## Intellectual Property Rights

### Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

## Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <u>http://webapp.etsi.org/key/queryform.asp</u>.

## Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

## Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 1 of a multi-part deliverable covering conformance test specification for Mission Critical Services over LTE consisting of:

3GPP TS 36.579-1 [2]: "Mission Critical (MC) services over LTE protocol conformance testing; Part 1: Common test environment"

## **3GPP TS 36.579-2:** "Mission Critical (MC) services **over LTE; Part 2: Mission Critical Push To Talk** (MCPTT) User Equipment (UE) Protocol conformance specification" (the present document);

3GPP TS 36.579-3 [3]: "Mission Critical (MC) services over LTE; Part 3: Mission Critical Push To Talk (MCPTT) Server Application test specification";

3GPP TS 36.579-4 [4]: "Mission Critical (MC) services over LTE; Part 4: Test Applicability and Implementation Conformance Statement (ICS)";

3GPP TS 36.579-5 [5]: "Mission Critical (MC) services over LTE; Part 5: Abstract test suite (ATS)".

## 1 Scope

The present document specifies the protocol conformance testing for testing a MCPTT Client for compliance to the Mission Critical Push To Talk (MCPTT) over LTE protocol requirements defined by 3GPP.

I particular the present document contains:

- the overall test structure;
- the test configurations;
- the conformance requirement and reference to the core specifications;
- the test purposes; and
- a brief description of the test procedure, the specific test requirements and short message exchange table.

The present document is valid for MCPTT Clients implemented according to 3GPP releases starting from Release 13 up to the Release indicated on the cover page of the present document.

The following information relevant to testing specified in the present document could be found in accompanying specifications:

- default setting of the test parameters TS 36.579-1 [2];
- Implementation Conformance Statement (ICS) TS 36.579-4 [4] and Implementation eXtra Information for Testing (IXIT) TS 36.579-5 [5];
- the applicability of each test case TS 36.579-4 [4].

The test cases are expected to be executed through the 3GPP radio interface. The present document does not specify the protocol conformance testing for the EPS (LTE) bearers which carry the MCPTT data sent or received by the MCPTT Client and which are required to be supported by the UE in which the MCPTT Client is installed. This is defined in TS 36.523-1 [6].

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

## 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

For the purpose of the present document, the following terms and definitions given in 3GPP TS 24.379 [9] apply:

An MCPTT user is affiliated to an MCPTT group An MCPTT user is affiliated to an MCPTT group at an MCPTT client **Affiliation status Group identity** In-progress emergency private call state In-progress imminent peril group state **MCPTT client ID MCPTT** emergency alert state **MCPTT** emergency group state MCPTT emergency group call state **MCPTT** emergency private call state MCPTT emergency private priority state MCPTT imminent peril group call state MCPTT imminent peril group state MCPTT private emergency alert state **MCPTT speech** Media-floor control entity **Temporary MCPTT group identity** Trusted mutual aid Untrusted mutual aid

For the purposes of the present document, the following terms and definitions given in 3GPP TS 22.179 [7] apply:

In-progress emergency MCPTT emergency alert MCPTT emergency group call MCPTT emergency state Partner MCPTT system Primary MCPTT system

For the purpose of the present document, the following terms and definitions given in 3GPP TS 24.380 [10] apply:

## **MBMS** subchannel

For the purpose of the present document, the following terms and definitions given in 3GPP TS 23.179 [8] apply:

Pre-selected MCPTT user profile

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

None.

## 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

ECGI	E-UTRAN Cell Global Identification
FFS	For Further Study
ICS	Implementation Conformance Statement
IPEG	In-Progress Emergency Group
IPEPC	In-Progress Emergency Private Call
IPIG	In-Progress Imminent peril Group
IUT	Implementation Under Test
IXIT	Implementation eXtra Information for Testing
MBMS	Multimedia Broadcast and Multicast Service
MBSFN	Multimedia Broadcast multicast service Single Frequency Network
MCPTT	Mission Critical Push To Talk
MCPTT group I	
MEA	MCPTT Emergency Alert
MEG	MCPTT Emergency Group
MEGC	MCPTT Emergency Group Call
MEPC	MCPTT Emergency Private Call
MEPP	MCPTT Emergency Private Priority
MES	MCPTT Emergency State
MIME	Multipurpose Internet Mail Extensions
MIG	MCPTT Imminent peril Group
MIGC	MCPTT Imminent peril Group Call
MONP	MCPTT Off-Network Protocol
MPEA	MCPTT Private Emergency Alert
NAT	Network Address Translation
PLMN	Public Land Mobile Network
QCI	QoS Class Identifier
RTP	Real-time Transport Protocol
SAI	Service Area Identifier
SDP	Session Description Protocol
SIP	Session Initiation Protocol
SS	System Simulator
SSRC	Synchronization SouRCe
TGI	Temporary MCPTT Group Identity
TMGI	Temporary Mobile Group Identity
TP	Transmission Point
TP	Test Purpose
UE	User Equipment
URI	Uniform Resource Identifier

## 4 General

## 4.1 Test methodology

## 4.1.1 Testing of optional functions and procedures

Any function or procedure which is optional, may be subject to a conformance test if it is implemented in the MCPTT Client.

A declaration by the MCPTT Client supplier (to use the Implementation Conformance Statement (ICS) proforma specified in TS 36.579-4 [4]) is used to determine whether an optional function/procedure has been implemented.

## 4.1.2 Test interfaces and facilities

Detailed descriptions of the MCPTT Client test interfaces and special facilities for testing are provided in 3GPP TS 36.509 [23].

## 4.2 Implicit testing

For some 3GPP MCPTT protocol features conformance is not verified explicitly in the present document. This does not imply that correct functioning of these features is not essential, but that these are implicitly tested to a sufficient degree in tests which are not explicitly dedicated to test the feature.

## 4.3 Repetition of tests

As a general rule, the test cases specified in the present document are highly reproducible and do not need to be repeated unless otherwise stated.

## 4.4 Handling of differences between conformance requirements in different releases of cores specifications

The conformance requirements which determine the scope of each test case are explicitly copy-pasted from relevant core specifications in the especially dedicated for this clause of each test with the title 'Conformance requirements'.

NOTE: When in the copy/pasted text there are references to other specifications the reference numbers will not match the reference numbers used in the present document. This approach has been taken in order to allow easy copy and then search for conformance requirements in those specifications.

When differences between conformance requirements in different releases of the cores specifications have impact on the Pre-test conditions, Test procedure sequence or/and the Specific message contents, the Conformance requirements related to different releases are specified separately with clear indication of the Release of the spec from which they were copied.

When there is no Release indicated for a conformance requirement text, this should be understood either as the Conformance requirements in the latest version of the spec with release = the TC Applicability release (which can be found in TS 36.579-4 [4], Table 4-1: Applicability of tests and additional information for testing, column 'Release'), or, as the Conformance requirements in the latest version of the spec of the release when the feature was introduced to the core specs.

## 4.5 Reference conditions

The reference environments used by all signalling and protocol tests is specified in TS 36.579-1 [2]. Where a test requires an environment that is different, this will be specified in the test itself.

## 4.6 Generic setup procedures

A set of basic generic procedures for MCPTT Client-Server communication are described in TS 36.579-1 [2]. These procedures will be used in numerous test cases throughout the present document.

## 5 MCPTT Client Configuration

- 5.1 Configuration / Authentication / User Authorisation / UE Configuration / User Profile / Key Generation
- 5.1.1 Test Purpose (TP)

## (1)

```
with { UE (MCPTT Client) attached to EPS services }
ensure that {
   when { the MCPTT User activates an MCPTT application and requests MCPTT initialisation }
    then { UE (MCPTT Client) performs MCPTT User Authentication }
   }
}
```

## (2)

```
with { UE (MCPTT Client) user authenticated }
ensure that {
   when { the UE (MCPTT Client) has established a secure HTPP tunnel }
    then { UE (MCPTT Client) performs key management authorization and obtains identity management
   key material }
}
```

(3)

```
with { UE (MCPTT Client) has obtained identity management key material }
ensure that {
  when { the UE (MCPTT Client) requests user service authorization }
    then { UE (MCPTT Client) sends a user authorization request to the MCPTT Server }
    }
}
```

(4)

```
with { UE (MCPTT Client) authorized for user services }
ensure that {
   when { the UE (MCPTT Client) requests configuration management authorization}
    then { UE (MCPTT Client) requests subscription to multiple documents simultaneously and request
   the retrieval of the MCPTT UE Configuration document, the MCPTT User Profile Configuration Document
   and the MCPTT Service Configuration Document }
   }
}
```

(5)

```
with { UE (MCPTT Client) having obtained user configuration data }
ensure that {
  when { the UE (MCPTT Client) requests group management authorization }
    then { UE (MCPTT Client) receives the group profile including group traffic keys }
    }
}
```

(6)

with { UE (MCPTT Client) having obtained all required configuration data }
ensure that {
 when { the UE (MCPTT Client) requires to refresh its service settings }
 then { UE (MCPTT Client) sends a SIP PUBLISH request }
 }
}

## 5.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TR 24.980 clauses 4.2.1 and 4.3.1, TS 24.482 clause 6.2.1 and Annex A.2.1.2, TS 24.484 clauses 4.2.1, 4.2.2, 6.2.2, 6.3.1.1, 6.3.2.1, 6.3.2.2, 6.3.13.2.1 and 6.3.13.2.2, TS 24.481 clauses 6.2.2.2, 6.2.3, 6.3.3.2.1, 6.3.3.2.2 and 6.3.13.2.1, TS 24.379 clauses 7.2.1. 7.2.1A, 7.2.2 and 7.2.3, TS 33.179 clauses 5.6.1, 6.2, 7.2.3 and Annex D. Unless otherwise stated these are Rel-13 requirements.

[TR 24.980, clause 4.2.1]

The MCPTT UE follows the SIP registration procedures defined in 3GPP TS 24.229 [4]. In addition, when the conditions for performing IMS registration in bullets 2, 3, 4, 5 and 6 in subclause L.3.1.2 of 3GPP TS 24.229 [4] evaluate to true, the MCPTT UE registers with the IMS.

[TR 24.980, clause 4.3.1]

The MCPTT UE follows the procedures defined in 3GPP TS 24.229 [4] and 3GPP TS 33.203 [7] for authentication with IMS Authentication and Key Agreement (IMS-AKA), Sec-Agree and IPSec. The MCPTT UE supports integrity protection.

[TS 24.482, clause 6.2.1]

Upon an indication from the MCPTT client to initiate MCPTT user authentication, the IdM client shall perform the user authentication procedure according to 3GPP TS 33.179 [2] with the following clarifications:

- shall establish a TLS tunnel to the authorisation endpoint of the IdM server as specified in 3GPP TS 33.179 [2] using the configured URL of the authorisation endpoint of the IdM server as specified in the "/<x>/OnNetwork/AppServerInfo/IDMSAuthEndpoint" leaf node defined in 3GPP TS 24.383 [11] and the clarifications in annex A;
- 2) shall generate an OIDC Authentication Request message as specified in the OpenID Connect 1.0 [6] and IETF RFC 6749 [5] with the following clarifications:
  - a) shall generate an HTTP GET request method according to IETF RFC 2616 [4];
  - b) shall include the configured parameter IdM client id as the client\_id parameter specified in 3GPP TS 33.179 [2] in the query component of the authorization endpoint's URI using the "application/xwww-form-urlencoded" format as specified in W3C.REC-html401-19991224 [7]; and

NOTE 1: The configuration of client\_id is specified in 3GPP TS 24.383 [11].

- c) shall include the remaining required parameters as specified in 3GPP TS 33.179 [2] in the query component of the authorization endpoint's URI using the "application/x-www-form-urlencoded" format as specified in W3C.REC-html401-19991224 [7]; and
- 3) shall send the HTTP GET request method towards the IdM server.
- NOTE 2: The OpenID Connect 1.0 [6] specification allows for an alternative mechanism for sending the OIDC Authentication request message using an HTTP POST request method which can be used in place of steps 1, 2, and 3 above.

Upon receipt of an HTTP 200 (OK) response from the IdM server, the IdM client:

- 1) shall prompt the MCPTT user for their username and password;
- NOTE 3: Other types of authentication are supported and are not defined by the OIDC specifications. 3GPP TS 33.179 [2] has defined username and password as a mandatory authentication method to be supported; hence a procedure to realize that method is included here.
- 2) shall generate an HTTP POST request method containing the MCPTT user's username and password; and
- 3) shall send the HTTP POST request method towards the IdM server.

Upon receipt of an OIDC Authentication Response message, the IdM client:

- shall establish a TLS tunnel to the token endpoint of the IdM server as specified in 3GPP TS 33.179 [2] using the configured URL of the token endpoint of the IdM server as specified in the "/<x>/OnNetwork/AppServerInfo/IDMSTokenEndpoint" leaf node defined in 3GPP TS 24.383 [11] and the clarifications in annex A;
- 2) shall generate an OIDC Token Request message as specified in OpenID Connect 1.0 [6] and IETF RFC 6749 [5] with the following clarifications:
  - a) shall generate an HTTP POST request method according to IETF RFC 2616 [4]; and
  - b) shall include the grant\_type parameter set to a value of "authorization\_code" and the other required parameters in the entity body of the HTTP POST request method using the using the "application/x-www-form-urlencoded" format as specified in 3GPP TS 33.179 [2]; and
- 3) shall send the HTTP POST request method towards the IdM server.

Upon receipt of an OIDC Token Response message, the IdM client:

- 1) shall validate the id\_token, access\_token and refresh token in the received OIDC Token Response message as specified in the OpenID Connect 1.0 [6] specification; and
- 2) shall provide the id\_token and access\_token in the received OIDC Token Response message to the MCPTT client.
- NOTE 4: The method in which the IdM client provides the id\_token and access\_token to the MCPTT client is implementation specific.

[TS 24.482, Annex A.2.1.2]

The HTTP client in the UE shall establish a TCP connection towards the home HTTP proxy FQDN and the home HTTP proxy port, unless the specific TCP connection is to be used for the IdM client to IdM server procedures described in subclause 6.2 and subclause 6.3 in the present document, in which case the HTTP client shall establish a TCP connection towards the IdM server.

The HTTP client in the UE shall establish a TLS tunnel via the TCP connection as specified in 3GPP TS 33.179 [2]. When establishing the TLS tunnel, the HTTP client in the UE shall act as a TLS client and the UE shall perform the TLS tunnel authentication using the TLS authentication method indicated by the TLS tunnel authentication method parameter according to 3GPP TS 33.179 [2]. The UE shall use the configured TLS tunnel authentication X.509 certificate and the configured TLS tunnel authentication pre-shared key when applicable for the used TLS authentication method. In order to prevent man-in-the-middle attacks, the HTTP client in the UE shall check the home HTTP proxy FQDN against the server's identity as presented in the received server's certificate message if the TCP connection terminates on the HTTP proxy, but shall do so if the TCP connection terminates on the IdM server.

NOTE: The TLS tunnel can be terminated in the HTTP proxy (rather than in the HTTP server providing the dereferenced HTTP URL).

The HTTP client in the UE shall send and receive all HTTP messages via the TLS tunnel.

If the HTTP client in the UE has an access token of the "bearer" token type as specified in IETF RFC 6750 [14], the HTTP client in the UE shall include an Authorization header field with the "Bearer" authentication scheme as specified in IETF RFC 6750 [14] in HTTP requests.

### [TS 33.179 Annex D]

All KMS communications are made via HTTPS. The MCPTT key management client is provisioned via XML content in the KMS's response. The XML content is designed to be extendable to allow KMS/client providers to add further information in the XML. Where the interface is extended, a different XML namespace should be used (so that may be ignored by non-compatible clients).

It is assumed that transmissions between the KMS and the key management client are secure and that the KMS has authenticated the identity of the key management client.

Additionally, to allow the transmission of key material securely between a secure element within the KMS and a secure element within the key management client, a security extension is defined which allows messages to be signed and key material to be encrypted using a shared Transport Key (TrK).

