**Important notice**

The present document can be downloaded from:

<https://www.etsi.org/standards-search>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at [www.etsi.org/deliver](http://www.etsi.org/deliver).

Users of the present document should be aware that the document may be subject to revision or change of status.

Information on the current status of this and other ETSI documents is available at

<https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx>

If you find errors in the present document, please send your comment to one of the following services:

<https://portal.etsi.org/People/CommitteeSupportStaff.aspx>

If you find a security vulnerability in the present document, please report it through our  
Coordinated Vulnerability Disclosure Program:

**Notice of disclaimer & limitation of liability**

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

## Intellectual Property Rights

### Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

---

## Legal Notice

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <https://webapp.etsi.org/key/queryform.asp>.

---

## Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

| 8        | Performance requirement .....                          | 513 |
| 8.1      | General .....  | 513 |

|            |   |     |
|------------|---|-----|
| 8.1.1      | Receiver antenna capability .....   | 513 |
| 8.1.1.1    | Simultaneous unicast and MBMS operations.....   | 514 |
| 8.1.1.2    | Dual-antenna receiver capability in idle mode.....  | 514 |
| 8.1.2      | Applicability of requirements .....   | 514 |
| 8.1.2.1    | Applicability of requirements for different channel bandwidths.....   | 514 |
| 8.1.2.2    | Definition of CA capability.....  | 514 |
| 8.1.2.2A   | Definition of dual connectivity capability.....   | 519 |
| 8.1.2.3    | Applicability and test rules for different CA configurations and bandwidth combination sets.....  | 520 |
| 8.1.2.3A   | Applicability and test rules for different dual connectivity configuration and bandwidth combination set .....  | 521 |
| 8.1.2.3B   | Applicability and test rules for different TDD-FDD CA configurations and bandwidth combination sets.....  | 522 |
| 8.1.2.3C   | Applicability and test rules for SDR tests for 4Rx capable UEs .....  | 523 |
| 8.1.2.3D   | Applicability and test rules for different CA with LAA SCell(s) configurations and bandwidth combination sets.....  | 524 |
| 8.1.2.3E   | Applicability and test rules for SDR tests for 8Rx capable UEs .....  | 525 |
| 8.1.2.4    | Test coverage for different number of component carriers .....  | 525 |
| 8.1.2.5    | Applicability of performance requirements for Type B receiver .....   | 526 |
| 8.1.2.6    | Applicability of performance requirements for 4Rx capable UEs .....   | 527 |
| 8.1.2.6.1  | Applicability rule and antenna connection for single carrier tests with 2Rx .....   | 527 |
| 8.1.2.6.2  | Applicability rule and antenna connection for CA and DC tests with 2Rx .....  | 528 |
| 8.1.2.6.3  | Applicability rule and antenna connection for single carrier tests with 4Rx .....   | 529 |
| 8.1.2.6.4  | Applicability rule for 256QAM tests.....  | 529 |
| 8.1.2.6.5  | Applicability rule and antenna connection for CA and DC tests with 4Rx .....  | 529 |
| 8.1.2.6.6  | Applicability rule for Type C with 4Rx.....   | 531 |
| 8.1.2.6.7  | Applicability rule for 1024QAM tests .....  | 532 |
| 8.1.2.7    | Applicability of Enhanced Downlink Control Channel Performance Requirements .....   | 532 |
| 8.1.2.8    | Applicability of performance requirements for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations..... | 533 |
| 8.1.2.8A   | Applicability of performance requirements for UE supporting coverage enhancement .....  | 533 |
| 8.1.2.9    | Applicability of SDR requirements for CA and LAA.....   | 535 |
| 8.1.2.10   | Applicability of performance requirements for Multi-user Superposed Transmission .....  | 535 |
| 8.1.2.11   | Applicability CRS interference mitigation receivers performance requirements.....   | 535 |
| 8.1.2.12   | Applicability of performance requirements for 8Rx capable UEs .....   | 536 |
| 8.1.2.12.1 | Applicability rule and antenna connection for single carrier PDSCH tests .....  | 536 |
| 8.1.2.12.2 | Applicability rule and antenna connection for control channel tests .....   | 542 |
| 8.1.2.12.3 | Applicability rule and antenna connection for CA and DC tests .....   | 542 |
| 8.1.3      | UE category and UE DL category .....  | 543 |
| 8.2        | Demodulation of PDSCH (Cell-Specific Reference Symbols) .....   | 543 |
| 8.2.1      | FDD (Fixed Reference Channel) .....   | 543 |
| 8.2.1.1    | Single-antenna port performance .....   | 544 |
| 8.2.1.1.1  | Minimum Requirement .....   | 544 |
| 8.2.1.1.2  | Void .....  | 548 |
| 8.2.1.1.3  | Void .....  | 548 |
| 8.2.1.1.4  | Minimum Requirement 1 PRB allocation in presence of MBSFN.....  | 548 |
| 8.2.1.1.4A | Minimum Requirement 1 PRB allocation in presence of FeMBMS Unicast-mixed Cell under CA .....  | 549 |
| 8.2.1.2    | Transmit diversity performance .....  | 550 |
| 8.2.1.2.1  | Minimum Requirement 2 Tx Antenna Port .....   | 550 |
| 8.2.1.2.2  | Minimum Requirement 4 Tx Antenna Port .....   | 550 |
| 8.2.1.2.3  | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS).....   | 551 |
| 8.2.1.2.3A | Minimum Requirement 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....           | 552 |
| 8.2.1.2.4  | Enhanced Performance Requirement Type A - 2 Tx Antenna Ports with TM3 interference model.....   | 554 |
| 8.2.1.2.5  | Enhanced Performance Requirement Type B - 2 Tx Antenna Ports with TM2 interference model.....   | 555 |
| 8.2.1.2.6  | Enhanced Performance Requirement Type B - 2 Tx Antenna Ports with TM9 interference model.....   | 556 |
| 8.2.1.2.7  | Minimum Requirement 2 Tx Antenna Port (Superposed transmission) .....   | 557 |
| 8.2.1.3    | Open-loop spatial multiplexing performance.....   | 558 |

|            |  |     |
|------------|--|-----|
| 8.2.1.3.1  | Minimum Requirement 2 Tx Antenna Port .....  | 558 |
| 8.2.1.3.1A | Soft buffer management test .....  | 561 |
| 8.2.1.3.1B | Enhanced Performance Requirement Type C – 2Tx Antenna Ports .....  | 562 |
| 8.2.1.3.1C | Enhanced Performance Requirement Type C - 2 Tx Antenna Ports with TM1 interference .....   | 563 |
| 8.2.1.3.2  | Minimum Requirement 4 Tx Antenna Port .....  | 564 |
| 8.2.1.3.3  | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) .....   | 564 |
| 8.2.1.3.4  | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....                                   | 567 |
| 8.2.1.3.5  | Minimum Requirement 2 Tx Antenna Port (Superposed transmission) .....  | 568 |
| 8.2.1.3.6  | Minimum Requirement 2 Tx Antenna Port (network-based CRS interference mitigation).....   | 569 |
| 8.2.1.4    | Closed-loop spatial multiplexing performance .....   | 570 |
| 8.2.1.4.1  | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port.....   | 570 |
| 8.2.1.4.1A | Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port.....   | 571 |
| 8.2.1.4.1B | Enhanced Performance Requirement Type A - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model .....  | 572 |
| 8.2.1.4.1C | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)..... | 573 |
| 8.2.1.4.1D | Enhanced Performance Requirement Type B - Single-layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model .....  | 574 |
| 8.2.1.4.1E | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports with CRS assistance information .....   | 576 |
| 8.2.1.4.1F | Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information .....   | 577 |
| 8.2.1.4.2  | Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port .....   | 578 |
| 8.2.1.4.2A | Enhanced Performance Requirement Type C – Multi-layer Spatial Multiplexing 2Tx Antenna Ports.....  | 578 |
| 8.2.1.4.3  | Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port .....   | 579 |
| 8.2.1.4.3A | Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity .....   | 583 |
| 8.2.1.4.4  | Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port (Superposed transmission) .....   | 584 |
| 8.2.1.5    | MU-MIMO.....   | 585 |
| 8.2.1.6    | [Control channel performance: D-BCH and PCH] .....   | 585 |
| 8.2.1.7    | Carrier aggregation with power imbalance .....   | 585 |
| 8.2.1.7.1  | Minimum Requirement .....  | 585 |
| 8.2.1.8    | Intra-band non-contiguous carrier aggregation with timing offset.....  | 586 |
| 8.2.1.8.1  | Minimum Requirement .....  | 586 |
| 8.2.1.9    | HST-SFN performance .....  | 587 |
| 8.2.1.9.1  | Minimum Requirement .....  | 587 |
| 8.2.1.9.2  | Minimum Requirement for Rel-16 further enhanced HST.....   | 590 |
| 8.2.1.10   | Intra-band contiguous carrier aggregation with minimum channel spacing.....  | 590 |
| 8.2.1.10.1 | Minimum Requirement .....  | 590 |
| 8.2.2      | TDD (Fixed Reference Channel) .....  | 591 |
| 8.2.2.1    | Single-antenna port performance .....  | 592 |
| 8.2.2.1.1  | Minimum Requirement .....  | 592 |
| 8.2.2.1.2  | Void .....   | 596 |
| 8.2.2.1.3  | Void .....   | 596 |
| 8.2.2.1.4  | Minimum Requirement 1 PRB allocation in presence of MBSFN.....   | 596 |
| 8.2.2.2    | Transmit diversity performance .....   | 596 |
| 8.2.2.2.1  | Minimum Requirement 2 Tx Antenna Port .....  | 596 |
| 8.2.2.2.2  | Minimum Requirement 4 Tx Antenna Port .....  | 597 |
| 8.2.2.2.3  | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) .....   | 597 |
| 8.2.2.2.3A | Minimum Requirement 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....                                  | 599 |
| 8.2.2.2.4  | Enhanced Performance Requirement Type A – 2 Tx Antenna Ports with TM3 interference model.....  | 600 |
| 8.2.2.2.5  | Minimum Requirement 2 Tx Antenna Port (when <i>EIMTA-MainConfigServCell-r12</i> is configured) .....   | 601 |
| 8.2.2.2.6  | Enhanced Performance Requirement Type B - 2 Tx Antenna Ports with TM2 interference model.....  | 602 |

|            |  |     |
|------------|--|-----|
| 8.2.2.2.7  | Enhanced Performance Requirement Type B - 2 Tx Antenna Ports with TM9 interference model .....   | 603 |
| 8.2.2.2.8  | Minimum Requirement 2 Tx Antenna Port (Superposed transmission) .....  | 604 |
| 8.2.2.3    | Open-loop spatial multiplexing performance .....   | 605 |
| 8.2.2.3.1  | Minimum Requirement 2 Tx Antenna Port .....  | 605 |
| 8.2.2.3.1A | Soft buffer management test .....  | 608 |
| 8.2.2.3.1B | Enhanced Performance Requirement Type C - 2Tx Antenna Ports .....  | 609 |
| 8.2.2.3.1C | Enhanced Performance Requirement Type C - 2 Tx Antenna Ports with TM1 interference .....   | 609 |
| 8.2.2.3.2  | Minimum Requirement 4 Tx Antenna Port .....  | 610 |
| 8.2.2.3.3  | Minimum Requirement 2Tx antenna port (demodulation subframe overlaps with aggressor cell ABS) .....  | 610 |
| 8.2.2.3.4  | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....                                   | 613 |
| 8.2.2.3.5  | Minimum Requirement 2 Tx Antenna Port (Superposed transmission) .....  | 615 |
| 8.2.2.3.6  | Minimum Requirement 2 Tx Antenna Port (network-based CRS interference mitigation).....   | 615 |
| 8.2.2.4    | Closed-loop spatial multiplexing performance .....   | 617 |
| 8.2.2.4.1  | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port .....  | 617 |
| 8.2.2.4.1A | Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port .....  | 617 |
| 8.2.2.4.1B | Enhanced Performance Requirement Type A – Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model .....  | 618 |
| 8.2.2.4.1C | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)..... | 619 |
| 8.2.2.4.1D | Enhanced Performance Requirement Type B - Single-layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model .....  | 621 |
| 8.2.2.4.1E | Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports with CRS assistance information .....   | 622 |
| 8.2.2.4.1F | Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information .....   | 623 |
| 8.2.2.4.2  | Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port .....   | 624 |
| 8.2.2.4.2A | Enhanced Performance Requirement Type C Multi-Layer Spatial Multiplexing 2 Tx Antenna Port .....   | 625 |
| 8.2.2.4.3  | Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port .....   | 626 |
| 8.2.2.4.3A | Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity .....   | 629 |
| 8.2.2.4.4  | Void .....   | 631 |
| 8.2.2.4.5  | Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port (Superposed transmission) .....   | 631 |
| 8.2.2.5    | MU-MIMO.....   | 631 |
| 8.2.2.6    | [Control channel performance: D-BCH and PCH] .....   | 631 |
| 8.2.2.7    | Carrier aggregation with power imbalance .....   | 631 |
| 8.2.2.7.1  | Minimum Requirement .....  | 632 |
| 8.2.2.8    | Intra-band contiguous carrier aggregation with minimum channel spacing.....  | 632 |
| 8.2.2.8.1  | Minimum Requirement .....  | 633 |
| 8.2.2.9    | HST-SFN performance .....  | 633 |
| 8.2.2.9.1  | Minimum Requirement .....  | 633 |
| 8.2.2.9.2  | Minimum Requirement for Rel-16 further enhanced HST .....  | 635 |
| 8.2.3      | TDD FDD CA (Fixed Reference Channel).....  | 636 |
| 8.2.3.1    | Single-antenna port performance .....  | 637 |
| 8.2.3.1.1  | Minimum Requirement for FDD PCell .....  | 637 |
| 8.2.3.1.2  | Minimum Requirement for TDD PCell .....  | 640 |
| 8.2.3.2    | Open-loop spatial multiplexing performance 2Tx Antenna port.....   | 644 |
| 8.2.3.2.1  | Minimum Requirement for FDD PCell .....  | 644 |
| 8.2.3.2.1A | Soft buffer management test for FDD PCell .....  | 647 |
| 8.2.3.2.2  | Minimum Requirement for TDD PCell .....  | 648 |
| 8.2.3.2.2A | Soft buffer management test for TDD PCell .....  | 652 |
| 8.2.3.3    | Closed-loop spatial multiplexing performance 4Tx Antenna Port .....  | 653 |
| 8.2.3.3.1  | Minimum Requirement for FDD PCell .....  | 653 |
| 8.2.3.3.2  | Minimum Requirement for TDD PCell .....  | 656 |
| 8.2.3.4    | Minimum Requirement for Closed-loop spatial multiplexing performance 4Tx Antenna Port for dual connectivity .....  | 660 |
| 8.2.3.5    | HST-SFN performance .....  | 662 |
| 8.2.3.5.0  | General .....  | 662 |

|           |   |     |
|-----------|---|-----|
| 8.2.3.5.1 | Minimum Requirement for FDD PCell .....   | 662 |
| 8.2.3.5.2 | Minimum Requirement for TDD PCell .....   | 665 |
| 8.2.4     | LAA .....   | 668 |
| 8.2.4.1   | Closed-loop spatial multiplexing performance 4Tx Antenna Port .....   | 668 |
| 8.2.4.1.1 | FDD PCell (FDD single carrier) .....  | 668 |
| 8.2.4.1.2 | TDD PCell (TDD single carrier) .....  | 671 |
| 8.3       | Demodulation of PDSCH (User-Specific Reference Symbols) .....   | 674 |
| 8.3.1     | FDD .....   | 674 |
| 8.3.1.1   | Single-layer Spatial Multiplexing .....   | 675 |
| 8.3.1.1A  | Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model .....   | 676 |
| 8.3.1.1B  | Single-layer Spatial Multiplexing (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....            | 678 |
| 8.3.1.1C  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM9 interference model .....   | 680 |
| 8.3.1.1D  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with CRS interference model .....   | 681 |
| 8.3.1.1E  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM3 interference model .....   | 683 |
| 8.3.1.1F  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM10 serving cell configuration and TM9 interference model .....         | 684 |
| 8.3.1.1G  | Single-layer Spatial Multiplexing (CRS assistance information is configured) .....  | 685 |
| 8.3.1.1H  | Single-layer Spatial Multiplexing (With Enhanced DMRS table configured) .....   | 686 |
| 8.3.1.1I  | Single-layer Spatial Multiplexing (with assistance information for simultaneous transmission interfering PDSCH) .....                                     | 687 |
| 8.3.1.2   | Dual-Layer Spatial Multiplexing .....   | 688 |
| 8.3.1.2A  | Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing .....   | 690 |
| 8.3.1.3   | Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports .....   | 691 |
| 8.3.1.3.1 | Minimum requirement with Same Cell ID (with single NZP CSI-RS resource) .....   | 691 |
| 8.3.1.3.2 | Minimum requirements with Same Cell ID (with multiple NZP CSI-RS resources) .....   | 692 |
| 8.3.1.3.3 | Minimum requirement with Different Cell ID and Colliding CRS (with single NZP CSI-RS resource) .....  | 694 |
| 8.3.1.3.4 | Minimum requirement with Different Cell ID and non-colliding CRS (with single NZP CSI-RS resource and CRS assistance information is configured) .....     | 695 |
| 8.3.1.3.5 | Minimum requirements with different Cell ID and non-colliding CRS (with multiple NZP CSI-RS resources and CRS assistance information is configured) ..... | 697 |
| 8.3.1.3.6 | Minimum requirements for QCL Type C and 2 Layers Spatial Multiplexing .....   | 699 |
| 8.3.1.4   | Performance Requirements for semiOpenLoop transmission .....  | 700 |
| 8.3.2     | TDD .....   | 701 |
| 8.3.2.1   | Single-layer Spatial Multiplexing .....   | 702 |
| 8.3.2.1A  | Single-layer Spatial Multiplexing (with multiple CSI-RS configurations) .....   | 704 |
| 8.3.2.1B  | Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model .....   | 705 |
| 8.3.2.1C  | Single-layer Spatial Multiplexing (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....            | 707 |
| 8.3.2.1D  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM9 interference .....   | 709 |
| 8.3.2.1E  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with CRS interference model .....   | 710 |
| 8.3.2.1F  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM3 interference .....   | 711 |
| 8.3.2.1G  | Enhanced Performance Requirement Type B – Single-layer Spatial Multiplexing with TM10 serving cell configuration and TM9 interference model .....         | 712 |
| 8.3.2.1H  | Single-layer Spatial Multiplexing (CRS assistance information is configured) .....  | 714 |
| 8.3.2.1I  | Single-layer Spatial Multiplexing (With Enhanced DMRS table configured) .....   | 715 |
| 8.3.2.1J  | Single-layer Spatial Multiplexing (with assistance information for simultaneous transmission interfering PDSCH) .....                                     | 716 |
| 8.3.2.2   | Dual-Layer Spatial Multiplexing .....   | 717 |
| 8.3.2.2A  | Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing .....   | 718 |
| 8.3.2.3   | Dual-Layer Spatial Multiplexing (with multiple CSI-RS configurations) .....   | 719 |
| 8.3.2.4   | Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports .....   | 720 |
| 8.3.2.4.1 | Minimum requirement with Same Cell ID (with single NZP CSI-RS resource) .....   | 720 |

|           |  |     |
|-----------|--|-----|
| 8.3.2.4.2 | Minimum requirements with Same Cell ID (with multiple NZP CSI-RS resources).....   | 722 |
| 8.3.2.4.3 | Minimum requirement with Different Cell ID and Colliding CRS (with single NZP CSI-RS resource) .....   | 723 |
| 8.3.2.4.4 | Minimum requirement with Different Cell ID and non-Colliding CRS (with single NZP CSI-RS resource and CRS assistance information is configured).....     | 725 |
| 8.3.2.4.5 | Minimum requirements with different Cell ID and non-colliding CRS (with multiple NZP CSI-RS resources and CRS assistance information is configured)..... | 726 |
| 8.3.2.4.6 | Minimum requirements for QCL Type C and 2 Layers Spatial Multiplexing.....   | 728 |
| 8.3.2.5   | Performance Requirements for semiOpenLoop transmission .....   | 730 |
| 8.3.3     | LAA .....  | 731 |
| 8.3.3.1   | Dual-Layer Spatial Multiplexing with DM-RS .....   | 731 |
| 8.3.3.1.1 | FDD PCell (FDD single carrier).....  | 731 |
| 8.3.3.1.2 | TDD Pcell (TDD single carrier) .....   | 735 |
| 8.4       | Demodulation of PDCCCH/PCFICH .....  | 738 |
| 8.4.1     | FDD .....  | 738 |
| 8.4.1.1   | Single-antenna port performance .....  | 739 |
| 8.4.1.2   | Transmit diversity performance .....   | 739 |
| 8.4.1.2.1 | Minimum Requirement 2 Tx Antenna Port .....  | 739 |
| 8.4.1.2.2 | Minimum Requirement 4 Tx Antenna Port .....  | 739 |
| 8.4.1.2.3 | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) .....   | 740 |
| 8.4.1.2.4 | Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) .....       | 742 |
| 8.4.1.2.5 | Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port under Asynchronous Network .....                                    | 745 |
| 8.4.1.2.6 | Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer .....                    | 746 |
| 8.4.1.2.7 | Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Port with Colliding CRS Dominant Interferer.....                         | 747 |
| 8.4.1.2.8 | Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer .....                    | 748 |
| 8.4.1.2.9 | Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer .....                    | 749 |

| H.1   | Indication of modified MPR behavior.....                     | 1594        |
| <b>Annex I (normative): Supported Post Antenna Gain.....</b>                |  | <b>1595</b> |
| I.1   | Declared Supported Post Antenna Gain for UE.....             | 1595        |
| <b>Annex J (informative): Change history .....</b>                          |  | <b>1596</b> |
| History .....   |  | 1641        |

---

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

- shall** indicates a mandatory requirement to do something
- shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

- should** indicates a recommendation to do something
- should not** indicates a recommendation not to do something
- may** indicates permission to do something
- need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

- can** indicates that something is possible
- cannot** indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

- will** indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- will not** indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- might** indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

**might not** indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

**is** (or any other verb in the indicative mood) indicates a statement of fact

**is not** (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

---

# 1 Scope

The present document establishes the minimum RF characteristics and minimum performance requirements for E-UTRA User Equipment (UE).

---

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply in the case of a single component carrier. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**Aggregated Channel Bandwidth:** The RF bandwidth in which a UE transmits and receives multiple contiguously aggregated carriers.

**Aggregated Transmission Bandwidth Configuration:** The number of resource block allocated within the aggregated channel bandwidth.

**Carrier aggregation:** Aggregation of two or more component carriers in order to support wider transmission bandwidths.

**Carrier aggregation band:** A set of one or more operating bands across which multiple carriers are aggregated with a specific set of technical requirements.

**Carrier aggregation bandwidth class:** A class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by a UE.

**Carrier aggregation configuration:** A combination of CA operating band(s) and CA bandwidth class(es) supported by a UE.

**Channel edge:** The lowest and highest frequency of the carrier, separated by the channel bandwidth.

**Channel bandwidth:** The RF bandwidth supporting a single E-UTRA RF carrier with the transmission bandwidth configured in the uplink or downlink of a cell. The channel bandwidth is measured in MHz and is used as a reference for transmitter and receiver RF requirements.

**Composite spectrum emission mask:** Emission mask requirement for intraband non-contiguous carrier aggregation which is a combination of individual sub-block spectrum emissions masks.

**Composite spurious emission requirement:** Spurious emission requirement for intraband non-contiguous carrier aggregation which is a combination of individual sub-block spurious emission requirements.

**Contiguous carriers:** A set of two or more carriers configured in a spectrum block where there are no RF requirements based on co-existence for un-coordinated operation within the spectrum block.

**Contiguous resource allocation:** A resource allocation of consecutive resource blocks within one carrier or across contiguously aggregated carriers. The gap between contiguously aggregated carriers due to the nominal channel spacing is allowed.

**Contiguous spectrum:** Spectrum consisting of a contiguous block of spectrum with no sub-block gaps.

**Enhanced downlink control channel performance requirements type A:** This defines performance requirements for downlink control channel assuming as baseline receiver reference symbol based linear minimum mean square error interference rejection combining plus CRS interference cancellation.

**Enhanced downlink control channel performance requirements type B:** This defines performance requirements for downlink control channel assuming as baseline receiver reference symbol based enhanced linear minimum mean square error interference rejection combining plus CRS interference cancellation.

**Enhanced performance requirements type A:** This defines performance requirements assuming as baseline receiver reference symbol based linear minimum mean square error interference rejection combining.

**Enhanced performance requirements type B:** This defines performance requirements assuming as baseline receiver using network assisted interference cancellation and suppression.

**Enhanced performance requirements type C:** This defines performance requirements assuming as baseline receiver inter-stream interference cancellation.

**Inter-band carrier aggregation:** Carrier aggregation of component carriers in different operating bands.

NOTE: Carriers aggregated in each band can be contiguous or non-contiguous.

**Intra-band contiguous carrier aggregation:** Contiguous carriers aggregated in the same operating band.

**Intra-band non-contiguous carrier aggregation:** Non-contiguous carriers aggregated in the same operating band.

**Lower sub-block edge:** The frequency at the lower edge of one sub-block. It is used as a frequency reference point for both transmitter and receiver requirements.

**Category NB1/NB2 stand-alone operation:** category NB1/NB2 is operating standalone when it utilizes its own spectrum, for example the spectrum used by GERAN systems as a replacement of one or more GSM carriers, as well as scattered spectrum for potential IoT deployment.

**Category NB1/NB2 guard band operation:** category NB1/NB2 is operating in guard band when it utilizes the unused resource block(s) within a E-UTRA carrier's guard-band.

**Category NB1/NB2 in-band operation:** category NB1/NB2 is operating in-band when it utilizes the resource block(s) within a normal E-UTRA carrier or within a normal NR carrier plus 15 kHz at each edge (and not within NR minimum guard band).

**Non-contiguous spectrum:** Spectrum consisting of two or more sub-blocks separated by sub-block gap(s).

**ProSe-enabled UE:** A UE that supports ProSe requirements and associated procedures.

NOTE: As defined in TS 23.303 [10].

**ProSe Direct Communication:** A communication between two or more UEs in proximity that are ProSe-enabled.

NOTE: As defined in TS 23.303 [10].

**ProSe Direct Discovery:** A procedure employed by a ProSe-enabled UE to discover other ProSe-enabled UEs in its vicinity.

NOTE: As defined in TS 23.303 [10].

**sTTI :** A transmission time interval (TTI) of either one slot or one subslot as defined in TS 36.211 [4] on either uplink or downlink.

**Sub-block:** This is one contiguous allocated block of spectrum for transmission and reception by the same UE. There may be multiple instances of sub-blocks within an RF bandwidth.

**Sub-block bandwidth:** The bandwidth of one sub-block.

**Sub-block gap:** A frequency gap between two consecutive sub-blocks within an RF bandwidth, where the RF requirements in the gap are based on co-existence for un-coordinated operation.

**Synchronized operation:** Operation of TDD in two different systems, where no simultaneous uplink and downlink occur.

**Unsynchronized operation:** Operation of TDD in two different systems, where the conditions for synchronized operation are not met.

**Upper sub-block edge:** The frequency at the upper edge of one sub-block. It is used as a frequency reference point for both transmitter and receiver requirements.

**V2X Communication:** V2X (Vehicle to Everything) service is operating in ITS spectrum and/or LTE licensed operating bands.

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

|                             |  |
|-----------------------------|--|
| $BW_{\text{Channel}}$       | Channel bandwidth  |
| $BW_{\text{Channel,block}}$ | Sub-block bandwidth, expressed in MHz. $BW_{\text{Channel,block}} = F_{\text{edge,block,high}} - F_{\text{edge,block,low}}$ .  |
| $BW_{\text{Channel\_CA}}$   | Aggregated channel bandwidth, expressed in MHz.  |
| $BW_{\text{GB}}$            | Virtual guard band to facilitate transmitter (receiver) filtering above / below edge CCs.  |
| $E_{RS}$                    | Transmitted energy per RE for reference symbols during the useful part of the symbol, i.e. excluding the cyclic prefix, (average power normalized to the subcarrier spacing) at the eNode B transmit antenna connector |

|                                  |  |
|----------------------------------|--|
| $\hat{E}_s$                      | The averaged received energy per RE of the wanted signal during the useful part of the symbol, i.e. excluding the cyclic prefix, at the UE antenna connector; average power is computed within a set of REs used for the transmission of physical channels (including user specific RSs when present), divided by the number of REs within the set, and normalized to the subcarrier spacing |
| F                                | Frequency  |
| $F_{\text{agg\_alloc\_low}}$     | Aggregated Transmission Bandwidth Configuration. The lowest frequency of the simultaneously transmitted resource blocks.   |
| $F_{\text{agg\_alloc\_high}}$    | Aggregated Transmission Bandwidth Configuration. The highest frequency of the simultaneously transmitted resource blocks.  |
| $F_{\text{Interferer (offset)}}$ | Frequency offset of the interferer (between the center frequency of the interferer and the carrier frequency of the carrier measured)  |
| $F_{\text{Interferer}}$          | Frequency of the interferer  |
| $F_{\text{offset}}$              | Frequency offset of the interferer (between the center frequency of the interferer and the closest edge of the carrier measured)   |
| $F_C$                            | Frequency of the carrier centre frequency  |
| $F_{C\_agg}$                     | Aggregated Transmission Bandwidth Configuration. Center frequency of the aggregated carriers.  |
| $F_{C,block,high}$               | Center frequency of the highest transmitted/received carrier in a sub-block.   |
| $F_{C,block,low}$                | Center frequency of the lowest transmitted/received carrier in a sub-block.  |
| $F_{C\_low}$                     | The centre frequency of the <i>lowest carrier</i> , expressed in MHz.  |
| $F_{C\_high}$                    | The centre frequency of the <i>highest carrier</i> , expressed in MHz.   |
| $F_{DL\_low}$                    | The lowest frequency of the downlink operating band  |
| $F_{DL\_high}$                   | The highest frequency of the downlink operating band   |
| $F_{UL\_low}$                    | The lowest frequency of the uplink operating band  |
| $F_{UL\_high}$                   | The highest frequency of the uplink operating band   |
| $F_{\text{edge,block,low}}$      | The lower sub-block edge, where $F_{\text{edge,block,low}} = F_{C,block,low} - F_{\text{offset}}$ .  |
| $F_{\text{edge,block,high}}$     | The upper sub-block edge, where $F_{\text{edge,block,high}} = F_{C,block,high} + F_{\text{offset}}$ .  |
| $F_{\text{edge\_low}}$           | The <i>lower edge</i> of aggregated channel bandwidth, expressed in MHz.   |
| $F_{\text{edge\_high}}$          | The <i>higher edge</i> of aggregated channel bandwidth, expressed in MHz.  |
| $F_{\text{offset}}$              | Frequency offset from $F_{C\_high}$ to the <i>higher edge</i> or $F_{C\_low}$ to the <i>lower edge</i> .   |
| $F_{\text{offset,block,low}}$    | Separation between lower edge of a sub-block and the center of the lowest component carrier within the sub-block   |
| $F_{\text{offset,block,high}}$   | Separation between higher edge of a sub-block and the center of the highest component carrier within the sub-block   |
| $F_{\text{offset\_NS\_23}}$      | Frequency offset in MHz needed if NS_23 is used  |
| $F_{\text{OOB}}$                 | The boundary between the E-UTRA out of band emission and spurious emission domains.  |
| $I_o$                            | The power spectral density of the total input signal (power averaged over the useful part of the symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the UE antenna connector, including the own-cell downlink signal   |
| $I_{or}$                         | The total transmitted power spectral density of the own-cell downlink signal (power averaged over the useful part of the symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the eNode B transmit antenna connector   |
| $\hat{I}_{or}$                   | The total received power spectral density of the own-cell downlink signal (power averaged over the useful part of the symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the UE antenna connector  |
| $I_{ot}$                         | The received power spectral density of the total noise and interference for a certain RE (average power obtained within the RE and normalized to the subcarrier spacing) as measured at the UE antenna connector   |
| $L_{\text{CRB}}$                 | Transmission bandwidth which represents the length of a contiguous resource block allocation expressed in units of resources blocks  |
| $L_{\text{Ctone}}$               | Transmission bandwidth which represents the length of a contiguous sub-carrier allocation expressed in units of tones  |
| $N_{\text{cp}}$                  | Cyclic prefix length   |
| $N_{\text{DL}}$                  | Downlink EARFCN  |

|                           |  |
|---------------------------|--|
| $N_{oc}$                  | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing), simulating interference from cells that are not defined in a test procedure, as measured at the UE antenna connector   |
| $N_{oc1}$                 | The power spectral density of a white noise source (average power per RE normalized to the subcarrier spacing), simulating interference in non-CRS symbols in ABS subframe from cells that are not defined in a test procedure, as measured at the UE antenna connector.   |
| $N_{oc2}$                 | The power spectral density of a white noise source (average power per RE normalized to the subcarrier spacing), simulating interference in CRS symbols in ABS subframe from all cells that are not defined in a test procedure, as measured at the UE antenna connector.   |
| $N_{oc3}$                 | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing), simulating interference in non-ABS subframe from cells that are not defined in a test procedure, as measured at the UE antenna connector   |
| $N_{oc}'$                 | The power spectral density (average power per RE normalised to the subcarrier spacing) of the summation of the received power spectral densities of the strongest interfering cells explicitly defined in a test procedure plus $N_{oc}$ , as measured at the UE antenna connector. The respective power spectral density of each interfering cell relative to $N_{oc}'$ is defined by its associated DIP value, or the respective power spectral density of each interfering cell relative to $N_{oc}$ is defined by its associated Es/Noc value. |
| $N_{\text{Offs-DL}}$      | Offset used for calculating downlink EARFCN  |
| $N_{\text{Offs-UL}}$      | Offset used for calculating uplink EARFCN  |
| $N_{otx}$                 | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing) simulating eNode B transmitter impairments as measured at the eNode B transmit antenna connector  |
| $N_{RB}$                  | Transmission bandwidth configuration, expressed in units of resource blocks  |
| $N_{RB\_agg}$             | The number of the aggregated RBs within the fully allocated Aggregated Channel bandwidth.  |
| $N_{RB\_alloc}$           | Total number of simultaneously transmitted resource blocks in Channel bandwidth or Aggregated Channel Bandwidth.   |
| $N_{RB,c}$                | The transmission bandwidth configuration of component carrier $c$ , expressed in units of resource blocks  |
| $N_{RB,largest\ BW}$      | The largest transmission bandwidth configuration of the component carriers in the bandwidth combination, expressed in units of resource blocks   |
| $N_{RX}$                  | Number of receiver antennas  |
| $N_{tone}$                | Transmission bandwidth configuration for category NB1 and NB2, expressed in units of tones.  |
| $N_{tone\ 3.75kHz}$       | Transmission bandwidth configuration for category NB1 and NB2 with 3.75 kHz sub-carrier spacing, expressed in units of tones.  |
| $N_{tone\ 15kHz}$         | Transmission bandwidth configuration for category NB1 and NB2 with 15 kHz sub-carrier spacing, expressed in units of tones.  |
| $N_{UL}$                  | Uplink EARFCN.   |
| $R_{av}$                  | Minimum average throughput per RB.   |
| $P_{CMAX}$                | The configured maximum UE output power.  |
| $P_{CMAX,c}$              | The configured maximum UE output power for serving cell $c$ .  |
| $P_{EMAX}$                | Maximum allowed UE output power signalled by higher layers. Same as IE $P\text{-Max}$ , defined in [7].  |
| $P_{EMAX,c}$              | Maximum allowed UE output power signalled by higher layers for serving cell $c$ . Same as IE $P\text{-Max}$ , defined in [7].  |
| $P_{Interferer}$          | Modulated mean power of the interferer   |
| $P_{PowerClass}$          | $P_{PowerClass}$ is the nominal UE power (i.e., no tolerance).   |
| $P_{PowerClass\_Default}$ | $P_{PowerClass\_Default}$ is the default nominal UE power (i.e., no tolerance) for the band.   |
| $P_{UMAX}$                | The measured configured maximum UE output power.   |
| $P_{uw}$                  | Power of an unwanted DL signal   |
| $P_w$                     | Power of a wanted DL signal  |
| $RB_{start}$              | Indicates the lowest RB index of transmitted resource blocks.  |
| $RB_{end}$                | Indicates the highest RB index of transmitted resource blocks.   |
| $T_{no\_hopping}$         | Transmission period within a TTI duration when consecutive symbols are transmitted without applying any frequency hopping  |
| $\Delta f_{OoB}$          | $\Delta$ Frequency of Out Of Band emission.  |
| $\Delta P_{PowerClass}$   | Adjustment to maximum output power for a given power class.  |
| $\Delta R_{IB,c}$         | Allowed reference sensitivity relaxation due to support for inter-band CA operation, for serving cell $c$ .  |

|                    |   |
|--------------------|---|
| $\Delta R_{IB,4R}$ | Reference sensitivity adjustment due to support for 4 antenna ports.  |
| $\Delta R_{IB,8R}$ | Reference sensitivity adjustment due to support for 8 antenna ports.  |
| $\Delta T_{IB,c}$  | Allowed maximum configured output power relaxation due to support for inter-band CA operation, for serving cell $c$ . |
| $\Delta T_C$       | Allowed operating band edge transmission power relaxation.  |
| $\Delta T_{C,c}$   | Allowed operating band edge transmission power relaxation for serving cell $c$ .                                      |
| $\Delta T_{ProSe}$ | Allowed operating band transmission power relaxation due to support of E-UTRA ProSe on an operating band.             |
| $\rho_A$           | According to Clause 5.2 in TS 36.213 [6]  |
| $\rho_B$           | According to Clause 5.2 in TS 36.213 [6]  |
| $\sigma$           | Test specific auxiliary variable used for the purpose of downlink power allocation, defined in Annex C.3.2.           |
| $W_{gap}$          | Sub-block gap size  |
| $W_{gap,L}$        | Sub-block gap size between lowest two CCs in frequency domain on CA_X-X-X   |
| $W_{gap,H}$        | Sub-block gap size between highest two CCs in frequency domain on CA_X-X-X  |

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

|            |   |
|------------|---|
| ABS        | Almost Blank Subframe   |
| ACLR       | Adjacent Channel Leakage Ratio  |
| ACS        | Adjacent Channel Selectivity  |
| A-MPR      | Additional Maximum Power Reduction  |
| AWGN       | Additive White Gaussian Noise   |
| BS         | Base Station  |
| CA         | Carrier Aggregation   |
| CA_X       | Intra-band contiguous CA of component carriers in one sub-block within Band X where X is the applicable E-UTRA operating band   |
| CA_X-X     | Intra-band non-contiguous CA of component carriers in two sub-blocks within Band X where X is the applicable E-UTRA operating band  |
| CA_X-X-X   | Intra-band non-contiguous CA of component carriers in three sub-blocks within Band X where X is the applicable E-UTRA operating band  |
| CA_X-X-X-X | Intra-band non-contiguous CA of component carriers in four sub-blocks within Band X where X is the applicable E-UTRA operating band   |
| CA_X-Y     | Inter-band CA of component carrier(s) in one sub-block within Band X and component carrier(s) in one sub-block within Band Y where X and Y are the applicable E-UTRA operating band |
| CA_X-X-Y   | CA of component carriers in two sub-blocks within Band X and component carrier(s) in one sub-block within Band Y where X and Y are the applicable E-UTRA operating bands            |
| CC         | Component Carriers  |
| CG         | Carrier Group   |
| CPE        | Customer Premise Equipment  |
| CPE_X      | Customer Premise Equipment for E-UTRA operating band X  |
| CW         | Continuous Wave   |
| DC         | Dual Connectivity   |
| DC_X-Y     | Inter-band DC of component carrier(s) in one sub-block within Band X and component carrier(s) in one sub-block within Band Y where X and Y are the applicable E-UTRA operating band |
| DL         | Downlink  |
| DIP        | Dominant Interferer Proportion  |
| EARFCN     | E-UTRA Absolute Radio Frequency Channel Number  |
| EIRP       | Effective Isotropic Radiated Power  |
| EPRE       | Energy Per Resource Element   |
| E-UTRA     | Evolved UMTS Terrestrial Radio Access   |
| EUTRAN     | Evolved UMTS Terrestrial Radio Access Network   |
| EVM        | Error Vector Magnitude  |
| FDD        | Frequency Division Duplex   |
| FRC        | Fixed Reference Channel   |

|         |  |
|---------|--|
| GNSS    | Global Navigation Satellite Systems  |
| HD      | Half-Duplex for Sidelink Operation   |
| HD-FDD  | Half- Duplex FDD   |
| ITS     | Intelligent Transportation Systems   |
| MCS     | Modulation and Coding Scheme   |
| MCG     | Master Cell Group  |
| MOP     | Maximum Output Power   |
| MPR     | Maximum Power Reduction  |
| MSD     | Maximum Sensitivity Degradation  |
| OCNG    | OFDMA Channel Noise Generator  |
| OFDMA   | Orthogonal Frequency Division Multiple Access  |
| OOB     | Out-of-band  |
| PA      | Power Amplifier  |
| PCC     | Primary Component Carrier  |
| P-MPR   | Power Management Maximum Power Reduction   |
| ProSe   | Proximity-based Services   |
| PSBCH   | Physical Sidelink Broadcast CHannel  |
| PSCCH   | Physical Sidelink Control CHannel  |
| PSDCH   | Physical Sidelink Discovery CHannel  |
| PSS     | Primary Synchronization Signal   |
| PSS_RA  | PSS-to-RS EPRE ratio for the channel PSS   |
| SSSS    | Secondary Sidelink Synchronization Signal  |
| PSSCH   | Physical Sidelink Shared CHannel   |
| PSSS    | Primary Sidelink Synchronization Signal  |
| RE      | Resource Element   |
| REFSENS | Reference Sensitivity power level  |
| r.m.s   | Root Mean Square   |
| SCC     | Secondary Component Carrier  |
| SCG     | Secondary Cell Group   |
| SINR    | Signal-to-Interference-and-Noise Ratio   |
| SNR     | Signal-to-Noise Ratio  |
| SSS     | Secondary Synchronization Signal   |
| SSS_RA  | SSS-to-RS EPRE ratio for the channel SSSSSSS Secondary Sidelink Synchronization Signal                   |
| TDD     | Time Division Duplex   |
| UE      | User Equipment   |
| UL      | Uplink   |
| UL-MIMO | Up Link Multiple Antenna transmission  |
| UMTS    | Universal Mobile Telecommunications System   |
| UTRA    | UMTS Terrestrial Radio Access  |
| UTRAN   | UMTS Terrestrial Radio Access Network  |
| V2X     | Vehicle to Everything  |
| xCH_RA  | xCH-to-RS EPRE ratio for the channel xCH in all transmitted OFDM symbols not containing cell-specific RS |
| xCH_RB  | xCH-to-RS EPRE ratio for the channel xCH in all transmitted OFDM symbols containing cell-specific RS     |

---

## 4 General

### 4.1 Relationship between minimum requirements and test requirements

The Minimum Requirements given in this specification make no allowance for measurement uncertainty. The test specification TS 36.521-1 Annex F defines Test Tolerances. These Test Tolerances are individually calculated for each test. The Test Tolerances are used to relax the Minimum Requirements in this specification to create Test Requirements.

The measurement results returned by the Test System are compared - without any modification - against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ITU-R M.1545 [3].

### 4.2 Applicability of minimum requirements

- a) In this specification the Minimum Requirements are specified as general requirements and additional requirements. Where the Requirement is specified as a general requirement, the requirement is mandated to be met in all scenarios
- b) For specific scenarios for which an additional requirement is specified, in addition to meeting the general requirement, the UE is mandated to meet the additional requirements.
- c) The reference sensitivity power levels defined in subclause 7.3 are valid for the specified reference measurement channels.
- d) NOTE: Receiver sensitivity degradation may occur when:
  - 1) The UE simultaneously transmits and receives with bandwidth allocations less than the transmission bandwidth configuration (see Figure 5.6-1), and
  - 2) Any part of the downlink transmission bandwidth is within an uplink transmission bandwidth from the downlink center subcarrier.
- e) The spurious emissions power requirements are for the long term average of the power. For the purpose of reducing measurement uncertainty it is acceptable to average the measured power over a period of time sufficient to reduce the uncertainty due to the statistical nature of the signal.
- f) The requirements in this specification for TDD operating bands apply for downlink and uplink operations using Frame Structure Type 2 [4] except for Band 46 operating with Frame Structure Type 3.
- g) The requirements related to subslot TTI and/or slot TTI shall apply only if UE supports multiple TTI patterns. And these requirements only apply to subslot and/or slot TTI configurations

### 4.3 Void

#### 4.3A Applicability of minimum requirements (CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0, UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2, V2X Communication, MBMS UE)

The requirements in clauses 5, 6 and 7 which are specific to CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0, UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2 and V2X Communication are specified as suffix A, B, C, D, E, F and G where;

- a) Suffix A additional requirements need to support CA

- b) Suffix B additional requirements need to support UL-MIMO
- c) Suffix C additional requirements need to support Dual Connectivity
- d) Suffix D additional requirements need to support ProSe
- e) Suffix E additional requirements need to support UE category 0, category M1, category M2, and category 1bis
- f) Suffix F additional requirements need to support UE category NB1 and NB2
- g) Suffix G additional requirements need to support V2X Communication

A terminal which supports the above features needs to meet both the general requirements and the additional requirement applicable to the additional subclause (suffix A, B, C, D, E, F and G) in clauses 5, 6 and 7. Where there is a difference in requirement between the general requirements and the additional subclause requirements (suffix A, B, C, D, E, F and G) in clauses 5, 6 and 7, the tighter requirements are applicable unless stated otherwise in the additional subclause.

A terminal which supports more than one feature (CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0, UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2 and V2X Communication) in clauses 5, 6 and 7 shall meet all of the separate corresponding requirements.

For a terminal supporting CA, compliance with minimum requirements for non-contiguous intra-band carrier aggregation in any given operating band does not imply compliance with minimum requirements for contiguous intra-band carrier aggregation in the same operating band.

For a terminal supporting CA, compliance with minimum requirements for contiguous intra-band carrier aggregation in any given operating band does not imply compliance with minimum requirements for non-contiguous intra-band carrier aggregation in the same operating band.

A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.

A terminal which supports CA, for each supported CA configuration, shall support Pcell transmissions in each of the aggregated Component Carriers unless indicated otherwise in clause 5.6A.1.

Terminal supporting Dual Connectivity configuration shall meet the minimum requirements for corresponding CA configuration (suffix A), unless otherwise specified.

For a terminal that supports ProSe Direct Communication and/or ProSe Direct Discovery, the minimum requirements are applicable when

- the UE is associated with a serving cell on the ProSe carrier, or
- the UE is not associated with a serving cell on the ProSe carrier and is provisioned with the preconfigured radio parameters for ProSe Direct Communications and/or ProSe Direct Discovery that are associated with known Geographical Area, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and the radio parameters for ProSe Direct Discovery on the ProSe carrier are provided by the serving cell, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and has a non-serving cell selected on the ProSe carrier that supports ProSe Direct Discovery and/or ProSe Direct Communication.

When the ProSe UE is not associated with a serving cell on the ProSe carrier, and the UE does not have knowledge of its geographical area, or is provisioned with preconfigured radio parameters that are not associated with any Geographical Area, ProSe transmissions are not allowed, and the requirements in Section 6.3.3D apply.

A terminal that supports simultaneous E-UTRA ProSe sidelink transmissions and E-UTRA uplink transmissions for the inter-band E-UTRA ProSe/E-UTRA bands specified in Table 5.5D-2, shall meet the minimum requirements for the corresponding inter-band UL CA configuration (suffix A), unless otherwise specified. For transmitter characteristics specified in clause 6, the terminal is required to meet the conformance tests for the corresponding inter-band UL CA configuration and is not required to be retested with simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions.

A terminal that supports E-UTRA V2X intra-band multi-carrier operation including carrier aggregation for the band specified in Table 5.5G-3, shall meet the corresponding transmitter characteristics requirements (in subclauses with suffix G in Section 6) only when there are multiple active transmissions on all of the configured carrier components. When there is only one active transmission on one of the configured carrier components, the corresponding requirements for V2X single carrier operation apply for the corresponding active carrier component.

A terminal which supports MBMS (including 15 kHz, 7.5 kHz, 1.25 kHz, 2.5 kHz and 0.37 kHz subcarrier spacing), shall meet the minimum requirements in clauses 5 and 7. A terminal which supports MBMS is not required to support all kinds of subcarrier spacing.

A terminal that supports multiple TTI patterns in different carriers, different TTI patterns can only be used when the carriers are aggregated in inter-band manner. For intra-band carrier aggregation, only same TTI patterns and same TAG are allowed in aggregated carriers.

## 4.4 RF requirements in later releases

The standardisation of new frequency bands and carrier aggregation configurations (downlink and uplink aggregation) may be independent of a release. However, in order to implement a UE that conforms to a particular release but supports a band of operation or a carrier aggregation configuration that is specified in a later release, it is necessary to specify some extra requirements. TS 36.307 [8] specifies requirements on UEs supporting a frequency band or a carrier aggregation configuration that is independent of release.

**NOTE:** For UEs conforming to the 3GPP release of the present document, some RF requirements of later releases may be mandatory independent of whether the UE supports the bands specified or carrier aggregation configurations defined in later releases or not. The set of RF requirements of later releases that is also mandatory for UEs conforming to the 3GPP release of the present document is determined by regional regulation.

---

# 5 Operating bands and channel arrangement

## 5.1 General

The channel arrangements presented in this clause are based on the operating bands and channel bandwidths defined in the present release of specifications.

**NOTE:** Other operating bands and channel bandwidths may be considered in future releases.

## 5.2 Void

## 5.3 Void

## 5.4 Void

## 5.5 Operating bands

E-UTRA is designed to operate in the operating bands defined in Table 5.5-1.

**Table 5.5-1 E-UTRA operating bands**

| E-UTRA<br>Operating<br>Band | Uplink (UL) operating band<br>BS receive<br>UE transmit | Downlink (DL) operating<br>band<br>BS transmit<br>UE receive | Duplex<br>Mode |

| <p>NOTE 1: Band 6, 23 is not applicable</p> <p>NOTE 2: Restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.</p> <p>NOTE 3: A UE that complies with the E-UTRA Band 65 minimum requirements in this specification shall also comply with the E-UTRA Band 1 minimum requirements.</p> <p>NOTE 4: The range 2180-2200 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured.</p> <p>NOTE 5: A UE that supports E-UTRA Band 66 shall receive in the entire DL operating band</p> <p>NOTE 6: A UE that supports E-UTRA Band 66 and CA operation in any CA band shall also comply with the minimum requirements specified for the DL CA configurations CA_66B, CA_66C and CA_66A-66A.</p> <p>NOTE 7: A UE that complies with the E-UTRA Band 66 minimum requirements in this specification shall also comply with the E-UTRA Band 4 minimum requirements.</p> <p>NOTE 8: This band is an unlicensed band restricted to licensed-assisted operation using Frame Structure Type 3</p> <p>NOTE 9: In this version of the specification, restricted to E-UTRA DL operation when carrier aggregation is configured.</p> <p>NOTE 10: The range 2010-2020 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 300 MHz The range 2005-2020 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 295 MHz.</p> <p>NOTE 11: This band is unlicensed band used for V2X communication. There is no expected network deployment in this band so Frame Structure Type 1 is used.</p> <p>NOTE 12: A UE that complies with the E-UTRA Band 74 minimum requirements in this specification shall also comply with the E-UTRA Band 11 and Band 21 minimum requirements.</p> <p>NOTE 13: UE that complies with the E-UTRA Band 50 minimum requirements in this specification shall also comply with the E-UTRA Band 51 minimum requirements.</p> <p>NOTE 14: A UE that complies with the E-UTRA Band 75 minimum requirements in this specification shall also comply with the E-UTRA Band 76 minimum requirements.</p> <p>NOTE 15: Uplink transmission is not allowed at this band for UE with external vehicle-mounted antennas.</p> <p>NOTE 16: This band is restricted to licensed-assisted operation using Frame Structure Type 3</p> <p>NOTE 17: DL operation in this band is restricted to 1526 – 1536 MHz and UL operation is restricted to 1627.5 – 1637.5 MHz and 1646.5 – 1656.5 MHz.</p> |                     |                     |                   |

## 5.5A Operating bands for CA

E-UTRA carrier aggregation is designed to operate in the operating bands defined in Tables 5.5A-1, 5.5A-2, 5.5A-2a, 5.5A-2b, 5.5A-2c, 5.5A-3, 5.5A-4 and 5.5A-5.

**Table 5.5A-1: Intra-band contiguous CA operating bands**

| E-UTRA CA Band | E-UTRA Band<br>(Table 5.5-1) |
|----------------|------------------------------|
| CA_1           | 1                            |

| NOTE 1: The frequency range in band 28 is restricted for this CA band combination to 703-733 MHz for the UL and 758-788 MHz for the DL. This restriction also apply for any band combinations when CA_20-28 is a subset of a higher order band combination. |        |
| NOTE 2: The frequency range in band 28 is restricted for this CA band combination to 718-748 MHz for the UL and 773-803 MHz for the DL  |        |

Table 5.5A-2a: Inter-band CA operating bands (three bands)

| E-UTRA CA Band | E-UTRA Band<br>(Table 5.5-1) |

## 5.5B Operating bands for UL-MIMO

E-UTRA UL-MIMO is designed to operate in the operating bands defined in Table 5.5B-1.

**Table 5.5B-1: Void**

## 5.5C Operating bands for Dual Connectivity

E-UTRA dual connectivity is designed to operate in the operating bands defined in Table 5.5C-1.

**Table 5.5C-1: Inter-band dual connectivity operating bands (two bands)**

| E-UTRA DC Band | E-UTRA Band<br>(Table 5.5) |
|----------------|----------------------------|
| DC_1-3         | 1, 3                       |

|    |    |                       |                       |    |     |     |
|----|----|-----------------------|-----------------------|----|-----|-----|
| 14 | 14 | 788 MHz – 798 MHz     | 788 MHz – 798 MHz     | HD | Yes | Yes |
| 20 | 20 | 832 MHz – 862 MHz     | 832 MHz – 862 MHz     | HD | Yes | Yes |
| 26 | 26 | 814 MHz – 849 MHz     | 814 MHz – 849 MHz     | HD | Yes | Yes |
| 28 | 28 | 703 MHz – 748 MHz     | 703 MHz – 748 MHz     | HD | Yes | Yes |
| 31 | 31 | 452.5 MHz – 457.5 MHz | 452.5 MHz – 457.5 MHz | HD | Yes | Yes |
| 41 | 41 | 2496 MHz – 2690 MHz   | 2496 MHz – 2690 MHz   | HD | Yes |     |
| 68 | 68 | 698 MHz – 728 MHz     | 698 MHz – 728 MHz     | HD | Yes | Yes |
| 72 | 72 | 451 MHz – 456 MHz     | 451 MHz – 456 MHz     | HD | Yes | Yes |

E-UTRA ProSe is designed to operate concurrent with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5D-2.

**Table 5.5D-2 Inter-band E-UTRA ProSe / E-UTRA operating bands**

| E-UTRA ProSe Band <sup>Note 1</sup>   | E-UTRA band / E-UTRA CA band <sup>Note 2</sup> |
|---|--|
| 2   | 4  |
|   | CA_2-4 <sup>Note 3</sup>                       |
| 28  | 1  |
|   | CA_1-28 <sup>Note 3</sup>                      |
| NOTE 1: As specified in Table 5.5D-1<br>NOTE 2: As specified in Table 5.5-1 and Table 5.5A-2<br>NOTE 3: Applies when E-UTRA uplink is assigned to one E-UTRA band and ProSe operation is restricted to the uplink frequencies paired with either PCC or SCC.<br>NOTE 4: The concurrency for E-UTRA ProSe Direct Discovery with E-UTRA uplink/downlink applies after allowing for any transmission and/or reception gap requested by the UE. |  |

## 5.5E Operating bands for UE category 0, UE category M1 and M2 and UE category 1bis

UE category 0 is designed to operate in the E-UTRA operating bands 2, 3, 4, 5, 8, 13, 20, 25, 26 and 28 in both half duplex FDD mode and full-duplex FDD mode and in bands 39, 40 and 41 in TDD mode. The E-UTRA bands are defined in Table 5.5-1.

UE category M1 and M2 is designed to operate in the E-UTRA operating bands 1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 14, 18, 19, 20, 21, 25, 26, 27, 28, 31, 66, 71, 72, 73, 74, 85, 87 and 88 in both half duplex FDD mode and full-duplex FDD mode, and in bands 39, 40, 41, 42 and 43 in TDD mode. The E-UTRA bands are defined in Table 5.5-1.

UE category 1bis is designed to operate in the E-UTRA operating bands 1, 2, 3, 4, 5, 7, 8, 12, 13, 18, 20, 26, 28, 31, 66 and 72 in full duplex FDD mode and in bands 34, 39, 40 and 41 in TDD mode. The E-UTRA bands are defined in Table 5.5-1

## 5.5F Operating bands for category NB1 and NB2

Category NB1 and NB2 are designed to operate in the E-UTRA operating bands 1, 2, 3, 4, 5, 7, 8, 11, 12, 13, 14, 17, 18, 19, 20, 21, 25, 26, 28, 31, 41, 42, 43, 65, 66, 70, 71, 72, 73, 74, 85, 87 and 88 which are defined in Table 5.5-1.

Category NB1 and NB2 are designed to operate in the NR operating bands n1, n2, n3, n5, n7, n8, n12, n14, n18, n20, n25, n26, n28, n41, n65, n66, n70, n71, n74, n90.

Category NB1 and NB2 systems operate in HD-FDD duplex mode or in TDD mode.

In case UE receives network signaling value NS\_04 on any of the operating bands listed in Table 5.5F-1 then the lower and upper limit of those bands are shown in Table 5.5F-1 to account for the USA emission requirements.

Table 5.5F-1 E-UTRA operating bands for NB-IoT in the USA

| E-UTRA Operating Band | Uplink (UL) operating band<br>BS receive<br>UE transmit |                      | Downlink (DL) operating band<br>BS transmit<br>UE receive |                      | Duplex Mode |
|-----------------------|---|----------------------|---|----------------------|-------------|
|                       | F <sub>UL_low</sub>                                     | F <sub>UL_high</sub> | F <sub>DL_low</sub>                                       | F <sub>DL_high</sub> |             |
| 2                     | 1850.1 MHz  | 1909.9 MHz           | 1930.1 MHz  | 1989.9 MHz           | FDD         |
| 4                     | 1710.1 MHz  | 1754.9 MHz           | 2110.1 MHz  | 2154.9 MHz           | FDD         |
| 5                     | 824.1 MHz   | 848.9 MHz            | 869.1 MHz   | 893.9 MHz            | FDD         |
| 12                    | 699 MHz   | 715.9 MHz            | 729 MHz   | 745.9 MHz            | FDD         |
| 13                    | 777 MHz   | 786.9 MHz            | 746 MHz   | 755.9 MHz            | FDD         |
| 17                    | 704.1 MHz   | 715.9 MHz            | 734.1 MHz   | 745.9 MHz            | FDD         |
| 25                    | 1850.1 MHz  | 1914.9 MHz           | 1930.1 MHz  | 1994.9 MHz           | FDD         |

| 70                    | 1695.1 MHz  | 1709.9 MHz           | 1995.1 MHz  | 2019.9 MHz           | FDD         |
| 71                    | 663.1 MHz   | 697.9 MHz            | 617.1 MHz   | 651.9 MHz            | FDD         |
| 85                    | 698.1 MHz   | 715.9 MHz            | 728.1 MHz   | 745.9 MHz            | FDD         |

## 5.5G Operating bands for V2X Communication

E-UTRA V2X Communication is designed to operate in the the operating bands defined in Table 5.5G-1.

Table 5.5G-1 V2X operating band

| E-UTRA Operating Band | E-UTRA V2X Operating Band | V2X UE transmit     |                      | V2X UE receive      |                      | Duplex Mode | Interface |
|-----------------------|---------------------------|---------------------|----------------------|---------------------|----------------------|-------------|-----------|
|                       |                           | F <sub>UL_low</sub> | F <sub>UL_high</sub> | F <sub>DL_low</sub> | F <sub>DL_high</sub> |             |           |
| 47                    | 47                        | 5855 MHz            | 5925 MHz             | 5855 MHz            | 5925 MHz             | HD          | PC5       |

E-UTRA V2X communication is designed to operate concurrent with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5G-2.

Table 5.5G-2 Inter-band concurrent V2X operating bands

| V2X concurrent band configuration | E-UTRA or V2X Operating Band | Interface | Uplink (UL) operating band<br>BS receive<br>UE transmit |                      | Downlink (DL) operating band<br>BS transmit<br>UE receive |                      | Duplex Mode |
|-----------------------------------|------------------------------|-----------|---|----------------------|---|----------------------|-------------|
|                                   |                              |           | F <sub>UL_low</sub>                                     | F <sub>UL_high</sub> | F <sub>DL_low</sub>                                       | F <sub>DL_high</sub> |             |
| V2X_3-47                          | 3                            | Uu        | 1710 MHz  | 1785 MHz             | 1805 MHz  | 1880 MHz             | FDD         |

E-UTRA V2X communication is also designed to operate for intra-band multi-carrier operation in the operating bands defined in Table 5.5G-3.

**Table 5.5G-3: V2X intra-band multi-carrier operation**

| V2X multi-carrier Band configuration | V2X operating Band | Interface |
|--------------------------------------|--------------------|-----------|
| V2X_47                               | 47                 | PC5       |

## 5.6 Channel bandwidth

Requirements in present document are specified for the channel bandwidths listed in Table 5.6-1.

**Table 5.6-1: Transmission bandwidth configuration  $N_{RB}$  in E-UTRA channel bandwidths**

| Channel bandwidth $BW_{Channel}$ [MHz]        | 1.4 | 3  | 5  | 10 | 15 | 20  |
|---|-----|----|----|----|----|-----|
| Transmission bandwidth configuration $N_{RB}$ | 6   | 15 | 25 | 50 | 75 | 100 |

Figure 5.6-1 shows the relation between the Channel bandwidth ( $BW_{Channel}$ ) and the Transmission bandwidth configuration ( $N_{RB}$ ). The channel edges are defined as the lowest and highest frequencies of the carrier separated by the channel bandwidth, i.e. at  $F_C \pm BW_{Channel} / 2$ .

**Figure 5.6-1: Definition of channel bandwidth and transmission bandwidth configuration for one E-UTRA carrier**

## 5.6.1 Channel bandwidths per operating band

a) The requirements in this specification apply to the combination of channel bandwidths and operating bands shown in Table 5.6.1-1. The transmission bandwidth configuration in Table 5.6.1-1 shall be supported for each of the specified channel bandwidths. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

**Table 5.6.1-1: E-UTRA channel bandwidth**

| E-UTRA band / Channel bandwidth |         |                  |                  |                  |                  |                    |
|---------------------------------|---------|------------------|------------------|------------------|------------------|--------------------|
| E-UTRA Band                     | 1.4 MHz | 3 MHz            | 5 MHz            | 10 MHz           | 15 MHz           | 20 MHz             |
| 1                               |         |                  | Yes              | Yes              | Yes              | Yes                |

NOTE 1: <sup>1</sup> refers to the bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (subclause 7.3) is allowed.

NOTE 2: <sup>2</sup> For the 20 MHz bandwidth, the minimum requirements are specified for E-UTRA UL carrier frequencies confined to either 713-723 MHz or 728-738 MHz

NOTE 3: <sup>3</sup> refers to the bandwidth for which the uplink transmission bandwidth can be restricted by the network for some channel assignments in FDD/TDD co-existence scenarios in order to meet unwanted emissions requirements (Clause 6.6.3.2).

NOTE 4: <sup>4</sup> For the 20 MHz bandwidth, the minimum requirements are restricted to E-UTRA operation when carrier aggregation is configured.

NOTE 5: <sup>5</sup> For the 15 MHz bandwidth, the minimum requirements are specified for E-UTRA UL carrier frequencies confined to either 705.5 MHz or 710.5-720.5 MHz

NOTE 6: <sup>6</sup> For the 20MHz bandwidth, the minimum requirements are specified for E-UTRA UL carrier frequencies confined to either 673-678 MHz or 683-688MHz.

b) The use of different (asymmetrical) channel bandwidth for the TX and RX is not precluded and is intended to form part of a later release.

### 5.6A Channel bandwidth for CA

For intra-band contiguous carrier aggregation *Aggregated Channel Bandwidth*, *Aggregated Transmission Bandwidth Configuration* and *Guard Bands* are defined as follows, see Figure 5.6A-1.

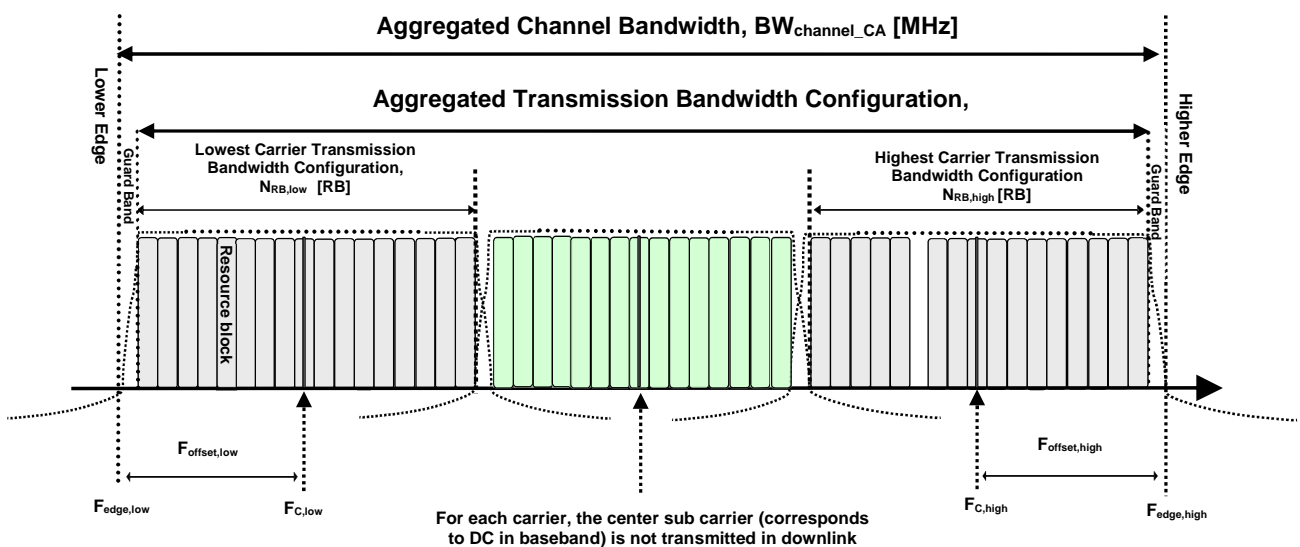

Figure 5.6A-1. Definition of Aggregated channel bandwidth and aggregated channel bandwidth edges

The *aggregated channel bandwidth*,  $BW_{Channel\_CA}$ , is defined as

$$BW_{Channel\_CA} = F_{edge,high} - F_{edge,low} \text{ [MHz]}.$$

The lower bandwidth edge  $F_{edge,low}$  and the upper bandwidth edge  $F_{edge,high}$  of the aggregated channel bandwidth are used as frequency reference points for transmitter and receiver requirements and are defined by

$$F_{edge,low} = F_{C,low} - F_{offset,low}$$

$$F_{edge,high} = F_{C,high} + F_{offset,high}$$

The lower and upper frequency offsets depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carrier and are defined as

$$F_{offset,low} = (0.18N_{RB,low} + \Delta f_1)/2 + BW_{GB} \text{ [MHz]}$$

$$F_{offset,high} = (0.18N_{RB,high} + \Delta f_1)/2 + BW_{GB} \text{ [MHz]}$$

where  $\Delta f_1 = \Delta f$  for the downlink with  $\Delta f$  the subcarrier spacing and  $\Delta f_1 = 0$  for the uplink, while  $N_{RB,low}$  and  $N_{RB,high}$  are the transmission bandwidth configurations according to Table 5.6-1 for the lowest and highest assigned component carrier, respectively.  $BW_{GB}$  denotes the *Nominal Guard Band* and is defined in Table 5.6A-1, and the factor 0.18 is the PRB bandwidth in MHz.

