**8.10.1.2.12 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing with CRS assistance information (User-Specific Reference Symbols)**

The requirements are specified in Table 8.10.1.2.12-2, with the addition of parameters in Table 8.10.1.2.12-1. In Table 8.10.1.2.12-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM9 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

**Table 8.10.1.2.12-1: Test Parameters**

| Parameter                      | Unit      | Cell 1                                 | Cell 2     | Cell 3     |
|--------------------------------|-----------|--|------------|------------|
| Uplink downlink configuration  |           | 1                                      | 1          | 1          |
| Special subframe configuration |           | 4                                      | 4          | 4          |

8.10.1.2.13 Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports

8.10.1.2.13.1 Minimum requirements for QCL Type C and 3 Layers Spatial Multiplexing

The requirements are specified in Table 8.10.1.2.13.1-3, with the additional parameters in Table 8.10.1.2.13.1-1 and Table 8.10.1.2.13.1-2. The purpose of this test is to verify the UE capability of supporting non quasi-co-located antenna ports when the UE receives DCI format 2D in a scenario with non-coherent joint transmission from two transmission points. The test verifies that the UE configured with quasi co-location type C performs correct tracking and compensation of the frequency and time difference between two transmission points, channel parameters estimation, channel estimation and rate matching behaviour according to the ‘PDSCH RE Mapping and Quasi-Co-Location Indicator’ signalling defined in [6]. In Table 8.10.1.2.13.1-1, transmission point 1 (TP 1) is the serving cell transmitting

PDCCH, synchronization signals, PBCH and PDSCH, and transmission point 2 (TP 2) has different Cell ID and transmits PDSCH. In the test the PDSCH is transmitted from TP 1 and TP 2. The downlink physical channel setup for TP 1 is according to Annex C.3.2 and for TP 2 according to Annex C.3.2.

**Table 8.10.1.2.13.1-1: Test Parameters**

| Parameter  |          | Unit             | TP 1                        | TP 2                        |
|--|----------|------------------|-----------------------------|-----------------------------|
| Uplink downlink configuration  |          |                  | 1                           | 1                           |

## 8.10.1.2.13.2 Minimum requirements for QCL Type C and 4 Layers Spatial Multiplexing

The requirements are specified in Table 8.10.1.2.13.2-3, with the additional parameters in Table 8.10.1.2.13.2-1 and Table 8.10.1.2.13.2-2. The purpose of this test is to verify the UE capability of supporting non quasi-co-located antenna ports when the UE receives DCI format 2D in a scenario with non-coherent joint transmission from two transmission points. The test verifies that the UE configured with quasi co-location type C performs correct tracking and compensation of the frequency and time difference between two transmission points, channel parameters estimation, channel estimation and rate matching behaviour according to the ‘PDSCH RE Mapping and Quasi-Co-Location Indicator’ signalling defined in [6]. In Table 8.10.1.2.13.2-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and PDSCH, and transmission point 2 (TP 2) has different Cell ID and transmits PDSCH. In the test the PDSCH is transmitted from TP 1 and TP 2. The downlink physical channel setup for TP 1 is according to Annex C.3.2 and for TP 2 according to Annex C.3.2.

Table 8.10.1.2.13.2-1: Test Parameters

| Parameter   | Unit             | TP 1                        | TP 2                        |
|---|------------------|-----------------------------|-----------------------------|
| Uplink downlink configuration   |                  | 1                           | 1                           |
| Special subframe configuration  |                  | 4                           | 4                           |
| Downlink power allocation   | $\rho_A$         | dB                          | 0                           |
|   | $\rho_B$         | dB                          | 0 (Note 1)                  |
|   | $\sigma$         | dB                          | -3                          |
| Beamforming model   |                  | Random beamforming (rank 2) | Random beamforming (rank 2) |
| Cell-specific reference signals   |                  | Antenna ports 0,1,2,3       | Antenna ports 0,1,2,3       |
| CSI reference signals 0   |                  | Antenna ports {15,16,17,18} | N/A                         |
| CSI-RS 0 periodicity and subframe offset $T_{CSI-RS}/\Delta_{CSI-RS}$   | Subframes        | 5 / 4                       |                             |
| CSI reference signal 0 configuration                                    |                  | 0                           |                             |
| CSI reference signals 1   |                  | N/A                         | Antenna ports {15,16,17,18} |
| CSI-RS 1 periodicity and subframe offset $T_{CSI-RS}/\Delta_{CSI-RS}$   | Subframes        |                             | 5 / 4                       |
| CSI reference signal 1 configuration                                    |                  |                             | 8                           |

8.10.1.2.14 HST-SFN performance

8.10.1.2.14.1 Minimum Requirement for Rel-16 further enhanced HST

The requirements are specified in Table 8.10.1.2.14-2, with the addition of the parameters in Table 8.10.1.2.14-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of this test is to verify UE performance in

the HST-SFN-500 scenario. The test for HST-SFN-500 scenario defined in B.3B is applied when *highSpeedEnhDemodFlag2-r16* [7] is received.

**Table 8.10.1.2.14-1: Void**

**Table 8.10.1.2.14-2: Void**

NOTE: Table 8.10.1.2.14-1 and Table 8.10.1.2.14-2 are moved to subclause 8.10.1.2.14.1 as Table 8.10.1.2.14.1-1 and Table 8.10.1.2.14.1-2.

**Table 8.10.1.2.14.1-1: Test Parameters for UE performance in HST-SFN-500 scenario (FRC)**

| Parameter                 | Unit     | Test 1       |
|---------------------------|----------|--------------|
| Downlink power allocation | $\rho_A$ | dB           |
|                           | $\rho_B$ | dB           |
|                           | $\sigma$ | dB           |
| $N_{oc}$ at antenna port  |          | dBm/15kHz    |
| ACK/NACK feedback mode    |          | Multiplexing |
| PDSCH transmission mode   |          | 3            |
| NOTE 1: $P_B = 1$ .       |          |              |

**Table 8.10.1.2.14.1-2: Minimum performance UE in HST-SFN-500 scenario (FRC)**

| Test number   | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |
|---|-----------|-------------------|--------------|-----------------------|--|------------------------------------|----------|-------------|
|   |           |                   |              |                       |  | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1 NOTE 2  | 10 MHz    | R.87-1 TDD        | OP.1 TDD     | HST-SFN-500           | 2x4  | 70                                 | 6.8      | $\geq 1$    |
| NOTE 1: Test case applicability is defined in 8.1.2.1 and 8.1.2.6.  |           |                   |              |                       |  |                                    |          |             |
| NOTE 2: The requirement defined is based on the normalized channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps. |           |                   |              |                       |  |                                    |          |             |

## 8.10.2 PDCCH/PCFICH

### 8.10.2.1 FDD

The parameters specified in Table 8.10.2.1-1 are valid for all FDD tests unless otherwise stated.

**Table 8.10.2.1-1: Test Parameters for PDCCH/PCFICH with 4 Rx Antenna Ports**

| Parameter                      | Unit     | Single antenna port | Transmit diversity |
|--------------------------------|----------|---------------------|--------------------|
| Number of PDCCH symbols        | symbols  | 2                   | 2                  |
| PHICH Ng (Note 1)              |          | 1                   | 1                  |
| PHICH duration                 |          | Normal              | Normal             |
| Unused RE-s and PRB-s (Note 2) |          | OCNG                | OCNG               |
| Cell ID                        |          | 0                   | 0                  |
| Downlink power allocation      | $\rho_A$ | dB                  | -3                 |
|                                | $\rho_B$ | dB                  | -3                 |
|                                | $\sigma$ | dB                  | 0                  |
| $N_{oc}$ at antenna port       |          | dBm/15kHz           | -98                |
| Cyclic prefix                  |          | Normal              | Normal             |

|   |
|---|
| Note 1: according to Clause 6.9 in TS 36.211 [4]. |
| Note 2: PDSCH is mapped as OCNG.                  |

### 8.10.2.1.1 Single-antenna port performance

For the parameters specified in Table 8.10.2.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.1.1-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 8 CCE             | R.15 FDD          | OP.1 FDD     | ETU70                 | 1x4 Low                                      | 1               | -5.4     |

### 8.10.2.1.2 Transmit diversity performance with 2 Tx Antenna Ports

For the parameters specified in Table 8.10.2.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.1.2-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.1.2-1: Minimum performance PDCCH/PCFICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 4 CCE             | R.16 FDD          | OP.1 FDD     | EVA70                 | 2 x 4 Low                                    | 1               | -3.5     |

### 8.10.2.1.3 Transmit diversity performance with 4 Tx Antenna Ports

For the parameters specified in Table 8.10.2.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.1.3-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.1.3-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 5 MHz     | 2 CCE             | R.17 FDD          | OP.1 FDD     | EPA5                  | 4 x 4 Medium A Xpol                          | 1               | -0.4     |

### 8.10.2.1.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.10.2.1.4-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.1.4-2. In Table 8.10.2.1.4-1, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell, respectively.

Table 8.10.2.1.4-1: Test Parameters for PDCCH/PCFICH

| Parameter   |                                  | Unit      | Cell 1                           | Cell 2                       |
|---|----------------------------------|-----------|----------------------------------|------------------------------|

Table 8.10.2.1.4-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

| Test Number | Aggregation level | Reference Channel | OCNG Pattern (Note 1) | Propagation Conditions (Note 2) |        | Antenna Configuration and Correlation Matrix (Note 3) | Reference Value |                   |
|-------------|-------------------|-------------------|-----------------------|---------------------------------|--------|---|-----------------|-------------------|
|             |                   |                   |                       | Cell 1                          | Cell 2 |   | Pm-dsg (%)      | SNR (dB) (Note 4) |
| 1           | 1 CCE             | R.17-2 FDD        | OP.1 FDD              | EPA5                            | EPA5   | 4x4 Low   | 1               | 16.5              |

Note 1: The OCNG pattern applies for Cell 1 and Cell 2.

Note 2: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.

Note 4: SNR corresponds to  $\hat{E}_s/N_{oc}$  of Cell 1 as defined in clause 8.1.1.

## 8.10.2.2 TDD

| Note 3: according to Clause 6.9 in TS 36.211 [4].     |          |           |              |              |
| Note 4: PDSCH is mapped as OCNB.                      |          |           |              |              |

### 8.10.2.2.1 Single-antenna port performance

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.2.1-1: Minimum performance PDCCH/PCFICH**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNB Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 8 CCE             | R.15 TDD          | OP.1 TDD     | ETU70                 | 1x4 Low                                      | 1               | -4.7     |

### 8.10.2.2.2 Transmit diversity performance with 2 Tx Antenna Ports

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.2-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.2.2-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNB Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 4 CCE             | R.16 TDD          | OP.1 TDD     | EVA70                 | 2 x 4 Low                                    | 1               | -3.2     |

### 8.10.2.2.3 Transmit diversity performance with 4 Tx Antenna Ports

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.3-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.2.2.3-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNB Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 5 MHz     | 2 CCE             | R.17 TDD          | OP.1 TDD     | EPA5                  | 4 x 4 Medium A Xpol                          | 1               | 0.0      |

#### 8.10.2.2.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.10.2.2.4-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.4-2. In Table 8.10.2.2.4-1, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell, respectively.

**Table 8.10.2.2.4-1: Test Parameters for PDCCH/PCFICH**

| Parameter   |                                  | Unit      | Cell 1                           | Cell 2                       |
|---|----------------------------------|-----------|----------------------------------|------------------------------|
| Downlink power allocation   | PDCCH_RA<br>OCNG_RA              | dB        | -3                               | -3                           |
|   | PHICH_RA                         | dB        | -3                               | N/A                          |

| Time Offset relative to Cell 1  |                                  | μs        | N/A                              | 2                            |
| Frequency shift relative to Cell 1  |                                  | Hz        | N/A                              | 200                          |
| Note 1: According to Clause 6.9 in TS 36.211 [4].                           |                                  |           |                                  |                              |
| Note 2: For Cell 2 unused RE-s and PRB-s do not include control region REs. |                                  |           |                                  |                              |

**Table 8.10.2.1.4-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A**

| Test Number | Aggregation level | Reference Channel | OCNG Pattern (Note 1) | Propagation Conditions (Note 2) |        | Antenna Configuration and Correlation Matrix (Note 3) | Reference Value |                   |
|-------------|-------------------|-------------------|-----------------------|---------------------------------|--------|---|-----------------|-------------------|
|             |                   |                   |                       | Cell 1                          | Cell 2 |   | Pm-dsg (%)      | SNR (dB) (Note 4) |
| 1           | 1 CCE             | R.17-2 TDD        | OP.1 TDD              | EPA5                            | EPA5   | 4x4 Low   | 1               | 17.9              |

Note 1: The OCNG pattern applies for Cell 1 and Cell 2.

Note 2: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.

Note 4: SNR corresponds to  $\hat{E}_s/N_{oc}$  of Cell 1 as defined in clause 8.1.1.

## 8.10.3 PHICH

The receiver characteristics of the PHICH are determined by the probability of miss-detecting an ACK for a NACK (Pm-an). It is assumed that there is no bias applied to the detection of ACK and NACK (zero-threshold detection).

### 8.10.3.1 FDD

The parameters specified in Table 8.10.3.1-1 are valid for all FDD tests with 4Rx unless otherwise stated.

**Table 8.10.3.1-1: Test Parameters for PHICH with 4 Rx Antenna Ports**

| Parameter  |          | Unit      | Single antenna port  | Transmit diversity |
|--|----------|-----------|--|--------------------|
| Downlink power allocation  | $\rho_A$ | dB        | 0  | -3                 |
|  | $\rho_B$ | dB        | 0  | -3                 |
|  | $\sigma$ | dB        | 0  | 0                  |
| PHICH duration   |          |           | Normal   | Normal             |
| PHICH Ng (Note 1)  |          |           | Ng = 1   | Ng = 1             |
| PDCCH Content  |          |           | UL Grant should be included with the proper information aligned with A.3.6. DL Grant: Note 2 |                    |
| Unused RE-s and PRB-s (Note 2)   |          |           | OCNG   | OCNG               |
| Cell ID  |          |           | 0  | 0                  |
| $N_{oc}$ at antenna port   |          | dBm/15kHz | -98  | -98                |
| Cyclic prefix  |          |           | Normal   | Normal             |
| Note 1: according to Clause 6.9 in TS 36.211 [4].  |          |           |  |                    |
| Note 2: Reference measurement channel R.15 FDD for Single Tx Antenna 8.10.3.1.1, R15-2 FDD for Transmit Diversity with 2Tx Antenna Port 8.10.3.1.2, R17 FDD for Transmit diversity with 4Tx Antenna Port 8.10.3.1.3, according to Table A.3.5.1-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1 for the serving cell. |          |           |  |                    |

#### 8.10.3.1.1 Single Tx Antenna Port performance

For the parameters specified in Table 8.10.3.1-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.1.1-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 10 MHz    | R.18              | OP.1 FDD     | ETU70                 | 1 x 4 Low                                    | 0.1             | 1.6      |

#### 8.10.3.1.2 Transmit diversity performance with 2 Tx Antenna Ports

For the parameters specified in Table 8.10.3.1-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.1.2-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.1.2-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 10 MHz    | R.19              | OP.1 FDD     | EVA70                 | 2 x 4 Low                                    | 0.1             | 0.6      |

### 8.10.3.1.3 Transmit diversity performance with 4 Tx Antenna Ports

For the parameters specified in Table 8.10.3.1-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.1.3-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.1.3-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 5 MHz     | R.20              | OP.1 FDD     | EPA5                  | 4 x 4 Medium correlation A, Cross polarized  | 0.1             | 0.1      |

### 8.10.3.2 TDD

The parameters specified in Table 8.10.3.2-1 are valid for all TDD tests with 4 Rx unless otherwise stated.

**Table 8.10.3.2-1: Test Parameters for PHICH with 4 Rx Antenna Ports**

| Parameter  | Unit      | Single antenna port  | Transmit diversity |
|--|-----------|--|--------------------|
| Uplink downlink configuration (Note 1)   |           | 1  | 1                  |
| Special subframe configuration (Note 2)  |           | 4  | 4                  |
| Downlink power allocation  | $\rho_A$  | dB   | -3                 |
|  | $\rho_B$  | dB   | -3                 |
|  | $\sigma$  | dB   | 0                  |
| PHICH duration   |           | Normal   | Normal             |
| PHICH Ng (Note 1)  |           | Ng = 1   | Ng = 1             |
| PDCCH Content  |           | UL Grant should be included with the proper information aligned with A.3.6. DL Grant: Note 4 |                    |
| Unused RE-s and PRB-s (Note 4)   |           | OCNG   | OCNG               |
| Cell ID  |           | 0  | 0                  |
| $N_{oc}$ at antenna port   | dBm/15kHz | -98  | -98                |
| Cyclic prefix  |           | Normal   | Normal             |
| ACK/NACK feedback mode   |           | Multiplexing   | Multiplexing       |
| Note 1: as specified in Table 4.2-2 in TS 36.211 [4].<br>Note 2: as specified in Table 4.2-1 in TS 36.211 [4].<br>Note 3: according to Clause 6.9 in TS 36.211 [4].<br>Note 4: Reference measurement channel R.15 TDD for Single Tx Antenna 8.10.3.2.1, R15-2 TDD for Transmit Diversity with 2Tx Antenna Port 8.10.3.2.2, R17 TDD for Transmit diversity with 4Tx Antenna Port 8.10.3.2.3, according to Table A.3.5.2-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1 for the serving cell |           |  |                    |

#### 8.10.3.2.1 Single Tx Antenna Port performance

For the parameters specified in Table 8.10.3.2-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.2.1-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 10 MHz    | R.18              | OP.1 TDD     | ETU70                 | 1 x 4 Low                                    | 0.1             | 1.7      |

#### 8.10.3.2.2 Transmit diversity performance with 2 Tx Antenna Ports

For the parameters specified in Table 8.10.3.2-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.2.2-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.2.2-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 10 MHz    | R.19              | OP.1 TDD     | EVA70                 | 2 x 4 Low                                    | 0.1             | 0.9      |

#### 8.10.3.2.3 Transmit diversity performance with 4 Tx Antenna Ports

For the parameters specified in Table 8.10.3.2-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.10.3.2.3-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.3.2.3-1: Minimum performance PHICH with 4 Rx Antenna Ports**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |              |                       |  | Pm-an (%)       | SNR (dB) |
| 1           | 5 MHz     | R.20              | OP.1 TDD     | EPA5                  | 4 x 4 Medium cotrrelation A, Cross polarized | 0.1             | 0.3      |

## 8.10.4 ePDCCH

The receiver characteristics of the EPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg). For the distributed transmission tests in 8.10.4.1, EPDCCH and PCFICH are tested jointly, i.e. a miss detection of PCFICH implies a miss detection of EPDCCH. For other tests, EPDCCH and PCFICH are not tested jointly.

### 8.10.4.1 Distributed Transmission with 4Rx

#### 8.10.4.1.1 FDD

The parameters specified in Table 8.10.4.1.1-1 are valid for all FDD distributed EPDCCH test with 4Rx unless otherwise stated.

**Table 8.10.4.1.1-1: Test Parameters for Distributed EPDCCH with 4Rx**

| Parameter               | Unit    | Value      |
|-------------------------|---------|------------|
| Number of PDCCH symbols | symbols | 2 (Note 1) |
| PHICH duration          |         | Normal     |

|   |          |            |  |
|---|----------|------------|--|
| Unused RE-s and PRB-s   |          |            | OCNG   |
| Cell ID   |          |            | 0  |
| Downlink power allocation   | $\rho_A$ | dB         | -3   |
|   | $\rho_B$ | dB         | -3   |
|   | $\sigma$ | dB         | 0  |
|   | $\delta$ | dB         | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15 kHz | -98  |
| Cyclic prefix   |          |            | Normal   |
| Subframe Configuration  |          |            | Non-MBSFN  |
| Precoder Update Granularity   | PRB      |            | 1  |
|   | ms       |            | 1  |
| Beamforming Pre-Coder   |          |            | Annex B.4.4  |
| Cell Specific Reference Signal  |          |            | Port 0 and 1                                       |
| Number of EPDCCH Sets Configured  |          |            | 2 (Note 2)   |
| Number of PRB per EPDCCH Set  |          |            | 4 (1 <sup>st</sup> Set)<br>8 (2 <sup>nd</sup> Set) |
| EPDCCH Subframe Monitoring  |          |            | NA   |
| PDSCH TM  |          |            | TM3  |
| DCI Format  |          |            | 2A   |
| <p>Note 1: The starting symbol for EPDCCH is derived from the PCFICH. RRC signalling <i>epdcch-StartSymbol-r11</i> is not configured.</p> <p>Note 2: The two sets are distributed EPDCCH sets and non-overlapping with PRB = {3, 17, 31, 45} for the first set and PRB = {0, 7, 14, 21, 28, 35, 42, 49} for the second set. EPDCCH is scheduled in the first set for Test 1 and second set for Test 2, respectively. Both sets are always configured.</p> |          |            |  |

For the parameters specified in Table 8.10.4.1.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.4.1.1-2. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.4.1.1-2: Minimum performance Distributed EPDCCH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 4 ECCE            | R.55 FDD          | OP.7 FDD     | EVA5                  | 2 x 4 Low                                    | 1               | -0.7     |
| 2           | 10 MHz    | 16 ECCE           | R.56 FDD          | OP.7 FDD     | EVA70                 | 2 x 4 Low                                    | 1               | -5.8     |

#### 8.10.4.1.2 TDD

The parameters specified in Table 8.10.4.1.2-1 are valid for all TDD distributed EPDCCH tests with 4Rx unless otherwise stated.

**Table 8.10.4.1.2-1: Test Parameters for Distributed EPDCCH with 4Rx**

| Parameter                 | Unit       | Value      |    |
|---------------------------|------------|------------|----|
| Number of PDCCH symbols   | symbols    | 2 (Note 1) |    |
| PHICH duration            |            | Normal     |    |
| Unused RE-s and PRB-s     |            | OCNG       |    |
| Cell ID                   |            | 0          |    |
| Downlink power allocation | $\rho_A$   | dB         | -3 |
|                           | $\rho_B$   | dB         | -3 |
|                           | $\sigma$   | dB         | 0  |
|                           | $\delta$   | dB         | 3  |
| $N_{oc}$ at antenna port  | dBm/15 kHz | -98        |    |
| Cyclic prefix             |            | Normal     |    |
| Subframe Configuration    |            | Non-MBSFN  |    |

|                                  |  |                         |
|----------------------------------|--|-------------------------|
| Precoder Update Granularity      | PRB  | 1                       |
|                                  | ms   | 1                       |
| Beamforming Pre-Coder            |  | Annex B.4.4             |
| Cell Specific Reference Signal   |  | Port 0 and 1            |
| Number of EPDCCH Sets Configured |  | 2 (Note 2)              |
| Number of PRB per EPDCCH Set     |  | 4 (1 <sup>st</sup> Set) |
|                                  |  | 8 (2 <sup>nd</sup> Set) |
| EPDCCH Subframe Monitoring       |  | NA                      |
| PDSCH TM                         |  | TM3                     |
| DCI Format                       |  | 2A                      |
| TDD UL/DL Configuration          |  | 0                       |
| TDD Special Subframe             |  | 1 (Note 3)              |
| Note 1:                          | The starting symbol for EPDCCH is derived from the PCFICH. RRC signalling <i>epdcch-StartSymbol-r11</i> is not configured.   |                         |
| Note 2:                          | The two sets are distributed EPDCCH sets and non-overlapping with PRB = {3, 17, 31, 45} for the first set and PRB = {0, 7, 14, 21, 28, 35, 42, 49} for the second set. EPDCCH is scheduled in the first set for Test 1 and second set for Test 2, respectively. Both sets are always configured. |                         |
| Note 3:                          | Demodulation performance is averaged over normal and special subframe.   |                         |

For the parameters specified in Table 8.10.4.1.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.4.1.2-2. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.4.1.2-2: Minimum performance Distributed EPDCCH with 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |

| 2           | 10 MHz    | 16 ECCE           | R.56 TDD          | OP.7 TDD     | EVA70                 | 2 x 4 Low                                    | 1               | -5.8     |

## 8.10.4.2 Localized Transmission with TM9 and 4Rx

### 8.10.4.2.1 FDD

The parameters specified in Table 8.10.4.2.1-1 are valid for all FDD TM9 localized ePDCCH tests with 4Rx unless otherwise stated.

**Table 8.10.4.2.1-1: Test Parameters for Localized EPDCCH with TM9 and 4Rx**

| Parameter                   | Unit       | Value      |    |
|-----------------------------|------------|------------|----|
| Number of PDCCH symbols     | symbols    | 1 (Note 1) |    |
| EPDCCH starting symbol      | symbols    | 2 (Note 1) |    |
| PHICH duration              |            | Normal     |    |
| Unused RE-s and PRB-s       |            | OCNG       |    |
| Cell ID                     |            | 0          |    |
| Downlink power allocation   | $\rho_A$   | dB         | 0  |
|                             | $\rho_B$   | dB         | 0  |
|                             | $\sigma$   | dB         | -3 |
|                             | $\delta$   | dB         | 0  |
| $N_{oc}$ at antenna port    | dBm/15 kHz | -98        |    |
| Cyclic prefix               |            | Normal     |    |
| Subframe Configuration      |            | Non-MBSFN  |    |
| Precoder Update Granularity | PRB        | 1          |    |
|                             | ms         | 1          |    |

|   |   |   |
|---|---|---|
| Beamforming Pre-Coder   |   | Annex B.4.5   |
| Cell Specific Reference Signal                                      |   | Port 0 and 1  |
| CSI-RS Reference Signal   |   | Port 15 and 16  |
| CSI-RS reference signal resource configuration                      |   | 0   |
| CSI reference signal subframe configuration $I_{\text{CSI-RS}}$     |   | 2   |
| ZP-CSI-RS configuration bitmap                                      |   | 0000010000000000  |
| ZP-CSI-RS subframe configuration $I_{\text{ZP-CSI-RS}}$             |   | 2   |
| Number of EPDCCH Sets   |   | 2 (Note 2)  |
| EPDCCH Subframe Monitoring pattern <i>subframePatternConfig-r11</i> |   | 1111111110 1111111101 1111111011<br>1111110111 (Note 3) |
| PDSCH TM  |   | TM9   |
| Note 1:   | The starting symbol for EPDCCH is signalled with <i>epdcch-StartSymbol-r11</i> . However, CFI is set to 1.  |   |
| Note 2:   | The first set is distributed transmission with PRB = {0, 49} and the second set is localized transmission with PRB = {0, 7, 14, 21, 28, 35, 42, 49}. ePDCCH is scheduled in the second set for all tests. |   |
| Note 3:   | EPDCCH is scheduled in every SF. UE is required to monitor ePDCCH for UE-specific search space only in SFs configured by <i>subframePatternConfig-r11</i> . Legacy PDCCH is not scheduled.                |   |

For the parameters specified in Table 8.10.4.2.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.4.2.1-2. EPDCCH subframe monitoring is configured and the subframe monitoring requirement in EPDCCH restricted subframes is statDTX of 99.9%.

The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.4.2.1-2: Minimum performance Localized EPDCCH with TM9 and 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | 2 ECCE            | R.57 FDD          | OP.7 FDD     | EVA5                  | 2 x 4 Low                                    | 1               | 6.5      |
| 2           | 10 MHz    | 8 ECCE            | R.58 FDD          | OP.7 FDD     | EVA5                  | 2 x 4 Low                                    | 1               | -1.5     |

#### 8.10.4.2.2 TDD

The parameters specified in Table 8.10.4.2.2-1 are valid for all TDD TM9 localized ePDCCH tests unless otherwise stated.

**Table 8.10.4.2.2-1: Test Parameters for Localized EPDCCH with TM9 and 4Rx**

| Parameter                      | Unit       | Value        |    |
|--------------------------------|------------|--------------|----|
| Number of PDCCH symbols        | symbols    | 1 (Note 1)   |    |
| EPDCCH starting symbol         | symbols    | 2 (Note 1)   |    |
| PHICH duration                 |            | Normal       |    |
| Unused RE-s and PRB-s          |            | OCNG         |    |
| Cell ID                        |            | 0            |    |
| Downlink power allocation      | $\rho_A$   | dB           | 0  |
|                                | $\rho_B$   | dB           | 0  |
|                                | $\sigma$   | dB           | -3 |
|                                | $\delta$   | dB           | 0  |
| $N_{oc}$ at antenna port       | dBm/15 kHz | -98          |    |
| Cyclic prefix                  |            | Normal       |    |
| Subframe Configuration         |            | Non-MBSFN    |    |
| Precoder Update Granularity    | PRB        | 1            |    |
|                                | ms         | 1            |    |
| Beamforming Pre-Coder          |            | Annex B.4.5  |    |
| Cell Specific Reference Signal |            | Port 0 and 1 |    |

|   |   |   |
|---|---|---|
| CSI-RS Reference Signal   |   | Port 15 and 16  |
| CSI-RS reference signal resource configuration                      |   | 0   |
| CSI reference signal subframe configuration $l_{\text{CSI-RS}}$     |   | 0   |
| ZP-CSI-RS configuration bitmap                                      |   | 0000010000000000  |
| ZP-CSI-RS subframe configuration $l_{\text{ZP-CSI-RS}}$             |   | 0   |
| Number of EPDCCH Sets   |   | 2 (Note 2)  |
| EPDCCH Subframe Monitoring pattern <i>subframePatternConfig-r11</i> |   | 1100011000 1100010000 1100011000<br>1100001000 1100011000 1000011000<br>1100011000 (Note 3) |
| PDSCH TM  |   | TM9   |
| TDD UL/DL Configuration   |   | 0   |
| TDD Special Subframe  |   | 1 (Note 4)  |
| Note 1:   | The starting symbol for EPDCCH is signalled with <i>epdcch-StartSymbol-r11</i> . However, CFI is set to 1.  |   |
| Note 2:   | The first set is distributed transmission with PRB = {0, 49} and the second set is localized transmission with PRB = {0, 7, 14, 21, 28, 35, 42, 49}. ePDCCH is scheduled in the second set for all tests. |   |
| Note 3:   | EPDCCH is scheduled in every SF. UE is required to monitor ePDCCH for UE-specific search space only in SFs configured by <i>subframePatternConfig-r11</i> . Legacy PDCCH is not scheduled.                |   |
| Note 4:   | Demodulation performance is averaged over normal and special subframe.  |   |

For the parameters specified in Table 8.10.4.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.4.2.2-2. EPDCCH subframe monitoring is configured and the subframe monitoring requirement in EPDCCH restricted subframes is statDTX of 99.9%.

The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.10.4.2.2-2: Minimum performance Localized EPDCCH with TM9 and 4Rx Antenna ports**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |

| 2           | 10 MHz    | 8 ECCE            | R.58 TDD          | OP.7 TDD     | EVA5                  | 2 x 4 Low                                    | 1               | -2.1     |

## 8.11 Demodulation (UE supporting coverage enhancement)

The requirements for UE DL Category M1 in this sub-clause are defined based on the simulation results with UE DL Category M1 unless otherwise stated.

The requirements for UE DL Category M2 in this sub-clause are defined based on the simulation results with UE DL Category M2 unless otherwise stated.

The requirements of UE DL Category M1 in this sub-clause are applicable for UE DL Category M2, UE DL Category 1bis and Category 0, as specified in the applicability rule in the sub-clause 8.1.2.8A.

The requirements of UE DL Category M2 in this sub-clause are applicable for UE DL Category 1bis and Category 0, as specified in the applicability rule in the sub-clause 8.1.2.8A.

### 8.11.1 PDSCH

#### 8.11.1.1 FDD and half-duplex FDD (Fixed Reference Channel)

The parameters specified in Table 8.11.1.1-1 are valid for FDD and half-duplex FDD tests unless otherwise stated.

**Table 8.11.1.1-1: Common Test Parameters (FDD and half-duplex FDD)**

| Parameter  | Unit         | CE Mode A  | CE Mode B  |
|--|--------------|--|--|
| Inter-TTI Distance   |              | 1  | 1  |
| Number of HARQ processes per component carrier   | Processes    | 8 or 10 (Note 2)   | 2  |
| Maximum number of HARQ transmission  |              | 4  | 4  |
| Redundancy version coding sequence $r_{vidx}$ (Note 1)   |              | {0, 2, 3, 1} for QPSK and 16QAM  | {0,0,0,0,2,2,2,2,3,3,3,3,1,1,1,1...} for QPSK  |
| Number of OFDM symbols for PDCCH per component carrier   | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths    | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths    |
| Cyclic Prefix  |              | Normal   | Normal   |
| Beamforming Precoder for MPDCCH  |              | Annex B.4.4  | Annex B.4.4  |
| Precoder update granularity for MPDCCH   |              | Frequency domain: 1 PRB<br>Time domain: identical during the hopping period (interval-FDD for CE Mode A) | Frequency domain: 1 PRB<br>Time domain: identical during the hopping period (interval-FDD for CE Mode B) |
| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR)  |              | 1111111111   | 1111111111   |
| Note 1: $r_{vidx}$ is defined in TS 36.213 [6] Table 7.1.7.1-2.<br>Note 2: For UE supporting ce-pdsch-tenProcesses-r13, the number of HARQ processes are set to 10, otherwise, it is set to 8. |              |  |  |

8.11.1.1.1 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

8.11.1.1.1.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.11.1.1.1-2, with the addition of the parameters in Table 8.11.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

**Table 8.11.1.1.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)**

| Parameter                            | Unit      | Test 1       |             |
|--------------------------------------|-----------|--------------|-------------|
| Downlink power allocation            | $\rho_A$  | dB           | -3          |
|                                      | $\rho_B$  | dB           | -3 (Note 1) |
|                                      | $\sigma$  | dB           | 0           |
|                                      | $\delta$  | dB           | 3           |
| $N_{oc}$ at antenna port             | dBm/15kHz | -98          |             |
| Precoding granularity                | PRB       | 6            |             |
| PMI delay (Note 2)                   | ms        | 10           |             |
| Reporting interval                   | ms        | 10           |             |
| Reporting mode                       |           | PUCCH 1-1    |             |
| Physical channel for CQI reporting   |           | PUSCH(Note4) |             |
| cqi-pmi-ConfigIndex                  |           | 12           |             |
| CodeBookSubsetRestriction bitmap     |           | 001111       |             |

#### 8.11.1.1.1.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.1.1.2-2, with the addition of parameters in Table 8.11.1.1.1.2-1. In Table 8.11.1.1.1.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

**Table 8.11.1.1.1.2-1: Test Parameters**

| Parameter                 | Unit      | Cell 1 | Cell 2      | Cell 3      |             |
|---------------------------|-----------|--------|-------------|-------------|-------------|
| Downlink power allocation | $\rho_A$  | dB     | -3          | -3          | -3          |
|                           | $\rho_B$  | dB     | -3 (Note 1) | -3 (Note 1) | -3 (Note 1) |
|                           | $\sigma$  | dB     | 0           | 0           | 0           |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98    | N/A         | N/A         |             |
| $\hat{E}_s/N_{oc}$        | dB        | N/A    | 11.75       | 5.69        |             |
| BW <sub>Channel</sub>     | MHz       | 10     | 10          | 10          |             |

|   |        |                   |                              |                              |    |
|---|--------|-------------------|------------------------------|------------------------------|----|
| Cyclic prefix   |        | Normal            | Normal                       | Normal                       |    |

### 8.11.1.1.1.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.1.1.3-2, with the addition of parameters in Table 8.11.1.1.1.3-1. In Table 8.11.1.1.1.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

**Table 8.11.1.1.1.3-1: Test Parameters**

| Parameter   |          | Unit      | Cell 1                | Cell 2                       | Cell 3                       |
|---|----------|-----------|-----------------------|------------------------------|------------------------------|
| Downlink power allocation   | $\rho_A$ | dB        | -6                    | -6                           | -6                           |

| Interference model  |          |           | N/A                   | As specified in clause B.5.3 | As specified in clause B.5.3 |
| Probability of occurrence of transmission in interference cells     |          | %         | N/A                   | 20                           | 20                           |
| Probability of occurrence of transmission rank in interfering cells | Rank 1   | %         | N/A                   | 80                           | 80                           |
|   | Rank 2   | %         | N/A                   | 20                           | 20                           |

Note 1:  $P_B = 1$ .

Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4). This reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Note 3: For each test, DC subcarrier puncturing shall be considered.

Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.

**Table 8.11.1.1.1.3-2: Minimum performance for PDSCH**

| Test Number | Reference Channel | OCNG Pattern |        |        | Propagation Conditions (Note1) |        |        | Correlation Matrix and Antenna Configuration (Note 2) | Reference Value                    |                   | UE Category |
|-------------|-------------------|--------------|--------|--------|--------------------------------|--------|--------|---|------------------------------------|-------------------|-------------|
|             |                   | Cell 1       | Cell 2 | Cell 3 | Cell 1                         | Cell 2 | Cell 3 |   | Fraction of Maximum Throughput (%) | SNR (dB) (Note 3) |             |
| 1           | R.95 FDD          | OP.1 FDD     | N/A    | N/A    | EPA5                           | EPA5   | EPA5   | 4x1 Low   | 70                                 | 11.4              | M2          |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.  
 Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.  
 Note 3: SNR corresponds to  $\hat{E}_s/N_{oc}$  of cell 1.

8.11.1.1.2 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

8.11.1.1.2.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a MPDCCH with DCI format 6-1A, the requirements are specified in Table 8.11.1.1.2.1-2 with the addition of the parameters in Table 8.11.1.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8.

**Table 8.11.1.1.2.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer)**

| parameter   | Unit      | Test 1            | Test 2            | Test 3            |
|---|-----------|-------------------|-------------------|-------------------|
| Downlink power allocation   | $\rho_A$  | dB                | 0                 | 0                 |
|   | $\rho_B$  | dB                | 0 (Note 1)        | 0 (Note 1)        |
|   | $\sigma$  | dB                | -3                | -3                |
|   | $\delta$  | dB                | 0                 | 0                 |
| Beamforming model   |           | Annex B.4.1       | Annex B.4.1       | Annex B.4.1       |
| Cell-specific reference signals   |           | Antenna ports 0,1 | Antenna ports 0,1 | Antenna ports 0,1 |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98 (Note 6)      | -98 (Note 6)      | -98 (Note 6)      |

8.11.1.1.2.2 (Void)

8.11.1.1.2.3 (Void)

8.11.1.1.3 Transmit diversity performance (Cell-Specific Reference Symbols)

8.11.1.1.3.1 Minimum Requirement 2 Tx Antenna Port supporting narrowband transmission

The requirements are specified in Table 8.11.1.1.3.1-2, with the addition of the parameters in Table 8.11.1.1.3.1-1 and Table 8.11.1.1.3.1-1a, and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

**Table 8.11.1.1.3.1-1: Test Parameters for Transmit diversity performance (FRC)**

| Parameter                 | Unit      | Test 1 (Note 3) | Test 2 (Note 3) | Test 2a (Note 3) | Test 3 (Note 3) | Test 4 (Note 3) |
|---------------------------|-----------|-----------------|-----------------|------------------|-----------------|-----------------|

## 8.11.1.1.3.2

## Minimum Requirement 2 Tx Antenna Port supporting wideband transmission

The requirements are specified in Table 8.11.1.1.3.2-2, with the addition of the parameters in Table 8.11.1.1.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.11.1.1.3.2-1: Test Parameters for Transmit diversity performance (FRC)

| Parameter   |          | Unit           | Test 1         | Test 2         | Test 2a<br>(Note 4) | Test 3         | Test 4         |
|---|----------|----------------|----------------|----------------|---------------------|----------------|----------------|
| Downlink power allocation   | $\rho_A$ | dB             | -3             | -3             | -3                  | -3             | -3             |
|   | $\rho_B$ | dB             | -3 (Note 1)    | -3 (Note 1)    | -3 (Note 1)         | -3 (Note 1)    | -3 (Note 1)    |
|   | $\sigma$ | dB             | 0              | 0              | 0                   | 0              | 0              |
|   | $\delta$ | dB             | 3              | 3              | 3                   | 3              | 3              |
| $N_{oc}$ at antenna port  |          | dBm/15kHz<br>Z | -98            | -98            | -98                 | -98            | -98            |
| Coverage enhancement mode   |          |                | CE Mode A      | CE Mode B      | CE Mode B           | CE Mode A      | CE Mode A      |
| PDSCH transmission mode   |          |                | 2              | 2              | 2                   | 2              | 2              |
| OFDM starting symbol (startSymbolBR)  |          |                | 2              | 2              | 2                   | 2              | 2              |
| Maximum number of repetitions for PDSCH (pdsch-maxNumRepetitionCEmodeA/pdsch-maxNumRepetitionCEmodeB)                               |          |                | Not configured | Not configured | Not configured      | Not configured | Not configured |
| PDSCH repetition number   |          |                | 8              | 32             | 32                  | 4              | 2              |
| Frequency hopping (mpdcch-pdsch-HoppingConfig)  |          |                | Enabled        | Enabled        | Enabled             | Disabled       | Disabled       |
| Frequency hopping offset (mpdcch-pdsch-HoppingOffset)   |          |                | 5              | 5              | 5                   | N/A            | N/A            |
| Frequency hopping interval (interval-FDD)   |          | ms             | 4              | 16             | 16                  | N/A            | N/A            |
| Maximum number of MPDCCH repetitions (mpdcch-NumRepetition)   |          |                | 16             | 64             | 64                  | 8              | 2              |
| MPDCCH transmission duration  |          | ms             | 16             | 64             | 64                  | 8              | 2              |
| Number of narrowbands for frequency hopping (mpdcch-pdsch-HoppingNB)  |          |                | 2              | 2              | 2                   | N/A            | N/A            |
| Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)   |          |                | 2              | 2              | 2                   | 2.5            | 5              |
| Narrowband for MPDCCH (mpdcch_Narrowband)   |          |                | 0              | 0              | 0                   | 0              | 0              |
| MPDCCH aggregation level  |          |                | 24             | 24             | 24                  | 24             | 24             |
| CRS muting outside UE RF bandwidth (crs-IntfMitigEnabled)   |          |                | Disabled       | Disabled       | Enabled             | Disabled       | Disabled       |
| Number of PRBs for CRS transmission (crs-IntfMitigNumPRBs)  |          |                | N/A            | N/A            | 24                  | N/A            | N/A            |
| Note 1: $P_B = 1$ .   |          |                |                |                |                     |                |                |
| Note 2: For each test, DC subcarrier puncturing shall be considered.  |          |                |                |                |                     |                |                |
| Note 3: If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate. |          |                |                |                |                     |                |                |
| Note 4: Test 2a is applicable for UE supporting CE Mode B and UE capable of ce-CRS-IntfMitig.                                       |          |                |                |                |                     |                |                |

Table 8.11.1.1.3.2-2: Minimum performance Transmit Diversity (FRC)

| Test number | Bandwidth and MCS | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |

## 8.11.1.2.1 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

## 8.11.1.2.1.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.11.1.2.1.1-2, with the addition of the parameters in Table 8.11.1.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

**Table 8.11.1.2.1.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)**

| Parameter   | Unit      | Test 1         |             |
|---|-----------|----------------|-------------|
| Downlink power allocation   | $\rho_A$  | dB             | -3          |
|   | $\rho_B$  | dB             | -3 (Note 1) |
|   | $\sigma$  | dB             | 0           |
|   | $\delta$  | dB             | 3           |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98            |             |
| Precoding granularity   | PRB       | 6              |             |
| PMI delay (Note 2)  | ms        | 10 or 11       |             |
| Reporting interval  | ms        | 5              |             |
| Reporting mode  |           | PUCCH 1-1      |             |
| cqi-pmi-ConfigIndex   |           | 4              |             |
| CodeBookSubsetRestriction bitmap  |           | 001111         |             |
| ACK/NACK feedback mode  |           | Multiplexing   |             |
| Physical channel for CQI reporting  |           | PUSCH (Note 3) |             |
| PDSCH transmission mode   |           | 6              |             |
| Coverage enhancement mode   |           | CE Mode A      |             |
| OFDM starting symbol (startSymbolBR)  |           | 2              |             |
| Maximum number of repetitions (mpdcch-NumRepetition)  |           | 1              |             |
| Frequency hopping (mpdcch-pdsch-HoppingConfig)  |           | Disabled       |             |
| MPDCCH transmission duration  | ms        | 1              |             |
| Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)   |           | 1              |             |
| Narrowband for MPDCCH (mpdcch_Narrowband)   |           | 1              |             |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).<br>Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.<br>Note 4: For each test, DC subcarrier puncturing shall be considered.<br>Note 5: If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate. |           |                |             |

#### 8.11.1.2.1.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.2.1.2-2, with the addition of parameters in Table 8.11.1.2.1.2-1. In Table 8.11.1.2.1.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

**Table 8.11.1.2.1.2-1: Test Parameters**

| Parameter   | Unit      | Cell 1 (Option 1) | Cell 2      | Cell 3      |
|---|-----------|-------------------|-------------|-------------|
| Uplink downlink Configuration                                     |           | 1                 | 1           | 1           |
| Special subframe configuration                                    |           | 4                 | 4           | 4           |
| Downlink power allocation   | $\rho_A$  | dB                | -3          | -3          |
|   | $\rho_B$  | dB                | -3 (Note 1) | -3 (Note 1) |
|   | $\sigma$  | dB                | 0           | 0           |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98               | N/A         | N/A         |
| $\hat{E}_s/N_{oc}$  | dB        | N/A               | 11.75       | 5.69        |
| $BW_{Channel}$  | MHz       | 10                | 10          | 10          |
| Cyclic prefix   |           | Normal            | Normal      | Normal      |
| Subframe Configuration  |           | Non-MBSFN         | Non-MBSFN   | Non-MBSFN   |
| Cell ID   |           | 0                 | 1           | 6           |
| Cell-specific reference signals                                   |           | Antenna ports 0,1 |             |             |
| Number of control OFDM symbols (CFI)                              |           | 2                 | 2           | 2           |
| PDSCH transmission mode   |           | 6                 | N/A         | N/A         |
| Coverage enhancement mode   |           | CE Mode A         | N/A         | N/A         |
| OFDM starting symbol (startSymbolBR)                              |           | 2                 | N/A         | N/A         |
| Maximum number of repetitions (mpdcch-NumRepetition)              |           | 1                 | N/A         | N/A         |
| Frequency hopping (mpdcch-pdsch-HoppingConfig)                    |           | Disabled          | N/A         | N/A         |
| Frequency hopping offset (mpdcch-pdsch-HoppingOffset)             |           | N/A               | N/A         | N/A         |
| Frequency hopping interval (interval-TDD)                         | ms        | N/A               | N/A         | N/A         |
| MPDCCH transmission duration                                      | ms        | 1                 | N/A         | N/A         |
| Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS) |           | 1                 | N/A         | N/A         |
| Precoding granularity   | PRB       | 6                 | N/A         | N/A         |
| PMI delay (Note 2)  | ms        | 10 or 11          | N/A         | N/A         |
| Reporting interval  | ms        | 5                 | N/A         | N/A         |
| Reporting mode  |           | PUCCH 1-1         | N/A         | N/A         |

|   |        |               |              |                              |                              |
|---|--------|---------------|--------------|------------------------------|------------------------------|
| Physical channel for CQI reporting  |        |               | PUSCH(Note4) |                              |                              |
| CodeBookSubsetRestriction bitmap  |        |               | 001111       | N/A                          | N/A                          |

**8.11.1.2.1.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information**

The requirements are specified in Table 8.11.1.2.1.3-2, with the addition of parameters in Table 8.11.1.2.1.3-1. In Table 8.11.1.2.1.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

**Table 8.11.1.2.1.3-1: Test Parameters**

| Parameter                      | Unit      | Cell 1 | Cell 2      | Cell 3      |
|--------------------------------|-----------|--------|-------------|-------------|

## 8.11.1.2.2 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

## 8.11.1.2.2.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a PDCCH with DCI format 6-1A, the requirements are specified in Table 8.11.1.2.2.1-2 with the addition of the parameters in Table 8.11.1.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8.

**Table 8.11.1.2.2.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer)**

| Parameter   |          | Unit      | Test 1            | Test 2            | Test 3            |
|---|----------|-----------|-------------------|-------------------|-------------------|
| Downlink power allocation   | $\rho_A$ | dB        | 0                 | 0                 | 0                 |
|   | $\rho_B$ | dB        | 0 (Note 1)        | 0 (Note 1)        | 0 (Note 1)        |
|   | $\sigma$ | dB        | -3                | -3                | -3                |
|   | $\delta$ | dB        | 0                 | 0                 | 0                 |

### 8.11.1.2.3 Transmit diversity performance (Cell-Specific Reference Symbols)

#### 8.11.1.2.3.1 Minimum Requirement 2 Tx Antenna Port supporting narrowband transmission

The requirements are specified in Table 8.11.1.2.3.1-2, with the addition of the parameters in Table 8.11.1.2.3.1-1 and Table 8.11.1.2.3.1-1a, and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

**Table 8.11.1.2.3.1-1: Test Parameters for Transmit diversity performance (FRC)**

| Parameter   | Unit           | Test 1 (Note 3)  | Test 2 (Note 3)  | Test 2a (Note 3) | Test 3 (Note 3)  | Test 4 (Note 3)  |
|---|----------------|------------------|------------------|------------------|------------------|------------------|

## 8.11.1.2.3.2 Minimum Requirement 2 Tx Antenna Port supporting wideband transmission

The requirements are specified in Table 8.11.1.2.3.2-2, with the addition of the parameters in Table 8.11.1.2.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.11.1.2.3.2-1: Test Parameters for Transmit diversity performance (FRC)

| Parameter   |          | Unit      | Test 1         | Test 2         | Test 2a (Note 4) | Test 3         | Test 4         |
|---|----------|-----------|----------------|----------------|------------------|----------------|----------------|
| Downlink power allocation   | $\rho_A$ | dB        | -3             | -3             | -3               | -3             | -3             |
|   | $\rho_B$ | dB        | -3 (Note 1)    | -3 (Note 1)    | -3 (Note 1)      | -3 (Note 1)    | -3 (Note 1)    |
|   | $\sigma$ | dB        | 0              | 0              | 0                | 0              | 0              |
|   | $\delta$ | dB        | 3              | 3              | 3                | 3              | 3              |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98            | -98            | -98              | -98            | -98            |
| ACK/NACK feedback mode  |          |           | Multiplexing   | Multiplexing   | Multiplexing     | Multiplexing   | Multiplexing   |
| PDSCH transmission mode   |          |           | 2              | 2              | 2                | 2              | 2              |
| Coverage enhancement mode   |          |           | CE Mode A      | CE Mode B      | CE Mode B        | CE Mode A      | CE Mode A      |
| OFDM starting symbol (startSymbolBR)  |          |           | 2              | 2              | 2                | 2              | 2              |
| Maximum number of repetitions for PDSCH (pdsch-maxNumRepetitionCEmodeA/pdsch-maxNumRepetitionCEmodeB) |          |           | Not configured | Not configured | Not configured   | Not configured | Not configured |
| PDSCH repetition number   |          |           | 8              | 32             | 32               | 4              | 2              |
| Frequency hopping (mpdcch-pdsch-HoppingConfig)  |          |           | Enabled        | Enabled        | Enabled          | Disabled       | Disabled       |
| Frequency hopping offset (mpdcch-pdsch-HoppingOffset)   |          |           | 5              | 5              | 5                | N/A            | N/A            |

|  |    |          |          |         |          |          |
|--|----|----------|----------|---------|----------|----------|
| Frequency hopping interval (interval-TDD)                            | ms | 5        | 20       | 20      | N/A      | N/A      |
| Maximum number of repetitions (mpdcch-NumRepetition)                 |    | 16       | 32       | 32      | 4        | 2        |
| MPDCCH transmission duration   | ms | 16       | 32       | 32      | 4        | 2        |
| Number of narrowbands for frequency hopping (mpdcch-pdsch-HoppingNB) |    | 2        | 2        | 2       | N/A      | N/A      |
| Starting subframe configuration for MPDCCH (mpdcch-startSF-U ESS)    |    | 5        | 8        | 8       | 8        | 10       |
| Narrowband for MPDCCH (mpdcch_Narrowband)                            |    | 0        | 0        | 0       | 0        | 0        |
| MPDCCH aggregation level   |    | 24       | 24       | 24      | 24       | 24       |
| CRS muting outside UE RF bandwidth (crs-IntfMitigEnabled)            |    | Disabled | Disabled | Enabled | Disabled | Disabled |
| Number of PRBs for CRS transmission (crs-IntfMitigNumPRBs)           |    | N/A      | N/A      | 24      | N/A      | N/A      |

Note 1:  $P_b = 1$ .

Note 2: For each test, DC subcarrier puncturing shall be considered.

Note 3: If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate.

Note 4: Test 2a is applicable for UE supporting CE Mode B and UE capable of ce-CRS-IntfMitig.

**Table 8.11.1.2.3.2-2: Minimum performance Transmit Diversity (FRC)**

| Test number | Bandwidth and MCS | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |

## 8.11.2 MPDCCH

The receiver characteristics of the MPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (P<sub>m-dsg</sub>).

### 8.11.2.1 FDD and half-duplex FDD

**Table 8.11.2.1-1: Test Parameters for MPDCCH (Category M1)**

| Parameter                            |          | Unit    | CE Mode A (Test 1) | CE Mode B (Test 1) |
|--------------------------------------|----------|---------|--------------------|--------------------|

### 8.11.2.1.1 CE Mode A

For the parameters specified in Table 8.11.2.1-1 and 8.11.2.1-2 the average probability of a missed downlink scheduling grant (P<sub>m-dsg</sub>) shall be below the specified value in Table 8.11.2.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.2.1.1-1: Minimum performance CE Mode A MPDCCH**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value        |          | UE Category |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|------------------------|----------|-------------|
|             |           |                   |                   |              |                       |  | P <sub>m-dsg</sub> (%) | SNR (dB) |             |
| 1           | 10 MHz    | 16 ECCE           | R.82 FDD          | OP.2 FDD     | EPA5                  | 2 x 1 Low                                    | 1                      | -4.8     | M1          |

| 3           | 10 MHz    | 16 ECCE           | R.82 FDD          | OP.2 FDD     | EPA5                  | 2 x 4 Low                                    | 1                      | -6.5     | ≥1          |

### 8.11.2.1.2 CE Mode B

For the parameters specified in Table 8.11.2.1-1 and 8.11.2.1-2 the average probability of a missed downlink scheduling grant (P<sub>m-dsg</sub>) shall be below the specified value in Table 8.11.2.1.2-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.2.1.2-1: Minimum performance CE Mode B MPDCCH**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value        |          | UE Category |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|------------------------|----------|-------------|
|             |           |                   |                   |              |                       |  | P <sub>m-dsg</sub> (%) | SNR (dB) |             |
| 1           | 10 MHz    | 24 ECCE           | R.83 FDD          | OP.2 FDD     | ETU1                  | 2 x 1 Low                                    | 1                      | -12      | M1          |
| 2           | 10 MHz    | 24 ECCE           | R.83 FDD          | OP.2 FDD     | ETU1                  | 2 x 2 Low                                    | 1                      | -13.2    | ≥1          |
| 3           | 10 MHz    | 24 ECCE           | R.83 FDD          | OP.2 FDD     | ETU1                  | 2 x 4 Low                                    | 1                      | -12.8    | ≥1          |

## 8.11.2.1.3 CE Mode A with TM9 interference model

The requirements are specified in Table 8.11.2.1.3-2, with the addition of parameters in Table 8.11.2.1.3-1. In Table 8.11.2.1.3-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.1.3-1: Test Parameters for MPDCCH

| Parameter  |          | Unit      | Cell 1               | Cell 2                          | Cell 3                          |
|--|----------|-----------|----------------------|---------------------------------|---------------------------------|
| OFDM starting symbol (startSymbolLC)   |          | symbols   | 2                    | 2                               | 2                               |

## 8.11.2.1.4 CE Mode A with CRS interference model

The requirements are specified in Table 8.11.2.1.4-2, with the addition of parameters in Table 8.11.2.1.4-1. In Table 8.11.2.1.4-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.1.4-1: Test Parameters for MPDCCH

| Parameter   |          | Unit      | Cell 1               | Cell 2                       | Cell 3                       |
|---|----------|-----------|----------------------|------------------------------|------------------------------|
| OFDM starting symbol (startSymbolLC)  |          | symbols   | 2                    | 2                            | 2                            |
| Unused RE-s and PRB-s   |          |           | OCNG                 | N/A                          | N/A                          |
| Cell ID   |          |           | 0                    | 1                            | 6                            |

### 8.11.2.1.5 CE Mode A and CE Mode B when CRS-ChEstMPDCCH-Config is configured

For the parameters specified in Table 8.11.2.1.5-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.1.5-2 for CE Mode A and in Table 8.11.2.1.5-3 for CE Mode B. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.2.1.5-1: Test Parameters for MPDCCH (Category M1)

| Parameter  | Unit       | CE Mode A (Test 1) | CE Mode B (Test 1) |
|--|------------|--------------------|--------------------|
| OFDM starting symbol (startSymbolLC)   | symbols    | 2                  | 2                  |
| Unused RE-s and PRB-s  |            | OCNG               | OCNG               |
| Cell ID  |            | 0                  | 0                  |

#### 8.11.2.2.5 CE Mode A and CE Mode B when CRS-ChEstMPDCCH-Config is configured

For the parameters specified in Table 8.11.2.2.5-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.2.5-2 for CE Mode A and in Table 8.11.2.2.5-3 for CE Mode B. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.2.2.5-1: Test Parameters for MPDCCH (Category M1)**

| Parameter                               |          | Unit       | CE Mode A    | CE Mode B    |
|---|----------|------------|--------------|--------------|
| OFDM starting symbol (startSymbolLC)    |          | symbols    | 2            | 2            |
| Unused RE-s and PRB-s                   |          |            | OCNG         | OCNG         |
| Cell ID                                 |          |            | 0            | 0            |
| Downlink power allocation               | $\rho_A$ | dB         | -3           | 0            |
|   | $\rho_B$ | dB         | -3           | 0            |
|   | $\sigma$ | dB         | 0            | -3           |
|   | $\delta$ | dB         | 3            | 0            |
| $N_{oc}$ at antenna port                |          | dBm/15k Hz | -98          | -98          |
| Cyclic prefix                           |          |            | Normal       | Normal       |
| Subframe Configuration                  |          |            | Non-MBSFN    | Non-MBSFN    |
| Precoder Update Granularity             | PRB      |            | N/A          | Not e2       |
|   | ms       |            | N/A          | Note 2       |

### 8.11.2.2.1 CE Mode A

For the parameters specified in Table 8.11.2.2-1 and 8.11.2.2-2 the average probability of a missed downlink scheduling grant (P<sub>m-dsg</sub>) shall be below the specified value in Table 8.11.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.2.2.1-1: Minimum performance CE Mode A MPDCCH**

| Test number | Bandwidth | Aggregation level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value        |          | UE Category |
|-------------|-----------|-------------------|-------------------|--------------|-----------------------|--|------------------------|----------|-------------|
|             |           |                   |                   |              |                       |  | P <sub>m-dsg</sub> (%) | SNR (dB) |             |

| 3           | 10 MHz    | 24 ECCE           | R.83 TDD          | OP.2 TDD     | ETU1                  | 2 x 4 Low                                    | 1                      | -12.8    | ≥1          |

## 8.11.2.2.3 CE Mode A with TM9 interference model

The requirements are specified in Table 8.11.2.2.3-2, with the addition of parameters in Table 8.11.2.2.3-1. In Table 8.11.2.2.3-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

**Table 8.11.2.2.3-1: Test Parameters for MPDCCH (TM9 interference model)**

| Parameter  |          | Unit      | Cell 1               | Cell 2                          | Cell 3                          |
|--|----------|-----------|----------------------|---------------------------------|---------------------------------|

## 8.11.2.2.4 CE Mode A with CRS interference model

The requirements are specified in Table 8.11.2.2.4-2, with the addition of parameters in Table 8.11.2.2.4-1. In Table 8.11.2.2.4-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.2.4-1: Test Parameters for MPDCCH (CRS interference model)

| Parameter  |          | Unit      | Cell 1               | Cell 2                       | Cell 3                       |
|--|----------|-----------|----------------------|------------------------------|------------------------------|
| OFDM starting symbol (startSymbolLC)   |          | symbols   | 2                    | 2                            | 2                            |
| Unused RE-s and PRB-s  |          |           | OCNG                 | N/A                          | N/A                          |

### 8.11.3 PBCH

The receiver characteristics of the PBCH are determined by the probability of miss-detection of the PBCH for single decoding interval (Pm-bch-s) and the probability of miss-detection of the PBCH for multiple decoding intervals (Pm-bch-m), which are defined as

$$P_{m-bch-s} = 1 - \frac{A_s}{B_s}$$

$$P_{m-bch-m} = 1 - \frac{A_m}{B_m}$$

The probability of miss-detection of the PBCH for single decoding interval (Pm-bch-s) is calculated under assumption of single PBCH TTI interval decoding.  $A_s$  is the number of correctly decoded MIB PDUs and  $B_s$  is the number of transmitted MIB PDUs (redundancy versions for the same MIB are not counted separately).

The probability of miss-detection of the PBCH for multiple decoding intervals (Pm-bch-m) is calculated over multiple PBCH TTI intervals under assumption of independent PBCH decoding over these intervals.  $A_m$  is the number of PBCH decoding intervals with at least one correctly decoded MIB PDU and  $B_m$  is the total number of PBCH decoding intervals. A multiple PBCH decoding interval has 1120 ms duration consisting of continuous PBCH TTIs during the test.