[TS 33.179 clause 5.6.1]

For key management authorization, the KM client in the UE presents an access token to the KMS over HTTP. The KMS validates the access token and if successful, provides user specific key material back to the UE KM client based on the MCPTT ID of the user. This includes identity based key information used for media and signalling protection.

For user service authorization, the MCPTT client in the UE presents an access token to the MCPTT server over SIP. The MCPTT server validates the access token and if successful, authorizes the user for full MCPTT services and sends an acknowledgement back to the MCPTT client. The MCPTT server then maps and maintains the IMPU to MCPTT ID association. The MCPTT ID to IMPU association shall only be known to the application layer. The SIP message used to convey the access token from the MCPTT client to the MCPTT server may be either a SIP REGISTER or SIP PUBLISH message.

The UE can now perform configuration management authorization and download the user profile. Following the flow described in subclause 10.1.4.2 of 3GPP TS 23.179 [2] "MCPTT user obtains the user profile (UE initiated)", the Configuration Management (CM) client in the UE sends an access token in the user profile query to the Configuration Management server over HTTP. The CM server receives the request and validates the access token, and if valid, the CM server uses the MCPTT ID to obtain the user profile from the MCPTT user database. The CM server then sends the user profile back to the CM client over HTTP.

Upon receiving the user's profile, the Group Management (GM) client in the UE can now perform group management authorization. The GM client obtains the user's group membership information from the user's profile, and following the flow shown in clause 10.1.5.2 of 3GPP TS 23.179 [2] "Retrieve group configurations at the group management client", the Group Management (GM) client in the UE sends an access token in the Get group configuration request to the host GM server of the group membership over HTTP. The GM server validates the access token, and if valid, completes the flow. As part of group management authorization, group key information is provided as per subclause 7.3.2 of the present document.

[TS 33.179 clause 7.2.3]

Case that HTTP proxy is used between the KMC and KMS

- 0) The key management client establishes a connection to the MCPTT KMS. As with other elements in the Common Services Core, the connection routed via, and secured by, the HTTP Proxy. The message flow below is within this secure connection.
- NOTE: Additionally, the connection between the MCPTT KMS and the HTTP Proxy is secured according to clause 8.
- 1) The key management client makes a request for user key material from the MCPTT KMS. The request contains details of the identity (e.g. the MCPTT ID) requested for key management, and the time for which the key material is required.
- 2) The KMS provides a response containing key material. The response includes the type of key material, the period of use for the material and any domain-specific parameters required for its use. For public safety use, the key material itself shall be wrapped using a 256-bit transport key (TrK). The TrK is distributed via an out-of-band mechanism along with a 32-bit identifier, TrK-ID.

Case that HTTP proxy is not used between the KMC and KMS

- 0) The key management client establishes a direct HTTPS connection to the MCPTT KMS. The following message flow is within this secure connection.
- 1) The key management client makes a request for user key material from the MCPTT KMS. The request contains details of the identity requested for key management, and the time at which the key material is required.
- 2) The KMS provides a response containing key material. The response includes the type of key material, the period of use for the material and any domain-specific parameters required for its use. Optionally, the key material itself may also be wrapped using a 256-bit transport key (TrK), distributed via an out-of-band mechanism along with a 32-bit identifier (TrK-ID).

#### [TS 24.484, clause 4.2.1]

Upon start up the MCPTT UE bootstraps the required information (e.g. FQDN or IP address) to locate the configuration management server for configuration of the MCPTT UE initial configuration management object (MO) and the default MCPTT user profile configuration management object (MO).

In order to obtain access to the MCPTT service the MCPTT UE needs to obtain configuration data either online via the network or offline using some external device (e.g. a laptop). As part of the bootstrap process the MCPTT UE needs to discover either:

- 1. the online configuration management server in the network that configures the MPCTT UE initial configuration MO and the default MCPTT user profile configuration MO, then the MCPTT UE:
  - a) using the URI of the configuration management server obtained from the MPCTT UE initial configuration MO, obtains:
    - the MCPTT UE configuration document;
    - the MCPTT user profile configuration document; and
    - the MCPTT service configuration document; and
  - b) using the URI of the group management server obtained from the MPCTT UE initial configuration MO obtain the MCPTT group document; or

[TS 24.484, clause 4.2.2]

The MCPTT UE contacts the identity management server using the HTTPS URI stored in the MCPTT UE initial configuration MO and performs MCPTT User authentication as specified in 3GPP TS 24.382 [6].

The MCPTT UE, using the MCPTT ID obtained during MCPTT user authentication, subscribes to the MCPTT UE configuration document, the MCPTT user profile configuration document and the MCPTT service configuration document using the procedure for subscribing to multiple documents simultaneously using the subscription proxy function specified in subclause 6.3.13.2.2 (i.e., the CMS acts as a Subscription Proxy) and subscribes to the MCPTT group document using the procedure specified in 3GPP TS 24.381 [5]. If these documents have been updated since the current version stored in the MCPTT UE, then the MCPTT UE will receive a SIP NOTIFY request with an XCAP Diff document (see IETF RFC 5875 [11]), in which case the CMC updates its local document copies. Retrieval by the MCPTT UE using the notified HTTPS URI of the MCPTT group document is performed as specified in 3GPP TS 24.381 [5].

[TS 24.484, clause 6.2.2]

The CMC shall send the HTTP request over TLS connection as specified for the HTTP client in the UE in annex A of 3GPP TS 24.382 [6].

[TS 24.484, clause 6.3.1.1]

A CMC shall support subclause 6.1.1 "*Document Management*" of OMA OMA-TS-XDM\_Core-V2\_1 [2] and subclause 6.3.13.2.2 for subscribing to configuration management documents.

[TS 24.484, clause 6.3.3.2.1]

In order to retrieve a configuration management document, a GC shall send an HTTP GET request with the Request URI that references the document to be updated to the network according to procedures specified in IETF RFC 4825 [14] "*Retrieve a Document*".

[TS 24.484, clause 6.3.3.2.2]

In order to retrieve a configuration management document, a CMC shall perform the procedures in subclause 6.3.3.2.1 specified for GC. The CMC shall set the Request-URI of the HTTP GET request to the "CMSXCAPRootURI" configured as per 3GPP TS 24.383 [4] and include the "auid" as per the appropriate application usage in clause 7.

Subclause 7.5 specifies which configuration management documents can be retrieved from the CMS over the CSC-4 reference point.

[TS 24.484, clause 6.3.13.2.1]

This procedure enables the CMC to subscribe to notification of changes of one or more configuration management documents defined in clause 7.

This procedure enables the MCPTT server to subscribe to notification of changes of the MCPTT service configuration document.

[TS 24.484, clause 6.3.13.2.2]

In order to subscribe to Configuration management document, a CMC shall send an initial SIP SUBSCRIBE request to the network according to the UE originating procedures specified in 3GPP TS 24.229 [22] and IETF RFC 5875 [11]. In the initial SIP SUBSCRIBE request, the CMC:

a) ...

- b) if subscription to multiple documents simultaneously using the subscription proxy function is used:
  - 1) shall include an application/resource-lists+xml MIME body. In the application/resource-lists+xml MIME body, the CMC shall include one <entry> element for each document or element to be subscribed to, such that the "uri" attribute of the <entry> element contains a relative path reference:
    - A) with the base URI being equal to the "CMSXCAPRootURI" configured in the CMC as per 3GPP TS 24.383 [4]; and
    - B) with the "auid" parameter set to the appropriate application usage identifying a configuration management document as described in clause 7;
  - 2) shall set the Request-URI to the configured public service identity for performing subscription proxy function of the CMS;
- c) shall include an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcptt-access-token> element set to the value of the access token received during authentication procedure as described in 3GPP TS 24.382 [6];
- d) if identity hiding is required:
  - shall perform the confidentiality protection procedures and integrity protection procedures defined in 3GPP TS 24.379 [9] for MCPTT client on the application/vnd.3gpp.mcptt-info+xml MIME body and on the application/resource-lists+xml MIME body; and
  - 2) shall include an application/mikey MIME body with the CSK as specified in 3GPP TS 24.379 [9];
- e) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [22]), in a P-Preferred-Service header field according to IETF RFC 6050 [23]; and
- f) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field.

Upon receiving a SIP NOTIFY request associated with a subscription created as result of the sent initial SIP SUBSCRIBE request:

- 1) if identity hiding is required, the CMC shall perform the confidentiality protection procedures and integrity protection procedures defined in 3GPP TS 24.379 [9] for MCPTT client; and
- 2) shall handle the SIP NOTIFY request according to IETF RFC 5875 [11].

[TS 24.481, clauses 6.2.2.2]

In order to address an existing group document defining a group ID known by GC, the GC shall set the Request-URI of an HTTP request to a XCAP URI identifying a group document addressed by a group ID as described in subclause 7.2.10.2, where the group ID is set to the group ID known by GC and where the XCAP root URI is the XCAP root URI configured in the UE.

[TS 24.481, clauses 6.2.3]

The GMC shall send the HTTP request over a TLS connection as specified for the HTTP client in the UE in annex A of 3GPP TS 24.382 [10].

The GMC shall perform the procedures in subclause 6.2.2 specified for GC.

[TS 24.481, clauses 6.3.3.2.1]

In order to retrieve a group document, a GC shall send an HTTP GET request with the Request URI that references the document to be retrieved to the network according to procedures specified in IETF RFC 4825 [22] "*Fetch a Document*".

[TS 24.481, clauses 6.3.3.2.2]

In order to retrieve a group document, a GMC shall perform the procedures in subclause 6.3.3.2.1 specified for GC.

[TS 24.481, clauses 6.3.13.2.1]

In order to subscribe to notification of changes of:

a) one or more MCPTT group documents of MCPTT groups identified by MCPTT group IDs;

•••

a GMC shall send an initial SIP SUBSCRIBE request to the network according to the UE originating procedures specified in 3GPP TS 24.229 [12] and IETF RFC 5875 [13]. In the initial SIP SUBSCRIBE request, the GMC:

- a) shall include an application/resource-lists+xml MIME body. In the application/resource-lists+xml MIME body, the GMC shall include one <entry> element for each document or element to be subscribed to, such that the "uri" attribute of the <entry> element:
  - 1) contains a relative path reference:
    - A) with the base URI being equal to the XCAP root URI configured in the GMC; and
    - B) identifying a group document addressed by a group ID as described in subclause 7.2.10.2 where the group ID is set to the MCPTT group ID; or

•••

- b) shall set the Request-URI to the configured public service identity for performing subscription proxy function of the GMS;
- c) shall include an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcptt-access-token> element set to the value of the access token received during authentication procedure as described in 3GPP TS 24.382 [49];
- d) if identity hiding is required:
  - shall perform the confidentiality protection procedures and integrity protection procedures defined in 3GPP TS 24.379 [5] for MCPTT client on the application/vnd.3gpp.mcptt-info+xml MIME body and on the application/resource-lists+xml MIME body; and
  - 2) shall include an application/mikey MIME body with the CSK as specified in 3GPP TS 24.379 [5];
- e) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [12]), in a P-Preferred-Service header field according to IETF RFC 6050 [14]; and
- f) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field.

Upon receiving a SIP NOTIFY request associated with a subscription created as result of the sent initial SIP SUBSCRIBE request:

- 1) if identity hiding is required, the GMC shall perform the confidentiality protection procedures and integrity protection procedures defined in 3GPP TS 24.379 [5] for MCPTT client; and
- 2) shall handle the SIP NOTIFY request according to IETF RFC 5875 [13].

[TS 24.379, clause 7.2.1]

When the MCPTT client performs SIP registration the MCPTT client shall perform the registration procedures as specified in 3GPP TS 24.229 [4].

The MCPTT client shall include the following media feature tags in the Contact header field of the SIP REGISTER request:

- 1) the g.3gpp.mcptt media feature tag; and
- 2) the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt".

•••

If the MCPTT client, upon performing SIP registration:

- 1) has successfully finished the user authentication procedure as described in 3GPP TS 24.382 [49];
- 2) has an available access-token;
- 3) based on implementation decides to use SIP REGISTER for service authorization; and
- 4) either confidentiality protection is enabled as specified in subclause 6.6.2.3.1 or integrity protection is enabled as specified in subclause 6.6.3.3.1;

then the MCPTT client:

•••

 if confidentiality protection is enabled as specified in subclause 6.6.2.3.1, shall encrypt the received access-token using the client server key (CSK) and shall include in the body of the SIP REGISTER request, an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcptt-access-token> element set to the encrypted access-token, as specified in subclause 6.6.2.3.3;

•••

4) if integrity protection is enabled as specified in subclause 6.6.3.3.1, shall use the CSK to integrity protect the application/vnd.3gpp.mcptt-info+xml MIME body by following the procedures in subclause 6.6.3.3.

[TS 24.379, clause 7.2.1A]

This procedure is only referenced from other procedures.

When populating the SIP PUBLISH request, the MCPTT client shall:

- 1) shall set the Request-URI to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- 2) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9];
- 3) shall set the Event header field to the "poc-settings" value; and
- 4) shall set the Expires header field according to IETF RFC 3903 [37], to 4294967295, if the MCPTT user is not removing the MCPTT service settings, otherwise to remove the MCPTT service settings the MCPTT client shall set the Expires header field to zero.

[TS 24.379, clause 7.2.2]

If based on implementation the MCPTT client decides to use SIP PUBLISH for MCPTT server settings to also perform service authorization and

- 1) has successfully finished the user authentication procedure as described in 3GPP TS 24.382 [49]; and
- 2) has available an access-token;

then the MCPTT client:

- 1) shall perform the procedures in subclause 7.2.1A;
- •••

- 3) if either confidentiality protection is enabled as specified in subclause 6.6.2.3.1 or integrity protection is enabled as specified in subclause 6.6.3.3.1 shall include an application/mikey MIME body with the CSK as MIKEY-SAKKE I\_MESSAGE as specified in 3GPP TS 33.179 [46] in the body of the SIP PUBLISH request;
- 4) if confidentiality protection is enabled as specified in subclause 6.6.2.3.1, shall include in the body of the SIP PUBLISH request an application/vnd.3gpp.mcptt-info+xml MIME body with:
  - a) the <mcptt-access-token> element set to the received access-token encrypted using the client server key (CSK), as specified in subclause 6.6.2.3.3; and
  - b) the <mcptt-client-id> element set to the encrypted MCPTT client ID of the originating MCPTT client, as specified in subclause 6.6.2.3.3;

•••

- 6) shall include an application/poc-settings+xml MIME body containing the Answer-Mode Indication setting in the <am-settings> element of the poc-settings event package set to the current answer mode setting ("auto-answer" or "manual-answer") of the MCPTT client according to IETF RFC 4354 [55]; and
- 7) if integrity protection is enabled as specified in subclause 6.6.3.3.1, shall use the CSK to integrity protect the application/vnd.3gpp.mcptt-info+xml MIME body and application/poc-settings+xml MIME body by following the procedures in subclause 6.6.3.3.

The MCPTT client shall send the SIP PUBLISH request according to 3GPP TS 24.229 [4].

[TS 24.379, clause 7.2.3]

To set, update, remove or refresh the MCPTT service settings, the MCPTT client shall generate a SIP PUBLISH request according 3GPP TS 24.229 [4], IETF RFC 3903 [37] and IETF RFC 4354 [55]. In the SIP PUBLISH request, the MCPTT client:

- 1) shall perform the procedures in subclause 7.2.1A;
- 2) if confidentiality protection is enabled as specified in subclause 6.6.2.3.1, shall include in the body of the SIP PUBLISH request, an application/vnd.3gpp.mcptt-info+xml MIME body with:
  - a) the <mcptt-request-uri> element set to the targeted MCPTT ID encrypted using the client server key (CSK), as specified in subclause 6.6.2.3.3; and
  - b) the <mcptt-client-id> element set to the encrypted MCPTT client ID of the originating MCPTT client, as specified in subclause 6.6.2.3.3;

•••

- 4) shall include an application/poc-settings+xml MIME body containing the Answer-Mode Indication setting in the <am-settings> element of the poc-settings event package set to the current answer mode setting ("auto-answer" or "manual-answer") of the MCPTT client according to IETF RFC 4354 [55]; and
- 5) if integrity protection is enabled as specified in subclause 6.6.3.3.1, shall use the CSK to integrity protect the application/vnd.3gpp.mcptt-info+xml MIME body and application/poc-settings+xml MIME body by following the procedures in subclause 6.6.3.3.3.

