.1 and in general, see 3GPP TS 33.102) is mandatory. In UMTS only, all protocols shall use integrity protected signalling. Integrity protection of all SM signalling messages is the responsibility of lower layers. It is the network which activates integrity protection. This is done using the security mode control procedure (TS 25.331).

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network, enters the state PDP-ACTIVE-PENDING and starts timer T3380. The message contains the selected NSAPI, PDP type, requested QoS and, if the UE requests a static address, the PDP address.

Upon receipt of an ACTIVATE PDP CONTEXT REQUEST message, the network selects a radio priority level based on the QoS negotiated and may reply with an ACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT the UE shall stop timer T3380, shall enter the state PDP-ACTIVE.

If the QoS offered by the network is the same as the QoS requested by the UE, the UE shall accept the negotiated QoS.

In UMTS, both the network and the UE shall store the LLC SAPI and the radio priority in the PDP context. If a UMTS to GSM system change is performed, the new SGSN shall initiate establishment of the logical link using the negotiated QoS profile, the negotiated LLC SAPI, and selected radio priority level stored in the PDP context as in a GSM to GSM Routing Area Update.

A UE, which is capable of operating in both GSM and UMTS, shall use a valid LLC SAPI, while a UE which is capable of operating only in UMTS shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network.

NOTE 1: The radio priority level and the LLC SAPI parameters, though not used in UMTS, shall be included in the messages, in order to support handover between UMTS and GSM networks.

Reference

3GPP TS 24.008 clauses 6.1.1 and 6.1.3.1.1.

11.1.1.1.3 Test purpose

To check that the UE initiates a PS attach, if one is not already active, when PDP context activation is requested.

To test the behaviour of the UE when SS responds to the PDP context activation request with the requested QoS.

11.1.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Auto Attach supported yes / no
- Method of context activation

Test procedure

The UE is attached, then the Detach Request is originated from the UE indicating "GPRS detach without switching off". The SS responds with a Detach Accept after completing the security mode procedures. A PDP context activation is then requested by the user. The PS attach (ATTACH REQUEST) is then indirectly caused by a requested PDP context activation. The SS returns the ATTACH ACCEPT message to the UE. Now session management can proceed with PDP context activation.

On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The contents of the ACTIVATE PDP CONTEXT REQUEST message shall then be checked. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
0a	UE			Detach is performed by the UE using MMI or AT Commands
0	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
1	→		DETACH REQUEST	
1a	SS			The SS starts integrity protection.
2	←		DETACH ACCEPT	SS sends Detach Accept message.
2a	SS			The SS releases the RRC connection.
3	UE			Initiate a context activation
3a	SS			The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	→		ATTACH REQUEST	The UE requests attach
4a	SS			The SS starts integrity protection.
5	←		ATTACH ACCEPT	The SS accepts attach Negotiated Ready timer value IE should not be included Force to standby IE set to “Force to standby not indicated”
6	→		ACTIVATE PDP CONTEXT REQUEST	The UE requests a PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380
6a	SS			The SS establishes the RAB.
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context activation and starts T3380
7a	UE			The UE stops T3380 and enters the state PDP-ACTIVE
8	SS			The SS waits for T3380 expiry to ensure no further activate request messages come from the UE
9	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE for the activated context
10	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS. This re-confirms that step 6 was correctly executed in the UE.
11	SS			The SS releases the RRC connection due to inactivity (no user data transferred)

Specific message contents

None.

11.1.1.1.5 Test requirements

At step 0 the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach".

At step 3a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

When requesting a PDP context activation, the UE shall:

- initiate PS ATTACH;

- when the SS responds to a PDP context activation request, initiated by the UE, with the requested QoS, the UE shall complete the PDP context activation procedure. To check if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

11.1.1.1a Attach initiated by context activation/QoS Offered by Network is the QoS Requested/Correct handling of QoS extensions for rates above 8640 kbps

11.1.1.1a.1 Definition and applicability

UEs which support HS-PDSCH and supporting rates above 8640 kbps (UE Category 9 and/or UE Category 10).

11.1.1.1a.2 Conformance requirement

1. SM procedures for identified access can only be performed if a GMM context has been established between the UE and the network. If no GMM context has been established, the MM sublayer has to initiate the establishment of a GMM context by use of the GMM procedures as described in chapter 4. After GMM context establishment, SM uses services offered by GMM (see 3GPP TS 24.007). Ongoing SM procedures are suspended during GMM procedure execution. In UMTS only, integrity protected signalling (see 3GPP TS 24.008 clause 4.1.1.1.1 and in general, see 3GPP TS 33.102) is mandatory. In UMTS only, all protocols shall use integrity protected signalling. Integrity protection of all SM signalling messages is the responsibility of lower layers. It is the network which activates integrity protection. This is done using the security mode control procedure (TS 25.331).

2. In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network, enters the state PDP-ACTIVE-PENDING and starts timer T3380. The message contains the selected NSAPI, PDP type, requested QoS and, if the UE requests a static address, the PDP address. The UE shall ensure that the selected NSAPI is not currently being used by another Session Management entity in the MS.

   Upon receipt of an ACTIVATE PDP CONTEXT REQUEST message, the network selects a radio priority level based on the QoS negotiated and may reply with an ACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT the UE shall stop timer T3380, shall enter the state PDP-ACTIVE. If the offered QoS parameters received from the network differ from the QoS requested by the MS, the MS shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

   ……

   In UMTS, both the network and the UE shall store the LLC SAPI and the radio priority in the PDP context. If a UMTS to GSM system change is performed, the new SGSN shall initiate establishment of the logical link using the negotiated QoS profile, the negotiated LLC SAPI, and selected radio priority level stored in the PDP context as in a GSM to GSM Routing Area Update.

   A UE, which is capable of operating in both GSM and UMTS, shall use a valid LLC SAPI, while a UE which is capable of operating only in UMTS shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network.

NOTE 1: The radio priority level and the LLC SAPI parameters, though not used in UMTS, shall be included in the messages, in order to support handover between UMTS and GSM networks.

3. The *quality of service* is a type 4 information element with a minimum length of 14 octets and a maximum length of 16 octets. The QoS requested by the MS shall be encoded both in the QoS attributes specified in octets 3-5 and in the QoS attributes specified in octets 6-14.

   In the UE to network direction and in the network to UE direction the following applies:

   - Octets 15 and 16 are optional. If octet 15 is included, then octet 16 shall also be included.

- A QoS IE received without octets 6-16, without octets 14-16, or without octets 15-16 shall be accepted by the receiving entity.

NOTE: This behaviour is required for interworking with entities supporting an earlier version of the protocol, or when the Maximum bit rate for downlink is negotiated to a value lower than 8700 kbps.

…….

0 0 0 0 0 0 0 1 Ignore the value indicated by the Maximum bit rate for downlink in octet 9. The maximum bit
rate is
0 1 0 0 1 0 1 0 8600 kbps + ((the binary coded value in 8 bits) * 100 kbps), giving a range of values

from

8700 kbps to 16000 kbps in 100 kbps increments.

Reference

3GPP TS 24.008 clauses 6.1.1, 6.1.3.1.1 and 10.5.6.5.

11.1.1.1a.3 Test purpose

To check that the UE initiates a PS attach, if one is not already active, when PDP context activation is requested.

To check that the UE performs correct handling of QoS extensions for rates above 8640 kbps, and to check that the UE is, as well, capable of correct handling of QoS not requiring the extension information.

To check the UE successfully completes the PDP context activation when the SS responds to the PDP context activation request with the requested QoS.

11.1.1.1a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Auto Attach supported yes / no
- Method of context activation
- Supported downlink rates above 8640 kbps yes/no

Test procedure

Table 11.1.1.1a.1 Test execution test parameters

Execution	Maximum bit rate for downlink
1	Value supported by the UE which is less than 8640 kbps
2	Value supported by the UE which is bigger than 8640 kbps, see Note 1

The UE is attached, then the Detach Request is originated from the UE indicating "GPRS detach without switching off". The SS responds with a Detach Accept after completing the security mode procedures. A PDP context activation is then requested. The IE “Maximum bit rate for downlink” is selected according to Table 11.1.1.1a.1 for execution=1. The PS attach (ATTACH REQUEST) is then indirectly caused by the requested PDP context activation. The SS returns the ATTACH ACCEPT message to the UE. Now session management can proceed with PDP context activation.

On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The contents of the ACTIVATE PDP CONTEXT REQUEST

message shall then be checked. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

The test case is repeated with test parameters according to Table 11.1.1.1a.1 for execution=2.

Note 1: A Rel-7 or later UE supporting higher HSDPA categories, 13 or above, is executed as category 9 or 10 depending on UE capability.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
0a	UE			Detach is performed by the UE using MMI or AT Commands
0		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
1	→		DETACH REQUEST	
1a		SS		The SS starts integrity protection.
2	←		DETACH ACCEPT	The SS sends Detach Accept message.
2a		SS		The SS releases the RRC connection.
3	UE			The UE initiates a context activation with a requested “Maximum bit rate for downlink” according to Table 11.1.1.1a.1
3a		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	→		ATTACH REQUEST	The UE requests attach
4a		SS		The SS starts integrity protection.
5	←		ATTACH ACCEPT	The SS accepts attach Negotiated Ready timer value IE should not be included Force to standby IE set to “Force to standby not indicated”
6	→		ACTIVATE PDP CONTEXT REQUEST	The UE requests a PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380
6a		SS		The SS establishes the RAB.
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context activation and starts T3380
7a	UE			The UE stops T3380 and enters the state PDP-ACTIVE
8		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
9	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE for the activated context
10	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS. This re-confirms that step 6 was correctly executed in the UE.
11		SS		The SS releases the RRC connection due to inactivity (no user data transferred)

The test sequence is repeated according to Table 11.1.1.1a.1.

Specific message contents

None.

11.1.1.1a.5 Test requirements

At step 0 the UE shall send RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach";

At step 3a the UE shall send RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration";

At step 4 the UE shall initiate PS ATTACH;

At step 6 the UE shall send ACTIVE PDP CONTEXT REQUEST message with the IE Requested QoS and Maximum bit rate for downlink set to value according to Table 11.1.1.1a.1;

At step 10 the UE shall send a MODIFY PDP CONTEXT ACCEPT message.

11.1.1.2 QoS offered by the network is a lower QoS

11.1.1.2.1 Void

11.1.1.2.2 Void

11.1.1.3 PDP context activation requested by the network, successful and unsuccessful

11.1.1.3.1 Definition

Void

11.1.1.3.2 Conformance requirement

If timer T3396 is running for a specific APN, because an ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST, MODIFY PDP CONTEXT REQUEST or ACTIVATE MBMS CONTEXT REQUEST message containing the low priority indicator set to "MS is configured for NAS signalling low priority" was rejected with timer T3396 and SM cause value #26 "insufficient resources", upon request of the upper layers the MS can:

- send an ACTIVATE PDP CONTEXT REQUEST message to the same APN, with low priority indicator set to "MS is not configured for NAS signalling low priority"; or,
- send an ACTIVATE SECONDARY PDP CONTEXT REQUEST, MODIFY PDP CONTEXT REQUEST or ACTIVATE MBMS CONTEXT REQUEST message, with low priority indicator set to "MS is not configured for NAS signalling low priority", for an active PDP context established with low priority indicator set to "MS is not configured for NAS signalling low priority" exists.

If timer T3396 is running, because an ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST message without APN containing the low priority indicator set to "MS is configured for NAS signalling low priority" was rejected with timer T3396 and SM cause value #26 "insufficient resources", upon request of the upper layers the MS can:

- send an ACTIVATE PDP CONTEXT REQUEST message with low priority indicator set to "MS is not configured for NAS signalling low priority"; or
- send an ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST message, with low priority indicator set to "MS is not configured for NAS signalling low

priority", for an active PDP context established with low priority indicator set to "MS is not configured for NAS signalling low priority" exists.

For requests with low priority indicator set to "MS is configured for NAS signalling low priority", the MS shall follow the procedures specified in subclause 6.1.3.1.3.

Reference

3GPP TS 24.008 clause 6.1.3.12.

11.1.1.3.3 Test purpose

To verify that a UE configured for dual priority that has T3396 is running for a specific APN can send a request to activate or modify the same APN, with low priority indicator set to "MS is not configured for NAS signalling low priority"

11.1.1.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE is configured for NAS signalling low priority

The UE is configured for NAS signalling low priority override

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to "NAS signalling low priority" "Override_NAS_SignallingLowPriority" is set to 1, as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

- PS Supported yes/no

Test procedure

An ACTIVATE PDP CONTEXT REQUEST message is sent by the UE with an indication that the UE is configured for NAS signalling low priority. The request is rejected by the SS with T3396 and SM cause value #26 "insufficient resources.

The UE issues another ACTIVATE PDP CONTEXT REQUEST message, before the expiration of timer T3396, this time with an indication that the UE is not configured for NAS signalling low priority. The request is accepted by the SS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	The UE requests a PDP context activation. Device properties = 'MS is configured for NAS signalling low priority'
3	←		ACTIVATE PDP CONTEXT REJECT	SS reject the PDP context activation with SM cause value #26 "insufficient resources and the T3396 timer
4	UE			Cause the UE to request the activation of the same context with the NAS signalling low priority override indicator. (see Note)
5	→		ACTIVATE PDP CONTEXT REQUEST	The UE requests a PDP context activation, Device properties = 'MS is not configured for NAS signalling low priority'
6		SS		The SS establishes the RAB.
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context activation and starts T3380
8	UE			The UE stops T3380 and enters the state PDP-ACTIVE
9		SS		The SS waits for T3380 expiry to ensure no further activate request messages come from the UE
10		←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE for the activated context
11	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS. This re-confirms that step 6 was correctly executed in the UE.
12		SS		The SS releases the RRC connection due to inactivity (no user data transferred)

Specific message contents

None.

11.1.1.3.5 Test requirements

Step 2: ACTIVATE PDP CONTEXT REQUEST message contains the Device properties IE set to 'MS is configured for NAS signalling low priority'

Step 5: ACTIVATE PDP CONTEXT REQUEST message contains the Device properties IE set to 'MS is not configured for NAS signalling low priority'. This message shall be sent before the expiry of timer T3396.

11.1.2 PDP context activation requested by the network, successful and unsuccessful

11.1.2.1 Definition

Void

11.1.2.2 Conformance requirement

1) Successful PDP context activation requested by the network

In order to request a PDP context activation, the network sends a REQUEST PDP CONTEXT ACTIVATION message to the UE and starts timer T3385. The message contains an offered PDP

address. If available, the APN shall be included in the REQUEST PDP CONTEXT ACTIVATION message.

Upon receipt of a REQUEST PDP CONTEXT ACTIVATION message, the UE shall than either initiate the PDP context activation procedure as described in 3GPP TS 24.008 clause 6.1.3.1.1, or shall reject the activation request by sending a REQUEST PDP CONTEXT ACTIVATION REJECT message as described in 3GPP TS 24.008 clause 6.1.3.1.4. The value of the reject cause IE of the REQUEST PDP CONTEXT ACTIVATION REJECT message shall indicate the reason for rejection, e.g. "insufficient resources to activate another context".

The ACTIVATE PDP CONTEXT REQUEST message sent by the UE in order to initiate the PDP context activation procedure shall contain the PDP address, PDP Type and APN requested by the network in the REQUEST PDP CONTEXT ACTIVATION message.

Upon receipt of the ACTIVATE PDP CONTEXT REQUEST message, the network shall stop timer T3385.

The same procedures then apply as described for UE initiated PDP context activation (3GPP TS 24.008, clause 6.1.3.1.1.

2) Unsuccessful PDP context activation requested by the network

Upon receipt of the REQUEST PDP CONTEXT ACTIVATION message, the UE may reject the network requested PDP context activation by sending the REQUEST PDP CONTEXT ACTIVATION REJECT message to the network. The message contains the same TI as included in the REQUEST PDP CONTEXT ACTIVATION and an additional cause code that typically indicates one of the following causes:

#26: insufficient resources;

#31: activation rejected, unspecified;

#40: feature not supported; or

#95 – 111: protocol errors.

The network shall stop timer T3385 and enter state PDP-INACTIVE.

3) Whenever a REQUEST PDP CONTEXT ACTIVATION message is received by the UE specifying a transaction identifier relating to a PDP context not in state PDP-INACTIVE, the UE shall locally deactivate the old PDP context relating to the received transaction identifier. Furthermore, the UE shall continue with the activation procedure of a new PDP context as indicated in the received message.

Reference

3GPP TS 24.008 clauses 6.1.3.1.2, 6.1.3.1.4 and 8.3.2.f).

11.1.2.3 Test purpose

To test behaviour of the UE upon receipt of a PDP context activation request from the SS:

a) When UE supports PDP context activation requested by the network

b) When UE supporting PDP context activation requested by the network, receives REQUEST PDP CONTEXT ACTIVATION message with transaction identifier relating to an already active PDP context

c) When UE does not support PDP context activation requested by the network

11.1.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no

Test procedure

A REQUEST PDP CONTEXT ACTIVATION message is sent by the SS. If UE does not accept PDP context activation, it shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message (UE behaviour type B); else UE will start PDP context activation procedure (UE behaviour type A).

On receipt of the ACTIVATE PDP CONTEXT REQUEST message from the UE, an ACTIVATE PDP CONTEXT ACCEPT message is returned by the SS. This is repeated until the maximum number of PDP contexts supported by the UE is activated (up to two).

When maximum number of PDP contexts is reached, UE shall reject next REQUEST PDP CONTEXT ACTIVATION message.

In response to the last activation request the UE shall return a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources', 'activation rejected, unspecified', ‘feature not supported’ or 'protocol errors' using cause values #26, #31, #40 or #95-111.

REQUEST PDP CONTEXT ACTIVATION message is then sent by the SS using transaction identifier of the currently active PDP context. The UE shall activate this context to replace the previous context.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		REQUEST PDP CONTEXT ACTIVATION	SS sends Request a PDP context activation to UE and starts timer T3385. UE behaviour type B: test case continues from Step 6
A2	→		ACTIVATE PDP CONTEXT REQUEST	UE behaviour type A:UE replies with a PDP context activation request, Traffic class set to Streaming class or Interactive class or Background class
A2a		SS		The SS stops timer T3385 and establishes the Radio Access Bearer.
A3	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation. If maximum number of PDP contexts of 2 (in future implementations this number might change) is reached, test execution continues from Step A5.
A4		SS		Steps 1, A2, A2a and A3 are repeated until maximum number of PDP contexts is reached, using various values for Traffic class IE. NOTE: In future implementations, if all 7 contexts are activated steps A5, 6 and 6a shall not be performed.
A5	←		REQUEST PDP CONTEXT ACTIVATION	SS requests a PDP context activation and starts timer T3385
6	→		REQUEST PDP CONTEXT ACTIVATION REJECT	The PDP context activation request is rejected with cause 'insufficient resources' or 'activation rejected, unspecified' or 'feature not supported' or 'protocol errors' using cause values #26, #31, #40 or #95-111.
6a		SS		The SS stops timer T3385. UE behaviour type B: test case ends.
A7	←		REQUEST PDP CONTEXT ACTIVATION	SS requests a PDP context activation for an existing PDP context with the same TI value as one of the active PDP contexts and starts timer T3385
A8		UE		UE locally deactivates the old PDP context with the same TI value
A9	→		ACTIVATE PDP CONTEXT REQUEST	UE continues with the activation of a new PDP context to replace locally deactivated PDP context
A9a		SS		The SS stops timer T3385 and releases Radio Access Bearer for old PDP context.
A9b		SS		The SS establishes the Radio Access Bearer for new PDP context.
A10	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation

Specific message contents

Case 1

Step 6: REQUEST PDP CONTEXT ACTIVATION REJECT message contains the same TI as included in the REQUEST PDP CONTEXT ACTIVATION message in step 5.

Step 7: TI IE value is equal to the TI value of one of the active PDP contexts, Offered PDP address IE value and/or Access point name IE value are (is) different from the corresponding IE value(s) in the existing PDP context.

11.1.2.5 Test requirements

The UE that is configured to support one or more PDP contexts simultaneously shall:

- accept PDP context activation initiated by the SS if number of active contexts is lower than the maximum.
- locally deactivate the old PDP context when a REQUEST PDP CONTEXT ACTIVATION message is received, specifying a transaction identifier relating to an active PDP context and continue with the activation procedure of a new PDP context as indicated in the received message.

The UE that does not support PDP Context Activation (a number of active contexts supported by the UE is equal to maximum or UE does not support PDP context) shall reject PDP context activation initiated by the SS.

11.1.3 Abnormal Cases

11.1.3.1 T3380 Expiry

11.1.3.1.1 Definition

11.1.3.1.2 Conformance requirement

1) On the first expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
2) On the second expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
3) On the third expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
4) On the fourth expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic PDP context activation re-attempt shall be performed.

Reference

3GPP TS 24.008 clause 6.1.3.1.5 a).

11.1.3.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to PDP CONTEXT ACTIVATION REQUEST.

11.1.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no

- Method of activating a context

Test procedure

A PDP context activation is requested by the user. The UE shall send the ACTIVATE PDP CONTEXT REQUEST message five times with T3380 seconds between each message. After this, no further ACTIVATE PDP CONTEXT REQUEST messages shall be sent by the UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3	SS			T3380 seconds
4	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
5	SS			T3380 seconds
6	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
7	SS			T3380 seconds
8	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
9	SS			T3380 seconds
10	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
11	SS			Wait for T3380 seconds to ensure no further ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE

Specific message contents

None.

11.1.3.1.5 Test requirements

UE shall re-send the ACTIVATE PDP CONTEXT REQUEST to SS five times in order to initiate PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE PDP CONTEXT REQUEST to SS.

11.1.3.2 Collision of UE initiated and network requested PDP context activation

11.1.3.2.1 Definition

This test needs to take into account the number of PDP contexts supported by the UE, to be able to test the response when the network tries to initiate a new context.

11.1.3.2.2 Conformance requirement

A collision of a UE initiated and a network requested PDP context activation procedure is identified by the UE if a REQUEST PDP CONTEXT ACTIVATION message is received from the network after the UE has sent an ACTIVATE PDP CONTEXT REQUEST message, and the UE has not yet received an ACTIVATE PDP CONTEXT ACCEPT or ACTIVATE PDP CONTEXT REJECT message.

NOTE: In general, the UE is unable to test if the PDP type, PDP address and APN in the REQUEST PDP CONTEXT ACTIVATION message are the same as those for the PDN to which it is attempting to activate a context. This is because the UE may have omitted one or more of the parameters in the ACTIVATE PDP CONTEXT REQUEST message, since it is relying on default values to be provided by the network.

In the case of such a collision, the UE initiated PDP context activation shall take precedence over the network requested PDP context activation. If the UE is able to compare the PDP type, PDP address and APN requested in the ACTIVATE PDP CONTEXT REQUEST message with those requested in the REQUEST PDP CONTEXT ACTIVATION message and these parameters are equal, then the UE shall discard the REQUEST PDP CONTEXT ACTIVATION message and shall wait for the network response to its ACTIVATE PDP CONTEXT REQUEST message. If the UE is not able to compare the PDP type, PDP address, and APN requested in the ACTIVATE PDP CONTEXT REQUEST message with those requested in the REQUEST PDP CONTEXT ACTIVATION message, then the UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with the cause 'insufficient resources' to the network, and wait for an ACTIVATE PDP CONTEXT ACCEPT message.

Reference

3GPP TS 24.008 clause 6.1.3.1.5 b), case: Static PDP address collision detected within the UE.

11.1.3.2.3 Test purpose

To test the behaviour of the UE when there is a collision between an UE initiated and network requested PDP context activation detected by the UE.

11.1.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Network requested PDP context activation supported yes/no
- Method of PDP context activation

Case 1

For an UE that supports PDP context activation requested by the network.

Test procedure

A PDP context activation is requested by the user with a static PDP address. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message followed by an ACTIVATE PDP CONTEXT ACCEPT message in a time less than T3380 (Use T3380/2). The UE shall send no messages within this time.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation (with static PDP address)
3	←		REQUEST PDP CONTEXT ACTIVATION	Request a PDP context activation request
4	SS			Wait for T3380/2 seconds to ensure UE does not re-send ACTIVATE PDP CONTEXT REQUEST
5	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation

Case 2

For a UE that does not support PDP context activation requested by the network.

Test procedure

A PDP context activation is requested by the user. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message. The UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources'. The SS then sends an ACTIVATE PDP CONTEXT ACCEPT.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3	←		REQUEST PDP CONTEXT ACTIVATION	Request a PDP context activation
4	→		REQUEST PDP CONTEXT ACTIVATION REJECT	Cause set to 'insufficient resources'.
5	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation

Specific message contents

For Case 1 and Case 2:

Step 2: ACTIVATE PDP CONTEXT REQUEST message contains PDP address and APN IEs.

Step 3: REQUEST PDPD CONTEXT ACTIVATION message contains the same PDP address and APN values as in Step 2.

11.1.3.2.5 Test requirements

In the case of such collision,

- UE that supports PDP context activation requested by the network shall discard the REQUEST PDP CONTEXT ACTIVATION message from SS and wait for an ACTIVATE PDP CONTEXT ACCEPT message.
- UE that does not support PDP context activation requested by the network shall reject PDP context activation initiated by the SS.

11.1.3.3 Network initiated PDP context activation request for an already activated PDP context (on the UE side)

11.1.3.3.1 Definition

11.1.3.3.2 Conformance requirement

If the UE receives a REQUEST PDP CONTEXT ACTIVATION message with the same combination of APN, PDP type and PDP address as an already activated PDP context, the UE shall deactivate the existing PDP context and, if any, all the linked PDP contexts (matching the combination of APN, PDP type and PDP address) locally without notification to the network and proceed with the requested PDP context activation.

Reference

3GPP TS 24.008 clause 6.1.3.1.5 d).

11.1.3.3.3 Test purpose

To test the behaviour of the UE when it detects a network initiated PDP context activation for the PDP context already activated on the UE side.

11.1.3.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

PS Supported yes/no

Method of PDP context activation

Test procedure

A PDP context activation is requested by the user. SS accepts PDP context activation. Secondary PDP context activation is requested by the user. SS accepts secondary PDP context activation. SS sends a REQUEST PDP CONTEXT ACTIVATION message with the same combination of APN, PDP type and PDP address as an already activated PDP context. The UE deactivates the existing PDP context and linked secondary PDP context (matching the combination of APN, PDP type and PDP address) locally without notification to the SS and proceeds with the requested PDP context activation.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	UE requests a PDP context activation
3	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation
4	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	UE requests a secondary PDP context activation
5	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	SS accepts the secondary PDP context activation
6	←		REQUEST PDP CONTEXT ACTIVATION	SS requests a PDP context activation with the same combination of APN, PDP type and PDP address as the activated PDP context
7	UE			UE locally deactivates the activated PDP context and the secondary PDP context
9	→		ACTIVATE PDP CONTEXT REQUEST	UE replies with a Request PDP context activation
10	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation

Specific message contents

None.

11.1.3.3.5 Test requirements

When inconsistency of PDP context between the UE and network is detected by the UE, then local synchronisation procedure shall be initiated in the UE. The PDP context and all (if any) linked contexts are implicitly deactivated and the new request shall be proceeded.

11.1.3.4 Network reject with Back-off Timer

11.1.3.4.1 Definition

11.1.3.4.2 Conformance requirement

An MS configured for NAS signalling low priority indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured to NAS signalling low priority" except for the following cases in which the MS shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the MS is performing an attach for emergency bearer services;
- the MS has a PDN connection for emergency bearer services established and is performing mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the MS is accessing the network with access class 11 – 15; or
- the MS is responding to paging.

The network may use the NAS signalling low priority indication for NAS level mobility management congestion control on a per core network node basis and APN based congestion control.

If the NAS signalling low priority indication is provided in an ACTIVATE PDP CONTEXT REQUEST message, the SGSN stores the NAS signalling low priority indication within the default PDP context activated due to this request

The network may detect and start performing the APN based congestion control when one or more APN congestion criteria as specified in 3GPP TS 23.060 [74] are met. The network may store an APN congestion back-off time on a per MS and congested APN basis and reject any subsequent PDP context activation request, secondary PDP context activation request or PDP context modification request from the MS targeted towards the congested APN before the APN congestion back-off time for the congested APN elapses.

References

3GPP TS 24.008 clauses 1.8 and 6.1.3.11

11.1.3.4.3 Test purpose

1) To verify that the LAP indicator can be set in the UE.

2) To verify that the Delay Tolerant indicator is sent by the UE.

3) To verify that the UE uses the back-off timer if the network reject a request with the T3396 timer.

11.1.3.4.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to "NAS signalling low priority" as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a context

Test procedure

A PDP context activation is requested by the user. The UE shall send the ACTIVATE PDP CONTEXT REQUEST. The SS responds with the ACTIVATE PDP CONTEXT REJECT message with cause code #26, "insufficient resources", and the T3396 timer with a value of 10 seconds. The UE starts the T3396 timer with the value of 10 seconds. When timer T3396 has expired the UE requests a PDP context activation.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
1A	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to " Delay Tolerant Access"
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation. The SS verifies that the IE "Device properties" is set to "MS is configured for NAS signalling low priority"
3	←		ACTIVATE PDP CONTEXT REJECT	The SS includes the IEs SM Cause with value #26 "insufficient resources" and T3396 with value 10 seconds. MS starts timer T3396 with the value of 10 seconds.
4	SS			The SS verifies that the UE does not initiate any communication before the T3396 timer has expired
5	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
6	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation

Specific message contents

None.

11.1.3.4.5 Test requirements

To pass the test the UE shall:

- At step 2 the UE shall include the IE "Device properties", set to "MS is configured for NAS signalling low priority", in the ACTIVATE PDP CONTEXT REQUEST.
- At step 3 the UE shall set the timer T3396 to the value of the "T3396" IE, as received in the ACTIVATE PDP CONTEXT REJECT message.
- At step 4 the UE shall not initiate any communication attempts.

11.1.4 Secondary PDP context activation procedures

11.1.4.1 Successful Secondary PDP Context Activation Procedure Initiated by the UE

11.1.4.1.1 QoS Offered by Network is the QoS Requested

11.1.4.1.1.1 Definition

11.1.4.1.1.2 Conformance requirement

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enter the state PDP-ACTIVE-PENDING and start timer T3380. The message shall contain the selected NSAPI. The UE shall ensure that the selected NSAPI is not currently being used by another Session Management entity in the UE. The message shall also include a QoS profile, a requested LLC SAPI and the Linked TI. The QoS profile is the requested QoS. If present, the TFT shall be sent transparently through the SGSN to the GGSN to enable packet classification and policing for downlink data transfer.

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST, the network shall validate the message by verifying the TI given in the Linked TI IE to be any of the active PDP context(s). The same GGSN address shall be used by the SGSN as for the already established PDP context(s) for that PDP address. The network shall select a radio priority level based on the QoS negotiated and shall reply with an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message, if the request can be accepted.

NOTE 1: If the UE requested a value for a QoS parameter that is not within the range specified by 3GPP TS 23.107, the network should negotiate the parameter to a value that lies within the specified range.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the UE shall stop timer T3380 and enter the state PDP-ACTIVE. If the offered QoS parameters received from the network differ from the QoS requested by the UE, the UE shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

In UMTS, both SGSN and UE shall store the LLC SAPI and the radio priority in the PDP context. If a UMTS to GSM Routing Area Update is performed, the new SGSN shall initiate establishment of the logical link using the negotiated LLC SAPI, the negotiated QoS profile and selected radio priority level stored in the PDP context as in a GSM to GSM Routing Area Update.

An UE, which is capable of operating in both GSM and UMTS, shall use a valid LLC SAPI, while an UE which is capable of operating only in UMTS shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network. When the UE uses a valid LLC SAPI, the network shall return a valid LLC SAPI. The network shall return the “LLC SAPI not assigned” value only when the UE uses the “LLC SAPI not assigned” value.

NOTE 2: The radio priority level and the LLC SAPI parameters, though not used in UMTS, shall be included in the messages, in order to support handover between UMTS and GSM networks.

Reference

3GPP TS 24.008 clauses 6.1.3.2 and 6.1.3.2.1.

11.1.4.1.1.3 Test purpose

To test the behaviour of the UE when SS responds to a Secondary PDP context activation request with the requested QoS.

11.1.4.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of context activation
- Secondary PDP context activation supported yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS. Secondary PDP context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONREXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
1a	SS			The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	Service type = "signalling"
1c	SS			The SS starts integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB
3	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context with the requested QoS
4	UE			The UE initiates a secondary PDP context activation
5	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 2.
6	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
7	SS			The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
8	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE for secondary PDP context
9	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS. This re-confirms that step 5 was correctly executed in the UE.

Specific message contents

Step 2: TI flag (octet 1, Bit 8) in TI IE is set to ‘0’ and value of TIO (octet 1, Bits 765) is set in range 0-6.

Step 3: TI flag in TI IE is set to ‘1’ and value of TIO is the same as in Step 2. Step 5:

- The Linked TI information element in ACTIVATE SECONDARY PDP CONTEXT REQUEST message specifies the TI for the PDP context already activated. The SS can derive PDP address for the secondary PDP context from the Linked TI,
- TI flag in TI IE is set to ‘0’ and value of TIO is the same as in Step 2 and 3
- NSAPI IE value is different from NSAPI value in Step 2

Step 6 and 8: TI flag in TI IE is set to ‘1’ and value of TIO is the same as in Step 5.

Step 9: TI flag in TI IE is set to ‘0’ and value of TIO is the same as in Step 5.

11.1.4.1.1.5 Test requirements

To pass the test the UE shall:

- when the SS responds to Secondary PDP context activation request initiated by the UE, with the requested QoS, the UE shall complete the Secondary PDP context activation procedure. To check

if the Secondary PDP context activation was successful, the SS shall request PDP context modification and UE shall accept it.

11.1.4.1.2 QoS Offered by Network is a lower QoS

11.1.4.1.2.1 Void

11.1.4.1.2.2 Void

11.1.4.1.2.3 LLC SAPI rejected by the UE

11.1.4.1.2.3.1 Definition

This test can only be performed if LLC SAPI can be set by the user.

11.1.4.1.2.3.2 Conformance Requirement

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network.

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST, the network shall select a radio priority level based on the QoS negotiated and shall reply with an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message, if the request can be accepted.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the UE shall stop timer T3380 and enter the state PDP-ACTIVE.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network if no logical link has been already established for that SAPI. If the LLC SAPI indicated by the network can not be supported by the UE, the UE shall initiate the PDP context deactivation procedure.

11.1.4.1.2.3.3 Test Purpose

To verify the behaviour of the UE when the network responds to the ACTIVATE SECONDARY PDP CONTEXT REQUEST message with a negotiated LLC SAPI which is not supported by the UE.

Reference

3GPP TS 24.008, clause 6.1.3.2.1.

11.1.4.1.2.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- User setting of LLC SAPI supported yes/no
- Method of setting LLC SAPI
- Method of context activation

- Secondary PDP context activation supported yes/no

Test procedure

The requested LLC SAPI is set. This is the only LLC SAPI supported by the UE. A PDP context activation is requested by the user and accepted by the SS. A secondary PDP context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message is returned by the SS with the LLC SAPI not supported by the UE. The UE shall then send a DEACTIVATE PDP CONTEXT REQUEST message for the secondary PDP context. A DEACTIVATE PDP CONTEXT ACCEPT message will be sent in return by the SS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a secondary PDP context activation
5	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	Request a Secondary PDP context activation
6	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	Accept the Secondary PDP context activation with LLC SAPI not supported by the UE
7	→		DEACTIVATE PDP CONTEXT REQUEST	Request deactivation of all PDP contexts
8	←		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation

Specific message contents

In step 3 *Negotiated LLC SAPI* IE is equal to *Requested LLC SAPI* IE in step 2 and step 5.

In step 7 SM cause IE shall have value #25: LLC or SNDCP failure. Also, *Tear down indicator* IE shall be included in the DEACTIVATE PDP CONTEXT REQUEST message to deactivate all PDP contexts for this PDP address.

11.1.4.2 Unsuccessful Secondary PDP Context Activation Procedure Initiated by the UE

11.1.4.2.1 Definition

11.1.4.2.2 Conformance requirement

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST message, the network may reject the UE initiated PDP context activation by sending an ACTIVATE SECONDARY PDP CONTEXT REJECT message to the UE. Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REJECT message, the UE shall stop timer T3380 and enter the state PDP-INACTIVE.

Reference

3GPP TS 24.008 clauses 6.1.3.2 and 6.1.3.2.2.

11.1.4.2.3 Test purpose

To test the behaviour of the UE when network rejects the UE initiated Secondary PDP context activation.

11.1.4.2.4 Method of test

Initial conditions

System Simulator:

- Method of context activation
- Secondary PDP context activation supported yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS. Secondary context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message from the UE, an ACTIVATE SECONDARY PDP CONTEXT REJECT with cause #43 'unknown PDP context' is returned by the SS. SS shall wait for T3380 seconds to ensure that the UE sends no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a secondary PDP context activation
5	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	Request a Secondary PDP context activation
6	←		ACTIVATE SECONDARY PDP CONTEXT REJECT	SS rejects the Secondary PDP context activation with cause '#43: unknown PDP context'
7	SS			Wait for T3380 seconds to ensure no further activate request messages come from the UE

Specific message contents

Step 5. The *Linked TI* information element specifies the TI which is different from the TI in the PDP context activated in steps 1-3.

11.1.4.2.5 Test requirements

After a secondary PDP context activation being rejected by the network, the UE shall not re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST message.

11.1.4.3 Abnormal cases

11.1.4.3.1 T3380 Expiry

11.1.4.3.1.1 Definition

11.1.4.3.1.2 Conformance requirement

1) On the first expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.
2) On the second expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.
3) On the third expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.
4) On the fourth expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.
5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic secondary PDP context activation re-attempt shall be performed.

Reference

3GPP TS 24.008 clause 6.1.3.2.3 a).

11.1.4.3.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to ACTIVATE SECONDARY PDP CONTEXT REQUEST message.

11	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	Request the Secondary PDP context activation
12		SS		T3380 seconds
13	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	Request the Secondary PDP context activation
14		SS		Wait for T3380 seconds to ensure no further ACTIVATE SECONDARY PDP CONTEXT REQUEST messages are sent by the UE

Specific message contents

None.

11.1.4.3.1.5 Test requirements

UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST to SS five times in order to initiate a Secondary PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages to SS.

11.1.5 Secondary PDP context activation procedures initiated by network

11.1.5.1 Successful Secondary PDP Context Activation Procedure Initiated by the Network

11.1.5.1.1 Definition

11.1.5.1.2 Conformance requirement

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the MS shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enter the state PDP-ACTIVE-PENDING and start timer T3380. The message shall contain the selected NSAPI. The MS shall ensure that the selected NSAPI is not currently being used by another Session Management entity in the MS. The message shall also include a QoS profile, a requested LLC SAPI and the Linked TI. The QoS profile is the requested QoS. If present, the TFT shall be sent transparently through the SGSN to the GGSN to enable packet classification and policing for downlink data transfer.

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST, the network shall validate the message by verifying the TI given in the Linked TI IE to be any of the active PDP context(s). The same GGSN address shall be used by the SGSN as for the already established PDP context(s) for that PDP address. The network shall select a radio priority level based on the QoS negotiated and shall reply with an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message, if the request can be accepted.

NOTE 1: If the MS requested a value for a QoS parameter that is not within the range specified by 3GPP TS 23.107 [81], the network should negotiate the parameter to a value that lies within the specified range.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the MS shall stop timer T3380 and enter the state PDP-ACTIVE. If the offered QoS parameters received from the network differ from the QoS requested by the MS, the MS shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

In A/Gb mode the MS shall initiate establishment of the logical link for the LLC SAPI indicated by the network with the offered QoS and selected radio priority level if no logical link has been already established for that SAPI. If the LLC SAPI indicated by the network can not be supported by the MS, the MS shall initiate the PDP context deactivation procedure.

In Iu mode, both SGSN and MS shall store the LLC SAPI and the radio priority in the PDP context. If an Iu mode to A/Gb mode Routing Area Update is performed, the new SGSN shall initiate establishment of the logical link using the negotiated LLC SAPI, the negotiated QoS profile and selected radio priority level stored in the PDP context as in an A/Gb mode to A/Gb mode Routing Area Update.

An MS, which is capable of operating in both A/Gb mode and Iu mode, shall use a valid LLC SAPI, while an MS which is capable of operating only in Iu mode shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network. When the MS uses a valid LLC SAPI, the network shall return a valid LLC SAPI. The network shall return the “LLC SAPI not assigned” value only when the MS uses the “LLC SAPI not assigned” value.

NOTE 2: The radio priority level and the LLC SAPI parameters, though not used in Iu mode, shall be included in the messages, in order to support handover between Iu mode and A/Gb mode networks.

...

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the network shall send a REQUEST SECONDARY PDP CONTEXT ACTIVATION message to the MS and start timer T3385. The message contains the required QoS, Linked TI, and optionally protocol configuration options and a

TFT. If present, the TFT shall be sent transparently through the SGSN to the MS to enable packet classification and policing for uplink and downlink data transfer.

Upon receipt of a REQUEST SECONDARY PDP CONTEXT ACTIVATION message, the MS shall then either initiate the secondary PDP context activation procedure as described in the subclause 6.1.3.2.1 or shall reject the activation request by sending a REQUEST SECONDARY PDP CONTEXT ACTIVATION REJECT message as described in subclause 6.1.3.2.2a. The value of the reject cause IE of the REQUEST SECONDARY PDP CONTEXT ACTIVATION REJECT message shall indicate the reason for rejection, e.g. "insufficient resources to activate another context".

The ACTIVATE SECONDARY PDP CONTEXT REQUEST message sent by the MS in order to initiate the secondary PDP context activation procedure shall contain the QoS and Linked TI required in the REQUEST SECONDARY PDP CONTEXT ACTIVATION message. The MS shall also include a TFT with the downlink packet filters as specified in the REQUEST SECONDARY PDP CONTEXT ACTIVATION message.

Upon receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message, the network shall stop timer T3385.

The same procedures then apply as described for MS initiated secondary PDP context activation.

3GPP TS 24.008 clauses 6.1.3.2, 6.1.3.2.1 and 6.1.3.2.1a.

11.1.5.1.3 Test purpose

To test the behaviour of the UE when it detects a network initiated secondary PDP context activation request on the existing PDP context already activated on the UE side

11.1.5.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of context activation

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ or ‘IPv4v6’ in the ACTIVATE PDP CONTEXT then the SS allocates an IPv4 address to the UE.

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context.