#### 8.11.3.1 FDD and half-duplex FDD

Table 8.11.3.1-1: Test Parameters for PBCH

| Parameter   |         | Unit      | Transmit diversity |
|---|---------|-----------|--------------------|
| Downlink power allocation                               | PBCH_RA | dB        | -3                 |
|   | PBCH_RB | dB        | -3                 |
| $N_{oc}$ at antenna port                                |         | dBm/15kHz | -98                |
| Cyclic prefix   |         |           | Normal             |
| Cell ID   |         |           | 0                  |
| Repetition of the physical broadcast channel (Note 1)   |         |           | Enabled            |
| Cyclic prefix   |         |           | Normal             |
| Note 1: as specified in Table 6.6.4-1 in TS 36.211 [4]. |         |           |                    |

### 8.11.3.1.1 Transmit diversity performance

For the parameters specified in Table 8.11.3.1-1 and Table 8.11.3.1.1-1, the averaged probability of a miss-detected PBCH (Pm-bchs and Pm-bch-m) shall be below the specified value in Table 8.11.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.3.1.1-1: Minimum performance PBCH**

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration and correlation Matrix | Reference value for single PBCH TTI |          | Reference value for multiple PBCH TTI |          |
|-------------|-----------|-------------------|-----------------------|--|-------------------------------------|----------|---------------------------------------|----------|
|             |           |                   |                       |  | Pm-bchs (%)                         | SNR (dB) | Pm-bch-m (%)                          | SNR (dB) |
| 1           | 10 MHz    | R.22              | EPA1                  | 2 x 1 Low                                    | 1                                   | -1.9     | 1                                     | -12.6    |

### 8.11.3.2 TDD

**Table 8.11.3.2-1: Test Parameters for PBCH**

| Parameter   | Unit      | Transmit diversity |
|---|-----------|--------------------|
| Uplink downlink configuration (Note 1)                  |           | 1                  |
| Special subframe configuration (Note 2)                 |           | 4                  |
| Downlink power allocation                               | PBCH_RA   | -3                 |
|   | PBCH_RB   | -3                 |
| $N_{oc}$ at antenna port                                | dBm/15kHz | -98                |
| Cyclic prefix   |           | Normal             |
| Cell ID   |           | 0                  |
| Repetition of the physical broadcast channel (Note 3)   |           | Enabled            |
| Cyclic prefix   |           | Normal             |
| Note 1: as specified in Table 4.2-2 in TS 36.211 [4].   |           |                    |
| Note 2: as specified in Table 4.2-1 in TS 36.211 [4].   |           |                    |
| Note 3: as specified in Table 6.6.4-2 in TS 36.211 [4]. |           |                    |

#### 8.11.3.2.1 Transmit diversity performance

For the parameters specified in Table 8.11.3.2-1 and Table 8.11.3.2.1-1, the averaged probability of a miss-detected PBCH (Pm-bchs and Pm-bch-m) shall be below the specified value in Table 8.11.3.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.11.3.2.1-1: Minimum performance PBCH**

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration and correlation Matrix | Reference value for single PBCH TTI |          | Reference value for multiple PBCH TTI |          |
|-------------|-----------|-------------------|-----------------------|--|-------------------------------------|----------|---------------------------------------|----------|
|             |           |                   |                       |  | Pm-bchs (%)                         | SNR (dB) | Pm-bch-m (%)                          | SNR (dB) |
| 1           | 10 MHz    | R.22              | EPA1                  | 2 x 1 Low                                    | 1                                   | -2.8     | 1                                     | -12.9    |

## 8.12 Demodulation of Narrowband IoT

### 8.12.1 NPDSCH

8.12.1.1 Half-duplex FDD The parameters specified in Table 8.12.1.1-1 are valid for all half-duplex FDD tests unless otherwise stated.

**Table 8.12.1.1-1: Common Test Parameters**

| Parameter   | Unit      | Value   |
|---|-----------|---|
| Number of HARQ processes per component carrier (Note 2)   | Processes | 1 or 2  |
| Maximum number of HARQ transmission   |           | 4   |
| Cyclic Prefix   |           | Normal  |
| extraControlRegionSize-r13  |           | 3 for In-band and N/A for Standalone/Guard-band unless otherwise stated |
| downlinkBitmap-r13 and dl-Gap-r13   |           | Not configured  |
| dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13   |           | Not configured  |
| Unused REs or RB (Note 1)   |           | OCNG  |
| OCNG pattern  |           | NB.OP.1   |
| Note 1: For in-band mode, the REs for transmission of LTE signals including PDCCH, CRS should be filled by OCNG.      |           |   |
| Note 2: 1 is applicable for both UE Category NB1 and NB2; 2 is only applicable for UE Category NB2 if UE supports it. |           |   |

**Table 8.12.1.1-2: Test Parameters of related NPDCCH and NPUSCH format 2 configurations**

| Parameter  | Unit | Value  |
|--|------|--|
| DCI format   |      | DCI format N1  |
| scheduling delay field ( $I_{\text{Delay}}$ )              |      | For tests in 8.12.1.1.4: 1<br>For others: 1 for the first HARQ process;<br>2 for the second HARQ process if configured |
| $N_{\text{Rep}}^{\text{AN}}$ (ack-NACK-NumRepetitions-r13) |      | 1  |
| ACK/NACK resource field                                    |      | 0  |
| Reference channel for NPDCCH                               |      | R.NB.3 FDD for one NRS antenna port; R.NB.4 FDD for two NRS antenna ports  |

### 8.12.1.1.1 Minimum Requirements for In-band

The requirements are specified in Table 8.12.1.1.1-2, with the addition of the parameters in Table 8.12.1.1.1 -1 and the downlink physical channel setup according to Annex C.3.2 and C.3.6. The purpose of these tests is to verify the performance.

**Table 8.12.1.1.1-1: Test Parameters for NPDSCH under In-band**

| Parameter                               | Unit      | Test 1, 2 |
|---|-----------|-----------|
| Downlink power allocation of LTE signal | $\rho_A$  | dB        |
|   | $\rho_B$  | dB        |
|   | $\sigma$  | dB        |
| $N_{oc}$ at antenna port                | $N_{oc1}$ | dBm/15kHz |
|   | $N_{oc2}$ | dBm/15kHz |

|   |          |  |
|---|----------|--|
| LTE CRS port number (eutra-NumCRS-Ports-r13)  |          | 4  |
| NPDCCH repetition number  | subframe | 8 for Test 1; 16 for Test 2; 128 for Test 3. |
| $R_{\text{TRX}}$ ( <i>npdcch-NumRepetitions-r13</i> )   | subframe | 8 for Test 1; 16 for Test 2; 128 for Test 3. |
| $G$ ( <i>npdcch-startSF-USS-r13</i> )   |          | 4 for Test 1; 2 for Test 2; 1.5 for Test 3   |
| Note 1: $P_B = 1$ .<br>Note 2: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;<br>Note 3: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |          |  |

**Table 8.12.1.1.1-2: Minimum performance under In-band with 2 NRS ports**

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|--|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |  | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Anchor       | R.NB.5 FDD        | 1                 | EPA5                  | 2x1 Low                                      | 70%                                | 6.9      | NB1, NB2    |
| 2           | 200kHz    | Anchor       | R.NB.5 FDD        | 32                | EPA5                  | 2x1 Low                                      | 70%                                | -4.8     | NB1, NB2    |
| 3           | 200kHz    | Non-anchor   | R.NB.5-1 FDD      | 256               | ETU1                  | 2x1 Low                                      | 70%                                | -9.8     | NB1, NB2    |

8.12.1.1.2 Minimum Requirements for Standalone/Guard-band

The requirements are specified in Table 8.12.1.1.2-2, with the addition of the parameters in Table 8.12.1.1.2 -1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the performance.

**Table 8.12.1.1.2-1: Test Parameters for NPDSCH under Standalone/Guard-band**

| Parameter  | Unit      |                                | Test 1, 2    |
|--|-----------|--------------------------------|--------------|
| $N_{oc}$ at antenna port   | $N_{oc1}$ | dBm/15kHz                      | -93 (Note 1) |
|  | $N_{oc2}$ | dBm/15kHz                      | -99 (Note 2) |
| NPDCCH repetition number   | subframe  | 32 for Test 1; 256 for Test 2. |              |
| $R_{\text{TRX}}$ ( <i>npdcch-NumRepetitions-r13</i> )  | subframe  | 64 for Test 1; 512 for Test 2. |              |
| $G$ ( <i>npdcch-startSF-USS-r13</i> )  |           | 1.5                            |              |
| Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;<br>Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |           |                                |              |

**Table 8.12.1.1.2-2: Minimum performance for NPDSCH under Standalone/Guard-band with 1 NRS port**

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation condition | Number of NRS ports | Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|---------------------|-----------------------|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |                     |                       | Fraction of Maximum Throughput (%) | SNR (dB) |             |

|   |        |                    |                  |     |      |   |     |     |               |             |

### 8.12.1.1.3 Minimum Requirements for Standalone for UE Category NB2

The requirements are specified in Table 8.12.1.1.3-2, with the addition of the parameters in Table 8.12.1.1.3-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance.

**Table 8.12.1.1.3-1: Test Parameters for NPDSCH under Standalone**

| Parameter                                      | Unit   |           | Test 1       |
|--|--|-----------|--------------|
| $N_{oc}$ at antenna port                       | $N_{oc1}$  | dBm/15kHz | -93 (Note 1) |
|  | $N_{oc2}$  | dBm/15kHz | -96 (Note 2) |
| NPDCCH repetition number                       | subframe   |           | 4 for Test 1 |
| $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> ) | subframe   |           | 8 for Test 1 |
| $G$ ( <i>npdcch-startSF-USS-r13</i> )          |  |           | 1.5          |
| Note 1:  | This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission; |           |              |
| Note 2:  | This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |           |              |

**Table 8.12.1.1.3-2: Minimum performance for NPDSCH under Standalone with 1 NRS port**

| Test number | Bandwidth | Carrier Type   | Reference Channel | Repetition number | Propagation condition | Number of NRS ports | Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|----------------|-------------------|-------------------|-----------------------|---------------------|-----------------------|------------------------------------|----------|-------------|
|             |           |                |                   |                   |                       |                     |                       | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Non-anch<br>or | R.NB.7<br>FDD     | 1                 | EPA5                  | 1                   | 1x1                   | 70%                                | 9.4      | NB2         |

### 8.12.1.1.4 Minimum Requirements for Standalone for UE with multiple TBs interleaved transmission

The requirements are specified in Table 8.12.1.1.4-2, with the addition of the parameters in Table 8.12.1.1.4-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify NPDSCH performance when multiple TBs with interleaved transmission are scheduled by one DCI as specified in TS 36.213[6].

These requirements are applicable for UE of UE-Category-NB NB2 supporting multiple TBs scheduling with interleaved transmission when multiple TBs are scheduled.

**Table 8.12.1.1.4-1: Test Parameters for NPDSCH under Standalone**

| Parameter                                      | Unit      |           | Test 1         |
|--|-----------|-----------|----------------|
| $N_{oc}$ at antenna port                       | $N_{oc1}$ | dBm/15kHz | -93 (Note 1)   |
|  | $N_{oc2}$ | dBm/15kHz | -99 (Note 2)   |
| NPDCCH repetition number                       | subframe  |           | 128 for Test 1 |
| $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> ) | subframe  |           | 128 for Test 1 |

|  |  |             |
|--|--|-------------|
| $G$ ( <i>nPDCCH-startSF-USS-r13</i> )  |  | 1.5         |
| Two HARQ processes ( <i>twoHARQ-ProcessesConfig-r14</i> )  |  | true        |
| Multiple TBs scheduling ( <i>multiTB-Config-r16</i> )  |  | interleaved |
| Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;<br>Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |  |             |

**Table 8.12.1.1.4-2: Minimum performance for NPDSCH under Standalone with 1 NRS port**

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation condition | Number of NRS ports | Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|---------------------|-----------------------|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |                     |                       | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Non-anchor   | R.NB.8 FDD        | 32                | ETU1                  | 1                   | 1x1                   | 70%                                | -6.0     | NB2         |

8.12.1.2 TDD

**Table 8.12.1.2-1: Common Test Parameters**

| Parameter   | Unit      | Value  |
|---|-----------|--|
| Uplink downlink configuration (Note 1)  |           | 4  |
| Special subframe configuration (Note 2)   |           | 4  |
| Number of HARQ processes per component carrier (Note 4)   | Processes | 1 or 2   |
| Maximum number of HARQ transmission   |           | 4  |
| Cyclic Prefix   |           | Normal   |
| extraControlRegionSize-r13  |           | 2 for In-band, N/A for Standalone/Guard-band unless otherwise stated |
| downlinkBitmap-r13 and dl-Gap-r13   |           | Not configured   |
| dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13   |           | Not configured   |
| Unused REs or RB (Note 3)   |           | OCNG   |
| OCNG pattern  |           | NB.OP.1  |
| Note 1: As specified in Table 4.2-2 in TS 36.211 [4]<br>Note 2: As specified in Table 4.2-1 in TS 36.211 [4]<br>Note 3: For in-band mode, the REs for transmission of LTE signals including PDCCH, CRS should be filled by OCNG.<br>Note 4: 1 is applicable for both UE Category NB1 and NB2; 2 is only applicable for UE Category NB2 if UE supports it. |           |  |

**Table 8.12.1.2-2: Test Parameters of related NPDCCH and NPUSCH format 2 configurations**

| Parameter  | Unit | Value         |
|------------|------|---------------|
| DCI format |      | DCI format N1 |

|   |  |  |
|---|--|--|
| scheduling delay field<br>( $I_{Delay}$ )             |  | 1 for the first HARQ process;<br>2 for the second HARQ process if configured |
| $N_{Rep}^{AN}$ ( <i>ack-NACK-NumRepetitions-r13</i> ) |  | 1  |
| ACK/NACK resource field                               |  | 0  |
| Reference channel for NPDCCH                          |  | R.NB.3 TDD for one NRS antenna port; R.NB.4 TDD for two NRS antenna ports    |
| $\alpha_{offset}$ ( <i>npdcch-Offset-USS-r13</i> )    |  | 0  |

8.12.1.2.1 Minimum Requirements for In-band

The requirements are specified in Table 8.12.1.2.1-2, with the addition of the parameters in Table 8.12.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2 and C.3.6. The purpose of these tests is to verify the performance.

**Table 8.12.1.2.1-1: Test Parameters for NPDSCH under In-band**

| Parameter   | Unit      | Test 1, 2                                    |
|---|-----------|--|
| Downlink power allocation of LTE signal   | $\rho_A$  | dB   |
|   | $\rho_B$  | dB   |
|   | $\sigma$  | dB   |
| $N_{oc}$ at antenna port  | $N_{oc1}$ | dBm/15kHz                                    |
|   | $N_{oc2}$ | dBm/15kHz                                    |
| LTE CRS port number (eutra-NumCRS-Ports-r13)  |           | 4  |
| NPDCCH repetition number  | subframe  | 8 for Test 1; 16 for Test 2; 128 for Test 3. |
| $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> )  | subframe  | 8 for Test 1; 16 for Test 2; 128 for Test 3. |
| $G$ ( <i>npdcch-startSF-USS-r13</i> )   |           | 4  |
| Note 1: $P_B = 1$ .<br>Note 2: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;<br>Note 3: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |           |  |

**Table 8.12.1.2.1-2: Minimum performance under In-band with 2 NRS ports**

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|--|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |  | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Anchored     | R.NB.5 TDD        | 1                 | EPA5                  | 2x1 Low                                      | 70%                                | 6.9      | NB1, NB2    |
| 2           | 200kHz    | Anchored     | R.NB.5 TDD        | 32                | EPA5                  | 2x1 Low                                      | 70%                                | -4.8     | NB1, NB2    |
| 3           | 200kHz    | Non-anchored | R.NB.5-1 TDD      | 256               | ETU1                  | 2x1 Low                                      | 70%                                | -9.8     | NB1, NB2    |

## 8.12.1.2.2 Minimum Requirements for Standalone/Guard-band

The requirements are specified in Table 8.12.1.2.2-2, with the addition of the parameters in Table 8.12.1.2.2-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the performance.

**Table 8.12.1.2.2-1: Test Parameters for NPDSCH under Standalone/Guard-band**

| Parameter                                      | Unit   |           | Test 1, 2                      |
|--|--|-----------|--------------------------------|
| $N_{oc}$ at antenna port                       | $N_{oc1}$  | dBm/15kHz | -93 (Note 1)                   |
|  | $N_{oc2}$  | dBm/15kHz | -99 (Note 2)                   |
| NPDCCH repetition number                       |  | subframe  | 32 for Test 1; 256 for Test 2. |
| $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> ) |  | subframe  | 32 for Test 1; 256 for Test 2. |
| $G$ ( <i>nPDCCH-startSF-USS-r13</i> )          |  |           | 4                              |
| Note 1:  | This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission; |           |                                |
| Note 2:  | This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |           |                                |

**Table 8.12.1.2.2-2: Minimum performance for NPDSCH under Standalone/Guard-band with 1 NRS port**

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation condition | Number of NRS ports | Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|---------------------|-----------------------|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |                     |                       | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Anchor       | R.NB.6 TDD        | 32                | EPA5                  | 1                   | 1x1                   | 70%                                | -3.4     | NB1, NB2    |
| 2           | 200kHz    | Non-anchor   | R.NB.6-1 TDD      | 256               | ETU1                  | 1                   | 1x1                   | 70%                                | -10.2    | NB1, NB2    |

## 8.12.1.2.3 Minimum Requirements for Standalone for UE Category NB2

The requirements are specified in Table 8.12.1.2.3-2, with the addition of the parameters in Table 8.12.1.2.3-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance.

**Table 8.12.1.2.3-1: Test Parameters for NPDSCH under Standalone**

| Parameter                                      | Unit   |           | Test 1       |
|--|--|-----------|--------------|
| $N_{oc}$ at antenna port                       | $N_{oc1}$  | dBm/15kHz | -93 (Note 1) |
|  | $N_{oc2}$  | dBm/15kHz | -96 (Note 2) |
| NPDCCH repetition number                       |  | subframe  | 4 for Test 1 |
| $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> ) |  | subframe  | 8 for Test 1 |
| $G$ ( <i>nPDCCH-startSF-USS-r13</i> )          |  |           | 4            |
| Note 1:  | This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission; |           |              |
| Note 2:  | This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission. |           |              |

Table 8.12.1.2.3-2: Minimum performance for NPDSCH under Standalone with 1 NRS port

| Test number | Bandwidth | Carrier Type | Reference Channel | Repetition number | Propagation condition | Number of NRS ports | Antenna Configuration | Reference value                    |          | UE Category |
|-------------|-----------|--------------|-------------------|-------------------|-----------------------|---------------------|-----------------------|------------------------------------|----------|-------------|
|             |           |              |                   |                   |                       |                     |                       | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 200kHz    | Non-anchor   | R.NB.7 TDD        | 1                 | EPA5                  | 1                   | 1x1                   | 70%                                | 9.4      | NB2         |

## 8.12.2 NPDCCH

The receiver characteristics of the NPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg).

### 8.12.2.1 Half-duplex FDD

The parameters specified in Table 8.12.2.1-1 and Table 8.12.2.1-2 are valid for all half-duplex FDD tests unless otherwise stated.

Table 8.12.2.1-1: Test Parameters for NPDCCH

| Parameter   | Unit      | Single antenna port              | Transmit diversity             |
|---|-----------|----------------------------------|--------------------------------|
| Narrowband physical layer Cell ID   |           | 0                                | 0                              |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98                              | -98                            |
| Cyclic prefix   |           | Normal                           | Normal                         |
| Number of CRS ports for in-band deployment mode   |           | 4                                | 4                              |
| NPDCCH starting position ( <i>euTraControlRegionSize-r13</i> ) (Note 1)                                 |           | 3                                | 3                              |
| Maximum number of repetitions $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> )                            |           | 128 for Test 1; 1024 for Test 2. | 64 for Test 1; 512 for Test 2. |
| NPDCCH start subframe $G$ ( <i>npdcch-startSF-USS-r13</i> )   |           | 2 for test 1, 1.5 for test 2     | 2 for test 1, 1.5 for test 2   |
| NPDCCH fractional period offset of starting subframe $\alpha_{offset}$ ( <i>npdcch-Offset-USS-r13</i> ) |           | 0                                | 0                              |
| NB-IoT downlink subframe bitmap for anchor carrier ( <i>downlinkBitmap-r13</i> )                        |           | Not configured                   | Not configured                 |
| NB-IoT downlink subframe bitmap for non-anchor carrier ( <i>downlinkBitmapNonAnchor-r13</i> )           |           | Not configured                   | Not configured                 |
| Downlink gap configuration for anchor carrier ( <i>dl-Gap-r13</i> )                                     |           | Not configured                   | Not configured                 |
| Downlink gap configuration for non-anchor carrier ( <i>dl-GapNonAnchor-r13</i> )                        |           | Not configured                   | Not configured                 |
| Unused REs or RBs (Note 1)  |           | OCNG                             | OCNG                           |
| OCNG pattern  |           | NB.OP.1                          | NB.OP.1                        |
| NOTE 1: Applicable only for in-band deployment mode.  |           |                                  |                                |

Table 8.12.2.1-2: Test Parameters of related NPDSCH and NPUSCH format 2 configurations

| Parameter | Unit | Value |
|-----------|------|-------|
|-----------|------|-------|

|   |           |   |
|---|-----------|---|
| Scheduling delay field<br>( $I_{\text{Delay}}$ )                    |           | 0   |
| NPDSCH Repetition number  |           | 1   |
| $N_{oc}$ at antenna port for NPDSCH                                 | dBm/15kHz | -98   |
| $N_{\text{Rep}}^{\text{AV}}$ ( <i>ack-NACK-NumRepetitions-r13</i> ) |           | 1   |
| ACK/NACK resource field   |           | 0   |
| Reference channel for NPDSCH  |           | R.NB.6 FDD and R.NB.6-1 FDD for one NRS antenna port; R.NB.5 FDD and R.NB.5-1 FDD for two NRS antenna ports |

### 8.12.2.1.1 Single-antenna performance

For the parameters specified in Table 8.12.2.1.1-1 the average probability of a missed downlink scheduling grant ( $P_{\text{m-dsg}}$ ) shall be below the specified value in Table 8.12.2.1.1-1. The downlink physical channel setup is in accordance with Annex C.3.6.

**Table 8.12.2.1.1-1: Minimum performance NPDCCH**

| Test number | Deployment mode        | Repetition number (R) | Carrier Type | Reference Channel | Propagation Condition | Number of NRS ports | Antenna Configuration | Reference value        |          | UE Category |
|-------------|------------------------|-----------------------|--------------|-------------------|-----------------------|---------------------|-----------------------|------------------------|----------|-------------|
|             |                        |                       |              |                   |                       |                     |                       | $P_{\text{m-dsg}}$ (%) | SNR (dB) |             |
| 1           | Stand-alone/Guard-band | 128                   | Anchor       | R.NB.3 FDD        | EPA5                  | 1                   | 1x1                   | 1                      | -4.9     | NB1, NB2    |
| 2           | Stand-alone/Guard-band | 1024                  | Non-anchor   | R.NB.3 FDD        | ETU1                  | 1                   | 1x1                   | 1                      | -11.4    | NB1, NB2    |

### 8.12.2.1.2 Transmit diversity performance

For the parameters specified in Table 8.12.2.1.2-1 the average probability of a missed downlink scheduling grant ( $P_{\text{m-dsg}}$ ) shall be below the specified value in Table 8.12.2.1.2-1. The downlink physical channel setup is in accordance with Annex C.3.6.

**Table 8.12.2.1.2-1: Minimum performance NPDCCH**

| Test number | Deployment mode | Repetition number (R) | Carrier Type | Reference Channel | Propagation Condition | Number of NRS ports | Antenna Configuration and correlation matrix | Reference value        |          | UE Category |
|-------------|-----------------|-----------------------|--------------|-------------------|-----------------------|---------------------|--|------------------------|----------|-------------|
|             |                 |                       |              |                   |                       |                     |  | $P_{\text{m-dsg}}$ (%) | SNR (dB) |             |
| 1           | In-band         | 64                    | Anchor       | R.NB.4 FDD        | EPA5                  | 2                   | 2x1 Low                                      | 1                      | -3.9     | NB1, NB2    |
| 2           | In-band         | 512                   | Non-anchor   | R.NB.4 FDD        | ETU1                  | 2                   | 2x1 Low                                      | 1                      | -10.0    | NB1, NB2    |

## 8.12.2.2 TDD

The parameters specified in Table 8.12.2.2-1 and Table 8.12.2.2-2 are valid for all TDD tests unless otherwise stated.

Table 8.12.2.2-1: Test Parameters for NPDCCH

| Parameter   | Unit      | Single antenna port                 | Transmit diversity                |
|---|-----------|-------------------------------------|-----------------------------------|
| Uplink downlink configuration (Note 1)  |           | 4                                   | 4                                 |
| Special subframe configuration (Note 2)   |           | 4                                   | 4                                 |
| Narrowband physical layer Cell ID   |           | 0                                   | 0                                 |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98                                 | -98                               |
| Cyclic prefix   |           | Normal                              | Normal                            |
| Number of CRS ports for in-band deployment mode   |           | 4                                   | 4                                 |
| NPDCCH starting position ( <i>extraControlRegionSize-r13</i> ) (Note 1)                                 |           | 2                                   | 2                                 |
| Maximum number of repetitions $R_{max}$ ( <i>npdcch-NumRepetitions-r13</i> )                            |           | 128 for Test 1;<br>1024 for Test 2. | 64 for Test 1;<br>512 for Test 2. |
| NPDCCH start subframe $G$ ( <i>npdcch-startSF-USS-r13</i> )   |           | 4                                   | 4                                 |
| NPDCCH fractional period offset of starting subframe $\alpha_{offset}$ ( <i>npdcch-Offset-USS-r13</i> ) |           | 0                                   | 0                                 |
| NB-IoT downlink subframe bitmap for anchor carrier ( <i>downlinkBitmap-r13</i> )                        |           | Not configured                      | Not configured                    |
| NB-IoT downlink subframe bitmap for non-anchor carrier ( <i>downlinkBitmapNonAnchor-r13</i> )           |           | Not configured                      | Not configured                    |
| Downlink gap configuration for anchor carrier ( <i>dl-Gap-r13</i> )                                     |           | Not configured                      | Not configured                    |
| Downlink gap configuration for non-anchor carrier ( <i>dl-GapNonAnchor-r13</i> )                        |           | Not configured                      | Not configured                    |
| Unused REs or RBs (Note 1)  |           | OCNG                                | OCNG                              |
| OCNG pattern  |           | NB.OP.1                             | NB.OP.1                           |
| NOTE 1: Applicable only for in-band deployment mode.  |           |                                     |                                   |

Table 8.12.2.2-2: Test Parameters of related NPDSCH and NPUSCH format 2 configurations

| Parameter   | Unit      | Value   |
|---|-----------|---|
| Scheduling delay field ( $I_{Delay}$ )                |           | 0   |
| NPDSCH Repetition number                              |           | 1   |
| $N_{oc}$ at antenna port for NPDSCH                   | dBm/15kHz | -98   |
| $N_{Rep}^{AV}$ ( <i>ack-NACK-NumRepetitions-r13</i> ) |           | 1   |
| ACK/NACK resource field                               |           | 0   |
| Reference channel for NPDSCH                          |           | R.NB.6 TDD and R.NB.6-1 TDD for one NRS antenna port; R.NB.5 TDD and R.NB.5-1 TDD for two NRS antenna ports |

### 8.12.2.2.1 Single-antenna performance

For the parameters specified in Table 8.12.2.2.1-1 the average probability of a missed downlink scheduling grant ( $P_{m-dsg}$ ) shall be below the specified value in Table 8.12.2.2.1-1. The downlink physical channel setup is in accordance with Annex C.3.6.

**Table 8.12.2.2.1-1: Minimum performance NPDCCH**

| Test number | Deployment mode        | Repetition number (R) | Carrier Type | Reference Channel | Propagation Condition | Number of NRS ports | Antenna Configuration | Reference value |          | UE Category |
|-------------|------------------------|-----------------------|--------------|-------------------|-----------------------|---------------------|-----------------------|-----------------|----------|-------------|
|             |                        |                       |              |                   |                       |                     |                       | $P_{m-dsg}$ (%) | SNR (dB) |             |
| 1           | Stand-alone/Guard-band | 128                   | Anchor       | R.NB.3 TDD        | EPA5                  | 1                   | 1x1                   | 1               | -4.9     | NB1, NB2    |
| 2           | Stand-alone/Guard-band | 1024                  | Non-anchor   | R.NB.3 TDD        | ETU1                  | 1                   | 1x1                   | 1               | -11.4    | NB1, NB2    |

### 8.12.2.2.2 Transmit diversity performance

For the parameters specified in Table 8.12.2.2.2-1 the average probability of a missed downlink scheduling grant ( $P_{m-dsg}$ ) shall be below the specified value in Table 8.12.2.2.2-1. The downlink physical channel setup is in accordance with Annex C.3.6.

**Table 8.12.2.2.2-1: Minimum performance NPDCCH**

| Test number | Deployment mode | Repetition number (R) | Carrier Type | Reference Channel | Propagation Condition | Number of NRS ports | Antenna Configuration and correlation matrix | Reference value |          | UE Category |
|-------------|-----------------|-----------------------|--------------|-------------------|-----------------------|---------------------|--|-----------------|----------|-------------|
|             |                 |                       |              |                   |                       |                     |  | $P_{m-dsg}$ (%) | SNR (dB) |             |
| 1           | In-band         | 64                    | Anchor       | R.NB.4 TDD        | EPA5                  | 2                   | 2x1 Low                                      | 1               | -3.9     | NB1, NB2    |
| 2           | In-band         | 512                   | Non-anchor   | R.NB.4 TDD        | ETU1                  | 2                   | 2x1 Low                                      | 1               | -10.0    | NB1, NB2    |

## 8.12.3 Demodulation of NPBCH

The receiver characteristics of the NPBCH are determined by the probability of miss-detection of the NPBCH ( $P_{m-bch}$ ), which is defined as

$$P_{m-bch} = 1 - \frac{A}{B}$$

For the performance with single a NPBCH TTI decoding, A is the number of correctly decoded MIB-NB PDUs and B is the number of transmitted MIB-NB PDUs.

For the performance with multiple NPBCH TTIs decoding, A is the number of 5120ms durations consisting of contiguous NPBCH TTIs where there is at least one correctly decoded MIB-NB PDU, and B is the number of 5120ms durations consisting of contiguous NPBCH TTIs during the test.

## 8.12.3.1 HD-FDD

Table 8.12.3.1-1: Test Parameters for NPBCH

| Parameter                 |          | Unit      | Single antenna port | Transmit diversity |
|---------------------------|----------|-----------|---------------------|--------------------|
| Downlink power allocation | NPBCH_RA | dB        | 0                   | -3                 |
|                           | NPBCH_RB | dB        | 0                   | -3                 |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98                 | -98                |
| Cyclic prefix             |          |           | Normal              | Normal             |
| Cell ID                   |          |           | 0                   | 0                  |

## 8.12.3.1.1 Single-antenna port performance with single NPBCH TTI

For the parameters specified in Table 8.12.3.1-1 the average probability of a miss-detecting NPBCH ( $P_{m-bch}$ ) shall be below the specified value in Table 8.12.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.6.

Table 8.12.3.1.1-1: Minimum performance NPBCH

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration | Reference value |          | UE Category |
|-------------|-----------|-------------------|-----------------------|-----------------------|-----------------|----------|-------------|
|             |           |                   |                       |                       | $P_{m-bch}$ (%) | SNR (dB) |             |
| 1           | 200 KHz   | R.NB1.1           | EPA1                  | 1 x 1                 | 1               | -2.0     | NB1, NB2    |

## 8.12.3.1.2 Transmit diversity performance

## 8.12.3.1.2.1 Minimum Requirement 2 Tx Antenna Port with multiple NPBCH TTIs

For the parameters specified in Table 8.12.3.1-1 the average probability of a miss-detected NPBCH ( $P_{m-bch}$ ) shall be below the specified value in Table 8.12.3.1.2.1-1. The downlink physical setup is in accordance with Annex C.3.6.

Table 8.12.3.1.2.1-1: Minimum performance NPBCH

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          | UE Category |
|-------------|-----------|-------------------|-----------------------|--|-----------------|----------|-------------|
|             |           |                   |                       |  | $P_{m-bch}$ (%) | SNR (dB) |             |
| 1           | 200 KHz   | R.NB1.2           | EPA1                  | 2 x 1 Low                                    | 1               | -11.5    | NB1, NB2    |

## 8.12.3.2 TDD

Table 8.12.3.2-1: Test Parameters for NPBCH TDD

| Parameter   |          | Unit      | Single antenna port | Transmit diversity |
|---|----------|-----------|---------------------|--------------------|
| Downlink power allocation                             | NPBCH_RA | dB        | 0                   | -3                 |
|   | NPBCH_RB | dB        | 0                   | -3                 |
| $N_{oc}$ at antenna port                              |          | dBm/15kHz | -98                 | -98                |
| Cyclic prefix   |          |           | Normal              | Normal             |
| Cell ID   |          |           | 0                   | 0                  |
| Uplink downlink configuration (Note 1)                |          |           | 4                   | 4                  |
| Special subframe configuration (Note 2)               |          |           | 4                   | 4                  |
| Note 1: as specified in Table 4.2-2 in TS 36.211 [4]. |          |           |                     |                    |
| Note 2: as specified in Table 4.2-1 in TS 36.211 [4]. |          |           |                     |                    |

### 8.12.3.2.1 Single-antenna port performance with single NPBCH TTI

For the parameters specified in Table 8.12.3.2-1 the average probability of a miss-detecting NPBCH (P<sub>m-bch</sub>) shall be below the specified value in Table 8.12.3.2.1-1. The downlink physical setup is in accordance with Annex C.3.6.

**Table 8.12.3.2.1-1: Minimum performance NPBCH**

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration | Reference value        |          | UE Category |
|-------------|-----------|-------------------|-----------------------|-----------------------|------------------------|----------|-------------|
|             |           |                   |                       |                       | P <sub>m-bch</sub> (%) | SNR (dB) |             |
| 1           | 200 KHz   | R.NB1.1           | EPA1                  | 1 x 1                 | 1                      | -2.0     | NB1, NB2    |

### 8.12.3.2.2 Transmit diversity performance

#### 8.12.3.2.2.1 Minimum Requirement 2 Tx Antenna Port with multiple NPBCH TTIs

For the parameters specified in Table 8.12.3.2-1 the average probability of a miss-detected NPBCH (P<sub>m-bch</sub>) shall be below the specified value in Table 8.12.3.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.6.

**Table 8.12.3.2.2.1-1: Minimum performance NPBCH**

| Test number | Bandwidth | Reference Channel | Propagation Condition | Antenna configuration and correlation Matrix | Reference value        |          | UE Category |
|-------------|-----------|-------------------|-----------------------|--|------------------------|----------|-------------|
|             |           |                   |                       |  | P <sub>m-bch</sub> (%) | SNR (dB) |             |
| 1           | 200 KHz   | R.NB1.2           | EPA1                  | 2 x 1 Low                                    | 1                      | -11.5    | NB1, NB2    |

## 8.13 Demodulation of PDSCH CA and DC(4 receiver antenna ports)

### 8.13.1 FDD (CA and DC)

The parameters specified in Table 8.13.1-1 are valid for all FDD CA and DC tests unless otherwise stated.

**Table 8.13.1-1: Common Test Parameters (FDD)**

| Parameter  | Unit         | Value  |
|--|--------------|--|
| Inter-TTI Distance                                     |              | 1  |
| Number of HARQ processes per component carrier         | Processes    | 8  |
| Maximum number of HARQ transmission                    |              | 4  |
| Redundancy version coding sequence                     |              | {0,1,2,3} for QPSK and 16QAM<br>{0,0,1,2} for 64QAM and 256QAM   |
| Number of OFDM symbols for PDCCH per component carrier | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths,<br>2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated |
| Cyclic Prefix  |              | Normal   |
| Cell_ID  |              | 0  |
| Cross carrier scheduling                               |              | Not configured   |

#### 8.13.1.1 Closed-loop spatial multiplexing performance

##### 8.13.1.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.1-3, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.13.1.1.1-4, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.13.1.1.1-5, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.13.1.1.1-6, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.1.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   |          | Unit      | Value  |
|---|----------|-----------|--|
| Downlink power allocation   | $\rho_A$ | dB        | -6   |
|   | $\rho_B$ | dB        | -6 (Note 1)  |
|   | $\sigma$ | dB        | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98  |
| Precoding granularity   |          | PRB       | 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs            |
| PMI delay (Note 2)  |          | ms        | 8  |
| Reporting interval  |          | ms        | 1  |
| Reporting mode  |          |           | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |          |           | 00000000000000000000000000000000<br>0011111111111111111111000000000000<br>0000 |
| CSI request field (Note 3)  |          |           | '10'   |
| PDSCH transmission mode   |          |           | 4  |
| Note 1: $P_B = 1$ .   |          |           |  |
| Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).               |          |           |  |
| Note 3: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by higher layers.   |          |           |  |
| Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for Tests in Table 8.13.1.1.1-3, and with PUCCH format 3 for Tests in Table 8.13.1.1.1-4, Table 8.13.1.1.1-5 and Table 8.13.1.1.1-6. |          |           |  |
| Note 5: The same PDSCH transmission mode is applied to each component carrier.  |          |           |  |

**Table 8.13.1.1.1-2: Single carrier performance for multiple CA configurations**

| Band - width | Reference channel |            | OCNG pattern | Propa- gation condi- tion | Correlation matrix and antenna config. |         | Reference value                    |          |        |
|--------------|-------------------|------------|--------------|---------------------------|--|---------|------------------------------------|----------|--------|
|              | 2Rx CC            | 4Rx CC     |              |                           | 2Rx CC                                 | 4Rx CC  | Fraction of maximum throughput (%) | SNR (dB) |        |
|              |                   |            |              |                           |  |         |                                    | 2Rx CC   | 4Rx CC |
| 1.4M Hz      | R.14-4 FDD        | R.14-4 FDD | OP.1 FDD     | EVA5                      | 4x2 Low                                | 4x4 Low | 70                                 | 10.4     | 7.5    |

### 8.13.1.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.13.1.1.2-3 for 2DL CCs and Table 8.13.1.1.2-4 for 3DL CCs, based on single carrier requirement specified in Table 8.13.1.1.2-2, with the addition of the parameters in Table 8.13.1.1.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity transmission.

**Table 8.13.1.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity**

| Parameter                 | Unit     | Values      |
|---------------------------|----------|-------------|
| Downlink power allocation | $\rho_A$ | dB          |
|                           | $\rho_B$ | dB          |
|                           | $\sigma$ | dB          |
|                           |          | -6          |
|                           |          | -6 (Note 1) |
|                           |          | 3           |

|   |           |   |
|---|-----------|---|
| $N_{oc}$ at antenna port  | dBm/15kHz | -98   |
| Precoding granularity   | PRB       | 6 for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, and 8 for 15MHz CCs and 20MHz CCs   |
| PMI delay (Note 2)  | ms        | 8   |
| Reporting interval  | ms        | 1   |
| Reporting mode  |           | PUSCH 1-2   |
| CodeBookSubsetRestriction bitmap  |           | 00000000000000000000000000000000<br>00001111111111111111100000000<br>00000000   |
| PDSCH transmission mode   |           | 4   |
| ACK/NACK transmission   |           | Separate ACK/NACK feedbacks with PUCCH format 1b on the MCG and SCG   |
| CSI feedback  |           | Separate PUSCH feedbacks on the MCG and SCG   |
| Time offset between MCG CC and SCG CC   | $\mu$ s   | 0 for UE under test supporting synchronous dual connectivity; 334 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 4) |
| <p>Note 1: <math>P_B = 1</math>.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: The same PDSCH transmission mode is applied to each component carrier.</p> <p>Note 4: As defined in TS36.300 [11].</p> <p>Note 5: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured.</p> |           |   |

**8.13.1.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM**

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding with 256QAM under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.3-3, based on single carrier requirement specified in Table 8.13.1.1.3-2, with the addition of the parameters in Table 8.13.1.1.3-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.1.1.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                        | Unit      | Value  |
|----------------------------------|-----------|--|
| Downlink power allocation        | $\rho_A$  | dB   |
|                                  | $\rho_B$  | dB   |
|                                  | $\sigma$  | dB   |
| $N_{oc}$ at antenna port         | dBm/15kHz | -98  |
| Precoding granularity            | PRB       | 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs          |

**Table 8.13.1.1.3-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num.   | CA Band-width combination | Requirement  | UE category |
|---|---------------------------|--|-------------|
| 1   | 2x10 MHz                  | As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 2   | 2x20 MHz                  | As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 3   | 2x5 MHz                   | As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 4   | 15MHz+5MHz                | As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 5   | 10MHz+5MHz                | As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |                           |  |             |

**8.13.1.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port**

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.4-3, based on single carrier requirement specified in Table 8.13.1.1.4-2, with the addition of the parameters in Table 8.13.1.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.1.1.4-1: Test Parameters for Four-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                 | Unit     | Value       |
|---------------------------|----------|-------------|
| Downlink power allocation | $\rho_A$ | dB          |
|                           | $\rho_B$ | dB          |
|                           |          | -6 (Note 1) |

|  |          |           |   |
|--|----------|-----------|---|
|  | $\sigma$ | dB        | 0   |
| $N_{oc}$ at antenna port   |          | dBm/15kHz | -98   |
| Cell-specific reference signals  |          |           | Antenna Ports 0,1,2,3   |
| Precoding granularity  |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs |
| PMI delay (Note 2)   |          | ms        | 8   |
| Reporting interval   |          | ms        | 1   |
| Reporting mode   |          |           | PUSCH 3-1   |
| CodeBookSubsetRestriction bitmap   |          |           | 0xFFFF000000000000  |
| CSI request field (Note 3)   |          |           | '10'  |
| PDSCH transmission mode  |          |           | 4   |
| PDSCH rank   |          |           | 4   |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).<br>Note 3: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by higher layers.<br>Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection<br>Note 5: The same PDSCH transmission mode is applied to each component carrier. |          |           |   |

**Table 8.13.1.1.4-2: Single carrier performance for multiple CA configurations**

| Band-width | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config | Reference value                    |          |
|------------|-------------------|--------------|-----------------------|---------------------------------------|------------------------------------|----------|
|            |                   |              |                       |                                       | Fraction of maximum throughput (%) | SNR (dB) |
| 5MHz       | R.74-1 FDD        | OP.1 FDD     | EPA5                  | 4x4 Low                               | 70                                 | 14.1     |
| 10MHz      | R.74 FDD          | OP.1 FDD     | EPA5                  | 4x4 Low                               | 70                                 | 14.9     |
| 15MHz      | R.74-2 FDD        | OP.1 FDD     | EPA5                  | 4x4 Low                               | 70                                 | 14.3     |
| 20MHz      | R.74-3 FDD        | OP.1 FDD     | EPA5                  | 4x4 Low                               | 70                                 | 14.4     |

**Table 8.13.1.1.4-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num.   | CA Band-width combination | Requirement                               | UE category |
|---|---------------------------|---|-------------|
| 1   | 2x10 MHz                  | As specified in Table 8.13.1.1.4-2 per CC | $\geq 5$    |
| 2   | 2x20 MHz                  | As specified in Table 8.13.1.1.4-2 per CC | $\geq 5$    |

| 5   | 10MHz+5MHz                | As specified in Table 8.13.1.1.4-2 per CC | $\geq 5$    |
| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |                           |   |             |

### 8.13.1.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

#### 8.13.1.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port

For CA with 2 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-3, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-4, based on single carrier requirement specified in Table

8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-5, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-6, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.1.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   |          | Unit                  | Values                                |
|---|----------|-----------------------|---------------------------------------|
| Downlink power allocation   | $\rho_A$ | dB                    | 0                                     |
|   | $\rho_B$ | dB                    | 0 (Note 1)                            |
|   | $\sigma$ | dB                    | -3                                    |
| Cell-specific reference signals   |          |                       | Antenna ports 0 and 1                 |
| Cell ID   |          |                       | 0                                     |
| CSI reference signals   |          |                       | Antenna ports 15,16                   |
| Beamforming model   |          |                       | Annex B.4.2                           |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$  |          | Subframes             | 5 / 2                                 |
| CSI reference signal configuration  |          |                       | 8                                     |
| Zero-power CSI-RS configuration<br>$l_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS bitmap}$  |          | Subframes /<br>bitmap | 3 /<br>0010000000000000               |
| $N_{oc}$ at antenna port  |          | dBm/15kHz             | -98                                   |
| $\hat{E}_s / N_{oc}$  |          |                       | Reference Value in Table 8.13.1.2.1-2 |
| Symbols for unused PRBs   |          |                       | OCNG (Note 2)                         |
| Number of allocated resource blocks (Note 2)  |          | PRB                   | 50                                    |
| Simultaneous transmission   |          |                       | No                                    |
| PDSCH transmission mode   |          |                       | 9                                     |
| Note 1: $P_B = 1$   |          |                       |                                       |
| Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. |          |                       |                                       |

**Table 8.13.1.2.1-2: Single carrier performance for multiple CA configurations**

| Band - width | Reference channel |            | OCNG pattern | Propagation condition | Correlation matrix and antenna config. |         | Reference value                    |          |        |
|--------------|-------------------|------------|--------------|-----------------------|--|---------|------------------------------------|----------|--------|
|              | 2Rx CC            | 4Rx CC     |              |                       | 2Rx CC                                 | 4Rx CC  | Fraction of maximum throughput (%) | SNR (dB) |        |
|              |                   |            |              |                       |  |         |                                    | 2Rx CC   | 4Rx CC |
| 5MHz         | R.51-2 FDD        | R.51-2 FDD | OP.1 FDD     | ETU5                  | 2x2 Low                                | 2x4 Low | 70                                 | 14.2     | 9.0    |
| 10 MHz       | R.51 FDD          | R.51 FDD   | OP.1 FDD     | ETU5                  | 2x2 Low                                | 2x4 Low | 70                                 | 13.7     | 8.8    |
| 15M Hz       | R.51-3 FDD        | R.51-3 FDD | OP.1 FDD     | ETU5                  | 2x2 Low                                | 2x4 Low | 70                                 | 13.6     | 8.7    |
| 20M Hz       | R.51-4 FDD        | R.51-4 FDD | OP.1 FDD     | ETU5                  | 2x2 Low                                | 2x4 Low | 70                                 | 14.3     | 8.8    |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.  
 Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.  
 Note 3: SNR corresponds to  $\hat{E}_s/N_{oc}$  of Cell 1.

**Table 8.13.1.2. 1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num.   | CA Band-width combination | Requirement  | UE category |
|---|---------------------------|--|-------------|
| 1   | 2x10 MHz                  | As specified in Table 8.13.1.2.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |

### 8.13.1.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

#### 8.13.1.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.1.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.3.1-3, based on single carrier requirement specified in Table 8.13.1.3.1-2, with the addition of the parameters in Table 8.13.1.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.1.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA**

| Parameter  |          | Unit           | Cell 1  | Cell 2   |
|--|----------|----------------|---|--|
| Downlink power allocation  | $\rho_A$ | dB             | -3  | -3   |
|  | $\rho_B$ | dB             | -3 (Note 1)   | -3   |
|  | $\sigma$ | dB             | 0   | 0  |
| Cell-specific reference signals  |          |                | Antenna ports 0,1   | Antenna ports 0,1  |
| $N_{oc}$ at antenna port   |          | dBm/15kHz<br>z | -98   | N/A  |
| DIP (Note 2)   |          | dB             | N/A   | -1.73  |
| Cell Id  |          |                | 0   | 1  |
| PDSCH transmission mode  |          |                | 6   | 4  |
| Interference model   |          |                | N/A   | As specified in clause B.5.3                               |
| Probability of occurrence of transmission rank in interfering cells  | Rank 1   | %              | N/A   | 80   |
|  | Rank 2   | %              | N/A   | 20   |
| Precoding granularity  |          | PRB            | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs | 4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 4)   |          | ms             | 8   | N/A  |
| Reporting interval   |          | ms             | 5   | N/A  |
| Reporting mode   |          |                | PUCCH 1-1   | N/A  |
| CodeBookSubsetRestriction bitmap   |          |                | 1111  | N/A  |
| Physical channel for CQI reporting   |          |                | PUSCH (Note 7)  | N/A  |
| cqi-pmi-ConfigurationIndex   | FDD PCC  |                | 2   | N/A  |
|  | FDD SCC  |                | 3   | N/A  |
| <p>Note 1: <math>P_B = 1</math></p> <p>Note 2: The respective received power spectral density of each interfering cell relative to <math>N_{oc}</math> is defined by its associated DIP value as specified in clause B.5.1.</p> <p>Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.</p> <p>Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 5: All cells are time-synchronous.</p> <p>Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.</p> <p>Note 7: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, SF#2, SF#6 and #7 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5 SF#6 SF#0 and SF#1.</p> |          |                |   |  |

| 3   | 2x5 MHz                   | As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 4   | 15MHz+5MHz                | As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 5   | 10MHz+5MHz                | As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |                           |  |             |

#### 8.13.1.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)

##### 8.13.1.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.1.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.4.1-3, based on single carrier requirement specified in Table 8.13.1.4.1-2, with the addition of the parameters in Table 8.13.1.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.1.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA**

| parameter   | Unit      | Cell 1              | Cell 2            |
|---|-----------|---------------------|-------------------|
| Downlink power allocation   | $\rho_A$  | dB                  | 0                 |
|   | $\rho_B$  | dB                  | 0 (Note 1)        |
|   | $\sigma$  | dB                  | -3                |
| Cell-specific reference signals                                       |           | Antenna ports 0,1   | Antenna ports 0,1 |
| CSI reference signals   |           | Antenna ports 15,16 | N/A               |
| CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$ | Subframes | 5 / 2               | N/A               |
| CSI reference signal configuration                                    |           | 0                   | N/A               |
| $N_{oc}$ at antenna port $z$  | dBm/15kHz | -98                 | N/A               |

| <p>Note 1: <math>P_B = 1</math></p> <p>Note 2: The respective received power spectral density of each interfering cell relative to <math>N_{oc}</math> is defined by its associated DIP value as specified in clause B.5.1.</p> <p>Note 3: The modulation symbols of the signal under test in Cell 1 are mapped onto antenna port 7 or 8.</p> <p>Note 4: The precoder in clause B.4.3 follows UE recommended PMI.</p> <p>Note 5: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 6: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.</p> <p>Note 7: All cells are time-synchronous.</p> <p>Note 8: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3, SF#4, SF#8 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7, SF#8, SF#2 and #3.</p> <p>Note 9: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.</p> |         |     |   |  |

**Table 8.13.1.4.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A, CDM-multiplexed DM RS**

| Band-width | Reference Channel | OCNG Pattern | Propagation Conditions | Correlation Matrix and | Reference Value |
|------------|-------------------|--------------|------------------------|------------------------|-----------------|
|------------|-------------------|--------------|------------------------|------------------------|-----------------|

|        | 2Rx CC     | 4Rx CC     | Cell 1   | Cell 2 | Cell 1 | Cell 2 | Antenna Configuration (Note 3) |         | Fraction of Maximum Throughput (%) | SINR (dB) (Note 2) |        |
|--------|------------|------------|----------|--------|--------|--------|--------------------------------|---------|------------------------------------|--------------------|--------|
|        |            |            |          |        |        |        | 2Rx CC                         | 4Rx CC  |                                    | 2Rx CC             | 4Rx CC |
| 5MHz   | R.76-1 FDD | R.76-4 FDD | OP.1 FDD | N/A    | EVA5   | EVA5   | 2x2 Low                        | 2x4 Low | 70                                 | -0.4               | -2.0   |
| 10 MHz | R.76 FDD   | R.76-5 FDD | OP.1 FDD | N/A    | EVA5   | EVA5   | 2x2 Low                        | 2x4 Low | 70                                 | 0.1                | -1.8   |
| 15MHz  | R.76-2 FDD | R.76-6 FDD | OP.1 FDD | N/A    | EVA5   | EVA5   | 2x2 Low                        | 2x4 Low | 70                                 | -0.2               | -1.9   |
| 20MHz  | R.76-3 FDD | R.76-7 FDD | OP.1 FDD | N/A    | EVA5   | EVA5   | 2x2 Low                        | 2x4 Low | 70                                 | -0.4               | -1.7   |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to  $\hat{E}_s / N_{oc}$  of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

**Table 8.13.1.4.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num. | CA Band-width combination | Requirement  | UE category |
|-----------|---------------------------|--|-------------|
| 1         | 2x10 MHz                  | As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 2         | 2x20 MHz                  | As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 3         | 2x5 MHz                   | As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 4         | 15MHz+5MHz                | As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 5         | 10MHz+5MHz                | As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

### 8.13.2 TDD (CA and DC)

The parameters specified in Table 8.13.2-1 are valid for all TDD CA and DC tests unless otherwise stated.

**Table 8.13.2-1: Common Test Parameters (TDD)**

| Parameter  | Unit         | Value  |
|--|--------------|--|
| Uplink downlink configuration (Note 1)                 |              | 1  |
| Special subframe configuration (Note 2)                |              | 4  |
| Cyclic prefix  |              | Normal   |
| Cell ID  |              | 0  |
| Inter-TTI Distance                                     |              | 1  |
| Number of HARQ processes per component carrier         | Processes    | 7  |
| Maximum number of HARQ transmission                    |              | 4  |
| Redundancy version coding sequence                     |              | {0,1,2,3} for QPSK and 16QAM<br>{0,0,1,2} for 64QAM and 256QAM   |
| Number of OFDM symbols for PDCCH per component carrier | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths,<br>2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated |

|                          |   |                |
|--------------------------|---|----------------|
| Cross carrier scheduling |   | Not configured |
| Note 1:                  | as specified in Table 4.2-2 in TS 36.211 [4]. |                |
| Note 2:                  | as specified in Table 4.2-1 in TS 36.211 [4]. |                |

### 8.13.2.1 Closed-loop spatial multiplexing performance

#### 8.13.2.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.1-2A, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.13.2.1.1-3, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.13.2.1.1-4, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.13.2.1.1-5, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.2.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter  | Unit      | Value   |
|--|-----------|---|
| Downlink power allocation  | $\rho_A$  | dB  |
|  | $\rho_B$  | dB  |
|  | $\sigma$  | dB  |
| $N_{oc}$ at antenna port   | dBm/15kHz | -98   |
| Precoding granularity  | PRB       | 8   |
| PMI delay (Note 2)   | ms        | 10 or 11  |
| Reporting interval   | ms        | 1 or 4 (Note 3)   |
| Reporting mode   |           | PUSCH 1-2   |
| ACK/NACK feedback mode   |           | PUCCH format 1b with channel selection for Tests with 2CCs; PUCCH format 3 for Tests with more than 2 CCs |
| CodeBookSubsetRestriction bitmap   |           | 000000000000000000000000<br>0000111111111111111100000000<br>00000000                                      |
| CSI request field (Note 4)   |           | '10'  |
| PDSCH transmission mode  |           | 4   |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)<br>Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.<br>Note 4: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by high layers.<br>Note 5: The same PDSCH transmission mode is applied to each component carrier. |           |   |

**Table 8.13.2.1.1-2: Single carrier performance for multiple CA configurations**

|                   |  |  |  |                 |

| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6 |                           |  |             |

8.13.2.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.13.2.1.2-3, for 2DL CCs, in Table 8.13.2.1.2-4 for 3DL CCs, and Table 8.13.2.1.2-5 for 4DL CCs, based on single carrier requirement specified in Table 8.13.2.1.2-2, with the addition of the parameters in Table 8.13.2.1.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity.

**Table 8.13.2.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity**

| Parameter   |          | Unit      | Value  |
|---|----------|-----------|--|
| Downlink power allocation   | $\rho_A$ | dB        | -6   |
|   | $\rho_B$ | dB        | -6 (Note 1)  |
|   | $\sigma$ | dB        | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98  |
| Precoding granularity   |          | PRB       | 6 for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, and 8 for 15MHz CCs and 20MHz CCs  |
| PMI delay (Note 2)  |          | ms        | 10 or 11   |
| Reporting interval  |          | ms        | 1 or 4 (Note 3)  |
| Reporting mode  |          |           | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |          |           | 00000000000000000000000000000000<br>000011111111111111111100000000<br>00000000   |
| PDSCH transmission mode   |          |           | 4  |
| ACK/NACK transmission   |          |           | Separate ACK/NACK feedbacks with PUCCH format 1b on the MCG and SCG  |
| CSI feedback  |          |           | Separate PUSCH feedbacks on the MCG and SCG  |
| Time offset between MCG CC and SCG CC   |          | $\mu$ s   | 0 for UE under test supporting synchronous dual connectivity;<br>334 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 5) |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)<br>Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.<br>Note 4: The same PDSCH transmission mode is applied to each component carrier.<br>Note 5: As defined in TS36.300 [11].<br>Note 6: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured. |          |           |  |

**Table 8.13.2.1.1-2: Single carrier performance for multiple DC configurations**

| Band - width | Reference channel |            | OCNG pattern | Propa- gation condi- tion | Correlation matrix and antenna config. |         | Reference value                     |          |        |
|--------------|-------------------|------------|--------------|---------------------------|--|---------|-------------------------------------|----------|--------|

### 8.13.2.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding with 256QAM under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.3-3, based on single carrier requirement specified in Table 8.13.2.1.3-2, with the addition of the parameters in Table 8.13.2.1.3-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.2.1.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                 | Unit      | Value |             |
|---------------------------|-----------|-------|-------------|
| Downlink power allocation | $\rho_A$  | dB    | -6          |
|                           | $\rho_B$  | dB    | -6 (Note 1) |
|                           | $\sigma$  | dB    | 3           |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98   |             |

|  |     |  |
|--|-----|--|
| Precoding granularity  | PRB | 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs              |
| PMI delay (Note 2)   | ms  | 10 or 11   |
| Reporting interval   | ms  | 1 or 4 (Note 3)  |
| Reporting mode   |     | PUSCH 1-2  |
| ACK/NACK feedback mode   |     | PUCCH format 1b with channel selection for Tests with 2CCs                       |
| CodeBookSubsetRestriction bitmap   |     | 00000000000000000000000000000000<br>00001111111111111111111100000000<br>00000000 |
| CSI request field (Note 4)   |     | '10'   |
| PDSCH transmission mode  |     | 4  |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)<br>Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.<br>Note 4: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by high layers.<br>Note 5: The same PDSCH transmission mode is applied to each component carrier. |     |  |

**Table 8.13.2.1.3-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num.   | CA Band-width combination | Requirement  | UE category |
|---|---------------------------|--|-------------|
| 1   | 2x20MHz                   | As specified in Table 8.13.2.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 2   | 20MHz+15MHz               | As specified in Table 8.13.2.1.3-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |                           |  |             |

**8.13.2.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port**

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.4-3, based on single carrier requirement specified in Table 8.13.2.1.4-2, with the addition of the parameters in Table 8.13.2.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.2.1.4-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter  | Unit      | Value   |             |
|--|-----------|---|-------------|
| Downlink power allocation  | $\rho_A$  | dB  | -6          |
|  | $\rho_B$  | dB  | -6 (Note 1) |
|  | $\sigma$  | dB  | 0           |
| $N_{oc}$ at antenna port   | dBm/15kHz | -98   |             |
| Cell-specific reference signals  |           | Antenna ports 0,1,2,3   |             |
| PDSCH transmission mode  |           | 4   |             |
| PDSCH rank   |           | 4   |             |
| Precoding granularity  | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs |             |
| PMI delay  | ms        | 10 or 11  |             |
| Reporting interval   | ms        | 1 or 4  |             |
| Reporting mode   |           | PUSCH 3-1   |             |
| CodeBookSubsetRestriction bitmap   |           | 0xFFFF000000000000  |             |

## 8.13.2.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

### 8.13.2.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port

For CA with 2 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-2A, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-3, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-4, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-5, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.2.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   | Unit                  | Values                                |            |
|---|-----------------------|---------------------------------------|------------|
| Downlink power allocation   | $\rho_A$              | dB                                    | 0          |
|   | $\rho_B$              | dB                                    | 0 (Note 1) |
|   | $\sigma$              | dB                                    | -3         |
| Cell-specific reference signals   |                       | Antenna ports 0 and 1                 |            |
| Cell ID   |                       | 0                                     |            |
| CSI reference signals   |                       | Antenna ports 15,16                   |            |
| Beamforming model   |                       | Annex B.4.2                           |            |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$  | Subframes             | 5 / 4                                 |            |
| CSI reference signal configuration  |                       | 8                                     |            |
| Zero-power CSI-RS configuration<br>$I_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS}$<br>bitmap   | Subframes /<br>bitmap | 4 /<br>0010000000000000               |            |
| $N_{oc}$ at antenna port  | dBm/15kHz             | -98                                   |            |
| $\widehat{E}_s / N_{oc}$  |                       | Reference Value in Table 8.13.2.2.1-2 |            |
| Symbols for unused PRBs   |                       | OCNG (Note 2)                         |            |

### 8.13.2.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

#### 8.13.2.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.2.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.3.1-3, based on single carrier requirement specified in Table 8.13.2.3.1-2, with the addition of the parameters in Table 8.13.2.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.2.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA**

| Parameter   |          | Unit      | Cell 1            | Cell 2                       |
|---|----------|-----------|-------------------|------------------------------|
| Downlink power allocation   | $\rho_A$ | dB        | -3                | -3                           |
|   | $\rho_B$ | dB        | -3 (Note 1)       | -3                           |
|   | $\sigma$ | dB        | 0                 | 0                            |
| Cell-specific reference signals                                     |          |           | Antenna ports 0,1 | Antenna ports 0,1            |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98               | N/A                          |
| DIP (Note 2)  |          | dB        | N/A               | -1.73                        |
| $BW_{\text{Channel}}$   |          | MHz       | 10                | 10                           |
| Cell Id   |          |           | 0                 | 1                            |
| PDSCH transmission mode   |          |           | 6                 | N/A                          |
| Interference model  |          |           | N/A               | As specified in clause B.5.3 |
| Probability of occurrence of transmission rank in interfering cells | Rank 1   | %         | N/A               | 80                           |
|   | Rank 2   | %         | N/A               | 20                           |
| Precoding granularity   |          | PRB       | 50                | 6                            |
| PMI delay (Note 4)  |          | ms        | 10 or 11          | N/A                          |
| Reporting interval  |          | ms        | 5                 | N/A                          |
| Reporting mode  |          |           | PUCCH 1-1         | N/A                          |
| CodeBookSubsetRestriction bitmap                                    |          |           | 1111              | N/A                          |
| Physical channel for CQI reporting                                  |          |           | PUSCH (Note 7)    | N/A                          |
| cqi-pmi-ConfigurationIndex  | TDD PCC  |           | 3                 | N/A                          |
|   | TDD SCC  |           | 4                 | N/A                          |

|         |  |
|---------|--|
| Note 1: | $P_B = 1$  |
| Note 2: | The respective received power spectral density of each interfering cell relative to $N_{oc}$ is defined by its associated DIP value as specified in clause B.5.1.  |
| Note 3: | Cell 1 is the serving cell. Cell 2, 3 are the interfering cells.   |
| Note 4: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).  |
| Note 5: | All cells are time-synchronous.  |
| Note 6: | ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.   |
| Note 7: | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, SF#4, SF#6 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 SF#8 SF#2 and SF#3. |

**Table 8.13.2.3.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A**

| Band-width | Reference Channel |            | OCNG Pattern |        | Propagation Conditions |        | Correlation Matrix and Antenna Configuration (Note 3) |         | Reference Value                    |                    |        |
|------------|-------------------|------------|--------------|--------|------------------------|--------|---|---------|------------------------------------|--------------------|--------|
|            | 2Rx CC            | 4Rx CC     | Cell 1       | Cell 2 | Cell 1                 | Cell 2 | 2Rx CC  | 4Rx CC  | Fraction of Maximum Throughput (%) | SINR (dB) (Note 2) |        |
|            |                   |            |              |        |                        |        |   |         |                                    | 2Rx CC             | 4Rx CC |
| 5MHz       | R.47-1 TDD        | R.47-1 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 0.8                | -2.8   |
| 10 MHz     | R.47 TDD          | R.47 TDD   | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 1.3                | -2.5   |
| 15MHz      | R.47-2 TDD        | R.47-2 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 1.0                | -2.7   |
| 20MHz      | R.47-3 TDD        | R.47-3 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 1.3                | -2.3   |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.  
 Note 2: SINR corresponds to  $\hat{E}_s / N_{oc}$  of Cell 1 as defined in clause 8.1.1.  
 Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

**Table 8.13.2.3.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num. | CA Band-width combination | Requirement  | UE category |
|-----------|---------------------------|--|-------------|
| 1         | 2x20MHz                   | As specified in Table 8.13.2.3.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 2         | 20MHz+15MHz               | As specified in Table 8.13.2.3.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

**8.13.2.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)**

**8.13.2.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)**

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined

in clause B.5.4. In 8.13.2.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.4.1-3, based on single carrier requirement specified in Table 8.13.2.4.1-2, with the addition of the parameters in Table 8.13.2.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.2.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA**

| parameter   |          | Unit      | Cell 1  | Cell 2                       |
|---|----------|-----------|---|------------------------------|
| Downlink power allocation   | $\rho_A$ | dB        | 0   | 0                            |
|   | $\rho_B$ | dB        | 0 (Note 1)  | 0                            |
|   | $\sigma$ | dB        | -3  | -3                           |

| Note 1: $P_B = 1$   |          |           |   |                              |
| Note 2: The respective received power spectral density of each interfering cell relative to $N_{oc}$ is defined by its associated DIP value as specified in clause B.5.1. |          |           |   |                              |
| Note 3: The modulation symbols of the signal under test in Cell 1 are mapped onto antenna port 7 or 8.  |          |           |   |                              |

|         |  |
|---------|--|
| Note 4: | The precoder in clause B.4.3 follows UE recommended PMI.   |
| Note 5: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).  |
| Note 6: | These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.  |
| Note 7: | All cells are time-synchronous.  |
| Note 8: | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, SF#4, SF#6 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7, SF#8, SF#2 and #3. |
| Note 9: | ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.   |

**Table 8.13.2.4.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A, CDM-multiplexed DM RS**

| Band-width | Reference Channel |            | OCNG Pattern |        | Propagation Conditions |        | Correlation Matrix and Antenna Configuration (Note 3) |         | Reference Value                    |                    |        |
|------------|-------------------|------------|--------------|--------|------------------------|--------|---|---------|------------------------------------|--------------------|--------|
|            | 2Rx CC            | 4Rx CC     | Cell 1       | Cell 2 | Cell 1                 | Cell 2 | 2Rx CC  | 4Rx CC  | Fraction of Maximum Throughput (%) | SINR (dB) (Note 2) |        |
|            |                   |            |              |        |                        |        |   |         |                                    | 2Rx CC             | 4Rx CC |
| 5MHz       | R.76-1 TDD        | R.76-4 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | -0.6               | -2.4   |
| 10 MHz     | R.76 TDD          | R.76-5 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | -0.1               | -2.1   |
| 15MHz      | R.76-2 TDD        | R.76-6 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | -0.2               | -2.1   |
| 20MHz      | R.76-3 TDD        | R.76-7 TDD | OP.1 TDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | -0.4               | -2.1   |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to  $\hat{E}_s / N_{oc}$  of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

**Table 8.13.2.4.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test num. | CA Band-width combination | Requirement  | UE category |
|-----------|---------------------------|--|-------------|
| 1         | 2x20MHz                   | As specified in Table 8.13.2.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |
| 2         | 20MHz+15MHz               | As specified in Table 8.13.2.4.1-2 per CC depending on either 2Rx CC or 4Rx CC | ≥5          |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

### 8.13.3 TDD-FDD (CA and DC)

The parameters specified in Table 8.13.3-1 are valid for all the TDD FDD CA tests unless otherwise stated.