The MCPTT client shall send the SIP PUBLISH request according to 3GPP TS 24.229 [4].

On receiving the SIP 200 (OK) response to the SIP PUBLISH request the MCPTT client may indicate to the MCPTT User the successful communication of the MCPTT service settings to the MCPTT server.

[TS 33.179, clause 6.2]

The support of Transport Layer Security (TLS) on HTTP-1 is mandatory. The profile for TLS implementation and usage shall follow the provisions given in 3GPP TS 33.310 [5], annex E.

If the PSK TLS based authentication mechanism is supported, the HTTP client in the MCPTT UE and the HTTP Proxy shall support the TLS version, PSK ciphersuites and TLS Extensions as specified in the TLS profile given in 3GPP TS 33.310 [5], annex E. The usage of pre-shared key ciphersuites for TLS is specified in the TLS profile given in 3GPP TS 33.310 [5], annex E.

## 5.1.3 Test description

## 5.1.3.1 Pre-test conditions

## System Simulator:

- SS (MCPTT server).
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10, is inserted.
- The MCPTT Client has been provisioned with the Initial UE Configuration Data as specified in TS 36.579-1 [2], clause 5.5.8.1 allowing for the location of the configuration management server for configuration of the MCPTT UE initial configuration management object (MO) and the default MCPTT user profile configuration management object (MO).
- UE is configured to support the general 3GPP TLS profile as specified in 3GPP TS 33.310 [30] Annex E using pre-shared key (psk) cipher suites with TLS extensions.
- The UE User is provided with username/password for user authentication (px\_MCPTT\_User\_A\_username, px\_MCPTT\_User\_A\_password as provided in TS 36.579-5 [5], Table 9.2-1: MCPTT Client Common PIXIT)

## Preamble:

- The MCPTT client is attached to EPS services and then the UE is Switched OFF (state 1) according to TS 36.508 [6].

5.1.3.2 Test procedure sequence

Table 5.1.3.2-1: Main behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	The UE is switched-on.	-	-	-	-
-	EXCEPTION: The E-UTRA/EPC related actions which step 1 above will trigger are described in TS 56.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages being exchanged.	-	-	-	-
2	Make the UE user request MCPTT service	-	-	-	-
	authorisation/configuration. NOTE: This is expected to be done via a suitable implementation dependent mechanism and may be manually or automatically initiated.				
-	EXCEPTION: Steps 3a1-3b1 describe	-	-	-	-
	behaviour that depends on UE implementation of the OpenID Connect protocol; the "lower case letter" identifies a step sequence that take place when one or the other is the case.				
3a1	Check: Does the UE (MCPTT client) establish a secure TLS tunnel as specified by 3GPP TS 33.310 [30], to the authorisation endpoint of the IdM server as specified in 3GPP TS 33.179 [15] using the configured URL of the authorisation endpoint of the IdM server as specified in the " <x>/OnNetwork/AppServerInfo/IDMSAuthEnd point" leaf node, Table 5.5.8.1-1, TS 36.579-1 [2]?</x>	-	-	1	Ρ
3a2	Check: Does the UE (MCPTT client) send an OpenID Connect Authentication Request using HTTP GET?	>	HTTP GET (Authorization)	1	Р
3b1	Check: Does the UE (MCPTT client) send an OpenID Connect Authentication Request using HTTP POST?	>	HTTP POST (Authorization)	1	Р
4	The SS sends a HTTP 200 (OK)	<	HTTP 200 (OK)	-	-
5	Make the UE user provide user credentials: username and password (px_MCPTT_User_A_username, px_MCPTT_User_A_password). NOTE: The UE is expected to prompt the MCPTT user for their username and password, or it may be stored on the UE. The provision of the username/password is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
6	Check: Does the UE (MCPTT client) send an HTTP POST Request message to the SS containing user name and password.	>	HTTP POST	1	Р
7	The SS sends a HTTP 302 (Found) as the OpenID Connect Authentication Response.	<	HTTP 302 (Found)	-	-
-	EXCEPTION: Step 8a1 describes behaviour that depends on step 3 above. Step 8a1 only happens if the UE follows step 3b1, otherwise step 8a1 is skipped.	-	-	-	-

8a1	Check: Does the UE (MCPTT client) establish a secure TLS tunnel as specified by 3GPP TS 33.310 [30] to the token endpoint of the IdM server as specified in 3GPP TS 33.179 [2] using the configured URL of the token endpoint of the IdM server as specified in the "/ <x>/OnNetwork/AppServerInfo/IDMSTokenE ndpoint" leaf node, Table 5.5.8.1-1, TS 36.579- 1 [2]?</x>	-	-	1	Ρ
9	Check: Does the UE (MCPTT client) send an HTTP POST Request message to the SS over the TLS connection established to the IdM token endpoint (OIDC Token Request message)?	>	HTTP POST	1	Ρ
10	The SS sends a HTTP 200 (OK) providing id_token, access_token and refresh token.	<	HTTP 200 (OK)	-	-
11	Check: Does the UE (MCPTT client) send a HTTP POST message presenting an access token to the SS over HTTP for Key Management Initialisation?	>	HTTP POST	2	Ρ
12	The SS replies to the UE with identity specific key information.	<	HTTP 200 (OK)	-	-
13	Check: Does the UE (MCPTT client) send a HTTP POST message presenting an access token to the SS over HTTP for Key Material Request?	>	HTTP POST	2	Р
14	The SS replies to the UE with identity specific key information.	<	HTTP 200 (OK)	-	-
-	EXCEPTION: Steps 15a1 to 15b1 describe behaviour that depends on UE implementation ; the "lower case letter" identifies a step sequence that take place when one or the other is the case.	-	-	-	-
15a1	Check: Does the UE (MCPTT client) send a SIP REGISTER request for service authorisation?	>	SIP REGISTER	2	Ρ
15b1	Check: Does the UE (MCPTT client) send a SIP PUBLISH request for service authorisation?	>	SIP PUBLISH	2	Ρ
16	The SS (MCPTT server) sends SIP 200 (OK).	<	SIP 200 (OK)	-	-
17	Check: Does the UE (MCPTT client) sends a SIP SUBSCRIBE - subscription to multiple documents simultaneously - to the SS containing the access token and a resource list mime body containing a list of the following documents: MCPTT UE Configuration document, MCPTT User Profile Configuration Document, and the MCPTT Service configuration document. The base URI of each list entry is set to the CMS XCAP-ROOT-URI?	-^	SIP SUBSCRIBE	3	Ρ
18	The SS sends a SIP 200 (OK) message.	<	SIP 200 (OK)	-	-
19	The SS sends a SIP NOTIFY message to the UE that contains the XCAP-URI of the documents.	<	SIP NOTIFY	-	-
20	The UE (MCPTT client) sends a SIP 200 (OK) message.	>	SIP 200 (OK)	-	-
21	Check: Does the UE (MCPTT client) send an HTTP GET Request message to the SS that contains the access token and the XCAP-URI of the MCPTT UE Configuration document?	-^	HTTP GET	4	Р
22	The SS sends the HTTP 200 (OK) message including the MCPTT UE Configuration Document.	\ \	HTTP 200 (OK)	-	-
23	Check: Does the UE (MCPTT client) send an HTTP GET Request message to the SS that contains the access token and the XCAP-URI of the MCPTT User Profile Configuration Document?	>	HTTP GET	4	Р

24	The SS sends the HTTP 200 (OK) message including the MCPTT User Profile Configuration Document.	<	HTTP 200 (OK)	-	-
25	Check: Does the UE (MCPTT client) send an HTTP GET Request message to the SS that contains the access token and the XCAP-URI of the MCPTT Service Configuration Document?	>	HTTP GET	4	Р
26	The SS sends the HTTP 200 (OK) message including the MCPTT Service Configuration Document.	<	HTTP 200 (OK)	-	-
27	Check: does the UE (MCPTT client) send a SIP SUBSCRIBE to the SS, containing the access token and a resource list mime body and a list of the Groups to be obtained. The base URI of each list entry is set to the GMS XCAP-ROOT-URI, and the MCPTT group ID identifies a group document?	>	SIP SUBSCRIBE	5	Ρ
28	The SS sends a SIP 200 (OK) message.	<	SIP 200 (OK)	-	-
29	The SS sends a SIP NOTIFY message to the UE that contains the XCAP-URI of the Group documents.	<	SIP NOTIFY	-	-
30	The UE (MCPTT client) sends a SIP 200 (OK) message.	>	SIP 200 (OK)	-	-
31	Check: Does the UE (MCPTT client) send an HTTP GET Request message to the SS that contains the access token and the XCAP-URI of the Group Configuration document?	>	HTTP GET	5	Ρ
32	The SS sends the HTTP 200 (OK) message including the Group Document 'MCPTT UE Configuration document'.	<	HTTP 200 (OK)	-	-
33	Check: Does the UE (MCPTT client) send the SIP PUBLISH message to the SS including the IMPU and Answer-mode indication?	>	SIP PUBLISH	6	Р
34	The SS sends a SIP 200 (OK) message.	<	SIP 200 (OK)	-	-
35	Make the UE terminate the MCPTT service authorisation/configuration. NOTE: This is expected to be done via a suitable implementation dependent mechanism and may be manually or automatically initiated.	-	-	-	-
36	The UE (MCPTT client) send a SIP BYE request.	>	SIP BYE	-	-
37	The SS (MCPTT server) sends SIP 200 (OK).	<	SIP 200 (OK)	-	-
-	EXCEPTION: SS releases the E-UTRA connection.	-	-	-	-

## 5.2 Configuration / Group Creation / Group Regroup Creation / Group Regroup Teardown

## 5.2.1 Test Purpose (TP)

(1)

```
with { UE (MCPTT Client) attached to EPS services }
ensure that {
   when { the UE (MCPTT Client) requests formation of a new MCPTT group }
    then { on successful group creation the UE (MCPTT Client) has access to the new group }
   }
}
```

(2)

```
with { UE (MCPTT Client) having access to at least two MCPTT groups }
ensure that {
  when { the UE (MCPTT Client) requests the groups to be combined }
    then { on successful group regrouping the UE (MCPTT Client) has access to the temporary group }
    }
}
```

(3)

```
with { UE (MCPTT Client) having access to a temporary group }
ensure that {
  when { the UE (MCPTT Client) requests temporary group tear down }
    then { on successful group tear down the UE (MCPTT Client) removes the temporary group }
  }
}
```

## 5.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.481 clauses 6.3.2.2.1, 6.3.2.2.2, 6.3.14.1, 6.3.14.2, 6.3.15.1 and 6.3.15.2; TS 33.179 clauses 7.3.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.481 clause 6.3.2.2.1]

In order to create a group document, a GC shall create an XML document of the application usage specified in subclause 7.2.1 and shall send the XML document to the network according to procedures specified in IETF RFC 4825 [22] "*Create or Replace a Document*". The GC shall set the Request-URI of the HTTP PUT request to an XCAP URI in users' tree where the XUI is set to a group creation XUI configuration parameter.

[TS 24.481 clause 6.3.2.2.2]

In order to create a group document, a GMC shall perform the procedures in subclause 6.3.2.2.1 specified for GC.

[TS 24.481 clause 6.3.14.1]

This procedure enables a GMC to initiate creation of a temporary MCPTT group by combining MCPTT groups.

[TS 24.481 clause 6.3.14.2]

In order to form a temporary MCPTT group, a GMC shall send a HTTP POST request according to procedures specified in IETF RFC 2616 [21] and subclause 6.2.3. In the HTTP POST request, the GMC:

- a) shall set the Request-URI to an XCAP URI:
  - 1) in users tree where the XUI is set to a group creation XUI configuration parameter; and
  - 2) with the document selector identifying the temporary MCPTT group to be created; and
- b) shall include an application/vnd.3gpp.GMOP+xml MIME body containing a GMOP document requesting group regroup creation specified in subclause 7.3.4.3, with a <group> element containing a group document for an MCPTT group. In the group document, the GMC shall include the <on-network-temporary> element according to subclause 7.2. In the <on-network-temporary> element, the GMC shall include <constituent-MCPTT-group-IDs> element according to subclause 7.2. In the <constituent-MCPTT-group-IDs> element, the GMC shall include one <constituent-MCPTT-group-ID> element according to subclause 7.2 for each MCPTT group to be combined.

Upon reception of an HTTP 2xx response to the sent HTTP POST request, the GMC shall consider the temporary MCPTT group formation as successful.

Upon reception of an HTTP 409 (Conflict) response with at least one <alt-value> element in the <uniqueness-failure> error element, the GMC may repeat procedures of the present subclause and identify the temporary MCPTT group being formed with an MCPTT Group ID indicated in an <alt-value> element.

[TS 24.481 clause 6.3.15.1] This procedure enables a GMC to initiate tear down of a temporary MCPTT group.

[TS 24.481 clause 6.3.15.2]

In order to tear down a temporary MCPTT group, the GMC shall send an HTTP DELETE request with Request-URI with an XCAP URI identifying a group document of the temporary MCPTT group according to procedures specified in IETF RFC 4825 [22] "*Delete an Element*".

[TS 33.179 clause 7.3.4]

Group creation procedure is described in clause 10.4.3 of 3GPP TS 23.179 [2]. To create the security context for the group, the GMS follows the procedures in clause 7.3.1, creating a new GMK and GMK-ID for the temporary group.

An encapsulated GMK and GUK-ID is sent to group members by the GMS within a notification message (step 4 within clause 10.4.3 of 3GPP TS 23.179 [2]). The procedure is equivalent to that described in clause 7.3.2.

## 5.2.3 Test description

## 5.2.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- E-UTRA related parameters are set to the default parameters for the basic single cell environment, as defined in TS 36.508 [6] clause 4.4.

### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10, is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

5.2.3.2 Test procedure sequence

Table 5.2.3.2-1: Main behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the UE user select the default MCPTT Group A.	-	-	-	-
	NOTE 1: This is expected to be done via a suitable implementation dependent mechanism and may be manually or				
-	automatically initiated. EXCEPTION: The E-UTRA/EPC related	-	_	-	-
	actions which step 1 above will trigger are described in TS 56.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages being exchanged.				
2	Make the UE user request the creation of a new group, MCPTT Group B, for communication with the user and two other users, MCPTT Client B and MCPTT Client C. NOTE 1: This is expected to be done via a suitable implementation dependent mechanism and may be manually or automatically initiated.	-	-	-	-
3	Check: Does the UE (MCPTT Client) send a HTTP PUT to the SS to request creation of the new group?	>	HTTP PUT	(1)	Р
4	The SS sends a SIP NOTIFY informing that the new group has been created and supplies the group configuration data.	<	SIP NOTIFY	-	-
5	The UE sends a SIP 200 (OK) message to the SS.	>	SIP 200 (OK)	-	-
6	The SS (MCPTT Server) sends a HTTP 201 (Created) containing the new group identifier.	<	HTTP 201 (Created)	-	-
7	Check: Does the UE (MCPTT client) notify the user that the MCPTT User is now part of Group C? NOTE 2: This is expected to be done via a	-	-	(1)	Ρ
8	suitable implementation dependent MMI. Make the UE user request the creation of a new group, MCPTT Group C, for communication with the user and two other users, MCPTT Client B and MCPTT Client C. NOTE 1: This is expected to be done via a suitable implementation dependent mechanism and may be manually or automatically initiated.	-	-	-	-
9	The UE (MCPTT Client) sends a HTTP PUT to the SS to request creation of the new group.	>	HTTP PUT	-	-
10	The SS sends a SIP NOTIFY informing that the new group has been created and supplies the group configuration data.	<	SIP NOTIFY	-	-
11	The UE sends a SIP 200 (OK) message to the SS.	>	SIP 200 (OK)	-	-
12	The SS (MCPTT Server) sends a HTTP 201 (Created) containing the new group identifier.	<	HTTP 201 (Created)	-	-

40		r		1	1
13	Make the UE user request the creation of a	-	-	-	-
	temporary group formed from MCPTT Group B				
	and MCPTT Group C to communicate with				
	itself and MCPTT Client B and MCPTT Client				
	С.				
	NOTE 4. This is supported to be done via a				
	NOTE 1: This is expected to be done via a				
	suitable implementation dependent				
	mechanism and may be manually or				
4.4	automatically initiated.			(0)	Р
14	Check: Does the UE (MCPTT Client) send a	>	HTTP POST	(2)	Р
	HTTP POST to the SS to request creation of

message }

## 5.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 9.2.1.2, 9.2.1.3, 9.2.1.4, and 9.2.1.5. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 9.2.1.2]

In order:

- to indicate that an MCPTT user is interested in one or more MCPTT group(s) at an MCPTT client;
- to indicate that the MCPTT user is no longer interested in one or more MCPTT group(s) at the MCPTT client;
- to refresh indication of an MCPTT user interest in one or more MCPTT group(s) at an MCPTT client due to near expiration of the expiration time of an MCPTT group with the affiliation status set to the "affiliated" state received in a SIP NOTIFY request in subclause 9.2.1.3;
- to send an affiliation status change request in mandatory mode to another MCPTT user; or
- any combination of the above;

the MCPTT client shall generate a SIP PUBLISH request according to 3GPP TS 24.229 [4], IETF RFC 3903 [37], and IETF RFC 3856 [51].

In the SIP PUBLISH request, the MCPTT client:

- 1) shall set the Request-URI to the public service identity identifying the originating participating MCPTT function serving the MCPTT user;
- shall include an application/vnd.3gpp.mcptt-info+xml MIME body. In the application/vnd.3gpp.mcptt-info+xml MIME body, the MCPTT client shall include the <mcptt-request-uri> element set to the MCPTT ID of the MCPTT user;
- 3) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9];
- 4) if the targeted MCPTT user is interested in at least one MCPTT group at the targeted MCPTT client, shall set the Expires header field according to IETF RFC 3903 [37], to 4294967295;
- NOTE 1: 4294967295, which is equal to 2<sup>32</sup>-1, is the highest value defined for Expires header field in IETF RFC 3261 [24].
- 5) if the targeted MCPTT user is no longer interested in any MCPTT group at the targeted MCPTT client, shall set the Expires header field according to IETF RFC 3903 [37], to zero; and
- 6) shall include an application/pidf+xml MIME body indicating per-user affiliation information according to subclause 9.3.1. In the MIME body, the MCPTT client:
  - a) shall include all MCPTT groups where the targeted MCPTT user indicates its interest at the targeted MCPTT client;

- b) shall include the MCPTT client ID of the targeted MCPTT client;
- c) shall not include the "status" attribute and the "expires" attribute in the <affiliation> element; and
- d) shall set the <p-id> child element of the <presence> root element to a globally unique value.

The MCPTT client shall send the SIP PUBLISH request according to 3GPP TS 24.229 [4].

[TS 24.379, clause 9.2.1.3]

NOTE 1: The MCPTT UE also uses this procedure to determine which MCPTT groups the MCPTT user successfully affiliated to.

In order to discover MCPTT groups:

- 1) which the MCPTT user at an MCPTT client is affiliated to; or
- 2) which another MCPTT user is affiliated to;

the MCPTT client shall generate an initial SIP SUBSCRIBE request according to 3GPP TS 24.229 [4], IETF RFC 3856 [51], and IETF RFC 6665 [27].

In the SIP SUBSCRIBE request, the MCPTT client:

- 1) shall set the Request-URI to the public service identity identifying the originating participating MCPTT function serving the MCPTT user;
- shall include an application/vnd.3gpp.mcptt-info+xml MIME body. In the application/vnd.3gpp.mcptt-info+xml MIME body, the MCPTT client shall include the <mcptt-request-uri> element set to the MCPTT ID of the targeted MCPTT user;
- 3) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9];
- 4) if the MCPTT client wants to receive the current status and later notification, shall set the Expires header field according to IETF RFC 6665 [26], to 4294967295;
- NOTE 2: 4294967295, which is equal to 2<sup>32</sup>-1, is the highest value defined for Expires header field in IETF RFC 3261 [24].
- 5) if the MCPTT client wants to fetch the current state only, shall set the Expires header field according to IETF RFC 6665 [26], to zero; and
- 6) shall include an Accept header field containing the application/pidf+xml MIME type; and
- if requesting MCPTT groups where the MCPTT user is affiliated to at the MCPTT client, shall include an application/simple-filter+xml MIME body indicating per client restrictions of presence event package notification information according to subclause 9.3.2.

In order to re-subscribe or de-subscribe, the MCPTT client shall generate an in-dialog SIP SUBSCRIBE request according to 3GPP TS 24.229 [4], IETF RFC 3856 [51], and IETF RFC 6665 [26]. In the SIP SUBSCRIBE request, the MCPTT client:

- 1) if the MCPTT client wants to receive the current status and later notification, shall set the Expires header field according to IETF RFC 6665 [26], to 4294967295;
- NOTE 3: 4294967295, which is equal to 2<sup>32</sup>-1, is the highest value defined for Expires header field in IETF RFC 3261 [24].
- 2) if the MCPTT client wants to de-subscribe, shall set the Expires header field according to IETF RFC 6665 [26], to zero; and
- 3) shall include an Accept header field containing the application/pidf+xml MIME type.

Upon receiving a SIP NOTIFY request according to 3GPP TS 24.229 [4], IETF RFC 3856 [51], and IETF RFC 6665 [26], if SIP NOTIFY request contains an application/pidf+xml MIME body indicating per-user affiliation information constructed according to subclause 9.3.1, then the MCPTT client shall determine affiliation

status of the MCPTT user for each MCPTT group at the MCPTT client(s) in the MIME body. If the <p-id> child element of the <presence> root element of the application/pidf+xml MIME body of the SIP NOTIFY request is included, the <p-id> element value indicates the SIP PUBLISH request which triggered sending of the SIP NOTIFY request.

[TS 24.379, clause 9.2.1.4]

NOTE: Procedure for sending affiliation status change request in negotiated mode to several target MCPTT users is not supported in this version of the specification.

Upon receiving a request from the MCPTT user to send an affiliation status change request in negotiated mode to a target MCPTT user, the MCPTT client shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33]. In the SIP MESSAGE request, the MCPTT client:

- 1) shall set the Request-URI to the public service identity identifying the originating participating MCPTT function serving the MCPTT user;
- shall include an application/vnd.3gpp.mcptt-info+xml MIME body. In the application/vnd.3gpp.mcptt-info+xml MIME body, the MCPTT client shall include the <mcptt-request-uri> element set to the MCPTT ID of the target MCPTT user;
- 3) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP MESSAGE request;
- 4) shall include an application/vnd.3gpp.mcptt-affiliation-command+xml MIME body as specified in Annex F.4; and
- 5) shall send the SIP MESSAGE request according to rules and procedures of 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP MESSAGE request, the MCPTT client shall indicate to the user that the request has been delivered to an MCPTT client of the target MCPTT user.

[TS 24.379, clause 9.2.1.5]

Upon receiving a SIP MESSAGE request containing:

- 1) the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Asserted-Service header field according to IETF RFC 6050 [9]; and
- an application/vnd.3gpp.mcptt-affiliation-command+xml MIME body with a list of MCPTT groups for affiliation under the <affiliate> element and a list of MCPTT groups for de-affiliation under the <de-affiliate> element;

then the MCPTT client:

- 1) shall send a 200 (OK) response to the SIP MESSAGE request;
- shall seek confirmation of the list of MCPTT groups for affiliation and the list of MCPTT groups for deaffiliation, resulting in an accepted list of MCPTT groups for affiliation and an accepted list of MCPTT groups for de-affiliation; and
- 3) if the user accepts the request:
  - a) shall perform affiliation for each entry in the accepted list of MCPTT groups for affiliation for which the MCPTT client is not affiliated, as specified in subclause 9.2.1.2; and
  - b) shall perform de-affiliation for each entry in the accepted list of MCPTT groups for de-affiliation for which the MCPTT client is affiliated, as specified in subclause 9.2.1.2.

# 5.3.3 Test description

### 5.3.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble:
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

5.3.3.2 Test procedure sequence

```
Table 5.3.3.2-1: Main Behaviour
```

St	Procedure		Message Sequence	TP	Verdict	
		U - S	Message			
1	Make the MCPTT User send a request to	-	-	-	-

# 5.4 Configuration / Pre-established Session Establishment / Pre-established Session Modification / Pre-established Session Release

# 5.4.1 Test Purpose (TP)

(1)

INVITE message, and, after indication from the MCPTT Server that the pre-established session request was accepted, the UE notifies the user }

(2)

with { the MCPTT client already having a pre-established session created } ensure that {

when { MCPTT User requests the modification of a pre-established session }

then { UE (MCPTT Client) requests the modification of a pre-establish session by sending a SIP
re-INVITE message or a SIP UPDATE message (depending on UE implementation), and, after indication
from the MCPTT Server that the pre-established session modification request was accepted, the UE
notifies the user }
}

#### (3)

```
with { the MCPTT client already having a pre-stablished session created }
ensure that {
   when { MCPTT Server requests the modification of a pre-established session by sending either a SIP
   UPDATE message or a SIP re-INVITE message }
    then { UE (MCPTT Client) responds the pre-established session modification request by sending a
   SIP 200 (OK) message, and then UE notifies the user of that the pre-established session has been
   modified }
   }
}
```

#### (4)

```
with { the MCPTT client already having a pre-stablished session created }
ensure that {
   when { MCPTT User requests the release of a pre-established session }
    then { UE (MCPTT Client) requests the release of a pre-establish session by sending a SIP INVITE
message, and, after indication from the MCPTT Server that the pre-established session release
request was accepted, the UE notifies the user }
   }
}
```

#### (5)

```
with { the MCPTT client already having a pre-stablished session created }
ensure that {
  when { MCPTT Server requests the release of a pre-established session by sending either a SIP BYE
message }
    then { UE (MCPTT Client) responds the pre-established session release request by sending a SIP
200 (OK) message, and then UE notifies the user of that the pre-established session has been
released }
```

# 5.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clause 8. Unless otherwise stated, these are Rel-13 requirements.

#### [TS 24.379, clause 8.2.1]

When the MCPTT client initiates a pre-established session the MCPTT client shall:

1) gather ICE candidates according to IETF RFC 5245 [17]; and

NOTE 1: ICE candidates are only gathered on interfaces that the MCPTT UE uses to obtain MCPTT service.

2) generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

#### The MCPTT client:

- 1) shall set the Request-URI of the SIP INVITE request to the public service identity of the participating MCPTT function serving the MCPTT user;
- 2) may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 4) shall include an Accept-Contact header field with the media feature tag g.3gpp.mcptt along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- 5) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 6) shall include an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref set to the value "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- 7) shall include the "timer" option tag in the Supported header field;

- 8) should include the Session-Expires header field according to IETF RFC 4028 [7] and should not include the "refresher" header field. The "refresher" header field parameter shall be set to "uac" if included;
- 9) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1, and include ICE candidates in the SDP offer as per IETF RFC 5245 [17]; and
- 10) shall send the SIP INVITE request according to 3GPP TS 24.229 [4].

Upon receiving a SIP 2xx response to the SIP INVITE request the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5].
- NOTE 2: If ICE candidate evaluation results in candidate pairs other than the default candidate pair being selected a further offer answer exchange using the procedures in subclause 8.3 will be needed.
- [TS 24.379, clause 8.3.1.1]

When the MCPTT client needs to modify the pre-established session outside of an MCPTT session, the MCPTT client:

- 1) shall generate a SIP UPDATE request or a SIP re-INVITE request according to 3GPP TS 24.229 [4];
- 2) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1, and include ICE candidates in the SDP offer as per IETF RFC 5245 [17], if required; and
- 3) shall send the SIP request towards the MCPTT server according to rules and procedures of 3GPP TS 24.229[4].

On receipt of the SIP 200 (OK) response the MCPTT client:

- 1) shall interact with media plane as specified in 3GPP TS 24.380 [5], if there is change in media parameters or codecs in the received SDP answer, compared to those in the previously agreed SDP; and
- 2) shall interact with media plane as specified in 3GPP TS 24.380 [5], if there is a media stream that is currently used in the pre-established session, marked as rejected in the received SDP answer.
- NOTE: The MCPTT client keeps resources for previously agreed media stream, media parameters and codecs until it receives a SIP 200 (OK) response.

[TS 24.379, clause 8.3.1.2]

Upon receiving a SIP UPDATE request or a SIP re-INVITE request to modify an existing pre-established session without associated MCPTT session, the MCPTT client:

- shall validate that the received SDP offer includes at least one media stream for which the media parameters and at least one codec is acceptable by the MCPTT client and if not reject the request with a SIP 488 (Not Acceptable Here) response. Otherwise, continue with the rest of the steps; and
- 2) shall generate a SIP 200 (OK) response as follows:

a) shall include an SDP answer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2, and include ICE candidates in the SDP answer as per IETF RFC 5245 [17]. if required.[TS 24.379, clause 8.4.1.1]

NOTE: The MCPTT client needs to be prepared to release the pre-established session when receiving a SIP BYE request generated by the SIP core (e.g. due to network release of media plane resources).

When a MCPTT client needs to release a pre-established session as created in subclause 8.2.1, the MCPTT client:

- 1) shall generate a SIP BYE request according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall set the Request-URI of the SIP BYE request to the URI that identifies the pre-established session;
- 3) shall send the SIP BYE request towards the participating MCPTT function within the SIP dialog of the preestablished session according to rules and procedures of the 3GPP TS 24.229 [4]; and
- 4) shall, upon receiving a SIP 200 (OK) response to the SIP BYE request interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 8.4.1.2]

Upon receiving a SIP BYE request from the participating MCPTT function within a pre-established session the MCPTT client shall check whether there are any MCPTT sessions using the pre-established session, and:

- if there is an established MCPTT session then the MCPTT client shall remove the MCPTT client from the MCPTT session by performing the procedures for session release for each MCPTT session as specified in 3GPP TS 24.380 [5]; and
- 2) if there is no MCPTT session using the pre-established session, then the MCPTT client shall:
  - a) interact with the media plane as specified in 3GPP TS 24.380 [5] for disconnecting the media plane resources towards the participating MCPTT function; and
  - b) shall generate and send a SIP 200 (OK) response to the SIP BYE request according to rules and procedures of 3GPP TS 24.229 [4].