NOTE: The values of  $BW_{Channel\_CA}$  for UE and BS are the same if the lowest and the highest component carriers are identical.

Aggregated Transmission Bandwidth Configuration is the number of the aggregated RBs within the fully allocated Aggregated Channel bandwidth and is defined per CA Bandwidth Class (Table 5.6A-1).

For intra-band non-contiguous carrier aggregation *Sub-block Bandwidth* and *Sub-block edges* are defined as follows, see Figure 5.6A-2.

Figure 5.6A-2. Non-contiguous intraband CA terms and definitions

The lower sub-block edge of the Sub-block Bandwidth ( $BW_{Channel,block}$ ) is defined as

$$F_{edge,block,low} = F_{C,block,low} - F_{offset,block,low}.$$

The upper sub-block edge of the Sub-block Bandwidth is defined as

$$F_{edge,block,high} = F_{C,block,high} + F_{offset,block,high}.$$

The Sub-block Bandwidth,  $BW_{Channel,block}$ , is defined as follows:

$$BW_{Channel,block} = F_{edge,block,high} - F_{edge,block,low} \text{ [MHz]}$$

The lower and upper frequency offsets  $F_{\text{offset,block,low}}$  and  $F_{\text{offset,block,high}}$  depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carriers within a sub-block and are defined as

$$F_{\text{offset,block,low}} = (0.18N_{\text{RB,low}} + \Delta f_1)/2 + \text{BW}_{\text{GB}} \text{ [MHz]}$$

$$F_{\text{offset,block,high}} = (0.18N_{\text{RB,high}} + \Delta f_1)/2 + \text{BW}_{\text{GB}} \text{ [MHz]}$$

where  $\Delta f_1 = \Delta f$  for the downlink with  $\Delta f$  the subcarrier spacing and  $\Delta f_1 = 0$  for the uplink, while  $N_{\text{RB,low}}$  and  $N_{\text{RB,high}}$  are the transmission bandwidth configurations according to Table 5.6-1 for the lowest and highest assigned component carrier within a sub-block, respectively.  $\text{BW}_{\text{GB}}$  denotes the *Nominal Guard Band* and is defined in Table 5.6A-1, and the factor 0.18 is the PRB bandwidth in MHz.

The sub-block gap size between two consecutive sub-blocks  $W_{\text{gap}}$  is defined as

$$W_{\text{gap}} = F_{\text{edge,block } n+1,\text{low}} - F_{\text{edge,block } n,\text{high}} \text{ [MHz]}$$

**Table 5.6A-1: CA bandwidth classes and corresponding nominal guard bands**

| CA Bandwidth Class   | Aggregated Transmission Bandwidth Configuration | Number of contiguous CC | Nominal Guard Band $\text{BW}_{\text{GB}}$   |
|--|---|-------------------------|--|
| A  | $N_{\text{RB,agg}} \leq 100$                    | 1                       | $a_1 \text{BW}_{\text{Channel}(1)} - 0.5\Delta f_1$ (NOTE 2)   |
| B  | $25 < N_{\text{RB,agg}} \leq 100$               | 2                       | $0.05 \max(\text{BW}_{\text{Channel}(1)}, \text{BW}_{\text{Channel}(2)}) - 0.5\Delta f_1$  |
| C  | $100 < N_{\text{RB,agg}} \leq 200$              | 2                       | $0.05 \max(\text{BW}_{\text{Channel}(1)}, \text{BW}_{\text{Channel}(2)}) - 0.5\Delta f_1$  |
| D  | $200 < N_{\text{RB,agg}} \leq 300$              | 3                       | $0.05 \max(\text{BW}_{\text{Channel}(1)}, \text{BW}_{\text{Channel}(2)}, \text{BW}_{\text{Channel}(3)}) - 0.5\Delta f_1$   |
| E  | $300 < N_{\text{RB,agg}} \leq 400$              | 4                       | $0.05 \max(\text{BW}_{\text{Channel}(1)}, \text{BW}_{\text{Channel}(2)}, \text{BW}_{\text{Channel}(3)}, \text{BW}_{\text{Channel}(4)}) - 0.5\Delta f_1$                                |
| F  | $400 < N_{\text{RB,agg}} \leq 500$              | 5                       | $0.05 \max(\text{BW}_{\text{Channel}(1)}, \text{BW}_{\text{Channel}(2)}, \text{BW}_{\text{Channel}(3)}, \text{BW}_{\text{Channel}(4)}, \text{BW}_{\text{Channel}(5)}) - 0.5\Delta f_1$ |
| I  | $700 < N_{\text{RB,agg}} \leq 800$              | 8                       | NOTE 3   |
| NOTE 1: $\text{BW}_{\text{Channel}(j)}$ , $j = 1, 2, 3, 4$ is the channel bandwidth of an E-UTRA component carrier according to Table 5.6-1 and $\Delta f_1 = \Delta f$ for the downlink with $\Delta f$ the subcarrier spacing while $\Delta f_1 = 0$ for the uplink. |   |                         |  |
| NOTE 2: $a_1 = 0.16/1.4$ for $\text{BW}_{\text{Channel}(1)} = 1.4$ MHz whereas $a_1 = 0.05$ for all other channel bandwidths.  |   |                         |  |
| NOTE 3: Applicable for later releases.   |   |                         |  |

The channel spacing between centre frequencies of contiguously aggregated component carriers is defined in subclause 5.7.1A.

## 5.6A.1 Channel bandwidths per operating band for CA

The requirements for carrier aggregation in this specification are defined for carrier aggregation configurations with associated bandwidth combination sets. For inter-band carrier aggregation, a *carrier aggregation configuration* is a combination of operating bands, each supporting a carrier aggregation bandwidth class. For intra-band contiguous carrier aggregation, a carrier aggregation configuration is a single operating band supporting a carrier aggregation bandwidth class.

For each carrier aggregation configuration, requirements are specified for all bandwidth combinations contained in a *bandwidth combination set*, which is indicated per supported band combination in the UE radio access capability. A UE can indicate support of several bandwidth combination sets per band combination.

Requirements for intra-band contiguous carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-1. Requirements for inter-band carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-2, Table 5.6A.1-2a, Table 5.6A.1-2b and Table 5.6A.1-2c. Requirements for intra-band non-contiguous carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-3.

The DL component carrier combinations for a given CA configuration shall be symmetrical in relation to channel centre unless stated otherwise in Table 5.6A.1-1, Table 5.6A.1-2, Table 5.6A.1-2a, Table 5.6A.1-2b and Table 5.6A.1-2c.

**Table 5.6A.1-1: E-UTRA CA configurations and bandwidth combination sets defined for intra-band contiguous CA**

| E-UTRA CA configuration | Uplink CA configurations (NOTE 3) | E-UTRA CA configuration / Bandwidth combination set         |                                      |                                      |                                      |                                      |                                    |                           |
|-------------------------|-----------------------------------|---|--------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|------------------------------------|---------------------------|
|                         |                                   | Component carriers in order of increasing carrier frequency |                                      |                                      |                                      |                                      | Maximum aggregated bandwidth [MHz] | Bandwidth combination set |

IOTE 1: The CA configuration refers to an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.

IOTE 2: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.

IOTE 3: Uplink CA configurations are the configurations supported by the present release of specifications.

IOTE 4: Restricted to E-UTRA operation when inter-band carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.

IOTE 5: 8Rx Requirements are applicable for this band configuration if UE supports 8Rx.

**Table 5.6A.1-2: E-UTRA CA configurations and bandwidth combination sets defined for inter-band CA (two bands)**

| E-UTRA CA configuration / Bandwidth combination set |                                   |                 |   |  |       |        |        |        |                                    |                           |   |
|---|-----------------------------------|-----------------|---|--|-------|--------|--------|--------|------------------------------------|---------------------------|---|
| E-UTRA CA Configuration                             | Uplink CA configurations (NOTE 4) | E-UTRA Bands    | 1.4 MHz   | 3 MHz  | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Maximum aggregated bandwidth [MHz] | Bandwidth combination set |   |

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.

NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.

NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.

NOTE 4: Uplink CA configurations are the configurations supported by the present release of specifications.

NOTE 5: For TDD inter-band Carrier Aggregation only non-simultaneous Rx/Tx uplink CA configurations can be supported by UE supporting corresponding DL CA configuration without simultaneous Rx/Tx.

NOTE 6: Void

NOTE 7: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

NOTE 8: For the corresponding CA configuration, UE may not support Pcell transmissions in this E-UTRA band.

NOTE 9: 8Rx Requirements are applicable for this band configuration if UE supports 8Rx.

**Table 5.6A.1-2a: E-UTRA CA configurations and bandwidth combination sets defined for inter-band CA (three bands)**

| E-UTRA CA configuration / Bandwidth combination set |   |              |  |       |       |        |        |        |                                    |                           |
|---|---|--------------|--|-------|-------|--------|--------|--------|------------------------------------|---------------------------|
| E-UTRA CA Configuration                             | Uplink CA configurations (NOTE 5)             | E-UTRA Bands | 1.4 MHz  | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Maximum aggregated bandwidth [MHz] | Bandwidth combination set |

|                    |   | 71 |  |  |     | Yes | Yes | Yes |    |   |

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.

NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.

NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.

NOTE 4: A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.

NOTE 5: Uplink CA configurations are the configurations supported by the present release of specifications.

NOTE 6: If the UE supports any uplink CA configuration for corresponding downlink CA configuration it shall support this uplink CA configuration.

NOTE 7: UL carrier shall be supported in Band 3 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

NOTE 8: UL carrier shall be supported in Band 20 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

NOTE 9: UL carrier is only supported on Band 1 or Band 3 not Band 41 because the fall back mode 1UL/2DL CA\_1A-41A has the limitation that UL carrier is only supported on Band 1.

NOTE 10: UL carrier is only supported on Band 1 or Band 42 not Band 41 because the fall back mode 1UL/2DL CA\_1A-41A has the limitation that UL carrier is only supported on Band 1.

NOTE 11: UL carrier is only supported on Band 1 or Band 5 not Band 41 because the fall back mode 1UL/2DL CA\_1A-41A has the limitation that UL carrier is only supported on Band 1.

NOTE 12: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

NOTE 13: UL carrier shall be supported in Band 8 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

NOTE 14: UL carrier shall be supported in Band 28 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

NOTE 15: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

NOTE 16: UL carrier shall be supported in Band 1 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

**Table 5.6A.1-2b: E-UTRA CA configurations and bandwidth combination sets defined for inter-band CA (four bands)**

| E-UTRA CA configuration / Bandwidth combination set |  |              |         |       |       |        |        |        |                                    |                           |    |   |
|---|--|--------------|---------|-------|-------|--------|--------|--------|------------------------------------|---------------------------|----|---|

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.

NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.

NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.

NOTE 4: A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.

NOTE 5: Uplink CA configurations are the configurations supported by the present release of specifications.

NOTE 6: If the UE supports any uplink CA configuration for corresponding downlink CA configuration it shall support this uplink CA configuration.

NOTE 7: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

NOTE 8: UL carrier is only supported on Band 1, Band 3 or Band 5 not Band 41 because the fall back mode 2DL/1UL CA\_1A-41A has the limitation that UL carrier is only supported on Band 1.

NOTE 9: UL carrier shall be supported in Band 1, 3, 8 or 28 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

**Table 5.6A.1-2c: E-UTRA CA configurations and bandwidth combination sets defined for inter-band CA (five bands)**

|   |
|---|
| E-UTRA CA configuration / Bandwidth combination set |
|---|

| E-UTRA CA Configuration          | Uplink CA configurations (NOTE 5) | E-UTRA Bands | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Maximum aggregated bandwidth [MHz] | Bandwidth combination set |
|----------------------------------|-----------------------------------|--------------|---------|-------|-------|--------|--------|--------|------------------------------------|---------------------------|

|                                  |                                   | 43           |         |       | Yes   | Yes    | Yes    | Yes    |                                    |                           |

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.

NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.

NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.

NOTE 4: A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.

NOTE 5: Uplink CA configurations are the configurations supported by the present release of specifications.

NOTE 6: If the UE supports uplink CA for corresponding downlink CA it shall support this uplink CA configuration.

NOTE 7: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

**Table 5.6A.1-3: E-UTRA CA configurations and bandwidth combination sets defined for non-contiguous intra-band CA (with two sub-blocks)**

| E-UTRACA configuration | Uplink CA configurations (NOTE 1) | E-UTRA CA configuration / Bandwidth combination set         |  |  |                                      |                                      |                                    |                           |

NOTE 1: Uplink CA configurations are the configurations supported by the present release of specifications.

NOTE 2: Restricted to E-UTRA operation when inter-band carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.

**Table 5.6A.1-4: E-UTRA CA configurations and bandwidth combination sets defined for non-contiguous intra-band CA (with three sub-blocks)**

| E-UTRACA configuration | Uplink CA configurations (NOTE 1) | E-UTRA CA configuration / Bandwidth combination set         |  |  |                                      |                                      | Maximum aggregated bandwidth [MHz] | Bandwidth combination set |
|------------------------|-----------------------------------|---|--|--|--------------------------------------|--------------------------------------|------------------------------------|---------------------------|

## 5.6B Channel bandwidth for UL-MIMO

The requirements specified in subclause 5.6 are applicable to UE supporting UL-MIMO.

### 5.6B.1 Void

## 5.6C Channel bandwidth for Dual Connectivity

For E-UTRA DC bands specified in 5.5C, the corresponding E-UTRA CA configurations in 5.6A.1, i.e., dual uplink inter-band carrier aggregation with uplink assigned to two E-UTRA bands, are applicable to Dual Connectivity.

NOTE 1: Requirements for the dual connectivity configurations are defined in the section corresponding E-UTRA uplink CA configurations, unless otherwise specified.

NOTE 2: For TDD inter-band dual connectivity configurations, requirements are applicable only for synchronous operation.

### 5.6C.1 Void

**Table 5.6C.1-1: Void**

**Table 5.6C.1-2: Void**

## 5.6D Channel bandwidth for ProSe

### 5.6D.1 Channel bandwidths per operating band for ProSe

The ProSe combination of channel bandwidths and operating bands is shown in Table 5.6D.1-1 and Table 5.6D.1-2. The transmission bandwidth configuration in Table 5.6D.1-1 and Table 5.6D.1-2 shall be supported for each of the specified channel bandwidths. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

## 5.6F Channel bandwidth for category NB1 and NB2

Channel bandwidth for Category NB1 and NB2 is 200 kHz.

For category NB1 and NB2, requirements in present document are specified for the channel bandwidth listed in Table 5.6F-1.

**Table 5.6F-1: Transmission bandwidth configuration  $N_{RB}$ ,  $N_{tone\ 15kHz}$  and  $N_{tone\ 3.75kHz}$  in NB1 and NB2 channel bandwidth**

|  |            |
|--|------------|
| <b>Channel bandwidth<br/><math>BW_{Channel}</math> [kHz]</b> | <b>200</b> |
| Transmission bandwidth configuration $N_{RB}$                | 1          |
| Transmission bandwidth configuration $N_{tone\ 15kHz}$       | 12         |
| Transmission bandwidth configuration $N_{tone\ 3.75kHz}$     | 48         |

Figure 5.6F-1 shows the relation between the Category NB1/NB2 channel bandwidth ( $BW_{Channel}$ ) and the Category NB1/NB2 transmission bandwidth configuration ( $N_{tone}$ ). The channel edges are defined as the lowest and highest frequencies of the carrier separated by the channel bandwidth, i.e. at  $F_C \pm BW_{Channel}/2$ .

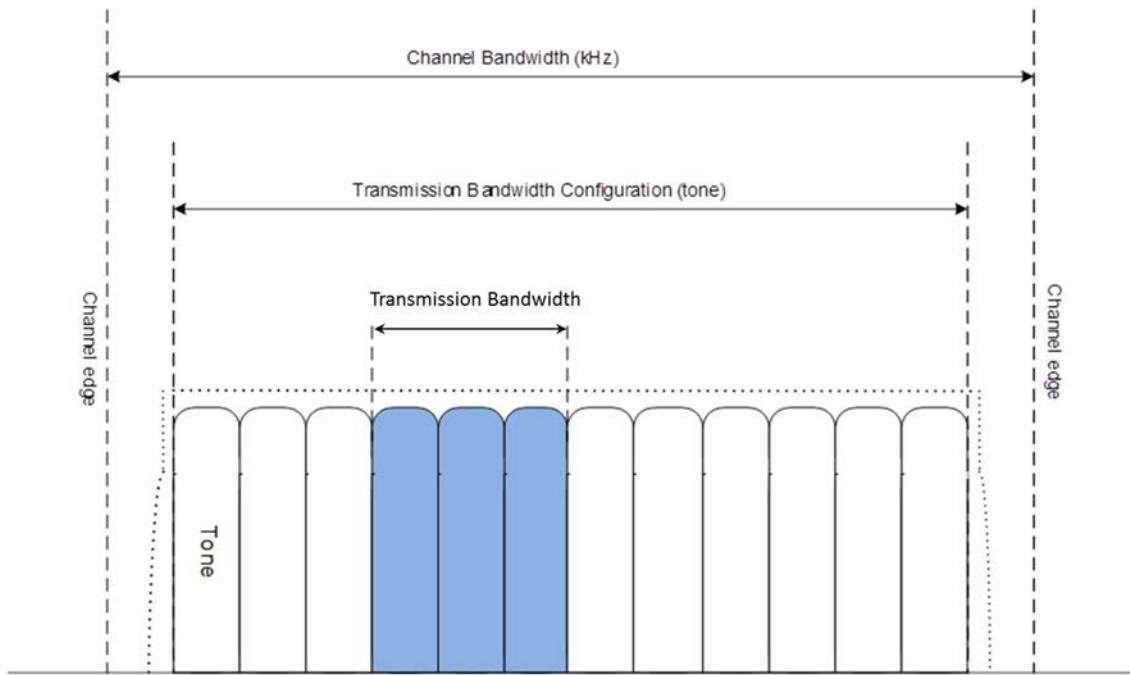

Figure 5.6F-1 Definition of Channel Bandwidth and Transmission Bandwidth configuration

## 5.6G Channel bandwidth for V2X Communication

### 5.6G.1 Channel bandwidths per operating band for V2X Communication

E-UTRA V2X Communication channel bandwidths and operating band is shown in Table 5.6G.1-1. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

Table 5.6G.1-1: V2X Communication channel bandwidth

| E-UTRA V2X band / V2X channel bandwidth |         |       |       |        |        |        |
|---|---------|-------|-------|--------|--------|--------|
| E-UTRA V2X Operating Band               | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| 47                                      |         |       |       | Yes    |        | Yes    |

For V2X inter-band con-current operation, the V2X Communication channel bandwidths for each operating band is specified in Table 5.6G.1-2.

Table 5.6G.1-2: Inter-band con-current V2X configurations and bandwidth combination sets

| Inter-band con-current V2X configuration | Inter-band con-current V2X configuration for TX | E-UTRA or V2X operating Bands | 1.4 MHz   | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Maximum bandwidth [MHz] | Bandwidth combination set |
|--|---|-------------------------------|---|-------|-------|--------|--------|--------|-------------------------|---------------------------|
| V2X_3A-47A                               | V2X_3A-47A                                      | 3                             | Yes   | Yes   | Yes   | Yes    | Yes    | Yes    | 40                      | 0                         |
|  |   | 47                            |   |       |       | Yes    |        | Yes    |                         |                           |
| V2X_3A-47B                               | V2X_3A-47A, V2X_47B                             | 3                             | Yes   | Yes   | Yes   | Yes    | Yes    | Yes    | 40                      | 0                         |

V2X Bandwidth Class is specified in Table 5.6G.1-3 for V2X intra-band contiguous multi-carrier operation.

**Table 5.6G.1-3: V2X bandwidth classes and corresponding nominal guard bands**

| V2X Bandwidth Class | Aggregated Transmission Bandwidth Configuration | Number of contiguous CC | Nominal Guard Band BW <sub>GB</sub>                             |
|---------------------|---|-------------------------|---|
| A                   | $N_{RB,agg} \leq 100$                           | 1                       | $0.05BW_{Channel(1)} - 0.5\Delta f_1$                           |
| B                   | $25 < N_{RB,agg} \leq 100$                      | 2                       | $[0.05 \max(BW_{Channel(1)}, BW_{Channel(2)}) - 0.5\Delta f_1]$ |
| C                   | $100 < N_{RB,agg} \leq 200$                     | 2                       | $[0.05 \max(BW_{Channel(1)}, BW_{Channel(2)}) - 0.5\Delta f_1]$ |
| C <sub>1</sub>      | $100 < N_{RB,agg} \leq 200$                     | 3                       | $[0.05 \max(BW_{Channel(1)}, BW_{Channel(2)}) - 0.5\Delta f_1]$ |
| D                   | $200 < N_{RB,agg} \leq 300$                     | 3                       | NOTE 3  |
| E                   | $300 < N_{RB,agg} \leq 400$                     | 4                       | NOTE 3  |
| F                   | $400 < N_{RB,agg} \leq 500$                     | 5                       | NOTE 3  |
| I                   | $700 < N_{RB,agg} \leq 800$                     | 8                       | NOTE 3  |

|  |
|--|
| NOTE 1: $BW_{Channel(j)}$ , $j = 1, 2, 3, 4$ is the channel bandwidth of an E-UTRA component carrier according to Table 5.6-1 and $\Delta f_1 = \Delta f$ for the downlink with $\Delta f$ the subcarrier spacing while $\Delta f_1 = 0$ for the uplink. |
| NOTE 2: Void   |
| NOTE 3: Applicable for later releases.   |

For V2X intra-band multi-carrier operation, the V2X communication channel bandwidths for each operating band is specified in Table 5.6G.1-4.

**Table 5.6G.1-4: V2X intra-band multi-carrier configurations**

|  |   | V2X multi-carrier configuration / Bandwidth combination set |                                      |                                      |                                      |                                      |                                    |                           |

## 5.7 Channel arrangement

### 5.7.1 Channel spacing

The spacing between carriers will depend on the deployment scenario, the size of the frequency block available and the channel bandwidths. The nominal channel spacing between two adjacent E-UTRA carriers is defined as following:

$$\text{Nominal Channel spacing} = (BW_{Channel(1)} + BW_{Channel(2)})/2$$

where  $BW_{Channel(1)}$  and  $BW_{Channel(2)}$  are the channel bandwidths of the two respective E-UTRA carriers. The channel spacing can be adjusted to optimize performance in a particular deployment scenario.

#### 5.7.1A Channel spacing for CA

For intra-band contiguous carrier aggregation with two or more component carriers, the nominal channel spacing between two adjacent E-UTRA component carriers is defined as the following unless stated otherwise:

$$\text{Nominal channel spacing} = \left\lceil \frac{BW_{Channel(1)} + BW_{Channel(2)} - 0.1|BW_{Channel(1)} - BW_{Channel(2)}|}{0.6} \right\rceil 0.3 \text{ [MHz]}$$

where  $BW_{Channel(1)}$  and  $BW_{Channel(2)}$  are the channel bandwidths of the two respective E-UTRA component carriers according to Table 5.6-1 with values in MHz. The channel spacing for intra-band contiguous carrier aggregation can be adjusted to any multiple of 300 kHz less than the nominal channel spacing to optimize performance in a particular deployment scenario.

For intra-band contiguous carrier aggregation with two or more component carriers in Band 46, the requirements apply for both 19.8 MHz and 20.1 MHz nominal carrier spacing between two 20 MHz component carriers, and for 15.0 MHz nominal carrier spacing between 10 MHz and 20 MHz component carriers.

For intra-band non-contiguous carrier aggregation the channel spacing between two or more E-UTRA component carriers in different sub-blocks shall be larger than the nominal channel spacing defined in this subclause.

### 5.7.1F Channel spacing for category NB1 and NB2

Nominal channel spacing for UE category NB1 and NB2 in stand-alone mode is 200 kHz. For in-band and guard-band cases the nominal channel spacing between two adjacent category NB1 or NB2 carriers is 180 kHz.

### 5.7.2 Channel raster

The channel raster is 100 kHz for all bands, which means that the carrier centre frequency must be an integer multiple of 100 kHz.

#### 5.7.2A Channel raster for CA

For carrier aggregation the channel raster is 100 kHz for all bands, which means that the carrier centre frequency must be an integer multiple of 100 kHz.

#### 5.7.2F Channel raster for category NB1 and NB2

Channel raster for category NB1 and NB2 in-band, guard-band and standalone operation is 100 kHz.

### 5.7.3 Carrier frequency and EARFCN

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 262143. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where  $F_{DL\_low}$  and  $N_{Offs-DL}$  are given in Table 5.7.3-1 and  $N_{DL}$  is the downlink EARFCN.

$$F_{DL} = F_{DL\_low} + 0.1(N_{DL} - N_{Offs-DL})$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where  $F_{UL\_low}$  and  $N_{Offs-UL}$  are given in Table 5.7.3-1 and  $N_{UL}$  is the uplink EARFCN.

$$F_{UL} = F_{UL\_low} + 0.1(N_{UL} - N_{Offs-UL})$$

**Table 5.7.3-1: E-UTRA channel numbers**

| E-UTRA Operating Band | Downlink            |               |                   | Uplink              |               |                   |
|-----------------------|---------------------|---------------|-------------------|---------------------|---------------|-------------------|
|                       | $F_{DL\_low}$ (MHz) | $N_{Offs-DL}$ | Range of $N_{DL}$ | $F_{UL\_low}$ (MHz) | $N_{Offs-UL}$ | Range of $N_{UL}$ |
| 1                     | 2110                | 0             | 0 – 599           | 1920                | 18000         | 18000 – 18599     |

| 76 <sup>2</sup> | 1427     | 70316 | 70316 – 70365 | N/A    |        |                 |
| 85              | 728      | 70366 | 70366 – 70545 | 698    | 134002 | 134002 – 134181 |
| 87              | 420      | 70546 | 70546 – 70595 | 410    | 134182 | 134182 – 134231 |
| 88              | 422      | 70596 | 70596 – 70645 | 412    | 134232 | 134232 – 134281 |

NOTE 1: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

NOTE 2: Restricted to E-UTRA operation when carrier aggregation is configured.

NOTE 3: For ProSe and V2X the corresponding UL channel number are also specified for the DL for the associated ProSe/V2X operating bands i.e. ProSe\_F<sub>UL</sub> = F<sub>UL</sub> and ProSe\_F<sub>DL</sub> = F<sub>UL</sub>; V2X\_F<sub>UL</sub> = F<sub>DL</sub> and V2X\_F<sub>DL</sub> = F<sub>UL</sub>.

NOTE 4: Requirements for uplink operations are not specified in this version of the specification.

NOTE 5: The range 2180-2200 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured.

NOTE 6: The range 2010-2020 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 300 MHz. The range 2005-2020 MHz of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 295 MHz.

### 5.7.3F Carrier frequency and EARFCN for category NB1 and NB2

The carrier frequency of category NB1/NB2 in the downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 262143 and the Offset of category NB1/NB2 Channel Number to EARFCN in the range  $\{-10,-9,-8,-7,-6,-5,-4,-3,-2,-1,-0.5,0,1,2,3,4,5,6,7,8,9\}$  for FDD and in the range  $\{-10,-9,-8.5,-8,-7,-6,-5,-4.5,-4,-3,-2,-1,-0.5,0,1,2,3,3.5,4,5,6,7,7.5,8,9\}$  for TDD. The relation between EARFCN, Offset of category NB1/NB2 Channel Number to EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where  $F_{DL}$  is the downlink carrier frequency of category NB1/NB2,  $F_{DL\_low}$  and  $N_{Offs-DL}$  are given in table 5.7.3-1,  $N_{DL}$  is the downlink EARFCN,  $M_{DL}$  is the Offset of category NB1/NB2 Channel Number to downlink EARFCN.

$$F_{DL} = F_{DL\_low} + 0.1(N_{DL} - N_{Offs-DL}) + 0.0025*(2M_{DL}+1)$$

The carrier frequency of category NB1/NB2 in the uplink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 –262143, and the Offset of category NB1/NB2 Channel Number to EARFCN in the range  $\{-10,-9,-8,-7,-6,-5,-4,-3,-2,-1,0,1,2,3,4,5,6,7,8,9\}$  for FDD and in the range  $\{-11,-10,-9.5,-9,-8.5,-8,-7.5,-7,-6.5,-6,-5.5,-5,-4.5,-4,-3.5,-3,-2.5,-2,-1.5,-1,-0.5,0,0.5,1,1.5,2,2.5,3,3.5,4,4.5,5,5.5,6,6.5,7,7.5,8,8.5,9,9.5,10,11\}$  for TDD. The relation between EARFCN, Offset of category NB1/NB2 Channel Number to EARFCN and the carrier frequency in MHz for the uplink is given by the following equation, where  $F_{UL}$  is the uplink carrier frequency of category NB1/NB2,  $F_{UL\_low}$  and  $N_{Offs-UL}$  are given in table 5.7.3-1,  $N_{UL}$  is the uplink EARFCN,  $M_{UL}$  is the Offset of category NB1/NB2 Channel Number to uplink EARFCN.

$$F_{UL} = F_{UL\_low} + 0.1(N_{UL} - N_{Offs-UL}) + 0.0025*(2M_{UL})$$

NOTE 1: For category NB1/NB2,  $N_{DL}$  or  $N_{UL}$  is different than the value of EARFCN that corresponds to E-UTRA downlink or uplink carrier frequency for in-band and guard band operation.

NOTE 2: For FDD  $M_{DL} = -0.5$  is not applicable for in-band and guard band operation. For TDD  $M_{DL} \{-0.5,+3.5,-4.5,+7.5,-8.5\}$  is not applicable for in-band and guard band operation.

NOTE 3: For the carrier including NPSS/NSSS for in-band and guard band operation,  $M_{DL}$  is selected from  $\{-2,-1,0,1\}$ .

NOTE 4: For the carrier including NPSS/NSSS for stand-alone operation,  $M_{DL} = -0.5$ .

### 5.7.4 TX–RX frequency separation

a) The default E-UTRA TX channel (carrier centre frequency) to RX channel (carrier centre frequency) separation is specified in Table 5.7.4-1 for the TX and RX channel bandwidths defined in Table 5.6.1-1

**Table 5.7.4-1: Default UE TX-RX frequency separation**

| E-UTRA Operating Band | TX – RX carrier centre frequency separation |
|-----------------------|---|
| 1                     | 190 MHz                                     |
| 2                     | 80 MHz.                                     |
| 3                     | 95 MHz.                                     |
| 4                     | 400 MHz                                     |
| 5                     | 45 MHz                                      |
| 6                     | 45 MHz                                      |
| 7                     | 120 MHz                                     |
| 8                     | 45 MHz                                      |
| 9                     | 95 MHz                                      |
| 10                    | 400 MHz                                     |
| 11                    | 48 MHz                                      |
| 12                    | 30 MHz                                      |
| 13                    | -31 MHz                                     |
| 14                    | -30 MHz                                     |
| 17                    | 30 MHz                                      |
| 18                    | 45 MHz                                      |
| 19                    | 45 MHz                                      |
| 20                    | -41 MHz                                     |

| E-UTRA Operating Band | TX – RX carrier centre frequency separation |
|-----------------------|---|
| 21                    | 48 MHz                                      |
| 22                    | 100 MHz                                     |
| 23                    | 180 MHz                                     |
| 24                    | -101.5 <sup>1</sup> , -120.5 MHz            |
| 25                    | 80 MHz                                      |
| 26                    | 45 MHz                                      |
| 27                    | 45 MHz                                      |
| 28                    | 55 MHz                                      |
| 30                    | 45 MHz                                      |
| 31                    | 10 MHz                                      |
| 65                    | 190 MHz                                     |
| 66                    | 400 MHz                                     |
| 68                    | 55 MHz                                      |
| ...                   |   |
| 70                    | 295, 300MHz <sup>1</sup>                    |
| 71                    | -46 MHz                                     |
| 72                    | 10 MHz                                      |
| 73                    | 10 MHz                                      |
| 74                    | 48 MHz                                      |
| 85                    | 30 MHz                                      |
| 87                    | 10 MHz                                      |
| 88                    | 10 MHz                                      |

NOTE 1: Default TX-RX carrier centre frequency separation.

b) The use of other TX channel to RX channel carrier centre frequency separation is not precluded and is intended to form part of a later release.

### 5.7.4A TX–RX frequency separation for CA

For intra-band contiguous carrier aggregation, the same TX-RX frequency separation as specified in Table 5.7.4-1 is applied to PCC and SCC, respectively.

### 5.7.4E TX–RX frequency separation for category M1 and M2

For the category M1 and M2 TX-RX frequency separation is flexible within the assigned channel bandwidth of E-UTRA carrier with the TX-RX frequency separation of the E-UTRA carriers as specified in Table 5.7.4-1.

### 5.7.4F TX–RX frequency separation for category NB1 and NB2

For in-band and guard-band operation mode, the category NB1 and NB2 TX-RX frequency separation is flexible within the assigned channel bandwidth of E-UTRA carrier with the TX-RX frequency separation of the E-UTRA carriers as specified in Table 5.7.4-1. For stand-alone operation mode the default TX-RX frequency separation is the same as Table 5.7.4-1.

---

## 6 Transmitter characteristics

### 6.1 General

Unless otherwise stated, the transmitter characteristics are specified at the antenna connector of the UE with a single or multiple transmit antenna(s). For UE with integral antenna only, a reference antenna with a gain of 0 dBi is assumed.

Unless otherwise stated, NB1 and NB2 requirements specified for an E-UTRA band shall also apply for the re-farmed NR band (e.g. if NB1/NB2 requirements are specified for E-UTRA band 1, they shall also apply for NR band n1).

## 6.2 Transmit power

### 6.2.1 Void

### 6.2.2 UE maximum output power

The following UE Power Classes define the maximum output power for any transmission bandwidth within the channel bandwidth for non CA configuration unless otherwise stated. The period of measurement shall be at least as defined in Table 6.2.2-0.

**Table 6.2.2-0: Measurement period for UE maximum output power**

| TTI pattern | Minimum measurement period |
|-------------|----------------------------|
| Subframe    | 1ms                        |

| NOTE 1: Void<br>NOTE 2: <sup>2</sup> refers to the transmission bandwidths (Figure 5.6-1) confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB<br>NOTE 3: For the UE which supports both Band 11 and Band 21 operating frequencies, the tolerance is FFS.<br>NOTE 4: $P_{PowerClass}$ is the maximum UE power specified without taking into account the tolerance<br>NOTE 5: For a UE that supports both Band 18 and Band 26, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB for transmission bandwidths confined within 815 MHz and 818 MHz.<br>NOTE 6: When NS_20 is signalled, the total output power within 2000-2005 MHz shall be limited to 7 dBm.<br>NOTE 7: Void.<br>NOTE 8: Generally, PC1 UE is not targeted for smartphone form factor.<br>NOTE 9: Void. |    |       |    |    |    |                 |  |  |

The default power class  $P_{PowerClass\_Default}$  for an operating band is Power Class 3 unless otherwise stated.

For a power class 2 capable UE operating on Band 41, when an IE  $P-max$  as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6, the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
  - if the band is a TDD band whose frame configuration is 0 or 6; or
  - if the IE  $P-Max$  as defined in TS 36.331 [7] is not provided; or
  - if the IE  $P-Max$  as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
    - meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE  $P-Max$  as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
  - meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5;

## 6.2.2A UE maximum output power for CA

The following UE Power Classes define the maximum output power for any transmission bandwidth within the aggregated channel bandwidth.

The maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least as defined in Table 6.2.2A-0a.

**Table 6.2.2A-0a: Measurement period for UE maximum output power for CA**

| TTI pattern | Minimum measurement period |
|-------------|----------------------------|
| Subframe    | 1ms                        |
| Slot        | 7OS                        |
| Subslot     | 2OS, 3OS                   |

For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band the requirements in subclause 6.2.2 apply. For inter-band carrier aggregation with two uplink contiguous component carrier assigned to one E-UTRA band the requirements specified in Table 6.2.2A-1 apply for that band. For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band in Band 38, 40, 41 or 42, the requirements for power class 2 are not applicable and the corresponding requirements for a power class 3 UE shall apply. For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band in Band 3, 20, 28, or 31, the requirements for power class 1 are not applicable and the corresponding requirements for a power class 3 UE shall apply.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, UE maximum output power shall be measured over all component carriers from different bands. If each band has separate antenna connectors, maximum output power is measured as the sum of maximum output power at each UE antenna connector. The maximum output power is specified in Table 6.2.2A-0.

For E-UTRA CA bands including an uplink LAA Scell in Band 46, the UE shall meet the following additional requirements for transmission within the frequency ranges 5150-5350 MHz and 5470-5725 MHz:

- a maximum mean power density of 10 dBm in any 1 MHz band when the network signaling value NS\_28 or NS\_29 is indicated in the LAA Scell;
- a maximum mean power density of 11 dBm in any 1 MHz band when the network signaling value NS\_30 is indicated in the LAA Scell;

the following additional requirements for transmission within the frequency range 5230-5250 MHz:

- a maximum mean power density of 4 dBm in any 1 MHz band when the network signaling value NS\_31 is indicated in the LAA Scell;

the following additional requirements for transmission within the frequency ranges 5150-5230 MHz, 5250-5350 MHz, 5470-5725 MHz and 5725-5850 MHz:

- a maximum mean power density of 10 dBm in any 1 MHz band when the network signaling value NS\_31 is indicated in the LAA Scell;

where the said network signaling values are specified in clause 6.2.4.

**Table 6.2.2A-0: UE Power Class for uplink interband CA (two bands)**

| E-UTRA CA Configuration | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB)     | Class 4 (dBm) | Tolerance (dB) |
|-------------------------|---------------|----------------|---------------|----------------|---------------|--------------------|---------------|----------------|
| CA_1A-3A                |               |                |               |                | 23            | +2/-3 <sup>2</sup> |               |                |
| CA_1A-5A                |               |                |               |                | 23            | +2/-3              |               |                |
| CA_1A-7A                |               |                |               |                | 23            | +2/-3 <sup>2</sup> |               |                |

| CA_39C-41A   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| CA_40A-42A   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| CA_41A-42A   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| CA_41A-42C   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| CA_41C-42A   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| CA_41C-42C   |  |  |  |  | 23 | +2/-3 <sup>2</sup> |  |  |
| NOTE 1: Void   |  |  |  |  |    |                    |  |  |
| NOTE 2: <sup>2</sup> refers to the transmission bandwidths (Figure 5.6-1) confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB |  |  |  |  |    |                    |  |  |
| NOTE 3: $P_{PowerClass}$ is the maximum UE power specified without taking into account the tolerance   |  |  |  |  |    |                    |  |  |
| NOTE 4: For inter-band carrier aggregation the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).   |  |  |  |  |    |                    |  |  |
| NOTE 5: For a UE that supports both Band 18 and Band 26, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB for transmission bandwidths confined within 815 MHz and 818 MHz.  |  |  |  |  |    |                    |  |  |

For uplink intra-band contiguous carrier aggregation the maximum output power is specified in Table 6.2.2A-1. For downlink intra-band contiguous carrier aggregation with a single uplink component carrier configured in the E-UTRA band, the maximum output power is specified in Table 6.2.2-1.

For a power class 2 capable UE operating with intra-band uplink contiguous CA bandwidth class C on Band 41, when an IE P-max as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6, the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

**Table 6.2.2A-1: CA UE Power Class for intraband contiguous CA**

| E-UTRA CA Configuration   | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB)     | Class 3 (dBm) | Tolerance (dB)     | Class 4 (dBm) | Tolerance (dB) |
|---|---------------|----------------|---------------|--------------------|---------------|--------------------|---------------|----------------|
| CA_1C   |               |                |               |                    | 23            | +2/-2              |               |                |
| CA_3C   |               |                |               |                    | 23            | +2/-2 <sup>2</sup> |               |                |

| CA_42C  |               |                |               |                    | 23            | +2/-3              |               |                |
| CA_48B  |               |                |               |                    | 23            | +2/-3              |               |                |
| CA_48C  |               |                |               |                    | 23            | +2/-3              |               |                |
| CA_66B  |               |                |               |                    | 23            | +2/-2              |               |                |
| CA_66C  |               |                |               |                    | 23            | +2/-2              |               |                |
| NOTE 1: Void  |               |                |               |                    |               |                    |               |                |
| NOTE 2: If all transmitted resource blocks (Figure 5.6A-1) over all component carriers are confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or/and $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB |               |                |               |                    |               |                    |               |                |
| NOTE 3: $P_{PowerClass}$ is the maximum UE power specified without taking into account the tolerance  |               |                |               |                    |               |                    |               |                |
| NOTE 4: For intra-band contiguous carrier aggregation the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).   |               |                |               |                    |               |                    |               |                |

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the requirements in subclause 6.2.2 apply. For intra-band non-contiguous carrier aggregation with two uplink carriers the maximum output power is specified in Table 6.2.2A-2.

**Table 6.2.2A-2: UE Power Class for intraband non-contiguous CA**

| E-UTRA CA Configuration  | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 4 (dBm) | Tolerance (dB) |

| CA_4A-4A   |               |                |               |                | 23            | +2/-2          |               |                |
| NOTE 1: For transmission bandwidths (Figure 5.6-1) confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB<br>NOTE 2: $P_{PowerClass}$ is the maximum UE power specified without taking into account the tolerance<br>NOTE 3: For intra-band non-contiguous carrier aggregation the maximum power requirement should apply to the total transmitted power over all component carriers (per UE). |               |                |               |                |               |                |               |                |

### 6.2.2B UE maximum output power for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the maximum output power for any transmission bandwidth within the channel bandwidth is specified in Table 6.2.2B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least as defined in Table 6.2.2B-0.

**Table 6.2.2B-0: Measurement period for UE maximum output power for UL-MIMO**

| TTI pattern | Minimum measurement period |
|-------------|----------------------------|
| Subframe    | 1ms                        |
| Slot        | 7OS                        |
| Subslot     | 2OS, 3OS                   |

**Table 6.2.2B-1: UE Power Class for UL-MIMO in closed loop spatial multiplexing scheme**

| EUTRA band | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB)       | Class 4 (dBm) | Tolerance (dB) |
|------------|---------------|----------------|---------------|----------------|---------------|----------------------|---------------|----------------|
| 1          |               |                |               |                | 23            | +2/-3                |               |                |
| 2          |               |                |               |                | 23            | +2/-3 <sup>2</sup>   |               |                |
| 3          |               |                |               |                | 23            | +2/-3 <sup>2</sup>   |               |                |
| 4          |               |                |               |                | 23            | +2/-3                |               |                |
| 5          |               |                |               |                | 23            | +2/-3                |               |                |
| 6          |               |                |               |                | 23            | +2/-3                |               |                |
| 7          |               |                |               |                | 23            | +2/-3 <sup>2</sup>   |               |                |
| 8          |               |                |               |                | 23            | +2/-3 <sup>2</sup>   |               |                |
| 9          |               |                |               |                | 23            | +2/-3                |               |                |
| 10         |               |                |               |                | 23            | +2/-3                |               |                |
| 11         |               |                |               |                | 23            | +2/-3                |               |                |

| 74   |    |       |    |                    | 23 | +2/-3              |  |  |
| NOTE 1: Void   |    |       |    |                    |    |                    |  |  |
| NOTE 2: <sup>2</sup> refers to the transmission bandwidths (Figure 5.6-1) confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB |    |       |    |                    |    |                    |  |  |
| NOTE 3: For the UE which supports both Band 11 and Band 21 operating frequencies, the tolerance is FFS.  |    |       |    |                    |    |                    |  |  |
| NOTE 4: $P_{PowerClass}$ is the maximum UE power specified without taking into account the tolerance   |    |       |    |                    |    |                    |  |  |
| NOTE 5: Void.  |    |       |    |                    |    |                    |  |  |

The default power class for an operating band is Power Class 3 unless otherwise stated.

For a power class 2 capable UE operating on Band 41, when an IE  $P_{max}$  as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6, the requirements for power class 2 are not applicable and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 41, the UE shall:

- if the UE supports a different power class than the UE default power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
  - if the band is a TDD band whose frame configuration is 0 or 6; or
  - if the IE  $P_{Max}$  as defined in TS 36.331 [7] is not provided; or
  - if the IE  $P_{Max}$  as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
    - meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
  - else (i.e the IE  $P_{Max}$  as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
    - meet all requirements for the supported power class and set its configured transmitted power as specified in sub-clause 6.2.5;

**Table 6.2.2B-2: UL-MIMO configuration in closed-loop spatial multiplexing scheme**

| Transmission mode | DCI format   | Codebook Index   |
|-------------------|--------------|------------------|
| Mode 2            | DCI format 4 | Codebook index 0 |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.2 apply.

### 6.2.2C Void

<reserved for future use>

### 6.2.2D UE maximum output power for ProSe

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE maximum output power shall be as specified in Table 6.2.2A-0 in subclause 6.2.2A for the corresponding inter-band aggregation with uplink assigned to two bands.

If UE is configured to operate on single E-UTRA ProSe sidelink band or E-UTRA uplink band specified in Table 5.5D-1, the requirements in subclause 6.2.2 apply.

### 6.2.2E UE maximum output power for Category M1 and M2 UE

The following UE Power Classes define the maximum output power for any transmission bandwidth within the channel bandwidth for non CA configuration and UL-MIMO unless otherwise stated. The period of measurement shall be at least one sub frame (1ms).

**Table 6.2.2E-1: UE Power Class**

| EUTRA band | Class 2 (dBm)   | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) | Class 6 (dBm) | Tolerance (dB) |
|------------|-----------------|----------------|---------------|----------------|---------------|----------------|---------------|----------------|
| 1          |                 |                | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 2          |                 |                | 23            | $\pm 2^2$      | 20            | $\pm 2^2$      | 14            | $\pm 2.5$      |
| 3          |                 |                | 23            | $\pm 2^2$      | 20            | $\pm 2^2$      | 14            | $\pm 2.5$      |
| 4          |                 |                | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 5          |                 |                | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 7          |                 |                | 23            | $\pm 2^2$      | 20            | $\pm 2^2$      | 14            | $\pm 2.5$      |
| 8          |                 |                | 23            | $\pm 2^2$      | 20            | $\pm 2^2$      | 14            | $\pm 2.5$      |
| 11         |                 |                | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 12         |                 |                | 23            | $\pm 2^2$      | 20            | $\pm 2^2$      | 14            | $\pm 2.5$      |
| 13         |                 |                | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |

| NOTE 7: Applicable for category M1 and M2 HD-FDD UE  |  |  |    |           |    |           |    |           |

## 6.2.2F UE maximum output power for category NB1 and NB2

Category NB1 and NB2 UE Power Classes are specified in Table 6.2.2F-1 and define the maximum output power for any transmission bandwidth within the category NB1 and NB2 channel bandwidth. For 3.75 kHz sub-carrier spacing the maximum output power is defined as mean power of measurement which period is atleast one slot (2ms) excluding the 2304Ts gap when UE is not transmitting. For 15kHz sub-carrier spacing the maximum output power is defined as mean power of measurement which period is atleast one sub-frame (1ms).

**Table 6.2.2F-1: UE Power Class**

| EUTRA band | Class 3 (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) | Class 6 (dBm) | Tolerance (dB) |
|------------|---------------|----------------|---------------|----------------|---------------|----------------|
| 1          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 2          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 3          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 4          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 5          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 7          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 8          | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 11         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 12         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 13         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 14         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 17         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |

| 28         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 31         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 41         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 42         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 43         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 65         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 66         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 70         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 71         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 72         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 73         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 74         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 85         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 87         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |
| 88         | 23            | $\pm 2$        | 20            | $\pm 2$        | 14            | $\pm 2.5$      |

## 6.2.2G UE maximum output power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the allowed V2X UE maximum output power for shall be as applied in Table 6.2.2-1 in subclause 6.2.2.

For V2X UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE maximum output power shall be as specified in Table 6.2.2G-1 in subclause 6.2.2G for the corresponding inter-band con-current operation with uplink assigned to two bands.

**Table 6.2.2G-1: Inter-band con-current V2X UE Power Class (two bands)**

| V2X con-current band Configuration | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB)     | Class 4 (dBm) | Tolerance (dB) |
|------------------------------------|---------------|----------------|---------------|----------------|---------------|--------------------|---------------|----------------|
| V2X_3A-47A                         |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_5A-47A                         |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_7A-47A                         |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_8A-47A                         |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_20A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_28A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_34A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_39A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_41A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |
| V2X_71A-47A                        |               |                |               |                | 23            | +2/-3 <sup>4</sup> |               |                |

NOTE 1: The con-current band combinations is used for V2X Service.  
NOTE 2:  $P_{\text{PowerClass}}$  is the maximum UE power specified without taking into account the tolerance  
NOTE 3: For inter-band con-current aggregation the maximum power requirement apply to the total transmitted power over all component carriers (per UE).  
NOTE 4: <sup>4</sup> refers to the transmission bandwidths (Figure 5.6-1) confined within  $F_{\text{UL\_low}}$  and  $F_{\text{UL\_low}} + 4$  MHz or  $F_{\text{UL\_high}} - 4$  MHz and  $F_{\text{UL\_high}}$ , the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB

For intra-band contiguous multi-carrier operation, the maximum output power is defined in Table 6.2.2G-2.

**Table 6.2.2G-2: V2X UE Power Class for intra-band contiguous multi-carrier operation**

| V2X intra-band multi-carrier configuration | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 4 (dBm) | Tolerance (dB) |
|--|---------------|----------------|---------------|----------------|---------------|----------------|---------------|----------------|
| V2X_47B                                    |               |                |               |                | 23            | ±2             |               |                |
| V2X_47C                                    |               |                |               |                | 23            | ±2             |               |                |

NOTE 1:  $P_{\text{PowerClass}}$  is the maximum UE power specified without taking into account the tolerance  
NOTE 2: For intra-band multi-carrier operation, the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).

When a UE is configured for E-UTRA V2X sidelink transmissions in Band 47, the UE shall meet the following additional requirements for transmission within the frequency ranges 5855-5925 MHz:

- The maximum mean power spectral density shall be restricted to 23 dBm/MHz EIRP when the network signaling value NS<sub>33</sub> or NS<sub>34</sub> is indicated.

where the network signaling values are specified in clause 6.2.4G.

NOTE: The PSD limit in EIRP shall be converted to conducted requirement depend on the supported post antenna connector gain  $G_{\text{post connector}}$  declared by the UE following the principle described in annex I.

For V2X UE supporting Transmit Diversity, if the UE transmits on two connectors at the same time, the maximum output power for any transmission bandwidth within the channel bandwidth is specified in Table 6.2.2G-3. The

maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least one sub frame (1ms).

**Table 6.2.2G-3: V2X UE Power Class for Transmit Diversity scheme**

| E-UTRA band | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 4 (dBm) | Tolerance (dB) |
|-------------|---------------|----------------|---------------|----------------|---------------|----------------|---------------|----------------|
| 47          |               |                | 26            | +2/-3          | 23            | +2/-3          |               |                |

If the UE transmits on one antenna connector at a time, the requirements in Table 6.2.2-1 shall apply to the active antenna connector.

### 6.2.3 UE maximum output power for modulation / channel bandwidth

For UE Power Class 1, 2 and 3, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Table 6.2.3-1.

**Table 6.2.3-1: Maximum Power Reduction (MPR) for Power Class 1, 2 and 3**

| Modulation | Channel bandwidth / Transmission bandwidth (N <sub>RB</sub> ) |         |       |        |        |        | MPR (dB) |
|------------|---|---------|-------|--------|--------|--------|----------|
|            | 1.4 MHz   | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |          |
| QPSK       | > 5   | > 4     | > 8   | > 12   | > 16   | > 18   | ≤ 1      |
| 16 QAM     | ≤ 5   | ≤ 4     | ≤ 8   | ≤ 12   | ≤ 16   | ≤ 18   | ≤ 1      |
| 16 QAM     | > 5   | > 4     | > 8   | > 12   | > 16   | > 18   | ≤ 2      |
| 64 QAM     | ≤ 5   | ≤ 4     | ≤ 8   | ≤ 12   | ≤ 16   | ≤ 18   | ≤ 2      |
| 64 QAM     | > 5   | > 4     | > 8   | > 12   | > 16   | > 18   | ≤ 3      |
| 256 QAM    | ≥ 1   |         |       |        |        |        | ≤ 5      |

For PRACH, PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each TTI pattern, the MPR shall be evaluated per T<sub>eval</sub> period as specified in table 6.2.3-2 and given by the maximum value taken over the transmission(s) within that period; the maximum MPR over T<sub>REF</sub> is then applied for T<sub>REF</sub>.

**Table 6.2.3-2: MPR evaluation period**

| TTI pattern | T <sub>REF</sub> | T <sub>eval</sub>                      |
|-------------|------------------|--|
| Subframe    | 1 subframe       | 1 slot                                 |
| Slot        | 7 OS             | Min(T <sub>no_hopping</sub> , 7OS)     |
| Sublot      | 2 OS, 3OS        | Min(T <sub>no_hopping</sub> , 2OS/3OS) |

For UE Power Class 1 and 3 transmissions with non-contiguous resource allocation in single component carrier, the allowed Maximum Power Reduction (MPR) for the maximum output power in table 6.2.2-1, is specified as follows

$$\text{MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where M<sub>A</sub> is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 8.00 - 10.12A && ; 0.00 < A \leq 0.33 \\ &5.67 - 3.07A && ; 0.33 < A \leq 0.77 \\ &3.31 && ; 0.77 < A \leq 1.00 \end{aligned}$$

Where M<sub>A</sub> is defined as follows for 256 QAM

$$\begin{aligned} M_A &= 8.00 - 10.12A && ; 0.00 < A \leq 0.25 \\ &5.50 && ; 0.25 < A < 1.00 \end{aligned}$$

Where

$$A = N_{RB\_alloc} / N_{RB}$$

CEIL $\{M_A, 0.5\}$  means rounding upwards to closest 0.5dB, i.e. MPR  $\in [3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 6.5, 7.0, 7.5, 8.0]$

The allowed MPR for transmission on an Scell in Band 46 or Band 49 within a component carrier of a nominal channel bandwidth of 10 MHz or 20 MHz is in accordance with 6.2.3-1 for  $RIV = '11111'$  (10 MHz) and  $L = 10$  (20 MHz) with  $L$  defined in Clause 8.1.4 of [6]. For all other possible values of the  $RIV$  defined in Clause 8.1.4 of [6] the allowed MPR is 2.5 dB for QPSK modulation, 3 dB for 16QAM modulation and 4 dB for 64QAM modulation (256QAM is FFS).

For a power class 2 capable UE operating on Band 41, when an IE  $P-max$  as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6, the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
  - if the band is a TDD band whose frame configuration is 0 or 6; or
  - if the IE  $P-Max$  as defined in TS 36.331 [7] is not provided; or
  - if the IE  $P-Max$  as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
    - meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
  - else (i.e the IE  $P-Max$  as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
    - meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

For UE Power Class 2 transmissions with non-contiguous resource allocation in single component carrier, the allowed Maximum Power Reduction (MPR) for the maximum output power is not specified in this version of the specification.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5 apply.

### 6.2.3A UE Maximum Output power for modulation / channel bandwidth for CA

For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band, the requirements in subclause 6.2.3 apply. For inter-band carrier aggregation with two uplink contiguous component carrier assigned to one E-UTRA band specified in this clause for intra-band contiguous carrier aggregation apply for that band.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the requirements in subclause 6.2.3 apply for each uplink component carrier.

For intra-band contiguous carrier aggregation the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 due to higher order modulation and contiguously aggregated transmit bandwidth configuration (resource blocks) is specified in Table 6.2.3A-1 for UE power class 3 CA bandwidth classes B and C, in Table 6.2.3A-1a for UE power class 2 CA bandwidth class C, and Table 6.2.3A-2 for UE power class 3 CA bandwidth class D. In case the modulation format is different on different component carriers then the MPR is determined by the rules applied to higher order of those modulations.

**Table 6.2.3A-1: Maximum Power Reduction (MPR) for Power Class 3**

| Modulation | CA bandwidth Class B and C / Smallest Component Carrier Transmission Bandwidth Configuration | MPR (dB) |
|------------|--|----------|
|------------|--|----------|

|         | 25 RB  | 50 RB   | 75 RB   | 100 RB  |     |
|---------|--|---|---|---|-----|
| QPSK    | > 8 and ≤ 25   | > 12 and ≤ 50   | > 16 and ≤ 75   | > 18 and ≤ 100  | ≤ 1 |
| QPSK    | > 25   | > 50  | > 75  | > 100   | ≤ 2 |
| 16 QAM  | ≤ 8  | ≤ 12  | ≤ 16  | ≤ 18  | ≤ 1 |
| 16 QAM  | > 8 and ≤ 25   | > 12 and ≤ 50   | > 16 and ≤ 75   | > 18 and ≤ 100  | ≤ 2 |
| 16 QAM  | > 25   | > 50  | > 75  | > 100   | ≤ 3 |
| 64 QAM  | ≤ 8 and allocation wholly contained within a single CC | ≤ 12 and allocation wholly contained within a single CC | ≤ 16 and allocation wholly contained within a single CC | ≤ 18 and allocation wholly contained within a single CC | ≤ 2 |
| 64 QAM  | > 8 or allocation extends across two CC's              | > 12 or allocation extends across two CC's              | > 16 or allocation extends across two CC's              | > 18 or allocation extends across two CC's              | ≤ 3 |
| 256 QAM | ≥ 1  |   |   |   | ≤ 5 |

Table 6.2.3A-1a: Maximum Power Reduction (MPR) for Power Class 2

| Modulation | CA bandwidth Class C / Smallest Component Carrier Transmission Bandwidth Configuration |   |   |   | MPR (dB) |
|------------|--|---|---|---|----------|
|            | 25 RB  | 50 RB   | 75 RB   | 100 RB  |          |
| QPSK       | > 6 and ≤ 25   | > 6 and ≤ 50  | > 6 and ≤ 75  | > 6 and ≤ 100   | ≤ 1      |
| QPSK       | > 25   | > 50  | > 75  | > 100   | ≤ 2      |
| 16 QAM     | ≤ 6  | ≤ 8   | ≤ 16  | ≤ 18  | ≤ 1.5    |
| 16 QAM     | > 6 and ≤ 25   | > 8 and ≤ 50  | > 16 and ≤ 75   | > 18 and ≤ 100  | ≤ 2      |
| 16 QAM     | > 25   | > 50  | > 75  | > 100   | ≤ 3      |
| 64 QAM     | ≤ 8 and allocation wholly contained within a single CC                                 | ≤ 12 and allocation wholly contained within a single CC | ≤ 16 and allocation wholly contained within a single CC | ≤ 18 and allocation wholly contained within a single CC | ≤ 2      |
| 64 QAM     | > 8 or allocation extends across two CC's  | > 12 or allocation extends across two CC's              | > 16 or allocation extends across two CC's              | > 18 or allocation extends across two CC's              | ≤ 3      |
| 256 QAM    | ≥ 1  |   |   |   | ≤ 6      |

Table 6.2.3A-2: Maximum Power Reduction (MPR) for Class 3

| Modulation | CA bandwidth Class D  |                         |                        |                         |                          | MPR (dB) |
|------------|-----------------------|-------------------------|------------------------|-------------------------|--------------------------|----------|
|            | 50 RB + 75 RB + 100RB | 50 RB + 100 RB + 100 RB | 75 RB + 75 RB + 100 RB | 75 RB + 100 RB + 100 RB | 100 RB + 100 RB + 100 RB |          |
| QPSK       | > 12 and ≤ 50         | > 12 and ≤ 50           | > 16 and ≤ 75          | > 16 and ≤ 75           | > 18 and ≤ 100           | ≤ 1      |
| QPSK       | > 50 and ≤ 125        | > 50 and ≤ 150          | > 75 and ≤ 150         | > 75 and ≤ 175          | > 100 and ≤ 200          | ≤ 2      |
| QPSK       | > 125                 | > 150                   | > 150                  | > 175                   | > 200                    | ≤ 3      |
| 16 QAM     | ≤ 12                  | ≤ 12                    | ≤ 16                   | ≤ 16                    | ≤ 18                     | ≤ 1      |
| 16 QAM     | > 12 and ≤ 50         | > 12 and ≤ 50           | > 16 and ≤ 75          | > 16 and ≤ 75           | > 18 and ≤ 100           | ≤ 2      |
| 16 QAM     | > 50 and ≤ 125        | > 50 and ≤ 150          | > 75 and ≤ 150         | > 75 and ≤ 175          | > 100 and ≤ 200          | ≤ 3      |

|         |   |   |   |   |   |       |
|---------|---|---|---|---|---|-------|
| 16 QAM  | > 125   | > 150   | > 150   | >175  | > 200   | ≤ 3.5 |
| 64 QAM  | ≤ 12 allocation wholly contained within a single CC                                       | ≤ 12 and allocation wholly contained within a single CC                                   | ≤ 16 and allocation wholly contained within a single CC                                   | ≤ 16 and allocation wholly contained within a single CC                                   | ≤ 18 and allocation wholly contained within a single CC                                   | ≤ 2   |
| 64 QAM  | > 12 allocation wholly contained within a single CC or allocation extends across two CC's | > 12 allocation wholly contained within a single CC or allocation extends across two CC's | > 16 allocation wholly contained within a single CC or allocation extends across two CC's | > 16 allocation wholly contained within a single CC or allocation extends across two CC's | > 18 allocation wholly contained within a single CC or allocation extends across two CC's | ≤ 3   |
| 64 QAM  | allocation extends across three CC's  | allocation extends across three CC's  | allocation extends across three CC's  | allocation extends across three CC's  | allocation extends across three CC's  | ≤ 4.0 |
| 256 QAM | ≥ 1   |   |   |   |   | ≤ 5.5 |

For PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$\text{MPR} = \text{CEIL} \{ \min(M_A, M_{\text{IM5}}), 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 8.2 && ; 0 \leq A < 0.025 \\ &9.2 - 40A && ; 0.025 \leq A < 0.05 \\ &8 - 16A && ; 0.05 \leq A < 0.25 \\ &4.83 - 3.33A && ; 0.25 \leq A \leq 0.4, \\ &3.83 - 0.83A && ; 0.4 \leq A \leq 1, \end{aligned}$$

Where  $M_A$  is defined as follows for 256 QAM

$$\begin{aligned} M_A &= 8.2 && ; 0 \leq A < 0.025 \\ &9.2 - 40A && ; 0.025 \leq A < 0.05 \\ &8 - 16A && ; 0.05 \leq A < 0.16 \\ &5.5 && ; 0.16 \leq A < 1 \end{aligned}$$

and  $M_{\text{IM5}}$  is defined as follows

$$\begin{aligned} M_{\text{IM5}} &= 4.5 && ; \Delta_{\text{IM5}} < 1.5 * \text{BW}_{\text{Channel\_CA}} \\ &6.0 && ; 1.5 * \text{BW}_{\text{Channel\_CA}} \leq \Delta_{\text{IM5}} < \text{BW}_{\text{Channel\_CA}}/2 + F_{\text{OOB}} \\ M_A &&& ; \Delta_{\text{IM5}} \geq \text{BW}_{\text{Channel\_CA}}/2 + F_{\text{OOB}} \end{aligned}$$

For UE power class 2 intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$\text{MPR} = \text{CEIL} \{ \min(M_A, M_{IM5}), 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 8.2 && ; 0 \leq A < 0.04 \\ &9.2 - 40A && ; 0.04 \leq A < 0.075 \\ &8 - 16A && ; 0.075 \leq A < 0.25 \\ &4.83 - 3.33A && ; 0.25 \leq A \leq 0.4, \\ &3.83 - 0.83A && ; 0.4 \leq A \leq 1, \end{aligned}$$

Where  $M_A$  is defined FFS for 256 QAM

and  $M_{IM5}$  is defined as follows

$$\begin{aligned} M_{IM5} &= 5.0 && ; \Delta_{IM5} < 1.5 * \text{BW}_{\text{Channel\_CA}} \\ &6.0 && ; 1.5 * \text{BW}_{\text{Channel\_CA}} \leq \Delta_{IM5} < \text{BW}_{\text{Channel\_CA}}/2 + F_{\text{OOB}} \\ M_A &&& ; \Delta_{IM5} \geq \text{BW}_{\text{Channel\_CA}}/2 + F_{\text{OOB}} \end{aligned}$$

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class B with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$\text{MPR} = \text{CEIL} \{ M_A, 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 10.5 - 17.5A && ; 0 \leq A < 0.2 \\ &8.5 - 7.5A && ; 0.2 \leq A < 0.6 \\ &5.5 - 2.5A && ; 0.6 \leq A \leq 1 \end{aligned}$$

Where  $M_A$  is defined as follows for 256 QAM

$$\begin{aligned} M_A &= 10.5 - 17.5A && ; 0 \leq A < 0.2 \\ &8.5 - 7.5A && ; 0.2 \leq A < 0.4 \\ &5.5 && ; 0.4 \leq A \leq 1 \end{aligned}$$

Where

$$A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$$

$$\Delta_{IM5} = \max( | F_{\text{C\_agg}} - (3 * F_{\text{agg\_alloc\_low}} - 2 * F_{\text{agg\_alloc\_high}}) |, | F_{\text{C\_agg}} - (3 * F_{\text{agg\_alloc\_high}} - 2 * F_{\text{agg\_alloc\_low}}) | )$$

$$F_{\text{C\_agg}} = (F_{\text{edge\_high}} + F_{\text{edge\_low}})/2$$

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class D with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.3A-2 is specified as follows

$$\text{MPR} = \text{CEIL} \{ \min(M_A, M_{IM5}), 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 8.2 && ; 0 \leq A < 0.025 \\ &9.2 - 40A && ; 0.025 \leq A < 0.05 \\ &8 - 16A && ; 0.05 \leq A < 0.25 \end{aligned}$$

$$4.0 \quad ; 0.25 \leq A < 1$$

Where  $M_A$  is defined as follows for 256 QAM

$$M_A = \begin{cases} 8.2 & ; 0 \leq A < 0.025 \\ 9.2 - 40A & ; 0.025 \leq A < 0.05 \\ 8 - 16A & ; 0.05 \leq A < 0.16 \\ 5.5 & ; 0.16 \leq A < 1 \end{cases}$$

and  $M_{IM5}$  is defined as follows

$$M_{IM5} = \begin{cases} 4.5 & ; \Delta_{IM5} < 1.5 * BW_{Channel\_CA} \\ 6.0 & ; 1.5 * BW_{Channel\_CA} \leq \Delta_{IM5} < BW_{Channel\_CA}/2 + F_{OOB} \\ M_A & ; \Delta_{IM5} \geq BW_{Channel\_CA}/2 + F_{OOB} \end{cases}$$

$CEIL\{M_A, 0.5\}$  means rounding upwards to closest 0.5dB, i.e.  $MPR \in [3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 6.5, 7.0, 7.5, 8.0, 8.5]$ .