**Table 8.13.3-1: Common Test Parameters**

| Parameter   | Unit | Value |
|---|------|-------|
| Uplink downlink configuration (Note 1) for TDD CC only  |      | 1     |
| Special subframe configuration (Note 2) for TDD CC only |      | 4     |

|  |           |              |  |
|--|-----------|--------------|--|
| Inter-TTI Distance                                     |           |              | 1  |
| Maximum number of HARQ processes per component carrier | FDD PCell | Processes    | 8 for FDD and TDD CCs  |
|  | TDD PCell | Processes    | 11 for FDD CC; 7 for TDD CC  |
| Maximum number of HARQ transmission                    |           |              | 4  |
| Redundancy version coding sequence                     |           |              | {0,1,2,3} for QPSK and 16QAM<br>{0,0,1,2} for 64QAM  |
| Number of OFDM symbols for PDCCH per component carrier |           | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths,<br>2 for 10 MHz, 15 MHz and 20 MHz bandwidths |
| Cyclic Prefix  |           |              | Normal   |
| Cell_ID  |           |              | 0  |
| Cross carrier scheduling                               |           |              | Not configured   |
| ACK/NACK feedback mode                                 |           |              | PUCCH format 3   |
| Downlink HARQ-ACK timing                               | FDD PCell |              | As specified in Clause 7.3.3 in TS36.213 [6]   |
|  | TDD PCell |              | As specified in Clause 7.3.4 in TS36.213 [6]   |
| Note 1: as specified in Table 4.2-2 in TS 36.211 [4].  |           |              |  |
| Note 2: as specified in Table 4.2-1 in TS 36.211 [4].  |           |              |  |

The applicability of their requirements are specified in Clause 8.1.2.6. The single carrier performance with different bandwidths for multiple CA configurations specified in Clause 8.13.3 cannot be applied for UE single carrier test.

### 8.13.3.1 Closed-loop spatial multiplexing performance 4Tx Antenna Port

#### 8.13.3.1.1 Minimum Requirement for FDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.1.1-4 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.1.1-5 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.1.1-6 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.1.1-7 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                 |          | Unit      | Value       |
|---------------------------|----------|-----------|-------------|
| Downlink power allocation | $\rho_A$ | dB        | -6          |
|                           | $\rho_B$ | dB        | -6 (Note 1) |
|                           | $\sigma$ | dB        | 3           |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98         |

|   |        |     |  |
|---|--------|-----|--|
| Precoding granularity   |        | PRB | Wideband precoding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 2)  | FDD CC | ms  | 8  |
|   | TDD CC | ms  | 10 or 11   |
| Reporting interval  | FDD CC | ms  | 1  |
|   | TDD CC | ms  | 1 or 4 (Note 3)  |
| Reporting mode  |        |     | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |        |     | 00000000000000000000000000000000<br>00001111111111111111111100000000<br>00000000                   |
| CSI request field (Note 3)  |        |     | '10'   |
| PDSCH transmission mode   |        |     | 4  |
| <p>Note 1: <math>P_B = 1</math>.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: Multiple CC-s under test are configured as the 1<sup>st</sup> set of serving cells by higher layers.</p> <p>Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.</p> <p>Note 5: The same PDSCH transmission mode is applied to each component carrier.</p> |        |     |  |

**Table 8.13.3.1.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)**

| Band - width | Reference channel |            | OCNG pattern | Propa- gation condi- tion | Correlation matrix and antenna config. |         | Reference value                     |          |        |
|--------------|-------------------|------------|--------------|---------------------------|--|---------|-------------------------------------|----------|--------|
|              | 2Rx CC            | 4Rx CC     |              |                           | 2Rx CC                                 | 4Rx CC  | Fraction of maximum throughpu t (%) | SNR (dB) |        |

### 8.13.3.1.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.1.2-4 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.1.2-5 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.1.2-6 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.1.2-7 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                 | Unit      | Value |
|---------------------------|-----------|-------|
| Downlink power allocation | $\rho_A$  | dB    |
|                           | $\rho_B$  | dB    |
|                           | $\sigma$  | dB    |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98   |

|   |        |     |  |
|---|--------|-----|--|
| Precoding granularity   |        | PRB | Widelband pre-coding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 2)  | FDD CC | ms  | 8  |
|   | TDD CC | ms  | 10 or 11   |
| Reporting interval  | FDD CC | ms  | 1  |
|   | TDD CC | ms  | 1 or 4 (Note 3)  |
| Reporting mode  |        |     | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |        |     | 00000000000000000000000000000000<br>00001111111111111111111100000000<br>00000000                     |
| CSI request field (Note 3)  |        |     | '10'   |
| PDSCH transmission mode   |        |     | TM4  |
| <p>Note 1: <math>P_B = 1</math>.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: Multiple CC-s under test are configured as the 1<sup>st</sup> set of serving cells by higher layers.</p> <p>Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.</p> <p>Note 5: The same PDSCH transmission mode is applied to each component carrier.</p> |        |     |  |

### 8.13.3.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

#### 8.13.3.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for FDD PCell

The purpose of these tests is to verify dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.2.1-4 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.2.1-5 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.2.1-6 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.2.1-7 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter  |          | Unit               | Values                                |
|--|----------|--------------------|---------------------------------------|
| Downlink power allocation  | $\rho_A$ | dB                 | 0                                     |
|  | $\rho_B$ | dB                 | 0 (Note 1)                            |
|  | $\sigma$ | dB                 | -3                                    |
| Cell-specific reference signals  |          |                    | Antenna ports 0 and 1                 |
| Cell ID  |          |                    | 0                                     |
| CSI reference signals  |          |                    | Antenna ports 15,16                   |
| Beamforming model  |          |                    | Annex B.4.2                           |
| CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$  | FDD CC   | Subframes          | 5 / 2                                 |
|  | TDD CC   |                    | 5 / 4                                 |
| CSI reference signal configuration   |          |                    | 8                                     |
| Zero-power CSI-RS configuration $l_{CSI-RS} / \text{ZeroPowerCSI-RS}$ bitmap   | FDD CC   | Subframes / bitmap | 3 / 0010000000000000                  |
|  | TDD CC   |                    | 4 / 0010000000000000                  |
| $N_{oc}$ at antenna port   |          | dBm/15kHz          | -98                                   |
| $\hat{E}_s / N_{oc}$   | FDD CC   |                    | Reference Value in Table 8.13.3.2.1-2 |
|  | TDD CC   |                    | Reference Value in Table 8.13.3.2.1-3 |
| Symbols for unused PRBs  |          |                    | OCNG (Note 2)                         |
| Number of allocated resource blocks (Note 2)   |          | PRB                | 50                                    |
| Simultaneous transmission  |          |                    | No                                    |

### 8.13.3.2.2 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.2.2-4 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.2.2-5 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.2.2-6 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.2.2-7 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.2.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   |          | Unit               | Values                                |
|---|----------|--------------------|---------------------------------------|
| Downlink power allocation   | $\rho_A$ | dB                 | 0                                     |
|   | $\rho_B$ | dB                 | 0 (Note 1)                            |
|   | $\sigma$ | dB                 | -3                                    |
| Cell-specific reference signals   |          |                    | Antenna ports 0 and 1                 |
| Cell ID   |          |                    | 0                                     |
| CSI reference signals   |          |                    | Antenna ports 15,16                   |
| Beamforming model   |          |                    | Annex B.4.2                           |
| CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$   | FDD CC   | Subframes          | 5 / 2                                 |
|   | TDD CC   |                    | 5 / 4                                 |
| CSI reference signal configuration  |          |                    | 8                                     |
| Zero-power CSI-RS configuration $l_{CSI-RS} / ZeroPowerCSI-RS$ bitmap   | FDD CC   | Subframes / bitmap | 3 / 0010000000000000                  |
|   | TDD CC   |                    | 4 / 0010000000000000                  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz          | -98                                   |
| $\hat{E}_s / N_{oc}$  | FDD CC   |                    | Reference Value in Table 8.13.3.2.2-2 |
|   | TDD CC   |                    | Reference Value in Table 8.13.3.2.2-3 |
| Symbols for unused PRBs   |          |                    | OCNG (Note 2)                         |
| Number of allocated resource blocks (Note 2)  |          | PRB                | 50                                    |
| Simultaneous transmission   |          |                    | No                                    |
| PDSCH transmission mode   |          |                    | 9                                     |
| Note 1: $P_B = 1$   |          |                    |                                       |
| Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. |          |                    |                                       |
| Note 3: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.  |          |                    |                                       |

### 8.13.3.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

#### 8.13.3.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for FDD PCell

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.3.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with FDD PCell and with 2 DL CCs, the requirements are specified in Table 8.13.3.3.1-4, based on single carrier requirement specified in Table 8.13.3.3.1-2 and Table 8.13.3.3.1-3, with the addition of the parameters in Table 8.13.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.3.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA**

| Parameter   |          | Unit      | Cell 1  | Cell 2   |
|---|----------|-----------|---|--|
| Downlink power allocation   | $\rho_A$ | dB        | -3  | -3   |
|   | $\rho_B$ | dB        | -3 (Note 1)   | -3   |
|   | $\sigma$ | dB        | 0   | 0  |
| Cell-specific reference signals                                     |          |           | Antenna ports 0,1   | Antenna ports 0,1  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98   | N/A  |
| DIP (Note 2)  |          | dB        | N/A   | -1.73  |
| Cell Id   |          |           | 0   | 1  |
| PDSCH transmission mode   |          |           | 6   | 4  |
| Interference model  |          |           | N/A   | As specified in clause B.5.3                               |
| Probability of occurrence of transmission rank in interfering cells | Rank 1   | %         | N/A   | 80   |
|   | Rank 2   | %         | N/A   | 20   |
| Precoding granularity   |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs | 4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 4)  | FDD CC   | ms        | 8   | N/A  |
|   | TDD CC   | ms        | 10 or 11  | N/A  |
| Reporting interval  |          | ms        | 5   | N/A  |
| Reporting mode  |          |           | PUCCH 1-1   | N/A  |
| CodeBookSubsetRestriction bitmap                                    |          |           | 1111  | N/A  |
| Physical channel for CQI reporting                                  |          |           | PUSCH (Note 7)  | N/A  |
| cqi-pmi-ConfigurationIndex  | FDD PCC  |           | 4   | N/A  |
|   | TDD SCC  |           | 5   | N/A  |

Note 1:  $P_B = 1$

Note 2: The respective received power spectral density of each interfering cell relative to  $N_{oc}$  is defined by its associated DIP value as specified in clause B.5.1.

Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.

Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Note 5: All cells are time-synchronous.

Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.

Note 7: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3 for TDD CCs, and PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2 for FDD CCs.

### 8.13.3.3.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for TDD PCell

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.3.3.2-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with TDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.3.2-4, based on single carrier requirement specified in Table 8.13.3.3.2-2 and Table 8.13.3.3.2-3, with the addition of the parameters in Table 8.13.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.3.3.2-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA**

| Parameter   |          | Unit      | Cell 1  | Cell 2   |
|---|----------|-----------|---|--|
| Downlink power allocation   | $\rho_A$ | dB        | -3  | -3   |
|   | $\rho_B$ | dB        | -3 (Note 1)   | -3   |
|   | $\sigma$ | dB        | 0   | 0  |
| Cell-specific reference signals                                     |          |           | Antenna ports 0,1   | Antenna ports 0,1  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98   | N/A  |
| DIP (Note 2)  |          | dB        | N/A   | -1.73  |
| Cell Id   |          |           | 0   | 1  |
| PDSCH transmission mode   |          |           | 6   | 4  |
| Interference model  |          |           | N/A   | As specified in clause B.5.3                               |
| Probability of occurrence of transmission rank in interfering cells | Rank 1   | %         | N/A   | 80   |
|   | Rank 2   | %         | N/A   | 20   |
| Precoding granularity   |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs | 4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 4)  | FDD CC   | ms        | 8   | N/A  |
|   | TDD CC   | ms        | 10 or 11  | N/A  |
| Reporting interval  |          | ms        | 5   | N/A  |
| Reporting mode  |          |           | PUCCH 1-1   | N/A  |
| CodeBookSubsetRestriction bitmap                                    |          |           | 1111  | N/A  |

Note 1:  $P_B = 1$

Note 2: The respective received power spectral density of each interfering cell relative to  $N_{oc}$  is defined by its associated DIP value as specified in clause B.5.1.

Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.

Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Note 5: All cells are time-synchronous.

Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.

**Table 8.13.3.3.2-2: Single carrier performance for Enhanced Performance Requirement Type A for FDD SCell (FRC)**

| Bandwidth | Reference Channel |            | OCNG Pattern |        | Propagation Conditions |        | Correlation Matrix and Antenna Configuration (Note 3) |         | Reference Value                    |                    |        |
|-----------|-------------------|------------|--------------|--------|------------------------|--------|---|---------|------------------------------------|--------------------|--------|
|           | 2Rx CC            | 4Rx CC     | Cell 1       | Cell 2 | Cell 1                 | Cell 2 | 2Rx CC  | 4Rx CC  | Fraction of Maximum Throughput (%) | SINR (dB) (Note 2) |        |
|           |                   |            |              |        |                        |        |   |         |                                    | 2Rx CC             | 4Rx CC |
| 5MHz      | R.47-1 FDD        | R.47-1 FDD | OP.1 FDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 0.8                | -3.0   |
| 10 MHz    | R.47 FDD          | R.47 FDD   | OP.1 FDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 1.0                | -2.7   |
| 15MHz     | R.47-2 FDD        | R.47-2 FDD | OP.1 FDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 0.8                | -2.9   |
| 20MHz     | R.47-3 FDD        | R.47-3 FDD | OP.1 FDD     | N/A    | EVA5                   | EVA5   | 2x2 Low   | 2x4 Low | 70                                 | 1.1                | -2.8   |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to  $\widehat{E}_s / N_{oc}$  of Cell 1 as defined in clause 8.1.1.  
 Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

**Table 8.13.3.2-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)**

| Test number | Aggregated Bandwidth (MHz) |        |        | Minimum performance requirement                            | UE Category |
|-------------|----------------------------|--------|--------|--|-------------|
|             | Total                      | FDD CC | TDD CC |  |             |
| 1           | 2x20                       | 20     | 20     | As defined in Table 8.13.3.2-2 and Table 8.13.3.2-3 per CC | ≥5          |
| 2           | 20+10                      | 10     | 20     | As defined in Table 8.13.3.2-2 and Table 8.13.3.2-3 per CC | ≥5          |
| 3           | 20+15                      | 15     | 20     | As defined in Table 8.13.3.2-2 and Table 8.13.3.2-3 per CC | ≥5          |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6

**8.13.3.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)**

**8.13.3.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for FDD PCell**

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.3.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with FDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.4.1-4, based on single carrier requirement specified in Table 8.13.3.4.1-2 and Table 8.13.3.4.1-3, with the addition of the parameters in Table 8.13.3.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.3.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA**

| parameter   |          | Unit      | Cell 1  | Cell 2   |
|---|----------|-----------|---|--|
| Downlink power allocation   | $\rho_A$ | dB        | 0   | 0  |
|   | $\rho_B$ | dB        | 0 (Note 1)  | 0  |
|   | $\sigma$ | dB        | -3  | -3   |
| Cell-specific reference signals   |          |           | Antenna ports 0,1   | Antenna ports 0,1  |
| CSI reference signals   |          |           | Antenna ports 15,16   | N/A  |
| CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$ | FDD CC   | Subframes | 5 / 2   | N/A  |
|   | TDD CC   |           | 5 / 4   | N/A  |
| CSI reference signal configuration  |          |           | 0   | N/A  |
| $N_{oc}$ at antenna port $z$  |          | dBm/15kHz | -98   | N/A  |
| DIP (Note 2)  |          | dB        | N/A   | -1.73  |
| Cell Id   |          |           | 0   | 126  |
| PDSCH transmission mode   |          |           | 9   | 9  |
| Beamforming model   |          |           | As specified in clause B.4.3 (Note 4, 5)  | N/A  |
| Interference model  |          |           | N/A   | As specified in clause B.5.4                               |
| Probability of occurrence of transmission rank in interfering cells                 | Rank 1   |           | N/A   | 70   |
|   | Rank 2   |           | N/A   | 30   |
| Precoder update granularity   |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs                                   | 4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 5)  | FDD CC   | Ms        | 8   | N/A  |
|   | TDD CC   |           | 10 or 11  | N/A  |
| Reporting interval  |          | Ms        | 5   | N/A  |
| Reporting mode  |          |           | PUCCH 1-1   | N/A  |
| CodeBookSubsetRestriction bitmap  |          |           | 001111  | N/A  |
| Symbols for unused PRBs   |          |           | OCNG (Note 6)   | N/A  |
| Simultaneous transmission   |          |           | No simultaneous transmission on the other antenna port in (7 or 8) used for the input signal under test | N/A  |
| Physical channel for CQI reporting  |          |           | PUSCH(Note 8)   | N/A  |
| cqi-pmi-ConfigurationIndex  | FDD PCC  |           | 4   | N/A  |
|   | TDD SCC  |           | 5   | N/A  |

|         |  |
|---------|--|
| Note 1: | $P_B = 1$  |
| Note 2: | The respective received power spectral density of each interfering cell relative to $N_{oc}$ is defined by its associated DIP value as specified in clause B.5.1.  |
| Note 3: | The modulation symbols of the signal under test in Cell 1 are mapped onto antenna port 7 or 8.   |
| Note 4: | The precoder in clause B.4.3 follows UE recommended PMI.   |
| Note 5: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).  |
| Note 6: | These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNB PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.  |
| Note 7: | All cells are time-synchronous.  |
| Note 8: | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3 for TDD CCs, and PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2 for FDD CCs. |
| Note 9: | ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.   |

#### 8.13.3.4.2 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for TDD PCell

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.3.4.2-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with TDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.4.2-4, based on single carrier requirement specified in Table 8.13.3.4.2-2 and Table 8.13.3.4.2-3, with the addition of the parameters in Table 8.13.3.4.2-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.13.3.4.2-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA**

| parameter   |          | Unit      | Cell 1              | Cell 2            |
|---|----------|-----------|---------------------|-------------------|
| Downlink power allocation   | $\rho_A$ | dB        | 0                   | 0                 |
|   | $\rho_B$ | dB        | 0 (Note 1)          | 0                 |
|   | $\sigma$ | dB        | -3                  | -3                |
| Cell-specific reference signals                                       |          |           | Antenna ports 0,1   | Antenna ports 0,1 |
| CSI reference signals   |          |           | Antenna ports 15,16 | N/A               |

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.  
 Note 2: SINR corresponds to  $\hat{E}_s/N_{oc}$  of Cell 1 as defined in clause 8.1.1.  
 Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

**Table 8.13.3.4.2-4: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs**

| Test number | Aggregated Bandwidth (MHz) |        |        | Minimum performance requirement                                | UE Category |
|-------------|----------------------------|--------|--------|--|-------------|
|             | Total                      | FDD CC | TDD CC |  |             |
| 1           | 2x20                       | 20     | 20     | As defined in Table 8.13.3.4.2-2 and Table 8.13.3.4.2-3 per CC | ≥5          |
| 2           | 20+10                      | 10     | 20     | As defined in Table 8.13.3.4.2-2 and Table 8.13.3.4.2-3 per CC | ≥5          |
| 3           | 20+15                      | 15     | 20     | As defined in Table 8.13.3.4.2-2 and Table 8.13.3.4.2-3 per CC | ≥5          |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3.5 Closed-loop spatial multiplexing performance 4Tx Antenna Port for DC

8.13.3.5.1 Minimum Requirement for FDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD DC with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.5.1-4 based on single carrier requirement specified in Table 8.13.3.5.1-2 and Table 8.13.3.5.1-3, with the addition of the parameters in Table 8.13.3.5.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.5.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for DC**

| Parameter   |          | Unit      | Value  |
|---|----------|-----------|--|
| Downlink power allocation   | $\rho_A$ | dB        | -6   |
|   | $\rho_B$ | dB        | -6 (Note 1)  |
|   | $\sigma$ | dB        | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98  |
| Precoding granularity   |          | PRB       | Wideband precoding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs   |
| PMI delay (Note 2)  | FDD CC   | ms        | 8  |
|   | TDD CC   | ms        | 10 or 11   |
| Reporting interval  | FDD CC   | ms        | 1  |
|   | TDD CC   | ms        | 1 or 4 (Note 3)  |
| Reporting mode  |          |           | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |          |           | 000000000000000000000000000000001111<br>11111111111110000000000000000000   |
| CSI request field (Note 3)  |          |           | '10'   |
| PDSCH transmission mode   |          |           | 4  |
| ACK/NACK transmission   |          |           | Separate ACK/NACK feedbacks with PUCCH format 1b on the MCG and SCG  |
| CSI feedback  |          |           | Separate PUSCH feedbacks on the MCG and SCG  |
| Time offset between MCG CC and SCG CC   |          | $\mu$ s   | 0 for UE under test supporting synchronous dual connectivity;<br>334 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 6) |
| <p>Note 1: <math>P_B = 1</math>.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: Multiple CC-s under test are configured as the 1<sup>st</sup> set of serving cells by higher layers.</p> <p>Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.</p> <p>Note 5: The same PDSCH transmission mode is applied to each component carrier.</p> <p>Note 6: As defined in TS36.300 [11].</p> <p>Note 7: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured.</p> |          |           |  |

### 8.13.3.5.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD DC with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.5.2-4 based on single carrier requirement specified in Table 8.13.3.5.2-2 and Table 8.13.3.5.2-3, with the addition of the parameters in Table 8.13.3.5.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.5.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for DC**

| Parameter                 | Unit      | Value  |
|---------------------------|-----------|--|
| Downlink power allocation | $\rho_A$  | -6   |
|                           | $\rho_B$  | -6 (Note 1)  |
|                           | $\sigma$  | 3  |
| $N_{oc}$ at antenna port  | dBm/15kHz | -98  |
| Precoding granularity     | PRB       | Wideband precoding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 2)        | FDD CC    | 8  |
|                           | TDD CC    | 10 or 11   |
| Reporting interval        | FDD CC    | 1  |

|   |        |    |  |

### 8.13.3.6 Closed-loop spatial multiplexing performance 4Tx Antenna Port with 256QAM

#### 8.13.3.6.1 Minimum Requirement for FDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.6.1-4 based on single carrier requirement specified in Table 8.13.3.6.1-2 and Table 8.13.3.6.1-3, with the addition of the parameters in Table 8.13.3.6.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.6.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   |          | Unit      | Value  |
|---|----------|-----------|--|
| Downlink power allocation   | $\rho_A$ | dB        | -6   |
|   | $\rho_B$ | dB        | -6 (Note 1)  |
|   | $\sigma$ | dB        | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98  |
| Precoding granularity   |          | PRB       | Wideband precoding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |
| PMI delay (Note 2)  | FDD CC   | ms        | 8  |
|   | TDD CC   | ms        | 10 or 11   |
| Reporting interval  | FDD CC   | ms        | 1  |
|   | TDD CC   | ms        | 1 or 4 (Note 3)  |
| Reporting mode  |          |           | PUSCH 1-2  |
| CodeBookSubsetRestriction bitmap  |          |           | 00000000000000000000000000000000<br>00001111111111111111111100000000<br>00000000                   |
| CSI request field (Note 3)  |          |           | '10'   |
| PDSCH transmission mode   |          |           | 4  |
| Note 1: $P_B = 1$ .   |          |           |  |
| Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |          |           |  |
| Note 3: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by higher layers.   |          |           |  |
| Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.  |          |           |  |
| Note 5: The same PDSCH transmission mode is applied to each component carrier.  |          |           |  |

### 8.13.3.6.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.6.2-4 based on single carrier requirement specified in Table 8.13.3.6.2-2 and Table 8.13.3.6.2-3, with the addition of the parameters in Table 8.13.3.6.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.6.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter   |          | Unit      | Value  |
|---|----------|-----------|--|
| Downlink power allocation   | $\rho_A$ | dB        | -6   |
|   | $\rho_B$ | dB        | -6 (Note 1)  |
|   | $\sigma$ | dB        | 3  |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98  |
| Precoding granularity   |          | PRB       | Widelband pre-coding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs |

### 8.13.3.7 Closed-loop spatial multiplexing performance 4Tx Antenna Port with Four layers

#### 8.13.3.7.1 Minimum Requirement for FDD PCell

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.7.1-4 based on single carrier requirement specified in Table 8.13.3.7.1-2 and Table 8.13.3.7.1-3, with the addition of the parameters in Table 8.13.3.7.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.7.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter                        |          | Unit      | Value   |
|----------------------------------|----------|-----------|---|
| Downlink power allocation        | $\rho_A$ | dB        | -6  |
|                                  | $\rho_B$ | dB        | -6 (Note 1)   |
|                                  | $\sigma$ | dB        | 0   |
| $N_{oc}$ at antenna port         |          | dBm/15kHz | -98   |
| Cell-specific reference signals  |          |           | Antenna Ports 0,1,2,3   |
| Precoding granularity            |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs |
| PMI delay (Note 2)               | FDD CC   | ms        | 8   |
|                                  | TDD CC   | ms        | 10 or 11  |
| Reporting interval               | FDD CC   | ms        | 1   |
|                                  | TDD CC   | ms        | 1 or 4 (Note 3)   |
| Reporting mode                   |          |           | PUSCH 3-1   |
| CodeBookSubsetRestriction bitmap |          |           | 0xFFFF000000000000  |
| CSI request field (Note 3)       |          |           | '10'  |
| PDSCH transmission mode          |          |           | 4   |
| PDSCH rank                       |          |           | 4   |

|         |   |
|---------|---|
| Note 1: | $P_B = 1$ .   |
| Note 2: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |
| Note 3: | Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by higher layers.   |
| Note 4: | ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection   |
| Note 5: | The same PDSCH transmission mode is applied to each component carrier.  |

| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |        |        |  |             |

8.13.3.7.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.7.2-4 based on single carrier requirement specified in Table 8.13.3.7.2-2 and Table 8.13.3.7.2-3, with the addition of the parameters in Table 8.13.3.7.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

**Table 8.13.3.7.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter  |          | Unit      | Value   |
|--|----------|-----------|---|
| Downlink power allocation  | $\rho_A$ | dB        | -6  |
|  | $\rho_B$ | dB        | -6 (Note 1)   |
|  | $\sigma$ | dB        | 0   |
| $N_{oc}$ at antenna port   |          | dBm/15kHz | -98   |
| Cell-specific reference signals  |          |           | Antenna Ports 0,1,2,3   |
| Precoding granularity  |          | PRB       | 25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs |
| PMI delay (Note 2)   | FDD CC   | ms        | 8   |
|  | TDD CC   | ms        | 10 or 11  |
| Reporting interval   | FDD CC   | ms        | 1   |
|  | TDD CC   | ms        | 1 or 4 (Note 3)   |
| Reporting mode   |          |           | PUSCH 3-1   |
| CodeBookSubsetRestriction bitmap   |          |           | 0xFFFFF00000000000  |
| CSI request field (Note 3)   |          |           | '10'  |
| PDSCH transmission mode  |          |           | 4   |
| PDSCH rank   |          |           | 4   |
| Note 1: $P_B = 1$ .<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).<br>Note 3: Multiple CC-s under test are configured as the 1 <sup>st</sup> set of serving cells by higher layers.<br>Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection<br>Note 5: The same PDSCH transmission mode is applied to each component carrier. |          |           |   |

**Table 8.13.3.7.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)**

| Band-width | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config | Reference value                    |          |
|------------|-------------------|--------------|-----------------------|---------------------------------------|------------------------------------|----------|
|            |                   |              |                       |                                       | Fraction of maximum throughput (%) | SNR (dB) |

| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6. |        |        |  |             |

## 8.14 Demodulation (UE supporting Short TTI)

The performance requirements specified in this clause are valid for UEs capable of short TTI.

### 8.14.1 Slot-PDSCH and Subslot-PDSCH

#### 8.14.1.1 FDD (Fixed Reference Channel)

The parameters specified in Table 8.14.1.1-1 are valid for FDD unless otherwise stated.

**Table 8.14.1.1-1: Common Test Parameters**

| Parameter                           | Unit  | Value   |
|-------------------------------------|---|---|
| Cyclic prefix                       |   | Normal  |
| Cell ID                             |   | 0   |
| Number of HARQ processes            | Processes   | 8 for Slot-PDSCH<br>8 for subslot-PDSCH with proc-Timeline=set1 (Note 1)<br>12 for subslot-PDSCH with proc-Timeline=set2 (Note 1) |
| Minimum Processing Time (Note 2)    |   | $X_p=4$ (proc-Timeline=set1)<br>$X_p=6$ (proc-Timeline=set2)  |
| Maximum number of HARQ transmission |   | 4   |
| Redundancy version coding sequence  |   | {0,1,2,3}   |
| Number of OFDM symbols for PDCCH    | OFDM symbols                                      | 2   |
| Note 1:                             | As specified in TS36.211 Table 8.1-2.             |   |
| Note 2:                             | Subslot-PDSCH only. As specified in TS36.213 7.3. |   |

#### 8.14.1.1.1 Open-loop spatial multiplexing performance

The requirements are specified in Table 8.14.1.1.1-3, with the addition of the parameters in Table 8.14.1.1.1-1 and Table 8.14.1.1.1-2, and the downlink physical channel setup according to Annex C.3.2.

**Table 8.14.1.1.1-1: Test Parameters for PDSCH**

| Parameter                                |          | Unit      | Test 1                   | Test 2                   |
|--|----------|-----------|--------------------------|--------------------------|
| Unused RE-s and PRB-s                    |          |           | OCNG                     | OCNG                     |

| Transmission type                          |      | Localized      | Localized      |
| Number of OFDM symbols                     |      | 2              | 2              |
| Number of PRBs per SPDCCH-PRB set (Note 1) |      | 8              | 8              |
| Rate Matching mode                         |      | Not configured | Mode 1         |
| SPDCCH L1 Reuse Indication                 |      | {1, 1}         | Not configured |
| Aggregation level                          | SCCE | 4              | 4              |

Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 7} for Set 1, and PRB = {8, 9, ..., 15} for Set 2

**Table 8.14.1.1.2-3: Minimum performance Large Delay CDD (FRC)**

| Test num | Bandwidth and MCS | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config. | Reference value                    |          | UE category |
|----------|-------------------|-------------------|--------------|-----------------------|--|------------------------------------|----------|-------------|
|          |                   |                   |              |                       |  | Fraction of maximum Throughput (%) | SNR (dB) |             |
| 1        | 10 MHz QPSK 1/3   | R.sTTI.3 FDD      | OP.1 FDD     | EPA5                  | 2x2 Low                                | 70                                 | 7.1      | ≥2          |
| 2        | 10 MHz QPSK 1/3   | R.sTTI.4 FDD      | OP.1 FDD     | EPA5                  | 2x2 Low                                | 70                                 | 8.4      | ≥2          |

8.14.1.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.14.1.2-1 are valid for TDD unless otherwise stated.

**Table 8.14.1.2-1: Common Test Parameters**

| Parameter     | Unit | Value  |
|---------------|------|--------|
| Cyclic prefix |      | Normal |
| Cell ID       |      | 0      |

|  |              |                |
|--|--------------|----------------|
| Number of HARQ processes                             | Processes    | 8 (Slot-PDSCH) |
| Maximum number of HARQ transmission                  |              | 4              |
| Redundancy version coding sequence                   |              | {0,1,2,3}      |
| Number of OFDM symbols for PDCCH                     | OFDM symbols | 2              |
| Uplink downlink configuration (Note 1)               |              | 1              |
| Special subframe configuration (Note 2)              |              | 4              |
| ACK/NACK feedback mode                               |              | Multiplexing   |
| Note 1: as specified in Table 4.2-2 in TS 36.211 [4] |              |                |
| Note 2: as specified in Table 4.2-1 in TS 36.211 [4] |              |                |

8.14.1.2.1 Open-loop spatial multiplexing performance

The requirements are specified in Table 8.14.1.2.1-3, with the addition of the parameters in Table 8.14.1.2.1-1 and Table 8.14.1.2.1-2, and the downlink physical channel setup according to Annex C.3.2.

**Table 8.14.1.2.1-1: Test Parameters for PDSCH**

| Parameter                                |          | Unit      | Test 1                |
|--|----------|-----------|-----------------------|
| Number of PDCCH symbols                  |          | symbols   | 2                     |
| Unused RE-s and PRB-s                    |          |           | OCNG                  |
| Cell ID                                  |          |           | 0                     |
| Downlink power allocation                | $\rho_A$ | dB        | -6                    |
|  | $\rho_B$ | dB        | -6                    |
|  | $\sigma$ | dB        | 0                     |
| $N_{oc}$ at antenna port                 |          | dBm/15kHz | -98                   |
| Subframe configuration                   |          |           | Non-MBSFN             |
| Cell specific reference signal           |          |           | Antenna ports 0,1,2,3 |
| DL TTI length                            |          |           | Slot                  |
| Configured SPDCCH-PRB sets               |          |           | {Set 1, Set 2}        |
| SPDCCH-PRB set used for DCI transmission |          |           | Set 1                 |
| Used/Unused SPDCCH resource indication   |          |           | N/A                   |
| PDSCH transmission mode                  |          |           | TM3                   |
| DCI format                               |          |           | 7-1B                  |

**Table 8.14.1.2.1-2: SPDCCH-PRB set parameters**

| Parameter   | Unit | Set 1          | Set 2          |
|---|------|----------------|----------------|
| Reference signal  |      | CRS            | CRS            |
| Transmission type   |      | Localized      | Localized      |
| Number of OFDM symbols  |      | 1              | 1              |
| Number of PRBs per SPDCCH-PRB set (Note 1)  |      | 16             | 16             |
| Rate Matching mode  |      | Mode 1         | Not configured |
| SPDCCH L1 Reuse Indication  |      | Not configured | {2, 0}         |
| Aggregation level   | SCCE | 2              | 2              |
| Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1, and PRB = {35, 36, ..., 49} for Set 2 |      |                |                |

## 8.14.2 SPDCCH

The receiver characteristics of the SPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg).

### 8.14.2.1 FDD

The parameters specified in Table 8.14.2.1-1 and Table 8.14.2.1-2 are valid for all FDD tests unless otherwise stated.

**Table 8.14.2.1-1: Test Parameters for SPDCCH**

| Parameter   |          | Unit      | Test 1<br>Test 3         | Test 2<br>Test 4     |
|---|----------|-----------|--------------------------|----------------------|
| Number of PDCCH symbols   |          | symbols   | 2                        | 2                    |
| Unused RE-s and PRB-s   |          |           | OCNG                     | OCNG                 |
| Cell ID   |          |           | 0                        | 0                    |
| Downlink power<br>allocation  | $\rho_A$ | dB        | -6                       | -3                   |
|   | $\rho_B$ | dB        | -6                       | -3                   |
|   | $\sigma$ | dB        | 0                        | 0                    |
|   | $\delta$ | dB        | N/A                      | 3                    |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98                      | -98                  |
| Cyclic prefix   |          |           | Normal                   | Normal               |
| Subframe configuration  |          |           | Non-MBSFN                | Non-MBSFN            |
| Precoder update granularity   |          | SREG      | N/A                      | 2                    |
|   |          | ms        | N/A                      | 1                    |
| Beamforming precoder  |          |           | N/A                      | Annex B.4.4          |
| Cell specific reference signal  |          |           | Antenna ports<br>0,1,2,3 | Antenna ports<br>0,1 |
| Configured SPDCCH-PRB sets  |          |           | {Set 1}                  | {Set 2}              |
| SPDCCH-PRB set used for DCI<br>transmission   |          |           | Set 1                    | Set 2                |
| PDSCH transmission mode   |          |           | TM4                      | TM9                  |

| Number of OFDM symbols   |      | 1         | Note 2      |
| Number of PRBs per SPDCCH-<br>PRB set (Note 1)   |      | 16        | 16          |
| Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1 and PRB = {0, 1, 6, 7, 12, 13, 18, 19, 28, 29, 34, 35, 40, 41, 46, 47} for Set 2. |      |           |             |
| Note 2: 2 OFDM symbols for slot-based SPDCCH. 2 OFDM symbols for subslot indices 2, 3, and 4, and 3 OFDM symbols for subslot indices 1 and 5 for subslot-based SPDCCH.     |      |           |             |

## 8.14.2.1.1 Minimum requirement

For the parameters specified in Table 8.14.2.1-1 and Table 8.14.2.1-2 the average probability of a missed downlink scheduling grant (P<sub>m-dsg</sub>) shall be below the specified value in Table 8.14.2.1.1-1. The metric P<sub>m-dsg</sub> is calculated across all the slots for slot-based SPDCCH and across all the subslots for subslot-based SPDCCH. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.14.2.1.1-1: Minimum performance SPDCCH

| Test number | Bandwidth | DL TTI length | Aggregation Level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value        |          |
|-------------|-----------|---------------|-------------------|-------------------|--------------|-----------------------|--|------------------------|----------|
|             |           |               |                   |                   |              |                       |  | P <sub>m-dsg</sub> (%) | SNR (dB) |
| 1           | 10 MHz    | Slot          | 2 SCCE            | R.sTTI.10 FDD     | OP.7 FDD     | EVA30                 | 4 x 2 Low                                    | 1                      | 2.9      |
| 2           | 10 MHz    | Slot          | 8 SCCE            | R.sTTI.11 FDD     | OP.7 FDD     | EPA5                  | 2 x 2 Low                                    | 1                      | 1.3      |
| 3           | 10 MHz    | Subslot       | 2 SCCE            | R.sTTI.10 FDD     | OP.7 FDD     | EVA30                 | 4 x 2 Low                                    | 1                      | 2.3      |
| 4           | 10 MHz    | Subslot       | 8 SCCE            | R.sTTI.11 FDD     | OP.7 FDD     | EPA5                  | 2 x 2 Low                                    | 1                      | 0.9      |

## 8.14.2.2 TDD

The parameters specified in Table 8.14.2.2-1 and Table 8.14.2.2-2 are valid for all TDD tests unless otherwise stated.

Table 8.14.2.2-1: Test Parameters for SPDCCH

| Parameter   |          | Unit      | Test 1                | Test 2            |
|---|----------|-----------|-----------------------|-------------------|
| Number of PDCCH symbols   |          | symbols   | 2                     | 2                 |
| Unused RE-s and PRB-s   |          |           | OCNG                  | OCNG              |
| Cell ID   |          |           | 0                     | 0                 |
| Downlink power allocation   | $\rho_A$ | dB        | -6                    | -3                |
|   | $\rho_B$ | dB        | -6                    | -3                |
|   | $\sigma$ | dB        | 0                     | 0                 |
|   | $\delta$ | dB        | N/A                   | 3                 |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98                   | -98               |
| Cyclic prefix   |          |           | Normal                | Normal            |
| Subframe configuration  |          |           | Non-MBSFN             | Non-MBSFN         |
| Precoder update granularity   | SREG     |           | N/A                   | 2                 |
|   | ms       |           | N/A                   | 1                 |
| Beamforming precoder  |          |           | N/A                   | Annex B.4.4       |
| Cell specific reference signal  |          |           | Antenna ports 0,1,2,3 | Antenna ports 0,1 |
| Configured SPDCCH-PRB sets  |          |           | {Set 1}               | {Set 2}           |
| SPDCCH-PRB set used for DCI transmission  |          |           | Set 1                 | Set 2             |
| PDSCH transmission mode   |          |           | TM4                   | TM9               |
| DCI format  |          |           | 7-1C                  | 7-1F              |
| TDD UL/DL Configuration   |          |           | 0                     | 0                 |
| TDD Special Subframe  |          |           | 1                     | 1                 |
| Note 1: For slot-based transmission, DCI 7-1C and 7-1F are transmitted only on SPDCCH in slot 1. For subslot-based transmission, DCI 7-1C and 7-1F are transmitted on SPDCCH in all the subslots. |          |           |                       |                   |

Table 8.14.2.2-2: SPDCCH-PRB set parameters

| Parameter              | Unit | Set 1     | Set 2       |
|------------------------|------|-----------|-------------|
| Reference symbol       |      | CRS       | DMRS        |
| Transmission type      |      | Localized | Distributed |
| Number of OFDM symbols |      | 1         | Note 2      |

|  |  |    |    |
|--|--|----|----|
| Number of PRBs per SPDCCH-PRB set (Note 1) |  | 16 | 16 |
| Note 1:                                    | The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1 and PRB = {0, 1, 6, 7, 12, 13, 18, 19, 28, 29, 34, 35, 40, 41, 46, 47} for Set 2. |    |    |
| Note 2:                                    | 2 OFDM symbols for slot-based SPDCCH. 2 OFDM symbols for subslot indices 2, 3, and 4, and 3 OFDM symbols for subslot indices 1 and 5 for subslot-based SPDCCH.     |    |    |

#### 8.14.2.2.1 Minimum requirement

For the parameters specified in Table 8.14.2.2-1 and Table 8.14.2.2-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.14.2.2.1-1. The metric Pm-dsg is calculated across all the slots. The downlink physical setup is in accordance with Annex C.3.2.

**Table 8.14.2.2.1-1: Minimum performance SPDCCH**

| Test number | Bandwidth | DL TTI length | Aggregation Level | Reference Channel | OCNG Pattern | Propagation Condition | Antenna configuration and correlation Matrix | Reference value |          |
|-------------|-----------|---------------|-------------------|-------------------|--------------|-----------------------|--|-----------------|----------|
|             |           |               |                   |                   |              |                       |  | Pm-dsg (%)      | SNR (dB) |
| 1           | 10 MHz    | Slot          | 2 SCCE            | R.sTTI.10 TDD     | OP.7 TDD     | EVA30                 | 4 x 2 Low                                    | 1               | 2.7      |
| 2           | 10 MHz    | Slot          | 8 SCCE            | R.sTTI.11 TDD     | OP.7 TDD     | EPA5                  | 2 x 2 Low                                    | 1               | 1.2      |

## 8.15 Demodulation (8 receiver antenna ports)

### 8.15.1 PDSCH

#### 8.15.1.1 Void

#### 8.15.1.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.15.1.2-1 are valid for all TDD tests unless otherwise stated.

**Table 8.15.1.2-1: Common Test Parameters (TDD)**

| Parameter                                      | Unit         | Value  |
|--|--------------|--|
| Uplink downlink configuration (Note 1)         |              | 1  |
| Special subframe configuration (Note 2)        |              | 4  |
| Cyclic prefix                                  |              | Normal   |
| Cell ID  |              | 0  |
| Inter-TTI Distance                             |              | 1  |
| Number of HARQ processes per component carrier | Processes    | 7  |
| Maximum number of HARQ transmission            |              | 4  |
| Redundancy version coding sequence             |              | {0,1,2,3} for QPSK and 16QAM<br>{0,0,1,2} for 64QAM and 256QAM   |
| Number of OFDM symbols for PDCCH               | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths,<br>2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated |

|                             |   |  |
|-----------------------------|---|--|
| Cross carrier scheduling    |   | Not configured   |
| Precoder update granularity |   | Frequency domain: 1 PRG for Transmission modes 9 and 10 unless stated otherwise<br>Time domain: 1 ms |
| ACK/NACK feedback mode      |   | Multiplexing   |
| Note 1:                     | as specified in Table 4.2-2 in TS 36.211 [4]. |  |
| Note 2:                     | as specified in Table 4.2-1 in TS 36.211 [4]. |  |

### 8.15.1.2.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.15.1.2.1-2, with the addition of the parameters in Table 8.15.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

**Table 8.15.1.2.1-1: Test Parameters for Transmit diversity Performance (FRC) with 8Rx Antenna Ports**

| Parameter                 | Unit     | Test 1    |
|---------------------------|----------|-----------|
| Downlink power allocation | $\rho_A$ | dB        |
|                           | $\rho_B$ | dB        |
|                           | $\sigma$ | dB        |
| $N_{oc}$ at antenna port  |          | dBm/15kHz |
| PDSCH transmission mode   |          | 2         |
| Note 1: $P_B = 1$         |          |           |

**Table 8.15.1.2.1-2: Minimum performance Transmit Diversity (FRC) with 8Rx Antenna Ports**

| Test number | Bandwidth and MCS   | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |
|-------------|---------------------|-------------------|--------------|-----------------------|--|------------------------------------|----------|-------------|
|             |                     |                   |              |                       |  | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 10 MHz<br>16QAM 1/2 | R.11 TDD          | OP.1 TDD     | EVA5                  | 2x8 Medium correlation B, ULA                | 70                                 | 1.4      | $\geq 2$    |

### 8.15.1.2.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.15.1.2.2-2, with the addition of the parameters in Table 8.15.1.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.15.1.2.2-1: Test Parameters for Large Delay CDD (FRC) with 8Rx Antenna Ports**

| Parameter                 | Unit     | Test 1    |
|---------------------------|----------|-----------|
| Downlink power allocation | $\rho_A$ | dB        |
|                           | $\rho_B$ | dB        |
|                           | $\sigma$ | dB        |
| $N_{oc}$ at antenna port  |          | dBm/15kHz |
| ACK/NACK feedback mode    |          | Bundling  |
| PDSCH transmission mode   |          | 3         |
| Note 1: $P_B = 1$         |          |           |

Table 8.15.1.2.2-2: Minimum performance Large Delay CDD (FRC) with 8Rx Antenna Ports

| Test number | Bandwidth and MCS   | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value                    |          | UE Category |
|-------------|---------------------|-------------------|--------------|-----------------------|--|------------------------------------|----------|-------------|
|             |                     |                   |              |                       |  | Fraction of Maximum Throughput (%) | SNR (dB) |             |
| 1           | 10 MHz<br>16QAM 1/2 | R.11-1<br>TDD     | OP.1<br>TDD  | EVA70                 | 2x8 Low                                      | 70                                 | 4.1      | ≥2          |

## 8.15.1.2.3 8 Layer Spatial Multiplexing (User-Specific Reference Symbols)

The requirements are specified in Table 8.15.1.2.3-2, with the addition of the parameters in Table 8.15.1.2.3-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.15.1.2.3-1: Minimum performance for 8 Layer Spatial Multiplexing (User-Specific Reference Symbols)

| Parameter   | Unit               | Test 1                                     |            |
|---|--------------------|--|------------|
| Downlink power allocation   | $\rho_A$           | dB   | 0          |
|   | $\rho_B$           | dB   | 0 (Note 1) |
|   | $\sigma$           | dB   | -3         |
| Beamforming model   |                    | 8 layer precoding based on WB PMI feedback |            |
| Cell-specific reference signals   |                    | Antenna ports 0,1                          |            |
| CSI reference signals   |                    | Antenna ports 15,...,22                    |            |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$  | Subframes          | 5 / 4                                      |            |
| CSI reference signal configuration  |                    | 3  |            |
| Zero-power CSI-RS configuration<br>$l_{\text{CSI-RS}} /$<br>ZeroPowerCSI-RS bitmap  | Subframes / bitmap | 4 /<br>0010000000000000                    |            |

### 8.15.2.2.1 Eight Layer Spatial Multiplexing (User-Specific Reference Symbols)

#### 8.15.2.2.1.1 Minimum Requirement Eight-Layer Spatial Multiplexing 8 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-eight performance with frequency selective precoding with 8Tx and 8Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.15.2.2.1.1-3, based on single carrier requirement specified in Table 8.15.2.2.1.1-2, with the addition of the parameters in Table 8.15.2.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

**Table 8.15.2.2.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA**

| Parameter  |          | Unit                  | Test 1                                  |
|--|----------|-----------------------|---|
| ownlink power allocation   | $\rho_A$ | dB                    | 0                                       |
|  | $\rho_B$ | dB                    | 0 (Note 1)                              |
|  | $\sigma$ | dB                    | -3                                      |
| Cell-specific reference signals  |          |                       | Antenna ports 0,1                       |

## 9 Reporting of Channel State Information

### 9.1 General

This section includes requirements for the reporting of channel state information (CSI). For all test cases in this section, the definition of SNR and SINR are in accordance with the one given in clause 8.1.1.

For the performance requirements specified in this clause, it is assumed that  $N_{RX}=2$  unless otherwise stated.

Unless otherwise stated, 4-bit CQI Table in Table 7.2.3-1 in TS 36.213 [6], and Modulation and TBS index table in Table 7.1.7.1-1 for PDSCH in TS 36.213 [6] are applied in all the CSI requirements.

#### 9.1.1 Applicability of requirements

##### 9.1.1.1 Applicability of requirements for different channel bandwidths

In Clause 9 the test cases may be defined with different channel bandwidth to verify the same CSI requirement.

Test cases defined for 5MHz channel bandwidth that reference this clause are applicable to UEs that support only Band 31, 72, 73, 87 and/or 88.

##### 9.1.1.2 Applicability and test rules for different CA configurations and bandwidth combination sets

The performance requirement for CA CQI tests in Clause 9 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL CCs in Table 9.1.1.2-1 and 3 or more DL CCs in Table 9.1.1.2-2. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

**Table 9.1.1.2-1: Applicability and test rules for CA UE CQI tests with 2 DL CCs**

| Tests                                | CA capability where the tests apply                                    | CA configuration from the selected CA capability where the tests apply                          | CA Bandwidth combination to be tested in priority order |
|--------------------------------------|--|---|---|
| CA tests with 2CCs in Clause 9.6.1.1 | Any of one of the supported CA capabilities                            | Any one of the supported FDD CA configurations  | 10+10 MHz, 20+20 MHz, 5+5 MHz, 10MHz+5MHz, 15MHz+5MHz   |
| CA tests with 2CCs in Clause 9.6.1.2 | Any of one of the supported CA capabilities with largest aggregated CA | Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |

|         |   |  |  |
|---------|---|--|--|
|         | bandwidth combination   |  |  |
| Note 1: | The applicability and test rules are specified in this table, unless otherwise stated.                |  |  |
| Note 2: | Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. |  |  |
| Note 3: | A single Uplink CC is configured for all tests  |  |  |

**Table 9.1.1.2-2: Applicability and test rules for CA UE CQI tests with 3 or more DL CCs**

| Tests   | CA capability where the tests apply   | CA configuration from the selected CA capability where the tests apply                          | CA Bandwidth combination to be tested in priority order |
|---|---|---|---|
| CA tests with 3 or more CCs in Clause 9.6.1.1 | Any of one of the supported CA capabilities with largest aggregated CA bandwidth combination          | Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| CA tests with 3 or more CCs in Clause 9.6.1.2 | Any of one of the supported CA capabilities with largest aggregated CA bandwidth combination          | Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| Note 1:                                       | The applicability and test rules are specified in this table, unless otherwise stated.                |   |   |
| Note 2:                                       | Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. |   |   |
| Note 3:                                       | A single Uplink CC is configured for all tests  |   |   |

### 9.1.1.2A Applicability and test rules for different TDD-FDD CA configurations and bandwidth combination sets

The performance requirement for TDD-FDD CA CQI tests in Clause 9 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL TDD-FDD CA in Table 9.1.1.2A-1 and for 3 or more DL TDD-FDD CA in Table 9.1.1.2A-2. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

**Table 9.1.1.2A-1: Applicability and test rules for CA UE CQI tests for TDD-FDD CA with 2 DL CCs**

| Tests                                | CA capability where the tests apply   | CA configuration from the selected CA capability where the tests apply   | CA Bandwidth combination to be tested in priority order |
|--------------------------------------|---|--|---|
| CA tests with 2CCs in Clause 9.6.1.3 | Any of one of the supported CA capabilities   | Any one of the supported TDD-FDD CA configurations with FDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| CA tests with 2CCs in Clause 9.6.1.4 | Any of one of the supported CA capabilities   | Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| Note 1:                              | The applicability and test rules are specified in this table, unless otherwise stated.                |  |   |
| Note 2:                              | Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. |  |   |
| Note 3:                              | A single Uplink CC is configured for all tests  |  |   |

**Table 9.1.1.2A-2: Applicability and test rules for CA UE CQI tests for TDD-FDD CA with 3 or more DL CCs**

| Tests                                | CA capability where the tests apply   | CA configuration from the selected CA capability where the tests apply   | CA Bandwidth combination to be tested in priority order |
|--------------------------------------|---|--|---|
| CA tests with 3CCs in Clause 9.6.1.3 | Any of one of the supported CA capabilities   | Any one of the supported TDD-FDD CA configurations with FDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| CA tests with 3CCs in Clause 9.6.1.4 | Any of one of the supported CA capabilities   | Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |
| Note 1:                              | The applicability and test rules are specified in this table, unless otherwise stated.                |  |   |
| Note 2:                              | Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. |  |   |
| Note 3:                              | A single Uplink CC is configured for all tests  |  |   |

### 9.1.1.3 Test coverage for different number of component carriers

For FDD CA tests specified in 9.6.1.1, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD CA tests specified in 9.6.1.2, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD FDD CA tests specified in 9.6.1.3 and 9.6.1.4, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the TDD FDD CA tests with less than the largest number of CCs supported by the UE.

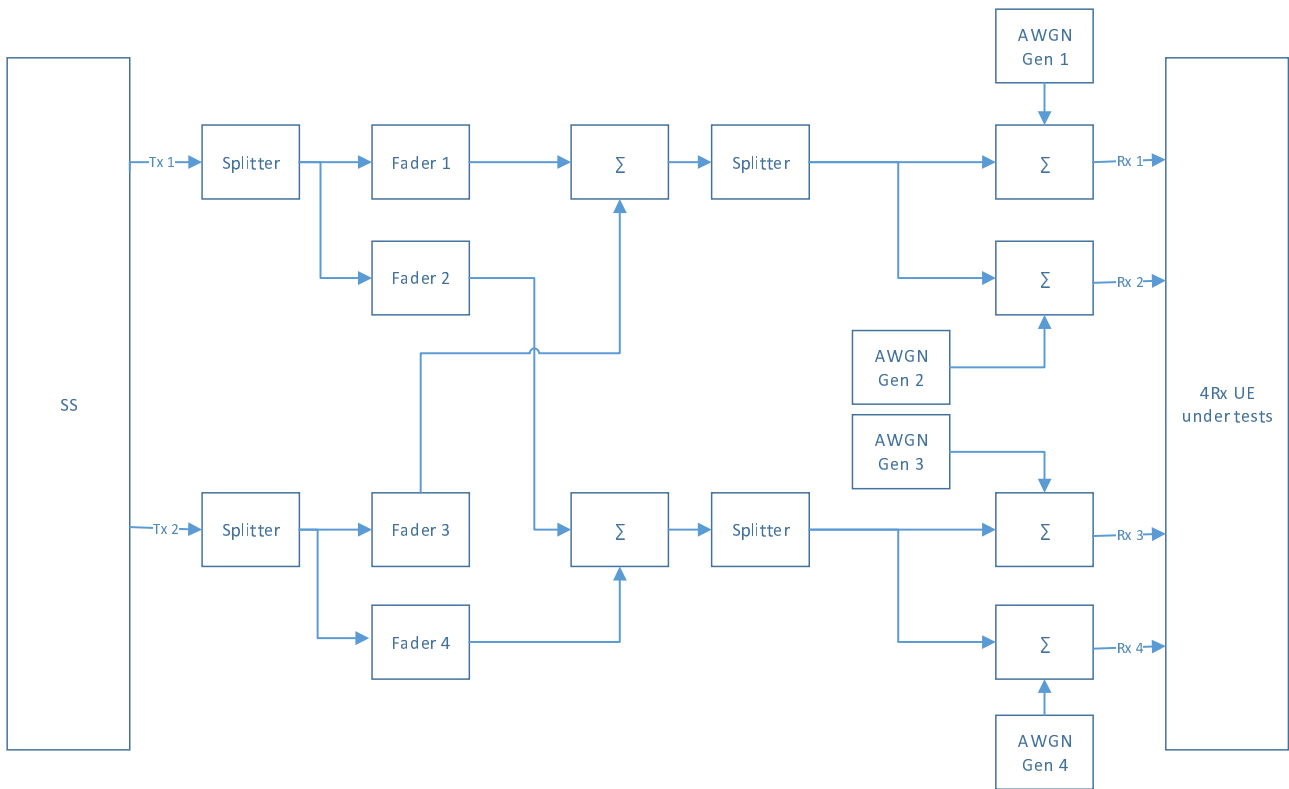

### 9.1.1.4 Applicability of performance requirements for 4Rx capable UEs

#### 9.1.1.4.1 Applicability rule and antenna connection for single carrier tests with 2Rx

For 4Rx capable UEs all single carrier tests specified in 9.2 to 9.5 with 2Rx are tested on any of the 2Rx supported RF bands by connecting 2 out of the 4Rx with data source from system simulator, and the other 2 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with 2Rx should be applied.

For 4Rx capable UEs without any 2Rx supported RF bands, all single carrier tests specified in 9.2 to 9.5 with 2Rx are tested on any of the 4Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna where applicable. Figure 9.1.1.4.1-1 shows an example of antenna connection for 4Rx UE in any one 4Rx supported RF band to perform a 2Rx performance test with antenna configuration as 2x2 without interference for information. The SNR requirements should be applied with 3 dB less than the number specified with 2Rx, unless there is no SNR requirements specified.

For 4Rx capable UEs without any 2Rx supported RF bands, all single carrier tests specified in 9.3.3 with 2Rx are tested on any of the 4Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent interference for each Rx antenna.

**Figure 9.1.1.4.1-1 Antenna connection example for 2Rx tests with antenna configuration as 2x2 without interference (informative)**

For 4Rx capable UEs without any 2Rx supported RF bands, for all single carrier tests listed in Table 9.1.1.4.1-1 specified from 9.2 to 9.5 with 2Rx can be skipped.

**Table 9.1.1.4.1-1 Requirement lists for 4Rx capable UEs**

| Requirement lists  |
|--|
| Enhanced performance requirements type B   |
| Requirements with demodulation subframe overlaps with aggressor cell ABS   |
| Requirements with demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured |

For 4Rx capable UEs, if corresponding tests listed from the 4Rx test lists from Table 9.1.1.4.1-2 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from the 2Rx test lists from Table 9.1.1.4.1-2.

**Table 9.1.1.4.1-2: Applicability rules for single carrier tests with 2Rx**

| 4Rx test lists   | 2Rx test lists   |

#### 9.1.1.4.2 Applicability rule and antenna connection for CA tests with 2Rx

All tests specified in 9.6 with 2Rx with CA and TDD-FDD CA are tested with 4 Rx capable UEs by connecting all 4Rx with data source from system simulator with the following change on the power level in the test configurations listed in Table 9.1.1.4.2-1 and by scheduling the PDSCH for user data based on the Reference measurement channel RC.1 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1 for FDD cells and Reference measurement channel RC.1 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1 for TDD cells.

**Table 9.1.1.4.2-1: Power level for 4Rx capable UE to verify CA tests with 2Rx**

| Number of CCs |                        | $\hat{I}_{or}^{(j)}$<br>dB[mW/15kHz] |
|---------------|------------------------|--------------------------------------|
| 2             | PCell                  | -88                                  |
|               | SCell                  | -95                                  |
| 3,4           | PCell                  | -85                                  |
|               | SCell1                 | -92                                  |
|               | SCell2, SCell3         | -99                                  |
| 5             | PCell                  | -85                                  |
|               | SCell1                 | -92                                  |
|               | SCell2, SCell3, SCell4 | -99                                  |

Within the CA configuration if any of the PCell and/or the SCells is a 2Rx supported RF band, keep the same power level listed in Table 9.1.1.4.2-1. Within the CA configuration if any of the PCell and/or the SCells is a 4Rx supported RF band, configure the power level 3 dB smaller than the number listed in Table 9.1.1.4.2-1. Same requirements specified with 2Rx should be applied.

Same applicability rules defined in 9.1.1.2, 9.1.1.2A for CA and TDD-FDD CA applied for different CA configurations and bandwidth combination sets should be applied for 4 Rx capable UEs.