## 5.4.3 Test description

#### 5.4.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

5.4.3.2 Test procedure sequence

```
Table 5.4.3.2-1: Main Behaviour
```

6 MCPTT Client on-network operation

- 6.1 Group Calls
- 6.1.1 Pre-arranged Group Call
- 6.1.1.1 On-network / On-demand Pre-arranged Group Call / Automatic Commencement Mode / End-to-end communication security / Floor Control / Upgrade to Emergency Group Call / Cancel Emergency State / Upgrade to Imminent Peril Group Call / Cancel Imminent Peril State / Client Originated (CO)
- 6.1.1.1.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service } ensure that { when { the MCPTT User requests the establishment of an MCPTT On-demand Pre-arranged Group Call requesting force of Automatic Commencement Mode at the invited MCPTT client(s) and implicit floor control } then { UE (MCPTT Client) requests On-demand Automatic Commencement Mode Pre-arranged Group Call establishment with implicit floor control by sending a SIP INVITE message, and, after indication from the MCPTT Server that the call was established notifies the user  $\}$ (2)with { UE (MCPTT Client) having established an MCPTT On-demand Pre-arranged Group Call with Automatic Commencement Mode } ensure that { when { the MCPTT User (MCPTT Client) engages in communication with the invited MCPTT User(s) } then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server (Floor Request during a talk burst, Floor granting/release, Floor idle, Floor deny, Floor taken/revoked, Floor request queued and queue handling) } }

(3)

with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic Commencement Mode }

```
ensure that {
  when { the SS (MCPTT Server) needs to terminate the ongoing MCPTT Group Call }
   then { the SS (MCPTT Server) sends a SIP BYE request and the UE (MCPTT Client) responds with a
SIP 200 (OK) and leaves the MCPTT session \}
```

#### (4)

with { UE (MCPTT Client) having established an On-demand Pre-arranged Group Call with Automatic Commencement Mode and the MCPTT User being authorised for initiating an MCPTT Emergency Group Call } ensure that { when { the MCPTT User (MCPTT Client) wants to upgrade the ongoing MCPTT Group Call to an MCPTT Emergency Group Call with floor control } then { UE (MCPTT Client) sends a SIP re-INVITE request and upon receipt of a SIP 2xx response considers the call as being upgraded to Emergency Group Call (emergency group call state = "MEGC 3: emergency-call-granted") } } (5) with { UE (MCPTT Client) having upgraded to an Emergency Group Call } ensure that { when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) } then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server } } (6) with { UE (MCPTT Client) having upgraded an On-demand Pre-arranged Group Call with Automatic Commencement Mode to an Emergency Group Call and the MCPTT User being authorised for cancelling an MCPTT Emergency state (MCPTT in-progress emergency cancel) } ensure that { when { the MCPTT User (MCPTT Client) wants to cancel the ongoing MCPTT Emergency state } then { UE (MCPTT Client) sends a SIP re-INVITE request and upon receipt of a SIP 2xx response considers the emergency condition cancelled } } (7)with { UE (MCPTT Client) having established an On-demand Pre-arranged Group Call with Automatic Commencement Mode and the MCPTT User being authorised for initiating an MCPTT Imminent Peril Group Call } ensure that { when { the MCPTT User (MCPTT Client) wants to upgrade the ongoing MCPTT Group Call to an MCPTT Imminent Peril Group Call with floor control } then { UE (MCPTT Client) sends a SIP re-INVITE request and upon receipt of a SIP 2xx response considers the call as being upgraded to Imminent Peril Group Call (imminent peril group call state = "MIG 2: in-progress") } } (8) with { UE (MCPTT Client) having upgraded to an Imminent Peril Group Call } ensure that { when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) } then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server } } (9)

with { UE (MCPTT Client) having upgraded an On-demand Pre-arranged Group Call with Automatic Commencement Mode to an Imminent Peril Group Call and the MCPTT User being authorised for cancelling an MCPTT Imminent Peril state (MCPTT in-progress imminent peril cancel) } ensure that {

when { the MCPTT User (MCPTT Client) wants to cancel the ongoing MCPTT Imminent Peril state } then { UE (MCPTT Client) sends a SIP re-INVITE request and upon receipt of a SIP 2xx response considers the imminent peril condition cancelled } }

```
(10)
```

with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic Commencement Mode } ensure that {

```
when { the MCPTT User (MCPTT Client) wants to terminate the ongoing MCPTT Group Call }
   then { UE (MCPTT Client) sends a SIP BYE request and leaves the MCPTT session }
   }
```

#### 6.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 10.1.1.2.1.1, 6.2.1, 6.2.3.1.2, 6.4, 6.5, 6.2.6, 10.1.1.2.1.3, 10.1.1.2.1.4, 6.2.8.1.3, 10.1.1.2.1.5, 6.2.8.1.11, 6.2.5.1, 10.1.1.2.3.1, TS 24.380, clauses 6.2.4.5.3, 6.2.4.3.5, 6.2.4.4.2, 6.2.4.5.4, 6.2.4.4.4, 6.2.4.4.9, 6.2.4.9.9, 6.2.4.9.6, 6.2.4.9.4. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT prearranged group call and the MCPTT emergency state is already set, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.1;
- 2) if the MCPTT user has requested the origination of an MCPTT imminent peril group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.9;
- 3) if the MCPTT user has requested the origination of a broadcast group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.2;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 12) if the MCPTT emergency state is already set or the MCPTT client emergency group state for this group is set to "MEG 2: in-progress", the MCPTT client shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2;

- 13) if the MCPTT client imminent peril group state for this group is set to "MIG 2: in-progress" or "MIG 3: confirmpending" shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.
- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.381 [31].
- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.

15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;

16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and

17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4; and
- 3) may subscribe to the conference event package as specified in subclause 10.1.3.1.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

- 1) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or
- 2) if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

- 1) shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:
    - i) if the MCPTT client is initiating a call to a group identity;
    - ii) if the <preferred-voice-encodings> element is present in the group document retrieved by the group management client as specified in 3GPP TS 24.381 [31] containing an <encoding> element with a "name" attribute; and
    - iii) if the MCPTT client supports the encoding name indicated in the value of the "name" attribute;

then the MCPTT client:

- i) shall insert the value of the "name" attribute in the <encoding name> field of the "a=rtpmap" attribute as defined in IETF RFC 4566 [12]; and
- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];
- 3) if floor control shall be used during the session, shall include an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12 for a media-floor control entity, consisting of:
  - a) the port number for the media-floor control entity selected as specified in 3GPP TS 24.380 [5]; and
  - b) the 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14; and
- 4) if end-to-end security is required for a private call and the SDP offer is not for establishing a pre-established session, shall include the MIKEY-SAKKE I\_MESSAGE in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS24.379, clause 6.2.3.1.2]

When performing the automatic commencement mode procedures, the MCPTT client shall follow the procedures in subclause 6.2.3.1.1 with the following clarification:

- The MCPTT client may include a P-Answer-State header field with the value "Confirmed" as specified in IETF RFC 4964 [34] in the SIP 200 (OK) response.

[TS24.379, clause 6.4]

An initial SIP INVITE request fulfilling the following criteria shall be regarded by the MCPTT server as an implicit floor request when the MCPTT client:

- 1) initiates an MCPTT speech session or initiates a pre-established session; and
- 2) includes the "mc\_implicit\_request" 'fmtp' attribute in the associated UDP stream for the floor control in the SDP offer/answer as specified in 3GPP TS 24.380 [5] clause 12.

A SIP re-INVITE request fulfilling the following criteria shall be regarded by the MCPTT server as an implicit floor request when the MCPTT client:

- 1) performs an upgrade of:
  - a) an MCPTT group call to an emergency MCPTT group call;
  - b) an MCPTT private call to an emergency MCPTT private call; or
  - c) an MCPTT group call to an imminent peril MCPTT group call; and

2) includes the "mc\_implicit\_request" 'fmtp' attribute in the associated UDP stream for the floor control in the SDP offer/answer as specified in 3GPP TS 24.380 [5] clause 12.

In all other cases the SIP (re-)INVITE request shall be regarded as received without an implicit floor request.

When using a pre-established session the MCPTT server shall regard the SIP REFER request as an implicit floor request:

- if the pre-established session was established with an implicit floor request and if an SDP offer is not included in a "body" parameter in the headers portion of the SIP URI in the <entry> element of the application/resource-lists MIME body, referenced by the "cid" URL in the Refer-To header field;
- 2) if the pre-established session was established with an implicit floor request, an SDP offer is included in a "body" parameter in the headers portion of the SIP URI in the <entry> element of the application/resource-lists MIME body, referenced by the "cid" URL in the Refer-To header field, and this SDP includes the "mc\_implicit\_request" media level attribute in the associated UDP stream for the floor control in the SDP offer; or
- 3) if the pre-established session was established without an implicit floor request and the SDP offer in a "body" parameter in the headers portion of the SIP URI in the <entry> element of the application/resource-lists MIME body, referenced by the "cid" URL in the Refer-To header field includes the "mc\_implicit\_request" media level attribute in the associated UDP stream for the floor control in the SDP offer.

In all other cases the SIP REFER request shall be regarded as received without an implicit floor request.

[TS24.379, clause 6.5]

The MCPTT client and the MCPTT server shall support several MIME bodies in SIP request and SIP responses.

When the MCPTT client or the MCPTT server sends a SIP message and the SIP message contains more than one MIME body, the MCPTT client or the MCPTT server:

- 1) shall, as specified in IETF RFC 2046 [21], include one Content-Type header field with the value set to multipart/mixed and with a boundary delimiter parameter set to any chosen value;
- 2) for each MIME body:
  - a) shall insert the boundary delimiter;
  - b) shall insert the Content-Type header field with the MIME type of the MIME body; and
  - c) shall insert the content of the MIME body;
- 3) shall insert a final boundary delimiter; and
- 4) if an SDP offer or an SDP answer is one of the MIME bodies, shall insert the application/sdp MIME body as the first MIME body.
- NOTE: The reason for inserting the application/sdp MIME body as the first body is that if a functional entity in the underlying SIP core does not understand multiple MIME bodies, the functional entity will ignore all MIME bodies with the exception of the first MIME body. The order of multiple MCPTT application MIME bodies in a SIP message is irrelevant.

When the MCPTT client or the MCPTT server sends a SIP message and the SIP message contains only one MIME body, the MCPTT client or the MCPTT server:

- 1) shall include a Content-Type header field set to the MIME type of the MIME body; and
- 2) shall insert the content of the MIME body.

[TS 24.380, clause 6.2.4.5.3]

Upon receiving an indication from the user to release the permission to send RTP media, the floor participant:

1. shall send a Floor Release message towards the floor control server The Floor Release message:

- a. may include the first bit in the subtype of the Floor Release message set to '1' (acknowledgement is required) as specified in subclause 8.2.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
  - b. if the session is a broadcast call and if the session was established as a normal call, shall include the Floor Indicator with the A-bit set to '1' (Normal call); and
  - c. if the Floor Granted message included the G-bit set to '1' (Dual floor), shall include the Floor Indicator with the G-bit set to '1' (Dual floor);
- 2. shall remove the indication that the participant is overriding without revoke if this indication is stored;
- 3. shall start timer T100 (Floor Release) and initialize counter C100 (Floor Release) to 1; and
- 4. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.3.5]

Upon receiving an indication from the user to request permission to send media, the floor participant:

- 1. shall send the Floor Request message toward the floor control server; The Floor Request message:
  - a. if a different priority than the normal priority is required, shall include the Floor Priority field with the priority not higher than negotiated with the floor control server as specified in subclause 14.3.3; and
  - b. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall start timer T101 (Floor Request) and initialise counter C101 (Floor Request) to 1; and
- 3. shall enter the 'U: pending Request' state.

[TS 24.380, clause 6.2.4.4.2]

Upon receiving a Floor Granted message from the floor control server or a floor granted indication in an SIP 200 (OK) response in the application and signalling layer, the floor participant:

- 1. if the first bit in the subtype of the Floor Granted message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '1' (Floor Granted); and
  - b. shall include the Source field set to 0' (the floor participant is the source);
- 2. shall provide floor granted notification to the user, if not already done;
- NOTE: Providing the floor granted notification to the user prior to receiving the Floor Granted message is an implementation option.
- 3. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call;
- 4. if the G-bit in the Floor Indicator is set to '1' (Dual floor) shall store an indication that the participant is overriding without revoke;
- 5. shall stop the optional timer T103 (End of RTP media), if running;
- 6. shall stop timer T101 (Floor Request); and
- 7. shall enter the 'U: has permission' state.

[TS 24.380, clause 6.2.4.5.4]

Upon receiving a Floor Revoke message, the floor participant:

1. shall inform the user that the permission to send RTP media is being revoked;

- 2. may give information to the user about the reason for revoking the permission to send media;
- shall request the media in the MCPTT client discard any remaining buffered RTP media packets and to stop forwarding of encoded voice to the MCPTT server;
- 4 if the G-bit in the Floor Indicator is set to '1' (Dual floor):
  - a. shall send a Floor Release message. In the Floor Release message:
    - i. shall include the Floor Indicator with the G-bit set to '1' (Dual floor); and
    - ii. may set the first bit in the subtype to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- 5 if the G-bit in the Floor Indicator is set to '0' (not Dual floor):
  - a. shall send a Floor Release message. In the Floor Release message:
    - i. shall include the Floor Indicator with the G-bit set to '0' (not Dual floor); and
    - ii. may set the first bit in the subtype to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
- 6. shall start timer T100 (Floor Release) and initialize counter C100 (Floor Release) to 1; and
- 7. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.4.4]

Upon receiving a Floor Deny message, the floor participant:

- 1. if the first bit in the subtype of the Floor Deny message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '3' (Floor Deny); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor deny notification to the user;
- 3. may display the floor deny reason to the user using information in the Reject Cause field;
- 4. shall stop timer T101 (Floor Request); and
- 5. shall enter the 'U: has no permission' state.

[TS 24.380, clause 6.2.4.4.9]

Upon receiving a Floor Queue Position Info message, the floor participant:

- 1. if the first bit in the subtype of the Floor Queue Position Info message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '9' (Floor Queue Position Info); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor request queued response notification to the MCPTT user;
- 3. may provide the queue position and priority to the MCPTT user; and
- 4. shall enter the 'U: queued' state.

[TS 24.380, clause 6.2.4.9.9]

Upon receipt of an indication from the MCPTT client to request the queue position, the floor participant:

1. shall send the Floor Queue Position Request message;

- shall start timer T104 (Floor Queue Position Request) and initialize counter C104 (Floor Queue Position Request) to 1; and
- 3. remain in the 'U: queued' state.

[TS 24.380, clause 6.2.4.9.6]

Upon receiving an indication from the MCPTT user to release the queued floor request, the floor participant:

- 1. shall send a Floor Release message: The Floor Release message:
  - a. may include the Floor Indicator field changing a broadcast group call to a normal call;
- 2. may set the first bit in the subtype of the Floor Release message to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
- 3. shall start timer T100 (Floor Release) and initialise counter C10 (Floor Release) to 1;
- 4. shall stop timer T104 (Floor Queue Position Request), if running; and
- 5. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.9.4]

Upon receiving a Floor Granted message, the floor participant:

- 1. if the first bit in the subtype of the Floor Granted message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '1' (Floor Granted); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide a floor granted notification to the MCPTT user;
- 3. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call;
- 4. shall stop timer T104 (Floor Queue Position Request), if running;
- 5. shall start timer T132 (Queued granted user action);
- 6. shall indicate the user that the floor is granted; and
- 7. shall remain in the 'U: queued' state.