A Secondary PDP context activation is requested by the SS by sending a REQUEST SECONDARY PDP CONTEXT ACTIVATION. The UE requests activation of the secondary PDP context. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONREXT REQUEST messages are sent by the

UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2	→		SERVICE REQUEST	Service type = "signalling"
3		SS		The SS starts integrity protection.
4	→		ACTIVATE PDP CONTEXT REQUEST	Activate the primary PDP context
4A		SS		IF the UE in step 4 set the PDP type to ' IPv4' or 'IPv4v6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS allocates an IPv4 address. ELSE IF the UE in step 4 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS allocates an IPv6 address.
5		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.26 in [9] (1xPS RB 64kbps).
6	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context with the requested QoS EXCEPTION: If the "PDP type" in the ACTIVATE PDP CONTEXT REQUEST message was 'IPv6' then stateless address auto configuration occurs on the user plane bearer established with the ACTIVATE PDP CONTEXT REQUEST
7		SS		The SS initiates a secondary PDP context activation
8	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385.
9	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4.
10		SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (2xPS RB 64kbps).
11	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
12		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
13	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE for secondary PDP context
14	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS. This re-confirms that step 9 was correctly executed in the UE.

Specific message contents

Step 4: TI flag (octet 1, Bit 8) in TI IE is set to '0' and value of TIO (octet 1, Bits 765) is set in range 0-6.

Step 6: TI flag in TI IE is set to '1' and value of TIO is the same as in Step 4.

Step 8:

- The Linked TI information element in REQUEST SECONDARY PDP CONTEXT ACTIVATION message specifies the TI for the primary PDP context already activated and is set according to Step 6. The request includes a TFT.
- TI flag in TI IE is set to '0' and value of TIO is different to Step 4.

Step 9:

- The Linked TI information element in ACTIVATE SECONDARY PDP CONTEXT REQUEST message specifies the TI for the PDP context already activated, as received in step 8
- TI flag in TI IE is set to '1' and value of TIO is the same as in Step 8
- NSAPI IE value is different from NSAPI value in Step 4

Step 11 and 13: TI flag in TI IE is set to '0' and value of TIO is the same as in Step 9.

Step 14: TI flag in TI IE is set to '1' and value of TIO is the same as in Step 9.

11.1.5.1.5 Test requirements

To pass the test the UE shall:

- at step 9 send a ACTIVATE SECONDARY PDP CONTEXT REQUEST message with a NSAPI value different from the value in Step 4.
- at step 14 send a MODIFY PDP CONTEXT ACCEPT message.

11.1.5.2 Successful Secondary PDP Context Activation, Deactivation and Re-activation Initiated by the Network

11.1.5.2.1 Definition

11.1.5.2.2 Conformance requirement

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the MS shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enter the state PDP-ACTIVE-PENDING and start timer T3380. The message shall contain the selected NSAPI. The MS shall ensure that the selected NSAPI is not currently being used by another Session Management entity in the MS. The message shall also include a QoS profile, a requested LLC SAPI and the Linked TI. The QoS profile is the requested QoS. If present, the TFT shall be sent transparently through the SGSN to the GGSN to enable packet classification and policing for downlink data transfer.

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST, the network shall validate the message by verifying the TI given in the Linked TI IE to be any of the active PDP context(s). The same GGSN address shall be used by the SGSN as for the already established PDP context(s) for that PDP address. The network shall select a radio priority level based on the QoS negotiated and shall reply with an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message, if the request can be accepted.

NOTE 1: If the MS requested a value for a QoS parameter that is not within the range specified by 3GPP TS 23.107 [81], the network should negotiate the parameter to a value that lies within the specified range.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the MS shall stop timer T3380 and enter the state PDP-ACTIVE. If the offered QoS parameters received from the network differ from the QoS requested by the MS, the MS shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

In A/Gb mode the MS shall initiate establishment of the logical link for the LLC SAPI indicated by the network with the offered QoS and selected radio priority level if no logical link has been already established for that SAPI. If the LLC SAPI indicated by the network can not be supported by the MS, the MS shall initiate the PDP context deactivation procedure.

In Iu mode, both SGSN and MS shall store the LLC SAPI and the radio priority in the PDP context. If an Iu mode to A/Gb mode Routing Area Update is performed, the new SGSN shall initiate establishment of the logical link using the negotiated LLC SAPI, the negotiated QoS profile and selected radio priority level stored in the PDP context as in an A/Gb mode to A/Gb mode Routing Area Update.

An MS, which is capable of operating in both A/Gb mode and Iu mode, shall use a valid LLC SAPI, while an MS which is capable of operating only in Iu mode shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network. When the MS uses a valid LLC SAPI, the network shall return a valid LLC SAPI. The network shall return the “LLC SAPI not assigned” value only when the MS uses the “LLC SAPI not assigned” value.

NOTE 2: The radio priority level and the LLC SAPI parameters, though not used in Iu mode, shall be included in the messages, in order to support handover between Iu mode and A/Gb mode networks.

…

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the network shall send a REQUEST SECONDARY PDP CONTEXT ACTIVATION message to the MS and start timer T3385. The message contains the required QoS, Linked TI, and optionally protocol configuration options and a TFT. If present, the TFT shall be sent transparently through the SGSN to the MS to enable packet classification and policing for uplink and downlink data transfer.

Upon receipt of a REQUEST SECONDARY PDP CONTEXT ACTIVATION message, the MS shall then either initiate the secondary PDP context activation procedure as described in the subclause 6.1.3.2.1 or shall reject the activation request by sending a REQUEST SECONDARY PDP CONTEXT ACTIVATION REJECT message as described in subclause 6.1.3.2.2a. The value of the reject cause IE of the REQUEST SECONDARY PDP CONTEXT ACTIVATION REJECT message shall indicate the reason for rejection, e.g. "insufficient resources to activate another context".

The ACTIVATE SECONDARY PDP CONTEXT REQUEST message sent by the MS in order to initiate the secondary PDP context activation procedure shall contain the QoS and Linked TI required in the REQUEST SECONDARY PDP CONTEXT ACTIVATION message. The MS shall also include a TFT with the downlink packet filters as specified in the REQUEST SECONDARY PDP CONTEXT ACTIVATION message.

Upon receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message, the network shall stop timer T3385.

The same procedures then apply as described for MS initiated secondary PDP context activation.

…

In order to deactivate a PDP context, the network sends a DEACTIVATE PDP CONTEXT REQUEST message to the MS and starts timer T3395. The message contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

8: Operator Determined Barring;

25: LLC or SNDCP failure (A/Gb mode only);

36: regular deactivation;

38: network failure; or

39: reactivation requested.

#112: APN restriction value incompatible with active PDP context.

The MS shall, upon receipt of this message, reply with a DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the network shall stop the timer T3395.

If a detach is requested by the HLR for an MS that has PDP contexts for emergency services, the SGSN shall send a DEACTIVATE PDP CONTEXT REQUEST message to the MS for all the PDP contexts that are not PDP contexts for emergency services.

In A/Gb mode, both the MS and the network shall initiate local release of the logical link if it is not used by another PDP context.

In Iu mode, the network shall initiate the release of Radio Access Bearer associated with this PDP context.

…

Each valid downlink- and uplink-packet filter contains a unique identifier within a given TFT, an evaluation precedence index that is unique among all packet filters for the same direction (downlink or uplink) for one PDP address and APN pair, and at least one of the following attributes:

- Remote Address and Subnet Mask.
- Protocol Number (IPv4) / Next Header (IPv6).
- Local Port Range.
- Remote Port Range.
- IPSec Security Parameter Index (SPI).
- Type of Service (TOS) (IPv4) / Traffic class (IPv6) and Mask.
- Flow Label (IPv6).

In the list of attributes above 'Remote' refers to the external network entity, and 'Local' to the MS.

Some of the above-listed attributes may coexist in a packet filter while others mutually exclude each other. In table 12 below, the possible combinations are shown. Only those attributes marked with an "X" may be specified for a single packet filter. All marked attributes may be specified, but at least one shall be specified.

If the parameters of the header of a received PDP PDU match all specified attribute values in a packet filter, then it is considered that a match is found for this packet filter. In this case, the evaluation procedure is aborted. Other packet filters in increasing order of their evaluation precedence index are evaluated until such match is found.

There may be potential conflicts if attribute values are combined in such a way that the defined filter can never achieve a match to a valid IP packet header. However, the determination of such conflicts is outside the scope of GPRS standardization.

Table 12: Valid Packet Filter Attribute Combinations

	Valid combination types		
Packet filter attribute	**I**	**II**	**III**
Remote Address and Subnet Mask	X	X	X
Protocol Number (IPv4) / Next Header (IPv6)	X	X	
Local Port Range	X		
Remote Port Range	X		
IPSec SPI		X	
TOS (IPv4) / Traffic Class (IPv6) and Mask	X	X	X
Flow Label (IPv6)			X

11.1.5.2.3 Test purpose

1. To verify that the UE, after having deactivated a network initiated secondary PDP context successfully, can re-activate a new network requested secondary PDP context associated with the same primary PDP context.

2. To verify that the UE successfully performs data transfer on the radio bearer associated with the secondary PDP context packet filtering before and after the re-activation of the secondary PDP context.

11.1.5.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of context activation

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ or ‘IPv4v6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv4 address to the UE and set the test variable IP type to “IPv4”.

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context and set the test variable IP type to “IPv6”.

A Secondary PDP context activation is requested by the SS by sending a REQUEST SECONDARY PDP CONTEXT ACTIVATION including Packet Filter#1 in the UL TFT. The UE requests activation of the secondary PDP context. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for

T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONREXT REQUEST messages are sent by the UE.

The SS activates UE test loop mode 4 and transmits two IP Packets to the UE, IP packet#1 and IP packet#2. IP packet#1 does not match Packet Filter#1. IP packet#2 matches Packet Filter#1. The SS checks that IP packet#1 is returned by the UE on the radio bearer associated with the primary PDP context and IP packet#2 is returned by the UE on the radio bearer associated with the secondary PDP context. The SS deactivates UE test loop mode 4.

The SS then requests to deactivate the secondary PDP context by sending DEACTIVATE PDP CONTEXT message to the user. The SS starts the T3395 timer. The UE deactivates the secondary PDP context and issues the DEACTIVATE PDP CONTEXT ACCEPT message. On receipt of this message the SS stops the T3395 timer.

A re-activation of the secondary PDP context is requested by the SS by sending a REQUEST SECONDARY PDP CONTEXT ACTIVATION includes Packet Filter#2 (different from Packet Filter#1) in the UL TFT IE. The UE requests activation of the secondary PDP context. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONREXT REQUEST messages are sent by the UE.

The SS activates UE test loop mode 4 and transmits two IP Packets to the UE, IP packet#3 and IP packet#4. IP packet#3 matches Packet Filter#1, but do not match Packet Filter#2. IP packet#4 matches Packet Filter#2. The SS checks that IP packet#3 is returned by the UE on the radio bearer associated with the primary PDP context (see Note) and IP packet#4 is returned by the UE on the radio bearer associated with the secondary PDP context. Note IP packet#3 is set to match Packet Filter#1 to verify that UE does not re-activate Packet Filter#1 when the secondary PDP context is reactivated. If Packet Filter#1 would still be active after the deactivation and re-activation of the secondary PDP context then would IP packet#3 have been returned on the radio bearer associated with the secondary PDP context instead of the primary PDP context.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2		SS		The SS activates UE radio bearer test mode in accordance to [10] TS 34.109, clause 5.2.1.
3	→		SERVICE REQUEST	Service type = "signalling"
4		SS		The SS starts integrity protection.
5	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
5A		SS		IF the UE in step 5 set the PDP type to ' IPv4' or 'IPv4v6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv4' ELSE IF the UE in step 5 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv6'
6		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.26 in [9] (1xPS RB 64kbps).
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context. EXCEPTION: If the test variable is set to 'IPv6' then stateless address auto configuration occurs on the user plane bearer established with the ACTIVATE PDP CONTEXT REQUEST message.
8		SS		The SS initiates a secondary PDP context activation
9	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385. A UL TFT filter (Packet Filter#1) is configured.
10	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4.
11		SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (2xPS RB 64kbps).
12	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
13		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
14		SS		The SS activates UE test loop mode 4 to establish UE loopback of IP PDUs. See [10] TS 34.109 clause 5.3.2.
15	←		IP PDU (IP packet#1)	The SS transmits IP packet#1 to the UE. IP packet#1 does not match Packet Filter#1.

16	→	IP PDU (IP packet#1)	The SS checks during 1 second that UE transmits IP packet#1 on the radio bearer associated with the primary PDP context.
17	←	IP DPU (IP packet#2)	The SS transmits IP packet#2 to the UE. IP packet#2 matches Packet Filter#1.
18	→	IP PDU (IP packet#2)	The SS checks during 1 second that UE transmits IP packet#2 on the radio bearer associated with the secondary PDP context.
19	SS		The SS deactivates UE test loop mode 4. See [10] TS 34.109 clause 5.3.3.
20	←	DEACTIVATE PDP CONTEXT	The SS starts timer T3395. Cause code set to #36 (regular deactivation)
21	→	DEACTIVATE PDP CONTEXT ACCEPT	The SS stops timer T3395. The SS reconfigures the RAB.
22	SS		The SS initiates a secondary PDP context activation
23	←	REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385. The SS configures Packet Filter#2 in the UL TFT associated with the secondary PDP context.
24	→	ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4.
25	SS		The SS stops timer T3385. The SS reconfigures the RAB.
26	←	ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
27	SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
28	SS		The SS activates UE test loop mode 4 to establish UE loopback of IP PDUs. See [10] TS 34.109 clause 5.3.2.
29	←	IP PDU (IP packet#3)	The SS transmits IP packet#3 to the UE. IP packet#3 do not match Packet Filter#2, but do match Packet Filter#1.
30	→	IP PDU (IP packet#3)	The SS checks during 1 second that UE transmits IP packet#3 on the radio bearer associated with the primary PDP context.
31	←	IP DPU (IP packet#4)	The SS transmits IP packet#4 to the UE. IP packet#4 matches Packet Filter#2.
32	→	IP PDU (IP packet#4)	The SS checks during 1 second that UE transmits IP packet#4 on the radio bearer associated with the secondary PDP context.

Specific message contents

Step 5: TI flag (octet 1, Bit 8) in TI IE is set to ‘0’ and value of TIO (octet 1, Bits 765) is set in range 0-6.

Step 7: TI flag in TI IE is set to ‘1’ and value of TIO is the same as in Step 5.

Step 9:

- The Linked TI information element in REQUEST SECONDARY PDP CONTEXT ACTIVATION message specifies the TI for the PDP context already activated and is set according to Step 7. The request includes an UL TFT filter, Packet Filter#1.
- TI flag in TI IE is set to ‘0’ and value of TIO is different to Step 5

- Packet Filter#1 is set according to table11.1.5.2.4-1.

Step 10:

- The Linked TI information element in ACTIVATE SECONDARY PDP CONTEXT REQUEST message specifies the TI for the PDP context already activated, as received in step 9
- TI flag in TI IE is set to '1' and value of TIO is the same as in Step 5 and 7
- NSAPI IE value is different from NSAPI value in Step 5

Step 12: TI flag in TI IE is set to '0' and value of TIO is the same as in Step 10.

Step 14: UE test loop mode IE is set to UE test loop mode 4 in the CLOSE UE TEST LOOP message, see [10] TS 34.109 clause 6.2.

Step 15: IP packet#1 is set according to table11.1.5.2.4-2.

Step 17: IP packet#2 is set according to table11.1.5.2.4-3

Step 20:

- TI flag in TI IE is set to '0' and value of TIO is the same as in Step 10
- The Cause Code IE is set to #36 (regular deactivation)

Step 23: The Linked TI information element in ACTIVATE SECONDARY PDP CONTEXT REQUEST message specifies the TI for the PDP context already activated, as received in step 9. The request includes an UL TFT filter, Packet Filter#2.

Packet Filter#2 is set according to table11.1.5.2.4-1.

Step 24:

- The Linked TI information element in ACTIVATE SECONDARY PDP CONTEXT REQUEST message specifies the TI for the PDP context already activated, as received in step 9
- TI flag in TI IE is set to '0' and value of TIO is the same as in Step 5 and 7
- NSAPI IE value is different from NSAPI value in Step 5

Step 28: UE test loop mode IE is set to UE test loop mode 4 in the CLOSE UE TEST LOOP message, see [10] TS 34.109 clause 6.2.

Step 29: IP packet#3 is set according to table11.1.5.2.4-4.

Step 31: IP packet#4 is set according to table11.1.5.2.4-2.

Table 11.1.5.2.4-1: Packet Filter Table

Packet filter ID	UL TFT	Packet filter evaluation precedence	Protocol Number (IPv4) / Next Header (IPv6)	Remote address and Subnet mask	Single Local Port (UE)	Local Port Range (UE)	Single Remote Port (NW)	Remote Port Range (NW)	IPSec SPI range	Type of Service (IPv4) / Traffic Class (IPv6) and Mask	Flow Label (IPv6)	Comments
1	Secondary PDP Context (step 9)	6	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and specific local port number and remote port number range. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	Secondary PDP Context (step23)	5	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10100000, Mask= 11111100	-	Same as packet filter#1 except for “Type of Service(IPv4) / Traffic Class (IPv6)” packet filter component.

Table 11.1.5.2.4-2: IP packet#1 (step 15, does not match packet filter#1)

Derivation path: IETF RFC 791 section 3.1 (IPv4) or RFC 2460 section 3 (IPv6) and RFC 769 introduction			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10101001	Significant for packet filter 1. Value matches packet filter 1.	
Protocol	17	UDP Significant packet filters 1. Value matches packet filter 1.	
Source Address	192.168.0.1	Not significant for any packet filters	IPv4
	Fe80::1:1	Not significant for any packet filters	IPv6
Destination Address	172.168.9.1	Significant for packet filter 1. Value does not match packet filter 1.	IPv4
	2001:0bb0:0001:0001	Significant for packet filter 1 Value does not match packet filter 1.	IPv6
Source Port	60001	Significant for packet filter 1. Value matches packet filter 1.	
Destination Port	60350	Significant for packet filter 1. Value matches packet filter 1.	

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.1.5.2.4-3: IP packet#2 (step 17, matches packet filter#1)

Derivation path: IP packet#1, Table 11.1.5.2.4-2.			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10101001	Significant for packet filter 1. Value matches packet filter 1.	
Destination Address	172.168.8.1	Significant for packet filter 1. Value matches packet filter 1.	IPv4
	2001:0ba0:0001:0001	Significant for packet filter 1. Value matches packet filter 1.	IPv6

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.1.5.2.4-4: IP packet#3 (step 29, does not match packet filter#2, matches removed packet filter#1)

Derivation path: IP packet#1, Table 11.1.5.2.4-2.			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10101001	Significant for packet filter 2. Value does not match packet filter 2.	
Destination Address	172.168.8.1	Significant for packet filter 2. Value matches packet filter 2.	IPv4
	2001:0ba0:0001:0001	Significant for packet filter 1. Value matches packet filter 2.	IPv6

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.1.5.2.4-5: IP packet#4 (step 31, matches packet filter#2)

Derivation path: IP packet#1, Table 11.1.5.2.4-2.			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10100000	Significant for packet filter 2. Value matches packet filter 2.	
Destination Address	172.168.8.1	Significant for packet filter 2. Value matches packet filter 2.	IPv4
	2001:0ba0:0001:0001	Significant for packet filter 2. Value matches packet filter 2.	IPv6

11.1.5.2.5 Test requirements

To pass the test the UE shall:

- at step 16 transmit an IP PDU containing IP packet#1 on the radio bearer associated with the primary PDP context.
- at step 18 transmit an IP PDU containing IP packet#2 on the radio bearer associated with the secondary PDP context.
- at step 30 transmit an IP PDU containing IP packet#3 on the radio bearer associated with the primary PDP context.
- at step 32 transmit an IP PDU containing IP packet#4 on the radio bearer associated with the secondary PDP context.

11.2 PDP context modification procedure

11.2.1 Network initiated PDP context modification

11.2.1.1 Definition

11.2.1.2 Conformance requirement

In order to initiate the procedure, the network sends the MODIFY PDP CONTEXT REQUEST message to the UE and starts timer T3386. The message shall contain the new QoS and the radio priority level and LLC SAPI that shall be used by the UE in GSM at the lower layers for the transmission of data related to the PDP context.

Upon receipt of this message the UE shall reply with the MODIFY PDP CONTEXT ACCEPT message, if the UE accepts the new QoS and the indicated LLC SAPI.

If the UE does not accept the new QoS or the indicated LLC SAPI, the UE shall initiate the PDP context deactivation procedure for the PDP context - the reject cause IE value of the DEACTIVATE PDP CONTEXT REQUEST message shall indicate "QoS not accepted".

The network shall upon receipt of the MODIFY PDP CONTEXT ACCEPT message stop timer T3386.

In UMTS, the network shall establish, reconfigure or continue using the Radio Access Bearer with the new QoS indicated in the MODIFY PDP CONTEXT REQUEST message.

Reference

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.1.

11.2.1.3 Test purpose

To test behaviour of the UE upon receipt of a MODIFY PDP CONTEXT REQUEST message from SS.

11.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

The requested QoS is set. A PDP context is activated by the user and accepted by the SS. A MODIFY PDP CONTEXT REQUEST message is then sent to the UE with a new QoS . The UE shall either send a DEACTIVATE PDP CONTEXT REQUEST (UE behaviour A) or MODIFY PDP CONTEXT ACCEPT (UE behaviour B) message in return.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate the PDP context
2a	SS			SS establishes RAB
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Request the modification of a PDP context, with a new QoS and start timer T3386.
A5	→		DEACTIVATE PDP CONTEXT REQUEST	UE behaviour type A: Initiate the PDP context deactivation. Cause set to 'QoS not accepted'
A5a	←		DEACTIVATE PDP CONTEXT ACCEPT	UE behaviour type A: Accept the PDP context deactivation and stop timer T3386.
A5b	SS			The SS releases the RAB associated with this PDP Context.
A5c	→		DETACH REQUEST	UE behaviour type A: A non-auto attach UE may (optionally) send a Detach Request. The SS shall wait up to 'T3390' seconds for the Detach Request.
A5d	←		DETACH ACCEPT	If the UE transmitted a Detach Request message in step A5c then the SS responds with a Detach Accept message.
B5	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	UE behaviour type B: Accept the PDP context modification
B5a	SS			Stop timer T3386
6			Void	
7			Void	
8			Void	

Specific message contents

None.

11.2.1.5 Test requirements

The UE shall:

- Accept or reject PDP context modification with a new QoS initiated by the SS.

11.2.1a Network initiated PDP context modification / Adding and deleting filters to TFT of a secondary PDP context

11.2.1a.1 Definition

11.2.1a.2 Conformance requirement

In order to initiate the procedure, the network sends the MODIFY PDP CONTEXT REQUEST message to the MS and starts timer T3386. The message shall contain the new QoS and the radio priority level and LLC SAPI that shall be used by the MS in A/Gb mode at the lower layers for the transmission of data related to the PDP context. The MODIFY PDP CONTEXT REQUEST message may also contain modified packet filters in the TFT information element that shall be applied to that specific PDP context.

The network informs the MS about the Bearer Control Mode to be applied for all active PDP contexts sharing the same PDP Address and APN by including the selected Bearer Control Mode parameter in the protocol configuration options information element. This information is either explicitly given in the MODIFY PDP CONTEXT REQUEST message or implicitly given by not being present. The MS shall act according to the presence of the protocol configuration options information element and the value of the selected Bearer Control Mode parameter in the MODIFY PDP CONTEXT REQUEST message:

- if the protocol configuration options information element is not present, the MS shall apply Bearer Control Mode 'MS only' for all active PDP contexts sharing the same PDP Address and APN.
- if the selected Bearer Control Mode parameter is not present in the protocol configuration options information element, the MS shall apply Bearer Control Mode 'MS only' for all active PDP contexts sharing the same PDP Address and APN.
- if the selected Bearer Control Mode parameter is present in the protocol configuration options information element, the MS shall apply Bearer Control Mode according to the value of this parameter for all active PDP contexts sharing the same PDP Address and APN.

Upon receipt of the MODIFY PDP CONTEXT REQUEST message the MS shall reply with the MODIFY PDP CONTEXT ACCEPT message, if the MS accepts the new QoS and the indicated LLC SAPI.

The network shall upon receipt of the MODIFY PDP CONTEXT ACCEPT message stop timer T3386.

In A/Gb mode, the network shall establish, reconfigure or continue using the logical link with the new QoS for the LLC SAPI indicated in the MODIFY PDP CONTEXT REQUEST message.

In Iu mode, if the Radio Access Bearer supporting the PDP context is active, then the network shall reconfigure and continue using the Radio Access Bearer with the new QoS indicated in the MODIFY PDP CONTEXT REQUEST message; if the PDP context is preserved, then the network may re-establish a Radio Access Bearer with the new QoS indicated in the MODIFY PDP CONTEXT REQUEST message.

…

Each valid downlink- and uplink-packet filter contains a unique identifier within a given TFT, an evaluation precedence index that is unique among all packet filters for the same direction (downlink or uplink) for one PDP address and APN pair, and at least one of the following attributes:

- Remote Address and Subnet Mask.
- Protocol Number (IPv4) / Next Header (IPv6).
- Local Port Range.
- Remote Port Range.
- IPSec Security Parameter Index (SPI).
- Type of Service (TOS) (IPv4) / Traffic class (IPv6) and Mask.
- Flow Label (IPv6).

In the list of attributes above 'Remote' refers to the external network entity, and 'Local' to the MS.

Some of the above-listed attributes may coexist in a packet filter while others mutually exclude each other. In table 12 below, the possible combinations are shown. Only those attributes marked with an "X" may be specified for a single packet filter. All marked attributes may be specified, but at least one shall be specified.

If the parameters of the header of a received PDP PDU match all specified attribute values in a packet filter, then it is considered that a match is found for this packet filter. In this case, the evaluation procedure is aborted. Other packet filters in increasing order of their evaluation precedence index are evaluated until such match is found.

There may be potential conflicts if attribute values are combined in such a way that the defined filter can never achieve a match to a valid IP packet header. However, the determination of such conflicts is outside the scope of GPRS standardization.

Table 12: Valid Packet Filter Attribute Combinations

	Valid combination types		
Packet filter attribute	**I**	**II**	**III**
Remote Address and Subnet Mask	X	X	X
Protocol Number (IPv4) / Next Header (IPv6)	X	X	
Local Port Range	X		
Remote Port Range	X		
IPSec SPI		X	
TOS (IPv4) / Traffic Class (IPv6) and Mask	X	X	X
Flow Label (IPv6)			X

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.1. 3GPP TS 23.060 clause 15.3.2.0.

11.2.1a.3 Test purpose

1. To verify that the UE successfully performs network initiated PDP context modification procedures to add and delete filters to the TFT of an active secondary PDP context.

2. To verify that the UE successfully performs packet filtering before and after modification of filters.

11.2.1a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ or ‘IPv4v6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates a IPv4 address to the UE and set the test variable IP type to “IPv4”.

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context and set the test variable IP type to “IPv6”. A Secondary PDP context activation with a UL TFT filter (Packet Filter#1) is requested by the SS and the activation procedure is completed by the UE.

The SS activates UE test loop mode 4 and transmits two IP Packets to the UE, IP packet#1 and IP packet#2. IP packet#1 does not match Packet Filter#1. IP packet#2 matches Packet Filter#1. The SS checks that IP packet#1 is returned by the UE on the radio bearer associated with the primary PDP context and IP packet#2 is returned by the UE on the radio bearer associated with the secondary PDP context. The SS sends a MODIFY PDP CONTEXT REQUEST message to the UE requesting a new TFT filter to be added, Packet Filter#2. The UE sends a MODIFY PDP CONTEXT ACCEPT message in return.

The SS transmits three IP Packets to the UE, IP packet#3; IP packet#4 and IP packet#5. IP packet#3 does not match Packet Filter#1 nor Packet Filter#2. IP packet#4 matches Packet Filter#1, but not Packet Filter#2. IP packet#5 matches Packet Filter#2, but not Packet Filter#1. The SS checks that IP packet#3 is returned by the UE on the radio bearer associated with the primary PDP context. The SS checks that IP packet#4 and IP packet#5 are returned by the UE on

the radio bearer associated with the secondary PDP context. The SS sends a MODIFY PDP CONTEXT REQUEST message to the UE requesting Packet Filter#1 to be removed from the TFT. The UE sends a MODIFY PDP CONTEXT ACCEPT message in return.

The SS transmits two IP Packets to the UE, IP packet#6 and IP packet#7. IP packet#6 matches Packet Filter#1, but not Packet Filter#2. IP packet#7 matches Packet Filter#2. The SS checks that IP packet#6 is returned by the UE on the radio bearer associated with the primary PDP context (see Note). The SS checks that IP packet#7 is returned by the UE on the radio bearer associated with the secondary PDP context. Note IP packet#6 is set to match Packet Filter#1, but not Packet Filkter#2 to verify that UE have successfully removed Packet Filter#1. If Packet Filter#1 would not have been removed by the UE then would IP packet#6 have been returned on the radio bearer associated with the secondary PDP context instead of the primary PDP context.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2		SS		The SS activates UE radio bearer test mode in accordance to [10] TS 34.109, clause 5.2.1.
3	→		SERVICE REQUEST	Service type = "signalling"
4		SS		The SS starts integrity protection.
5	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
5A		SS		IF the UE in step 5 set the PDP type to ' IPv4' or 'IPv4v6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv4' ELSE IF the UE in step 5 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv6'
6		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.26 in [9] (1xPS RB 64kbps).
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context. EXCEPTION: If the test variable is set to 'IPv6' then stateless address auto configuration occurs on the user plane bearer established with the ACTIVATE PDP CONTEXT REQUEST message.
8		SS		The SS initiates a secondary PDP context activation
9	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385. A UL TFT filter (Packet Filter#1) is configured.
10	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4.
11		SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (2xPS RB 64kbps).
12	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
13		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
14		SS		The SS activates UE test loop mode 4 to establish UE loopback of IP PDUs. See [10] TS 34.109 clause 5.3.2.
15	←		IP PDU (IP packet#1)	The SS transmits IP packet#1 to the UE. IP packet#1 does not match Packet Filter#1.
16	→		IP PDU (IP packet#1)	The SS checks during 1 second that UE transmits IP packet#1 on the radio bearer associated with the primary PDP context.
17	←		IP DPU (IP packet#2)	The SS transmits IP packet#2 to the UE. IP packet#2 matches Packet Filter#1.

18	→	IP PDU (IP packet#2)	The SS checks during 1 second that UE transmits IP packet#2 on the radio bearer associated with the secondary PDP context.
19	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE to add a UL TFT filter (Packet Filter#2) to the secondary PDP context
20	→	MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS.
21	←	IP PDU (IP packet#3)	The SS transmits IP packet#3 to the UE. IP packet#3 does not match Packet Filter#1 nor Packet Filter#2.
22	→	IP PDU (IP packet#3)	The SS checks during 1 second that UE transmits IP packet#3 on the radio bearer associated with the primary PDP context.
23	←	IP DPU (IP packet#4)	The SS transmits IP packet#4 to the UE. IP packet#4 matches Packet Filter#1, but not Packet Filter#2.
24	→	IP PDU (IP packet#4)	The SS checks during 1 second that UE transmits IP packet#4 on the radio bearer associated with the secondary PDP context.
25	←	IP DPU (IP packet#5)	The SS transmits IP packet#5 to the UE. IP packet#5 matches Packet Filter#2, but not Packet Filter#1.
26	→	IP PDU (IP packet#5)	The SS checks during 1 second that UE transmits IP packet#5 on the radio bearer associated with the secondary PDP context.
27	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE to remove a UL TFT filter (Packet Filter#1) from the secondary PDP context
28	→	MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS.
29	←	IP PDU (IP packet#6)	The SS transmits IP packet#6 to the UE. IP packet#6 matches Packet Filter#1, but not Packet Filter#2.
30	→	IP PDU (IP packet#6)	The SS checks during 1 second that UE transmits IP packet#6 on the radio bearer associated with the primary PDP context.
31	←	IP PDU (IP packet#7)	The SS transmits IP packet#7 to the UE. IP packet#7 matches Packet Filter#2.
32	→	IP PDU (IP packet#7)	The SS checks during 1 second that UE transmits IP packet#7 on the radio bearer associated with the secondary PDP context.

Specific message contents

Step 9: The Linked TI information element in REQUEST SECONDARY PDP CONTEXT ACTIVATION message specifies the TI for the PDP context already activated and is set to the TI value of step 7. The request includes an UL TFT filter, Packet Filter#1.

Packet Filter#1 is set according to table 11.2.1a.4-1

Step 14: UE test loop mode IE is set to UE test loop mode 4 in the CLOSE UE TEST LOOP message, see [10] TS 34.109 clause 6.2.

Step 15: IP packet#1 is set according to table 11.2.1a.4-2

Step 17: IP packet#2 is set according to table 11.2.1a.4-3

Step 19: Use TI to identify secondary PDP context. Add a packet filter (Packet Filter#2) to the UL TFT.

Packet Filter#2 is set according to table 11.2.1a.4-1

Step 21: IP packet#3 is set identical to IP Packet#1, according to table 11.2.1a.4-2, and does not match Packet Filter#1 nor Packet Filter#2.

Step 23: IP packet#4 is set identical to IP Packet#2, according to table 11.2.1a.4-3, and matches Packet Filter#1 but not Packet Filter#2.

Step 25: IP packet#5 is set according to table 11.2.1a.4-4

Step 27: Use TI to identify secondary PDP context. Remove the packet filter (Packet Filter#1) from the UL TFT.

Step 29: IP packet#6 is set identical to IP Packet#2, according to table 11.2.1a.4-3, and matches Packet Filter#1 but not Packet Filter#2.

Step 31: IP packet#7 is set identical to IP Packet#5, according to table 11.2.1a.4-4, and does not match Packet Filter#1 but matches Packet Filter#2.

Table 11.2.1a.4-1: Packet Filter Table

Packet filter ID	UL TFT	Packet filter evaluation precedence	Protocol Number (IPv4) / Next Header (IPv6)	Remote address and Subnet mask	Single Local Port (UE)	Local Port Range (UE)	Single Remote Port (NW)	Remote Port Range (NW)	IPSec SPI range	Type of Service (IPv4) / Traffic Class (IPv6) and Mask	Flow Label (IPv6)	Comments
1	Secondary PDP Context (Step 9)	6	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and specific local port number and remote port number range. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	Secondary PDP Context (Step 19)	5	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10100000, Mask= 11111100	-	Same as packet filter#1 except for “Type of Service(IPv4) / Traffic Class (IPv6)” packet filter component.

Table 11.2.1a.4-2: IP packet#1 (Step 15, does not match Packet Filter#1)

Derivation path: IETF RFC 791 section 3.1 (IPv4) or RFC 2460 section 3 (IPv6) and RFC 769 introduction			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10101001	Significant for packet filters 1 and 2. Value matches packet filters 1 but not 2.	
Protocol	17	UDP Significant for packet filters 1 and 2. Value matches packet filters 1 and 2	
Source Address	192.168.0.1	Not significant for any packet filters	IPv4
	Fe80::1:1	Not significant for any packet filters	IPv6
Destination Address	172.168.9.1	Significant for packet filters 1 and 2. Value does not match packet filters 1 and 2.	IPv4
	2001:0bb0:0001:0001	Significant for packet filters 1 and 2. Value does not match packet filters 1 and 2.	IPv6
Source Port	60001	Significant for packet filter 1. Value matches packet filter 1.	
Destination Port	60350	Significant for packet filter 1. Value matches packet filter 1.	

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.2.1a.4-3: IP packet#2 (Step 17, matches Packet Filter#1)

Derivation path: IP packet#1, Table 11.2.1a.4-2			
Information Element	**Value/Remark**	**Comment**	**Condition**
Destination Address	172.168.8.1	Significant for packet filter 1 and 2. Value matches packet filters 1 and 2.	IPv4
	2001:0ba0:0001:0001	Significant for packet filter 1 and 2. Value matches packet filters 1 and 2.	IPv6

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.2.1a.4-4: IP packet#5 (Step 25, matches Packet Filter#2, but not Packet Filter#1)

Derivation path: IP packet#1, Table 11.2.1a.4-2			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10100000	Significant for packet filter 1 and 2. Value matches packet filter 2. Value does not match packet filter 1.	
Destination Address	172.168.8.1	Significant for packet filters 1 and 2. Value matches packet filters 1 and 2.	IPv4
	2001:0ba0:0001:0001	Significant for packet filters 1 and 2. Value matches packet filters 1 and 2.	IPv6

11.2.1a.5 Test requirements

To pass the test the UE shall:

- at step 16 transmit an IP PDU containing IP packet#1 on the radio bearer associated with the primary PDP context.
- at step 18 transmit an IP PDU containing IP packet#2 on the radio bearer associated with the secondary PDP context.
- at step 20 send a MODIFY PDP CONTEXT ACCEPT message.
- at step 22 transmit an IP PDU containing IP packet#3 on the radio bearer associated with the primary PDP context.
- at step 24 transmit an IP PDU containing IP packet#4 on the radio bearer associated with the secondary PDP context.
- at step 26 transmit an IP PDU containing IP packet#5 on the radio bearer associated with the secondary PDP context.
- at step 28 send a MODIFY PDP CONTEXT ACCEPT message.
- at step 30 transmit an IP PDU containing IP packet#6 on the radio bearer associated with the primary PDP context.
- at step 32 transmit an IP PDU containing IP packet#7 on the radio bearer associated with the secondary PDP context.

11.2.1b Network initiated PDP context modification / Adding filters to TFT of the Primary PDP context

11.2.1b.1 Definition

11.2.1b.2 Conformance requirement

In order to initiate the procedure, the network sends the MODIFY PDP CONTEXT REQUEST message to the MS and starts timer T3386. The message shall contain the new QoS and the radio priority level and LLC SAPI that shall be used by the MS in A/Gb mode at the lower layers for the transmission of data related to the PDP context. The MODIFY PDP CONTEXT REQUEST message may also contain modified packet filters in the TFT information element that shall be applied to that specific PDP context.

The network informs the MS about the Bearer Control Mode to be applied for all active PDP contexts sharing the same PDP Address and APN by including the selected Bearer Control Mode parameter in the protocol configuration options information element. This information is either explicitly given in the MODIFY PDP CONTEXT REQUEST message or implicitly given by not being present. The MS shall act according to the presence of the protocol configuration options information element and the value of the selected Bearer Control Mode parameter in the MODIFY PDP CONTEXT REQUEST message:

- if the protocol configuration options information element is not present, the MS shall apply Bearer Control Mode 'MS only' for all active PDP contexts sharing the same PDP Address and APN.
- if the selected Bearer Control Mode parameter is not present in the protocol configuration options information element, the MS shall apply Bearer Control Mode 'MS only' for all active PDP contexts sharing the same PDP Address and APN.
- if the selected Bearer Control Mode parameter is present in the protocol configuration options information element, the MS shall apply Bearer Control Mode according to the value of this parameter for all active PDP contexts sharing the same PDP Address and APN.

Upon receipt of the MODIFY PDP CONTEXT REQUEST message the MS shall reply with the MODIFY PDP CONTEXT ACCEPT message, if the MS accepts the new QoS and the indicated LLC SAPI.

The network shall upon receipt of the MODIFY PDP CONTEXT ACCEPT message stop timer T3386.

In A/Gb mode, the network shall establish, reconfigure or continue using the logical link with the new QoS for the LLC SAPI indicated in the MODIFY PDP CONTEXT REQUEST message.

In Iu mode, if the Radio Access Bearer supporting the PDP context is active, then the network shall reconfigure and continue using the Radio Access Bearer with the new QoS indicated in the MODIFY PDP CONTEXT REQUEST message; if the PDP context is preserved, then the network may re-establish a Radio Access Bearer with the new QoS indicated in the MODIFY PDP CONTEXT REQUEST message.

…

Each valid downlink- and uplink-packet filter contains a unique identifier within a given TFT, an evaluation precedence index that is unique among all packet filters for the same direction (downlink or uplink) for one PDP address and APN pair, and at least one of the following attributes:

- Remote Address and Subnet Mask.
- Protocol Number (IPv4) / Next Header (IPv6).
- Local Port Range.
- Remote Port Range.
- IPSec Security Parameter Index (SPI).
- Type of Service (TOS) (IPv4) / Traffic class (IPv6) and Mask.
- Flow Label (IPv6).

In the list of attributes above 'Remote' refers to the external network entity, and 'Local' to the MS.

Some of the above-listed attributes may coexist in a packet filter while others mutually exclude each other. In table 12 below, the possible combinations are shown. Only those attributes marked with an "X" may be specified for a single packet filter. All marked attributes may be specified, but at least one shall be specified.

If the parameters of the header of a received PDP PDU match all specified attribute values in a packet filter, then it is considered that a match is found for this packet filter. In this case, the evaluation procedure is aborted. Other packet filters in increasing order of their evaluation precedence index are evaluated until such match is found.

There may be potential conflicts if attribute values are combined in such a way that the defined filter can never achieve a match to a valid IP packet header. However, the determination of such conflicts is outside the scope of GPRS standardization.

Table 12: Valid Packet Filter Attribute Combinations

	Valid combination types		
Packet filter attribute	**I**	**II**	**III**
Remote Address and Subnet Mask	X	X	X
Protocol Number (IPv4) / Next Header (IPv6)	X	X	
Local Port Range	X		
Remote Port Range	X		
IPSec SPI		X	
TOS (IPv4) / Traffic Class (IPv6) and Mask	X	X	X
Flow Label (IPv6)			X

Reference

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.1. 3GPP TS 23.060 clause 15.3.2.0.

11.2.1b.3 Test purpose

1. To verify that the UE, when having a secondary PDP context active, successfully performs network initiated PDP context modification procedure to add a filter to the TFT of the primary PDP context.

2. To verify that the UE successfully performs packet filtering before and after adding the filter to the primary PDP context.

11.2.1b.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ or ‘IPv4v6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates a IPv4 address to the UE and set the test variable IP type to “IPv4”.

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context and set the test variable IP type to “IPv6”. A secondary PDP context activation with a UL TFT filter (Packet Filter#1) is requested by the SS and the activation procedure is completed by the UE.

The SS activates UE test loop mode 4 and transmits two IP Packets to the UE, IP packet#1 and IP packet#2. IP packet#1 does not match Packet Filter#1. IP packet#2 matches Packet Filter#1. The SS checks that IP packet#1 is returned by the UE on the radio bearer associated with the primary PDP context and IP packet#2 is returned by the UE on the radio bearer associated with the secondary PDP context. The SS sends a MODIFY PDP CONTEXT REQUEST message to the UE requesting a new TFT filter to be added to the primary PDP context (Packet Filter#2, having a higher evaluation precedence index than Packet Filter#1 and will be evaluated after Packet Filter#1). The UE sends a MODIFY PDP CONTEXT ACCEPT message in return.

The SS transmits four IP Packets to the UE, IP packet#3; IP packet#4; IP packet#5 and IP packet#6. IP packet#3 matches Packet Filter#2, but not Packet Filter#1. IP packet#4 matches Packet Filter#1, but not Packet Filter#2. IP

packet#5 matches both Packet Filter#1 and Packet Filter#2. IP packet #6 does not match Packet Filter #1 or Packet Filter #2. The SS checks that IP packet#3 is returned by the UE on the radio bearer associated with the primary PDP context. The SS checks that IP packet#4 and IP packet#5 is returned by the UE on the radio bearer associated with the secondary PDP context (see Note). The SS checks that IP packet#6 is not returned by the UE. Note IP packet#5 is matching both Packet Filter#1 and Packet Filter#2. As the packet filter evaluation precedence index is lower for Packet Filter#1, and will be evaluated before Packet Filter#2 then shall IP packet#5 be returned by the UE on the radio bearer associated with Packet Filter#1 (secondary PDP context).