#### 9.1.1.4.3 Applicability rule and antenna connection for single carrier tests with 4Rx

For 4Rx capable UEs all single carrier tests specified in 9.9 with 4Rx are tested on any of the 4 Rx supported RF bands by connecting all 4Rx with data source from system simulator.

#### 9.1.1.5 Applicability of requirements for UEs supporting coverage enhancement

For 2Rx capable UEs supporting coverage enhancement mode A (ce-ModeA in UE-EUTRA-Capability [7]), all the tests for CE Mode A specified in 9.8.1 and 9.8.2 are tested on any of the 2Rx supported RF bands by connecting all 2Rx with data source from system simulator. The SNR requirements should be applied with 3dB less than the number specified with UE DL Category M1.

For 4Rx capable UEs supporting coverage enhancement mode A (ce-ModeA in UE-EUTRA-Capability [7]), all the tests for CE Mode A specified in 9.8.1 and 9.8.2 are tested on any of the 4Rx supported RF bands by connecting all 4Rx with data source from system simulator. The SNR requirements should be applied with 6dB less than the number specified with UE DL Category M1.

## 9.2 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

### 9.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbols)

#### 9.2.1.1 FDD

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.1.1-1 and Table 9.2.1.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 FDD / RC.14 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

The applicability of the requirement with 5MHz bandwidth as specified in Table 9.2.1.1-2 is defined in 9.1.1.1.

**Table 9.2.1.1-1: PUCCH 1-0 static test (FDD)**

| Parameter  |          | Unit         | Test 1         |     | Test 2 |     |
|--|----------|--------------|----------------|-----|--------|-----|
| Bandwidth  |          | MHz          | 10             |     |        |     |
| PDSCH transmission mode  |          |              | 1              |     |        |     |
| Downlink power allocation  | $\rho_A$ | dB           | 0              |     |        |     |
|  | $\rho_B$ | dB           | 0              |     |        |     |
|  | $\sigma$ | dB           | 0              |     |        |     |
| Propagation condition and antenna configuration  |          |              | AWGN (1 x 2)   |     |        |     |
| SNR (Note 2)   |          | dB           | 0              | 1   | 6      | 7   |
| $\hat{I}_{or}^{(j)}$   |          | dB[mW/15kHz] | -98            | -97 | -92    | -91 |
| $N_{oc}^{(j)}$   |          | dB[mW/15kHz] | -98            |     | -98    |     |

| PUCCH Report Type                               |   | 4              |     |     |     |
| Reporting periodicity                           | ms  | $N_{pd} = 5$   |     |     |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |   | 6              |     |     |     |
| Note 1:   | Reference measurement channel RC.14 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1, except for category 1 UE use RC.15 FDD with two sided dynamic OCNG Pattern OP.2 FDD as described in Annex A.5.1.2. |                |     |     |     |
| Note 2:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                |     |     |     |

### 9.2.1.2 TDD

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.1.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.2.1.2-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       |              | Unit           | Test 1       |     | Test 2 |  |
|---|--------------|----------------|--------------|-----|--------|--|
| Bandwidth                                       |              | MHz            | 10           |     |        |  |

| Special subframe configuration                  |              |                | 4            |     |        |  |
| Downlink power allocation                       | $\rho_A$     | dB             | 0            |     |        |  |
|   | $\rho_B$     | dB             | 0            |     |        |  |
|   | $\sigma$     | dB             | 0            |     |        |  |
| Propagation condition and antenna configuration |              |                | AWGN (1 x 2) |     |        |  |
| SNR (Note 2)                                    | dB           | 0              | 1            | 6   | 7      |  |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -98            | -97          | -92 | -91    |  |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz] | -98            |              | -98 |        |  |
| Max number of HARQ transmissions                |              | 1              |              |     |        |  |
| Physical channel for CQI reporting              |              | PUSCH (Note 3) |              |     |        |  |
| PUCCH Report Type                               |              | 4              |              |     |        |  |
| Reporting periodicity                           | ms           | $N_{pd} = 5$   |              |     |        |  |
| <i>cqi-pmi-ConfigurationIndex</i>               |              | 3              |              |     |        |  |
| ACK/NACK feedback mode                          |              | Multiplexing   |              |     |        |  |

|         |  |
|---------|--|
| Note 1: | Reference measurement channel RC.1 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1, except for category 1 UE use RC.4 TDD with two sided dynamic OCNG Pattern OP.2 TDD as described in Annex A.5.2.2.                |
| Note 2: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |
| Note 3: | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |

9.2.1.3 FDD (CSI measurements in case two CSI subframe sets are configured)

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.1.3-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-1 for Cell 2 and C.3.2-2, the reported CQI value according to RC.2 FDD / RC.6 FDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1. The value of the median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  minus the median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  shall be larger than or equal to 2 and less than or equal to 5 in Test 1 and shall be larger than or equal to 0 and less than or equal to 1 in Test 2.

Cell 2 is the aggressor cell. The number of the CRS ports in Cell1 and Cell2 is the same.</p> <p>Note 7: This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.</p> <p>Note 8: This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.</p> <p>Note 9: This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.</p> <p>Note 10: Downlink physical channel setup in Cell 2 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.1.5</p> <p>Note 11: Reference measurement channel in Cell 1 RC.2 FDD according to Table A.4-1 for UE Category 2-8 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1, and RC.6 FDD according to Table A.4-1 for Category 1 with one/two sided dynamic OCNG Pattern OP. 1/2 FDD as described in Annex A.5.1.1 and A.5.1.2.</p> <p>Note 12: To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.</p> <p>Note 13: <i>cqi-pmi-ConfigurationIndex</i> is applied for C<sub>CSI,0</sub>.</p> <p>Note 14: <i>cqi-pmi-ConfigurationIndex2</i> is applied for C<sub>CSI,1</sub>.</p> |                    |    |  |     |  |     |

9.2.1.4 TDD (CSI measurements in case two CSI subframe sets are configured)

The following requirements apply to UE Category ≥1. For the parameters specified in Table 9.2.1.4-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C3.3-1 for Cell 2 and C.3.2-2, the reported CQI value according to RC.2 TDD / RC.6 TDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ±1 of the reported median more than 90% of the time. If the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets C<sub>CSI,1</sub> is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1. The value of the median CQI obtained by reports in CSI subframe sets C<sub>CSI,0</sub> minus the median CQI obtained by reports in CSI subframe sets C<sub>CSI,1</sub> shall be larger than or equal to 2 and less than or equal to 5 in Test 1 and shall be larger than or equal to 0 and less than or equal to 1 in Test 2.

Table 9.2.1.4-1: PUCCH 1-0 static test (TDD)

| Parameter               | Unit | Test 1 |         | Test 2 |         |
|-------------------------|------|--------|---------|--------|---------|
|                         |      | Cell 1 | Cell 2  | Cell 1 | Cell 2  |
| Bandwidth               | MHz  | 10     |         | 10     |         |
| PDSCH transmission mode |      | 2      | Note 10 | 2      | Note 10 |

|   |                 |              |                          |     |                          |                          |     |                          |
|---|-----------------|--------------|--------------------------|-----|--------------------------|--------------------------|-----|--------------------------|

| Note 2:  | ABS pattern as defined in [9].  |
| Note 3:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]   |
| Note 4:  | As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].  |
| Note 5:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]   |
| Note 6:  | Cell 1 is the serving cell. Cell 2 is the aggressor cell. The number of the CRS ports in Cell1 and Cell2 is the same.   |
| Note 7:  | This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.  |
| Note 8:  | This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS  |
| Note 9:  | This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.   |
| Note 10: | Downlink physical channel setup in Cell 2 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.2.5  |
| Note 11: | Reference measurement channel in Cell 1 RC.2 TDD according to Table A.4-1 for UE Category ≥2 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1, and RC.6 TDD according to Table A.4-1 for Category 1 with one/two sided dynamic OCNG Pattern OP.1/2 TDD as described in Annex A.5.2.1 and Annex A.5.2.2. |
| Note 12: | To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.   |
| Note 13: | <i>cqi-pmi-ConfigurationIndex</i> is applied for $C_{CSI,0}$ .  |
| Note 14: | <i>cqi-pmi-ConfigurationIndex2</i> is applied for $C_{CSI,1}$ .   |

### 9.2.1.5 FDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

The following requirements apply to UE Category ≥2. For the parameters specified in Table 9.2.1.5-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-2 for Cell 2 and Cell 3, and C.3.2-2, the reported CQI value according to RC.2 FDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ±1 of the reported median more than 90% of the time.

For test 1 and test 2, if the PDSCH BLER in ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  is less than or equal to 0.1, the BLER in ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

For test 2, if the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 2) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.2.1.5-1: PUCCH 1-0 static test (FDD)**

| Parameter                                       | Unit            | Test 1           |              |                          | Test 2           |              |                          |
|---|-----------------|------------------|--------------|--------------------------|------------------|--------------|--------------------------|
|   |                 | Cell 1           | Cell 2 and 3 |                          | Cell 1           | Cell 2 and 3 |                          |
| Bandwidth                                       | MHz             | 10               |              |                          | 10               |              |                          |

- Note 1: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
- Note 2: ABS pattern as defined in [9].
- Note 3: Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
- Note 4: As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7]
- Note 5: Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
- Note 6: Cell 1 is the serving cell. Cell 2 and Cell 3 are the aggressor cells. The number of the CRS ports in Cell1, Cell2, and Cell3 are the same.
- Note 7: This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.
- Note 8: This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.
- Note 9: This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.
- Note 10: Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.1.5
- Note 11: Reference measurement channel in Cell 1 RC.2 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.
- Note 12: To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.
- Note 13:  $cqi-pmi-ConfigurationIndex$  is applied for  $C_{CSI,0}$ .
- Note 14:  $cqi-pmi-ConfigurationIndex2$  is applied for  $C_{CSI,1}$ .

### 9.2.1.6 TDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in Table 9.2.1.6-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-2 for Cell 2 and Cell 3, and C.3.2-2, the reported CQI value according to RC.2 TDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of  $\pm 1$  of the reported median more than 90% of the time.

For test 1 and test 2, if the PDSCH BLER in ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  is less than or equal to 0.1, the BLER in ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

For test 2, if the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 2) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.2.1.6-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       | Unit            | Test 1                           |              |                          | Test 2                           |                          |                          |

| Note 1:  | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                     |     |                     |     |
| Note 2:  | ABS pattern as defined in [9].  |                     |     |                     |     |
| Note 3:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]   |                     |     |                     |     |
| Note 4:  | As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].  |                     |     |                     |     |
| Note 5:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]   |                     |     |                     |     |
| Note 6:  | Cell 1 is the serving cell. Cell 2 and Cell 3 are the aggressor cells. The number of the CRS ports in Cell1, Cell2, and Cell3 is the same.  |                     |     |                     |     |
| Note 7:  | This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.  |                     |     |                     |     |
| Note 8:  | This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS  |                     |     |                     |     |
| Note 9:  | This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.   |                     |     |                     |     |
| Note 10:   | Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.2.5   |                     |     |                     |     |
| Note 11:   | Reference measurement channel in Cell 1 RC.2 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |                     |     |                     |     |
| Note 12:   | To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3. |                     |     |                     |     |
| Note 13:   | <i>cqi-pmi-ConfigurationIndex</i> is applied for C <sub>CSI,0</sub> .   |                     |     |                     |     |
| Note 14:   | <i>cqi-pmi-ConfigurationIndex2</i> is applied for C <sub>CSI,1</sub> .  |                     |     |                     |     |

9.2.1.7 FDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

The following requirements apply to UE Category 11-12 and DL Category ≥11. For the parameters specified in Table 9.2.1.7-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1A FDD in Table A.4-1 shall be in the range of ±1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1, or the BLER using the transport format indicated by the (median CQI + 1) shall be less than or equal to 0.1 when the highest MCS value of the test case has reached. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

Table 9.2.1.7-1: PUCCH 1-0 static test (FDD)

| Parameter                                       | Unit         | Test 1       |     | Test 2 |     |
|---|--------------|--------------|-----|--------|-----|
| Bandwidth                                       | MHz          | 10           |     |        |     |
| PDSCH transmission mode                         |              | 1            |     |        |     |

| Note 1:                            | Reference measurement channel RC.1A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1. |                |
| Note 2:                            | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |                |

### 9.2.1.8 TDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

The following requirements apply to UE Category 11-12 and UE DL Category  $\geq 11$ . For the parameters specified in Table 9.2.1.8-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1A TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1, or the BLER using the transport format indicated by the (median CQI + 1) shall be less than or equal to 0.1 when the highest MCS value of the test case has reached. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

**Table 9.2.1.8-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       |  | Unit         | Test 1         |     | Test 2 |     |
|---|--|--------------|----------------|-----|--------|-----|
| Bandwidth                                       |  | MHz          | 20             |     |        |     |
| PDSCH transmission mode                         |  |              | 1              |     |        |     |
| Uplink downlink configuration                   |  |              | 2              |     |        |     |
| Special subframe configuration                  |  |              | 4              |     |        |     |
| Downlink power allocation                       | $\rho_A$   | dB           | 0              |     |        |     |
|   | $\rho_B$   | dB           | 0              |     |        |     |
|   | $\sigma$   | dB           | 0              |     |        |     |
| Propagation condition and antenna configuration |  |              | AWGN (1 x 2)   |     |        |     |
| SNR (Note 2)                                    |  | dB           | -1             | 0   | 20     | 21  |
| $\hat{I}_{or}^{(j)}$                            |  | dB[mW/15kHz] | -99            | -98 | -78    | -77 |
| $N_{oc}^{(j)}$                                  |  | dB[mW/15kHz] | -98            |     | -98    |     |
| Max number of HARQ transmissions                |  |              | 1              |     |        |     |
| Physical channel for CQI reporting              |  |              | PUSCH (Note 3) |     |        |     |
| PUCCH Report Type                               |  |              | 4              |     |        |     |
| Reporting periodicity                           |  | ms           | $N_{pd} = 5$   |     |        |     |

| ACK/NACK feedback mode                          |  |              | Multiplexing   |     |        |     |
| Note 1:   | Reference measurement channel RC.1A TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |              |                |     |        |     |
| Note 2:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |              |                |     |        |     |
| Note 3:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |              |                |     |        |     |

### 9.2.1.9 FDD (Modulation and TBS index Table 3 and 4-bit CQI Table 4 are used)

The following requirements apply to UE DL Category 20 and DL Category  $\geq 22$ . For the parameters specified in Table 9.2.1.9-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.X FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 4 in Table 7.2.3-4 in TS 36.213 [6], and Modulation and TBS index table 3 in Table 7.1.7.1-1B for PDSCH in TS 36.213 [6] are applied.

**Table 9.2.1.9-1: PUCCH 1-0 static test (FDD)**

| Parameter                                       | Unit   | Test 1         |     |
|---|--|----------------|-----|
| Bandwidth                                       | MHz  | 10             |     |
| PDSCH transmission mode                         |  | 1              |     |
| Downlink power allocation                       | $\rho_A$   | dB             | 0   |
|   | $\rho_B$   | dB             | 0   |
|   | $\sigma$   | dB             | 0   |
| Propagation condition and antenna configuration |  | AWGN (1 x 2)   |     |
| SNR (Note 2)                                    | dB   | 28             | 29  |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz]   | -70            | -69 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]   | -98            |     |
| Max number of HARQ transmissions                |  | 1              |     |
| Physical channel for CQI reporting              |  | PUCCH Format 2 |     |
| PUCCH Report Type                               |  | 4              |     |
| Reporting periodicity                           | ms   | $N_{pd} = 5$   |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |  | 6              |     |
| Note 1:   | Reference measurement channel RC.30 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1. |                |     |
| Note 2:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |                |     |

### 9.2.1.10 TDD (Modulation and TBS index Table 3 and 4-bit CQI Table 4 are used)

The following requirements apply to UE DL Category 20 and DL Category  $\geq 22$ . For the parameters specified in Table 9.2.1.10-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.X TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 3 in Table 7.2.3-4 in TS 36.213 [6], and Modulation and TBS index table 3 in Table 7.1.7.1-1B for PDSCH in TS 36.213 [6] are applied.

**Table 9.2.1.10-1: PUCCH 1-0 static test (TDD)**

| Parameter                      | Unit     | Test 1 |   |
|--------------------------------|----------|--------|---|
| Bandwidth                      | MHz      | 20     |   |

| <i>cqi-pmi-ConfigurationIndex</i>  |          |              | 3              |     |
| ACK/NACK feedback mode   |          |              | Multiplexing   |     |
| <p>Note 1: Reference measurement channel RC.30 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.</p> <p>Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.</p> <p>Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.</p> |          |              |                |     |

## 9.2.2 Minimum requirement PUCCH 1-1 (Cell-Specific Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

### 9.2.2.1 FDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.2.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> - 1, median CQI<sub>1</sub>, median CQI<sub>1</sub> + 1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

**Table 9.2.2.1-1: PUCCH 1-1 static test (FDD)**

| Parameter                                       | Unit     | Test 1             | Test 2 |
|---|----------|--------------------|--------|
| Bandwidth                                       | MHz      | 10                 |        |
| PDSCH transmission mode                         |          | 4                  |        |
| Downlink power allocation                       | $\rho_A$ | dB                 | -3     |
|   | $\rho_B$ | dB                 | -3     |
|   | $\sigma$ | dB                 | 0      |
| Propagation condition and antenna configuration |          | Clause B.1 (2 x 2) |        |

| PUCCH Report Type for RI                  |   | 3              |     |     |     |
| Reporting periodicity                     | ms  | $N_{pd} = 5$   |     |     |     |
| <i>cqi-pmi-ConfigurationIndex</i>         |   | 6              |     |     |     |
| <i>ri-ConfigIndex</i>                     |   | 1 (Note 3)     |     |     |     |
| Note 1:                                   | Reference measurement channel RC.2 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1. |                |     |     |     |
| Note 2:                                   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level. |                |     |     |     |
| Note 3:                                   | It is intended to have UL collisions between RI reports and HARQ-ACK, since the RI reports shall not be used by the eNB in this test.       |                |     |     |     |

### 9.2.2.2 TDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.2.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set  $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$  for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

**Table 9.2.2.2-1: PUCCH 1-1 static test (TDD)**

| Parameter  | Unit         | Test 1             |     | Test 2 |     |
|--|--------------|--------------------|-----|--------|-----|
| Bandwidth  | MHz          | 10                 |     |        |     |
| PDSCH transmission mode                            |              | 4                  |     |        |     |
| Uplink downlink configuration                      |              | 2                  |     |        |     |
| Special subframe<br>configuration                  |              | 4                  |     |        |     |
| Downlink power<br>allocation                       | $\rho_A$     | dB                 | -3  |        |     |
|  | $\rho_B$     | dB                 | -3  |        |     |
|  | $\sigma$     | dB                 | 0   |        |     |
| Propagation condition and<br>antenna configuration |              | Clause B.1 (2 x 2) |     |        |     |

| SNR (Note 2)                                       | dB           | 10                 | 11  | 16     | 17  |
| $\hat{I}_{or}^{(j)}$                               | dB[mW/15kHz] | -88                | -87 | -82    | -81 |
| $N_{oc}^{(j)}$                                     | dB[mW/15kHz] | -98                |     | -98    |     |
| Max number of HARQ<br>transmissions                |              | 1                  |     |        |     |

|  |  |                |
|--|--|----------------|
| Physical channel for CQI/PMI reporting |  | PUSCH (Note 3) |
| PUCCH Report Type                      |  | 2              |
| Reporting periodicity                  | ms   | $N_{pd} = 5$   |
| <i>cqi-pmi-ConfigurationIndex</i>      |  | 3              |
| <i>ri-ConfigIndex</i>                  |  | 805 (Note 4)   |
| ACK/NACK feedback mode                 |  | Multiplexing   |
| Note 1:                                | Reference measurement channel RC.2 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.  |                |
| Note 2:                                | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |                |
| Note 3:                                | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.   |                |
| Note 4:                                | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |                |

### 9.2.3 Minimum requirement PUCCH 1-1 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

#### 9.2.3.1 FDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set  $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$  for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

**Table 9.2.3.1-1: PUCCH 1-1 static test (FDD)**

| Parameter  | Unit     | Test 1                        | Test 2 |
|--|----------|-------------------------------|--------|
| Bandwidth  | MHz      |                               | 10     |
| PDSCH transmission mode  |          |                               | 9      |
| Downlink power allocation  | $\rho_A$ | dB                            | 0      |
|  | $\rho_B$ | dB                            | 0      |
|  | $P_C$    | dB                            | -3     |
|  | $\sigma$ | dB                            | -3     |
| Cell-specific reference signals  |          | Antenna ports 0, 1            |        |
| CSI reference signals  |          | Antenna ports 15,...,18       |        |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$ |          | 5/1                           |        |
| CSI reference signal configuration   |          | 0                             |        |

9.2.3.1A FDD (With *channelMeasRestriction* configured)

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.3.1A-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> - 1, median CQI<sub>1</sub>, median CQI<sub>1</sub> + 1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

| <i>cqi-pmi-ConfigurationIndex</i>   |              | 12             |     |     |     |
| <i>ri-ConfigIndex</i>   |              | 1              |     |     |     |
| PDSCH scheduled sub-frames  |              | 1,2,3,4,7,8,9  |     |     |     |
| NOTE 1: Reference measurement channel RC.7 FDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1.   |              |                |     |     |     |
| NOTE 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |              |                |     |     |     |
| NOTE 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink #5. |              |                |     |     |     |
| NOTE 4: In sub-frame 6, transmission power of CSI-RS REs is 9dB lower than CRS REs, in sub-frame 1, there is no power offset between CSI-RS REs and CRS REs.  |              |                |     |     |     |

### 9.2.3.2 TDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set  $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$  for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

**Table 9.2.3.2-1: PUCCH 1-1 submode 1 static test (TDD)**

| Parameter  | Unit     | Test 1                               | Test 2  |
|--|----------|--------------------------------------|---------|
| Bandwidth  | MHz      | 10                                   |         |
| PDSCH transmission mode  |          | 9                                    |         |
| Uplink downlink configuration  |          | 2                                    |         |
| Special subframe configuration   |          | 4                                    |         |

PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.</p> <p>Note 4: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.</p> |              |                |     |     |     |

9.2.3.2A TDD (With *channelMeasRestriction* configured)

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.3.2A-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> -1, median CQI<sub>1</sub>, median CQI<sub>1</sub> +1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

Table 9.2.3.2A-1: PUCCH 1-1 submode 1 static test (TDD)

| Parameter  | Unit     | Test 1 | Test 2                  |
|--|----------|--------|-------------------------|
| Bandwidth  | MHz      |        | 10                      |

| <i>ri-ConfigIndex</i>  |              | 805 (Note 4)                         |     |     |     |
| ACK/NACK feedback mode   |              | Multiplexing                         |     |     |     |
| PDSCH scheduled sub-frames   |              | 3,4,9                                |     |     |     |
| NOTE 1: Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.  |              |                                      |     |     |     |
| NOTE 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |              |                                      |     |     |     |
| NOTE 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7.  |              |                                      |     |     |     |
| NOTE 4: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |              |                                      |     |     |     |
| NOTE 5: In sub-frame 8, transmission power of CSI-RS REs is 9dB lower than CRS REs, in sub-frame 3, there is no power offset between CSI-RS REs and CRS REs.   |              |                                      |     |     |     |

## 9.2.4 Minimum requirement PUCCH 1-1 (With Single CSI Process)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

If UE supporting *interferenceMeasRestriction*, test cases specified in 9.2.4.1A and 9.2.4.2A are applicable for such UE otherwise test cases specified in 9.2.4.1 and 9.2.4.2 are applied.

### 9.2.4.1 FDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.4.1-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set {median  $\text{CQI}_1 - 1$ , median  $\text{CQI}_1$ , median  $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

|         |   |
|---------|---|
| Note 1: | Reference measurement channel RC.10 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.  |
| Note 2: | REs for antenna ports 0 and 1 CRS have zero transmission power.   |
| Note 3: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |
| Note 4: | N/A.  |
| Note 5: | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5. |

9.2.4.1A FDD (With *interferenceMeasRestriction* configured)

The following requirements apply to UE Category ≥2. For the parameters specified in table 9.2.4.1A-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> -1, median CQI<sub>1</sub>, median CQI<sub>1</sub> +1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

Table 9.2.4.1A-1: PUCCH 1-1 static test (FDD)

| Parameter   | Unit     | Test 1                  |                       | Test 2                  |                       |     |
|---|----------|-------------------------|-----------------------|-------------------------|-----------------------|-----|

| NOTE1: Reference measurement channel RC.10 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.   |                  |              |                          |                 |     |                          |                 |     |
| NOTE 2: REs for antenna ports 0 and 1 CRS have zero transmission power.   |                  |              |                          |                 |     |                          |                 |     |
| NOTE 3: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                  |              |                          |                 |     |                          |                 |     |
| NOTE 4: N/A.  |                  |              |                          |                 |     |                          |                 |     |
| NOTE 5: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink #5. |                  |              |                          |                 |     |                          |                 |     |

9.2.4.2 TDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.2.4.2-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> - 1, median CQI<sub>1</sub>, median CQI<sub>1</sub> + 1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

Table 9.2.4.2-1: PUCCH 1-1 static test (TDD)

| Parameter                          | Unit     | Test 1 |     | Test 2 |     |    |
|------------------------------------|----------|--------|-----|--------|-----|----|

| Timing offset between TPs   |  | us           | 0   |                             | 0   |                             |
| Frequency offset between TPs  |  | Hz           | 0   |                             | 0   |                             |
| Note 1:   | Reference measurement channel RC.10 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |              |   |                             |   |                             |
| Note 2:   | REs for antenna ports 0 and 1 CRS have zero transmission power.  |              |   |                             |   |                             |
| Note 3:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |              |   |                             |   |                             |
| Note 4:   | N/A.   |              |   |                             |   |                             |
| Note 5:   | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.  |              |   |                             |   |                             |
| Note 6:   | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |              |   |                             |   |                             |

9.2.4.2A TDD (With *interferenceMeasRestriction* configured)

The following requirements apply to UE Category ≥2. For the parameters specified in table 9.2.4.2A-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> -1, median CQI<sub>1</sub>, median CQI<sub>1</sub> +1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

Table 9.2.4.2A-1: PUCCH 1-1 static test (TDD)

| Parameter  | Unit             | Test 1  |                             |     | Test 2  |                             |     |     |

| Frequency offset between TPs   | Hz           | 0             |             | 0             |             |
| NOTE 1: Reference measurement channel RC.10 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |              |               |             |               |             |
| NOTE 2: REs for antenna ports 0 and 1 CRS have zero transmission power.  |              |               |             |               |             |
| NOTE 3: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |              |               |             |               |             |
| NOTE 4: N/A.   |              |               |             |               |             |
| NOTE 5: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7.  |              |               |             |               |             |
| NOTE 6: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |              |               |             |               |             |

## 9.2.5 Minimum requirement PUCCH 1-1 (when *csi-SubframeSet –r12* and *EIMTA-MainConfigServCell-r12* are configured)

The following requirements apply to UE Category  $\geq 2$  which supports eIMTA TDD UL-DL reconfiguration for TDD serving cell(s) via monitoring PDCCH with eIMTA-RNTI and Rel-12 CSI subframe sets. For the parameters specified in table 9.2.5-1, and using the downlink physical channels specified in Tables C.3.2-1 and C.3.2-2, for each CSI subframe set, the reported CQI value shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. For each CSI subframe set, if the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1. The difference of the median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  and the median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  shall be larger than or equal to 3.

| Note 2: | Reference measurement channel RC.20 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1 for CSI subframe set 1.  |
| Note 3: | In the test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level for each CSI subframe set separately.   |
| Note 4: | As specified in Table 4.2-2 in TS 36.211.  |
| Note 5: | UL/DL configuration in PDCCH with eIMTA-RNTI is cyclically selected from the given set on a per-DCI basis.   |
| Note 6: | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2. CQI/PMI reports for CSI subframe set 0 is transmitted in SF#2 and CQI/PMI reports for CSI subframe set 1 is transmitted in SF#7. |
| Note 7: | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.                               |

## 9.2.6 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbols)

### 9.2.6.1 Frame structure type 3 with FDD Pcell

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.6.1-1, Table 9.2.6.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

The value of the wideband CQI median for first set of CQI reports minus the wideband CQI median for second set of CQI reports shall be larger than or equal to 2 in Test 1 and Test 2.

**Table 9.2.6.1-1: Parameters for PUSCH 3-0 static test on FDD Pcell**

| Parameter                                       | Unit     | Value              |    |
|---|----------|--------------------|----|
| Bandwidth                                       | MHz      | 20                 |    |
| PDSCH transmission mode                         |          | 3                  |    |
| Downlink power allocation                       | $\rho_A$ | dB                 | -3 |
|   | $\rho_B$ | dB                 | -3 |
|   | $\sigma$ | dB                 | 0  |
| Propagation condition and antenna configuration |          | Clause B.1 (2 x 2) |    |

|                                  |   |           |
|----------------------------------|---|-----------|
| SNR                              | dB  | 20        |
| $\hat{I}_{or}^{(j)}$             | dB[mW/15kHz]  | -78       |
| $N_{oc}^{(j)}$                   | dB[mW/15kHz]  | -98       |
| Max number of HARQ transmissions |   | 1         |
| Reporting mode                   |   | PUSCH 3-0 |
| CSI request field                |   | '10'      |
| trigger1 (Note 2)                |   | 01000000  |
| trigger2 (Note 2)                |   | 00000000  |
| Note 1:                          | PCell is used for HARQ ACK/NACK feedback and aperiodic CSI triggering/reporting. One sided dynamic OCN Pattern OP.1 FDD as described in A.5.1.1 is transmitted on PCell on all RBs, but PDSCH for user data is not transmitted on PCell.  |           |
| Note 2:                          | trigger1 and trigger2 are defined as TS 36.331 for aperiodicCSI-Trigger. They Indicate for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. PDCCH DCI format 0 with a trigger for aperiodic CQI is transmitted periodically in subframe 1 and subframe 6 with 5ms periodicity. |           |

|   | Random variable $p$ defined in B.8              |              | 0.5  |        |
|   | Power configuration for each burst              |              | $\hat{I}_{or}^{(j)}$ is randomly selected from 6 dB power boosting or 0 dB power boosting with equal probability |        |

|         |   |
|---------|---|
| Note 1: | Reference measurement channel RC.2A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FS3 as described in Annex A.5.4.1, except for category 1 UE use RC.4A FDD with two sided dynamic OCNG Pattern OP.2 FS3 as described in Annex A.5.4.2. |
| Note 2: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |

### 9.2.6.2 Frame structure type 3 with TDD Pcell

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.6.2-1, Table 9.2.6.2-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

The value of the wideband CQI median for first set of CQI reports minus the wideband CQI median for second set of CQI reports shall be larger than or equal to 2 in Test 1 and Test 2.

**Table 9.2.6.2-1: Parameters for PUSCH 3-0 static test on TDD Pcell**

| Parameter                                       | Unit         | Value              |    |
|---|--------------|--------------------|----|
| Bandwidth                                       | MHz          | 20                 |    |
| Uplink downlink configuration                   |              | 2                  |    |
| Special subframe configuration                  |              | 4                  |    |
| PDSCH transmission mode                         |              | 3                  |    |
| Downlink power allocation                       | $\rho_A$     | dB                 | -3 |
|   | $\rho_B$     | dB                 | -3 |
|   | $\sigma$     | dB                 | 0  |
| Propagation condition and antenna configuration |              | Clause B.1 (2 x 2) |    |
| SNR   | dB           | 20                 |    |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -78                |    |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz] | -98                |    |
| Max number of HARQ transmissions                |              | 1                  |    |
| Reporting mode                                  |              | PUSCH 3-0          |    |
| CSI request field                               |              | '10'               |    |
| trigger1 (Note 2)                               |              | 01000000           |    |
| trigger2 (Note 2)                               |              | 00000000           |    |

Note 1: PCell is used for HARQ ACK/NACK feedback and aperiodic CSI triggering/reporting. One sided dynamic OCNG Pattern OP.1 TDD as described in A.5.2.1 is transmitted on PCell on all RBs, but PDSCH for user data is not transmitted on PCell.

Note 2: trigger1 and trigger2 are defined as TS 36.331 for aperiodicCSI-Trigger. They Indicate for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. PDCCH DCI format 0 with a trigger for aperiodic CQI is transmitted periodically in subframe 3 and subframe 8 with 5ms periodicity.

**Table 9.2.6.2-2: PUSCH 3-0 static test on LAA Scell**

| Parameter   |   | Unit         | Test 1   | Test 2 |
|---|---|--------------|--|--------|
| Bandwidth   |   | MHz          | 20   |        |
| PDSCH transmission mode   |   |              | 3  |        |
| Downlink power allocation   | $\rho_A$  | dB           | -3   |        |
|   | $\rho_B$  | dB           | -3   |        |
|   | $\sigma$  | dB           | 0  |        |

| SNR in subframes with 0 dB power boost (Note 2)   |   | dB           | 3  | 4      |
| $\hat{I}_{or}^{(j)}$ in subframes with 6 dB power   |   | dB[mW/15kHz] | -89  | -88    |
| $\hat{I}_{or}^{(j)}$ in subframes with 0 dB power   |   | dB[mW/15kHz] | -95  | -94    |
| $N_{oc}^{(j)}$  |   | dB[mW/15kHz] | -98  |        |
| MBSFN subframe Configuration  |   |              | Non-MBSFN  |        |
| Cell Id   |   |              | 0  |        |
| dmtc-Periodicity  |   | ms           | 80   |        |
| dmtc-Offset   |   |              | 0  |        |
| Number of control OFDM symbols  |   |              | 3  |        |
| Max number of HARQ transmissions  |   |              | 1  |        |
| Reporting mode  |   |              | PUSCH 3-0  |        |
| PDSCH transmission model  | Basic model                                     |              | As specified in Section B.7  |        |
|   | subframeStartPosition                           |              | s0   |        |
|   | Number of occupied symbols per subframe         |              | 14   |        |
|   | The number of subframes set ( $S_1$ ) per burst |              | {3,8}  |        |
|   | Random variable $p$ defined in B.8              |              | 0.5  |        |
|   | Power configuration for each burst              |              | $\hat{I}_{or}^{(j)}$ is randomly selected from 6 dB power boosting or 0 dB power boosting with equal probability |        |
| Note 1: Reference measurement channel RC.2A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FS3 as described in Annex A.5.4.1, except for category 1 UE use RC.4A FDD with two sided dynamic OCNG Pattern OP.2 FS3 as described in Annex A.5.4.2. |   |              |  |        |
| Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |   |              |  |        |

## 9.2.7 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

### 9.2.7.1 Frame structure type 3 with FDD Pcell

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.7.1-1, Table 9.2.7.1-2 and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA S-cell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

The value of the wideband CQI for the first set of CQI report minus the wideband CQI median for second set of CQI shall be larger than or equal to 2 in Test 1 and Test 2.

**Table 9.2.7.1-1: Parameters for PUSCH 3-1 static test on FDD Pcell**

| Parameter  | Unit         | Value                |   |
|--|--------------|----------------------|---|
| Bandwidth  | MHz          | 20                   |   |
| PDSCH transmission mode  |              | 9                    |   |
| Downlink power allocation  | $\rho_A$     | dB                   | 0 |
|  | $\rho_B$     | dB                   | 0 |
|  | $P_c$        | dB                   | 0 |
|  | $\sigma$     | dB                   | 0 |
| Propagation condition and antenna configuration                          |              | Clause B.1 (2 x 2)   |   |
| SNR  | dB           | 20                   |   |
| $\hat{I}_{or}^{(j)}$   | dB[mW/15kHz] | -78                  |   |
| $N_{oc}^{(j)}$   | dB[mW/15kHz] | -98                  |   |
| CRS reference signals  |              | Antenna ports 0      |   |
| CSI reference signals  |              | Antenna ports 15, 16 |   |
| CSI-RS periodicity and subframe offset<br>$T_{CSI-RS} / \Delta_{CSI-RS}$ |              | 5/ 1                 |   |
| CSI-RS reference signal configuration                                    |              | 4                    |   |
| CodeBookSubsetRestriction bitmap   |              | 000001               |   |
| Number of control OFDM symbols   |              | 3                    |   |
| Max number of HARQ transmissions   |              | 1                    |   |
| Reporting mode   |              | PUSCH 3-1            |   |

|                   |   |          |
|-------------------|---|----------|
| CSI request field |   | '10'     |
| trigger1 (Note 2) |   | 01000000 |
| trigger2 (Note 2) |   | 00000000 |
| Note 1:           | PCell is used for HARQ ACK/NACK feedback and aperiodic CSI triggering/reporting. One sided dynamic OCNG Pattern OP.1 FDD as described in A.5.1.1 is transmitted on PCell on all RBs, but PDSCH for user data is not transmitted on PCell.   |          |
| Note 2:           | trigger1 and trigger2 are defined as TS 36.331 for aperiodicCSI-Trigger. They Indicate for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. PDCCH DCI format 0 with a trigger for aperiodic CQI is transmitted periodically in subframe 1 and subframe 6 with 5ms periodicity. |          |

**Table 9.2.7.1-2: PUSCH 3-1 static test on LAA Scell**

| Parameter  |   | Unit         | Test 1   | Test 2 |
|--|---|--------------|--|--------|
| Bandwidth  |   | MHz          | 20 MHz   |        |
| Transmission mode  |   |              | 9  |        |
| Downlink power allocation  | $\rho_A$  | dB           | 0  |        |
|  | $\rho_B$  | dB           | 0  |        |

| Max number of HARQ transmissions   |   |              | 1  |        |
| Reporting mode   |   |              | PUSCH 3-1  |        |
| PDSCH transmission model   | Basic model                                     |              | As specified in Section B.8  |        |
|  | subframeStartPosition                           |              | s0   |        |
|  | Number of occupied symbols per subframe         |              | 14   |        |
|  | The number of subframes set ( $S_1$ ) per burst |              | {3, 8}   |        |
|  | Random variable $p$ defined in B.8              |              | 0.5  |        |
|  | Power configuration for each burst              |              | $\hat{I}_{or}^{(j)}$ is randomly selected from 6 dB power boosting or 0 dB power boosting with equal probability |        |

|         |  |
|---------|--|
| Note 1: | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4) |
| Note 2: | Reference measurement channel RC.9A FDD according to Table A.4-1 with one/two sided dynamic OCNB Pattern OP.1/2 FS3 as described in Annex A.5.4.1/2.   |
| Note 3: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |

### 9.2.7.2 Frame structure type 3 with TDD Pcell

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.2.7.2-1, Table 9.2.7.2-2 and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of  $\pm 1$  of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

The value of the wideband CQI for the first set of CQI report minus the wideband CQI median for second set of CQI shall be larger than or equal to 2 in Test 1 and Test 2.

**Table 9.2.7.2-1: Parameters for PUSCH 3-1 static test on TDD Pcell**

| Parameter                                       | Unit         | Value                |   |
|---|--------------|----------------------|---|

## 9.3 CQI reporting under fading conditions

### 9.3.1 Frequency-selective scheduling mode

The accuracy of sub-band channel quality indicator (CQI) reporting under frequency selective fading conditions is determined by a double-sided percentile of the reported differential CQI offset level 0 per sub-band, and the relative increase of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest reported differential CQI offset level the corresponding transport format compared to the case for which a fixed format is transmitted on any sub-band in set  $S$  of TS 36.213 [6]. The purpose is to verify that preferred sub-bands can be used for frequently-selective scheduling. To account for sensitivity of the input SNR the sub-band CQI reporting under frequency selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

#### 9.3.1.1 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbols)

##### 9.3.1.1.1 FDD

For the parameters specified in Table 9.3.1.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha\%$  of the time but less than  $\beta\%$  for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

**Table 9.3.1.1.1-1 Sub-band test for single antenna transmission (FDD)**

| Parameter                 |          | Unit | Test 1     |    | Test 2 |    |

| UE Category  | $\geq 1$ | $\geq 1$ |

9.3.1.1.2 TDD

For the parameters specified in Table 9.3.1.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.2-2 and by the following

- a) a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$ % of the time but less than  $\beta$ % for each sub-band;
- b) the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- c) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

### 9.3.1.1.3 FDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

For the parameters specified in Table 9.3.1.1.3-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.3-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput in ABS subframes obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER in ABS subframes for the indicated transport formats shall be greater than or equal to  $\epsilon$ .

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

|          |  |
|----------|--|
| Note 1:  | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |
| Note 2:  | ABS pattern as defined in [9]. PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel. |
| Note 3:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]  |
| Note 4:  | As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7]  |
| Note 5:  | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]  |
| Note 6:  | Cell 1 is the serving cell. Cell 2 and Cell 3 are the aggressor cells. The number of the CRS ports in Cell1, Cell2, and Cell3 are the same.  |
| Note 7:  | This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.   |
| Note 8:  | This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.  |
| Note 9:  | This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.  |
| Note 10: | Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNB pattern as defined in Annex A.5.1.5  |
| Note 11: | Reference measurement channel in Cell 1 RC.3 FDD according to Table A.4-1 with one/two sided dynamic OCNB Pattern OP.1/2 FDD as described in Annex A.5.1.1/2.  |
| Note 12: | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4).  |
| Note 13: | The CSI reporting is such that reference subframes belong to $C_{csi,0}$ .   |

**Table 9.3.1.1.3-2 Minimum requirement (FDD)**

|              | Test 1   | Test 2   |
|--------------|----------|----------|
| $\alpha$ [%] | 2        | 2        |
| $\beta$ [%]  | 55       | 55       |
| $\gamma$     | 1.1      | 1.1      |
| $\epsilon$   | 0.01     | 0.01     |
| UE Category  | $\geq 1$ | $\geq 1$ |

#### 9.3.1.1.4 TDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

For the parameters specified in Table 9.3.1.1.4-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.4-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha\%$  of the time but less than  $\beta\%$  for each sub-band;
- the ratio of the throughput in ABS subframes obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER in ABS subframes for the indicated transport formats shall be greater than or equal to  $\epsilon$ .

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

**Table 9.3.1.1.4-1: Sub-band test for single antenna transmission (TDD)**

| Parameter                      | Unit | Test 1 |              | Test 2 |              |
|--------------------------------|------|--------|--------------|--------|--------------|
|                                |      | Cell 1 | Cell 2 and 3 | Cell 1 | Cell 2 and 3 |
| Bandwidth                      | MHz  | 10     |              | 10     |              |

### 9.3.1.1.5 TDD (when *csi-SubframeSet-r12* is configured)

The following requirements apply to UE Category  $\geq 1$  which supports Rel-12 CSI subframe sets. For the parameters specified in Table 9.3.1.1.5-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.5-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band for each CSI subframe set;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$  for each CSI subframe set;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05 and less than 0.60 for each CSI subframe set.
- the difference of the wide-band median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  and the wide-band median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  shall be larger than or equal to 3.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.1.1.5-1: Sub-band test for TDD**

| Parameter  | Unit         | Test  |      |
|--|--------------|---|------|
| Bandwidth  | MHz          | 10  |      |
| Transmission mode  |              | 2   |      |
| Uplink downlink configuration  |              | 2   |      |

| Reporting interval (Note 4)                      | ms  | 10 per subframe set                                    |
| CQI delay  | ms  | 15 for CSI subframe set 0<br>15 for CSI subframe set 1 |
| Reporting mode                                   |   | PUSCH 3-0  |
| Sub-band size                                    | RB  | 6 (full size)  |
| Max number of HARQ transmissions                 |   | 1  |
| ACK/NACK feedback mode                           |   | Multiplexing   |
| Number of EPDCCH Sets Configured                 |   | 2 (Note 5,6)   |
| Number of PRB per EPDCCH Set                     |   | 4  |
| EPDCCH Subframe Monitoring                       |   | NA   |
| EPDCCH Aggregation level                         |   | 8ECCE  |
| EPDCCH beamforming model                         |   | Annex B.4.4  |
| Note 1:  | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4)  |  |
| Note 2:  | Reference measurement channel RC.17 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 TDD as described in Annex A.5.2.1/2.  |  |
| Note 3:  | In the test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level for each subframe set separately..   |  |
| Note 4:  | For CSI subframe set 0, PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF #7. For CSI subframe set 1, PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#8 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF#2.  |  |
| Note 5:  | In case UE supports EPDCCH, the PDSCH scheduling grants are transmitted via EPDCCH, otherwise PDCCH is used.  |  |
| Note 6:  | The two sets are distributed EPDCCH sets and non-overlapping with PRB = {0, 3, 6, 9} for the first set and PRB = {40, 43, 46, 49} for the second set. EPDCCH set is selected after scheduling decision for PDSCH to avoid collision between PDSCH and EPDCCH PRBs, respectively. EPDCCH is only transmitted from one set. The starting symbol for EPDCCH is derived from the PCFICH. RRC signalling epdch-StartSymbol-r11 is not configured |  |

| $\beta$ [%]  | 55       |
| $\gamma$     | 1.1      |
| UE Category  | $\geq 1$ |

### 9.3.1.2 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

#### 9.3.1.2.1 FDD

For the parameters specified in Table 9.3.1.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.1.2.1-1 Sub-band test for FDD**

| Parameter  |          | Unit         | Test 1  |     | Test 2 |     |
|--|----------|--------------|---|-----|--------|-----|

### 9.3.1.2.2 TDD

For the parameters specified in Table 9.3.1.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.2-2 and by the following

- a) a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;

- b) the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- c) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.1.2.2-1 Sub-band test for TDD**

| Parameter  |          | Unit         | Test 1  |     | Test 2 |     |
|--|----------|--------------|---|-----|--------|-----|
| Bandwidth  |          | MHz          | 10 MHz  |     |        |     |
| Transmission mode  |          |              | 9   |     |        |     |

### 9.3.1.2.3 FDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

For the parameters specified in Table 9.3.1.2.3-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.3-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha\%$  of the time but less than  $\beta\%$  for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

**Table 9.3.1.2.3-1 Sub-band test for FDD**

| Parameter  | Unit   | Test 1  |     |
|--|--|---|-----|
| Bandwidth  | MHz  | 10 MHz  |     |
| Transmission mode  |  | 9   |     |
| Downlink power allocation  | $\rho_A$   | dB  | 0   |

| UE DL Category | $\geq 11$ |

#### 9.3.1.2.4 TDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

For the parameters specified in Table 9.3.1.2.4-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.4-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

**Table 9.3.1.2.4-1 Sub-band test for TDD**

| Parameter  | Unit         | Test 1  |     |
|--|--------------|---|-----|
| Bandwidth  | MHz          | 20 MHz  |     |

9.3.1.2.5 Void

**Table 9.3.1.2.5-1: Void****Table 9.3.1.2.5-2: Void**9.3.1.2.6 TDD (when *csi-SubframeSet* *-r12* is configured with one CSI process)

The following requirements apply to UE Category  $\geq 1$  which supports Rel-12 CSI subframe sets and TM10. For the parameters specified in Table 9.3.1.2.6-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.6-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$ % of the time but less than  $\beta$ % for each sub-band for each CSI subframe set;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set *S* shall be  $\geq \gamma$  for each CSI subframe set;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.01 for each CSI subframe set.
- The difference of the wide-band median CQI obtained by reports in CSI subframe sets  $C_{CSI,0}$  and the wide-band median CQI obtained by reports in CSI subframe sets  $C_{CSI,1}$  shall be larger than or equal to 3.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.1.2.6-1: Sub-band test for TDD**

| Parameter                     | Unit | Test |

## 9.3.2 Frequency non-selective scheduling mode

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective fading conditions is determined by the reporting variance, and the relative increase of the throughput obtained when the transport format transmitted is that indicated by the reported CQI compared to the case for which a fixed transport format configured according to the reported median CQI is transmitted. In addition, the reporting accuracy is determined by a minimum BLER using the transport formats indicated by the reported CQI. The purpose is to verify that the UE is tracking the channel variations and selecting the largest transport format possible according to the prevailing channel state for frequently non-selective scheduling. To account for sensitivity of the input SNR the CQI reporting under frequency non-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

### 9.3.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol)

#### 9.3.2.1.1 FDD

For the parameters specified in Table 9.3.2.1.1-1 and Table 9.3.2.1.1-3, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.2.1.1-2 and Table 9.3.2.1.1-4 and by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha$  % of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02

The applicability of the requirement with 5MHz bandwidth as specified in Table 9.3.2.1.1-3 and Table 9.3.2.1.1-4 is defined in 9.1.1.1.

**Table 9.3.2.1.1-1 Fading test for single antenna (FDD)**

| Parameter                             |          | Unit         | Test 1         |     | Test 2 |     |

| UE Category  | $\geq 1$ | $\geq 1$ |

9.3.2.1.2 TDD

For the parameters specified in Table 9.3.2.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.2.1.2-2 and by the following

- a) a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha$  % of the time;
- b) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;
- c) when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

**Table 9.3.2.1.2-1 Fading test for single antenna (TDD)**

| <i>ri-ConfigIndex</i>  |   | 805 (Note 5)                            |     |     |     |
| Max number of HARQ transmissions   |   | 1                                       |     |     |     |
| ACK/NACK feedback mode   |   | Multiplexing                            |     |     |     |
| Note 1:  | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |   |     |     |     |
| Note 2:  | Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |   |     |     |     |
| Note 3:  | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |   |     |     |     |
| Note 4:  | To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.  |   |     |     |     |
| Note 5:  | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available. |   |     |     |     |

### 9.3.3 Frequency-selective interference

The accuracy of sub-band channel quality indicator (CQI) reporting under frequency selective interference conditions is determined by a percentile of the reported differential CQI offset level +2 for a preferred sub-band, and the relative increase of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest reported differential CQI offset level the corresponding transport format compared to the case for which a fixed format is transmitted on any sub-band in set  $S$  of TS 36.213 [6]. The purpose is to verify that preferred sub-bands are used for frequently-selective scheduling under frequency-selective interference conditions.

### 9.3.3.1 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbol)

#### 9.3.3.1.1 FDD

For the parameters specified in Table 9.3.3.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.3.1.1-2 and by the following

- a sub-band differential CQI offset level of +2 shall be reported at least  $\alpha\%$  for at least one of the sub-bands of full size at the channel edges;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.3.1.1-1 Sub-band test for single antenna transmission (FDD)**

## 9.3.3.1.2 TDD

For the parameters specified in Table 9.3.3.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.3.1.2-2 and by the following

- a) a sub-band differential CQI offset level of +2 shall be reported at least  $\alpha\%$  for at least one of the sub-bands of full size at the channel edges;
- b) the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.3.1.2-1 Sub-band test for single antenna transmission (TDD)**

### 9.3.3.2 Void

#### 9.3.3.2.1 Void

#### 9.3.3.2.2 Void

## 9.3.4 UE-selected subband CQI

The accuracy of UE-selected subband channel quality indicator (CQI) reporting under frequency-selective fading conditions is determined by the relative increase of the throughput obtained when transmitting on the UE-selected subbands with the corresponding transport format compared to the case for which a fixed format is transmitted on any subband in set  $S$  of TS 36.213 [6]. The purpose is to verify that correct subbands are accurately reported for frequency-selective scheduling. To account for sensitivity of the input SNR the subband CQI reporting under frequency-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

### 9.3.4.1 Minimum requirement PUSCH 2-0 (Cell-Specific Reference Symbols)

#### 9.3.4.1.1 FDD

For the parameters specified in Table 9.3.4.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.1.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on a randomly selected subband among the best  $M$  subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each TTI for FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{\text{PRB}}^{(j)}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

**Table 9.3.4.1.1-1 Subband test for single antenna transmission (FDD)**

### 9.3.4.1.2 TDD

For the parameters specified in Table 9.3.4.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.1.2-2 and by the following

a) the ratio of the throughput obtained when transmitting on a randomly selected subband among the best  $M$  subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each available downlink transmission instance for TDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{PRB}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

## 9.3.4.2 Minimum requirement PUCCH 2-0 (Cell-Specific Reference Symbols)

### 9.3.4.2.1 FDD

For the parameters specified in Table 9.3.4.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.2.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each TTI for FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{PRB}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

**Table 9.3.4.2.1-1 Subband test for single antenna transmission (FDD)**

| Parameter                          |          | Unit         | Test 1  |     | Test 2 |     |
|------------------------------------|----------|--------------|---|-----|--------|-----|
| Bandwidth                          |          | MHz          | 10 MHz  |     |        |     |
| Transmission mode                  |          |              | 1 (port 0)  |     |        |     |
| Downlink power allocation          | $\rho_A$ | dB           | 0   |     |        |     |
|                                    | $\rho_B$ | dB           | 0   |     |        |     |
|                                    | $\sigma$ | dB           | 0   |     |        |     |

| UE Category | $\geq 1$ | $\geq 1$ |

### 9.3.4.2.2 TDD

For the parameters specified in Table 9.3.4.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting on subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set  $S$  shall be  $\geq \gamma$ ;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each available downlink transmission instance for TDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{PRB}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

**Table 9.3.4.2.2-1 Sub-band test for single antenna transmission (TDD)**

| Parameter                      |          | Unit         | Test 1  |     | Test 2 |     |
|--------------------------------|----------|--------------|---|-----|--------|-----|

## 9.3.5 Additional requirements for enhanced receiver Type A

The purpose of the test is to verify that the reporting of the channel quality is based on the receiver of the enhanced Type A. Performance requirements are specified in terms of the relative increase of the throughput obtained when the transport format is that indicated by the reported CQI subject to an interference model compared to the case with a white Gaussian noise model, and a requirement on the minimum BLER of the transmitted transport formats indicated by the reported CQI subject to an interference model.

### 9.3.5.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol)

#### 9.3.5.1.1 FDD

For the parameters specified in Table 9.3.5.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.5.1.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.3.5.1.1-1 Fading test for single antenna (FDD)**

| Parameter  | Unit         | Cell 1         | Cell 2          |
|--|--------------|----------------|-----------------|
| Bandwidth  | MHz          | 10 MHz         |                 |
| Transmission mode  |              | 1 (port 0)     |                 |

### 9.3.5.2 Minimum requirement PUCCH 1-1 (CSI Reference Symbol)

#### 9.3.5.2.1 FDD

For the parameters specified in Table 9.3.5.2.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.5.2.1-2 and by the following

- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.3.5.2.1-1 Fading test for two antennas (FDD)**

| Parameter  | Unit                  | Cell 1                                      | Cell 2                     |

9.3.5.2.2 TDD

For the parameters specified in Table 9.3.5.2.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.3.5.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

| Max number of HARQ transmissions   |                       | 1   | N/A                         |
| ACK/NACK feedback mode   |                       | Multiplexing                                | N/A                         |
| <p>Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)</p> <p>Note 2: Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.</p> <p>Note 3: To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.</p> <p>Note 4: The respective received power spectral density of each interfering cell relative to <math>N_{oc}</math> is defined by its associated DIP value as specified in clause B.5.1.</p> |                       |   |                             |

|          |   |
|----------|---|
| Note 5:  | Two cells are considered in which Cell 1 is the serving cell and Cell 2 is the interfering cell. Interfering cell is fully loaded.  |
| Note 6:  | Both cells are time-synchronous.  |
| Note 7:  | Static channel is used for the interference model. In case for white Gaussian noise model Cell 2 is not present.  |
| Note 8:  | SINR corresponds to $\widehat{E}_s/N_{oc}$ of Cell 1 as defined in clause 8.1.1.  |
| Note 9:  | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available. |
| Note 10: | N/A.  |
| Note 11: | The precoder in clause B.4.3 follows UE recommended PMI.  |
| Note 12: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).   |

| UE Category | $\geq 2$ |

### 9.3.6 Minimum requirement (With multiple CSI processes)

The purpose of the test is to verify the reporting accuracy of the CQI and the UE processing capability for multiple CSI processes. Each CSI process is associated with a CSI-RS resource and a CSI-IM resource as shown in Table 9.3.6-1. For UE supports one CSI process, CSI process 2 is configured and the corresponding requirements shall be fulfilled. For UE supports three CSI processes, CSI processes 0, 1 and 2 are configured and the corresponding requirements shall be fulfilled. For UE supports four CSI processes, CSI processes 0, 1, 2 and 3 are configured and the corresponding requirements shall be fulfilled.

**Table 9.3.6-1: Configuration of CSI processes**

|                 | CSI process 0     | CSI process 1     | CSI process 2     | CSI process 3     |
|-----------------|-------------------|-------------------|-------------------|-------------------|
| CSI-RS resource | CSI-RS signal 0   | CSI-RS signal 1   | CSI-RS signal 0   | CSI-RS signal 1   |
| CSI-IM resource | CSI-IM resource 0 | CSI-IM resource 0 | CSI-IM resource 1 | CSI-IM resource 2 |

#### 9.3.6.1 FDD

For the parameters specified in Table 9.3.6.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.6.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha\%$  of the time but less than  $\beta\%$  for each sub-band for CSI process 1, 2, or 3;
- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\delta\%$  of the time for CSI process 0;
- the difference of the median CQIs of the reported wideband CQI for configured CSI processes shall be greater or equal to the values as in Table 9.3.6.1-3;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;

- e) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.6.1-1: Fading test for FDD**

| Max number of HARQ transmissions                    |   |    | 1                      | N/A                    | 1                      | N/A                    |
| Note 1:   | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |    |                        |                        |                        |                        |
| Note 2:   | 3 symbols allocated to PDCCH  |    |                        |                        |                        |                        |
| Note 3:   | Reference measurement channel RC.12 FDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 2, 3, 4, 7, 8 and 9 from TP1.   |    |                        |                        |                        |                        |
| Note 4:   | TM10 OCNG OP.8 FDD as specified in A.5.1.8 is transmitted on subframe 1 and 6 from TP1.   |    |                        |                        |                        |                        |
| Note 5:   | TM10 OCNG OP.8 FDD as specified in A.5.1.8 is transmitted on subframe 1, 2, 3, 4, 6, 7, 8 and 9 from TP2  |    |                        |                        |                        |                        |
| Note 6:   | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#2 and #7. |    |                        |                        |                        |                        |
| Note 7:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |    |                        |                        |                        |                        |
| Note 8:   | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#1 and #6 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#0 and #5.   |    |                        |                        |                        |                        |
| Note 9:   | For these sub-bands which are not selected for PDSCH transmission, TM10 OCNG should be transmitted.   |    |                        |                        |                        |                        |

Note 10: PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#2 and #7 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#1 and #6.

### 9.3.6.2 TDD

For the parameters specified in Table 9.3.6.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.6.2-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band for CSI process 1, 2, or 3;
- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\delta$  % of the time for CSI process 0;
- the difference of the median CQIs of the reported wideband CQI for configured CSI processes shall be greater or equal to the values as in Table 9.3.6.2-3;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

**Table 9.3.6.2-1: Fading test for TDD**

| Parameter                      | Unit         | Test 1 |     |     |     | Test 2 |     |     |     |
|--------------------------------|--------------|--------|-----|-----|-----|--------|-----|-----|-----|

| ACK/NACK feedback mode           |   | Multiplexing             | N/A                    | Multiplexing             | N/A                    |  |
| Note 1:                          | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |                          |                        |                          |                        |  |
| Note 2:                          | 3 symbols allocated to PDCCH  |                          |                        |                          |                        |  |
| Note 3:                          | Reference measurement channel RC.12 TDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 4 and 9 from TP1.   |                          |                        |                          |                        |  |
| Note 4:                          | TM10 OCNG OP.8 TDD is transmitted as specified in A.5.2.8 on subframe 3 and 8 from TP1.   |                          |                        |                          |                        |  |
| Note 5:                          | TM10 OCNG OP.8 TDD is transmitted as specified in A.5.2.8 on subframe 3, 4, 8 and 9 from TP2  |                          |                        |                          |                        |  |
| Note 6:                          | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.   |                          |                        |                          |                        |  |
| Note 7:                          | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                          |                        |                          |                        |  |
| Note 8:                          | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 and #8 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#7 and #2.   |                          |                        |                          |                        |  |
| Note 9:                          | For these sub-bands which are not selected for PDSCH transmission, TM10 OCNG should be transmitted.   |                          |                        |                          |                        |  |
| Note 10:                         | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available. |                          |                        |                          |                        |  |

## 9.3.7 Minimum requirement PUSCH 3-2

### 9.3.7.1 FDD

For the parameters specified in Table 9.3.7.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.7.1-2 and by the following.

- the ratio of the throughput obtained when transmitting based on UE PUSCH 3-2 reported wideband CQI and subband PMI and that obtained when transmitting based on PUSCH 3-1 reported wideband CQI and wideband PMI shall be  $\geq \alpha$ ;
- The ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS based on UE PUSCH3-2 reported subband CQI and subband PMI and that obtained when transmitting on a randomly selected sub-band in set  $S$  based on PUSCH 1-2 reported wideband CQI and subband PMI shall be  $\geq \beta$ ;

The transport block sizes TBS for wideband CQI and subband CQI are selected according to RC.17 FDD for test 1 and according to RC.18 FDD for test 2.

| UE Category | $\geq 2$ | $\geq 2$ |

### 9.3.7.2 TDD

For the parameters specified in Table 9.3.7.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.7.2-2 and by the following.

- the ratio of the throughput obtained when transmitting based on UE PUSCH 3-2 reported wideband CQI and subband PMI and that obtained when transmitting based on PUSCH 3-1 reported wideband CQI and wideband PMI shall be  $\geq \alpha$ ;
- The ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS based on UE PUSCH3-2 reported subband CQI and subband PMI and that obtained when transmitting on a randomly selected sub-band in set S based on PUSCH 1-2 reported wideband CQI and subband PMI shall be  $\geq \beta$ ;

The transport block sizes TBS for wideband CQI and subband CQI are selected according to RC.17 TDD for test 1 and RC.18 TDD for test 2.

**Table 9.3.7.2-1 Sub-band test for TDD**

| Parameter   | Unit         | Test 1                   |     | Test 2                             |     |
|---|--------------|--------------------------|-----|------------------------------------|-----|
| Bandwidth   | MHz          | 10MHz                    |     |                                    |     |

### 9.3.8 Additional requirements for enhanced receiver Type B

The purpose of the test is to verify that the reporting of the channel quality based on the receiver of the enhanced Type B meets a minimum performance. Performance requirements are specified in terms of the relative throughput obtained when the transport format is that indicated by the reported CQI with NeighCellsInfo-r12 configured compared to the case without NeighCellsInfo-r12 configured. Cell 1 is the serving cell, and Cell 2 and Cell 3 are the interference cells.