### [TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 10.1.1.2.1.3]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to upgrade the MCPTT group session to an emergency condition or an imminent peril condition on an MCPTT prearranged group, the MCPTT client shall generate a SIP re-INVITE request as specified in 3GPP TS 24.229 [4], with the clarifications given below.

 if the MCPTT user is requesting to upgrade the MCPTT group session to an in-progress emergency group state and this is an unauthorised request for an MCPTT emergency call as determined by the procedures of subclause 6.2.8.1.8, the MCPTT client:

- a) should indicate to the MCPTT user that they are not authorised to upgrade the MCPTT group session to an in-progress emergency group state; and
- b) shall skip the remaining steps of the current subclause;
- 2) if the MCPTT user is requesting to upgrade the MCPTT group session to an in-progress imminent peril state and this is an unauthorised request for an MCPTT imminent peril group call as determined by the procedures of subclause 6.2.8.1.8, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to upgrade the MCPTT group session to an in-progress imminent peril group state; and
  - b) shall skip the remaining steps of the current subclause;
- 3) if the MCPTT user has requested to upgrade the MCPTT group session to an MCPTT emergency call, the MCPTT client:
  - a) shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.1;
  - b) if an indication of an MCPTT emergency alert is to be included, shall perform the procedures specified in subclause 6.2.9.1 for the MCPTT emergency alert trigger; and
  - c) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2.
- 4) if the MCPTT user has requested to upgrade the MCPTT group session to an MCPTT imminent peril call, the MCPTT client:
  - a) shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.9; and
  - b) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 5) if the SIP re-INVITE request is to be sent within an on-demand session, shall include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the preestablished session;
- NOTE: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 7) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 8) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall perform the actions specified in subclause 6.2.8.1.4.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

On receiving a SIP 4xx response, SIP 5xx response or a SIP 6xx response to the SIP re-INVITE request the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

[TS 24.379, clause 10.1.1.2.1.4]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to cancel the in-progress emergency condition on a prearranged MCPTT group, the MCPTT client shall generate a SIP re-INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- 1) if the MCPTT user is not authorised to cancel the in-progress emergency group state of the MCPTT group as determined by the procedures of subclause 6.2.8.1.7, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to cancel the in-progress emergency group state of the MCPTT group; and
  - b) shall skip the remaining steps of the current subclause;
- 2) shall, if the MCPTT user is cancelling an in-progress emergency condition and optionally an MCPTT emergency alert originated by the MCPTT user, include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.3;
- shall, if the MCPTT user is cancelling an in-progress emergency condition and an MCPTT emergency alert originated by another MCPTT user, include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.14;
- 4) shall include in the application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged"; and
  - b) the <mcptt-request-uri> element set to the group identity;
- NOTE 1: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP INVITE request that is sent by the originating participating MCPTT function.
- 5) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP re-INVITE request according to IETF RFC 3840 [16];
- 6) if the SIP re-INVITE request is to be sent within an on-demand session, shall include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the preestablished session;
- NOTE 2: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 8) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2; and
- 9) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) shall set the MCPTT emergency group state of the group to "MEG 1: no-emergency";
- 3) shall set the MCPTT emergency group call state of the group to "MEGC 1: emergency-gc-capable"; and
- 4) if the MCPTT emergency alert state is set to "MEA 4: Emergency-alert-cancel-pending", the sent SIP re-INVITE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body and the SIP 2xx response to the SIP request for a priority group call does not contain a Warning header field as specified in subclause 4.4 with the warning text containing the mcptt-warn-code set to "149", shall set the MCPTT emergency alert state to "MEA 1: no-alert".

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

On receiving a SIP 4xx response, SIP 5xx response or SIP 6xx response to the SIP re-INVITE request:

- 1) shall set the MCPTT emergency group state as "MEG 2: in-progress";
- 2) if the SIP 4xx response, SIP 5xx response or SIP 6xx response contains an application/vnd.3gpp.mcptt-info+xml MIME body with an <alert-ind> element set to a value of "true" and the sent SIP re-INVITE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body, the MCPTT client shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated"; and
- 3) if the SIP 4xx response, SIP 5xx response or SIP 6xx response did not contain an application/vnd.3gpp.mcpttinfo+xml MIME body with an <alert-ind> element and did not contain an <originated-by> element, the MCPTT emergency alert (MEA) state shall revert to its value prior to entering the current procedure.
- NOTE 3: If the in-progress emergency group state cancel request is rejected, the state of the session does not change, i.e. continues with MCPTT emergency group call level priority.

[TS 24.379, clause 6.2.8.1.3]

This subclause is referenced from other procedures.

If the MCPTT emergency group call state is set to "MEGC 3: emergency-call-granted" and the MCPTT emergency alert state is set to "MEA 1: no-alert", the MCPTT client shall generate a SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given below.

NOTE 1: This procedure assumes that the calling procedure has verified that the MCPTT user has made an authorised request for cancelling MCPTT in-progress emergency group state of the group.

The MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <emergency-ind> element set to "false";
- 2) shall clear the MCPTT emergency state; and
- 3) shall set MCPTT emergency group state of the MCPTT group to "MEG 3: cancel-pending"
- NOTE 2: This is the case of an MCPTT user who has initiated an MCPTT emergency group call and wants to cancel it.

If the MCPTT emergency group call state is set to "MEGC 3: emergency-call-granted" and the MCPTT emergency alert state is set to a value other than "MEA 1: no-alert" and the MCPTT user has indicated only the MCPTT emergency group call should be cancelled, the MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <emergency-ind> element set to "false"; and
- 2) shall set the MCPTT emergency group state of the MCPTT group to "MEG 3: cancel-pending".
- NOTE 3: This is the case of an MCPTT user has initiated both an MCPTT emergency group call and an MCPTT emergency alert and wishes to only cancel the MCPTT emergency group call. This leaves the MCPTT emergency state set.

If the MCPTT emergency group call state is set to "MEGC 3: emergency-call-granted" and the MCPTT emergency alert state is set to a value other than "MEA 1: no-alert" and the MCPTT user has indicated that the MCPTT emergency alert on the MCPTT group should be cancelled in addition to the MCPTT emergency group call, the MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <emergency-ind> element set to "false";
- 2) shall if this is an authorised request to cancel an MCPTT emergency alert as determined by the procedures of subclause 6.2.8.1.6:
  - a) include in the application/vnd.3gpp.mcptt-info+xml MIME body an <alert-ind> element set to "false";

- b) set the MCPTT emergency alert state to "MEA 4: Emergency-alert-cancel-pending"; and
- c) clear the MCPTT emergency state;
- 3) should, if this is not an authorised request to cancel an MCPTT emergency alert as determined by the procedures of subclause 6.2.8.1.6, indicate to the MCPTT user that they are not authorised to cancel the MCPTT emergency alert; and
- 4) shall set the MCPTT emergency group state of the MCPTT group to "MEG 3: cancel-pending".
- NOTE 4: This is the case of an MCPTT user that has initiated both an MCPTT emergency group call and an MCPTT emergency alert and wishes to cancel both.

[TS 24.379, clause 10.1.1.2.1.5]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to cancel the in-progress imminent peril condition on a prearranged MCPTT group, the MCPTT client shall generate a SIP re-INVITE request by following the procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- 1) if the MCPTT user is not authorised to cancel the in-progress imminent peril group state of the MCPTT group as determined by the procedures of subclause 6.2.8.1.10, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to cancel the in-progress imminent peril group state of the MCPTT group; and
  - b) shall skip the remaining steps of the current subclause;
- shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.11; and
- 3) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 4) shall include in the application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged"; and
  - b) the <mcptt-request-uri> element set to the group identity;
- NOTE 1: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP re-INVITE request that is sent by the originating participating MCPTT function.
- 5) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP re-INVITE request according to IETF RFC 3840 [16];
- 6) if the SIP re-INVITE request is to be sent within an on-demand session, shall include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the preestablished session; and
- NOTE 2: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 8) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];

- 2) shall set the MCPTT imminent peril group state of the group to "MIG 1: no-imminent-peril"; and
- 3) shall set the MCPTT imminent peril group call state of the group to "MIGC 1: imminent-peril-gc-capable".

On receiving a SIP 4xx, SIP 5xx response or SIP 6xx response to the SIP re-INVITE request:

- 1) if the SIP 4xx response, SIP 5xx response or SIP 6xx response:
  - a) contains an application/vnd.3gpp.mcptt-info+xml MIME body with an <imminentperil-ind> element set to a value of "true"; or
  - b) does not contain an application/vnd.3gpp.mcptt-info+xml MIME body with an <imminentperil-ind> element;

then the MCPTT client shall set the MCPTT imminent peril group state as "MIG 2: in-progress".

NOTE 3: This is the case where the MCPTT client requested the cancellation of the MCPTT imminent peril inprogress state and was rejected.

[TS 24.379, clause 6.2.8.1.11]

This subclause is referenced from other procedures.

If the MCPTT imminent peril group call state is set to "MIGC 3: imminent-peril-call-granted" or the MCPTT imminent peril group state of the MCPTT group is set to "MIG 2: in-progress", the MCPTT client shall generate a SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given below.

NOTE 1: This procedure assumes that the calling procedure has verified that the MCPTT user has made an authorised request for cancelling the in-progress imminent peril group state of the group.

The MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <imminentperil-ind> element set to "false"; and
- 2) shall set MCPTT imminent peril group state of the MCPTT group to "MIG 4: cancel-pending".
- NOTE 2: This is the case of an MCPTT user who has initiated an MCPTT imminent peril group call and wants to cancel it, or another authorised member of the group who wishes to cancel the in-progress imminent peril state of the group.

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

#### 6.1.1.1.3 Test description

6.1.1.1.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4.

The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.1.1.1.3.2 Test procedure sequence

# Table 6.1.1.1.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the MCPTT User request the establishment of an MCPTT on-demand pre- arranged group call, automatic	-	-	-	-
	commencement mode, with explicit request for floor control (implicit floor control).				
	NOTE: This is expected to be done via a				
-	suitable implementation dependent MMI. EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-
	are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO				
	communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.				
2	Check: Does the UE (MCPTT client) send an initial SIP INVITE request requesting the establishment of an MCPTT on-demand pre-	>	SIP INVITE	1	Р
	arranged group call, automatic commencement mode, applying End-to-end communication security with implicit floor control?				
3	The SS sends SIP 100 Trying	<	SIP 100 Trying	-	-
4	The SS sends SIP 180 Ringing	<	SIP 180 Ringing	-	-
5	The SS sends a SIP 200 (OK) message indicating that it has accepted the SIP INVITE request	<	SIP 200 (OK)	-	-
6	Check: Does the UE (MCPTT client) send a SIP ACK in response to the SIP 200 (OK)	>	SIP ACK	1	Р
7	Check: Does the UE (MCPTT client) notify the user that the call has been successfully established?	-	-	1	Р
	NOTE: This is expected to be done via a suitable implementation dependent MMI.				
8	Make the MCPTT User indicate end of talking (e.g. releasing the PTT button). NOTE: This is expected to be done via a suitable implementation dependent MMI.				
9	Check: Does the UE (MCPTT client) send a Floor Release message?	>	Floor Release	2	Р
-	EXCEPTION: Step 10a1 describes behaviour that depends on the UE implementation; the	-	-	-	-
	"lower case letter" identifies a step sequence that take place if the UE requests an acknowledgement to the Floor Release message.				
10a1	The SS sends a Floor Ack message in response to the Floor Release message	<	Floor Ack	-	-
11	The SS sends a Floor Idle message with no acknowledgement required	<	Floor Idle	-	-
12	Make the MCPTT User request to speak (e.g. pressing the PTT button). NOTE: This is expected to be done via a	-	-	-	-
13	suitable implementation dependent MMI. Check: Does the UE (MCPTT client) send a Floor Request message?	>	Floor Request	2	P
14	The SS sends a Floor Granted message with an acknowledgement required	<	Floor Granted		
15	Check: Does the UE (MCPTT client) send a Floor Ack message in response to the Floor Granted message?	>	Floor Ack	2	Р
16	Check: Does the MCPTT Client provide floor granted notification to the MCPTT User? NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	2	Р

17	The SS overrides the MCPTT Client and	-	-	-	-
	grants the floor to a higher priority MCPTT				
	Client.				
18	The SS sends a Floor Revoke message with	<	Floor Revoke	-	-
10	the Reject Cause set to #4 - Media Burst pre-				
	empted.

6.1.1.2 On-network / On-demand Pre-arranged Group Call / Automatic Commencement Mode / Floor Control / Upgrade to Emergency Group Call / Cancel Emergency State / Upgrade to Imminent Peril Group Call / Cancel Imminent Peril State / Client Terminated (CT)

6.1.1.2.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT }
ensure that {
 when { the SS (MCPTT Server) initiates an On-demand Pre-arranged group call with Automatic
 Commencement Mode and implicit floor control }
 then { UE (MCPTT Client) responds by sending a SIP 200 (OK) message and after indication from
 the MCPTT Server that the call was established notifies the user }
 }
}

(2)

with { UE (MCPTT Client) having an ongoing MCPTT On-demand Pre-arranged Group Call with Automatic Commencement Mode } ensure that {

when { the MCPTT User (MCPTT Client) engages in communication with the invited MCPTT User(s) }

then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server (Floor Request
during a talk burst, Floor granting/release, Floor idle, Floor deny, Floor taken/revoked, Floor
request queued and queue handling) }
}

```
(3)
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic
Commencement Mode }
ensure that {
  when { the MCPTT User (MCPTT Client) wants to terminate the ongoing MCPTT Group Call }
   then { UE (MCPTT Client) sends a SIP BYE request and leaves the MCPTT session }
            }
(4)
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic
Commencement Mode }
ensure that {
  when { the SS (MCPTT Server) upgrades the ongoing MCPTT Group Call to an MCPTT Emergency Group
Call with floor control }
   then { UE (MCPTT Client) responds to the SIP re-INVITE request with a SIP 200 (OK) response and
considers the call as being upgraded to an Emergency Group Call (emergency group call state = "MEGC
3: emergency-call-granted") }
            }
(5)
with { UE (MCPTT Client) in an upgraded Emergency Group Call }
ensure that {
  when \{ the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) \}
    then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server }
            }
(6)
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic
Commencement Mode which was upgraded to an Emergency Group Call }
ensure that {
  when { the SS (MCPTT Server) cancels the ongoing MCPTT Emergency state }
   then { UE (MCPTT Client) responds to the SIP re-INVITE request with a SIP 200 (OK) and considers
the emergency condition cancelled }
(7)
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic
Commencement Mode }
ensure that {
 when { the SS (MCPTT Server) upgrades the ongoing MCPTT Group Call to an MCPTT Imminent Peril
Group Call with floor control }
    then { UE (MCPTT Client) responds to the SIP re-INVITE request with a SIP 200 (OK) response and
considers the call as being upgraded to an cImminent Peril Group Call (imminent peril group call
state = "MIG 2: in-progress") }
           }
(8)
with { UE (MCPTT Client) in an upgraded Imminent Peril Group Call }
ensure that {
  when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) }
    then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server }
            }
(9)
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic
Commencement Mode which was upgraded to an Imminent Peril Group Call }
ensure that {
```

when { the SS (MCPTT Server) cancels the ongoing MCPTT Imminent Peril state }
 then { UE (MCPTT Client) responds to the SIP re-INVITE request with a SIP 200 (OK) and considers
 the imminent peril condition cancelled }

}

### (10)

with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Automatic Commencement Mode } ensure that { when { the SS (MCPTT Server) needs to terminate the ongoing MCPTT Group Call }

```
then { the SS (MCPTT Server) sends to tertificate the ongoing MCPTT Gloup call }
then { the SS (MCPTT Server) sends a SIP BYE request and the UE (MCPTT Client) responds with a
SIP 200 (OK) and leaves the MCPTT session }
}
```

## 6.1.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.1.1.2.1.2, 6.2.2, 6.2.3.1.2, 6.2.6, 10.1.1.2.1.6, 6.2.5.1, 10.1.1.2.3.1, 10.1.1.2.3.3 and TS 24.380, clauses 6.2.4.5.3, 6.2.4.3.5, 6.2.4.4.2. 6.2.4.5.4, 6.2.4.4.4, 6.2.4.4.9, 6.2.4.9.9, 6.2.4.9.4. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.2]

In the procedures in this subclause:

- 1) emergency indication in an incoming SIP INVITE request refers to the <emergency-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
- 2) imminent peril indication in an incoming SIP INVITE request refers to the <imminentperil-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body.

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

#### The MCPTT client:

- 1) may reject the SIP INVITE request if either of the following conditions are met:
  - a) MCPTT client does not have enough resources to handle the call; or
  - b) any other reason outside the scope of this specification;

and skip the rest of the steps;

- 2) if the SIP INVITE request is rejected in step 1), shall respond toward participating MCPTT function either with appropriate reject code as specified in 3GPP TS 24.229 [4] and warning texts as specified in subclause 4.4.2 or with SIP 480 (Temporarily unavailable) response not including warning texts if the user is authorised to restrict the reason for failure and skip the rest of the steps of this subclause;
- NOTE: If the SIP INVITE request contains an emergency indication or imminent peril indication, the MCPTT client can by means beyond the scope of the present document choose to accept the request.
- shall check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 4) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) should display the MCPTT group identity of the group with the emergency condition contained in the <mcptt-calling-group-id> element; and

- iii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
- b) shall set the MCPTT emergency group state to "MEG 2: in-progress";
- c) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
- d) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable"; otherwise
- 5) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT imminent peril group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT imminent peril group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) should display the MCPTT group identity of the group with the imminent peril condition contained in the <mcptt-calling-group-id> element; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";
- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode, yet the invited MCPTT client allows the call to be answered with automatic commencement mode;
- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.