For intra-band non-contiguous carrier aggregation with one uplink carrier, the requirements in subclause 6.2.3 apply.

For intra-band non-contiguous carrier aggregation with two uplink carriers MPR is specified for E-UTRA CA configurations with a maximum possible  $W_{GAP} \leq 35$  MHz; the allowed MPR is

$$MPR = CEIL \{M_N, 0.5\}$$

where  $M_N$  is defined as follows

$$M_N = \begin{cases} -0.125 N + 18.25 & ; 2 \leq N \leq 50 \\ -0.0333 N + 13.67 & ; 50 < N \leq 200 \end{cases}$$

where  $N = N_{RB\_alloc}$  is the number of allocated resource blocks. Clause 6.2.3 does not apply in addition. E-UTRA CA configurations with a maximum possible  $W_{gap} > 35$  MHz and their corresponding MPR are intended to form part of a later release.

For intra-band carrier aggregation, the MPR is evaluated per  $T_{eval}$  period specified in table 6.2.3A-3 and given by the maximum value taken over the transmission(s) on all component carriers within that period; the maximum MPR over  $T_{REF}$  is then applied for  $T_{REF}$ .

**Table 6.2.3A-3: MPR evaluation period for CA**

| TTI pattern | $T_{REF}$  | $T_{eval}$                             |
|-------------|------------|--|
| Subframe    | 1 subframe | 1 slot                                 |
| Slot        | 7 OS       | $\text{Min}(T_{no\_hopping}, 7OS)$     |
| Sublot      | 2 OS, 3OS  | $\text{Min}(T_{no\_hopping}, 2OS/3OS)$ |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the requirements specified in subclause 6.2.3 apply for the E-UTRA band supporting one component carrier, and for the E-UTRA band supporting two contiguous component carriers the requirements specified in subclause 6.2.3A apply.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5A apply.

### 6.2.3B UE maximum output power for modulation / channel bandwidth for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2B-1 is specified in Table 6.2.3-1. The requirements

shall be met with UL-MIMO configurations defined in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5B apply.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.3 apply.

### 6.2.3D UE maximum output power for modulation / channel bandwidth for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, this subclause specifies the allowed Maximum Power Reduction (MPR) power for ProSe physical channels and signals due to higher order modulation and transmit bandwidth configuration (resource blocks).

The allowed MPR for the maximum output power for ProSe physical channels PSDCH, PSCCH, PSSCH, and PSBCH shall be as specified in subclause 6.2.3 for PUSCH for the corresponding modulation and transmission bandwidth.

The allowed MPR for the maximum output power for ProSe physical signal PSSS shall be as specified in subclause 6.2.3 for PUSCH QPSK modulation for the corresponding transmission bandwidth.

The allowed MPR for the maximum output power for ProSe physical signal SSSS is specified in Table 6.2.3D-1.

For a power class 2 capable UE operating on Band 41, the corresponding requirements for a power class 3 UE apply when an IE *P-max* as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
  - if the band is a TDD band whose frame configuration is 0 or 6; or
  - if the IE *P-Max* as defined in TS 36.331 [7] is not provided; or
  - if the IE *P-Max* as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
    - meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
  - else (i.e the IE *P-Max* as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
    - meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

**Table 6.2.3D-1: Maximum Power Reduction (MPR) for SSSS for Power Class 1, 2 and 3**

| Channel bandwidth | MPR for SSSS (dB) |
|-------------------|-------------------|
| 1.4 MHz           |                   |
| 3.0 MHz           |                   |
| 5.0 MHz           | ≤ 4               |
| 10 MHz            | ≤ 4               |
| 15 MHz            | ≤ 4               |
| 20 MHz            | ≤ 4               |

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.2.3D apply for ProSe transmission and the requirements in subclause 6.2.3 apply for uplink transmission.

### 6.2.3E UE maximum output power for modulation / channel bandwidth for category M1 and M2

For category M1 UE Power Class 3, 5 and 6, the allowed Maximum Power Reduction (MPR) for the maximum output power specified in Table 6.2.2E-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Tables 6.2.3E-1, 6.2.3E-2 and 6.2.3E-5 respectively.

For category M2 UE Power Class 3, 5 and 6, the allowed Maximum Power Reduction (MPR) for the maximum output power specified in Table 6.2.2E-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Table 6.2.3E-3, Table 6.2.3E-4 and Table 6.2.3E-6 respectively.

For subPRB allocation of category M1 UE of Power Class 3, there is no MPR applies. For subPRB allocation of category M2 UE of Power Class 3, the allowed MPR due to higher order modulation and transmit bandwidth configuration (subcarrier) is specified in in Table 6.2.3E-7.

**Table 6.2.3E-1: Maximum Power Reduction (MPR) for category M1 UE for Power Class 2 and 3**

| Modulation | Channel bandwidth / Transmission bandwidth ( $N_{RB}$ ) |          |       |        |        |        | MPR (dB) |
|------------|---|----------|-------|--------|--------|--------|----------|
|            | 1.4 MHz   | 3.0 MHz  | 5 MHz | 10 MHz | 15 MHz | 20 MHz |          |
| QPSK       | >2  | >2       | >1    | >4     | -      | -      | $\leq 1$ |
| QPSK       | >5  | >5       | -     | -      | -      | -      | $\leq 2$ |
| 16 QAM     | $\leq 2$  | $\leq 2$ | >1    | >3     | -      | -      | $\leq 1$ |
| 16QAM      | >2  | >2       | >3    | >5     | -      | -      | $\leq 2$ |

NOTE: MPR only applicable for  $N_{RB} \geq 1$

**Table 6.2.3E-2: Maximum Power Reduction (MPR) for category M1 for Power Class 5**

| Modulation | Channel bandwidth / Transmission bandwidth ( $N_{RB}$ ) |          |       |        |        |        | MPR (dB) |
|------------|---|----------|-------|--------|--------|--------|----------|
|            | 1.4 MHz   | 3.0 MHz  | 5 MHz | 10 MHz | 15 MHz | 20 MHz |          |
| QPSK       | >2  | >2       | >3    | >5     | -      | -      | $\leq 1$ |
| QPSK       | >5  | >5       | -     | -      | -      | -      | $\leq 2$ |
| 16 QAM     | $\leq 2$  | $\leq 2$ | >3    | >5     | -      | -      | $\leq 1$ |
| 16QAM      | >2  | >2       | >5    | -      | -      | -      | $\leq 2$ |

NOTE: MPR only applicable for  $N_{RB} \geq 1$

**Table 6.2.3E-3: Maximum Power Reduction (MPR) for category M2 UE for Power Class 2 and 3**

| Modulation | Channel bandwidth / Transmission bandwidth ( $N_{RB}$ ) |          |       |        |           |           | MPR (dB) |
|------------|---|----------|-------|--------|-----------|-----------|----------|
|            | 1.4 MHz   | 3.0 MHz  | 5 MHz | 10 MHz | 15 MHz    | 20 MHz    |          |
| QPSK       | >2  | >2       | >1    | >4     | > 16      | > 18      | $\leq 1$ |
| QPSK       | >5  | >5       | -     | -      | -         | -         | $\leq 2$ |
| 16 QAM     | $\leq 2$  | $\leq 2$ | >1    | >3     | $\leq 16$ | $\leq 18$ | $\leq 1$ |
| 16QAM      | >2  | >2       | >3    | >5     | > 16      | > 18      | $\leq 2$ |

NOTE: MPR only applicable for  $N_{RB} \geq 1$

**Table 6.2.3E-4: Maximum Power Reduction (MPR) for category M2 UE for Power Class 5**

|  | BPSK       | QPSK     | BPSK       | QPSK       | BPSK     | QPSK |
| WB index for 2 subcarrier transmission | 0          | -        | 0          | 1          | -        | -    |
| MPR                                    | $\leq 0.5$ | -        | $\leq 0.5$ | $\leq 0.5$ | -        | -    |
| WB index for 3 subcarrier transmission | -          | 0        | -          | 0          | 1        | -    |
| MPR                                    | -          | $\leq 2$ | -          | $\leq 2$   | $\leq 2$ | -    |
| WB index for 6 subcarrier transmission | -          | 0        | -          | 0          | 1        | -    |
| MPR                                    | -          | $\leq 1$ | -          | $\leq 1$   | $\leq 1$ | -    |

NOTE: WB is specified in TS 36.211 [4]

For PRACH, PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each subframe, the MPR is evaluated per slot and given by the maximum value taken over the transmission(s) within the slot; the maximum MPR over the two slots is then applied for the entire subframe.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5 apply.

No other MPR requirement than those specified in tables 6.2.3E-1 and Table 6.2.3E-2 and Table 6.2.3E-5 applies to category M1 and those specified in tables 6.2.3E-3 and Table 6.2.3E-4 and Table 6.2.3E-6 applies to category M2 UE.

### 6.2.3F UE maximum output power for modulation / channel bandwidth for category NB1 and NB2

For UE category NB1 and NB2 power class 3 and 5 the allowed Maximum Power Reduction (MPR) for the maximum output power given in Table 6.2.2F-1 is specified in Table 6.2.3F-1.

**Table 6.2.3F-1: Maximum Power Reduction (MPR) for UE category NB1 and NB2 Power Class 3 and 5**

| Modulation                            | QPSK          |             |               |
|---------------------------------------|---------------|-------------|---------------|
| Tone positions for 3 Tones allocation | 0-2           | 3-5 and 6-8 | 9-11          |
| MPR                                   | $\leq 0.5$ dB | 0 dB        | $\leq 0.5$ dB |
| Tone positions for 6 Tones allocation | 0-5 and 6-11  |             |               |
| MPR                                   | $\leq 1$ dB   | $\leq 1$ dB |               |

|   |        |
|---|--------|
| <b>Tone positions for 12 Tones allocation</b> | 0-11   |
| <b>MPR</b>                                    | ≤ 2 dB |

For UE category NB1 and NB2 power class 6 the allowed Maximum Power Reduction (MPR) for the maximum output power given in Table 6.2.2F-1 is specified in Table 6.2.3F-2.

**Table 6.2.3F-2: Maximum Power Reduction (MPR) for UE category NB1 and NB2 Power Class 6**

|                                    |             |
|------------------------------------|-------------|
| <b>Modulation</b>                  | <b>QPSK</b> |
| <b>MPR for 3 Tones allocation</b>  | ≤ 0.5 dB    |
| <b>MPR for 6 Tones allocation</b>  | ≤ 1 dB      |
| <b>MPR for 12 Tones allocation</b> | ≤ 1.5 dB    |

For the UE maximum output power modified by MPR, the power limits specified in sub-clause 6.2.5F apply.

### 6.2.3G UE maximum output power for modulation / channel bandwidth for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, this subclause specifies the allowed Maximum Power Reduction (MPR) power for V2X physical channels and signals due to PSCCH and PSSCH simultaneous transmission.

#### 6.2.3G.1 MPR for Power class 3 V2X UE

For contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.3G.1-1 for power class 3.

**Table 6.2.3G.1-1: Maximum Power Reduction (MPR) for power class 3 V2X Communication (Contiguous PSCCH and PSSCH transmission)**

| Modulation | Channel bandwidth / Transmission bandwidth ( $N_{RB}$ ) |         |       |        |        |        | MPR (dB) |
|------------|---|---------|-------|--------|--------|--------|----------|
|            | 1.4 MHz   | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |          |
| QPSK       |   |         |       |        |        |        | ≤ 1.5    |
| 16 QAM     |   |         |       |        |        |        | ≤ 2      |
| 64QAM      |   |         |       |        |        |        | ≤ 3      |

For non-contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified as follows

$$MPR = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = 4.5 \quad ; 0.00 < A \leq 0.2$$

$$5.5 - 5.833A \quad ; 0.2 < A \leq 0.6$$

$$2.0 \quad ; 0.6 < A \leq 1.00$$

Where

$$A = N_{RB\_alloc} / N_{RB}$$

$\text{CEIL}\{M_A, 0.5\}$  means rounding upwards to closest 0.5dB.

The allowed MPR for the maximum output power for V2X physical channels PSBCH and PSSS shall be as specified in subclause 6.2.3 for the corresponding modulation and transmission bandwidth.

The allowed MPR for the maximum output power for V2X physical signal SSSS is specified in Table 6.2.3D-1.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the allowed MPR requirements in subclause 6.2.3G apply for V2X PSSCH and PSCCH transmission. The allowed MPR requirements in subclause 6.2.3D apply for other V2X sidelink transmission (PSBCH/PSSS/SSSS). The MPR requirements in subclause 6.2.3 apply for uplink transmission.

For intra-band contiguous multi-carrier operation bandwidth class B the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2G.1-2 due to higher order modulation is specified as follows.

**Table 6.2.3G.1-2: Void**

$$\text{MPR} = \text{CEIL} \{ M_A, 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} M_A &= 6.5 && ; 0 \leq A < 0.1 \\ &8 - 15A && ; 0.1 \leq A < 0.2 \\ &5.75 - 3.75A && ; 0.2 \leq A < 0.6 \end{aligned}$$

3.5 ;  $0.6 \leq A \leq 1$  For intra-band contiguous multi-carrier operation bandwidth class C the allowed Maximum Power Reduction (MPR) for the maximum output power can be specified as follows. In case the modulation format is different on different component carriers then the MPR is determined by the rules applied to higher order of those modulations.

$$\text{MPR} = \text{CEIL} \{ M_A, 0.5 \}$$

Where  $M_A$  is defined as follows for QPSK, 16 QAM and 64 QAM

$$\begin{aligned} [M_A &= 6.5 && ; 0 \leq A < 0.1 \\ &8.5 - 20A && ; 0.1 \leq A < 0.2 \\ &5.25 - 2.5A && ; 0.2 \leq A < 0.6 \\ &3.5 && ; 0.6 \leq A \leq 1] \end{aligned}$$

### 6.2.3G.2 MPR for Power class 2 V2X UE

For contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.3G.2-1 for power class 2.

**Table 6.2.3G.2-1: Maximum Power Reduction (MPR) for power class 2 V2X Communication (Contiguous PSCCH and PSSCH transmission)**

| Modulation | Channel bandwidth / Transmission bandwidth ( $N_{RB}$ ) |         |       |        |        |        | MPR (dB)   |
|------------|---|---------|-------|--------|--------|--------|------------|
|            | 1.4 MHz   | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |            |
| QPSK       |   |         |       |        |        |        | $\leq 2$   |
| 16 QAM     |   |         |       |        |        |        | $\leq 2.5$ |
| 64QAM      |   |         |       |        |        |        | $\leq 3$   |

For non-contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified as follows:

$$\text{MPR} = \text{CEIL} \{ M_A, 0.5 \}$$

Where  $M_A$  is defined as follows

$$\begin{aligned} \text{For 10MHz channel bandwidth} \quad M_A &= 4.5 && ; 0.0 < A \leq 0.2 \\ &8.5 - 20.0A && ; 0.2 < A \leq 0.3 \end{aligned}$$

$$2.5 \quad ; 0.3 < A \leq 1.00$$

For 20MHz channel bandwidth  $M_A = 9.0 \quad ; 0.0 < A \leq 0.1$

$$12.0 - 30.0A \quad ; 0.1 < A \leq 0.3$$

$$3.0 \quad ; 0.3 < A \leq 1.00$$

Where

$$A = N_{RB\_alloc} / N_{RB}$$

CEIL{ $M_A$ , 0.5} means rounding upwards to closest 0.5dB.

## 6.2.4 UE maximum output power with additional requirements

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power as specified in Table 6.2.2-1. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For UE Power Class 1, 2 and 3 the specific requirements and identified subclauses are specified in Table 6.2.4-1 along with the allowed A-MPR values that may be used to meet these requirements. The allowed A-MPR values specified below in Table 6.2.4-1 to 6.2.4-15 are in addition to the allowed MPR requirements specified in subclause 6.2.3.

**Table 6.2.4-1: Additional Maximum Power Reduction (A-MPR)**

| Network Signalling value | Requirements (subclause) | E-UTRA Band                      | Channel bandwidth (MHz) | Resources Blocks ( $N_{RB}$ )                  | A-MPR (dB)        |

| <p>NOTE 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the channel BW assigned, where channel BW is as defined in subclause 5.6. A-MPR for operations below this frequency is not covered in this version of specifications except for the channel assignments in NOTE2 as the emissions requirement in 6.6.3.3.1 may not be met. For 10MHz channel bandwidth whose carrier frequency is larger than or equal to 1945 MHz or 15 MHz channel bandwidth whose carrier frequency is larger than or equal to 1947.5 MHz, no A-MPR applies.</p> <p>NOTE 2: Applicable when carrier frequency is 1932.5 MHz for 15MHz channel bandwidth or 1930 MHz for 20MHz channel bandwidth case.</p> <p>NOTE 3: Applicable when the E-UTRA carrier is within 1920-1980 MHz.</p> <p>NOTE 4: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.</p> <p>NOTE 5: Applicable only for an LAA Scell configured in Band 46.</p> <p>NOTE 6: Applicable when the E-UTRA carrier is within 1447.9 – 1462.9 MHz</p> <p>NOTE 7: Applicable for power class 2 UE in E-UTRA carrier with channel bandwidth is confined within 2570 MHz and 2615 MHz</p> <p>NOTE 8: Not applicable for power class 2 UE in Band 42</p> |                         |                |                          |                                  |          |

**Table 6.2.4-2: A-MPR for "NS\_07"**

| Parameters  | Region A |                 | Region B |         | Region C |
|---|----------|-----------------|----------|---------|----------|
| RB <sub>start</sub>   | 0 - 12   |                 | 13 - 18  | 19 - 42 | 43 - 49  |
| LCRB [RBs]  | 6-8      | 1 to 5 and 9-50 | ≥8       | ≥18     | ≤2       |
| A-MPR [dB]  | ≤ 8      | ≤ 12            | ≤ 12     | ≤ 6     | ≤ 3      |
| NOTE 1; RB <sub>start</sub> indicates the lowest RB index of transmitted resource blocks<br>NOTE 2; LCRB is the length of a contiguous resource block allocation<br>NOTE 3: For intra-subframe frequency hopping between two regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping between two regions, notes 1 and 2 apply on a per T <sub>no_hopping</sub> basis.<br>NOTE 4; For intra-subframe frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for both slots in the subframe. For intra-slot frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for the slot. For intra-subslot frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for the subslot. |          |                 |          |         |          |

**Table 6.2.4-3: A-MPR for "NS\_10"**

| Channel bandwidth [MHz]   | Parameters          | Region A |
|---|---------------------|----------|
| 15  | RB <sub>start</sub> | 0 - 10   |
|   | LCRB [RBs]          | 1 -20    |
|   | A-MPR [dB]          | ≤ 2      |
| 20  | RB <sub>start</sub> | 0 - 15   |
|   | LCRB [RBs]          | 1 -20    |
|   | A-MPR [dB]          | ≤ 5      |
| NOTE 1: RB <sub>start</sub> indicates the lowest RB index of transmitted resource blocks<br>NOTE 2: LCRB is the length of a contiguous resource block allocation<br>NOTE 3: For intra-subframe frequency hopping which intersects Region A, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects Region A, notes 1 and 2 apply on a T <sub>no_hopping</sub> basis.<br>NOTE 4: For intra-subframe frequency hopping which intersect Region A, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects Region A, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects Region A, the larger A-MPR value may be applied for the subslot. |                     |          |

|                         | A-MPR [dB]                                     | ≤ 5      | ≤ 4      | ≤ 3      | ≤ 3      |

NOTE 1; RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks  
 NOTE 2; LCRB is the length of a contiguous resource block allocation  
 NOTE 3: For intra-subframe frequency hopping between two regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping between two regions, notes 1 and 2 apply on a per T<sub>no\_hopping</sub> basis.  
 NOTE 4; For intra-subframe frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for both slots in the subframe. For intra-slot frequency hopping between two regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping between two regions, the larger A-MPR value may be applied for the subslot.

|               | <b>L<sub>CRB</sub> [RBs]</b> | > 0                            | > 12    | > 16    | > 0     |
|               | <b>A-MPR [dB]</b>            | ≤ 10                           | ≤ 8     | ≤ 6     | ≤ 6     |
| <b>15 MHz</b> | <b>F<sub>c</sub> [MHz]</b>   | F <sub>c</sub> = 705.5         |         |         |         |
|               | <b>RB<sub>start</sub></b>    | 0 - 16                         | 17 - 23 | 24 - 56 | 57 - 60 |
|               | <b>L<sub>CRB</sub> [RBs]</b> | > 0                            | > 12    | > 20    | < 6     |
|               | <b>A-MPR [dB]</b>            | ≤ 10                           | ≤ 9     | ≤ 7     | ≤ 6     |

NOTE 1: RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks  
 NOTE 2: L<sub>CRB</sub> is the length of a contiguous resource block allocation  
 NOTE 3: For intra-subframe frequency hopping between two regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping between two regions, notes 1 and 2 apply on a per T<sub>no\_hopping</sub> basis.  
 NOTE 4: For intra-subframe frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for both slots in the subframe. For intra-slot frequency hopping between two regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping between two regions, the larger A-MPR value may be applied for the subslot.

|   |  | A-MPR [dB]             | 8        | 2        | N/A      | N/A       | N/A      | N/A      | N/A       |           |
|   | 1635.0   | No A-MPR needed        |          |          |          |           |          |          |           |           |
|   | 1649.0   |                        |          |          |          |           |          |          |           |           |
| 1654.0  |  |                        |          |          |          |           |          |          |           |           |
| 10 MHz  | 1632.5   | RB <sub>start</sub>    | $\leq 5$ | $\leq 5$ | 6 to 18  | $\leq 18$ | 35 to 39 | 35 to 39 | $\geq 40$ | $\geq 40$ |

|        |                 |          |               |           |        |          |       |          |       |
|--------|-----------------|----------|---------------|-----------|--------|----------|-------|----------|-------|
|        | LCRB [RBs]      | $\leq 5$ | 6<br>to<br>12 | $\leq 12$ | $> 12$ | $\leq 7$ | $> 7$ | $\leq 7$ | $> 7$ |
|        | A-MPR [dB]      | 7        | 5             | 7         | 4      | 2        | 5     | 3        |       |
| 1651.5 | No A-MPR needed |          |               |           |        |          |       |          |       |

For PRACH, PUCCH and SRS transmissions, the allowed A-MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each TTI pattern, the A-MPR shall be evaluated per  $T_{\text{eval}}$  period as specified in table 6.2.4-35 and given by the maximum value taken over the transmission(s) within that period; the maximum A-MPR over the  $T_{\text{REF}}$  is then applied for  $T_{\text{REF}}$ .

**Table 6.2.4-35: A-MPR evaluation period**

| TTI pattern | $T_{\text{REF}}$ | $T_{\text{eval}}$   |
|-------------|------------------|---|
| Subframe    | 1 subframe       | 1 slot  |
| Slot        | 7 OS             | $\text{Min}(T_{\text{no\_hopping}}, 7\text{OS})$            |
| Sublot      | 2 OS, 3OS        | $\text{Min}(T_{\text{no\_hopping}}, 2\text{OS}/3\text{OS})$ |

For the UE maximum output power modified by A-MPR, the power limits specified in subclause 6.2.5 apply.

## 6.2.4A UE maximum output power with additional requirements for CA

Additional ACLR, spectrum emission and spurious emission requirements for carrier aggregation can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the CA Power Class as specified in Table 6.2.2A-1.

If for intra-band carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2.3 and 6.2.4 apply with the Network Signaling value indicated by the field *additionalSpectrumEmission*.

For intra-band contiguous aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table 6.2.4A-1 is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field *additionalSpectrumEmissionSCell-r10*. Then clause 6.2.3A does not apply, i.e. the carrier aggregation MPR = 0dB, unless the value indicated is CA\_NS\_09 or CA\_NS\_31. For uplink 64 QAM and 256 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in Table 6.2.3A-1 and A-MPR requirements specified in Table 6.2.4A-1.

**Table 6.2.4A-1: Additional Maximum Power Reduction (A-MPR) for intra-band contiguous CA**

| CA Network Signalling value | Requirements (subclause)  | Uplink CA Configuration | A-MPR [dB] (subclause) |
|-----------------------------|---------------------------|-------------------------|------------------------|
| CA_NS_01                    | 6.6.3.3A.1                | CA_1C                   | 6.2.4A.1               |
| CA_NS_02                    | 6.6.3.3A.2                | CA_1C                   | 6.2.4A.2               |
| CA_NS_03                    | 6.6.3.3A.3                | CA_1C                   | 6.2.4A.3               |
| CA_NS_04                    | 6.6.2.2A.1, 6.6.3.3A.8    | CA_41C, CA_41D          | 6.2.4A.4               |
| CA_NS_05                    | 6.6.3.3A.4                | CA_38C                  | 6.2.4A.5               |
| CA_NS_06                    | 6.6.3.3A.5                | CA_7C                   | 6.2.4A.6               |
| CA_NS_07                    | 6.6.3.3A.6                | CA_39C                  | 6.2.4A.7               |
| CA_NS_08                    | 6.6.3.3A.7                | CA_42C                  | 6.2.4A.8               |
| CA_NS_09                    | 6.6.2.2A.2                | CA_66B                  | N/A                    |
|                             | 6.6.2.2A.3                | CA_66C                  | N/A                    |
| CA_NS_10                    | 6.6.2.2A.4<br>6.6.3.3A.10 | CA_48B, CA_48C          | 6.2.4A.10              |

|  |          |                         |     |
|--|----------|-------------------------|-----|
| ...  |          |                         |     |
| CA_NS_31   | NOTE 1   | Table 5.6A.1-1 (NOTE 1) | N/A |
| CA_NS_32   | Reserved |                         |     |
| NOTE 1: Applicable for uplink CA configurations listed in Table 5.6A.1-1 for which none of the additional requirements in subclauses 6.6.2.2A or 6.6.3.3A apply. |          |                         |     |
| NOTE 2: The index of the sequence CA_NS corresponds to the value of <i>additionalSpectrumEmissionSCell-r10</i> .   |          |                         |     |

If for intra-band non-contiguous carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2.3 and 6.2.4 apply with the Network Signaling value indicated by the field *additionalSpectrumEmission*.

For intra-band non-contiguous carrier aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table 6.2.4A-2 is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field *additionalSpectrumEmissionSCell-r10*. MPR as specified in subclause 6.2.3A is not allowed in addition, unless A-MPR is N/A.

**Table 6.2.4A-2: Additional Maximum Power Reduction (A-MPR) for intra-band non-contiguous CA**

| CA Network Signalling value   | Additional requirements for sub-blocks in order of increasing uplink carrier frequency |                          | Uplink CA Configuration | A-MPR for sub-blocks in order of increasing uplink carrier frequency |
|---|--|--------------------------|-------------------------|--|
|   | Requirements (subclause)   | Requirements (subclause) |                         | A-MPR [dB] (subclause)   |
| CA_NC_NS_01   | 6.6.2.2.1 (NS_03)  | 6.6.2.2.1 (NS_03)        | CA_4A-4A                | N/A  |
| ...   |  |                          |                         |  |
| CA_NC_NS_31   | NOTE 1   | NOTE 1                   | Table 5.6A.1-3 (NOTE 1) | N/A  |
| CA_NC_NS_32   | Reserved   |                          |                         |  |
| NOTE 1: Applicable for uplink CA configurations listed in Table 5.6A.1-3 for which the additional requirements in subclause 6.6.2.1.1 (indicated by NS_01) applies in each sub-block. |  |                          |                         |  |
| NOTE 2: The index of the sequence CA_NC_NS corresponds to the value of <i>additionalSpectrumEmissionSCell-r10</i> .   |  |                          |                         |  |

If for inter-band carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2.3 and 6.2.4 apply with the Network Signaling value indicated by the field *additionalSpectrumEmission*.

For inter-band carrier aggregation with the UE configured for transmissions on two serving cells the maximum output power reduction specified in Table 6.2.4-1 is allowed for each serving cell of the applicable uplink CA configuration according to the Network Signaling value indicated by the field *additionalSpectrumEmission* for the PCC and the CA network signalling value indicated by the field *additionalSpectrumEmissionSCell-r10* for the SCC. The value of *additionalSpectrumEmissionSCell-r10* is equal to that of *additionalSpectrumEmission* configured on the SCC. MPR as specified in subclause 6.2.3A is allowed in addition.

For PUCCH and SRS transmissions, the allowed A-MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For intra-band carrier aggregation, the A-MPR shall be evaluated per  $T_{eval}$  period as specified in table 6.2.4A-3 and given by the maximum value taken over the transmission(s) on all component carriers within that period; the maximum A-MPR over  $T_{REF}$  is then applied for the entire  $T_{REF}$ .

**Table 6.2.4A-3: A-MPR evaluation  $T_{eval}$  period**

| TTI pattern | $T_{REF}$  | $T_{eval}$   |
|-------------|------------|--|
| Subframe    | 1 subframe | 1 slot   |
| Slot        | 7 OS       | $\text{Min}(T_{no\_hopping}, 7\text{OS})$            |
| Subslot     | 2 OS, 3OS  | $\text{Min}(T_{no\_hopping}, 2\text{OS}/3\text{OS})$ |

For combinations of intra-band and inter-band carrier aggregation with the UE configured for transmission on three serving cells (up to two contiguously aggregated carriers per band), the maximum output power reduction is specified as follows. For the band supporting one serving cell the maximum output power reduction specified in Table 6.2.4-1 is allowed according to the Network Signaling value indicated by the field *additionalSpectrumEmission* for the PCC and

the CA network signalling value indicated by the field *additionalSpectrumEmissionSCell-r10* for the SCC. The value of *additionalSpectrumEmissionSCell-r10* is equal to that of *additionalSpectrumEmission* configured on the SCC. MPR as specified in subclause 6.2.3A is allowed in addition. For the band supporting intra-band contiguous aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table 6.2.4A-1 is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field *additionalSpectrumEmissionSCell-r10*. Then clause 6.2.3A does not apply, i.e. the carrier aggregation MPR = 0dB, unless the value indicated is CA\_NS\_31. For uplink 64 QAM and 256 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in Table 6.2.3A-1 and A-MPR requirements specified in Table 6.2.4A-1.

For the UE maximum output power modified by A-MPR specified in table 6.2.4A-1, the power limits specified in subclause 6.2.5A apply.

### 6.2.4A.1 A-MPR for CA\_NS\_01 for CA\_1C

If the UE is configured to CA\_1C and it receives IE CA\_NS\_01 the allowed maximum output power reduction applied to transmissions on the PCC and the SCC for contiguously aggregated signals is specified in table 6.2.4A.1-1.

**Table 6.2.4A.1-1: Contiguous allocation A-MPR for CA\_NS\_01**

| CA_1C: CA_NS_01 | RB <sub>start</sub>     | L <sub>CRB</sub> [RBs]    | RB <sub>start</sub> + L <sub>CRB</sub> [RBs] | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|-----------------|-------------------------|---------------------------|--|---|
| 100 RB / 100 RB | 0 – 23 and<br>176 – 199 | > 0                       | N/A  | ≤ 12.0  |
|                 | 24 – 105                | > 64                      | N/A  | ≤ 6.0   |
|                 | 106 – 175               | N/A                       | > 175  | ≤ 5.0   |
| 75 RB / 75 RB   | 0 – 6 and 143<br>– 149  | 0 < L <sub>CRB</sub> ≤ 10 | N/A  | ≤ 11.0  |
|                 |                         | > 10                      | N/A  | ≤ 6.0   |
|                 | 7 – 90                  | > 44                      | N/A  | ≤ 5.0   |
|                 | 91 – 142                | N/A                       | > 142  | ≤ 2.0   |

NOTE 1: RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks  
NOTE 2: L<sub>CRB</sub> is the length of a contiguous resource block allocation  
NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1 and 2 apply on a per T<sub>no\_hopping</sub> basis.  
NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot.

If the UE is configured to CA\_1C and it receives IE CA\_NS\_01 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows

$$\text{A-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$\begin{aligned} M_A &= -22.5 A + 17 && ; 0 \leq A < 0.20 \\ &= -11.0 A + 14.7 && ; 0.20 \leq A < 0.70 \\ &= -1.7 A + 8.2 && ; 0.70 \leq A \leq 1 \end{aligned}$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

### 6.2.4A.2 A-MPR for CA\_NS\_02 for CA\_1C

If the UE is configured to CA\_1C and it receives IE CA\_NS\_02 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.2-1.

**Table 6.2.4A.2-1: Contiguous allocation A-MPR for CA\_NS\_02**

| CA_1C: CA_NS_02 | RB <sub>end</sub> | L <sub>CRB</sub> [RBs]   | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|-----------------|-------------------|--------------------------|---|
| 100 RB / 100 RB | 0 – 20            | > 0                      | ≤ 4 dB  |
|                 | 21 – 46           | > 0                      | ≤ 3 dB  |
|                 | 47 – 99           | > RB <sub>end</sub> - 20 | ≤ 3 dB  |
|                 | 100 – 184         | > 75                     | ≤ 6 dB  |
|                 | 185 – 199         | > 0                      | ≤ 10 dB   |
| 75 RB / 75 RB   | 0 – 48            | > 0                      | ≤ 2 dB  |
|                 | 49 – 80           | > RB <sub>end</sub> - 20 | ≤ 3 dB  |
|                 | 81 – 129          | > 60                     | ≤ 5 dB  |
|                 | 130 – 149         | > 84                     | ≤ 6 dB  |
|                 | 130 – 149         | 1 – 84                   | ≤ 2 dB  |

If the UE is configured to CA\_1C and it receives IE CA\_NS\_02 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$\text{A-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = \begin{cases} -22.5 A + 17 & ; 0 \leq A < 0.20 \\ -11.0 A + 14.7 & ; 0.20 \leq A < 0.70 \\ -1.7 A + 8.2 & ; 0.70 \leq A \leq 1 \end{cases}$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

### 6.2.4A.3 A-MPR for CA\_NS\_03 for CA\_1C

If the UE is configured to CA\_1C and it receives IE CA\_NS\_03 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.3-1.

**Table 6.2.4A.3-1: Contiguous allocation A-MPR for CA\_NS\_03**

| CA_1C: CA_NS_03 | RB <sub>end</sub> | L <sub>CRB</sub> [RBs]   | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|-----------------|-------------------|--------------------------|---|
| 100 RB / 100 RB | 0 – 26            | > 0                      | ≤ 10 dB   |
|                 | 27 – 63           | ≥ RB <sub>end</sub> - 27 | ≤ 6 dB  |
|                 | 27 – 63           | < RB <sub>end</sub> - 27 | ≤ 1 dB  |
|                 | 64 – 100          | > RB <sub>end</sub> - 20 | ≤ 4 dB  |
|                 | 101 – 171         | > 68                     | ≤ 7 dB  |
|                 | 172 – 199         | > 0                      | ≤ 10 dB   |
| 75 RB / 75 RB   | 0 – 20            | > 0                      | ≤ 10 dB   |
|                 | 21 – 45           | > 0                      | ≤ 4 dB  |
|                 | 46 – 75           | > RB <sub>end</sub> - 13 | ≤ 2 dB  |
|                 | 76 – 95           | > 45                     | ≤ 5 dB  |
|                 | 96 – 149          | > 43                     | ≤ 8 dB  |
|                 | 120 – 149         | 1 - 43                   | ≤ 6 dB  |

If the UE is configured to CA\_1C and it receives IE CA\_NS\_03 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = -23.33A + 17.5 \quad ; 0 \leq A < 0.15$$

$$-7.65A + 15.15 \quad ; 0.15 \leq A \leq 1$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

#### 6.2.4A.4 A-MPR for CA\_NS\_04

If the UE is configured to CA\_41C or any uplink inter-band CA configuration containing CA\_41C and it receives IE CA\_NS\_04 the allowed maximum output power reduction applied to transmission on two component carriers for contiguously aggregated signals is specified in Table 6.2.4A.4-1 and Table 6.2.4A.4-1A for UE power class 3 and in Table 6.2.4A.4-2 for UE power class 2.

**Table 6.2.4A.4-1: Contiguous Allocation A-MPR for CA\_NS\_04 (power class 3), Bandwidth Class C**

| CA Bandwidth Class C | RB <sub>start</sub>  | LCRB [RBs] | RB <sub>start</sub> + LCRB [RBs] | A-MPR for QPSK [dB] | A-MPR for 16 QAM, 64 QAM and 256 QAM [dB] |
|----------------------|----------------------|------------|----------------------------------|---------------------|---|
| 25 RB / 100 RB       | 0 – 34 and 90 – 124  | >0         | N/A                              | ≤3dB                | ≤3.5dB                                    |
|                      | 35 – 89              | N/A        | >90                              | ≤1dB                | ≤2.5dB                                    |
| 50RB / 100 RB        | 0 – 44 and 105 – 149 | >0         | N/A                              | ≤4dB                | ≤4dB                                      |
|                      | 45 – 104             | N/A        | >105                             | ≤3dB                | ≤4dB                                      |
| 75 RB / 75 RB        | 0 – 44 and 105 – 149 | >0         | N/A                              | ≤4dB                | ≤4dB                                      |
|                      | 45 – 104             | N/A        | >105                             | ≤4dB                | ≤4dB                                      |
| 100 RB / 75 RB       | 0 – 49 and 125 – 174 | >0         | N/A                              | ≤4dB                | ≤4dB                                      |
|                      | 50 - 124             | N/A        | >125                             | ≤3dB                | ≤4dB                                      |
| 100 RB / 100 RB      | 0 – 59 and 140 – 199 | >0         | N/A                              | ≤3dB                | ≤4dB                                      |
|                      | 60– 139              | N/A        | >140                             | ≤4dB                | ≤4dB                                      |

NOTE 1: RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks  
NOTE 2: LCRB is the length of a contiguous resource block allocation  
NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1 and 2 apply on a per T<sub>no\_hopping</sub> basis..  
NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot.

**Table 6.2.4A.4-1A: Contiguous Allocation A-MPR for CA\_NS\_04 (power class 3), Bandwidth Class D**

| CA Bandwidth Class D     | RB <sub>start</sub>  | LCRB [RBs] | RB <sub>start</sub> + LCRB [RBs] | A-MPR for QPSK [dB] | A-MPR for 16 QAM, 64 QAM and 256 QAM [dB] |
|--------------------------|----------------------|------------|----------------------------------|---------------------|---|
| 50 RB / 75 RB / 100 RB   | 0 – 64 and 161 – 224 | >0         | N/A                              | ≤4dB                | ≤4.5dB                                    |
|                          | 65 – 160             | N/A        | >161                             | ≤3dB                | ≤3.5dB                                    |
| 50 RB / 100 RB / 100 RB  | 0 – 72 and 178 – 249 | >0         | N/A                              | ≤4dB                | ≤4.5dB                                    |
|                          | 73 – 177             | N/A        | >178                             | ≤3dB                | ≤3.5dB                                    |
| 75 RB / 75 RB / 100 RB   | 0 – 72 and 178 – 249 | >0         | N/A                              | ≤4dB                | ≤4.5dB                                    |
|                          | 73 – 177             | N/A        | >178                             | ≤3dB                | ≤3.5dB                                    |
| 75 RB / 100 RB / 100 RB  | 0 – 78 and 197 – 274 | >0         | N/A                              | ≤3.5dB              | ≤4dB                                      |
|                          | 79 - 196             | N/A        | >197                             | ≤2.5dB              | ≤3dB                                      |
| 100 RB / 100 RB / 100 RB | 0 – 96 and 204 – 300 | >0         | N/A                              | ≤4dB                | ≤4dB                                      |
|                          | 97– 203              | N/A        | >204                             | ≤2.5dB              | ≤3dB                                      |

NOTE 1:  $RB_{start}$  indicates the lowest RB index of transmitted resource blocks  
 NOTE 2:  $L_{CRB}$  is the length of a contiguous resource block allocation  
 NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1 and 2 apply on a per  $T_{no\_hopping}$  basis..  
 NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot.

**Table 6.2.4A.4-2: Contiguous Allocation A-MPR for CA\_NS\_04 (power class 2)**

| CA Bandwidth Class C | Lower edge cutoff frequency [MHz] <sup>5</sup> | $RB_{start}$ | $L_{CRB}$ [RBs] | $RB_{start} + L_{CRB}$ [RBs] | A-MPR per modulation [dB] |       |       |        |

| 75 RB / 100 RB       | 2523.4   | 0 – 64       | >0              | N/A                          | ≤5                        | ≤5    | ≤5    | 6.5    |
|                      |  | 65 – 114     | N/A             | >115                         | ≤2                        | ≤2.5  | ≤2.5  | 3.5    |
|                      |  | 115 – 174    | >0              | N/A                          | ≤1                        | ≤1.5  | ≤2    | 3      |
| 100 RB / 100 RB      | 2528.3   | 0 – 69       | >0              | N/A                          | ≤5                        | ≤5    | ≤5    | 6.5    |
|                      |  | 70 – 129     | N/A             | >130                         | ≤2                        | ≤2.5  | ≤2.5  | 3.5    |
|                      |  | 130 – 199    | >0              | N/A                          | ≤1.5                      | ≤1.5  | ≤2    | 3      |

NOTE 1:  $RB_{start}$  indicates the lowest RB index of transmitted resource blocks  
 NOTE 2:  $L_{CRB}$  is the length of a contiguous resource block allocation  
 NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis  
 NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe  
 NOTE 5: The A-MPR values in this table shall apply when the lower edge of the aggregated channel bandwidth (Figure 5.6A-1) is less than or equal to the lower edge cutoff frequency specified in this table for the corresponding CA bandwidth combination. When the lower edge of the aggregated channel bandwidth exceeds the lower edge cutoff frequency, then the A-MPR shall be equal to the MPR specified in Table 6.2.3A-1a.

If the UE is configured to CA\_41C or any uplink inter-band CA configuration containing CA\_41C and it receives IE CA\_NS\_04 the allowed maximum output power reduction applied to transmissions on two serving cells assigned to Band 41 with non-contiguous resource allocation is defined as follows for UE power class 3

$$A-MPR = CEIL \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$\begin{aligned}
 M_A &= 11, & 0 \leq A < 0.05 \\
 &= -55.0A + 13.75, & 0.05 \leq A < 0.15 \\
 &= -4.0A + 6.10, & 0.15 \leq A < 0.40 \\
 &= -0.83A + 4.83, & 0.40 \leq A \leq 1
 \end{aligned}$$

Where  $A = N_{RB\_alloc} / N_{RB\_agg}$ .

If the UE is configured to CA\_41C or any uplink inter-band CA configuration containing CA\_41C and it receives IE CA\_NS\_04 the allowed maximum output power reduction applied to transmissions on two serving cells assigned to Band 41 with non-contiguous resource allocation is defined as follows for UE power class 2

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

If the UE is configured to CA\_41D or any uplink inter-band CA configuration containing CA\_41D and it receives IE CA\_NS\_04 the allowed maximum output power reduction applied to transmissions on two serving cells assigned to Band 41 with non-contiguous resource allocation is defined as follows for UE power class 3

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$\begin{aligned} M_A &= 11.5, & 0 \leq A < 0.05 \\ &= -55.0A + 14.25, & 0.05 \leq A < 0.15 \\ &= -4.0A + 6.60, & 0.15 \leq A < 0.40 \\ &= -0.833A + 5.333, & 0.40 \leq A \leq 1 \end{aligned}$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

Where  $M_A$  is defined as follows when the lower edge of the aggregated channel bandwidth (Table 5.6A-1) is less than or equal to the lower edge cutoff frequency specified in Table 6.2.4A.4-2 for the corresponding CA bandwidth combination

$$\begin{aligned} M_A &= 13.0, & 0 \leq A < 0.05 \\ &= 15.33 - 46.67A, & 0.05 \leq A < 0.20 \\ &= -7.0 - 5.0A, & 0.20 \leq A < 0.50 \\ &= 4.5, & 0.50 \leq A \leq 1 \end{aligned}$$

And  $M_A$  is defined as follows when the lower edge of the aggregated channel bandwidth exceeds the lower edge cutoff frequency specified in Table 6.2.4A.4-2 for the corresponding CA bandwidth combination

$$\begin{aligned} M_A &= 8.2, & 0 \leq A < 0.04 \\ &= 9.8 - 40.0A, & 0.04 \leq A < 0.075 \\ &= 8.0 - 16.0A, & 0.075 \leq A < 0.25 \\ &= 4.83 - 3.33A, & 0.25 \leq A < 0.40 \\ &= 3.83 - 0.83A, & 0.40 \leq A \leq 1 \end{aligned}$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

#### 6.2.4A.5 A-MPR for CA\_NS\_05 for CA\_38C

If the UE is configured to CA\_38C and it receives IE CA\_NS\_05 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.5-1.

**Table 6.2.4A.5-1: Contiguous Allocation A-MPR for CA\_NS\_05**

| CA_38C      | RB <sub>end</sub> | L <sub>CRB</sub> [RBs]   | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|-------------|-------------------|--------------------------|---|
| 100RB/100RB | 0 – 12            | >0                       | ≤ 5 dB  |
|             | 13 – 79           | > RB <sub>end</sub> – 13 | ≤ 2 dB  |
|             | 80 – 180          | >60                      | ≤ 6 dB  |
|             | 181 – 199         | > 0                      | ≤ 11 dB   |

|  |           |                                   |             |
|--|-----------|-----------------------------------|-------------|
| 75RB/75RB  | 0 – 70    | $> \max(0, RB_{\text{end}} - 10)$ | $\leq 2$ dB |
|  | 71- 108   | $> 60$                            | $\leq 5$ dB |
|  | 109 – 139 | $> 0$                             | $\leq 5$ dB |
|  | 140 – 149 | $\leq 70$                         | $\leq 2$ dB |
|  | 140 – 149 | $> 70$                            | $\leq 6$ dB |
| NOTE 1: $RB_{\text{end}}$ indicates the highest RB index of transmitted resource blocks  |           |                                   |             |
| NOTE 2: $L_{\text{CRB}}$ is the length of a contiguous resource block allocation   |           |                                   |             |
| NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1 and 2 apply on a per $T_{\text{no\_hopping}}$ basis.   |           |                                   |             |
| NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot. |           |                                   |             |

If the UE is configured to CA\_38C and it receives IE CA\_NS\_05 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = -14.17 A + 16.50 \quad ; 0 \leq A < 0.60$$

$$-2.50 A + 9.50 \quad ; 0.60 \leq A \leq 1$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

#### 6.2.4A.6 A-MPR for CA\_NS\_06

If the UE is configured to CA\_7C and it receives IE CA\_NS\_06 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.6-1.

**Table 6.2.4A.6-1: Contiguous Allocation A-MPR for CA\_NS\_06**

| CA Bandwidth Class C      | $RB_{\text{end}}$ | $L_{\text{CRB}}$ [RBs]            | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|---------------------------|-------------------|-----------------------------------|---|
| 100RB/100RB               | 0 – 22            | $> 0$                             | $\leq 4$ dB                                     |
|                           | 23 – 99           | $> \max(0, RB_{\text{end}} - 25)$ | $\leq 2$ dB                                     |
|                           | 100 – 142         | $> 75$                            | $\leq 3$ dB                                     |
|                           | 143 – 177         | $> 70$                            | $\leq 5$ dB                                     |
|                           | 178 – 199         | $> 0$                             | $\leq 10$ dB                                    |
| 75RB/75RB                 | 0 – 7             | $> 0$                             | $\leq 5$ dB                                     |
|                           | 8- 74             | $> \max(0, RB_{\text{end}} - 10)$ | $\leq 2$ dB                                     |
|                           | 75 – 109          | $> 64$                            | $\leq 2$ dB                                     |
|                           | 110 – 144         | $> 35$                            | $\leq 6$ dB                                     |
|                           | 145 – 149         | $> 0$                             | $\leq 10$ dB                                    |
| 50RB/100RB and 100RB/50RB | 0 – 10            | $> 0$                             | $\leq 5$ dB                                     |
|                           | 11 – 75           | $> \max(0, RB_{\text{end}} - 25)$ | $\leq 2$ dB                                     |
|                           | 76 – 103          | $> 50$                            | $\leq 3$ dB                                     |
|                           | 104 – 144         | $> 25$                            | $\leq 6$ dB                                     |
| 75RB/100RB                | 145 – 149         | $> 0$                             | $\leq 10$ dB                                    |
|                           | 0 – 15            | $> 0$                             | $\leq 5$ dB                                     |

|                   |           |                       |         |
|-------------------|-----------|-----------------------|---------|
| and<br>100RB/75RB | 16 – 75   | > max(0, RB_End – 15) | ≤ 2 dB  |
|                   | 76 – 120  | > 50                  | ≤ 3 dB  |
|                   | 121 – 160 | > 50                  | ≤ 6 dB  |
|                   | 161 – 174 | > 0                   | ≤ 10 dB |

If the UE is configured to CA\_7C and it receives IE CA\_NS\_06 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = -13.33A + 17.5 \quad ; 0 \leq A < 0.15$$

$$-6.47A + 16.47 \quad ; 0.15 \leq A \leq 1$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$ .

#### 6.2.4A.7 A-MPR for CA\_NS\_07

If the UE is configured to CA\_39C or any uplink inter-band CA configuration containing CA\_39C and it receives IE CA\_NS\_07 the allowed maximum output power reduction applied to transmission on two component carriers for contiguously aggregated signals is specified in Table 6.2.4A.7-1.

**Table 6.2.4A.7-1: Contiguous Allocation A-MPR for CA\_NS\_07**

| CA_39C: CA_NS_07                        | RB <sub>Start</sub> | L <sub>CRB</sub> [RBs]               | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
|---|---------------------|--------------------------------------|---|
| 75 RB / 100 RB<br>and<br>100 RB / 75 RB | 0 – 13              | > 0                                  | ≤ 11  |
|   | 14 – 50             | ≤ 60                                 | ≤ 3   |
|   | 14 – 100            | > 60                                 | ≤ 7   |
|   | 101 – 155           | > max(155 - RB <sub>start</sub> , 0) | ≤ 2   |
|   | 156 – 174           | > 0                                  | ≤ 5   |
| 50 RB / 100 RB<br>and<br>100 RB / 50 RB | 0 – 5               | > 0                                  | ≤ 11  |
|   | 6 – 42              | ≤ 25                                 | ≤ 3   |
|   |                     | > 25                                 | ≤ 6   |
|   | 43 – 80             | > 50                                 | ≤ 5   |
|   | 81 – 138            | > 20                                 | ≤ 2   |
|   | 139 – 149           | > 0                                  | ≤ 5   |
| 25 RB / 100 RB<br>and<br>100 RB / 25 RB | 0 – 32              | ≥ 84                                 | ≤ 6   |
|   |                     | < 84                                 | ≤ 4   |
|   | 33 – 60             | > 50                                 | ≤ 3   |
|   | 61 – 124            | > 20                                 | ≤ 3   |

If the UE is configured to CA\_39C or any uplink inter-band CA configuration containing CA\_39C and it receives IE CA\_NS\_07 the allowed maximum output power reduction applied to transmissions on two serving cells assigned to Band 39 with non-contiguous resource allocation is defined as follows

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = -16.25A + 21 \quad ; 0 \leq A < 0.80$$

$$-2.50A + 10.00 \quad ; 0.80 \leq A \leq 1$$

Where  $A = N_{\text{RB\_alloc}} / N_{\text{RB\_agg}}$

## 6.2.4A.8 A-MPR for CA\_NS\_08

If the UE is configured to CA\_42C and it receives IE CA\_NS\_08 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.8-1.

Table 6.2.4A.8-1: Contiguous Allocation A-MPR for CA\_NS\_08

| CA_42C:<br>CA_NS_08                 | RBstart       | Condition       | RBend           | L <sub>CRB</sub> [RBs] | A-MPR for<br>QPSK, 16 QAM,<br>64 QAM and 256<br>QAM [dB] |
|-------------------------------------|---------------|-----------------|-----------------|------------------------|--|
| 100RB / 100RB                       | ≤ 21          | Or              | ≥ 178           | ≤ 25                   | ≤ 12   |
|                                     |               |                 |                 | > 25 and ≤ 80          | ≤ 6  |
|                                     | ≥ 0           | N/A             | N/A             | > 80 and ≤ 172         | ≤ 8  |

| > 49                                | And           | < 125           | ≥ 36 and < 54   | ≤ 2                    |  |
| 100RB / 50RB<br>And<br>50RB / 100RB | ≤ 5           | Or              | ≥ 144           | ≤ 16                   | ≤ 12   |
|                                     |               |                 |                 | > 16 and ≤ 61          | ≤ 6  |
|                                     | ≥ 0           | N/A             | N/A             | > 61                   | ≤ 8  |
|                                     |               |                 |                 | ≥ 36 and ≤ 61          | ≤ 5  |
| > 5 and ≤ 41                        | Or            | ≥ 108 and < 144 | < 36            | ≤ 3                    |  |
| 100RB / 25RB<br>And<br>25RB / 100RB | ≤ 31          | Or              | ≥ 92            | ≤ 34                   | ≤ 4  |
|                                     |               |                 |                 | > 34 and ≤ 44          | ≤ 5  |
|                                     | ≥ 0           | N/A             | N/A             | > 44                   | ≤ 8  |

NOTE 1: RB<sub>start</sub> indicates the lowest RB index of transmitted resource blocks  
NOTE 2: L<sub>CRB</sub> is the length of a contiguous resource block allocation  
NOTE 3: RB<sub>end</sub> indicates the highest RB index of transmitted resource blocks  
NOTE 4: If condition is "and" both RB<sub>start</sub> and RB<sub>end</sub> constraints need to be met. If condition is "or" either RB<sub>start</sub> or RB<sub>end</sub> constraints need to be met  
NOTE 5: For intra-subframe frequency hopping which intersects regions, notes 1, 2, 3 and 4 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1,2,3 and 4 apply on a per T<sub>no\_hopping</sub> basis.  
NOTE 6: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot.

If the UE is configured to CA\_42C and it receives IE CA\_NS\_08 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where M<sub>A</sub> is defined as follows

$$M_A = \begin{cases} 20 & ; 0 \leq A < 0.025 \\ 23 - 120A & ; 0.025 \leq A < 0.05 \\ 17.53 - 10.59A & ; 0.05 \leq A \leq 0.9 \\ 8 & ; 0.9 \leq A \leq 1 \end{cases}$$

Where A = N<sub>RB\_alloc</sub> / N<sub>RB\_agg</sub>.

6.2.4A.9 Void

6.2.4A.10 A-MPR for CA\_NS\_10

If the UE is configured to CA\_48C and it receives IE CA\_NS\_10 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.10-2 or Table 6.2.4A.10-3. Which table is determined by the position of the carrier centre frequency in Table 6.2.4A.10-1.

**Table 6.2.4A.10-1: A-MPR regions for CA\_48C**

|                 |                      | ≥95   | ≤ 2.5      |
|                 | 43 - 151             |       | ≤ 1        |
| 20+20           | 0 - 31 and 165 - 199 |       | ≤ 4.5      |
|                 | 32 - 51              | <100  | ≤ 1        |
|                 |                      | ≥100  | ≤ 1.5      |
|                 | 52 - 164             | <100  | ≤ 1        |
| ≥100            |                      | ≤ 1   |            |

If the UE is configured to CA\_48C and it receives IE CA\_NS\_10 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined with both an edge and a center scenario and is determined in Table 6.2.4A.10-4.

**Table 6.2.4A.10-4: A-MPR regions for CA\_48C**

| Channel Bandwidth, MHz | Carrier Centre Frequency, F <sub>c</sub> , MHz  | A-MPR  |
|------------------------|---|--------|
| 20+5 / 5 + 20          | $F_L + BW_{CA}/2 \leq F_C <$<br>$F_L + 3*BW_{CA}/2 - 10 \text{ MHz}$<br>$F_H - 3*BW_{CA}/2 + 10 \text{ MHz} \leq F_C \leq$<br>$F_H - BW_{CA}/2$ | Edge   |
|                        | $F_L + 3*BW_{CA}/2 - 10 \text{ MHz} \leq F_C < F_H -$<br>$3*BW_{CA}/2 + 10 \text{ MHz}$   | Center |
| 20+10 / 10 + 20        | $F_L + BW_{CA}/2 \leq F_C <$<br>$F_L + 3*BW_{CA}/2 - 10 \text{ MHz}$<br>$F_H - 3*BW_{CA}/2 + 10 \text{ MHz} \leq F_C \leq$<br>$F_H - BW_{CA}/2$ | Edge   |
|                        | $F_L + 3*BW_{CA}/2 - 10 \text{ MHz} \leq$<br>$F_C < F_H - 3*BW_{CA}/2 + 10 \text{ MHz}$   | Center |
| 20+15 / 15 + 20        | $F_L + BW_{CA}/2 \leq F_C <$<br>$F_L + 3*BW_{CA}/2 - 10 \text{ MHz}$<br>$F_H - 3*BW_{CA}/2 + 10 \text{ MHz} \leq F_C \leq$<br>$F_H - BW_{CA}/2$ | Edge   |
|                        | $F_L + 3*BW_{CA}/2 - 10 \text{ MHz} \leq$<br>$F_C < F_H - 3*BW_{CA}/2 + 10 \text{ MHz}$   | Center |

|  |  |        |
|--|--|--------|
| 20+20  | $F_L + BW_{CA}/2 \leq F_C <$ $F_L + 3 \cdot BW_{CA}/2 - 10 \text{ MHz}$ $F_H - 3 \cdot BW_{CA}/2 + 10 \text{ MHz} \leq F_C \leq$ $F_H - BW_{CA}/2$ | Edge   |
|  | $F_L + 3 \cdot BW_{CA}/2 - 10 \text{ MHz} \leq$ $F_C < F_H - 3 \cdot BW_{CA}/2 + 10 \text{ MHz}$   | Center |
| NOTE: $F_L = 3550 \text{ MHz}$ , $F_H = 3700 \text{ MHz}$ and $BW_{CA}$ is the combined bandwidth of the contiguous CCs in the CA combination indicated. |  |        |

The Edge scenario is defined as follows

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

where  $M_A$  is defined as follows

$$M_A = \begin{array}{ll} 18.00 - 10.00 \text{ A}; & 0 \leq A < 0.05 \\ 18.50 - 20.00 \text{ A}; & 0.05 \leq A < 0.2 \\ 15.50 - 5.00 \text{ A}; & 0.2 \leq A < 1 \end{array}$$

where  $A = N_{RB\_alloc} / N_{RB\_agg}$ .

The Center scenario is defined as follows

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

where  $M_A$  is defined as follows

$$M_A = \begin{array}{ll} 11.50 - 10.00 \text{ A}; & 0 \leq A < 0.15 \\ 10.88 - 5.88 \text{ A}; & 0.15 \leq A < 1 \end{array}$$

where  $A = N_{RB\_alloc} / N_{RB\_agg}$

For CA\_48B contiguous resource allocation when  $3560 \text{ MHz} \leq F_{agg\_alloc\_low}$  and  $F_{agg\_alloc\_high} \leq 3690 \text{ MHz}$

if allocation is inner 1 then  $A\text{-MPR} = 0 \text{ dB}$  where inner 1 is defined as

$$RB_{Start,Low} = \max(1, \text{floor}(L_{CRB}/2))$$

where  $\max()$  indicates the largest value of all arguments and  $\text{floor}(x)$  is the greatest integer less than or equal to  $x$ .

$$RB_{Start,High} = N_{RB\_agg} - RB_{Start,Low} - L_{CRB}$$

with following conditions

$$RB_{Start,Low} \leq RB_{Start} \leq RB_{Start,High}, \text{ and}$$

$$L_{CRB} \leq \text{ceil}(N_{RB\_agg}/2)$$

Inner 1 region exceptions thresholds are

$$RB_{start} < 12 \text{ or } RB_{end} \geq 92 \text{ for } BW_{Channel\_CA} = 20\text{MHz}$$

For which  $A\text{MPR} = 4 \text{ dB}$ .

else  $A\text{-MPR} = 4 \text{ dB}$

For CA\_48B contiguous resource allocation when  $F_{agg\_alloc\_low} < 3560 \text{ MHz}$

if allocation is inner 3 then  $A\text{-MPR} = 0 \text{ dB}$

Inner 3 region exceptions thresholds are

$$RB_{start} < 30 \text{ for } BW_{Channel\_CA} = 20\text{MHz}$$

For which AMPR = 7dB.

where inner 3 is defined as

$$N_{RB\_agg} / 4 < RB_{Start} < N_{RB\_agg} 3/4 - L_{CRB} \quad \text{AND} \quad L_{CRB} < N_{RB\_agg}/4$$

else A-MPR = 7 dB.

For CA\_48B contiguous resource allocation when  $F_{agg\_alloc\_high} > 3690$  MHz

if allocation is inner 3 then A-MPR = 0 dB

Inner 3 region exceptions thresholds are

$$RB_{start} > 70 \text{ for } BW_{Channel\_CA} = 20\text{MHz}$$

For which AMPR = 7dB.

where inner 3 is defined as

$$N_{RB\_agg} / 4 < RB_{Start} < N_{RB\_agg} 3/4 - L_{CRB} \quad \text{AND} \quad L_{CRB} < N_{RB\_agg}/4$$

else A-MPR = 7 dB.

For CA\_48B non-contiguous resource allocation when  $3560 \text{ MHz} \leq F_{agg\_alloc\_low}$  and  $F_{agg\_alloc\_high} \leq 3690 \text{ MHz}$

$$A = N_{RB\_alloc} / N_{RB\_agg}$$

$$\begin{array}{ll} \text{A-MPR=} & 13.00; & 0.00 \leq A \leq 0.08 \\ & 13.78 - 9.78 A; & 0.08 < A \leq 1.00 \end{array}$$

For CA\_48B non-contiguous resource allocation when  $F_{agg\_alloc\_low} < 3560 \text{ MHz}$  or  $F_{agg\_alloc\_high} > 3690 \text{ MHz}$

$$\begin{array}{ll} \text{A-MPR=} & 13.00; & 0.00 \leq A \leq 0.08 \\ & 14.13 - 14.06 A; & 0.08 < A \leq 0.40 \\ & 9.17 - 1.67 A; & 0.40 < A \leq 1.00 \end{array}$$

## 6.2.4B UE maximum output power with additional requirements for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the A-MPR values specified in subclause 6.2.4 shall apply to the maximum output power specified in Table 6.2.2B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For the UE maximum output power modified by A-MPR, the power limits specified in subclause 6.2.5B apply.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.4 apply.

## 6.2.4D UE maximum output power with additional requirements for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the allowed A-MPR for the maximum output power for ProSe physical channels PSDCH, PSCCH, PSSCH, and PSBCH shall be as specified in subclause 6.2.4 for PUSCH for the corresponding modulation and transmission bandwidth.

The allowed A-MPR for the maximum output power for ProSe physical signal PSSS and SSSS shall be as specified in subclause 6.2.4 for PUSCH QPSK modulation for the corresponding transmission bandwidth.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.2.4D apply for ProSe transmission and the requirements in subclause 6.2.4 apply for uplink transmission.

## 6.2.4E UE maximum output power with additional requirements for category M1 and M2 UE

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power as specified in Table 6.2.2E-1 and Table 6.2.4E-2. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For UE Power Class 3 and 5 the specific requirements and identified subclauses are specified in Table 6.2.4E-1 and Table 6.2.4E-2 along with the allowed A-MPR values that may be used to meet these requirements. The allowed A-MPR values specified below in Table 6.2.4E-1 and Table 6.2.4E-2 and from 6.2.4-2 to 6.2.4-15 are in addition to the allowed MPR requirements specified in subclause 6.2.3E.

**Table 6.2.4E-1: Additional Maximum Power Reduction (A-MPR) for category M1 UE**

| Network Signalling value | Requirements (subclause) | E-UTRA Band    | Resources Blocks ( $N_{RB}$ ) | A-MPR (dB) |
|--------------------------|--------------------------|----------------|-------------------------------|------------|

Table 6.2.4E-3: A-MPR for "NS\_04" for Cat-M1

| Channel bandwidth [Hz]  | Parameters                                   | Region   |          |          |          |
|---|--|----------|----------|----------|----------|
| 5   | Fc [MHz]                                     | ≤ 2500.5 |          |          |          |
|   | (NB <sub>index</sub> , RB <sub>start</sub> ) | (0, 0-5) | (1, 0-1) |          |          |
|   | LCRB [RBs]                                   | > 0      |          |          |          |
|   | A-MPR [dB]                                   | ≤ 2      |          |          |          |
| 10  | Fc [MHz]                                     | ≤ 2504   |          |          |          |
|   | (NB <sub>index</sub> , RB <sub>start</sub> ) | (0, 0-5) | (1, 0-1) |          |          |
|   | LCRB [RBs]                                   | >0       |          |          |          |
|   | A-MPR [dB]                                   | ≤ 3      |          |          |          |
| 15  | Fc [MHz]                                     | ≤ 2510.8 |          |          |          |
|   | (NB <sub>index</sub> , RB <sub>start</sub> ) | (0, 0-5) | (1, 0-5) |          |          |
|   | LCRB [RBs]                                   | >0       |          |          |          |
|   | A-MPR [dB]                                   | ≤ 3      |          |          |          |
| 20  | Fc [MHz]                                     | ≤ 2517.5 |          |          |          |
|   | (NB <sub>index</sub> , RB <sub>start</sub> ) | (0, 0-5) | (1, 0-5) | (2, 0-5) | (3, 0-2) |
|   | LCRB [RBs]                                   | >0       |          |          |          |
|   | A-MPR [dB]                                   | ≤ 3      |          |          |          |
| NOTE 1: RBstart indicates the lowest RB index of transmitted resource blocks  |  |          |          |          |          |
| NOTE 2: LCRB is the length of a contiguous resource block allocation  |  |          |          |          |          |
| NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis  |  |          |          |          |          |
| NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger A-MPR value may be applied for both slots in the subframe           |  |          |          |          |          |
| NOTE 5: For CAT-M1 device, the NB index is the starting index allocated from DCI[6], the RBstart is indexed within the NB allocated to cat-M1 device. |  |          |          |          |          |

Table 6.2.4E-4: A-MPR for "NS\_07" for Cat-M1

| BW [MHz]  | 5         |           |           |           | 10       |          |

No other A-MPR requirement than those specified in table 6.2.4E-1, table 6.2.4E-2, table 6.2.4E-6 and table 6.2.4E-7 applies to category M1 and M2 UE.