#### 9.3.8.1 Minimum requirement PUCCH 1-1 (Cell-Specific Reference Symbols)

##### 9.3.8.1.1 FDD

For the parameters specified in Table 9.3.8.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.8.1.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with NeighCellsInfo-r12 configured and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources without NeighCellsInfo-r12 configured shall be  $\geq \gamma$ ;

**9.3.8.1.2 TDD**

For the parameters specified in Table 9.3.8.1.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.3.8.1.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with NeighCellsInfo-r12 configured and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources without NeighCellsInfo-r12 configured shall be  $\geq \gamma$ ;

**Table 9.3.8.1.2-1 Fading test for TDD**

| Parameter                             | Unit             | Cell 1    | Cell 2    | Cell 3    |

9.3.8.2.2 TDD

For the parameters specified in Table 9.3.8.2.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.3.8.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with NeighCellsInfo-r12 configured and that obtained when

transmitting the transport format indicated by each reported wideband CQI index subject to interference sources without NeighCellsInfo-r12 configured shall be  $\geq \gamma$ ;

**Table 9.3.8.2.2-1 Fading test for TDD**

| Parameter   |                           | Unit               | Cell 1                        | Cell 2                       | Cell 3                       |
|---|---------------------------|--------------------|-------------------------------|------------------------------|------------------------------|

| NeighCellsInfo-r12 (Note 6)   | p-aList-r12               |                    | N/A                           | {dB-6, dB-3, dB0}            | {dB-6, dB-3, dB0}            |
|   | transmission ModeList-r12 |                    | N/A                           | {2,3,4,8,9}                  | {2,3,4,8,9}                  |
| Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4) |                           |                    |                               |                              |                              |
| Note 2: Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.  |                           |                    |                               |                              |                              |

Note 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.

Note 4: All cells are time-synchronous.

Note 5: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available.

Note 6: NeighCellsInfo-r12 is described in subclause 6.3.2 of [7].

9.3.8.3.2 TDD

For the parameters specified in Table 9.3.8.3.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.8.3.2-2 and by the following

- a) the ratio of the throughput obtained for the Type B receiver with NAICS assistance information when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with specified  $\hat{E}_s/N_{oc}$  and that obtained for the Type B receiver without NAICS assistance information when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with the same specified  $\hat{E}_s/N_{oc}$  shall be  $\geq \gamma$ ;

| Reference measurement channel  |  |                       | Note 2                        | N/A                             | N/A                             |
| Max number of HARQ transmissions   |  |                       | 1                             | N/A                             | N/A                             |
| ACK/NACK feedback mode   |  |                       | Multiplexing                  | N/A                             | N/A                             |
| NeighCellsInfo-r12 (Note 6)  | p-aList-r12                            |                       | N/A                           | {dB-6, dB-3,<br>dB0}            | {dB-6, dB-3,<br>dB0}            |
|  | transmissionModeList-r12               |                       | N/A                           | {2,3,4,8,9}                     | {2,3,4,8,9}                     |

|         |   |
|---------|---|
| Note 1: | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |
| Note 2: | Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.  |
| Note 3: | To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#0 and #5.  |
| Note 4: | All cells are time-synchronous.   |
| Note 5: | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available. |
| Note 6: | NeighCellsInfo-r12 is described in subclause 6.3.2 of [7].  |

Table 9.3.8.3.2-2 Minimum requirement (TDD)

|             | Test 1   |
|-------------|----------|
| $\gamma$    | 0.925    |
| UE Category | $\geq 2$ |

## 9.4 Reporting of Precoding Matrix Indicator (PMI)

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements for transmission mode 6, transmission mode 9 with 4 TX and transmission mode 9 with 8 TX *alternativeCodebookEnabledCLASSB\_K1=TRUE* configured are specified in terms of the ratio

$$\gamma = \frac{t_{ue}}{t_{rnd}}$$

In the definition of  $\gamma$ , for PUSCH 3-1 single PMI and PUSCH 1-2 multiple PMI requirements,  $t_{rnd}$  is 60% of the maximum throughput obtained at  $SNR_{rnd}$  using random precoding, and  $t_{ue}$  the throughput measured at  $SNR_{rnd}$  with precoders configured according to the UE reports;

For the PUCCH 2-1 single PMI requirement,  $t_{rnd}$  is 60% of the maximum throughput obtained at  $SNR_{rnd}$  using random precoding on a randomly selected full-size subband in set S subbands, and  $t_{ue}$  the throughput measured at  $SNR_{rnd}$  with both the precoder and the preferred full-size subband applied according to the UE reports;

For PUSCH 2-2 multiple PMI requirements,  $t_{rnd}$  is 60% of the maximum throughput obtained at  $SNR_{rnd}$  using random precoding on a randomly selected full-size subband in set S subbands, and  $t_{ue}$  the throughput measured at  $SNR_{rnd}$  with both the subband precoder and a randomly selected full-size subband (within the preferred subbands) applied according to the UE reports.

For PUCCH 1-1 single PMI requirement under transmission mode 9 with 4Tx and 8 TX when *alternativeCodebookEnabledCLASSB\_K1=TRUE* configured,  $t_{ue}$  is 70% of the maximum throughput obtained at  $SNR_{follow}$  using the precoders configured according to the UE reports, and  $t_{rnd}$  is the throughput measured at  $SNR_{follow}$  with random precoding.

The requirements for transmission mode 9 with 8 TX and transmission mode 9 with 4TX enhanced codebook are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, follow 2}}{t_{rnd 1, rnd 2}}$$

In the definition of  $\gamma$ , for PUSCH 3-1 single PMI, PUCCH 1-1 single PMI and PUSCH 1-2 multiple PMI requirements,  $t_{follow 1, follow 2}$  is 70% of the maximum throughput obtained at  $SNR_{follow 1, follow 2}$  using the precoders configured according to the UE reports, and  $t_{rnd 1, rnd 2}$  is the throughput measured at  $SNR_{follow 1, follow 2}$  with random precoding.

The requirements for transmission mode 9 with 12 TX, 16 TX, 24TX and 32 TX Class A codebook are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, 1, follow 1, 2, follow 2}}{t_{rnd 1, 1, rnd 1, 2, rnd 2}}$$

In the definition of  $\gamma$ , for PUSCH 3-1 single PMI and PUSCH 1-2 multiple PMI requirements,  $t_{ue, follow 1, 1, follow 1, 2, follow 2}$  is 90% of the maximum throughput obtained at  $SNR_{follow 1, 1, follow 1, 2, follow 2}$  using the precoders configured according to the UE reports, and  $t_{rnd 1, 1, rnd 1, 2, rnd 2}$  is the throughput measured at  $SNR_{follow 1, 1, follow 1, 2, follow 2}$  with random precoding.

The requirements for transmission mode 9 with 16 TX Class A *advancedCodebookEnabled=TRUE* configured are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, 1, follow 1, 2, follow 1, 3, follow 2, follow\_RPI}}{t_{follow 1, 1, follow 1, 2, follow 1, 3, follow 2, fixed\_RPI}}$$

In the definition of  $\gamma$ ,  $t_{ue, follow 1, 1, follow 1, 2, follow 1, 3, follow 2, follow\_RPI}$  is [70%] of the maximum throughput obtained at  $SNR_{follow 1, 1, follow 1, 2, follow 1, 3, follow 2, follow\_RPI}$  using the precoders configured according to both the PMI and relative power indicator (RPI) reported by the UE, and  $t_{follow 1, 1, follow 1, 2, follow 1, 3, follow 2, fixed\_RPI}$  is the throughput measured at  $SNR_{follow 1, 1, follow 1, 2, follow 1, 3, follow 2, follow\_RPI}$  using the precoders configured according to the UE reports PMI and fixed RPI equal to 0.

## 9.4.1 Single PMI

### 9.4.1.1 Minimum requirement PUSCH 3-1 (Cell-Specific Reference Symbols)

#### 9.4.1.1.1 FDD

For the parameters specified in Table 9.4.1.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.1.1-2.

**Table 9.4.1.1.1-1: PMI test for single-layer (FDD)**

| Parameter                             | Unit     | Test 1    |    |
|---------------------------------------|----------|-----------|----|
| Bandwidth                             | MHz      | 10        |    |
| Transmission mode                     |          | 6         |    |
| Propagation channel                   |          | EVA5      |    |
| Precoding granularity                 | PRB      | 50        |    |
| Correlation and antenna configuration |          | Low 2 x 2 |    |
| Downlink power allocation             | $\rho_A$ | dB        | -3 |
|                                       | $\rho_B$ | dB        | -3 |

|   |                |              |           |
|---|----------------|--------------|-----------|
|   | $\sigma$       | dB           | 0         |
|   | $N_{oc}^{(j)}$ | dB[mW/15kHz] | -98       |
| Reporting mode  |                |              | PUSCH 3-1 |
| Reporting interval  |                | ms           | 1         |
| PMI delay (Note 2)  |                | ms           | 8         |
| Measurement channel   |                |              | R. 10 FDD |
| OCNG Pattern  |                |              | OP.1 FDD  |
| Max number of HARQ transmissions  |                |              | 4         |
| Redundancy version coding sequence  |                |              | {0,1,2,3} |
| Note 1: For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).  |                |              |           |
| Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |                |              |           |

**Table 9.4.1.1.1-2 Minimum requirement (FDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.1      |
| UE Category | $\geq 1$ |

#### 9.4.1.1.2 TDD

For the parameters specified in Table 9.4.1.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.1.1.2-2.

**Table 9.4.1.1.2-1: PMI test for single-layer (TDD)**

| Parameter                             | Unit           | Test 1       |           |
|---------------------------------------|----------------|--------------|-----------|
| Bandwidth                             | MHz            | 10           |           |
| Transmission mode                     |                | 6            |           |
| Uplink downlink configuration         |                | 1            |           |
| Special subframe configuration        |                | 4            |           |
| Propagation channel                   |                | EVA5         |           |
| Precoding granularity                 | PRB            | 50           |           |
| Correlation and antenna configuration |                | Low 2 x 2    |           |
| Downlink power allocation             | $\rho_A$       | dB           | -3        |
|                                       | $\rho_B$       | dB           | -3        |
|                                       | $\sigma$       | dB           | 0         |
|                                       | $N_{oc}^{(j)}$ | dB[mW/15kHz] | -98       |
| Reporting mode                        |                |              | PUSCH 3-1 |
| Reporting interval                    |                | ms           | 1         |
| PMI delay (Note 2)                    |                | ms           | 10 or 11  |
| Measurement channel                   |                |              | R.10 TDD  |
| OCNG Pattern                          |                |              | OP.1 TDD  |
| Max number of HARQ transmissions      |                |              | 4         |
| Redundancy version coding sequence    |                |              | {0,1,2,3} |

|                        |   |              |
|------------------------|---|--------------|
| ACK/NACK feedback mode |   | Multiplexing |
| Note 1:                | For random precoder selection, the precoder shall be updated in each available downlink transmission instance.  |              |
| Note 2:                | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |              |

**Table 9.4.1.1.2-2: Minimum requirement (TDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.1      |
| UE Category | $\geq 1$ |

## 9.4.1.2 Minimum requirement PUCCH 2-1 (Cell-Specific Reference Symbols)

### 9.4.1.2.1 FDD

For the parameters specified in Table 9.4.1.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.2.1-2.

**Table 9.4.1.2.1-1: PMI test for single-layer (FDD)**

| Parameter                              | Unit  | Test 1             |    |
|--|---|--------------------|----|
| Bandwidth                              | MHz   | 10                 |    |
| Transmission mode                      |   | 6                  |    |
| Propagation channel                    |   | EVA5               |    |
| Correlation and antenna configuration  |   | Low 4 x 2          |    |
| Downlink power allocation              | $\rho_A$  | dB                 | -6 |
|  | $\rho_B$  | dB                 | -6 |
|  | $\sigma$  | dB                 | 3  |
| $N_{oc}^{(j)}$                         | dB[mW/15kHz]  | -98                |    |
| PMI delay                              | ms  | 8 or 9             |    |
| Reporting mode                         |   | PUCCH 2-1 (Note 6) |    |
| Reporting periodicity                  | ms  | $N_{pd} = 2$       |    |
| Physical channel for CQI reporting     |   | PUSCH (Note 3)     |    |
| PUCCH Report Type for wideband CQI/PMI |   | 2                  |    |
| PUCCH Report Type for subband CQI      |   | 1                  |    |
| Measurement channel                    |   | R.14-1 FDD         |    |
| OCNG Pattern                           |   | OP.1/2 FDD         |    |
| Precoding granularity                  | PRB   | 6 (full size)      |    |
| Number of bandwidth parts ( $J$ )      |   | 3                  |    |
| $K$                                    |   | 1                  |    |
| <i>cqi-pmi-ConfigIndex</i>             |   | 1                  |    |
| Max number of HARQ transmissions       |   | 4                  |    |
| Redundancy version coding sequence     |   | {0,1,2,3}          |    |
| Note 1:                                | For random precoder selection, the precoder shall be updated every two TTI (2 ms granularity).                                  |                    |    |
| Note 2:                                | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later |                    |    |

|         |   |
|---------|---|
|         | than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).   |
| Note 3: | To avoid collisions between HARQ-ACK and wideband CQI/PMI or subband CQI, it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, #3, #7 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5, #7, #1 and #3. |
| Note 4: | Reports for the short subband (having 2RBs in the last bandwidth part) are to be disregarded and instead data is to be transmitted on the most recently used subband for bandwidth part with j=1.   |
| Note 5: | In the case where wideband PMI is reported, data is to be transmitted on the most recently used subband.  |
| Note 6: | The bit field for PMI confirmation in DCI format 1B shall be mapped to "0" and TPMI information shall indicate the codebook index used in Table 6.3.4.2.3-2 of TS36.211 [4] according to the latest PMI report on PUCCH.  |

|                                    |   |              |              |              |
|------------------------------------|---|--------------|--------------|--------------|
| Redundancy version coding sequence |   | {0,1,2,3}    | {0,1,2,3}    | {0,1,2,3}    |
| ACK/NACK feedback mode             |   | Multiplexing | Multiplexing | Multiplexing |
| Note 1:                            | For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).  |              |              |              |
| Note 2:                            | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).                   |              |              |              |
| Note 3:                            | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#4 and #9 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF#3 and #8.   |              |              |              |
| Note 4:                            | Randomization of the principle beam direction shall be used as specified in B.2.3A.4  |              |              |              |
| Note 5:                            | Only one of these two aperiodic NZP CSI-RS resources will be randomly selected and activated during test. The selected aperiodic NZP CSI-RS is transmitted in every subframe #4 and #9.   |              |              |              |
| Note 6:                            | Through MAC CE, one of these two periodic NZP CSI-RS resources will be activated and the other one will be deactivated in an alternative way. The activation and deactivation command will be transmitted in sub-frame #0 per [10000] ms. |              |              |              |
| Note 7:                            | When activation and/or deactivation command through MAC CE is transmitted at subframe n, the scheduled PDSCH transmission will be skipped for the subsequent 25 subframes.  |              |              |              |

**Table 9.4.1.3.2-2: Minimum requirement (TDD)**

| Parameter   | Test 1   | Test 2   | Test 3   |
|-------------|--|----------|----------|
| $\gamma$    | 3  | 3        | 3        |
| UE Category | $\geq 1$   | $\geq 2$ | $\geq 2$ |
| Note 1:     | For UE that indicates support of csi-RS-NZP-mode 'aperiodic' and/or 'multiShot', test 2 and/or test 3 will be run and test 1 will be skipped. Otherwise, test 1 will be run and test 2 and test 3 will be skipped. |          |          |

### 9.4.1.3.3 FDD (with Class A 12Tx codebook)

For the parameters specified in Table 9.4.1.3.3-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.3.3-2.

**Table 9.4.1.3.3-1: PMI test for single-layer (FDD)**

| Parameter  | Unit | Test 1                      |
|--|------|-----------------------------|
| Bandwidth  | MHz  | 10                          |

| Note 1: For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).<br>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |          |                  |  |  |

Note 3: PDSCH\_RA= 0 dB, PDSCH\_RB= 0 dB in order to have the same PDSCH and OCNG power per subcarrier at the receiver.  
 Note 4: Randomization of the principle beam direction shall be used as specified in B.2.3B.4.  
 Note 5: Value of parameter codebookConfig shall be random selected one value from UE supported codebook configurations.

**Table 9.4.1.3.5-2: Minimum requirement (FDD)**

| Parameter   | Test 1a  | Test 1b  |
|---|----------|----------|
| $\gamma$  | 3.5      | 3.5      |
| UE Category   | $\geq 2$ | $\geq 2$ |
| Note1: For UE that indicates support of density reduction for Class A, test 1b will be run and test 1a will be skipped. Otherwise, test 1a will be run and test 1b will be skipped. |          |          |

9.4.1.3.6 TDD (with Class A 24Tx codebook)

For the parameters specified in Table 9.4.1.3.6-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.3.6-2.

**Table 9.4.1.3.6-1: PMI test for dual-layer (TDD)**

| ACK/NACK feedback mode                 |   |              | Multiplexing   | Multiplexing   |
| Note 1:                                | For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).  |              |                |                |
| Note 2:                                | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |              |                |                |
| Note 3:                                | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH.  |              |                |                |
| Note 4:                                | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#4 and #9 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF#3 and #8.   |              |                |                |

**Table 9.4.1.4.4-2 Minimum requirement (TDD)**

| Parameter   | Test 1   | Test 1a  |
|-------------|--|----------|
| $\gamma$    | 1.2  | 1.2      |
| UE Category | $\geq 2$   | $\geq 2$ |
| Note1:      | For UE that indicates support of density reduction for Class B, test 1a will be run and test 1 will be skipped. Otherwise, test 1 will be run and test 1a will be skipped. |          |

## 9.4.1a Void

### 9.4.1a.1 Void

#### 9.4.1a.1.1 Void

#### 9.4.1a.1.2 Void

## 9.4.2 Multiple PMI

### 9.4.2.1 Minimum requirement PUSCH 1-2 (Cell-Specific Reference Symbols)

#### 9.4.2.1.1 FDD

For the parameters specified in Table 9.4.2.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.2.1.1-2.

**Table 9.4.2.1.1-1: PMI test for single-layer (FDD)**

| Parameter  | Unit  | Test 1   |    |
|--|---|--|----|
| Bandwidth  | MHz   | 10   |    |
| Transmission mode  |   | 6  |    |
| Propagation channel  |   | EPA5   |    |
| Precoding granularity<br>(only for reporting and<br>following PMI) | PRB   | 6  |    |
| Correlation and<br>antenna configuration                           |   | Low 2 x 2  |    |
| Downlink<br>power<br>allocation                                    | $\rho_A$  | dB   | -3 |
|  | $\rho_B$  | dB   | -3 |
|  | $\sigma$  | dB   | 0  |
| $N_{oc}^{(j)}$   | dB[mW/15kHz]  | -98  |    |
| Reporting mode   |   | PUSCH 1-2  |    |
| Reporting interval   | ms  | 1  |    |
| PMI delay  | ms  | 8  |    |
| Measurement channel  |   | R.11-3 FDD<br>for UE<br>Category 1,<br>R.11 FDD for<br>UE Category<br>$\geq 2$ |    |
| OCNG Pattern   |   | OP.1/2 FDD   |    |
| Max number of HARQ<br>transmissions                                |   | 4  |    |
| Redundancy version<br>coding sequence                              |   | {0,1,2,3}  |    |
| Note 1:  | For random precoder selection, the precoders shall be updated in each TTI (1 ms granularity).   |  |    |
| Note 2:  | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |  |    |
| Note 3:  | One/two sided dynamic OCNG Pattern OP.1/2 FDD as described in Annex A.5.1.1/2 shall be used.  |  |    |

**Table 9.4.2.1.1-2: Minimum requirement (FDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.2      |
| UE Category | $\geq 1$ |

### 9.4.2.1.2 TDD

For the parameters specified in Table 9.4.2.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.2.1.2-2.

**Table 9.4.2.1.2-1: PMI test for single-layer (TDD)**

| Parameter                        | Unit | Test 1 |
|----------------------------------|------|--------|
| Bandwidth                        | MHz  | 10     |
| Transmission mode                |      | 6      |
| Uplink downlink<br>configuration |      | 1      |

| Downlink power allocation   | $\rho_A$ | dB           | -3  |
|   | $\rho_B$ | dB           | -3  |
|   | $\sigma$ | dB           | 0   |
| $N_{oc}^{(j)}$  |          | dB[mW/15kHz] | -98   |
| Reporting mode  |          |              | PUSCH 1-2   |
| Reporting interval  |          | ms           | 1   |
| PMI delay   |          | ms           | 10 or 11  |
| Measurement channel   |          |              | R.11-3 TDD for UE Category 1<br>R.11 TDD for UE Category $\geq 2$ |
| OCNG Pattern  |          |              | OP.1/2 TDD  |
| Max number of HARQ transmissions  |          |              | 4   |
| Redundancy version coding sequence  |          |              | {0,1,2,3}   |
| ACK/NACK feedback mode  |          |              | Multiplexing  |
| <p>Note 1: For random precoder selection, the precoders shall be updated in each available downlink transmission instance.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: One/two sided dynamic OCNG Pattern OP.1/2 TDD as described in Annex A.5.2.1/2 shall be used.</p> |          |              |   |

**Table 9.4.2.1.2-2: Minimum requirement (TDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.2      |
| UE Category | $\geq 1$ |

## 9.4.2.2 Minimum requirement PUSCH 2-2 (Cell-Specific Reference Symbols)

### 9.4.2.2.1 FDD

For the parameters specified in Table 9.4.2.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.2.2.1-2.

**Table 9.4.2.2.1-1: PMI test for single-layer (FDD)**

| Parameter           | Unit | Test 1 |
|---------------------|------|--------|
| Bandwidth           | MHz  | 10     |
| Transmission mode   |      | 6      |
| Propagation channel |      | EVA5   |

|   |          |              |               |
|---|----------|--------------|---------------|
| Correlation and antenna configuration   |          |              | Low 4 x 2     |
| Downlink power allocation   | $\rho_A$ | dB           | -6            |
|   | $\rho_B$ | dB           | -6            |
|   | $\sigma$ | dB           | 3             |
| $N_{oc}^{(j)}$  |          | dB[mW/15kHz] | -98           |
| PMI delay   |          | ms           | 8             |
| Reporting mode  |          |              | PUSCH 2-2     |
| Reporting interval  |          | ms           | 1             |
| Measurement channel   |          |              | R.14-2 FDD    |
| OCNG Pattern  |          |              | OP.1/2 FDD    |
| Subband size ( $k$ )  |          | RBs          | 3 (full size) |
| Number of preferred subbands ( $M$ )  |          |              | 5             |
| Max number of HARQ transmissions  |          |              | 4             |
| Redundancy version coding sequence  |          |              | {0,1,2,3}     |
| Note 1: For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity)   |          |              |               |
| Note 2: If the UE reports in an available uplink reporting instance at subframe SF# $n$ based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4) |          |              |               |

**Table 9.4.2.2.1-2: Minimum requirement (FDD)**

|             | Test 1   |
|-------------|----------|
| $\gamma$    | 1.2      |
| UE Category | $\geq 1$ |

#### 9.4.2.2.2 TDD

For the parameters specified in Table 9.4.2.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.2.2.2-2.

**Table 9.4.2.2.2-1: PMI test for single-layer (TDD)**

| Parameter                             | Unit     | Test 1       |               |
|---------------------------------------|----------|--------------|---------------|
| Bandwidth                             | MHz      | 10           |               |
| Transmission mode                     |          | 6            |               |
| Uplink downlink configuration         |          | 1            |               |
| Special subframe configuration        |          | 4            |               |
| Propagation channel                   |          | EVA5         |               |
| Correlation and antenna configuration |          | Low 4 x 2    |               |
| Downlink power allocation             | $\rho_A$ | dB           | -6            |
|                                       | $\rho_B$ | dB           | -6            |
|                                       | $\sigma$ | dB           | 3             |
| $N_{oc}^{(j)}$                        |          | dB[mW/15kHz] | -98           |
| PMI delay                             |          | ms           | 10            |
| Reporting mode                        |          |              | PUSCH 2-2     |
| Reporting interval                    |          | ms           | 1             |
| Measurement channel                   |          |              | R.14-2 TDD    |
| OCNG Pattern                          |          |              | OP.1/2 TDD    |
| Subband size ( $k$ )                  |          | RBs          | 3 (full size) |
| Number of preferred subbands ( $M$ )  |          |              | 5             |

|   |  |              |
|---|--|--------------|
| Max number of HARQ transmissions  |  | 4            |
| Redundancy version coding sequence  |  | {0,1,2,3}    |
| ACK/NACK feedback mode  |  | Multiplexing |
| <p>Note 1: For random precoder selection, the precoders shall be updated in each available downlink transmission instance.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> |  |              |

**Table 9.4.2.2-2 Minimum requirement (TDD)**

|             | Test 1   |
|-------------|----------|
| $\gamma$    | 1.15     |
| UE Category | $\geq 1$ |

### 9.4.2.3 Minimum requirement PUSCH 1-2 (CSI Reference Symbol)

#### 9.4.2.3.1 FDD

For the parameters specified in Table 9.4.2.3.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.2.3.1-2.

**Table 9.4.2.3.1-1: PMI test for single-layer (FDD)**

| Parameter  | Unit         | Test 1                              |    |
|--|--------------|-------------------------------------|----|
| Bandwidth  | MHz          | 10                                  |    |
| Transmission mode  |              | 9                                   |    |
| Propagation channel  |              | EVA5                                |    |
| Precoding granularity (only for reporting and following PMI)                           | PRB          | 6                                   |    |
| Correlation and antenna configuration  |              | Low<br>ULA 4 x 2                    |    |
| Cell-specific reference signals  |              | Antenna ports<br>0,1                |    |
| CSI reference signals  |              | Antenna ports<br>15,...,18          |    |
| Beamforming model  |              | Annex B.4.3                         |    |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$ |              | 5/ 1                                |    |
| CSI-RS reference signal configuration  |              | 8                                   |    |
| CodeBookSubsetRestriction bitmap   |              | 0x0000 0000<br>0000 FFFF            |    |
| Downlink power allocation  | $\rho_A$     | dB                                  | 0  |
|  | $\rho_B$     | dB                                  | 0  |
|  | $P_c$        | dB                                  | -3 |
|  | $\sigma$     | dB                                  | -3 |
| $N_{oc}^{(j)}$   | dB[mW/15kHz] | -98                                 |    |
| Reporting mode   |              | PUSCH 1-2                           |    |
| Reporting interval   | ms           | 5                                   |    |
| PMI delay  | ms           | 8                                   |    |
| Measurement channel  |              | R.45-1 FDD<br>for UE<br>Category 1, |    |

|                                    |   |   |
|------------------------------------|---|---|
|                                    |   | R.45 FDD for UE Category $\geq 2$                               |
| OCNG Pattern                       |   | OP.7 FDD for UE Category 1<br>OP.1 FDD for UE Category $\geq 2$ |
| Max number of HARQ transmissions   |   | 4   |
| Redundancy version coding sequence |   | {0,1,2,3}   |
| Note 1:                            | For random precoder selection, the precoders shall be updated in each TTI (1 ms granularity).   |   |
| Note 2:                            | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |   |
| Note 3:                            | Void.   |   |
| Note 4:                            | PDSCH_RA= 0 dB, PDSCH_RB= 0 dB in order to have the same PDSCH and OCNG power per subcarrier at the receiver.   |   |

**Table 9.4.2.3.1-2: Minimum requirement (FDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.3      |
| UE Category | $\geq 1$ |

#### 9.4.2.3.2 TDD

For the parameters specified in Table 9.4.2.3.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.2.3.2-2.

**Table 9.4.2.3.2-1: PMI test for single-layer (TDD)**

| Parameter  | Unit | Test 1                   |
|--|------|--------------------------|
| Bandwidth  | MHz  | 10                       |
| Transmission mode  |      | 9                        |
| Uplink downlink configuration  |      | 1                        |
| Special subframe configuration   |      | 4                        |
| Propagation channel  |      | EVA5                     |
| Precoding granularity (only for reporting and following PMI)                           | PRB  | 6                        |
| Antenna configuration  |      | 8 x 2                    |
| Correlation modeling   |      | High, Cross polarized    |
| Cell-specific reference signals  |      | Antenna ports 0,1        |
| CSI reference signals  |      | Antenna ports 15,...,22  |
| Beamforming model  |      | Annex B.4.3              |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$ |      | 5/ 4                     |

## 9.4.2.3.4 TDD (with 4Tx enhanced codebook)

For the parameters specified in Table 9.4.2.3.4-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.2.3.4-2.

Table 9.4.2.3.4-1 PMI test for dual-layer (TDD)

| Parameter   | Unit  | Test 1  |    |
|---|---|---|----|
| Bandwidth   | MHz   | 10  |    |
| Transmission mode   |   | 9   |    |
| Uplink downlink configuration   |   | 1   |    |
| Special subframe configuration  |   | 4   |    |
| Propagation channel   |   | EVA5  |    |
| Precoding granularity (only for reporting and following PMI)                      | PRB   | 6   |    |
| Correlation and antenna configuration   |   | XP High 4 x 2   |    |
| Beamforming model   |   | Annex B.4.3   |    |
| Cell-specific reference signals   |   | Antenna ports 0,1   |    |
| CSI reference signals   |   | Antenna ports 15,...,18   |    |
| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / I_{\text{CSI-RS}}$ |   | 5/ 4  |    |
| CSI-RS reference signal configuration   |   | 4   |    |
| CodeBookSubsetRestriction bitmap  |   | 0x0000 0000 FFFF<br>0000 FFFF 0000                              |    |
| Downlink power allocation   | $\rho_A$  | dB  | 0  |
|   | $\rho_B$  | dB  | 0  |
|   | $P_c$   | dB  | -3 |
|   | $\sigma$  | dB  | -3 |
| $N_{oc}^{(j)}$  | dB[mW/15kHz]  | -98   |    |
| Reporting mode  |   | PUSCH1-2  |    |
| Reporting interval  | ms  | 5   |    |
| PMI delay (Note 2)  | ms  | 10  |    |
| Measurement channel   |   | R.61-1 TDD for UE Category 1, R.61 TDD for UE Category $\geq 2$ |    |
| Rank Number of PDSCH  |   | 2   |    |
| OCNG Pattern  |   | OP.7 FDD for UE Category 1<br>OP.1 FDD for UE Category $\geq 2$ |    |
| Max number of HARQ transmissions  |   | 4   |    |
| Redundancy version coding sequence  |   | {0,1,2,3}   |    |
| ACK/NACK feedback mode  |   | Multiplexing  |    |
| alternativeCodeBookEnable<br>dFor4TX-r12  |   | True  |    |
| Note 1:   | For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity)   |   |    |
| Note 2:   | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). |   |    |
| Note3:  | Void.   |   |    |
| Note 4:   | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#4 and #9 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF#3 and #8.   |   |    |
| Note 5:   | Randomization of the principle beam direction shall be used as specified in B.2.3A.4.   |   |    |

**Table 9.4.2.3.4-2 Minimum requirement (TDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.2      |
| UE Category | $\geq 1$ |

#### 9.4.2.3.5 FDD (with Class A 16Tx codebook)

For the parameters specified in Table 9.4.2.3.5-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.2.3.5-2.

**Table 9.4.2.3.5-1: PMI test for dual-layer (FDD)**

| Parameter  | Unit           | Test 1   |           |
|--|----------------|--|-----------|
| Bandwidth  | MHz            | 10   |           |
| Transmission mode  |                | 9  |           |
| Propagation channel  |                | EVA5   |           |
| Precoding granularity<br>(only for reporting and following PMI)                        | PRB            | 6  |           |

| $\gamma$    | 1.03     |
| UE Category | $\geq 2$ |

### 9.4.3 Void

## 9.5 Reporting of Rank Indicator (RI)

The purpose of this test is to verify that the reported rank indicator accurately represents the channel rank. The accuracy of RI (CQI) reporting is determined by the relative increase of the throughput obtained when transmitting based on the reported rank compared to the case for which a fixed rank is used for transmission. Transmission mode 4 is used with the specified CodebookSubSetRestriction in section 9.5.1, transmission mode 9 is used with the specified CodebookSubSetRestriction in section 9.5.2 and transmission mode 3 is used with the specified CodebookSubSetRestriction in section 9.5.3, and transmission mode 10 is used with the specified CodebookSubSetRestriction in section 9.5.5.

For fixed rank 1 transmission in sections 9.5.1, 9.5.2 and 9.5.5, the RI and PMI reporting is restricted to two single-layer precoders, For fixed rank 2 transmission in sections 9.5.1, 9.5.2 and 9.5.5, the RI and PMI reporting is restricted to one two-layer precoder, For follow RI transmission in sections 9.5.1 and 9.5.2, the RI and PMI reporting is restricted to select the union of these precoders. Channels with low and high correlation are used to ensure that RI reporting reflects the channel condition.

For fixed rank 1 transmission in section 9.5.3, the RI reporting is restricted to single-layer, for fixed rank 2 transmission in section 9.5.3, the RI reporting is restricted to two-layers. For follow RI transmission in section 9.5.3, the RI reporting is either one or two layers.

### 9.5.1 Minimum requirement (Cell-Specific Reference Symbols)

#### 9.5.1.1 FDD

The minimum performance requirement in Table 9.5.1.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.5.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.1.1-2.

**Table 9.5.1.1-1: RI Test (FDD)**

| Parameter                                       | Unit     | Test 1  | Test 2 | Test 3 |
|---|----------|---|--------|--------|
| Bandwidth                                       | MHz      | 10  |        |        |

| UE Category | $\geq 2$ | $\geq 2$ | $\geq 2$ |

### 9.5.1.2 TDD

The minimum performance requirement in Table 9.5.1.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.5.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.1.2-2.

**Table 9.5.1.2-1: RI Test (TDD)**

| Parameter               | Unit | Test 1 | Test 2 | Test 3 |
|-------------------------|------|--------|--------|--------|
| Bandwidth               | MHz  | 10     |        |        |
| PDSCH transmission mode |      | 4      |        |        |

|  |          |              |   |                          |                          |
|--|----------|--------------|---|--------------------------|--------------------------|
| Downlink power allocation  | $\rho_A$ | dB           | -3  |                          |                          |
|  | $\rho_B$ | dB           | -3  |                          |                          |

| UE Category | $\geq 2$ | $\geq 2$ | $\geq 2$ |

## 9.5.2 Minimum requirement (CSI Reference Symbols)

### 9.5.2.1 FDD

The minimum performance requirement in Table 9.5.2.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.5.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.2.1-2.

**Table 9.5.2.1-1: RI Test (FDD)**

| Parameter                 | Unit     | Test 1 | Test 2 | Test 3 |
|---------------------------|----------|--------|--------|--------|
| Bandwidth                 | MHz      | 10     |        |        |

| UE Category | $\geq 2$ | $\geq 2$ | $\geq 2$ |

**9.5.2.2 TDD**

The minimum performance requirement in Table 9.5.2.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;

b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.5.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.2.2-2.

**Table 9.5.2.2-1: RI Test (TDD)**

| Parameter  | Unit  | Test 1                   | Test 2  | Test 3                   |
|--|---|--------------------------|---|--------------------------|
| Bandwidth  | MHz   |                          | 10  |                          |
| PDSCH transmission mode  |   |                          | 9   |                          |

### 9.5.3 Minimum requirement (CSI measurements in case two CSI subframe sets are configured)

#### 9.5.3.1 FDD

The minimum performance requirement in Table 9.5.3.1-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$

For the parameters specified in Table 9.5.3.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.3.1-2.

**Table 9.5.3.1-1: RI Test (FDD)**

| Parameter                                       |                 | Unit         | Test 1  |  | Test 2  |  |
|---|-----------------|--------------|---|--|---|--|
|   |                 |              | Cell 1  | Cell 2                                       | Cell 1  | Cell 2                                       |

| Note 3:                                       | This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.   |  |          |  |          |
| Note 4:                                       | This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.  |  |          |  |          |
| Note 5:                                       | This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS   |  |          |  |          |
| Note 6:                                       | ABS pattern as defined in [9].   |  |          |  |          |
| Note 7:                                       | Time-domain measurement resource restriction pattern for PCell measurements as defined in [7].   |  |          |  |          |
| Note 8:                                       | As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].   |  |          |  |          |
| Note 9:                                       | Cell 1 is the serving cell. Cell 2 is the aggressor cell. The number of the CRS ports in Cell 1 and Cell 2 is the same.  |  |          |  |          |
| Note 10:                                      | Downlink physical channel setup in Cell 2 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.1.5.  |  |          |  |          |

**Table 9.5.3.1-2: Minimum requirement (FDD)**

|             | Test 1   | Test 2   |
|-------------|----------|----------|
| $\gamma_1$  | 0.9      | 1.05     |
| UE Category | $\geq 2$ | $\geq 2$ |

9.5.3.2 TDD

The minimum performance requirement in Table 9.5.3.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ .

For the parameters specified in Table 9.5.3.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.3.2-2.

**Table 9.5.3.2-1: RI Test (TDD)**

| Parameter                                       |                | Unit          | Test1   |                                  | Test2   |                          |
|---|----------------|---------------|---|----------------------------------|---|--------------------------|
|   |                |               | Cell 1  | Cell 2                           | Cell 1  | Cell 2                   |
| Bandwidth                                       |                | MHz           | 10  |                                  | 10  |                          |
| PDSCH transmission mode                         |                |               | 3   | Note 11                          | 3   | Note 11                  |
| Uplink downlink configuration                   |                |               | 1   |                                  | 1   |                          |

## 9.5.4 Minimum requirement (CSI measurements in case two CSI subframe sets are configured and CRS assistance information are configured)

### 9.5.4.1 FDD

For the parameters specified in Table 9.5.4.1-1, the minimum performance requirement in Table 9.5.4.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

In Table 9.5.4.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] including Cell 2 and Cell 3 is provided.

Table 9.5.4.1-1: RI Test (FDD)

| Parameter                                       |             | Unit         | Cell 1  | Cell 2   | Cell 3   |
|---|-------------|--------------|---|--|--|

### 9.5.4.2 TDD

For the parameters specified in Table 9.5.4.2-1, the minimum performance requirement in Table 9.5.4.2-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

In Table 9.5.4.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] including Cell 2 and Cell 3 is provided.

**Table 9.5.4.2-1: RI Test (TDD)**

| Parameter                     | Unit | Cell 1 | Cell 2               | Cell 3               |
|-------------------------------|------|--------|----------------------|----------------------|
| Bandwidth                     | MHz  | 10     | 10                   | 10                   |

| <i>cqi-pmi-ConfigurationIndex2</i>                    |             |              | 9   | N/A                    | N/A                    |
| <i>ri-ConfigurationInd2</i>                           |             |              | 0   | N/A                    | N/A                    |
| Cyclic prefix   |             |              | Normal  | Normal                 | Normal                 |

- Note 1: Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern OP.5 TDD as defined in Annex A.5.2.5.
- Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
- Note 3: This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.
- Note 4: This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.
- Note 5: This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS
- Note 6: ABS pattern as defined in [9]. PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
- Note 7: Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
- Note 8: As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].
- Note 9: The number of control OFDM symbols is not available for ABS and is 3 for the subframe indicated by "0" of ABS pattern.
- Note 10: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4).
- Note 11: Reference measurement channel in Cell 1 RC.2 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.
- Note 12: The number of the CRS ports in Cell1, Cell2 and Cell 3 is the same.
- Note 13: SIB-1 will not be transmitted in Cell2 and Cell 3 in this test.
- Note 14: To avoid collisions between RI/CQI reports and HARQ-ACK it is necessary to report them on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic RI/CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.

**Table 9.5.4.2-2: Minimum requirement (TDD)**

|  | <b>Test 1</b>                              | <b>Test 2</b>                     | <b>Test 3</b>                              |

### 9.5.5 Minimum requirement (with CSI process)

Each CSI process is associated with a CSI-RS resource and a CSI-IM resource as shown in Table 9.5.5-1.

For UE supports one CSI process, CSI process 0 is configured for Test 1 and Test 2, but CSI process 1 is not configured for Test 2. The corresponding  $\gamma$  requirements for Test 1 and Test 2 shall be fulfilled. The requirement on reported RI for CSI process 1 in Test 2 is not applicable.

For UE supports multiple CSI processes, CSI process 0 is configured for Test 1 and CSI processes 0 and 1 are configured for Test 2. The corresponding  $\gamma$  requirements for Test 1 and Test 2 shall be fulfilled, and also the requirement on reported RI for CSI process 1 in Test 2.

**Table 9.5.5-1: Configuration of CSI processes**

|                 | <b>CSI process 0</b> | <b>CSI process 1</b> |
|-----------------|----------------------|----------------------|
| CSI-RS resource | CSI-RS signal 0      | CSI-RS signal 1      |
| CSI-IM resource | CSI-IM resource 0    | CSI-IM resource 1    |

## 9.5.5.1 FDD

The minimum performance requirement in Table 9.5.5.1-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;
- c) For Test 2, the RI reported for CSI process 1 shall be the same as the most recent RI reported for CSI process 0 if UE is configured with multiple CSI processes.

For the parameters specified in Table 9.5.5.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.5.1-2.

Table 9.5.5.1-1: RI Test (FDD)

| Parameter  |              | Unit | Test 1                        |                             | Test 2                        |                              |
|--|--------------|------|-------------------------------|-----------------------------|-------------------------------|------------------------------|
|  |              |      | TP1                           | TP2                         | TP1                           | TP2                          |
| Bandwidth  |              | MHz  | 10 MHz                        |                             | 10 MHz                        |                              |

| Note 1:                              | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |    |  |                        |  |                        |
| Note 2:                              | 3 symbols allocated to PDCCH  |    |  |                        |  |                        |
| Note 3:                              | Reference measurement channel RC.13 FDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 2, 3, 4, 7, 8 and 9 from TP1.   |    |  |                        |  |                        |
| Note 4:                              | TM10 OCNG as specified in A.5.1.8 is transmitted on subframe 1 and 6 from TP1.  |    |  |                        |  |                        |
| Note 5:                              | TM10 OCNG as specified in A.5.1.8 is transmitted on subframe 1, 2, 3, 4, 6, 7, 8 and 9 from TP2 for Test 1; TP2 is blanked for Test 2.  |    |  |                        |  |                        |
| Note 6:                              | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5. |    |  |                        |  |                        |
| Note 7:                              | If UE supports multiple CSI processes, CSI process 0 is configured as 'RI-reference CSI process' for CSI process 1.   |    |  |                        |  |                        |
| Note 8:                              | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#1 and #6 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#0 and #5.   |    |  |                        |  |                        |
| Note 9:                              | If UE supports one CSI process, CSI process 1 is not configured in Test 2.  |    |  |                        |  |                        |

**Table 9.5.5.1-2: Minimum requirement (FDD)**

|             | Test 1   | Test 2   |
|-------------|----------|----------|
| $\gamma_1$  | N/A      | 1.0      |
| $\gamma_2$  | 1.0      | N/A      |
| UE Category | $\geq 2$ | $\geq 2$ |

**9.5.5.2 TDD**

The minimum performance requirement in Table 9.5.5.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

- c) For Test 2, the RI reported for CSI process 1 shall be the same as the most recent RI reported for CSI process 0 if UE is configured with multiple CSI processes.

For the parameters specified in Table 9.5.5.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.5.2-2.

**Table 9.5.5.2-1: RI Test (TDD)**

| Parameter   | Unit               | Test 1                        |                       | Test 2                        |                       |
|---|--------------------|-------------------------------|-----------------------|-------------------------------|-----------------------|
|   |                    | TP1                           | TP2                   | TP1                           | TP2                   |

| Quasi-co-located CRS             |   |    | Same Cell ID as Cell 1                               | Same Cell ID as Cell 2 | Same Cell ID as Cell 1                               | Same Cell ID as Cell 2 |
| PMI for subframe 4 and 9         |   |    | 010000 for fixed RI = 2<br>010011 for UE reported RI | 100000                 | 000011 for fixed RI = 1<br>010011 for UE reported RI | N/A                    |
| PMI for subframe 3 and 8         |   |    | 100000   | 100000                 | 100000   | N/A                    |
| Max number of HARQ transmissions |   |    | 1  | N/A                    | 1  | N/A                    |
| ACK/NACK feedback mode           |   |    | Multiplexing   | N/A                    | Multiplexing   | N/A                    |
| Note 1:                          | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4) |    |  |                        |  |                        |
| Note 2:                          | 3 symbols allocated to PDCCH  |    |  |                        |  |                        |
| Note 3:                          | Reference measurement channel RC.13 TDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 4 and 9 from TP1.   |    |  |                        |  |                        |
| Note 4:                          | TM10 OCNG as specified in A.5.2.8 is transmitted on subframe 3 and 8 from TP1.  |    |  |                        |  |                        |
| Note 5:                          | TM10 OCNG as specified in A.5.2.8 is transmitted on subframe 3, 4, 8 and 9 from TP2 for Test 1; TP2 is blanked for Test 2.  |    |  |                        |  |                        |
| Note 6:                          | Reported wideband CQI and PMI are used and sub-band CQI is discarded.   |    |  |                        |  |                        |
| Note 7:                          | If UE supports multiple CSI processes, CSI process 0 is configured as 'RI-reference CSI process' for CSI process 1.   |    |  |                        |  |                        |
| Note 8:                          | If UE supports one CSI process, CSI process 1 is not configured in Test 2.  |    |  |                        |  |                        |
| Note 9:                          | PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 and #8 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#7 and #2.   |    |  |                        |  |                        |

Table 9.5.5.2-2: Minimum requirement (TDD)

|             | Test 1   | Test 2   |
|-------------|----------|----------|
| $\gamma_1$  | N/A      | 1.0      |
| $\gamma_2$  | 1.0      | N/A      |
| UE Category | $\geq 2$ | $\geq 2$ |

## 9.6 Additional requirements for carrier aggregation

This clause includes requirements for the reporting of channel state information (CSI) with the UE configured for carrier aggregation. The purpose is to verify that the channel state for each cell is correctly reported with multiple cells configured for periodic reporting.

### 9.6.1 Periodic reporting on multiple cells (Cell-Specific Reference Symbols)

#### 9.6.1.1 FDD

The following requirements apply to UE Category  $\geq 3$ . For CA with 2 DL CC, for the parameters specified in Table 9.6.1.1-1 and Table 9.6.1.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of Pcell and Scell reported shall be such that

$$\text{wideband CQI}_{\text{Pcell}} - \text{wideband CQI}_{\text{Scell}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.1-1: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 2 DL CA)

| Parameter                 | Unit     | Pcell | Scell |
|---------------------------|----------|-------|-------|
| PDSCH transmission mode   |          |       | 1     |
| Downlink power allocation | $\rho_A$ | dB    | 0     |
|                           | $\rho_B$ | dB    | 0     |

|   |  |                |                                      |
|---|--|----------------|--------------------------------------|
| Propagation condition and antenna configuration |  | AWGN (1 x 2)   |                                      |
| SNR   | dB   | 10             | 4                                    |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz]   | -88            | -94                                  |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]   | -98            | -98                                  |
| Physical channel for CQI reporting              |  | PUCCH Format 2 |                                      |
| PUCCH Report Type                               |  | 4              |                                      |
| Reporting periodicity                           | ms   | $N_{pd} = 10$  |                                      |
| <i>cqi-pmi-ConfigurationIndex</i>               |  | 11             | 16 (shift of 5 ms relative to Pcell) |
| Note 1:   | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1. |                |                                      |
| Note 2:   | Void   |                |                                      |

**Table 9.6.1.1-2: PUCCH 1-0 static test (FDD, 2 DL CA)**

| Test number | Bandwidth combination   |
|-------------|---|
| 1           | 10MHz for both cells  |
| 2           | 20MHz for both cells  |
| 3           | 5MHz for both cells   |
| 4           | 5MHz for PCell and 10MHz for SCell  |
| 5           | 5MHz for PCell and 15MHz for SCell  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. |
| Note 2:     | Mapping of PCell and SCell to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.  |

The following requirements for 3DL CA apply to UE Category  $\geq 5$ . For CA with 3 DL CC, for the parameters specified in Table 9.6.1.1-3 and Table 9.6.1.1-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category  $\geq 8$ . For CA with 4 DL CC, for the parameters specified in Table 9.6.1.1-3 and Table 9.6.1.1-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, and SCell 1 and SCell 3 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell3} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.1-3: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 3 and 4 DL CA)**

| Parameter                                       | Unit     | Pcell        | Scell1 | Scell2, 3 |
|---|----------|--------------|--------|-----------|
| PDSCH transmission mode                         |          | 1            |        |           |
| Downlink power allocation                       | $\rho_A$ | dB           | 0      |           |
|   | $\rho_B$ | dB           | 0      |           |
| Propagation condition and antenna configuration |          | AWGN (1 x 2) |        |           |

|                                    |   |                |                                      |  |
|------------------------------------|---|----------------|--------------------------------------|--|
| SNR                                | dB  | 12             | 6                                    | 0  |
| $\hat{I}_{or}^{(j)}$               | dB[mW/15kHz]  | -86            | -92                                  | -98  |
| $N_{oc}^{(j)}$                     | dB[mW/15kHz]  | -98            | -98                                  | -98  |
| Physical channel for CQI reporting |   | PUCCH Format 2 |                                      |  |
| PUCCH Report Type                  |   | 4              |                                      |  |
| Reporting periodicity              | ms  | $N_{pd} = 20$  |                                      |  |
| <i>cqi-pmi-ConfigurationIndex</i>  |   | 21             | 26 (shift of 5 ms relative to Pcell) | 31 for Scell2 (shift of 10 ms relative to Pcell) , 36 for Scell3 (shift of 15ms relative to Pcell) |
| Note 1:                            | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCN Pattern OP.1 FDD as described in Annex A.5.1.1. |                |                                      |  |
| Note 2:                            | Void  |                |                                      |  |

**Table 9.6.1.1-4: PUCCH 1-0 static test (FDD, 3 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 3x20  |
| 2           | 20+20+15  |
| 3           | 20+20+10  |
| 4           | 20+15+15  |
| 5           | 20+15+10  |
| 6           | 20+10+10  |
| 7           | 15+15+10  |
| 8           | 20+10+5   |
| 9           | 20+15+5   |
| 10          | 10+10+5   |
| 11          | 5+5+20  |
| 12          | 3x10  |
| 13          | 5+5+10  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.   |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping. |

**Table 9.6.1.1-5: PUCCH 1-0 static test (FDD, 4 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 4x20  |
| 2           | 20+20+20+10   |
| 3           | 20+20+10+10   |
| 4           | 20+20+10+5  |
| 5           | 20+10+10+5  |
| 6           | 15+3x20   |
| 7           | 2x15+2x20   |
| 8           | 10+15+2x20  |
| 9           | 3x10+20   |
| 10          | 2x5+2x20  |
| 11          | 2x5+10+20   |
| 12          | 4x10  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth   |

as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 5DL CA apply to UE Category 8 and  $\geq 11$ . For CA with 5 DL CC, for the parameters specified in Table 9.6.1.1-6 and Table 9.6.1.1-7, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, and SCell 1 and SCell 4 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.1-6: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 5 DL CA)**

| Parameter                                       | Unit   | Pcell          | Scell1                               | Scell2, 3, 4   |
|---|--|----------------|--------------------------------------|--|
| PDSCH transmission mode                         |  | 1              |                                      |  |
| Downlink power allocation                       | $\rho_A$   | dB             |                                      |  |
|   | $\rho_B$   | dB             |                                      |  |

| SNR   | dB   | 12             | 6                                    | 0  |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz]   | -86            | -92                                  | -98  |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]   | -98            | -98                                  | -98  |
| Physical channel for CQI reporting              |  | PUCCH Format 2 |                                      |  |
| PUCCH Report Type                               |  | 4              |                                      |  |
| Reporting periodicity                           | ms   | $N_{pd} = 40$  |                                      |  |
| <i>cqi-pmi-ConfigurationIndex</i>               |  | 41             | 46 (shift of 5 ms relative to Pcell) | 51 for Scell 2 (shift of 10 ms relative to Pcell), 56 for Scell 3 (shift of 15ms relative to Pcell), 61 for Scell4 (shift of 20ms relative to Pcell) |
| Note 1:   | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1. |                |                                      |  |
| Note 2:   | Void   |                |                                      |  |

**Table 9.6.1.1-7: PUCCH 1-0 static test (FDD, 5 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 5x20  |
| 2           | 15+4x20   |
| 3           | 10+4x20   |
| 4           | 2x10+3x20   |
| 5           | 5+10+3x20   |
| 6           | 3x10+2x20   |
| 7           | 4x10+20   |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs  |

shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 6DL CA apply to UE Category 8 and  $\geq 11$ . For CA with 6 DL CC, for the parameters specified in Table 9.6.1.1-8 and Table 9.6.1.1-9, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, and SCell 1 and SCell 5 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.1-8: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 6 DL CA)**

| Parameter                                       | Unit   | Pcell          | Scell1                               | Scell2, 3, 4, 5   |
|---|--|----------------|--------------------------------------|---|
| PDSCH transmission mode                         |  | 1              |                                      |   |
| Downlink power allocation                       | $\rho_A$   | dB             |                                      |   |
|   | $\rho_B$   | dB             |                                      |   |
| Propagation condition and antenna configuration |  | AWGN (1 x 2)   |                                      |   |
| SNR   | dB   | 12             | 6                                    | 0   |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz]   | -86            | -92                                  | -98   |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]   | -98            | -98                                  | -98   |
| Physical channel for CQI reporting              |  | PUCCH Format 2 |                                      |   |
| PUCCH Report Type                               |  | 4              |                                      |   |
| Reporting periodicity                           | ms   | $N_{pd} = 40$  |                                      |   |
| <i>cqi-pmi-ConfigurationIndex</i>               |  | 41             | 46 (shift of 5 ms relative to Pcell) | 51 for Scell 2 (shift of 10 ms relative to Pcell), 56 for Scell 3 (shift of 15ms relative to Pcell), 61 for Scell4 (shift of 20ms relative to Pcell), 66 for Scell5 (shift of 25ms relative to Pcell) |
| Note 1:   | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1. |                |                                      |   |
| Note 2:   | Void   |                |                                      |   |

**Table 9.6.1.1-9: PUCCH 1-0 static test (FDD, 6 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 6x20  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.   |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping. |

The following requirements for 7DL CA apply to UE Category 8 and  $\geq 11$ . For CA with 7 DL CC, for the parameters specified in Table 9.6.1.1-10 and Table 9.6.1.1-11, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, SCell 1 and SCell 5, and SCell 1 and SCell 6 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell6}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.1-10: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 7 DL CA)**

| Parameter                                       | Unit   | Pcell          | Scell1                               | Scell2, 3, 4, 5, 6   |
|---|--|----------------|--------------------------------------|--|
| PDSCH transmission mode                         |  | 1              |                                      |  |
| Downlink power allocation                       | $\rho_A$   | dB             |                                      |  |
|   | $\rho_B$   | dB             |                                      |  |

| Note 2:   | Void   |                |                                      |  |

**Table 9.6.1.1-11: PUCCH 1-0 static test (FDD, 7 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 7x20  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.   |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping. |

### 9.6.1.2 TDD

The following requirements apply to UE Category  $\geq 3$ . For CA with 2 DL CC, for the parameters specified in Table 9.6.1.2-1 and Table 9.6.1.2-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of Pcell and Scell reported shall be such that

$$\text{wideband CQI}_{\text{Pcell}} - \text{wideband CQI}_{\text{Scell}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.2-1: PUCCH 1-0 static test on multiple cells (TDD, 2 DL CA)**

| Parameter                                       |  | Unit         | Pcell          | Scell                                |
|---|--|--------------|----------------|--------------------------------------|
| PDSCH transmission mode                         |  |              | 1              |                                      |
| Uplink downlink configuration                   |  |              | 2              |                                      |
| Special subframe configuration                  |  |              | 4              |                                      |
| Downlink power allocation                       | $\rho_A$   | dB           | 0              |                                      |
|   | $\rho_B$   | dB           | 0              |                                      |
| Propagation condition and antenna configuration |  |              | AWGN (1 x 2)   |                                      |
| SNR   |  | dB           | 10             | 4                                    |
| $\hat{I}_{or}^{(j)}$                            |  | dB[mW/15kHz] | -88            | -94                                  |
| $N_{oc}^{(j)}$                                  |  | dB[mW/15kHz] | -98            | -98                                  |
| Physical channel for CQI reporting              |  |              | PUCCH Format 2 |                                      |
| PUCCH Report Type                               |  |              | 4              |                                      |
| Reporting periodicity                           |  | ms           | $N_{pd} = 10$  |                                      |
| <i>cqi-pmi-ConfigurationIndex</i>               |  |              | 8              | 13 (shift of 5 ms relative to Pcell) |
| Note 1:   | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1. |              |                |                                      |
| Note 2:   | Void   |              |                |                                      |

**Table 9.6.1.2-2: PUCCH 1-0 static test (TDD, 2 DL CA)**

| Test number | Bandwidth combination   |
|-------------|---|
| 1           | 20MHz for both cells  |
| 2           | 15MHz for PCell and 20MHz for SCell   |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. |
| Note 2:     | Mapping of PCell and Scell to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.  |

The following requirements for 3DL CA apply to UE Category  $\geq 5$ . For CA with 3 DL CC, for the parameters specified in Table 9.6.1.2-3 and Table 9.6.1.2-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category  $\geq 8$ . For CA with 4 DL CC, for the parameters specified in Table 9.6.1.2-3 and Table 9.6.1.2-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2

on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, and SCell 1 and SCell 3 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.2-3: PUCCH 1-0 static test on multiple cells (TDD, 3 and 4 DL CA)**

| Parameter                                       | Unit   | Pcell          | Scell1                               | Scell2, 3   |
|---|--|----------------|--------------------------------------|---|
| PDSCH transmission mode                         |  |                | 1                                    |   |

**Table 9.6.1.2-4: PUCCH 1-0 static test (TDD, 3 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 3x20  |
| 2           | 20+20+15  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.   |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping. |

**Table 9.6.1.2-5: PUCCH 1-0 static test (TDD, 4 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 4x20  |
| 2           | 20+20+20+15   |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is |

Note 2: defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 5DL CA apply to UE Category 8 and ≥11. For CA with 5 DL CC, for the parameters specified in Table 9.6.1.2-6 and Table 9.6.1.2-7, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, and SCell 1 and SCell 4 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.2-6: Parameters for PUCCH 1-0 static test on multiple cells (TDD, 5 DL CA)**

| Parameter                                       |          | Unit   | Pcell          | Scell1                               | Scell2, 3, 4   |
|---|----------|--|----------------|--------------------------------------|--|
| PDSCH transmission mode                         |          |  | 1              |                                      |  |
| Uplink downlink configuration                   |          |  | 2              |                                      |  |
| Special subframe configuration                  |          |  | 4              |                                      |  |
| Downlink power allocation                       | $\rho_A$ | dB   | 0              |                                      |  |
|   | $\rho_B$ | dB   | 0              |                                      |  |
| Propagation condition and antenna configuration |          |  | AWGN (1 x 2)   |                                      |  |
| SNR   |          | dB   | 12             | 6                                    | 0  |
| $\hat{I}_{or}^{(j)}$                            |          | dB[mW/15kHz]   | -86            | -92                                  | -98  |
| $N_{oc}^{(j)}$                                  |          | dB[mW/15kHz]   | -98            | -98                                  | -98  |
| Physical channel for CQI reporting              |          |  | PUCCH Format 2 |                                      |  |
| PUCCH Report Type                               |          |  | 4              |                                      |  |
| Reporting periodicity                           |          | ms   | $N_{pd} = 40$  |                                      |  |
| <i>cqi-pmi-ConfigurationIndex</i>               |          |  | 38             | 43 (shift of 5 ms relative to Pcell) | 48 (shift of 10 ms relative to Pcell), 53 for Scell3 (shift of 15ms relative to Pcell), 5 for Scell4 (shift of 20ms relative to Pcell) |
| Note 1:   |          | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1. |                |                                      |  |
| Note 2:   |          | Void   |                |                                      |  |

**Table 9.6.1.2-7: PUCCH 1-0 static test (TDD, 5 DL CA)**

| Test number   | Bandwidth combination (MHz) |
|---|-----------------------------|
| 1   | 5x20                        |
| 2   | 15+4x20                     |
| Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. |                             |

Note 2: If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 6DL CA apply to UE Category 8 and ≥11. For CA with 6 DL CC, for the parameters specified in Table 9.6.1.2-8 and Table 9.6.1.2-9, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, and SCell 1 and SCell 5 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} \geq [2]$$

for more than 90% of the time.

**Table 9.6.1.2-8: Parameters for PUCCH 1-0 static test on multiple cells (TDD, 6 DL CA)**

| Parameter                                       | Unit   | Pcell          | Scell1                               | Scell2, 3, 4, 5  |

| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is |

Note 2: defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3. If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and SCells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

### 9.6.1.3 TDD-FDD CA with FDD PCell

The following requirements apply to UE Category  $\geq 5$ . For TDD-FDD CA with FDD PCell with 2 DL CC, for the parameters specified in Table 9.6.1.3-1 and Table 9.6.1.3-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.3-1: Parameters for PUCCH 1-0 static test on multiple cells (TDD-FDD CA with FDD PCell, 2 DL CA)**

| Parameter                                       |   | Unit         | PCell          | SCell                                |
|---|---|--------------|----------------|--------------------------------------|
| PDSCH transmission mode                         |   |              | 1              |                                      |
| Uplink downlink configuration                   |   |              | N/A            | 2                                    |
| Special subframe configuration                  |   |              | N/A            | 4                                    |
| Downlink power allocation                       | $\rho_A$  | dB           | 0              |                                      |
|   | $\rho_B$  | dB           | 0              |                                      |
| Propagation condition and antenna configuration |   |              | AWGN (1 x 2)   |                                      |
| SNR   |   | dB           | 10             | 4                                    |
| $\hat{I}_{or}^{(j)}$                            |   | dB[mW/15kHz] | -88            | -94                                  |
| $N_{oc}^{(j)}$                                  |   | dB[mW/15kHz] | -98            | -98                                  |
| Physical channel for CQI reporting              |   |              | PUCCH Format 2 |                                      |
| PUCCH Report Type                               |   |              | 4              |                                      |
| Reporting periodicity                           |   | ms           | $N_{pd} = 10$  |                                      |
| <i>cqi-pmi-ConfigurationIndex</i>               |   |              | 9              | 14 (shift of 5 ms relative to Pcell) |
| Note 1:   | 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 FDD and OP.1 TDD as described in Annex A.5.1.1 and A.5.2.1. |              |                |                                      |
| Note 2:   | Void  |              |                |                                      |
| Note 3:   | Void  |              |                |                                      |

**Table 9.6.1.3-2: PUCCH 1-0 static test (TDD-FDD CA with FDD PCell, 2 DL CA)**

| Test number | Bandwidth combination  |
|-------------|--|
| 1           | 20MHz for FDD cell and 20MHz for TDD cell  |
| 2           | 10MHz for FDD cell and 20MHz for TDD cell  |
| 3           | 15MHz for FDD cell and 20MHz for TDD cell  |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3. |

The following requirements for 3DL CA apply to UE Category  $\geq 5$ . For TDD-FDD CA with FDD PCell with 3 DL CC, for the parameters specified in Table 9.6.1.3-3 and Table 9.6.1.3-4, and using the downlink physical channels specified

in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category  $\geq 8$ . For TDD-FDD CA with FDD PCell with 4 DL CC, for the parameters specified in Table 9.6.1.3-3 and Table 9.6.1.3-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2, and SCell1 and SCell3 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

for more than 90% of the time.