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2		SS		The SS activates UE radio bearer test mode in accordance to [10] TS 34.109, clause 5.2.1.
3	→		SERVICE REQUEST	Service type = "signalling"
4		SS		The SS starts integrity protection.
5	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
5A		SS		IF the UE in step 5 set the PDP type to ' IPv4' or 'IPv4v6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv4' ELSE IF the UE in step 5 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv6'
6		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (1xPS RB 64kbps).
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context. EXCEPTION: If the test variable is set to 'IPv6' then stateless address auto configuration occurs on the user plane bearer established with the ACTIVATE PDP CONTEXT REQUEST message
8		SS		The SS initiates a secondary PDP context activation
9	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385.
10	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4. A UL TFT filter (Packet Filter#1) is configured.
11		SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.5.5a in [9] (2xPS RB 64kbps).
12	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
13		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
14		SS		The SS activates UE test loop mode 4 to establish UE loopback of IP PDUs. See [10] TS 34.109 clause 5.3.2.
15	←		IP PDU (IP packet#1)	The SS transmits IP packet#1 to the UE. IP packet#1 does not match Packet Filter#1.
16	→		IP PDU (IP packet#1)	The SS checks during 1 second that UE transmits IP packet#1 on the radio bearer associated with the primary PDP context.
17	←		IP DPU (IP packet#2)	The SS transmits IP packet#2 to the UE. IP packet#2 matches Packet Filter#1.

18	→	IP PDU (IP packet#2)	The SS checks during 1 second that UE transmits IP packet#2 on the radio bearer associated with the secondary PDP context.
19	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE to add a UL TFT filter (Packet Fileter#2) for primary PDP context
20	→	MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS.
21	←	IP PDU (IP packet#3)	The SS transmits IP packet#3 to the UE. IP packet#3 matches Packet Filter#2, but not Packet Filter#1.
22	→	IP PDU (IP packet#3)	The SS checks during 1 second that UE transmits IP packet#1 on the radio bearer associated with the primary PDP context.
23	←	IP DPU (IP packet#4)	The SS transmits IP packet#4 to the UE. IP packet#4 matches Packet Filter#1, but not Packet Filter#2.
24	→	IP PDU (IP packet#4)	The SS checks during 1 second that UE transmits IP packet#4 on the radio bearer associated with the secondary PDP context.
25	←	IP DPU (IP packet#5)	The SS transmits IP packet#5 to the UE. IP packet#5 matches both Packet Filter#1 and Packet Filter#2.
26	→	IP PDU (IP packet#5)	The SS checks during 1 second that UE transmits IP packet#5 on the radio bearer associated with the secondary PDP context.
27	←	IP DPU (IP packet#6)	The SS transmits IP packet#6 to the UE. . IP packet #6 does not match Packet Filter #1 or Packet Filter #2.
28	SS		The SS checks during 1 second that UE do not transmit IP packet#6.

Specific message contents

Step 9: The Linked TI information element in REQUEST SECONDARY PDP CONTEXT ACTIVATION message specifies the TI for the PDP context already activated and is set to the TI value of step 7. The request includes an UL TFT filter, Packet Filter#1.

Packet Filter#1 is set according to table 11.2.1b.4-1

Step 14: UE test loop mode IE is set to UE test loop mode 4 in the CLOSE UE TEST LOOP message, see [10] TS 34.109 clause 6.2.

Step 15: IP packet#1 is set according to table 11.2.1b.4-2

Step 17: IP packet#2 is set according to table 11.2.1b.4-3

Step 19: Use TI to identify primary PDP context. Add a packet filter (Packet Filter#2) to the UL TFT.

Packet Filter#2 is set according to table 11.2.1b.4-1

Step 21: IP packet#3 is set according to table 11.2.1b.4-4

Step 23: IP packet#4 is set according to table 11.2.1b.4-5

Step 25: IP packet#5 is set identical to IP Packet#2, according to table 11.2.1b.4-3, and matches both Packet Filter#1 and Packet Filter#2

Step 27: IP packet#6 is set identical to IP Packet#1, according to table 11.2.1b.4-2, and does not match Packet Filter #1 or Packet Filter #2

Table 11.2.1b.4-1: Packet Filter Table

Packet filter ID	UL TFT	Packet filter evaluation precedence	Protocol Number (IPv4) / Next Header (IPv6)	Remote address and Subnet mask	Single Local Port (UE)	Local Port Range (UE)	Single Remote Port (NW)	Remote Port Range (NW)	IPSec SPI range	Type of Service (IPv4) / Traffic Class (IPv6) and Mask	Flow Label (IPv6)	Comments
1	Secondary PDP Context (Step 9)	1	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and specific local and remote port numbers. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	Primary PDP Context (Step 19)	2	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	60000: 60100	60350	-	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and local port numbers and single remote port. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.

IPv6	This condition applies if test variable IP type is set to 'IPv6'.

11.2.1b.5 Test requirements

To pass the test the UE shall:

- at step 16 transmit an IP PDU containing IP packet#1 on the radio bearer associated with the primary PDP context.
- at step 18 transmit an IP PDU containing IP packet#2 on the radio bearer associated with the secondary PDP context.
- at step 20 send a MODIFY PDP CONTEXT ACCEPT message.

- at step 22 transmit an IP PDU containing IP packet#3 on the radio bearer associated with the primary PDP context.
- at step 24 transmit an IP PDU containing IP packet#4 on the radio bearer associated with the secondary PDP context.
- at step 26 transmit an IP PDU containing IP packet#5 on the radio bearer associated with the secondary PDP context.
    - at step 28 not transmit and IP PDU.

11.2.2 UE initiated PDP context modification

11.2.2.1 UE initiated PDP Context Modification accepted by network

11.2.2.1.1 Definition

None

11.2.2.1.2 Conformance requirement

In order to initiate the procedure, the UE sends the MODIFY PDP CONTEXT REQUEST message to the network, enters the state PDP-MODIFY-PENDING and starts timer T3381. The message may contain the requested new QoS and/or the TFT and the requested LLC SAPI (used in GSM).

Upon receipt of the MODIFY PDP CONTEXT REQUEST message, the network may reply with the MODIFY PDP CONTEXT ACCEPT message in order to accept the context modification. The reply message may contain the negotiated QoS and the radio priority level based on the new QoS profile and the negotiated LLC SAPI, that shall be used in GSM by the logical link.

Upon receipt of the MODIFY PDP CONTEXT ACCEPT message, the UE shall stop the timer T3381. If the offered QoS parameters received from the network differs from the QoS requested by the UE, the UE shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

Reference

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.2.

11.2.2.1.3 Test purpose

To test the behaviour of the UE upon receipt of a MODIFY PDP CONTEXT ACCEPT message from the SS with

- Requested QoS;

11.2.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of setting minimum QoS
- Method of activating a PDP context

Test procedure

The requested QoS is set. A PDP context is activated by the user and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message with new QoS. The SS accepts the context modification and replies with the MODIFY PDP CONTEXT ACCEPT message with the QoS requested. The SS waits 'T3390' seconds to confirm that UE will not initiate a PDP context deactivation.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request the modification of a PDP context, with new QoS
5	←		MODIFY PDP CONTEXT ACCEPT (NETWORK TO UE DIRECTION)	Accept the PDP context modification with QoS requested
6			SS	SS waits 'T3390' seconds to confirm UE does not initiate PDP context deactivation.
7			Void	
8			Void	
9			Void	
10			Void	
11			Void	

Specific message contents

None.

11.2.2.1.5 Test requirements

When requesting the PDP context modification, the UE shall:

- Modify the PDP context if SS replied with the requested QoS;

11.2.2.2 UE initiated PDP Context Modification not accepted by the network

11.2.2.2.1 Definition

11.2.2.2.2 Conformance requirement

In order to initiate the procedure, the UE sends the MODIFY PDP CONTEXT REQUEST message to the network, enters the state PDP-MODIFY-PENDING and starts timer T3381. The message may contain the requested new QoS and/or the TFT and the requested LLC SAPI (used in GSM).

Upon receipt of a MODIFY PDP CONTEXT REQUEST message, the network may reject the UE initiated PDP context modification request by sending a MODIFY PDP CONTEXT REJECT message to the UE. The message shall contain a cause code that typically indicates one of the following:

26: insufficient resources;

30: activation rejected by GGSN, Serving GW or PDN GW; # 32: Service option not supported;

37: QoS not accepted;

41: semantic error in the TFT operation;

42: syntactical error in the TFT operation;

44: semantic errors in packet filter(s);

45: syntactical errors in packet filter(s);

48: request rejected, Bearer Control Mode violation;

60: bearer handling not supported; or

95 - 111: protocol errors.

…

If the SM cause value is #26 "insufficient resources", the network may include a value for timer T3396 value IE in the MODIFY PDP CONTEXT REJECT message.

Upon receipt of a MODIFY PDP CONTEXT REJECT message, the UE shall stop timer T3381 and enter the state PDP-ACTIVE.

If the SM cause value is #26 and T3396 value IE is included:

- the MS takes different actions depending on the timer value received for T3396 value IE:

  i) if the timer value of T3396 value IE indicates neither zero nor deactivated, the MS shall start timer T3396 and not try to send another ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST messages for the same APN until timer T3396 expires, the timer T3396 is stopped, the MS is switched off or the SIM/USIM is removed;

  ii) if the timer value indicates that this timer is deactivated, the MS shall not try to send another ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST messages for the same APN until the MS is switched off or the SIM/USIM is removed or the MS receives REQUEST PDP CONTEXT ACTIVATION or REQUEST SECONDARY PDP CONTEXT ACTIVATION or MODIFY PDP CONTEXT REQUEST message for the same APN from the network; or

  iii) if the timer value indicates that this timer is zero, the MS may send an ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST messages for the same APN.

If the T3396 value IE is not included, the MS may send an ACTIVATE PDP CONTEXT REQUEST, ACTIVATE SECONDARY PDP CONTEXT REQUEST or MODIFY PDP CONTEXT REQUEST messages for the same APN.

Reference

3GPP TS 24.008 clauses 6.1.3.3, 6.1.3.3.2 and 6.1.3.3.3.

11.2.2.2.3 Test purpose

To test the behaviour of the UE upon receipt of a MODIFY PDP CONTEXT REJECT message from the System Simulator.

11.2.2.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message. The SS rejects the context modification and replies with the MODIFY PDP CONTEXT REJECT with cause set to # 26: insufficient resources and a valid timer T3396 value IE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	The UE requests modification of the PDP context and starts timer T3381
5	←		MODIFY PDP CONTEXT REJECT	The SS rejects PDP context modification, SM cause = #26
5a				The UE starts T3396
6	SS			Wait for T3396 expiry to ensure no further MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) messages are sent by the UE

Specific message contents

MODIFY PDP CONTEXT REJECT (step 5)

Information Element	Value/remark
SM cause	#26: insufficient resources
T3396 value	60s

11.2.2.2.5 Test requirements

After receiving MODIFY PDP CONTEXT REJECT message from the SS, the UE shall not resend PDP context modification request before the expiry of T3396.

11.2.2.3 UE initiated PDP Context Modification / Dual priority / low priority override

11.2.2.3.1 Definition

Void

11.2.2.3.2 Conformance requirement

An MS configured for NAS signalling low priority (see 3GPP TS 24.368 [135], 3GPP TS 31.102 [112]) indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured to NAS signalling low priority" except for the following cases in which the MS shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the MS is performing an attach for emergency bearer services;
- the MS has a PDN connection for emergency bearer services established and is performing mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the MS configured for dual priority is requested by the upper layers to establish a PDN connection with the low priority indicator set to "MS is not configured for NAS signalling low priority";
- the MS configured for dual priority is performing EPS session management procedures related to the PDN connection established with low priority indicator set to "MS is not configured for NAS signalling low priority";
- the MS configured for dual priority has a PDN connection established by setting the low priority indicator to "MS is not configured for NAS signalling low priority" and is performing EPS mobility management procedures;
- the MS is accessing the network with access class 11 – 15; or
- the MS is responding to paging.

The network may use the NAS signalling low priority indication for NAS level mobility management congestion control on a per core network node basis and APN based congestion control.

If the NAS signalling low priority indication is provided in an ACTIVATE PDP CONTEXT REQUEST message, the SGSN stores the NAS signalling low priority indication within the default PDP context activated due to this request.

Reference

3GPP TS 24.008 clauses 1.8.

11.2.2.3.3 Test purpose

To verify that a MS configured for dual priority set the low priority indicator to "MS is not configured for NAS signalling low priority" when requested by the upper layers to establish a PDP context with the low priority indicator overridden

To verify that a MS configured for dual priority set the low priority indicator to "MS is not configured for NAS signalling low priority" when it is performing session management procedures related to the PDP context established with low priority indicator set to "MS is not configured for NAS signalling low priority"

11.2.2.3.4 Method of test

Initial condition

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE is configured for NAS signalling low priority

The UE is configured for NAS signalling low priority override

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to "NAS signalling low priority" "Override_NAS_SignallingLowPriority" is set to 1, as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

Support of PS service Yes/No
Method of activating a PDP context Yes/No

Test procedure

A PDP context is activated by the user, indicating that the UE is not configured for NAS signalling low priority, and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message, indicating that the UE is not configured for NAS signalling low priority. The SS accepts the context modification and replies with the MODIFY PDP CONTEXT ACCEPT.. The SS waits 'T3390' seconds to confirm that UE will not initiate a PDP context deactivation.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context Device properties = 'MS is not configured for NAS signalling low priority'
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request the modification of a PDP context Device properties = 'MS is not configured for NAS signalling low priority'
5	←		MODIFY PDP CONTEXT ACCEPT (NETWORK TO UE DIRECTION)	Accept the PDP context modification with
6			SS	SS waits 'T3390' seconds to confirm UE does not initiate PDP context deactivation.

Specific message contents

None.

11.2.2.3.5 Test requirements

Step 2: ACTIVATE PDP CONTEXT REQUEST message contains the Device properties IE set to 'MS is not configured for NAS signalling low priority'.

Step 4: MODIFY PDP CONTEXT REQUEST message contains the Device properties IE set to 'MS is not configured for NAS signalling low priority'.

11.2.3 Abnormal cases

11.2.3.1 T3381 Expiry

11.2.3.1.1 Definition

11.2.3.1.2 Conformance requirement

On the first expiry of timer T3381, the UE shall re-send the MODIFY PDP CONTEXT REQUEST message, reset and restart timer T3381. This retransmission is repeated four times, i.e. on the fifth expiry of timer T3381, the UE may continue to use the previously negotiated QoS or it may initiate the PDP context deactivation procedure.

Reference

3GPP TS 24.008 clause 6.1.3.3.4 a) case: In the UE.

11.2.3.1.3 Test purpose

To test the behaviour of the UE when SS does not reply to MODIFY PDP CONTEXT REQUEST message.

11.2.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context

Test procedure

A PDP context activation is requested by the user and accepted by the SS. The UE shall send MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) message five times with T3381 seconds between each message. After this no further MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) messages shall be sent by the UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation
4	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context, with new QoS
5	SS			T3381 seconds
6	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context, with the same QoS as in step 4
7	SS			T3381 seconds
8	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context, with the same QoS as in step 4
9	SS			T3381 seconds
10	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context, with the same QoS as in step 4
11	SS			T3381 seconds
12	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context, with the same QoS as in step 4
13	SS			Wait for T3381 seconds to ensure no further MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) messages are sent by the UE

Specific message contents

None.

11.2.3.1.5 Test requirements

UE shall re-send the MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) to SS five times in order to initiate the PDP context modification, with expiry of timer T3381 between messages. After fifth try, UE shall send no more MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) messages to SS.

11.2.3.2 Collision of UE and network initiated PDP context modification procedures

11.2.3.2.1 Definition

11.2.3.2.2 Conformance requirement

A collision of a UE and network initiated PDP context modification procedures is identified by the UE if a MODIFY PDP CONTEXT REQUEST message is received from the network after the UE has sent a MODIFY PDP CONTEXT REQUEST message itself, and both messages contain the same TI and the UE has not yet received a MODIFY PDP CONTEXT ACCEPT message from the network.

In the case of such a collision, the network initiated PDP context modification shall take precedence over the UE initiated PDP context modification. The UE shall terminate internally the UE initiated PDP context modification

procedure, enter the state PDP-ACTIVE and proceed with the network initiated PDP context modification procedure by sending a MODIFY PDP CONTEXT ACCEPT message.

Reference

3GPP TS 24.008 clause 6.1.3.3.4 b).

11.2.3.2.3 Test purpose

To test behaviour of the UE when it identifies collision of the UE and SS initiated PDP context modification with the same TI.

11.2.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message. Then the SS initiates the PDP context modification by sending MODIFY PDP CONTEXT REQUEST message with the same TI. The UE shall reply to the SS initiated PDP context modification procedure by sending MODIFY PDP CONTEXT ACCEPT message with the same TI.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a PDP context activation
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Conversational Call, Originating Streaming Call, Originating Interactive Call, Originating Background Call, or Originating Subscribed traffic call
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB.
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation
4	→		MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION)	Request modification of the PDP context
5	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Request modification of the PDP context with the same TI
6	UE			UE identifies collision, terminates internally the UE initiated PDP context modification procedure
7	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	Accept SS initiated PDP context modification

Specific message contents

Steps 2, 4 and 7. TI flag (bit 8) in the TI IE is set to 0 (transaction initiated by the UE).

Steps 3 and 5. TI flag (bit 8) in the TI IE is set to 1.

Steps 2, 3, 4, 5 and 7. The value of the TIO (bits 5-7) in the TI IE is the same in these test steps.

11.2.3.2.5 Test requirements

In step 6, the UE shall terminate internally the UE initiated PDP context modification procedure and proceed with SS initiated PDP context modification.

11.3 PDP context deactivation procedures

11.3.1 PDP context deactivation initiated by the UE

11.3.1.1 Definition

11.3.1.2 Conformance requirement

In order to deactivate a PDP context, the UE sends a DEACTIVATE PDP CONTEXT REQUEST message to the network, enters the state PDP-INACTIVE-PENDING and starts timer T3390. The message contains the transaction identifier (TI) in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

- #26: insufficient resources;
- #36: regular PDP context deactivation; or
- #37: QoS not accepted.

The network shall reply with the DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the UE shall stop timer T3390. In UMTS, the network shall initiate the release of Radio Access Bearer associated with this PDP context.

Whenever any session management message except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS is received by the UE specifying a transaction identifier which is not recognised as relating to an active context or to a context that is in the process of activation or deactivation, the UE shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.

Reference

3GPP TS 24.008 clauses 6.1.3.4.1 and 8.3.2 (b).

11.3.1.3 Test purpose

To test the behaviour of the UE upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS in PDP context deactivation procedure initiated by the UE.

To test the behaviour of the UE upon receipt of a session management message (except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS) specifying a transaction identifier which is not recognised as relating to an active context or to a context that is in the process of activation or deactivation.

11.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Method of deactivating the PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context is activated by the user and accepted by the SS. PDP context deactivation is then requested by the user. The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message to the SS. The SS shall then reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then wait for T3390 seconds to ensure T3390 has been stopped and that no further messages are sent from the UE. The UE in manual mode may perform a detach procedure. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated context and if the UE has not started a detach procedure it shall reply with an SM STATUS message with cause #81 'transaction identifier not known'.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation with traffic class “originatingStreamingCall”, "originatingInteractiveCall" or "originatingBackgroundCall".
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB.
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a context deactivation
5	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context and starts waiting for 'T3390'. SM cause set to #36.
6	←		DEACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context deactivation and timer ‘T3390’ is cancelled.
6a			Void	
7	→		DETACH REQUEST	The UE may (optionally) send a Detach Request (only Note 1). The SS shall wait up to 'T3390' seconds for the Detach Request. While waiting the SS releases the RAB associated with this PDP Context. If the SS receives a Detach Request the test execution continues from step A8, otherwise from step B8. SS shall check that no further deactivate request messages are sent during this time.
A8	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the deactivated context.
A9	SS			Start timer 'T3386' and wait until is expires to ensure that UE does not respond to Modify PDP Context Request(Net) after Detach Request has been sent from UE.
A10	←		DETACH ACCEPT	SS responds with DETACH ACCEPT message as a Detach Request was transmitted by the UE
B8	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the deactivated context. (Allowed for Note 1 and Note 2).
B9	→		SM STATUS	Cause set to #81
Note 1: Support of automatic PS attach procedure at switch on – no Note 2: Support of automatic PS attach procedure at switch on – yes				

Specific message contents

Steps 2 and 5: TI flag (bit 8) in TI IE is set to 0 (transaction initiated by the UE).

Steps 3, 6, A8 and B8: TI flag in TI IE is set to 1.

Steps 2, 3, 5, 6, A8 and B8: The value of TIO IE (bits 5-7) of the transaction identifier (TI) is the same in these test steps.

11.3.1.5 Test requirements

At step 1a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to one of the following causes:

- Originating Streaming Call;
- Originating Interactive Call or
- Originating Background Call
- OriginatingSubscribedTrafficCall

In PDP context deactivation procedure initiated by the UE, upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS, the UE shall deactivate PDP context associated with given PDP address and TI.

If the UE has not performed a detach procedure then, upon modification procedure initiated by the network, for deactivated PDP context, the UE shall reply with SM STATUS message with cause #81.

11.3.2 PDP context deactivation initiated by the network

11.3.2.1 Definition

11.3.2.2 Conformance requirement

In order to deactivate a PDP context, the network sends a DEACTIVATE PDP CONTEXT REQUEST message to the UE and starts timer T3395. The message contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

36: regular PDP context deactivation;

38: network failure; or

39: reactivation requested.

The UE shall, upon receipt of this message, reply with a DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the network shall stop the timer T3395. In UMTS, the network shall initiate the release of Radio Access Bearer associated with this PDP context.

Reference

3GPP TS 24.008 clause 6.1.3.4.2.

11.3.2.3 Test purpose

To test the behaviour of the UE upon receipt of a DEACTIVATE PDP CONTEXT REQUEST message from the SS.

11.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context is activated by the user and accepted by the SS. A DEACTIVATE PDP CONTEXT REQUEST message is then sent by the SS. The UE shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then wait for T3395 seconds to ensure that no further messages are sent from the UE. The UE in manual mode may perform a detach procedure. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated context and if the UE has not started a detach procedure it shall reply with an SM STATUS message with cause #81 'invalid transaction identifier value'.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation with traffic class “originatingStreamingCall”, "originatingInteractiveCall" or "originatingBackgroundCall".
1a		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c		SS		The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a		SS		The SS establishes the RAB.
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	←		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context and starts waiting for 'T3395'. SM cause set to #36.
5	→		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation and timer ‘T3395’ is cancelled.
5a			Void	
5b	→		DETACH REQUEST	The UE may (optionally) send a Detach Request (only Note 1). The SS shall wait up to 'T3395' seconds for the Detach Request. While waiting the SS releases the RAB associated with this PDP Context. If the SS receives a Detach Request the test execution continues from step A6, otherwise from step B6. SS shall check that no further deactivate request messages are sent during this time.
A6	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the deactivated context.
A7		SS		Start timer 'T3386' and wait until is expires to ensure that UE does not respond to Modify PDP Context Request(Net) after Detach Request has been sent from UE.
A8	←		DETACH ACCEPT	SS responds with DETACH ACCEPT message as a Detach Request was transmitted by the UE
B6	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the deactivated context. (Allowed for Note 1 and Note 2).
B7	→		SM STATUS	Cause set to #81
Note 1: Support of automatic PS attach procedure at switch on – no Note 2: Support of automatic PS attach procedure at switch on – yes				

Specific message contents

Steps 2 and 5: TI flag (bit 8) in TI IE is set to 0 (transaction initiated by the UE).

Steps 3, 4, A6 and B6: TI flag in TI IE is set to 1.

Steps 2, 3, 4, 5, A6 and B6: The value of TIO IE (bits 5-7) of the transaction identifier (TI) is the same in these test steps.

11.3.2.5 Test requirements

At step 1a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to one of the following causes:

- Originating Streaming Call;
- Originating Interactive Call or
- Originating Background Call
- OriginatingSubscribedTrafficCall

Upon receipt of a request for deactivation of a PDP context from the SS, the UE shall deactivate PDP context.

If the UE has not performed a detach procedure then, upon modification procedure initiated by the network, for deactivated PDP context, UE shall reply with SM STATUS message with cause #81, as confirmation that previously SS requested PDP context deactivation was performed by the UE.

11.3.2a PDP context deactivation initiated by the network / secondary PDP context active / deactivation of primary PDP context

11.3.2a.1 Definition

11.3.2a.2 Conformance requirement

The purpose of this procedure is to deactivate an existing PDP context between the MS and the network. The PDP context deactivation may be initiated by the MS or by the network. The *tear down indicator* information element may be included in the DEACTIVATE PDP CONTEXT REQUEST message in order to indicate whether only the PDP context associated with this specific TI or all active PDP contexts sharing the same PDP address and APN as the PDP context associated with this specific TI shall be deactivated. If the tear down is requested, all other active PDP contexts sharing the same PDP address and APN as the PDP context associated with this specific TI shall be deactivated locally without peer-to-peer signalling. If the *tear down indicator* information element is not included in the DEACTIVATE PDP CONTEXT REQUEST message, only the PDP context associated with this specific TI shall be deactivated.

An MS supporting S1 mode shall always include the tear down indicator when deactivating the default PDP context. An MS not supporting S1 mode should apply the same behaviour (see 3GPP TS 23.060 [74]).

After successful PDP context deactivation, the associated NSAPI and TI values are released and can be reassigned to another PDP context.

If one or more MBMS contexts are linked to a PDP context that has been deactivated, the MS shall deactivate all those MBMS contexts locally (without peer to peer signalling between the MS and the network).

…

In order to deactivate a PDP context, the network sends a DEACTIVATE PDP CONTEXT REQUEST message to the MS and starts timer T3395. The message contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

8: Operator Determined Barring;

25: LLC or SNDCP failure (A/Gb mode only);

36: regular deactivation;

38: network failure; or

39: reactivation requested.

#112: APN restriction value incompatible with active PDP context.

The MS shall, upon receipt of this message, reply with a DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the network shall stop the timer T3395.

If a detach is requested by the HLR for an MS that has PDP contexts for emergency services, the SGSN shall send a DEACTIVATE PDP CONTEXT REQUEST message to the MS for all the PDP contexts that are not PDP contexts for emergency services.

In A/Gb mode, both the MS and the network shall initiate local release of the logical link if it is not used by another PDP context.

In Iu mode, the network shall initiate the release of Radio Access Bearer associated with this PDP context.

Reference

3GPP TS 24.008 clause 6.1.3.4 and 6.1.3.4.2.

11.3.2a.3 Test purpose

To verify that the UE deactivates an active secondary PDP context when the network requests deactivation of a primary PDP context with the *tear down indicator* information element included.

11.3.2a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ or ‘IPv4v6’ in the ACTIVATE PDP CONTEXT then the SS allocates an IPv4 address to the UE.

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context.

A secondary PDP context activation is requested by the SS and the activation procedure is completed by the UE.

A DEACTIVATE PDP CONTEXT REQUEST message is then sent to the UE requesting the deactivation of the primary PDP context. The UE shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then wait for T3395 seconds to ensure that no further messages are sent from the UE. The UE in manual mode may perform a detach procedure. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated secondary context and if the UE has not started a detach procedure it shall reply with an SM STATUS message with cause #81 'invalid transaction identifier value'.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2	→		SERVICE REQUEST	Service type = "signalling"
3		SS		The SS starts integrity protection.
4	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
4A		SS		IF the UE in step 4 set the PDP type to ' IPv4' or 'IPv4v6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS allocates an IPv4 address. ELSE IF the UE in step 4 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS allocates an IPv6 address.
5		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.26 in [9] (1xPS RB 64kbps).
6	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context EXCEPTION: If the "PDP type" in the ACTIVATE PDP CONTEXT REQUEST message was 'IPv6' then stateless address auto configuration occurs on the user plane bearer established with the ACTIVATE PDP CONTEXT REQUEST
7		SS		The SS initiates a secondary PDP context activation
8	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385.
9	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 4.
10		SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (2xPS RB 64kbps).
11	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
12		SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
13	←		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of the primary PDP context and starts waiting for 'T3395'. SM cause set to #36.
14	→		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation and timer 'T3395' is cancelled.
14b	→		DETACH REQUEST	The UE may (optionally) send a Detach Request (only Note 1). The SS shall wait up to 'T3395' seconds for the Detach Request. While waiting the SS releases the RAB associated with this PDP Context. If the SS receives a Detach Request the test execution continues from step A15, otherwise from step B15. SS shall check that no further deactivate request messages are sent during this time.

A15	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the primary context.
A16	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the secondary context.
A17	SS		Start timer 'T3386' and wait until is expires to ensure that UE does not respond to Modify PDP Context Request(Net) after Detach Request has been sent from UE.
A18	←	DETACH ACCEPT	SS responds with DETACH ACCEPT message as a Detach Request was transmitted by the UE
B15	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the primary context. (Allowed for Note 1 and Note 2).
B16	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the secondary context. (Allowed for Note 1 and Note 2).
B17	→	SM STATUS	Cause set to #81
Note 1: Support of automatic PS attach procedure at switch on – no			
Note 2: Support of automatic PS attach procedure at switch on – yes			

Specific message contents

Steps 13:

- The TI shall indicate the primary PDP context
- The tear down indicator shall be set.

11.3.2a.5 Test requirements

Upon receipt of a request for deactivation of the primary PDP context, with the *tear down indicator* information element included, from the SS the UE shall deactivate the primary and secondary PDP contexts.

If the UE has not performed a detach procedure then, upon modification procedure initiated by the network, for deactivated PDP context, UE shall reply with SM STATUS message with cause #81, as confirmation that previously SS requested PDP context deactivation was performed by the UE.

11.3.3 Abnormal cases

11.3.3.1 T3390 Expiry

11.3.3.1.1 Definition

11.3.3.1.2 Conformance requirement

Expiry of timers

In the UE:

On the first expiry of timer T3390, the UE shall resent the message DEACTIVATE PDP CONTEXT REQUEST and shall reset and restart the timer T3390. This retransmission is repeated four times, i.e. on the fifth expiry of timer T3390, the UE shall release all resources allocated and shall erase the PDP context related data.

Reference

3GPP TS 24.008 clause 6.1.3.4.3 a), case In the UE.

11.3.3.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to a DEACTIVATE PDP CONTEXT REQUEST message from the UE.

11.3.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Method of deactivating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. PDP context deactivation is then requested by the user. The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message five times with T3390 seconds between each message. After that, the UE shall release the PDP context. T3390 seconds after the fifth message the SS shall send a MODIFY PDP CONTEXT REQUEST message for the deactivated context and the UE shall reply with SM STATUS with cause set to #81 'Transaction identifier not known'.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
2a	SS			The SS establishes the RAB.
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a context deactivation
5	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
6	SS			T3390 seconds
7	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
8	SS			T3390 seconds
9	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
10	SS			T3390 seconds
11	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
12	SS			T3390 seconds
13	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
14	SS			Wait T3390 seconds
14a	UE			The UE releases the PDP context and all allocated resources
15	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Try to modify the deactivated context.
16	→		SM STATUS	Cause set to #81

Specific message contents

Steps 2, 5, 7, 9, 11 and 13: TI flag (bit 8) in TI IE is set to 0 (transaction initiated by the UE).

Steps 3, and 15: TI flag in TI IE is set to 1.

Steps 2, 3, 5, 7, 9, 11, 13, and 15: The value of TIO IE (bits 5-7) of the transaction identifier (TI) is the same in these test steps.

11.3.3.1.5 Test requirements

If SS does not respond to the UE initiated PDP context deactivation procedure, the UE shall retransmit four more DEACTIVATE PDP CONTEXT Requests four times, with T3390 timer expiry between the successive messages, before releasing resources allocated to the PDP context and deleting PDP context related data.

11.3.3.2 Collision of UE and network initiated PDP context deactivation requests

11.3.3.2.1 Definition

11.3.3.2.2 Conformance requirement

If the UE and the network initiated PDP context deactivation requests collide, the UE and the network shall each reply with the message DEACTIVATE PDP CONTEXT ACCEPT and shall stop timer T3390 and T3395, respectively.

Reference

3GPP TS 24.008 clause 6.1.3.4.3 b).

11.3.3.2.3 Test purpose

To test the behaviour of the UE when there is a collision between an UE initiated and network initiated context deactivation.

11.3.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Method of deactivating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. Context deactivation is then requested by the user. Upon receipt of the DEACTIVATE PDP CONTEXT REQUEST message the SS sends a DEACTIVATE PDP CONTEXT REQUEST message. The UE shall reply with only one DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of this message the SS sends a DEACTIVATE PDP CONTEXT ACCEPT message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
1a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
1b	→		SERVICE REQUEST	
1c	SS			The SS starts ciphering and integrity protection.

3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a context deactivation
5	→		DEACTIVATE PDP CONTEXT REQUEST	UE requests deactivation of a PDP context
6	←		DEACTIVATE PDP CONTEXT REQUEST	SS requests deactivation of a PDP context and starts T3390 and T3395
7	→		DEACTIVATE PDP CONTEXT ACCEPT	UE accepts the PDP context deactivation requested by the SS
7a	SS			SS stops T3395
8	←		DEACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context deactivation requested by the UE
9	SS			SS releases the RAB
10	SS			SS waits for expiry of T3390 to ensure no further deactivate request messages are sent

Specific message contents

Steps 2 and 5. TI flag (bit 8) in TI IE is set to 0 (transaction initiated by the UE).

Steps 3, 6 and 8. TI flag in TI IE is set to 1.

Steps 2, 3, 5, 6, 7 and 8. The value of TIO IE (bits 5-7) of the transaction identifier (TI) is the same in these test steps.

11.3.3.2.5 Test requirements

When UE and SS initiated PDP context deactivation requests collide, the UE shall reply with DEACTIVATE PDP CONTEXT ACCEPT to the SS.

11.4 Unknown or Unforeseen Transaction Identifier/Non-semantical Mandatory Information Element Errors

11.4.1 Error cases

11.4.1.1 Definition

11.4.1.2 Conformance requirement

The mobile station shall ignore a session management message with TI EXT bit = 0. Otherwise, the following procedures shall apply:

- Whenever any session management message, except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS, is received by the UE specifying a transaction identifier which is not recognized as relating to an active context or to a context that is in the process of activation or deactivation, the UE shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.

- When REQUEST PDP CONTEXT ACTIVATION message is received with a transaction identifier flag set to "1", this message shall be ignored.

When on receipt of a message,

- an "imperative message part" error; or
- a "missing mandatory IE " error.

is diagnosed or when a message containing:

- a syntactically incorrect mandatory IE; or
- an IE unknown in the message, but encoded as "comprehension required"; or
- an out of sequence IE encoded as "comprehension required".

is received, the UE shall proceed as follows:

- If the message was a SM message, except DEACTIVATE PDP CONTEXT REQUEST and REQUEST PDP CONTEXT ACTIVATION, the SM-STATUS message with cause # 96 "invalid mandatory information" shall be returned.

  a) If the message is a DEACTIVATE PDP CONTEXT REQUEST, a DEACTIVATE PDP CONTEXT ACCEPT message shall be returned. All resources allocated for that context shall be released.

  b) If the message is a REQUEST PDP CONTEXT ACTIVATION, a REQUEST PDP CONTEXT REJECT message with cause # 96 "Invalid mandatory information" shall be returned.

- If a mobile station receives a GMM message or SM message with message type not defined for the PD or not implemented by the receiver, it shall return a status message (GMM STATUS or SM STATUS depending on the protocol discriminator) with cause #97 'message type non-existent or not implemented'.
- If the mobile station receives a message not compatible with the protocol state, the mobile station shall ignore the message except for the fact that, if an RR connection exists, it returns a status message (STATUS, MM STATUS depending on the protocol discriminator) with cause #98 "Message type not compatible with protocol state". When the message was a GMM message the GMM-STATUS message with cause #98 "Message type not compatible with protocol state" shall be returned. When the message was a SM message the SM-STATUS message with cause #98 'Message type not compatible with protocol state' shall be returned.

Other syntactic errors.

This clause applies to the analysis of the value part of an information element. It defines the following terminology:

- An IE is defined to be syntactically incorrect in a message if it contains at least one value defined as 'reserved', or if its value part violates syntactic rules given in the specification of the value part. However it is not a syntactical error that a type 4 standard IE specifies in its length indicator a greater length than possible according to the value part specification: extra bits are ignored.

Reference

3GPP TS 24.008 clauses 8.3.2, 8.4 and 8.5.

3GPP TS 24.007 clause 11.4.2.

11.4.1.3 Test purpose

To test the behaviour of the UE when messages with unknown or unforeseen transaction identifiers or non-semantical mandatory information element errors occur.

11.4.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS supported yes/no
- Method of context activation

Test procedure

A PDP context activation is requested by the SS with the transaction identifier set to '1'. The UE shall not respond to this request.

A PDP context is then activated from the UE. An invalid accept messages is sent by the SS. The UE replies with SM STATUS message. After T3380 seconds UE sends second auto generated ACTIVATE PDP CONTEXT REQUEST message. SS again replies with invalid ACTIVATE PDP CONTEXT ACCEPT and UE returns SM STATUS message. After further T3380 seconds UE sends third auto generated ACTIVATE PDP CONTEXT REQUEST message. SS replies with unknown message and UE returns SM STATUS with cause #97 'message type non-existent or not implemented'. After T3380 seconds the UE sends next auto generated ACTIVATE PDP CONTEXT REQUEST message, SS replies with MODIFY PDP CONTEXT REQUEST and UE returns SM STATUS with cause #98 'message type not compatible with protocol state'. After T3380 seconds the UE sends last auto generated ACTIVATE PDP CONTEXT REQUEST message. SS replies with valid accept message.

A deactivate message is then sent from the SS with a different transaction identifier to the one used in the activate request message sent by the UE. The UE shall reply with a SM STATUS message with cause #81 'invalid transaction identifier value'.

Two invalid modification messages are then sent to the UE in turn. The UE shall respond each time with a SM-STATUS message with cause # 96 "invalid mandatory information".

Last MODIFY PDP CONTEXT message sent from SS has TI EXT bit = 0. The UE does not respond to this message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		REQUEST PDP CONTEXT ACTIVATION	Request the activation of a PDP context with the transaction identifier flag set to "1"
2		SS		Wait T3385 seconds to ensure UE does not request context activation
3	UE			Initiate a context request
4	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE
5	←		ACTIVATE PDP CONTEXT ACCEPT	Unknown IE encoded as 'comprehension required'
6	→		SM STATUS	Cause set to #96

15		SS		Wait T3380 seconds
16	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE (auto-generated)
17	←		MODIFY PDP CONTEXT REQUEST	Request modification of PDP context
18	→		SM STATUS	Cause set to #98
19		SS		Wait T3380 seconds
20	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE (auto-generated)
21	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
22	←		DEACTIVATE PDP CONTEXT REQUEST	Try to deactivate the context with a different transaction identifier to that used to activate the context
23	→		SM STATUS	Cause set to # 81
24	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context ('New QoS' mandatory IE missing in the message)
25	→		SM STATUS	Cause set to # 96
26	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context (with 'Requested LLC SAPI' set to reserved value '1100')
27	→		SM STATUS	Cause set to # 96
28	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context (TI EXT bit = 0)
29		SS		Wait T3386 seconds to ensure UE does not respond

11.4.1.5 Test requirements

TBD.

11.5 MBMS Context Activation

11.5.1m MBMS Context Activation requested by the network, Successful and Unsuccessful procedure / MBMS Multicast Service

11.5.1m.1 Definition

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.5.1m.2 Conformance requirement

The purpose of this procedure is to establish an MBMS context in the MS and in the network for a specific IP Multicast Address using a specific NSAPI for MBMS user plane transmission. The MS shall only initiate the MBMS context activation when requested by the network. However, the trigger for the activation request by the network is initiated by the MS at the application layer.

1) Successful MBMS context activation

In order to request an MBMS context activation, the network sends a REQUEST MBMS CONTEXT ACTIVATION message to the MS, enters the state MBMS-ACTIVE-PENDING and starts timer T3385. The message shall contain the IP multicast address, the APN and the Linked NSAPI.

Upon receipt of a REQUEST MBMS CONTEXT ACTIVATION message, the MS shall validate the message by verifying the NSAPI given in the Linked NSAPI IE to be one of the active PDP context(s), and send an ACTIVATE MBMS CONTEXT REQUEST, enter state MBMS-ACTIVE-PENDING and start timer T3380. The message shall contain an IP multicast address and an APN, which shall be the same as the IP multicast address and the APN requested by the network in the REQUEST MBMS CONTEXT ACTIVATION message. Furthermore, the MS shall include the Supported MBMS bearer capabilities, i.e. the maximum downlink bit rate the MS can handle.

Upon receipt of the ACTIVATE MBMS CONTEXT REQUEST message, the network shall stop timer T3385. If the network accepts the request, it shall reply with an ACTIVATE MBMS CONTEXT ACCEPT message.

Upon receipt of the message ACTIVATE MBMS CONTEXT ACCEPT the MS shall stop timer T3380 and shall enter the state MBMS-ACTIVE.

2) Whenever a REQUEST MBMS CONTEXT ACTIVATION message is received by the MS specifying a transaction identifier relating to a PDP context or MBMS context not in state PDP-INACTIVE, the MS shall locally deactivate the old PDP context or MBMS context relating to the received transaction identifier. Furthermore, the MS shall continue with the activation procedure of a new MBMS context as indicated in the received message.

3) Upon receipt of the REQUEST MBMS CONTEXT ACTIVATION message, the MS may reject the network requested MBMS context activation by sending the REQUEST MBMS CONTEXT ACTIVATION REJECT message to the network The sender of the message shall include the same TI as included in the REQUEST MBMS CONTEXT ACTIVATION and an additional cause code that typically indicates one of the following causes:

…….

40: feature not supported; or

…….

The network shall stop timer T3385 and enter in state PDP-INACTIVE.

Reference

3GPP TS 24.008 clauses 6.1.3.8 and 8.3.2 f.

11.5.1m.3 Test purpose

To test behaviour of the UE upon receipt of a MBMS context activation request from the SS:

a) When UE supports MBMS context activation requested by the network

b) When UE supporting MBMS context activation requested by the network, receives REQUEST MBMS CONTEXT ACTIVATION message with transaction identifier relating to an already active MBMS or PDP context

11.5.1m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE has at least two PDP context activated. PDP one trans_id 0 and nsapi 5. PDP two trans_id 1 and nsapi 6.

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes/No

Test procedure

The UE joins a multicast service provided by the SS.