## [TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;

- b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and
- 4) if included in the SDP offer, shall include the media-level section of the offered media-floor control entity consisting of:
  - a) an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12; and
  - b) 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14.

[TS24.379, clause 6.2.3.1.2]

When performing the automatic commencement mode procedures, the MCPTT client shall follow the procedures in subclause 6.2.3.1.1 with the following clarification:

- The MCPTT client may include a P-Answer-State header field with the value "Confirmed" as specified in IETF RFC 4964 [34] in the SIP 200 (OK) response.

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 10.1.1.2.1.6]

This subclause covers both on-demand session and pre-established sessions.

Upon receipt of a SIP re-INVITE request the MCPTT client:

- if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user the MCPTT ID of the originator of the MCPTT emergency group call and an indication that this is an MCPTT emergency group call;
  - b) if the <mcpttinfo> element containing the <mcptt-Params> element contains an <alert-ind> element set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - c) shall set the MCPTT emergency group state to "MEG 2: in-progress";
  - d) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - e) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable";
- 2) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user the MCPTT ID of the originator of the MCPTT imminent peril group call and an indication that this is an MCPTT imminent peril group call; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";
- 3) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "false":
  - a) should display to the MCPTT user the MCPTT ID of the MCPTT user cancelling the MCPTT emergency group call;

- b) if the <mcpttinfo> element containing the <mcptt-Params> element contains an <alert-ind> element set to "false":
  - i) should display to the MCPTT user an indication of the MCPTT emergency alert cancellation and the MCPTT ID of the MCPTT user cancelling the MCPTT emergency alert; and
  - ii) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body including an <originated-by> element:
    - A) should display to the MCPTT user the MCPTT ID contained in the <originated-by> element of the MCPTT user that originated the MCPTT emergency alert; and
    - B) if the MCPTT ID contained in the <originated-by> element is the MCPTT ID of the receiving MCPTT user shall set the MCPTT emergency alert state to "MEA 1: no-alert";
- c) shall set the MCPTT emergency group state to "MEG 1: no-emergency"; and
- d) if the MCPTT emergency group call state of the group is set to "MEGC 3: emergency-call-granted", shall set the MCPTT emergency group call state of the group to "MEGC 1: emergency-gc-capable";
- 4) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "false":
  - a) should display to the MCPTT user the MCPTT ID of the MCPTT user cancelling the MCPTT imminent peril group call and an indication that this is an MCPTT imminent peril group call;
  - b) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - c) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable";
- 5) shall check if a Resource-Priority header field is included in the incoming SIP re-INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) shall accept the SIP re-INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 8) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 9) if the SIP re-INVITE request was received within an on-demand session, shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- 10) if the SIP re-INVITE request was received within a pre-established session, shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the pre-established session;
- NOTE: The SIP re-INVITE request can be received within an on-demand session or a pre-established session. If the SIP re-INVITE request is received within a pre-established session, the media-level section for the MCPTT speech media stream and the media-level section of the media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 11) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and

12) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 10.1.1.2.3.1]

When an MCPTT client wants to leave the MCPTT session that has been established using on-demand session, the MCPTT client shall follow the procedures as specified in subclause 6.2.4.1.

[TS 24.379, clause 10.1.1.2.3.3]

Upon receiving a SIP BYE request for releasing the prearranged MCPTT group call, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

[TS 24.380, clause 6.2.4.5.3]

Upon receiving an indication from the user to release the permission to send RTP media, the floor participant:

- 1. shall send a Floor Release message towards the floor control server The Floor Release message:
  - a. may include the first bit in the subtype of the Floor Release message set to '1' (acknowledgement is required) as specified in subclause 8.2.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
  - b. if the session is a broadcast call and if the session was established as a normal call, shall include the Floor Indicator with the A-bit set to '1' (Normal call); and
  - c. if the Floor Granted message included the G-bit set to '1' (Dual floor), shall include the Floor Indicator with the G-bit set to '1' (Dual floor);
- 2. shall remove the indication that the participant is overriding without revoke if this indication is stored;
- 3. shall start timer T100 (Floor Release) and initialize counter C100 (Floor Release) to 1; and
- 4. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.3.5]

Upon receiving an indication from the user to request permission to send media, the floor participant:

- 1. shall send the Floor Request message toward the floor control server; The Floor Request message:
  - a. if a different priority than the normal priority is required, shall include the Floor Priority field with the priority not higher than negotiated with the floor control server as specified in subclause 14.3.3; and
  - b. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall start timer T101 (Floor Request) and initialise counter C101 (Floor Request) to 1; and
- 3. shall enter the 'U: pending Request' state.
- [TS 24.380, clause 6.2.4.4.2]

Upon receiving a Floor Granted message from the floor control server or a floor granted indication in an SIP 200 (OK) response in the application and signalling layer, the floor participant:

1. if the first bit in the subtype of the Floor Granted message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:

- a. shall include the Message Type field set to '1' (Floor Granted); and
- b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor granted notification to the user, if not already done;
- NOTE: Providing the floor granted notification to the user prior to receiving the Floor Granted message is an implementation option.
- 3. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call;
- 4. if the G-bit in the Floor Indicator is set to '1' (Dual floor) shall store an indication that the participant is overriding without revoke;
- 5. shall stop the optional timer T103 (End of RTP media), if running;
- 6. shall stop timer T101 (Floor Request); and
- 7. shall enter the 'U: has permission' state.

#### [TS 24.380, clause 6.2.4.5.4]

Upon receiving a Floor Revoke message, the floor participant:

- 1. shall inform the user that the permission to send RTP media is being revoked;
- 2. may give information to the user about the reason for revoking the permission to send media;
- 3. shall request the media in the MCPTT client discard any remaining buffered RTP media packets and to stop forwarding of encoded voice to the MCPTT server;
- 4 if the G-bit in the Floor Indicator is set to '1' (Dual floor):
  - a. shall send a Floor Release message. In the Floor Release message:
    - i. shall include the Floor Indicator with the G-bit set to '1' (Dual floor); and
    - ii. may set the first bit in the subtype to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- 5 if the G-bit in the Floor Indicator is set to '0' (not Dual floor):
  - a. shall send a Floor Release message. In the Floor Release message:
    - i. shall include the Floor Indicator with the G-bit set to '0' (not Dual floor); and
    - ii. may set the first bit in the subtype to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
- 6. shall start timer T100 (Floor Release) and initialize counter C100 (Floor Release) to 1; and
- 7. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.4.4]

Upon receiving a Floor Deny message, the floor participant:

- 1. if the first bit in the subtype of the Floor Deny message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '3' (Floor Deny); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor deny notification to the user;

- 3. may display the floor deny reason to the user using information in the Reject Cause field;
- 4. shall stop timer T101 (Floor Request); and
- 5. shall enter the 'U: has no permission' state.

[TS 24.380, clause 6.2.4.4.9]

Upon receiving a Floor Queue Position Info message, the floor participant:

- 1. if the first bit in the subtype of the Floor Queue Position Info message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '9' (Floor Queue Position Info); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor request queued response notification to the MCPTT user;
- 3. may provide the queue position and priority to the MCPTT user; and
- 4. shall enter the 'U: queued' state.

[TS 24.380, clause 6.2.4.9.9]

Upon receipt of an indication from the MCPTT client to request the queue position, the floor participant:

- 1. shall send the Floor Queue Position Request message;
- shall start timer T104 (Floor Queue Position Request) and initialize counter C104 (Floor Queue Position Request) to 1; and
- 3. remain in the 'U: queued' state.

[TS 24.380, clause 6.2.4.9.6]

Upon receiving an indication from the MCPTT user to release the queued floor request, the floor participant:

- 1. shall send a Floor Release message: The Floor Release message:
  - a. may include the Floor Indicator field changing a broadcast group call to a normal call;
- 2. may set the first bit in the subtype of the Floor Release message to '1' (Acknowledgment is required) as described in subclause 8.3.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
- 3. shall start timer T100 (Floor Release) and initialise counter C10 (Floor Release) to 1;
- 4. shall stop timer T104 (Floor Queue Position Request), if running; and
- 5. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.9.4]

Upon receiving a Floor Granted message, the floor participant:

- 1. if the first bit in the subtype of the Floor Granted message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '1' (Floor Granted); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide a floor granted notification to the MCPTT user;

- 3. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call;
- 4. shall stop timer T104 (Floor Queue Position Request), if running;
- 5. shall start timer T132 (Queued granted user action);
- 6. shall indicate the user that the floor is granted; and
- 7. shall remain in the 'U: queued' state.
- 6.1.1.2.3 Test description
- 6.1.1.2.3.1 Pre-test conditions

### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.1.1.2.3.2 Test procedure sequence

# Table 6.1.1.2.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message	-	
1	SS initiates an on-demand pre-arranged group call with automatic commencement mode and implicit floor control	<	SIP INVITE	-	-
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.4 Generic Test Procedure for MCPTT CT communication in E-UTRA '. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-
-	EXCEPTION: Step 2a1 describes behaviour that depends on the UE implementation; the "lower case letter" identifies a step sequence that take place if the UE responds to a SIP INVITE prior to the MCPTT user's acknowledgment.	-	-	-	-

Test Purpose (TP) 6.1.1.3.1

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service } ensure that {

when { the MCPTT User requests the establishment of an MCPTT On-demand Pre-arranged Group Call requesting Manual Commencement Mode at the invited MCPTT client(s) and implicit floor control } then { UE (MCPTT Client) requests On-demand Manual Commencement Mode Pre-arranged Group Call establishment with implicit floor control by sending a SIP INVITE message }

(2)

```
with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call with Manual
Commencement Mode }
ensure that {
  when { the MCPTT User (MCPTT Client) wants to terminate the ongoing MCPTT Group Call }
    then { UE (MCPTT Client) sends a SIP BYE request and leaves the MCPTT session }
```

#### 6.1.1.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 10.1.1.2.1.1, 6.2.1, 10.1.1.2.3.1, 6.2.4.1. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.1]

}

}

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT prearranged group call and the MCPTT emergency state is already set, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.1;

- 2) if the MCPTT user has requested the origination of an MCPTT imminent peril group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.9;
- 3) if the MCPTT user has requested the origination of a broadcast group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.2;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 7) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 12) if the MCPTT client emergency group state for this group is set to "MEG 2: in-progress" or "MEG 4: confirmpending", the MCPTT client shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2;
- 13) if the MCPTT client imminent peril group state for this group is set to "MIG 2: in-progress" or "MIG 3: confirmpending" shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.
- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.381 [31].

- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.
- 15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;
- 16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4; and
- 3) may subscribe to the conference event package as specified in subclause 10.1.3.1.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

- 1) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or
- if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

- 1) shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:
    - i) if the MCPTT client is initiating a call to a group identity;
    - ii) if the <preferred-voice-encodings> element is present in the group document retrieved by the group management client as specified in 3GPP TS 24.381 [31] containing an <encoding> element with a "name" attribute; and
    - iii) if the MCPTT client supports the encoding name indicated in the value of the "name" attribute;

then the MCPTT client:

i) shall insert the value of the "name" attribute in the <encoding name> field of the "a=rtpmap" attribute as defined in IETF RFC 4566 [12]; and

- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];
- 3) if floor control shall be used during the session, shall include an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12 for a media-floor control entity, consisting of:
  - a) the port number for the media-floor control entity selected as specified in 3GPP TS 24.380 [5]; and
  - b) the 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14; and
- 4) if end-to-end security is required for a private call and the SDP offer is not for establishing a pre-established session, shall include the MIKEY-SAKKE I\_MESSAGE in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 10.1.1.2.3.1]

When an MCPTT client wants to leave the MCPTT session that has been established using on-demand session, the MCPTT client shall follow the procedures as specified in subclause 6.2.4.1.

[TS 24.379, clause 6.2.4.1]

Upon receiving a request from an MCPTT user to leave an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to leave; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

6.1.1.3.3 Test description

6.1.1.3.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

- The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.1.3.3.2 Test procedure sequence