## 6.2.4F UE maximum output power with additional requirements for category NB1 and NB2 UE

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power are specified. For the agreed E-UTRA bands for category NB1 and NB2 UE an A-MPR of 0 dB shall be allowed unless specified otherwise.

For UE Power Class 3 and 5 the specific requirements and identified subclauses are specified in Table 6.2.4F-1 along with the allowed A-MPR values that may be used to meet these requirements. The allowed A-MPR values specified below in Table 6.2.4F-1 are in addition to the allowed MPR requirements specified in subclause 6.2.3F-1.

**Table 6.2.4F-1: Additional Maximum Power Reduction (A-MPR) for category NB1 and NB2 UE**

| Network Signalling value | Requirements (subclause) | E-UTRA Band  | A-MPR (dB) |
|--------------------------|--------------------------|--|------------|
| NS_01                    | 6.6.2F.1                 | Operating bands defined in 5.5F  | N/A        |
| NS_02                    | 6.6.2F.2.1               | [1, 2, 3, 5, 8, 11, 12, 13, 17, 18, 19, 20, 21, 25, 26, 28, 66, 70 and 85] | [N/A]      |
| NS_03                    | 6.6.2F.2.2               | [1, 2, 3, 5, 8, 11, 12, 13, 17, 18, 19, 20, 21, 25, 26, 28, 66, 70 and 85] | [N/A]      |
| NS_04                    | 5.5F                     | 2, 4, 5, 12, 13, 17, 25, 26, 66, 71, 85                                    | N/A        |

## 6.2.4G UE maximum output power with additional requirements for V2X Communication

For QPSK the MPR requirements specified in subclause 6.2.3G does not apply, i.e. MPR = 0dB. For 16QAM and 64 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in subclause 6.2.3G and A-MPR requirements specified in subclause 6.2.4G.

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the maximum output power reduction specified as

$$A\text{-MPR} = \text{CEIL} \{M_A, 0.5\}$$

Where  $M_A$  is defined as follows

$$M_A = A\text{-MPR}_{\text{Base}} + G_{\text{post connector}} * A\text{-MPR}_{\text{Step}}$$

$\text{CEIL}\{M_A, 0.5\}$  means rounding upwards to closest 0.5dB.

$A\text{-MPR}_{\text{Base}}$  and  $A\text{-MPR}_{\text{Step}}$  are specified in Tables 6.2.4G-1, 6.2.4G-2, 6.2.4G-3 is allowed when network signalling value is provided. The supported post antenna connector gain  $G_{\text{post connector}}$  is declared by the UE following the principle described in annex I.

NOTE: the  $A\text{-MPR}_{\text{Step}}$  is the increase in A-MPR allowance to allow UE to meet tighter conducted A-SE and A-SEM requirements with higher value of declared  $G_{\text{post connector}}$ .  $A\text{-MPR}_{\text{Base}}$  is the default A-MPR value when no  $G_{\text{post connector}}$  is declared.  $A\text{-MPR}_{\text{Base}}$  and  $A\text{-MPR}_{\text{Step}}$  vary depending on channel frequency and RB allocation. For channel

frequencies and RB allocations that are close to the frequency range 5815-5855MHz, those value are much higher due to stringent emission requirement in this range.

|               | 5880, 5890, 5900       | $\leq 18$                     | $\geq 0$                | 3.5                   | 1                     |      |
|               |                        | >18 and $\leq 42$             | $\geq 0$                | 2.5                   | 1                     |      |
|               |                        | >42                           |                         | 3                     | 1                     |      |

The allowed A-MPR for the maximum output power for V2X physical signal PSBCH and PSSS/SSSS shall be as be as specified in subclause 6.2.4 for the corresponding modulation and transmission bandwidth.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.2.4G apply for V2X PSSCH and PSCCH transmission. The allowed A-MPR requirements in subclause 6.2.4D apply for other V2X sidelink transmission (PSBCH/PSSS/SSSS). The A-MPR requirements in subclause 6.2.4 apply for uplink transmission.

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the allowed A-MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.4G-3 and 6.2.4G-4 for V2X UE power class 2.

## 6.2.5 Configured transmitted power

The UE is allowed to set its configured maximum output power  $P_{C_{MAX,c}}$  for serving cell  $c$ . The configured maximum output power  $P_{C_{MAX,c}}$  is set within the following bounds:

$$P_{C_{MAX,L,c}} \leq P_{C_{MAX,c}} \leq P_{C_{MAX,H,c}} \text{ with}$$

$$P_{C_{MAX,L,c}} = \text{MIN} \{ P_{E_{MAX,c}} - \Delta T_{C,c}, (P_{\text{PowerClass}} - \Delta P_{\text{PowerClass}}) - \text{MAX}(M_{PR,c} + A\text{-}M_{PR,c} + \Delta T_{IB,c} + \Delta T_{C,c} + \Delta T_{\text{ProSe}}, P\text{-}M_{PR,c} \}$$

$$P_{C_{MAX,H,c}} = \text{MIN} \{ P_{E_{MAX,c}}, P_{\text{PowerClass}} - \Delta P_{\text{PowerClass}} \}$$

where

- $P_{E_{MAX,c}}$  is the value given by IE *P-Max* for serving cell  $c$ , defined in [7];
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2-1 without taking into account the tolerance specified in the Table 6.2.2-1;
- $\Delta P_{\text{PowerClass}} = 3$  dB for a power class 2 capable UE operating in Band 41, when *P-max* of 23 dBm or lower is indicated or if the uplink/downlink configuration is 0 or 6 in the cell; otherwise,  $\Delta P_{\text{PowerClass}} = 0$  dB

- $\Delta P_{PowerClass} = P_{PowerClass} - P_{PowerClass\_Default}$  dB for UE operating in Band 14, when  $P_{max}$  of 23 dBm or lower is indicated in the cell; otherwise,  $\Delta P_{PowerClass} = 0$  dB.
- $MPR_c$  and  $A-MPR_c$  for serving cell  $c$  are specified in subclause 6.2.3 and subclause 6.2.4, respectively;
- $\Delta T_{IB,c}$  is the additional tolerance for serving cell  $c$  as specified in Table 6.2.5-2;  $\Delta T_{IB,c} = 0$  dB otherwise;
- $\Delta T_{C,c} = 1.5$  dB when NOTE 2 in Table 6.2.2-1 applies;
- $\Delta T_{C,c} = 0$  dB when NOTE 2 in Table 6.2.2-1 does not apply;
- $\Delta T_{ProSe} = 0.1$  dB when the UE supports ProSe Direct Discovery and/or ProSe Direct Communication on the corresponding E-UTRA ProSe band;  $\Delta T_{ProSe} = 0$  dB otherwise.
- For a power class higher than default UE power class capable UE except for operating in Band 14 and Band 41,  $\Delta P_{PowerClass} = P_{PowerClass} - P_{PowerClass\_Default}$  dB, when the band is a TDD band whose frame configuration is 0 or 6; or  $P_{max}$  is not indicated in the cell; or  $P_{Max}$  is provided and set to the maximum output power of the default power class or lower, otherwise,  $\Delta P_{PowerClass} = 0$  dB.

$P-MPR_c$  is the allowed maximum output power reduction for

- a) ensuring compliance with applicable electromagnetic energy absorption requirements and addressing unwanted emissions / self desense requirements in case of simultaneous transmissions on multiple RAT(s) for scenarios not in scope of 3GPP RAN specifications;
- b) ensuring compliance with applicable electromagnetic energy absorption requirements in case of proximity detection is used to address such requirements that require a lower maximum output power.

The UE shall apply  $P-MPR_c$  for serving cell  $c$  only for the above cases. For UE conducted conformance testing  $P-MPR$  shall be 0 dB

NOTE 1:  $P-MPR_c$  was introduced in the  $P_{CMAX,c}$  equation such that the UE can report to the eNB the available maximum output transmit power. This information can be used by the eNB for scheduling decisions.

NOTE 2:  $P-MPR_c$  may impact the maximum uplink performance for the selected UL transmission path.

$T_{REF}$  and  $T_{eval}$  are specified in Table 6.2.5-0 for different TTI patterns. For each  $T_{REF}$ , the  $P_{CMAX_{L,c}}$  for serving cell  $c$  is evaluated per  $T_{eval}$  and given by the minimum value taken over the transmission(s) within the  $T_{eval}$ ; the minimum  $P_{CMAX_{L,c}}$  over the one or more  $T_{eval}$  is then applied for the entire  $T_{REF}$ .  $P_{PowerClass}$  shall not be exceeded by the UE during any period of time.

**Table 6.2.5-0:  $P_{CMAX}$  evaluation window for different TTI patterns**

| TTI pattern | $T_{REF}$  | $T_{eval}$ | $T_{eval}$ with frequency hopping  |
|-------------|------------|------------|------------------------------------|
| Subframe    | 1 subframe | 1 slot     | 1 slot                             |
| Subslot     | 2 OS       | 2 OS       | $\text{Min}(T_{no\_hopping}, 2OS)$ |
| Slot        | 7 OS       | 7 OS       | $\text{Min}(T_{no\_hopping}, 7OS)$ |

The measured configured maximum output power  $P_{UMAX,c}$  shall be within the following bounds:

$$P_{CMAX_{L,c}} - \text{MAX}\{T_{L,c}, T(P_{CMAX_{L,c}})\} \leq P_{UMAX,c} \leq P_{CMAX_{H,c}} + T(P_{CMAX_{H,c}}).$$

where the tolerance  $T(P_{CMAX,c})$  for applicable values of  $P_{CMAX,c}$  is specified in Table 6.2.5-1, and Table 6.2.5-1A. The tolerance  $T_{L,c}$  is the absolute value of the lower tolerance for the applicable operating band as specified in Table 6.2.2-1.

**Table 6.2.5-1:  $P_{CMAX}$  tolerance**

| $P_{CMAX,c}$ (dBm)           | Tolerance $T(P_{CMAX,c})$ (dB) |
|------------------------------|--------------------------------|
| $23 < P_{CMAX,c} \leq 33$    | 2.0                            |
| $21 \leq P_{CMAX,c} \leq 23$ | 2.0                            |
| $20 \leq P_{CMAX,c} < 21$    | 2.5                            |

|                                  |     |
|----------------------------------|-----|
| $19 \leq P_{\text{CMAX},c} < 20$ | 3.5 |
| $18 \leq P_{\text{CMAX},c} < 19$ | 4.0 |
| $13 \leq P_{\text{CMAX},c} < 18$ | 5.0 |
| $8 \leq P_{\text{CMAX},c} < 13$  | 6.0 |
| $-40 \leq P_{\text{CMAX},c} < 8$ | 7.0 |

**Table 6.2.5-1A:  $P_{\text{CMAX}}$  tolerance for power class 5**

| $P_{\text{CMAX},c}$<br>(dBm)     | Tolerance T( $P_{\text{CMAX},c}$ )<br>(dB) |
|----------------------------------|--|
| $P_{\text{CMAX},c} = 20$         | 2.0  |
| $19 \leq P_{\text{CMAX},c} < 20$ | 3.5  |
| $18 \leq P_{\text{CMAX},c} < 19$ | 4.0  |
| $13 \leq P_{\text{CMAX},c} < 18$ | 5.0  |
| $8 \leq P_{\text{CMAX},c} < 13$  | 6.0  |
| $-40 \leq P_{\text{CMAX},c} < 8$ | 7.0  |

**Table 6.2.5-1B:  $P_{\text{CMAX}}$  tolerance for power class 6 for category M1 and M2 UE**

| $P_{\text{CMAX},c}$<br>(dBm)        | Tolerance T( $P_{\text{CMAX},c}$ )<br>(dB) |
|-------------------------------------|--|
| $13 \leq P_{\text{CMAX},c} \leq 14$ | 2.5  |
| $12 \leq P_{\text{CMAX},c} < 13$    | 3.5  |
| $11 \leq P_{\text{CMAX},c} < 12$    | 4  |
| $8 \leq P_{\text{CMAX},c} < 11$     | 5  |
| $5 \leq P_{\text{CMAX},c} < 8$      | 6.0  |
| $-40 \leq P_{\text{CMAX},c} < 5$    | 7.0  |

For the UE which supports inter-band carrier aggregation configurations with the uplink assigned to one or two E-UTRA bands the  $\Delta T_{\text{IB},c}$  is defined for applicable bands in Table 6.2.5-2, Table 6.2.5-3 and Table 6.2.5-4 where unless otherwise stated, the same  $\Delta T_{\text{IB},c}$  is applicable to E-UTRA band(s) part for CA configurations which have the same E-UTRA operating band combination.

**Table 6.2.5-2:  $\Delta T_{\text{IB},c}$  (two bands)**

| E-UTRA operating band combination      | E-UTRA Band | $\Delta T_{\text{IB},c}$ [dB] |

| <p>NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations</p> <p>NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations</p> <p>NOTE 3: In case the UE supports more than one of the above 2DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 2DL inter-band carrier aggregation configurations then:</p> <ul style="list-style-type: none"> <li>- When the E-UTRA operating band frequency range is <math>\leq 1</math>GHz, the applicable additional tolerance shall be the average of the 2DL tolerances above, truncated to one decimal place for that operating band among the supported 2DL CA configurations. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 2DL carrier aggregation configurations involving such band shall be applied</li> <li>- When the E-UTRA operating band frequency range is <math>&gt;1</math>GHz, the applicable additional 2DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 2DL CA configurations</li> </ul> <p>NOTE 4: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.</p> <p>NOTE 5: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:</p> <ul style="list-style-type: none"> <li>- When the E-UTRA operating band frequency range is <math>\leq 1</math>GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied</li> <li>- When the E-UTRA operating band frequency range is <math>&gt;1</math>GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.</li> </ul> <p>NOTE 6: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.</p> <p>NOTE 7: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx.</p> |    |                  |

|          |  |
|----------|--|
| NOTE 8:  | Only applicable for UE supporting inter-band carrier aggregation with the uplink active in the FDD band.   |
| NOTE 9:  | For Band 28, the requirements only apply for the restricted frequency range specified for this CA configuration (Table 5.5A-2).  |
| NOTE 10: | The requirement is applied for UE transmitting on the frequency range of 2545-2690MHz.   |
| NOTE 11: | The requirement is applied for UE transmitting on the frequency range of 2496-2545MHz.   |
| NOTE 12: | For UE supporting E-UTRA band 65 and CA configurations including Band 1, the Band 65 $\Delta T_{IB,c}$ is the max(Band 65 $\Delta T_{IB,c}$ , Band 1 $\Delta T_{IB,c}$ )   |
| NOTE 13: | For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable $\Delta T_{IB,c}$ in Band 42, 43, or 48 is the max(Band 42 $\Delta T_{IB,c}$ , Band 43 $\Delta T_{IB,c}$ , Band 48 $\Delta T_{IB,c}$ ). |
| NOTE 14: | Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8.   |

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is <1GHz and another band is >1.7GHz and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

NOTE: To meet the  $\Delta T_{IB,c}$  requirements for CA\_3A-7A with state-of-the-art technology, an increase in power consumption of the UE may be required. It is also expected that as the state-of-the-art technology evolves in the future, this possible power consumption increase can be reduced or eliminated.

**Table 6.2.5-3:  $\Delta T_{IB,c}$  (three bands)**

| E-UTRA operating band combination  | E-UTRA Band | $\Delta T_{IB,c}$ [dB] |

|   | 71 | 0.6               |
| NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations |    |                   |

- NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations
- NOTE 3: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:
- When the E-UTRA operating band frequency range is  $\leq 1\text{GHz}$  and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
  - When the E-UTRA operating band frequency range is  $>1\text{GHz}$ , the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations
- NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
- NOTE 5: The requirement is specified for the frequency range of 2545-2690MHz.
- NOTE 6: The requirement is specified for the frequency range of 2496-2545MHz.
- NOTE 7: For UE supporting E-UTRA band 65 and CA configurations including Band 1, the Band 65  $\Delta T_{\text{IB,c}}$  is the  $\max(\text{Band 65 } \Delta T_{\text{IB,c}}, \text{Band 1 } \Delta T_{\text{IB,c}})$
- NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 42.
- NOTE 9: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx on Band 41 and Band 42.
- NOTE 10: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 8
- NOTE 12: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3 or Band 8.
- NOTE 13: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 14: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 15: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 41.
- NOTE 16: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable  $\Delta T_{\text{IB,c}}$  in Band 42, 43, or 48 is the  $\max(\text{Band 42 } \Delta T_{\text{IB,c}}, \text{Band 43 } \Delta T_{\text{IB,c}}, \text{Band 48 } \Delta T_{\text{IB,c}})$ .
- NOTE 17: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 11.
- NOTE 18: The values in the table reflect what can be achieved with the present state of the art technology. They shall be reconsidered when the state of the art technology progresses.
- NOTE 19: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRAN band and without simultaneous Rx/Tx on band 39 and band 41
- NOTE 20: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx among TDD bands

Table 6.2.5-4:  $\Delta T_{IB,c}$  (four bands)

| E-UTRA operating band combination   | E-UTRA Band | $\Delta T_{IB,c}$ [dB]               |

| <p>NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.</p> <p>NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.</p> <p>NOTE 3: Tolerances for a UE supporting multiple 5DL inter-band CA configurations are FFS.</p> <p>NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.</p> |    |     |

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is <1GHz and other bands are >1.7GHz and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

## 6.2.5A Configured transmitted power for CA

For uplink carrier aggregation the UE is allowed to set its configured maximum output power  $P_{\text{MAX},c}$  for serving cell  $c$  and its total configured maximum output power  $P_{\text{MAX}}$ .

The configured maximum output power  $P_{\text{MAX},c}$  on serving cell  $c$  shall be set as specified in subclause 6.2.5.

For uplink inter-band carrier aggregation,  $\text{MPR}_c$  and  $\text{A-MPR}_c$  apply per serving cell  $c$  and are specified in subclause 6.2.3 and subclause 6.2.4, respectively.  $\text{P-MPR}_c$  accounts for power management for serving cell  $c$ .  $P_{\text{MAX},c}$  is calculated under the assumption that the transmit power is increased independently on all component carriers.

For uplink intra-band contiguous and non-contiguous carrier aggregation,  $\text{MPR}_c = \text{MPR}$  and  $\text{A-MPR}_c = \text{A-MPR}$  with  $\text{MPR}$  and  $\text{A-MPR}$  specified in subclause 6.2.3A and subclause 6.2.4A respectively. There is one power management term for the UE, denoted  $\text{P-MPR}$ , and  $\text{P-MPR}_c = \text{P-MPR}$ .  $P_{\text{MAX},c}$  is calculated under the assumption that the transmit power is increased by the same amount in dB on all component carriers.

The total configured maximum output power  $P_{\text{CMAX}}$  shall be set within the following bounds:

$$P_{\text{CMAX\_L}} \leq P_{\text{CMAX}} \leq P_{\text{CMAX\_H}}$$

For uplink inter-band carrier aggregation with one serving cell  $c$  per operating band when same TTI pattern is used in all aggregated serving cells,

$$P_{\text{CMAX\_L}} = \text{MIN} \{ 10 \log_{10} \sum \text{MIN} [ p_{\text{EMAX},c} / (\Delta t_{\text{C},c}), p_{\text{PowerClass}} / (\text{mpr}_c \cdot a\text{-mpr}_c \cdot \Delta t_{\text{C},c} \cdot \Delta t_{\text{IB},c} \cdot \Delta t_{\text{ProSe}}), p_{\text{PowerClass}} / \text{pmpr}_c ], P_{\text{PowerClass}} \}$$

$$P_{\text{CMAX\_H}} = \text{MIN} \{ 10 \log_{10} \sum p_{\text{EMAX},c}, P_{\text{PowerClass}} \}$$

where

- $p_{\text{EMAX},c}$  is the linear value of  $P_{\text{EMAX},c}$  which is given by IE *P-Max* for serving cell  $c$  in [7];
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2A-1 without taking into account the tolerance specified in the Table 6.2.2A-1;  $p_{\text{PowerClass}}$  is the linear value of  $P_{\text{PowerClass}}$ ;
- $\text{mpr}_c$  and  $a\text{-mpr}_c$  are the linear values of  $\text{MPR}_c$  and  $\text{A-MPR}_c$  as specified in subclause 6.2.3 and subclause 6.2.4, respectively;
- $\text{pmpr}_c$  is the linear value of  $\text{P-MPR}_c$ ;
- $\Delta t_{\text{C},c}$  is the linear value of  $\Delta T_{\text{C},c}$ .  $\Delta t_{\text{C},c} = 1.41$  when NOTE 2 in Table 6.2.2-1 applies for a serving cell  $c$ , otherwise  $\Delta t_{\text{C},c} = 1$ ;
- $\Delta t_{\text{IB},c}$  is the linear value of the inter-band relaxation term  $\Delta T_{\text{IB},c}$  of the serving cell  $c$  as specified in Table 6.2.5-2; otherwise  $\Delta t_{\text{IB},c} = 1$ ;
- $\Delta t_{\text{ProSe}}$  is the linear value of  $\Delta T_{\text{ProSe}}$  and applies as specified in subclause 6.2.5.

For uplink intra-band contiguous and non-contiguous carrier aggregation when same TTI pattern is used in all aggregated serving cells,

$$P_{\text{CMAX\_L}} = \text{MIN} \{ 10 \log_{10} \sum p_{\text{EMAX},c} - \Delta T_{\text{C}}, (P_{\text{PowerClass}} - \Delta P_{\text{PowerClass}}) - \text{MAX}(\text{MPR} + \text{A-MPR} + \Delta T_{\text{IB},c} + \Delta T_{\text{C}} + \Delta T_{\text{ProSe}}, \text{P-MPR}) \}$$

$$P_{\text{CMAX\_H}} = \text{MIN} \{ 10 \log_{10} \sum p_{\text{EMAX},c}, P_{\text{PowerClass}} \}$$

where

- $p_{\text{EMAX},c}$  is the linear value of  $P_{\text{EMAX},c}$  which is given by IE *P-Max* for serving cell  $c$  in [7];
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2A-1 without taking into account the tolerance specified in the Table 6.2.2A-1;  
 $\Delta P_{\text{PowerClass}} = 3$  dB for a power class 2 capable UE operating in Band 41, when *P-max* of 23 dBm or lower is indicated or if the uplink/downlink configuration is 0 or 6 in the cell; otherwise,  $\Delta P_{\text{PowerClass}} = 0$  dB
- $\text{MPR}$  and  $\text{A-MPR}$  are specified in subclause 6.2.3A and subclause 6.2.4A respectively;
- $\Delta T_{\text{IB},c}$  is the additional tolerance for serving cell  $c$  as specified in Table 6.2.5-2;
- $\text{P-MPR}$  is the power management term for the UE;
- $\Delta T_{\text{C}}$  is the highest value  $\Delta T_{\text{C},c}$  among all serving cells  $c$  in the  $T_{\text{REF}}$  over all  $T_{\text{eval}}$  durations.  $\Delta T_{\text{C},c} = 1.5$  dB when NOTE 2 in Table 6.2.2A-1 applies to the serving cell  $c$ , otherwise  $\Delta T_{\text{C},c} = 0$  dB;
- $\Delta T_{\text{ProSe}}$  applies as specified in subclause 6.2.5.

For uplink inter-band carrier aggregation with one serving cell  $c$  per operating band when at least one different TTI patterns is used in aggregated cells, the UE is allowed to set its configured maximum output power  $P_{\text{CMAX},c(i),i}$  for serving cell  $c(i)$  of TTI length  $i$ ,  $i = 1,2,3$  and its total configured maximum output power  $P_{\text{CMAX}}$ .

The configured maximum output power  $P_{\text{CMAX},c(i),i}(p)$  in TTI  $p$  of serving cell  $c(i)$  on TTI length  $i$  shall be set within the following bounds:

$$P_{\text{CMAX\_L},c(i),i}(p) \leq P_{\text{CMAX},c(i),i}(p) \leq P_{\text{CMAX\_H},c(i),i}(p)$$

where  $P_{\text{CMAX\_L},c(i),i}(p)$  and  $P_{\text{CMAX\_H},c(i),i}(p)$  are the limits for a serving cell  $c(i)$  of TTI length  $i$  as specified in subclause 6.2.5.

The total UE configured maximum output power  $P_{\text{CMAX}}(p,q,k)$  in a TTI  $p$  of TTI length 1, a TTI  $q$  of TTI length 2 and a TTI  $k$  of TTI length 3 that overlap in time shall be set within the following bounds unless stated otherwise:

$$P_{\text{CMAX\_L}}(p,q,k) \leq P_{\text{CMAX}}(p,q,k) \leq P_{\text{CMAX\_H}}(p,q,k)$$

When  $p$ ,  $q$ ,  $k$  are of different lengths and belong to different cells:

$$P_{\text{CMAX\_L}}(p,q,k) = \text{MIN} \{ 10 \log_{10} [p_{\text{CMAX\_L},c(1),1}(p) + p_{\text{CMAX\_L},c(2),2}(q) + p_{\text{CMAX\_L},c(3),3}(k)], P_{\text{PowerClass}} \}$$

$$P_{\text{CMAX\_H}}(p,q,k) = \text{MIN} \{ 10 \log_{10} [p_{\text{CMAX\_H},c(1),1}(p) + p_{\text{CMAX\_H},c(2),2}(q) + p_{\text{CMAX\_H},c(3),3}(k)], P_{\text{PowerClass}} \}$$

where  $p_{\text{CMAX\_L},c(i),i}$  and  $p_{\text{CMAX\_H},c(i),i}$  are the respective limits  $P_{\text{CMAX\_L},c(i),i}$  and  $P_{\text{CMAX\_H},c(i),i}$  expressed in linear scale.

For combinations of intra-band and inter-band carrier aggregation with UE configured for transmission on three serving cells (up to two contiguously aggregated carriers per operating band),

For the case when  $p$  and  $q$  belong to the same band and  $k$  belongs to a different band but  $p$ ,  $q$  and  $k$  are of the same TTI pattern.

$$P_{\text{CMAX\_L}} = \text{MIN} \{ 10 \log_{10} \sum (p_{\text{CMAX\_L},Bi}), P_{\text{PowerClass}} \}$$

$$P_{\text{CMAX\_H}} = \text{MIN} \{ 10 \log_{10} \sum p_{\text{EMAX},c}, P_{\text{PowerClass}} \}$$

For the case when  $p$  and  $q$  belong to the same band and are of the same TTI pattern while  $k$  belong to a different band and is of different TTI pattern then:

$$P_{\text{CMAX\_L}}(p,q,k) = \text{MIN} \{ 10 \log_{10} [p_{\text{CMAX\_L},Bi}(p) + p_{\text{CMAX\_L},c(3),3}(k)], P_{\text{PowerClass}} \}$$

$$P_{\text{CMAX\_H}}(p,q,k) = \text{MIN} \{ 10 \log_{10} [p_{\text{CMAX\_H},Bi}(p) + p_{\text{CMAX\_H},c(3),3}(k)], P_{\text{PowerClass}} \}$$

where

- $p_{\text{EMAX},c}$  is the linear value of  $P_{\text{EMAX},c}$  which is given by IE *P-Max* for serving cell  $c$  in [7];
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2A-0 without taking into account the tolerance specified in the Table 6.2.2A-0;  $p_{\text{PowerClass}}$  is the linear value of  $P_{\text{PowerClass}}$ ;
- $p_{\text{CMAX\_L},Bi}$  is the linear values of  $P_{\text{CMAX\_L}}$  as specified in corresponding operating band.  $P_{\text{CMAX\_L},c}$  specified for single carrier in subclause 6.2.5 applies for operating band supporting one serving cell.  $P_{\text{CMAX\_L}}$  specified for uplink intra-band contiguous carrier aggregation in subclause 6.2.5A applies for operating band supporting two contiguous serving cells.
- intra-band carriers use the same TTI patterns.

$T_{\text{REF}}$  and  $T_{\text{eval}}$  are specified in Table 6.2.5A-0 when same and different TTI patterns are used in aggregated carriers. For each  $T_{\text{REF}}$ , the  $P_{\text{CMAX\_L}}$  is evaluated per  $T_{\text{eval}}$  and given by the minimum value taken over the transmission(s) within the  $T_{\text{eval}}$ ; the minimum  $P_{\text{CMAX\_L}}$  over the one or more  $T_{\text{eval}}$  is then applied for the entire  $T_{\text{REF}}$ .  $P_{\text{PowerClass}}$  shall not be exceeded by the UE during any period of time.

**Table 6.2.5A-0:  $P_{\text{CMAX}}$  evaluation window for different TTI patterns**

| TTI duration   | $T_{\text{REF}}$               | $T_{\text{eval}}$                 |
|--|--------------------------------|-----------------------------------|
| Different TTI duration in different aggregated carrier | $T_{\text{REF}}$ of longer TTI | $T_{\text{eval}}$ of shortest TTI |

If the UE is configured with multiple TAGs and transmissions of the UE on TTI  $i$  for any serving cell in one TAG overlap some portion of the first symbol of the transmission on TTI  $i + 1$  for a different serving cell in another TAG, the UE minimum of  $P_{\text{CMAX\_L}}$  for TTIs  $i$  and  $i + 1$  applies for any overlapping portion of TTIs  $i$  and  $i + 1$ .  $P_{\text{PowerClass}}$  shall not be exceeded by the UE during any period of time.

In case PC2 and uplink intra-band contiguous CA capable UE receives  $p_{\text{EMAX},c}$  in Scell then that applies both to Scell and Pcell once the Scell is activated.

The measured maximum output power  $P_{UMAX}$  over all serving cells with same TTI pattern shall be within the following range:

$$P_{CMAX\_L} - \text{MAX}\{T_L, T_{LOW}(P_{CMAX\_L})\} \leq P_{UMAX} \leq P_{CMAX\_H} + T_{HIGH}(P_{CMAX\_H})$$

$$P_{UMAX} = 10 \log_{10} \sum P_{UMAX,c}$$

where  $p_{UMAX,c}$  denotes the measured maximum output power for serving cell  $c$  expressed in linear scale. The tolerances  $T_{LOW}(P_{CMAX})$  and  $T_{HIGH}(P_{CMAX})$  for applicable values of  $P_{CMAX}$  are specified in Table 6.2.5A-1 and Table 6.2.5A-2 for inter-band carrier aggregation and intra-band carrier aggregation, respectively. The tolerance  $T_L$  is the absolute value of the lower tolerance for applicable E-UTRA CA configuration as specified in Table 6.2.2A-0, Table 6.2.2A-1 and Table 6.2.2A-2 for inter-band carrier aggregation, intra-band contiguous carrier aggregation and intra-band non-contiguous carrier aggregation, respectively.

The measured maximum output power  $P_{UMAX}$  over all serving cells, when atleast one TTI has a different TTI pattern, shall be within the following range:

$$P'_{CMAX\_L} - \text{MAX}\{T_L, T_{LOW}(P'_{CMAX\_L})\} \leq P'_{UMAX} \leq P'_{CMAX\_H} + T_{HIGH}(P'_{CMAX\_H})$$

$$P'_{UMAX} = 10 \log_{10} \sum p'_{UMAX,c}$$

where  $p'_{UMAX,c}$  denotes the average measured maximum output power for serving cell  $c$  expressed in linear scale over  $T_{REF}$ . The tolerances  $T_{LOW}(P'_{CMAX})$  and  $T_{HIGH}(P'_{CMAX})$  for applicable values of  $P'_{CMAX}$  are specified in Table 6.2.5A-1 and Table 6.2.5A-2 for inter-band carrier aggregation and intra-band carrier aggregation, respectively. The tolerance  $T_L$  is the absolute value of the lower tolerance for applicable E-UTRA CA configuration as specified in Table 6.2.2A-0, Table 6.2.2A-1 and Table 6.2.2A-2 for inter-band carrier aggregation, intra-band contiguous carrier aggregation and intra-band non-contiguous carrier aggregation, respectively.

where:

$$P'_{CMAX\_L} = \text{MIN}\{ \text{MIN}\{10 \log_{10} \sum (P_{CMAX\_L, Bi}), P_{PowerClass}\} \text{ over all overlapping TTIs in } T_{REF}\}$$

$$P'_{CMAX\_H} = \text{MAX}\{ \text{MIN}\{10 \log_{10} \sum P_{EMAX,c}, P_{PowerClass}\} \text{ over all overlapping TTIs in } T_{REF}\}$$

**Table 6.2.5A-1:  $P_{CMAX}$  tolerance for uplink inter-band CA (two bands)**

| $P_{CMAX}$<br>(dBm)      | Tolerance<br>$T_{LOW}(P_{CMAX})$<br>(dB) | Tolerance<br>$T_{HIGH}(P_{CMAX})$<br>(dB) |

| $13 \leq P_{CMAX} < 18$    | 5.0                                      |   |
| $8 \leq P_{CMAX} < 13$     | 6.0                                      |   |
| $-40 \leq P_{CMAX} < 8$    | 7.0                                      |   |

## 6.2.5B Configured transmitted power for UL-MIMO

For UE supporting UL-MIMO, the transmitted power is configured per each UE.

The definitions of configured maximum output power  $P_{\text{CMAX},c}$ , the lower bound  $P_{\text{CMAX}_L,c}$ , and the higher bound  $P_{\text{CMAX}_H,c}$  specified in subclause 6.2.5 shall apply to UE supporting UL-MIMO, where

- $P_{\text{PowerClass}}$ ,  $\Delta P_{\text{PowerClass}}$  and  $\Delta T_{C,c}$  are specified in subclause 6.2.2B;
- $\text{MPR}_{c}$  is specified in subclause 6.2.3B;
- $\text{A-MPR}_{c}$  is specified in subclause 6.2.4B.

The measured configured maximum output power  $P_{\text{UMAX},c}$  for serving cell  $c$  shall be within the following bounds:

$$P_{\text{CMAX}_L,c} - \text{MAX}\{T_L, T_{\text{LOW}}(P_{\text{CMAX}_L,c})\} \leq P_{\text{UMAX},c} \leq P_{\text{CMAX}_H,c} + T_{\text{HIGH}}(P_{\text{CMAX}_H,c})$$

where  $T_{\text{LOW}}(P_{\text{CMAX}_L,c})$  and  $T_{\text{HIGH}}(P_{\text{CMAX}_H,c})$  are defined as the tolerance and applies to  $P_{\text{CMAX}_L,c}$  and  $P_{\text{CMAX}_H,c}$  separately, while  $T_L$  is the absolute value of the lower tolerance in Table 6.2.2B-1 for the applicable operating band.

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the tolerance is specified in Table 6.2.5B-1. The requirements shall be met with UL-MIMO configurations specified in Table 6.2.2B-2.

**Table 6.2.5B-1:  $P_{\text{CMAX},c}$  tolerance in closed-loop spatial multiplexing scheme**

| $P_{\text{CMAX},c}$<br>(dBm)      | Tolerance<br>$T_{\text{LOW}}(P_{\text{CMAX}_L,c})$ (dB) | Tolerance<br>$T_{\text{HIGH}}(P_{\text{CMAX}_H,c})$ (dB) |
|-----------------------------------|---|--|
| $P_{\text{CMAX},c} = 23$          | 3.0   | 2.0  |
| $22 \leq P_{\text{CMAX},c} < 23$  | 5.0   | 2.0  |
| $21 \leq P_{\text{CMAX},c} < 22$  | 5.0   | 3.0  |
| $20 \leq P_{\text{CMAX},c} < 21$  | 6.0   | 4.0  |
| $16 \leq P_{\text{CMAX},c} < 20$  | 5.0   |  |
| $11 \leq P_{\text{CMAX},c} < 16$  | 6.0   |  |
| $-40 \leq P_{\text{CMAX},c} < 11$ | 7.0   |  |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.5 apply.

## 6.2.5C Configured transmitted power for Dual Connectivity

For inter-band dual connectivity with one uplink serving cell per CG, the UE is allowed to set its configured maximum output power  $P_{\text{CMAX},c(i),i}$  for serving cell  $c(i)$  of CG  $i$ ,  $i = 1, 2$ , and its total configured maximum output power  $P_{\text{CMAX}}$ .

The configured maximum output power  $P_{\text{CMAX},c(i),i}(p)$  in subframe  $p$  of serving cell  $c(i)$  on CG  $i$  shall be set within the following bounds:

$$P_{\text{CMAX}_L,c(i),i}(p) \leq P_{\text{CMAX},c(i),i}(p) \leq P_{\text{CMAX}_H,c(i),i}(p)$$

where  $P_{\text{CMAX}_L,c(i),i}(p)$  and  $P_{\text{CMAX}_H,c(i),i}(p)$  are the limits for a serving cell  $c(i)$  of CG  $i$  as specified in subclause 6.2.5.

The total UE configured maximum output power  $P_{\text{CMAX}}(p,q)$  in a subframe  $p$  of CG 1 and a subframe  $q$  of CG 2 that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$P_{\text{CMAX}_L}(p,q) \leq P_{\text{CMAX}}(p,q) \leq P_{\text{CMAX}_H}(p,q)$$

with

$$P_{\text{CMAX}_L}(p,q) = \text{MIN} \{10 \log_{10} [p_{\text{CMAX}_L,c(1),1}(p) + p_{\text{CMAX}_L,c(2),2}(q)], P_{\text{PowerClass}}\}$$

$$P_{\text{CMAX}_H}(p,q) = \text{MIN} \{10 \log_{10} [p_{\text{CMAX}_H,c(1),1}(p) + p_{\text{CMAX}_H,c(2),2}(q)], P_{\text{PowerClass}}\}$$

where  $p_{\text{CMAX}_L,c(i),i}$  is  $p_{\text{CMAX}_H,c(i),i}$  are the respective limits  $P_{\text{CMAX}_L,c(i),i}(p)$  and  $P_{\text{CMAX}_H,c(i),i}(p)$  expressed in linear scale.

If the UE is configured in Dual Connectivity and synchronous transmissions of the UE on subframe  $p$  for a serving cell in one CG overlaps some portion of the first symbol of the transmission on subframe  $q + 1$  for a different serving cell in the other CG, the UE minimum of  $P_{\text{CMAX\_L}}$  between subframes pairs  $(p, q)$  and  $(p+1, q+1)$  respectively applies for any overlapping portion of subframes  $(p, q)$  and  $(p+1, q+1)$ .  $P_{\text{PowerClass}}$  shall not be exceeded by the UE during any period of time.

The measured total maximum output power  $P_{\text{UMAX}}$  over both CGs is

$$P_{\text{UMAX}} = 10 \log_{10} [p_{\text{UMAX},c(1),1} + p_{\text{UMAX},c(2),2}],$$

where  $p_{\text{UMAX},c(i),i}$  denotes the measured output power of serving cell  $c(i)$  of CG  $i$  expressed in linear scale.

If the UE is configured in Dual Connectivity and synchronous transmissions

$$P_{\text{CMAX\_L}}(p, q) - T_{\text{LOW}}(P_{\text{CMAX\_L}}(p, q)) \leq P_{\text{UMAX}} \leq P_{\text{CMAX\_H}}(p, q) + T_{\text{HIGH}}(P_{\text{CMAX\_H}}(p, q))$$

where  $P_{\text{CMAX\_L}}(p, q)$  and  $P_{\text{CMAX\_H}}(p, q)$  are the limits for the pair  $(p, q)$  and with the tolerances  $T_{\text{LOW}}(P_{\text{CMAX}})$  and  $T_{\text{HIGH}}(P_{\text{CMAX}})$  for applicable values of  $P_{\text{CMAX}}$  specified in Table 6.2.5C-1.  $P_{\text{CMAX\_L}}$  may be modified for any overlapping portion of subframes  $(p, q)$  and  $(p+1, q+1)$ .

If the UE is configured in Dual Connectivity and asynchronous transmissions, the subframes of the leading CG are taken as reference subframes for the measurement of the total configured output power  $P_{\text{UMAX}}$ . If subframe  $p$  of CG 1 and subframe  $q$  of CG 2 overlap in time in their respective slot 0 and

1. if  $p$  leads in time over  $q$ , then  $p$  is the reference subframe and the  $(p, q)$  and  $(p, q-1)$  pairs are considered for determining the  $P_{\text{CMAX}}$  tolerance
2. if  $q$  leads in time over  $p$ , then  $q$  is the reference subframe and the  $(p-1, q)$  and  $(p, q)$  pairs are considered for determining the  $P_{\text{CMAX}}$  tolerance;

for the reference subframe  $p$  duration (when subframe  $p$  in CG 1 leads):

$$P'_{\text{CMAX\_L}} = \text{MIN} \{P_{\text{CMAX\_L}}(p, q), P_{\text{CMAX\_L}}(p, q-1)\}$$

$$P'_{\text{CMAX\_H}} = \text{MAX} \{P_{\text{CMAX\_H}}(p, q), P_{\text{CMAX\_H}}(p, q-1)\}$$

while for the reference subframe  $q$  duration (when subframe  $q$  in CG 2 leads):

$$P'_{\text{CMAX\_L}} = \text{MIN} \{P_{\text{CMAX\_L}}(p-1, q), P_{\text{CMAX\_L}}(p, q)\}$$

$$P'_{\text{CMAX\_H}} = \text{MAX} \{P_{\text{CMAX\_H}}(p-1, q), P_{\text{CMAX\_H}}(p, q)\}$$

where  $P_{\text{CMAX\_L}}$  and  $P_{\text{CMAX\_H}}$  are the applicable limits for each overlapping subframe pairs  $(p, q)$ ,  $(p, q-1)$  and  $(p-1, q)$ . The measured total configured maximum output power  $P_{\text{UMAX}}$  shall be within the following bounds:

$$P'_{\text{CMAX\_L}} - T_{\text{LOW}}(P'_{\text{CMAX\_L}}) \leq P_{\text{UMAX}} \leq P'_{\text{CMAX\_H}} + T_{\text{HIGH}}(P'_{\text{CMAX\_H}})$$

with the tolerances  $T_{\text{LOW}}(P_{\text{CMAX}})$  and  $T_{\text{HIGH}}(P_{\text{CMAX}})$  for applicable values of  $P_{\text{CMAX}}$  specified in Table 6.2.5C-1.

**Table 6.2.5C-1:  $P_{\text{CMAX}}$  tolerance for inter-band Dual Connectivity**

| $P_{\text{CMAX}}(\text{dBm})$   | Tolerance<br>$T_{\text{LOW}}(P_{\text{CMAX\_L}})(\text{dB})$ | Tolerance<br>$T_{\text{HIGH}}(P_{\text{CMAX\_H}})(\text{dB})$ |
|---------------------------------|--|---|
| $P_{\text{CMAX}} = 23$          | 3.0  | 2.0   |
| $22 \leq P_{\text{CMAX}} < 23$  | 5.0  | 2.0   |
| $21 \leq P_{\text{CMAX}} < 22$  | 5.0  | 3.0   |
| $20 \leq P_{\text{CMAX}} < 21$  | 6.0  | 4.0   |
| $16 \leq P_{\text{CMAX}} < 20$  | 5.0  |   |
| $11 \leq P_{\text{CMAX}} < 16$  | 6.0  |   |
| $-40 \leq P_{\text{CMAX}} < 11$ | 7.0  |   |

## 6.2.5D Configured transmitted power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the configured maximum output power  $P_{\text{CMAX},c}$  and power boundary requirement specified in subclause 6.2.5 shall apply to UE supporting ProSe, where

- $\text{MPR}_c$  is specified in subclause 6.2.3D;
- $\text{A-MPR}_c$  is specified in subclause 6.2.4D;
- $\Delta T_{\text{ProSe}} = 0.1$  dB.

For  $P_{\text{CMAX},\text{PSSCH}}$  and  $P_{\text{CMAX},\text{PSCCH}}$ ,  $P_{\text{EMAX},c}$  is the value given by IE *P-Max* for serving cell  $c$ , defined by [7], when present.  $P_{\text{EMAX},c}$  is the value given by IE *maxTxPower*, defined by [7], when the UE is not associated with a serving cell on the ProSe carrier .

For  $P_{\text{CMAX},\text{PSDCH}}$ ,  $P_{\text{EMAX},c}$  is the value given by the IE *discMaxTxPower* in [7].

For  $P_{\text{CMAX},\text{PSBCH}}$ ,  $P_{\text{EMAX},c}$  is the value given by the IE *maxTxPower* in [7] when the ProSe UE is not associated with a serving cell on the ProSe carrier. When the UE is associated with a serving cell, then  $P_{\text{EMAX},c}$  is the value given by the IE *P-Max* when PSBCH/SLSS transmissions is triggered for ProSe Direct communication as specified in [7], and is the value given by the IE *discMaxTxPower* in [7] otherwise.

For  $P_{\text{CMAX},\text{SSSS}}$ , the value is as calculated for  $P_{\text{CMAX},\text{PSBCH}}$  and applying the MPR for SSSS as specified in Section 6.2.3D.

When a UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE is allowed to set its configured maximum output power  $P_{\text{CMAX},c,\text{E-UTRA}}$  and  $P_{\text{CMAX},c,\text{ProSe}}$  for the configured E-UTRA uplink carrier and the configured E-UTRA ProSe carrier, respectively, and its total configured maximum output power  $P_{\text{CMAX},c}$ .

The configured maximum output power  $P_{\text{CMAX},c,\text{E-UTRA}}(p)$  in subframe  $p$  for the configured E-UTRA uplink carrier shall be set within the bounds:

$$P_{\text{CMAX}_L,c,\text{E-UTRA}}(p) \leq P_{\text{CMAX},c,\text{E-UTRA}}(p) \leq P_{\text{CMAX}_H,c,\text{E-UTRA}}(p)$$

where  $P_{\text{CMAX}_L,c,\text{E-UTRA}}$  and  $P_{\text{CMAX}_H,c,\text{E-UTRA}}$  are the limits for a serving cell  $c$  as specified in subclause 6.2.5.

The configured maximum output power  $P_{\text{CMAX},c,\text{ProSe}}(q)$  in subframe  $q$  for the configured E-UTRA ProSe carrier shall be set within the bounds:

$$P_{\text{CMAX},c,\text{ProSe}}(q) \leq P_{\text{CMAX}_H,c,\text{ProSe}}(q)$$

where  $P_{\text{CMAX}_H,c,\text{ProSe}}$  is the limit as specified in subclause 6.2.5D.

The total UE configured maximum output power  $P_{\text{CMAX}}(p,q)$  in a subframe  $p$  of an E-UTRA uplink carrier and a subframe  $q$  of an E-UTRA ProSe sidelink that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$P_{\text{CMAX}_L}(p,q) \leq P_{\text{CMAX}}(p,q) \leq P_{\text{CMAX}_H}(p,q)$$

with

$$P_{\text{CMAX}_L}(p,q) = P_{\text{CMAX}_L,c,\text{E-UTRA}}(p)$$

$$P_{\text{CMAX}_H}(p,q) = \text{MIN} \{ 10 \log_{10} [p_{\text{CMAX}_H,c,\text{E-UTRA}}(p) + p_{\text{CMAX}_H,c,\text{ProSe}}(q)], P_{\text{PowerClass}} \}$$

where  $p_{\text{CMAX}_H,c,\text{ProSe}}$  and  $p_{\text{CMAX}_H,c,\text{E-UTRA}}$  are the limits  $P_{\text{CMAX}_H,c,\text{ProSe}}(q)$  and  $P_{\text{CMAX}_H,c,\text{E-UTRA}}(p)$  expressed in linear scale.

The measured total maximum output power  $P_{\text{UMAX}}$  over both the E-UTRA uplink and E-UTRA ProSe carriers is

$$P_{\text{UMAX}} = 10 \log_{10} [p_{\text{UMAX},c,\text{E-UTRA}} + p_{\text{UMAX},c,\text{ProSe}}],$$

where  $P_{UMAX,c,E-UTRA}$  denotes the measured output power of serving cell  $c$  for the configured E-UTRA uplink carrier, and  $P_{UMAX,c,ProSe}$  denotes the measured output power for the configured E-UTRA ProSe carrier expressed in linear scale.

When a UE is configured for synchronous ProSe and uplink transmissions,

$$P_{CMAX\_L}(p, q) - T_{LOW}(P_{CMAX\_L}(p, q)) \leq P_{UMAX} \leq P_{CMAX\_H}(p, q) + T_{HIGH}(P_{CMAX\_H}(p, q))$$

where  $P_{CMAX\_L}(p, q)$  and  $P_{CMAX\_H}(p, q)$  are the limits for the pair  $(p, q)$  and with the tolerances  $T_{LOW}(P_{CMAX})$  and  $T_{HIGH}(P_{CMAX})$  for applicable values of  $P_{CMAX}$  specified in Table 6.2.5C-1.  $P_{CMAX\_L}$  may be modified for any overlapping portion of subframes  $(p, q)$  and  $(p + 1, q + 1)$ .

When a UE is configured for asynchronous ProSe and uplink transmissions, the carrier configured for uplink transmission is taken as the reference. If subframe  $p$  for the E-UTRA uplink carrier and subframe  $q$  for the E-UTRA ProSe carrier overlap in time and

1. if uplink carrier leads in time over  $q$ , then  $p$  is the reference subframe and, the  $(p, q)$  and  $(p, q-1)$  pairs are considered for determining the  $P_{CMAX}$  tolerance
2. if ProSe carrier leads in time over  $p$ , then  $p$  is the reference subframe and, the  $(p, q)$  and  $(p, q+1)$  pairs are considered for determining the  $P_{CMAX}$  tolerance

For the reference subframe  $p$  duration when uplink carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,cE-UTRA}(p)$$

$$P'_{CMAX\_H} = \text{MAX} \{P_{CMAX\_H}(p, q-1), P_{CMAX\_H}(p, q)\}$$

For the reference subframe  $p$  duration when ProSe carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,cE-UTRA}(p)$$

$$P'_{CMAX\_H} = \text{MAX} \{P_{CMAX\_H}(p, q), P_{CMAX\_H}(p, q+1)\}$$

where  $P_{CMAX\_L,cE-UTRA}(p)$  and  $P_{CMAX\_H}$  are the applicable limits for each overlapping subframe pairs  $(p, q)$ ,  $(p, q+1)$ ,  $(p, q-1)$ . The measured total configured maximum output power  $P_{UMAX}$  shall be within the following bounds:

$$P'_{CMAX\_L} - T_{LOW}(P'_{CMAX\_L}) \leq P_{UMAX} \leq P'_{CMAX\_H} + T_{HIGH}(P'_{CMAX\_H})$$

with the tolerances  $T_{LOW}(P_{CMAX})$  and  $T_{HIGH}(P_{CMAX})$  for applicable values of  $P_{CMAX}$  specified in Table 6.2.5C-1.

## 6.2.5F Configured transmitted Power for category NB1 and NB2

For each slot  $i$  the category NB1 and NB2 UE is allowed to set its configured maximum output power  $P_{CMAX,c}$ . The configured maximum output power  $P_{CMAX,c}$  is set within the following bounds:

$$P_{CMAX\_L,c} \leq P_{CMAX,c} \leq P_{CMAX\_H,c}$$

Where

- $P_{CMAX\_L,c} = \text{MIN} \{ P_{EMAX,c}, P_{PowerClass} - MPR_c - A-MPR_c \}$
- $P_{CMAX\_H,c} = \text{MIN} \{ P_{EMAX,c}, P_{PowerClass} \}$
- $P_{EMAX,c}$  is the value given to IE *P-Max*, defined in [7]
- $P_{PowerClass}$  is the maximum category NB1 and NB2 UE power specified in Table 6.2.2F-1 without taking into account the associated tolerance
- $MPR_c$  is specified in subclause 6.2.3F
- $A-MPR_c = 0\text{dB}$  unless otherwise stated.

The measurement period for  $P_{UMAX,c}$  is at least one sub-frame (1ms) for 15 KHz channel spacing, and at least a 2ms slot (excluding the 2304Ts gap when UE is not transmitting) respectively for the 3.75 KHz channel spacing. The measured maximum output power  $P_{UMAX,c}$  shall be within the following bounds:

$$P_{CMAX,L,c} - T(P_{CMAX,L,c}) \leq P_{UMAX,c} \leq P_{CMAX,H,c} + T(P_{CMAX,H,c})$$

Where  $T(P_{CMAX})$  is defined by the tolerance table below and applies to  $P_{CMAX,L,c}$  and  $P_{CMAX,H,c}$  separately.

**Table 6.2.5F-1:  $P_{CMAX}$  tolerance for power class 3**

| $P_{CMAX}$ (dBm)           | Tolerance $T(P_{CMAX})$ (dB) |
|----------------------------|------------------------------|
| $21 \leq P_{CMAX} \leq 23$ | 2.0                          |
| $20 \leq P_{CMAX} < 21$    | 2.5                          |
| $19 \leq P_{CMAX} < 20$    | 3.5                          |
| $18 \leq P_{CMAX} < 19$    | 4.0                          |
| $13 \leq P_{CMAX} < 18$    | 5.0                          |
| $8 \leq P_{CMAX} < 13$     | 6.0                          |
| $-40 \leq P_{CMAX} < 8$    | 7.0                          |

**Table 6.2.5F-2:  $P_{CMAX}$  tolerance for power class 5**

| $P_{CMAX,c}$ (dBm)           | Tolerance $T(P_{CMAX,c})$ (dB) |
|------------------------------|--------------------------------|
| $18 \leq P_{CMAX,c} \leq 20$ | 2.0                            |
| $17 \leq P_{CMAX,c} < 18$    | 2.5                            |
| $16 \leq P_{CMAX,c} < 17$    | 3.5                            |
| $15 \leq P_{CMAX,c} < 16$    | 4.0                            |
| $10 \leq P_{CMAX,c} < 15$    | 5.0                            |
| $5 \leq P_{CMAX,c} < 10$     | 6.0                            |
| $-40 \leq P_{CMAX,c} < 5$    | 7.0                            |

**Table 6.2.5F-3:  $P_{CMAX}$  tolerance for power class 6**

| $P_{CMAX,c}$ (dBm)           | Tolerance $T(P_{CMAX,c})$ (dB) |
|------------------------------|--------------------------------|
| $13 \leq P_{CMAX,c} \leq 14$ | 2.5                            |
| $12 \leq P_{CMAX,c} < 13$    | 3.5                            |
| $11 \leq P_{CMAX,c} < 12$    | 4                              |
| $8 \leq P_{CMAX,c} < 11$     | 5                              |
| $5 \leq P_{CMAX,c} < 8$      | 6.0                            |
| $-40 \leq P_{CMAX,c} < 5$    | 7.0                            |

## 6.2.5G Configured transmitted power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the V2X UE is allowed to set its configured maximum output power  $P_{CMAX,c}$  for component carrier  $c$ . The configured maximum output power  $P_{CMAX,c}$  is set within the following bounds:

$$P_{CMAX,L,c} \leq P_{CMAX,c} \leq P_{CMAX,H,c} \text{ with}$$

$$P_{CMAX,L,c} = \text{MIN} \{ P_{EMAX,c} - \Delta T_{C,c}, P_{PowerClass} - \text{MAX}(MPR_c + A\text{-}MPR_c + \Delta T_{IB,c} + \Delta T_{C,c} + \Delta T_{ProSe}, P\text{-}MPR_c), P_{Regulatory,c} \}$$

$$P_{CMAX,H,c} = \text{MIN} \{ P_{EMAX,c}, P_{PowerClass}, P_{Regulatory,c} \}$$

where

- For the total transmitted power  $P_{\text{CMAX},c}$  of PSSCH and PSCCH,  $P_{\text{EMAX},c}$  is the value given by IE *maxTxPower*, defined by [7], when the UE is not associated with a serving cell on the V2X carrier.
- For  $P_{\text{CMAX,PSBCH}}$ ,  $P_{\text{EMAX},c}$  is the value given by the IE *maxTxPower* in [7] when the UE is not associated with a serving cell on the V2X carrier.
- For  $P_{\text{CMAX,SSSS}}$ , the value is as calculated for  $P_{\text{CMAX,PSBCH}}$  and applying the MPR for SSSS as specified in Section 6.2.3D.
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2-1 without taking into account the tolerance specified in the Table 6.2.2-1;
- $\text{MPR}_c$  and  $\text{A-MPR}_c$  for serving cell  $c$  are specified in subclause 6.2.3G and subclause 6.2.4G, respectively;
- $\Delta T_{\text{IB},c}$ ,  $\Delta T_{\text{C},c}$ ,  $\Delta T_{\text{ProSe}}$  and  $\text{P-MPR}_c$  are specified in subclause 6.2.5
- $P_{\text{Regulatory},c} = 10 - G_{\text{post connector}}$  dBm when the V2X UE is within the protected zone [13] of CEN DSRC tolling system and operating in Band 47;  $P_{\text{Regulatory},c} = 33 - G_{\text{post connector}}$  dBm otherwise.

The maximum output power  $P_{\text{CMAX,PSSCH}}$  and  $P_{\text{CMAX,PSCCH}}$  are derived from  $P_{\text{CMAX},c}$  based on the PSD offset following subclause 14.1.1.5 in [6]. For all cases, the PSD difference between PSCCH and PSSCH shall be the same as the PSD offset value.

For the measured configured maximum output power  $P_{\text{UMAX},c}$  for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions, the same requirement as in subclause 6.2.5 shall be applied.

When a UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE is allowed to set its configured maximum output power  $P_{\text{CMAX},c,E\text{-UTRA}}$  and  $P_{\text{CMAX},c,V2X}$  for the configured E-UTRA uplink carrier and the configured E-UTRA V2X carrier, respectively, and its total configured maximum output power  $P_{\text{CMAX},c}$ . The  $\Delta T_{\text{IB},c}$  of  $P_{\text{CMAX},c,E\text{-UTRA}}$  is specified in Table 6.2.5G-1.

The configured maximum output power  $P_{\text{CMAX},c,E\text{-UTRA}}(p)$  in subframe  $p$  for the configured E-UTRA uplink carrier shall be set within the bounds:

$$P_{\text{CMAX}_L,c,E\text{-UTRA}}(p) \leq P_{\text{CMAX},c,E\text{-UTRA}}(p) \leq P_{\text{CMAX}_H,c,E\text{-UTRA}}(p)$$

where  $P_{\text{CMAX}_L,c,E\text{-UTRA}}$  and  $P_{\text{CMAX}_H,c,E\text{-UTRA}}$  are the limits for a serving cell  $c$  as specified in subclause 6.2.5.

The configured maximum output power  $P_{\text{CMAX},c,V2X}(q)$  in subframe  $q$  for the configured E-UTRA V2X carrier shall be set within the bounds:

$$P_{\text{CMAX},c,V2X}(q) \leq P_{\text{CMAX}_H,c,V2X}(q)$$

where  $P_{\text{CMAX}_H,c,V2X}$  is the limit as specified in subclause 6.2.5G.

The total UE configured maximum output power  $P_{\text{CMAX}}(p,q)$  in a subframe  $p$  of an E-UTRA uplink carrier and a subframe  $q$  of an E-UTRA V2X sidelink that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$P_{\text{CMAX}_L}(p,q) \leq P_{\text{CMAX}}(p,q) \leq P_{\text{CMAX}_H}(p,q)$$

with

$$P_{\text{CMAX}_L}(p,q) = P_{\text{CMAX}_L,c,E\text{-UTRA}}(p)$$

$$P_{\text{CMAX}_H}(p,q) = 10 \log_{10} [p_{\text{CMAX}_H,c,E\text{-UTRA}}(p) + p_{\text{CMAX}_H,c,V2X}(q)]$$

where  $p_{\text{CMAX}_H,c,V2X}$  and  $p_{\text{CMAX}_H,c,E\text{-UTRA}}$  are the limits  $P_{\text{CMAX}_H,c,V2X}(q)$  and  $P_{\text{CMAX}_H,c,E\text{-UTRA}}(p)$  expressed in linear scale.

The measured total maximum output power  $P_{\text{UMAX}}$  over both the E-UTRA uplink and E-UTRA V2X carriers is

$$P_{\text{UMAX}} = 10 \log_{10} [p_{\text{UMAX},c,E\text{-UTRA}} + p_{\text{UMAX},c,V2X}],$$

where  $P_{UMAX,c,E-UTRA}$  denotes the measured output power of serving cell  $c$  for the configured E-UTRA uplink carrier, and  $P_{UMAX,c,V2X}$  denotes the measured output power for the configured E-UTRA V2X carrier expressed in linear scale.

When a UE is configured for synchronous V2X sidelink and uplink transmissions,

$$P_{CMAX\_L}(p, q) - T_{LOW}(P_{CMAX\_L}(p, q)) \leq P_{UMAX} \leq P_{CMAX\_H}(p, q) + T_{HIGH}(P_{CMAX\_H}(p, q))$$

where  $P_{CMAX\_L}(p, q)$  and  $P_{CMAX\_H}(p, q)$  are the limits for the pair  $(p, q)$  and with the tolerances  $T_{LOW}(P_{CMAX})$  and  $T_{HIGH}(P_{CMAX})$  for applicable values of  $P_{CMAX}$  specified in Table 6.2.5G-2.  $P_{CMAX\_L}$  may be modified for any overlapping portion of subframes  $(p, q)$  and  $(p+1, q+1)$ .

When a UE is configured for asynchronous V2X and uplink transmissions, the subframe  $p$  for the E-UTRA uplink carrier and subframe  $q$  for the E-UTRA V2X carrier overlap in time and

1. if uplink carrier leads in time over  $q$  and V2X UE sidelink transmission has SCI whose “Priority” field is set to a value less than the high layer parameter  $thresSL-TxPrioritization$ , then  $p$  is the reference subframe and the  $(p, q)$  and  $(p, q-1)$  pairs are considered for determining the PCMAX tolerance
2. if uplink carrier leads in time over  $q$  and V2X UE sidelink transmission has SCI whose “Priority” field is set to a value larger than the high layer parameter  $thresSL-TxPrioritization$ , then  $q$  is the reference subframe and the  $(p, q)$  and  $(p+1, q)$  pairs are considered for determining the PCMAX tolerance
3. if V2X carrier leads in time over  $p$  and V2X UE sidelink transmission has SCI whose “Priority” field is set to a value less than the high layer parameter  $thresSL-TxPrioritization$ , then  $p$  is the reference subframe and the  $(p, q)$  and  $(p, q+1)$  pairs are considered for determining the PCMAX tolerance
4. if V2X carrier leads in time over  $p$  and V2X UE sidelink transmission has SCI whose “Priority” field is set to a value larger than the high layer parameter  $thresSL-TxPrioritization$ , then  $q$  is the reference subframe and the  $(p-1, q)$  and  $(p, q)$  pairs are considered for determining the PCMAX tolerance

For the reference subframe  $p$  duration when uplink carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,c,E-UTRA}(p)$$

$$P'_{CMAX\_H} = \text{MAX}\{P_{CMAX\_H}(p, q-1), P_{CMAX\_H}(p, q)\}$$

For the reference subframe  $p$  duration when V2X carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,c,E-UTRA}(p)$$

$$P'_{CMAX\_H} = \text{MAX}\{P_{CMAX\_H}(p, q), P_{CMAX\_H}(p, q+1)\}$$

For the reference subframe  $q$  duration when uplink carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,c,E-UTRA}(q)$$

$$P'_{CMAX\_H} = \text{MAX}\{P_{CMAX\_H}(p, q), P_{CMAX\_H}(p+1, q)\}$$

For the reference subframe  $q$  duration when V2X carrier leads:

$$P'_{CMAX\_L} = P_{CMAX\_L,c,E-UTRA}(p)$$

$$P'_{CMAX\_H} = \text{MAX}\{P_{CMAX\_H}(p-1, q), P_{CMAX\_H}(p, q)\}$$

where  $P_{CMAX\_L,c,E-UTRA}(p)$  and  $P_{CMAX\_H}$  are the applicable limits for each overlapping subframe pairs above 4case with  $(p, q)$ ,  $(p, q-1)$  or  $(p, q)$ ,  $(p, q+1)$  or  $(p, q)$ ,  $(p+1, q)$  or  $(p, q)$ ,  $(p-1, q)$ . The measured total configured maximum output power  $P_{UMAX}$  shall be within the following bounds:

$$P'_{CMAX\_L} - T_{LOW}(P'_{CMAX\_L}) \leq P_{UMAX} \leq P'_{CMAX\_H} + T_{HIGH}(P'_{CMAX\_H})$$

with the tolerances  $T_{LOW}(P_{CMAX})$  and  $T_{HIGH}(P_{CMAX})$  for applicable values of  $P_{CMAX}$  specified in Table 6.2.5G-2.

For intra-band contiguous multi-carrier operation,  $MPR_c = MPR$  and  $A-MPR_c = A-MPR$  with  $MPR$  and  $A-MPR$  specified in subclause 6.2.3G and subclause 6.2.4G respectively. There is one power management term for the UE, denoted P-MPR, and  $P-MPR_c = P-MPR$ .  $P_{CMAX,c}$  is calculated under the assumption that the transmit power is increased by the same amount in dB on all component carriers.

The total configured maximum output power  $P_{\text{CMAX}}$  shall be set within the following bounds:

$$P_{\text{CMAX}_L} \leq P_{\text{CMAX}} \leq P_{\text{CMAX}_H}$$

$$P_{\text{CMAX}_L} = \text{MIN}\{10 \log_{10} \sum p_{\text{EMAX},c} - \Delta T_C, P_{\text{PowerClass}} - \text{MAX}(\text{MPR} + \text{A-MPR} + \Delta T_{\text{IB},c} + \Delta T_C + \Delta T_{\text{ProSe}}, \text{P-MPR}), P_{\text{Regulatory}}\}$$

$$P_{\text{CMAX}_H} = \text{MIN}\{10 \log_{10} \sum p_{\text{EMAX},c}, P_{\text{PowerClass}}, P_{\text{Regulatory}}\}$$

where

- $p_{\text{EMAX},c}$  is the linear value of  $P_{\text{EMAX},c}$  which is given by IE *maxTxPower* in [7];
- $P_{\text{PowerClass}}$  is the maximum UE power specified in Table 6.2.2G-1 without taking into account the tolerance specified in the Table 6.2.2G-1;
- MPR and A-MPR are specified in subclause 6.2.3G and subclause 6.2.4G respectively;
- $\Delta T_{\text{IB},c}$  is the additional tolerance for serving cell  $c$  as specified in Table 6.2.5-2;
- P-MPR is the power management term for the UE;
- $\Delta T_C$  is the highest value  $\Delta T_{C,c}$  among all serving cells  $c$  in the subframe over both timeslots.  $\Delta T_{C,c} = 1.5$  dB when NOTE 2 in Table 6.2.2-1 applies, otherwise  $\Delta T_{C,c} = 0$  dB;
- $\Delta T_{\text{ProSe}}$  applies as specified in subclause 6.2.5.
- $P_{\text{Regulatory}} = 10 - G_{\text{post connector}}$  dBm when V2X UE is within the protected zone [13] of CEN DSRC tolling system and operating in Band 47;  $P_{\text{Regulatory}} = 33 - G_{\text{post connector}}$  dBm otherwise.