A REQUEST MBMS CONTEXT ACTIVATION message is sent by the SS. UE will start MBMS context activation procedure

On receipt of the ACTIVATE MBMS CONTEXT REQUEST message from the UE, an ACTIVATE MBMS CONTEXT ACCEPT message is returned by the SS.

REQUEST MBMS CONTEXT ACTIVATION message is then sent by the SS using transaction identifier of the currently active MBMS context. The UE shall activate this context to replace the previous context.

REQUEST MBMS CONTEXT ACTIVATION message is then sent by the SS using transaction identifier of the currently active PDP context. The UE shall activate this context to replace the previous context.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
0		SS	Join MBMS session	Join 1st MBMS session. See TS 34.108 clause 7.6.1
1	←		REQUEST MBMS CONTEXT ACTIVATION	SS sends Request a MBMS context activation to UE and starts timer T3385. The linked nsapi set to 5.
2	→		ACTIVATE MBMS CONTEXT REQUEST	UE supporting Multicast replies with a MBMS context activation request
3		SS		The SS stops timer T3385.
4	←		ACTIVATE MBMS CONTEXT ACCEPT	SS accepts the MBMS context activation.
5	←		REQUEST MBMS CONTEXT ACTIVATION	SS requests a MBMS context activation for an existing MBMS context with the same TI value as one of the active MBMS contexts and starts timer T3385
6	UE			UE locally deactivates the old MBMS context with the same TI value
7	→		ACTIVATE MBMS CONTEXT REQUEST	UE continues with the activation of a new MBMS context to replace locally deactivated MBMS context
8		SS		The SS stops timer T3385.
9	←		ACTIVATE MBMS CONTEXT ACCEPT	SS accepts the MBMS context activation
10	←		REQUEST MBMS CONTEXT ACTIVATION	requests MBMS context activation for an existing PDP context with linked NSAPI 5 and by setting TI value same as the TI value of other active PDP context (TI value set to 1); and starts timer T3385
11	UE			UE locally deactivates the PDP context with TI value 1 and NSAPI 6
12	→		ACTIVATE MBMS CONTEXT REQUEST	UE continues with the activation of a new MBMS context which is linked to NSAPI 5
13		SS		The SS stops timer T3385 and releases Radio Access Bearer for old PDP context.
14	←		ACTIVATE MBMS CONTEXT ACCEPT	SS accepts the MBMS context activation

Specific message contents

Step 5: TI IE value is equal to the TI value of one of the active MBMS contexts , Offered multicast address IE value and/or Access point name IE value are (is) different from the corresponding IE value(s) in the existing MBMS context.

Step 10: TI IE value is equal to the TI value of one of the active PDP contexts .

11.5.1m.5 Test requirements

At step 2, the UE shall accept MBMS context activation initiated by the SS.

At step 6, the UE shall locally deactivate the old MBMS context when a REQUEST MBMS CONTEXT ACTIVATION message is received, specifying a transaction identifier relating to an active MBMS context and continue with the activation procedure of a new MBMS context as indicated in the received message.

At step 11, the UE shall locally deactivate the old MBMS context when a REQUEST MBMS CONTEXT ACTIVATION message is received, specifying a transaction identifier relating to an active PDP context and continue with the activation procedure of a new MBMS context as indicated in the received message.

11.5.2m Abnormal Cases

11.5.2.1m T3380 Expiry / MBMS Multicast Service

11.5.2.1m.1 Definition

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.5.2.1m.2 Conformance requirement

On the first expiry of the timer T3380, the UE shall resend the ACTIVATE MBMS CONTEXT REQUEST and shall reset and restart timer T3380. This retransmission is repeated four times, i.e. on the fifth expiry of timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic MBMS context activation re-attempt shall be performed.

Upon receipt of the REQUEST MBMS CONTEXT ACTIVATION message, the MS may reject the network requested MBMS context activation by sending the REQUEST MBMS CONTEXT ACTIVATION REJECT message to the network The sender of the message shall include the same TI as included in the REQUEST MBMS CONTEXT ACTIVATION and an additional cause code that typically indicates one of the following causes:

…….

40: feature not supported; or

…….

The network shall stop timer T3385 and enter in state PDP-INACTIVE.

Reference

3GPP TS 24.008 clause 6.1.3.8.4 a.

11.5.2.1.3m Test purpose

To test the behaviour of the UE when the SS does not reply to MBMS CONTEXT ACTIVATION REQUEST.

11.5.2.1.4m Method of test

Initial conditions

System Simulator:

1 MBMS cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE has at least one PDP context activated. PDP one trans_id 0 and nsapi 5.

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes/No

Test procedure

The UE joins a multicast service provided by the SS.

A MBMS context activation is requested by the SS. The UE shall send the ACTIVATE MBMS CONTEXT REQUEST message five times with T3380 seconds between each message. After this, no further ACTIVATE MBMS CONTEXT REQUEST messages shall be sent by the UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
0		SS	Join MBMS session	Join 1st MBMS session. See TS 34.108 clause 7.6.1
1	←		REQUEST MBMS CONTEXT ACTIVATION	SS sends Request a MBMS context activation to UE and starts timer T3385. The linked nsapi set to 5.
2	→		ACTIVATE MBMS CONTEXT REQUEST	UE supporting Multicast replies with a MBMS context activation request
3		SS		The SS stops timer T3385.
4		SS		T3380 seconds
5	→		ACTIVATE MBMS CONTEXT REQUEST	Request a MBMS context activation
6		SS		T3380 seconds
7	→		ACTIVATE MBMS CONTEXT REQUEST	Request a MBMS context activation
8		SS		T3380 seconds

10		SS		T3380 seconds
11	→		ACTIVATE MBMS CONTEXT REQUEST	Request a MBMS context activation
12		SS		Wait for T3380 seconds to ensure no further ACTIVATE MBMS CONTEXT REQUEST messages are sent by the UE

Specific message contents

None.

11.5.2.1m.5 Test requirements

At step 5, the UE On the first expiry of the timer T3380, the UE shall re-send the MBMS CONTEXT ACTIVATION REQUEST.

At step 7, On the second expiry of the timer T3380, the UE shall re-send the MBMS CONTEXT ACTIVATION REQUEST.

At step 9, On the third expiry of the timer T3380, the UE shall re-send the MBMS CONTEXT ACTIVATION REQUEST.

At step 11, On the fourth expiry of the timer T3380, the UE shall re-send the MBMS CONTEXT ACTIVATION REQUEST.

At step 12, On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic MBMS context activation re-attempt shall be performed.

11.5.2.2m Network initiated MBMS context activation request for an already activated context (on the UE side) / MBMS Multicast Service

11.5.2.2m.1 Definition

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.5.2.2m.2 Conformance requirement

……..

MBMS context activation request for an already activated MBMS context (on the mobile station side): If the MS receives a REQUEST MBMS CONTEXT ACTIVATION message with the same combination of APN and IP multicast address (i.e. PDP type and PDP address) as an already activated MBMS

context, the MS shall deactivate the existing MBMS context locally without notification to the network and proceed with the requested MBMS context activation.

……..

Upon receipt of the REQUEST MBMS CONTEXT ACTIVATION message, the MS may reject the network requested MBMS context activation by sending the REQUEST MBMS CONTEXT ACTIVATION REJECT message to the network The sender of the message shall include the same TI as included in the REQUEST MBMS CONTEXT ACTIVATION and an additional cause code that typically indicates one of the following causes:

…….

40: feature not supported; or

…….

The network shall stop timer T3385 and enter in state PDP-INACTIVE.

Reference

3GPP TS 24.008 clause 6.1.3.8.4 c).

11.5.2.2m.3 Test purpose

To test the behaviour of the UE when it detects a network initiated MBMS context activation for the MBMS context already activated on the UE side.

11.5.2.2m.4 Method of test

Initial conditions

System Simulator:

1 MBMS cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE has at least one PDP context activated. PDP one trans_id 0 and nsapi 5.

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes/No

Test procedure

The UE joins a multicast service provided by the SS.

A MBMS context activation is requested by the SS. UE accepts MBMS context activation and sends MBMS CONTEXT ACTIVATION REQUEST which SS responds with MBMS CONTEXT ACTIVATION ACCEPT. SS sends a REQUEST MBMS CONTEXT ACTIVATION message with the same combination of APN and multicast address as an already activated MBMS context. The UE deactivates the existing MBMS context locally without notification to the SS and proceeds with the requested MBMS context activation.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
0		SS	Join MBMS session	Join 1st MBMS session. See TS 34.108 clause 7.6.1
1	←		REQUEST MBMS CONTEXT ACTIVATION	SS sends Request a MBMS context activation to UE and starts timer T3385. The linked nsapi set to 5.
2	→		ACTIVATE MBMS CONTEXT REQUEST	UE supporting Multicast replies with a MBMS context activation request.
3		SS		The SS stops timer T3385.
4	←		ACTIVATE MBMS CONTEXT ACCEPT	SS accepts the MBMS context activation.
5	←		REQUEST MBMS CONTEXT ACTIVATION	SS requests a MBMS context activation for an existing MBMS context with the same APN and multicast address as the active MBMS context and starts timer T3385
6	UE			UE locally deactivates the old MBMS context with the same APN and multicast address
7	→		ACTIVATE MBMS CONTEXT REQUEST	UE continues with the activation of a new MBMS context to replace locally deactivated MBMS context
8		SS		The SS stops timer T3385.
9	←		ACTIVATE MBMS CONTEXT ACCEPT	SS accepts the MBMS context activation

Specific message contents

None.

11.5.2.2.5m Test requirements

At step 6, the UE shall locally deactivate old MBMS context.

At step 7, the UE shall continue with the activation of a new MBMS context.

11.6 MBMS Context deactivation

11.6.1m MBMS Context deactivation requested by the network, Successful / MBMS Multicast Service

11.6.1m.1 Definition

This test case is applicable for Rel-6 UEs that support MBMS multicast services.

11.6.1m.2 Conformance requirement

The purpose of the MBMS context deactivation procedure is to deactivate an existing MBMS context in the MS and the network. The MS shall only initiate the MBMS context deactivation when requested by the network, however the trigger for the deactivation request by the network may be initiated by the MS at application layer or by the network, see 3GPP TS 23.246.

After a successful MBMS context deactivation, the associated MBMS NSAPI and TI values shall be released in both the MS and the network and can be reassigned to another MBMS context.

The MBMS context deactivation procedure makes use of the messaging and signalling of the PDP context deactivation procedure as described in the subclause 6.2.3.2.1.

In order to request an MBMS context deactivation, the network sends a DEACTIVATE PDP CONTEXT REQUEST message to the MS, enters the state MBMS-INACTIVE-PENDING and starts timer T3395. The messages contains the transaction identifier (TI) in use for the MBMS context to be deactivated and a cause code that typically indicates one of the following causes:

36: regular deactivation;

38: network failure;

47: multicast group membership time-out.

The MS shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message and enter the state PDP-INACTIVE. Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the network shall stop the timer T3395 and enter the state PDP-INACTIVE.

….

Whenever any session management message except REQUEST PDP CONTEXT ACTIVATION, REQUEST MBMS CONTEXT ACTIVATION, or SM-STATUS is received by the MS specifying a transaction identifier which is not recognized as relating to an active context or to a context that is in the process of activation or deactivation, the MS shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.

….

The purpose of this procedure is to deactivate an existing PDP context between the MS and the network. The PDP context deactivation may be initiated by the MS or by the network. The *tear down indicator* information element may be included in the DEACTIVATE PDP CONTEXT REQUEST message in order to indicate whether only the PDP context associated with this specific TI or all active PDP contexts sharing the same PDP address and APN as the PDP context associated with this specific TI shall be deactivated. If the tear down is requested, all other active PDP contexts sharing the same PDP address and APN as the PDP context associated with this specific TI shall be deactivated locally without peer-to-peer signalling. If the *tear down indicator* information element is not included in the DEACTIVATE PDP CONTEXT REQUEST message, only the PDP context associated with this specific TI shall be deactivated.

After successful PDP context deactivation, the associated NSAPI and TI values are released and can be reassigned to another PDP context.

If one or more MBMS contexts are linked to a PDP context that has been deactivated, the MS shall deactivate all those MBMS contexts locally (without peer to peer signalling between the MS and the network).

Reference

3GPP TS 24.008 clauses 6.1.3.4, 6.1.3.9 and 8.3.2.

11.6.1m.3 Test purpose

To verify that the UE correctly handle a MBMS context deactivation procedure requested by the network, upon reception of a DEACTIVATE PDP CONTEXT REQUEST. To verify that the UE correctly handle a MBMS context deactivation procedure locally, when the linked PDP context is deactivated.

11.6.1m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE has one PDP context activated (trans_id 0 and nsapi 5) and one MBMS context activated (trans_id 1 and mbms nsapi 128).

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes/No

Test procedure

The UE joins a multicast service provided by the SS.

During the 1st MBMS session the SS sends a DEACTIVATE PDP CONTEXT REQUEST message using transaction identifier of the currently active MBMS context. The SS sets T3395 timer to wait for the response from the UE.

The UE shall initiate a MBMS context deactivation procedure.

The UE shall send the DEACTIVATE PDP CONTEXT ACCEPT message within T3395 timer duration.

In order to check that the MBMS context has been deactivated, a DEACTIVATE PDP CONTEXT REQUEST message using transaction identifier of the deactivated MBMS context is sent by the SS.

The UE shall send the SM STATUS message using cause #81 "invalid transaction identifier value".

The UE joins a multicast service provided by the SS.

During the 2nd MBMS session the SS sends a DEACTIVATE PDP CONTEXT REQUEST message using the tear down indicator.

The UE shall deactivate the MBMS context locally.

In order to check that the MBMS context has been deactivated, a DEACTIVATE PDP CONTEXT REQUEST message using transaction identifier of the deactivated MBMS context is sent by the SS.

The UE shall send the SM STATUS message using cause #81 "invalid transaction identifier value".

Expected Sequence

Information Element	Value/remark
Tear down indicator	tear down requested

11.6.1m.5 Test requirements

In step 3, the UE shall send a DEACTIVATE PDP CONTEXT ACCEPT message containing the transaction identifier (TI) in use for the MBMS context.

In step 6, the UE shall send an SM STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet.

In step 9, the UE shall deactivate the MBMS contexts locally.

In step 12, the UE shall send an SM STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet.

11.6.2 Void

11.6.3 Void

11.7m Network Feature Support IE for MBMS / MBMS Multicast Service

11.7m.1 Definition and applicability

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.7m.2 Conformance requirement

The network informs the MS about the support of specific features, such as LCS-MOLR or MBMS, in the "Network feature support" Information Element. The information is either explicitly given by sending the "Network feature support" IE or implicitly by not sending it. The handling in the network is described in subclause 9.4.2.9. The MS may use the indication to inform the user about the availability of the appropriate services and it shall not request services that have not been indicated as available. The indication for MBMS is defined in subclause "MBMS feature support indication" in 3GPP TS 23.246.

…

An SGSN that supports MBMS shall indicate MBMS feature support to the UE during Routing Area Update procedure in the Routing Area Update Accept message and during GPRS attach procedure in the Attach Accept message. The UE then knows it can use already activated MBMS bearers, or activate new MBMS bearers according to subclause 8.2 "MBMS Multicast Service Activation".

An SGSN that does not support MBMS will not indicate MBMS feature support to the UE. This indicates to the UE that MBMS bearers are no longer supported, which may allow the UE to use point-to-point bearers for MBMS data transfer. In this case, the UE shall deactivate all active MBMS UE Contexts locally.

Reference(s)

Clause 4.7.3 of TS 24.008

Clause 8.9a of TS 23.246

11.7m.3 Test purpose

To verify that the UE correctly reads the "Network feature support" IE received in ATTACH ACCEPT or ROUTING AREA UPDATE ACCEPT message and does not try to request MBMS services if those are not available in the network.

11.7m.4 Method of test

Initial conditions

System Simulator:

2 MBMS cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).

Both cells are operating in network operation mode II.

User Equipment:

The UE is Idle updated on Cell A

Related ICS/IXIT statement(s)

- MBMS Multicast service application available on UE Yes/No

Test procedure

The UE initiates attach procedure for PS services. The SS responds with ATTACH ACCEPT message where "Network feature support" IE indicates that MBMS is supported in the network. The UE shall join the MBMS service. The SS adjusts the cell levels so that the UE starts the ROUTING AREA UPDATE procedure. The SS responds with ROUTING AREA UPDATE ACCEPT message where "Network feature support" IE indicates that MBMS is not supported in the network. The UE shall deactivate the active MBMS context locally. In order to check that the MBMS context has been deactivated, a DEACTIVATE PDP CONTEXT REQUEST message using transaction identifier of the deactivated MBMS context is sent by the SS. The UE shall send the SM STATUS message using cause #81 "invalid transaction identifier value". The UE initiates detach procedure.

The UE initiates attach procedure for PS services. The SS responds with ATTACH ACCEPT message where "Network feature support" IE is omitted and implicitly indicates that MBMS is not supported in the network. The UE shall not try to join the MBMS service. The SS adjusts the cell levels so that the UE starts the ROUTING AREA UPDATE procedure. The SS responds with ROUTING AREA UPDATE ACCEPT message where "Network feature support" IE indicates that MBMS is supported in the network. The UE shall join the MBMS service. The UE initiates detach procedure.

Specific Message Contents

None

11.7m.5 Test requirements

In step 7 the UE shall join the MBMS session.

In step 13 the UE shall deactivate the MBMS contexts locally.

In step A14c or B14a the UE shall send an SM STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet.

In step 21 the UE shall not try to join the MBMS session.

In step 28 the UE shall join the MBMS session.

11.8 MBMS Service Request

11.8.1m MBMS Service request procedure not accepted by the network / MBMS Multicast Service

11.8.1m.1 Definition and applicability

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.8.1m.2 Conformance requirement

If the Service request cannot be accepted, the network returns a SERVICE REJECT message to the mobile station. An MS that receives a SERVICE REJECT message stops timer T3317. The MS shall then take different actions depending on the received reject cause value:

…

40 (No PDP context activated)

- The MS shall deactivate locally all active PDP and MBMS contexts and the MS shall enter the state GMM-REGISTERED.NORMAL-SERVICE. The MS may also activate PDP context(s) to replace any previously active PDP contexts. The MS may also perform the procedures needed in order to activate any previously active multicast service(s).

NOTE: In some cases, user interaction may be required and then the MS cannot activate the PDP and MBMS context(s) automatically.

Reference(s)

Clause 4.7.13.4 of TS 24.008

11.8.1m.3 Test purpose

To verify that the UE correctly handles a SERVICE REJECT message with SM cause “#40 No PDP context activated” received from the network and deactivates the MBMS context locally.

11.8.1m.4 Method of test

Initial conditions

System Simulator:

1 MBMS cell, default parameters.

User Equipment:

The UE is in "PMM-IDLE” mode and has joined the multicast service provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Multicast service application available on UE Yes/No

Test procedure

The UE receives an MBMS MODIFIED SERVICES INFORMATION message for an MBMS multicast service for which the UE has activated an MBMS context. The UE will try to establish a PS signalling connection and sends a SERVICE REQUEST message to the SS where the service type is set to "MBMS multicast service reception". The SS returns a SERVICE REJECT message to the UE with SM cause “#40 No PDP context activated”. The UE shall deactivate locally the active MBMS context and shall enter the state GMM-REGISTERED.NORMAL-SERVICE. In order to check that the MBMS context has been deactivated, a DEACTIVATE PDP CONTEXT REQUEST message using transaction identifier of the deactivated MBMS context is sent by the SS. The UE shall send the SM STATUS message using cause #81 "invalid transaction identifier value".

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MBMS MODIFIED SERVICES INFORMATION	The SS informs the UE about a change for the MBMS service available in the cell
2	→		SERVICE REQUEST	Service type: MBMS Multicast Service Reception
3	←		SERVICE REJECT	GMM cause: # 40 No PDP context activated
4	UE			The UE deactivates the MBMS context locally
5	SS			The SS shall check that no messages are sent from the UE
6	←		DEACTIVATE PDP CONTEXT REQUEST	Request MBMS context deactivation Including the transaction Identifier of the previous activated MBMS context. SM cause: #36 regular deactivation.
7	→		SM STATUS	SM cause value to #81 “invalid transaction identifier value”.

Specific Message Contents

11.8.1m.5 Test requirements

In step 2 the UE shall send a SERVICE REQUEST message containing the service type IE MBMS Service Reception.

In step 4 the UE shall deactivate the MBMS contexts locally.

In step 7 the UE shall send an SM STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet.

11.8.2 MBMS Service Request procedure collision with Routing Area Update/ MBMS Selected Service

11.8.2.1 Definition and applicability

This test is applicable for Rel-6 UEs supporting MBMS broadcast services.

11.8.2.2 Conformance requirement

The following abnormal cases can be identified:

…

e) Routing area update procedure is triggered

If a cell change into a new routing area occurs and the necessity of routing area update procedure is determined before the security mode control procedure is completed, a SERVICE ACCEPT or SERVICE REJECT message has been received, the Service request procedure shall be aborted and the routing area updating procedure is started immediately. Follow-on request pending may be indicated in the ROUTING AREA UPDATE REQUEST for the service, which was the trigger of the aborted Service request procedure, to restart the pending service itself or the Service request procedure after the completion of the routing area updating procedure. If the Service type of the aborted SERVICE REQUEST was indicating "data", then the routing area update procedure may be followed by a re-initiated Service request procedure indicating "data", if it is still necessary. If the Service type was indicating "MBMS multicast service reception", or "MBMS broadcast service reception" the Service request procedure shall be aborted.

Reference(s)

Clause 4.7.13.5 of TS 24.008 (Rel-7 version)

11.8.2.3 Test purpose

To verify that the UE correctly aborts a SERVICE REQUEST procedure if a ROUTING AREA UPDATE procedure is initiated before the SERVICE REQUEST procedure has been completed.

11.8.2.4 Method of test

Initial conditions

System Simulator:

2 MBMS cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).

Both cells are operating in network operation mode II.

User Equipment:

The UE is in "PMM-IDLE” mode and is interested in the selected service provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test procedure

The UE receives an MBMS MODIFIED SERVICES INFORMATION message for an MBMS selected service for which the UE has activated an MBMS context. The UE will try to establish a PS signalling connection and sends a SERVICE REQUEST message to the SS where the service type is set to "MBMS broadcast service reception ". The SS adjusts the cell levels so that the UE starts the ROUTING AREA UPDATE procedure and aborts the SERVICE

REQUEST procedure. The ROUTING AREA UPDATE procedure is completed. The SS checks that the UE does not initiate further SERVICE REQUEST

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				The SS sets the cell type of cell B to the "Suitable neighbour cell" and the cell type of cell A to the "Serving cell" (see NOTE). The following messages are sent and shall be received on cell A.
2	SS			SS initiates PTPRB setup procedure by sending MBMS Modified services Information with “MBMS required UE action” IE set to “Request PTP RB”.
2a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to “mbms_PTP_RB_Request”.
2b	UE			The UE after completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after RRC CONNECTION SETUP COMPLETE.
3	→		SERVICE REQUEST	Service type: MBMS Broadcast Service Reception Timer T3317 shall be started.
4	←		AUTHENTICATION AND CIPHERING REQUEST	
5	→		AUTHENTICATION AND CIPHERING RESPONSE	
5a	SS			The SS releases the RRC connection.
6	SS			Within timer T3317 the SS sets the cell type of cell A to the "Suitable neighbour cell" and the cell type of cell B to the "Serving cell" (see NOTE).
7				The SS sets the cell type of cell A to the "Suitable neighbour cell" and the cell type of cell B to the "Serving cell" (see NOTE). The following messages are sent and shall be received on cell B.
8	UE			The SERVICE REQUEST procedure shall be aborted. Timer T3317 shall be stopped.
8a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to " registration ".
8b	UE			The UE after completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after RRC CONNECTION SETUP COMPLETE.
9	→		ROUTING AREA UPDATE REQUEST	Update type: RA updating Old routing area identification: RAI-1 Old P-TMSI signature: P-TMSI-1signature

10	SS		The SS starts integrity protection.
11	←	ROUTING AREA UPDATE ACCEPT	Update result: RA updated Routing area identification: RAI-4 P-TMSI signature: P-TMSI-2 signature Mobile identity: P-TMSI-2
12	→	ROUTING AREA UPDATE COMPLETE	
13	SS		SS waits for 30 seconds to check that no further SERVICE REQUEST messages are sent by the UE.
NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1.5 “Reference Radio Conditions (FDD)”.			

Specific Message Contents

In step 2, MBMS Modified services Information sent by SS with “MBMS required UE action” IE set to “Request PTP RB”.

11.8.2.5 Test requirements

In step 9 the UE shall send ROUTING AREA UPDATE REQUEST.

11.8.2m MBMS Service Request procedure collision with Routing Area Update / MBMS Multicast Service

11.8.2.1m Definition and applicability

This test is applicable for Rel-6 UEs supporting MBMS multicast services.

11.8.2.2m Conformance requirement

Same conformance requirement as in clause 11.8.2.2.

11.8.2.3m Test purpose

Same test purpose as in clause 11.8.2.3.

11.8.2.4m Method of test

Initial conditions

System Simulator:

2 MBMS cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).

Both cells are operating in network operation mode II.

User Equipment:

The UE is in "PMM-IDLE” mode and has joined the multicast service provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Multicast service application available on UE Yes/No

Test procedure

Same test procedure as in clause 11.8.2.4m except that the UE receives an MBMS MODIFIED SERVICES INFORMATION message for an MBMS multicast service for which the UE has activated an MBMS context and the Service Type in SERVICE REQUEST message to the SS indicates ‘MBMS Multicast Service Reception’.

Expected sequence

Same expected sequence as in clause 11.8.2.4m except that the expected sequence steps 2b and 8b are not applicable and the Service Type in SERVICE REQUEST message in step 3 indicates ‘MBMS Multicast Service Reception’.

11.9 UE routing of uplink packets

11.9.1 UE routing of uplink packets

11.9.1.1 Definition

11.9.1.2 Conformance requirement

References: The conformance requirements covered in the present TC are specified in: TS 23.060, clause 15.3.2.0 and TS 24.008, clause 10.5.6.12.

[TS 23.060, clause 15.3.2.0]

Each valid downlink- and uplink-packet filter contains a unique identifier within a given TFT, an evaluation precedence index that is unique among all packet filters for the same direction (downlink or uplink) for one PDP address and APN pair, and at least one of the following attributes:

- Remote Address and Subnet Mask.
- Protocol Number (IPv4) / Next Header (IPv6).
- Local Port Range.
- Remote Port Range.
- IPSec Security Parameter Index (SPI).
- Type of Service (TOS) (IPv4) / Traffic class (IPv6) and Mask.
- Flow Label (IPv6).

In the list of attributes above 'Remote' refers to the external network entity, and 'Local' to the MS.

Some of the above-listed attributes may coexist in a packet filter while others mutually exclude each other. In table 12 below, the possible combinations are shown. Only those attributes marked with an "X" may be specified for a single packet filter. All marked attributes may be specified, but at least one shall be specified.

If the parameters of the header of a received PDP PDU match all specified attribute values in a packet filter, then it is considered that a match is found for this packet filter. In this case, the evaluation procedure is aborted. Other packet filters in increasing order of their evaluation precedence index are evaluated until such match is found.

There may be potential conflicts if attribute values are combined in such a way that the defined filter can never achieve a match to a valid IP packet header. However, the determination of such conflicts is outside the scope of GPRS standardization.

Table 12: Valid Packet Filter Attribute Combinations

	Valid combination types		
Packet filter attribute	**I**	**II**	**III**
Remote Address and Subnet Mask	X	X	X
Protocol Number (IPv4) / Next Header (IPv6)	X	X	
Local Port Range	X		
Remote Port Range	X		
IPSec SPI		X	
TOS (IPv4) / Traffic Class (IPv6) and Mask	X	X	X
Flow Label (IPv6)			X

[TS 24.008, clause 10.5.6.12]

The purpose of the *traffic flow template* information element is to specify the TFT parameters and operations for a PDP context. In addition, this information element may be used to transfer extra parameters to the network (e.g. the Authorization Token; see 3GPP TS 24.229 [95]). The TFT may contain packet filters for the downlink direction, the uplink direction or packet filters that apply for both directions. The packet filters determine the traffic mapping to PDP contexts. The downlink packet filters shall be applied by the network and the uplink packet filters shall be applied by the MS. A packet filter that applies for both directions shall be applied by the network as a downlink packet filter and by the MS as an uplink filter.

The *traffic flow template* is a type 4 information element with a minimum length of 3 octets. The maximum length for the IE is 257 octets.

NOTE 1: The IE length restriction is due to the maximum length that can be encoded in a single length octet.

NOTE 2: A maximum size IPv4 packet filter can be 32 bytes. Therefore, 7 maximum size IPv4 type packet filters, plus the last packet filter which can contain max 30 octets can fit into one TFT, i.e. if needed not all packet filter components can be defined into one message. A maximum size Ipv6 packet filter can be 60 bytes. Therefore, only 4 maximum size IPv6 packet filters can fit into one TFT. However, using "Add packet filters to existing TFT", it's possible to create a TFT including 16 maximum size Ipv4 or IPv6 filters.

The *traffic flow template* information element is coded as shown in figure 10.5.144/3GPP TS 24.008 and table 10.5.162/3GPP TS 24.008.

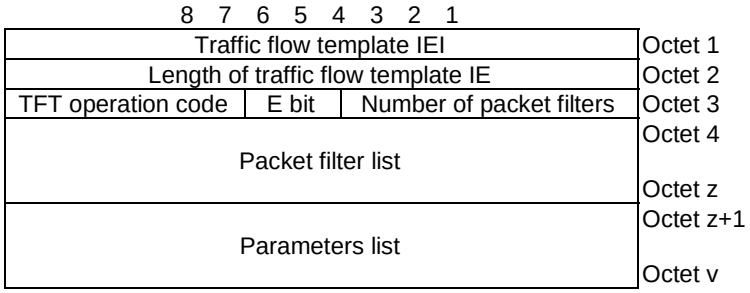

Figure 10.5.144/3GPP TS 24.008: *Traffic flow template* information element

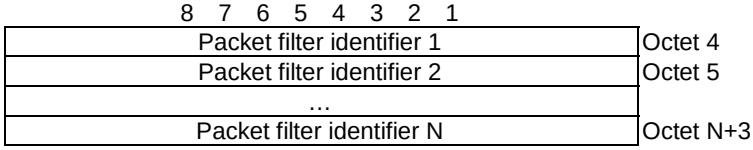

Figure 10.5.144a/3GPP TS 24.008: *Packet filter list* when the TFT operation is "delete packet filters from existing TFT" (z=N+3)

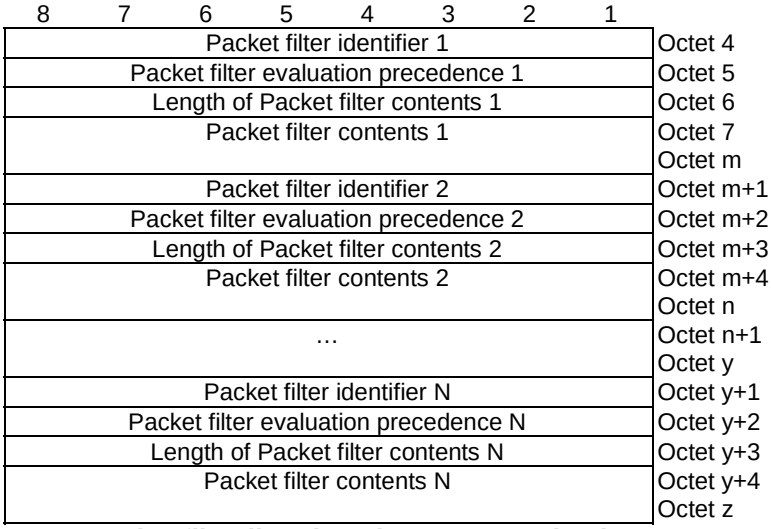

Figure 10.5.144b/3GPP TS 24.008: *Packet filter list* when the TFT operation is "create new TFT", or "add packet filters to existing TFT" or "replace packet filters in existing TFT"

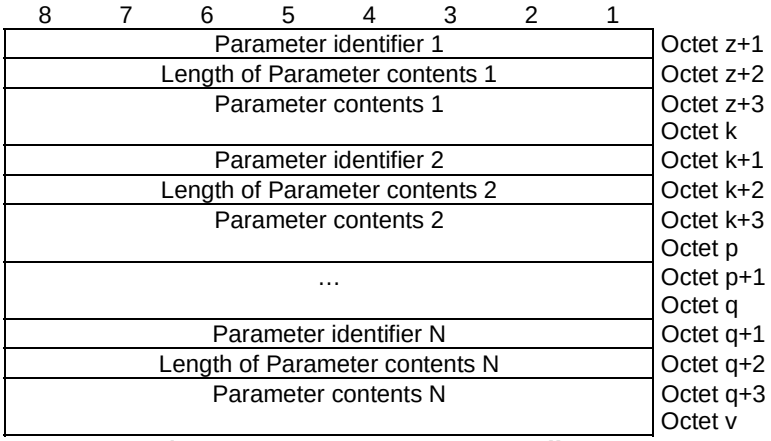

Figure 10.5.144c/3GPP TS 24.008: *Parameters list*

Table 10.5.162/3GPP TS 24.008: *Traffic flow template* information element

TFT operation code (octet 3)
Bits
8 7 6

0 0 0 Spare
0 0 1 Create new TFT

0 1 0 Delete existing TFT
0 1 1 Add packet filters to existing TFT

1 0 0 Replace packet filters in existing TFT

1 0 1 Delete packet filters from existing TFT
1 1 0 No TFT operation

1 1 1 Reserved

The TFT operation code "No TFT operation" shall be used if a *parameters list* is included but no *packet filter list* is included in the *traffic flow template* information element.

E bit (bit 5 of octet 3)

The *E bit* indicates if a *parameters list* is included in the TFT IE and it is encoded as follows:
0 *parameters list* is not included
1 *parameters list* is included

Number of packet filters (octet 3)

The *number of packet filters* contains the binary coding for the number of packet filters in the *packet filter list*. The *number of packet filters* field is encoded in bits 4 through 1 of octet 3 where bit 4 is the most significant and bit 1 is the least significant bit. For the "delete existing TFT" operation and for the "no TFT operation", the *number of packet filters* shall be coded as 0. For all other operations, the number of packet filters shall be greater than 0 and less than or equal to 16.

Packet filter list (octets 4 to z)

The *packet filter list* contains a variable number of packet filters. For the "delete existing TFT" operation and the "no TFT operation", the *packet filter list* shall be empty.

For the "delete packet filters from existing TFT" operation, the *packet filter list* shall contain a variable number of packet filter identifiers. This number shall be derived from the coding of the *number of packet filters* field in octet 3.

For the "create new TFT", "add packet filters to existing TFT" and "replace packet filters in existing TFT" operations, the *packet filter list* shall contain a variable number of packet filters. This number shall be derived from the coding of the *number of packet filters* field in octet 3.

Each packet filter is of variable length and consists of

- a packet filter identifier and direction (1 octet);
- a packet filter evaluation precedence (1 octet);
- the length of the packet filter contents (1 octet); and
- the packet filter contents itself (v octets).

The *packet filter identifier* field is used to identify each packet filter in a TFT. The least significant 4 bits are used.

The *packet filter direction* is used to indicate, in bits 5 and 6, for what traffic direction the filter applies:

00 - pre Rel-7 TFT filter
01 - downlink only
10 - uplink only
11 - bidirectional

Bits 8 through 7 are spare bits.

The *packet filter evaluation precedence* field is used to specify the precedence for the packet filter among all packet filters in all TFTs associated with this PDP address. Higher the value of the *packet filter evaluation precedence* field, lower the precedence of that packet filter is. The first bit in transmission order is the most significant bit.

The *length of the packet filter contents* field contains the binary coded representation of the length of the *packet filter contents* field of a packet filter. The first bit in transmission order is the most significant bit.

The *packet filter contents* field is of variable size and contains a variable number (at least one) of *packet filter components*. Each *packet filter component* shall be encoded as a sequence of a one octet *packet filter component type identifier* and a fixed length *packet filter component value* field. The *packet filter component type identifier* shall be transmitted first.

In each packet filter, there shall not be more than one occurrence of each packet filter component type. Among the "IPv4 remote address type" and "IPv6 remote address type" packet filter components, only one shall be present in one packet filter. Among the "single local port type" and "local port range type" packet filter components, only one shall be present in one packet filter. Among the "single remote port type" and "remote port range type" packet filter components, only one shall be present in one packet filter.

The term *local* refers to the MS and the term *remote* refers to an external network entity.

Packet filter component type identifier
Bits
8 7 6 5 4 3 2 1

0 0 0 1 0 0 0 0	IPv4 remote address type
0 0 1 0 0 0 0 0	IPv6 remote address type
0 0 1 1 0 0 0 0	Protocol identifier/Next header type
0 1 0 0 0 0 0 0	Single local port type
0 1 0 0 0 0 0 1	Local port range type
0 1 0 1 0 0 0 0	Single remote port type
0 1 0 1 0 0 0 1	Remote port range type
0 1 1 0 0 0 0 0	Security parameter index type
0 1 1 1 0 0 0 0	Type of service/Traffic class type
1 0 0 0 0 0 0 0	Flow label type

All other values are reserved.

For "IPv4 remote address type", the *packet filter component value* field shall be encoded as a sequence of a four octet *IPv4 address* field and a four octet *IPv4 address mask* field. The *IPv4 address* field shall be transmitted first.

For "IPv6 remote address type", the *packet filter component value* field shall be encoded as a sequence of a sixteen octet *IPv6 address* field and a sixteen octet *IPv6 address mask* field. The *IPv6 address* field shall be transmitted first.

For "Protocol identifier/Next header type", the *packet filter component value* field shall be encoded as one octet which specifies the IPv4 protocol identifier or IPv6 next header.

For "Single local port type" and "Single remote port type", the *packet filter component value* field shall be encoded as two octet which specifies a port number.

For "Local port range type" and "Remote port range type", the *packet filter component value* field shall be encoded as a sequence of a two octet *port range low limit* field and a two octet *port range high limit* field. The *port range low limit* field

shall be transmitted first.

For "Security parameter index", the *packet filter component value* field shall be encoded as four octet which specifies the IPSec security parameter index.

For "Type of service/Traffic class type", the *packet filter component value* field shall be encoded as a sequence of a one octet *Type-of-Service/Traffic Class* field and a one octet *Type-of-Service/Traffic Class mask* field. The *Type-of-Service/Traffic Class* field shall be transmitted first.

For "Flow label type", the *packet filter component value* field shall be encoded as three octet which specifies the IPv6 flow label. The bits 8 through 5 of the first octet shall be spare whereas the remaining 20 bits shall contain the IPv6 flow label.

Parameters list (octets z+1 to v)

The *parameters list* contains a variable number of parameters that may be transferred. If the *parameters list* is included, the *E bit* is set to 1; otherwise, the *E bit* is set to 0.

Each parameter included in the *parameters list* is of variable length and consists of:

- a parameter identifier (1 octet);
- the length of the parameter contents (1 octet); and
- the parameter contents itself (v octets).

The *parameter identifier* field is used to identify each parameter included in the *parameters list* and it contains the hexadecimal coding of the parameter identifier. Bit 8 of the *parameter identifier* field contains the most significant bit and bit 1 contains the least significant bit. In this version of the protocol, the following parameter identifiers are specified:

- 01H (Authorization Token);
- 02H (Flow Identifier) ; and
- 03H (Packet Filter Identifier).

If the *parameters list* contains a parameter identifier that is not supported by the receiving entity the corresponding parameter shall be discarded.

The *length of parameter contents* field contains the binary coded representation of the length of the *parameter contents* field. The first bit in transmission order is the most significant bit.

When the *parameter identifier* indicates Authorization Token, the *parameter contents* field contains an authorization token, as specified in 3GPP TS 29.207 [100]. The first octet is the most significant octet of the authorization token and the last octet is the least significant octet of the authorization token.

The *parameters list* shall be coded in a way that an Authorization Token (i.e. a parameter with identifier 01H) is always followed by one or more Flow Identifiers (i.e. one or more parameters with identifier 02H).

If the *parameters list* contains two or more consecutive Authorization Tokens without any Flow Identifiers in between, the receiver shall treat this as a semantical TFT error.

When the *parameter identifier* indicates Flow Identifier, the *parameter contents* field contains the binary representation of a flow identifier. The Flow Identifier consists of four octets. Octets 1 and 2 contains the Media Component number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 2 is the least significant bit, and bit 8 of octet 1 is the most significant bit. Octets 3 and 4 contains the IP flow number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 4 is the least significant bit, and bit 8 of octet 3 is the most significant bit.

When the parameter identifier indicates Packet Filter Identifier, the parameter contents field contains the binary representation of one or more packet filter identifiers. Each packet filter identifier is encoded in one octet, in the 4 least significant bits. This parameter is used by the MS to identify one or more packet filters in a TFT when modifying the QoS of a PDP context without modifying the packet filter itself.

11.9.1.3 Test purpose

1. To verify that the UE, when it has IP packets to transmit, evaluates the configured packet filters in the correct evaluation order and transmits IP packets in uplink on the bearer associated with the matched packet filter when having a primary and two secondary PDP contexts active

2. To verify that the UE, when it has IP packets to transmit and only packet filters defined for the secondary PDP contexts, transmits IP packets in uplink on the bearer associated with the primary PDP context, if the IP packet does not satisfy any of the configured packet filters for the secondary PDP contexts.

3. To verify that the UE, when it has IP packets to transmit, transmits IP packets in uplink on the bearer associated with the primary PDP context, if the IP packet only satisfies a packet filters defined for the primary PDP context.

4. To verify that the UE discards the IP packet if it does not satisfy any of the configured packet filters for the primary or secondary PDP contexts.

11.9.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- Method of activating a PDP context
- Support of automatic PS attach procedure at switch on yes/no

Test procedure

A PDP context activation is requested by the user and accepted by the SS.

If the UE set the PDP type to ‘IPv4’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv4 address to the UE and set the test variable IP type to “IPv4”. The SS executes the test sequence once (sub test 1).

Else if the UE set the PDP type to ‘IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context and set the test variable IP type to “IPv6”. The SS executes the test sequence once (sub test 2).

Else if the UE set the PDP type to ‘IPv4IPv6’ in the ACTIVATE PDP CONTEXT REQUEST then the SS executes the test sequence twice. For first execution (sub test 1) then the SS allocates an IPv4 address to the UE and set the test variable IP type to “IPv4”. For the second execution (sub test 2) the SS allocates an IPv6 address via stateless address auto configuration on the established primary PDP context and set the test variable IP type to “IPv6”.

A secondary PDP context activation with a UL TFT filter (Packet Filter#1) is requested by the SS and the activation procedure is completed by the UE. A third PDP context is activated by the SS using the secondary PDP context activation procedure. Packet Filter#2, Packet Filter#3and Packet Filter#4, depending on the IP type used, are activated.