**Table 9.6.1.3-3: PUCCH 1-0 static test on multiple cells (TDD-FDD CA with FDD PCell, 3 and 4 DL CA)**

| Parameter   |          | Unit         | PCell          | SCell1                               | SCell2, SCell3   |
|---|----------|--------------|----------------|--------------------------------------|--|
| PDSCH transmission mode   |          |              | 1              |                                      |  |
| Uplink downlink configuration   |          |              | N/A            | 2 for TDD Cell<br>N/A for FDD Cell   |  |
| Special subframe configuration  |          |              | N/A            | 4 for TDD Cell<br>N/A for FDD Cell   |  |
| Downlink power allocation   | $\rho_A$ | dB           | 0              |                                      |  |
|   | $\rho_B$ | dB           | 0              |                                      |  |
| Propagation condition and antenna configuration   |          |              | AWGN (1 x 2)   |                                      |  |
| SNR   |          | dB           | 12             | 6                                    | 0  |
| $\hat{I}_{or}^{(j)}$  |          | dB[mW/15kHz] | -86            | -92                                  | -98  |
| $N_{oc}^{(j)}$  |          | dB[mW/15kHz] | -98            | -98                                  | -98  |
| Physical channel for CQI reporting  |          |              | PUCCH Format 2 |                                      |  |
| PUCCH Report Type   |          |              | 4              |                                      |  |
| Reporting periodicity   |          | ms           | $N_{pd} = 20$  |                                      |  |
| <i>cqi-pmi-ConfigurationIndex</i>   |          |              | 19             | 24 (shift of 5 ms relative to Pcell) | 29 for SCell 2 (shift of 10 ms relative to Pcell) , 34 for SCell 3 (shift of 15ms relative to PCell) |
| Note 1: 3 symbols are allocated to PDCCH. **Table 9.6.1.3-4: PUCCH 1-0 static test (TDD-FDD CA with FDD PCell, 3 DL CA)**

| Test number | Bandwidth combination (MHz)                  |
|-------------|--|
| 1           | 20MHz for FDD cell and 2x20MHz for TDD cell  |
| 2           | 15MHz for FDD cell and 2x20MHz for TDD cell  |
| 3           | 10MHz for FDD cell and 2x20MHz for TDD cell  |
| 4           | 2x20MHz for FDD cell and 20MHz for TDD cell  |
| 5           | 20+15MHz for FDD cell and 20MHz for TDD cell |
| 6           | 20+10MHz for FDD cell and 20MHz for TDD cell |
| 7           | 2x10MHz for FDD cell and 20MHz for TDD cell  |
| 8           | 10MHz for FDD cell and 15+20MHz for TDD cell |
| 9           | 10+15MHz for FDD cell and 20MHz for TDD cell |

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.

Note 2: If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and SCells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

**Table 9.6.1.3-5: PUCCH 1-0 static test (TDD-FDD CA with FDD PCell, 4 DL CA)**

| Test number | Bandwidth combination (MHz)   |
|-------------|---|
| 1           | 20MHz for FDD cell and 3x20MHz for TDD cell   |
| 2           | 2x20MHz for FDD cell and 2x20MHz for TDD cell   |
| 3           | 20+15MHz for FDD cell and 2x20MHz for TDD cell  |
| 4           | 2x15MHz for FDD cell and 2x20MHz for TDD cell   |
| 5           | 2x20+15MHz for FDD cell and 20MHz for TDD cell  |
| 6           | 2x15+20MHz for FDD cell and 20MHz for TDD cell  |
| 7           | 2x20+10MHz for FDD cell and 20MHz for TDD cell  |
| 8           | 3x20MHz for FDD cell and 20MHz for TDD cell   |
| 9           | 10MHz for FDD cell and 3x20MHz for TDD cell   |
| 10          | 2x10MHz for FDD cell and 2x20MHz for TDD cell   |
| 11          | 2x10MHz for FDD cell and 20+15MHz for TDD cell  |
| 12          | 10+20MHz for FDD cell and 2x20MHz for TDD cell  |
| 13          | 10+15MHz for FDD cell and 2x20MHz for TDD cell  |
| 14          | 10+15+20MHz for FDD cell and 20MHz for TDD cell   |
| Note 1:     | The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.  |
| Note 2:     | If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and SCells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping. |

The following requirements for 5DL CA apply to UE Category 8 and ≥11. For TDD-FDD CA with FDD PCell with 5 DL CC, for the parameters specified in Table 9.6.1.3-6 and Table 9.6.1.3-7, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2, SCell1 and SCell3, and SCell 1 and SCell 4 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

for more than 90% of the time.

## 9.7 CSI reporting (Single receiver antenna)

The number of receiver antennas  $N_{RX}$  assumed for the minimum performance requirement in this clause is 1.

### 9.7.1 CQI reporting definition under AWGN conditions

#### 9.7.1.1 FDD and half-duplex FDD

The following requirements apply to UE DL Category 0. For the parameters specified in Table 9.7.1.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.16 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.7.1.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)**

| Parameter                                       | Unit  | Test 1         |     | Test 2 |     |
|---|---|----------------|-----|--------|-----|
| Bandwidth                                       | MHz   | 10             |     |        |     |
| PDSCH transmission mode                         |   | 1              |     |        |     |
| Downlink power allocation                       | $\rho_A$  | dB             |     | 0      |     |
|   | $\rho_B$  | dB             |     | 0      |     |
|   | $\sigma$  | dB             |     | 0      |     |
| Propagation condition and antenna configuration |   | AWGN (1 x 1)   |     |        |     |
| SNR (Note 2)                                    | dB  | 0              | 1   | 6      | 7   |
| $\hat{I}_{or}^{(j)}$<br>or                      | dB[mW/15kHz]  | -98            | -97 | -92    | -91 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]  | -98            |     | -98    |     |
| Max number of HARQ transmissions                |   | 1              |     |        |     |

| PUCCH Report Type                               |   | 4              |     |        |     |
| Reporting periodicity                           | ms  | $N_{pd} = 40$  |     |        |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |   | 41             |     |        |     |
| Note 1:   | Reference measurement channel RC.16 FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/OP.2 FDD as described in Annex A.5.1.1/A.5.1.2. |                |     |        |     |
| Note 2:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.                   |                |     |        |     |

### 9.7.1.2 TDD

The following requirements apply to UE DL Category 0. For the parameters specified in Table 9.7.1.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.16 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.7.1.2-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       | Unit   | Test 1         |     | Test 2 |     |
|---|--|----------------|-----|--------|-----|
| Bandwidth                                       | MHz  | 10             |     |        |     |
| PDSCH transmission mode                         |  | 1              |     |        |     |

| Special subframe configuration                  |  | 4              |     |        |     |
| Downlink power allocation                       | $\rho_A$   | dB             | 0   |        |     |
|   | $\rho_B$   | dB             | 0   |        |     |
|   | $\sigma$   | dB             | 0   |        |     |
| Propagation condition and antenna configuration |  | AWGN (1 x 1)   |     |        |     |
| SNR (Note 2)                                    | dB   | 0              | 1   | 6      | 7   |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz]   | -98            | -97 | -92    | -91 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz]   | -98            |     | -98    |     |
| Max number of HARQ transmissions                |  | 1              |     |        |     |
| Physical channel for CQI reporting              |  | PUSCH (Note 3) |     |        |     |
| PUCCH Report Type                               |  | 4              |     |        |     |
| Reporting periodicity                           | ms   | $N_{pd} = 5$   |     |        |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |  | 3              |     |        |     |
| ACK/NACK feedback mode                          |  | Multiplexing   |     |        |     |
| Note 1:   | Reference measurement channel RC.16 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/OP.2 TDD as described in Annex A.5.2.1/A.5.2.2.  |                |     |        |     |
| Note 2:   | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |                |     |        |     |
| Note 3:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |                |     |        |     |

### 9.7.1.3 FDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.1.3-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.4 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.7.1.3-1: PUCCH 1-0 static test (FDD)**

| Parameter               | Unit | Test 1 | Test 2 |
|-------------------------|------|--------|--------|
| Bandwidth               | MHz  | 10     |        |
| PDSCH transmission mode |      | 1      |        |

|   |          |   |                |     |     |     |
|---|----------|---|----------------|-----|-----|-----|
| Downlink power allocation                       | $\rho_A$ | dB  | 0              |     |     |     |
|   | $\rho_B$ | dB  | 0              |     |     |     |
|   | $\sigma$ | dB  | 0              |     |     |     |
| Propagation condition and antenna configuration |          |   | AWGN (1 x 1)   |     |     |     |
| SNR (Note 2)                                    |          | dB  | 0              | 1   | 6   | 7   |
| $\hat{I}_{or}^{(j)}$                            |          | dB[mW/15kHz]  | -98            | -97 | -92 | -91 |
| $N_{oc}^{(j)}$                                  |          | dB[mW/15kHz]  | -98            |     | -98 |     |
| Max number of HARQ transmissions                |          |   | 1              |     |     |     |
| Physical channel for CQI reporting              |          |   | PUCCH Format 2 |     |     |     |
| PUCCH Report Type                               |          |   | 4              |     |     |     |
| Reporting periodicity                           |          | ms  | $N_{pd} = 5$   |     |     |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |          |   | 6              |     |     |     |
| Note 1:   |          | Reference measurement channel RC.4 FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.2 FDD as described in Annex A.5.1.2. |                |     |     |     |
| Note 2:   |          | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.     |                |     |     |     |

#### 9.7.1.4 TDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.1.4-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.4 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1.

**Table 9.7.1.4-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       |          | Unit         | Test 1         |     | Test 2 |     |
|---|----------|--------------|----------------|-----|--------|-----|
| Bandwidth                                       |          | MHz          | 10             |     |        |     |
| PDSCH transmission mode                         |          |              | 1              |     |        |     |
| Uplink downlink configuration                   |          |              | 2              |     |        |     |
| Special subframe configuration                  |          |              | 4              |     |        |     |
| Downlink power allocation                       | $\rho_A$ | dB           | 0              |     |        |     |
|   | $\rho_B$ | dB           | 0              |     |        |     |
|   | $\sigma$ | dB           | 0              |     |        |     |
| Propagation condition and antenna configuration |          |              | AWGN (1 x 1)   |     |        |     |
| SNR (Note 2)                                    |          | dB           | 0              | 1   | 6      | 7   |
| $\hat{I}_{or}^{(j)}$                            |          | dB[mW/15kHz] | -98            | -97 | -92    | -91 |
| $N_{oc}^{(j)}$                                  |          | dB[mW/15kHz] | -98            |     | -98    |     |
| Max number of HARQ transmissions                |          |              | 1              |     |        |     |
| Physical channel for CQI reporting              |          |              | PUSCH (Note 3) |     |        |     |
| PUCCH Report Type                               |          |              | 4              |     |        |     |
| Reporting periodicity                           |          | ms           | $N_{pd} = 5$   |     |        |     |
| <i>cqi-pmi-ConfigurationIndex</i>               |          |              | 3              |     |        |     |
| ACK/NACK feedback mode                          |          |              | Multiplexing   |     |        |     |

|         |  |
|---------|--|
| Note 1: | Reference measurement channel RC.4 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/OP.2 TDD as described in Annex A.5.2.1/A.5.2.2.   |
| Note 2: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |
| Note 3: | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |

## 9.7.2 CQI reporting under fading conditions

### 9.7.2.1 FDD and half-duplex FDD

For the parameters specified in Table 9.7.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.7.2.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha\%$  of the time but less than  $\beta\%$  for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD and in each available downlink transmission instance for half-duplex FDD.

**Table 9.7.2.1-1 Sub-band test for single antenna transmission (FDD and half-duplex FDD)**

| Parameter  |          | Unit         | Test 1  |     | Test 2 |     |
|--|----------|--------------|---|-----|--------|-----|
| Bandwidth  |          | MHz          | 10 MHz  |     |        |     |
| Transmission mode  |          |              | 1 (port 0)  |     |        |     |
| Downlink power allocation  | $\rho_A$ | dB           | 0   |     |        |     |
|  | $\rho_B$ | dB           | 0   |     |        |     |
|  | $\sigma$ | dB           | 0   |     |        |     |
| SNR (Note 3)   |          | dB           | 8   | 9   | 13     | 14  |
| $\hat{I}_{or}^{(j)}$   |          | dB[mW/15kHz] | -90   | -89 | -85    | -84 |
| $N_{oc}^{(j)}$   |          | dB[mW/15kHz] | -98   |     | -98    |     |
| Propagation channel  |          |              | Clause B.2.4 with $\tau_d = 0.45 \mu s$ ,<br>$a = 1$ , $f_D = 5 \text{ Hz}$ |     |        |     |
| Antenna configuration  |          |              | 1 x 1   |     |        |     |
| Reporting interval   |          | ms           | 8   |     |        |     |
| CQI delay  |          | ms           | 8   |     |        |     |
| Reporting mode   |          |              | PUSCH 3-0   |     |        |     |
| Sub-band size  |          | RB           | 6 (full size)   |     |        |     |
| Max number of HARQ transmissions   |          |              | 1   |     |        |     |
| <p>Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4)</p> <p>Note 2: Reference measurement channel RC.16 FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 FDD as described in Annex A.5.1.1/2.</p> <p>Note 3: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.</p> |          |              |   |     |        |     |

**Table 9.7.2.1-2 Minimum requirement (FDD and half-duplex FDD)**

|                | Test 1 | Test 2 |
|----------------|--------|--------|
| $\alpha$ [%]   | 2      | 2      |
| $\beta$ [%]    | 55     | 55     |
| $\gamma$       | 1.1    | 1.1    |
| UE DL Category | 0      | 0      |

### 9.7.2.2 TDD

For the parameters specified in Table 9.7.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.7.2.2-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance for TDD.

**Table 9.7.2.2-1 Sub-band test for single antenna transmission (TDD)**

| Parameter  |          | Unit         | Test 1  |     | Test 2 |     |
|--|----------|--------------|---|-----|--------|-----|
| Bandwidth  |          | MHz          | 10 MHz  |     |        |     |
| Transmission mode  |          |              | 1 (port 0)  |     |        |     |
| Downlink power allocation  | $\rho_A$ | dB           | 0   |     |        |     |
|  | $\rho_B$ | dB           | 0   |     |        |     |
|  | $\sigma$ | dB           | 0   |     |        |     |
| Uplink downlink configuration  |          |              | 2   |     |        |     |
| Special subframe configuration   |          |              | 4   |     |        |     |
| SNR (Note 3)   |          | dB           | 8   | 9   | 13     | 14  |
| $\hat{I}_{or}^{(j)}$   |          | dB[mW/15kHz] | -90   | -89 | -85    | -84 |
| $N_{oc}^{(j)}$   |          | dB[mW/15kHz] | -98   |     | -98    |     |
| Propagation channel  |          |              | Clause B.2.4 with $\tau_d = 0.45$<br>$\mu s, a = 1, f_D = 5$ Hz |     |        |     |
| Antenna configuration  |          |              | 1 x 1   |     |        |     |
| Reporting interval   |          | ms           | 5   |     |        |     |
| CQI delay  |          | ms           | 10 or 11  |     |        |     |
| Reporting mode   |          |              | PUSCH 3-0   |     |        |     |
| Sub-band size  |          | RB           | 6 (full size)   |     |        |     |
| Max number of HARQ transmissions   |          |              | 1   |     |        |     |
| ACK/NACK feedback mode   |          |              | Multiplexing  |     |        |     |
| Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4) |          |              |   |     |        |     |

|         |  |

| Note 3: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.          |

**Table 9.7.2.2-2 Minimum requirement (TDD)**

|                | Test 1 | Test 2 |
|----------------|--------|--------|
| $\alpha$ [%]   | 2      | 2      |
| $\beta$ [%]    | 55     | 55     |
| $\gamma$       | 1.1    | 1.1    |
| UE DL Category | 0      | 0      |

### 9.7.2.3 FDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.2.3-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.7.2.3-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI.

**Table 9.7.2.3-1 Sub-band test for single antenna transmission (FDD)**

| Parameter                        | Unit   | Test 1  |     | Test 2 |     |
|----------------------------------|--|---|-----|--------|-----|
| Bandwidth                        | MHz  | 10 MHz  |     |        |     |
| Transmission mode                |  | 1 (port 0)  |     |        |     |
| Downlink power allocation        | $\rho_A$   | dB  |     |        |     |
|                                  | $\rho_B$   | dB  |     |        |     |
|                                  | $\sigma$   | dB  |     |        |     |
| SNR (Note 3)                     | dB   | 8   | 9   | 13     | 14  |

|----------------|--------|--------|
| $\alpha$ [%]   | 2      | 2      |
| $\beta$ [%]    | 55     | 55     |
| $\gamma$       | 1.15   | 1.15   |
| UE DL Category | 1bis   | 1bis   |

### 9.7.2.4 TDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.2.4-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.7.2.4-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least  $\alpha$  % of the time but less than  $\beta$  % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set  $S$  shall be  $\geq \gamma$ ;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance for TDD.

**Table 9.7.2.4-1 Sub-band test for single antenna transmission (TDD)**

| Parameter                        |          | Unit         | Test 1  |     | Test 2 |     |
|----------------------------------|----------|--------------|---|-----|--------|-----|
| Bandwidth                        |          | MHz          | 10 MHz  |     |        |     |
| Transmission mode                |          |              | 1 (port 0)  |     |        |     |
| Downlink power allocation        | $\rho_A$ | dB           | 0   |     |        |     |
|                                  | $\rho_B$ | dB           | 0   |     |        |     |
|                                  | $\sigma$ | dB           | 0   |     |        |     |
| Uplink downlink configuration    |          |              | 2   |     |        |     |
| Special subframe configuration   |          |              | 4   |     |        |     |
| SNR (Note 3)                     |          | dB           | 8   | 9   | 13     | 14  |
| $\hat{I}_{or}^{(j)}$             |          | dB[mW/15kHz] | -90   | -89 | -85    | -84 |
| $N_{oc}^{(j)}$                   |          | dB[mW/15kHz] | -98   |     | -98    |     |
| Propagation channel              |          |              | Clause B.2.4 with $\tau_d = 0.45$<br>$\mu s, a = 1, f_D = 5$ Hz |     |        |     |
| Antenna configuration            |          |              | 1 x 1   |     |        |     |
| Reporting interval               |          | ms           | 5   |     |        |     |
| CQI delay                        |          | ms           | 10 or 11  |     |        |     |
| Reporting mode                   |          |              | PUSCH 3-0   |     |        |     |
| Sub-band size                    |          | RB           | 6 (full size)   |     |        |     |
| Max number of HARQ transmissions |          |              | 1   |     |        |     |
| ACK/NACK feedback mode           |          |              | Multiplexing  |     |        |     |

|         |  |
|---------|--|
| Note 1: | If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4) |
| Note 2: | Reference measurement channel RC.3 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 TDD as described in Annex A.5.2.1/2.  |
| Note 3: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |

|                | Test 1 | Test 2 |
|----------------|--------|--------|
| $\alpha$ [%]   | 2      | 2      |
| $\beta$ [%]    | 55     | 55     |
| $\gamma$       | 1.15   | 1.15   |
| UE DL Category | 1bis   | 1bis   |

## 9.8 CSI reporting (UE supporting coverage enhancement)

The requirements in this sub-clause are defined based on the simulation results with UE DL Category M1 unless otherwise stated.

The requirements of UE DL Category M1 in 9.8.1 and 9.8.2 are applicable for UE DL Category M2 and UE DL Category 0.

The requirements of UE DL Category M1 in 9.8.3 and 9.8.4 are applicable for UE DL Category M2.

The requirements in 9.8.5 are defined based on the simulation results with Non-BL UEs, and they are applicable for non-BL UEs supporting coverage enhancement.

### 9.8.1 CQI reporting definition under AWGN conditions

#### 9.8.1.1 FDD and half-duplex FDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.8.1.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.23 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1.

**Table 9.8.1.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)**

| Parameter                                       | Unit         | Test 1       |     |
|---|--------------|--------------|-----|
| Bandwidth                                       | MHz          | 10           |     |
| PDSCH transmission mode                         |              | 1            |     |
| Downlink power allocation                       | $\rho_A$     | dB           | 0   |
|   | $\rho_B$     | dB           | 0   |
|   | $\sigma$     | dB           | 0   |
|   | $\delta$     | dB           | 0   |

| SNR (Note 2)                                    | dB           | 5            | 6   |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -93          | -92 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz] | -98          | -98 |

|   |  |                |
|---|--|----------------|
| Max number of HARQ transmissions                                    |  | 1              |
| Physical channel for CQI reporting                                  |  | PUSCH (Note 4) |
| PUCCH Report Type   |  | 4              |
| Reporting periodicity   | ms   | $N_{pd} = 10$  |
| CQI delay   | ms   | 10             |
| <i>cqi-pmi-ConfigurationIndex</i>                                   |  | 12             |
| Frequency hopping   |  | Disabled       |
| Frequency hopping interval (interval-FDD)                           |  | N/A            |
| Starting OFDM symbol (startSymbolBR)                                |  | 3              |
| PDSCH repetition level  |  | 1              |
| MPDCCH repetition level   |  | 1              |
| Beamforming Precoder for MPDCCH                                     |  | No precoding   |
| Precoder update granularity for MPDCCH                              |  | N/A            |
| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR) |  | 1111111111     |
| Note 1:   | Reference measurement channel RC.23 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD and two sided dynamic OCNG pattern OP.2 FDD as described in Annex A.5.1.1 and A.5.1.2.   |                |
| Note 2:   | The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                |
| Note 3:   | DC subcarrier puncturing shall be considered.  |                |
| Note 4:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5. |                |

### 9.8.1.2 TDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.7.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.23 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.8.1.2-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       | Unit         | Test 1         |     |
|---|--------------|----------------|-----|
| Bandwidth                                       | MHz          | 10             |     |
| PDSCH transmission mode                         |              | 1              |     |
| Downlink power allocation                       | $\rho_A$     | dB             | 0   |
|   | $\rho_B$     | dB             | 0   |
|   | $\sigma$     | dB             | 0   |
|   | $\delta$     | dB             | 0   |
| Propagation condition and antenna configuration |              | AWGN (1 x 1)   |     |
| SNR (Note 2)                                    | dB           | 4              | 5   |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -94            | -93 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz] | -98            | -98 |
| Max number of HARQ transmissions                |              | 1              |     |
| Physical channel for CQI reporting              |              | PUSCH (Note 3) |     |
| PUCCH Report Type                               |              | 4              |     |

|   |  |              |
|---|--|--------------|
| Reporting periodicity   | ms   | $N_{pd} = 5$ |
| <i>cqi-pmi-ConfigurationIndex</i>                                   |  | 3            |
| Frequency hopping   |  | Disabled     |
| Frequency hopping interval (interval-TDD)                           |  | N/A          |
| Starting OFDM symbol (startSymbolLC)                                |  | 3            |
| PDSCH repetition level  |  | 1            |
| ACK/NACK feedback mode  |  | Multiplexing |
| MPDCCH repetition level   |  | 1            |
| Beamforming Precoder for MPDCCH                                     |  | No precoding |
| Precoder update granularity for MPDCCH                              |  | N/A          |
| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR) |  | 1011110111   |
| Note 1:   | Reference measurement channel RC.23 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.   |              |
| Note 2:   | The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |              |
| Note 3:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |              |
| Note 4:   | DC subcarrier puncturing shall be considered.  |              |

## 9.8.2 UE-selected subband CQI

### 9.8.2.1 FDD and half-duplex FDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.8.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.8.2.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on the best narrowband reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected narrowband within the set of narrowbands in which MPDCCH is monitored shall be  $\geq \gamma$ ;

The requirements only apply for narrowbands of full size and the random scheduling across the narrowbands is done by selecting a new narrowband in each TTI for FDD and half-duplex FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{PRB}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the narrowband size.

**Table 9.8.2.1-1 Sub-band test for single antenna transmission (FDD and half-duplex FDD)**

| Parameter                 |          | Unit         | Test 1     |     |
|---------------------------|----------|--------------|------------|-----|
| Bandwidth                 |          | MHz          | 10 MHz     |     |

|                | Test 1       |
|----------------|--------------|
| $\gamma$       | 1.3          |
| UE DL Category | M1, $\geq 0$ |

### 9.8.2.2 TDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.8.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.8.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting on the best narrowband reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected narrowband within the set of narrowbands in which MPDCCH is monitored shall be  $\geq \gamma$ ;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new narrowband in each available downlink transmission instance for TDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the  $N_{PRB}$  entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the narrowband size.

**Table 9.8.2.2-1 Sub-band test for single antenna transmission (TDD)**

| Parameter   | Unit         | Test 1  |     |
|---|--------------|---|-----|
| Bandwidth   | MHz          | 10 MHz  |     |
| Transmission mode   |              | 1 (port 0)  |     |

### 9.8.3 CQI reporting definition for UE supporting 64QAM under AWGN

#### 9.8.3.1 FDD and half-duplex FDD

The following requirements apply to UE supporting *ce-ModeA-r13* and *ce-PDSCH-64QAM-r15*. For the parameters specified in Table 9.8.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.31 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.8.3.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)**

| Parameter                                       | Unit         | Test 1       |     |
|---|--------------|--------------|-----|
| Bandwidth                                       | MHz          | 10           |     |
| PDSCH transmission mode                         |              | 1            |     |
| Downlink power allocation                       | $\rho_A$     | dB           | 0   |
|   | $\rho_B$     | dB           | 0   |
|   | $\sigma$     | dB           | 0   |
|   | $\delta$     | dB           | 0   |
| Propagation condition and antenna configuration |              | AWGN (1 x 1) |     |
| SNR (Note 2)                                    | dB           | 11           | 12  |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -87          | -86 |

MPDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.</p> |              |                |     |

9.8.3.2 TDD

The following requirements apply to UE supporting supporting *ce-ModeA-r13* and *ce-PDSCH-64QAM-r15*. For the parameters specified in Table 9.8.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.31 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1.

Table 9.8.3.2-1: PUCCH 1-0 static test (TDD)

| Parameter                                       | Unit         | Test 1       |     |
|---|--------------|--------------|-----|
| Bandwidth                                       | MHz          | 10           |     |

| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR) |  | 1011110111     |
| Note 1:   | Reference measurement channel RC.31 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.   |                |
| Note 2:   | The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                |
| Note 3:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |                |
| Note 4:   | DC subcarrier puncturing shall be considered.  |                |

## 9.8.4 CQI reporting definition for UE supporting alternative table under AWGN

### 9.8.4.1 FDD and half-duplex FDD

The following requirements apply to UE supporting *ce-ModeA-r13* and *ce-CQI-AlternativeTable-r15*. For the parameters specified in Table 9.8.4.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.32 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.8.4.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)**

| Parameter                                       | Unit         | Test 1       |     |
|---|--------------|--------------|-----|
| Bandwidth                                       | MHz          | 10           |     |

| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR) |  | 1111111111     |
| Note 1:   | Reference measurement channel RC.32 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD and two sided dynamic OCNG pattern OP.2 FDD as described in Annex A.5.1.1 and A.5.1.2.   |                |
| Note 2:   | The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                |
| Note 3:   | DC subcarrier puncturing shall be considered.  |                |
| Note 4:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5. |                |

### 9.8.4.2 TDD

The following requirements apply to UE supporting *ce-ModeA-r13* and *ce-CQI-AlternativeTable-r15*. For the parameters specified in Table 9.8.4.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.32 TDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.8.4.2-1: PUCCH 1-0 static test (TDD)**

| Parameter                                       | Unit         | Test 1         |     |
|---|--------------|----------------|-----|
| Bandwidth                                       | MHz          | 10             |     |
| PDSCH transmission mode                         |              | 1              |     |

|   | $\rho_B$     | dB             | 0   |
|   | $\sigma$     | dB             | 0   |
|   | $\delta$     | dB             | 0   |
| Propagation condition and antenna configuration |              | AWGN (1 x 1)   |     |
| SNR (Note 2)                                    | dB           | 5              | 6   |
| $\hat{I}_{or}^{(j)}$                            | dB[mW/15kHz] | -93            | -92 |
| $N_{oc}^{(j)}$                                  | dB[mW/15kHz] | -98            | -98 |
| Max number of HARQ transmissions                |              | 1              |     |
| Physical channel for CQI reporting              |              | PUSCH (Note 3) |     |
| PUCCH Report Type                               |              | 4              |     |

|   |  |              |
|---|--|--------------|
| Reporting periodicity   | ms   | $N_{pd} = 5$ |
| <i>cqi-pmi-ConfigurationIndex</i>                                   |  | 3            |
| Frequency hopping   |  | Disabled     |
| Frequency hopping interval (interval-TDD)                           |  | N/A          |
| Starting OFDM symbol (startSymbolLC)                                |  | 3            |
| PDSCH repetition level  |  | 1            |
| ACK/NACK feedback mode  |  | Multiplexing |
| MPDCCH repetition level   |  | 1            |
| Beamforming Precoder for MPDCCH                                     |  | No precoding |
| Precoder update granularity for MPDCCH                              |  | N/A          |
| BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR) |  | 1011110111   |
| Note 1:   | Reference measurement channel RC.32 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.   |              |
| Note 2:   | The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |              |
| Note 3:   | To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2. |              |
| Note 4:   | DC subcarrier puncturing shall be considered.  |              |

### 9.8.5 PMI reporting with PUCCH 1-1 (CSI Reference Symbol)

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements are specified in terms of the ratio

$$\gamma = \frac{t_{ue}}{t_{rnd}}$$

In the definition of  $\gamma$ ,  $t_{ue}$  is 70% of the maximum throughput obtained at  $SNR_{follow}$  using the precoders configured according to the UE reports, and  $t_{rnd}$  is the throughput measured at  $SNR_{follow}$  with random precoding.

#### 9.8.5.1 FDD

For the parameters specified in Table 9.8.5.1-1 and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.8.5.1-2.

**Table 9.8.5.1-1 PMI test for single-layer (FDD)**

| Parameter                 | Unit     | Test 1 |    |
|---------------------------|----------|--------|----|
| Bandwidth                 | MHz      | 10     |    |
| Transmission mode         |          | 9      |    |
| Propagation channel       |          | EPA5   |    |

## 9.9 CSI reporting for 4Rx UE

### 9.9.1 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

#### 9.9.1.1 Minimum requirement PUCCH 1-0 with Rank 1 (Cell-Specific Reference Symbols)

##### 9.9.1.1.1 FDD

The following requirements apply to UE Category  $\geq 1$ . For the parameters specified in Table 9.9.1.1.1-1, using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 FDD / RC.4 FDD in Table A.4-1 shall be in the range of  $\pm 1$  of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

**Table 9.9.1.1.1-1: PUCCH 1-0 static test (FDD)**

| Parameter   |          | Unit         | Test 1         |     | Test 2 |     |

**9.9.1.2 Minimum requirement PUCCH 1-1 with Rank 2 (CSI Reference Symbols)**

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

**9.9.1.2.1 FDD**

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.9.1.2.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set {median  $\text{CQI}_1 - 1$ , median  $\text{CQI}_1$ , median  $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

**Table 9.9.1.2.1-1: PUCCH 1-1 static test (FDD)**

| Parameter | Unit | Test 1 | Test 2 |
|-----------|------|--------|--------|

| Note 2:  | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                               |     |     |     |
| Note 3:  | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5. |                               |     |     |     |

9.9.1.2.2 TDD

The following requirements apply to UE Category  $\geq 2$ . For the parameters specified in table 9.9.1.2.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> -1, median CQI<sub>1</sub>, median CQI<sub>1</sub> +1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

| <i>ri-ConfigIndex</i>  |          |  | 805 (Note 4)                         |     |     |     |
| ACK/NACK feedback mode   |          |  | Multiplexing                         |     |     |     |
| Note 1:  |          | Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.  |                                      |     |     |     |
| Note 2:  |          | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |                                      |     |     |     |
| Note 3:  |          | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.  |                                      |     |     |     |
| Note 4:  |          | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |                                      |     |     |     |

### 9.9.1.3 Minimum requirement PUCCH 1-1 with Rank 4 (Cell-Specific Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

#### 9.9.1.3.1 FDD

The following requirements apply to UE Category  $\geq 5$ . For the parameters specified in table 9.9.1.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $CQI_1$  shall be within the set {median  $CQI_1 - 1$ , median  $CQI_1$ , median  $CQI_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $CQI_1$  shall be used to determine the median  $CQI$  values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $CQI_0 - 1$  and median  $CQI_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $CQI_0 + 1$  and median  $CQI_1 + 1$  shall be greater than or equal to 0.1.

### 9.9.1.3.2 TDD

The following requirements apply to UE Category  $\geq 5$ . For the parameters specified in table 9.9.1.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband } CQI_1 = \text{wideband } CQI_0 - \text{Codeword 1 offset level}$$

The wideband  $CQI_1$  shall be within the set {median  $CQI_1 - 1$ , median  $CQI_1$ , median  $CQI_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $CQI_1$  shall be used to determine the median  $CQI$  values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $CQI_0 - 1$  and median  $CQI_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $CQI_0 + 1$  and median  $CQI_1 + 1$  shall be greater than or equal to 0.1.

9.9.1.4 Minimum requirement PUCCH 1-1 with Rank 3 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.9.1.4.1 FDD

The following requirements apply to UE Category  $\geq 5$ . For the parameters specified in table 9.9.1.4.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set {median  $\text{CQI}_1 - 1$ , median  $\text{CQI}_1$ , median  $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

Table 9.9.1.4.1-1: PUCCH 1-1 static test (FDD)

| Parameter | Unit | Test 1 | Test 2 |
|-----------|------|--------|--------|
|-----------|------|--------|--------|

|  |   |                               |     |     |     |

| <i>ri-ConfigIndex</i>  |   | 1                             |     |     |     |
| Note 1:  | Reference measurement channel RC.22 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.  |                               |     |     |     |
| Note 2:  | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.   |                               |     |     |     |
| Note 3:  | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5. |                               |     |     |     |

9.9.1.4.2 TDD

The following requirements apply to UE Category  $\geq 5$ . For the parameters specified in table 9.9.1.4.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband  $\text{CQI}_1$  shall be within the set {median  $\text{CQI}_1 - 1$ , median  $\text{CQI}_1$ , median  $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values  $\text{CQI}_1$  shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 - 1$  and median  $\text{CQI}_1 - 1$  shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median  $\text{CQI}_0 + 1$  and median  $\text{CQI}_1 + 1$  shall be greater than or equal to 0.1.

Table 9.9.1.4.2-1: PUCCH 1-1 static test (TDD)

| Parameter                      | Unit | Test 1 | Test 2 |
|--------------------------------|------|--------|--------|
| Bandwidth                      | MHz  | 10     |        |

| <i>cqi-pmi-ConfigurationIndex</i>   |          |              | 3                             |     |     |     |
| <i>ri-ConfigIndex</i>   |          |              | 805 (Note 4)                  |     |     |     |
| ACK/NACK feedback mode  |          |              | Multiplexing                  |     |     |     |
| <p>Note 1: Reference measurement channel RC.22 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.</p> <p>Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.</p> <p>Note 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.</p> <p>Note 4: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.</p> |          |              |                               |     |     |     |

## 9.9.2 CQI reporting definition under fading conditions

### 9.9.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol) for enhanced receiver Type A

The purpose of the test is to verify that the reporting of the channel quality is based on the receiver of the enhanced Type A. Performance requirements are specified in terms of the relative increase of the throughput obtained when the transport format is that indicated by the reported CQI subject to an interference model compared to the case with a white Gaussian noise model, and a requirement on the minimum BLER of the transmitted transport formats indicated by the reported CQI subject to an interference model.

#### 9.9.2.1.1 FDD

For the parameters specified in Table 9.9.2.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.9.2.1.1-2 and by the following

- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;

- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.9.2.1.1-1 Fading test for single antenna (FDD)**

| Parameter  | Unit         | Cell 1         | Cell 2          |
|--|--------------|----------------|-----------------|
| Bandwidth  | MHz          | 10 MHz         |                 |
| Transmission mode  |              | 1 (port 0)     |                 |
| Cyclic Prefix  |              | Normal         | Normal          |
| Cell ID  |              | 0              | 1               |
| SINR (Note 8)  | dB           | -4             | N/A             |
| $N_{oc}^{(j)}$   | dB[mW/15kHz] | -98            | N/A             |

## 9.9.2.1.2 TDD

For the parameters specified in Table 9.9.2.1.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.9.2.1.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.9.2.1.2-1 Fading test for single antenna (TDD)**

| Parameter   | Unit         | Cell 1         | Cell 2          |
|---|--------------|----------------|-----------------|
| Bandwidth   | MHz          | 10 MHz         |                 |
| Transmission mode   |              | 1 (port 0)     |                 |

### 9.9.2.2 Minimum requirement PUCCH 1-1 (CSI Reference Symbol) for enhanced receiver Type A

The purpose of the test is to verify that the reporting of the channel quality is based on the receiver of the enhanced Type A. Performance requirements are specified in terms of the relative increase of the throughput obtained when the transport format is that indicated by the reported CQI subject to an interference model compared to the case with a white Gaussian noise model, and a requirement on the minimum BLER of the transmitted transport formats indicated by the reported CQI subject to an interference model.

#### 9.9.2.2.1 FDD

For the parameters specified in Table 9.9.2.2.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.9.2.2.1-2 and by the following

- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.9.2.2.1-1 Fading test for single antenna (FDD)**

| Parameter                              | Unit               | Cell 1                                     | Cell 2             |
|--|--------------------|--|--------------------|
| Bandwidth                              | MHz                | 10 MHz                                     |                    |

| UE Category | $\geq 2$ |

9.9.2.2.2 TDD

For the parameters specified in Table 9.9.2.2.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.9.2.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be  $\geq \gamma$ ;
- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

**Table 9.9.2.2.2-1 Fading test for single antenna (TDD)**

| Parameter   | Unit                  | Cell 1                                      | Cell 2                      |

| Physical channel for RI reporting   |                       | PUCCH Format 2                              | N/A                         |
| PUCCH Report Type for RI  |                       | 3   | N/A                         |
| $cqi-pmi$ -<br>ConfigurationIndex   |                       | 3   | N/A                         |
| $ri$ -ConfigIndex   |                       | 805 (Note 9)                                | N/A                         |
| Max number of HARQ transmissions  |                       | 1   | N/A                         |
| ACK/NACK feedback mode  |                       | Multiplexing                                | N/A                         |
| Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later |                       |   |                             |

|          |   |
|----------|---|
|          | than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)   |
| Note 2:  | Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.  |
| Note 3:  | To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.  |
| Note 4:  | The respective received power spectral density of each interfering cell relative to $N_{oc}$ is defined by its associated DIP value as specified in clause B.5.1.   |
| Note 5:  | Two cells are considered in which Cell 1 is the serving cell and Cell 2 is the interfering cell. Interfering cell is fully loaded.  |
| Note 6:  | Both cells are time-synchronous.  |
| Note 7:  | Static channel is used for the interference model. In case for white Gaussian noise model Cell 2 is not present.  |
| Note 8:  | SINR corresponds to $\hat{E}_s / N_{oc}$ of Cell 1 as defined in clause 8.1.1.  |
| Note 9:  | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available. |
| Note 10: | The precoder in clause B.4.3 follows UE recommended PMI.  |
| Note 11: | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).   |

|             |          |
|-------------|----------|
| $\gamma$    | 1.8      |
| UE Category | $\geq 2$ |

### 9.9.3 Reporting of Precoding Matrix Indicator (PMI) for 4Rx UE

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements for transmission mode 9 with 8 TX are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, follow 2}}{t_{md1, md 2}}$$

In the definition of  $\gamma$ , for PUSCH 3-1 single PMI  $t_{follow 1, follow 2}$  is 70% of the maximum throughput obtained at

$SNR_{follow 1, follow 2}$  using the precoders configured according to the UE reports, and  $t_{md1, md2}$  is the throughput measured at  $SNR_{follow 1, follow 2}$  with random precoding .

## 9.9.3.1 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

## 9.9.3.1.1 TDD

For the parameters specified in Table 9.9.3.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.3.1.1-2.

**Table 9.9.3.1.1-1: PMI test for single-layer (TDD)**

| Parameter   |          | Unit         | Test 1  |

**Table 9.9.3.1.1-2: Minimum requirement (TDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 2.5      |
| UE Category | $\geq 2$ |

## 9.9.4 Reporting of Rank Indicator (RI)

The purpose of this test for 4Rx UEs is to verify that the reported rank indicator accurately represents the channel rank. The accuracy of RI (CQI) reporting is determined by the relative increase of the throughput obtained when transmitting based on the reported rank compared to the case for which a fixed rank is used for transmission. Transmission mode 4 is used with the specified CodebookSubSetRestriction in section 9.9.4.1, transmission mode 9 is used with the specified CodebookSubSetRestriction in section 9.9.4.2.

For the fixed rank 1 transmission with 2 Tx ports the RI and PMI reporting is restricted to two single-layer precoders, For fixed rank 2 transmission with 2 Tx ports the RI and PMI reporting is restricted to one two-layer precoder. For the follow RI transmission for rank 1 and 2 and 2 Tx ports the RI and PMI reporting is restricted to select the union of these precoders.

For the fixed rank 2 transmission with 4 Tx ports the RI and PMI reporting is restricted to any 2 Layer precoder, for the follow RI transmission the RI and PMI reporting is not restricted at all.

Channels with low and high correlation are used to ensure that RI reporting reflects the channel condition.

### 9.9.4.1 Minimum requirement (Cell-Specific Reference Symbols)

#### 9.9.4.1.1 FDD

The minimum performance requirement in Table 9.9.4.1.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.9.4.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.4.1.1-2.

**Table 9.9.4.1.1-1: RI Test (FDD)**

| Parameter                                       |          | Unit | Test 1  | Test 2                   | Test 3                   | Test 4                   |

| PUCCH Report Type for CQI/PMI          |  | 2                  |     |     |     |
| Physical channel for RI reporting      |  | PUSCH (Note 3)     |     |     |     |
| PUCCH Report Type for RI               |  | 3                  |     |     |     |
| Reporting periodicity                  | ms   | $N_{pd}= 5$        |     |     |     |
| PMI and CQI delay                      | ms   | 8                  |     |     |     |
| <i>cqi-pmi-ConfigurationIndex</i>      |  | 6                  |     |     |     |
| <i>ri-ConfigurationInd</i>             |  | 1 (Note 5)         |     |     |     |
| Note 1:                                | If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI and CQI estimation at a downlink subframe not later than SF#(n-4), this reported PMI and wideband CQI cannot be applied at the eNB downlink before SF#(n+4).   |                    |     |     |     |
| Note 2:                                | Reference measurement channel RC.2 FDD / RC.21 FDD respectively for Test 1-3 / 4 according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.  |                    |     |     |     |
| Note 3:                                | To avoid collisions between RI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic RI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.   |                    |     |     |     |
| Note 4:                                | The bit field for precoding information in DCI format 2 shall be mapped as: <ul style="list-style-type: none"> <li>• For reported RI = 1 and PMI = 0 &gt;&gt; precoding information bit field index = 1</li> <li>• For reported RI = 1 and PMI = 1 &gt;&gt; precoding information bit field index = 2</li> <li>• For reported RI = 2 and PMI = 0 &gt;&gt; precoding information bit field index = 0</li> </ul> |                    |     |     |     |
| Note 5:                                | To avoid the ambiguity of TE behaviour when applying CQI and PMI during rank switching, RI reports are to be applied at the TE with one subframe delay in addition to Note 1 to align with CQI and PMI reports.  |                    |     |     |     |
| Note 6:                                | The following precoders are allowed in Test 4:<br>"0x0000 0000 FFFF 0000" for RI=2<br>"0xFFFF FFFF FFFF FFFF" for UE reported RI   |                    |     |     |     |

| $\gamma_1$  | N/A      | 1.05     | 0.9      | N/A      |
| $\gamma_2$  | 1        | N/A      | N/A      | 1.1      |
| UE Category | $\geq 2$ | $\geq 2$ | $\geq 2$ | $\geq 5$ |

9.9.4.1.2 TDD

The minimum performance requirement in Table 9.9.4.1.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.9.4.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.4.1.2-2.

**Table 9.9.4.1.2-1: RI Test (TDD)**

| Parameter                 | Unit     | Test 1 | Test 2 | Test 3 | Test 4 |
|---------------------------|----------|--------|--------|--------|--------|

## 9.9.4.2 Minimum requirement (CSI Reference Symbols)

### 9.9.4.2.1 FDD

The minimum performance requirement in Table 9.9.4.2.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.9.4.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.4.2.1-2.

**Table 9.9.4.2.1-1: RI Test (FDD)**

| Parameter               | Unit | Test 1 | Test 2 | Test 3 | Test 4 |
|-------------------------|------|--------|--------|--------|--------|
| Bandwidth               | MHz  |        | 10     |        |        |
| PDSCH transmission mode |      |        | 9      |        |        |

|  |   |   |                          |                          |                          |
|--|---|---|--------------------------|--------------------------|--------------------------|
| Downlink power allocation  | $\rho_A$  | dB  | 0                        |                          |                          |
|  | $\rho_B$  | dB  | 0                        |                          |                          |
|  | $P_c$   | dB  | 0                        | -3                       |                          |
|  | $\sigma$  | dB  | 0                        | -3                       |                          |

| UE Category | $\geq 2$ | $\geq 2$ | $\geq 2$ | $\geq 5$ |

## 9.9.4.2.2 TDD

The minimum performance requirement in Table 9.9.4.2.2-2 is defined as

- a) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be  $\geq \gamma_1$ ;
- b) The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be  $\geq \gamma_2$ ;

For the parameters specified in Table 9.9.4.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.4.2.2-2.

**Table 9.9.4.2.2-1: RI Test (TDD)**

## 9.10 Reporting of CSI-RS Resource Indicator (CRI)

The purpose of this test is to verify that the reported CSI-RS Resource Indicator is accurate. The accuracy of CRI reporting for Tests in Section 9.10.1 is determined by:

- a) The ratio of the throughput obtained when transmitting based on the reported CRI and fixed precoder with multiple CSI-RS resources configured compared to that obtained when transmitting based on the fixed precoder with one CSI-RS resource configured:
- $$\gamma = \frac{t_{ue, follow\_CRI, fixed\_PMI}}{t_{fixed\_CRI, fixed\_PMI}}$$

- $t_{ue, follow\_CRI, fixed\_PMI}$  is [70%] of the maximum throughput obtained at  $SNR_{ue, follow\_CRI, fixed\_PMI}$  using fixed precoder and power scaling factor according to UE reported CRI value with multiple CSI-RS resources configured
- $t_{fixed\_CRI, fixed\_PMI}$  is throughput obtained at  $SNR_{ue, follow\_CRI, fixed\_PMI}$  using fixed precoder and power scaling factor according to the one configured CSI-RS resource
- $SNR_{ue, follow\_CRI, fixed\_PMI}$  is specified based on CRS RE power

- b) Each candidate CRI value among 0, 1, ..., K-1 shall be reported at least  $\alpha\%$  of the time at  $SNR_{ue, follow\_CRI, fixed\_PMI}$  with multiple CSI-RS resources configured

- The number of configured CSI-RS resources K is specific to a test.

The accuracy of CRI reporting for Tests in Section 9.10.2 is determined by:

- a) The ratio of the throughput obtained when transmitting based on the reported CRI and fixed precoder with multiple CSI-RS resources configured compared to that obtained when transmitting based on the fixed precoder with one CSI-RS resource configured:
- $$\gamma = \frac{t_{ue, follow\_CRI}}{t_{fixed\_TP1}}$$

- $t_{ue, follow\_CRI}$  is [70%] of the maximum throughput obtained at  $SNR_{ue, follow\_CRI}$  using the CRI configured according to the CSI UE report
- $t_{fixed\_TP1}$  is throughput obtained at  $SNR_{ue, follow\_CRI}$  under assumption of single TP1 transmission

- b) CRI 2 value among 0, 1 and 2 shall be reported at least  $\alpha$  % of the time at  $SNR_{ue, follow\_CRI}$  with 2 CSI-RS resources configured
- c) CRI 0 value among 0, 1 and 2 shall be reported at least  $\beta$  % of the time at  $SNR_{fixed\_TP1}$  with 2 CSI-RS resources configured
  - $SNR_{fixed\_TP1}$  corresponds to [70%] of the maximum throughput under assumption of single TP1 transmission

### 9.10.1 Minimum requirement (PUSCH 3-1)

#### 9.10.1.1 FDD

For the parameters specified in Table 9.10.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.10.1.1-2.

**Table 9.10.1.1-1: CRI Test (FDD)**

| Parameter                                      | Unit           | Test 1-1<br>(K,N)=(2,8)                | Test 1-2<br>(K,N)=(2,16)                          | Test 1-3<br>(K,N)=(4,32)                          | Test 1-4<br>(K,N)=(8,64)                          |    |
|--|----------------|--|---|---|---|----|

| <p>Note1: According to UE capability configuration list for the maximum number of NZP CSI-RS resource Kmax and the maximum number of total NZP CSI-RS ports N in each K =2,..., Kmax: if UE supports the combination of (K,N)=(8,64), then test 1-4 is applicable; else if UE supports the combination of (K,N)=(4,32), then test 1-3 is applicable; else if UE supports the combination of (K,N)=(2,16), then test 1-2 is applicable; otherwise test 1-1 is applicable.</p> |          |          |          |          |

## 9.10.2 Minimum requirement (PUSCH 3-1, QCL Type C)

### 9.10.2.1 FDD

The requirements are specified in Table 9.10.2.1-4, with the additional parameters in Table 9.10.2.1-1, Table 9.10.2.1-2 and Table 9.10.2.1-3. In Table 9.10.2.1-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and can transmit PDSCH, and transmission point 2 (TP 2) has different Cell ID and can transmit PDSCH. The downlink physical channel setup for TP 1 is according to Table C.3.2 and for TP 2 according to Table C.3.2.

**Table 9.10.2.1-1: Test Parameters**

| Parameter | Unit | Fixed TP1 case |      | Follow CRI case |      |
|-----------|------|----------------|------|-----------------|------|
|           |      | TP 1           | TP 2 | TP 1            | TP 2 |

|  |          |                  |                                  |                            |   |                            |
|--|----------|------------------|----------------------------------|----------------------------|---|----------------------------|
| Downlink power allocation  | $\rho_A$ | dB               | 0                                | 0                          | 0   | 0                          |
|  | $\rho_B$ | dB               | 0 (Note 1)                       | 0                          | 0 (Note 1)  | 0                          |
|  | $\sigma$ | dB               | -3                               | -3                         | -3  | -3                         |
| $\widehat{E}_s / N_{oc}$   |          | dB               | SNR1 (Note 2)                    | SNR2 = SNR1 - [9] dB       | SNR1 (Note 2)   | SNR2 = SNR1 - [9] dB       |
| $N_{oc}$ at antenna port   |          | dBm/15kHz        | -98                              |                            |   |                            |
| $BW_{Channel}$   |          | MHz              | 10                               |                            |   |                            |
| Cyclic Prefix  |          |                  | Normal                           |                            |   |                            |
| PDSCH transmission mode  |          |                  | 10                               |                            |   |                            |
| Number of allocated resource block   |          |                  | 50                               |                            |   |                            |
| Cell ID  |          |                  | 0                                | 126                        | 0   | 126                        |

9.10.2.2 TDD

The requirements are specified in Table 9.10.2.2-4, with the additional parameters in Table 9.10.2.2-1, Table 9.10.2.2-2 and Table 9.10.2.2-3. In Table 9.10.2.2-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and can transmit PDSCH, and transmission point 2 (TP 2) has different Cell ID and can transmit PDSCH. The downlink physical channel setup for TP 1 is according to Table C.3.2 and for TP 2 according to Table C.3.2.

| UE Category | $\geq 2$ |

## 9.11 Reporting of Hybrid Channel state information

### 9.11.1 Minimum requirement (with eMIMO-Type configured as Class B with more than one CSI-RS resource configured and eMIMO-Type2 as Class B with one CSI-RS resource configured)

The purpose of this test is to verify that the reported CRI<sup>(1)</sup> from eMIMO-Type and PMI<sup>(2)</sup> from eMIMO-Type2 are accurate.

The accuracy of CRI and PMI reporting are determined by the ratio of the throughput obtained when transmitting based on UE reported CRI<sup>(1)</sup> and PMI<sup>(2)</sup> compared to that obtained when transmitting based on the random precoding and fixed CRI:

$$\gamma = \frac{t_{ue, followCRI^{(1)}, followPMI^{(2)}}}{t_{fixedCRI^{(1)}, rndPMI^{(2)}}}$$

- $t_{ue, followCRI^{(1)}, followPMI^{(2)}}$  is [70%] of the maximum throughput obtained at  $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$  using following precoder according to UE reported PMI<sup>(2)</sup> for eMIMO-Type2 and power scaling factor according to UE reported CRI<sup>(1)</sup> for eMIMO-Type

- $t_{fixedCRI^{(1)}, mdPMI^{(2)}}$  is throughput obtained at  $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$  using random precoder and power scaling factor according to the one configured CSI-RS resource
- $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$  is specified based on CRS RE power

### 9.11.1.1 FDD

For the parameters specified in Table 9.11.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.11.1.1-2.

**Table 9.11.1.1-1: CRI/PMI test for single layer (FDD)**

| Parameter  | Unit     | Test 1              |    |
|--|----------|---------------------|----|
| Bandwidth  | MHz      | 10                  |    |
| Transmission mode  |          | 9                   |    |

| Physical channel for CRI <sup>(1)</sup> reporting  |          | PUSCH               |    |
| Reporting interval for CRI <sup>(1)</sup> reporting  | ms       | 40 (Note 5)         |    |
| Physical channel for RI <sup>(2)</sup> /CQI <sup>(2)</sup> /PMI <sup>(2)</sup> reporting   |          | PUSCH               |    |
| Reporting Interval for RI <sup>(2)</sup> /CQI <sup>(2)</sup> /PMI <sup>(2)</sup> reporting   | ms       | 5                   |    |
| Downlink power allocation  | $\rho_A$ | dB                  | 0  |
|  | $\rho_B$ | dB                  | 0  |
|  | $P_c$    | dB                  | -3 |
|  | $\sigma$ | dB                  | -3 |
| Rank Number of PDSCH   |          | 1                   |    |
| Measurement channel  |          | R.50A-1 FDD         |    |
| OCNG Pattern   |          | OP.1 FDD            |    |
| Max number of HARQ transmissions   |          | 4                   |    |
| Redundancy version coding sequence   |          | {0,1,2,3}           |    |
| Scheduled PDSCH SFs  |          | SF 0,2,3,4,7,8,9    |    |
| Note 1: For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).   |          |                     |    |
| Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on CRI,PMI estimation at a downlink SF not later than SF#(n-4), this reported CRI, PMI cannot be applied at the eNB downlink before SF#(n+4). |          |                     |    |

|         |   |
|---------|---|
| Note 3: | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH.  |
| Note 4: | The precoder matrix as specified in Table 6.3.4.2.3-1of [4].For following PMI, PMI equals to UE reported PMI <sup>(2)</sup> for eMIMO-Type2 "Class B".  |
| Note 5: | PDCCH DCI format 0 with a trigger for aperiodic CSI of eMIMO-Type shall be transmitted in downlink SF#1 to allow aperiodic CRI <sup>(1)</sup> to be transmitted on uplink SF#5. PDCCH DCI format 0 with a trigger for aperiodic CSI of eMIMO-Type2 shall be transmitted in downlink SF#1,6 to allow aperiodic RI <sup>(2)</sup> /CQI <sup>(2)</sup> /PMI <sup>(2)</sup> to be transmitted on uplink SF#5,0. |

**Table 9.11.1.1-2: Minimum requirement (FDD)**

| Parameter   | Test 1   |
|-------------|----------|
| $\gamma$    | 1.3      |
| UE Category | $\geq 2$ |

### 9.11.1.2 TDD

For the parameters specified in Table 9.11.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.11.1.2-2.

**Table 9.11.1.2-1: CRI/PMI test for single layer (TDD)**

| Parameter  | Unit           | Test 1              |    |
|--|----------------|---------------------|----|
| Bandwidth  | MHz            | 10                  |    |
| Transmission mode  |                | 9                   |    |
| Uplink downlink configuration  |                | 2                   |    |
| Special subframe configuration   |                | 4                   |    |
| Propagation channel  |                | EPA5                |    |
| Precoding granularity (only for reporting and following PMI)                               | PRB            | 50                  |    |
| Correlation and antenna configuration  |                | 4*2 ULA Low         |    |

| $\gamma$    | 1.3      |
| UE Category | $\geq 2$ |

## 9.12 CSI reporting (UE supporting Short TTI)

The requirements in this sub-clause are valid for UEs capable of short TTI.

### 9.12.1 CQI reporting under fading conditions (Cell-Specific Reference Symbol)

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective fading conditions is determined by the reporting variance, and the relative increase of the throughput obtained when the transport format transmitted is that indicated by the reported CQI compared to the case for which a fixed transport format configured according to the reported median CQI is transmitted. In addition, the reporting accuracy is determined by a minimum BLER using the transport formats indicated by the reported CQI. The purpose is to verify that the UE is tracking the channel variations and selecting the largest transport format possible according to the prevailing channel state for frequently non-selective scheduling. To account for sensitivity of the input SNR the CQI reporting under frequency non-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

#### 9.12.1.1 FDD

For the parameters specified in Table 9.12.1.1-1, Table 9.12.1.1-2 and Table 9.12.1.1-3 using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.12.1.1-4 by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha$ % of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;

- c) when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

**Table 9.12.1.1-1: Fading test for slot-PDSCH (FDD)**

| Parameter   |          | Unit         | Test 1            |     | Test 2 |     |

### 9.12.1.2 TDD

For the parameters specified in Table 9.12.1.2-1 and Table 9.12.1.2-2 using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.12.1.2-3 by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha$ % of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

**Table 9.12.1.2-1: Fading test for slot-PDSCH (TDD)**

| Parameter | Unit | Test 1 | Test 2 |
|-----------|------|--------|--------|
|-----------|------|--------|--------|

|   |          |              |                   |     |     |     |
|---|----------|--------------|-------------------|-----|-----|-----|
| Bandwidth   |          | MHz          | 10 MHz            |     |     |     |
| Transmission mode   |          |              | 4 (ports 0 and 1) |     |     |     |
| Uplink downlink configuration   |          |              | 2                 |     |     |     |
| Special subframe configuration  |          |              | 4                 |     |     |     |
| Downlink power allocation   | $\rho_A$ | dB           | -3                |     |     |     |
|   | $\rho_B$ | dB           | -3                |     |     |     |
|   | $\sigma$ | dB           | 0                 |     |     |     |
| SNR (Note 3)  |          | dB           | 1                 | 2   | 9   | 10  |

## 9.12.2 CQI reporting under fading conditions (CSI Reference Symbol)

### 9.12.2.1 FDD

For the parameters specified in Table 9.12.2.1-1, Table 9.12.2.1-2, and Table 9.12.2.1-3 using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.12.2.1-4 by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha\%$  of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to [0.02].

**Table 9.12.2.1-1: Fading test for slot-PDSCH (FDD)**

| Parameter  |          | Unit         | Test 1                        |     | Test 2 |     |
|--|----------|--------------|-------------------------------|-----|--------|-----|
| Bandwidth  |          | MHz          | 10 MHz                        |     |        |     |
| Transmission mode  |          |              | 9                             |     |        |     |
| Downlink power allocation  | $\rho_A$ | dB           | 0                             |     |        |     |
|  | $\rho_B$ | dB           | 0                             |     |        |     |
|  | $\sigma$ | dB           | -3                            |     |        |     |
| SNR (Note 3)   |          | dB           | 3                             | 4   | 12     | 13  |
| $\hat{I}_{or}^{(j)}$   |          | dB[mW/15kHz] | -95                           | -94 | -86    | -85 |
| $N_{oc}^{(j)}$   |          | dB[mW/15kHz] | -98                           |     | -98    |     |
| Propagation channel  |          |              | EPA5                          |     |        |     |
| Correlation and antenna configuration  |          |              | High (2 x 2)                  |     |        |     |
| Beamforming Model  |          |              | As specified in Section B.4.3 |     |        |     |
| Cell-specific reference signals  |          |              | Antenna ports 0,1             |     |        |     |
| CSI reference signals  |          |              | Antenna ports 15,16           |     |        |     |
| CSI-RS periodicity and subframe offset<br>$T_{CSI-RS} / \Delta_{CSI-RS}$   |          |              | 5/1                           |     |        |     |
| CSI-RS reference signal configuration  |          |              | 0                             |     |        |     |
| Reporting mode   |          |              | PUSCH 1-1                     |     |        |     |
| Reporting interval   |          | ms           | 5                             |     |        |     |
| CQI delay  |          | slots        | 8                             |     |        |     |
| Max number of HARQ transmissions   |          |              | 1                             |     |        |     |
| CodeBookSubsetRestriction bitmap   |          |              | 00 0001                       |     |        |     |
| DL TTI length  |          |              | Slot                          |     |        |     |
| Configured SPDCCH-PRB sets   |          |              | {Set 1}                       |     |        |     |
| SPDCCH-PRB set used for DCI transmission   |          |              | Set 1                         |     |        |     |
| <p>Note 1: For slot-PDSCH, if the UE reports in an available uplink reporting instance at slot #n based on CQI estimation at a downlink slot not later than slot #(n-4), this reported wideband CQI cannot be applied at the eNB downlink before slot #(n+4).</p> <p>Note 2: Reference measurement channel RC.27 FDD according to Table A.4-1 for Categories 2 or higher with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.</p> |          |              |                               |     |        |     |

Note 3: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.

**Table 9.12.2.1-2: Fading test for subslot-PDSCH (FDD)**

| Parameter   |          | Unit         | Test 3                        |     | Test 4 |     |
|---|----------|--------------|-------------------------------|-----|--------|-----|

| UE Category  | $\geq 2$ | $\geq 2$ | $\geq 2$ | $\geq 2$ |

### 9.12.2.2 TDD

For the parameters specified in Table 9.12.2.2-1 and Table 9.12.2.2-2 using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.12.2.2-3 by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least  $\alpha$ % of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be  $\geq \gamma$ ;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to [0.02].

**Table 9.12.2.2-1: Fading test for slot-PDSCH (TDD)**

| Parameter  |          | Unit         | Test 1                        |     | Test 2 |     |
|--|----------|--------------|-------------------------------|-----|--------|-----|
| Bandwidth  |          | MHz          | 10 MHz                        |     |        |     |

## 9.13 CSI reporting for 8Rx UE

### 9.13.1 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

#### 9.13.1.1 Minimum requirement PUCCH 1-1 with Rank 4 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by

the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.13.1.2.1 Void

9.13.1.2.2 TDD

The following requirements apply to UE Category 8 and DL Category 14, 17~20, ≥22. For the parameters specified in table 9.13.1.2.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI<sub>1</sub> shall be within the set {median CQI<sub>1</sub> -1, median CQI<sub>1</sub>, median CQI<sub>1</sub> +1} for more than 90% of the time, where the resulting wideband values CQI<sub>1</sub> shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> - 1 and median CQI<sub>1</sub> - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI<sub>0</sub> + 1 and median CQI<sub>1</sub> + 1 shall be greater than or equal to 0.1.