NOTE: The supported post antenna connector gain  $G_{\text{post connector}}$  declared by the UE following the principle described in annex I.

**Table 6.2.5G-1:  $\Delta T_{\text{IB},c}$  for inter-band con-current V2X operation (two bands)**

| V2X con-current band Combination | E-UTRA or V2X Operating Band | $\Delta T_{\text{IB},c}$ [dB] |
|----------------------------------|------------------------------|-------------------------------|
| V2X_3-47                         | 3                            | 0.0                           |
| V2X_5-47                         | 5                            | 0.2                           |
| V2X_7-47                         | 7                            | 0.0                           |
| V2X_8-47                         | 8                            | 0.0                           |
| V2X_20-47                        | 20                           | 0.2                           |
| V2X_28A-47A                      | 28                           | 0.2                           |
| V2X_34-47                        | 34                           | 0.0                           |
| V2X_39-47                        | 39                           | 0.0                           |
| V2X_41-47                        | 41                           | 0.0                           |
| V2X_71A-47A                      | 71                           | 0.0                           |

For V2X UE supporting Transmit Diversity, the transmitted power is configured per each UE.

If the UE transmits on two antenna connectors at the same time, the tolerance is specified in Table 6.2.5G-2 and 6.2.5G-3 for PC2 and PC3 V2X UE respectively.

**Table 6.2.5G-2:  $P_{\text{CMAX},c}$  tolerance in Transmit Diversity scheme for PC2 V2X UE**

| $P_{\text{CMAX},c}$ (dBm)        | Tolerance $T_{\text{LOW}}(P_{\text{CMAX}_L,c})$ (dB) | Tolerance $T_{\text{HIGH}}(P_{\text{CMAX}_H,c})$ (dB) |
|----------------------------------|--|---|
| $P_{\text{CMAX},c} \geq 26$      | 3.0  | 2.0   |
| $23 \leq P_{\text{CMAX},c} < 26$ | 4.0  | 2.0   |
| $22 \leq P_{\text{CMAX},c} < 23$ | 5.0  | 2.0   |
| $21 \leq P_{\text{CMAX},c} < 22$ | 5.0  | 3.0   |
| $20 \leq P_{\text{CMAX},c} < 21$ | 6.0  | 4.0   |

|                                   |     |
|-----------------------------------|-----|
| $16 \leq P_{\text{CMAX},c} < 20$  | 5.0 |
| $11 \leq P_{\text{CMAX},c} < 16$  | 6.0 |
| $-30 \leq P_{\text{CMAX},c} < 11$ | 7.0 |

**Table 6.2.5G-3:  $P_{\text{CMAX},c}$  tolerance in Transmit Diversity scheme for PC3 V2X UE**

| $P_{\text{CMAX},c}$<br>(dBm)      | Tolerance<br>$T_{\text{LOW}}(P_{\text{CMAX},L,c})$ (dB) | Tolerance<br>$T_{\text{HIGH}}(P_{\text{CMAX},H,c})$ (dB) |
|-----------------------------------|---|--|
| $P_{\text{CMAX},c} = 23$          | 3.0   | 2.0  |
| $22 \leq P_{\text{CMAX},c} < 23$  | 5.0   | 2.0  |
| $21 \leq P_{\text{CMAX},c} < 22$  | 5.0   | 3.0  |
| $20 \leq P_{\text{CMAX},c} < 21$  | 6.0   | 4.0  |
| $16 \leq P_{\text{CMAX},c} < 20$  | 5.0   |  |
| $11 \leq P_{\text{CMAX},c} < 16$  | 6.0   |  |
| $-40 \leq P_{\text{CMAX},c} < 11$ | 7.0   |  |

If the UE transmits on one antenna connector at a time, the requirements in Table 6.2.5-1 apply to the active antenna connector.

## 6.3 Output power dynamics

### 6.3.1 (Void)

### 6.3.2 Minimum output power

The minimum controlled output power of the UE is defined as the broadband transmit power of the UE, i.e. the power in the channel bandwidth for all transmit bandwidth configurations (resource blocks), when the power is set to a minimum value.

#### 6.3.2.1 Minimum requirement

The minimum output power is defined as the mean power in one sub-frame (1ms). The minimum output power shall not exceed the values specified in Table 6.3.2.1-1.

**Table 6.3.2.1-1: Minimum output power**

|                       | Channel bandwidth / Minimum output power / Measurement bandwidth |         |         |         |          |        |
|-----------------------|--|---------|---------|---------|----------|--------|
|                       | 1.4 MHz  | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Minimum output power  | -40 dBm  |         |         |         |          |        |
| Measurement bandwidth | 1.08 MHz   | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

### 6.3.2A UE Minimum output power for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and non-contiguous carrier aggregation, the minimum controlled output power of the UE is defined as the transmit power of the UE per component carrier, i.e., the power in the channel bandwidth of each component carrier for all transmit bandwidth configurations (resource blocks), when the power on both component carriers are set to a minimum value.

#### 6.3.2A.1 Minimum requirement for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the minimum output power is defined per carrier and the requirement is specified in subclause 6.3.2.1. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclause 6.3.2A.1 apply for those component carriers.

For intra-band contiguous and non-contiguous carrier aggregation the minimum output power is defined as the mean power in one sub-frame (1ms). The minimum output power shall not exceed the values specified in Table 6.3.2A.1-1.

**Table 6.3.2A.1-1: Minimum output power for intra-band contiguous and non-contiguous CA UE**

|                       | CC Channel bandwidth / Minimum output power / Measurement bandwidth |         |         |         |          |        |
|-----------------------|---|---------|---------|---------|----------|--------|
|                       | 1.4 MHz   | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Minimum output power  | -40 dBm   |         |         |         |          |        |
| Measurement bandwidth |   |         | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

## 6.3.2B UE Minimum output power for UL-MIMO

For UE supporting UL-MIMO, the minimum controlled output power is defined as the broadband transmit power of the UE, i.e. the sum of the power in the channel bandwidth for all transmit bandwidth configurations (resource blocks) at each transmit antenna connector, when the UE power is set to a minimum value.

### 6.3.2B.1 Minimum requirement

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the minimum output power is defined as the sum of the mean power at each transmit connector in one sub-frame (1ms). The minimum output power shall not exceed the values specified in Table 6.3.2B.1-1.

**Table 6.3.2B.1-1: Minimum output power**

|                       | Channel bandwidth / Minimum output power / Measurement bandwidth |         |         |         |          |        |
|-----------------------|--|---------|---------|---------|----------|--------|
|                       | 1.4 MHz  | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Minimum output power  | -40 dBm  |         |         |         |          |        |
| Measurement bandwidth | 1.08 MHz   | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3.2 apply.

### 6.3.2C Void

<reserved for future use>

### 6.3.2D UE Minimum output power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.3.2 apply for ProSe transmission.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.2A apply as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

### 6.3.2F UE Minimum output power for category NB1 and NB2

For category NB1 and NB2 UE the single-tone and multi-tone transmission minimum output power requirement for the channel bandwidth is -40 dBm. For 3.75kHz sub-carrier spacing the minimum output power is defined as mean power in one slot (2ms) excluding the 2304Ts gap when UE is not transmitting. For 15kHz sub-carrier spacing the minimum output power is defined as mean power in one sub-frame (1ms).

## 6.3.2G UE Minimum output power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the minimum output power shall not exceed the values specified in Table 6.3.2G-1.

**Table 6.3.2G-1: Minimum output power**

|                       | Channel bandwidth / Minimum output power / Measurement bandwidth |         |       |         |        |        |
|-----------------------|--|---------|-------|---------|--------|--------|
|                       | 1.4 MHz  | 3.0 MHz | 5 MHz | 10 MHz  | 15 MHz | 20 MHz |
| Minimum output power  | -30 dBm  |         |       |         |        |        |
| Measurement bandwidth |  |         |       | 9.0 MHz |        | 18 MHz |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements specified in subclause 6.3.2 shall apply for the uplink and the requirements specified in subclause 6.3.2G shall apply for the sidelink.

For intra-band contiguous E-UTRA V2X multiple carrier transmissions, the requirements specified in subclause 6.3.2G shall apply for each sidelink carrier.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the minimum output power is defined as the sum of the mean power at each transmit connector in one sub-frame (1ms). The minimum output power shall not exceed the values specified for single carrier.

If the UE transmits on a one antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

## 6.3.3 Transmit OFF power

Transmit OFF power is defined as the mean power when the transmitter is OFF. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During DTX and measurements gaps, the UE is not considered to be OFF.

### 6.3.3.1. Minimum requirement

The transmit OFF power is defined as the mean power in a duration of at least one sub-frame (1ms) excluding any transient periods. The transmit OFF power shall not exceed the values specified in Table 6.3.3.1-1.

**Table 6.3.3.1-1: Transmit OFF power**

|                       | Channel bandwidth / Transmit OFF power / Measurement bandwidth |         |         |         |          |        |
|-----------------------|--|---------|---------|---------|----------|--------|
|                       | 1.4 MHz  | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Transmit OFF power    | -50 dBm  |         |         |         |          |        |
| Measurement bandwidth | 1.08 MHz   | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

## 6.3.3A UE Transmit OFF power for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and non-contiguous carrier aggregation, transmit OFF power is defined as the mean power per component carrier when the transmitter is OFF on all component carriers. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During measurements gaps, the UE is not considered to be OFF.

### 6.3.3A.1 Minimum requirement for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, transmit OFF power requirement is defined per carrier and the requirement is specified in subclause 6.3.3.1. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclause 6.3.3A.1 apply for those component carriers.

For intra-band contiguous and non-contiguous carrier aggregation the transmit OFF power is defined as the mean power in a duration of at least one sub-frame (1ms) excluding any transient periods. The transmit OFF power shall not exceed the values specified in Table 6.3.3A.1-1.

**Table 6.3.3A.1-1: Transmit OFF power for intra-band contiguous and non-contiguous CA UE**

|                       | CC Channel bandwidth / Transmit OFF power / Measurement bandwidth |         |         |         |          |        |
|-----------------------|---|---------|---------|---------|----------|--------|
|                       | 1.4 MHz   | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Transmit OFF power    | -50 dBm   |         |         |         |          |        |
| Measurement bandwidth |   |         | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

### 6.3.3B UE Transmit OFF power for UL-MIMO

For UE supporting UL-MIMO, the transmit OFF power is defined as the mean power at each transmit antenna connector when the transmitter is OFF at all transmit antenna connectors. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During DTX and measurements gaps, the UE is not considered to be OFF.

#### 6.3.3B.1 Minimum requirement

The transmit OFF power is defined as the mean power at each transmit antenna connector in a duration of at least one sub-frame (1ms) excluding any transient periods. The transmit OFF power at each transmit antenna connector shall not exceed the values specified in Table 6.3.3B.1-1.

**Table 6.3.3B.1-1: Transmit OFF power per antenna port**

|                       | Channel bandwidth / Transmit OFF power/ Measurement bandwidth |         |         |         |          |        |
|-----------------------|---|---------|---------|---------|----------|--------|
|                       | 1.4 MHz   | 3.0 MHz | 5 MHz   | 10 MHz  | 15 MHz   | 20 MHz |
| Transmit OFF power    | -50 dBm   |         |         |         |          |        |
| Measurement bandwidth | 1.08 MHz  | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

### 6.3.3D Transmit OFF power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the ProSe UE shall meet the Transmit OFF power at all times when the UE is not associated with a serving cell on the ProSe carrier and does not have knowledge of its geographical area or is provisioned with pre-configured radio parameters that are not associated with any known Geographical Area.

The requirements specified in subclause 6.3.3 shall apply to UE supporting ProSe when

- the UE is associated with a serving cell on the ProSe carrier, or
- the UE is not associated with a serving cell on the ProSe carrier and is provisioned with the preconfigured radio parameters for ProSe Direct Communications and/or ProSe Direct Discovery that are associated with known Geographical Area, or

- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and the radio parameters for ProSe Direct Discovery on the ProSe carrier are provided by the serving cell, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and has a non-serving cell selected on the ProSe carrier that supports ProSe Direct Discovery and/or ProSe Direct Communication.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, transmit OFF power is defined as the mean power per component carrier when the transmitter is OFF on all component carriers. During measurement gaps and transmission/reception gaps for ProSe, the UE is not considered to be OFF. Transmit OFF power requirement as specified in subclause 6.3.3 apply per carrier.

### 6.3.3F Transmit OFF power for category NB1 and NB2

For category NB1 and NB2 UE the transmit OFF power requirement for the channel bandwidth is -50 dBm. For 3.75kHz sub-carrier spacing the transmit OFF power is defined as mean power in one slot (2ms) excluding the 2304Ts gap when UE is not transmitting. For 15kHz sub-carrier spacing the transmit OFF power is defined as mean power in one sub-frame (1ms).

### 6.3.3G Transmit OFF power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the V2X UE shall meet the Transmit OFF power in subclause 6.3.3D.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.3A apply for as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

For intra-band contiguous E-UTRA V2X multiple carrier transmissions, the requirements in subclause 6.3.3A apply as specified for the corresponding intra band contiguous carrier aggregation.

The transmit OFF power is defined as the mean power at each transmit antenna connector.

The transmit OFF power at each transmit antenna connector shall not exceed the values specified for single carrier.

## 6.3.4 ON/OFF time mask

### 6.3.4.1 General ON/OFF time mask

The General ON/OFF time mask defines the observation period between Transmit OFF and ON power and between Transmit ON and OFF power. ON/OFF scenarios include; the beginning or end of DTX, measurement gap, contiguous, and non contiguous transmission

The OFF power measurement period is defined in a duration of at least one subframe, or one slot or one subslot for sTTI, excluding any transient periods. The ON power is defined as the mean power over one subframe, or one slot or one subslot for sTTI, excluding any transient period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The transient period length shall be no longer than the specified value in Table 6.3.4.1-1.

**Table 6.3.4.1-1: Transient period length depending on transmission length**

| TTI pattern  | Channel BW (MHz) | TTI Duration | Transient period length (μs) |
|--------------|------------------|--------------|------------------------------|
| Subframe TTI |                  | 1ms          | 20                           |
| Slot TTI     | 1.4              | 1 slot       | 20                           |
|              | > 1.4            | 1 slot       | 10                           |
| Subslot TTI  | 1.4              | 2os or 3 os  | 20                           |
|              | > 1.4            | 2os or 3 os  | 10                           |

**Figure 6.3.4.1-1: General ON/OFF time mask for subframe TTI and for Frame Structure Type 1 and Frame Structure Type 2**

For Frame Structure Type 3 the general ON/OFF mask is specified in 6.3.4.1-1A with the PUSCH starting position modified by  $t_D = N_{start}^{FS3} T_s$  relative to the start of the sub-frame as indicated in the associated DCI, where  $N_{start}^{FS3}$  and the basic time unit  $T_s$  are specified in [4]. At the end of the sub-frame  $t_{end} = 0$  and  $t_{end} = T_{symp}$  with  $T_{symp}$  denoting the duration of the last SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI has value '0' and '1' as specified in [5], respectively; the OFF power requirement applies 5 µs after the end of the last symbol transmitted.

**Figure 6.3.4.1-1A: General ON/OFF time mask for subframe TTI and for Frame Structure Type 3**

**Figure 6.3.4.1-1B: General ON/OFF time mask for sTTI and for Frame Structure Type 1 and Frame Structure Type 2**

### 6.3.4.2 PRACH and SRS time mask

#### 6.3.4.2.1 PRACH time mask

The PRACH ON power is specified as the mean power over the PRACH measurement period excluding any transient periods as shown in Figure 6.3.4.2-1. The measurement period for different PRACH preamble format is specified in Table 6.3.4.2-1.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

**Table 6.3.4.2-1: PRACH ON power measurement period**

| PRACH preamble format | Measurement period (ms) |
|-----------------------|-------------------------|
| 0                     | 0.9031                  |
| 1                     | 1.4844                  |
| 2                     | 1.8031                  |
| 3                     | 2.2844                  |
| 4                     | 0.1479                  |

**Figure 6.3.4.2-1: PRACH ON/OFF time mask**

#### 6.3.4.2.2 SRS time mask

In the case a single SRS transmission, the ON power is defined as the mean power over the symbol duration excluding any transient period; Figure 6.3.4.2.2-1 and Figure 6.3.4.2.2-1A.

In the case a dual SRS transmission, the ON power is defined as the mean power for each symbol duration excluding any transient period. Figure 6.3.4.2.2-2

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

**Figure 6.3.4.2.2-1: Single SRS time mask for Frame Structure Type 1 and Frame Structure Type 2**

For Frame Structure Type 3 and single SRS transmission, the SRS time mask is specified in 6.3.4.2-2A; the OFF power requirement applies [5]  $\mu$ s after the end of the SRS symbol.

Figure 6.3.4.2-1A: Single SRS time mask for Frame Structure Type 3

Figure 6.3.4.2-2: Dual SRS time mask for the case of UpPTS transmissions

For SRS transmission mapped to two or more OFDM symbols the ON power is defined as the mean power for each symbol duration excluding any transient period. For consecutive SRS transmissions without power change, Figure 6.3.4.2.2-3 applies.

Figure 6.3.4.2-3: Consecutive SRS time mask for the case when no power change is required

When power change between consecutive SRS transmissions is required, then Figure 6.3.4.2.2-4 and Figure 6.3.4.2.2-5 apply.

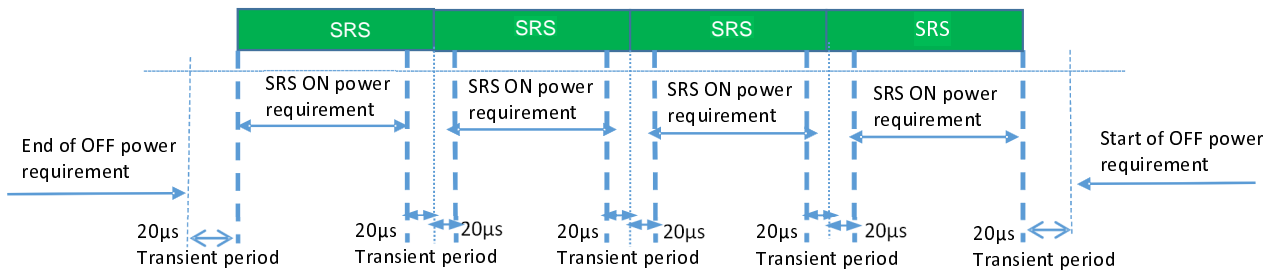

Figure 6.3.4.2.2-4: Consecutive SRS time mask for the case when power change is required

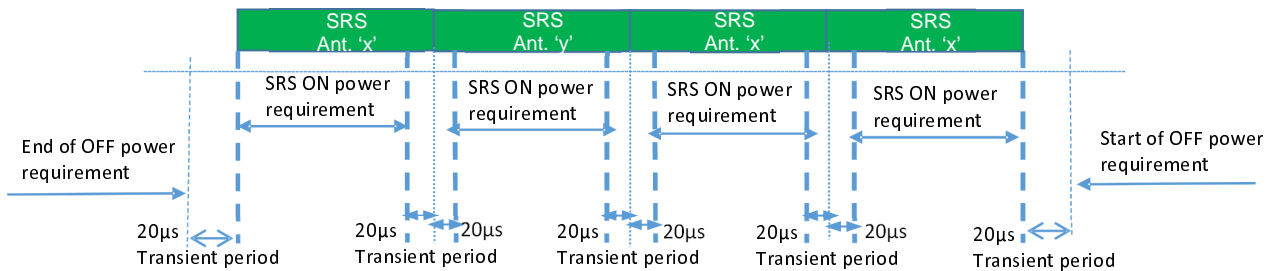

Figure 6.3.4.2.2-5: Time mask for SRS antenna switching

The above transient period applies to all the transmit CCs in CA with the CC sounding SRS. UE RF requirements do not apply during this transient period.

### 6.3.4.3 Slot / Sub frame boundary time mask for subframe TTI

The sub frame boundary time mask defines the observation period between the previous/subsequent sub-frame and the (reference) sub-frame. A transient period at a slot boundary within a sub-frame is only allowed in the case of Intra-sub frame frequency hopping. For the cases when the subframe contains SRS the time masks in subclause 6.3.4.4 apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

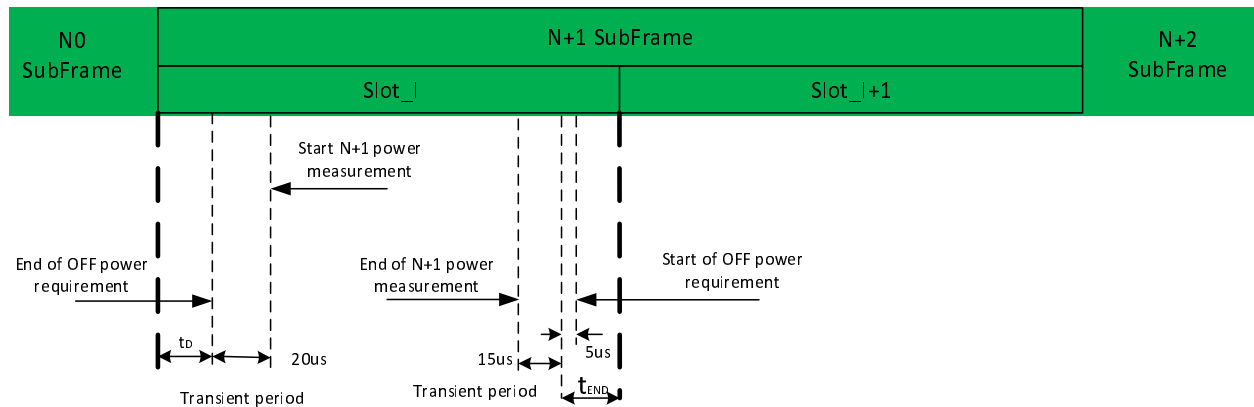

Figure 6.3.4.3-1: Transmission power template for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the sub-frame boundary time mask is specified in Figure 6.3.4.3-1A when the bit indicating the PUSCH ending symbol in the associated DCI has value ‘1’ and the PUSCH starting position is modified by  $t_D$  in the following subframe (clause 6.3.4.1);  $T_{symbol}$  denotes the duration of the ending SC-FDMA symbol. the OFF power requirement applies 5 µs after the end of the last symbol transmitted.

**Figure 6.3.4.3-1A: Transmission power template when the bit in the associated DCI indicating the PUSCH ending symbol has value ‘1’ for Frame Structure Type 3**

For Frame Structure Type 3 the first slot boundary time mask is specified in Figure 6.3.4.3-1B when the PUSCH mode is 3 indicated in DCI [4]. The PUSCH starting position modified by  $t_D = N_{start}^{FS3} T_s$  relative to the start of the sub-frame as indicated in the associated DCI, where  $N_{start}^{FS3}$  and the basic time unit  $T_s$  are specified in TS 36.211 [4]. At the end of the first slot  $t_{end} = 3 \cdot T_{symp}$  or  $t_{end} = 0$  with  $T_{symp}$  denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either fourth or seventh symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies 5 µs after the end of the last symbol transmitted.

**Figure 6.3.4.3-1B: Transmission power template for the first slot in one subframe for Frame Structure Type 3**

For Frame Structure Type 3 the second slot boundary time mask is specified in Figure 6.3.4.3-1C when the PUSCH mode is 2 indicated in DCI [4]. The PUSCH starting position modified by  $t_D = N_{start}^{FS3} T_s$  relative to the start of the second slot as indicated in the associated DCI, where  $N_{start}^{FS3}$  and the basic time unit  $T_s$  are specified in TS 36.211 [4]. At the end of the second slot  $t_{end} = T_{symp}$  or  $t_{end} = 0$  with  $T_{symp}$  denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either thirteenth or fourteenth symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies 5 µs after the end of the last symbol transmitted.

For Frame Structure Type 3 the second slot boundary time mask specified in Figure 6.3.4.3-1C can also be applied when the PUSCH mode is 1 indicated in DCI [4] and transmission starts at the eighth symbol. The PUSCH starting position  $t_D = 0$  relative to the start of the second slot. At the end of the second slot  $t_{end} = T_{symp}$  or  $t_{end} = 0$  with  $T_{symp}$  denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either thirteenth or fourteenth symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies 5 µs after the end of the last symbol transmitted.

**Figure 6.3.4.3-1C: Transmission power template for the second slot in one subframe for Frame Structure Type 3**

6.3.4.4 PUCCH / PUSCH / SRS time mask for subframe TTI

The PUCCH/PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent PUSCH/PUCCH symbol and subsequent sub-frame. The time masks apply for all types of frame structures and their allowed PUCCH/PUSCH/SRS transmissions unless otherwise stated.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

**Figure 6.3.4.4-1: PUCCH/PUSCH/SRS time mask when there is a transmission before SRS but not after for Frame Structure Type 1 and Frame Structure Type 2**

For Frame Structure Type 3 the PUSCH/SRS time mask when there is a transmission before SRS but not after is specified in Figure 6.3.4.4-1A; the OFF power requirement applies 5 μs after the end of the last symbol transmitted.

**Figure 6.3.4.4-1A: PUSCH/SRS time mask when there is a transmission before SRS but not after for Frame Structure Type 3**

Figure 6.3.4.4-2: PUCCH/PUSCH/SRS time mask when there is transmission before and after SRS

Figure 6.3.4.4-3: PUCCH/PUSCH/SRS time mask when there is a transmission after SRS but not before

Figure 6.3.4.4-4: SRS time mask when there is FDD SRS blanking for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the PUSCH/SRS time mask with transmission after the SRS symbol and the PUSCH starting position modified by  $t_D$  in the following subframe (clause 6.3.4.1) is specified in Figure 6.3.4.4-4A when there is SRS blanking.

Figure 6.3.4.4-4A: SRS time mask when there is SRS blanking for Frame Structure Type 3

### 6.3.4.5 Symbol / Subslot boundary time mask for subslot TTI

The subslot boundary time mask defines the observation period between the previous/subsequent subslot and the (reference) subslot. A transient period at a symbol boundary within a subslot is only allowed in the case of Intra-subslot frequency hopping. For the cases when the subslot contains SRS the time masks in subclause 6.3.4.6 apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Following time masks requirements shall be applied:

- the transient period shall be equally shared between two consecutive Reference symbols or Data symbols (figure 6.3.4.5-1 and figure 6.3.4.5-4).
- Otherwise, the transient period shall be placed in the Reference symbol (figure 6.3.4.5-2 and figure 6.3.4.5-3).

Figure 6.3.4.5-1: Transmission power template for subslot TTI – transient period shared

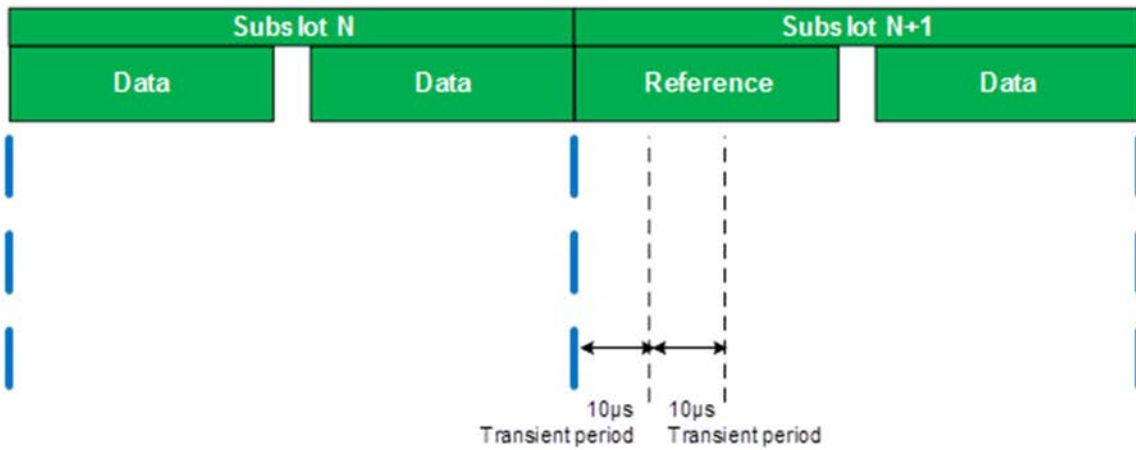

Figure 6.3.4.5-2: Transmission power template for subslot TTI – transient period not shared

Figure 6.3.4.5-3: Transmission power template for subslot TTI – transient period not shared

Figure 6.3.4.5-4: Transmission power template for subslot TTI – transient period shared

### 6.3.4.6 Subslot PUCCH / subslot PUSCH / SRS time mask for subslot TTI

The subslot PUCCH/subslot PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) in the last symbol in subslot N and an adjacent subslot PUSCH/subslot PUCCH symbol in subslot N+1.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Following time masks requirement shall be applied when SRS is either transmitted or blanked:

- the transient period shall be placed in Reference symbol when the transient is in between Reference symbol and SRS (figure 6.3.4.6-1, figure 6.3.4.6-2, figure 6.3.4.6-5 and figure 6.3.4.6-7).
- the transient period shall be equally shared when the transient is in between Data symbol and SRS (figure 6.3.4.6-3 and figure 6.3.4.6-4).

Figure 6.3.4.6-1: subslot PUSCH/SRS time mask when there is a Reference symbol before SRS (or SRS blanking) and data symbol after

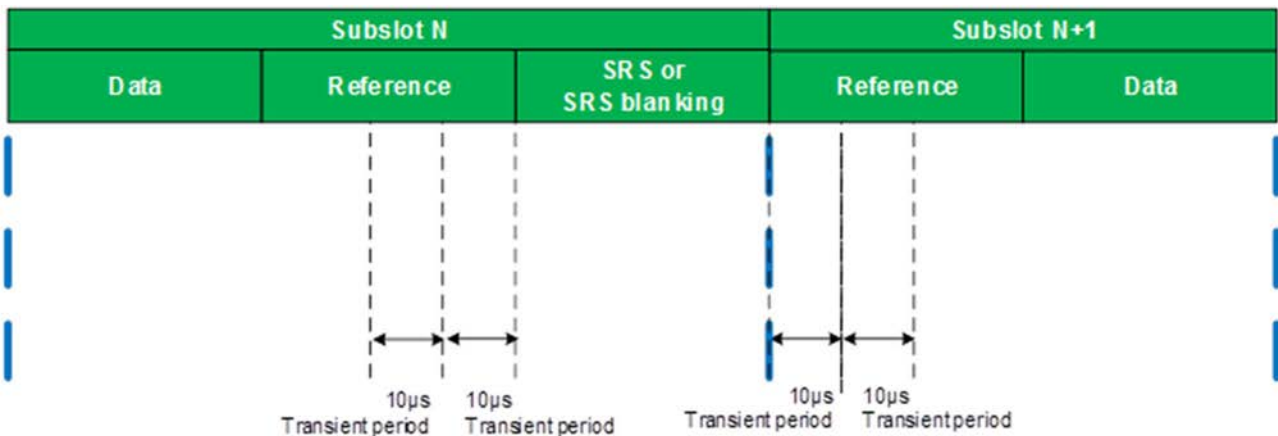

Figure 6.3.4.6-2: subslot PUSCH/SRS time mask when there is a Reference symbol before SRS (or SRS blanking) and Reference symbol after

Figure 6.3.4.6-3: subslot PUSCH/SRS time mask when there is a data symbol before SRS (or SRS blanking) and data symbol after

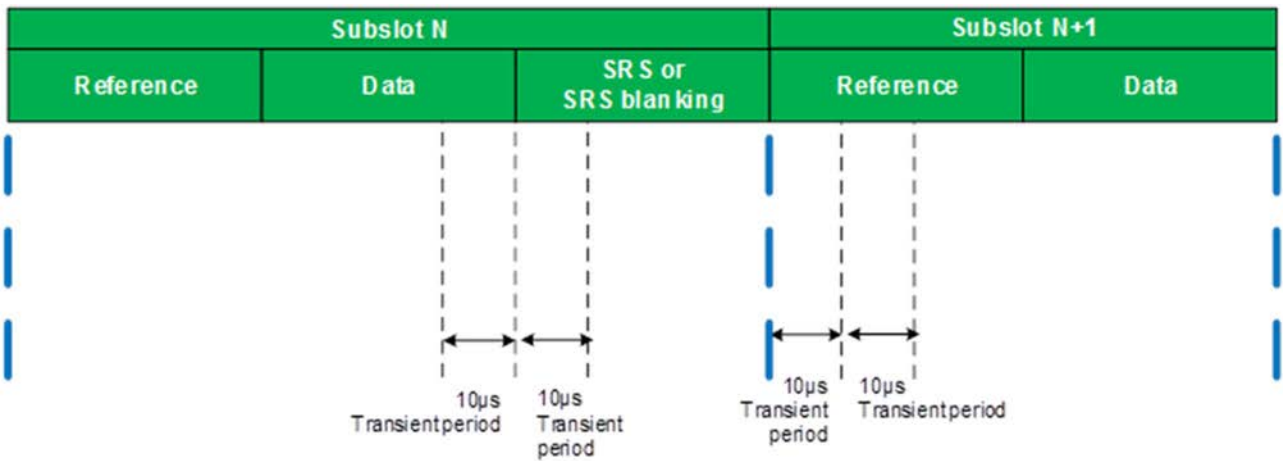

Figure 6.3.4.6-4: subslot PUSCH/SRS time mask when there is a data symbol before SRS (or SRS blanking) and Reference symbol after

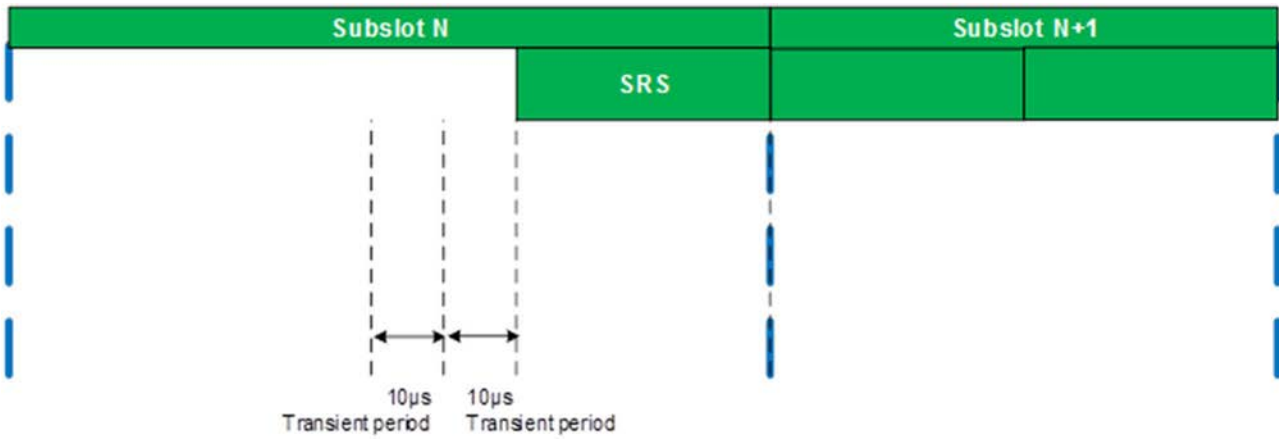

Figure 6.3.4.6-5: subslot PUSCH/SRS time mask when there is a no symbol before SRS

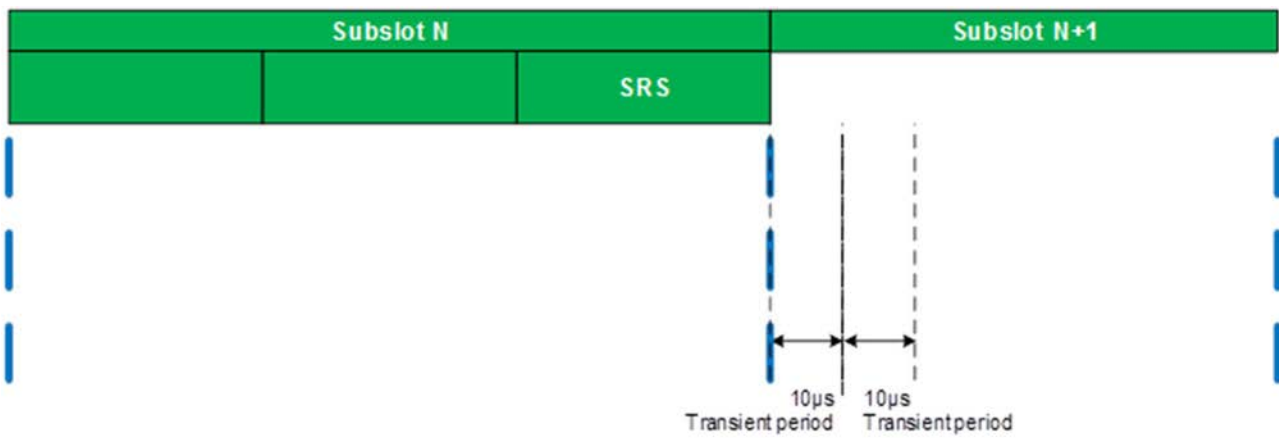

Figure 6.3.4.6-6: subslot PUSCH/SRS time mask when there is a no symbol after SRS

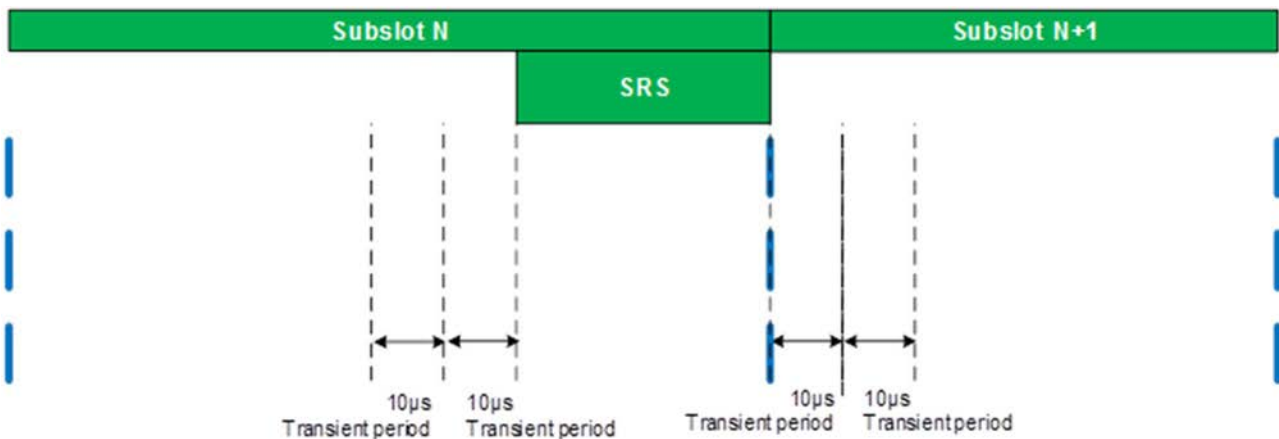

Figure 6.3.4.6-7: subslot PUSCH/SRS time mask when there is a no symbol before and after SRS

### 6.3.4.7 Symbol / Slot boundary time mask for slot TTI

The slot boundary time mask defines the observation period between the previous/subsequent slot and the (reference) slot. A transient period at a symbol boundary within a slot is only allowed in the case of Intra slot frequency hopping. For the cases when the slot contains SRS the time masks in subclause 6.3.4.8 shall apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

For slot boundary, the time masks specified in subclause 6.3.4.4 shall apply with a transient time of 10µs instead of 20µs.

For frequency hopping within the slot, the time masks specified in subclause 6.3.4.5 shall apply.

### 6.3.4.8 Slot PUCCH / slot PUSCH / SRS time mask for slot TTI

The slot PUCCH/slot PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent slot PUSCH/slot PUCCH symbol and subsequent slot.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The time masks specified in subclause 6.3.4.4 shall apply.

### 6.3.4.9 Consecutive subslot and slot TTI or consecutive subslot and subframe TTI time mask

The consecutive subslot and slot boundary time mask or consecutive subslot and subframe boundary time mask defines the observation period between the subslot and the slot or subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

In this case, the transient period shall be placed in the subframe TTI or the slot TTI (figure 6.3.4.9-1)

Figure 6.3.4.9-1: subslot TTI and subframe TTI boundary

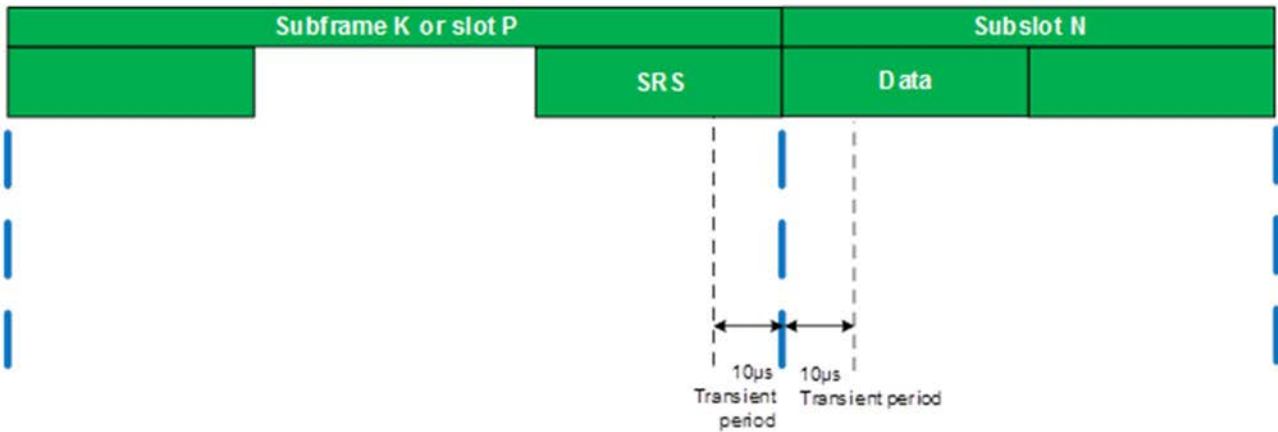

### 6.3.4.10 Consecutive subframe and subslot TTI or consecutive slot and subslot TTI time mask

The consecutive subframe and subslot boundary time mask or consecutive slot and subslot boundary time mask defines the observation period between the slot or subframe and the subslot.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

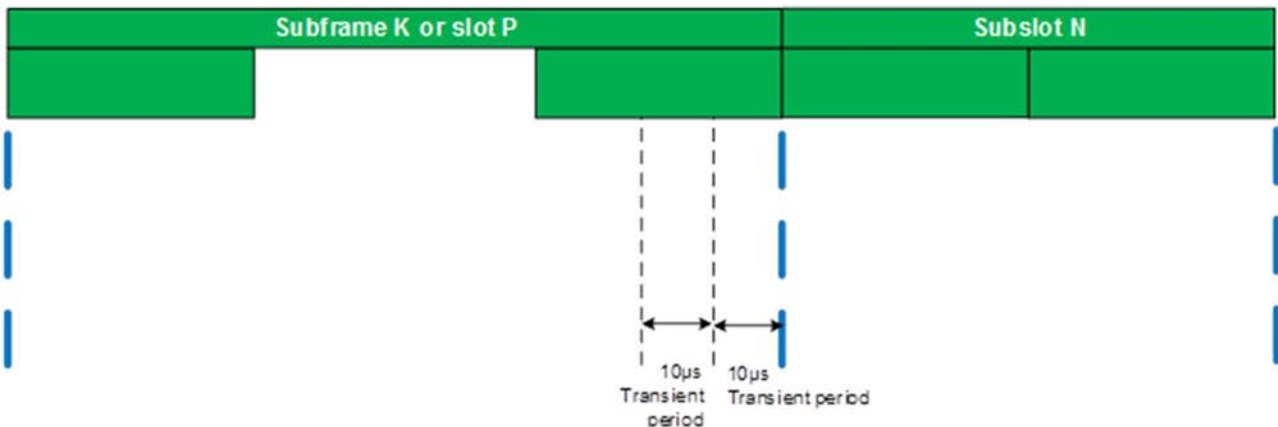

**Figure 6.3.4.10-1: Subframe TTI and subslot TTI boundary with SRS in last subframe TTI symbol and Reference Symbol in first subslot TTI symbol**

**Figure 6.3.4.10-2: Subframe TTI and subslot TTI boundary with SRS in last subframe TTI symbol and data Symbol in first subslot TTI symbol**

When the last symbol of the Subframe or slot is not SRS then the transient period is placed in the Subframe or Slot.

**Figure 6.3.4.10-3: subframe TTI and subslot TTI boundary**

6.3.4.11 Consecutive TTI and slot TTI or consecutive slot TTI and TTI time mask

The consecutive subframe and slot boundary time mask or consecutive slot and subframe boundary time mask defines the observation period between the subframe and the slot or the slot and the subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The time masks at subframe boundary specified in subclause 6.3.4.3 or at slot boundary specified in subclause 6.3.4.7 shall apply.

### 6.3.4A ON/OFF time mask for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and non-contiguous carrier aggregation, the general output power ON/OFF time mask specified in subclause 6.3.4.1 is applicable for each component carrier during the ON power period and the transient periods. The OFF period as specified in subclause 6.3.4.1 shall only be applicable for each component carrier when all the component carriers are OFF.

### 6.3.4B ON/OFF time mask for UL-MIMO

For UE supporting UL-MIMO, the ON/OFF time mask requirements in subclause 6.3.4 apply at each transmit antenna connector.

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the general ON/OFF time mask requirements specified in subclause 6.3.4.1 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3.4 apply.

### 6.3.4D ON/OFF time mask for ProSe

For ProSe Direct Discovery and ProSe Direct Communications, additional requirements on ON/OFF time masks for ProSe physical channels and signals are specified in this clause.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.4D apply for ProSe transmission and the requirements in subclause 6.3.4 apply for uplink transmission.

#### 6.3.4D.1 General time mask for ProSe

The General ON/OFF time mask defines the observation period between the Transmit OFF and ON power and between Transmit ON and OFF power for PSDCH, PSCCH, and PSSCH transmissions in a subframe wherein the last symbol is punctured to create a guard period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

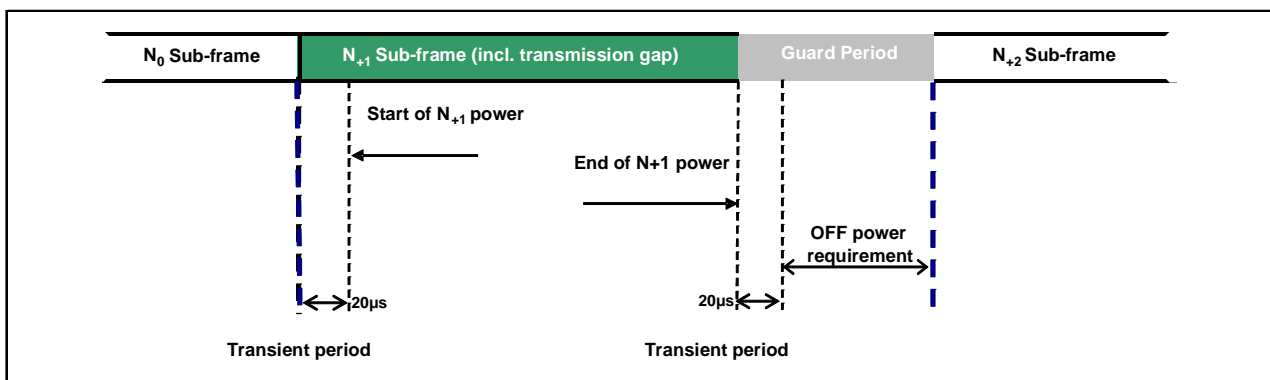

Figure 6.3.4D.1-1: PSDCH/PSCCH/PSSCH time mask

### 6.3.4D.2 PSSS/SSSS time mask

The PSSS time mask / SSSS time mask defines the observation period between the Transmit OFF and ON power and between Transmit ON and OFF power for PSSS/SSSS transmissions in a subframe when not multiplexed with PSBCH in that subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

Figure 6.3.4D.2-1: PSSS time mask for normal CP transmission (when not time-multiplexed with PSBCH)

Figure 6.3.4D.2-2: PSSS time mask for extended CP transmission (when not time-multiplexed with PSBCH)

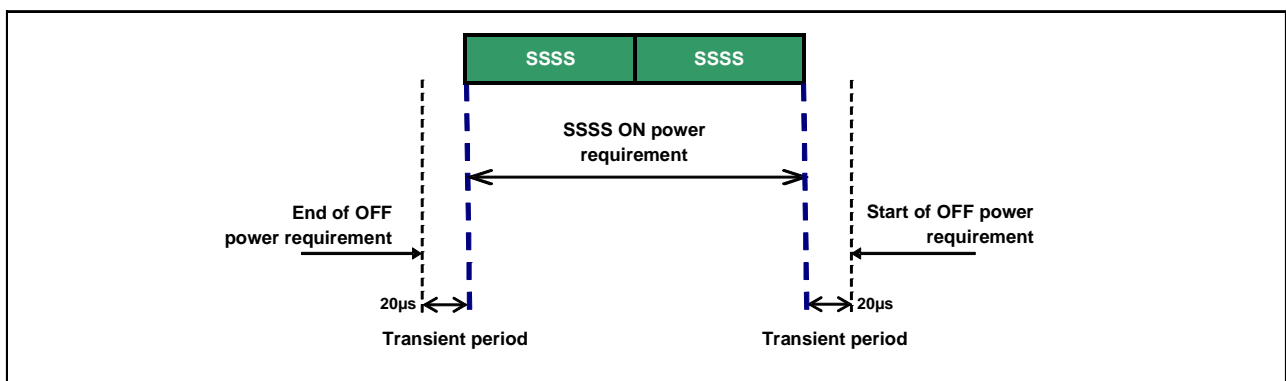

Figure 6.3.4D.2-3: SSSS time mask (when not time-multiplexed with PSBCH)

### 6.3.4D.3 PSSS / SSSS / PSBCH time mask

The PSSS/SSSS/PSBCH time mask defines the observation period between SSSS and adjacent PSSS/PSBCH symbols in a subframe, with last symbol punctured to create a guard period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

Figure 6.3.4D.3-1: PSSS/SSSS/PSBCH time mask for normal CP transmission

Figure 6.3.4D.3-2: PSSS/SSSS/PSBCH time mask for extended CP transmission

### 6.3.4D.4 PSSCH / SRS time mask

The PSSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent PSSCH symbol and subsequent sub-frame.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

The PSSCH/SRS time mask shall follow the PUSCH/PUCCH/SRS time mask as specified in subclause 6.3.4.4.

### 6.3.4F ON/OFF time mask for category NB1 and NB2

#### 6.3.4F.1 General ON/OFF time mask

E-UTRA general ON/OFF time mask in subclause 6.3.4.1 applies for category NB1 and NB2 UE with an exception that for 3.75kHz sub-carrier spacing the transmit OFF power is defined as mean power in one slot (2ms) and for 15kHz sub-

carrier spacing the transmit OFF power is defined as mean power in one sub-frame (1ms), excluding any transient periods. The ON power is defined as the mean power over one RU excluding any transient periods.

### 6.3.4F.2 NPRACH time mask

The NPRACH ON power is specified as the mean power over the NPRACH measurement period excluding any transient periods as shown in Figure 6.3.4F.2-1. The measurement period for different NPRACH preamble format is specified in Table 6.3.4F.2-1.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2F and subclause 6.6.2.3F.

**Table 6.3.4F.2-1: NPRACH ON power measurement period**

| NPRACH preamble format | Measurement period (ms) |
|------------------------|-------------------------|
| 0                      | 5.6                     |
| 1                      | 6.4                     |

**Figure 6.3.4F.2-1: NPRACH ON/OFF time mask**

### 6.3.4G ON/OFF time mask for V2X Communication

For V2X Communications, additional requirements on ON/OFF time masks for V2X physical channels and signals are specified in this clause.

The General ON/OFF time mask in subclause 6.3.4D.1 and PSSS/SSSS time mask in subcluse 6.3.4D.2 are applied for E-UTRA V2X sidelink UE.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.4G apply for the V2X sidelink transmission and the requirements in subclause 6.3.4 apply for the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation the general ON/OFF time mask is applicable for each component carrier during the ON power period and the transient periods. The OFF period shall only be applicable for each component carrier when all the component carriers are OFF.

For V2X UE supporting Transmit Diversity, the ON/OFF time mask requirements apply at each transmit antenna connector.

If the UE transmits on two antenna connectorsat the same time, the general ON/OFF time mask requirements apply to each transmit antenna connector.

If the UE transmits on one antenna connector at a time, the general ON/OFF time mask requirements apply to the active antenna connector.

### 6.3.4G.1 PSSS / SSSS / PSBCH time mask

The PSSS/SSSS/PSBCH time mask for V2X UE defines the observation period between SSSS and adjacent PSSS/PSBCH symbols in a sub-frame, with last symbol punctured to create a guard period.

Figure 6.3.4G.1-1: PSSS/SSSS/PSBCH time mask for normal CP transmission for V2X Service

Figure 6.3.4G.1-2: PSSS/SSSS/PSBCH time mask for extended CP transmission for V2X Service

## 6.3.5 Power Control

### 6.3.5.1 Absolute power tolerance

Absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap larger than 20ms. This tolerance includes the channel estimation error (the absolute RSRP accuracy requirement specified in subclause 9.1 of TS 36.133). In the case of a PRACH transmission, the absolute tolerance is specified for the first preamble. The absolute power tolerance includes the channel estimation error (the absolute RSRP accuracy requirement specified in subclause 9.1 of TS 36.133).

#### 6.3.5.1.1 Minimum requirements

The minimum requirement for absolute power tolerance is given in Table 6.3.5.1.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2.2 and the Minimum output power as defined in subclause 6.3.2.

For operating bands under NOTE 2 in Table 6.2.2-1, the absolute power tolerance as specified in Table 6.3.5.1.1-1 is relaxed by reducing the lower limit by 1.5 dB when the transmission bandwidth is confined within  $F_{UL\_low}$  and  $F_{UL\_low} + 4$  MHz or  $F_{UL\_high} - 4$  MHz and  $F_{UL\_high}$ .

**Table 6.3.5.1.1-1: Absolute power tolerance**

| Conditions | Tolerance     |
|------------|---------------|
| Normal     | $\pm 9.0$ dB  |
| Extreme    | $\pm 12.0$ dB |

### 6.3.5.2 Relative Power tolerance

The relative power tolerance is the ability of the UE transmitter to set its output power in a target sub-frame relatively to the power of the most recently transmitted reference sub-frame if the transmission gap between these sub-frames is  $\leq 20$  ms.

For PRACH transmission, the relative tolerance is the ability of the UE transmitter to set its output power relatively to the power of the most recently transmitted preamble. The measurement period for the PRACH preamble is specified in Table 6.3.4.2-1.

#### 6.3.5.2.1 Minimum requirements

The requirements specified in Table 6.3.5.2.1-1 apply when the power of the target and reference sub-frames are within the power range bounded by the Minimum output power as defined in subclause 6.3.2 and the measured PUMAX as defined in subclause 6.2.5 (i.e, the actual power as would be measured assuming no measurement error). This power shall be within the power limits specified in subclause 6.2.5.

To account for RF Power amplifier mode changes 2 exceptions are allowed for each of two test patterns. The test patterns are a monotonically increasing power sweep and a monotonically decreasing power sweep over a range bounded by the requirements of minimum power and maximum power specified in subclauses 6.3.2 and 6.2.2. For these exceptions the power tolerance limit is a maximum of  $\pm 6.0$  dB in Table 6.3.5.2.1-1

**Table 6.3.5.2.1-1 Relative power tolerance for transmission (normal conditions)**

| Power step $\Delta P$<br>(Up or down)<br>[dB]   | All combinations<br>of PUSCH and<br>PUCCH<br>transitions [dB] | All combinations of<br>PUSCH/PUCCH and<br>SRS transitions<br>between sub-<br>frames [dB] | PRACH [dB] |
|---|---|--|------------|
| $\Delta P < 2$  | $\pm 2.5$ (NOTE 3)  | $\pm 3.0$  | $\pm 2.5$  |
| $2 \leq \Delta P < 3$   | $\pm 3.0$   | $\pm 4.0$  | $\pm 3.0$  |
| $3 \leq \Delta P < 4$   | $\pm 3.5$   | $\pm 5.0$  | $\pm 3.5$  |
| $4 \leq \Delta P \leq 10$   | $\pm 4.0$   | $\pm 6.0$  | $\pm 4.0$  |
| $10 \leq \Delta P < 15$   | $\pm 5.0$   | $\pm 8.0$  | $\pm 5.0$  |
| $15 \leq \Delta P$  | $\pm 6.0$   | $\pm 9.0$  | $\pm 6.0$  |
| NOTE 1: For extreme conditions an additional $\pm 2.0$ dB relaxation is allowed<br>NOTE 2: For operating bands under NOTE 2 in Table 6.2.2-1, the relative power tolerance is relaxed by increasing the upper limit by 1.5 dB if the transmission bandwidth of the reference sub-frames is confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ and the target sub-frame is not confined within any one of these frequency ranges; if the transmission bandwidth of the target sub-frame is confined within $F_{UL\_low}$ and $F_{UL\_low} + 4$ MHz or $F_{UL\_high} - 4$ MHz and $F_{UL\_high}$ and the reference sub-frame is not confined within any one of these frequency ranges, then the tolerance is relaxed by reducing the lower limit by 1.5 dB.<br>NOTE 3: For PUSCH to PUSCH transitions with the allocated resource blocks fixed in frequency and no transmission gaps other than those generated by downlink subframes, DwPTS fields or Guard Periods for TDD: for a power step $\Delta P \leq 1$ dB, the relative power tolerance for transmission is $\pm 1.0$ dB. |   |  |            |

The power step ( $\Delta P$ ) is defined as the difference in the calculated setting of the UE Transmit power between the target and reference sub-frames with the power setting according to subclause 5.1 of [TS 36.213]. The error is the difference

between  $\Delta P$  and the power change measured at the UE antenna port with the power of the cell-specific reference signals kept constant. The error shall be less than the relative power tolerance specified in Table 6.3.5.2.1-1.

For sub-frames not containing an SRS symbol, the power change is defined as the relative power difference between the mean power of the original reference sub-frame and the mean power of the target subframe not including transient durations. The mean power of successive sub-frames shall be calculated according to Figure 6.3.4.3-1 and Figure 6.3.4.1-1 if there is a transmission gap between the reference and target sub-frames.

If at least one of the sub-frames contains an SRS symbol, the power change is defined as the relative power difference between the mean power of the last transmission within the reference sub-frame and the mean power of the first transmission within the target sub-frame not including transient durations. A transmission is defined as PUSCH, PUCCH or an SRS symbol. The mean power of the reference and target sub-frames shall be calculated according to Figures 6.3.4.1-1, 6.3.4.2-1, 6.3.4.4-1, 6.3.4.4-2 and 6.3.4.4-3 for these cases.

### 6.3.5.3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission within 21 ms in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in TS 36.213 are constant. For HD-FDD UEs that support coverage enhancement (CE), the requirements on aggregate power control tolerance in 6.3.5E.3 apply.

#### 6.3.5.3.1 Minimum requirement

The UE shall meet the requirements specified in Table 6.3.5.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2 and the maximum output power as defined in subclause 6.2.2.

**Table 6.3.5.3.1-1: Aggregate power control tolerance**

| TPC command  | UL channel | Aggregate power tolerance within 21 ms |
|--|------------|--|
| 0 dB   | PUCCH      | $\pm 2.5$ dB                           |
| 0 dB   | PUSCH      | $\pm 3.5$ dB                           |
| NOTE: The UE transmission gap is 4 ms. TPC command is transmitted via PDCCH 4 subframes preceding each PUCCH/PUSCH transmission. |            |  |

### 6.3.5A Power control for CA

The requirements apply for one single PUCCH, PUSCH or SRS transmission of contiguous PRB allocation per component carrier with power setting in accordance with Clause 5.1 of [6].

#### 6.3.5A.1 Absolute power tolerance

The absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap on each active component carriers larger than 20ms. For component carriers with Frame Structure Type 3 the absolute power tolerance requirements apply when the said transmission gaps are larger than 40 ms. The requirement can be tested by time aligning any transmission gaps on the component carriers.

When SRS carrier based switching is used, then the above mentioned absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap on component carriers (to which SRS switching occurs) larger than 40ms.

##### 6.3.5A.1.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the absolute power control tolerance is specified on each component carrier exceed the minimum output power as defined in subclause 6.3.2A and the total power is limited by maximum output power as defined in subclause 6.2.2A. The requirements defined in Table

6.3.5.1.1-1 shall apply on each component carrier with all component carriers active. The requirements can be tested by time aligning any transmission gaps on all the component carriers.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation the absolute power control tolerance per component carrier is given in Table 6.3.5.1.1-1.

## 6.3.5A.2 Relative power tolerance

### 6.3.5A.2.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the relative power tolerance is specified when the power of the target and reference sub-frames on each component carrier exceed the minimum output power as defined in subclause 6.3.2A and the total power is limited by  $P_{UMAX}$  as defined in subclause 6.2.5A. The requirements shall apply on each component carrier with all component carriers active. The UE transmitter shall have the capability of changing the output power independently on all component carriers in the uplink and:

- a) the requirements for all combinations of PUSCH and PUCCH transitions per component carrier is given in Table 6.3.5.2.1-1.
- b) for SRS the requirements for combinations of PUSCH/PUCCH and SRS transitions between subframes given in Table 6.3.5.2.1-1 apply per component carrier when the target and reference subframes are configured for either simultaneous SRS or simultaneous PUSCH.
- c) for RACH the requirements apply for the primary cell and are given in Table 6.3.5.2.1-1.

For component carriers with Frame Structure Type 3 the requirements for the target sub-frame relative to the power of the most recently transmitted reference sub-frame shall be met with a transmission gap  $\leq 40$  ms.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation, the requirements apply when the power of the target and reference sub-frames on each component carrier exceed -20 dBm and the total power is limited by  $P_{UMAX}$  as defined in subclause 6.2.5A. For the purpose of these requirements, the power in each component carrier is specified over only the transmitted resource blocks.

The UE shall meet the following requirements for transmission on both assigned component carriers when the average transmit power per PRB is aligned across both assigned carriers in the reference sub-frame:

- a) for all possible combinations of PUSCH and PUCCH transitions per component carrier, the corresponding requirements given in Table 6.3.5.2.1-1;
- b) for SRS transitions on each component carrier, the requirements for combinations of PUSCH/PUCCH and SRS transitions given in Table 6.3.5.2.1-1 with simultaneous SRS of constant SRS bandwidth allocated in the target and reference subframes;
- c) for RACH on the primary component carrier, the requirements given in Table 6.3.5.2.1-1 for PRACH.

For a) and b) above, the power step  $\Delta P$  between the reference and target subframes shall be set by a TPC command and/or an uplink scheduling grant transmitted by means of an appropriate DCI Format.

For a), b) and c) above, two exceptions are allowed for each component carrier for a power per carrier ranging from -20 dBm to  $P_{UMAX,c}$  as defined in subclause 6.2.5. For these exceptions the power tolerance limit is  $\pm 6.0$  dB in Table 6.3.5.2.1-1.

## 6.3.5A.3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission within 21 ms in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in [6] are constant on all active component carriers.

### 6.3.5A.3.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the aggregate power tolerance is specified on each component carrier exceed the minimum output power as defined in subclause 6.3.2A and the total power is limited by maximum output power as defined in subclause 6.2.2A. The requirements defined in Table

6.3.5.3.1-1 shall apply on each component carrier with all component carriers active. The requirements can be tested by time aligning any transmission gaps on both the component carriers.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation, the aggregate power tolerance per component carrier is given in Table 6.3.5.3.1-1 with either simultaneous PUSCH or simultaneous PUCCH-PUSCH (if supported by the UE) configured. The average power per PRB shall be aligned across both assigned carriers before the start of the test. The requirement can be tested with the transmission gaps time aligned between component carriers.

## 6.3.5B Power control for UL-MIMO

For UE supporting UL-MIMO, the power control tolerance applies to the sum of output power at each transmit antenna connector.

The power control requirements specified in subclause 6.3.5 apply to UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme. The requirements shall be met with UL-MIMO configurations specified in Table 6.2.2B-2, wherein

- The Maximum output power requirements for UL-MIMO are specified in subclause 6.2.2B
- The Minimum output power requirements for UL-MIMO are specified in subclause 6.3.2B
- The requirements for configured transmitted power for UL-MIMO are specified in subclause 6.2.5B.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3.5 apply.

## 6.3.5D Power Control for ProSe

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.5D apply for ProSe transmission and the requirements in subclause 6.3.5 apply for uplink transmission.

### 6.3.5D.1 Absolute power tolerance

For ProSe transmissions, the absolute power tolerance requirements specified in subclause 6.3.5.1 shall apply for each ProSe transmission.

## 6.3.5E Power control for category M1 and M2

### 6.3.5E.1 Absolute power tolerance

The absolute power tolerance requirements specified in subclause 6.3.5.1 apply, wherein

- The Maximum output power requirements are specified in subclause 6.2.2E
- The Minimum output power requirements are specified in subclause 6.3.2
- The requirements for configured transmitted power are specified in subclause 6.2.5.

### 6.3.5E.2 Relative Power tolerance

The relative power tolerance requirements specified in subclause 6.3.5.2 apply, wherein

- The Maximum output power requirements are specified in subclause 6.2.2E
- The Minimum output power requirements are specified in subclause 6.3.2
- The requirements for configured transmitted power are specified in subclause 6.2.5.

### 6.3.5E.3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in TS 36.213 are constant.

For category M1 and M2 TDD and FD-FDD UEs, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-0 apply. For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration  $\leq 64$  ms, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-0 apply.

For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration  $> 64$  ms, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-1 apply.

#### 6.3.5E.3.1 Minimum requirement

The category M1 and M2 TDD and FD-FDD UEs shall meet the requirements specified in Table 6.3.5E.3.1-0 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2, the maximum output power as defined in subclause 6.2.2E, and the requirements for configured transmitted power are specified in subclause 6.2.5.

The category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration  $\leq 64$  ms, shall meet the requirements specified in Table 6.3.5E.3.1-0 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2, the maximum output power as defined in subclause 6.2.2E, and the requirements for configured transmitted power are specified in subclause 6.2.5.