The SS activates UE test loop mode 4 and transmits 17 or 19 IP packets depending on the IP type used. The SS checks that the IP packets are returned by the UE on the radio bearer corresponding to the matching filter, see Table 11.9.1.4-2.

The SS sends a MODIFY PDP CONTEXT REQUEST message to the UE requesting a new TFT filter to be added to the primary PDP context, Packet Filter#5. The UE sends a MODIFY PDP CONTEXT ACCEPT message in return.

The SS transmits IP packet#18 that matches Packet Filter#5. The SS checks that IP packet#18 is returned by the UE on the radio bearer associated with the primary PDP context. The SS transmits IP packet#19 that does not match any packet filter. The SS checks that no IP packet is returned by the UE on any radio bearer.

The test procedure is executed once for IPv4 case (sub test 1) and once for IPv6 case (sub test 2) dependending on UE capability as specified in Table 11.9.1.4.-1a.

Table 11.9.1.4-1a: Test executions and test parameters

Sub test	Applicability	IPtype
1	UE supporting IPv4	'IPv4'
2	UE supporting IPv6	'IPv6'
Note 1: For UEs supporting both IPv4 and IPv6 then both test execution 1 and 2 shall be performed.		

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to either Originating Streaming Call, Originating Interactive Call or Originating Background Call or OriginatingSubscribedTrafficCall
2		SS		The SS activates UE radio bearer test mode in accordance to [10] TS 34.109, clause 5.2.1.
3	→		SERVICE REQUEST	Service type = "signalling"
4		SS		The SS starts integrity protection.
5	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
5A		SS		IF the UE in step 5 set the PDP type to ' IPv4' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv4' and executes the test sequence using the IPv4 packet filters components in Table 11.9.1.4-1. ELSE IF the UE in step 5 set the PDP type to ' IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the SS sets the test variable IPtype='IPv6' and executes the test sequence using the IPv6 packet filters components in Table 11.9.1.4-1. ELSE IF the UE in step 5 set the PDP type to ' IPv4IPv6' in the ACTIVATE PDP CONTEXT REQUEST message then the test secuence shall be executed twice according to table 11.9.1.4-1a. At the first execution the SS sets the test variable IPtype='IPv4' and executes the test sequence using the IPv4 packet filters components in Table 11.9.1.4-1. At the second execution then the SS sets the test variable IPtype='IPv6' and executes the test sequence using the IPv6 packet filters components in Table 11.9.1.4-1.
6		SS		The SS establishes the RAB according to reference radio bearer combination 6.10.2.4.1.26 in [9] (1xPS RB 64kbps).
7	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context If the test variable IPtype is set to 'IPv4' then the SS assigns an IPv4 adress in the ACTIVATE PDP CONTEXT ACCEPT message EXCEPTION: If the test variable IPtype is set to 'IPv6' then stateless address auto configuration occurs on the user plane bearer established in step 6. EXCEPTION: If the test variable IPtype is set to 'IPv6' then stateless address auto configuration occurs on the user plane bearer established in step 6.
8		SS		The SS initiates a secondary PDP context activation
9	←		REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385.

10	→	ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 5. A UL TFT filter is configured.
11	SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.10.2.4.1.57 in [9] (2xPS RB 64kbps).
12	←	ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
13	←	REQUEST SECONDARY PDP CONTEXT ACTIVATION	The SS requests a Secondary PDP context activation and starts timer T3385.
14	→	ACTIVATE SECONDARY PDP CONTEXT REQUEST	The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380. NSAPI IE value is different from the value in Step 5. UL TFT filters are configured.
15	SS		The SS stops timer T3385. The SS reconfigures the RAB according to reference radio bearer combination 6.11.4l.1 in [9] (3xPS RB 64kbps).
16	←	ACTIVATE SECONDARY PDP CONTEXT ACCEPT	The SS accepts the Secondary PDP context activation with the requested QoS
17	SS		The SS waits for T3380 seconds to ensure no further activate request messages come from the UE
18	SS		The SS activates UE test loop mode 4 to establish UE loopback of IP PDUs. See [10] TS 34.109 clause 5.3.2. EXCEPTION: IF IPtype='IPv4' then test steps 19 to 20 are repeated for N= 1 to 14 IF IPtype='IPv6' then test steps 19 to 20 are repeated for N= 1 to 17
19	←	IP PDU (IP packet#N)	The SS transmits one IP Packet according to Table 11.9.1.4-2 for Sub-test index=N
20	→	IP PDU (IP packet#N)	Check: Does UE send the IP Packet on the PDP context as specified by Table 11.9.1.4-2 for Sub-test index=N?
21	←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	The SS sends a modify request to UE to add a UL TFT filter to the primary PDP context
22	→	MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	The UE accepts the modification request from the SS.
23	←	IP PDU (IP packet#18)	The SS transmits one IP Packet according to Table 11.9.1.4-2 for Sub-test index=18
24	→	IP PDU (IP packet#18)	Check: Does UE send the IP Packet on the data radio bearer as specified by Table 11.9.1.4-2 for Sub-test index=18?
25	←	IP PDU (IP packet#19)	The SS transmits one IP Packet according to Table 11.9.1.4-2 for Sub-test index=19
26			Check: Does UE send an IP Packet on any of the PDP contexts? EXCEPTION: Steps 27 – 33 are executed if two executions apply and this is the first execution.
27	←	OPEN UE TEST LOOP	The SS transmits an OPEN UE TEST LOOP message to exit the UE test loop mode
28	→	OPEN UE TEST LOOP COMPLETE	The UE transmits an OPEN UE TEST LOOP COMPLETE message.
29	←	DEACTIVATE RB TEST MODE	The SS requests the UE to deactivate the UE radio bearer test mode by transmitting a DEACTIVATE RB TEST MODE message

30	→	DEACTIVATE RB TEST MODE COMPLETE	The UE deactivates the radio bearer test mode ans transmits the DEACTIVATE RB TEST MODE COMPLETE message
31	←	DETACH REQUEST	The SS initiates Detach procedure with the Detach Type IE "re-attach required"
32	→	DETACH ACCEPT	UE sends DETACH ACCEPT message
33			The SS releases the RRC connection.

Specific message contents

Step 10: The request includes an UL TFT filter, Packet Filter#1. Packet Filter#1 is set according to table 11.9.1.4-1

Step 14: The request includes UL TFT filters. If PDP type was set to “IPv4” in step 5 then Packet Filter#2 and Packet Filter#3, according to table 11.9.1.4-1, are included. If PDP type was set to “iIPv6 or “IPv4v6” in step 5 then Packet Filter#2, Packet Filter#3and Packet Filter#4, to table 11.9.1.4-1, are included.

Step 18: UE test loop mode IE is set to UE test loop mode 4 in the CLOSE UE TEST LOOP message, see [10] TS 34.109 clause 6.2.

Step 19: IP packet#N is set according to table 11.9.1.4-2

Step 21: The request includes an UL TFT filter Packet Filter#5 according to table 11.9.1.4-1.

Step 23: IP packet#18 is set according to table 11.9.1.4-5

Step 25: IP packet#19 is set according to table 11.9.1.4-5

Table 11.9.1.4-1: Packet Filter Table

		Packet filter components										
Packet filter ID	**UL TFT**	**Packet filter evaluation precedence**	**Protocol Number (IPv4) / Next Header (IPv6)**	**Remote address and Subnet mask**	**Single Local Port (UE)**	**Local Port Range (UE)**	**Single Remote Port** (NW)	**Remote Port Range (NW)**	**IPSec SPI range**	**Type of Service (IPv4) / Traffic Class (IPv6) and Mask**	**Flow Label (IPv6)**	**Comments**
1	Secondary PDP Context (Step 10)	6	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and specific local and remote port numbers This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	Secondary PDP Context (Step 14)	7	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	60000: 60100	60350	-	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and range of local and remote port numbers. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
3	Secondary PDP Context (Step 14)	5	50 IPSec (ESP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	0x0F80F000	10100000, Mask= 11111100	-	IPSec session. Example from TS 23.060 cl 15.3.3.3 This is a valid Packet Filter Attribute Combination Type II according to TS 23.060, subclause 15.3.2.0.
4	Secondary PDP Context (Step 14)	2	-	IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	-	10110000, Mask= 11111100	5	IPv6 Flow Label filter This is a valid Packet Filter Attribute Combination Type III according to TS 23.060, subclause 15.3.2.0.
5	Primary PDP Context (Step 5)	255		IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]-	-	-	-	-	-	-	-	Application identified by remote address and specific local port number. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.

Table 11.9.1.4-2: Sub-test test parameters and test requirements

Sub-test Index	Test data (IP packet) Note 1	Expected PDP context for the matching packet filter	Packet Filter Attribute Combination under test	Packet Filter Component under test	Comment
1	IP packet#1	Secondary PDP Context (Step 10)	Type I	All Type I packet filter components match	The IP packet is only matching Packet Filter 1 and 2 in Table 11.9.1.4-1. The IP packet is returned on Secondary PDP Context (Step 10) as Packet Filter 1 is evaluated before Packet Filter 2.
2	IP packet#2	Primary PDP Context (Step 5)	Type I	Remote Address does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
3	IP packet#3	Primary PDP Context (Step 5)	Type I	Protocol identifier/Next header does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
4	IP packet#4	Secondary PDP Context (Step 14)	Type I	Single local port does not match	The IP packet is only matching Packet Filter 2 in Table 11.9.1.4-1. The IP packet is returned on Secondary PDP Context (Step 14).
5	IP packet#5	Primary PDP Context (Step 5)	Type I	Local port range does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
6	IP packet#6	Secondary PDP Context (Step 10)	Type I	Single remote port does not match	IP packet is only matching Packet Filter 1 in Table 11.9.1.4-1. The IP packet is returned on Secondary PDP Context (Step 10).
7	IP packet#7	Primary PDP Context (Step 5)	Type I	Remote port range does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
8	IP packet#8	Primary PDP Context (Step 5)	Type I	Type of service/Traffic class does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
9	IP packet#9	Secondary PDP Context (Step 14)	Type II	All Type II packet filter components match	The IP packet is only matching Packet Filter 3 in Table 11.9.1.4-1. The IP packet is returned on DRB3.
10	IP packet#10	Primary PDP Context (Step 5)	Type II	Remote Address does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
11	IP packet#11	Primary PDP Context (Step 5)	Type II	Protocol identifier/Next header does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
12	IP packet#12	Primary PDP Context (Step 5)	Type II	Security parameter index does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
13	IP packet#13	Primary PDP Context (Step 5)	Type II	Type of service/Traffic class does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
14	IP packet#14	Secondary PDP Context (Step 10)	Type III	All Type III packet filter components match	The IP packet is only matching Packet Filter 4 in Table 11.9.1.4-1. The IP packet is returned on Secondary PDP Context (Step 10).
15	IP packet#15	Primary PDP Context (Step 5)	Type III	Remote Address does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
16	IP packet#16	Primary PDP Context (Step 5)	Type III	Type of service/Traffic class does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
17	IP packet#17	Primary PDP Context (Step 5)	Type III	Flow Label does not match	No packet filter matches. The IP packet is returned on Primary PDP Context
18	IP packet#18	Primary PDP Context (Step 5)	Type I	Remote Address match	IP packet is only matching Packet Filter 5 in Table 11.9.1.4-1
19	IP packet#19	None	Type I	Remote Address does not match	IP packet does not match any Packet Filters

Note 1: IP Packet details are specified in Tables 11.9.1.4-3 to 11.9.1.4-21 Note 2: IP packets for sub-test index 1 to 17 are sent by the SS while no TFT is assigned to the Primary PDP Context. IP packets for sub-test index 18 and 19 are sent by the SS after adding a TFT to the Primary PDP Context.

Table 11.9.1.4-3: IP packet#1 (Table 11.9.1.4-2)

Derivation path: IETF RFC 791 section 3.1 (IPv4) or RFC 2460 section 3 (IPv6) and RFC 769 introduction			
Information Element	**Value/Remark**	**Comment**	**Condition**
Type of service (IPv4) / Traffic Class (IPv6)	10101001	Significant for packet filters 1, 2, 3, and 4. Value matches packet filters 1 and 2. Value does not match packet filters 3 or 4.	
Protocol	17	UDP Significant packet filters 1, 2 and 3. Value matches packet filters 1 and 2. Value does not match packet filter 3.

Condition	Explanation
IPv4	This condition applies if test variable IP type is set to 'IPv4'.
IPv6	This condition applies if test variable IP type is set to 'IPv6'.

Table 11.9.1.4-21: IP packet#19 (Table 11.9.1.4-2)

Derivation path: IP packet#18, Table 11.9.1.4-20			
Information Element	**Value/Remark**	**Comment**	**Condition**
Destinaton Address	172.168.9.1	Significant for packet filters 1, 2, 3 and 5. Value does not match packet filters 1, 2, 3 and 5.	IPv4
	2001:0ba1::0001:0001	Significant for packet filters 1, 2, 3, 4 and 5. Value does not match packet filters 1, 2, 3, 4 and 5.	IPv6

11.9.1.5 Test requirements

To pass the test the UE shall:

- at step 20 transmit an IP PDU containing IP Packet#N on the radio bearer associated with the PDP context as specified by Table 11.9.1.4-2 for Sub-test index=N.
- at step 22 send a MODIFY PDP CONTEXT ACCEPT message.
- at step 24 transmit an IP PDU containing IP Packet#18 on the radio bearer associated with the PDP context as specified by Table 11.9.1.4-2 for Sub-test index=18.
- at step 26 not transmit any IP PDU

12 Elementary procedure for Packet Switched Mobility Management

12.1 Applicability, default conditions and default messages

All test cases for PS mobility management apply for all PS mobiles unless otherwise stated in a specific test. Within each test case, the ICS statement indicates whether the test shall be performed for mobiles that can only operate in mode - class A, only in mode - class C , or in both mode - class A and C. For some procedures, the mobile class is of no importance.

Note that only the layer 3 messages are described in the document. The mapping of the layer 3 messages to lower layers and the use of logical channels is not described in the present document.

The terms 'PS/CS mode of operation' and 'PS mode of operation' are not used in the present document with some exceptions. Instead the terms 'UE operation mode A' and 'UE operation mode C' are used.

If UE supports mode A and C; the operation mode change from C to A during the test and the resulting signalling caused by the mode change, are out of test scope and up to implementation.

The default conditions and default message contents not specified in this clause must be set as in "PS default conditions"

Below is a list of the RAI values and the corresponding RAC, LAC and MCC used in the test cases:

RAI-1: MCC1/MNC1/LAC1/RAC1 (Used if only one cell)

RAI-2: MCC2/MNC1/LAC1/RAC1

RAI-3: MCC1/MNC1/LAC2/RAC1

RAI-4: MCC1/MNC1/LAC1/RAC2

RAI-5: MCC1/MNC1/LAC1/RAC3

RAI-6: MCC2/MNC1/LAC2/RAC1

RAI-7: MCC2/MNC1/LAC1/RAC2

RAI-8: MCC1/MNC2/LAC1/RAC1

RAI-9: MCC1/MNC2/LAC2/RAC1

RAI10: MCC1/MNC2/LAC1/RAC2

RAI-11: MCC1/MNC3/LAC1/RAC1

RAI-12: MCC1/MNC1/LAC2/RAC2

If the User Equipment initial condition specifies that the mobile has a valid IMSI but the initial condition does not mention P-TMSI, than that shall be interpreted as that the mobile has no valid P-TMSI.

The tests are based on 3GPP TS 24.008.

NOTE: A Rel-8 UE supporting E-UTRA and CS voice emergency call may send 'signallingConnectionReleaseIndication' upon receipt of an ATTACH REJECT or a ROUTING AREA UPDATE REJECT message with one of the following causes: 'Illegal MS (cause #3)', 'GPRS service not allowed (cause #7)' or 'GPRS services and non-GPRS services not allowed (cause #8)'.

12.2 PS attach procedure

This procedure is used to indicate for the network that the IMSI is available for traffic by establishment of a GMM context.

12.2.1 Normal PS attach

The normal PS attach procedure is a GMM procedure used by PS UEs of UE operation mode A or C to IMSI attach for PS services only.

12.2.1.1 PS attach / accepted

12.2.1.1.1 Definition

12.2.1.1.2 Conformance requirement

1) If the network accepts the PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.

2) If the network accepts the PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.

3) If the network accepts the PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the old P-TMSI, the UE shall continue communication with the old P-TMSI.

Reference

3GPP TS 24.008 clause 4.7.3.1

12.2.1.1.3 Test purpose

To test the behaviour of the UE if the network accepts the PS attach procedure.

The following cases are identified:

1) P-TMSI / P-TMSI signature is allocated;

2) P-TMSI / P-TMSI signature is reallocated;

3) Old P-TMSI / P-TMSI signature is not changed.

12.2.1.1.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE has a valid IMSI.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

1) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI.

2) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS reallocates a new P-TMSI and returns ATTACH ACCEPT message with the new P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI. The UE will not answer signalling addressed to the old P-TMSI.

3) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS accepts the P-TMSI and returns ATTACH ACCEPT message without any P-TMSI. Further communication UE - SS is performed by the old P-TMSI.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set to attach to the PS services only (see ICS). If this is not supported by the UE, goto step 26.
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
2a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
5a	SS			The SS releases the RRC connection.
6	<-		PAGING TYPE1	Mobile identity = P-TMSI-2 Paging order is for PS services. Paging cause: Terminating interactive call
6a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating interactive call".
7	->		SERVICE REQUEST	Service type = "paging response"
7a	SS			The SS starts integrity protection and releases the RRC connection.
8	UE			The UE is switched off or power is removed (see ICS).
8a	SS			SS checks that the IE "Establishment cause" in any received RRC CONNECTION REQUEST message is set to **"**Detach" (message not sent if power is removed).
9	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
9a	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
10	UE			The UE is powered up or switched on and initiates an attach (see ICS).
10a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
11	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-2 Old Routing area identity = RAI-1
11a	<-		AUTHENTICATION AND CIPHERING REQUEST	
11b	->		AUTHENTICATION AND CIPHERING RESPONSE	
11c	SS			The SS starts integrity protection.
12	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI-1 signature Routing area identity = RAI-1
13	->		ATTACH COMPLETE	
14			Void	

Step	Direction		Message	Comments
	UE	SS		
14b			Void	
14c	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
14d	SS			SS verifies that the UE transmits an RRC CONNECTION REQUEST message. SS will reject this request. The IE "Establishment cause" is not checked.
15	<-		PAGING TYPE1	Mobile identity = P-TMSI-2 Paging order is for PS services.
16	UE			No response from the UE to the request. This is checked for 10 seconds.
17	UE			The UE is switched off or power is removed (see ICS).
17a	SS			SS checks that the IE "Establishment cause" in any received RRC CONNECTION REQUEST message is set to "Detach" (message not sent if power is removed).
18	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
18a	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
19	UE			The UE is powered up or switched on and initiates an attach (see ICS).
19a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
20	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
20a	<-		AUTHENTICATION AND CIPHERING REQUEST	
20b	->		AUTHENTICATION AND CIPHERING RESPONSE	
20c	SS			The SS starts integrity protection.
21	<-		ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Routing area identity = RAI-1 Attach result = 'GPRS only attached'
22	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services. Paging cause: Terminating interactive call
22a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating interactive call".
22b			Void	
22c			Void	
23	->		SERVICE REQUEST	Service type = "paging response"
23aa	SS			The SS starts integrity protection and releases the RRC connection.
23a			Void	
23b			Void	
24	UE			The UE is switched off or power is removed (see ICS).
24a	SS			SS checks that the IE "Establishment cause" in any received RRC CONNECTION REQUEST message is set to "Detach" (message not sent if power is removed).
25	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'

Step	Direction		Message	Comments
	UE	SS		
25a	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
26	UE			The UE is set to attach to both the PS and non-PS services (see ICS) and the test is repeated from step 2 to step 25a.

Specific message contents

None.

12.2.1.1.5 Test requirements

At step 2a, 10a and 19a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step 6a and 22a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Terminating Interactive Call".

At step 8a, 17a and 24a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach".

At step3, 11 and 20, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the Mobile identity in the ATTACH REQUEST message and on the Mobile identity in the ATTACH ACCEPT message.

Case 1) The Mobile identity in the ATTACH REQUEST message is the IMSI and the Mobile identity in the ATTACH ACCEPT message is the P-TMSI.

At step5, UE shall:

- acknowledge the P-TMSI by sending the ATTACH COMPLETE message.

Case 2) The Mobile identity in the ATTACH REQUEST message is the P-TMSI and the Mobile identity in the ATTACH ACCEPT message is the new P-TMSI.

At step13, UE shall:

- acknowledge the new P-TMSI by sending the ATTACH COMPLETE message.

At step23, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.1.1a PS attach / accepted / Attach with IMSI

12.2.1.1a.1 Definition

12.2.1.1a.2 Conformance requirement

1) If the MS is configured for "AttachWithIMSI" and the selected PLMN is neither the registered PLMN nor in the list of equivalent PLMNs, the MS shall include the IMSI in the Mobile identity IE in the ATTACH REQUEST message

2) If the network accepts the PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.

Reference

3GPP TS 24.008 clause 4.7.3.1, 4.4.4.1

12.2.1.1a.3 Test purpose

To test the behaviour of the UE if the network accepts the PS attach procedure.

The following cases are identified:

1) To verify that the Attach with IMSI indicator can be set in the UE

2. To verify that the UE registers with IMSI (not Temporary ID) when registering with a new PLMN if the selected PLMN is neither the registered PLMN nor in the list of equivalent PLMNs

12.2.1.1a.4 Method of test

Initial condition

System Simulator:

Two cells; cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC2/MNC1/LAC2/RAC1 (RAI-6).
Both cells are operating in network operation mode II (in case of UE operation mode A).

NB: Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

The PLMN that contains Cell B is not equivalent to the PLMN that contains Cell A.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE has a valid IMSI.

The UE has been registered in the CS domain.

The US is configured for "AttachWithIMSI"

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"Attach with IMSI is performed when moving to a non-equivalent PLMN" as defined in TS 24.368, clause 5.4.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

1) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI.

2) The SS changes the serving cell to a cell that belongs to a new PLMN. When the UE selects the new cell it sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and

returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI.

Expected Sequence

33	SS			The SS starts integrity protection and releases the RRC connection.
34	UE			The UE is set to attach to both the PS and non-PS services (see ICS) and the test is repeated from step 3 to step 33.
NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

None.

12.2.1.1a.5 Test requirements

At step 4 and 22 the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step 13 and 31 the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Terminating Interactive Call".

At step 5, when the UE is powered up or switched on and step 23, UE shall initiate the PS attach procedure with an ATTACH REQUEST message using the IMSI as Mobile Identity.

At step10 and 28 UE shall acknowledge the new P-TMSI by sending the ATTACH COMPLETE message.

12.2.1.2 PS attach / rejected / IMSI invalid / illegal UE

12.2.1.2.1 Definition

12.2.1.2.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal MS, the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.

2) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal MS the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

3) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal MS, the User Equipment shall delete the LAI.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.2.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'illegal MS.

12.2.1.2.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in

MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2).

All three cells are operating in network operation mode II (in case of UE operation mode A).

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE in all cells.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode C Yes/No

UE operation mode A Yes/No (only if mode C not supported)

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Illegal MS'. The SS checks that the UE does not perform PS attach in the same or another PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode C (see ICS).
				The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.
2	SS			The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a			Void	
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
5	<-		ATTACH REJECT	GMM cause = 'Illegal MS'.
				The following messages are sent and shall be received on cell B.
6	SS			Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
7	UE			Cell B is preferred by the UE.
8	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
9	UE			The UE initiates an attach by MMI or by AT command.
10	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
				The following messages are sent and shall be received on cell C.
11	SS			Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Serving cell". (see note)
12	UE			Cell C is preferred by the UE.
13	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
14	UE			The UE initiates an attach by MMI or by AT command.
15	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
16	UE			If possible (see ICS) switch off is performed. Otherwise the power is removed.
17	UE			The UE is powered up or switched on.
18	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A. SS allocates Mobile identity = TMSI-1.
19	UE			The UE initiates an attach (see ICS).
20	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
20a	<-		AUTHENTICATION AND CIPHERING REQUEST	
20b	->		AUTHENTICATION AND CIPHERING RESPONSE	
20c	SS			The SS starts integrity protection.

21	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
22	->	ATTACH COMPLETE	
NOTE:	The definitions for "Non-Suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.		

Specific message contents

None.

12.2.1.2.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, 10, 13 and 15, UE shall:

- not send the ATTACH REQUEST message to SS, even if there is an instruction of attach request from MMI or from AT command.

At step20, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

12.2.1.3 PS attach / rejected / IMSI invalid / PS services not allowed

12.2.1.3.1 Definition

12.2.1.3.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'GPRS services not allowed', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.

2) If the network rejects a PS attach procedure from the User Equipment with the cause 'GPRS services not allowed' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.3.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'GPRS services not allowed' (no valid PS-subscription for the IMSI).

12.2.1.3.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).
Both cells are operating in network operation mode II.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode C Yes/No

UE operation mode A Yes/No

USIM removal possible without powering down Yes/No

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a normal attach with the cause value 'GPRS services not allowed'. The SS checks that the UE does not perform PS attach in another PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 17.
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
5	<-		ATTACH REJECT	GMM cause = 'GPRS services not allowed'
5a		SS		The SS releases the RRC connection.
				The following messages are sent and shall be received on cell B.
6		SS		Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
7	UE			Cell B is preferred by the UE.
7a	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
8	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
9	UE			If possible (see ICS) USIM removal is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed.
10	UE			The UE gets the USIM replaced, is powered up or switched on and initiates an attach (see ICS).
10a		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
11	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
11a	<-		AUTHENTICATION AND CIPHERING REQUEST	
11b	->		AUTHENTICATION AND CIPHERING RESPONSE	
11c		SS		The SS starts integrity protection.
12	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
13	->		ATTACH COMPLETE	
14	UE			The UE is switched off or power is removed (see ICS).
15	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
15a		SS		The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off .

16			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
17	UE		The UE is set in UE operation mode A(see ICS) and the test is repeated from step 3 to step 15.
NOTE: The definitions for "Non-Suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

Specific message contents

None.

12.2.1.3.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step8, UE shall:

- not perform a PS attach procedure.

At step11, after the UE is switched on or a USIM is replaced, UE shall:

- perform the PS attach procedure.

12.2.1.4 PS attach / rejected / PLMN not allowed

12.2.1.4.1 Definition

12.2.1.4.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' the User Equipment shall:

   1.1 not perform PS attach when switched on in the same routing area or location area (except for the HPLMN).

   1.2 not perform PS attach when in the same PLMN and when that PLMN is not selected manually.

   1.3 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

   1.4 store the PLMN in the 'forbidden PLMN' list.

2) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' the User Equipment shall perform PS attach when a new PLMN is entered.

3) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' and if after that the PLMN from which this rejection was received, is manually selected, the User Equipment shall perform a PS attach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.4.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'PLMN not allowed'.

12.2.1.4.4 Method of test

Proc 1: Test procedure 1

Initial condition

System Simulator:

Four cells (not simultaneously activated), cell A in MCC1/MNC2/LAC1/RAC1 (RAI-8), cell B in MCC1/MNC2/LAC1/RAC1 (RAI-8), cell C in MCC1/MNC2/LAC2/RAC1 (RAI-9) and cell D in MCC2/MNC1/LAC1/RAC1 (RAI-2).
All four cells are operating in network operation mode II (in case of UE operation mode A). The PLMN of the four cells should NOT be that of the UE Home PLMN.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

NB: i) Cell D will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-8. UE is Idle Updated on cell A.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'PLMN not allowed'. The SS checks that the UE does not perform PS attach if activated in the same routing area or location area and performs PS attach only when a new PLMN is entered.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
	SS			The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode C (see ICS).
2	SS			The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". Set the cell type of cell D to the "Non-Suitable cell". (see note)
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a			Void	
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-8
5	<-		ATTACH REJECT	GMM cause = 'PLMN not allowed'
5a				The SS releases the RRC Connection.
6	UE			No ATTACH REQUEST sent to SS (SS waits 30 seconds).
				The following messages are sent and shall be received on cell B.
7	UE			The UE is switched off.
8	SS			Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
9	UE			The UE is powered up or switched on.
10	UE			Cell B is preferred by the UE.
11	UE			No ATTACH REQUEST sent to SS (SS waits 30 seconds).
				The following messages are sent and shall be received on cell C.
12	SS			Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Serving cell". (see note)
13	UE			Cell C is preferred by the UE.
14	UE			No ATTACH REQUEST sent to SS (SS waits 30 seconds).
				The following messages are sent and shall be received on cell D.
15	SS			Set the cell type of cell C to the "Non-Suitable cell". Set the cell type of cell D to the "Serving cell". (see note)
16	UE			Cell D is preferred by the UE.
17	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
18	UE			The UE initiates an attach automatically, by MMI or by AT command.
19	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
19a	<-		AUTHENTICATION AND CIPHERING REQUEST	
19b	->		AUTHENTICATION AND CIPHERING RESPONSE	
19c	SS			The SS starts integrity protection.

20	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
21	->	ATTACH COMPLETE	
NOTE: The definitions for "Non-Suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

Proc 2: Test procedure 2

Initial condition

System Simulator:

One cell operating in network operation mode II: MCC2/MNC1/LAC1/RAC1 (RAI-2). The PLMN of the cell should NOT be that of the Mobile Station Home PLMN.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-2. UE is Idle Updated on cell A.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'PLMN not allowed'. The subscribers access rights is changed to allow PS attach. Then the PLMN from which this rejection was received is manually selected and the SS check that a PS attach is performed.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode C or A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
2a			Void	
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-2
4	<-		ATTACH REJECT	GMM cause = 'PLMN not allowed'
4a				The SS releases the RRC Connection.
5	UE			No ATTACH REQUEST sent to SS (SS waits 30 seconds)
6	UE			The current PLMN is selected manually.
7			Void	
8	UE			The UE initiates a PS attach. If UE does not attach automatically, then UE initiates the attach procedure by MMI or AT command.
9	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
9a	<-		AUTHENTICATION AND CIPHERING REQUEST	
9b	->		AUTHENTICATION AND CIPHERING RESPONSE	
9c	SS			The SS starts integrity protection.

11	->		ATTACH COMPLETE	

Specific message contents

None.

12.2.1.4.5 Test requirements

Test requirements for test procedure 1

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, UE shall:

- not perform PS attach procedure.

UE shall perform the following actions depending on the PLMN or the routing area or the location area

Case 1) UE is in the same routing area or location area when the power is switched on,

At step11, UE shall:

- not perform PS attach procedure.

Case2) UE is in the same PLMN, and this PLMN is not selected manually

At step14, UE shall:

- not perform PS attach procedure.

Case3) UE is in a new PLMN.

At step19, UE shall:

- perform the PS attach procedure.

Test requirements for test procedure 2

At step3, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step5, UE shall:

- not perform PS attach procedure.

At step9, when the UE is in the new PLMN, and this PLMN is selected manually, UE shall

- perform the PS attach procedure.

12.2.1.5a PS attach / rejected / roaming not allowed in this location area

12.2.1.5a.1 Definition

12.2.1.5a.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'roaming not allowed in this location area' the User Equipment shall:

   1.1 not perform PS attach when in the same location area.

   1.2 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

   1.3 store the LA in the 'forbidden location areas for roaming' list.

   1.4 perform PS attach when a new location area is entered.

   1.5 Periodically search for its HPLMN.

2) The User Equipment shall reset the list of 'Forbidden location areas for roaming' when switched off or when the USIM is removed.

3) The UE shall be capable of storing at least 10 entries in the list of 'Forbidden location areas for roaming'.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.5a.3 Test purpose

Test purpose 1

To test that on receipt of a rejection using the 'roaming not allowed in this location area' cause code, the UE ceases trying to attach on that location area. Successful PS attach procedure is possible in other location areas.

Test purpose 2

To test that if the UE is switched off or the USIM is removed the list of 'forbidden location areas for roaming' is cleared.

Test purpose 3

To test that at least 6 entries can be held in the list of 'forbidden location areas for roaming' (the requirement in 3GPP TS 24.008 is to store at least 10 entries. This is not fully tested by the third procedure).

Test purpose 4

To test that if a cell of the Home PLMN is available then the UE returns to it in preference to any other available cell.

12.2.1.5a.4 Method of test

Proc 1: Test procedure 1

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN), cell B in

MCC2/MNC1/LAC2/RAC1 (RAI-6, Not HPLMN) and cell C in MCC2/MNC1/LAC1/RAC2 (RAI-7, Not HPLMN).

All three cells are operating in network operation mode II.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-2.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Roaming not allowed in this location area'. A new attempt for a PS attach is not possible. Successful PS attach / detach procedures are performed in another location area. A new attempt for a PS attach is performed in the 1st location area. This attempt shall not succeed, as the LA is on the forbidden list.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 19.
2		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.

Proc 3: Test procedure 3

Initial condition

System Simulator:

Six cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC2/RAC1 (RAI-3, Not HPLMN), cell C in MCC2/MNC1/LAC3/RAC1 (Not HPLMN), cell D in MCC2/MNC1/LAC4/RAC1 (Not HPLMN), cell E in MCC2/MNC1/LAC5/RAC1 (Not HPLMN), cell F in MCC2/MNC1/LAC6/RAC1 (Not HPLMN).
All six cells are operating in network operation mode II (in case of UE operation mode A).
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-2.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Roaming not allowed in this location area'. This is done for 6 different location areas. Then the SS checks that the UE does not attempt to perform an attach procedure on the non-allowed location areas.

Different types of UE may use different methods to periodically clear the list of forbidden areas (e.g. every day at 12am) for roaming. If the list is cleared while the test is being run, it may be necessary to re-run the test.

Proc 4: Test procedure4

Initial condition

System Simulator:

Two cells, cell A in MCC2/MNC1/LAC1/RAC1 (not HPLMN, RAI-2) and cell B in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1).
Both cells are operating in network operation mode II (in case of UE operation mode A).

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-2.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Roaming not allowed in this location area'. A second cell belonging to the HPLMN is activated. It is checked that the UE returns to its HPLMN.

Expected Sequence

12.2.1.5a.5 Test requirements

Test requirements for Test procedure1

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this location area', UE shall:

- not perform the PS attach procedure.

At step11, when the new location area is entered, UE shall:

- perform the PS attach procedure

At step19, when the rejected location area is entered, UE shall

- not perform PS attach procedure.

Test requirements for Test procedure2

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step5, after the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this location area', UE shall:

- not perform PS attach procedure.

At step9, when the UE is switched on or USIM is replaced, UE shall:

- perform the PS attach procedure.

Test requirements for Test procedure3

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, 13, 20, 27, 34 and 41, after the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this location area', UE shall:

- not perform PS attach procedure.

At step11, 18, 25, 32 and 39 , UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step45, 49 and 53, UE shall:

- not perform PS attach procedure.

Test requirements for Test procedure4

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this location area', UE shall:

- not perform PS attach procedure.

At step10, when a new location area is entered, UE shall:

- perform the PS attach procedure.

12.2.1.5b PS attach / rejected / No Suitable Cells In Location Area

12.2.1.5b.1 Definition

12.2.1.5b.2 Conformance requirement

(1) If the network rejects a PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

1.1not perform PS attach when in the same location area.

1.2delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

1.3store the LA in the 'forbidden location areas for roaming' list.

1.4not delete the list of "equivalent PLMNs".

1.5perform PS attach when a new location area is entered.

Reference

3GPP TS 24.008 clauses 4.7.3.1.

12.2.1.5b.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'No Suitable Cells In Location Area'.

12.2.1.5b.4 Method of test

Initial condition

System Simulator:

Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6)

All three cells are operating in network operation mode II.

The PLMN contains Cell C is equivalent to the PLMN that contains Cell A.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall search for a suitable cell in a different location area on the equivalent PLMN and shall perform PS attach procedure in that cell.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode A (see ICS).
2		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-suitable cell". Set the cell type of cell C to the "Non-suitable cell". (see note)
3			Void	
3a		SS		SS checks that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Registration”.
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE	
4c		SS		The SS starts integrity protection.
5	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Routing area identity = RAI-1 Equivalent PLMNs = MCC2,MNC1
6	<-		DETACH REQUEST	Detach type = re-attach required
7	->		DETACH ACCEPT	
8		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell". (see note) The SS configures power level of each Cell as follows. Cell A > Cell B = Cell C
9			Void	
9a		SS		SS shall wait for 1 second to receive the Attach Request in step 10 on the existing RRC Connection. In case ATTACH REQUEST is not received within 1 second then existing RRC Connection is released.
10	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
11	<-		ATTACH REJECT	GMM cause = 'No Suitable Cells In Location Area'
12		SS		The SS initiates the RRC connection release. The following message are sent and shall be received on cell C.
13	UE		Registration on CS	See TS 34.108
14	UE			The UE initiates an attach automatically, by MMI or by AT command.
14a				SS checks that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Registration”.
15	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
16	<-		AUTHENTICATION AND CIPHERING REQUEST	
17	->		AUTHENTICATION AND CIPHERING RESPONSE	
18		SS		The SS starts integrity protection.

19	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-6 Equivalent PLMNs = MCC1,MNC1
20	->	ATTACH COMPLETE	
20a	SS		The SS releases the RRC connection.
NOTE:	The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS 34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.		

Specific message contents

None.

12.2.1.5b.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step15, when the UE enters a suitable cell in a different location area on the equivalent PLMN, UE shall:

- perform the PS attach procedure.

12.2.1.5c PS attach / rejected / Location area not allowed

12.2.1.5c.1 Definition

12.2.1.5c.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'Location area not allowed' the User Equipment shall:

   1.1 delete any RAI, P-TMSI, P-TMSI signature and PS ciphering key sequence number.

   1.2 set the PS update status to GU3 ROAMING NOT ALLOWED.

   1.3 reset the attach attempt counter.

   1.4 store the LAI in the list of "forbidden location areas for regional provision of service".

   1.1 perform a cell selection.

   1.2 not delete the list of "equivalent PLMNs".

2) If the network rejects a PS attach procedure from the User Equipment with the cause 'Location area not allowed' and if the User Equipment is IMSI attached via MM procedures the User Equipment shall:

   2.1 set the update status to U3 ROAMING NOT ALLOWED.

   2.2 delete any TMSI, LAI and ciphering key sequence number.

   2.3 reset the location update attempt counter.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.5c.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'Location area not allowed'.

12.2.1.5c.4 Method of test

Initial condition

System Simulator:

Three cells cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6).
All three cells are operating in network operation mode II (in case of UE operation mode A).

The PLMN contains Cell C is equivalent to the PLMN that contains Cell A.

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1, RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Location area not allowed'. The SS checks that the UE does not perform MM IMSI attach while in the same location area and performs PS attach when a new equivalent PLMN is entered.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1	UE			If UE operation mode A is supported, If UE operation mode C is supported, the UE is set in UE operation mode A (see ICS). If UE operation mode A is not supported, the UE is set in UE operation mode C.
2		SS		The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the " Non-suitable cell ". Set the cell type of cell C to the " Non-suitable cell " (see note)
3	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.

17	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-6 Equivalent PLMNs = MCC1,MNC1
18	->	ATTACH COMPLETE	
19	UE		No MM IMSI attach request sent to SS (SS waits 30 seconds).
19a	SS		The SS releases the RRC connection.
NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

Specific message contents

None.

12.2.1.5c.5 Test requirements

At step4 and 10, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step12, UE shall:

- perform cell selection.

At step13, UE shall:

- perform PS attach procedure with Mobile identity = IMSI.

At step19, UE shall:

- not perform MM IMSI attach

12.2.1.5d PS attach / rejected / PS services not allowed in this PLMN

12.2.1.5d.1 Definition

12.2.1.5d.2 Conformance requirement

If the network rejects a PS attach procedure from the User Equipment with the cause 'GPRS services not allowed in this PLMN' the User Equipment shall:

The MS shall delete any RAI, P-TMSI, P-TMSI signature, and GPRS ciphering key sequence number stored, shall set the GPRS update status to GU3 ROAMING NOT ALLOWED (and shall store it according to subclause 4.1.3.2) and shall change to state GMM-DEREGISTERED.

The MS shall store the PLMN identity in the "forbidden PLMNs for GPRS service" list. A GPRS MS operating in MS operation mode C shall perform a PLMN selection instead of a cell selection.

A GPRS MS operating in MS operation mode A or B in network operation mode II or III, is still IMSI attached for CS services in the network.

As an implementation option, a GPRS MS operating in operation mode A or B may perform the following additional action. If no RR connection exists the MS may perform the action immediately. If the MS is operating in MS operation mode A and an RR connection exists, the MS may only perform the action when the RR connection is subsequently released:

- The MS may perform a PLMN selection according to 3GPP TS 23.122 [14].

The MS shall not perform the optional PLMN selection in the case where the PLMN providing this reject cause is:

- On the "User Controlled PLMN Selector with Access Technology " list or,
- On the "Operator Controlled PLMN Selector with Access Technology " list or,

- A PLMN identified as equivalent to any PLMN, with the same MCC, contained in the lists above

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.5d.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'GPRS services not allowed in this PLMN'.

12.2.1.5d.4 Method of test

Initial condition

System Simulator:

Three cells cell A with MCC1/MNC2/LAC1/RAC1 (RAI-8, Not HPLMN), cell B in MCC1/MNC2/LAC1/RAC2 (RAI-10, Not HPLMN), cell C in MCC2/MNC1/LAC1/RAC2 (RAI-7). All three cells are operating in network operation mode II (in case of UE operation mode A).

The PLMN contains Cell C is equivalent to the PLMN that contains Cell A.

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1, RAI-8.

Related ICS/IXIT statements

None.

12.2.1.5d.5 Test requirements

At step5 and 10, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step A12, UE shall:

- perform PLMN selection, only if the UE is in UE Operation Mode C.

At step13, UE shall:

- in case of operation mode C, perform PS attach procedure with Mobile identity = IMSI to the equivalent cell.

- in case of operation mode A, perform PS attach procedure and CS registration procedure (at step B12c)

At step B12a.1 UE shall:

- respond the Paging for CS domain service on cell A.

12.2.1.5e PS attach / rejected / Not authorized for this CSG

12.2.1.5e.1 Definition

12.2.1.5e.2 Conformance requirement

(1) If the network rejects a PS attach procedure from the User Equipment with the cause ' Not authorized for this CSG ', the User Equipment shall:

1.1 not perform PS attach when no suitable cell is entered.

1.2 delete the CSG ID of the cell, where the UE has sent the ATTACH REQUEST message, from the allowed CSG ID list stored in the UE.

1.3 not delete the list of "equivalent PLMNs".

1.4 perform PS attach when a new suitable cell is entered.

Reference

3GPP TS 24.008 clause 4.7.3.1

12.2.1.5e.3 Test purpose

To verify UE to remove the CSG ID from the Allowed CSG list and search for a suitable cell in the same PLMN when #25 is received.

12.2.1.5e.4 Method of test

Initial conditions:

System Simulator:

Two cells cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1)/CSG1, cell B in MCC1/MNC1/LAC1/RAC2 (RAI-2)/CSG2.