**Table 9.13.1.2.2-1: PUCCH 1-1 static test 4x8 (TDD)**

| Parameter  |          | Unit         | Test 1                        |     | Test 2 |     |

| CSI-RS periodicity and subframe offset<br>$T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$ |          |              | 5/ 3                          |     |        |     |
| CSI reference signal configuration   |          |              | 0                             |     |        |     |
| Propagation condition and antenna configuration  |          |              | Clause B.1 (4x8 for Rank4)    |     |        |     |
| Beamforming Model  |          |              | As specified in Section B.4.3 |     |        |     |
| CodeBookSubsetRestriction bitmap   |          |              | 0x0001 0000 0000 0000         |     |        |     |
| SNR (Note 2)   |          | dB           | 4                             | 5   | 11     | 12  |
| $\hat{I}_{or}^{(j)}$   |          | dB[mW/15kHz] | -94                           | -93 | -87    | -86 |
| $N_{oc}^{(j)}$   |          | dB[mW/15kHz] | -98                           |     | -98    |     |
| Max number of HARQ transmissions   |          |              | 1                             |     |        |     |
| Physical channel for CQI/PMI reporting   |          |              | PUSCH (Note 3)                |     |        |     |
| PUCCH Report Type for CQI/PMI  |          |              | 2                             |     |        |     |
| Physical channel for RI reporting  |          |              | PUSCH                         |     |        |     |
| PUCCH Report Type for RI   |          |              | 3                             |     |        |     |
| Reporting periodicity  |          | ms           | $N_{pd} = 5$                  |     |        |     |
| CQI delay  |          | ms           | 10 or 11                      |     |        |     |
| <i>cqi-pmi-ConfigurationIndex</i>  |          |              | 3                             |     |        |     |
| <i>ri-ConfigIndex</i>  |          |              | 805 (Note 4)                  |     |        |     |
| ACK/NACK feedback mode   |          |              | Multiplexing                  |     |        |     |

|         |  |
|---------|--|
| Note 1: | Reference measurement channel RC.23 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.   |
| Note 2: | For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.  |
| Note 3: | To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.  |
| Note 4: | RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification. |

## 10 Performance requirement (MBMS)

### 10.1 FDD (Fixed Reference Channel)

The parameters specified in Table 10.1-1 are valid for all FDD tests unless otherwise stated. For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB as the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

**Table 10.1-1: Common Test Parameters (FDD)**

| Parameter                                    | Unit   | Value       |
|--|--|-------------|
| Number of HARQ processes                     | Processes  | None        |
| Subcarrier spacing                           | kHz  | 15 kHz      |
| Allocated subframes per Radio Frame (Note 1) |  | 6 subframes |
| Number of OFDM symbols for PDCCH             |  | 2           |
| Cyclic Prefix                                |  | Extended    |
| Note1:                                       | For FDD mode, up to 6 subframes (#1/2/3/6/7/8) are available for MBMS, in line with TS 36.331. |             |

All tests specified in 10.1 and 10.3 the applicability rules are defined as the following. The requirements in clause 10.3 are applicable to UEs that support FeMBMS. The test case applicability is in according to Table 10.1-2 depending on set of supported UE capabilities.

**Table 10.1-2: FeMBMS PMCH tests applicability**

| Tests / clause | Applicable if UE indicates at least the following capability   |
|----------------|--|
| 10.3.1         | FeMBMS support of <i>fembmsMixedCell</i> and <i>unicast-fembmsMixedSCell</i> with corresponding subcarrier spacing |
| 10.3.2         | FeMBMS support of <i>fembmsMixedCell</i> with corresponding subcarrier spacing                                     |
| 10.3.3         | FeMBMS support of <i>fembmsDedicatedCell</i> with corresponding subcarrier spacing                                 |

For FeMBMS capable UEs, if corresponding tests listed in clause 10.1 or 10.3.1 or 10.3.2 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed in clause 10.3.3.

#### 10.1.1 Minimum requirement

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS.

For the parameters specified in Table 10.1-1 and Table 10.1.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.1.1-2.

**Table 10.1.1-1: Test Parameters for Testing**

| Parameter                 |          | Unit      | Test 1-4   |
|---------------------------|----------|-----------|------------|
| Downlink power allocation | $\rho_A$ | dB        | 0          |
|                           | $\rho_B$ | dB        | 0 (Note 1) |
|                           | $\sigma$ | dB        | 0          |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98        |
| Note 1: $P_B = 0$ .       |          |           |            |

**Table 10.1.1-2: Minimum performance**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation condition               | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|-----------|-------------------|--------------|-------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |           |                   |              |                                     |                                | BLER (%)        | SNR(dB) |                  |
| 1           | 10 MHz    | R.37 FDD          | OP.4 FDD     | MBSFN channel model (Table B.2.6-1) | 1x2 low                        | 1               | 4.1     | $\geq 1$         |
| 2           | 10 MHz    | R.38 FDD          | OP.4 FDD     |                                     |                                |                 | 11.0    | $\geq 1$         |
| 3           | 10 MHz    | R.39 FDD          | OP.4 FDD     |                                     |                                |                 | 20.1    | $\geq 2$         |
|             | 5.0MHz    | R.39-1 FDD        | OP.4 FDD     |                                     |                                |                 | 20.5    | 1                |
| 4           | 1.4 MHz   | R.40 FDD          | OP.4 FDD     |                                     |                                |                 | 6.6     | $\geq 1$         |

## 10.2 TDD (Fixed Reference Channel)

The parameters specified in Table 10.2-1 are valid for all TDD tests unless otherwise stated. For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB as the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

**Table 10.2-1: Common Test Parameters (TDD)**

| Parameter  | Unit      | Value       |
|--|-----------|-------------|
| Number of HARQ processes   | Processes | None        |
| Subcarrier spacing   | kHz       | 15 kHz      |
| Allocated subframes per Radio Frame (Note 1)   |           | 5 subframes |
| Number of OFDM symbols for PDCCH   |           | 2           |
| Cyclic Prefix  |           | Extended    |
| Note1: For TDD mode, in line with TS 36.331, Uplink-Downlink Configuration 5 is proposed, up to 5 subframes (#3/4/7/8/9) are available for MBMS. |           |             |

### 10.2.1 Minimum requirement

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS.

For the parameters specified in Table 10.2-1 and Table 10.2.1-1 and Annex A.3.8.2, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.2.1-2.

**Table 10.2.1-1: Test Parameters for Testing**

| Parameter                 |          | Unit      | Test 1-4   |
|---------------------------|----------|-----------|------------|
| Downlink power allocation | $\rho_A$ | dB        | 0          |
|                           | $\rho_B$ | dB        | 0 (Note 1) |
|                           | $\sigma$ | dB        | 0          |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98        |
| Note 1: $P_B = 0$ .       |          |           |            |

**Table 10.2.1-2: Minimum performance**

| Test number | Bandwidth | Reference Channel | OCNG Pattern | Propagation condition               | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|-----------|-------------------|--------------|-------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |           |                   |              |                                     |                                | BLER (%)        | SNR(dB) |                  |

## 10.3 FDD (Fixed Reference Channel) with FeMBMS

For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB for subcarrier spacing as 15kHz, 3dB for for subcarrier spacing as 7.5kHz and 10.8dB for for subcarrier spacing as 1.25kHz because the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

### 10.3.1 Minimum requirement for FeMBMS Unicast-mixed Cell under CA

#### 10.3.1.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell under CA.

For the parameters specified in Table 10.3.1.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.1.1-2.

**Table 10.3.1.1-1: Test Parameters for Testing**

| Parameter                 |          | Unit      | Test 1-2   |
|---------------------------|----------|-----------|------------|
| Downlink power allocation | $\rho_A$ | dB        | 0          |
|                           | $\rho_B$ | dB        | 0 (Note 1) |
|                           | $\sigma$ | dB        | 0          |
| $N_{oc}$ at antenna port  |          | dBm/15kHz | -98        |

|   |     |  |
|---|-----|--|
| PDSCH transmission mode in PCell and SCell  |     | 1  |
| Subcarrier spacing for SCell  | kHz | 1.25 kHz                                       |
| Allocated subframes per Radio Frame for SCell (Note 2)  |     | 8 subframes                                    |
| Number of OFDM symbols for PDCCH for SCell  |     | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix for SCell in non-MBSFN subframes  |     | Extended                                       |
| Note 1: $P_B = 0$ .   |     |  |
| Note 2: For SCell with FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331. |     |  |

Table 10.3.1.1-2: Minimum performance

| Test number | Cell  | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|-------|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |       |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | SCell | 10              | R.81-1 FDD        | OP.4A FDD    | MBSFN channel model (Table B.2.6.2-1) | 1x2 low                        | 1               | 14.1    | $\geq 2$         |
| 2           | PCell | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | SCell | 10              | R.81-2 FDD        | OP.4A FDD    | MBSFN channel model (Table B.2.6.2-1) | 1x2 low                        | 1               | 26.0    | $\geq 2$         |

### 10.3.1.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell under CA.

For the parameters specified in Table 10.3.1.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.1.2-2.

Table 10.3.1.2-1: Test Parameters for Testing

| Parameter  |          | Unit      | Test 1      |
|--|----------|-----------|-------------|
| Downlink power allocation                              | $\rho_A$ | dB        | 0           |
|  | $\rho_B$ | dB        | 0 (Note 1)  |
|  | $\sigma$ | dB        | 0           |
| $N_{oc}$ at antenna port                               |          | dBm/15kHz | -98         |
| PDSCH transmission mode in PCell and SCell             |          |           | 1           |
| Subcarrier spacing for SCell                           |          | kHz       | 7.5 kHz     |
| Allocated subframes per Radio Frame for SCell (Note 2) |          |           | 8 subframes |

|   |  |  |
|---|--|--|
| Number of OFDM symbols for PDCCH for SCell  |  | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix for SCell in non-MBSFN subframes  |  | Extended                                       |
| Note 1: $P_B = 0$ .   |  |  |
| Note 2: For SCell with FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331. |  |  |

Table 10.3.1.2-2: Minimum performance

| Test number | Cell  | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|-------|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |       |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | SCell | 10              | R.82-1 FDD        | OP.4A FDD    | MBSFN channel model (Table B.2.6.1-1) | 1x2 low                        | 1               | 13.9    | $\geq 2$         |

## 10.3.2 Minimum requirement for FeMBMS Unicast-mixed Cell as Non-Serving Cell

### 10.3.2.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell as non-serving cell.

For the parameters specified in Table 10.3.2.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.2.1-2.

Table 10.3.2.1-1: Test Parameters for Testing

| Parameter  |          | Unit      | Test 1-4                                       |
|--|----------|-----------|--|
| Downlink power allocation  | $\rho_A$ | dB        | 0  |
|  | $\rho_B$ | dB        | 0 (Note 1)                                     |
|  | $\sigma$ | dB        | 0  |
| $N_{oc}$ at antenna port   |          | dBm/15kHz | -98  |
| Subcarrier spacing   |          | kHz       | 1.25 kHz                                       |
| Allocated subframes per Radio Frame (Note 2)   |          |           | 8 subframes                                    |
| Number of OFDM symbols for PDCCH   |          |           | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix in non-MBSFN subframes   |          |           | Extended                                       |
| Note 1: $P_B = 0$ .  |          |           |  |
| Note 2: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331. |          |           |  |

Table 10.3.2.1-2: Minimum performance

| Test number | Cell  | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |   |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell   | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | FeMBMS Unicast-mixed Cell as non-serving cell | 10              | R.81-1 FDD        | OP.4A FDD    | MBSFN channel model (Table B.2.6.2-1) | 1x2 low                        | 1               | 14.1    | ≥2               |

|             | FeMBMS Unicast-mixed Cell as non-serving cell | 10              | R.81-2 FDD        | OP.4A FDD    | MBSFN channel model (Table B.2.6.2-1) | 1x2 low                        | 1               | 26.0    | ≥2               |

### 10.3.2.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for enhanced FeMBMS Unicast-mixed Cell as non-serving cell.

For the parameters specified in Table 10.3.2.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.2.2-2.

Table 10.3.2.2-1: Test Parameters for Testing

| Parameter  |          | Unit      | Test 1-4                                       |
|--|----------|-----------|--|
| Downlink power allocation  | $\rho_A$ | dB        | 0  |
|  | $\rho_B$ | dB        | 0 (Note 1)                                     |
|  | $\sigma$ | dB        | 0  |
| $N_{ac}$ at antenna port   |          | dBm/15kHz | -98  |
| Subcarrier spacing   |          | kHz       | 7.5 kHz  |
| Allocated subframes per Radio Frame (Note 2)   |          |           | 8 subframes                                    |
| Number of OFDM symbols for PDCCH   |          |           | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix in non-MBSFN subframes   |          |           | Extended                                       |
| Note 1: $P_B = 0$ .  |          |           |  |
| Note 2: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331. |          |           |  |

Table 10.3.2.2-2: Minimum performance

| Test number | Cell | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|------|-----------------|-------------------|--------------|-----------------------|--------------------------------|-----------------|---------|------------------|
|             |      |                 |                   |              |                       |                                | BLER (%)        | SNR(dB) |                  |

|   |   |    |            |           |                                       |         |    |      |          |

### 10.3.3 Minimum requirement for MBMS Dedicated cell

#### 10.3.3.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.1-2.

**Table 10.3.3.1-1: Test Parameters for Testing MBMS Dedicated Cell**

| Parameter  |          | Unit        | Test 1-2                                       |
|--|----------|-------------|--|
| Downlink power allocation  | $\rho_A$ | dB          | 0  |
|  | $\rho_B$ | dB          | 0 (Note 1)                                     |
|  | $\sigma$ | dB          | 0  |
| $N_{oc}$ at antenna port   |          | dBm/1.25kHz | -98  |
| PDSCH transmission mode in PCell                                     |          |             | 1  |
| Subcarrier spacing for MBMS Dedicated Cell                           |          | kHz         | 1.25 kHz                                       |
| Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2) |          |             | 10 subframes                                   |
| Number of OFDM symbols for PDCCH for MBMS Dedicated Cell             |          |             | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix for CAS in MBMS Dedicated Cell                         |          |             | Extended                                       |
| Note 1: $P_B = 0$ .  |          |             |  |
| Note 2: All subframes are MBSFN subframes except CAS                 |          |             |  |

**Table 10.3.3.1-2: Minimum performance for MBMS dedicated Cell**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |

### 10.3.3.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.2-2.

**Table 10.3.3.2-1: Test Parameters for Testing MBMS Dedicated Cell**

| Parameter  |          | Unit        | Test 1   |
|--|----------|-------------|--|
| Downlink power allocation  | $\rho_A$ | dB          | 0  |
|  | $\rho_B$ | dB          | 0 (Note 1)                                     |
|  | $\sigma$ | dB          | 0  |
| $N_{oc}$ at antenna port   |          | dBm/1.25kHz | -98  |
| PDSCH transmission mode in PCell                                     |          |             | 1  |
| Subcarrier spacing for MBMS Dedicated Cell                           |          | kHz         | 7.5 kHz  |
| Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2) |          |             | 10 subframes                                   |
| Number of OFDM symbols for PDCCH for MBMS Dedicated Cell             |          |             | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix for CAS in MBMS Dedicated Cell                         |          |             | Extended                                       |
| Note 1: $P_B = 0$ .  |          |             |  |
| Note 2: All subframes are MBSFN subframes except CAS                 |          |             |  |

**Table 10.3.3.2-2: Minimum performance for MBMS dedicated Cell**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---------------------|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |                     |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell               | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | MBMS Dedicated Cell | 10              | R.84-1 FDD        | NA           | MBSFN channel model (Table B.2.6.1-1) | 1x2 low                        | 1               | 13.9    | $\geq 2$         |

### 10.3.3.3 Minimum requirement with 15kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.3-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.3-2.

**Table 10.3.3.3-1: Test Parameters for Testing MBMS Dedicated Cell**

| Parameter  |          | Unit        | Test 1-3                                       |
|--|----------|-------------|--|
| Downlink power allocation  | $\rho_A$ | dB          | 0  |
|  | $\rho_B$ | dB          | 0 (Note 1)                                     |
|  | $\sigma$ | dB          | 0  |
| $N_{oc}$ at antenna port   |          | dBm/1.25kHz | -98  |
| PDSCH transmission mode in PCell                                     |          |             | 1  |
| Subcarrier spacing for MBMS Dedicated Cell                           |          | kHz         | 15 kHz   |
| Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2) |          |             | 10 subframes                                   |
| Number of OFDM symbols for PDCCH for MBMS Dedicated Cell             |          |             | 0 (MBSFN subframes)<br>2 (non-MBSFN subframes) |
| Cyclic Prefix for MBMS Dedicated Cell                                |          |             | Extended                                       |
| Note 1: $P_B = 0$ .  |          |             |  |
| Note 2: All subframes are MBSFN subframes                            |          |             |  |

**Table 10.3.3.3-2: Minimum performance for MBMS dedicated Cell**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---------------------|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |                     |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell               | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | MBMS Dedicated Cell | 3               | R.85-1 FDD        | NA           | MBSFN channel model (Table B.2.6.1-1) | 1x2 low                        | 1               | 7.0     | $\geq 2$         |
| 2           | PCell               | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | MBMS Dedicated Cell | 5               | R.85-2 FDD        | NA           | MBSFN channel model (Table B.2.6.1-1) | 1x2 low                        | 1               | 13.5    | $\geq 2$         |
| 3           | PCell               | 10              | NA                | OP.1 FDD     | AWGN                                  | 1x2 low                        | NA              | NA      | NA               |
|             | MBMS Dedicated Cell | 10              | R.85-3 FDD        | NA           | MBSFN channel model (Table B.2.6.1-1) | 1x2 low                        | 1               | 22.3    | $\geq 2$         |

## 10.4 FDD with 5G terrestrial broadcast

For all tests in section 10.4 the applicability rules are defined in Table 10.4-1 depending on the capabilities of the UE. The requirements in clause 10.4 are applicable to UEs that support 5G terrestrial broadcast.

**Table 10.4-1: 5G terrestrial broadcast tests applicability**

| Tests                   | Applicable if UE supports at least the following capability  |
|-------------------------|--|
| Table 10.4.1.1-2 test 1 | 5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and <i>timeSeparationSlot4-r16</i> |

|                         |  |
|-------------------------|--|
| Table 10.4.1.1-2 test 2 | 5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and <i>timeSeparationSlot2-r16</i>                             |
| Table 10.4.1.2-2 test 1 | 5G terrestrial broadcast support of <i>mbms-ScalingFactor2dot5-r16</i>   |
| Table 10.4.2.1-1 test 1 | 5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and 5G terrestrial broadcast support of PBCH repetition in CAS |
| Table 10.4.2.1-1 test 2 | 5G terrestrial broadcast support of <i>mbms-ScalingFactor2dot5-r16</i> and 5G terrestrial broadcast support of PBCH repetition in CAS  |

For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 16dB for subcarrier spacing as 0.37kHz, 7.8 dB for subcarrier spacing as 2.5kHz because the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

## 10.4.1 Minimum requirement for PMCH decoding

### 10.4.1.1 Minimum requirement with 0.37kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER.

For the parameters specified in Table 10.4.1.1-1 and Table A.3.8.1-9, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.4.1.1-2.

**Table 10.4.1.1-1: Test Parameters for Testing**

| Parameter                         |          | Unit      |            |
|-----------------------------------|----------|-----------|------------|
| Downlink power allocation         | $\rho_A$ | dB        | 0          |
|                                   | $\rho_B$ | dB        | 0 (Note 1) |
|                                   | $\sigma$ | dB        | 0          |
| $N_{oc}$ at antenna port          |          | dBm/15kHz | -98        |
| PDSCH transmission mode in PCell  |          |           | 1          |
| Subcarrier spacing for MBSFN cell |          | kHz       | 0.37 kHz   |
| Bandwidth                         |          | MHz       | 10(Note 2) |
| Note 1: $P_B = 0$ .               |          |           |            |
| Note 2: For both Pcell and Scell. |          |           |            |

**Table 10.4.1.1-2: Minimum performance**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | MBSFN RS type | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---------------------|-----------------|-------------------|---------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |                     |                 |                   |               |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell               | 10              | N/A               | N/A           | OP.1 FDD     | AWGN                                  | 1x1                            | N/A             | N/A     | N/A              |
|             | MBMS Dedicated Cell | 10              | R.106-1 FDD       | Type 1        | N/A          | MBSFN channel model (Table B.2.6.3-1) | 1x1                            | 1               | 18.5    | $\geq 2$         |
| 2           | PCell               | 10              | N/A               | N/A           | OP.1 FDD     | AWGN                                  | 1x1                            | N/A             | N/A     | N/A              |
|             | MBMS Dedicated Cell | 10              | R.106-2 FDD       | Type 2        | N/A          | MBSFN channel model (Table B.2.6.3-1) | 1x1                            | 1               | 20.2    | $\geq 2$         |

### 10.4.1.2 Minimum requirement with 2.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER.

For the parameters specified in Table 10.4.1.2-1 and Table A.3.8.1-10, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.4.1.2-2.

**Table 10.4.1.2-1: Test Parameters for Testing**

| Parameter                         |          | Unit      |                          |
|-----------------------------------|----------|-----------|--------------------------|
| Downlink power allocation         | $\rho_A$ | dB        | 0                        |
|                                   | $\rho_B$ | dB        | 0 (Note 1)               |
|                                   | $\sigma$ | dB        | 0                        |
| $N_{oc}$ at antenna port          |          | dBm/15kHz | $N_{oc}$ at antenna port |
| PDSCH transmission mode in PCell  |          |           | 1                        |
| Subcarrier spacing for MBSFN cell |          | kHz       | 2.5 kHz                  |
| Bandwidth                         |          | MHz       | 10(Note 2)               |
| Note 1: $P_B = 0$ .               |          |           |                          |
| Note 2: For both Pcell and Scell. |          |           |                          |

**Table 10.4.1.2-2: Minimum performance**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition                 | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---------------------|-----------------|-------------------|--------------|---------------------------------------|--------------------------------|-----------------|---------|------------------|
|             |                     |                 |                   |              |                                       |                                | BLER (%)        | SNR(dB) |                  |
| 1           | PCell               | 10              | N/A               | OP.1 FDD     | AWGN                                  | 1x2 low                        | N/A             | N/A     | N/A              |

## 10.4.2 Minimum requirement for CAS detection

### 10.4.2.1 Minimum requirement for PBCH detection

For the parameters specified in Table 8.6.1-1, the average probability of a miss-detected PBCH (Pm-bch) shall be below the specified value in Table 10.4.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

**Table 10.4.2.1-1: Minimum performance**

| Test number | Cell                | Bandwidth (MHz) | Reference Channel | OCNG Pattern | Propagation condition | Correlation Matrix and antenna | Reference value |         | MBMS UE Category |
|-------------|---------------------|-----------------|-------------------|--------------|-----------------------|--------------------------------|-----------------|---------|------------------|
|             |                     |                 |                   |              |                       |                                | Pm-bch (%)      | SNR(dB) |                  |
| 1           | PCell               | 10              | N/A               | OP.1 FDD     | AWGN                  | 1x1 low                        | N/A             | N/A     | N/A              |
|             | MBMS Dedicated Cell | 10              | R.23-1            | N/A          | AWGN                  | 1x1 low                        | 1               | -7.2    | $\geq 2$         |

|   |                     |    |        |          |           |         |     |      |     |
|---|---------------------|----|--------|----------|-----------|---------|-----|------|-----|
| 2 | PCell               | 10 | N/A    | OP.1 FDD | AWGN      | 1x2 low | N/A | N/A  | N/A |
|   | MBMS Dedicated Cell | 10 | R.23-1 | N/A      | EVA 162Hz | 1x2 low | 1   | -6.7 | ≥ 2 |

## 11 Performance requirement (ProSe Direct Discovery)

This clause contains the performance requirements for the Sidelink physical channels specified for ProSe Direct Discovery.

### 11.1 General

#### 11.1.1 Applicability of requirements

The requirements in this clause are applicable to UEs that support ProSe Direct Discovery. The test case applicability is in according to table 11.1.1-1 depending on set of supported UE capabilities.

**Table 11.1.1-1: ProSe Direct Discovery test applicability**

| FDD/TDD | Tests / clause | Applicable if UE indicates at least the following capability                                      |
|---------|----------------|---|
| FDD     | 11.2.1         | ProSe Direct Discovery without support of <i>disc-SLSS-r12</i>                                    |
|         | 11.2.3         | ProSe Direct Discovery with support of <i>discPeriodicSLSS-r13</i> and ProSe Direct Communication |
|         | 11.3.1         | ProSe Direct Discovery  |
|         | 11.4.1         | ProSe Direct Discovery with support of <i>disc-SLSS-r12</i>                                       |
|         | 11.5.1         | ProSe Direct Discovery  |
| TDD     | 11.2.2         | ProSe Direct Discovery  |
|         | 11.3.2         | ProSe Direct Discovery  |
|         | 11.5.2         | ProSe Direct Discovery  |

For maximum Sidelink Processes test specified in clause 11.5, the UE is required to only meet the test for the maximum channel bandwidth over the ProSe operating bands supported by the UE. Test case 11.2.3 for 5MHz channel bandwidth is applicable to UEs that support ProSe Direct Communication on Band 31 only.

#### 11.1.2 Reference DRX configuration

**Table 11.1.2-1: Reference DRX configuration**

| Parameter  | Value     | Comments |
|--|-----------|----------|
| onDurationTimer  | psf1      |          |
| drx-InactivityTimer  | psf1      |          |
| drx-RetransmissionTimer  | psf1      |          |
| longDRX-CycleStartOffset                                       | sf2560, 0 |          |
| shortDRX   | disabled  |          |
| NOTE 1: For further information see clause 6.3.2 in TS 36.331. |           |          |

## 11.2 Demodulation of PSDCH (single link performance)

The purpose of the requirements in this subclause is to verify the PSDCH demodulation performance with a single active PSDCH link under different operating scenarios and channel conditions.

The active cell(s), when present, are specified in the test parameters specific to the test.

## 11.2.1 FDD (in-coverage)

The minimum requirements are specified in Table 11.2.1-2 with the test parameters specified in Table 11.2.1-1. The receiver UE under test is associated with Cell 1.

**Table 11.2.1-1: Test Parameters**

| Parameter  |                           | Unit      | Test 1  |            |
|--|---------------------------|-----------|---|------------|
| Discovery resource pool configuration  |                           |           | As specified in Table A.7.1.1-1 (Configuration #1-FDD)  |            |
| DRX configuration  |                           |           | As specified in Table 11.1.2-1  |            |
| $N_{oc}$ at antenna port (NOTE 3)  |                           | dBm/15kHz | -98   |            |
| Active cell(s)   |                           |           | Cell 1 (Serving cell)   |            |
| Cell 1   | Cyclic prefix             |           | Normal  |            |
|  | Cell ID                   |           | 0   |            |
|  | Downlink power allocation | $\rho_A$  | dB  | 0          |
|  |                           | $\rho_B$  | dB  | 0 (NOTE 1) |
|  |                           | $\sigma$  | dB  | 0          |
|  | OCNG Pattern (NOTE 2)     |           |   | OP.1 FDD   |
|  | Propagation channel       |           |   | AWGN       |
|  | Antenna configuration     |           |   | 1x2        |
| RSRP   |                           | dBm/15kHz | -92   |            |
| Active Sidelink UE(s)  |                           |           | Sidelink UE 1   |            |
| Sidelink UE 1  | Sidelink Transmissions    |           | PSDCH   |            |
|  | PSDCH RB allocation       |           | PRB pairs $\{2i..2i+1\}$ , where $i$ is chosen randomly uniformly from $[0,11]$ in each discovery period. |            |
|  | Time offset (NOTE 4)      |           | $\mu$ s   | +1         |
|  | Frequency offset (NOTE 5) |           | Hz  | +200       |
|  | Propagation Channel       |           |   | EPA5       |
|  | Antenna configuration     |           |   | 1x2 Low    |
| NOTE 1: $P_B = 0$ .  |                           |           |   |            |
| NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.                       |                           |           |   |            |
| NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.                          |                           |           |   |            |
| NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE. |                           |           |   |            |
| NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.                           |                           |           |   |            |

**Table 11.2.1-2: Minimum performance**

| Test num. | Sidelink UE | Band-width | Reference channel | Reference value   |          |
|-----------|-------------|------------|-------------------|-------------------|----------|
|           |             |            |                   | BLER of PSDCH (%) | SNR (dB) |
| 1         | 1           | 5 MHz      | D.1 FDD           | 30                | 4.6      |

## 11.2.2 TDD (in-coverage)

The minimum requirements are specified in Table 11.2.2-2 with the test parameters specified in Table 11.2.2-1. The receiver UE under test is associated with Cell 1.

**Table 11.2.2-1: Test Parameters**

| Parameter                             |  | Unit      | Test 1   |
|---------------------------------------|--|-----------|--|
| Discovery resource pool configuration |  |           | As specified in Table A.7.1.2-1 (Configuration #1-TDD) |
| DRX configuration                     |  |           | As specified in Table 11.1.2-1                         |
| $N_{oc}$ at antenna port (NOTE 5)     |  | dBm/15kHz | -98  |
| Active cell(s)                        |  |           | Cell 1 (Serving cell)                                  |
| Cell 1                                | Cyclic prefix                          |           | Normal   |
|                                       | Uplink downlink configuration (NOTE 3) |           | 0  |

|  |   |               |   |            |
|--|---|---------------|---|------------|
|  | Special subframe configuration (NOTE 4) |               | 4   |            |
|  | Cell ID                                 |               | 0   |            |
|  | Downlink power allocation               | $\rho_A$      | dB  | 0          |
|  |   | $\rho_B$      | dB  | 0 (NOTE 1) |
|  |   | $\sigma$      | dB  | 0          |
|  | OCNG Pattern <sup>NOTE 2</sup>          |               | OP.1 TDD  |            |
|  | Propagation channel                     |               | AWGN  |            |
|  | Antenna configuration                   |               | 1x2   |            |
| RSRP   | dBm/15kHz                               | -92           |   |            |
| Active Sidelink UE(s)  |   | Sidelink UE 1 |   |            |
| Sidelink UE 1  | Sidelink Transmissions                  |               | PSDCH   |            |
|  | RB allocation                           |               | PRB pairs $\{2i..2i+1\}$ , where $i$ is chosen randomly uniformly from $[0,11]$ in each discovery period. |            |
|  | Time offset (NOTE 6)                    | $\mu$ s       | +1  |            |
|  | Frequency offset (NOTE 7)               | Hz            | +200  |            |
|  | Propagation Channel                     |               | EPA5  |            |
|  | Antenna configuration                   |               | 1x2 Low   |            |
| NOTE 1: $P_B = 0$ .  |   |               |   |            |
| NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.                       |   |               |   |            |
| NOTE 3: As specified in Table 4.2-2 in TS 36.211 [4].  |   |               |   |            |
| NOTE 4: As specified in Table 4.2-1 in TS 36.211 [4].  |   |               |   |            |
| NOTE 5: Applicable to both DL subframes and UL subframes configured for ProSe Direct Discovery.            |   |               |   |            |
| NOTE 6: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE. |   |               |   |            |
| NOTE 7: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.                           |   |               |   |            |

**Table 11.2.2-2: Minimum performance**

| Test num. | Sidelink UE | Band-width | Reference channel | Reference value   |          |
|-----------|-------------|------------|-------------------|-------------------|----------|
|           |             |            |                   | BLER of PSDCH (%) | SNR (dB) |
| 1         | 1           | 5 MHz      | D.1 TDD           | 30                | 4.6      |

### 11.2.3 FDD (out-of-coverage)

The minimum requirements are specified in Table 11.2.3-2 with the test parameters specified in Table 11.2.3-1. The receiver UE under test is out of network coverage.

**Table 11.2.3-1: Test Parameters**

| Parameter                   | Unit                            | Test 1   |
|-----------------------------|---------------------------------|--|
| Resource pool configuration |                                 | As specified in Table A.7.1.1-4 (Configuration #4-FDD)   |
| DRX configuration           |                                 | As specified in Table 11.1.2-1                           |
| $N_{oc}$ at antenna port    | dBm/15kHz                       | -98  |
| Active cell(s)              |                                 | None   |
| Active Sidelink UE(s)       |                                 | Sidelink UEs 1, 2  |
| Sidelink UE 1               | Sidelink Transmissions          | SLSS + PSBCH   |
|                             | networkControlledSyncTx         | ON   |
|                             | slssid                          | 30   |
|                             | inCoverage (in MIB-SL)          | TRUE   |
|                             | syncOffsetIndicator             | Set same as syncOffsetIndicator1 in Configuration #4-FDD |
|                             | Propagation channel             | EPA5   |
|                             | Antenna configuration           | 1x2 Low  |
|                             | $\widehat{E}_s$ at antenna port | dBm/15kHz  |
| Sidelink UE 2               | Sidelink Transmissions          | PSDCH  |

|  |                           |               |  |
|--|---------------------------|---------------|--|
|  | PSDCH RB allocation       |               | PRB pairs $\{2i..2i+1\}$ , where $i$ is chosen randomly uniformly from $[0,11]$ (for 5MHz) or $[0,24]$ (for 10MHz) in each discovery period. |
|  | Time offset (Note 1)      | $\mu\text{s}$ | +1   |
|  | Frequency offset (Note 2) | Hz            | +200   |
|  | Propagation Channel       |               | EPA5   |
|  | Antenna configuration     |               | 1x2 Low  |
| NOTE 1: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE. |                           |               |  |
| NOTE 2: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.                                      |                           |               |  |

Table 11.2.3-2: Minimum performance

| Test number | Sidelink UE | Band-width | Reference channel | Reference value   |          |
|-------------|-------------|------------|-------------------|-------------------|----------|
|             |             |            |                   | BLER of PSDCH (%) | SNR (dB) |
| 1           | 1           | 5 MHz      | D.1 FDD           | 30                | 4.6      |
|             |             | 10 MHz     |                   |                   |          |

## 11.3 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSDCH transmissions from two Sidelink UEs with power imbalance in one subframe.

### 11.3.1 FDD

The minimum requirements are specified in Table 11.3.1-2 with the test parameters specified in Table 11.3.1-1. The receiver UE under test is associated with Cell 1. The Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSDCH on adjacent RBs.

Table 11.3.1-1: Test Parameters

| Parameter                             |                                     | Unit          | Test 1   |            |
|---------------------------------------|-------------------------------------|---------------|--|------------|
| Discovery resource pool configuration |                                     |               | As specified in Table A.7.1.1-1 (Configuration #1-FDD) |            |
| DRX configuration                     |                                     |               | As specified in Table 11.1.2-1                         |            |
| $N_{oc}$ at antenna port (NOTE 3)     |                                     | dBm/15kHz     | -98  |            |
| Active cell(s)                        |                                     |               | Cell 1 (Serving cell)                                  |            |
| Cell 1                                | Cyclic prefix                       |               | Normal   |            |
|                                       | Cell ID                             |               | 0  |            |
|                                       | Downlink power allocation           | $\rho_A$      | dB   | 0          |
|                                       |                                     | $\rho_B$      | dB   | 0 (NOTE 1) |
|                                       |                                     | $\sigma$      | dB   | 0          |
|                                       | OCNG Pattern (NOTE 2)               |               |  | OP.1 FDD   |
|                                       | Propagation channel                 |               |  | AWGN       |
| Antenna configuration                 |                                     |               | 1x2  |            |
| RSRP                                  |                                     | dBm/15kHz     | -92  |            |
| Active Sidelink UE(s)                 |                                     |               | Sidelink UE 1, Sidelink UE 2                           |            |
| Sidelink UE 1                         | Sidelink Transmissions              |               | PSDCH  |            |
|                                       | PSDCH RB allocation                 |               | PRB pairs {4..5}                                       |            |
|                                       | Time offset (NOTE 3)                | $\mu\text{s}$ | 0  |            |
|                                       | Frequency offset (NOTE 4)           | Hz            | 0  |            |
|                                       | Propagation Channel                 |               | AWGN   |            |
| Antenna configuration                 |                                     |               | 1x2 Low  |            |
| Sidelink UE 2                         | Sidelink Transmissions              |               | PSDCH  |            |
|                                       | PSDCH RB allocation                 |               | PRB pairs {6..7}                                       |            |
|                                       | Time offset (w.r.t. Cell 1 DL)      | $\mu\text{s}$ | 0  |            |
|                                       | Frequency offset (w.r.t. Cell 1 UL) | Hz            | 0  |            |
|                                       | Propagation Channel                 |               | AWGN   |            |

|  |         |
|--|---------|
| Antenna configuration  | 1x2 Low |
| NOTE 1: $P_B = 0$ .  |         |
| NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.                       |         |
| NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.                          |         |
| NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE. |         |
| NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.                           |         |

**Table 11.3.1-2: Minimum performance**

| Test num.   | Bandwidth | Sidelink UE | Reference channel | Reference value   |          |
|---|-----------|-------------|-------------------|-------------------|----------|
|   |           |             |                   | BLER of PSDCH (%) | SNR (dB) |
| 1   | 5 MHz     | 1           | D.1 FDD           | (NOTE 1)          | 24.3     |
|   |           | 2           | D.1 FDD           | 30                | 6.9      |
| NOTE 1: There is no BLER requirement for Sidelink UE 1. |           |             |                   |                   |          |

### 11.3.2 TDD

The minimum requirements are specified in Table 11.3.2-2 with the test parameters specified in Table 11.3.2-1. The receiver UE under test is associated with Cell 1. The Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSDCH on adjacent RBs.

**Table 11.3.2-1: Test Parameters**

| Parameter                             |   | Unit      | Test 1   |            |
|---------------------------------------|---|-----------|--|------------|
| Discovery resource pool configuration |   |           | As specified in Table A.7.1.2-1 (Configuration #1-TDD) |            |
| DRX configuration                     |   |           | As specified in Table 11.1.2-1                         |            |
| $N_{oc}$ at antenna port (NOTE 5)     |   | dBm/15kHz | -98  |            |
| Active cell(s)                        |   |           | Cell 1 (Serving cell)                                  |            |
| Cell 1                                | Cyclic prefix                           |           | Normal   |            |
|                                       | Uplink downlink configuration (NOTE 3)  |           | 0  |            |
|                                       | Special subframe configuration (NOTE 4) |           | 4  |            |
|                                       | Cell ID                                 |           | 0  |            |
|                                       | Downlink power allocation               | $\rho_A$  | dB   | 0          |
|                                       |   | $\rho_B$  | dB   | 0 (NOTE 1) |
|                                       |   | $\sigma$  | dB   | 0          |
|                                       | OCNG Pattern <sup>NOTE 2</sup>          |           | OP.1 TDD   |            |
|                                       | Propagation channel                     |           | AWGN   |            |
|                                       | Antenna configuration                   |           | 1x2  |            |
| RSRP                                  | dBm/15kHz                               | -92       |  |            |
| Active Sidelink UE(s)                 |   |           | Sidelink UE 1, Sidelink UE 2                           |            |
| Sidelink UE 1                         | Sidelink Transmissions                  |           | PSDCH  |            |
|                                       | PSDCH RB allocation                     |           | PRB pairs {4..5}                                       |            |
|                                       | Time offset (NOTE 6)                    | $\mu$ s   | 0  |            |
|                                       | Frequency offset (NOTE 7)               | Hz        | 0  |            |
|                                       | Propagation Channel                     |           | AWGN   |            |
|                                       | Antenna configuration                   |           | 1x2 Low  |            |
| Sidelink UE 2                         | Sidelink Transmissions                  |           | PSDCH  |            |
|                                       | RB allocation                           |           | PRB pairs {6..7}                                       |            |
|                                       | Time offset (NOTE 6)                    | $\mu$ s   | 0  |            |
|                                       | Frequency offset (NOTE 7)               | Hz        | 0  |            |
|                                       | Propagation Channel                     |           | AWGN   |            |
|                                       | Antenna configuration                   |           | 1x2 Low  |            |

NOTE 1:  $P_B = 0$ .

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: As specified in Table 4.2-2 in TS 36.211 [4].

NOTE 4: As specified in Table 4.2-1 in TS 36.211 [4].

NOTE 5: Applicable to both DL subframes and UL subframes configured for ProSe Direct Discovery.

NOTE 6: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 7: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 11.3.2-2: Minimum performance

| Test num.   | Bandwidth | Sidelink UE | Reference channel | Reference value   |          |
|---|-----------|-------------|-------------------|-------------------|----------|
|   |           |             |                   | BLER of PSDCH (%) | SNR (dB) |
| 1   | 5 MHz     | 1           | D.1 TDD           | (NOTE 1)          | 24.3     |
|   |           | 2           | D.1 TDD           | 30                | 6.9      |
| NOTE 1: There is no BLER requirement for Sidelink UE 1. |           |             |                   |                   |          |

## 11.4 Multiple timing reference test

The purpose of this test is to check the demodulation performance when receiving from two Sidelink UEs that follow different timing references and transmitting on different resources (non-overlapping in time).

### 11.4.1 FDD

The test parameters are specified in Table 11.4.1-1. Sidelink UE 2 and the receiver UE under test are associated with Cell 1. Sidelink UE 1 and 3 are associated with another cell and use a different timing, and UE 1 acts as a synchronization reference. The minimum requirements are specified in Table 11.4.1-2.

Table 11.4.1-1: Test Parameters

| Parameter                             |   | Unit      | Test 1   |            |
|---------------------------------------|---|-----------|--|------------|
| Discovery resource pool configuration |   |           | As specified in Table A.7.1.1-2 (Configuration #2-FDD) |            |
| DRX configuration                     |   |           | As specified in Table 11.1.2-1                         |            |
| $N_{oc}$ at antenna port (NOTE 3)     |   | dBm/15kHz | -98  |            |
| Active cell(s)                        |   |           | Cell 1 (Serving cell)                                  |            |
| Cell 1                                | Cyclic prefix                           |           | Normal   |            |
|                                       | Cell ID                                 |           | 0  |            |
|                                       | Downlink power allocation               | $\rho_A$  | dB   | 0          |
|                                       |   | $\rho_B$  | dB   | 0 (NOTE 1) |
|                                       |   | $\sigma$  | dB   | 0          |
|                                       | OCNG Pattern <sup>NOTE 2</sup>          |           | OP.1 FDD   |            |
|                                       | Propagation channel                     |           | AWGN   |            |
|                                       | Antenna configuration                   |           | 1x2  |            |
| RSRP                                  | dBm/15kHz                               | -92       |  |            |

|  | Resource pool used for transmissions |         | $discRxPool(1)$   |
|  | RB allocation                        |         | PRB pairs $\{2i..2i+1\}$ , where $i$ is chosen randomly uniformly from $[0,11]$ in each discovery period. |
|  | Time offset (NOTE 4)                 | $\mu s$ | 3511  |
|  | Frequency offset (NOTE 5)            | Hz      | +300  |
|  | Antenna configuration                |         | 1x2 Low   |
| NOTE 1: $P_B = 0$ .  |                                      |         |   |
| NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.                       |                                      |         |   |
| NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.                          |                                      |         |   |
| NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE. |                                      |         |   |
| NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.                           |                                      |         |   |

Table 11.4.1-2: Minimum performance

| Test num.  | Band-width | Sidelink UE | Reference channel | Reference value                     |          |
|--|------------|-------------|-------------------|-------------------------------------|----------|
|  |            |             |                   | BLER of PSDCH (%) <sup>NOTE 1</sup> | SNR (dB) |
| 1  | 5 MHz      | 2           | D.1 FDD           | 30                                  | 4.6      |
|  |            | 3           | D.1 FDD           | 30                                  | 4.6      |
| NOTE 1: The BLER is measured after 5 D2D Discovery periods (1600 frames) of lead time during which the test UE detects and synchronizes to Sidelink UE 1 SLSS. |            |             |                   |                                     |          |

## 11.5 Maximum Sidelink processes test

The purpose of this test is to verify the maximum number of Sidelink processes supported by the UE as reported using UE capability signalling ( $discSupportedProc$ ).

The UE is required to meet only the test for the maximum channel bandwidth over the ProSe operating bands supported by the UE.

### 11.5.1 FDD

The test parameters are specified in Table 11.5.1-1. Multiple discovery resource pools are interleaved. Each Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 11.5.1-2.

Table 11.5.1-1: Test Parameters

| Parameter                             |               | Unit | Test 1-7  |
|---------------------------------------|---------------|------|---|
| Discovery resource pool configuration |               |      | As specified in Table A.7.1.1-3 (Configuration #3-FDD) with parameters $BW_{Channel}$ , $N_{Pools}$ = Number of configured resource pools (as specified in Table 11.5.1-2), and $N = discSupportedProc$ |
| DRX configuration                     |               |      | As specified in Table 11.1.2-1  |
| Active cell(s)                        |               |      | Cell 1 (Serving cell)   |
| Cell 1                                | Cyclic prefix |      | Normal  |
|                                       | Cell ID       |      | 0   |

|   |                              |   |    |            |
|---|------------------------------|---|----|------------|
|   | Downlink power allocation    | $\rho_A$  | dB | 0          |
|   |                              | $\rho_B$  | dB | 0 (NOTE 1) |
|   |                              | $\sigma$  | dB | 0          |
|   | OCNG Pattern                 | NOTE 2  |    | OP.1 FDD   |
|   | Propagation channel          | Static propagation condition<br>No external noise sources are applied |    |            |
|   | Antenna configuration        | 1x2   |    |            |
|   | RSRP                         | dBm/15kHz   |    | -85        |
| Active Sidelink UE(s)   |                              | Sidelink UE $i, i = 0, \dots, \text{discSupportedProc}-1$             |    |            |
| Sidelink UE $i$   | Sidelink Transmissions       | PSDCH (D.1 FDD)   |    |            |
|   | Resource pool index (NOTE 3) | $\lfloor \frac{i}{N_{MAX\_SF}} \rfloor$                               |    |            |
|   | PSDCH RB allocation (NOTE 3) | PRB pairs $\{2*(i \% N_{MAX\_SF}), 2*(i \% N_{MAX\_SF})+1\}$          |    |            |
|   | Time offset (NOTE 4)         | $\mu\text{s}$   | 0  |            |
|   | Frequency offset (NOTE 4)    | Hz  | 0  |            |
|   | Propagation Channel          | Static propagation condition<br>No external noise sources are applied |    |            |
|   | Antenna configuration        | 1x2 Low   |    |            |
| NOTE 1: $P_B = 0$ .   |                              |   |    |            |
| NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs..   |                              |   |    |            |
| NOTE 3: $N_{MAX\_SF}$ represents the maximum number of Sidelink UEs transmitting in one subframe. $N_{MAX\_SF} = 12$ (5 MHz), 25 (10MHz), 37 (15MHz), 50 (10MHz). |                              |   |    |            |
| NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.  |                              |   |    |            |
| NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.  |                              |   |    |            |

Table 11.5.1-2: Minimum performance

| Test num. | Bandwidth | discSupportedProc | Number of configured resource pools | $\hat{E}_s$ at antenna port (dBm/15kHz) | Reference value for Sidelink UE $i=0\dots\text{discSupportedProc}-1$ |
|-----------|-----------|-------------------|-------------------------------------|---|--|
|           |           |                   |                                     |   | Fraction of maximum throughput (%)                                   |
| 1         | 5 MHz     | 50                | 5                                   | -85                                     | 95   |
| 2         | 10 MHz    | 50                | 2                                   | -85                                     | 95   |
| 3         | 15 MHz    | 50                | 2                                   | -85                                     | 95   |
| 4         | 20 MHz    | 50                | 1                                   | -85                                     | 95   |
| 5         | 10 MHz    | 400               | 16                                  | -85                                     | 95   |
| 6         | 15 MHz    | 400               | 11                                  | -85                                     | 95   |
| 7         | 20 MHz    | 400               | 8                                   | -85                                     | 95   |

### 11.5.2 TDD

The test parameters are specified in Table 11.5.2-1. Multiple discovery resource pools are interleaved. Each Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 11.5.2-2.

Table 11.5.2-1: Test Parameters

| Parameter                             | Unit | Test 1-7   |
|---------------------------------------|------|--|
| Discovery resource pool configuration |      | As specified in Table A.7.1.2-2 (Configuration #2-TDD) with parameters $BW_{\text{Channel}}$ , $N_{\text{Pools}}$ = Number of configured resource pools (as specified in Table 11.5.2-2), and $N = \text{discSupportedProc}$ |
| DRX configuration                     |      | As specified in Table 11.1.2-1   |
| Active cell(s)                        |      | Cell 1 (Serving cell)  |

|   |   |           |   |   |
|---|---|-----------|---|---|
| Cell 1  | Cyclic prefix                           |           |   | Normal  |
|   | Uplink downlink configuration (NOTE 3)  |           |   | 0   |
|   | Special subframe configuration (NOTE 4) |           |   | 4   |
|   | Cell ID                                 |           |   | 0   |
|   | Downlink power allocation               | $\rho_A$  | dB  | 0   |
|   |   | $\rho_B$  | dB  | 0 (NOTE 1)  |
|   |   | $\sigma$  | dB  | 0   |

| 7         | 20 MHz    | 400               | 8                                   | -85                                     | 95  |

## 12 Performance requirement (ProSe Direct Communication)

This clause contains the performance requirements for the Sidelink physical channels specified for ProSe Direct Communication in TS 36.211 [4].

### 12.1 General

#### 12.1.1 Applicability of requirements

##### 12.1.1.1 Applicability of requirements for different channel bandwidths

The requirements in this clause are applicable to UEs that support ProSe Direct Communication. Test cases defined for 5MHz channel bandwidth are applicable to UEs that support ProSe Direct Communication on only Band 31.

##### 12.1.1.2 Test coverage for different number of component carriers

For FDD tests specified in 12.8, if corresponding CA tests are tested, the test coverage can be considered fulfilled without executing single carrier tests.

##### 12.1.1.3 Applicability and test rules for different CA configurations and bandwidth combination sets

The performance requirement for CA UE demodulation tests with active Sidelink in Clause 12 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined in Table 12.1.1.3-1. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

**Table 12.1.1.3-1: Applicability and test rules for CA UE demodulation tests with active Sidelink**

| Tests                             | CA capability where the tests apply   | CA configuration from the selected CA capability where the tests apply                          | CA Bandwidth combination to be tested in priority order |
|-----------------------------------|---|---|---|
| CA tests with 2CCs in Clause 12.8 | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination             |

#### 12.1.2 Reference DRX configuration

**Table 12.1.2-1: Reference DRX configuration**

| Parameter  | Value     | Comments |
|--|-----------|----------|
| onDurationTimer  | psf1      |          |
| drx-InactivityTimer  | psf1      |          |
| drx-RetransmissionTimer  | psf1      |          |
| longDRX-CycleStartOffset                                       | sf2560, 0 |          |
| shortDRX   | disabled  |          |
| NOTE 1: For further information see clause 6.3.2 in TS 36.331. |           |          |

## 12.2 Demodulation of PSSCH

The purpose of the requirements in this subclause is to verify the PSSCH demodulation performance with a single active PSSCH link.

### 12.2.1 FDD

The minimum requirements are specified in Table 12.2.1-2 with the test parameters specified in Table 12.2.1-1. This test specifies an out-of-coverage scenario where Sidelink UE 1 is the synchronization reference only and Sidelink UE 2 transmits PSCCH and PSSCH.

**Table 12.2.1-1: Test Parameters**

| Parameter  |  | Unit       | Test 1  |
|--|--|------------|---|
| Communication resource pool configuration  |  |            | As specified in Table A.7.2.1-1 (Configuration #1-FDD)  |
| $N_{oc}$ at antenna port (NOTE 1)  |  | dBm/15 kHz | -98   |
| Active cell(s)   |  |            | None  |
| Sidelink UE 1  | Sidelink Transmissions                   |            | SLSS + PSBCH  |
|  | networkControlledSyncTx                  |            | ON  |
|  | slssid                                   |            | 30  |
|  | inCoverage (in MIB-SL)                   |            | FALSE   |
|  | syncOffsetIndicator                      |            | Set same as syncOffsetIndicator1 in Configuration #1-FDD  |
|  | Propagation channel                      |            | EPA5  |
|  | Antenna configuration                    |            | 1x2 Low   |
|  | $\widehat{E}_s$ at antenna port          | dBm/15 kHz | -85   |
| Sidelink UE 2  | Sidelink Transmissions                   |            | PSCCH + PSSCH   |
|  | PSCCH RMC                                |            | 5MHz: CC.3 FDD<br>10 MHz: CC.4 FDD  |
|  | PSCCH subframe allocation                |            | As defined by TS 36.213 with $n_{PSCCH}$ chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSCCH} \cdot RP / 2 \rfloor L_{PSCCH} - 1]$ every sc-period                            |
|  | PSCCH RB allocation                      |            |   |
|  | $\widehat{E}_s$ of PSCCH at antenna port | dBm/15 kHz | -85   |
|  | PSSCH RMC                                |            | As specified in Table 12.2.1-2  |
|  | PSSCH subframe allocation                |            | As per time repetition pattern specified in PSCCH   |
|  | PSSCH RB allocation                      |            | First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213<br>HARQ retransmission: As per frequency hopping indicated in PSCCH and specified in TS36.213 |
|  | Time offset (NOTE 2)                     | $\mu$ s    | +1  |
|  | Frequency offset (NOTE 3)                | Hz         | +200  |
|  | Propagation Channel                      |            | EVA70   |
| Antenna configuration  |  | 1x2 Low    |   |
| NOTE 1: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.  |  |            |   |
| NOTE 2: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE. |  |            |   |
| NOTE 3: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.                                      |  |            |   |

**Table 12.2.1-2: Minimum performance**

| Test num. | Sidelink UE | Bandwidth | PSSCH Reference channel | Reference value                             |                   |
|-----------|-------------|-----------|-------------------------|---|-------------------|
|           |             |           |                         | Fraction of maximum throughput (%) (NOTE 1) | SNR (dB) of PSSCH |

|   |   |        |          |    |      |
|---|---|--------|----------|----|------|
| 1   | 2 | 10 MHz | CD.1 FDD | 70 | -3.4 |
|   |   | 5 MHz  |          | 70 | -3.3 |
| NOTE 1: The throughput is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1. |   |        |          |    |      |

## 12.3 Demodulation of PSCCH

The purpose of the requirements in this subclause is to verify the PSCCH demodulation performance with a single active PSSCH link.

### 12.3.1 FDD

The minimum requirements are specified in Table 12.3.1-2 with the test parameters specified in Table 12.3.1-1. This test specifies an out-of-coverage scenario where Sidelink UE 1 is the synchronization reference only and Sidelink UE 2 transmits PSCCH and PSSCH.

**Table 12.3.1-1: Test Parameters**

| Parameter  |                           | Unit       | Test 1  |
|--|---------------------------|------------|---|
| Communication resource pool configuration  |                           |            | As specified in Table A.7.2.1-1 (Configuration #1-FDD)  |
| $N_{oc}$ at antenna port (NOTE 1)  |                           | dBm/15 kHz | -98   |
| Active cell(s)   |                           |            | None  |
| Sidelink UE 1  | Sidelink Transmissions    |            | SLSS + PSBCH  |
|  | networkControlledSyncTx   |            | ON  |
|  | slssid                    |            | 30  |
|  | inCoverage (in MIB-SL)    |            | FALSE   |
|  | syncOffsetIndicator       |            | Set same as syncOffsetIndicator1 in Configuration #1-FDD  |
|  | Propagation channel       |            | EPA5  |
|  | Antenna configuration     |            | 1x2 Low   |
| $\hat{E}_s$ at antenna port  | dBm/15 kHz                | -85        |   |
| Sidelink UE 2  | Sidelink Transmissions    |            | PSCCH + PSSCH   |
|  | PSCCH RMC                 |            | As specified in Table 12.3.1-2  |
|  | PSCCH subframe allocation |            | As defined by TS 36.213 with $n_{PSCCH}$ chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSCCH} \cdot RP / 2 \rfloor L_{PSCCH} - 1]$ every sc-period                            |
|  | PSCCH RB allocation       |            |   |
|  | PSSCH RMC                 |            | CD.1 FDD  |
|  | PSSCH subframe allocation |            | As per time repetition pattern specified in PSCCH   |
|  | PSSCH RB allocation       |            | First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213<br>HARQ retransmission: As per frequency hopping indicated in PSCCH and specified in TS36.213 |
|  | Time offset (NOTE 2)      | $\mu$ s    | +1  |
|  | Frequency offset (NOTE 3) | Hz         | +200  |
|  | Propagation Channel       |            | EVA70   |
|  | Antenna configuration     |            | 1x2 Low   |
| NOTE 1: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.  |                           |            |   |
| NOTE 2: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE. |                           |            |   |
| NOTE 3: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.                                      |                           |            |   |

**Table 12.3.1-2: Minimum performance**

| Test num. | Sidelink UE | Band-width | PSCCH Reference channel | Reference value                          |                   |
|-----------|-------------|------------|-------------------------|--|-------------------|
|           |             |            |                         | Probability of missed PSCCH (%) (NOTE 1) | SNR (dB) of PSCCH |
| 1         | 2           | 10 MHz     | CC.4 FDD                | 1  | 4.7               |
|           |             | 5 MHz      | CC.3 FDD                | 1  | 4.8               |

NOTE 1: The probability is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

## 12.4 Demodulation of PSBCH

The purpose of the requirements in this subclause is to verify the PSBCH demodulation performance with a single active link.

### 12.4.1 FDD

The minimum requirements are specified in Table 12.4.1-2 with the test parameters specified in Table 12.4.1-1.

**Table 12.4.1-1: Test Parameters**

| Parameter                                 |                         | Unit      | Test 1   |
|---|-------------------------|-----------|--|
| Communication resource pool configuration |                         |           | As specified in Table A.7.2.1-1 (Configuration #1-FDD)   |
| $N_{oc}$ at antenna port                  |                         | dBm/15kHz | -98  |
| Active cell(s)                            |                         |           | None   |
| Sidelink UE 1                             | Sidelink Transmissions  |           | SLSS + PSBCH (CP.1 FDD)                                  |
|   | networkControlledSyncTx |           | ON   |
|   | slssid                  |           | 30   |
|   | inCoverage (in MIB-SL)  |           | FALSE  |
|   | syncOffsetIndicator     |           | Set same as syncOffsetIndicator1 in Configuration #1-FDD |
|   | Propagation channel     |           | EPA5   |
|   | Antenna configuration   |           | 1x2 Low  |

**Table 12.4.1-2: Minimum performance**

| Test num. | Sidelink UE | Band-width | Reference channel | Reference value                          |          |
|-----------|-------------|------------|-------------------|--|----------|
|           |             |            |                   | Probability of missed PSBCH (%) (NOTE 1) | SNR (dB) |
| 1         | 1           | 10 MHz     | PSBCH (CP.1 FDD)  | 1  | 4.4      |
|           |             | 5 MHz      |                   |  |          |

NOTE 1: The probability is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

## 12.5 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSSCH transmissions from two Sidelink UEs with power imbalance in one subframe.

### 12.5.1 FDD

The test parameters in Table 12.5.1-1 specifies an in-coverage scenario where Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSSCH on adjacent RBs. The minimum requirements are specified in Table 12.5.1-2.

**Table 12.5.1-1: Test Parameters**

| Parameter                                 |  | Unit      | Test 1   |            |
|---|--|-----------|--|------------|
| Communication resource pool configuration |  |           | As specified in Table A.7.2.1-2 (Configuration #2-FDD) |            |
| DRX configuration                         |  |           | As specified in Table 12.1.2-1                         |            |
| $N_{oc}$ at antenna port (Note 3)         |  | dBm/15kHz | -98  |            |
| Active cell(s)                            |  |           | Cell 1 (Serving cell)                                  |            |
| Cell 1                                    | Cyclic prefix                            |           | Normal   |            |
|   | Cell ID                                  |           | 0  |            |
|   | Downlink power allocation                | $\rho_A$  | dB   | 0          |
|   |  | $\rho_B$  | dB   | 0 (NOTE 1) |
|   |  | $\sigma$  | dB   | 0          |
|   | OCNG Pattern (Note 2)                    |           |  | OP.1 FDD   |
|   | Propagation channel                      |           |  | AWGN       |
|   | Antenna configuration                    |           |  | 1x2        |
| RSRP                                      |  | dBm/15kHz | -92  |            |
| Active Sidelink UE(s)                     |  |           | Sidelink UE 1, Sidelink UE 2                           |            |
| Sidelink UE 1                             | Sidelink Transmissions                   |           | PSCCH + PSSCH  |            |
|   | PSCCH RMC                                |           | 5 MHz: CC.1 FDD<br>10 MHz: CC.2 FDD                    |            |
|   | PSCCH subframe allocation                |           | $n_{PSCCH} = 0$ (as defined in TS 36.213)              |            |
|   | PSCCH RB allocation                      |           |  |            |
|   | $\widehat{E}_s$ of PSCCH at antenna port |           | dBm/15kHz  | -85        |
|   | PSSCH RMC                                |           | As specified in Table 12.5.1-2                         |            |
|   | PSSCH subframe allocation                |           | As per time repetition pattern specified in PSCCH      |            |
|   | PSSCH RB allocation                      |           | PRB pairs {4, 5}                                       |            |
|   | Time offset (NOTE 4)                     |           | $\mu$ s  | 0          |
|   | Frequency offset (NOTE 5)                |           | Hz   | 0          |
|   | Propagation Channel                      |           |  | AWGN       |
|   | Antenna configuration                    |           |  | 1x2        |
| Sidelink UE 2                             | Sidelink Transmissions                   |           | PSCCH + PSSCH  |            |
|   | PSCCH RMC                                |           | 5 MHz: CC.1 FDD<br>10 MHz: CC.2 FDD                    |            |
|   | PSCCH subframe allocation                |           | $n_{PSCCH} = 2$ (as defined in TS 36.213)              |            |
|   | PSCCH RB allocation                      |           |  |            |
|   | $\widehat{E}_s$ of PSCCH at antenna port |           | dBm/15kHz  | -85        |
|   | PSSCH RMC                                |           | As specified in Table 12.5.1-2                         |            |
|   | PSSCH subframe allocation                |           | As per time repetition pattern specified in PSCCH      |            |
|   | PSSCH RB allocation                      |           | PRB pairs {6, 7}                                       |            |
|   | Time offset (NOTE 4)                     |           | $\mu$ s  | 0          |
|   | Frequency offset (NOTE 5)                |           | Hz   | 0          |
|   | Propagation Channel                      |           |  | AWGN       |
|   | Antenna configuration                    |           |  | 1x2        |

NOTE 1:  $P_B = 0$ .

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.

NOTE 4: The power of PSCCH is set high to ensure reliable reception of PSCCH.

NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

**Table 12.5.1-2: Minimum performance**

| Test num. | Bandwidth  | Sidelink UE | PSSCH Reference channel | Reference value                    |                   |
|-----------|------------|-------------|-------------------------|------------------------------------|-------------------|
|           |            |             |                         | Fraction of maximum throughput (%) | SNR (dB) of PSSCH |
| 1         | 5 / 10 MHz | 1           | CD.5 FDD                | (NOTE 1)                           | 24.35             |
|           |            | 2           | CD.5 FDD                | 70                                 | 2.4               |

NOTE 1: There is no throughput requirement for Sidelink UE 1.