**Table 6.3.5E.3.1-0: Aggregate power control tolerance**

| TPC command  | UL channel | Aggregate power tolerance within 21 ms <sup>2</sup> |
|--|------------|---|
| 0 dB   | PUCCH      | $\pm 2.5$ dB  |
| 0 dB   | PUSCH      | $\pm 3.5$ dB  |
| NOTE 1: The UE transmission gap is 4 ms for full-duplex FDD and TDD.<br>For UE of half-duplex FDD with the channel bandwidth 5 MHz / 10 MHz / 15 MHz / 20 MHz, the transmission gap is 1 ms after subframe #4 and 7 ms after subframe #6.<br>For UE of half-duplex FDD with the CBW 1.4 / 3 MHz, the transmission gap is 9 ms.<br>TPC command is transmitted via MPDCCH 4 subframes preceding each PUCCH/PUSCH transmission. |            |   |
| NOTE 2: For UE of half-duplex FDD with the CBW 1.4 / 3 MHz, the test interval is 41 ms.  |            |   |

The category M1 and M2 HD-FDD UE and for continuous uplink transmissions of duration  $> 64$  ms shall meet the requirements specified in Table 6.3.5E.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2 and the maximum output power as defined in subclause 6.2.2E.

**Table 6.3.5E.3.1-1: Aggregate power control tolerance**

| TPC command  | UL channel | Aggregate power tolerance within 129 ms |
|--|------------|---|
| 0 dB   | PUCCH      | $\pm 2.5$ dB                            |
| 0 dB   | PUSCH      | $\pm 3.5$ dB                            |
| NOTE: The UE transmission gap is 5 ms. TPC command is transmitted via MPDCCH 4 subframes preceding each PUCCH/ PUSCH transmission. |            |   |

### 6.3.5F Power Control for category NB1 and NB2

Power control requirements in this clause apply for category NB1 and NB2 UE.

### 6.3.5F.1 Absolute power tolerance

The minimum requirement for absolute power tolerance is given in Table 6.3.5F.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2.2F and the Minimum output power as defined in subclause 6.3.2F.

**Table 6.3.5F.1-1: Absolute power tolerance - I**

| Conditions | Tolerance     |
|------------|---------------|
| Normal     | $\pm 9.0$ dB  |
| Extreme    | $\pm 12.0$ dB |

In case of  $-15 \text{ dB} \leq \hat{E}_s/I_{ot} < -6 \text{ dB}$ , the absolute power tolerance given in Table 6.3.5F.1-2 applies if the UE transmit power is not mandated to be  $P_{\text{CMAX},c}$  according to the UE uplink power control procedure or random access procedure in Section 16 of [6] (e.g. the lowest configured repetition level is used for NPRACH transmission or the number of repetitions of the allocated NPUSCH RUs is no more than 2).

**Table 6.3.5F.1-2: Absolute power tolerance - II**

| Conditions | Tolerance     |
|------------|---------------|
| Normal     | $\pm 13.3$ dB |
| Extreme    | $\pm 16.3$ dB |

### 6.3.5F.2 Relative power tolerance

Category NB1 and NB2 UE relative power control requirement is defined for NPRACH power step values of 0, 2, 4 and 6 dB. For NPRACH transmission, the relative tolerance is the ability of the UE transmitter to set its output power relatively to the power of the most recently transmitted preamble. The measurement period for the NPRACH preamble is specified in Table 6.3.4F.2-1.

The requirements specified in Table 6.3.5F.2-1 apply when the power of the target and reference sub-frames are within the power range bounded by the Minimum output power as defined in subclause 6.3.2F and the maximum output power as defined in subclause 6.2.2F.

**Table 6.3.5F.2-1: Relative power tolerance for category NB1 and NB2 NPRACH transmission (normal conditions)**

| Power step $\Delta P$ [dB] | NPRACH [dB]  |
|----------------------------|--|
| $\Delta P = 0$             | $\pm 1.5$  |
| $\Delta P = 2$             | $\pm 2.0$  |
| $\Delta P = 4$             | $\pm 3.5$  |
| $\Delta P = 6$             | $\pm 4.0$  |
| NOTE:                      | For extreme conditions an additional $\pm 2.0$ dB relaxation is allowed. |

The power step ( $\Delta P$ ) is defined as the difference in the calculated setting of the UE transmit power between the target and reference sub-frames. The error is the difference between  $\Delta P$  and the power change measured at the UE antenna port with the power of the cell-specific reference signals kept constant. The error shall be less than the relative power tolerance specified in Table 6.3.5F.2-1.

### 6.3.5F.3 Aggregate power control tolerance for category NB1 and NB2

Category NB1 and NB2 aggregate power control tolerance is the ability of a UE to maintain its output power in non-contiguous transmission with respect to the first UE transmission, when the uplink power control parameters as defined in TS 36.213 are constant and  $\alpha$  is set to 0.

#### 6.3.5F.3.1 Minimum requirement

The UE shall meet the requirements specified in Table 6.3.5F.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2F and the maximum output power as defined in subclause 6.2.2F.

**Table 6.3.5F.3.1-1: Aggregate power control tolerance for HD-FDD**

| UL channel   | Aggregate power tolerance         |                                  |
|--|-----------------------------------|----------------------------------|
|  | 15 kHz / 12 tones<br>within 53 ms | 15 kHz / 1 tone<br>within 104 ms |
| NPUSCH   | $\pm 3.5$ dB                      |                                  |
| NOTE: For five consecutive UE transmissions the transmission gaps are 12 ms for 12 tone and 16 ms for single tone transmissions. Uplink scheduling grant is transmitted via NPDCCH eight subframes before NPUSCH transmission. |                                   |                                  |

**Table 6.3.5F.3.1-2: Aggregate power control tolerance for TDD**

| UL channel   | Aggregate power tolerance         |                                  |
|--|-----------------------------------|----------------------------------|
|  | 15 kHz / 12 tones<br>within 81 ms | 15 kHz / 1 tone<br>within 177 ms |
| NPUSCH   | $\pm 3.5$ dB                      |                                  |
| NOTE: For five consecutive UE transmissions the transmission gaps are 19 ms for 12 tone and 23 ms for single tone transmissions. Uplink scheduling grant is transmitted via NPDCCH eight subframes before NPUSCH transmission. |                                   |                                  |

### 6.3.5G Power Control for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.3.5G.1 apply for E-UTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.5G.1 apply for V2X sidelink transmission and the requirements in subclause 6.3.5 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the power control tolerance for single carrier shall apply to the sum of output power at each transmit antenna connector.

If the UE transmit on one -antenna connector at a time, the requirements for single carrier shall apply to the active antenna connector.

#### 6.3.5G.1 Absolute power tolerance

Absolute power tolerance is the ability of the UE to set its output power to a specific value for each subframe.

For V2X sidelink communication transmissions in the operating bands specified in Table 5.5G-1, the minimum requirement for absolute power tolerance is given in Table 6.3.5G.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2.2G and the Minimum output power as defined in subclause 6.3.2G.

For operating bands under NOTE 2 in Table 6.2.2-1, the absolute power tolerance as specified in Table 6.3.5G.1-1 is relaxed by reducing the lower limit by 1.5 dB when the transmission bandwidth is confined within  $F_{UL\_low}$  and  $F_{UL\_low} + 4$  MHz or  $F_{UL\_high} - 4$  MHz and  $F_{UL\_high}$ .

**Table 6.3.5G.1-1: Absolute power tolerance**

| Conditions | Tolerance     |
|------------|---------------|
| Normal     | $\pm 9.0$ dB  |
| Extreme    | $\pm 12.0$ dB |

For intra-band contiguous multi-carrier operation the absolute power control tolerance specified in Table 6.3.5G.1-1 shall apply for each component carrier.

## 6.4 Void

## 6.5 Transmit signal quality

### 6.5.1 Frequency error

The UE modulated carrier frequency shall be accurate to within  $\pm 0.1$  PPM observed over a period of one time slot (0.5 ms) compared to the carrier frequency received from the E-UTRA Node B

#### 6.5.1A Frequency error for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the frequency error requirements defined in subclause 6.5.1 shall apply on each component carrier with all component carriers active.

For intra-band contiguous carrier aggregation the UE modulated carrier frequencies per band shall be accurate to within  $\pm 0.1$  PPM observed over a period of one timeslot compared to the carrier frequency of primary component carrier received from the E-UTRA in the corresponding band.

For intra-band non-contiguous carrier aggregation the requirements in Section 6.5.1 applies per component carrier.

#### 6.5.1B Frequency error for UL-MIMO

For UE(s) supporting UL-MIMO, the UE modulated carrier frequency at each transmit antenna connector shall be accurate to within  $\pm 0.1$  PPM observed over a period of one time slot (0.5 ms) compared to the carrier frequency received from the E-UTRA Node B.

#### 6.5.1D Frequency error for ProSe

The UE modulated carrier frequency for ProSe sidelink transmissions shall be accurate to within  $\pm 0.1$  PPM observed over a period of one time slot (0.5 ms) compared to the carrier frequency received from the synchronization source. The synchronization source can be E-UTRA Node B or a ProSe UE transmitting sidelink synchronization signals.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.5.1D apply for ProSe transmission and the requirements in subclause 6.5.1 apply for uplink transmission.

#### 6.5.1E Frequency error for UE category M1 and M2

For category M1 and M2 TDD UEs and FD-FDD UEs, the frequency error requirements in Clause 6.5.1 apply.

For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration  $\leq 64$  ms, the frequency error requirements in Clause 6.5.1 apply.

For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration  $> 64$  ms, the UE modulated carrier frequency shall be accurate to within the limits in Table 6.5.1E-1 observed over a period of one time slot (0.5 ms) compared to the carrier frequency received from the E-UTRA Node B.

**Table 6.5.1E-1: Frequency error requirement for HD-FDD UE category M1 and M2**

| Carrier frequency [GHz] | Frequency error [ppm] |
|-------------------------|-----------------------|
| $\leq 1$                | $\pm 0.2$             |
| $> 1$                   | $\pm 0.1$             |

## 6.5.1F Frequency error for UE category NB1 and NB2

For UE category NB1 and NB2, the UE modulated carrier frequency shall be accurate to within the following limits

**Table 6.5.1F-1: Frequency error requirement for UE category NB1 and NB2**

| Carrier frequency [GHz] | Frequency error [ppm] |
|-------------------------|-----------------------|
| $\leq 1$                | $\pm 0.2$             |
| $> 1$                   | $\pm 0.1$             |

Observed over a period of one time slot (0.5 ms for 15 kHz sub-carrier spacing and 2 ms excluding the 2304Ts gap for 3.75 kHz sub-carrier spacing) and averaged over  $72/L_{Ctone}$  slots (where  $L_{Ctone} = \{1, 3, 6, 12\}$  is the number of sub-carriers used for the transmission), compared to the carrier frequency received from the E-UTRA Node B.

## 6.5.1G Frequency error for V2X Communication

The UE modulated carrier frequency for V2X sidelink transmissions shall be accurate to within  $\pm 0.1$  PPM observed over a period of one time slot (0.5 ms) compared to the absolute frequency in case of using GNSS synchronization source. The same requirements applied over a period of one time slot (0.5 ms) compared to the relative frequency in case of using the E-UTRA Node B or V2X UE sidelink synchronization signals.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.5.1G apply for V2X sidelink transmission and the requirements in subclause 6.5.1 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the UE modulated carrier frequency at each transmit antenna connector shall be accurate to within  $\pm 0.1$  PPM observed over a period of one time slot (0.5 ms) in case of using GNSS synchronization source. The same requirements applied over a period of one time slot (0.5 ms) compared to the relative frequency in case of using the E-UTRA Node B or V2X UE sidelink synchronization signals.

If the UE transmits on one antenna connector at a time, the requirements for single carrier shall apply to the active antenna connector.

## 6.5.2 Transmit modulation quality

Transmit modulation quality defines the modulation quality for expected in-channel RF transmissions from the UE. The transmit modulation quality is specified in terms of:

- Error Vector Magnitude (EVM) for the allocated resource blocks (RBs)
- EVM equalizer spectrum flatness derived from the equalizer coefficients generated by the EVM measurement process
- Carrier leakage
- In-band emissions for the non-allocated RB

All the parameters defined in subclause 6.5.2 are defined using the measurement methodology specified in Annex F.

### 6.5.2.1 Error Vector Magnitude

The Error Vector Magnitude is a measure of the difference between the reference waveform and the measured waveform. This difference is called the error vector. Before calculating the EVM the measured waveform is corrected by the sample timing offset and RF frequency offset. Then the carrier leakage shall be removed from the measured waveform before calculating the EVM.

The measured waveform is further modified by selecting the absolute phase and absolute amplitude of the Tx chain. The EVM result is defined after the front-end IDFT as the square root of the ratio of the mean error vector power to the mean reference power expressed as a %.

The basic EVM measurement interval in the time domain is one preamble sequence for the PRACH, and as specified in Table 6.5.2.1-1 for the PUCCH and PUSCH in the time domain. When the PUSCH or PUCCH transmission slot or subslot is shortened due to multiplexing with SRS, the EVM measurement interval is reduced by one symbol, accordingly. Likewise, when the PUSCH starting position is modified or when second last symbol is the ending symbol of the PUSCH subframe for Frame Structure Type 3, the EVM measurement interval is reduced accordingly. The PUSCH or PUCCH EVM measurement interval is also reduced when the mean power, modulation or allocation between slots or subslots is expected to change. In the case of PUSCH transmission, the measurement interval is reduced by a time interval equal to the sum of 5  $\mu$ s and the applicable exclusion period defined in subclause 6.3.4, adjacent to the boundary where the power change is expected to occur. The PUSCH exclusion period is applied to the signal obtained after the front-end IDFT. In the case of PUCCH transmission with power change, the PUCCH EVM measurement interval is reduced by one symbol adjacent to the boundary where the power change is expected to occur.

**Table 6.5.2.1-1: Measurement interval for EVM**

| TTI pattern | Measurement interval |
|-------------|----------------------|
| Subframe    | 7OS                  |
| Slot        | 7OS                  |
| Subslot     | 2OS, 3OS             |

#### 6.5.2.1.1 Minimum requirement

The RMS average of the basic EVM measurements for 10 subframes excluding any transient period for the average EVM case, and 60 subframes excluding any transient period for the reference signal EVM case, for the different modulations schemes shall not exceed the values specified in Table 6.5.2.1.1-1 for the parameters defined in Table 6.5.2.1.1-2. For EVM evaluation purposes, [all PRACH preamble formats 0-4 and] all PUCCH formats 1, 1a, 1b, 2, 2a and 2b are considered to have the same EVM requirement as QPSK modulated.

**Table 6.5.2.1.1-1: Minimum requirements for Error Vector Magnitude**

| Parameter    | Unit | Average EVM Level | Reference Signal EVM Level |
|--------------|------|-------------------|----------------------------|
| QPSK or BPSK | %    | 17.5              | 17.5                       |
| 16 QAM       | %    | 12.5              | 12.5                       |
| 64 QAM       | %    | 8                 | 8                          |
| 256 QAM      | %    | 3.5               | 3.5                        |

**Table 6.5.2.1.1-2: Parameters for Error Vector Magnitude**

| Parameter                   | Unit | Level             |
|-----------------------------|------|-------------------|
| UE Output Power             | dBm  | $\geq -40$        |
| UE Output Power for 256 QAM | dBm  | $\geq -30$        |
| Operating conditions        |      | Normal conditions |

### 6.5.2.2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. The measurement interval is one slot in the time domain.

6.5.2.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power shall not exceed the values specified in Table 6.5.2.2.1-1.

**Table 6.5.2.2.1-1: Minimum requirements for relative carrier leakage power**

| Parameters  | Relative limit (dBc) | Applicable frequencies           |
|---|----------------------|----------------------------------|
| Output power >10 dBm  | -28                  | Carrier center frequency < 1 GHz |
|   | -25                  | Carrier center frequency ≥ 1 GHz |
| 0 dBm ≤ Output power ≤ 10 dBm   | -25                  |                                  |
| -30 dBm ≤ Output power ≤ 0 dBm  | -20                  |                                  |
| -40 dBm ≤ Output power < -30 dBm<br>(NOTE 1)  | -10                  |                                  |
| NOTE 1: The requirement in this power range is not applicable for V2X sidelink transmission for E-UTRA V2X operating bands specified in Table 5.5G-1. |                      |                                  |

6.5.2.3 In-band emissions

The in-band emission is defined as the average across 12 sub-carrier and as a function of the RB offset from the edge of the allocated UL transmission bandwidth. The in-band emission is measured as the ratio of the UE output power in a non-allocated RB to the UE output power in an allocated RB.

The basic in-band emissions measurement interval is defined over one slot in the time domain. When the PUSCH or PUCCH transmission slot is shortened due to multiplexing with SRS, the in-band emissions measurement interval is reduced by one SC-FDMA symbol, accordingly. Likewise, when the PUSCH starting position is modified or when the second last symbol is the ending symbol of the PUSCH sub-frame for Frame Structure Type 3, the in-band emissions measurement interval is reduced accordingly.

6.5.2.3.1 Minimum requirements

The relative in-band emission shall not exceed the values specified in Table 6.5.2.3.1-1.

**Table 6.5.2.3.1-1: Minimum requirements for in-band emissions**

| Parameter description   | Unit | Limit (NOTE 1)  |   | Applicable Frequencies         |
|---|------|---|---|--------------------------------|
| <b>General</b>  | dB   | For Frame Structure Type 1 and Frame Structure Type 2:<br>$\max \left\{ -25 - 10 \cdot \log_{10} (N_{RB} / L_{CRB}), \right.$ $20 \cdot \log_{10} EVM - 3 - 5 \cdot ( \Delta_{RB}  - 1) / L_{CRB},$ $\left. -57 \text{ dBm} / 180 \text{ kHz} - P_{RB} \right\}$ For Frame Structure Type 3, 10 MHz and 20 MHz channel bandwidths:<br>$\max \left\{ -10 - 6( \Delta_{RB}  - 1), \right.$ $\left. -57 \text{ dBm} / 180 \text{ kHz} - P_{RB} \right\}$ |   | Any non-allocated (NOTE 2)     |
|   |      | -28   | Image frequencies when carrier center frequency < 1 GHz and Output power > 10 dBm |                                |
| <b>IQ Image</b>   | dB   | -25   | Image frequencies when carrier center frequency < 1 GHz and Output power ≤ 10 dBm |                                |
|   |      | -25   | Image frequencies when carrier center frequency ≥ 1 GHz                           |                                |
| <b>Carrier leakage</b>  | dBc  | -28   | Output power > 10 dBm and carrier center frequency < 1 GHz                        | Carrier frequency (NOTES 4, 5) |
|   |      | -25   | Output power > 10 dBm and carrier center frequency ≥ 1 GHz                        |                                |
|   |      | -25   | 0 dBm ≤ Output power ≤ 10 dBm   |                                |
|   |      | -20   | -30 dBm ≤ Output power ≤ 0 dBm  |                                |
|   |      | -10   | -40 dBm ≤ Output power < -30 dBm (NOTE 12)  |                                |
| NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of $P_{RB} - 30$ dB and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. $P_{RB}$ is defined in NOTE 10. |      |   |   |                                |

- NOTE 2: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one non-allocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs. For Frame Structure Type 3 and 20 MHz channel bandwidth, the requirement applies for QPSK, 16QAM and 64QAM modulation with  $|\Delta_{RB}| \leq 5$  for any non-allocated RB and  $RIV = 1$  in the uplink scheduling grant with  $RIV$  specified in [6]. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the requirement applies for QPSK, 16QAM and 64QAM modulation with  $|\Delta_{RB}| \leq 3$  for any non-allocated RB and  $RIV = '01000$  in the uplink scheduling grant.
- NOTE 3: The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated RBs. For Frame Structure Type 3 with 20 MHz channel bandwidth, the applicable frequency is  $n_{PRB} = 98$  for QPSK, 16QAM and 64QAM modulation. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the applicable frequency is  $n_{PRB} = 48$  for QPSK, 16QAM and 64QAM modulation.
- NOTE 4: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one non-allocated RB to the measured total power in all allocated RBs. For Frame Structure Type 3 and 20 MHz channel bandwidth, the requirement applies for QPSK, 16QAM and 64QAM modulation with  $RIV = 5$  in the uplink scheduling grant. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the requirement applies for QPSK, 16QAM and 64QAM modulation with  $RIV = '00100$  in the uplink scheduling grant.
- NOTE 5: The applicable frequencies for this limit are those that are enclosed in the RBs containing the DC frequency if  $N_{RB}$  is odd, or in the two RBs immediately adjacent to the DC frequency if  $N_{RB}$  is even, but excluding any allocated RB.
- NOTE 6:  $L_{CRB}$  is the Transmission Bandwidth (see Figure 5.6-1).
- NOTE 7:  $N_{RB}$  is the Transmission Bandwidth Configuration (see Figure 5.6-1).
- NOTE 8:  $EVM$  is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.
- NOTE 9:  $\Delta_{RB}$  is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g.  $\Delta_{RB} = 1$  or  $\Delta_{RB} = -1$  for the first adjacent RB outside of the allocated bandwidth).
- NOTE 10:  $P_{RB}$  is the transmitted power per 180 kHz in allocated RBs, measured in dBm.
- [NOTE 11: For V2V-V2X waveforms, the requirements are applied when PSSCH and PSCCH are adjacent in frequency. The limit values (General, IQ Image or Carrier leakage) of each channel is calculated separately as  $P_{general, PSSCH}$ ,  $P_{IQ, PSSCH}$ ,  $P_{LO, PSSCH}$ ,  $P_{general, PSCCH}$ ,  $P_{IQ, PSCCH}$ ,  $P_{LO, PSCCH}$ , respectively. In-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of  $P_{RB, PSSCH} - 30$  dB and the  $P_{sumIBE, SSCH}$ , where  $P_{sumIBE, SSCH}$  is the linear sum of  $P_{general, PSSCH}$ ,  $P_{IQ, PSSCH}$ ,  $P_{LO, PSSCH}$ ,  $P_{general, PSCCH}$ ,  $P_{IQ, PSCCH}$ ,  $P_{LO, PSCCH}$ .]
- NOTE 12: The requirement in this power range is not applicable for V2X sidelink transmission for E-UTRA V2X operating bands specified in Table 5.5G-1.

NOTE: For Frame Structure 3 and operations in Band 46, in-band emissions requirements are not specified for the 10 MHz channel bandwidth.

#### 6.5.2.4 EVM equalizer spectrum flatness

The zero-forcing equalizer correction applied in the EVM measurement process (as described in Annex F) must meet a spectral flatness requirement for the EVM measurement to be valid. The EVM equalizer spectrum flatness is defined in terms of the maximum peak-to-peak ripple of the equalizer coefficients (dB) across the allocated uplink block. The basic measurement interval is the same as for EVM.

##### 6.5.2.4.1 Minimum requirements

The peak-to-peak variation of the EVM equalizer coefficients contained within the frequency range of the uplink allocation shall not exceed the maximum ripple specified in Table 6.5.2.4.1-1 for normal conditions. For uplink allocations contained within both Range 1 and Range 2, the coefficients evaluated within each of these frequency ranges shall meet the corresponding ripple requirement and the following additional requirement: the relative difference between the maximum coefficient in Range 1 and the minimum coefficient in Range 2 must not be larger than 5 dB, and the relative difference between the maximum coefficient in Range 2 and the minimum coefficient in Range 1 must not be larger than 7 dB (see Figure 6.5.2.4.1-1).

The EVM equalizer spectral flatness shall not exceed the values specified in Table 6.5.2.4.1-2 for extreme conditions. For uplink allocations contained within both Range 1 and Range 2, the coefficients evaluated within each of these frequency ranges shall meet the corresponding ripple requirement and the following additional requirement: the relative difference between the maximum coefficient in Range 1 and the minimum coefficient in Range 2 must not be larger than 6 dB, and the relative difference between the maximum coefficient in Range 2 and the minimum coefficient in Range 1 must not be larger than 10 dB (see Figure 6.5.2.4.1-1).

**Table 6.5.2.4.1-1: Minimum requirements for EVM equalizer spectrum flatness (normal conditions)**

| Frequency range   | Maximum ripple [dB] |
|---|---------------------|
| $F_{UL\_Meas} - F_{UL\_Low} \geq 3$ MHz and $F_{UL\_High} - F_{UL\_Meas} \geq 3$ MHz<br>(Range 1)           | 4 (p-p)             |
| $F_{UL\_Meas} - F_{UL\_Low} < 3$ MHz or $F_{UL\_High} - F_{UL\_Meas} < 3$ MHz<br>(Range 2)                  | 8 (p-p)             |
| NOTE 1: $F_{UL\_Meas}$ refers to the sub-carrier frequency for which the equalizer coefficient is evaluated |                     |
| NOTE 2: $F_{UL\_Low}$ and $F_{UL\_High}$ refer to each E-UTRA frequency band specified in Table 5.5-1       |                     |

**Table 6.5.2.4.1-2: Minimum requirements for EVM equalizer spectrum flatness (extreme conditions)**

| Frequency range   | Maximum Ripple [dB] |
|---|---------------------|
| $F_{UL\_Meas} - F_{UL\_Low} \geq 5$ MHz and $F_{UL\_High} - F_{UL\_Meas} \geq 5$ MHz<br>(Range 1)           | 4 (p-p)             |
| $F_{UL\_Meas} - F_{UL\_Low} < 5$ MHz or $F_{UL\_High} - F_{UL\_Meas} < 5$ MHz<br>(Range 2)                  | 12 (p-p)            |
| NOTE 1: $F_{UL\_Meas}$ refers to the sub-carrier frequency for which the equalizer coefficient is evaluated |                     |
| NOTE 2: $F_{UL\_Low}$ and $F_{UL\_High}$ refer to each E-UTRA frequency band specified in Table 5.5-1       |                     |

**Figure 6.5.2.4.1-1: The limits for EVM equalizer spectral flatness with the maximum allowed variation of the coefficients indicated (the ETC minimum requirement within brackets).**

### 6.5.2A Transmit modulation quality for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the requirements shall apply on each component carrier as defined in clause 6.5.2 with all component carriers active. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclauses 6.5.2A.1, 6.5.2A.2, and 6.5.2A.3 apply for those component carriers.

The requirements in this clause apply with PCC and SCC in the UL configured and activated: PCC with PRB allocation and SCC without PRB allocation and without CSI reporting and SRS configured.

### 6.5.2A.1 Error Vector Magnitude

For the intra-band contiguous and non-contiguous carrier aggregation, the Error Vector Magnitude requirement should be defined for each component carrier. Requirements only apply with PRB allocation in one of the component carriers. Similar transmitter impairment removal procedures are applied for CA waveform before EVM calculation as is specified for non-CA waveform in sub-section 6.5.2.1.

When a single component carrier is configured Table 6.5.2.1.1-1 apply.

The EVM requirements are according to Table 6.5.2A.1-1 if CA is configured in uplink with the parameters defined in Table 6.5.2.1.1-2.

**Table 6.5.2A.1-1: Minimum requirements for Error Vector Magnitude**

| Parameter    | Unit | Average EVM Level per CC | Reference Signal EVM Level |
|--------------|------|--------------------------|----------------------------|
| QPSK or BPSK | %    | 17.5                     | 17.5                       |
| 16 QAM       | %    | 12.5                     | 12.5                       |
| 64 QAM       | %    | 8                        | 8                          |
| 256 QAM      | %    | 3.5                      | 3.5                        |

### 6.5.2A.2 Carrier leakage for CA

Carrier leakage is an additive sinusoid waveform that is confined within the aggregated transmission bandwidth configuration. The carrier leakage requirement is defined for each component carrier and is measured on the component carrier with PRBs allocated. The measurement interval is one slot in the time domain.

#### 6.5.2A.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power shall not exceed the values specified in Table 6.5.2A.2.1-1.

**Table 6.5.2A.2.1-1: Minimum requirements for Relative Carrier Leakage Power**

| Parameters                       | Relative Limit (dBc) |
|----------------------------------|----------------------|
| Output power >0 dBm              | -25                  |
| -30 dBm ≤ Output power ≤ 0 dBm   | -20                  |
| -40 dBm ≤ Output power < -30 dBm | -10                  |

### 6.5.2A.3 In-band emissions

#### 6.5.2A.3.1 Minimum requirement for CA

For intra-band contiguous carrier aggregation bandwidth class B, C and D, the requirements in Table 6.5.2A.3.1-1 and 6.5.2A.3.1-2 apply within the aggregated transmission bandwidth configuration with both component carrier (s) active and one single contiguous PRB allocation of bandwidth  $L_{CRB}$  at the edge of the aggregated transmission bandwidth configuration.

The inband emission is defined as the interference falling into the non allocated resource blocks for all component carriers. The measurement method for the inband emissions in the component carrier with PRB allocation is specified in annex F. For a non allocated component carrier a spectral measurement is specified.

For intra-band non-contiguous carrier aggregation the requirements for in-band emissions should be defined for each component carrier. Requirements only apply with PRB allocation in one of the component carriers according to Table 6.5.2.3.1.

**Table 6.5.2A.3.1-1: Minimum requirements for in-band emissions (allocated component carrier)**

| Parameter       | Unit | Limit  | Applicable Frequencies                   |
|-----------------|------|--|--|
| General         | dB   | $\max \{ -25 - 10 \cdot \log_{10} (N_{RB} / L_{CRB}), 20 \cdot \log_{10} EVM - 3 - 5 \cdot ( \Delta_{RB}  - 1) / L_{CRB}, -57 \text{ dBm} / 180 \text{ kHz} - P_{RB} \}$ | Any non-allocated (NOTE 2)               |
| IQ Image        | dB   | -25  | Exception for IQ image (NOTE 3)          |
| Carrier leakage | dBc  | -25  | Exception for Carrier frequency (NOTE 4) |
|                 |      | -20  |  |
|                 |      | -10  |  |

NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of  $P_{RB} - 30$  dB and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply.  $P_{RB}$  is defined in NOTE 9. The limit is evaluated in each non-allocated RB.

NOTE 2: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one non-allocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs

NOTE 3: Exceptions to the general limit are allowed for up to  $L_{CRBs} + 1$  RBs within a contiguous width of  $L_{CRBs} + 1$  non-allocated RBs. The measurement bandwidth is 1 RB.

NOTE 4: Exceptions to the general limit are allowed for up to two contiguous non-allocated RBs. The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in the non-allocated RB to the measured total power in all allocated RBs.

NOTE 5:  $L_{CRB}$  is the Transmission Bandwidth (see Figure 5.6-1) not exceeding  $\lfloor N_{RB} / 2 - 1 \rfloor$

NOTE 6:  $N_{RB}$  is the Transmission Bandwidth Configuration (see Figure 5.6-1) of the component carrier with RBs allocated.

NOTE 7:  $EVM$  is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.

NOTE 8:  $\Delta_{RB}$  is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g.  $\Delta_{RB} = 1$  or  $\Delta_{RB} = -1$  for the first adjacent RB outside of the allocated bandwidth).

NOTE 9:  $P_{RB}$  is the transmitted power per 180 kHz in allocated RBs, measured in dBm.

NOTE 10: For V2X intra-band contiguous multi-carrier operation the in-band emission requirement (General, IQ Image or Carrier leakage) of each channel is calculated separately as  $P_{general, PSSCH,c(i)}, P_{IQ, PSSCH,c(i)}, P_{LO, PSSCH,c(i)}, P_{general, PSCCH,c(i)}, P_{IQ, PSCCH,c(i)}, P_{LO, PSCCH,c(i)}$  for each carrier respectively. In-band emissions combined limit for the aggregated bandwidth is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the  $P_{sumIBE,CA}$ , where  $P_{sumIBE,CA}$  is the linear sum of  $P_{general, PSSCH,c(i)}, P_{IQ, PSSCH,c(i)}, P_{LO, PSSCH,c(i)}, P_{general, PSCCH,c(i)}, P_{IQ, PSCCH,c(i)}, P_{LO, PSCCH,c(i)}$  for all carriers.

**Table 6.5.2A.3.1-2: Minimum requirements for in-band emissions (not allocated component carrier)**

| Parameter | Unit | Meas BW NOTE 1                  | Limit  | remark   | Applicable Frequencies  |
|-----------|------|---------------------------------|--|--|---|
| General   | dB   | BW of 1 RB (180KHz rectangular) | $\max \{ -25 - 10 \cdot \log_{10} (N_{RB} / L_{CRB}), 20 \cdot \log_{10} EVM - 3 - 5 \cdot ( \Delta_{RB}  - 1) / L_{CRB}, -57 \text{ dBm} / 180 \text{ kHz} - P_{RB} \}$ | The reference value is the average power per allocated RB in the allocated component carrier | Any RB in the non allocated component carrier. The frequency raster of the RBs is derived when this component carrier is allocated with RBs |
| IQ Image  | dB   | BW of 1 RB (180KHz rectangular) | -25<br>NOTE 2  | The reference value is the average power per allocated RB in the allocated                   | The frequencies of the $L_{CRB}$ contiguous non-allocated RBs are unknown.  |

|  |     |                                 |        |                                  |  |  |
|--|-----|---------------------------------|--------|----------------------------------|--|--|
|  |     |                                 |        | component carrier                | The frequency raster of the RBs is derived when this component carrier is allocated with RBs   |  |
| Carrier leakage  | dBc | BW of 1 RB (180KHz rectangular) | NOTE 3 |                                  | The reference value is the total power of the allocated RBs in the allocated component carrier | The frequencies of the up to 2 non-allocated RBs are unknown. The frequency raster of the RBs is derived when this component carrier is allocated with RBs |
|  |     |                                 | -25    | Output power > 0 dBm             |  |  |
|  |     |                                 | -20    | -30 dBm ≤ Output power ≤ 0 dBm   |  |  |
|  |     |                                 | -10    | -40 dBm ≤ Output power < -30 dBm |  |  |
| <p>NOTE 1: Resolution BWs smaller than the measurement BW may be integrated to achieve the measurement bandwidth.</p> <p>NOTE 2: Exceptions to the general limit is are allowed for up to <math>L_{CRB} + 1</math> RBs within a contiguous width of <math>L_{CRB} + 1</math> non-allocated RBs.</p> <p>NOTE 3: Two Exceptions to the general limit are allowed for up to two contiguous non-allocated RBs</p> <p>NOTE 4: NOTES 1, 5, 6, 7, 8, 9 from Table 6.5.2A.3.1-1 apply for Table 6.5.2A.3.1-2 as well.</p> <p>NOTE 5: <math>\Delta_{RB}</math> for measured non-allocated RB in the non allocated component carrier may take non-integer values when the carrier spacing between the CCs is not a multiple of RB.</p> <p>NOTE 6: For V2X intra-band contiguous multi-carrier operation the in-band emission requirement (General, IQ Image or Carrier leakage) of each channel is calculated separately as <math>P_{general, PSSCH,c(i)}</math>, <math>P_{IQ, PSSCH,c(i)}</math>, <math>P_{LO, PSSCH,c(i)}</math>, <math>P_{general, PSCCH,c(i)}</math>, <math>P_{IQ, PSCCH,c(i)}</math>, <math>P_{LO, PSCCH,c(i)}</math> for each carrier respectively. In-band emissions combined limit for the aggregated bandwidth is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the <math>P_{sumIBE,CA}</math>, where <math>P_{sumIBE,CA}</math> is the linear sum of <math>P_{general, PSSCH,c(i)}</math>, <math>P_{IQ, PSSCH,c(i)}</math>, <math>P_{LO, PSSCH,c(i)}</math>, <math>P_{general, PSCCH,c(i)}</math>, <math>P_{IQ, PSCCH,c(i)}</math>, <math>P_{LO, PSCCH,c(i)}</math> for all carriers.</p> |     |                                 |        |                                  |  |  |

### 6.5.2B Transmit modulation quality for UL-MIMO

For UE supporting UL-MIMO, the transmit modulation quality requirements are specified at each transmit antenna connector.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.5.2 apply.

The transmit modulation quality is specified in terms of:

- Error Vector Magnitude (EVM) for the allocated resource blocks (RBs)
- EVM equalizer spectrum flatness derived from the equalizer coefficients generated by the EVM measurement process
- Carrier leakage (caused by IQ offset)
- In-band emissions for the non-allocated RB

#### 6.5.2B.1 Error Vector Magnitude

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the Error Vector Magnitude requirements specified in Table 6.5.2.1.1-1 which is defined in subclause 6.5.2.1 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2B.2 Carrier leakage

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the Relative Carrier Leakage Power requirements specified in Table 6.5.2.2.1-1 which is defined in subclause 6.5.2.2 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2B.3 In-band emissions

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the In-band Emission requirements specified in Table 6.5.2.3.1-1 which is defined in subclause 6.5.2.3 apply at each transmit antenna connector. The requirements shall be met with the uplink MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2B.4 EVM equalizer spectrum flatness for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the EVM Equalizer Spectrum Flatness requirements specified in Table 6.5.2.4.1-1 and Table 6.5.2.4.1-2 which are defined in subclause 6.5.2.4 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

## 6.5.2D Transmit modulation quality for ProSe

The requirements in this clause apply to ProSe sidelink transmissions.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.5.2D apply for ProSe transmission and the requirements in subclause 6.5.2 apply for uplink transmission.

### 6.5.2D.1 Error Vector Magnitude

For ProSe sidelink physical channels PSDCH, PSCCH, PSSCH, and PSBCH, the Error Vector Magnitude requirements shall be as specified for PUSCH in subclause 6.5.2.1 for the corresponding modulation and transmission bandwidth. When ProSe transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the EVM measurement interval is reduced by one symbol, accordingly.

For PSBCH the duration over which EVM is averaged shall be 24 subframes.

This requirement is not applicable for ProSe physical signals PSSS and SSSS.

### 6.5.2D.2 Carrier leakage

The requirements of subclause 6.5.2.2 shall apply for ProSe transmissions.

### 6.5.2D.3 In-band emissions

For ProSe sidelink physical channels PSDCH, PSCCH, PSSCH, and PSBCH, the In-band emissions requirements shall be as specified for PUSCH in subclause 6.5.2.3 for the corresponding modulation and transmission bandwidth. When ProSe transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the In-band emissions measurement interval is reduced by one symbol, accordingly.

### 6.5.2D.4 EVM equalizer spectrum flatness for ProSe

The requirements of subclause 6.5.2.4 shall apply for ProSe transmissions.

## 6.5.2E Transmit modulation quality for category M1 and M2

### 6.5.2E.1 Error Vector Magnitude

The Error Vector Magnitude is defined in section 6.5.2.1.

## 6.5.2E.2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. For UE of UL Categories M1 and M2, the sinusoid waveform may lie at the center of the narrowband assigned for transmission. The measurement interval is one slot in the time domain.

### 6.5.2E.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power at the center of the channel bandwidth or the center of the narrowband assigned for transmission shall not exceed the values specified in Table 6.5.2.2.1-1.

## 6.5.2E.3 In-band emissions

The in-band emission is defined in clause 6.5.2.3 and measurement condition specified in Annex F.

### 6.5.2E.3.1 Minimum requirements

The relative in-band emission when the center carrier frequency is either at the center of channel bandwidth or at the center of the narrowband assigned for transmission shall not exceed the values specified in Table 6.5.2E.3.1-1

**Table 6.5.2E.3.1-1: Minimum requirements for in-band emissions**

| Parameter description  | Unit | Limit (NOTE 1)   |   | Applicable Frequencies  |
|--|------|--|---|---|
| General  | dB   | $-18 - [5] \cdot ( \Delta_{SubG}  - 1) / L_{SCG}$  |   | Any non-allocated Subcarrier Group within the subPRB allocation (NOTE 11,12,13) |
|  |      | $\max \left\{ -25 - 10 \cdot \log_{10} (N_{RB} / L_{CRB}), \right.$ $20 \cdot \log_{10} EVM - 3 - 5 \cdot ( \Delta_{RB}  - 1) / L_{CRB},$ $\left. -57 \text{ dBm} / 180 \text{ kHz} - P_{RB} \right\}$ |   | Any non-allocated (NOTE 2)  |
| IQ Image   | dB   | -28  | Image frequencies when carrier center frequency < 1 GHz and Output power > 10 dBm | Image frequencies (NOTES 2, 3)  |
|  |      | -25  | Image frequencies when carrier center frequency < 1 GHz and Output power ≤ 10 dBm |   |
|  |      | -25  | Image frequencies when carrier center frequency ≥ 1 GHz                           |   |
| Carrier leakage  | dBc  | -28  | Output power > 10 dBm and carrier center frequency < 1 GHz                        | Carrier frequency (NOTES 4, 5)  |
|  |      | -25  | Output power > 10 dBm and carrier center frequency ≥ 1 GHz                        |   |
|  |      | -25  | 0 dBm ≤ Output power ≤ 10 dBm   |   |
|  |      | -20  | -30 dBm ≤ Output power ≤ 0 dBm  |   |
|  |      | -10  | -40 dBm ≤ Output power < -30 dBm  |   |
| <p>NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of <math>P_{RB} - 30</math> dB and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. <math>P_{RB}</math> is defined in NOTE 10.</p> <p>NOTE 2: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one non-allocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs.</p> <p>NOTE 3: The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated RBs. For UE of UL Categories M1 and M2, the applicable frequencies shall alternatively include those found by reflection on the center of the assigned narrowband, but excluding any allocated RBs.</p> <p>NOTE 4: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one non-allocated RB to the measured total power in all allocated RBs.</p> <p>NOTE 5: The applicable frequencies for this limit are those that are enclosed in the RBs containing the DC frequency if <math>N_{RB}</math> is odd, or in the two RBs immediately adjacent to the DC frequency if <math>N_{RB}</math> is even, but excluding any allocated RB. For UE of UL Categories M1 and M2, the applicable frequencies shall alternatively be the centre frequency of the supported 6RBs.</p> |      |  |   |   |

NOTE 6:  $L_{CRB}$  is the Transmission Bandwidth (see Figure 5.6-1).

NOTE 7:  $N_{RB}$  is the Transmission Bandwidth Configuration (see Figure 5.6-1).

NOTE 8:  $EVM$  is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.

NOTE 9:  $\Delta_{RB}$  is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g.  $\Delta_{RB} = 1$  or  $\Delta_{RB} = -1$  for the first adjacent RB outside of the allocated bandwidth).

NOTE 10:  $P_{RB}$  is the transmitted power per 180 kHz in allocated RBs, measured in dBm.

NOTE 11: The measurement bandwidth is 1 subcarrier group ( [3] subcarrier per subcarrier group) and the limit is expressed as a ratio of measured power in one non-allocated subcarrier group to the measured total power in all allocated subcarrier.

NOTE 12:  $\Delta_{SubG}$  is the starting frequency offset between the allocated subcarrier group and the measured non-allocated subcarrier group (e.g.  $\Delta_{SubG} = 1$  or  $\Delta_{SubG} = -1$  for the first adjacent subcarrier group outside the allocated subcarrier group.)

NOTE 13:  $L_{SCG}$  is the Transmission bandwidth (number of subcarrier group).

## 6.5.2F Transmit modulation quality for Category NB1 and NB2

### 6.5.2F.1 Error Vector Magnitude

The RMS average of the basic EVM measurements for  $240/L_{Ctone}$  slots excluding any transient period for the average EVM case, where  $L_{Ctone} = \{1, 3, 6, 12\}$  is the number of subcarriers for the category NB1 and NB2 transmission, for the different modulations schemes shall not exceed the values specified in Table 6.5.2.1.1-1 for the parameters defined in Table 6.5.2.1.1-2. For EVM evaluation purposes, both NPRACH formats are considered to have the same EVM requirement as QPSK modulated.

### 6.5.2F.2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. The measurement interval is one slot in the time domain. The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power of category NB1 or NB2 UE shall not exceed the values specified in Table 6.5.2F.2-1.

**Table 6.5.2F.2-1: Minimum requirements for relative carrier leakage power**

| Parameters  | Relative limit (dBc) |
|---|----------------------|
| $0 \text{ dBm} \leq \text{Output power}$                      | -25                  |
| $-30 \text{ dBm} \leq \text{Output power} \leq 0 \text{ dBm}$ | -20                  |
| $-40 \text{ dBm} \leq \text{Output power} < -30 \text{ dBm}$  | -10                  |

### 6.5.2F.3 In-band emissions

The in-band emission is defined as a function of the tone offset from the edge of the allocated UL transmission tone(s) within the transmission bandwidth configuration. The in-band emission is measured as the ratio of the UE output power in a non-allocated tone to the UE output power in an allocated tone. The basic in-band emissions measurement interval is defined over one slot in the time domain.

The category NB1 and NB2 UE relative in-band emission shall not exceed the values specified in Table 6.5.2F.3-1.

**Table 6.5.2F.3-1: Minimum requirements for in-band emissions**

| Parameter description | Unit | Limit (NOTE 1)   | Applicable Frequencies     |
|-----------------------|------|--|----------------------------|
| General               | dB   | $\max \left\{ \begin{aligned} & -15 - 10 \cdot \log_{10} (N_{tone} / L_{Ctone}), \\ & -18 - 5 \cdot ( \Delta_{tone}  - 1) / L_{Ctone}, \\ & -57 \text{ dBm} / (3.75 \text{ kHz or } 15 \text{ kHz}) - P_{tone} \end{aligned} \right\}$ | Any non-allocated (NOTE 2) |

| IQ Image        | dB  | -25 |   | Image frequencies (NOTES 2, 3) |
|-----------------|-----|-----|---|--------------------------------|
| Carrier leakage | dBc | -25 | $0 \text{ dBm} \leq \text{Output power}$                      | Carrier frequency (NOTES 4, 5) |
|                 |     | -20 | $-30 \text{ dBm} \leq \text{Output power} \leq 0 \text{ dBm}$ |                                |
|                 |     | -10 | $-40 \text{ dBm} \leq \text{Output power} < -30 \text{ dBm}$  |                                |

NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated tone. For each such tone, the minimum requirement is calculated as the higher of  $P_{\text{tone}} - 30 \text{ dB}$  and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply.  $P_{\text{tone}}$  is defined in NOTE 9.

NOTE 2: The measurement bandwidth is 1 tone and the limit is expressed as a ratio of measured power in one non-allocated tone to the measured average power per allocated tone, where the averaging is done across all allocated tones.

NOTE 3: The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated tones.

NOTE 4: The measurement bandwidth is 1 tone and the limit is expressed as a ratio of measured power in one non-allocated tone to the measured total power in all allocated tones.

NOTE 5: The applicable frequencies for this limit are those that are enclosed in the tones containing the DC frequency if  $N_{\text{tone}}$  is odd, or in the two tones immediately adjacent to the DC frequency if  $N_{\text{tone}}$  is even, but excluding any allocated tone.

NOTE 6:  $L_{\text{Ctone}}$  is the Transmission Bandwidth (tones).

NOTE 7:  $N_{\text{tone}}$  is the Transmission Bandwidth Configuration (tones).

NOTE 8:  $\Delta_{\text{tone}}$  is the starting frequency offset between the allocated tone and the measured non-allocated tone. (e.g.  $\Delta_{\text{tone}} = 1$  or  $\Delta_{\text{tone}} = -1$  for the first adjacent tone outside of the allocated bandwidth).

NOTE 9:  $P_{\text{tone}}$  is the transmitted power per 3.75 kHz or 15 kHz in allocated tones, measured in dBm.

## 6.5.2G Transmit modulation quality for V2X Communication

The requirements in this clause apply to V2X sidelink transmissions.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.5.2G apply for V2X sidelink transmission and the requirements in subclause 6.5.2 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna-connectors at the same time, the transmit modulation quality requirements for single carrier shall apply to each transmit antenna connector.

If V2X UE transmits on one-antenna connector at a time, the requirements specified for single carrier apply to the active antenna connector.

### 6.5.2G.1 Error Vector Magnitude

For V2X physical channels PSCCH, PSSCH and PSBCH, the Error Vector Magnitude requirements shall be as specified for PUSCH in subclause 6.5.2.1 for the corresponding modulation and transmission bandwidth.

For V2X sidelink physical channels PSCCH, PSSCH and PSBCH, the Error Vector Magnitude requirements shall be as specified separately for PSSCH and PSCCH for the corresponding modulation and transmission bandwidth. The measurement period for EVM of PSSCH and PSCCH is 15 subframes. The measurement period for reference signal EVM is 30 subframes. When V2X transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the EVM measurement interval is reduced by one symbol, accordingly.

For PSBCH the duration over which EVM is averaged shall be 24 subframes.

For intra-band contiguous multi-carrier operation the EVM requirement shall apply for each component carrier.

### 6.5.2G.2 Carrier leakage

The requirements of subcaluse 6.5.2.2 shall apply for V2X transmissions.

For intra-band contiguous multi-carrier operation the carrier leakage requirement of subclause 6.5.2A.2 shall apply.

### 6.5.2G.3 In-band emissions

For V2X sidelink physical channels PSCCH, PSSCH and PSBCH, the In-band emissions requirements shall be as specified for PUSCH in subclause 6.5.2.3 for the corresponding modulation and transmission bandwidth. When V2X transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the In-band emissions measurement interval is reduced by one symbol, accordingly.

For intra-band contiguous multi-carrier operation the in-band emission requirement of subclause 6.5.2A.3 shall apply.

### 6.5.2G.4 EVM equalizer spectrum flatness

The requirements of subclause 6.5.2.4 shall apply for V2X transmissions.

For intra-band contiguous multi-carrier operation the EVM equalizer spectrum flatness requirement of subclause 6.5.2.4 shall apply for each component carrier.

## 6.6 Output RF spectrum emissions

The output UE transmitter spectrum consists of the three components; the emission within the occupied bandwidth (channel bandwidth), the Out Of Band (OOB) emissions and the far out spurious emission domain.

Figure 6.6-1: Transmitter RF spectrum

### 6.6.1 Occupied bandwidth

Occupied bandwidth is defined as the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on the assigned channel. The occupied bandwidth for all transmission bandwidth configurations (Resources Blocks) shall be less than the channel bandwidth specified in Table 6.6.1-1

Table 6.6.1-1: Occupied channel bandwidth

|                         | Occupied channel bandwidth / Channel bandwidth |         |       |        |        |        |
|-------------------------|--|---------|-------|--------|--------|--------|
|                         | 1.4 MHz  | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Channel bandwidth (MHz) | 1.4  | 3       | 5     | 10     | 15     | 20     |

### 6.6.1.1 Additional minimum requirement for E-UTRA (network signalled value "NS\_29")

For E-UTRA CA bands including one uplink LAA Scell in Band 46 with "NS\_29" indicated, the occupied bandwidth for all transmission bandwidth configurations (Resources Blocks) shall be less than or equal to 19 MHz and 19.7MHz for E-UTRA carriers of 20 MHz bandwidth assigned within 5150-5350 MHz and 5470-5725 MHz, respectively.

### 6.6.1A Occupied bandwidth for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands the occupied bandwidth is defined per component carrier. Occupied bandwidth is the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on assigned channel bandwidth on the component carrier. The occupied bandwidth shall be less than the channel bandwidth specified in Table 6.6.1-1.

For intra-band contiguous carrier aggregation the occupied bandwidth is a measure of the bandwidth containing 99 % of the total integrated power of the transmitted spectrum. The OBW shall be less than the aggregated channel bandwidth defined in subclause 5.6A.

For intra-band non-contiguous carrier aggregation sub-block occupied bandwidth is defined as the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on the sub-block. In case the sub-block consist of one component carrier the occupied bandwidth of the sub-block shall be less than the channel bandwidth specified in Table 6.6.1-1.

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the occupied bandwidth is the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on each E-UTRA band. The OBW shall be less than the channel bandwidth as specified in Table 6.6.1-1 for the E-UTRA band supporting one component carrier. The OBW shall be less than the aggregated channel bandwidth as specified in subclause 5.6A for the E-UTRA band supporting two contiguous component carriers.

### 6.6.1B Occupied bandwidth for UL-MIMO

For UE supporting UL-MIMO, the requirements for occupied bandwidth is specified at each transmit antenna connector. The occupied bandwidth is defined as the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on the assigned channel at each transmit antenna connector.

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the occupied bandwidth at each transmitter antenna shall be less than the channel bandwidth specified in Table 6.6.1B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

**Table 6.6.1B-1: Occupied channel bandwidth**

|                         | Occupied channel bandwidth / Channel bandwidth |         |       |        |        |        |
|-------------------------|--|---------|-------|--------|--------|--------|
|                         | 1.4 MHz  | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Channel bandwidth (MHz) | 1.4  | 3       | 5     | 10     | 15     | 20     |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.6.1 apply.

### 6.6.1F Occupied bandwidth for category NB1 and NB2

The occupied bandwidth is defined as the bandwidth containing 99 % of the total integrated mean power of the transmitted spectrum on the assigned channel at the transmit antenna connector. Occupied bandwidth shall be less than the channel bandwidth of category NB1 and NB2 specified in Section 5.6F.

## 6.6.1G Occupied bandwidth for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.6.1 apply for E-UTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.6.1 apply for V2X sidelink transmission and the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation, the occupied bandwidth is a measure of the bandwidth containing 99 % of the total integrated power of the transmitted spectrum. The OBW shall be less than the aggregated channel bandwidth defined in subclause 5.6A.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements for occupied bandwidth is specified at each transmit antenna connector and the occupied bandwidth at each transmitter antenna shall be less than the channel bandwidth specified for single carrier.

If V2X UE transmits on one antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

## 6.6.2 Out of band emission

The Out of band emissions are unwanted emissions immediately outside the assigned channel bandwidth resulting from the modulation process and non-linearity in the transmitter but excluding spurious emissions. This out of band emission limit is specified in terms of a spectrum emission mask and an Adjacent Channel Leakage power Ratio.

### 6.6.2.1 Spectrum emission mask

The spectrum emission mask of the UE applies to frequencies ( $\Delta f_{\text{OOB}}$ ) starting from the  $\pm$  edge of the assigned E-UTRA channel bandwidth. For frequencies offset greater than  $\Delta f_{\text{OOB}}$  as specified in Table 6.6.2.1.1-1 the spurious requirements in subclause 6.6.3 are applicable.

#### 6.6.2.1.1 Minimum requirement

The power of any UE emission shall not exceed the levels specified in Table 6.6.2.1.1-1 for the specified channel bandwidth.

**Table 6.6.2.1.1-1: General E-UTRA spectrum emission mask**

| Spectrum emission limit (dBm)/ Channel bandwidth |            |            |          |           |           |           |                          |
|--|------------|------------|----------|-----------|-----------|-----------|--------------------------|
| $\Delta f_{\text{OOB}}$<br>(MHz)                 | 1.4<br>MHz | 3.0<br>MHz | 5<br>MHz | 10<br>MHz | 15<br>MHz | 20<br>MHz | Measurement<br>bandwidth |
| $\pm 0-1$  | -10        | -13        | -15      | -18       | -20       | -21       | 30 kHz                   |
| $\pm 1-2.5$                                      | -10        | -10        | -10      | -10       | -10       | -10       | 1 MHz                    |
| $\pm 2.5-2.8$                                    | -25        | -10        | -10      | -10       | -10       | -10       | 1 MHz                    |
| $\pm 2.8-5$                                      |            | -10        | -10      | -10       | -10       | -10       | 1 MHz                    |
| $\pm 5-6$  |            | -25        | -13      | -13       | -13       | -13       | 1 MHz                    |
| $\pm 6-10$                                       |            |            | -25      | -13       | -13       | -13       | 1 MHz                    |
| $\pm 10-15$                                      |            |            |          | -25       | -13       | -13       | 1 MHz                    |
| $\pm 15-20$                                      |            |            |          |           | -25       | -13       | 1 MHz                    |
| $\pm 20-25$                                      |            |            |          |           |           | -25       | 1 MHz                    |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.1A Spectrum emission mask for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spectrum emission mask of the UE is defined per component carrier while both component carriers are active and the requirements are specified in subclauses 6.6.2.1 and 6.6.2.2. If for some frequency spectrum emission masks of component carriers overlap then spectrum emission mask allowing higher power spectral density applies for that frequency. If for some frequency a component carrier spectrum emission mask overlaps with the channel bandwidth of another component carrier, then the emission mask does not apply for that frequency.

For intra-band contiguous carrier aggregation the spectrum emission mask of the UE applies to frequencies ( $\Delta f_{\text{OOB}}$ ) starting from the  $\pm$  edge of the aggregated channel bandwidth (Table 5.6A-1) For intra-band contiguous carrier aggregation the bandwidth class B, C and D, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.1A-0, Table 6.6.2.1A-1 and Table 6.6.2.1A-2 for the specified channel bandwidth.

**Table 6.6.2.1A-0: General E-UTRA CA spectrum emission mask for Bandwidth Class B**

| $\Delta f_{\text{OOB}}$<br>(MHz) | 25RB+25RB<br>(9.8MHz) | 25RB+50RB<br>(14.95 MHz) | 25RB+75RB<br>(19.8MHz) | 50RB+50RB<br>(19.9 MHz) | Measurement<br>bandwidth |
|----------------------------------|-----------------------|--------------------------|------------------------|-------------------------|--------------------------|
| $\pm 0-1$                        | -18                   | -20                      | -21                    | -21                     | 30 kHz                   |
| $\pm 1-5$                        | -10                   | -10                      | -10                    | -10                     | 1 MHz                    |

|                  |  |     |     |     |     |     |       |
|------------------|--|-----|-----|-----|-----|-----|-------|
| $\pm 49.7-49.85$ |  | -25 | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 49.85-50$   |  | -25 | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm 50-54.65$   |  |     | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm 54.65-54.7$ |  |     | -25 | -25 | -25 | -13 | 1 MHz |
| $\pm 54.7-54.85$ |  |     |     | -25 | -25 | -13 | 1 MHz |
| $\pm 54.85-59.6$ |  |     |     |     | -25 | -13 | 1 MHz |
| $\pm 59.6-59.65$ |  |     |     |     | -25 | -25 | 1 MHz |
| $\pm 59.65-64.6$ |  |     |     |     |     | -25 | 1 MHz |

For intra-band non-contiguous carrier aggregation transmission the spectrum emission mask requirement is defined as a composite spectrum emissions mask. Composite spectrum emission mask applies to frequencies up to  $\pm \Delta f_{\text{OoB}}$  starting from the edges of the sub-blocks. Composite spectrum emission mask is defined as follows

- a) Composite spectrum emission mask is a combination of individual sub-block spectrum emissions masks
- b) In case the sub-block consist of one component carrier the sub-block general spectrum emission mask is defined in subclause 6.6.2.1.1
- c) If for some frequency sub-block spectrum emission masks overlap then spectrum emission mask allowing higher power spectral density applies for that frequency
- d) If for some frequency a sub-block spectrum emission mask overlaps with the sub-block bandwidth of another sub-block, then the emission mask does not apply for that frequency.

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the spectrum emission mask of the UE is defined per E-UTRA band while all component carriers are active. For the E-UTRA band supporting one component carrier the requirements in subclauses 6.6.2.1 and 6.6.2.2 apply. For the E-UTRA band supporting two contiguous component carriers the requirements specified in subclause 6.6.2.1A apply. If for some frequency spectrum emission masks of single component carrier and two contiguous component carriers overlap then spectrum emission mask allowing higher power spectral density applies for that frequency. If for some frequency spectrum emission masks of single component carrier or two contiguous component carriers overlap then the emission mask does not apply for that frequency.

## 6.6.2.2 Additional spectrum emission mask

This requirement is specified in terms of an "additional spectrum emission" requirement.

### 6.6.2.2.1 Minimum requirement (network signalled value "NS\_03", "NS\_11", "NS\_20", and "NS\_21")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_03", "NS\_11", "NS\_20" or "NS\_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.1-1.

**Table 6.6.2.2.1-1: Additional requirements**

| $\Delta f_{\text{OoB}}$<br>(MHz) | Spectrum emission limit (dBm)/ Channel bandwidth |         |       |        |        |        | Measurement bandwidth |
|----------------------------------|--|---------|-------|--------|--------|--------|-----------------------|
|                                  | 1.4 MHz  | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |                       |
| $\pm 0-1$                        | -10  | -13     | -15   | -18    | -20    | -21    | 30 kHz                |
| $\pm 1-2.5$                      | -13  | -13     | -13   | -13    | -13    | -13    | 1 MHz                 |
| $\pm 2.5-2.8$                    | -25  | -13     | -13   | -13    | -13    | -13    | 1 MHz                 |
| $\pm 2.8-5$                      |  | -13     | -13   | -13    | -13    | -13    | 1 MHz                 |
| $\pm 5-6$                        |  | -25     | -13   | -13    | -13    | -13    | 1 MHz                 |
| $\pm 6-10$                       |  |         | -25   | -13    | -13    | -13    | 1 MHz                 |
| $\pm 10-15$                      |  |         |       | -25    | -13    | -13    | 1 MHz                 |
| $\pm 15-20$                      |  |         |       |        | -25    | -13    | 1 MHz                 |
| $\pm 20-25$                      |  |         |       |        |        | -25    | 1 MHz                 |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2.2 Minimum requirement (network signalled value "NS\_04")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.2-1.

**Table 6.6.2.2.2-1: Additional requirements**

| $\Delta f_{\text{OoB}}$<br>(MHz) | Spectrum emission limit (dBm)/ Channel bandwidth |           |           |           |                          |
|----------------------------------|--|-----------|-----------|-----------|--------------------------|
|                                  | 5<br>MHz   | 10<br>MHz | 15<br>MHz | 20<br>MHz | Measurement<br>bandwidth |
| $\pm 0-1$                        | -15  | -18       | -20       | -21       | 30 kHz                   |
| $\pm 1-2.5$                      | -10  | -10       | -10       | -10       | 1 MHz                    |
| $\pm 2.5-2.8$                    | -10  | -10       | -10       | -10       | 1 MHz                    |
| $\pm 2.8-5$                      | -10  | -10       | -10       | -10       | 1 MHz                    |
| $\pm 5-6$                        | -13  | -13       | -13       | -13       | 1 MHz                    |
| $\pm 6-9$                        | -25  | -13       | -13       | -13       | 1 MHz                    |
| $\pm 9-10$                       | -25  | -25       | -13       | -13       | 1 MHz                    |
| $\pm 10-13.5$                    |  | -25       | -13       | -13       | 1 MHz                    |
| $\pm 13.5-15$                    |  | -25       | -25       | -13       | 1 MHz                    |
| $\pm 15-18$                      |  |           | -25       | -13       | 1 MHz                    |
| $\pm 18-20$                      |  |           | -25       | -25       | 1 MHz                    |
| $\pm 20-25$                      |  |           |           | -25       | 1 MHz                    |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2.3 Minimum requirement (network signalled value "NS\_06" or "NS\_07")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_06" or "NS\_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.3-1.

**Table 6.6.2.2.3-1: Additional requirements**

| $\Delta f_{\text{OoB}}$<br>(MHz) | Spectrum emission limit (dBm)/ Channel bandwidth |            |          |           |                          |
|----------------------------------|--|------------|----------|-----------|--------------------------|
|                                  | 1.4<br>MHz                                       | 3.0<br>MHz | 5<br>MHz | 10<br>MHz | Measurement<br>bandwidth |
| $\pm 0-0.1$                      | -13  | -13        | -15      | -18       | 30 kHz                   |
| $\pm 0.1-1$                      | -13  | -13        | -13      | -13       | 100 kHz                  |
| $\pm 1-2.5$                      | -13  | -13        | -13      | -13       | 1 MHz                    |
| $\pm 2.5-2.8$                    | -25  | -13        | -13      | -13       | 1 MHz                    |
| $\pm 2.8-5$                      |  | -13        | -13      | -13       | 1 MHz                    |
| $\pm 5-6$                        |  | -25        | -13      | -13       | 1 MHz                    |
| $\pm 6-10$                       |  |            | -25      | -13       | 1 MHz                    |
| $\pm 10-15$                      |  |            |          | -25       | 1 MHz                    |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2.4 Minimum requirement (network signalled value "NS\_33" or "NS\_34")

The additional spectrum mask in Table 6.6.2.2.4-1 applies for E-UTRA V2X UE within 5 855 MHz to 5 950 MHz according to ETSI EN 302 571. Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_33" or "NS\_34" is indicated in the cell, the power of any V2X UE emission shall not exceed the levels specified in Table 6.6.2.2.4-1.

**Table 6.6.2.2.4-1: Additional requirements for 10MHz channel bandwidth**

| Spectrum emission limit (dBm EIRP)/ Channel bandwidth |  |                       |
|---|--|-----------------------|
| $\Delta f_{\text{OoB}}$ (MHz)                         | 10 MHz   | Measurement bandwidth |
| $\pm 0-0.5$   | $[-13 - 12 \left( \frac{ \Delta f_{\text{OoB}} }{\text{MHz}} \right)]$                 | 100 kHz               |
| $\pm 0.5-5$   | $[-19 - \frac{16}{9} \left( \frac{ \Delta f_{\text{OoB}} }{\text{MHz}} - 0.5 \right)]$ | 100 kHz               |
| $\pm 5-10$  | $[-27 - 2 \left( \frac{ \Delta f_{\text{OoB}} }{\text{MHz}} - 5.0 \right)]$            | 100 kHz               |

NOTE 1: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

NOTE 2: Additional SEM for V2X overrides any other requirements in frequency range 5855-5950MHz.

NOTE 3: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain  $G_{\text{post connector}}$  declared by the UE following the principle described in annex I.

#### 6.6.2.2.5 Minimum requirement (network signalled value "NS\_27" and "NS\_43")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_27" or "NS\_43" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.5-1.

**Table 6.6.2.2.5-1: Additional requirements**

| $\Delta f_{\text{OoB}}$ (MHz)   | Spectrum emission limit (dBm)/ Channel bandwidth |        |        |        | Measurement bandwidth |
|---|--|--------|--------|--------|-----------------------|
|   | 5 MHz  | 10 MHz | 15 MHz | 20 MHz |                       |
| $\pm 0-1$   | -13  | -13    | -13    | -13    | Note 1                |
| $\pm 1-10$  | -13  | -13    | -13    | -13    | 1 MHz                 |
| $\pm 10-15$   |  | -25    | -25    | -25    | 1 MHz                 |
| $\pm 15-20$   |  |        | -25    | -25    | 1 MHz                 |
| $\pm 20-25$   |  |        |        | -25    | 1 MHz                 |
| Note 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth. |  |        |        |        |                       |

### 6.6.2.2.6 Minimum requirement (network signalled value "NS\_28")

When "NS\_28" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.6-1 for E-UTRA channels assigned within the frequency ranges 5150-5350 and 5470-5725 MHz.

**Table 6.6.2.2.6-1: Additional requirements**

| Frequency offset of measurement filter -3dB point, $\Delta f$ | Frequency offset of measurement filter centre frequency, $f_{\text{offset}}$ | Minimum requirement [dBm]                                 | Measurement bandwidth |
|---|--|---|-----------------------|
| $0 \text{ MHz} \leq \Delta f < 0.5 \text{ MHz}$               | $0.5 \text{ MHz} \leq f_{\text{offset}} < 1 \text{ MHz}$                     | $10 - 20(f_{\text{offset}}/\text{MHz}) \text{ dB}$        | 1 MHz                 |
| $0.5 \text{ MHz} \leq \Delta f < 9.5 \text{ MHz}$             | $1 \text{ MHz} \leq f_{\text{offset}} < 10 \text{ MHz}$                      | $-10 - 8/9(f_{\text{offset}}/\text{MHz} - 1) \text{ dB}$  | 1 MHz                 |
| $9.5 \text{ MHz} \leq \Delta f < 19.5 \text{ MHz}$            | $10 \text{ MHz} \leq f_{\text{offset}} < 20 \text{ MHz}$                     | $-28 - 1.2(f_{\text{offset}}/\text{MHz} - 10) \text{ dB}$ | 1 MHz                 |
| $19.5 \text{ MHz} \leq \Delta f$                              | $20 \text{ MHz} \leq f_{\text{offset}}$                                      | -30   | 1 MHz                 |

NOTE 1: The measurement filter -3dB point is that closest to the channel edge.  
 NOTE 2: The requirement applies when the offset of the measurement filter centre frequency is such that both -3 dB points of the measurement filter are confined within any of the two frequency ranges 5150-5250 MHz and 5470-5725 MHz.