Both cells are operating in network operation mode II(in case of UE operation mode A).

Both Cell A and Cell B belong to PLMN 1.

User Equipment:

The UE has a valid P-TMSI-1, RAI-1.

The UE has been registered on the PLMN 1 in the CS domain.

UE Allowed CSG List contains CSG1and CSG2

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EFACSGL	PLMN 1	CSG 1,CSG 2

The UE is previously registered on PLMN1, before switched off.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode C Yes/No

UE operation mode A Yes/No (only if mode C not supported)

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value ' Not authorized for this CSG '. The SS checks that the UE shall search for a suitable cell on the same PLMN and shall perform PS attach procedure in that cell.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode A OR The UE is set in UE operation mode C (see ICS).
2	SS			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-suitable cell". (See note)
2a	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
4	SS			SS checks that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Registration”.

24	->	ATTACH COMPLETE	
25	SS		The SS releases the RRC connection.
26	UE		The UE is switched Off or Power is removed. (See ICS)
27	SS		The SS checks that the IE “Establishment Cause” in any received RRC CONNECTION REQUEST is set to “Detach” (Message not sent if power is removed).
28	-->	DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
29			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non Suitable neighbour cell". The SS configures power level of each Cell as follows. Cell A > Cell B
30			The UE is powered up or switched ON.
31			SS Checks that the does not initiate a RRC CONNECTION REQ on Cell A
NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS 34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

12.2.1.5e.5 Test requirements

At step5, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step14, after the UE receives ATTACH REJECT, UE shall:

- delete the CSG1 in the CSG List.
- UE Allowed CSG List shall contain only CSG2.

At step19, when the UE camps on a suitable cell in on the same PLMN, UE shall:

- perform the PS attach procedure.

At step23, after the UE receives ATTACH ACCEPT:

- UE Allowed CSG List shall contain only CSG2.

12.2.1.6 PS attach / abnormal cases / access barred due to access class control

12.2.1.6.1 Definition

12.2.1.6.2 Conformance requirement

1) The UE shall not perform PS attach procedure, but stays in the current serving cell and applies normal cell reselection process.

2) The User Equipment shall perform the PS attach procedure when:

   2.1 Access is granted.

   2.2Cell is changed.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.6.3 Test purpose

Test purpose1

To test the behaviour of the UE in case of access class control (access is granted).

Test purpose2

To test the behaviour of the UE in case of access class control (Cell is changed).

12.2.1.6.4 Method of test

Proc 1: Test procedure1

Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is initially indicated to be barred.

System Simulator:

One cell operating in network operation mode II.
Access class x barred.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

UE operation mode A Yes/No

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS indicates access class x barred. A PS attach procedure is not performed.

The SS indicates that access class x is not barred. A PS attach procedure is performed.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The USIM is programmed with access class x.
2	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 12.
3	UE			The UE is powered up or switched on and attempts to initiate an attach (see ICS).
4	UE			No ATTACH REQUEST sent to SS, as access class x is barred (SS waits 30 seconds).
5	SS			The access class x is not barred anymore.
6	UE			The UE initiates a PS attach either automatically or manually (see ICS).
7	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
7a	<-		AUTHENTICATION AND CIPHERING REQUEST	
7b	->		AUTHENTICATION AND CIPHERING RESPONSE	
7c	SS			The SS starts integrity protection.
8	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
9	->		ATTACH COMPLETE	
10	UE			The UE is switched off or power is removed (see ICS).
11	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
11a	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
12	SS			The SS is set in network operation mode II.
13	UE			The UE is set in UE operation mode A(see ICS) and the test is repeated from step 3 to step 11.

Proc 2: Test procedure2

Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is indicated to be barred on cell A.

System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) has access class x barred, cell B in MCC1/MNC1/LAC1/RAC1 (RAI-1) has access class x not barred.
Both cells are operating in network operation mode II (in case of UE operation mode A).
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS indicates access class x barred. A PS attach procedure is not performed.

A cell change is performed into a cell where access class x is not barred. A PS attach procedure is performed.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The USIM is programmed with access class x.
		SS		The following messages are sent and shall be received on cell A.
2		SS		The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". (see note)
3	UE			The UE is set in UE operation mode C (see ICS).
4	UE			The UE is powered up or switched on and attempts to initiate an attach (see ICS).
5	UE			No ATTACH REQUEST sent to SS, as access class x is barred (SS waits 30 seconds).
				The following messages are sent and shall be received on cell B.
6		SS		Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note)
7	UE			The UE initiates an attach either automatically or manually (see ICS).
8	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
8a	<-		AUTHENTICATION AND CIPHERING REQUEST	
8b	->		AUTHENTICATION AND CIPHERING RESPONSE	
8c	SS			The SS starts integrity protection.
9	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-1
10	->		ATTACH COMPLETE	
NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

None.

12.2.1.6.5 Test requirements

Test requirements for Test procedure1

At step4, when the UE access class x is barred, UE shall:

- not perform a PS attach procedure.

At step7, when the UE access class x is granted, UE shall:

initiate the PS attach procedure.

Test requirements for Test procedure2

At step5, when the UE access class x is barred, UE shall:

- not perform a PS attach procedure.

At step8, when the serving cell is changed, UE shall:

- initiate the PS attach procedure.

12.2.1.7 PS attach / abnormal cases / change of routing area

12.2.1.7.1 Definition

12.2.1.7.2 Conformance requirement

If a cell change into a new routing area occurs before an ATTACH ACCEPT or ATTACH REJECT message has been received, the GPRS attach procedure shall be aborted and re-initiated immediately.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.7.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.2.1.7.4 Method of test

Initial condition

System Simulator:

One cell with MCC1/MNC1/LAC1/RAC1 (RAI-1)
The cell is operating in network operation mode II (in case of UE operation mode A).
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode C Yes/No

UE operation mode A Yes/No (only if mode C not supported)

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE initiates a PS attach procedure. The ATTACH ACCEPT message is delayed from the SS. The UE receive a new routing area code. The UE shall re-initiate a PS attach procedure in the new routing area.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode C (see ICS).
2		SS		The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". (see note)
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4		->	ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
5		SS		No response to the ATTACH REQUEST message is given by the SS.
6			Void	
6a		<-	UTRAN MOBILITY INFORMATION	The SS conveys updated CN system information for the PS domain to the UE in connected mode, including a new routing area code. Note: SS transmits the updated system information with the new RAI information in SIB1
6b		->	UTRAN MOBILITY INFORMATION CONFIRM	
7	UE			The UE automatically re-initiates the attach.
8		->	ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
8a		<-	AUTHENTICATION AND CIPHERING REQUEST	
8b		->	AUTHENTICATION AND CIPHERING RESPONSE	
8c		SS		The SS starts integrity protection.
9		<-	ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Attach result = 'GPRS only attached' Routing area identity = RAI-4
NOTE: The definitions for "Non-Suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

UTRAN MOBILITY INFORMATION (step 6a)

The contents of the UTRAN MOBILITY INFORMATION message in this test case is identical to the default message in TS 34.108, with the following exceptions.

Information Element	Value/remark
New U-RNTI	Not Present
New C-RNTI	Not Present
UE Timers and constants in connected mode	Not Present
CN information info	
- PLMN identity	Not Present
- CN common GSM-MAP NAS system information	Not Present
- CN domain related information	
- CN domain identity	CS domain
- CN domain specific GSM-MAP NAS system info	
- T3212	Infinity
- ATT	0
- CN domain specific DRX cycle length coefficient	7
- CN domain related information	
- CN domain identity	PS domain
- CN domain specific GSM-MAP NAS system info	
- RAC	RAC-2
- NMO	1 (Network Mode of Operation II)
- CN domain specific DRX cycle length coefficient	7

12.2.1.7.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected sequence.

At step8, as the UE has received a new RAI in the UTRAN MOBILITY INFORMATION message before the ATTACH ACCEPT message or the ATTACH REJECT message is received by the UE, the UE shall:

- abort the PS attach procedure and re-initiate the PS attach procedure immediately with new information elements.

12.2.1.8 PS attach / abnormal cases / power off

12.2.1.8.1 Definition

12.2.1.8.2 Conformance requirement

When power is switched off before ATTACH ACCEPT message is received by the UE, the UE shall abort the PS attach procedure and perform a PS detach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.

12.2.1.8.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.2.1.8.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No

Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE is switched off after initiating an attach procedure. A PS detach is automatically performed by the UE before power is switched off.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 7.
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Routing area identity = RAI-1
4	SS			No response to the ATTACH REQUEST message is given by the SS.
5	UE			The UE is powered off and initiates a PS detach (with power off) by
6	->		DETACH REQUEST	Detach type = 'power switched off, GPRS detach'
7	UE			The UE is set in UE operation mode A (see ICS) and the test is repeated from step 2 to step 6.

Specific message contents

None.

12.2.1.8.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when power is switched off before ATTACH ACCEPT message is received, UE shall:

- abort the PS attach procedure and perform the PS detach procedure.

12.2.1.9 PS attach / abnormal cases / PS detach procedure collision

12.2.1.9.1 Definition

12.2.1.9.2 Conformance requirement

1) When a DETACH REQUEST message is received by the UE (any cause except re-attach) while waiting for an ATTACH ACCEPT message, the UE shall terminate the PS attach procedure and continue with the PS detach procedure.

2) When a DETACH REQUEST message is received by the UE (cause re-attach) while waiting for an ATTACH ACCEPT message, the UE shall ignore the PS detach procedure and continue with the PS attach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.1.9.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.2.1.9.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Test procedure

The UE initiates a PS attach procedure. The SS does not answer the PS attach procedure, but initiates a PS detach procedure (any cause except re-attach). The UE shall terminate the PS attach procedure and continue with the PS detach procedure**.**

The UE initiates a PS attach procedure. The SS does not answer the PS attach procedure, but initiates a PS detach procedure (cause re-attach). The UE shall ignore the PS detach procedure and continue with the PS attach.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode C (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
4	SS			The SS ignores the ATTACH REQUEST message and initiates a detach procedure.
5	<-		DETACH REQUEST	Detach type = 're-attach not required'
6	->		DETACH ACCEPT	
7	UE			The UE initiates the attach procedure by MMI or AT command.
8	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
9	SS			The SS ignores the ATTACH REQUEST message and initiates a detach procedure.
10	<-		DETACH REQUEST	Detach type = 're-attach required'
11	UE			The UE ignores the DETACH REQUEST message and continue with the attach procedure.
12	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
13	->		ATTACH COMPLETE	

Specific message contents

None.

12.2.1.9.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the Detach type in the DETACH REQUEST message.

Case1) Detach type = 're-attach not required' GMM cause is not re-attach

At step6, when the DETACH REQUEST message is received by the UE while waiting for an ATTACH ACCEPT message, UE shall:

- terminate the PS attach procedure and continue with the PS detach procedure.

Case2) Detach type = 're-attach required'

At step11, when the DETACH REQUEST message is received by the UE while waiting for an ATTACH ACCEPT message, UE shall:

- ignore the PS detach procedure and continue with the PS attach procedure.

12.2.1.10 PS attach / abnormal cases / Failure due to non-integrity protection

12.2.1.10.1 Definition

12.2.1.10.2 Conformance requirement

Except the messages listed below, no layer 3 signalling messages shall be processed by the receiving MM and GMM entities or forwarded to the CM entities, unless the security mode control procedure is activated for that domain.

- GMM messages:
  - AUTHENTICATION & CIPHERING REQUEST
  - AUTHENTICATION & CIPHERING REJECT
  - IDENTITY REQUEST
  - ATTACH REJECT
  - ROUTING AREA UPDATE ACCEPT (at periodic routing area update with no change of routing area or temporary identity)
  - ROUTING AREA UPDATE REJECT
  - SERVICE REJECT
  - DETACH ACCEPT (for non power-off)

Reference(s):

3GPP TS 24.008 clause 4.1.1.1.1

12.2.1.10.3 Test purpose

To verify that the UE ignores NAS signalling messages when the security mode procedure is not activated.

12.2.1.10.4 Method of test

Initial Conditions

System Simulator:

One cell operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid IMSI.

If the UE is in UE operation mode A, then the UE has been registered in the CS domain.

Related ICS Statements

Support of PS service Yes/No
UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No

Test procedure

The attach procedure is initiated. Upon reception of ATTACH REQUEST message from the UE, the SS responds with an ATTACH ACCEPT message without the integrity protection. The UE shall ignore this message and re-transmit ATTACH REQUEST message at expiry of timer T3310.

This time the SS starts the authentication procedure and initiates the integrity protection. After receiving ATTACH ACCEPT message, the UE shall respond to ATTACH COMPLETE message.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A or C (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach procedure (see ICS).
3	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
5	<-		AUTHENTICATION AND CIPHERING REQUEST	Request authentication. Set PS-CKSN
6	->		AUTHENTICATION AND CIPHERING RESPONSE	RES
7	SS			The SS does not initiate the security mode procedure.
8	<-		ATTACH ACCEPT	
9	UE			The UE ignores ATTACH ACCEPT message.
10	SS			The SS waits until the UE sends a new ATTACH REQUEST message in step 11.
11	->		ATTACH REQUEST	The UE re-transmits the message. The SS verifies that this ATTACH REQUEST message is sent by the UE after the expiry of T3310 (15 sec). The period of time to check is either between the ATTACH REQUEST messages or between the RRC CONNECTION REQUEST message and the second ATTACH REQUEST message. Attach type = 'GPRS attach' Mobile identity = IMSI
12	<-		AUTHENTICATION AND CIPHERING REQUEST	Request authentication. Set PS-CKSN
13	->		AUTHENTICATION AND CIPHERING RESPONSE	RES
14	SS			The SS starts integrity protection.
15	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI
16	->		ATTACH COMPLETE	

Specific Message Contents

None.

12.2.1.10.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step9, UE shall;

- ignore the first ATTACH ACCEPT message.

At step11, UE shall;

- re-transmit ATTACH REQUEST message after expiry of timer T3310.

At step16, UE shall;

- respond to ATTACH COMPLETE message after the UE receives the second ATTACH ACCEPT message.

12.2.1.11 PS attach / accepted / follow-on request pending indicator set

12.2.1.11.1 Definition and applicability

UE which supports follow-on request procedure.

12.2.1.11.2 Conformance requirement

1) In UMTS, if the MS wishes to prolong the established PS signalling connection after the GPRS attach procedure, it may set a follow-on request pending indicator on.

2) In UMTS, the network should prolong the PS signalling connection if the mobile station has indicated a follow-on request pending in ATTACH REQUEST. The network may also prolong the PS signalling connection without any indication from the mobile terminal.

Reference

3GPP TS 24.008 clause 4.7.3.1.1 and 4.7.3.1.3

12.2.1.11.3 Test purpose

To test the behaviour of the UE if the follow-on request pending indicator can be set on during the attach procedure.

The following cases are identified:

1) follow-on request pending indicator may be set to indicate further signalling messages from the UE

2) follow-on request pending indicator not set, no further signalling messages expected from the UE

12.2.1.11.4 Method of test

Initial condition

System Simulator:

1 cell, operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
Method of context activation

Support of Follow On Proceed Yes/No

Test procedure

1) The UE is attached, then the Detach Request is originated from the UE indicating "GPRS detach without switching off". The SS responds with a Detach Accept after completing the security mode procedures. A PDP context activation is then requested by the user. The PS attach (ATTACH REQUEST) is then indirectly caused by a requested PDP context activation. UE shall set the Follow-ON Request bit to 1 in the ATTACH REQUEST message. The SS returns the ATTACH ACCEPT message to the UE. Now session management can proceed with PDP context activation. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS to finish the PC call establishment. The SS releases the RRC connection and the UE is switched off.

2) The UE is switched on and initiates PS attach (ATTACH REQUEST). UE shall set the Follow-ON Request bit to 0 in the ATTACH REQUEST message. The SS returns the ATTACH ACCEPT message to the UE. The SS verifies UE does not sent any messages on the PS Signalling Connection for 10 seconds. SS releases the RRC connection..

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
0	UE			Detach is performed by the UE using MMI or AT Commands
1		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
2	→		DETACH REQUEST	
3		SS		The SS starts integrity protection.
4	←		DETACH ACCEPT	SS sends Detach Accept message.
5		SS		The SS releases the RRC connection.
6	UE			Initiate a context activation
7		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
8	→		ATTACH REQUEST	The UE requests attach. UE shall set the FOR bit to 1
9		SS		The SS starts integrity protection.
10	←		ATTACH ACCEPT	The SS accepts attach Negotiated Ready timer value IE should not be included Force to standby IE set to “Force to standby not indicated”
11	→		ACTIVATE PDP CONTEXT REQUEST	The UE requests a PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380
12		SS		The SS establishes the RAB.
13	←		ACTIVATE PDP CONTEXT ACCEPT	The SS accepts the PDP context activation.
14		SS		The SS releases the RRC connection due to inactivity (no user data transferred)
15	UE			The UE is switched off or power is removed (see ICS).
16		SS		SS checks that the IE "Establishment cause" in any received RRC CONNECTION REQUEST message is set to "Detach" (message not sent if power is removed).
17	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
18		SS		The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
19	UE			The UE is powered up or switched on and initiates an attach (see ICS).
20		SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
21	->		ATTACH REQUEST	The UE requests attach. The UE shall set the FOR bit to 0.
22			AUTHENTICATION AND CIPHERING REQUEST	
23			AUTHENTICATION AND CIPHERING RESPONSE	
24		SS		The SS starts integrity protection.
25	<-		ATTACH ACCEPT	The SS accepts attach Negotiated Ready timer value IE should not be included Force to standby IE set to “Force to standby not indicated”

26			The SS does not respond and waits for the time of 5 seconds. No further messages are expected from the UE on the current PS Signalling Connection.
27	SS		The SS releases the RRC connection

Specific message contents

None.

12.2.1.11.5 Test requirements

At step 8 the UE shall send an ATTACH REQUEST with FOR bit set to 1

At step 21 the UE shall send an ATTACH REQUEST with FOR bit set to 0.

12.2.1.12 PS attach / abnormal cases / access barred due to domain specific access restriction for PS domain

12.2.1.12.1 Definition

This test case is applicable for Rel-5 UEs supporting DSAC and Rel-6 or later UEs.

12.2.1.12.2 Conformance requirement

TS24.008 4.1.1.2.2

> If the PS or CS domain is barred because of domain specific access control, a GPRS MS operating in mode A or B in a network that operates in mode II or III shall use the MM specific procedures or GMM specific procedures, respectively, in the domain which is unbarred. If the MS detects that a domain changes from barred to unbarred, it shall behave as specified in subclauses 4.4.4.9, 4.5.1.2, 4.7.3.1.5, 4.7.5.1.5, and 4.7.13.5.

TS24.008 4.7.3.1.5

a) Access barred because of common access class control or PS domain specific access control

> The GPRS attach procedure shall not be started. The MS stays in the current serving cell and applies normal cell reselection process. The GPRS attach procedure is started as soon as possible, i.e. when access is granted or because of a cell change.

Specific message contents

None.

12.2.1.12.5 Test requirements

At step4, when the SS indicates that PS domain specific access class x is barred, the UE shall:

- not perform a PS attach procedure.

At step7, when the SS indicates that PS domain specific access class x is not barred, the UE shall:

- initiate the PS attach procedure.

12.2.1.13 NITZ / GMM/ Time zone, Time and DST Handling

12.2.1.13.1 Definition

To check that the UE correctly handles time zone, time and DST.

12.2.1.13.2 Conformance requirement

The feature Network Identities and Timezone shall make it possible for a serving PLMN to transfer its current identity, universal time, DST and LTZ to MSs, and for the MS to store and use this information. Each one of these elements is optional. The feature significantly enhances roaming as it enables the accurate indication of network identities that are either newer than the ME or have changed their name since the ME was manufactured or sold. Additionally time and timezone information can be utilised by MEs as desired.

When using the default character set (see 3GPP TS 23.038 [3]), the serving PLMN shall make both a "short" and a "long" name available to the MS. As an alternative or, in addition, to the default character set, the serving PLMN can make a name available in UCS2. The MS shall be free to choose one of these names depending upon its own characteristics and/or limitations, such as those of its display.

NOTE: Guidance is sought, particularly from non-European operators, as to whether long and short name is required in UCS2 format.

The Network Operator may change the network identity at any time. However the change of network identity need not force immediate transfer of information to the MS.

As a network option, it shall be possible to send universal time (UT) by the network. Time information shall include: Year, Month, Day, Hour, Minute, Second, Timezone and DST. The expected accuracy of the time information is in the order of minutes.

NOTE: Universal time indicates the time at which this information element (see 3GPP TS 24.008 [2]) may have been sent by the network. Thus it can be assumed that the accuracy of the time information when it arrives at the MS is usually within a couple minutes.

The serving PLMN shall make Local Time Zone (LTZ) available to the MS as an offset from Universal Time in units of 15 minutes.

When the LTZ is compensated for DST (summertime), the serving PLMN shall provide a DST parameter to indicate this. The adjustment for DST can be +1h or +2h.

The TP-Service-Centre-Time-Stamp field is given in semi-octet representation, and represents the local time in the following way:

	Year:	**Month:**	**Day:**	**Hour:**	**Minute:**	**Second:**	**Time Zone**
Digits: (Semi-octets)	2	2	2	2	2	2	2

The Time Zone indicates the difference, expressed in quarters of an hour, between the local time and GMT. In the first of the two semi-octets, the first bit (bit 3 of the seventh octet of the TP-Service-Centre-Time-Stamp field) represents the algebraic sign of this difference (0: positive, 1: negative).

The Service-Centre-Time-Stamp, and any other times coded in this format that are defined in the present document, represent the time local to the sending entity.

If the MS has knowledge of the local time zone, then any time received (e.g. Service-Centre-Time-Stamp) at the MS may be displayed in the local time rather than the time local to the sending entity. Messages shall be stored as received without change to any time contained therein.

The Time Zone code enables the receiver to calculate the equivalent time in GMT from the other semi-octets in the Service-Centre-Time-Stamp, or indicate the time zone (GMT, GMT+1H etc.), or perform other similar calculations as required by the implementation. The value contained in the Time Zone field must take into account daylight saving time, such that when the sending entity changes from regular (winter) time to daylight saving (summer) time, there is a change to the value in the Time Zone field, for example in the UK the winter setting is 00000000 and the summer setting is 01000000.

If the MS receives a non-integer value in the SCTS, it shall assume that the digit is set to 0 but shall store the entire field exactly as received.

If the local time zone has been adjusted for Daylight Saving Time, the network shall indicate this by including the IE Network Daylight Saving Time.

3GPP TS 22.042 sub clause 4

3GPP TS 23.040 sub clause 9.2.3.11

3GPP TS 24.008 sub clause 9.4.19.4

12.2.1.13.3 Test purpose

To verify that a UE supporting any of the NITZ Time related feature (Local Time Zone, Universal Time and DST IE (and thus GMM Information) is able to handle them properly.

12.2.1.13.4 Method of test

Related ICS/IXIT statements

- Switch on off button Yes/No
- Automatic GPRS attach procedure at switch on or power on Yes/No
- Use of NITZ DST Yes/No
- Use of NITZ Universal Time for PLMN Yes/No
- Use of NITZ Local Time Zone for PLMN Yes/No

Initial conditions

System Simulator:

Two cells operating in network operation mode I, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).

User Equipment:

The UE is switched off with a valid USIM inserted.

Test procedure

Following the Idle update on Cell A, SS sends its local time and date (on GMT+1, Winter Time) using the GMM INFORMATION Message to the UE. The test operator verifies then the parameters and/or the time and date stored in the MS.

The UE is then moved to Cell B, and after a ROUTING AREA UPDATE procedure, the time is changed to “Summer Time” with the DST IE using a GMM INFORMATION Message. The test operator verifies then the parameters and/or the time and date stored in the UE and switches Off the UE

The UE is then moved to Cell A, and after a ROUTING AREA UPDATE procedure the Time Zone is then changed, no DST present (GMT+2, Winter Time), using GMM INFORMATION message. The operator verifies then the parameters and/or the time stored on the UE.

Expected sequence

	UE	SS		
1	UE			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non Suitable neighbour cell". The UE is powered up or switched on and initiates an attach (see PICS). The following messages are sent and shall be received on cell A
2	->		ATTACH REQUEST	
3	SS			The SS starts integrity protection.

Local Time Zone IE	46
Time Zone	80 - GMT+2 (8*15 minutes+ 0*15 minutes DST)

12.2.1.13.5 Test requirements

In step 6, 16 and 24 the UE populates the supported fields with the correct values.

12.2.1.14 NITZ / GMM/ NITZ Parameters Storage and Deletion

12.2.1.14.1 Definition

To check that the UE correctly stores and deletes NITZ parameters.

12.2.1.14.2 Conformance requirement

The feature Network Identities and Timezone shall make it possible for a serving PLMN to transfer its current identity, universal time, DST and LTZ to MSs, and for the MS to store and use this information. Each one of these elements is optional. The feature significantly enhances roaming as it enables the accurate indication of network identities that are either newer than the ME or have changed their name since the ME was manufactured or sold. Additionally time and timezone information can be utilised by MEs as desired.

When using the default character set (see 3GPP TS 23.038 [3]), the serving PLMN shall make both a "short" and a "long" name available to the MS. As an alternative or, in addition, to the default character set, the serving PLMN can make a name available in UCS2. The MS shall be free to choose one of these names depending upon its own characteristics and/or limitations, such as those of its display.

Switching off the MS should not cause the updated name of the network(s) to be deleted.

References

3GPP TS 22.042 sub clause 4 and 6.2

12.2.1.14.3 Test purpose

To verify that a UE supporting any of the NITZ Name related feature (Short or Full PLMN name and thus GMM Information) is able to handle the names properly and does not erase the PLMN name sent using NITZ procedure at switch off.

12.2.1.14.4 Method of test

Related ICS/IXIT statements

- Switch on off button Yes/No
- Automatic GPRS attach procedure at switch on or power on Yes/No
- Use of NITZ Full name for PLMN Yes/No
- Use of NITZ Short name for PLMN Yes/No

Initial conditions

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE is switched off with a valid USIM inserted.

Test procedure

Following the GPRS attachment, SS sends a Short and a Full Name for the PLMN using the GMM INFORMATION Message to the UE. The operator verifies then the parameters stored in the UE.

The UE is then switched Off. The UE is re-attached after switching on, and the operator verifies then that the names are still stored/used in the MS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is powered up or switched on and initiates an attach (see PICS). The following messages are sent and shall be received on cell A
2	->		ATTACH REQUEST	
3	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = Attach type in step 2 Mobile identity = P-TMSI-2 P-TMSI-2 signature Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
6	<-		GMM INFORMATION	Full Name for Network and Short Name for Network IE are included : “NITZDeletionPLMN” for Full Name “NITZPLMN” for Short Name See specific message content
7	UE			**Operator Action:** Verify that the names are stored and handled correctly according to Specific PICS Statements: “NITZDeletionPLMN” for Full name, “NITZPLMN” for Short name
8	UE			The UE is switched off or power is removed (see PICS).
9	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, combined GPRS / IMSI detach'
10	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
11	UE			The UE is powered up or switched on and initiates an attach (see ICS).
12	->		ATTACH REQUEST	
13	SS			The SS starts integrity protection.
14	<-		ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Attach result = Attach type in step 12
15	SS			The SS releases the RRC connection
16	UE			**Operator Action:** Verify that the same names are still stored and handled correctly according to Specific PICS Statements: “NITZDeletionPLMN” for Full name, “NITZPLMN” for Short name

Specific message contents:

12.2.1.15.3 Test purpose

To verify that a UE supporting NITZ (any of the Fields) is able to handle both MM INFORMATION and GMM INFORMATION messages and those parameters set in the latest message override the previous ones.

12.2.1.15.4 Method of test

Related ICS/IXIT statements

- Switch on off button Yes/No

- Automatic GPRS attach procedure at switch on or power on Yes/No
- Use of NITZ DST Yes/No
- Use of NITZ Universal Time for PLMN Yes/No
- Use of NITZ Local Time Zone for PLMN Yes/No
- Use of NITZ Full name for PLMN Yes/No
- Use of NITZ Short name for PLMN Yes/No

Initial conditions

System Simulator:

Two cells operating in network operation mode I, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).

User Equipment:

The UE is switched off with a valid USIM inserted.

Test procedure

Following its GPRS Attachment procedure, the UE receives from SS, through the GMM INFORMATION a complete set of NITZ parameters (PLMN long name, short name, and Universal time with local time adjustment). The operator verifies then the names used and the time and date stored in the UE (according to specific PICS Statements).

The UE is then paged on its paging group with its IMSI. SS verifies that the UE sends a PAGING RESPONSE. SS sends back a MM INFORMATION message changing the NITZ PLMN names (short and full names) and the local time information.

The operator verifies then that the new NITZ names are used and the time information changed (if supported).

The serving cell is then lowered and the UE triggers a ROUTING AREA UPDATE procedure on the second cell. Following this procedure, SS sends some new NITZ PLMN names (full and short) using the GMM INFORMATION message.

The operator verifies then that the new NITZ names are used, if supported, and, if possible, that the time information is not changed.

Expected sequence

	UE	SS		
1	UE			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non Suitable neighbour cell". 12.2.1.16 PS attach / EAB active

12.2.1.16.1 Definition

Test to verify that the UE does not perform PS attach if the network broadcast EAB and EAB is enabled in the UE.

12.2.1.16.2 Conformance requirement

- For generic location updating, GPRS attach and routing area updating procedures the mobile station shall evaluate the control information for:
  - common access control (as specified in 3GPP TS 44.018 [84], 3GPP TS 44.060 [76], and 3GPP TS 25.331 [23c]);
  - domain specific access control (as specified in 3GPP TS 44.018 [84] and 3GPP TS 25.331 [23c]);
  - specific control information for location registration (as specified in 3GPP TS 25.331 [23c]; see "Paging Permission with Access Control"); and
  - EAB as specified for A/Gb mode in 3GPP TS 44.018 [84], and for Iu mode in 3GPP TS 25.331 [23c].

References

TS 24.008, 4.1.1.5

12.2.1.16.3 Test purpose

To verify that the UE does not perform PS attach if the network broadcast EAB and EAB is enabled in the UE

12.2.1.16.4 Method of test

Initial conditions:

- System Simulator:
  - One cell operating in network operation mode II.
  - The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

- User Equipment:
  - The UE has a valid IMSI.
  - The UE has been registered in the CS domain.
  - An access class x (0-9) is arbitrarily chosen. The USIM is programmed with this access class x.
  - The UE is equipped with a USIM containing values shown in Table 12.2.1.16–1.

Table 12.2.1.16-1: USIM Configuration

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"ExtendedAccessBarring is set to 1 which indicate the extended access barring is applied for the UE" as defined in TS 24.368, clause 5.6.

Related ICS/IXIT statement(s)

- Support of PS service Yes/No
- UE operation mode A Yes/No
- UE operation mode C Yes/No
- Switch off on button Yes/No
- Automatic PS attach procedure at switch on or power on Yes/No

Test Procedure

The SS indicates access class x barred in EAB information.

The UE is powered up or switched on.

UE will not initiate a PS attaché procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS set class x barred in EAB information. SS transmits system information, with IE "EAB Parameters For All" in SIB21. SIB_REP of SIB21 is 5.12s and access class x is present in IE “common EAB information”.
2	UE			The UE is set to attach to the PS services only (see ICS).
3	UE			The UE is powered up or switched on.
4	UE			The UE shall not initiate a PS attach procedure as access class x is barred. (SS waits 30 seconds).
5		SS		SS modifies system information and stops transmitting SYSTEM INFORMATION BLOCK TYPE 21.
6	UE			The UE shall transmit a RRC CONNECTION REQUESTmessage on cell B to initiate a PS attach procedure. And the RRC Connection is established..
7	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
8		<-	AUTHENTICATION AND CIPHERING REQUEST	
9		->	AUTHENTICATION AND CIPHERING RESPONSE	
10		SS		The SS starts integrity protection.
11		<-	ATTACH ACCEPT	
12		->	ATTACH COMPLETE	
13		SS		The SS releases the RRC connection.

Specific message contents

None.

12.2.1.16.5 Test requirement

At step 4, The UE shall not initiate a PS attach procedure as access class x is barred in EAB information.

At step 6, The UE shall transmit a RRC CONNECTION REQUESTmessage on cell B to initiate a PS attach procedure.

12.2.2 Combined PS attach

12.2.2.1 Combined PS attach / PS and non-PS attach accepted

12.2.2.1.1 Definition

12.2.2.1.2 Conformance requirement

1) If the network accepts the combined PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.

2) If the network accepts the combined PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.

3) If the network accepts the combined PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the previously used P-TMSI, the UE shall continue communication with the previously used P-TMSI.

4) If the network accepts the combined PS attach procedure and determines that IMSI shall be used in CS operations, the UE shall continue communication with the IMSI for CS operations.

5) If the network accepts the combined PS attach procedure and determines that a TMSI shall be used in CS operations, the UE shall continue communication with the TMSI for CS operations.

Reference

3GPP TS 24.008 clause 4.7.3.2.

12.2.2.1.3 Test purpose

To test the behaviour of the UE if the network accepts the PS attach procedure.

The following cases are identified:

1) P-TMSI / P-TMSI signature is allocated;
2) P-TMSI / P-TMSI signature is reallocated;
3) Old P-TMSI / P-TMSI signature is not changed;
4) Mobile terminating CS call is allowed with IMSI;
5) Mobile terminating CS call is allowed with TMSI.

12.2.2.1.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I. ATT flag is set to 0.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
UE supports CS call establishment Yes/No

Test procedure

1) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI. For CS calls, the IMSI is used.
2) The UE is CS paged in order to verify that the IMSI is used for CS calls.
3) The UE is PS paged in order to verify that the new P-TMSI is used for PS services.
4) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS allocates a new P-TMSI and returns ATTACH ACCEPT message with the new P-TMSI and a new TMSI. The UE acknowledge the P-TMSI and the TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI. For CS calls, the new TMSI is used. The UE is CS paged in order to verify that the new TMSI is used for CS services.
5) The UE is PS paged in order to verify that the new P-TMSI is used for PS services. The UE will not answer signalling addressed to the old P-TMSI.
6) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS accepts the P-TMSI and returns ATTACH ACCEPT message without any P-TMSI. Further communication UE - SS is performed by the previously used P-TMSI.
7) The UE is PS paged in order to verify that the previously used P-TMSI is used for PS services.

12.2.2.1.5 Test requirements

At step 3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

Case 1) SS accept the combined PS attach procedure (signalled by an IMSI) and allocates a P-TMSI.

At step5, UE shall

- send the ATTACH COMPLETE message.

At step10, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step14, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

Case 2) SS accepts the combined PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI and TMSI.

At step20, UE shall:

- send the ATTACH COMPLETE message.

At step26, when the UE receives the paging message for CS domain with Mobile identity = TMSI, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step30, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

Case 3) SS accepts the combined PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the previously used P-TMSI.

At step39, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.2.2 Combined PS attach / PS only attach accepted

12.2.2.2.1 Definition

12.2.2.2.2 Conformance requirement

1) If the network accepts the combined PS attach procedure, but GMM cause code 'IMSI unknown in HLR' is sent to the UE the User Equipment shall delete the stored TMSI, LAI and CKSN. The User Equipment shall consider USIM invalid for non-PS services until power is switched off or USIM is removed.

2) If the network accepts the combined PS attach procedure, but GMM cause code 'MSC temporarily not reachable' or 'Network failure' is sent to the UE, an UE operation mode A UE may perform an MM IMSI attach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.2.

12.2.2.2.3 Test purpose

Test purpose 1

To test the behaviour of the UE if the network accepts the PS attach procedure with indication PS only, GMM cause 'IMSI unknown in HLR'.

Test purpose 2

To test the behaviour of the UE which does not support an automatic MM IMSI attach if the network accepts the PS attach procedure with indication PS only, GMM cause 'MSC temporarily not reachable' or 'Network failure'.

Test purpose 3

To test the behaviour of the UE which supports an automatic MM IMSI attach if the network accepts the PS attach procedure with indication PS only, GMM cause 'MSC temporarily not reachable' or 'Network failure'.

12.2.2.2.4 Method of test

Proc 1: Test procedure 1

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. GMM cause 'IMSI unknown in HLR' is indicated from SS. Further communication UE - SS is performed by the P-TMSI. CS services are not possible.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A.
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity =IMSI TMSI status = no valid TMSI available
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature GMM cause = 'IMSI unknown in HLR' Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
6	<-		PAGING TYPE1	Mobile identity = IMSI Paging order is for CS services.
7	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.

Proc 2: Test procedure 2

Initial condition

System Simulator:

One cell operating in network operation mode I. T3212 and T3302 is set to 6 minutes.

User Equipment:

The UE has a valid TMSI, P-TMSI and RAI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE sends an ATTACH REQUEST message. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. GMM cause 'MSC temporarily not reachable' or 'Network failure' is indicated from SS. The cause code is arbitrarily chosen. The UE sends a ROUTING AREA UPDATE REQUEST message. The SS returns a ROUTING AREA UPDATE ACCEPT message. GMM cause 'MSC temporarily not reachable' or 'Network failure' is indicated from SS. The cause code is arbitrarily chosen. The ROUTING AREA UPDATE procedure is repeated four times. An UE operation mode A UE may then perform an MM IMSI attach procedure (according to the ICS statement). Further communication UE - SS is performed by the P-TMSI. The existence of a signalling channel is verified by a request for mobile identity.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS

12.2.2.2.5 Test requirements

Test requirements for Test porpose1

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step7, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

Test requirements for Test porpose2

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step6, 8, 10 and 13, when the routing area updating attempt counter is less than 5 and the stored RAI is equal to the RAI of the current serving cell, UE shall:

- perform the combined routing area update procedure indicating "combined RA/LA updating with IMSI attach".

Test requirements for Test porpose3

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step5, 7, 9 and 11, when the routing area updating attempt counter is less than 5 and the stored RAI is equal to the RAI of the current serving cell, UE shall:

- perform the combined routing area update procedure indicating "combined RA/LA updating with IMSI attach".

At step16, UE shall:

- perform MM location updating procedure.

At step21, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

12.2.2.3 Combined PS attach / PS attach while IMSI attach

12.2.2.3.1 Definition

12.2.2.3.2 Conformance requirement

If the PS UE is already attached for non-PS services by the MM specific attach procedure, but wants to perform an attach for PS services, the combined PS attach procedure is performed.

Reference

3GPP TS 24.008 clause 4.7.3.2.

12.2.2.3.3 Test purpose

To test the behaviour of the UE if PS attach performed while IMSI attached.

12.2.2.3.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I. ATT flag is set.

User Equipment:

The UE has a valid TMSI-1, P-TMSI-1 and RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE is forced to register for CS services but not to PS services. The SS verifies that the UE does not respond to paging messages for PS domain. Then the UE is triggered to perform the PS attach procedure and the SS verifies that it responds to PS paging messages.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS) and configured not to perform an automatic PS attach at switch on.
2	UE			The UE is powered up or switched on. No PS attach is performed (see ICS).
3			Registration on CS	See TS 34.108 Location updating type = IMSI attach. The SS allocates TMSI-1
4	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
5	UE			No response from the UE to the request. This is checked for 10 seconds.
6	UE			The UE is triggered to perform a PS attach.
7	->		ATTACH REQUEST	Attach type = 'GPRS attach while IMSI attached' or 'Combined GPRS/IMSI attach' Mobile identity =P-TMSI-1 Old Routing area identity = RAI-1
7a	<-		AUTHENTICATION AND CIPHERING REQUEST	
7b	->		AUTHENTICATION AND CIPHERING RESPONSE	
7c	SS			The SS starts integrity protection.
8	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' No new mobile identity assigned. TMSI and P-TMSI not included P-TMSI-2 signature Routing area identity = RAI-1
9	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
10	->		RRC CONNECTION REQUEST	
11	<-		RRC CONNECTION SETUP	
12	->		RRC CONNECTION SETUP COMPLETE	
13	->		SERVICE REQUEST	service type = "paging response"
14	<-		RRC CONNECTION RELEASE	
15	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

12.2.2.3.5 Test requirements

UE is already attached for non-PS service with the MM specific attach procedure.

At step5, UE shall:

- not respond to the paging message for PS domain.

At step7, when the UE is requested to attach for PS services, UE shall:

- perform the combined PS attach procedure.

At step13, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.2.3a Combined PS attach / NMO-I enabled in UE

12.2.2.3a.1 Definition

12.2.2.3a.2 Conformance requirement

1) The network operation mode (mode I, II, or III) shall be indicated as system information to MSs. Additional system information can indicate that MSs configured to use the extended NMO I system information (see TS 24.368 [111]) shall use NMO I, regardless of what NMO is indicated by system information for other MSs. If this additional system information is absent, MSs configured to use the extended NMO I system information shall use the system information that represents the network operation mode for other MSs. From these indications, the MS determines which mode applies to it. That mode shall be used when using the procedures described in other clauses of this specification.

2) If the parameter "NMO_I_Behaviour" in the NAS configuration Management Object or USIM is set to the value of "1", the bit 2 "NMO I" of system information is applied.

3) If the network accepts the combined PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.

Reference

3GPP TS 24.008 clauses 4.7.3.2 and 4.1.1.4.2. 3GPP TS 23.060 clause 5.3.13.2

12.2.2.3a.3 Test purpose

To verify that if "Network mode of operation I" is set in the UE, the UE performs a combined attach when the extended NMO-I system information is broadcast from the network.

12.2.2.3a.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II. ATT flag is set to 0.

The SIB1 IE "CN domain specific GSM-MAP NAS system information" for the PS Domain has the bit in the “NMO I, Network Mode of Operation I” set to “1”.

User Equipment:

The UE has a valid IMSI.

The UE has the parameter "NMO_I_Behaviour" set to “1”.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NMO I, Network Mode of Operation I" indication is used as defined in TS 24.368, clause 5.6.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
UE supports CS call establishment Yes/No

Test procedure

1) The UE reads the SIB1 IE "CN domain specific GSM-MAP NAS system information" and uses the value of the “NMO I, Network Mode of Operation I” bit.

2) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE - SS is performed by the new P-TMSI. For CS calls, the IMSI is used.

2) The UE is CS paged in order to verify that the IMSI is used for CS calls.

3) The UE is PS paged in order to verify that the new P-TMSI is used for PS services.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	-->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity =IMSI TMSI status = no valid TMSI available
5	<--		AUTHENTICATION AND CIPHERING REQUEST	
6	-->		AUTHENTICATION AND CIPHERING RESPONSE	
7	SS			The SS starts integrity protection.
8	<--		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity =IMSI Routing area identity = RAI-1
9	-->		ATTACH COMPLETE	
10	SS			The SS releases the RRC connection and waits 5s to allow the UE to read system information.
11	<--		PAGING TYPE1	Mobile identity = IMSI Paging order is for CS services. Paging cause = "Terminating conversational call [UE supports CS call establishment] or Terminating Low Priority Signalling"
12	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating conversational call" or “Low priority signalling”.
13	-->		PAGING RESPONSE	Mobile identity = IMSI
14	SS			The SS releases the RRC connection and waits 5s to allow the UE to read system information.
15	<--		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging for PS services Paging cause = "Terminating interactive call"
16	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating interactive call".
17	-->		SERVICE REQUEST	service type = "paging response"
18	SS			The SS releases the RRC connection

Specific message contents

None.