## 12.6 Multiple timing reference test

The purpose of this test is to check the PSSCH demodulation performance when receiving from two Sidelink UEs that follow different timing references and transmitting on different resources (non-overlapping in time).

### 12.6.1 FDD

The test parameters are specified in Table 12.6.1-1. Sidelink UE 2 and the receiver UE under test are associated with Cell 1. Sidelink UE 1 and Sidelink UE 3 are associated with another cell and use a different timing, and Sidelink UE 1 acts as a synchronization reference only. The minimum requirements are specified in Table 12.6.1-2.

**Table 12.6.1-1: Test Parameters**

| Parameter                                 |  | Unit      | Test 1  |            |
|---|--|-----------|---|------------|
| Communication resource pool configuration |  |           | As specified in Table A.7.2.1-3 (Configuration #3-FDD)  |            |
| DRX configuration                         |  |           | As specified in Table 12.1.2-1  |            |
| $N_{oc}$ at antenna port (Note 3)         |  | dBm/15kHz | -98   |            |
| Active cell(s)                            |  |           | Cell 1 (Serving cell)   |            |
| Cell 1                                    | Cyclic prefix                            |           | Normal  |            |
|   | Cell ID                                  |           | 0   |            |
|   | Downlink power allocation                | $\rho_A$  | dB  | 0          |
|   |  | $\rho_B$  | dB  | 0 (NOTE 1) |
|   |  | $\sigma$  | dB  | 0          |

| Propagation Channel   |  | EVA70     |   |
| Antenna configuration |  | 1x2 Low   |   |

NOTE 1:  $P_b = 0$ .  
 NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.  
 NOTE 3: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.  
 NOTE 4: Timing advance indication in PSSCH is set as 18 ( $=288T_s$ ) in this test. PSSCH timing is advanced with respect to PSCCH timing by the quantity (i.e., PSSCH timing shall be  $+1\mu s - 288T_s$  in this test).  
 NOTE 5: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.  
 NOTE 6: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 12.6.1-2: Minimum performance

| Test num. | Band-width | Sidelink UE | PSSCH Reference channel | Reference value                             |          |
|-----------|------------|-------------|-------------------------|---|----------|
|           |            |             |                         | Fraction of maximum throughput (%) (NOTE 1) | SNR (dB) |
| 1         | 10 MHz     | 2           | CD.4 FDD                | 70  | 3.0      |
|           |            | 3           | CD.2 FDD                | 70  | 2.8      |
|           | 5 MHz      | 2           | CD.3 FDD                | 70  | 2.9      |
|           |            | 3           | CD.2 FDD                | 70  | 2.8      |

NOTE 1: The throughput is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

## 12.7 Maximum Sidelink processes test

The purpose of this test is to verify the maximum number of Sidelink processes and the maximum number of bits per TTI supported by the UE.

### 12.7.1 FDD

The test parameters are specified in Table 12.7.1-1. Multiple communication resource pools are interleaved. Each active Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 12.7.1-2.

Table 12.7.1-1: Test Parameters

| Parameter                                 | Unit | Test 1   |
|---|------|--|
| Communication resource pool configuration |      | As specified in Table A.7.2.1-4 (Configuration #4-FDD) |
| DRX configuration                         |      | As specified in Table 12.1.2-1                         |

## 12.8 Sustained downlink data rate with active Sidelink

The purpose of this test is to verify the downlink data rate is not impacted when Sidelink resource are also configured. The test parameters are in Table 12.8.1-1. Cell 1 is the serving cell and UE 1 and UE 2 are transmitters of Prose Direct Communication. The test UE is expected to receive all PDSCH transmissions, and prioritize the transmission of ACK/NACK over the reception of UE 2's PSSCH.

The test cases apply to UE categories and bandwidth combinations with maximum aggregated bandwidth as specified in Table 12.8.1-2. The minimum requirements are specified in Table 12.8.1-3. The TB success rate in the cellular link shall be sustained during at least 300 frames.

**Table 12.8.1-1: Test parameters for sustained downlink data rate (FDD 64QAM) with active Sidelink**

| Parameter   | Unit | Test 1, 2, 3A, 3B, 4A, 6C       |
|---|------|---------------------------------|

## 13 Void

## 14 Performance requirement (V2X Sidelink Communication)

This clause contains the performance requirements for the sidelink physical channels specified for V2X Sidelink Communication.

### 14.1 General

#### 14.1.1 Applicability of requirements

The requirements in this clause are applicable to UEs that support V2X sidelink communication using Band 47.

When GNSS or GNSS-equivalent synchronization source is used, the reference GNSS signal power is as specified in Table B.6.1-1 in TS 36.133.

The test case applicability is in according to Table 14.1.1-1.

**Table 14.1.1-1: V2X test applicability**

| Tests / clause                      | Applicable if UE supports the following capability   |
|-------------------------------------|--|
| 14.2<br>14.3<br>14.4<br>14.8 Test 1 | UE supporting V2X sidelink<br>If the SL-C-RX Category 4 UE passes 14.11 Test 1 or 2, then the test coverage can be considered fulfilled without executing 14.8 Test 1.                           |
| 14.5                                | UE with support of <i>slss-TxRx-r14</i> [7]  |
| 14.6<br>14.9                        | UE supporting concurrent operation band for V2X and E-UTRA   |
| 14.7                                | UE not supporting concurrent operation band for V2X and E-UTRA   |
| 14.8 Test 2                         | UE with support of <i>v2x-HighReception-r14</i> [7].<br>If the SL-C-RX Category 4 UE passes 14.11 Test 3 or 4, then the test coverage can be considered fulfilled without executing 14.8 Test 2. |
| 14.10 Test 1<br>14.11 Test 1        | UE with support of CA with 2 SL CCs and without support of CA with 3 SL CCs  |
| 14.10 Test 2<br>14.11 Test 2        | UE with support of CA with 3 SL CCs  |
| 14.11 Test 3                        | UE with support of <i>v2x-EnhancedHighReception-r15</i> [7] and CA with 2 SL CCs and without support of CA with 3 SL CCs   |
| 14.11 Test 4                        | UE with support of <i>v2x-EnhancedHighReception-r15</i> [7] and CA with 3 SL CCs   |

## 14.2 Demodulation of PSSCH

The purpose of the requirements in this subclause is to verify the PSSCH for V2X demodulation performance with a single active PSSCH link.

The minimum requirements are specified in Table 14.2-2 with the test parameters specified in Table 14.2-1. In this test scenario, GNSS or GNSS-equivalent synchronization source is used and Sidelink UE 1 transmits PSCCH and PSSCH.

**Table 14.2-1: Test Parameters**

| Parameter  |                           | Unit       | Test 1, 2  | Test 3, 4                    |
|--|---------------------------|------------|--|------------------------------|
| Communication resource pool configuration  |                           |            | As specified in Table A.9-1 (Configuration #1-V2X) |                              |
| $N_{oc}$ at antenna port   |                           | dBm/15 kHz | -98  |                              |
| Active cell(s)   |                           |            | None   |                              |
| V2X Tx format (SL-V2X-TxProfileList-r15)   |                           |            | N/A  | SL-V2X-TxProfile-r15 = rel15 |
| Sidelink UE 1  | Sidelink Transmissions    |            | PSCCH+PSSCH  |                              |
|  | Timing offset (Note 1)    |            | CP/2-12Ts  |                              |
|  | Frequency offset (Note 2) | Hz         | +600   |                              |
|  | Synchronization           |            | GNSS or GNSS-equivalent                            |                              |
|  | Antenna configuration     |            | 1x2 Low  |                              |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing. |                           |            |  |                              |
| Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.        |                           |            |  |                              |

**Table 14.2-2: Minimum performance**

| Test num. | Bandwidth | PSSCH Reference channel | Propagation condition | Reference value |                   |
|-----------|-----------|-------------------------|-----------------------|-----------------|-------------------|
|           |           |                         |                       | PSSCH BLER (%)  | SNR (dB) of PSSCH |
| 1         | 20 MHz    | CD.8                    | EVA180                | 10              | 14.2              |
| 2         | 10 MHz    | CD.9                    | EVA2700               |                 | 5.4               |
| 3         | 20 MHz    | CD.13                   | EVA180                |                 | 12.5              |
| 4         | 10 MHz    | CD.14                   | EVA2700               |                 | 2.8               |

## 14.3 Demodulation of PSCCH

The purpose of the requirements in this subclause is to verify the PSCCH for V2X demodulation performance with a single active PSSCH link.

The minimum requirements are specified in Table 14.3-2 with the test parameters specified in Table 14.3-1. In this test scenario, GNSS or GNSS-equivalent synchronization source is used and Sidelink UE 1 transmits PSCCH and PSSCH.

**Table 14.3-1: Test Parameters**

| Parameter                                 |                        | Unit       | Test 1   |
|---|------------------------|------------|--|
| Communication resource pool configuration |                        |            | As specified in Table A.9-1 (Configuration #1-V2X) |
| $N_{oc}$ at antenna port                  |                        | dBm/15 kHz | -98  |
| Active cell(s)                            |                        |            | None   |
| Sidelink UE 1                             | Sidelink Transmissions |            | PSCCH+PSSCH  |

|   |                           |    |                         |
|---|---------------------------|----|-------------------------|
|   | Timing offset (Note 1)    |    | CP/2-12Ts               |
|   | Frequency offset (Note 2) | Hz | +600                    |
|   | Synchronization           |    | GNSS or GNSS-equivalent |
|   | Antenna configuration     |    | 1x2 Low                 |
|   | PSSCH RMC                 |    | CD.9                    |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.<br>Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.<br>Note 3: Cyclic shift for PSSCH DMRS is randomly selected between {0, 3, 6, 9} for each PSSCH transmission. |                           |    |                         |

**Table 14.3-2: Minimum performance**

| Test number | Bandwidth | PSSCH Reference channel | Propagation condition | Reference value                 |                   |
|-------------|-----------|-------------------------|-----------------------|---------------------------------|-------------------|
|             |           |                         |                       | Probability of missed PSSCH (%) | SNR (dB) of PSSCH |
| 1           | 10 MHz    | CC.8                    | EVA1500               | 1                               | 2.6               |

## 14.4 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSSCH transmissions from two Sidelink UEs with power imbalance in one subframe.

The minimum requirements are specified in Table 14.4-2 with the test parameters specified in Table 14.4-1. The Sidelink UE 1 and 2 are synchronized to GNSS or GNSS-equivalent synchronization reference.

**Table 14.4-1: Test Parameters**

| Parameter   |                           | Unit      | Test 1   |
|---|---------------------------|-----------|--|
| Communication resource pool configuration   |                           |           | As specified in Table A.9-2 (Configuration #2-V2X) |
| $N_{oc}$ at antenna port  |                           | dBm/15kHz | -98  |
| Active cell(s)  |                           |           | None   |
| Active Sidelink UE(s)   |                           |           | Sidelink UE 1, Sidelink UE 2                       |
| Sidelink UE 1   | Sidelink Transmissions    |           | PSSCH + PSSCH                                      |
|   | PSSCH RB allocation       |           | PRB pairs {5, 6}                                   |
|   | PSSCH RMC                 |           | As specified in Table 14.4-2                       |
|   | PSSCH RB allocation       |           | PRB pairs {7, 8, 9}                                |
|   | Time offset (Note 1)      | μs        | 0  |
|   | Frequency offset (Note 2) | Hz        | 0  |
|   | Propagation Channel       |           | AWGN   |
|   | Antenna configuration     |           | 1x2  |
| Sidelink UE 2   | Sidelink Transmissions    |           | PSSCH + PSSCH                                      |
|   | PSSCH RB allocation       |           | PRB pairs {20, 21}                                 |
|   | PSSCH RMC                 |           | As specified in Table 14.4-2                       |
|   | PSSCH RB allocation       |           | PRB pairs {22, 23, 24}                             |
|   | Time offset (Note 1)      | μs        | 0  |
|   | Frequency offset (Note 2) | Hz        | 0  |
|   | Propagation Channel       |           | AWGN   |
|   | Antenna configuration     |           | 1x2  |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.<br>Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency. |                           |           |  |

**Table 14.4-2: Minimum performance**

| Test number | Bandwidth | Sidelink UE | PSSCH Reference channel | Reference value |                   |
|-------------|-----------|-------------|-------------------------|-----------------|-------------------|
|             |           |             |                         | PSSCH BLER (%)  | SNR (dB) of PSSCH |
| 1           | 20MHz     | 1           | CD.10                   | (Note 1)        | 30.35             |
|             |           | 2           | CD.10                   | 10              | 13.3              |

Note 1: There is no throughput requirement for Sidelink UE 1.

## 14.5 Demodulation of PSBCH

The purpose of the requirements in this subclause is to verify the PSBCH demodulation performance with a single active link.

The minimum requirements are specified in Table 14.5-2 with the test parameters specified in Table 14.5-1. The Sidelink UE 1 transmit PSBCH to tested UE and tested UE is synchronized to SLSS of Sidelink UE 1

**Table 14.5-1: Test Parameters**

| Parameter  |                           | Unit      | Test 1   |
|--|---------------------------|-----------|--|
| Communication resource pool configuration  |                           |           | As specified in Table A.9-1 (Configuration #1-V2X) |
| $N_{oc}$ at antenna port   |                           | dBm/15kHz | -98  |
| Active cell(s)   |                           |           | None   |
| Sidelink UE 1  | Sidelink Transmissions    |           | SLSS+PSBCH (Note 3)                                |
|  | sllsid                    |           | 169  |
|  | Time offset (Note 1)      | $\mu$ s   | 0  |
|  | Frequency offset (Note 2) | Hz        | 0  |
|  | Synchronization source    |           | GNSS   |
| Antenna configuration  |                           |           | 1x2 Low  |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing. |                           |           |  |
| Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.        |                           |           |  |
| Note 3: PSBCH transmits together with corresponding SLSS in the same subframe.           |                           |           |  |

**Table 14.5-2: Minimum performance**

| Test number | Bandwidth | PSBCH Reference channel | Propagation condition | Reference value                 |                   |
|-------------|-----------|-------------------------|-----------------------|---------------------------------|-------------------|
|             |           |                         |                       | Probability of missed PSBCH (%) | SNR (dB) of PSBCH |
| 1           | 20 MHz    | CP.2                    | EVA180                | 1                               | 2.5               |

## 14.6 Demodulation of PSSCH with eNB based synchronization

The purpose of the requirements in this subclause is to verify the PSSCH for V2X demodulation performance with a single active PSSCH link under eNB based synchronization.

The minimum requirement is specified in Table 14.6-2 with the test parameters specified in Table 14.6-1. In this test scenario, eNB based synchronization source is used and Sidelink UE 1 transmits PSCCH and PSSCH.

**Table 14.6-1: Test Parameters**

| Parameter                                 |                           | Unit       | Test 1   |            |
|---|---------------------------|------------|--|------------|
| Communication resource pool configuration |                           |            | As specified in Table A.9-3 (Configuration #3-V2X) |            |
| $N_{oc}$ at antenna port                  |                           | dBm/15 kHz | -98  |            |
| Active cell(s)                            |                           |            | Cell 1 (Serving cell)                              |            |

## 14.7 Soft buffer test

The purpose of this test is to verify the maximum number of bits per TTI supported by the V2X UE.

The minimum requirement is specified in Table 14.7-2 with the test parameters specified in Table 14.7-1.

**Table 14.7-1: Test Parameters**

| Parameter  |  | Unit      | Test 1   | Test 2                       |
|--|--|-----------|--|------------------------------|
| Communication resource pool configuration  |  |           | As specified in Table A.9-4 (Configuration #4-V2X) |                              |
| $N_{oc}$ at antenna port   |  | dBm/15kHz | -98  |                              |
| Active cell(s)   |  |           | None   |                              |
| V2X Tx format (SL-V2X-TxProfileList-r15)   |  |           | N/A  | SL-V2X-TxProfile-r15 = rel15 |
| Active Sidelink UE(s)  |  |           | Sidelink UE $i, 0 \leq i \leq 14$                  |                              |
| Sidelink UE $i, 0 \leq i \leq 14$  | Sidelink Transmissions                                   |           | PSCCH + PSSCH                                      |                              |
|  | Time gap between initial transmission and retransmission | Subframe  | 15   |                              |

## 14.8 PSCCH decoding capability test

The purpose of this test is to verify the maximum number of received PSCCHs per subframe supported by the V2X UE.

The minimum requirements are specified in Table 14.8-3 with the test parameters specified in Table 14.8-1 and Table 14.8-2 according to UE capability.

**Table 14.8-1: Test Parameters**

| Parameter  |                           | Unit          | Test 1  |
|--|---------------------------|---------------|---|
| Communication resource pool configuration  |                           |               | As specified in Table A.9-5<br>(Configuration #5-V2X)                 |
| Active cell(s)   |                           |               | None  |

## 14.9 Sustained downlink data rate with active sidelink

The purpose of this test is to verify the WAN and V2X operation is not impacted with each other when UE is under concurrent operation. This test case applies to UEs support concurrent operation of V2X communication with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5G-2.

The test parameters are in Table 14.9-1, and the test UE is expected to receive all PSSCH and PDSCH transmissions simultaneously.

For PDSCH, the test cases apply to UE categories and bandwidth as specified in Table 14.9-2. The minimum requirements for PSSCH are specified in Table 14.7-2, Table 14.10-3 and Table 14.10-4 with corresponding test applicability and the minimum requirements for PDSCH downlink data rate are specified in Table 14.9-3. Both PDSCH and PSSCH performance will be verified simultaneously. The TB success rate in the cellular link shall be sustained during at least 300 frames.

**Table 14.9-1: Test parameters for sustained downlink data rate (FDD 64QAM) and maximum PSSCH processing capability**

| Parameter  |  | Unit      | Test 1   |
|--|--|-----------|--|
| Communication resource pool configuration  |  |           | As specified in Table A.9-4 (Configuration #4-V2X) |
| $N_{oc}$ at antenna port   |  | dBm/15kHz | -98  |
| Active cell(s)   |  |           | Cell 1 (PCell)                                     |
| Cell 1   | Test parameters  |           | As specified in Table 8.7.1-1 and Table 14.9-2     |
| Active Sidelink UE(s)  |  |           | Sidelink UE $i$ , $0 \leq i \leq 14$               |

## 14.10 Soft buffer test (CA)

The purpose of this test is to verify the maximum number of bits per TTI supported by the V2X UE with UE SL-C-RX Category 4 for UEs supporting V2X CA.

For CA with 2 SL CCs, the requirements are specified in Table 14.10-3, based on single carrier requirement specified in Table 14.10-2, with the test parameters specified in Table 14.10-1.

For CA with 3 SL CCs, the requirements are specified in Table 14.10-4, based on single carrier requirement specified in Table 14.10-2, with the test parameters specified in Table 14.10-1.

**Table 14.10-1: Test Parameters**

| Parameter  |  | Unit      | Test 1, 2  |
|--|--|-----------|--|
| Communication resource pool configuration  |  |           | As specified in Table A.9-4 (Configuration #4-V2X) |
| $N_{oc}$ at antenna port   |  | dBm/15kHz | -98  |
| Active cell(s)   |  |           | None   |
| V2X Tx format (SL-V2X-TxProfileList-r15)   |  |           | SL-V2X-TxProfile-r15 = rel15                       |
| Active Sidelink UE(s)  |  |           | Sidelink UE $i$ , $0 \leq i \leq 14$               |
| Sidelink UE $i$ , $0 \leq i \leq 14$   | Sidelink Transmissions                                   |           | PSSCH + PSSCH                                      |
|  | Time gap between initial transmission and retransmission | Subframe  | 15   |
|  | Timing offset (Note 1)                                   | $\mu$ s   | 0  |
|  | Frequency offset (Note 2)                                | Hz        | 0  |
|  | Synchronization source                                   |           | GNSS or GNSS-equivalent                            |
| Antenna configuration  |  |           | 1x2  |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing. |  |           |  |
| Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.        |  |           |  |
| Note 3: 15 sidelink UEs should transmit one by one circularly for every subframe.        |  |           |  |

**Table 14.10-2: Single carrier performance with different bandwidths for multiple CA configurations**

| Bandwidth | PSSCH Reference channel | Propagation condition | Reference value |                   |
|-----------|-------------------------|-----------------------|-----------------|-------------------|
|           |                         |                       | PSSCH BLER (%)  | SNR (dB) of PSSCH |
| 10 MHz    | CD.16                   | AWGN                  | 5               | 12.0              |
| 20 MHz    | CD.15                   | AWGN                  | 5               | 12.0              |

**Table 14.10-3: Minimum performance for CA with 2 SL CCs**

| Test num. | CA Bandwidth combination | Requirement                    | ue-CategorySL-C-RX |

| Test num. | CA Bandwidth combination | Requirement                    | ue-CategorySL-C-RX |
|-----------|--------------------------|--------------------------------|--------------------|
| 2         | 3x10 MHz                 | As specified in 14.10-2 per CC | SL-C-RX Category 4 |

## 14.11 PSCCH/PSSCH decoding capability test (CA)

The purpose of this test is to verify the maximum number of Sidelink processes and the maximum number of bits per TTI supported by the UE with UE SL-C-RX Category 4 for UEs supporting V2X CA.

For CA with 2 SL CCs, the requirements are specified in Table 14.11-4 based on single carrier requirement specified in Table 14.11-3, with the test parameters specified in Table 14.11-1 and Table 14.11-2 according to UE capability.

For CA with 3 SL CCs, the requirements are specified in Table 14.11-5 based on single carrier requirement specified in Table 14.11-3, with test parameters specified in Table 14.11-1 and Table 14.11-2 according to UE capability.

**Table 14.11-1: Test Parameters**

| Parameter  |                           | Unit          | Test 1  | Test 2   |
|--|---------------------------|---------------|---|--|
| Communication resource pool configuration  |                           |               | As specified in Table A.9-5 and A.9-6 (Configuration #5-V2X and #6-V2X) | As specified in Table A.9-6 (Configuration #6-V2X) |
| V2X Tx format (SL-V2X-TxProfileList-r15)   |                           |               | SL-V2X-TxProfile-r15 = rel15  |  |
| Active cell(s)   |                           |               | None  |  |
| Sidelink UE $i$ ,<br>$0 \leq i \leq 14$  | Sidelink Transmissions    |               | PSCCH + PSSCH   |  |
|  | Timing offset (Note 1)    | $\mu\text{s}$ | 0   |  |
|  | Frequency offset (Note 2) | Hz            | 0   |  |
|  | Synchronization source    |               | GNSS or GNSS-equivalent   |  |
|  | Propagation Channel       |               | Static propagation condition<br>No external noise sources are applied   |  |
|  | Antenna configuration     |               | 1x2   |  |
|  | PSSCH RMC                 |               | CD.17 and CD.18   | CD.18  |
| Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.                   |                           |               |   |  |
| Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.                          |                           |               |   |  |
| Note 3: Cyclic shift for PSCCH DMRS is randomly selected between {0, 3, 6, 9} for each PSCCH transmission. |                           |               |   |  |

**Table 14.11-2: Test Parameters**

# Annex A (normative): Measurement channels

## A.1 General

The throughput values defined in the measurement channels specified in Annex A, are calculated and are valid per datastream (codeword). For multi-stream (more than one codeword) transmissions, the throughput referenced in the minimum requirements is the sum of throughputs of all datastreams (codewords).

The UE category entry in the definition of the reference measurement channel in Annex A is only informative and reveals the UE categories, which can support the corresponding measurement channel. Whether the measurement channel is used for testing a certain UE category or not is specified in the individual minimum requirements.

---

## A.2 UL reference measurement channels

### A.2.1 General

The measurement channels in the following subclauses are defined to derive the requirements in clause 6 (Transmitter Characteristics) and clause 7 (Receiver Characteristics). The measurement channels represent example configurations of physical channels for different data rates.

#### A.2.1.1 Applicability and common parameters

The UL reference measurement channels comprise transmission of PUSCH and Demodulation Reference signals only. The following conditions apply:

- 1 HARQ transmission
- Cyclic Prefix normal
- PUSCH hopping off
- Link adaptation off
- Demodulation Reference signal as per TS 36.211 [4] subclause 5.5.2.1.2.

Where ACK/NACK is transmitted, it is assumed to be multiplexed on PUSCH as per TS 36.212 [5] subclause 5.2.2.6.

- ACK/NACK 1 bit
- ACK/NACK mapping adjacent to Demodulation Reference symbol
- ACK/NACK resources punctured into data
- Max number of resources for ACK/NACK: 4 SC-FDMA symbols per subframe
- No CQI transmitted, no RI transmitted

#### A.2.1.2 Determination of payload size

The algorithm for determining the payload size  $A$  is as follows; given a desired coding rate  $R$  and radio block allocation  $N_{RB}$

1. Calculate the number of channel bits  $N_{ch}$  that can be transmitted during the first transmission of a given sub-frame.
2. Find  $A$  such that the resulting coding rate is as close to  $R$  as possible, that is,

$$\min \left| R - (A + 24 * (N_{CB} + 1)) / N_{ch} \right|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- A is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of  $N_{RB}$  resource blocks.
- C is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
- For RMC-s, which at the nominal target coding rate do not cover all the possible UE categories for the given modulation, reduce the target coding rate gradually (within the same modulation), until the maximal possible number of UE categories is covered.

3. If there is more than one A that minimises the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.

### A.2.1.3 Overview of UL reference measurement channels

In Table A.2.1.3-1 to A.2.1.3-1K are listed the UL reference measurement channels specified in annexes A.2.2 and A.2.3 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.2.2 and A.2.3 as appropriate.

## A.2.2 Reference measurement channels for FDD

### A.2.2.1 Full RB allocation

#### A.2.2.1.1 QPSK

**Table A.2.2.1.1-1: Reference Channels for QPSK with full RB allocation**

| Parameter         | Unit | Value |   |   |    |    |    |
|-------------------|------|-------|---|---|----|----|----|
| Channel bandwidth | MHz  | 1.4   | 3 | 5 | 10 | 15 | 20 |

|  |      |      |      |      |       |       |       |
|--|------|------|------|------|-------|-------|-------|
| Allocated resource blocks  |      | 6    | 15   | 25   | 50    | 75    | 100   |
| DFT-OFDM Symbols per Sub-Frame   |      | 12   | 12   | 12   | 12    | 12    | 12    |
| Modulation   |      | QPSK | QPSK | QPSK | QPSK  | QPSK  | QPSK  |
| Target Coding rate   |      | 1/3  | 1/3  | 1/3  | 1/3   | 1/5   | 1/6   |
| Payload size   | Bits | 600  | 1544 | 2216 | 5160  | 4392  | 4584  |
| Transport block CRC  | Bits | 24   | 24   | 24   | 24    | 24    | 24    |
| Number of code blocks per Sub-Frame (Note 1)   |      | 1    | 1    | 1    | 1     | 1     | 1     |
| Total number of bits per Sub-Frame   | Bits | 1728 | 4320 | 7200 | 14400 | 21600 | 28800 |
| Total symbols per Sub-Frame  |      | 864  | 2160 | 3600 | 7200  | 10800 | 14400 |
| UE Category  |      | ≥ 1  | ≥ 1  | ≥ 1  | ≥ 1   | ≥ 1   | ≥ 1   |
| Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) |      |      |      |      |       |       |       |

**Table A.2.2.1.1-1a: Reference Channels for QPSK with full/maximum RB allocation for UE UL category 0**

| Parameter  | Unit | Value |      |      |       |       |       |
|--|------|-------|------|------|-------|-------|-------|
| Channel bandwidth  | MHz  | 1.4   | 3    | 5    | 10    | 15    | 20    |
| Allocated resource blocks  |      | 6     | 15   | 25   | 36    | 36    | 36    |
| DFT-OFDM Symbols per Sub-Frame   |      | 12    | 12   | 12   | 12    | 12    | 12    |
| Modulation   |      | QPSK  | QPSK | QPSK | QPSK  | QPSK  | QPSK  |
| Target Coding rate   |      | 1/3   | 1/5  | 1/8  | 1/10  | 1/10  | 1/10  |
| Payload size   | Bits | 600   | 872  | 904  | 1000  | 1000  | 1000  |
| Transport block CRC  | Bits | 24    | 24   | 24   | 24    | 24    | 24    |
| Number of code blocks per Sub-Frame (NOTE 1)   |      | 1     | 1    | 1    | 1     | 1     | 1     |
| Total number of bits per Sub-Frame   | Bits | 1728  | 4320 | 7200 | 10368 | 10368 | 10368 |
| Total symbols per Sub-Frame  |      | 864   | 2160 | 3600 | 5184  | 5184  | 5184  |
| UE UL Category   |      | 0     | 0    | 0    | 0     | 0     | 0     |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)   |      |       |      |      |       |       |       |
| NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th, 6th, 12th, 13th, 14th, 20th, 21st, 22nd, 28th, 29th, 30th, 36th, 37th, and 38th subframes every 40ms. Information bit payload is available if uplink subframe is scheduled. |      |       |      |      |       |       |       |

**Table A.2.2.1.1-1b: Reference Channels for QPSK with full/maximum RB allocation for UE UL category M1**

| Parameter   | Unit | Value |      |      |      |      |      |
|---|------|-------|------|------|------|------|------|
| Channel bandwidth   | MHz  | 1.4   | 3    | 5    | 10   | 15   | 20   |
| Allocated resource blocks   |      | 6     | 6    | 6    | 6    | 6    | 6    |
| DFT-OFDM Symbols per Sub-Frame  |      | 12    | 12   | 12   | 12   | 12   | 12   |
| Modulation  |      | QPSK  | QPSK | QPSK | QPSK | QPSK | QPSK |
| Target Coding rate  |      | 1/3   | 1/3  | 1/3  | 1/3  | 1/3  | 1/3  |
| Payload size  | Bits | 600   | 600  | 600  | 600  | 600  | 600  |
| Transport block CRC   | Bits | 24    | 24   | 24   | 24   | 24   | 24   |
| Number of code blocks per Sub-Frame (NOTE 1)  |      | 1     | 1    | 1    | 1    | 1    | 1    |
| Total number of bits per Sub-Frame  | Bits | 1728  | 1728 | 1728 | 1728 | 1728 | 1728 |
| Total symbols per Sub-Frame   |      | 864   | 864  | 864  | 864  | 864  | 864  |
| UE UL Category  |      | M1    | M1   | M1   | M1   | M1   | M1   |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)  |      |       |      |      |      |      |      |
| NOTE 2: For HD-FDD UE with $N_{abs}^{PUSCH} = 1$ , the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled. $N_{abs}^{PUSCH}$ is total number of absolute subframes a PUSCH with repetition spans [4]. |      |       |      |      |      |      |      |

NOTE 3: For HD-FDD UE with  $N_{abs}^{PUSCH} > 1$ , MPDCCH are scheduled at 0th DL subframe every  $N_{abs}^{PUSCH} + 5$  subframes (starting from the 0th subframe). The associated PUSCH is scheduled at the 4th to  $(N_{abs}^{PUSCH} + 3)$ -th UL subframes every  $N_{abs}^{PUSCH} + 5$  subframes. Information bit payload is available if uplink subframe is scheduled.

**Table A.2.2.1.1-1c: Reference Channels for QPSK with full/maximum RB allocation for UE UL category M2**

| Parameter  | Unit | Value |      |      |      |      |      |
|--|------|-------|------|------|------|------|------|
| Channel bandwidth  | MHz  | 1.4   | 3    | 5    | 10   | 15   | 20   |
| Allocated resource blocks  |      | 6     | 12   | 24   | 24   | 24   | 24   |
| DFT-OFDM Symbols per Sub-Frame   |      | 12    | 12   | 12   | 12   | 12   | 12   |
| Modulation   |      | QPSK  | QPSK | QPSK | QPSK | QPSK | QPSK |
| Target Coding rate   |      | 1/3   | 1/3  | 1/3  | 1/3  | 1/3  | 1/3  |
| Payload size   | Bits | 600   | 1224 | 2472 | 2472 | 2472 | 2472 |
| Transport block CRC  | Bits | 24    | 24   | 24   | 24   | 24   | 24   |
| Number of code blocks per Sub-Frame (NOTE 1)   |      | 1     | 1    | 1    | 1    | 1    | 1    |
| Total number of bits per Sub-Frame   | Bits | 1728  | 3456 | 6912 | 6912 | 6912 | 6912 |
| Total symbols per Sub-Frame  |      | 864   | 1728 | 3456 | 3456 | 3456 | 3456 |
| UE UL Category   |      | M2    | M2   | M2   | M2   | M2   | M2   |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)   |      |       |      |      |      |      |      |
| NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled. |      |       |      |      |      |      |      |

A.2.2.1.2 16-QAM

**Table A.2.2.1.2-1: Reference Channels for 16-QAM with full RB allocation**

| Parameter  | Unit | Value |       |       |       |       |       |
|--|------|-------|-------|-------|-------|-------|-------|
| Channel bandwidth  | MHz  | 1.4   | 3     | 5     | 10    | 15    | 20    |

| UE Category  |      | M1    | M1    | M1    | M1    | M1    | M1    |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).  |      |       |       |       |       |       |       |
| NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled. |      |       |       |       |       |       |       |

**Table A.2.2.1.2-1c: Reference Channels for 16-QAM with maximum RB allocation for UE UL category M2**

| Parameter  | Unit | Value |       |       |       |       |       |
|--|------|-------|-------|-------|-------|-------|-------|
| Channel bandwidth  | MHz  | 1.4   | 3     | 5     | 10    | 15    | 20    |
| Allocated resource blocks  |      | 6     | 12    | 24    | 24    | 24    | 24    |
| DFT-OFDM Symbols per Sub-Frame   |      | 12    | 12    | 12    | 12    | 12    | 12    |
| Modulation   |      | 16QAM | 16QAM | 16QAM | 16QAM | 16QAM | 16QAM |
| Target Coding rate   |      | 1/3   | 1/3   | 1/3   | 1/3   | 1/3   | 1/3   |
| Payload size   | Bits | 1032  | 2088  | 4264  | 4264  | 4264  | 4264  |
| Transport block CRC  | Bits | 24    | 24    | 24    | 24    | 24    | 24    |
| Number of code blocks per Sub-Frame  |      | 1     | 1     | 1     | 1     | 1     | 1     |
| Total number of bits per Sub-Frame   | Bits | 3456  | 6912  | 13824 | 13824 | 13824 | 13824 |
| Total symbols per Sub-Frame  |      | 864   | 1728  | 3456  | 3456  | 3456  | 3456  |
| UE Category  |      | M2    | M2    | M2    | M2    | M2    | M2    |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).  |      |       |       |       |       |       |       |
| NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled. |      |       |       |       |       |       |       |

| Note 1:                                      | If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) |        |        |        |        |        |        |

### A.2.2.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements. The single allocated RB case is included.

The allocated RBs are contiguous and start from one end of the channel bandwidth. A single allocated RB is at one end of the channel bandwidth.

#### A.2.2.2.1 QPSK

**Table A.2.2.2.1-1: Reference Channels for QPSK with partial RB allocation**

| Parameter | Ch BW    | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category |
|-----------|----------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|-------------|
| Unit      | MHz      |               |                                |       |                    | Bits         | Bits                |  | Bits                               |                             |             |
|           | 1.4 - 20 | 1             | 12                             | QPSK  | 1/3                | 72           | 24                  | 1  | 288                                | 144                         | ≥ 1         |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th, 6th, 12th, 13th, 14th, 20th, 21st, 22nd, 28th, 29th, 30th, 36th, 37th, and 38th subframes every 40ms. Information bit payload is available if uplink subframe is scheduled.

Table A.2.2.1-1b: Reference Channels for QPSK with partial RB allocation for UE UL category M1

| Parameter | Ch BW | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category |
|-----------|-------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|-------------|
|-----------|-------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|-------------|

| Unit | MHz      |   |    |      |     | Bits | Bits |   | Bits |     |    |
|------|----------|---|----|------|-----|------|------|---|------|-----|----|
|      | 1.4 - 20 | 1 | 12 | QPSK | 1/3 | 72   | 24   | 1 | 288  | 144 | M1 |
|      | 1.4 - 20 | 2 | 12 | QPSK | 1/3 | 176  | 24   | 1 | 576  | 288 | M1 |
|      | 1.4 - 20 | 3 | 12 | QPSK | 1/3 | 256  | 24   | 1 | 864  | 432 | M1 |
|      | 1.4 - 20 | 4 | 12 | QPSK | 1/3 | 392  | 24   | 1 | 1152 | 576 | M1 |
|      | 1.4 - 20 | 5 | 12 | QPSK | 1/3 | 424  | 24   | 1 | 1440 | 720 | M1 |
|      | 3-20     | 6 | 12 | QPSK | 1/3 | 600  | 24   | 1 | 1728 | 864 | M1 |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Note 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled.

|      | 5 - 20   | 21 | 12 | 16QAM | 1/2 | 5992 | 24   | 1        | 12096 | 3024 | M2 |
|      | 5 - 20   | 24 | 12 | 16QAM | 1/2 | 6968 | 24   | 2        | 13824 | 3456 | M2 |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD, the uplink subframes are scheduled at the 5th, 6th, and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled.

A.2.2.2.3 64-QAM

Table A.2.2.2.3-1: Reference Channels for 64-QAM with partial RB allocation

| Parameter | Ch BW    | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category (Note 2) | UE UL Category (Note 2) |
|-----------|----------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|----------------------|-------------------------|
| Unit      | MHz      |               |                                |       |                    | Bits         | Bits                |  | Bits                               |                             |                      |                         |
|           | 1.4 - 20 | 1             | 12                             | 64QAM | 3/4                | 616          | 24                  | 1  | 864                                | 144                         | 5,8                  | 5, 8, 13, 14            |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

### A.2.2.3 Void

Table A.2.2.3-1: Void

### A.2.2.4 subPRB allocation

The location of allocated RB for subPRB allocation is chosen according to values specified in the Tx requirements.

Table A.2.2.4-1: Reference Channels for SubPRB allocation

| Parameter                              | Unit | Value        |          |          |
|--|------|--------------|----------|----------|
|  |      | 1.4 – 20     | 1.4 – 20 | 1.4 – 20 |
| Channel bandwidth                      | MHz  | 1.4 – 20     | 1.4 – 20 | 1.4 – 20 |
| Allocated resource blocks              |      | 1            | 1        | 1        |
| Number of subcarriers                  |      | 2 out of 3   | 3        | 6        |
| DFT-OFDM Symbols per Sub-Frame         |      | 12           | 12       | 12       |
| Modulation                             |      | $\pi/2$ BPSK | QPSK     | QPSK     |
| Target Coding rate                     |      | 1/3          | 1/3      | 1/3      |
| Payload size                           | Bits | 32           | 72       | 72       |
| Transport block CRC                    | Bits | 24           | 24       | 24       |
| Number of code blocks                  |      | 1            | 1        | 1        |
| Total number of bits per resource unit | Bits | 192          | 288      | 288      |
| Total symbols per resource unit        |      | 192          | 144      | 144      |
| Tx time                                | ms   | 8            | 4        | 2        |
| UE UL Category                         |      | M1/M2        | M1/M2    | M1/M2    |

NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

## A.2.3 Reference measurement channels for TDD

For TDD, the measurement channel is based on DL/UL configuration ratio of 2DL:2UL, or 1DL:4UL. 2DL:2UL is the default and used unless explicitly specified in the test case

### A.2.3.1 Full RB allocation

#### A.2.3.1.1 QPSK

Table A.2.3.1.1-1: Reference Channels for QPSK with full RB allocation

| Parameter                              | Unit | Value |    |    |    |    |     |
|--|------|-------|----|----|----|----|-----|
|  |      | 1.4   | 3  | 5  | 10 | 15 | 20  |

#### A.2.3.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements. The single allocated RB case is included.

The allocated RBs are contiguous and start from one end of the channel bandwidth. A single allocated RB is at one end of the channel bandwidth.

A.2.3.2.1 QPSK

Table A.2.3.2.1-1: Reference Channels for QPSK with partial RB allocation

| Parameter | Ch BW    | Allocated RBs | UDL Configuration (Note 2) | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size for Sub-Frame 2, 3, 7, 8 | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame for Sub-Frame 2, 3, 7, 8 | Total symbols per Sub-Frame for Sub-Frame 2, 3, 7, 8 | UE Category |

A.2.3.3 Void

Table A.2.3.3-1: Void

### A.2.3.4 subPRB allocation

The location of allocated RB for subPRB allocation is chosen according to values specified in the Tx requirements.

**Table A.2.3.4-1: Reference Channels for SubPRB allocation**

| Parameter  | Unit | Value        |          |          |
|--|------|--------------|----------|----------|
|  |      | 1.4 – 20     | 1.4 – 20 | 1.4 – 20 |
| Channel bandwidth  | MHz  | 1.4 – 20     | 1.4 – 20 | 1.4 – 20 |
| Allocated resource blocks  |      | 1            | 1        | 1        |
| Number of subcarriers  |      | 2 out of 3   | 3        | 6        |
| DFT-OFDM Symbols per Sub-Frame   |      | 12           | 12       | 12       |
| Modulation   |      | $\pi/2$ BPSK | QPSK     | QPSK     |
| Target Coding rate   |      | 1/3          | 1/3      | 1/3      |
| Payload size   | Bits | 32           | 72       | 72       |
| Transport block CRC  | Bits | 24           | 24       | 24       |
| Number of code blocks  |      | 1            | 1        | 1        |
| Total number of bits per resource unit   | Bits | 192          | 288      | 288      |
| Total symbols per resource unit  |      | 192          | 144      | 144      |
| Tx time  | ms   | 8            | 4        | 2        |
| UE UL Category   |      | M1/M2        | M1/M2    | M1/M2    |
| NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) |      |              |          |          |

### A.2.4 Reference measurement channels for UE category NB1

**Table A.2.4-1 Reference Channels for UE category NB1**

| Parameter  | Value        |              |              |              |       |       |       |
|--|--------------|--------------|--------------|--------------|-------|-------|-------|
|  | 3.75         | 3.75         | 15           | 15           | 15    | 15    | 15    |
| Sub-carrier spacing (kHz)  | 3.75         | 3.75         | 15           | 15           | 15    | 15    | 15    |
| Number of tone   | 1            | 1            | 1            | 1            | 3     | 6     | 12    |
| Modulation   | $\pi/2$ BPSK | $\pi/4$ QPSK | $\pi/2$ BPSK | $\pi/4$ QPSK | QPSK  | QPSK  | QPSK  |
| Number of NPUSCH repetition (NOTE 5)   | 1            | 1            | 1            | 1            | 1     | 1     | 1     |

## A.2.5 Reference measurement channels for LAA

### A.2.5.1 Full RB allocation

#### A.2.5.1.1 QPSK

**Table A.2.5.1.1-1: Reference Channels for QPSK with full RB allocation**

| Parameter  | Unit | Value    |          |
|--|------|----------|----------|
| Channel bandwidth  | MHz  | 10       | 20       |
| Allocated resource blocks  |      | 50       | 100      |
| DFT-OFDM Symbols per Sub-Frame   |      | 12       | 12       |
| Modulation   |      | QPSK     | QPSK     |
| Target Coding rate   |      | 1/3      | 1/6      |
| Payload size   | Bits | 5160     | 4584     |
| Transport block CRC  | Bits | 24       | 24       |
| Number of code blocks per Sub-Frame<br>(Note 1)  |      | 1        | 1        |
| Total number of bits per Sub-Frame   | Bits | 14400    | 28800    |
| Total symbols per Sub-Frame  |      | 7200     | 14400    |
| UE Category  |      | $\geq 1$ | $\geq 1$ |
| Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) |      |          |          |

#### A.2.5.1.2 16QAM

**Table A.2.5.1.2-1: Reference Channels for 16QAM with full RB allocation**

| Parameter  | Unit | Value    |          |
|--|------|----------|----------|
| Channel bandwidth  | MHz  | 10       | 20       |
| Allocated resource blocks  |      | 50       | 100      |
| DFT-OFDM Symbols per Sub-Frame   |      | 12       | 12       |
| Modulation   |      | 16QAM    | 16QAM    |
| Target Coding rate   |      | 3/4      | 1/3      |
| Payload size   | Bits | 21384    | 19848    |
| Transport block CRC  | Bits | 24       | 24       |
| Number of code blocks per Sub-Frame<br>(Note 1)  |      | 4        | 4        |
| Total number of bits per Sub-Frame   | Bits | 28800    | 57600    |
| Total symbols per Sub-Frame  |      | 7200     | 14400    |
| UE Category  |      | $\geq 2$ | $\geq 2$ |
| Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) |      |          |          |

A.2.5.1.3 64QAM

Table A.2.5.1.3-1: Reference Channels for 64QAM with full RB allocation

| Parameter  | Unit | Value         |               |
|--|------|---------------|---------------|
| Channel bandwidth  | MHz  | 10            | 20            |
| Allocated resource blocks  |      | 50            | 100           |
| DFT-OFDM Symbols per Sub-Frame   |      | 12            | 12            |
| Modulation   |      | 64QAM         | 64QAM         |
| Target Coding rate   |      | 3/4           | 3/4           |
| Payload size   | Bits | 31704         | 63776         |
| Transport block CRC  | Bits | 24            | 24            |
| Number of code blocks per Sub-Frame (Note 1)   |      | 8             | 11            |
| Total number of bits per Sub-Frame   | Bits | 43200         | 86400         |
| Total symbols per Sub-Frame  |      | 7200          | 14400         |
| UE Category (Note 2)   |      | 5,8           | 5,8           |
| UE UL Category (Note 2)  |      | 5,8,13,<br>14 | 5,8,13,<br>14 |
| Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)<br>Note 2: If UE does not report UE UL category, then the applicability of reference channel is determined by UE category. If UE reports UE UL category, then the applicability of reference channel is determined by UE UL category. |      |               |               |

A.2.5.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements.

A.2.5.2.1 QPSK

Table A.2.5.2.1-1: Reference Channels for QPSK with partial RB allocation

| Parameter   | Ch BW   | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category |
|---|---------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|-------------|
| Unit  | MHz     |               |                                |       |                    | Bits         | Bits                |  | Bits                               |                             |             |
|   | 10 - 20 | 10            | 12                             | QPSK  | 1/3                | 872          | 24                  | 1  | 2880                               | 1440                        | ≥ 1         |
|   | 10 - 20 | 20            | 12                             | QPSK  | 1/3                | 1736         | 24                  | 1  | 5760                               | 2880                        | ≥ 1         |
|   | 10 - 20 | 30            | 12                             | QPSK  | 1/3                | 2664         | 24                  | 1  | 8640                               | 4320                        | ≥ 1         |
|   | 10 - 20 | 40            | 12                             | QPSK  | 1/3                | 4136         | 24                  | 1  | 11520                              | 5760                        | ≥ 1         |
|   | 20      | 50            | 12                             | QPSK  | 1/3                | 5160         | 24                  | 1  | 14400                              | 7200                        | ≥ 1         |
|   | 20      | 60            | 12                             | QPSK  | 1/4                | 4264         | 24                  | 1  | 17280                              | 8640                        | ≥ 1         |
|   | 20      | 70            | 12                             | QPSK  | 1/4                | 4968         | 24                  | 1  | 20160                              | 10080                       | ≥ 1         |
|   | 20      | 80            | 12                             | QPSK  | 1/5                | 4776         | 24                  | 1  | 23040                              | 11520                       | ≥ 1         |
|   | 20      | 90            | 12                             | QPSK  | 1/6                | 4008         | 24                  | 1  | 25920                              | 12960                       | ≥ 1         |
| Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)<br>Note 2: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N <sub>Interlace</sub> -1 } where N <sub>Interlace</sub> is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively.<br>Note 3: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N <sub>Interlace</sub> -1 } where N <sub>Interlace</sub> is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively. |         |               |                                |       |                    |              |                     |  |                                    |                             |             |

A.2.5.2.2 16QAM

Table A.2.5.2.2-1: Reference Channels for 16QAM with partial RB allocation

| Parameter | Ch BW   | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category |
|-----------|---------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|-------------|
| Unit      | MHz     |               |                                |       |                    | Bits         | Bits                |  | Bits                               |                             |             |
|           | 10 - 20 | 10            | 12                             | 16QAM | 3/4                | 4264         | 24                  | 1  | 5760                               | 1440                        | ≥ 2         |

|           | 20      | 60            | 12                             | 16QAM | 2/3                | 23688        | 24                  | 4  | 34560                              | 8640                        | ≥ 2         |
|           | 20      | 70            | 12                             | 16QAM | 1/2                | 19848        | 24                  | 4  | 40320                              | 10080                       | ≥ 2         |
|           | 20      | 80            | 12                             | 16QAM | 1/2                | 22920        | 24                  | 4  | 46080                              | 11520                       | ≥ 2         |
|           | 20      | 90            | 12                             | 16QAM | 2/5                | 20616        | 24                  | 4  | 51840                              | 12960                       | ≥ 2         |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N<sub>Interface-1</sub>} where N<sub>Interface</sub> is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively.

Note 3: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N<sub>Interface-1</sub>} where N<sub>Interface</sub> is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively.

A.2.5.2.3 64QAM

Table A.2.5.2.3-1: Reference Channels for 64QAM with partial RB allocation

| Parameter | Ch BW   | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category (Note 2) | UE UL Category (Note 2) |
|-----------|---------|---------------|--------------------------------|-------|--------------------|--------------|---------------------|--|------------------------------------|-----------------------------|----------------------|-------------------------|

|           | 20      | 50            | 12                             | 64QAM | 3/4                | 31704        | 24                  | 6  | 43200                              | 7200                        | 5,8                  | 5, 8, 13, 14            |
|           | 20      | 60            | 12                             | 64QAM | 3/4                | 37888        | 24                  | 7  | 51840                              | 8640                        | 5,8                  | 5, 8, 13, 14            |
|           | 20      | 70            | 12                             | 64QAM | 3/4                | 43816        | 24                  | 4  | 60480                              | 10080                       | 5,8                  | 5, 8, 13, 14            |
|           | 20      | 80            | 12                             | 64QAM | 3/4                | 51024        | 24                  | 9  | 69120                              | 11520                       | 5,8                  | 5, 8, 13, 14            |
|           | 20      | 90            | 12                             | 64QAM | 2/3                | 51024        | 24                  | 9  | 77760                              | 12960                       | 5,8                  | 5, 8, 13, 14            |

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: If UE does not report UE UL category, then the applicability of reference channel is determined by UE category. If UE reports UE UL category, then the applicability of reference channel is determined by UE UL category

Note 3: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N<sub>Interface-1</sub>} where N<sub>Interface</sub> is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively.

Note 4: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N<sub>Interface-1</sub>} where N<sub>Interface</sub> is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively.

## A.3 DL reference measurement channels

### A.3.1 General

The number of available channel bits varies across the sub-frames due to PBCH and PSS/SSS overhead. The payload size per sub-frame is varied in order to keep the code rate constant throughout a frame.

Unless otherwise stated, no user data is scheduled on subframes #5 in order to facilitate the transmission of system information blocks (SIB).

The algorithm for determining the payload size  $A$  is as follows; given a desired coding rate  $R$  and radio block allocation  $N_{RB}$

1. Calculate the number of channel bits  $N_{ch}$  that can be transmitted during the first transmission of a given sub-frame.
2. Find  $A$  such that the resulting coding rate is as close to  $R$  as possible, that is,

$$\min |R - (A + 24 * (N_{CB} + 1)) / N_{ch}|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- a)  $A$  is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of  $N_{RB}$  resource blocks.
  - b)  $C$  is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
3. If there is more than one  $A$  that minimizes the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.
  4. For TDD, the measurement channel is based on DL/UL configuration ratio of 2DL+DwPTS (12 OFDM symbol):  
2UL

#### A.3.1.1 Overview of DL reference measurement channels

In Table A.3.1.1-1 to A.3.1.1-1V are listed the DL reference measurement channels specified in annexes A.3.2 to A.3.15 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.3.2 to A.3.15 as appropriate.

**Table A.3.1.1-1: Overview of DL reference measurement channels (FDD, Receiver requirements)**

## A.3.2 Reference measurement channel for receiver characteristics

Unless otherwise stated, Tables A.3.2-1, A.3.2-1a, A.3.2-1b, A.3.2-2, A.3.2-2a and A.3.2-2b are applicable for measurements on the Receiver Characteristics (clause 7) with the exception of subclause 7.4 (Maximum input level).

Unless otherwise stated, Tables A.3.2-3, A.3.2-3a, A.3.2-3b, A.3.2-4, A.3.2-4a and A.3.2-4b are applicable for subclause 7.4 (Maximum input level).

Unless otherwise stated, Tables A.3.2-1, A.3.2-1a, A.3.2-1b, A.3.2-2, A.3.2-2a and A.3.2-2b also apply for the modulated interferer used in Clauses 7.5, 7.6 and 7.8 with test specific bandwidths.

For transmissions in TDD Band 46, Table A.3.2-2c is applicable for measurements of Receiver Characteristics (clause 7) except for the Maximum Input Level (clause 7.4A) for which Table A.3.2-4d and Table A.3.2-7 apply. For these measurements, the discovery signals measurement timing configuration (DMTC) periodicity shall be set at *dmtc-Periodicity* = 40 ms with an offset *dmtc-Offset* = 0 for the channel and the DRS shall be transmitted in the first subframe of each DMTC occasion. Furthermore, no PBCH is transmitted and the PDSCH is also scheduled in subframe #5.

**Table A.3.2-1 Fixed Reference Channel for Receiver Requirements (FDD)**

| Parameter                                    | Unit      | Value |      |      |       |       |       |

| Max. Throughput averaged over 1 frame for FDD     | kbps  | 51.2 | 51.2 | 204.8 | 262.4 | 262.4 | 262.4 |
| Max. Throughput averaged over 1 frames for HD-FDD | kbps  | 25.6 | 25.6 | 76.8  | 98.4  | 98.4  | 98.4  |
| UE DL Category                                    |   | M1   | M1   | M1    | M1    | M1    | M1    |
| Note 1:   | 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10MHz channel BW. 3 symbols allocated to PDCCH for 5 MHz and 3 MHz. 4 symbols allocated to PDCCH for 1.4 MHz  |      |      |       |       |       |       |
| Note 2:   | Reference signal, Synchronization signals and PBCH allocated as per TS 36.211.  |      |      |       |       |       |       |
| Note 3:   | The scheduled narrowband other than 1.4MHz and 3MHz channel bandwidth avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.  |      |      |       |       |       |       |
| Note 4:   | For HD-FDD UE, PDSCH are scheduled at the 3rd subframe every 1 radio frame for 1.4MHz and 3MHz channel bandwidth. For other channel bandwidth, PDSCH are scheduled at the 0th, 1st and 2nd subframes every 1 radio frame. Information bit payload is available if downlink subframe is scheduled. The corresponding M-PDCCH is scheduled 2 subframes before the corresponding PDSCH transmission. |      |      |       |       |       |       |
| Note 5:   | 2 resource blocks allocated to M-PDCCH  |      |      |       |       |       |       |

**Table A.3.2-1c Fixed Reference Channel for Receiver Requirements (HD-FDD) without repetition – for CAT-NB1**

| Parameter                                | Unit   | Value |
|--|--|-------|
| Channel bandwidth                        | MHz  | 0.2   |
| Number of subcarriers                    |  | 12    |
| Modulation                               |  | QPSK  |
| Target Coding Rate                       |  | 1/3   |
| Number of HARQ Processes                 | Processes  | 1     |
| Maximum number of HARQ transmissions     |  | 1     |
| Transport block size                     | Bits   | 88    |
| Number of Sub-Frames per transport block |  | 1     |
| Transport block CRC                      | Bits   | 24    |
| Binary Channel Bits Per Sub-Frame        | Bits   | 320   |
| LTE CRS port                             |  | N/A   |
| Number of NRS ports                      |  | 1     |
| Number of NPDSCH repetitions (Note 7)    |  | 0     |
| UE DL Category                           |  | NB1   |
| Note 1:                                  | Category NB1 in stand-alone mode has been considered here.   |       |
| Note 2:                                  | Reference signal, Synchronization signals and NPBCH allocated as per TS 36.211.  |       |
| Note 3:                                  | If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)   |       |
| Note 4:                                  | Parameters related to NPDSCH scheduling are defined in Table A.3.2-1e to Table A.3.2-1g.   |       |
| Note 5:                                  | NPDCCH and information bit payload are not transmitted in the subframes used for transmission of SI messages.  |       |
| Note 6:                                  | SI messages transmission should be prioritized over NPDCCH transmission in case of collision. NPDCCH transmission is postponed until the next NB-IoT downlink subframe in case NPDCCH transmission occurs in a non NB-IoT downlink subframe, where an NB-IoT downlink subframe is a subframe that does not contain NPSS/NSSS/NPBCH/SIB1-NB transmission. |       |
| Note 7:                                  | Number of repetition $N_{Rep}$ as defined in table 16.4.1.3-2 in TS 36.213 [6].  |       |

Table A.3.2-1d: Void

| Max. Throughput averaged over 1 frame for FDD     | kbps  | 51.2 | 136.0 | 276.8 | 276.8 | 1107.2 | 1107.2 |
| Max. Throughput averaged over 1 frames for HD-FDD | kbps  | 25.6 | 68.0  | 138.4 | 138.4 | 415.2  | 415.2  |
| UE DL Category                                    |   | M2   | M2    | M2    | M2    | M2     | M2     |
| Note 1:   | 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10MHz channel BW. 3 symbols allocated to PDCCH for 5 MHz and 3 MHz. 4 symbols allocated to PDCCH for 1.4 MHz  |      |       |       |       |        |        |
| Note 2:   | Reference signal, Synchronization signals and PBCH allocated as per TS 36.211.  |      |       |       |       |        |        |
| Note 3:   | The scheduled wideband other than 1.4MHz/3MHz/5MHz/15MHz channel bandwidth avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.   |      |       |       |       |        |        |
| Note 4:   | For HD-FDD UE, PDSCH are scheduled at the 3rd subframe every 1 radio frame for 1.4MHz/3MHz/5MHz/10MHz channel bandwidth. For other channel bandwidth, PDSCH are scheduled at the 0th, 1st and 2nd subframes every 1 radio frame. Information bit payload is available if downlink subframe is scheduled. The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmission. |      |       |       |       |        |        |
| Note 5:   | 2 resource blocks allocated to MPDCCH.  |      |       |       |       |        |        |
| Note 6:   | 4 resource blocks in each narrowband allocated to PDSCH.  |      |       |       |       |        |        |

**Table A.3.2-2e Fixed Reference Channel for Receiver Requirements (TDD) – for CAT-NB1 and CAT-NB2**

| Parameter                                | Unit      | Value |
|--|-----------|-------|
| Channel bandwidth                        | MHz       | 0.2   |
| Number of subcarriers                    |           | 12    |
| Uplink-Downlink Configuration (Note 7)   |           | 1     |
| Modulation                               |           | QPSK  |
| Target Coding Rate                       |           | 1/3   |
| Number of HARQ Processes                 | Processes | 1     |
| Maximum number of HARQ transmissions     |           | 1     |
| Transport block size                     | Bits      | 88    |
| Number of Sub-Frames per transport block |           | 1     |
| Transport block CRC                      | Bits      | 24    |
| Binary Channel Bits Per Sub-Frame        | Bits      | 320   |
| LTE CRS port                             |           | N/A   |
| Number of NRS ports                      |           | 1     |

|                              |  |            |
|------------------------------|--|------------|
| Number of NPDSCH repetitions |  | 1          |
| UE DL Category               |  | NB1 or NB2 |
| Note 1:                      | Category NB1 or NB2 in stand-alone mode has been considered here.  |            |
| Note 2:                      | Reference signal, Synchronization signals and NPBCH allocated as per TS 36.211.  |            |
| Note 3:                      | If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)   |            |
| Note 4:                      | Parameters related to NPDSCH scheduling are defined in Table A.3.2-1e to Table A.3.2-1g.   |            |
| Note 5:                      | NPDCCH and information bit payload are not transmitted in the subframes used for transmission of SI messages.  |            |
| Note 6:                      | SI messages transmission should be prioritized over NPDCCH transmission in case of collision. NPDCCH transmission is postponed until the next NB-IoT downlink subframe in case NPDCCH transmission occurs in a non NB-IoT downlink subframe, where an NB-IoT downlink subframe is a subframe that does not contain NPSS/NSSS/NPBCH/SIB1-NB transmission. |            |
| Note 7:                      | As per Table 4.2-2 in TS 36.211 [4]  |            |
| Note 8:                      | Number of repetition $N_{Rep}$ as defined in table 16.4.1.3-2 in TS 36.213 [6].  |            |

| For Sub-Frame 6   | Bits      | N/A   | N/A   | N/A   | N/A   | N/A   | N/A   |
| Transport block CRC   | Bits      | 24    | 24    | 24    | 24    | 24    | 24    |
| Number of Code Blocks per Sub-Frame   |           |       |       |       |       |       |       |
| For Sub-Frames 3, 8   |           | 1     | 1     | 1     | 1     | 1     | 1     |
| For Sub-Frames 0,1,2,5,7,9  |           | N/A   | N/A   | 1     | 1     | 1     | 1     |
| For Sub-Frame 4   |           | N/A   | N/A   | N/A   | N/A   | N/A   | N/A   |
| For Sub-Frame 6   |           | N/A   | N/A   | N/A   | N/A   | N/A   | N/A   |
| Binary Channel Bits Per Sub-Frame   |           |       |       |       |       |       |       |
| For Sub-Frames 3, 8   | Bits      | 912   | 1008  | 1008  | 1008  | 1008  | 1008  |
| For Sub-Frames 0,1,2,5,7,9  |           | N/A   | N/A   | 1008  | 1008  | 1008  | 1008  |
| For Sub-Frame 4   | Bits      | N/A   | N/A   | N/A   | N/A   | N/A   | N/A   |
| For Sub-Frame 6   | Bits      | N/A   | N/A   | N/A   | N/A   | N/A   | N/A   |
| Max. Throughput averaged over 1 frame for FDD   | kbps      | 110.4 | 110.4 | 441.6 | 441.6 | 441.6 | 441.6 |
| Max. Throughput averaged over 1 frame for HD-FDD  |           | 55.2  | 55.2  | 165.6 | 165.6 | 165.6 | 165.6 |
| Note 1: 4 symbols allocated to PDCCH for 1.4MHz channel bandwidth. 3 symbols allocated to PDCCH for all other channel bandwidths.   |           |       |       |       |       |       |       |
| Note 2: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211.  |           |       |       |       |       |       |       |
| Note 3: The scheduled narrowband other than 1.4MHz and 3MHz channel bandwidth avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.  |           |       |       |       |       |       |       |
| Note 4: For HD-FDD UE, PDSCH are scheduled at the 3rd subframe every 1 radio frame for 1.4MHz and 3MHz channel bandwidth. For other channel bandwidth, PDSCH are scheduled at the 0th, 1st, and 2nd subframes every 1 radio frame. Information bit payload is available if downlink subframe is scheduled. The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmission. |           |       |       |       |       |       |       |

|  |
|--|
| Note 5: 2 resource blocks allocated to MPDCCH. |
|--|

**Table A.3.2-3e: Fixed Reference Channel for Maximum input level for UE DL Category M2 (FDD and HD-FDD)**