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2.7 Minimum requirement (network signalled value "NS\_35")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS\_35" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.7-1.

**Table 6.6.2.2.7-1: Additional requirements**

| $\Delta f_{\text{OOB}}$ (MHz) | 5 MHz            | 10 MHz           | 15 MHz           | 20 MHz | Measurement bandwidth (unless otherwise stated) |
|-------------------------------|------------------|------------------|------------------|--------|---|
| $\pm 0-0.1$                   | -15              | -18              | -20              | -21    | 30 kHz  |
| $\pm 0.1-6$                   | -13              | -13              | -13              | -13    | 100 kHz   |
| $\pm 6-10$                    | -25 <sup>1</sup> | -13              | -13              | -13    | 100 kHz   |
| $\pm 10-15$                   |                  | -25 <sup>1</sup> | -13              | -13    | 100 kHz   |
| $\pm 15-20$                   |                  |                  | -25 <sup>1</sup> | -13    | 100 kHz   |
| $\pm 20-25$                   |                  |                  |                  | -25    | 1 MHz   |

Note 1: The measurement bandwidth shall be 1 MHz

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A Additional Spectrum Emission Mask for CA

This requirement is specified in terms of an "additional spectrum emission" requirement.

#### 6.6.2.2A.1 Minimum requirement (network signalled value "CA\_NS\_04")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA\_NS\_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.1-1.

**Table 6.6.2.2A.1-1: Additional requirements**

| Spectrum emission limit [dBm]/BW <sub>Channel_CA</sub> |                        |                         |                        |                     |                         |                         |                          |
|--|------------------------|-------------------------|------------------------|---------------------|-------------------------|-------------------------|--------------------------|

| ± 29.75-29.95  |                        | -25                     | -25                    | -25                 | -13                     | -13                     | 1 MHz                    |
| ± 29.95-32.85  |                        |                         | -25                    | -25                 | -13                     | -13                     | 1 MHz                    |
| ± 32.85-34.9   |                        |                         | -25                    | -25                 | -25                     | -13                     | 1 MHz                    |
| ± 34.9-35  |                        |                         |                        | -25                 | -25                     | -13                     | 1 MHz                    |
| ± 35-37.8  |                        |                         |                        |                     | -25                     | -13                     | 1 MHz                    |
| ± 37.8-39.85   |                        |                         |                        |                     | -25                     | -25                     | 1 MHz                    |
| ± 39.85-44.8   |                        |                         |                        |                     |                         | -25                     | 1 MHz                    |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

#### 6.6.2.2A.2 Minimum requirement CA\_66B (network signalled value "CA\_NS\_09")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA\_NS\_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.2-1.

**Table 6.6.2.2A.2-1: Additional requirements**

| $\Delta f_{\text{OoB}}$<br>(MHz) | 25RB+25RB<br>(9.8MHz) | 25RB+50RB<br>(14.95 MHz) | 25RB+75RB<br>(19.8MHz) | 50RB+50RB<br>(19.9 MHz) | Measurement<br>bandwidth |

| ± 30-34.85   |                          |                          | -25                      | -25                   | -13                       | -13                       | 1 MHz                    |
| ± 34.85-34.9   |                          |                          | -25                      | -25                   | -25                       | -13                       | 1 MHz                    |
| ± 34.9-35  |                          |                          |                          | -25                   | -25                       | -13                       | 1 MHz                    |
| ± 35-39.8  |                          |                          |                          |                       | -25                       | -13                       | 1 MHz                    |
| ± 39.8-39.85   |                          |                          |                          |                       | -25                       | -25                       | 1 MHz                    |
| ± 39.85-44.8   |                          |                          |                          |                       |                           | -25                       | 1 MHz                    |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A.4 Minimum requirement CA\_48B and CA\_48C (network signalled value "CA\_NS\_10")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA\_NS\_10" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.4-1.

**Table 6.6.2.2A.4-1: Additional requirements for "CA\_NS\_10"**

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.3 Adjacent Channel Leakage Ratio

Adjacent Channel Leakage power Ratio (ACLR) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. ACLR requirements for one E-UTRA carrier are specified for two scenarios for an adjacent E-UTRA and /or UTRA channel as shown in Figure 6.6.2.3-1.

Figure 6.6.2.3-1: Adjacent Channel Leakage requirements for one E-UTRA carrier

#### 6.6.2.3.1 Minimum requirement E-UTRA

E-UTRA Adjacent Channel Leakage power Ratio ( $E-UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.1-1, Table 6.6.2.3.1-2, and Table 6.6.2.3.1-3. If the measured adjacent channel power is greater than  $-50\text{dBm}$  then the  $E-UTRA_{ACLR}$  shall be higher than the value specified in Table 6.6.2.3.1-1, Table 6.6.2.3.1-2, and Table 6.6.2.3.1-3.

For a power class 2 capable UE operating on Band 41, when an IE  $P\text{-max}$  as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6, the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
  - if the band is a TDD band whose frame configuration is 0 or 6; or
  - if the IE  $P\text{-Max}$  as defined in TS 36.331 [7] is not provided; or
  - if the IE  $P\text{-Max}$  as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
    - meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE  $P\text{-Max}$  as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
  - meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

**Table 6.6.2.3.1-1: General requirements for E-UTRA<sub>ACLR</sub>**

|  | Channel bandwidth / E-UTRA <sub>ACLR1</sub> / Measurement bandwidth |             |         |           |           |           |

| Adjacent channel centre frequency offset [MHz] | N/A   | N/A     | +5 / -5 | +10 / -10 | +15 / -15 | +20 / -20 |

**6.6.2.3.1a Additional minimum requirement for E-UTRA (network signalled value “NS\_29”)**

When "NS\_29" is indicated in the cell, the UE emission shall meet the additional requirements specified in Table 6.6.2.3.1a-1 for E-UTRA channels assigned within the frequency ranges 5150-5350 MHz and 5470-5725 MHz. The assigned E-UTRA channel power and alternative adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.1a-1. If the measured alternative adjacent channel power is greater than -50dBm then the E-UTRA<sub>ACLR2</sub> shall be higher than the value specified in Table 6.6.2.3.1a-1.

**Table 6.6.2.3.1a-1: Additional E-UTRA<sub>ACLR</sub> requirement**

|   | Channel bandwidth / E-UTRA <sub>ACLR2</sub> / Measurement bandwidth |
|---|---|
|   | 20 MHz  |
| E-UTRA <sub>ACLR2</sub>   | 40 dBc  |
| E-UTRA channel Measurement bandwidth  | NOTE 1  |
| Adjacent channel centre frequency offset [MHz]  | +40 / -40   |
| NOTE 1: 18 MHz for E-UTRA channels assigned within 5150-5350 MHz; 19 MHz for E-UTRA channels assigned within 5470-5725 MHz. |   |

6.6.2.3.1A Void

6.6.2.3.1Aa Void

### 6.6.2.3.2 Minimum requirements UTRA

UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent(s) UTRA channel frequency.

UTRA Adjacent Channel Leakage power Ratio is specified for both the first UTRA adjacent channel ( $UTRA_{ACLR1}$ ) and the 2<sup>nd</sup> UTRA adjacent channel ( $UTRA_{ACLR2}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3.2-1. If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the  $UTRA_{ACLR}$  shall be higher than the value specified in Table 6.6.2.3.2-1.

$UTRA_{ACLR}$  is not applicable to the power class 3 UE operating in Band 7, 12, 13, 17, 20, 24, 27, 30, 33, 35, 36, 37, 38, 40, 43, 44, 45, 47, 48, 50, 51, 52, 68, 70, 71, 85 and Scell operation in Band 46, 49.

$UTRA_{ACLR}$  is not applicable to the power class 2 UE operating in Band 38, 40, 41, 42 or 47 and Scell operation in Band 46.

$UTRA_{ACLR}$  is not applicable to the power class 1 UE operating in Band 3, 20, 28, 31 or 72.

**Table 6.6.2.3.2-1: Requirements for  $UTRA_{ACLR1/2}$**

|  | Channel bandwidth / $UTRA_{ACLR1/2}$ / Measurement bandwidth |                        |                           |                         |                           |                          |

| NOTE 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. |  |                        |                           |                         |                           |                          |

### 6.6.2.3.2A Minimum requirement UTRA for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned channel bandwidth on the component carrier to the filtered mean power centred on an adjacent channel

frequency. The UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.2.

For intra-band contiguous carrier aggregation the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) UTRA channel frequency.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the sum of the filtered mean powers centered on the assigned sub-block frequencies to the filtered mean power centred on an adjacent(s) UTRA channel frequency.  $UTRA_{ACLR1/2}$  requirements are applicable for all sub-blocks and are specified in Table 6.6.2.3.2A-2.  $UTRA_{ACLR1}$  is required to be met in the sub-block gap when the gap bandwidth  $W_{gap}$  is  $5\text{MHz} \leq W_{gap} < 15\text{MHz}$ . Both  $UTRA_{ACLR1}$  and  $UTRA_{ACLR2}$  are required to be met in the sub-block gap when the gap bandwidth  $W_{gap}$  is  $15\text{MHz} \leq W_{gap}$ .

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is defined as follows. For the E-UTRA band supporting one component carrier, the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the assigned channel bandwidth of the component carrier to the filtered mean power centred on an adjacent(s) UTRA channel frequency and the requirements specified in subclause 6.6.2.3.2 apply. For the E-UTRA band supporting two contiguous component carriers the UTRA Adjacent Channel Leakage power Ratio ( $UTRA_{ACLR}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) UTRA channel frequency and the requirements specified in subclause 6.6.2.3.2A apply.

UTRA Adjacent Channel Leakage power Ratio is specified for both the first UTRA adjacent channel ( $UTRA_{ACLR1}$ ) and the 2<sup>nd</sup> UTRA adjacent channel ( $UTRA_{ACLR2}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor  $\alpha = 0.22$ . The assigned aggregated channel bandwidth power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3.2A-1 for intraband contiguous carrier aggregation or 6.6.2.3.2A-2 for intraband non-contiguous carrier aggregation. If the measured UTRA channel power is greater than  $-50\text{dBm}$  then the  $UTRA_{ACLR}$  shall be higher than the value specified in Table 6.6.2.3.2A-1 for intraband contiguous carrier aggregation or 6.6.2.3.2A-2 for intraband non-contiguous carrier aggregation.

For carrier aggregation with one or two uplink component carriers, the  $UTRA_{ACLR}$  requirements for the PC3 UE are not applicable to the uplink component carrier(s) assigned to one of the E-UTRA band in Band 7, 12, 13, 17, 20, 24, 27, 30, 33, 35, 36, 37, 38, 40, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 68, 70, 71 or 85.

**Table 6.6.2.3.2A-1: Requirements for  $UTRA_{ACLR1/2}$**

|  | CA bandwidth class / $UTRA_{ACLR1/2}$ / measurement bandwidth                                   |
|--|---|
|  | CA bandwidth class B, C and D   |
| $UTRA_{ACLR1}$   | 33 dB   |
| Adjacent channel centre frequency offset (in MHz)                                  | $\frac{+ BW_{Channel\_CA} / 2 + BW_{UTRA} / 2}{- BW_{Channel\_CA} / 2 - BW_{UTRA} / 2}$         |
| $UTRA_{ACLR2}$   | 36 dB   |
| Adjacent channel centre frequency offset (in MHz)                                  | $\frac{+ BW_{Channel\_CA} / 2 + 3 * BW_{UTRA} / 2}{- BW_{Channel\_CA} / 2 - 3 * BW_{UTRA} / 2}$ |
| CA E-UTRA channel Measurement bandwidth  | $BW_{Channel\_CA} - 2 * BW_{GB}$  |
| UTRA 5MHz channel Measurement bandwidth (NOTE 1)                                   | 3.84 MHz  |

| NOTE 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.<br>NOTE 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. |  |

### 6.6.2.3.3A Minimum requirements for CA E-UTRA

For intra-band contiguous carrier aggregation the carrier aggregation E-UTRA Adjacent Channel Leakage power Ratio (CA E-UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent aggregated channel bandwidth at nominal channel spacing. The assigned aggregated channel bandwidth power and adjacent aggregated channel bandwidth power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.3A-1. If the measured adjacent channel power is greater than – 50dBm then the E-UTRA<sub>ACLR</sub> shall be higher than the value specified in Table 6.6.2.3.3A-1 and Table 6.6.2.3.3A-1a.

**Table 6.6.2.3.3A-1: General requirements for CA E-UTRA<sub>ACLR</sub>**

|   | CA bandwidth class / CA E-UTRA <sub>ACLR</sub> / Measurement bandwidth |
|---|--|
|   | CA bandwidth class B, C and D  |
| CA E-UTRA <sub>ACLR</sub>                         | 30 dB  |
| CA E-UTRA channel Measurement bandwidth           | $BW_{\text{Channel\_CA}} - 2 \cdot BW_{\text{GB}}$                     |
| Adjacent channel centre frequency offset (in MHz) | $\frac{+ BW_{\text{Channel\_CA}}}{- BW_{\text{Channel\_CA}}}$          |

**Table 6.6.2.3.3A-1a: Additional requirements for CA E-UTRA<sub>ACLR</sub> for UL CA\_41C Power Class 2**

|   | CA bandwidth class / CA E-UTRA <sub>ACLR</sub> / Measurement bandwidth |
|---|--|
|   | CA bandwidth class C   |
| CA E-UTRA <sub>ACLR</sub>                         | 31 dB  |
| CA E-UTRA channel Measurement bandwidth           | $BW_{\text{Channel\_CA}} - 2 \cdot BW_{\text{GB}}$                     |
| Adjacent channel centre frequency offset (in MHz) | $\frac{+ BW_{\text{Channel\_CA}}}{- BW_{\text{Channel\_CA}}}$          |

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACLR</sub>) is the ratio of the filtered mean power centred on the assigned channel bandwidth on a component carrier to the filtered mean power centred on an adjacent channel frequency. The E-UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.1.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACL</sub>R) is the ratio of the sum of the filtered mean powers centred on the assigned sub-block frequencies to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. In case the sub-block gap bandwidth  $W_{gap}$  is smaller than of the sub-block bandwidth then for that sub-block no E-UTRA<sub>ACL</sub>R requirement is set for the gap. In case the sub-block gap bandwidth  $W_{gap}$  is smaller than either of the sub-block bandwidths then no E-UTRA<sub>ACL</sub>R requirement is set for the gap. The assigned E-UTRA sub-block power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.3A-2. If the measured adjacent channel power is greater than  $-50$  dBm then the E-UTRA<sub>ACL</sub>R shall be higher than the value specified in Table 6.6.2.3.3A-2.

**Table 6.6.2.3.3A-2: General requirements for non-contiguous intraband CA E-UTRA<sub>ACL</sub>R**

|   | CC and adjacent channel bandwidth / E-UTRA <sub>ACL</sub> R / Measurement bandwidth |       |       |        |        |        |
|---|---|-------|-------|--------|--------|--------|
|   | 1.4 MHz   | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| E-UTRA <sub>ACL</sub> R1                            | 30 dB   | 30 dB | 30 dB | 30 dB  | 30 dB  | 30 dB  |
| CC and adjacent channel measurement bandwidth [MHz] | 1.08  | 2.7   | 4.5   | 9      | 13.5   | 18     |
| Adjacent channel centre frequency offset [MHz]      | + 1.4   | + 3   | + 5   | + 10   | + 15   | + 20   |
|   | /   | /     | /     | /      | /      | /      |
|   | - 1.4   | - 3   | - 5   | - 10   | - 15   | - 20   |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACL</sub>R) is defined as follows. For the E-UTRA band supporting one component carrier, the E-UTRA Adjacent Channel Leakage power Ratio (UTRA<sub>ACL</sub>R) is the ratio of the filtered mean power centred on the assigned channel bandwidth of the component carrier to the filtered mean power centred on an adjacent channel frequency and the requirements in subclause 6.6.2.3.1 apply. For the E-UTRA band supporting two contiguous component carriers the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA<sub>ACL</sub>R) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) aggregated channel bandwidth at nominal channel spacing and the requirements of CA E-UTRA<sub>ACL</sub>R specified in subclause 6.6.2.3.3A apply.

#### 6.6.2.4 Void

##### 6.6.2.4.1 Void

#### 6.6.2A Void

<reserved for future use>

#### 6.6.2B Out of band emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Out of band emissions resulting from the modulation process and non-linearity in the transmitters are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.2 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.6.3 apply.

#### 6.6.2C Void

<reserved for future use>

## 6.6.2D Out of band emission for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.6.2 apply.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.6.2 apply per E-UTRA ProSe sidelink and E-UTRA uplink transmission as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

## 6.6.2F Out of band emission for category NB1 and NB2

### 6.6.2F.1 Spectrum emission mask

The spectrum emission mask of the category NB1 and NB2 UE applies to frequencies ( $\Delta f_{\text{OoB}}$ ) starting from the  $\pm$  edge of the assigned category NB1 or NB2 channel bandwidth. For frequencies greater than ( $\Delta f_{\text{OoB}}$ ) as specified in Table 6.6.2F.1-1 the spurious requirements in subclause 6.6.3 are applicable.

The power of any category NB1 or NB2 UE emission shall not exceed the levels specified in Table 6.6.2F.1-1. The spectrum emission limit between each  $\Delta f_{\text{OoB}}$  is linearly interpolated.

**Table 6.6.2F.1-1: category NB1 and NB2 UE spectrum emission mask**

| $\Delta f_{\text{OoB}}$ (kHz) | Emission limit (dBm) | Measurement bandwidth |
|-------------------------------|----------------------|-----------------------|
| $\pm 0$                       | 26                   | 30 kHz                |
| $\pm 100$                     | -5                   | 30 kHz                |
| $\pm 150$                     | -8                   | 30 kHz                |
| $\pm 300$                     | -29                  | 30 kHz                |
| $\pm 500-1700$                | -35                  | 30 kHz                |

In addition to the spectrum emission mask requirement in Table 6.6.2F.1-1 a category NB1 or NB2 UE shall also meet the applicable E-UTRA spectrum emission mask requirement in sub-clause 6.6.2. E-UTRA spectrum emission requirement applies for frequencies that are Foffset away from edge of NB1 or NB2 channel edge as defined in Table 6.6.2F.1-2.

**Table 6.6.2F.1-2: Foffset for category NB1 and NB2 UE spectrum emission mask**

| Channel BW (MHz) | Foffset [kHz] |
|------------------|---------------|
| 1.4              | 165           |
| 3                | 190           |
| 5                | 200           |
| 10               | 225           |
| 15               | 240           |
| 20               | 245           |

Note: Foffset in Table 6.6.2F.1-2 is used to guarantee co-existence for guard-band operation.

### 6.6.2F.2 Additional Spectrum Emission Mask for Category NB1 and NB2

This requirement is specified in terms of an "additional spectrum emission" requirement.

#### 6.6.2F.2.1 Minimum requirement (network signalled value "NS\_02")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell broadcast message.

When "NS\_02" is indicated in the cell, the NB-IoT channel is deployed in the lower guard-band of a 10MHz E-UTRA channel and the separation between the two channel centres is equal to 4.695 MHz. The power of any UE emission shall

not exceed the levels specified in Table 6.6.2.1.1-1 for the specified E-UTRA channel bandwidth and the levels specified in Table 6.6.2F.1-1 for the NB-IoT channel.

Note: UEs that meet the above emission requirement would automatically meet the E-UTRA additional spectrum emission masks as defined in 6.6.2.2 for the applicable operating bands.

### 6.6.2F.2.2 Minimum requirement (network signalled value "NS\_03")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell broadcast message.

When "NS\_03" is indicated in the cell, the NB-IoT channel is deployed in the upper guard-band of a 10MHz E-UTRA channel and the separation between the two channel centres is equal to 4.695 MHz. The power of any UE emission shall not exceed the levels specified in Table 6.6.2.1.1-1 for the specified E-UTRA channel bandwidth and the levels specified in Table 6.6.2F.1-1 for the NB-IoT channel.

Note: UEs that meet the above emission requirement would automatically meet the E-UTRA additional spectrum emission masks as defined in 6.6.2.2 for the applicable operating bands.

### 6.6.2F.3 Adjacent Channel Leakage Ratio for category NB1 and NB2

Adjacent Channel Leakage power Ratio is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. The assigned category NB1 or NB2 channel power and adjacent channel power are measured with filters and measurement bandwidths specified in Table 6.6.2F.3-1. If the measured adjacent channel power is greater than  $-50\text{dBm}$  then the category NB1 or NB2 UE ACLR shall be higher than the value specified in Table 6.6.2F.3-1.  $\text{GSM}_{\text{ACLR}}$  requirement is intended for protection of GSM system.  $\text{UTRA}_{\text{ACLR}}$  requirement is intended for protection of UTRA and E-UTRA systems.

**Table 6.6.2F.3-1: category NB1 and NB2 UE ACLR requirements**

|   | $\text{GSM}_{\text{ACLR}}$ | $\text{UTRA}_{\text{ACLR}}$ |
|---|----------------------------|-----------------------------|
| <b>ACLR</b>   | 20 dB                      | 37 dB                       |
| <b>Adjacent channel center frequency offset from category NB1 or NB2 Channel edge</b> | $\pm 200\text{ kHz}$       | $\pm 2.5\text{ MHz}$        |
| <b>Adjacent channel measurement bandwidth</b>   | 180 kHz                    | 3.84 MHz                    |
| <b>Measurement filter</b>   | Rectangular                | RRC-filter<br>$\alpha=0.22$ |
| <b>Category NB1 and NB2 channel measurement bandwidth</b>                             | 180 kHz                    | 180 kHz                     |
| <b>Category NB1 and NB2 channel Measurement filter</b>                                | Rectangular                | Rectangular                 |

### 6.6.2G Out of band emission for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the requirements in subclause 6.6.2 apply except for the ACLR requirements for power class 2 V2X UE.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.6.2 apply per V2X sidelink

transmission and E-UTRA uplink transmission as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

For intra-band contiguous multi-carrier operation, the general CA spectrum emission mask for CA Bandwidth Class B specified in subclause 6.6.2.1A shall apply for V2X Bandwidth Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.6.2.1A shall apply for V2X Bandwidth Class C and C<sub>1</sub>.

For intra-band contiguous multi-carrier operation, the E-UTRA ACLR requirement for CA Bandwidth Class B specified in subclause 6.6.2.3.3A shall apply for V2X Bandwidth Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.6.2.3.3A shall apply for V2X Bandwidth Class C and C<sub>1</sub>.

For power class 2 V2X UE, the assigned channel power and adjacent channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2G-1. If the measured adjacent channel power is greater than -50dBm then ACLR shall be higher than the value specified in Table 6.6.2G-1.

**Table 6.6.2G-1: ACLR requirements for power class 2 V2X Communication**

|  | Channel bandwidth / ACLR / Measurement bandwidth |                 |
|--|--|-----------------|
|  | 10 MHz   | 20 MHz          |
| ACLR   | 31 dB  | 31 dB           |
| E-UTRA channel Measurement bandwidth           | 9.0 MHz  | 18 MHz          |
| Adjacent channel centre frequency offset [MHz] | +10<br>/<br>-10                                  | +20<br>/<br>-20 |

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements specified for single carrier apply to each transmit antenna connector.

If V2X UE transmits on one antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

## 6.6.3 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products, but exclude out of band emissions unless otherwise stated. The spurious emission limits are specified in terms of general requirements inline with SM.329 [2] and E-UTRA operating band requirement to address UE co-existence.

To improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.3.1 Minimum requirements

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth. The spurious emission limits in Table 6.6.3.1-2 apply for all transmitter band configurations ( $N_{RB}$ ) and channel bandwidths.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1-1: Boundary between E-UTRA out of band and spurious emission domain**

| Channel bandwidth            | 1.4 MHz | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
|------------------------------|---------|---------|-------|--------|--------|--------|
| OOB boundary $F_{OOB}$ (MHz) | 2.8     | 6       | 10    | 15     | 20     | 25     |

**Table 6.6.3.1-2: Spurious emissions limits**

| Frequency Range   | Maximum Level | Measurement bandwidth | NOTE |
|---|---------------|-----------------------|------|
| $9 \text{ kHz} \leq f < 150 \text{ kHz}$  | -36 dBm       | 1 kHz                 |      |
| $150 \text{ kHz} \leq f < 30 \text{ MHz}$   | -36 dBm       | 10 kHz                |      |

### 6.6.3.1A Minimum requirements for CA

This clause specifies the spurious emission requirements for carrier aggregation.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spurious emission requirement Table 6.6.3.1-2 apply for the frequency ranges that are more than  $F_{\text{OOB}}$  as defined in Table 6.6.3.1-1 away from edges of the assigned channel bandwidth on a component carrier. If for some frequency a spurious emission requirement of individual component carrier overlaps with the spectrum emission mask or channel bandwidth of another component carrier then it does not apply.

NOTE: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.1-2 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.1-2 would be considered to be verified by the measurements verifying the one uplink inter-band CA spurious emission requirement.

For intra-band contiguous carrier aggregation the spurious emission limits apply for the frequency ranges that are more than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth (Table 5.6A-1). For frequencies  $\Delta f_{\text{OOB}}$  greater than  $F_{\text{OOB}}$  as specified in Table 6.6.3.1A-1 the spurious emission requirements in Table 6.6.3.1-2 are applicable.

**Table 6.6.3.1A-1: Boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation**

| CA Bandwidth Class | OOB boundary $F_{\text{OOB}}$ (MHz) |
|--------------------|-------------------------------------|
| A                  | Table 6.6.3.1-1                     |
| B                  | $BW_{\text{Channel\_CA}} + 5$       |
| C                  | $BW_{\text{Channel\_CA}} + 5$       |

For intra-band non-contiguous carrier aggregation transmission the spurious emission requirement is defined as a composite spurious emission requirement. Composite spurious emission requirement applies to frequency ranges that are more than  $F_{\text{OOB}}$  away from the edges of the sub-blocks. Composite spurious emission requirement is defined as follows

- Composite spurious emission requirement is a combination of individual sub-block spurious emission requirements

- b) In case the sub-block consist of one component carrier the sub-lock spurious emission requirement and  $F_{OOB}$  are defined in subclause 6.6.3.1
- c) If for some frequency an individual sub-block spurious emission requirement overlaps with the general spectrum emission mask or the sub-block bandwidth of another sub-block then it does not apply

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the spurious emission requirement is defined as follows. For the E-UTRA band supporting one component carrier the requirements in Table 6.6.3.1-2 apply for frequency ranges that are more than  $F_{OOB}$  (MHz) from the edges of assigned channel bandwidth as defined in Table 6.6.3.1-1. For the E-UTRA band supporting two contiguous component carriers the requirements in Table 6.6.3.1-2 apply for frequency ranges that are more than  $F_{OOB}$  (MHz) from the edges of assigned aggregated channel bandwidth as defined in Table 6.6.3.1A-1. If for some frequency a spurious emission requirement of a single component carrier or two contiguous component carriers overlap with the spurious emission requirement or channel bandwidth of another component carrier or two contiguously aggregated carriers then it does not apply.

### 6.6.3.2 Spurious emission band UE co-existence

This clause specifies the requirements for the specified E-UTRA band, for coexistence with protected bands.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ .  $MBW$  denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.2-1: Requirements**

| E-UTRA Band | Spurious emission   |                       |   |                     |           |      |                |

|   | Frequency range   | 470                 | - | 694                  | -42 | 8   |        |  |
|   | E-UTRA Band 1, 3, 7, 8, 20, 22, 28, 31, 32, 33, 34, 38, 40, 42, 43, 47, 52, 65, 68, 72  | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1   |        |  |
|   | E-UTRA Band 87  | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -20 | 1   | 15     |  |
| 88  | E-UTRA Band 88  | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1   | 15     |  |
|   | Frequency range   | 470                 | - | 694                  | -42 | 8   |        |  |
|   | NOTE 1: F <sub>DL_low</sub> and F <sub>DL_high</sub> refer to each E-UTRA frequency band specified in Table 5.5-1   |                     |   |                      |     |     |        |  |
|   | NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x L <sub>CRB</sub> x 180kHz), where N is 2, 3, 4, [5] for the 2 <sup>nd</sup> , 3 <sup>rd</sup> , 4 <sup>th</sup> [or 5 <sup>th</sup> ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval. |                     |   |                      |     |     |        |  |
| NOTE 3: N/A   |   |                     |   |                      |     |     |        |  |
| NOTE 4: N/A   |   |                     |   |                      |     |     |        |  |
| NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band                                     |   |                     |   |                      |     |     |        |  |
| NOTE 6: N/A   |   |                     |   |                      |     |     |        |  |
| NOTE 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.   |   |                     |   |                      |     |     |        |  |
| NOTE 8: Applicable when co-existence with PHS system operating in 1884.5-1915.7MHz.   |   |                     |   |                      |     |     |        |  |
| NOTE 9: N/A   |   |                     |   |                      |     |     |        |  |
| NOTE 10: N/A  |   |                     |   |                      |     |     |        |  |
| NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD   |   |                     |   |                      |     |     |        |  |
| NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB   |   |                     |   |                      |     |     |        |  |
| NOTE 13: N/A  |   |                     |   |                      |     |     |        |  |
| NOTE 14: N/A  |   |                     |   |                      |     |     |        |  |
| NOTE 15: These requirements also apply for the frequency ranges that are less than F <sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |   |                     |   |                      |     |     |        |  |
| NOTE 16: N/A  |   |                     |   |                      |     |     |        |  |
| NOTE 17: N/A  |   |                     |   |                      |     |     |        |  |

- NOTE 18: N/A
- NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz. Applicable when the assigned E-UTRA carrier is confined within 715 MHz and 718 MHz and when the channel bandwidth used is 3 MHz.
- NOTE 20: N/A
- NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 22: This requirement is applicable for power class 3 UE for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For power class 2 UE for any channel bandwidths within the range 2570 - 2615 MHz, NS\_44 shall apply. For power class 2 or 3 UE for carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
- NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $902.5 \text{ MHz} \leq F_c < 907.5 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 20 RB
  - for carriers of 5 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is within the range  $907.5 \text{ MHz} \leq F_c \leq 912.5 \text{ MHz}$  without any restriction on uplink transmission bandwidth.
  - for carriers of 10 MHz channel bandwidth when carrier centre frequency ( $F_c$ ) is  $F_c = 910 \text{ MHz}$  with an uplink transmission bandwidth less than or equal to 32 RB with  $RB_{\text{start}} > 3$ .
- NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2<sup>nd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3<sup>rd</sup> harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3<sup>rd</sup> harmonic totally or partially overlaps the measurement bandwidth (MBW).
- NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
- NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
- NOTE 28: N/A
- NOTE 29: N/A
- NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
- NOTE 31: N/A
- NOTE 32: Void
- NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier center frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier center frequency is within the range 1895 - 1903 MHz.
- NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with  $RB_{\text{start}} > 1$  and  $RB_{\text{start}} < 48$ . Applicable when the assigned E-UTRA carrier is confined within 715 MHz and 718 MHz and when the channel bandwidth used is 3 MHz.
- NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
- NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
- NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
- NOTE 38: Applicable when NS\_33 or NS\_34 is configured by the pre-configured radio parameters.
- NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.

|  |
|--|
| NOTE 40: In the frequency range $x-5950\text{MHz}$ , SE requirement of $-30\text{dBm/MHz}$ should be applied; where $x = \max(5925, f_c + 15)$ , where $f_c$ is the channel centre frequency.  |
| NOTE 41: Applicable for all bandwidths, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to $1427\text{ MHz} +$ the channel BW assigned for 1.4, 3, 5 and 10 MHz bandwidth, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to $1440\text{ MHz}$ for 15 and 20 MHz bandwidth. This requirement shall be verified with UE transmission power configured as high as possible but no higher than 15 dBm. |
| NOTE 42: Applicable for 1.4, 3 and 5 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to $1467\text{ MHz}$ assigned for 10 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to $1463.8\text{ MHz}$ for 15 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to $1460.8\text{ MHz}$ for 20 MHz bandwidth.      |
| NOTE 43: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $G_{\text{post connector}}$ declared by the UE following the principle described in annex I.   |
| NOTE 44: For category NB1 and NB2 UE when carrier centre frequency is $1920.1\text{ MHz}$ , in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index $> 2$ .  |
| NOTE 45: Resolution BW is 10% of the measurement BW and the result should be integrated to achieve the measurement bandwidth. The sweep time shall be set at least as $(\text{sweep points}) \times (\text{symbol length})$ to improve the measurement accuracy.   |

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3.2-1 and the restriction on the single-tone uplink transmission to sub-carrier index  $> 2$  in Note 44 of Table 6.6.3.2-1 are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of  $-15.5\text{ dBm/5MHz}$  is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

When "NS\_33" or "NS 34" is configured from pre-configured radio parameters or the cell and the indication from upper layers has indicated that the UE is within the protection zone of CEN DSRC devices or HDR DSRC devices, the power of any V2X UE emission shall fulfil either one of the two set of conditions.

|             | Maximum Transmission Power (dBm EIRP) | Emission Limit in Frequency Range 5795-5815 (dBm/MHz EIRP) |
|-------------|---------------------------------------|--|
| Condition 1 | 10                                    | -65  |
| Condition 2 | 10                                    | -45  |

### 6.6.3.2A Spurious emission band UE co-existence for CA

This clause specifies the additional requirements for inter-band uplink carrier aggregation configurations with the single CC uplink assigned to two E-UTRA bands for coexistence with protected bands for the specified uplink carrier aggregation configurations in Table 6.5A.3.2.3-1. The intersection of the requirements for the individual bands specified in clause 6.5.3.2 shall also apply for the specified uplink carrier aggregation configurations. Intersection of a requirement means that both UL constituent bands have the same protected band requirement specified and if one or both protected bands have note(s) associated those note(s) also apply.

As exceptions, the additional requirements in Table 6.6.3.2A-0 apply on each component carrier with all component carriers are active.

NOTE 1: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $\text{MBW}/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $\text{MBW}/2$ . MBW denotes the measurement bandwidth defined for the protected band.

NOTE 2: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6A.3.2.3-1 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6A.3.2.3-1 and in clause 6.6.3.2 would be considered to be verified by the measurements verifying the one uplink inter-band CA UE to UE co-existence requirements.

Table 6.6.3.2A-0: Requirements for uplink inter-band carrier aggregation (two bands)

| E-UTRA CA Configuration | Spurious emission |                       |   |                     |           |         |         |
|-------------------------|-------------------|-----------------------|---|---------------------|-----------|---------|---------|
|                         | Protected band    | Frequency range (MHz) |   | Maximum Level (dBm) | MBW (MHz) | NOTE    |         |
| CA_1-5                  | Frequency range   | 859                   | - | 869                 | -27       | 1       |         |
| CA_1-8                  | Frequency range   | 860                   | - | 890                 | -40       | 1       | 3, 11   |
| CA_1-11                 | Frequency range   | 945                   | - | 960                 | -50       | 1       |         |
|                         | Frequency range   | 2545                  | - | 2575                | -50       | 1       |         |
|                         | Frequency range   | 2595                  | - | 2645                | -50       | 1       |         |
| CA_1-18                 | Frequency range   | 758                   | - | 799                 | -50       | 1       |         |
|                         | Frequency range   | 799                   | - | 803                 | -40       | 1       | 3       |
|                         | Frequency range   | 860                   | - | 890                 | -40       | 1       |         |
|                         | Frequency range   | 945                   | - | 960                 | -50       | 1       |         |
|                         | Frequency range   | 2545                  | - | 2575                | -50       | 1       |         |
| CA_1-19                 | Frequency range   | 2595                  | - | 2645                | -50       | 1       |         |
|                         | Frequency range   | 945                   | - | 960                 | -50       | 1       |         |
|                         | Frequency range   | 2545                  | - | 2575                | -50       | 1       |         |
| CA_1-20                 | Frequency range   | 758                   | - | 788                 | -50       | 1       |         |
| CA_1-21                 | Frequency range   | 945                   | - | 960                 | -50       | 1       |         |
|                         | Frequency range   | 2545                  | - | 2575                | -50       | 1       |         |
|                         | Frequency range   | 2595                  | - | 2645                | -50       | 1       |         |
| CA_1-26                 | Frequency range   | 945                   | - | 960                 | -50       | 1       |         |
|                         | Frequency range   | 703                   | - | 799                 | -50       | 1       |         |
|                         |                   | 799                   | - | 803                 | -40       | 1       | 3       |
| CA_1-28                 | Frequency range   | 470                   | - | 694                 | -42       | 8       | 3, 22   |
|                         | Frequency range   | 470                   | - | 710                 | -26.2     | 6       | 23      |
|                         | Frequency range   | 758                   | - | 773                 | -32       | 1       | 3       |
|                         | Frequency range   | 773                   | - | 803                 | -50       | 1       |         |

NOTE 1: Void

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x L<sub>CRB</sub> x 180kHz), where N is 2, 3 or 4 for the 2<sup>nd</sup>, 3<sup>rd</sup> or 4<sup>th</sup> harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz. Applicable when the assigned E-UTRA carrier is confined within 715 MHz and 718 MHz and when the channel bandwidth used is 3 MHz.

NOTE 6: Void

NOTE 7: Void

NOTE 8: Void

NOTE 9: Void

NOTE 10: Void

NOTE 11: This requirement is applicable only for the following cases:

- for carriers of 5 MHz channel bandwidth when carrier centre frequency (F<sub>c</sub>) is within the range 902.5 MHz ≤ F<sub>c</sub> < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency (F<sub>c</sub>) is within the range 907.5 MHz ≤ F<sub>c</sub> ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency (F<sub>c</sub>) is F<sub>c</sub> = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with RB<sub>start</sub> > 3.

NOTE 12: Void

NOTE 13: Void

NOTE 14: Void

NOTE 15: Void

NOTE 16: Void

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.

NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 19: Void

NOTE 20: Void

NOTE 21: Void

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.NOTE 24: Void

NOTE 25: Void

**Table 6.6.3.2A-1: Requirements for intraband carrier aggregation**

| E-UTRA CA Configuration | Spurious emission  |                       |   |                      |           |      |    |

|  |  |                     |   |                      |     |   |   |
|--|--|---------------------|---|----------------------|-----|---|---|
| CA_48  | E-UTRA Band 2, 4, 5, 12, 13, 14, 17, 24, 25, 26, 29, 30, 41, 50, 51, 66, 70, 71, 74, 85                    | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1 |   |
| CA_66  | E-UTRA Band 2, 4, 5, 7, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 50, 51, 66, 70, 71, 74, 85 | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1 |   |
|  | E-UTRA Band 42, 48<br>NR Band n77  | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1 | 2 |
| <p>NOTE 1: F<sub>DL_low</sub> and F<sub>DL_high</sub> refer to each E-UTRA frequency band specified in Table 5.5-1</p> <p>NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x L<sub>CRB</sub> x 180kHz), where N is 2, 3, 4, [5] for the 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> [or 5<sup>th</sup>] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval</p> <p>NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band</p> <p>NOTE 4: N/A</p> <p>NOTE 5: N/A</p> <p>NOTE 6: N/A</p> <p>NOTE 7: N/A</p> <p>NOTE 8: N/A</p> <p>NOTE 9: N/A</p> <p>NOTE 10: The requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.</p> <p>NOTE 11: N/A</p> <p>NOTE 12: N/A</p> <p>NOTE 13: N/A</p> <p>NOTE 14: N/A</p> <p>NOTE 15: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.</p> |  |                     |   |                      |     |   |   |

**Table 6.6.3.2A-2: Requirements for intraband non-contiguous CA**

| E-UTRA CA Configuration  | Spurious emission   |                       |   |                      |           |      |   |
|--|---|-----------------------|---|----------------------|-----------|------|---|
|  | Protected band  | Frequency range (MHz) |   | Maximum Level (dBm)  | MBW (MHz) | NOTE |   |
| CA_4-4   | E-UTRA Band 2, 4, 5, 10, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 41, 43, 50, 51, 53, 66, 70, 71, 74, 85 | F <sub>DL_low</sub>   | - | F <sub>DL_high</sub> | -50       | 1    |   |
|  | E-UTRA Band 22, 42<br>NR Band n7  | F <sub>DL_low</sub>   | - | F <sub>DL_high</sub> | -50       | 1    | 2 |
| <p>NOTE 1: F<sub>DL_low</sub> and F<sub>DL_high</sub> refer to each E-UTRA frequency band specified in Table 5.5-1</p> <p>NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2<sup>nd</sup> or 3<sup>rd</sup> harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x L<sub>CRB</sub> x 180kHz), where N is 2 or 3 for the 2<sup>nd</sup> or 3<sup>rd</sup> harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.</p> |   |                       |   |                      |           |      |   |

**6.6.3.3 Additional spurious emissions**

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3.1 Minimum requirement (network signalled value "NS\_05")

When "NS\_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.1-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.1-1: Additional requirements (PHS)**

| Frequency band (MHz)        | Channel bandwidth / Spectrum emission limit (dBm) |        |        |        | Measurement bandwidth | NOTE |
|-----------------------------|---|--------|--------|--------|-----------------------|------|
|                             | 5 MHz   | 10 MHz | 15 MHz | 20 MHz |                       |      |
| $1884.5 \leq f \leq 1915.7$ | -41   | -41    | -41    | -41    | 300 KHz               | 1    |

**Table 6.6.3.3.1-2: Void**

#### 6.6.3.3.2 Minimum requirement (network signalled value "NS\_07")

When "NS\_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.2-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.2-1: Additional requirements**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) |  | Measurement bandwidth |
|--|---|--|-----------------------|
|  | 10 MHz  |  |                       |
| $769 \leq f \leq 775$  | -57   |  | 6.25 kHz              |
| NOTE: The emissions measurement shall be sufficiently power averaged to ensure standard standard deviation < 0.5 dB. |   |  |                       |

#### 6.6.3.3.3 Minimum requirement (network signalled value "NS\_08")

When "NS\_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3-1: Additional requirement**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) |       |       | Measurement bandwidth |
|-----------------------|---|-------|-------|-----------------------|
|                       | 5MHz  | 10MHz | 15MHz |                       |
| $860 \leq f \leq 890$ | -40   | -40   | -40   | 1 MHz                 |

#### 6.6.3.3.4 Minimum requirement (network signalled value "NS\_09")

When "NS\_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.4-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.4-1: Additional requirement**

| Frequency band (MHz)        | Channel bandwidth / Spectrum emission limit (dBm) |       |       | Measurement bandwidth |
|-----------------------------|---|-------|-------|-----------------------|
|                             | 5MHz  | 10MHz | 15MHz |                       |
| $1475.9 \leq f \leq 1510.9$ | -35   | -35   | -35   | 1 MHz                 |

NOTE 1: Void.

NOTE 2: To improve measurement accuracy, A-MPR values for NS\_09 specified in Table 6.2.4-1 in subclause 6.2.4 are derived based on 100 kHz RBW.

#### 6.6.3.3.5 Minimum requirement (network signalled value "NS\_12")

When "NS 12" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz             |                       |
| $806 \leq f \leq 813.5$   | -42   | 6.25 kHz              |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.              |   |                       |
| NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. |   |                       |

#### 6.6.3.3.6 Minimum requirement (network signalled value "NS\_13")

When "NS 13" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.6-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.6-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 1.4, 3, 5 MHz                                     |                       |
| $806 \leq f \leq 816$   | -42   | 6.25 kHz              |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.                |   |                       |
| NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. |   |                       |

#### 6.6.3.3.7 Minimum requirement (network signalled value "NS\_14")

When "NS 14" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.7-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.7-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-----------------------|---|-----------------------|
|                       | 10 MHz, 15 MHz                                    |                       |
| $806 \leq f \leq 816$ | -42   | 6.25 kHz              |

NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.  
 NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.

#### 6.6.3.3.8 Minimum requirement (network signalled value “NS\_15”)

When “NS\_15” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.8-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.8-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz             |                       |
| $851 \leq f \leq 859$   | -53   | 6.25 kHz              |
| NOTE 1: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. |   |                       |

#### 6.6.3.3.9 Minimum requirement (network signalled value “NS\_16”)

When “NS\_16” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.9-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.9-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|-----------------------|---|-----------------------|------|
|                       | 1.4, 3, 5, 10 MHz                                 |                       |      |
| $790 \leq f \leq 803$ | -32   | 1 MHz                 |      |

#### 6.6.3.3.10 Minimum requirement (network signalled value “NS\_17”)

When “NS\_17” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.10-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.10-1: Additional requirements**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|--|---|-----------------------|------|
|  | 3, 5, 10 MHz                                      |                       |      |
| $470 \leq f \leq 710$  | -26.2   | 6 MHz                 | 1    |
| NOTE 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.<br>Applicable when the assigned E-UTRA carrier is confined within 715 MHz and 718 MHz and when the channel bandwidth used is 3 MHz. |   |                       |      |

#### 6.6.3.3.11 Minimum requirement (network signalled value “NS\_18”)

When “NS\_18” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.11-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.11-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|----------------------|---|-----------------------|------|
|                      | 5, 10, 15, 20 MHz                                 |                       |      |
| 692-698              | -26.2   | 6 MHz                 |      |

#### 6.6.3.3.12 Minimum requirement (network signalled value “NS\_19”)

When “NS\_19” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.12-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.12-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|-----------------------|---|-----------------------|------|
|                       | 3, 5, 10, 15, 20 MHz                              |                       |      |
| $662 \leq f \leq 694$ | -25   | 8 MHz                 |      |

#### 6.6.3.3.13 Minimum requirement (network signalled value “NS\_11”)

When “NS\_11” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.13-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.13-1: Additional requirements**

| Frequency band (MHz)    | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-------------------------|---|-----------------------|
|                         | 1.4, 3, 5, 10, 15, 20 MHz                         |                       |
| E-UTRA Band 2           | -50   | 1 MHz                 |
| $1998 \leq f \leq 1999$ | -21   | 1 MHz                 |
| $1997 \leq f < 1998$    | -27   | 1 MHz                 |
| $1996 \leq f < 1997$    | -32   | 1 MHz                 |
| $1995 \leq f < 1996$    | -37   | 1 MHz                 |
| $1990 \leq f < 1995$    | -40   | 1 MHz                 |

#### 6.6.3.3.14 Minimum requirement (network signalled value “NS\_20”)

When “NS\_20” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.14-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.14-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 5, 10, 15, 20 MHz                                 |                       |
| $1990 \leq f < 1999$  | -40   | 1 MHz                 |
| $1999 \leq f \leq 2000$   | -40   | NOTE 1                |
| NOTE 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth. |   |                       |

### 6.6.3.3.15 Minimum requirement (network signalled value "NS\_21")

When "NS\_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.15-1. These requirements also apply for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.15-1: Additional requirements**

| Frequency band (MHz)    | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-------------------------|---|-----------------------|
|                         | 5, 10 MHz   |                       |
| $2200 \leq f < 2288$    | -40   | 1 MHz                 |
| $2288 \leq f < 2292$    | -37   | 1 MHz                 |
| $2292 \leq f < 2296$    | -31   | 1 MHz                 |
| $2296 \leq f < 2300$    | -25   | 1 MHz                 |
| $2320 \leq f < 2324$    | -25   | 1 MHz                 |
| $2324 \leq f < 2328$    | -31   | 1 MHz                 |
| $2328 \leq f < 2332$    | -37   | 1 MHz                 |
| $2332 \leq f \leq 2395$ | -40   | 1 MHz                 |

### 6.6.3.3.16 Minimum requirement (network signalled value "NS\_22")

When "NS 22" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.16-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.16-1: Additional requirement**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | MBW   |
|---|---|-------|
|   | 5, 10, 15, 20 MHz                                 |       |
| $3400 \leq f \leq 3800$   | -23 (NOTE 1, NOTE 3)                              | 5 MHz |
|   | -40 (NOTE 2)                                      | 1 MHz |
| NOTE 1: This requirement applies within an offset between 5 MHz and 25 MHz from the lower and from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. |   |       |
| NOTE 2: This requirement applies from 3400 MHz to 25 MHz below the lower E-UTRA channel edge and from 25 MHz above the upper E-UTRA channel edge to 3800 MHz.   |   |       |
| NOTE 3: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band   |   |       |

### 6.6.3.3.17 Minimum requirement (network signalled value "NS\_23")

When "NS 23" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.17-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.17-1: Additional requirement**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | MBW   |
|---|---|-------|
|   | 5, 10, 15, 20 MHz                                 |       |
| $3400 \leq f \leq 3800$   | -23 (NOTE 1, NOTE 4)                              | 5 MHz |
|   | -40 (NOTE 2)                                      | 1 MHz |
| NOTE 1: This requirement applies within an offset between 5 MHz + $F_{\text{offset\_NS\_23}}$ and 25 MHz + $F_{\text{offset\_NS\_23}}$ from the lower and from the upper edges of the |   |       |

channel bandwidth, whenever these frequencies overlap with the specified frequency band.

NOTE 2: This requirement applies from 3400 MHz to 25 MHz +  $F_{\text{offset\_NS\_23}}$  below the lower E-UTRA channel edge and from 25 MHz +  $F_{\text{offset\_NS\_23}}$  above the upper E-UTRA channel edge to 3800 MHz.

NOTE 3:  $F_{\text{offset\_NS\_23}}$  is:  
 0 MHz for 5 MHz channel BW,  
 5 MHz for 10 MHz channel BW,  
 9 MHz for 15 MHz channel BW and  
 12 MHz for 20 MHz channel BW.

NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band

6.6.3.3.18 Void

Table 6.6.3.3.18-1: Void

6.6.3.3.19 Minimum requirement (network signalled value "NS\_04")

When "NS\_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.19-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.19-1: Additional requirements

| Frequency band            | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---------------------------|---|-----------------------|
|                           | 5, 10, 15, 20 MHz                                 |                       |
| 2490.5 MHz ≤ f < 2495 MHz | -13   | 1 MHz                 |
| 9 kHz < f < 2490.5 MHz    | -25   | 1 MHz                 |

6.6.3.3.20 Minimum requirement (network signalled value "NS\_24")

When "NS\_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.20-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.20-1: Additional requirements

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 5 MHz, 10 MHz, 15 MHz, 20 MHz                     |                       |
| Band 34   | -50   | MHz                   |
| NOTE 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. |   |                       |

6.6.3.3.21 Minimum requirement (network signalled value "NS\_25")

When "NS\_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.21-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.21-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 5 MHz, 10 MHz, 15 MHz, 20 MHz                     |                       |
| Band 34   | -40   | MHz                   |
| NOTE 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. |   |                       |

#### 6.6.3.3.22 Minimum requirement (network signalled value "NS\_26")

When "NS\_26" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.22-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.22-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-----------------------|---|-----------------------|
|                       | 5 MHz, 10 MHz, 15 MHz                             |                       |
| $686 \leq f \leq 694$ | -25   | 8MHz                  |

#### 6.6.3.3.23 Minimum requirement (network signalled value "NS\_27" and "NS\_43")

When "NS\_27" or "NS\_43" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.23-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.23-1: Additional requirements**

| Frequency band   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|--|---|-----------------------|
|  | 5, 10, 15, 20 MHz                                 |                       |
| $9 \text{ kHz} \leq f \leq 3530 \text{ MHz}$   | -40   | 1 MHz                 |
| $3720 \text{ MHz} \leq f \leq 5^{\text{th}} \text{ harmonic of the upper frequency edge of the UL operating band}$ |   |                       |

#### 6.6.3.3.24 Minimum requirement (network signalled value "NS\_28")

When "NS\_28" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 MHz and 5470-5725 MHz shall not exceed the levels specified in Table 6.6.3.3.24-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.24-1: Additional requirements**

| Frequency band (MHz)     | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|--------------------------|---|-----------------------|
|                          | 20 MHz  |                       |
| $47 \leq f \leq 74$      | -54   | 100 kHz               |
| $87.5 \leq f \leq 118$   | -54   | 100 kHz               |
| $174 \leq f \leq 230$    | -54   | 100 kHz               |
| $470 \leq f \leq 862$    | -54   | 100 kHz               |
| $1000 \leq f \leq 5150$  | -30   | 1 MHz                 |
| $5350 \leq f \leq 5470$  | -30   | 1 MHz                 |
| $5725 \leq f \leq 26000$ | -30   | 1 MHz                 |

6.6.3.3.25 Minimum requirement (network signalled value “NS\_29”)

When "NS\_29" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 and 5470-5725 MHz shall not exceed the levels specified in Table 6.6.3.3.25-1. This requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.25-1: Additional requirements**

| Centre Frequency F <sub>c</sub> [MHz]                            | Protected range [MHz] | Frequency difference Δf between centre frequency –<br>5240 (for F <sub>c</sub> =5180, 5200, 5220, 5240)<br>5260 (for F <sub>c</sub> =5260, 5280, 5300, 5320)<br>(MHz) | Minimum requirement [dBm] | Measurement bandwidth |
|--|-----------------------|---|---------------------------|-----------------------|
| 5180, 5200, 5220, 5240   | 5135 ≤ f ≤ 5142       | -   | -26                       | 1 MHz                 |
|  | 5142 < f ≤ 5150       | -   | -18                       |                       |
|  | 5250 ≤ f < 5251       | ≥ 10 and < 11   | 10(10 - Δf)               |                       |
|  | 5251 ≤ f < 5260       | ≥ 11 and < 20   | -10 - 8/9(Δf - 11)        |                       |
|  | 5260 ≤ f < 5266.7     | ≥ 20 and < 26.7   | -18 - 1.2(Δf - 20)        |                       |
| 5266.7 ≤ f ≤ 5365  | -                     | -26   |                           |                       |
| 5260, 5280, 5300, 5320   | 5135 ≤ f ≤ 5233.3     | -   | -26                       |                       |
|  | 5233.3 < f ≤ 5240     | ≥ 20 and < 26.7   | -18 - 1.2(Δf - 20)        |                       |
|  | 5240 < f ≤ 5249       | ≥ 11 and < 20   | -10 - 8/9(Δf - 11)        |                       |
|  | 5249 < f ≤ 5250       | ≥ 10 and < 11   | 10(10 - Δf)               |                       |
|  | 5350 ≤ f ≤ 5365       | -   | -26                       |                       |
| 5500, 5520, 5540, 5560, 5580, 5600, 5620, 5640, 5660, 5680, 5700 | 5455 ≤ f ≤ 5460       | -   | -26                       |                       |
|  | 5460 < f ≤ 5470       | -   | -19                       |                       |
|  | 5725 ≤ f < 5740       | -   | -19                       |                       |
|  | 5740 ≤ f ≤ 5745       | -   | -26                       |                       |

6.6.3.3.26 Minimum requirement (network signalled value “NS\_30”)

When "NS\_30" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 MHz, 5470-5725 MHz and 5725-5850 MHz shall not exceed the levels specified in Table 6.6.3.3.26-1, Table 6.6.3.3.26-2 and Table 6.6.3.3.26-3, respectively. These requirements also apply for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.26-1: Additional requirements for E-UTRA channels assigned within 5150-5350 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| 4500 ≤ f ≤ 5150      | -41   | 1 MHz                 |
| 5350 ≤ f ≤ 5460      | -41   |                       |

**Table 6.6.3.3.26-2: Additional requirements for E-UTRA channels assigned within 5470-5725 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| 4500 ≤ f ≤ 5150      | -41   | 1 MHz                 |
| 5350 ≤ f ≤ 5460      | -41   |                       |
| 5460 < f ≤ 5470      | -27   |                       |
| 5725 ≤ f             | -27   |                       |

**Table 6.6.3.3.26-3: Additional requirements for E-UTRA channels assigned within 5725-5850 MHz**

| Frequency offset of measurement filter -3dB point, $\Delta f$ | Frequency offset of measurement filter centre frequency, $f_{\text{offset}}$ | Minimum requirement [dBm]                         | Measurement bandwidth |
|---|--|---|-----------------------|
| $0 \text{ MHz} \leq \Delta f < 5 \text{ MHz}$                 | $0.5 \text{ MHz} \leq f_{\text{offset}} < 5.5 \text{ MHz}$                   | $27 - 2.28(f_{\text{offset}}/\text{MHz} - 0.5)$   | 1 MHz                 |
| $5 \text{ MHz} \leq \Delta f < 25 \text{ MHz}$                | $5.5 \text{ MHz} \leq f_{\text{offset}} < 25.5 \text{ MHz}$                  | $15.6 - 0.28(f_{\text{offset}}/\text{MHz} - 0.5)$ | 1 MHz                 |
| $25 \text{ MHz} \leq \Delta f < 75 \text{ MHz}$               | $25.5 \text{ MHz} \leq f_{\text{offset}} < 75.5 \text{ MHz}$                 | $10 - 0.74(f_{\text{offset}}/\text{MHz} - 0.5)$   | 1 MHz                 |
| $75 \text{ MHz} \leq \Delta f$                                | $75.5 \text{ MHz} \leq f_{\text{offset}}$                                    | -27   | 1 MHz                 |

NOTE 1: The frequency offset  $f_{\text{offset}}$  is below and above the range 5725-5850 MHz; the measurement filter -3dB point is that closest to the range 5725-5850 MHz

NOTE 2: The requirement applies when the offset of the measurement filter centre frequency is such that both -3 dB points of the measurement filter are confined within the frequency range 5725-5850 MHz.

### 6.6.3.3.27 Minimum requirement (network signalled value "NS\_31")

When "NS\_31" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5250 MHz, 5250-5350 MHz, 5470-5725 MHz and 5725-5850 MHz shall not exceed the levels specified in Table 6.6.3.3.27-1, Table 6.6.3.3.27-2, Table 6.6.3.3.27-3 and Table 6.6.3.3.27-4, respectively. These requirements also apply for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.27-1: Additional requirements for E-UTRA channels assigned within 5150-5250 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| $f \leq 5150$        | -27   | 1 MHz                 |
| $f \geq 5250$        | -27   |                       |

**Table 6.6.3.3.27-2: Additional requirements for E-UTRA channels assigned within 5250-5350 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| $f \leq 5250$        | -27   | 1 MHz                 |
| $f \geq 5350$        | -27   |                       |

**Table 6.6.3.3.27-3: Additional requirements for E-UTRA channels assigned within 5470-5725 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| $f \leq 5470$        | -27   | 1 MHz                 |
| $f \geq 5725$        | -27   |                       |

**Table 6.6.3.3.27-4: Additional requirements for E-UTRA channels assigned within 5725-5850 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      | 20 MHz  |                       |
| $f \leq 5725$        | -27   | 1 MHz                 |
| $f \geq 5850$        | -27   |                       |

### 6.6.3.3.28 Minimum requirement (network signalled value "NS\_36")

When "NS\_36" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.28-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.28-1: Additional requirements**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|--|---|-----------------------|
|  | 5 MHz, 10 MHz and 15 MHz                          |                       |
| $470 \leq f \leq 694$  | -42   | 8MHz                  |
| NOTE: For a 5 MHz E-UTRA carrier confined within 698MHz and 703MHz, this requirement shall be met in normal conditions only. The requirement is relaxed to -30dBm in extreme conditions. |   |                       |

### 6.6.3.3.29 Minimum requirement (network signalled value "NS\_38")

When "NS\_38" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.29-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.29-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|-----------------------|
|   | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz     |                       |
| $1400 \leq f \leq 1427$   | -32   | 27MHz                 |
| NOTE 1: This requirement shall be verified with UE transmission power configured as high as possible but no higher than 15 dBm. |   |                       |

### 6.6.3.3.30 Minimum requirement (network signalled value "NS\_39")

When "NS\_39" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.30-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.30-1: Additional requirements**

| Frequency band (MHz)    | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-------------------------|---|-----------------------|
|                         | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz     |                       |
| $1475 \leq f \leq 1488$ | -28   | 1MHz                  |

### 6.6.3.3.31 Minimum requirement (network signalled value "NS\_40" and "NS\_41")

When "NS\_40" or "NS\_41" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 1427-1432MHz (B51) and 1432-1452MHz (B50) shall not exceed the levels specified in Table 6.6.3.3.31-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.31-1: Additional requirements for E-UTRA channels assigned within 1427-1452MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|----------------------|---|-----------------------|
|                      |   |                       |

|   |                                 |        |
|---|---------------------------------|--------|
|   | <b>3, 5, 10, 15,<br/>20 MHz</b> |        |
| $1400 \leq f \leq 1427$   | -32                             | 27 MHz |
| NOTE 1: This requirement shall be verified with UE transmission power configured as high as possible but no higher than 15 dBm. |                                 |        |

#### 6.6.3.3.32 Minimum requirement (network signalled value "NS\_42")

When "NS\_42" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 1492-1517 MHz (B50) shall not exceed the levels specified in Table 6.6.3.3.32-1. These requirements also apply for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.32-1: Additional requirements for E-UTRA channels assigned within 1492-1517 MHz**

| Frequency band (MHz)    | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-------------------------|---|-----------------------|
|                         | <b>3, 5, 10, 15,<br/>20 MHz</b>                   |                       |
| $1518 \leq f \leq 1559$ | -30   | 1 MHz                 |

#### 6.6.3.3.33 Minimum requirement (network signalled value "NS\_44")

When "NS\_44" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.33-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.33-1: Additional requirements**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|--|---|-----------------------|------|
|  | <b>5, 10, 15, 20</b>                              |                       |      |
| 2620-2645  | -15.5   | 5MHz                  | 1    |
| 2645-2690  | -40   | 1MHz                  | 1    |
| Note 1: The E-UTRA carrier with channel bandwidth is confined within 2570 MHz and 2615 MHz |   |                       |      |

#### 6.6.3.3.34 Minimum requirement (network signalled value "NS\_45")

When "NS\_45" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Tables 6.6.3.3.35-1 and 6.6.3.3.35-2. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.34-1: Additional requirements for 1.4, 3 and 5 MHz channel bandwidths**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth   | NOTE |
|--|---|-------------------------|------|
|  | <b>1.4, 3, 5</b>                                  |                         |      |
| $0.009 < f \leq 2477.5$  | -25   | 1 MHz                   |      |
| $2477.5 < f \leq 2478.5$   | -13   | 1 MHz                   |      |
| $2478.5 < f \leq 2483.5$   | -10   | 1 MHz                   |      |
| $2495 \leq f < 2496$   | -13   | 1% of Channel Bandwidth |      |
| $2496 < f \leq 2501$   | -13   | 1 MHz                   |      |
| $2501 \leq f \leq 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band | -25   | 1 MHz                   |      |

**Table 6.6.3.34-2: Additional requirements for 10 MHz channel bandwidth**

| Frequency band (MHz)   | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth   | NOTE |
|--|---|-------------------------|------|
|  | 10  |                         |      |
| $0.009 < f \leq 2473.5$  | -25   | 1 MHz                   |      |
| $2473.5 < f \leq 2478.5$   | -13   | 1 MHz                   |      |
| $2478.5 < f \leq 2483.5$   | -10   | 1 MHz                   |      |
| $2495 \leq f < 2496$   | -13   | 1% of Channel Bandwidth |      |
| $2496 < f \leq 2505$   | -13   | 1 MHz                   |      |
| $2505 \leq f \leq 5^{\text{th}}$ harmonic of the upper frequency edge of the UL operating band | -25   | 1 MHz                   |      |

### 6.6.3.3.35 Minimum requirement (network signalled value "NS\_56")

When "NS\_56" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.35-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.35-1: Additional requirements**

| Frequency band (MHz)  | Channel bandwidth / Spectrum emission limit <sup>1</sup> (dBm) | Measurement bandwidth | NOTE   |
|---|--|-----------------------|--|
|   | 5 MHz, 10MHz   |                       |  |
| $1541 \leq f \leq 1559$   | -102   | 2kHz                  | Averaged over any 2 millisecond active transmission interval |
| $1559 \leq f \leq 1608$   | -85  | 700Hz                 |  |
| $1608 \leq f \leq 1610$   | $-85 + 5/2 (f-1608)$   | 700Hz                 |  |
| $1610 \leq f \leq 1625$   | $-80 + 66/15 (f-1610)$   | 700Hz                 |  |
| $1541 \leq f \leq 1608$   | -75  | 1MHz                  | Averaged over any 2 millisecond active transmission interval |
| $1608 \leq f \leq 1610$   | $-75 + 5/2 (f-1608)$   | 1MHz                  |  |
| $1610 \leq f \leq 1627.5$   | $-70 + 57/17.5 (f-1610)$                                       | 1MHz                  |  |
| 1627.5  | -37  | 4kHz                  |  |
| $1638.5 \leq f \leq 1645.5$   | -28  | 4kHz                  |  |
| $1657.5 \leq f \leq 1660.5$   | -28  | 4kHz                  |  |
| NOTE 1: The EIRP requirement in regulation is converted to conducted requirement using a 0 dBi antenna. |  |                       |  |

### 6.6.3.3A Additional spurious emissions for CA

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell reconfiguration message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ . MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3A.1 Minimum requirement for CA\_1C (network signalled value "CA\_NS\_01")

When "CA\_NS\_01" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OoB}}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1-1: Additional requirements (PHS)**

| Protected band  | Frequency range (MHz) |   |          | Maximum Level (dBm) | MBW (MHz) | NOTE |
|---|-----------------------|---|----------|---------------------|-----------|------|
| E-UTRA band 34  | FDL_low               | - | FDL_high | -50                 | 1         |      |
| Frequency range   | 1884.5                | - | 1915.7   | -41                 | 0.3       | 1    |
| NOTE 1: Applicable when the aggregated channel bandwidth is confined within frequency range 1940 – 1980 MHz |                       |   |          |                     |           |      |

#### 6.6.3.3A.2 Minimum requirement for CA\_1C (network signalled value "CA\_NS\_02")

When "CA\_NS\_02" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.2-1. This requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.2-1: Additional requirements**

| Protected band  | Frequency range (MHz) |   |                      | Maximum Level (dBm) | MBW (MHz) | NOTE |
|---|-----------------------|---|----------------------|---------------------|-----------|------|
| E-UTRA band 34  | F <sub>DL_low</sub>   | - | F <sub>DL_high</sub> | -50                 | 1         |      |
| Frequency range   | 1900                  | - | 1915                 | -15.5               | 5         | 1, 2 |
| Frequency range   | 1915                  | - | 1920                 | +1.6                | 5         | 1, 2 |
| NOTE 1: The requirement also applies for the frequency ranges that are less than F <sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |                       |   |                      |                     |           |      |
| NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.                                       |                       |   |                      |                     |           |      |

#### 6.6.3.3A.3 Minimum requirement for CA\_1C (network signalled value "CA\_NS\_03")

When "CA\_NS\_03" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.3-1. This requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.3-1: Additional requirements**

| Protected band  | Frequency range (MHz) |   |                      | Maximum Level (dBm) | MBW (MHz) | NOTE |
|---|-----------------------|---|----------------------|---------------------|-----------|------|
| E-UTRA band 34  | F <sub>DL_low</sub>   | - | F <sub>DL_high</sub> | -50                 | 1         |      |
| Frequency range   | 1880                  | - | 1895                 | -40                 | 1         |      |
| Frequency range   | 1895                  | - | 1915                 | -15.5               | 5         | 1, 2 |
| Frequency range   | 1915                  | - | 1920                 | +1.6                | 5         | 1, 2 |
| NOTE 1: The requirement also applies for the frequency ranges that are less than F <sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |                       |   |                      |                     |           |      |
| NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.                                       |                       |   |                      |                     |           |      |

#### 6.6.3.3A.4 Minimum requirement for CA\_38C (network signalled value "CA\_NS\_05")

When "CA\_NS\_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.4-1. This requirement also applies for the frequency ranges that are less than F<sub>OOB</sub> (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth. This requirement is applicable for carriers with aggregated channel bandwidths confined in 2570 - 2615 MHz.