12.2.2.3a.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step 9, UE shall

- send the ATTACH COMPLETE message.

At step13, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step17, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.2.3b

12.2.2.3c Combined PS attach / congestion / GPRS services only

12.2.2.3c.1 Definition

12.2.2.3c.2 Conformance requirement

22 (Congestion)

The MS shall change to state GMM-REGISTERED.ATTEMPTING-TO-UPDATE-MM, shall stop timer T3310 if still running, and shall enter state MM-IDLE. The MS shall set the routing area updating attempt counter to 5 and shall start the timer T3302.

Reference

3GPP TS 24.008 clause 4.7.3.2.3.2.

12.2.2.3c.3 Test purpose

To verify that when the MS receives ATTACH ACCEPT with GMM cause congestion then the MS stops combined attach procedure, starts timer T3302 and initiates the combined attach procedure again when Timer T3302 expires.

12.2.2.3c.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I. ATT flag is set to 0.

User Equipment:

The UE has a valid TMSI-1, P-TMSI-1 and RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

1) UE initiate a combined attach procedure, and receive a Attach Accept with Attach result = ' GPRS only attached ' and GMM cause= 'congestion'.

2) After T3302 expired, the UE initiate a combined attach procedure.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".

15	->		AUTHENTICATION AND CIPHERING RESPONSE	
16	SS			The SS starts integrity protection.
17	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity =IMSI Routing area identity = RAI-1
18	->		ATTACH COMPLETE	
19	SS			The SS releases the RRC connection.

Specific message contents

None.

12.2.2.3c.5 Test requirements

At step 12, when the timer T3302 is expired, UE shall:

- Initiate the combine attach procedure with Attach type = 'Combined GPRS/IMSI attach'.

12.2.2.4 Combined PS attach / rejected / IMSI invalid / illegal ME

12.2.2.4.1 Definition

12.2.2.4.2 Conformance requirement

1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall consider USIM invalid for PS and non-PS services until power is switched off or USIM is removed.

2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall delete the stored TMSI, LAI, CSKN, RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Reference

3GPP TS 24.008 clause 4.7.3.2

12.2.2.4.3 Test purpose

To test the behaviour of the UE if the network rejects the combined PS attach procedure of the UE with the cause 'Illegal ME'.

12.2.2.4.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC1(RAI-2).
All three cells are operating in network operation mode I.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid TMSI-1, P-TMSI-1 and RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
USIM removal possible without powering down Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'Illegal ME'. The SS checks that the UE does not perform PS attach in the same or another PLMN. CS services are not possible as the USIM is blocked for CS services. PS services are not possible as the USIM is blocked for PS services.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The following messages are sent and shall be received on cell A. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' or 'GPRS attach while IMSI attached' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1 TMSI status = valid TMSI available or IE is omitted
5	<-		ATTACH REJECT	GMM cause 'Illegal ME'.
6	UE		PAGING TYPE1	Mobile identity = TMSI-1Paging order is for CS services.
7	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.
8	<-		PAGING TYPE1	Mobile identity = IMSI Paging order is for CS services
9	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.
10	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
11	UE			No response from the UE to the request. This is checked for 10 seconds.
12		SS		The following messages are sent and shall be received on cell B. Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
13	UE			Cell B is preferred by the UE.
14	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
15	<-		PAGING TYPE1	Mobile identity = IMSI Paging order is for CS services
16	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.
17		SS		The following messages are sent and shall be received on cell C. Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Serving cell". (see note)
18	UE			Cell C is preferred by the UE.

12.2.2.6.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step6, if the UE is PS class A, UE shall:

- perform the MM IMSI attach procedure.

At step11, 22 and 36, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step26, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step29, UE shall:

- perform the PS attach procedure.

12.2.2.7a Combined PS attach / rejected / location area not allowed

12.2.2.7a.1 Definition

12.2.2.7a.2 Conformance requirement

1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:

   1.1 not perform combined PS attach when in the same location area.

   1.2 delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.

   1.3 store the LA in the 'forbidden location areas for regional provision of service'.

   1.4 not delete the list of "equivalent PLMNs".

   1.5 perform a cell selection.

2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:

   2.1 perform combined PS attach when a new location area is entered.

   2.2 delete the list of forbidden LAs when power is switched off.

Reference

3GPP TS 24.008 clauses 4.7.3.2.

12.2.2.7a.3 Test purpose

To test the behaviour of the UE if the network rejects the combined PS attach procedure with the cause 'Location Area not allowed'.

To test that the UE deletes the list of forbidden LAs when power is switched off.

12.2.2.7a.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6).
All cells are operating in network operation mode I.

The PLMN contains Cell C is equivalent to the PLMN that contains Cell A.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid TMSI, P-TMSI and RAI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
PS attach attempted automatically by outstanding request Yes/No

Test procedure

The SS rejects a combined PS attach with the cause value 'Location Area not allowed'. The SS checks that the UE does not perform combined PS attach while in the location area, performs PS attach when a new location area is entered and

deletes the list of forbidden LAs when switched off. CS services are not possible unless an IMSI attach procedure is performed.

Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a		->	ATTACH REQUEST	Attach type = 'Combined GPRS/ IMSI attach' or "GPRS Attach while IMSI attached" Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
3b		<-	ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity = TMSI-1 Routing area identity = RAI-1 Equivalent PLMNs = MCC2,MNC1
3c		<-	DETACH REQUEST	Detach type = re-attach required
3d		->	DETACH ACCEPT	
4		->	ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' or "GPRS Attach while IMSI attached" Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
5		<-	ATTACH REJECT	GMM cause 'Location Area not allowed'
6	UE			No LOCATION UPDATING REQ with type 'IMSI attach' is sent to the SS (SS waits 30 seconds).
7		<-	PAGING TYPE1	Mobile identity = TMSI Paging order is for CS services.
8	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.
9		<-	PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
10		->		No response from the UE to the request. This is checked for 10 seconds
				The following messages are sent and shall be received on cell B.
11		SS		Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
11a	UE			The UE performs cell selection.
12	UE			Cell B is preferred by the UE.
13	UE			No ATTACH REQUEST or LOCATION UPDATING REQ is sent to SS (SS waits 60 seconds)
15		<-	PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
16	UE			No response from the UE to the request. This is checked for 10seconds.
17	UE			The UE initiates an attach by MMI or AT command.
18				No attach is performed by the UE. This is checked for 10 seconds.
				The following messages are sent and shall be received on cell C.

Step	Direction		Message	Comments
	UE	SS		
19		SS		Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Serving cell". (see note)
19a	UE			The UE performs cell selection
20	UE			Cell C is preferred by the UE. Step 20a and 20b are only performed by an UE which will not initiate a PS attach automatically (see ICS)
20a conditional	UE		Registration on CS	Parameter Mobile identity is IMSI. See TS 34.108
20b conditional	UE			UE initiates an attach via MMI or AT commands.
21	->		ATTACH REQUEST	Attach type = 'Combined GPRS/ IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
21a	<-		AUTHENTICATION AND CIPHERING REQUEST	
21b	->		AUTHENTICATION AND CIPHERING RESPONSE	
21c	SS			The SS starts integrity protection.

12.2.2.7a.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Location Area not allowed', UE shall:

- not initiate MM location updating procedure.

At step8, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step10 and 16, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step13 and 18, when the UE is in the same location area, UE shall:

- not perform PS attach procedure.

At step21, when the UE enters a new location area, UE shall

- perform the combined PS attach procedure.

At step28 and 52, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step35 and 59, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step45, when the UE is powered up or switched on, UE shall:

- perform the combined PS attach procedure.

12.2.2.7b Combined PS attach / rejected / No Suitable Cells In Location Area

12.2.2.7b.1 Definition

12.2.2.7b.2 Conformance requirement

1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

   1.1 not perform combined PS attach when in the same location area.

   1.2 delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.

   1.3 store the LA in the 'forbidden location areas for roaming'.

   1.4 not delete the list of "equivalent PLMNs".

2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

   2.1 search for a suitable cell in a different location area on the same PLMN.

Reference

3GPP TS 24.008 clauses 4.7.3.2.

12.2.2.7b.3 Test purpose

To test the behaviour of the UE if the network rejects the combined PS attach procedure with the cause 'No Suitable Cells In Location Area'.

12.2.2.7b.4 Method of test

Initial condition

System Simulator:

Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has valid TMSI, P-TMSI and RAI

The PLMN contains Cell C is equivalent to the PLMN that contains Cell A.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a combined PS attach with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall search for a suitable cell in a different location area on the same PLMN and shall perform combined PS attach procedure in that cell

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following message are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity =P-TMSI-1 Old Routing area identity = RAI-1

17	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature MS identity = TMSI-2 Routing area identity = RAI-3 Equivalent PLMNs = MCC2,MNC1
18	->		ATTACH COMPLETE	
NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions for signalling test cases only" subclauses.				

Specific message contents

None.

12.2.2.7b.5 Test requirements

At step4 and 9, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected sequence.

At step13, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- initiate the combined PS attach procedure.

12.2.2.7c Combined PS attach / rejected / Roaming not allowed in this location area

12.2.2.7c.1 Definition

12.2.2.7c.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'Roaming not allowed in this location area' the User Equipment shall:

   1.1 delete any RAI, P-TMSI, P-TMSI signature and PS ciphering key sequence number.

   1.2 set the PS update status to GU3 ROAMING NOT ALLOWED.

   1.3 delete any TMSI, LAI and ciphering key sequence number.

   1.4 store the LAI in the list of "forbidden location areas for roaming".

   1.5 perform a PLMN selection.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.2.7c.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'Roaming not allowed in this location area'.

12.2.2.7c.4 Method of test

Initial condition

System Simulator:

Three cells cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4) , cell C in MCC1/MNC1/LAC2/RAC2 (RAI-12)
All three cells are operating in network operation mode I.

User Equipment:

The UE has valid TMSI, P-TMSI and RAI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No (only if mode C not supported)

12.2.2.7c.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, UE shall:

- not perform MM IMSI attach and PS attach.

At step8, UE shall:

- not respond to paging for CS domain service.

At step10, UE shall:

- not respond to paging for PS domain service.

At step15, UE shall:

- perform PS attach procedure.

At step20, UE shall:

- perform MM IMSI attach procedure.

12.2.2.7d Combined PS attach / rejected / PS services not allowed in this PLMN

12.2.2.7d.1 Definition

12.2.2.7d.2 Conformance requirement

1) If the network rejects a PS attach procedure from the User Equipment with the cause 'GPRS services not allowed in this PLMN' the User Equipment shall:

   1.1 delete any RAI, P-TMSI, P-TMSI signature and PS ciphering key sequence number.

1.2 set the PS update status to GU3 ROAMING NOT ALLOWED.

1.3 store the PLMN identity in the "forbidden PLMNs for PS service" list.

2) If the UE is in UE operation mode A the User Equipment shall:

2.1 perform IMSI attach for non-GPRS services by use of the MM IMSI attach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.1.

12.2.2.7d.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'GPRS services not allowed in this PLMN'.

12.2.2.7d.4 Method of test

Initial condition

System Simulator:

Two cells cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2). All two cells are operating in network operation mode I.

The PLMN contains Cell B is equivalent to the PLMN that contains Cell A.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1, RAI-1.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a PS attach with the cause value 'GPRS services not allowed in this PLMN'. The SS checks that the UE does not perform PS attach and performs an IMSI attach for non-PS services by use of the MM IMSI attach procedure when in the same cell.

After the cell is changed to equivalent PLMN, the UE shall perform PS attach procedure.

Expected Sequence

Step	Direction		Message	Comments

12.2.2.7d.5 Test requirements

At step5 and 10, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step4 and 9, UE shall:

- perform MM IMSI attach.

At step12, UE shall:

- not perform PS attach procedure.

At step14, UE shall:

- perform PS attach procedure.

12.2.2.7e Combined PS attach / rejected / Not authorized for this CSG

12.2.2.7e.1 Definition

12.2.2.7e.2 Conformance requirement

(1) If the network rejects a combined PS attach procedure from the User Equipment with the cause ' Not authorized for this CSG ', the User Equipment shall:

1.1 not perform PS attach when no suitable cell is entered.

1.2 delete the CSG ID of the cell, where the UE has sent the ATTACH REQUEST message, from the allowed CSG ID list stored in the UE.

1.3 not delete the list of "equivalent PLMNs".

1.4 perform PS attach when a new suitable cell is entered.

Reference

3GPP TS 24.008 clause 4.7.3.2

12.2.2.7e.3 Test purpose

To verify UE to remove the CSG ID from the Allowed CSG list and search for a suitable cell in the same PLMN when #25 is received.

12.2.2.7e.4 Method of test

Initial conditions:

System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1)/CSG 1, cell B in MCC1/MNC1/LAC1/RAC2 (RAI-2) /

CSG 2.

Both Cell A and Cell B belong to PLMN 1.

Both cells are operating in network operation mode I.

User Equipment:

The UE has a valid P-TMSI-1, RAI-1.

UE Allowed CSG List contains CSG1 and CSG2.

UE is registered on PLMN 1.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EFACSGL	PLMN 1	CSG 1,CSG 2

The UE is previously registered on PLMN1, before switched off.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a combined PS attach with the cause value ' Not authorized for this CSG '. The SS checks that the UE shall search for a suitable cell on the same PLMN and shall perform combined PS attach procedure in that cell.

Expected Sequence

9	<-		DETACH REQUEST	Detach type = re-attach required
10	->		DETACH ACCEPT	
11	SS			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". The SS configures power level of each Cell as follows. Cell A > Cell B
12	->		ATTACH REQUEST	Attach type =' Combined GPRS/IMSI attach ' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
12A	<--		AUTHENTICATION AND CIPHERING REQUEST	
12B	-->		AUTHENTICATION AND CIPHERING RESPONSE	
12C				The SS starts Integrity Protection
13	<-		ATTACH REJECT	GMM cause = ' Not authorized for this CSG '
14	SS			The SS initiates the RRC connection release. The following message are sent and shall be received on cell B.
15	UE			The UE initiates an attach automatically, by MMI or by AT command.
16	->		ATTACH REQUEST	Attach type =' Combined GPRS/IMSI attach ' Mobile identity = P-TMSI-1
17	<-		AUTHENTICATION AND CIPHERING REQUEST	
18	->		AUTHENTICATION AND CIPHERING RESPONSE	
19	SS			The SS starts integrity protection.
20	<-		ATTACH ACCEPT	Attach result ='Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
21	->		ATTACH COMPLETE	
22	SS			The SS releases the RRC connection.
23	UE			The UE is switched Off or Power is removed. (See ICS)
24	SS			The SS checks that the IE “Establishment Cause” in any received RRC CONNECTION REQUEST is set to “Detach” (Message not sent if power is removed).

25	-->	DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
26			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non Suitable neighbour cell". The SS configures power level of each Cell as follows. Cell A > Cell B
27			The UE is powered up or switched ON.
28			SS Checks that the does not initiate a RRC CONNECTION REQ on Cell A
NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS 34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

12.2.2.7e.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step13, when the UE receives ATTACH REJECT, UE shall:

- delete the CSG1 in the CSG List..
- UE Allowed CSG List shall contain only CSG2.

At step16, when the UE camps on a suitable cell in on the same PLMN, UE shall:

- perform the PS attach procedure.

At step20, after the UE receives ATTACH ACCEPT:

- UE Allowed CSG List shall contain only CSG2.

12.2.2.8 Combined PS attach / abnormal cases / attempt counter check / miscellaneous reject causes

12.2.2.8.1 Definition

12.2.2.8.2 Conformance requirement

1) When a combined PS attach procedure is rejected with the attempt counter less than five, the User Equipment shall repeat the combined PS attach procedure after T3311 timeout.
2) When a combined PS attach procedure is rejected with the attempt counter five, the User Equipment shall delete the stored TMSI, LAI, CKSN, P-TMSI, P-TMSI signature, PS CKSN and RAI and start T3302.
3) When the T3302 expire, a new combined PS attach procedure shall be initiated.

GMM cause codes that can be selected are: 'IMSI unknown in HLR'4 'MS identity cannot be derived by the network' 'Network failure' 'Congestion' 'retry upon entry into a new cell' 'Semantically incorrect message' 'Invalid mandatory information' 'Message type non-existent or not implemented' 'Message type not compatible with the protocol state' 'Information element non-existent or not implemented' 'Conditional IE error' 'Message not compatible with the protocol state' 'Protocol error, unspecified'

Reference

3GPP TS 24.008 clause 4.7.3.2.

12.2.2.8.3 Test purpose

To test the behaviour of the UE with respect to the attempt counter.

12.2.2.8.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has a valid TMSI, P-TMSI and RAI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No Automatic PS attach procedure at switch on or power on Yes/No

Switch off on button Yes/No

Test procedure

The UE initiates a combined PS attach procedure (attempt counter zero).

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter one) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter two) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter three) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter four) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE shall not perform a new successful attach procedure after 15 seconds.

The UE initiates a combined PS attach procedure with attempt counter zero after T3302 expires without P-TMSI, P-TMSI signature, PS CKSN and RAI.

T3302; set to 10 minutes.

T3311; 15 seconds.

12.2.2.8.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the conditions described below.

Case1) A combined PS attach procedure is rejected with the attempt counter less than five

At step 5, 8, 11 and 14, when the timer T3311 timeout has occurred, UE shall:

- repeat the combined PS attach procedure.

Case2) A combined PS attach procedure is rejected with the attempt counter five

At step21, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

Case3) The T3302 expires

At step23, UE shall:

- re-initiate the new combined PS attach procedure.

At step30, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step34, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.2.9 Combined PS attach / abnormal cases / PS detach procedure collision

12.2.2.9.1 Definition

12.2.2.9.2 Conformance requirement

1) When a DETACH REQUEST message is received by the UE (any cause except re-attach) while waiting for an ATTACH ACCEPT message or ATTACH REJECT message, the UE shall terminate the combined PS attach procedure and continue with the combined PS detach procedure.

2) When a DETACH REQUEST message is received by the UE (cause re-attach) while waiting for an ATTACH ACCEPT message or ATTACH REJECT message, the UE shall ignore the combined PS detach procedure and continue with the combined PS attach procedure.

Reference

3GPP TS 24.008 clause 4.7.3.2.

12.2.2.9.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.2.2.9.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has valid TMSI, P-TMSI and RAI. UE is Idle Updated.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
Re-attach automatically when the network commands a detach with no cause value Yes/No

Test procedure

The UE initiates a combined PS attach procedure. The SS does not answer the combined PS attach procedure, but initiates a combined PS detach procedure (any cause except re-attach). The UE shall terminate the combined PS attach procedure and continue with the combined PS detach procedure.

The UE initiates a combined PS attach procedure. The SS does not answer the combined PS attach procedure, but initiates a combined PS detach procedure (cause re-attach). The UE shall ignore the combined PS detach procedure and continue with the combined PS attach. CS services are also possible.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1

Specific message contents

None.

12.2.2.9.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the Detach type described below.

Case1) Detach type is not re-attach

At step6, UE shall:

- respond to DETACH REQUEST message by sending DETACH ACCEPT message.

Case2) Detach type is re-attach

At step13, UE shall:

- ignore the PS detach procedure.

At step15, UE shall:

- send the ATTACH COMPLETE message.

At step20, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step24, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.2.2.10 Combined PS attach / abnormal cases / access barred due to paging permission with access control

12.2.2.10.1 Definition

This test case is applicable for Rel-8 or later UEs.

12.2.2.10.2 Conformance requirement

TS 24.008 4.1.1.5

- For location updating and routing area updating the mobile station shall evaluate the control information for common access control (as specified in 3GPP TS 44.018 [84], 3GPP TS 44.060 [76], and 3GPP TS 25.331 [23c]), domain specific access control (as specified in 3GPP TS 25.331 [23c]), and the specific control information for location registration (as specified in 3GPP TS 25.331 [23c]; see "Paging Permission with Access Control").

TS 24.008 4.7.3.1.5

a) Access barred because of access class control

The GPRS attach procedure shall not be started. The MS stays in the current serving cell and applies normal cell reselection process. The GPRS attach procedure is started as soon as possible, i.e. when access is granted or because of a cell change.

Reference

3GPP TS 24.008 clause 4.1.1.5, 4.7.3.1.5

12.2.2.10.3 Test purpose

Test purpose

To test the behaviour of the UE in case of paging permission with access control.

The following cases are identified:

1) To verify that, when a combined attach procedure is triggered and SIB3 indicates that the "Location/Registration Restriction Indicator" is set to "All" and all access classes in "Location/Registration Access Class Barred List" are set to barred, the UE does not attempt to make any attach procedure.

2) To verify that, when a combined attach procedure is triggered and SIB3 indicates that "Location/Registration Restriction Indicator" is set to "All" and restriction status is set to "no restriction", the UE performs a combined attach procedure.

12.2.2.10.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.
"Location/Registration Restriction Indicator " IE in SIB3 is set to "All".
All access classes in "Location/Registration Access Class Barred List " IE in SIB3 are set to barred.

User Equipment:

The UE is equipped with a USIM programmed with access class x arbitrarily chosen (0-9).
The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE is switched on. The UE shall not perform any attach procedure as SS indicates in SIB3 that "Location/Registration Restriction Indicator" is set to "All" and all access classes in the "Location/Registration Access Class Barred List " are set to barred.

The SS changes the restriction status in SIB3 to indicate no restriction. The UE is triggered to perform a combined attach procedure. The SS checks that UE performs a combined attach procedure.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1			Void	
2	UE			The UE is powered up or switched on and attempts to initiate an attach (see ICS).
3	UE			The SS checks for 120 seconds that the UE does not transmit any ATTACH REQUEST
4	SS			The SS change the restriction status in SIB3 to no restriction
5	UE			The UE is triggered to perform a combined attach procedure either automatically or manually (see ICS).
6	SS			The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
7	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
8	<-		AUTHENTICATION AND CIPHERING REQUEST	
9	->		AUTHENTICATION AND CIPHERING RESPONSE	
10	SS			The SS starts an integrity protection.
11	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-1 MS identity = TMSI-1
12	->		ATTACH COMPLETE	
13	SS			The SS releases the RRC connection.
Note 1: The UE shall not initiate any combined attach procedure as “Location/Registration Restriction Indicator” IE in SIB3 is set to “All” and all access classes in Location/Registration Access Class Barred List in SIB3 are set to barred.				

Specific message contents

None.

12.2.2.10.5 Test requirements

1) At step 3 the UE shall not transmit any ATTACH REQUEST message.

2) At step 7 the UE shall transmit an ATTACH REQUEST message.

12.3 PS detach procedure

12.3.1 UE initiated PS detach procedure

12.3.1.1 PS detach / power off / accepted

12.3.1.1.1 Definition

12.3.1.1.2 Conformance requirement

The UE detaches the IMSI for PS services if the UE is switched off.

Reference

3GPP TS 24.008 clause 4.7.4.1

12.3.1.1.3 Test purpose

To test the behaviour of the UE for the detach procedure.

12.3.1.1.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a PS attach procedure.

The UE sends a DETACH REQUEST message to the SS.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set o attach to the PS services only (see ICS). If that is not supported by the UE, goto step 8.
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
2a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
5a	SS			The SS releases the RRC connection.
6	UE			The UE is switched off (see ICS).
6a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Detach".
7	->		DETACH REQUEST	Detach type = 'power switched off, GPRS detach'
7a				The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
8	UE			The UE is set to attach to both the PS and non-PS services (see ICS) and the test is repeated from step 2 to step 7a.

Specific message contents

None.

12.3.1.1.5 Test requirements

At step 2a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step 6a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach".

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, when the UE is switched off, UE shall:

- send the DETACH REQUEST message to SS with the Detach type = 'power switched off, GPRS detach'.

12.3.1.2 PS detach / accepted

12.3.1.2.1 Definition

12.3.1.2.2 Conformance requirement

1) The GPRS detach procedure is initiated by the UE by sending a DETACH REQUEST message. The detach type information element may indicate "GPRS detach with switching off", "GPRS detach without switching off", "IMSI detach", "GPRS/IMSI detach with switching off" or "GPRS/IMSI detach without switching off".

   The UE shall include the P-TMSI in the DETACH REQUEST message. The UE shall also include a valid P-TMSI signature, if available.

2) Upon completion of the detach procedure, the used P-TMSI signature shall be deleted.

Reference

3GPP TS 24.008 clause 4.7.4.1.1

3GPP TS 24.008 clause 4.7.1.3

12.3.1.2.3 Test purpose

To test the behaviour of the UE for the detach procedure, including treatment of P-TMSI signature.

12.3.1.2.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No

12.3.1.2.5 Test requirements

At step 2a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step 6a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach".

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, UE shall:

- send the DETACH REQUEST message (without power off) to SS with mobile identity P-TMSI-1 and P-TMSI-1 signature.

At step10, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step 12, UE shall

- initiate ATTACH REQUEST message without P-TMSI signature IE.

At step 15, UE shall:

- send the DETACH REQUEST message (without power off) to SS with mobile identity P-TMSI-1 and without P-TMSI-1 signature.

12.3.1.3 PS detach / abnormal cases / attempt counter check / procedure timeout

12.3.1.3.1 Definition

12.3.1.3.2 Conformance requirement

1) When a T3321 timeout has occurred during a PS detach procedure with the attempt counter less than five, the User Equipment shall repeat the PS detach procedure.

2) When a T3321 timeout has occurred during a PS detach procedure with the attempt counter five, the User Equipment shall not repeat the procedure.

Reference

3GPP TS 24.008 clause 4.7.4.1.

12.3.1.3.3 Test purpose

To test the behaviour of the UE with respect to the attempt counter.

12.3.1.3.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a PS attach procedure.

The UE initiates a PS detach procedure (attempt counter zero). The SS does not answer with DETACH ACCEPT message before T3321 timeout.

The UE initiates a new PS detach procedure (attempt counter one) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.

The UE initiates a new PS detach procedure (attempt counter two) after T3321expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.

The UE initiates a new PS detach procedure (attempt counter three) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.

The UE initiates a new PS detach procedure (attempt counter four) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.

The UE initiates a new PS detach procedure with attempt counter five (after T3321expires). The SS does not answer with DETACH ACCEPT message before T3321 timeout.

At T3321 timeout in the UE, the UE then deletes the logical link since the retransmissions have been repeated four times.

The UE performs a new PS attach procedure.

T3321; 15 seconds.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 25.
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Attach result = 'GPRS only attached' Routing area identity = RAI-1
5	UE			The UE initiates a PS detach (without power off) by MMI or AT command.
6	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
7	SS			No response is given from the SS.
8	SS			The SS verifies that the time between the detach requests is 15 seconds
9	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
10	SS			No response is given from the SS.
11	SS			The SS verifies that the time between the detach requests is 15 seconds
12	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
13	SS			No response is given from the SS.
14	SS			The SS verifies that the time between the detach requests is 15 seconds
15	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
16	SS			No response is given from the SS.
17	SS			The SS verifies that the time between the detach requests is 15 seconds
18	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
19	SS			No response is given from the SS within 40 seconds and SS verifies that the UE will not send a DETACH REQUEST again.
20	UE			Initiate a PS attach
21	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
21a	<-		AUTHENTICATION AND CIPHERING REQUEST	
21b	->		AUTHENTICATION AND CIPHERING RESPONSE	
21c	SS			The SS starts integrity protection.
22	<-		ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Attach result = 'GPRS only attached' Routing area identity = RAI-1
23				UE is switched off or power is removed (see ICS)
24	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
24a	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.

Step	Direction		Message	Comments
	UE	SS		
25	UE			The UE is set in UE operation mode A (see ICS) and the test is repeated from step 2 to step 24.

Specific message contents

None.

12.3.1.3.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attaché procedure with the information elements specified in the above Expected Sequence.

At step9, 12, 15 and 18, when a T3321 expires with the attempt counter less than five, UE shall:

- initiate the new PS detach procedure.

At step19, when the attempt counter is greater than or equal to five, UE shall:

- not repeat the PS detach procedure.

At step20, UE shall:

- initiate the PS attaché procedure.

12.3.1.4 PS detach / abnormal cases / GMM common procedure collision

12.3.1.4.1 Definition

12.3.1.4.2 Conformance requirement

When any of the GMM common messages P-TMSI REALLOCATION COMMAND, GMM STATUS or GMM INFORMATION is received by the UE while waiting for a DETACH ACCEPT message with detach cause different from "power off", the UE shall ignore the GMM common message.

Reference

3GPP TS 24.008 clause 4.7.4.1.

12.3.1.4.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.3.1.4.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE).

User Equipment:

The UE has a valid IMSI.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The following test procedure is repeated for sequence counter k = 1,2,3:

The UE performs a PS attach.

The UE initiates a PS detach. The SS initiates a P-TMSI REALLOCATION COMMAND message (k=1), a GMM STATUS message (k=2) and a GMM INFORMATION message (k=3). The UE shall ignore the GMM common messages and continue with the PS detach procedure. The sending of the P-TMSI REALLOCATION COMMAND message (k = 1), the GMM STATUS message (k = 2), the GMM INFORMATION message (k = 3) and the DETACH ACCEPT message shall be completed within Timer T3321 -10%.

The SS signal to the UE, but no response is received, as the signalling link is disconnected.

Expected Sequence

The test sequence is repeated for k = 1 … 3

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode C (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
6	UE			The UE initiates a detach (without power off) by MMI or AT command.
7	->		DETACH REQUEST	Detach type = 'normal detach, GPRS detach'
8A (k=1)	SS			The SS sends a P-TMSI REALLOCATION COMMAND message
9A (k=1)	<-		P-TMSI REALLOCATION COMMAND	
10A (k=1)	UE			The UE ignores the message. This is verified for 10 seconds.
8B (k=2)	SS			The SS sends a GMM STATUS message
9B (k=2)	<-		GMM STATUS	
10B (k=2)	UE			The UE ignores the message. This is verified for 10 seconds.
8C (k=3)	SS			The SS sends a GMM INFORMATION message
9C (k=3)	<-		GMM INFORMATION	
10C (k=3)	UE			The UE ignores the message which is verified for 10 seconds or if GMM INFORMATION message not implemented, sends a GMM STATUS with GMM Cause 'Message type non-existent or not implemented'.
11	<-		DETACH ACCEPT	The SS responds to the DETACH REQUEST
12	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
13	UE			No response from the UE to the request. This is checked for 10 seconds.

Note: Steps 8x, 9x, 10x and 11 shall be completed within Timer T3321 -10%.

Specific message contents

None.

12.3.1.4.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step 10A, 10B, 10C and 13, when any of the GMM common messages P-TMSI REALLOCATION COMMAND, GMM STATUS or GMM INFORMATION is received by the UE while waiting for a DETACH ACCEPT message with detach cause different from "power off, UE shall:

- ignore any of the GMM common message.

12.3.1.5 PS detach / power off / accepted / PS/IMSI detach

12.3.1.5.1 Definition

12.3.1.5.2 Conformance requirement

The UE detach the IMSI for PS and non-PS services.

Reference

3GPP TS 24.008 clause 4.7.4.1.

12.3.1.5.3 Test purpose

To test the behaviour of the UE for the detach procedure.

12.3.1.5.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The UE sends a DETACH REQUEST message to the SS. The UE then deletes the logical link.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set to attach to both the PS and non-PS services (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).
2a	SS			SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
3	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.

12.3.1.7.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step10, after the detach procedure (Detach type = 'normal detach, IMSI detach') is completed, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step12, after the detach procedure (Detach type = 'normal detach, IMSI detach') is completed, UE shall:

- not respond to the paging message for CS.

At step21, after the routing area updating procedure (Update type = 'Combined RA/LA updating') is completed, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

12.3.1.8 PS detach / abnormal cases / change of cell into new routing area

12.3.1.8.1 Definition

12.3.1.8.2 Conformance requirement

When a change of cell into a new routing area is performed before DETACH ACCEPT message is received by the UE, the UE shall abort the PS detach procedure and re-initiate it after the routing area update procedure.

Reference

3GPP TS 24.008 clause 4.7.4.1.

12.3.1.8.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.3.1.8.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).
Both cells are operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
User requested combined PS and non-PS detached without powering off Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

Sufficient time is given for the UE to identify the neighbour cell before the UE is triggered to initiate a PS detach procedure. The DETACH ACCEPT message is delayed from the SS.

The UE performs a cell reselection to a cell in a new routing area and performs a routing area update procedure.

The UE shall re-initiate a PS detach procedure when the routing area update procedure is finished.

The UE deletes the logical link.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available

4c		SS		The SS starts integrity protection.
5	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity = TMSI-1 Routing area identity = RAI-1
6	->		ATTACH COMPLETE	
6a		SS		SS waits 30 sec.
7	UE			The UE initiates a PS detach (without power off) by MMI or AT command.
8	->		DETACH REQUEST	Detach type = 'normal detach, combined GPRS / IMSI detach'
9		SS		No response to the DETACH REQUEST message is given by the SS
				The following messages are sent and shall be received on cell B.
10		SS		Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note) Cell B is preferred by the UE.
11	UE			The UE performs a RA update in the new cell.
12	->		ROUTING AREA UPDATE REQUEST	Update type = 'Combined RA/LA updating' Old P-TMSI signature=P-TMSI-1 signature Old Routing area identity = RAI-1 TMSI status = valid TMSI available or IE omitted
13	<-		ROUTING AREA UPDATE ACCEPT	Update result = 'Combined RA/LA updated' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-4
14	->		ROUTING AREA UPDATE COMPLETE	
15	->		DETACH REQUEST	The detach is automatically re-attempted. Detach type = 'normal detach, combined GPRS / IMSI detach'
16	<-		DETACH ACCEPT	

NOTE: The definitions for "Non-Suitable cell", "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.

Specific message contents

None.

12.3.1.8.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step12, when a change of cell into a new routing area is performed before DETACH ACCEPT message is received by the UE, UE shall:

- abort a PS detach procedure.
- perform routing area updating procedure.

At step15, when the UE completes a routing area updating procedure, UE shall:

- re-initiate the PS detach procedure.

12.3.1.9 PS detach / abnormal cases / PS detach procedure collision

12.3.1.9.1 Definition

12.3.1.9.2 Conformance requirement

When a DETACH REQUEST is received by the UE while waiting for a DETACH ACCEPT message, the UE shall answer the network initiated GPRS detach procedure.

Reference

3GPP TS 24.008 clause 4.7.4.1.

12.3.1.9.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

12.3.1.9.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
User requested combined PS and non-PS detached without powering off Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The UE initiates a PS detach. The SS does not answer the detach procedure, but initiates a detach procedure (cause re-attach not required). The UE shall continue with the network initiated detach procedure.

The UE deletes the logical link.

PS and CS services are not possible.

Expected Sequence

7	->		DETACH REQUEST	Detach type = 'normal detach, combined GPRS / IMSI detach'
8	<-		DETACH REQUEST	Detach type = 're-attach not required'
9	->		DETACH ACCEPT	The UE answers the network initiated detach.
10	<-		DETACH ACCEPT	The SS answers the UE initiated detach.
11	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
12	UE			No response from the UE to the request. This is checked for 10 seconds.
13	<-		PAGING TYPE 1	Mobile identity = TMSI-1 Paging order is for CS services.
14	UE			The UE shall not initiate an RRC connection. This is checked during 3 seconds.

Specific message contents

None.

12.3.1.9.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE receives DETACH REQUEST message from SS before UE initiated GPRS detach procedure has been completed, UE shall:

- send the DETACH ACCEPT message to SS.

At step12, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step14, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

12.3.1.10 UE initiated detach/abnormal case/ Not authorized for this CSG

12.3.1.10.1 Definition

12.3.1.10.2 Conformance requirement

The following abnormal cases can be identified:

a) CSG ID of the CSG cell is not in the Allowed CSG list of the MS which sends the detach request

If the MS initiates a detach procedure in a CSG cell the CSG ID of which is not in the MS's Allowed CSG list and the detach procedure is not due to "switch off", the network shall initiate the detach procedure. The network shall send a DETACH REQUEST message including the GMM cause value #25 "not authorized for this CSG", to indicate to the MS to remove the CSG ID of the cell, where the MS has sent the DETACH REQUEST message, from the allowed CSG list.

Reference

3GPP TS 24.008 clause 4.7.4.1.5

12.3.1.10.3 Test purpose

To test the behaviour of the MS if the MS initiates a detach procedure in a CSG cell the CSG ID of which is not in

the MS's Allowed CSG list.

12.3.1.10.4 Method of test

Initial condition

System Simulator:

Two cells cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC1 (RAI-1)/CSG1.

Both cells are operating in network operation mode I.

Both Cell A and Cell B belong to PLMN 1.

The cell B shall also include:

-"CSG Indicator" in its Master Information Block

-"CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3 with the following contents:

Start PSC: 144

Number of PSCs: alltheRest

On the SS side, CSG1 is not in the Allowed CSG List which is stored in the CSG subscription data.

User Equipment:

The UE has a valid IMSI.

The UE's Allowed CSG List contains CSG1

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EF_{ACSGL}	PLMN 1	CSG1

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off/on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
User requested combined PS and non-PS detached without powering off Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services) on Cell A.

The UE performs cell reselection to Cell B and then initiates a PS detach without power off. The SS does not answer the detach procedure, but initiates a detach procedure (cause “not authorized for this CSG”). The UE shall continue with the network initiated detach procedure.

The UE shall not camp again on Cell B whose CSG ID is not in its Allowed CSG list and it camps on a suitable Cell A. The UE performs the combined PS attach procedure on Cell A.

Expected Sequence

Step	Direction UE | SS	Message	Comments
			The following messages are sent and shall be received on cell A.
1	SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-suitable cell". (See note)
2	UE		The UE is set in UE operation mode A (see ICS). The UE is powered up or switched on and initiates an attach (see ICS).
3	->	ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
4	<-	AUTHENTICATION AND CIPHERING REQUEST	
5	->	AUTHENTICATION AND CIPHERING RESPONSE	
6	SS		The SS starts integrity protection.
7	<-	ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity = TMSI-1 Routing area identity = RAI-1
8	->	ATTACH COMPLETE	
			The following messages are sent and shall be received on cell B.
9	SS		Set the cell type of cell B to the "Serving cell". Set the cell type of cell A to the "Suitable neighbour cell". The SS configures power level of each Cell as follows. Cell B > Cell A
10	UE		UE reselects to Cell B
11	UE		The UE initiates a PS detach (without power off) by MMI or AT command.
12	->	DETACH REQUEST	Detach type = 'normal detach, combined GPRS / IMSI detach'
13	<-	DETACH REQUEST	GMM cause = 'not authorized for this CSG'
14	->	DETACH ACCEPT	The UE answers the network initiated detach.
15	SS		The SS initiates the RRC connection release. The following message are sent and shall be received on cell A
16	->	ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
17	<-	AUTHENTICATION AND CIPHERING REQUEST	
18	->	AUTHENTICATION AND CIPHERING RESPONSE	
19	SS		The SS starts integrity protection.
20	<-	ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity = TMSI-1 Routing area identity = RAI-1
21	->	ATTACH COMPLETE	

NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS 34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.

Specific message contents

None.

12.3.1.10.5 Test requirements

At step 1-12, UE Allowed CSG List shall contain only CSG 1.
At step 13, when the UE receives DETACH REQUEST, UE shall:

- delete the CSG1 from the Allowed CSG List.

At step 14, the UE shall continue the network initiated detach procedure.

At step 16, when the UE camps on a suitable cell in the same PLMN, UE shall:

- perform the Combined PS attach procedure.

12.3.2 Network initiated PS detach procedure

12.3.2.1 PS detach / re-attach not required / accepted

12.3.2.1.1 Definition

12.3.2.1.2 Conformance requirement

The UE detach the IMSI for PS services.

Reference

3GPP TS 24.008 clause 4.7.4.2.

12.3.2.1.3 Test purpose

To test the behaviour of the UE for the detach procedure.

12.3.2.1.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode II (in case of UE operation mode A).

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A).

User Equipment:

The UE has a valid IMSI.

The UE has been registered in the CS domain (in case of UE operation mode A).

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a PS attach procedure.

The SS sends a DETACH REQUEST message to the UE. The UE then deletes the logical link.

The SS signal to the UE, but no response is received, as the signalling link is disconnected.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		The SS is set in network operation mode II.
2	UE			The UE is set to either attach to PS only or both the PS and non-PS services (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS).
3a		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE	
4c		SS		The SS starts integrity protection.
5	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-1
6	->		ATTACH COMPLETE	
7		SS		The SS initiates a PS detach.
8	<-		DETACH REQUEST	Detach type = 're-attach not required' GMM cause = ‘GPRS services not allowed’
9	->		DETACH ACCEPT	
9a		SS		The SS releases the RRC connection.
10	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 Paging order is for PS services.
11	UE			No response from the UE to the request. This is checked for 10 seconds.

Specific message contents

None.

12.3.2.1.5 Test requirements

At step 3a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE receives the DETACH REQUEST message from SS and the detach type IE indicates 're-attach not required', the UE shall:

- send DETACH ACCEPT message to SS.

At step11, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

12.3.2.2 PS detach / rejected / IMSI invalid / PS services not allowed

12.3.2.2.1 Definition

12.3.2.2.2 Conformance requirement

1) If the network performs a PS detach procedure with the cause 'GPRS services not allowed', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.

2) If the network performs a PS detach procedure with the cause 'GPRS services not allowed' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Reference

3GPP TS 24.008 clause 4.7.4.2.

12.3.2.2.3 Test purpose

To test the behaviour of the UE if the network orders a PS detach procedure with the cause 'GPRS services not allowed' (no valid PS-subscription for the IMSI).

12.3.2.2.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).
Both cells are operating in network operation mode II.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No
USIM removal possible without powering down Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS performs a detach with the cause value 'GPRS services not allowed'. The SS checks that the UE does not perform PS attach in another PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 22.
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE	
4c	SS			The SS starts integrity protection.
5	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
6	->		ATTACH COMPLETE	
7	<-		DETACH REQUEST	Detach type = 're-attach not required' Cause = 'GPRS services not allowed'
8	->		DETACH ACCEPT	
				The following messages are sent and shall be received on cell B.
9		SS		Set the cell type of cell A to the "Non-Suitable cell". Set the cell type of cell B to the "Serving cell". (see note)
10	UE			Cell B is preferred by the UE. Step 11 is only performed for UE Operation Mode A.
11	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A. Parameter mobile identity is IMSI.
12				The UE initiates an attach automatically (see ICS), by MMI or AT commands.
13	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
14	UE			If possible (see ICS) USIM removal is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed.
15	UE			The UE gets the USIM replaced, is powered up or switched on and initiates an attach (see ICS).
15a	UE		Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
16	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
16a	<-		AUTHENTICATION AND CIPHERING REQUEST	
16b	->		AUTHENTICATION AND CIPHERING RESPONSE	
16c	SS			The SS starts integrity protection.

17	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
18	->	ATTACH COMPLETE	
19	UE		The UE is switched off or power is removed (see ICS).
20	->	DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'
20a	SS		The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
21			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
22	UE		The UE is set in UE operation mode A (see ICS) and the test is repeated from step 3 to step 18.
NOTE: The definitions for "Non-Suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

Specific message contents

None.

12.3.2.2.5 Test requirements

At step4 and 15, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receives the DETACH REQUEST message (Detach type = 're-attach not required', Cause = 'GPRS services not allowed') from SS, UE shall:

- send DETACH ACCEPT message.

At step13, UE shall:

- not perform PS attach procedure.

12.3.2.3 PS detach / IMSI detach / accepted

12.3.2.3.1 Definition

12.3.2.3.2 Conformance requirement

The UE detach the IMSI for PS services.

Reference

3GPP TS 24.008 clause 4.7.4.2.

12.3.2.3.3 Test purpose

To test the behaviour of the UE for the detach procedure.

12.3.2.3.4 Method of test

Initial condition

System Simulator:

One cell operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The SS sends a DETACH REQUEST message to the UE. The UE then performs an IMSI detach (detach for non-PS services).

The SS signal to the UE, but no response is received, as the signalling link is disconnected.

The UE attach for non-PS services by a routing area update procedure. Both PS and CS services are possible.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).

19	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

12.3.2.3.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receives the DETACH REQUEST message with Detach type = 'IMSI detach', UE shall;

- send the DETACH ACCEPT message to SS.

At step10, after the completion of the detach procedure, UE shall;

- perform combined routing area updating procedure.

At step17, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

12.3.2.4 PS detach / re-attach requested / accepted

12.3.2.4.1 Definition

12.3.2.4.2 Conformance requirement

When receiving the DETACH REQUEST message and the detach type IE indicates "re-attach required", the UE shall deactivate the PDP contexts and deactivate the logical link(s), if any. The UE shall then send a DETACH ACCEPT message to the network and shall change state to GMM-DEREGISTERED. The UE shall, after the completion of the GPRS detach procedure, initiate a GPRS attach procedure. The UE should also activate PDP context(s) to replace any previously active PDP contexts.

A GPRS UE operating in UE operation mode A or B in network operation mode I, which receives an DETACH REQUEST message with detach type indicating "re-attach required" or "re-attach not required" and no cause code, is only detached for GPRS services in the network.

Reference

3GPP TS 24.008 clause 4.7.4.2.2.

12.3.2.4.3 Test purpose

To test the behaviour of the UE for the detach procedure in case automatic re-attach.

12.3.2.4.4 Method of test

Initial condition

System Simulator:

One cell in operating in network operation mode I.

User Equipment:

The UE has a valid TMSI, P-TMSI and RAI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The SS sends a DETACH REQUEST message to the UE with cause re-attach. The UE then detaches for PS services. The UE automatically performs a new combined PS attach procedure with Attach Type “GPRS attach while IMSI attached” (for PS services) and PS and CS services are again possible.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS).

20	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents

None.

12.3.2.4.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receives DETACH REQUEST message with Detach type = 're-attach required', UE shall;

- send DETACH ACCEPT message to SS.

At step9, after UE completed PS detach procedure with Detach type = 're-attach required', UE shall:

- initiate the combined PS attach procedure with an Attach Type of either 'Combined GPRS/IMSI attach' or ‘GPRS attach while IMSI attached’.

At step13, when the UE receives the paging message for PS domain, UE shall;

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step18, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

12.3.2.5 PS detach / rejected / location area not allowed

12.3.2.5.1 Definition

12.3.2.5.2 Conformance requirement

1) If the network performs a PS detach procedure with the cause 'location area not allowed' the User Equipment shall:

   1.1 not perform combined PS attach when in the same location area.

   1.2 delete any RAI or LAI, P-TMSI, P-TMSI signature and PS ciphering key sequence number .

   1.3 store the LAI in the list of the 'forbidden location areas for regional provision of service'.

   1.4 delete any TMSI, LAI and ciphering key sequence number if the UE is IMSI attached and if no RRC connection exists or if the UE is operating in UE operation mode A and an RRC connection exists when the RRC connection is subsequently released.

2) If the network performs a PS detach procedure with the cause 'location area not allowed' the User Equipment shall:

   2.1 perform combined PS attach when a new location area is entered.

   2.2 delete the list of forbidden LAs when power is switched off.

Reference

3GPP TS 24.008 clauses 4.7.4.2.

12.3.2.5.3 Test purpose

To test the behaviour of the UE if the network orders the PS detach procedure with the cause 'Location Area not allowed'.

To test that the UE deletes the list of forbidden LAs when power is switched off.

12.3.2.5.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC2 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC1/RAC2 (RAI-7, Not HPLMN), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6,

Not HPLMN).
All cells are operating in network operation mode I.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
PS attach attempted automatically by outstanding request Yes/No

Test procedure

The SS orders a PS detach with the cause value 'Location Area not allowed'. The SS checks that the UE does not perform combined PS attach while in the location area, performs PS attach when a new location area is entered and deletes the list of forbidden LAs when switched off. CS services are not possible unless an IMSI attach procedure is performed.

Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell ". Set the cell type of cell C to the "Non-Suitable cell ". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4		->	ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available

12.3.2.5.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receive the DETACH REQUEST message (Detach type = 're-attach not required', Cause = 'Location Area not allowed') from SS, UE shall:

- send the DETACH ACCEPT message.

UE shall perform the following action depending on UE location.

1) UE is in the same location area.

At step9 and 18, UE shall:

- not perform location updating procedure.

At step11 and 20, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for PS domain.

At step13 and 22, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step17, UE shall;

- not perform PS attach procedure.

2) UE is in the new location area.

At step27, UE shall;

- perform the combined PS attach procedure.

At step34, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step41, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step50, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence

At step57, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step64, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.3.2.6 PS detach / rejected / No Suitable Cells In Location Area

12.3.2.6.1 Definition

12.3.2.6.2 Conformance requirement

1. If the network performs a PS detach procedure with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

   1.1delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.

   1.2store the LA in the 'forbidden location areas for roaming'.

Reference

3GPP TS 24.008 clauses 4.7.4.2.

12.3.2.6.3 Test purpose

To test the behaviour of the UE if the network sends the DETACH REQUEST message with the cause 'No Suitable Cells In Location Area'.

12.3.2.6.4 Method of test

Initial condition

System Simulator:

Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)

All three cells are operating in network operation mode I.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS sends a DETACH REQUEST message with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall not perform combined PS attach while in the same location area on the same PLMN. The SS checks that the UE shall perform PS attach when the UE enters a suitable cell in a different location area on the same PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". Set the cell type of cell C to the "Suitable neighbour cell". (see note) The SS configures power level of each Cell as follows. Cell A > Cell B = Cell C
1	UE			The UE is set in UE operation mode A (see ICS).
2	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
3a	<-		AUTHENTICATION AND CIPHERING REQUEST	
3b	->		AUTHENTICATION AND CIPHERING RESPONSE	
3c	SS			The SS starts integrity protection.
4	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature MS identity = TMSI-1 Routing area identity = RAI-1
5	->		ATTACH COMPLETE	
6	<-		DETACH REQUEST	Detach type = 're-attach not required' Cause 'No Suitable Cells In Location Area'
7	->		DETACH ACCEPT	
				The following message are sent and shall be received on cell B.
8	UE			The UE initiates an attach automatically, by MMI or by AT command.
9	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
10	<-		ATTACH ACCEPT	Attach result = 'Combined GPRS/IMSI attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature MS identity = TMSI-2 Routing area identity = RAI-3
11	->		ATTACH COMPLETE	
NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

None.

12.3.2.6.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- perform the PS attach procedure.

12.3.2.7 PS detach / rejected / Roaming not allowed in this location area

12.3.2.7.1 Definition

12.3.2.7.2 Conformance requirement

1) If the network performs a PS detach procedure with the cause 'Roaming not allowed in this location area' the User Equipment shall:

   1.1 delete any RAI, P-TMSI, P-TMSI signature and PS ciphering key sequence number.

   1.2 set the GPRS update status to GU3 ROAMING NOT ALLOWED.

   1.3 reset the attach attempt counter.

   1.4 store the LAI in the list of "forbidden location areas for roaming".

   1.5 perform a PLMN selection.

2) If the UE is IMSI attached via MM procedures, the UE shall in addition:

   2.1 delete any TMSI, LAI and ciphering key sequence number.

   2.2 reset the location update attempt counter.

Reference

3GPP TS 24.008 clauses 4.7.4.2.

12.3.2.7.3 Test purpose

To test the behaviour of the UE if the network orders the PS detach procedure with the cause ' Roaming not allowed in this location area '.

12.3.2.7.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC1/RAC2 (RAI-7, Not HPLMN), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6, Not HPLMN).
All cells are operating in network operation mode I.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No
UE supports CS call establishment Yes/No

Test procedure

The SS orders a PS detach with the cause value ' Roaming not allowed in this location area '. The SS checks that the UE does not perform combined PS attach while in the location area, performs PS attach when a new location area is entered and deletes the list of forbidden LAs when switched off. CS services are not possible unless an IMSI attach procedure is performed.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
		SS		The following messages are sent and shall be received on cell A.
1		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode A (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'Combined GPRS/IMSI attach' Mobile identity = IMSI TMSI status = no valid TMSI available
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE

12.3.2.7.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receive the DETACH REQUEST message (Detach type = 're-attach not required', Cause = ' Roaming not allowed in this location area') from SS, UE shall:

- send the DETACH ACCEPT message.

UE shall perform the following action depending on UE location.

1) UE is in the same location area.

At step9 and 18, UE shall:

- not perform location updating procedure.

At step11 and 20, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for PS domain.

At step13 and 22, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step17, UE shall;

- not perform PS attach procedure.

2) UE is in the new location area.

At step27, UE shall;

- perform the combined PS attach procedure.

At step34, when the UE receives the paging message for CS domain with Mobile identity = TMSI-1, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step41, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step50, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence

At step57, when the UE receives the paging message for CS domain with Mobile identity = TMSI-2, UE shall;

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step64, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

12.3.2.8 PS detach / rejected / PS services not allowed in this PLMN

12.3.2.8.1 Definition

12.3.2.8.2 Conformance requirement

If the network performs a PS detach procedure with the cause ' GPRS services not allowed in this PLMN ', the UE:

1. shall delete any RAI, P-TMSI, P-TMSI signature, and PS ciphering key sequence number stored, shall set the PS update status to GU3 ROAMING NOT ALLOWED (and shall store it according to section 4.1.3.2) and shall change to state GMM-DEREGISTERED.
2. shall store the PLMN identity in the "forbidden PLMNs for PS service" list.

If the network performs a PS detach procedure with the cause ' GPRS services not allowed in this PLMN ', the UE operating in UE operation mode A in network operation mode I:

1. shall set the timer T3212 to its initial value and restart it, if it is not already running.
2. is still IMSI attached for CS services in the network.

Reference(s):

3GPP TS 24.008 subclause 4.7.4.2.2

12.3.2.8.3 Test purpose

Test purpose for Test procedure1

To test the behaviour of the UE if the network initiates a PS detach procedure with the cause "GPRS services not allowed in this PLMN" (for Conformance requirement1, 2).

Test purpose for Test procedure2

To test the behaviour of the UE operating in UE operation mode A in network operation mode I if the network initiates a PS detach procedure with the cause "GPRS services not allowed in this PLMN" (for Conformance requirement3, 4).

12.3.2.8.4 Method of test

Proc 1: Test procedure 1

Initial conditions

System Simulator:

Two cells cellA in MCC2/MNC1/LAC1/RAC1(RAI-2, Not HPLMN), cellB in MCC1/MNC2/LAC2/RAC1. Both cells are operating in network operation mode II.
The PLMN contains Cell B is equivalent to the PLMN that contains Cell A.
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

NB: i) Cell B will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid TMSI-1, P-TMSI-1 and RAI-2.

The UE has been registered in the CS domain.

Related ICS/IXIT statement(s)

- Support of PS service Yes/No.
- UE operation mode A Yes/No
- UE operation mode C Yes/No (only if mode A not supported)..
- Switch off on button Yes/No.
- Automatic PS attach procedure at switch on or power on Yes/No.

Test procedure

Two cells are configured.

Cell A transmits with higher power so that the UE attempts an attach procedure to cell A.

Cell B is configured as “non-Suitable Cell”.

The UE initiates a PS attach procedure.

The SS sends a PS detach with the cause "GPRS services not allowed in this PLMN".

The SS verifies that the UE does not perform a periodic ROUTING AREA UPDATE procedure in this PLMN after the timer T3312 is expired and does not respond a paging for PS services.

Cell B transmits with high power so that the UE attempts an attach procedure to cell B.

The UE initiates a PS attach procedure.

The SS verifies that the UE performs a periodic ROUTING AREA UPDATE procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
	SS			The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode A or C (see ICS).
2	SS			Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the " non-Suitable cell "
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-2
5	<-		AUTHENTICATION AND CIPHERING REQUEST	
6	->		AUTHENTICATION AND CIPHERING RESPONSE	
7	SS			The SS starts integrity protection.
8	<-		ATTACH ACCEPT	Attach result = ' GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-2 Equivalent PLMNs = MCC1,MNC2 Periodic RA Update Timer (T3312) = 6minutes
9	->		ATTACH COMPLETE	
10	<-		DETACH REQUEST	Detach Type = 're-attach not required' Cause = 'GPRS services not allowed in this PLMN'
11	->		DETACH ACCEPT	
12	SS			The SS releases the RRC connection.
13	<-		PAGING TYPE1	Mobile identity = P-TMSI-2 Paging order is for PS services.
14	UE			No response from the UE to the request. This is checked for 10 seconds.
15	UE			The SS verifies that the UE does not attempt to access the network for T3312.
				The following messages are sent and shall be received on cell B.

16	SS			If UE is set in UE operation mode C then
				Set the cell type of cell A to the "Suitable neighbour cell ".
				If UE is set in UE operation mode A then
				Set the cell type of cell A to the "Non Suitable neighbour cell ".
				Set the cell type of cell B to the "Serving cell " (see note)

17				Cell B is preferred by the UE.
18			Registration on CS	See TS 34.108 This is applied only for UE in UE operation mode A.
19				The UE initiates an attach automatically (See ICS), by MMI or AT command.
20	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
21	<-		AUTHENTICATION AND CIPHERING REQUEST	
22	->		AUTHENTICATION AND CIPHERING RESPONSE	
23	SS			The SS starts integrity protection.

24	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-9 Equivalent PLMNs = MCC2,MNC1 Periodic RA Update Timer (T3312) = 6minutes
25	->	ATTACH COMPLETE	
25a	SS		The SS releases the RRC connection.
25b	SS		The SS verifies that the UE does not attempt to access the network for T3312.
26	SS		SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
27	->	ROUTING AREA UPDATING REQUEST	Update type = 'Periodic updating' Old P-TMSI signature=P-TMSI-2 signature Old Routing area identity = RAI-9
28	<-	ROUTING AREA UPDATING ACCEPT	No new mobile identity assigned. P-TMSI and TMSI not included. Update result = 'RA updated' Equivalent PLMNs = MCC2,MNC1
NOTE: The definitions for "Suitable neighbour cell", "Non-suitable cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.			

Specific message contents

None.

Proc 2: Test procedure 2

Initial conditions

System Simulator:

One cell is operating in network operation mode I: MCC2/MNC1/LAC1/RAC1(RAI-2, Not HPLMN).

12.3.2.8.5 Test Requirement

Test Requirement for Test procedure1

At step4, when the UE is powered up or switched on, the UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step11, when the UE receives DETACH REQUEST message with the cause "GPRS services not allowed in this PLMN", the UE shall:

- send DETACH ACCEPT message.

At step13, when the UE receives the paging for PS services with "Mobile identity = P-TMSI-2", the UE shall;

- not respond to the paging for PS services.

At step14, when the time T3312 is expired, the UE shall:

- not attempt to access the network.

At step20, when the UE enters the different cell with the equivalent PLMN, the UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step27, when the time T3312 is expired, the UE shall:

- initiate the periodic routing area updating procedure with the information elements specified in the above Expected Sequence.

Test Requirement for Test procedure2

At step3, when the UE is powered up or switched on, the UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step10, when the UE receives DETACH REQUEST message with cause "GPRS services not allowed in this PLMN ", the UE shall:

- send DETACH ACCEPT message.

At step12, while the SS wait for the timer T3312 to expire, the UE shall:

- not perform the periodic location area updating procedure.

At step13, when the T3212 timer is expired, the UE shall:

- initiate the periodic location area updating procedure.

At step16, when the UE receives the paging for CS services with "Mobile identity = IMSI", the UE shall;

- respond to the paging for CS services by sending the PAGING RESPONSE message.

12.4 Routing area updating procedure

This procedure is used to update the actual routing area of an UE in the network.

12.4.1 Normal routing area updating

The routing area updating procedure is a GMM procedure used by PS UEs of UE operation mode A or C that are IMSI attached for PS services only.

12.4.1.1a Routing area updating / accepted

12.4.1.1a.1 Definition

12.4.1.1a.2 Conformance requirement

1) If the network accepts the routing area updating procedure and reallocates a P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.

2) If the network accepts the routing area updating procedure from the UE without reallocation of the old P-TMSI, the UE shall continue communication with the old P-TMSI.

3) The routing area updating procedure shall also be used by a UE which is attached for PS services if a new PLMN is entered.

Reference

3GPP TS 24.008 clause 4.7.5, 4.7.5.1.

12.4.1.1a.3 Test purpose

To test the behaviour of the UE if the network accepts the routing area updating procedure.

The following cases are identified:

1) P-TMSI / P-TMSI signature is reallocated.

2) Old P-TMSI / P-TMSI signature is not changed.

To test the behaviour of the UE if the UE enters the new PLMN.

12.4.1.1a.4 Method of test

Initial condition

System Simulator:

Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC2 (RAI-7).
All three cells are operating in network operation mode II.
The PLMN contains cell C is equivalent to the PLMN that contains cell A.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A) in all cells.

Sintrasearch and Sintersearch values for cells A, B and C are 20 dB.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid IMSI.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

1) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS reallocates the P-TMSI and returns ROUTING AREA UPDATE ACCEPT message with a new P-TMSI. The UE acknowledge the new P-TMSI by sending ROUTING AREA UPDATE COMPLETE message. Further communication UE - SS is performed by the new P-TMSI. The UE will not answer signalling addressed to the old P-TMSI.

2) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS accepts the P-TMSI and returns ROUTING AREA UPDATE ACCEPT message without any P-TMSI. Further communication UE - SS is performed by the P-TMSI.

3) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS reallocates the P-TMSI and returns ROUTING AREA UPDATE ACCEPT message with a new P-TMSI. The UE acknowledge the new P-TMSI by sending ROUTING AREA UPDATE COMPLETE message.

12.4.1.1a.5 Test requirements

At step 3a, 7a, 15a and 22 the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Registration".

At step 18a the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Terminating Interactive Call".

At step 29 the UE shall send an RRC CONNECTION REQUEST message with the IE Establishment cause set to "Detach".

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step13, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

- not respond to the paging message for PS domain.

At step16, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step19, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step23, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

12.4.1.1b Routing area updating / accepted / Signalling connection re-establishment

12.4.1.1b.1 Definition

12.4.1.1b.2 Conformance requirement

When the UE receives an indication from the lower layers that the RRC connection has been released with cause "Directed signalling connection re-establishment", then the UE shall enter PMM-IDLE mode and initiate immediately a normal routing area update procedure (the use of normal or combined procedure depends on the network operation mode in the current serving cell) regardless whether the routing area has been changed since the last update or not.

Reference

3GPP TS 24.008 clause 4.7.2.5, 4.7.5.1

12.4.1.1b.3 Test purpose

To test the behaviour of the UE if the UE receives a RRC CONNECTION RELEASE message with cause = "Directed signalling connection re-establishment".

12.4.1.1b.4 Method of test

Initial condition

System Simulator:

One cell(Cell A) in MCC1/MNC1/LAC1/RAC1 (RAI-1) operating in network operation mode II.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A) in all cells.

User Equipment:

The UE has a valid TMSI, P-TMSI-1 and RAI-1

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

a) The UE initiates a Service request procedure in order to establish the PS signalling connection for the upper layer signalling.

b) After the Service request procedure is complete, the SS sends the RRC CONNECTION RELEASE message with cause = "Directed signalling connection re-establishment" to the UE.

c) After the UE release the RRC connection, the UE initiate immediately a normal routing area update procedure.

Expected Sequence

12.4.1.1b.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step16, UE shall;

- initiate the routing area updating procedure whether the routing area has been changed since the last update or not.

12.4.1.1c Void

12.4.1.1d Routing area updating / accepted / SMS via GPRS supported

12.4.1.1d.1 Definition

Void

12.4.1.1d.2 Conformance requirement

If the network operates in mode II, a GPRS MS that operates in mode A or B and wishes to be or is simultaneously IMSI attached for GPRS and non-GPRS services, shall use the MM specific procedures listed in subclauses 4.3 and 4.4 and the GMM specific procedures listed in subclauses 4.7.3, 4.7.4 and 4.7.5. The applicability of periodic location updating is further specified in subclause 4.4.2 and the periodic routing area updating is specified in subclause 4.7.2.2. If the GPRS MS, which operates in mode A or B, wishes to be IMSI attached for GPRS and "SMS-only service" or is simultaneously IMSI attached for GPRS and non-GPRS services in order to obtain GPRS services and "SMS-only service", then the GPRS MS shall first complete the GMM specific procedure before performing the MM specific procedures. If this GPRS MS receives in the ATTACH ACCEPT or ROUTING AREA UPDATE ACCEPT message the Additional network feature support IE indicating "SMS via GPRS supported", then the GPRS MS shall not perform the MM specific procedure until a new ATTACH ACCEPT or ROUTING AREA UPDATE ACCEPT message indicating "SMS via GPRS not supported" or the GPRS MS does not wish to be IMSI attached only for GPRS and "SMS-only service".

If the authentication procedure is performed by MM and the authentication is rejected by the network (i.e. upon receive of AUTHENTICATION REJECT), the MS shall in addition set the GPRS update status to GU3 ROAMING NOT ALLOWED and shall, if available, delete the P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number stored. The SIM/USIM shall be considered as invalid for GPRS and non-GPRS services until switching off or the SIM/USIM is removed. The MS shall abort any GMM procedure and shall enter state GMM-DEREGISTERED. If S1 mode is supported in the MS, the MS shall handle the EMM parameters EPS update status, GUTI, last visited registered TAI, TAI list and KSI as specified in 3GPP TS 24.301 [120] for the case when the EPS authentication is not accepted by the network.

If the PS or CS domain is barred because of domain specific access control, a GPRS MS operating in mode A or B in a network that operates in mode II shall use the MM specific procedures or GMM specific procedures, respectively, in the domain which is unbarred. If the MS detects that a domain changes from barred to unbarred, it shall behave as specified in subclauses 4.3.4.4, 4.4.4.9, 4.5.1.2, 4.7.3.1.5, 4.7.4.1.4, 4.7.5.1.5, and 4.7.13.5.

Reference

3GPP TS 24.008 clauses 4.1.1.2.2.

12.4.1.1d.3 Test purpose

To verify that if the MS initiates a combined GPRS attach procedure for GPRS services and "SMS-only service", the MS indicates "SMS only" in the Additional update type

To verify that if the MS initiates the combined routing area updating procedure for GPRS services and "SMS-only service", the MS indicates "SMS only" in the Additional update type IE

To verify that a UE that whishes to be IMSI attached for GPRS and "SMS-only service" or is simultaneously IMSI attached for GPRS and non-GPRS services in order to obtain GPRS services and "SMS-only service" in a network that operates in NMO II, the UE shall first complete the GMM specific procedure before performing the MM specific procedures.

12.4.1.1d.4 Method of test

Initial conditions

System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). Both cells are operating in network operation mode II.

User Equipment:

The UE has a valid IMSI.

The UE is configured to use the SMS-only service

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode A Yes/No
Switch off on button Yes/No

Support of SMS-only service Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

A GPRS attach procedure for GPRS services and "SMS-only service", is performed. The UE indicates that is it whishes to attach for the SMS-only service by including the Additional update type IE, set to ‘SMS only’, in the ATTACH REQUEST message. The SS respond with the ATTACH ACCEPT message indicating ‘GPRS only” and GMM cause #28 "SMS provided via GPRS in this routing area".

The UE sends a ROUTING AREA UPDATE REQUEST message indicating that it is for the SMS-only service by including the Additional update type IE set to ‘SMS only’. The SS respond with the ROUTING AREA UPDATE ACCEPT message indicating ‘GPRS only” and GMM cause #28 "SMS provided via GPRS in this routing area".

No MM messages shall be sent by the UE during this sequence.

Expected sequence

Step	Direction		Message	Comments
	UE	SS

12.4.1.1d.5 Test requirements

Step 4: ATTACH REQUEST message contains the Additional update type IE set to 'SMS only'.

Step 12: ROUTING AREA UPDATE REQUEST message contains the Additional update type IE set to 'SMS only'.

After step 9: No MM messages shall be sent by the UE.

12.4.1.1dm Handling of MBMS context status information in ROUTING AREA UPDATE procedure/ MBMS Multicast Service

12.4.1.1dm.1 Definition

This Test is applicable for all Rel-6 UEs supporting MBMS multicast services.

12.4.1.1dm.2 Conformance requirement

If the MBMS context status information element is included in the ROUTING AREA UPDATE ACCEPT message, then the MS shall deactivate all those MBMS contexts locally (without peer to peer signalling between the MS and network) which are not in SM state PDP-INACTIVE in the MS, but are indicated by the network as being in state PDP-INACTIVE. If no MBMS context status information element is included, then the MS shall deactivate all those MBMS contexts locally which are not in SM state PDP-INACTIVE in the MS.

Reference

3GPP TS 24.008 [4] clause 4.7.5.1.3.

12.4.1.1dm.3 Test purpose

1. To verify that the UE includes correctly the MBMS context status information in the ROUTING AREA UPDATE REQUEST message.

2. To verify that if the MBMS context status information element is included in the ROUTING AREA UPDATE ACCEPT message, then the UE deactivates all those MBMS contexts locally (without peer to peer signalling between the UE and network) which are not in SM state PDP-INACTIVE in the UE, but are indicated by the network as being in state PDP-INACTIVE.

3. To verify that if no MBMS context status information element is included, then the UE deactivates all MBMS contexts locally which are not in SM state PDP-INACTIVE in the MS.

12.4.1.1dm.4 Method of test

Initial condition

System Simulator:

Three MBMS cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC2 (RAI-7).
All three cells are operating in network operation mode II.
The PLMN contains cell C is equivalent to the PLMN that contains cell A.

The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE to prevent repeated CS domain registration and/or IMSI Detach by UEs in operation mode A) in all cells.

Sintrasearch and Sintersearch values for cells A, B and C are set to 20 dB.

Note: Cell A is mapped to Cell 21, Cell B is mapped to Cell 22 and Cell C is mapped to Cell 24 as found in TS 34.108 [9] clause 6.1.4.3.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN in cell A.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

The UE has one PDP context activated, three MBMS contexts activated in SM state MBMS-ACTIVE.

PDP1: trans_id 0 and nsapi 5

MBMS-1 (MBMS-ACTIVE): trans_id 1 and nsapi 128

MBMS-2 (MBMS-ACTIVE): trans_id 2 and nsapi 129

MBMS-3 (MBMS-ACTIVE): trans_id 3 and nsapi 130

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes/No

UE operation mode A Yes/No
UE operation mode C Yes/No
Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

1) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS verifies the MBMS context status IE and returns a ROUTING AREA UPDATE ACCEPT message with a different MBMS context status IE.

2) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS verifies the MBMS context status IE and returns a ROUTING AREA UPDATE ACCEPT message without an MBMS context status IE.

3) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS verifies the MBMS context status IE is not contained in the message and returns a ROUTING AREA UPDATE ACCEPT message without an MBMS context status IE.

Step	Direction		Message	Comments
	UE	SS		
1		SS		Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note)
2				The following messages are sent and shall be received on cell B.
3		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
4	→		ROUTING AREA UPDATE REQUEST	UE sets nsapi 128 and 129 and 130 as 1 in MBMS context Status IE and all other as 0.
5		SS		The SS starts integrity protection.
6	←		ROUTING AREA UPDATE ACCEPT	SS sets nsapi 128 as 1 and nsapi 129 and 130 as 0 in MBMS Context Status IE. UE locally deactivates MBMS context with nsapi 129 and nsapi 130.
7	→		ROUTING AREA UPDATE COMPLETE	
8		SS		The SS releases the RRC connection.
9		SS		Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Suitable neighbour cell". (see note)
10				The following messages are sent and shall be received on cell A.
11	UE			Cell A is preferred by the UE.
12		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
13	→		ROUTING AREA UPDATE REQUEST	UE sets nsapi 128 as 1 in MBMS context Status IE and all other as 0. SS verifies UE deactivated nsapi 129 and 130.
14		SS		The SS starts integrity protection.
15	←		ROUTING AREA UPDATE ACCEPT	SS does not include PDP context status and MBMS Context Status IE. The UE locally deactivates all MBMS contexts and PDP contexts.
16	→		ROUTING AREA UPDATE COMPLETE	
17		SS		The SS releases the RRC connection.
18		SS		Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell C to the "Serving cell". (see note)
19				The following messages are sent and shall be received on cell C.
20	UE			Cell C is preferred by the UE.
21		SS		The SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Registration".
22	→		ROUTING AREA UPDATE REQUEST	UE does not include PDP context status IE and MBMS Context Status IE. SS verifies UE deactivated nsapi 128 and UE does not include MBMS and PDP context status IEs when no PDP and MBMS context exists.
23				The SS starts integrity protection.
24	←		ROUTING AREA UPDATE ACCEPT	SS does not include PDP and MBMS Context Status IEs.
25	→		ROUTING AREA UPDATE COMPLETE	

NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 [9] clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.

Specific message contents

ROUTING AREA UPDATE REQUEST (step 4)

Information Element	Value/remark
MBMS context status	
MBMS context status IEI	35
Length of MBMS context status contents	1
	07 (NSAPI 128 =1, NSAPI 129 = 1, NSAPI 130 = 1)

ROUTING AREA UPDATE ACCEPT (step 6)

Information Element	Value/remark
PDP context status	
PDP context status IEI	32
Length of PDP context status contents	1
	2x (NSAPI(5)=1)
MBMS context status	
MBMS context status IEI	35
Length of MBMS context status contents	1
	01 (NSAPI 128 =1, NSAPI 129 = 0, NSAPI 130 = 0)

ROUTING AREA UPDATE REQUEST (step 13)

Information Element	Value/remark
MBMS context status	
MBMS context status IEI	35
Length of MBMS context status contents	1
	01 (NSAPI 128 =1, NSAPI 129 = 0, NSAPI 130 = 0)

Step 15: The SS does not include PDP Context status IE and MBMS Context Status IE.

Note: Allocate P-TMSI in all ROUTING AREA UPDATE ACCEPT.

12.4.1.1dm.5 Test requirements

At step 4, the UE shall set nsapi 128, 129 and 130 as 1 in the MBMS context Status IE and all others as 0.

At step 13, the UE shall set nsapi 128 as 1 in the MBMS context Status IE and all others as 0.

At step 22, the UE shall not include the PDP context status IE and the MBMS Context Status IE.

12.4.1.1e Routing area updating / accepted / low priority override

12.4.1.1e.1 Definition

Void

12.4.1.1e.2 Conformance requirement

An MS configured for NAS signalling low priority (see 3GPP TS 24.368 [135], 3GPP TS 31.102 [112]) indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured to NAS signalling low priority" except for the following cases in which the MS shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the MS is performing an attach for emergency bearer services;
- the MS has a PDN connection for emergency bearer services established and is performing mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the MS configured for dual priority is requested by the upper layers to establish a PDN connection with the low priority indicator set to "MS is not configured for NAS signalling low priority";

- the MS configured for dual priority is performing EPS session management procedures related to the PDN connection established with low priority indicator set to "MS is not configured for NAS signalling low priority";
- the MS configured for dual priority has a PDN connection established by setting the low priority indicator to "MS is not configured for NAS signalling low priority" and is performing EPS mobility management procedures;
- the MS is accessing the network with access class 11 – 15; or
- the MS is responding to paging.

The network may use the NAS signalling low priority indication for NAS level mobility management congestion control on a per core network node basis and APN based congestion control.

If the NAS signalling low priority indication is provided in an ACTIVATE PDP CONTEXT REQUEST message, the SGSN stores the NAS signalling low priority indication within the default PDP context activated due to this request.

Reference

3GPP TS 24.008 clauses 1.8.

12.4.1.1e.3 Test purpose

To verify that a MS configured for dual priority and has a PDN connection established by setting the low priority indicator to "MS is not configured for NAS signalling low priority", set the low priority indicator to "MS is not configured for NAS signalling low priority" when it is performing mobility management procedures

12.4.1.1e.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).
Both cells are operating in network operation mode II (in case of UE operation mode A).
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1. MS is Idle Updated on cell A.

The UE is configured for NAS signalling low priority

The UE is configured for NAS signalling low priority override

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	“NAS_SignallingPriority is set to “NAS signalling low priority” “Override_NAS_SignallingLowPriority” is set to 1, as defined in TS 24.368, clause 5.3.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Automatic attach procedure when UE identity cannot be derived by the network Yes/No

Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The UE initiates the ATTACH procedure, indicating that it is configured for NAS signalling low priority.

Configure the UE to override NAS signalling low priority.

When the UE enters a new routing area is performs the Routing Area Update procedure, indicating it is not configured for NAS signalling low priority.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			The following messages are sent and shall be received on cell A. The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode C (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	UE		Registration on CS	See TS 34.108 This step is applied only for UE in UE operation mode A. Parameter mobile identity is TMSI.
5	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity =P-TMSI-1 Old Routing area identity = RAI-1 Device properties = ‘MS is configured for NAS signalling low priority’
6	<-		AUTHENTICATION AND CIPHERING REQUEST	
7	->		AUTHENTICATION AND CIPHERING RESPONSE	
8	SS			The SS starts integrity protection.
9	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
10	->		ATTACH COMPLETE	
10A	UE			The UE is configured to override NAS signalling low priority
11	SS			The following messages are sent and shall be received on cell B. Set the cell type of cell A to the " Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note)
12	UE			Cell B is preferred by the UE.
13	->		ROUTING AREA UPDATE REQUEST	Update type = 'RA updating' Old P-TMSI signature=P-TMSI-2 signature Old Routing area identity = RAI-1 Device properties = ‘MS is not configured for NAS signalling low priority’
14	<-		ROUTING AREA UPDATE ACCEPT	Update result = 'RA updated' Mobile identity = P-TMSI-1 P-TMSI-1 signature Routing area identity = RAI-4 Equivalent PLMNs = MCC2,MNC1
15	->		ROUTING AREA UPDATE COMPLETE	

Step	Direction		Message	Comments
	UE	SS		
NOTE: The definitions for "Non-Suitable cell", Suitable neighbour cell and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

None.

12.4.1.1e.5 Test requirements

Step 5: ATTACH REQUEST message contains the Device properties IE set to ‘MS is configured for NAS signalling low priority’.

Step 13: ROUTING AREA UPDATE REQUEST message contains the Device properties IE set to ‘MS is not configured for NAS signalling low priority’.

12.4.1.2 Routing area updating / rejected / IMSI invalid / illegal ME

12.4.1.2.1 Definition

12.4.1.2.2 Conformance requirement

1) If the network rejects a routing area updating procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.

2) If the network rejects a routing area updating procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Reference

3GPP TS 24.008 clause 4.7.5.1.

12.4.1.2.3 Test purpose

To test the behaviour of the UE if the network rejects the routing area updating procedure of the UE with the cause 'Illegal ME'.

12.4.1.2.4 Method of test

Initial condition

System Simulator:

Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2).
All three cells are operating in network operation mode II (in case of UE operation mode A)
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in all cells.

NB: i) Cell C will be mapped to Cell 4 as found in TS 34.108 clause 6.1.4.1.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)

USIM removal possible without powering down Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a routing area updating with the cause value 'Illegal ME'. The SS checks that the UE does not perform PS attach in the same or another PLMN.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1	UE			The UE is set in UE operation mode C (see ICS).
2	SS			The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell C to the "Non-Suitable cell". (see note)
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
3a			Void	
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = P-TMSI-1 Old Routing area identity = RAI-1
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE	
4c	SS			The SS starts integrity protection.
5	<-		ATTACH ACCEPT	No new mobile identity assigned. P-TMSI and P-TMSI signature not included. Attach result = 'GPRS only attached' Routing area identity = RAI-1
				The following messages are sent and shall be received on cell B.
6	SS			Set the cell type of cell A to the "Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note)
7	UE			Cell B is preferred by the UE.
8	->		ROUTING AREA UPDATE REQUEST	Update type = 'RA updating' Old Routing area identity = RAI-1
9	<-		ROUTING AREA UPDATE REJECT	GMM cause = 'Illegal ME'
10	<-		PAGING TYPE1	Mobile identity = P-TMSI-1 PAGING TYPE1 (used for NW-mode II). Paging order is for PS services.
11	UE			No response from the UE to the request. This is checked for 10 seconds.
				The following messages are sent and shall be received on cell C.
12	SS			Set the cell type of cell B to the "Non-Suitable cell". Set the cell type of cell A to the “Non-Suitable cell”. Set the cell type of cell C to the "Serving cell". (see note)
13	UE			Cell C is preferred by the UE.
14	UE			No ATTACH REQUEST sent to the SS (SS waits 30 seconds).
15	UE			If possible (see ICS) USIM removal is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed.
16	UE			The UE gets the USIM replaced, is powered up or switched on and initiates an attach (see ICS).
16a				Step 16b is only performed by UE in operation mode A

16b	UE	Registration on CS	See TS 34.108 SS allocates Mobile identity = TMSI-1.
17	->	ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
17a	<-	AUTHENTICATION AND CIPHERING REQUEST	
17b	->	AUTHENTICATION AND CIPHERING RESPONSE	
17c	SS		The SS starts integrity protection.
18	<-	ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-2
19	->	ATTACH COMPLETE	

NOTE: The definitions for "Non-Suitable cell", "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.

Specific message contents

None.

12.4.1.2.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step11, after the routing area updating procedure is rejected with GMM cause = 'Illegal ME', UE shall;

- not respond to the paging message for PS domain.

At step14, UE shall,

- not initiate PS attach procedure.

At step17, after the UE is powered up or USIM is replaced, UE shall;

- initiate the PS attach procedure.

12.4.1.3 Routing area updating / rejected / UE identity cannot be derived by the network

12.4.1.3.1 Definition

12.4.1.3.2 Conformance requirement

If the network rejects a routing area updating procedure from the User Equipment with the cause 'MS identity cannot be derived by the network', the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Depending on the manufacturer the UE may or may not perform a PS attach procedure.

Reference

3GPP TS 24.008 clause 4.7.5.1.

12.4.1.3.3 Test purpose

To test the behaviour of the UE if the network rejects the routing area updating procedure of the UE with the cause 'MS identity cannot be derived by the network'.

12.4.1.3.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).
Both cells are operating in network operation mode II (in case of UE operation mode A).
The SIB1 IE "CN domain specific NAS system information", for the CS Domain, is set to value "00 00" (T3212 value is set to 0 and ATT flag is set to FALSE) in both cells.

User Equipment:

The UE has a valid P-TMSI-1 and RAI-1.

The UE has been registered in the CS domain.

Related ICS/IXIT statements

Support of PS service Yes/No
UE operation mode C Yes/No
UE operation mode A Yes/No (only if mode C not supported)
Automatic attach procedure when UE identity cannot be derived by the network Yes/No
Switch off on button Yes/No
Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

The SS rejects a normal routing area updating with the cause value 'MS identity cannot be derived by the network'. The UE detach locally. A new PS attach may be performed.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
				The following messages are sent and shall be received on cell A.
1		SS		The SS is set in network operation mode II. Set the cell type of cell A to the "Serving cell". Set the cell type of cell B to the "Non-Suitable cell". (see note)
2	UE			The UE is set in UE operation mode C (see ICS).
3	UE			The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE.
4	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity =P-TMSI-1 Old Routing area identity = RAI-1
4a	<-		AUTHENTICATION AND CIPHERING REQUEST	
4b	->		AUTHENTICATION AND CIPHERING RESPONSE	
4c		SS		The SS starts integrity protection.
5	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-2 P-TMSI Signature = P-TMSI-2 signature Routing area identity = RAI-1
6	->		ATTACH COMPLETE	
				The following messages are sent and shall be received on cell B.
7		SS		Set the cell type of cell A to the " Suitable neighbour cell". Set the cell type of cell B to the "Serving cell". (see note)
8	UE			Cell B is preferred by the UE.
9	->		ROUTING AREA UPDATE REQUEST	Update type = 'RA updating' Old P-TMSI signature=P-TMSI-2 signature Old Routing area identity = RAI-1
10	<-		ROUTING AREA UPDATE REJECT	GMM cause = 'MS identity cannot be derived by the network'
11	UE			If an automatic attach procedure by the UE is not possible when the UE identity cannot be derived by the network (see ICS) goto step 19.
12			Void	
12a		SS		SS shall wait for 1 second to receive the Attach Request in step 13 on the existing RRC Connection. In case ATTACH REQUEST is not received within 1 second then existing RRC Connection is released.
13	->		ATTACH REQUEST	Attach type = 'GPRS attach' Mobile identity = IMSI
13a	<-		AUTHENTICATION AND CIPHERING REQUEST	
13b	->		AUTHENTICATION AND CIPHERING RESPONSE	
13c		SS		The SS starts integrity protection.
14	<-		ATTACH ACCEPT	Attach result = 'GPRS only attached' Allocated P-TMSI = P-TMSI-1 P-TMSI Signature = P-TMSI-1 signature Routing area identity = RAI-4
15	->		ATTACH COMPLETE	
16	UE			The UE is switched off or power is removed (see ICS).
17	->		DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, GPRS detach'

Step	Direction		Message	Comments
	UE	SS		
18	SS			The SS releases the RRC connection. If no RRC CONNECTION RELEASE COMPLETE message have been received within 1 second then the SS shall consider the UE as switched off.
19	<-		PAGING TYPE1	Mobile identity = P-TMSI-2 PAGING TYPE1 (used for NW-mode II). Paging order is for PS services.
20	UE			No response from the UE to the request, as the UE has detached locally. This is checked for 10 seconds.
NOTE: The definitions for "Non-Suitable cell", Suitable neighbour cell and "Serving cell" are specified in TS34.108 clause 6.1 in the relevant to the RAT of the cells "Reference Radio Conditions" subclauses.				

Specific message contents

None.

12.4.1.3.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the implementation of the UE.

Case 1) UE supports an Automatic PS attach procedure.

At step13, UE shall;

- initiate the PS attach procedure.

Case 2) UE does not support an Automatic PS attach procedure.

At step20, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

12.4.1.4a Routing area updating / rejected / location area not allowed

12.4.1.4a.1 Definition

12.4.1.4a.2 Conformance requirement

1) If the network rejects a routing area updating procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:

   1.1 not perform PS attach when in the same location area.