**Table 6.6.3.3A.4-1: Additional requirements**

| Protected band  | Frequency range (MHz) |   |      | Maximum Level (dBm) | MBW (MHz) | NOTE    |
|---|-----------------------|---|------|---------------------|-----------|---------|
| Frequency range   | 2620                  | - | 2645 | -15.5               | 5         | 1, 2, 3 |
| Frequency range   | 2645                  | - | 2690 | -40                 | 1         | 1, 3    |
| NOTE 1: The requirement also applies for the frequency ranges that are less than F <sub>OOB</sub> (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |                       |   |      |                     |           |         |

NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.  
 NOTE 3: This requirement is applicable for carriers with aggregated channel bandwidths confined in 2570-2615 MHz.

#### 6.6.3.3A.5 Minimum requirement for CA\_7C (network signalled value "CA\_NS\_06")

When "CA\_NS\_06" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.5-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.5-1: Additional requirements**

| Protected band   | Frequency range (MHz) |   |      | Maximum Level (dBm) | MBW (MHz) | NOTE |
|--|-----------------------|---|------|---------------------|-----------|------|
| Frequency range  | 2570                  | - | 2575 | +1.6                | 5         | 1, 2 |
| Frequency range  | 2575                  | - | 2595 | -15.5               | 5         | 1, 2 |
| Frequency range  | 2595                  | - | 2620 | -40                 | 1         |      |
| NOTE 1: The requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |                       |   |      |                     |           |      |
| NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.                                |                       |   |      |                     |           |      |

#### 6.6.3.3A.6 Minimum requirement for CA\_39C and CA\_39C-41A (network signalled value "CA\_NS\_07")

When "CA\_NS\_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.6-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.6-1: Additional requirements**

| Protected band   | Frequency range (MHz) |   |      | Maximum Level (dBm) | MBW (MHz) | NOTE    |
|--|-----------------------|---|------|---------------------|-----------|---------|
| Frequency range  | 1805                  | - | 1855 | -40                 | 1         | 1       |
| Frequency range  | 1855                  | - | 1880 | -15.5               | 5         | 1, 2, 3 |
| NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz.  |                       |   |      |                     |           |         |
| NOTE 2: The requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth. |                       |   |      |                     |           |         |
| NOTE 3: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.                                |                       |   |      |                     |           |         |

#### 6.6.3.3A.7 Minimum requirement for CA\_42C (network signalled value "CA\_NS\_08")

When "CA\_NS\_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.7-1. This requirement also applies for the frequency ranges that are less than  $F_{OOB}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.7-1: Additional requirements**

| Frequency band (MHz)  | Aggregated bandwidth / Spectrum emission limit (dBm) | MBW   |
|---|--|-------|
|   | 25, 30, 35, 40 MHz (Note 1)                          |       |
| $3400 \leq f \leq 3800$   | -23 (Note 2, Note 4)                                 | 5 MHz |
|   | -40 (Note 3)   | 1 MHz |
| NOTE 1: Possible aggregated bandwidth for CA_42C as specified in Table 5.6A.1-1.  |  |       |
| NOTE 2: This requirement applies within an offset between 5 MHz and 25 MHz from the lower and from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. |  |       |

NOTE 3: This requirement applies from 3400 MHz to 25 MHz below the lower E-UTRA channel edge and from 25 MHz above the upper E-UTRA channel edge to 3800 MHz.

NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band.

#### 6.6.3.3A.8 Minimum requirement for CA\_41C and CA\_41D (network signalled value "CA\_NS\_04")

When "CA\_NS\_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.8-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.8-1: Additional requirements**

| Frequency band                                 | Spectrum emission limit (dBm) | Measurement bandwidth |
|--|-------------------------------|-----------------------|
| $2490.5 \text{ MHz} \leq f < 2495 \text{ MHz}$ | -13                           | 1 MHz                 |
| $9 \text{ kHz} < f < 2490.5 \text{ MHz}$       | -25                           | 1 MHz                 |

#### 6.6.3.3A.9 Void

#### 6.6.3.3A.10 Minimum requirement for CA\_48B and CA\_48C (network signalled value "CA\_NS\_10")

When "CA\_NS\_10" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.10-1. This requirement also applies for the frequency ranges that are less than  $F_{\text{OOB}}$  (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.10-1: Additional requirements**

| Frequency range (MHz) | Aggregated bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|-----------------------|--|-----------------------|
|                       | 5, 10, 15, 20, 40 MHz                                |                       |
| 9 kHz – 3530 MHz      | -40  | 1 MHz                 |
| 3530 MHz – 3540 MHz   | -25  |                       |
| 3710 MHz – 3720 MHz   | -25  |                       |
| 3720 MHz – 12.75 GHz  | -40  |                       |

### 6.6.3A Void

<reserved for future use>

### 6.6.3B Spurious emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.3 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-1.

If UE is configured for transmission on single-antenna port, the general requirements in subclause 6.6.3 apply.

### 6.6.3C Void

<reserved for future use>

### 6.6.3D Spurious emission for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.6.3 apply.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE co-existence requirements in Table 6.6.3.2A-0 in subclause 6.6.3.2A apply as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

### 6.6.3F Spurious emission for category NB1 and NB2

When UE is configured for category NB1 or NB2 uplink transmissions the requirements in subclause 6.6.3 apply with an exception that boundary between category NB1 or NB2 out of band and spurious emission domain shall be  $F_{OOB} = 1.7$  MHz.

### 6.6.3G Spurious emission for V2X Communication

This clause specifies the additional requirements for inter-band con-current V2X operation with the single CC uplink assigned to two E-UTRA bands for coexistence with protected bands for the specified simultaneous transmission of the inter-band con-current V2X configurations in Table 6.6.3G-0. The intersection of the requirements for the individual bands specified in clause 6.6.3.2 shall also apply for the specified simultaneous transmission of the inter-band con-current V2X. Intersection of a requirement means that both UL or sidelink transmission constituent bands have the same protected band requirement specified and if one or both protected bands have note(s) associated those note(s) also apply.

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the requirements in subclause 6.6.3 apply.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE-coexistence requirements in Table 6.6.3G-0 in subclause 6.6.3G apply as as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

**NOTE:** For inter-band con-current V2X operation with uplink assigned to E-UTRA band and sidelink transmission assigned to E-UTRA V2X operating bands, the requirements in Table 6.6.3G-0 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3G-0 and in clause 6.6.3.2 would be considered to be verified by the measurements verifying the one uplink inter-band con-current UE to UE co-existence requirements.

**Table 6.6.3G-0: Requirements for inter-band con-current V2X operation**

| V2X con-current band Configuration | Spurious emission |                       |   |      |                     |           |      |
|------------------------------------|-------------------|-----------------------|---|------|---------------------|-----------|------|
|                                    | Protected band    | Frequency range (MHz) |   |      | Maximum Level (dBm) | MBW (MHz) | NOTE |
| V2X_3A-47A                         | Frequency range   | 5925                  | - | 5950 | -30                 | 1         | 7,8  |
|                                    | Frequency range   | 5815                  | - | 5855 | -30                 | 1         | 7    |
| V2X_5A-47A                         | Frequency range   | 5925                  | - | 5950 | -30                 | 1         | 7, 8 |
|                                    | Frequency range   | 5815                  | - | 5855 | -30                 | 1         | 7    |
| V2X_7A-47A                         | Frequency range   | 5925                  | - | 5950 | -30                 | 1         | 7, 8 |
|                                    | Frequency range   | 5815                  | - | 5855 | -30                 | 1         | 7    |
| V2X_8A-47A                         | Frequency range   | 5925                  | - | 5950 | -30                 | 1         | 7, 8 |
|                                    | Frequency range   | 5815                  | - | 5855 | -30                 | 1         | 7    |
| V2X_20A-47A                        | Frequency range   | 758                   | - | 788  | -50                 | 1         |      |
|                                    | Frequency range   | 5925                  | - | 5950 | -30                 | 1         | 7, 8 |

|             |                 |      |   |      |         |   |         |
|-------------|-----------------|------|---|------|---------|---|---------|
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |
| V2X_28A-47A | Frequency range | 470  | - | 694  | -42     | 8 | 3, 12   |
|             | Frequency range | 470  | - | 710  | -26.2   | 6 | 13      |
|             | Frequency range | 662  | - | 694  | -26.2   | 6 | 3       |
|             | Frequency range | 758  | - | 773  | -32     | 1 | 3       |
|             | Frequency range | 773  | - | 803  | -50     | 1 |         |
|             | Frequency range | 5925 | - | 5950 | -30     | 1 | 7, 8    |
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |
| V2X_34A-47A | Frequency range | 5925 | - | 5950 | -30     | 1 | 7, 8    |
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |
| V2X_39A-47A | Frequency range | 1805 | - | 1855 | [-40]   | 1 | 5       |
|             | Frequency range | 1855 | - | 1880 | [-15.5] | 5 | 3, 4, 5 |
|             | Frequency range | 5925 | - | 5950 | -30     | 1 | 7, 8    |
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |
| V2X_41A-47A | Frequency range | 5925 | - | 5950 | -30     | 1 | 7, 8    |
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |
| V2X_71A-47A | Frequency range | 5925 | - | 5950 | -30     | 1 | 7, 8    |
|             | Frequency range | 5815 | - | 5855 | -30     | 1 | 7       |

NOTE 1: Void  
 NOTE 2: Void  
 NOTE 3: These requirements also apply for the frequency ranges that are less than  $F_{OoB}$  (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.  
 NOTE 4: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.  
 NOTE 5: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier center frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier center frequency is within the range 1895 - 1903 MHz.  
 NOTE 6: Void  
 NOTE 7: Applicable when NS\_33 or NS\_34 is configured by the pre-configured radio parameters.  
 NOTE 8: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where  $x = \max(5925, fc + 15)$ , where  $fc$  is the channel centre frequency.  
 NOTE 9: Void  
 NOTE 10: Void  
 NOTE 11: Void  
 NOTE 12: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.  
 NOTE 13: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with  $RB_{start} > 1$  and  $RB_{start} < 48$ . Applicable when the assigned E-UTRA carrier is confined within 715 MHz and 718 MHz and when the channel bandwidth used is 3 MHz.

For intra-band contiguous multi-carrier operation, the boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation specified in Table 6.6.3.1A-1 shall apply.

For intra-band contiguous multi-carrier operation, the spurious emission requirements in Table 6.6.3G-1 shall apply for coexistence with protected bands.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus  $MBW/2$ . The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus  $MBW/2$ . MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3G-1: Requirements for intraband multi-carrier V2X operation**

| V2X multi-carrier | Spurious emission |                       |                     |           |      |
|-------------------|-------------------|-----------------------|---------------------|-----------|------|
|                   | Protected band    | Frequency range (MHz) | Maximum Level (dBm) | MBW (MHz) | NOTE |

| Config uration |  |                     |   |                      |     |   |
|----------------|--|---------------------|---|----------------------|-----|---|
| V2X_47<br>B    | E-UTRA Band 1, 3, 5, 7, 8, 22, 26, 28, 34, 39, 40, 41, 42, 44, 45, 50, 51, 52, 65<br>NR band n77, n78, n79 | F <sub>DL_low</sub> | - | F <sub>DL_high</sub> | -50 | 1 |

For V2X UEs supporting Transmit Diversity, the requirements specified for single carrier shall apply to each transmit antenna connector.

If V2X UE is configured for transmission on single-antenna connector, the general requirements specified for single carrier shall apply to the active antenna connector.

## 6.6A Void

## 6.6B Void

## 6.7 Transmit intermodulation

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7.1 Minimum requirement

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through E-UTRA rectangular filter with measurement bandwidth shown in Table 6.7.1-1.

The requirement of transmitting intermodulation is prescribed in Table 6.7.1-1.

**Table 6.7.1-1: Transmit Intermodulation**

| BW Channel (UL)                      | 5MHz   |        | 10MHz  |        | 15MHz   |         | 20MHz  |        |
|--------------------------------------|--------|--------|--------|--------|---------|---------|--------|--------|
| Interference Signal Frequency Offset | 5MHz   | 10MHz  | 10MHz  | 20MHz  | 15MHz   | 30MHz   | 20MHz  | 40MHz  |
| Interference CW Signal Level         | -40dBc |        |        |        |         |         |        |        |
| Intermodulation Product              | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc  | -35dBc  | -29dBc | -35dBc |
| Measurement bandwidth                | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz  | 18MHz  |

### 6.7.1A Minimum requirement for CA

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product on both component carriers when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7.1A-1.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the requirement is specified in Table 6.7.1-1 which shall apply on each component carrier with both component carriers active.

For intra-band contiguous carrier aggregation the requirement of transmitting intermodulation is specified in Table 6.7.1A-1.

**Table 6.7.1A-1: Transmit Intermodulation**

| CA bandwidth class(UL)               | B and C  |                                   |
|--------------------------------------|--|-----------------------------------|
| Interference Signal Frequency Offset | $BW_{\text{Channel\_CA}}$                          | $2 \cdot BW_{\text{Channel\_CA}}$ |
| Interference CW Signal Level         | -40dBc   |                                   |
| Intermodulation Product              | -29dBc   | -35dBc                            |
| Measurement bandwidth                | $BW_{\text{Channel\_CA}} - 2 \cdot BW_{\text{GB}}$ |                                   |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band) transmit intermodulations is defined as follows. For the E-UTRA band supporting one component carrier the requirement specified in Table 6.7.1-1 apply. For the E-UTRA band supporting two contiguous component carriers the requirements specified in Table 6.7.1A-1 apply.

### 6.7.1B Minimum requirement for UL-MIMO

For UE supporting UL-MIMO, the transmit intermodulation requirements are specified at each transmit antenna connector and the wanted signal is defined as the sum of output power at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.7.1 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.7.1 apply.

### 6.7.1F Minimum requirement for category NB1 and NB2

The UE category NB1 and NB2 transmitter intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product as defined in Table 6.7.1F-1 when an interfering CW signal is added at a level below the wanted signal at the transmitter antenna port. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7.1F-1.

**Table 6.7.1F-1: UE category NB1 and NB2 transmitter IM requirement**

| Parameters for transmitter intermodulation |                                       |         |
|--|---------------------------------------|---------|
| BW Channel (UL)                            | 15 kHz (1 tone at sub-carrier 5 or 6) |         |
| Interference Signal Frequency Offset       | 180 kHz                               | 360 kHz |
| Interference CW Signal Level               | -40dBc                                |         |
| Intermodulation Product                    | -20 dBc                               | -39 dBc |
| Measurement bandwidth                      | 30 kHz                                | 30 kHz  |

### 6.7.1G Minimum requirement for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.7.1 apply for E-UTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.7.1 apply for V2X sidelink transmission and the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation, the transmit intermodulation requirement for CA Bandwidth Class B specified in subclause 6.7.1A shall apply for V2X Bandwidth Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.7.1A shall apply for V2X Bandwidth Class C and C<sub>1</sub>.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements specified for single carrier shall apply to each transmit antenna connector. If the UE transmits on one antenna connector, the requirements specified for single carrier shall apply to the active antenna connector.

## 6.8 Void

### 6.8A Void

### 6.8B Time alignment error for UL-MIMO

For UE(s) with multiple transmit antenna connectors supporting UL-MIMO, this requirement applies to frame timing differences between transmissions on multiple transmit antenna connectors in the closed-loop spatial multiplexing scheme.

The time alignment error (TAE) is defined as the average frame timing difference between any two transmissions on different transmit antenna connectors.

#### 6.8B.1 Minimum Requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 130 ns.

### 6.8C Void

### 6.8D Void

### 6.8E Void

### 6.8F Void

### 6.8G Time alignment error

For V2X UE(s) with two transmit antenna connectors in Transmit Diversity scheme, this requirement applies to frame timing differences between transmissions on two transmit antenna connectors. The Time Alignment Error (TAE) shall not exceed [260] ns.

---

## 7 Receiver characteristics

### 7.1 General

Unless otherwise stated the receiver characteristics are specified at the antenna connector(s) of the UE. For UE(s) with an integral antenna only, a reference antenna(s) with a gain of 0 dBi is assumed for each antenna port(s). UE with an integral antenna(s) may be taken into account by converting these power levels into field strength requirements,

assuming a 0 dBi gain antenna. For UEs with more than one receiver antenna connector, identical interfering signals shall be applied to each receiver antenna port if more than one of these is used (diversity).

The levels of the test signal applied to each of the antenna connectors shall be as defined in the respective sections below.

With the exception of subclause 7.3, the requirements shall be verified with the network signalling value NS\_01 configured (Table 6.2.4-1).

All the parameters in clause 7 are defined using the UL reference measurement channels specified in Annexes A.2.2 and A.2.3, the DL reference measurement channels specified in Annex A.3.2 and using the set-up specified in Annex C.3.1.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks, an in-gap test refers to the case when the interfering signal is located at a negative offset with respect to the assigned lowest channel frequency of the highest sub-block and located at a positive offset with respect to the assigned highest channel frequency of the lowest sub-block.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks, an out-of-gap test refers to the case when the interfering signal(s) is (are) located at a positive offset with respect to the assigned channel frequency of the highest carrier frequency, or located at a negative offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks with channel bandwidth larger than or equal to 5 MHz, the existing adjacent channel selectivity requirements, in-band blocking requirements (for each case), and narrow band blocking requirements apply for in-gap tests only if the corresponding interferer frequency offsets with respect to the two measured carriers satisfy the following condition in relation to the sub-block gap size  $W_{\text{gap}}$  for at least one of these carriers  $j = 1, 2$ , so that the interferer frequency position does not change the nature of the core requirement tested:

$$W_{\text{gap}} \geq 2 \cdot |F_{\text{Interferer (offset),j}}| - BW_{\text{Channel}(j)}$$

where  $F_{\text{Interferer (offset),j}}$  for a sub-block with a single component carrier is the interferer frequency offset with respect to carrier  $j$  as specified in subclause 7.5.1, subclause 7.6.1 and subclause 7.6.3 for the respective requirement and  $BW_{\text{Channel}(j)}$  the channel bandwidth of carrier  $j$ .  $F_{\text{Interferer (offset),j}}$  for a sub-block with two or more contiguous component carriers is the interference frequency offset with respect to the carrier adjacent to the gap is specified in subclause 7.5.1A, 7.6.1A and 7.6.3A. The interferer frequency offsets for adjacent channel selectivity, each in-band blocking case and narrow-band blocking shall be tested separately with a single in-gap interferer at a time.

For a ProSe UE that supports both ProSe Direct Discovery and ProSe Direct Communication, the receiver characteristics specified in clause 7 for ProSe Direct Communication shall apply.

For ProSe Direct Discovery and ProSe Direct Communication on E-UTRA ProSe operating bands that correspond to TDD E-UTRA operating bands as specified in subclause 5.5D, the only additional requirement for ProSe specified in subclause 7.4.1D is applicable.

## 7.2 Diversity characteristics

The requirements in Section 7 assume that the receiver is equipped with two Rx port as a baseline. These requirements apply to all UE categories unless stated otherwise. Additional requirements apply for UE(s) equipped with four Rx ports. These additional requirements also apply for supported band combinations for which the UE can operate using up to four Rx ports while configured with carrier aggregation. With the exception of subclause 7.9 all requirements shall be verified by using both (all) antenna ports simultaneously.

NOTE: for an operating band in which the UE can operate using up to four Rx ports, it suffices to verify for conformance the additional requirements applicable for four Rx ports [except for REFSSENS].

NOTE: Implementation of 4 antenna ports for all operating bands supported by the UE is not mandated.

For a category 0, a category [M 1], category 1bis, category NB1 and NB2 UE the requirements in Section 7 assume that the receiver is equipped with single Rx port.

## 7.3 Reference sensitivity power level

The reference sensitivity power level REFSENS is the minimum mean power applied to each one of the UE antenna ports for all UE categories except category 0, category M1, category M2, and category 1bis, or to the single antenna port for UE category 0, UE category M1, category M2, and UE category 1bis, at which the throughput shall meet or exceed the requirements for the specified reference measurement channel.

The throughput for the REFSENS test is measured based on the Transmission Mode 1 unless specified otherwise.

### 7.3.1 Minimum requirements (QPSK)

The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1 and Table 7.3.1-2

**Table 7.3.1-1: Reference sensitivity QPSK  $P_{\text{REFSENS}}$**

| E-UTRA Band | Channel bandwidth |             |                    |                    |                    |              | Duplex Mode |
|-------------|-------------------|-------------|--------------------|--------------------|--------------------|--------------|-------------|
|             | 1.4 MHz (dBm)     | 3 MHz (dBm) | 5 MHz (dBm)        | 10 MHz (dBm)       | 15 MHz (dBm)       | 20 MHz (dBm) |             |

| 74  | -104.7 <sup>8</sup> | -101.7 <sup>8</sup> | -99.5 <sup>8</sup> | -96.5 <sup>8</sup> | -94.7 <sup>8</sup> | -89.8 <sup>8</sup> | FDD |
| 85  |                     |                     | -97                | -94                |                    |                    | FDD |
| 87  | -99.0               | -95.7               | -93.5              |                    |                    |                    | FDD |
| 88  | -99.0               | -95.7               | -93.5              |                    |                    |                    | FDD |
| NOTE 1: The transmitter shall be set to P <sub>UMAX</sub> as defined in subclause 6.2.5   |                     |                     |                    |                    |                    |                    |     |
| NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1                                 |                     |                     |                    |                    |                    |                    |     |
| NOTE 3: The signal power is specified per port  |                     |                     |                    |                    |                    |                    |     |
| NOTE 4: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.  |                     |                     |                    |                    |                    |                    |     |
| NOTE 5: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.  |                     |                     |                    |                    |                    |                    |     |
| NOTE 6: <sup>6</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |                     |                     |                    |                    |                    |                    |     |
| NOTE 7: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.                    |                     |                     |                    |                    |                    |                    |     |
| NOTE 8: <sup>8</sup> indicates that the requirement is modified by -0.5 dB when the assigned E-UTRA channel bandwidth is confined within 1475.9-1510.9 MHz.           |                     |                     |                    |                    |                    |                    |     |

For UE(s) equipped with 4 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.1-1 shall be modified by the amount given in ΔR<sub>IB,4R</sub> in Table 7.3.1-1a for the applicable E-UTRA bands.

**Table 7.3.1-1a: ΔR<sub>IB,4R</sub>**

| E-UTRA Band                                       | ΔR <sub>IB,4R</sub> [dB] |
|---|--------------------------|
| 1, 2, 3, 4, 7, 20, 21, 25, 30, 34, 39, 40, 41, 66 | - 2.7                    |
| 42, 43, 52  | - 2.2                    |

For UE(s) equipped with 8 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.1-1 shall be modified by the amount given in ΔR<sub>IB,8R</sub> in Table 7.3.1-1aa for the applicable E-UTRA bands.

**Table 7.3.1-1aa: ΔR<sub>IB,8R</sub>**

| E-UTRA Band | ΔR <sub>IB,8R</sub> [dB] |
|-------------|--------------------------|
| 41, 42, 43  | - 4                      |

For UE(s) supporting power class 1 in any of the E-UTRA bands given in table 7.3.1-1b, the following exceptions due to the high power leakage or blocking issue shall apply. The throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1b and Table 7.3.1-2.

**Table 7.3.1-1b: Reference sensitivity for power class 1 QPSK  $P_{\text{REFSENS}}$  (Exception due to high power issue)**

| Channel bandwidth   |               |             |             |              |              |              |             |
|---|---------------|-------------|-------------|--------------|--------------|--------------|-------------|
| E-UTRA Band   | 1.4 MHz (dBm) | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) | Duplex Mode |
| 20  |               |             | -92.8       | -90.9        | -89.5        | -88.5        | FDD         |
| NOTE 1: The transmitter shall be set to $P_{\text{UMAX}}$ as defined in subclause 6.2.5   |               |             |             |              |              |              |             |
| NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 |               |             |             |              |              |              |             |
| NOTE 3: The signal power is specified per port.   |               |             |             |              |              |              |             |

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.1-1 (two antenna ports) and Table 7.3.1-1a (four antenna ports) shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.1-2.

NOTE: Table 7.3.1-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative). For the UE which supports inter-band carrier aggregation configuration with the uplink in one or two E-UTRA bands, the minimum requirement for reference sensitivity in Table 7.3.1-1 and Table 7.3.1-1a shall be increased by the amount given in  $\Delta R_{\text{IB,c}}$  in Table 7.3.1-1A, Table 7.3.1-1B and Table 7.3.1-1C for the applicable E-UTRA bands where unless otherwise stated, the same  $\Delta R_{\text{IB,c}}$  is applicable to E-UTRA band(s) part for CA configurations which have the same E-UTRA operating band combination.

**Table 7.3.1-1A:  $\Delta R_{\text{IB,c}}$  (two bands)**

| E-UTRA operating band combination      | E-UTRA Band | $\Delta R_{\text{IB,c}}$ [dB] |
|--|-------------|-------------------------------|
| CA_1-3, CA_1-1-3, CA_1-1-3-3, CA_1-3-3 | 1           | 0                             |
|  | 3           | 0                             |
| CA_1-5, CA_1-1-5                       | 1           | 0                             |

| <p>NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations</p> <p>NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations</p> <p>NOTE 3: In case the UE supports more than one of the above 2DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 2DL inter-band carrier aggregation configurations then:</p> <ul style="list-style-type: none"> <li>- When the E-UTRA operating band frequency range is <math>\leq 1</math>GHz, the applicable additional tolerance shall be the average of the 2DL tolerances in Table 7.3.1-1A, truncated to one decimal place that would apply for that operating band among the supported 2DL CA configurations. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 2DL carrier aggregation configurations involving such band shall be applied</li> <li>- When the E-UTRA operating band frequency range is <math>&gt;1</math>GHz, the applicable additional tolerance shall be the maximum 2DL tolerance in Table 7.3.1-1A that would apply for that operating band among the supported 2DL CA configurations</li> </ul> <p>NOTE 4: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.</p> <p>NOTE 5: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:</p> <ul style="list-style-type: none"> <li>- When the E-UTRA operating band frequency range is <math>\leq 1</math>GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied</li> <li>- When the E-UTRA operating band frequency range is <math>&gt;1</math>GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.</li> </ul> <p>NOTE 6: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.</p> <p>NOTE 7: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx.</p> <p>NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in the FDD band.</p> <p>NOTE 9: For Band 28, the requirements only apply for the restricted frequency range specified for this CA configuration (Table 5.5A-2).</p> <p>NOTE 10: The requirement is applied for UE transmitting on the frequency range of 2545-2690MHz.</p> |    |     |

NOTE 11: The requirement is applied for UE transmitting on the frequency range of 2496-2545MHz.

NOTE 12: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable  $\Delta R_{IB,c}$  in Band 42, 43, or 48 is the max(Band 42  $\Delta R_{IB,c}$ , Band 43  $\Delta R_{IB,c}$ , Band 48  $\Delta R_{IB,c}$ ).

NOTE 13: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8.

NOTE: To meet the  $\Delta R_{IB,c}$  requirements for CA\_20A-28A state-of-the-art filter combiner technology is needed.

**Table 7.3.1-1B:  $\Delta R_{IB,c}$  (three bands)**

| E-UTRA operating band combination                          | E-UTRA Band | $\Delta R_{IB,c}$ [dB] |

|   | 71 | 0                 |
| NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.  |    |                   |
| NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.                                    |    |                   |
| NOTE 3: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then: |    |                   |

- When the E-UTRA operating band frequency range is  $\leq 1$ GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
  - When the E-UTRA operating band frequency range is  $>1$ GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.
- NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
- NOTE 5: The requirement is specified for the frequency range of 2545-2690MHz.
- NOTE 6: The requirement is specified for the frequency range of 2496-2545MHz.
- NOTE 7: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 42.
- NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx on Band 41 and Band 42.
- NOTE 9: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 8.
- NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3 or Band 8.
- NOTE 12: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 13: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.
- NOTE 14: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 41.
- NOTE 15: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable  $\Delta R_{IB,c}$  in Band 42, 43, or 48 is the  $\max(\text{Band 42 } \Delta R_{IB,c}, \text{Band 43 } \Delta R_{IB,c}, \text{Band 48 } \Delta R_{IB,c})$ .
- NOTE 16: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 11.
- NOTE 17: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRAN band and without simultaneous Rx/Tx on Band 39 and Band 41.
- NOTE 18: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx among TDD bands.

**Table 7.3.1-1C:  $\Delta R_{IB,c}$  (four bands)**

| E-UTRA operating band combination      | E-UTRA Band | $\Delta R_{IB,c}$ [dB] |

| <p>NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.</p> <p>NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.</p> <p>NOTE 3: Tolerances for a UE supporting multiple 5DL inter-band CA configurations are FFS.</p> <p>NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.</p> |    |     |

NOTE : The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is <1GHz and other bands are >1.7GHz and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

**Table 7.3.1-2: Uplink configuration for reference sensitivity**

| E-UTRA Band / Channel bandwidth / N <sub>RB</sub> / Duplex mode |         |       |                 |                 |                 |                 |             |
|---|---------|-------|-----------------|-----------------|-----------------|-----------------|-------------|
| E-UTRA Band   | 1.4 MHz | 3 MHz | 5 MHz           | 10 MHz          | 15 MHz          | 20 MHz          | Duplex Mode |
| 1   |         |       | 25              | 50              | 75              | 100             | FDD         |

NOTE 1: <sup>1</sup> refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

NOTE 2: For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.

|         |   |
|---------|---|
| NOTE 3: | <sup>3</sup> refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB <sub>start</sub> 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB <sub>start</sub> 16                     |
| NOTE 4: | <sup>4</sup> refers to Bands 31, 72, 73, 87 and 88; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at RB <sub>start</sub> 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at RB <sub>start</sub> 10. |

Unless given by Table 7.3.1-3, the minimum requirements specified in Tables 7.3.1-1, 7.3.1-1a and 7.3.1-2 shall be verified with the network signalling value NS\_01 (Table 6.2.4-1) configured.

**Table 7.3.1-3: Network signalling value for reference sensitivity**

| E-UTRA Band | Network Signalling value |
|-------------|--------------------------|
| 2           | NS_03                    |
| 4           | NS_03                    |
| 10          | NS_03                    |

| 85          | NS_06                    |

### 7.3.1A Minimum requirements (QPSK) for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1, Table 7.3.1-1a and Table 7.3.1-2. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active. The uplink resource blocks shall be located as close as possible to the primary downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1). The primary downlink operating band is the downlink band of the active uplink operating band. The UE shall meet the requirements specified in subclause 7.3.1 with the following exceptions.

For the bands supporting 4 antenna ports which are in Table 7.3.1-1a, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in  $\Delta R_{IB,4R}$  in Table 7.3.1-1a for the applicable E-UTRA bands unless otherwise specified.

For the bands supporting 8 antenna ports which are in Table 7.3.1-1aa, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in  $\Delta R_{IB,8R}$  in Table 7.3.1-1aa for the applicable E-UTRA bands unless otherwise specified.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0a, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by harmonic interference from the uplink transmission in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0a and Table 7.3.1A-0b.

**Table 7.3.1A-0a: Reference sensitivity for carrier aggregation QPSK  $P_{\text{REFSENS, CA}}$  (exceptions due to harmonic issue)**

| EUTRA CA Configuration                | Channel bandwidth |               |             |             |              |              |              | Duplex mode |
|---------------------------------------|-------------------|---------------|-------------|-------------|--------------|--------------|--------------|-------------|

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.

NOTE 3: The signal power is specified per port

NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply unless otherwise specified).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3<sup>rd</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

NOTE 7: Void.

NOTE 8: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3<sup>rd</sup> transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).

NOTE 9: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42A, CA\_3A-3A-42A, CA\_3A-42A-42A, CA\_1A-3A-42A, CA\_2A-13A-48A-66A, CA\_2A-48A, CA\_2A-48C, CA\_2A-48D, CA\_48A-66A, CA\_3A-7A-42A, CA\_3A-19A-42A, CA\_3A-20A-42A, CA\_3A-28A-42A, CA\_1A-3A-7A-42A, CA\_5A-48A-66A, CA\_5A-48A-66A-66A, CA\_13A-48A-66A, CA\_13A-48A-66A-66A, CA\_13A-48A-66B, CA\_13A-48A-66C, CA\_13A-48A-48A-66A, CA\_13A-48C-66A, CA\_13A-48D-66A, CA\_13A-48A-48C-66A, CA\_28A-32A, CA\_48A-66A-66A, CA\_48A-66B, CA\_48A-66C, CA\_48A-48A-66A, CA\_48C-66A, CA\_48A-48A-66A-66A, CA\_48A-48A-66B, CA\_48A-48A-66C, CA\_48C-66B, CA\_48C-66C, CA\_48E-66A, CA\_1A-3A-18A-42A, CA\_1A-3A-19A-42A, CA\_1A-3A-32A-42A, CA\_1A-3A-41A-42A, CA\_3A-7A-20A-42A, CA\_3A-20A-32A-42A, CA\_3A-28A-41A-42A, CA\_3A-18A-42A, CA\_3A-18A-42C, CA\_3A-8A-42A and CA\_3A-8A-42C.  $\Delta F_{HD} = 0$  MHz for CA\_11A-28A, CA\_1A-11A-28A and CA\_3A-11A-28A.

NOTE 10: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.

NOTE 11: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher) band with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

- NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 4<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.
- NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \left\lfloor f_{DL}^{HB} / 0.4 \right\rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.
- NOTE 14: For the UE that supports CA\_1A-18A-28A or CA\_1A-19A-28A, no requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3<sup>rd</sup> transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.1 apply).
- NOTE 15: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3<sup>rd</sup> harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.
- NOTE 16: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that  $f_{DL}^{LB} = \left\lfloor f_{UL}^{HB} / 0.3 \right\rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{LB}$  the carrier frequency in the victim (lower) band and  $BW_{Channel}^{HB}$  the channel bandwidth configured in the higher band.
- NOTE 17: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 5<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.
- NOTE 18: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \left\lfloor f_{DL}^{HB} / 0.5 \right\rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.
- NOTE 19: No requirements apply for the case that there is at least one individual RE within the uplink transmission bandwidth of the relative higher band and when the frequency range of relative higher band's uplink channel bandwidth or uplink 1<sup>st</sup> adjacent channel bandwidth is fully or partially overlapped with the 3 times of the frequency range of the relative lower band's downlink channel bandwidth. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
- NOTE 20: Void
- NOTE 21: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies 728 – 738 MHz. The reference sensitivity is only verified when all configured RE's are confined within frequencies 728 – 738 MHz (the requirements specified in clause 7.3.1 of [6] apply).
- NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_1A-3A-21A-42A.
- NOTE 23: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \left\lfloor f_{DL}^{HB} / 0.2 \right\rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.
- NOTE 24: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
- NOTE 25: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-19A-21A-42A.
- NOTE 26: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \left\lfloor f_{DL}^{HB} / 0.2 \right\rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.
- NOTE 27: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 < f_{UL}^{LB} < F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

- NOTE 28: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of either Band 5 or Band 8 for which the 3<sup>rd</sup> transmitter harmonic is within the downlink transmission bandwidth of Band 41. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
- NOTE 29: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
- NOTE 30: Void
- NOTE 31: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_2A-48A-48A and CA\_2A-48A-48C
- NOTE 32: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2<sup>nd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_2A-48A-66A, CA\_2A-48A-66A-66A and CA\_2A-48C-66A
- NOTE 33: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.
- NOTE 34: Void
- NOTE 35: These exceptions for the intra-band class C carriers should be verified one carrier at a time, according to note 6 frequency arrangements. No exceptions apply for the carrier which is not under RESENS exception test.
- NOTE 36: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
- NOTE 37: These requirements apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
- Note 38: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 3<sup>rd</sup> transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 15$  MHz for CA\_26A-41A, CA\_25A-26A-41A.

**Table 7.3.1A-0b: Uplink configuration for the low band (exceptions due to harmonic issue)**

| E-UTRA Band / Channel bandwidth of the high band / N <sub>RB</sub> / Duplex mode |         |         |       |       |        |        |        |             |
|--|---------|---------|-------|-------|--------|--------|--------|-------------|
| EUTRA CA Configuration   | UL band | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Duplex mode |

| NOTE 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth.   |    |   |   |                 |                 |                 |                 |     |
| NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies. |    |   |   |                 |                 |                 |                 |     |

NOTE 3: <sup>3</sup> refers to the UL resource blocks shall be located between 2373-2400MHz.  
 NOTE 4: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.  
 NOTE 5: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a high band.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bA, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3.1A-0bA. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bA and Table 7.3.1A-0bB.

**Table 7.3.1A-0bA: Reference sensitivity for carrier aggregation QPSK  $P_{REFSENS, CA}$  (exceptions for two bands due to close proximity of UL to DL channel)**

| EUTRA CA Configuration      | EUTRA band     | Channel bandwidth |             |             |              |              |              | Duplex mode |

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
 NOTE 3: The signal power is specified per port  
 NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq$  60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.  
 NOTE 7: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.  
 NOTE 8: Void  
 NOTE 9: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

**Table 7.3.1A-0bB: Uplink configuration for the uplink band (exceptions for two bands due to close proximity of UL to DL channel)**

| E-UTRA Band / Channel bandwidth of the affected DL band / N <sub>RB</sub> / Duplex mode |         |         |       |       |        |        |        |             |
|---|---------|---------|-------|-------|--------|--------|--------|-------------|
| EUTRA CA Configuration  | UL band | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz | Duplex mode |

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.

NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz

NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.

NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bC, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3.1A-0bC. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bC and Table 7.3.1A-0bD.

**Table 7.3.1A-0bC: Reference sensitivity for carrier aggregation QPSK P<sub>REFSENS, CA</sub> (exceptions for three bands due to close proximity of UL to DL channel)**

| EUTRA CA Configuration      | EUTRA band        | Channel bandwidth |             |             |              |              |              | Duplex mode |

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.

NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq$  60 MHz. For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.

NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.

NOTE 7: Void

NOTE 8: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.

NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.

NOTE 10: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq$  60 MHz. For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.

NOTE 11: Void

NOTE 12: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

Table 7.3.1A-0bD: Uplink configuration for the uplink band (exceptions for three bands due to close proximity of UL to DL channel)

| E-UTRA Band / Channel bandwidth of the affected DL band / N <sub>RB</sub> / Duplex mode |                  |         |       |       |        |        |        |             |
|---|------------------|---------|-------|-------|--------|--------|--------|-------------|

| NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1. |                  |  |  |    |    |    |    |     |
| NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz  |                  |  |  |    |    |    |    |     |
| NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.   |                  |  |  |    |    |    |    |     |
| NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).                                |                  |  |  |    |    |    |    |     |

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bD1, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3.1A-0bD1. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bD1 and Table 7.3.1A-0bD2.

**Table 7.3.1A-0bD1: Reference sensitivity for carrier aggregation QPSK P<sub>REFSENS, CA</sub> (exceptions for four bands due to close proximity of UL to DL channel)**

| EUTRA CA Configuration | EUTRA band | Channel bandwidth |             |             |              |              |              | Duplex mode |
|------------------------|------------|-------------------|-------------|-------------|--------------|--------------|--------------|-------------|
|                        |            | 1.4 MHz (dBm)     | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) |             |
|                        |            |                   |             |             |              |              |              |             |

| <p>NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.</p> <p>NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is &lt; 60 MHz</p> <p>NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.</p> |  |  |  |  |  |  |  |  |

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bD3, exceptions are allowed when the uplink is active within a specified frequency range as noted in Table 7.3.1A-0bD3. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bD3 and Table 7.3.1A-0bD4.

**Table 7.3.1A-0bD3: Reference sensitivity for carrier aggregation QPSK  $P_{REFSENS, CA}$  (exceptions for five bands due to close proximity of UL to DL channel)**

NOTE 1: The transmitter shall be set to P<sub>UMAX</sub> as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
 NOTE 3: The signal power is specified per port  
 NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 6: Void  
 NOTE 7: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.  
 NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.  
 NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bE, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by uplink being active

in the applicable active UL bands of the same CA configuration in Table 7.3.1A-0bE. For these exceptions, the UE shall meet the reference sensitivities specified in Table 7.3.1A-0bE and Table 7.3.1A-0bF.

**Table 7.3.1A-0bE: Reference sensitivity for carrier aggregation QPSK  $P_{REFSENS, CA}$  (exceptions due to cross band isolation issues of TDD and FDD bands)**

| CA_28A-40D  | 40               |  |  | -95.1   | -92.9   | -91.4   | -90.5   | TDD | 28 |
| CA_28A-40D  | 28               |  |  | -96.8   | -94.1   | -92.5   | -89.8   | FDD | 40 |

NOTE 1: The transmitter shall be set to P<sub>UMAX</sub> as defined in subclause 6.2.5A

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: These requirements apply regardless of the channel bandwidth and the location of UL band.

NOTE 5: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

NOTE 6: The antenna isolation for MSD calculation is assumed as 10 dB. For conducted mode REFSENS test such antenna isolation is not observed as the antennas are disconnected. Additionally antenna isolation assumption is under discussion depending on the frequency range

NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range ΔF<sub>HD</sub> above and below the edge of this downlink transmission bandwidth. The value ΔF<sub>HD</sub> depends on the E-UTRA configuration: ΔF<sub>HD</sub> = 10 MHz for CA\_3A-42A, CA\_3A-42C, CA\_3A-42D, CA\_3A-3A-42C, CA\_3A-42A-42C, CA\_1A-3A-42A, CA\_1A-3A-42C, CA\_1A-3A-42D, CA\_3A-19A-42A, CA\_3A-19A-42C, CA\_1A-3A-19A-42A, CA\_3A-41A-42A, CA\_3A-41A-42C, CA\_3A-41C-42A, and CA\_3A-41C-42C.

- NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor \cdot 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.
- NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
- NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
- NOTE 11: Void
- NOTE 12: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
- NOTE 13: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq 60$  MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
- NOTE 14: The B41 requirements also apply to the supported CA\_1A-41A.
- NOTE 15: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1
- NOTE 16: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq 60$  MHz. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
- NOTE 17: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
- NOTE 18: No requirements apply when there is at least one individual RE within the downlink transmission bandwidth of band5 for which the 3rd receiver harmonic is within the uplink transmission bandwidth of band41. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
- NOTE 19: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

**Table 7.3.1A-0bF: Uplink configuration for reference sensitivity (exceptions due to cross band isolation issues of TDD and FDD bands)**

| E-UTRA Band / Channel bandwidth of the affected DL band / N <sub>RB</sub> / Duplex mode |                  |         |       |       |                 |                 |                 |             |
|---|------------------|---------|-------|-------|-----------------|-----------------|-----------------|-------------|
| EUTRA CA Configuration  | E-UTRA Band      | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz          | 15 MHz          | 20 MHz          | Duplex Mode |

| <p>NOTE 1: <sup>1</sup> refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).</p> <p>NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.</p> <p>NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is &lt; 60 MHz.</p> |    |  |    |    |                 |                 |                 |     |

NOTE 4: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is  $\geq 60$  MHz.  
 NOTE 5: <sup>5</sup> refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RB<sub>start</sub> 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RB<sub>start</sub> 16

For band combinations including operating bands without uplink band (as noted in Table 5.5-1), the requirements are specified in Table 7.3.1A-0d and for any uplink band with uplink configuration specified in Table 7.3.1-2.

**Table 7.3.1A-0d: Reference sensitivity QPSK P<sub>REFSENS</sub> (CA with a SDL band)**

| EUTRA CA Configuration        | Channel bandwidth |               |             |             |              |              |              | Duplex mode |

NOTE 1: The transmitter shall be set to  $P_{UMAX}$  as defined in subclause 6.2.5A.  
 NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1  
 NOTE 3: The signal power is specified per port.  
 NOTE 4: Void  
 NOTE 5: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.  
 NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.  
 NOTE 7: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.

Table 7.3.1A-0e: Void

For band combinations including operating band 46 (Table 5.5-1), the requirements are specified in Table 7.3.1A-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.1-2 and Table 7.3.1A-0eC.

For band combinations including operating band 49 (Table 5.5-1), the requirements are specified in Table 7.3.1A-0eA for the uplink in any band other than Band 49 with uplink configurations specified in Table 7.3.1-2 and measurement exclusion region in Table 7.3.1A-0eD.

**Table 7.3.1A-0eA: Reference sensitivity QPSK  $P_{\text{REFSENS}}$  (CA with band 46 or Band 49)**

| EUTRA CA Configuration | Channel bandwidth |               |             |             |              |              |              | Duplex mode |     |
|------------------------|-------------------|---------------|-------------|-------------|--------------|--------------|--------------|-------------|-----|
|                        | EUTRA band        | 1.4 MHz (dBm) | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) |             |     |

|  | 71 |  |  |  | -97.2 | -94.2 | -92.0 | -87.5 | TDD |

NOTE 1: The transmitter shall be set to P<sub>UMAX</sub> as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.

NOTE 3: The signal power is specified per port.

NOTE 4: Void

NOTE 5: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 7.3.1A-0eC.

NOTE 6: Void

NOTE 7: <sup>7</sup> indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

NOTE 8: When Band 46 have self interference problems by dual uplink CA, then the requirements not apply in exclusion zone which is frequency range within (harmonics frequency region + ΔF<sub>HD</sub>) and IMD frequency region as follow.

NOTE 9: The requirement for B49 does not apply when there is at least one individual RE within the B49 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 7.3.1A-0eD.

NOTE 10: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band which excludes band 46 and a range ΔF<sub>HD</sub> above and below the edge of this downlink transmission bandwidth. The value ΔF<sub>HD</sub> depends on the E-UTRA configuration: ΔF<sub>HD</sub> = 10 MHz for CA\_2-46-48, CA\_46-48-66, and CA\_2-46-48-66. For harmonic issue not related with band 46, the uplink configuration of CA\_2-48, CA\_48-66 and CA\_2-48-66 in Table 7.3.1A-0b can be used.

NOTE 11: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and

$$F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$$

with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.

NOTE 12: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher) band with

$F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

IMD frequency range

**Table 7.3.1A-0eB: Void**

Table 7.3.1A-0eC specifies the Band 46 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.1-2. The exclusion region in Table 7.3.1A-0eC is specified for the case of 10MHz and 20MHz channel bandwidth in Band 46.

**Table 7.3.1A-0eC: Band 46 Reference sensitivity measurement exclusion region in MHz.**

| Licensed Component Carriers / E-UTRA Band / Harmonic order / Channel BW in UL |                |        |        |        |        |
|---|----------------|--------|--------|--------|--------|
| Licensed Component Carriers   | Harmonic order | 5MHz   | 10MHz  | 15MHz  | 20MHz  |
| 1   | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 2   | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 3   | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 4   | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 5   | 7              | +/- 10 | +/- 20 |        |        |
| 7 <sup>1</sup>  | 2              | +/- 15 | +/- 25 | +/- 38 | +/- 50 |
| 8   | 6              | +/- 10 | +/- 20 |        |        |
| 11  | 4              | +/- 15 | +/- 25 |        |        |
| 12  | 8              | +/- 10 | +/- 20 |        |        |
| 13  | 7              | +/- 10 | +/- 20 |        |        |
| 19  | 7              | +/- 10 | +/- 20 | +/- 30 |        |
| 21  | 4              | +/- 15 | +/- 25 | +/- 38 |        |
| 25  | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 26  | 7              | +/- 10 | +/- 20 | +/- 30 |        |
| 28  | 7              | +/- 10 | +/- 20 | +/- 30 | +/- 40 |
| 28  | 8              | +/- 10 | +/- 20 | +/- 30 | +/- 40 |
| 39  | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |
| 41  | 2              | +/- 15 | +/- 25 | +/- 38 | +/- 50 |
| 66  | 3              | +/- 15 | +/- 23 | +/- 35 | +/- 45 |

NOTE 1: Even though UL harmonic does not fall directly into Band 46 the exclusion region still applies.  
 NOTE 2: The center of the exclusion region is obtained by multiplying the UL channel center frequency by the harmonic order.

Table 7.3.1A-0eD specifies the Band 49 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.1-2.

**Table 7.3.1A-0eD: Band 49 reference sensitivity measurement exclusion region in MHz.**

| Licensed Component Carriers / E-UTRA Band / Harmonic order / Channel BW in UL  |                |          |        |          |        |
|--|----------------|----------|--------|----------|--------|
| Licensed Component Carriers  | Harmonic order | 5MHz     | 10MHz  | 15MHz    | 20MHz  |
| 2 <sup>1</sup>   | 2              | +/- 12.5 | +/- 25 | +/- 37.5 | +/- 50 |
| NOTE 1: Even though UL harmonic does not fall directly into Band 49 the exclusion region still applies.                      |                |          |        |          |        |
| NOTE 2: The center of the exclusion region is obtained by multiplying the UL channel center frequency by the harmonic order. |                |          |        |          |        |

In all cases for single uplink inter-band CA, unless given by Table 7.3.1-3 for the band with the active uplink carrier, the applicable reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4-1) configured.

For inter-band carrier aggregation with one component carrier per operating band (up to four downlinks) and the uplink assigned to two E-UTRA bands the throughput shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1, Table 7.3.1-1a and Table 7.3.1-2. The reference sensitivity is defined to be met with all downlink component carriers active and both of the uplink carriers active.

For E-UTRA CA configurations with uplink and downlink assigned to two E-UTRA bands given in Table 7.3.1A-0f, the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-0f. For E-UTRA CA configurations with uplink assigned to two E-UTRA bands and downlink assigned to three E-UTRA bands given in Table 7.3.1A-0g, the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-0g. For these test points the reference sensitivity requirement specified in Table 7.3.1-1 and Table 7.3.1-1a are relaxed by the amount of the corresponding parameter MSD given in Table 7.3.1A-0f and Table 7.3.1A-0g.

The allowed exceptions defined in Table 7.3.1A-0a and Table 7.3.1A-0b for inter-band carrier aggregation with a single active uplink are also applicable for dual uplink operation.

**Table 7.3.1A-0f: 2DL/2UL interband Reference sensitivity QPSK  $P_{\text{REFSENS}}$  and uplink/downlink configurations**

| EUTRA CA Configuration | E-UTRA Band / Channel bandwidth / $N_{\text{RB}}$ / Duplex mode |                |                |                     |                |          |             | Source of IMD     |
|------------------------|---|----------------|----------------|---------------------|----------------|----------|-------------|-------------------|

NOTE 1: Both of the transmitters shall be set min(+20 dBm, P<sub>C<sub>MAX</sub>L,c</sub>) as defined in subclause 6.2.5A

NOTE 2: RB<sub>START</sub> = 0

NOTE 3: No requirements apply when there is at least one individual RE within the intermodulation generated by the dual uplink is within the downlink transmission bandwidth of the FDD band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.1 apply).

NOTE 4: This band is subject to IMD5 also which MSD is not specified.

NOTE 5: Void

NOTE 6: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of  $\Delta R_{IB,4R}$  in Table 7.3.1-1a when MSD > 0.

|   |            | 66 | 1770   | 5  | 25  | 2190   | 5  | N/A  |         | N/A  |

NOTE 1: This band is subject to IMD3 also which MSD is not specified.  
 NOTE 1: Both of the transmitters shall be set min(+20 dBm, P<sub>C<sub>MAX,L,c</sub></sub>) as defined in subclause 6.2.5A  
 NOTE 2: RB<sub>START</sub> = 0  
 NOTE 3: Void  
 NOTE 4: This MSD requirement apply with both IMD2 and IMD3 products should be generated.  
 NOTE 5: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of ΔR<sub>IB,4R</sub> in Table 7.3.1-1a when MSD > 0.  
 NOTE 6: Due to the spectrum holdings of the operator, the deployed frequency ranges do not result MSD to interested downlink channel. Therefore, no requirements apply for this CA configuration.

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters

specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table 7.3.1-1B, Table 7.3.1-1C, Table 7.3.1A-0h and Table 7.3.1A-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the power levels in Table 7.3.1-1 and Table 7.3.1-1a also apply for an SCC assigned in the unpaired part. The requirement is verified using an uplink CA configuration with the largest number of carriers supported by the UE. Table 7.3.1A-0h, Table 7.3.1A-1 and Table 7.3.1A-2 specifies the maximum number of allocated uplink resource blocks for which the intra-band contiguous carrier aggregation reference sensitivity requirement shall be met. The PCC and SCC allocations as defined in Table 7.3.1A-0h, Table 7.3.1A-1 and Table 7.3.1A-2 form a contiguous allocation where TX–RX frequency separations of the component carriers are as defined in Table 5.7.4-1. In case downlink CA configuration has additional SCC(s) compared to uplink CA configuration those are configured furthers away from uplink band. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2 and the downlink PCC carrier center frequency shall be configured closer to uplink operating band than any of the downlink SCC center frequency. Unless given by Table 7.3.1-3, the reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4-1) configured.

**Table 7.3.1A-0h: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class B**

| CA configuration / CC combination / $N_{RB\_agg}$ / Duplex mode   |           |     |           |     |           |     |           |     |             |
|---|-----------|-----|-----------|-----|-----------|-----|-----------|-----|-------------|
| Uplink CA configuration   | 25RB+25RB |     | 50RB+25RB |     | 50RB+50RB |     | 75RB+25RB |     | Duplex Mode |
|   | PCC       | SCC | PCC       | SCC | PCC       | SCC | PCC       | SCC |             |
| CA_5B   | N/A       | N/A | 25        | 0   | 25        | 0   | N/A       | N/A | FDD         |
| CA_8B   | N/A       | N/A | 25        | 0   | 25        | 0   | N/A       | N/A | FDD         |
| CA_66B  | 25        | 25  | 50        | 25  | 50        | 50  | 75        | 25  | FDD         |
| NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.   |           |     |           |     |           |     |           |     |             |
| NOTE 2: The transmitted power over both PCC and SCC shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.  |           |     |           |     |           |     |           |     |             |
| NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).   |           |     |           |     |           |     |           |     |             |
| NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band. |           |     |           |     |           |     |           |     |             |
| NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.                                 |           |     |           |     |           |     |           |     |             |

**Table 7.3.1A-1: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class C**

| CA configuration / CC combination / $N_{RB\_agg}$ / Duplex mode   |            |     |            |     |           |     |           |     |            |     |             |     |             |

| NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.   |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 2: The transmitted power over both PCC and SCC shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.  |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).   |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band. |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.                                 |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 6: Void.   |            |     |            |     |           |     |           |     |            |     |             |     |             |
| NOTE 7: Void  |            |     |            |     |           |     |           |     |            |     |             |     |             |

**Table 7.3.1A-2: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class D**

| CA configuration / CC combination / N <sub>RB_agg</sub> / Duplex mode   |  |   |     |     |
|---|--|---|-----|-----|
| Uplink CA configuration   | CC combination   | Number of uplink resource blocks per CC |     |     |
|   |  | PCC                                     | SCC | SCC |
| CA_40D  | 75RB+75RB+75RB<br>100RB+75RB+75RB<br>100RB+100RB+50RB<br>100RB+100RB+75RB<br>100RB+100RB+100RB | NOTE 6                                  |     |     |
| CA_41D  | 75RB+75RB+75RB<br>100RB+75RB+75RB<br>100RB+100RB+50RB<br>100RB+100RB+75RB<br>100RB+100RB+100RB | NOTE 6                                  |     |     |
| NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.<br>NOTE 2: The transmitted power over both PCC and SCC shall be set to PUMAX as defined in subclause 6.2.5A.<br>NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).<br>NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.<br>NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.<br>NOTE 6: All uplink CCs are fully allocated |  |   |     |     |

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the throughput of each downlink component carrier shall be  $\geq 95\%$  of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) and parameters specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table 7.3.1-1B, Table 7.3.1-1C and Table 7.3.1A-3 with the reference sensitivity power level increased by  $\Delta R_{IBNC}$  given in Table 7.3.1A-3 for the SCC(s). For aggregation of more than two downlink FDD carriers with one uplink carrier the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-3. The requirements apply with all downlink carriers active. Unless given by Table 7.3.1-3, the reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4-1) configured.

**Table 7.3.1A-3: Intra-band non-contiguous CA with one uplink configuration for reference sensitivity**

| CA configuration | Aggregated channel bandwidth (PCC+SCC) | W <sub>gap</sub> / [MHz]   | UL PCC allocation | $\Delta R_{IBNC}$ (dB) | Duplex mode |
|------------------|--|----------------------------|-------------------|------------------------|-------------|
| CA_1A-1A         | 25RB + 25RB                            | $0.0 < W_{gap} \leq 50.0$  | 25 <sup>1</sup>   | 0.5                    | FDD         |

| NOTE 1: <sup>1</sup> refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission.  |                              |   |                    |     |     |
| NOTE 2: $W_{\text{gap}}$ is the sub-block gap between the two sub-blocks.   |                              |   |                    |     |     |
| NOTE 3: The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band.   |                              |   |                    |     |     |
| NOTE 4: <sup>4</sup> refers to the UL resource blocks shall be located at $RB_{\text{start}}=33$ .  |                              |   |                    |     |     |
| NOTE 5: For the TDD intra-band non-contiguous CA configurations, the minimum requirements apply only in synchronized operation between all component carriers.  |                              |   |                    |     |     |
| NOTE 6: All combinations of channel bandwidths defined in Table 5.6A.1-3.   |                              |   |                    |     |     |
| NOTE 7: All applicable sub-block gap sizes.   |                              |   |                    |     |     |
| NOTE 8: The PCC allocation is same as Transmission bandwidth configuration $N_{\text{RB}}$ as defined in Table 5.6-1. In case of uplink sub-block is TDD intra-band contiguous CA then the uplink PCC and SCC allocations are the same as $N_{\text{RB\_agg}}$ defined in Table 7.3.1A-1. |                              |   |                    |     |     |
| NOTE 9: <sup>9</sup> refers to the UL resource blocks shall be located at $RB_{\text{start}}=25$ .  |                              |   |                    |     |     |

NOTE 10: <sup>10</sup> refers to the UL resource blocks shall be located at  $RB_{start}=35$ .  
 NOTE 11: <sup>11</sup> refers to the UL resource blocks shall be located at  $RB_{start}=50$ .  
 NOTE 12: <sup>12</sup> refers to the UL resource blocks shall be located at  $RB_{start}=39$ .  
 NOTE 13: <sup>13</sup> refers to the UL resource blocks shall be located at  $RB_{start}=57$ .  
 NOTE 14: <sup>14</sup> refers to the UL resource blocks shall be located at  $RB_{start}=44$ .  
 NOTE 15: <sup>15</sup> refers to the UL resource blocks shall be located at  $RB_{start}=62$ .  
 NOTE 16: The carrier center frequency of PCC in the DL operating band is configured closer to the UL operating band.  
 NOTE 17: Void  
 NOTE 18: <sup>18</sup> refers to the UL resource blocks shall be located at  $RB_{start}=12$ .  
 NOTE 19: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of  $\Delta R_{IB,4R}$  in Table 7.3.1-1a when  $MSD > 0$ .

For intra-band non-contiguous carrier aggregation with two uplink and downlink carriers the reference sensitivity is defined to be met with both downlink and uplink carriers activated. The downlink PCC and SCC minimum requirements for reference sensitivity power level as specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table 7.3.1-1B and Table 7.3.1-1C are increased by amount of  $\Delta R_{2UL\_PCC}$  and  $\Delta R_{2UL\_SCC}$  which are defined in Table 7.3.1A-4 when uplink PCC and SCC allocations are according to the Table 7.3.1A-4.

**Table 7.3.1A-4: Intra-band non-contiguous CA with two uplinks configuration for reference sensitivity**

| CA configuration   | Aggregated channel bandwidth (PCC+SCC) | $W_{gap}$ / [MHz] | UL PCC allocation | UL SCC allocation | $\Delta R_{2UL\_PCC}$ (dB) | $\Delta R_{2UL\_SCC}$ (dB) | Duplex mode |
|--|--|-------------------|-------------------|-------------------|----------------------------|----------------------------|-------------|
| CA_4A-4A   | NOTE 2                                 | NOTE 3            | NOTE 4            | NOTE 5            | 0.0                        | 0.0                        | FDD         |
| NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.<br>NOTE 2: All combinations of channel bandwidths defined in Table 5.6A.1-3.<br>NOTE 3: All applicable sub-block gap sizes.<br>NOTE 4: The PCC allocation is same as Transmission bandwidth configuration $N_{RB}$ as defined in Table 5.6-1.<br>NOTE 5: The SCC allocation is same as Transmission bandwidth configuration $N_{RB}$ as defined in Table 5.6-1. |  |                   |                   |                   |                            |                            |             |

For combinations of intra-band and inter-band carrier aggregation, the requirement is defined with an uplink configuration in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink (up to two contiguously aggregated uplink carriers) is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when an uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band when the uplink is active in band(s) supporting non-contiguous aggregation. For these uplink configurations, the UE shall meet the reference sensitivity requirements for intra-band non-contiguous carrier aggregation of two or more downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.3.1. For the two or more component carriers within the same band,  $\Delta R_{IBNC} = 0$  dB for all sub-block gaps (Table 7.3.1A-3) when the uplink is active in another band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with all uplink carriers active in each band capable of UL operation. For component carriers configured in Band 46, the said requirements for intra-band carrier aggregation of downlink carriers are replaced by the requirements in Table 7.3.1A-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.1-2. Unless given by Table 7.3.1-3, the reference sensitivity requirements shall be verified with the network signalling value NS\_01 (Table 6.2.4-1) configured.

For the UE that supports any of combinations of intra-band and inter-band carrier aggregation given in Table 7.3.1A-5, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by harmonic interference from the uplink being active in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-5 and Table 7.3.1A-6.

**Table 7.3.1A-5: Reference sensitivity for carrier aggregation QPSK  $P_{REFSENS, CA}$  (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)**

| EUTRA CA Configuration | EUTRA band | Channel bandwidth |             |             |              |              |              | Duplex mode |
|------------------------|------------|-------------------|-------------|-------------|--------------|--------------|--------------|-------------|
|                        |            | 1.4 MHz (dBm)     | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) |             |
|                        |            |                   |             |             |              |              |              |             |

|   |                  |  |  |       |       |       |       |     |

NOTE 1: The transmitter shall be set to P<sub>UMAX</sub> as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCN Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply unless otherwise specified).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the

carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.

- NOTE 7: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
- NOTE 8: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_3A-42C, CA\_3A-42D, CA\_3A-3A-42C, CA\_3A-42A-42C, CA\_3A-42C-42C, CA\_1A-3A-18A-42C, CA\_1A-3A-19A-42C, CA\_1A-3A-21A-42C, CA\_1A-3A-41A-42C, CA\_1A-3A-41C-42A, CA\_1A-3A-41C-42C, CA\_1A-3A-42C, CA\_3A-28A-42C, CA\_3A-28A-42D, CA\_3A-19A-42C, CA\_3A-19A-42D, CA\_3A-21A-42D, CA\_3A-28A-40C, CA\_3A-28A-40D, CA\_3A-28A-41A-42C, CA\_3A-28A-41C-42A, CA\_3A-28A-41C-42C, CA\_3A-28A-42A-42A, CA\_3A-28A-42A-42C, CA\_3A-28A-42C-42C, CA\_3A-41A-42A-42A, CA\_3A-41A-42A-42C, CA\_3A-41A-42C-42C, CA\_2A-48C-48C, CA\_2A-48A-48D, CA\_48A-48C-66C, CA\_48A-48C-66B, CA\_48A-48D-66A, CA\_48C-48C-66A, CA\_48D-66A, CA\_48A-48C-66A, CA\_2A-13A-48D, CA\_2A-13A-48A-48C, CA\_2A-13A-48C-66A, CA\_2A-13A-48A-48A-66A, CA\_2A-48D-66A, CA\_2A-48E-66A, CA\_2A-48A-48C-66A and CA\_2A-48E.
- NOTE 9: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  carrier frequency in the victim (higher) band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the lower band.
- NOTE 10: The requirements are only applicable to channel bandwidths with a carrier frequency at  $\pm (20 + BW_{Channel}^{HB} / 2)$  MHz offset from  $2f_{UL}^{LB}$  in the victim (higher) band) with  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$ , where  $BW_{Channel}^{LB}$  and  $BW_{Channel}^{HB}$  are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
- NOTE 11: Void
- NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 5<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.
- NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.5 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.
- NOTE 14: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies 728 – 738 MHz. The reference sensitivity is only verified when all configured RE's are confined within frequencies 728 – 738 MHz (the requirements specified in clause 7.3.1 of [6] apply).
- NOTE 15: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 4<sup>th</sup> transmitter harmonic is within the downlink transmission bandwidth of a high band.
- NOTE 16: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that  $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.4 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{HB}$  the carrier frequency of a high band in MHz and  $BW_{Channel}^{LB}$  the channel bandwidth configured in the low band.
- NOTE 17: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3<sup>rd</sup> harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.
- NOTE 18: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that  $f_{DL}^{LB} = \lfloor f_{UL}^{HB} / 0.3 \rfloor 0.1$  in MHz and  $F_{UL\_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL\_high}^{LB} - BW_{Channel}^{LB} / 2$  with  $f_{DL}^{LB}$  the carrier frequency in the victim (lower) band and  $BW_{Channel}^{HB}$  the channel bandwidth configured in the higher band.
- NOTE 19: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 6.2.4-3.
- NOTE 20: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

NOTE 21: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.  
 NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range  $\Delta F_{HD}$  above and below the edge of this downlink transmission bandwidth. The value  $\Delta F_{HD}$  depends on the E-UTRA configuration:  $\Delta F_{HD} = 10$  MHz for CA\_2A-48A-48C

**Table 7.3.1A-6: Uplink configuration for the low band (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)**

| E-UTRA Band / Channel bandwidth of the high band / $N_{RB}$ / Duplex mode  |         |         |       |       |        |        |        |             |
|--|---------|---------|-------|-------|--------|--------|--------|-------------|