# Table 6.1.1.3.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the MCPTT User request the establishment of an MCPTT on-demand pre- arranged group call, manual commencement mode, with explicit request for floor control (implicit floor control). NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-
2	Check: Does the UE (MCPTT client) send an initial SIP INVITE request requesting the establishment of an MCPTT on-demand pre- arranged group call with manual commencement mode and implicit floor control?	>	SIP INVITE	1	Ρ
3	The SS sends SIP 100 Trying	<	SIP 100 Trying	-	-
4	The SS sends SIP 180 Ringing	<	SIP 180 Ringing	-	-
5	SS sends SIP 200 (OK), indicating that the MCPTT call has been established	<	SIP 200 (OK)	-	-
6	Check: Does the UE (MCPTT client) send a SIP ACK in response to the SIP 200 (OK)	>	SIP ACK	1	Р
7	Make the MCPTT User end the on-demand group call. NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
8	Check: Does the UE (MCPTT Client) send a SIP BYE message to end the on-demand group call.	>	SIP BYE	2	Р
9	The SS sends a SIP 200 (OK)	<	SIP 200 (OK)		
-	EXCEPTION: SS releases the E-UTRA connection.	-	-	-	-

```

#### 6.1.1.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 10.1.1.2.1.2, 6.2.2, 6.2.3.2.2, 6.5, 10.1.1.2.3.3, 6.2.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.2]

In the procedures in this subclause:

- 1) emergency indication in an incoming SIP INVITE request refers to the <emergency-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
- 2) imminent peril indication in an incoming SIP INVITE request refers to the <imminentperil-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body.

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

1) may reject the SIP INVITE request if either of the following conditions are met:

- a) MCPTT client does not have enough resources to handle the call; or
- b) any other reason outside the scope of the present document;

and skip the rest of the steps;

- 2) if the SIP INVITE request is rejected in step 1), shall respond toward participating MCPTT function either with appropriate reject code as specified in 3GPP TS 24.229 [4] and warning texts as specified in subclause 4.4.2 or with SIP 480 (Temporarily unavailable) response not including warning texts if the user is authorised to restrict the reason for failure and skip the rest of the steps of this subclause;
- NOTE: If the SIP INVITE request contains an emergency indication or imminent peril indication, the MCPTT client can by means beyond the scope of the present document choose to accept the request.
- shall check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 4) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) should display the MCPTT group identity of the group with the emergency condition contained in the <mcptt-calling-group-id> element; and
    - iii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - b) shall set the MCPTT emergency group state to "MEG 2: in-progress";
  - c) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - d) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable"; otherwise
- 5) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT imminent peril group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT imminent peril group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) should display the MCPTT group identity of the group with the imminent peril condition contained in the <mcptt-calling-group-id> element; and
  - b) shall set the MCPTT imminent peril group state to "MIG 3: in-progress";
- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode, yet the invited MCPTT client allows the call to be answered with automatic commencement mode;
- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:

- a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
- b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.

[TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;
  - b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
  - c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and
- 4) if included in the SDP offer, shall include the media-level section of the offered media-floor control entity consisting of:
  - a) an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12; and
- b) 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14.

[TS 24.379, clause 6.2.3.2.2]

When performing the manual commencement mode procedures:

- 1) the terminating MCPTT client may automatically generate a SIP 183 (Session Progress) in accordance with 3GPP TS 24.229 [4], prior to the MCPTT user's acknowledgement; and
- 2) if the MCPTT user declines the MCPTT session invitation the MCPTT client shall send a SIP 480 (Temporarily Unavailable) response towards the MCPTT server with the warning text set to: "110 user declined the call invitation" in a Warning header field as specified in subclause 4.4, and not continue with the rest of the steps in this subclause.

When generating a SIP 183 (Session Progress) response, the MCPTT client:

- 1) shall include the following in the Contact header field:
  - a) the g.3gpp.mcptt media feature tag; and
  - b) the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt"; and
- 2) may include a P-Answer-State header field with the value "Unconfirmed" as specified in IETF RFC 4964 [34];

When sending the SIP 200 (OK) response to the incoming SIP INVITE request, the MCPTT client shall follow the procedures in subclause 6.2.3.1.2.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.5]

The MCPTT client and the MCPTT server shall support several MIME bodies in SIP request and SIP responses.

When the MCPTT client or the MCPTT server sends a SIP message and the SIP message contains more than one MIME body, the MCPTT client or the MCPTT server:

- 1) shall, as specified in IETF RFC 2046 [21], include one Content-Type header field with the value set to multipart/mixed and with a boundary delimiter parameter set to any chosen value;
- 2) for each MIME body:
  - a) shall insert the boundary delimiter;
  - b) shall insert the Content-Type header field with the MIME type of the MIME body; and
  - c) shall insert the content of the MIME body;
- 3) shall insert a final boundary delimiter; and
- 4) if an SDP offer or an SDP answer is one of the MIME bodies, shall insert the application/sdp MIME body as the first MIME body.
- NOTE: The reason for inserting the application/sdp MIME body as the first body is that if a functional entity in the underlying SIP core does not understand multiple MIME bodies, the functional entity will ignore all MIME bodies with the exception of the first MIME body. The order of multiple MCPTT application MIME bodies in a SIP message is irrelevant.

When the MCPTT client or the MCPTT server sends a SIP message and the SIP message contains only one MIME body, the MCPTT client or the MCPTT server:

- 1) shall include a Content-Type header field set to the MIME type of the MIME body; and
- 2) shall insert the content of the MIME body.

[TS 24.379, clause 10.1.1.2.3.3]

Upon receiving a SIP BYE request for releasing the prearranged MCPTT group call, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].
- 6.1.1.4.3 Test description
- 6.1.1.4.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.1.5 On-network / Pre-arranged Group Call using pre-established session / Client originated Pre-established Session Release with associated MCPTT session / Client Originated (CO)

# 6.1.1.5.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service and having a pre-established session with the MCPTT Server } ensure that {

when { the MCPTT User requests the establishment of an MCPTT On-demand Pre-arranged Group Call using a pre-established session requesting Automatic Commencement Mode at the invited MCPTT client(s) and implicit floor control }

then { UE (MCPTT Client) requests On-demand Pre-arranged Group Call using a pre-established
session establishment by sending a SIP REFER message and responds to the SS with correct MCPC
messages }

(2)

with { UE (MCPTT Client) having an ongoing On-demand Pre-arranged Group Call using a pre-established
session }
ensure that {

when { the MCPTT User (MCPTT Client) wants to terminate the ongoing MCPTT Group Call but keep the pre-established session }

then { UE (MCPTT Client) sends a SIP REFER request and leaves the MCPTT session }

#### 6.1.1.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 10.1.1.2.2.1, 10.1.1.3.1.2, 10.1.1.2.3.2, 6.2.4.2, 10.1.1.3.3.2, 6.3.2.1.7 and TS 24.380, clauses 4.1.2.2, 4.1.2.3. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.1]

}

Upon receiving a request from an MCPTT user to establish an MCPTT group session using an MCPTT group identity identifying a prearranged MCPTT group within the pre-established session, the MCPTT client shall generate a SIP REFER request as specified in IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27], and in accordance with the UE procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client shall follow the procedures specified in subclause 10.1.2.2.2.1 with the clarification in step 3) of subclause 10.1.2.2.2.1 that:

- 1) the <entry> element in the application/resource-lists MIME body shall contain a "uri" attribute set to the prearranged MCPTT group identity;
- 2) the <session-type> element of the application/vnd.3gpp.mcptt-info MIME body in the hname "body" URI header field shall be set to a value of "prearranged"; and
- 3) if the MCPTT user has requested the origination of a broadcast group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.2.

[TS 24.379, clause 10.1.1.3.1.2]

Upon receipt of a "SIP REFER request for a pre-established session", with:

- the Refer-To header field containing a Content-ID ("cid") Uniform Resource Locator (URL) as specified in IETF RFC 2392 [62] that points to an application/resource-lists MIME body as specified in IETF RFC 5366 [20] containing an <entry> element with a "uri" attribute containing a SIP-URI set to a pre-arranged group identity;
- 2) a body" URI header field of the SIP-URI specified above containing an application/vnd.3gpp.mcptt-info MIME body with the <session-type> element set to "prearranged"; and
- 3) a Content-ID header field set to the "cid" URL;

the participating MCPTT function:

- if unable to process the request due to a lack of resources or a risk of congestion exists, may reject the SIP INVITE request with a SIP 500 (Server Internal Error) response. The participating MCPTT function may include a Retry-After header field to the SIP 500 (Server Internal Error) response as specified in IETF RFC 3261 [24] and shall not continue with the rest of the steps;
- NOTE 1: If the application/vnd.3gpp.mcptt-info MIME body included in the SIP REFER request as described at the top of the present subclause contains an <emergency-ind> element or <imminentperil-ind> element set to a value of "true", and this is an authorised request for originating a priority call as determined by subclause 6.3.2.1.8.1, the participating MCPTT function can according to local policy choose to accept the request.

- 2) shall check if the number of maximum simultaneous MCPTT group calls supported for the MCPTT user as specified in the <MaxSimultaneousCallsN6> element of the <MCPTT-group-call> element of the MCPTT user profile document (see the MCPTT user profile document in 3GPP TS 24.384 [50]) has been exceeded. If exceeded, the participating MCPTT function shall respond with a SIP 486 (Busy Here) response with the warning text set to "103 maximum simultaneous MCPTT group calls reached" in a Warning header field as specified in subclause 4.4 and shall not continue with the rest of the steps;
- 3) shall determine the MCPTT ID of the calling user from public user identity in the P-Asserted-Identity header field of the SIP REFER request;
- NOTE 2: The MCPTT ID of the calling user is bound to the public user identity at the time of service authorisation, as documented in subclause 7.3.
- 4) if the participating MCPTT function cannot find a binding between the public user identity and an MCPTT ID or if the validity period of an existing binding has expired, then the participating MCPTT function shall reject the SIP REFER request with a SIP 404 (Not Found) response with the warning text set to "141 user unknown to the participating function" in a Warning header field as specified in subclause 4.4, and shall not continue with any of the remaining steps;
- 5) if through local policy in the participating MCPTT function, the user identified by the MCPTT ID is not authorised to initiate prearranged group calls, shall reject the "SIP REFER request for pre-established session" with a SIP 403 (Forbidden) response to the SIP INVITE request, with warning text set to "109 user not authorised to make prearranged group calls" in a Warning header field as specified in subclause 4.4;
- 6) if the "SIP REFER request for a pre-established session" contained a Refer-Sub header field containing "false" value and a Supported header field containing "norefersub" value, shall handle the SIP REFER request as specified in 3GPP TS 24.229 [4], IETF RFC 3515 [25] as updated by IETF RFC 6665 [26], and IETF RFC 4488 [22] without establishing an implicit subscription;
- 7) if received SIP REFER request includes an application/vnd.3gpp.mcptt-info+xml MIME body with an <emergency-ind> element included or an <imminent-peril> element included, shall validate the request as described in subclause 6.3.2.1.8.3;
- 8) if the SIP REFER request contains in the application/vnd.3gpp.mcptt-info+xml MIME body:
  - a) an <emergency-ind> element set to a value of "true" and this is an unauthorised request for an MCPTT emergency group call as determined by subclause 6.3.2.1.8.1;
  - b) an <alert-ind> element set to a value of "true" and this is an unauthorised request for an MCPTT emergency alert as determined by subclause 6.3.2.1.8.2; or
  - c) an <imminent-peril> element set to a value of "true" and this is an unauthorised request for an MCPTT imminent peril group call as determined by subclause 6.3.2.1.8.1;

then shall reject the SIP REFER request with a SIP 403 (Forbidden) response and skip the rest of the steps;

- 9) shall retrieve the group identity within the <entry> element of the application/resource-lists MIME body, referenced by the "cid" URL contained in the Refer-To header field of the SIP REFER request;
- 10) shall determine the public service identity of the controlling MCPTT function associated with the group identity in the application/resource-lists MIME body referenced by the Refer-To header of the SIP REFER request. If the participating MCPTT function is unable to identify the controlling MCPTT function associated with the group identity, it shall reject the REFER request with a SIP 404 (Not Found) response with the warning text "142 unable to determine the controlling function" in a Warning header field as specified in subclause 4.4, and shall not continue with any of the remaining steps;
- NOTE 3: The public service identity can identify the controlling function in the primary MCPTT system or a partner MCPTT system.
- NOTE 4: How the participating MCPTT server discovers the public service identity of the controlling MCPTT function associated with the group identity is out of scope of the current document.
- 11) if the user identified by the MCPTT ID is not affiliated to the group identified in the SIP REFER request as determined by subclause 9.2.2.2.11 and this is an authorised request for originating a priority call as determined by subclause 6.3.2.1.8.1, shall perform the actions specified in subclause 9.2.2.2.12 for implicit affiliation;

- 12)if the actions for implicit affiliation specified in step 11) above were performed but not successful in affiliating the MCPTT user due to the MCPTT user already having N2 simultaneous affiliations, shall reject the SIP REFER request with a SIP 486 (Busy Here) response with the warning text set to "102 too many simultaneous affiliations" in a Warning header field as specified in subclause 4.4. and skip the rest of the steps.
- NOTE 5: N2 is the total number of MCPTT groups that an MCPTT user can be affiliated to simultaneously as specified in 3GPP TS 23.179 [3].
- NOTE 6: if the SIP INVITE request contains an emergency indication set to a value of "true" or an imminent peril indication set to a value of "true" and this is an authorised request for originating a priority call as determined by subclause 6.3.2.1.8.1, the participating MCPTT function can according to local policy choose to allow an exception to the N2 limit. Alternatively, a lower priority affiliation of the MCPTT user could be cancelled to allow for the new affiliation.
- 13) shall generate a final SIP 200 (OK) response to the "SIP REFER request for a pre-established session" according to 3GPP TS 24.229 [4];
- NOTE 7: In accordance with IETF RFC 4488 [22], the participating MCPTT function inserts the Refer-Sub header field containing the value "false" in the SIP 200 (OK) response to the SIP REFER request to indicate that it has not created an implicit subscription.

[TS 24.379, clause 10.1.1.3.1.2]

When an MCPTT client wants to leave the MCPTT session within a pre-established session, the MCPTT client shall follow the procedures as specified in subclause 6.2.4.2.

[TS 24.379, clause 6.2.4.2]

Upon receiving a request from an MCPTT user to leave an MCPTT session within a pre-established session, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- shall generate an initial SIP REFER request outside a dialog in accordance with the procedures specified in 3GPP TS 24.229 [4], IETF RFC 4488 [22] and IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27];
- 3) shall set the Request-URI of the SIP REFER request to the public service identity identifying the pre-established session on the MCPTT server serving the MCPTT user;
- shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- 5) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22];
- 6) shall set the Refer-To header field of the SIP REFER request to the MCPTT session identity to leave;
- 7) shall include the "method" SIP URI parameter with the value "BYE" in the URI in the Refer-To header field;
- 8) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session; and
- 9) shall send the SIP REFER request according to 3GPP TS 24.229 [4].

Upon receiving a SIP 2xx response to the SIP REFER request, the MCPTT client shall interact with media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 10.1.1.3.3.2]

Upon receiving from the MCPTT client a SIP REFER request when using a pre-established session with the method SIP-URI parameter set to value "BYE" in the URI in the Refer-To header field the participating MCPTT function shall follow the procedures as specified in subclause 6.3.2.1.7.

[TS 24.379, clause 6.3.2.1.7]

Upon receiving a SIP REFER request with the "method" SIP URI parameter set to value "BYE" in the URI in the Refer-To header field from the MCPTT client, the participating MCPTT function:

- 1) if the user identified by the MCPTT ID is not authorised, shall reject the "SIP REFER request for pre-established session" with a SIP 403 (Forbidden) response to the SIP BYE request, with warning text set to "100 function not allowed due to <detailed reason>" as specified in subclause 4.4, and shall not continue with the rest of the steps;
- 2) if the SIP REFER request contained a Refer-Sub header field containing "false" value and a Supported header field containing "norefersub" value, shall handle the SIP REFER request as specified in 3GPP TS 24.229 [4], IETF RFC 3515 [25] as updated by IETF RFC 6665 [26], and IETF RFC 4488 [22] without establishing an implicit subscription;
- 3) shall generate a SIP 200 (OK) response to the SIP REFER request, and in the SIP 200 (OK) response:
  - a) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22]; and
  - b) shall check the presence of the Refer-Sub header field of the SIP REFER request and if it is present and set to the value "false" shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- NOTE: In accordance with IETF RFC 4488 [22], the participating MCPTT function inserts the Refer-Sub header field containing the value "false" in the SIP 200 (OK) response to the SIP REFER request to indicate that it has not created an implicit subscription.
- 4) shall send the SIP 200 (OK) response to the SIP REFER request towards MCPTT client according to 3GPP TS 24.229 [4];

[TS 24.380, clause 4.1.2.2]

For a pre-arranged group call, when the originator initiates the call setup indicating the use of a pre-established session using SIP messages as specified in 3GPP TS 24.379 [2], the participating MCPTT function (which serves the originating MCPTT client) sends to the originating MCPTT client a Connect message after the controlling MCPTT function accepts the initiation of this call. After the reception of this Connect message the originating MCPTT client sends an Acknowledgment message by indicating that the connection is accepted or by indicating that the connection is not accepted. If the connection is accepted by the originating MCPTT client, the floor control for this call continues a specified in clause 6.

[TS 24.380, clause 4.1.2.3]

For a pre-arranged group call if the controlling MCPTT function as triggered by an originating group member initiates a call as specified in 3GPP TS 24.379 [2], the participating MCPTT function which serves the terminating MCPTT client sends a Connect message to all affiliated MCPTT clients of this group. After the reception of the Connect message the terminating MCPTT client sends an Acknowledgment message by indicating that the connection is accepted or by indicating that the connection is not accepted. If the connection is accepted by the terminating MCPTT client, the floor control for this call continues a specified in clause 6.

- NOTE: If a terminating client does not have an available pre-established session, the call setup proceeds as in ondemand call setup as specified in 3GPP TS 24.379 [2].

### 6.1.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.380, clauses 4.1.2.2, 4.1.2.3, 9.2.2.3.2, 9.2.2.3.4. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.380, clause 4.1.2.2]

For a pre-arranged group call if the controlling MCPTT function as triggered by an originating group member initiates a call as specified in 3GPP TS 24.379 [2], the participating MCPTT function which serves the terminating MCPTT client sends a Connect message to all affiliated MCPTT clients of this group. After the reception of the Connect message the terminating MCPTT client sends an Acknowledgment message by indicating that the connection is accepted or by indicating that the connection is not accepted. If the connection is accepted by the terminating MCPTT client, the floor control for this call continues a specified in clause 6.

NOTE: If a terminating client does not have an available pre-established session, the call setup proceeds as in ondemand call setup as specified in 3GPP TS 24.379 [2].

[TS 24.380, clause 4.1.2.3]

When a call is released by the controlling MCPTT function (as specified in 3GPP TS 24.379 [2]), the participating MCPTT function sends a Disconnect message to all MCPTT clients which used a pre-established session for this call. Then the call is released (see also 3GPP TS 24.379 [2]) and the pre-established session can be used for another call. When an MCPTT client leaves a call (as specified in 3GPP TS 24.379 [2]) which was setup over a pre-established session without releasing the pre-established session, this pre-established session can be used for another call.

[TS 24.380, clause 9.2.2.3.2]

Upon reception of a Connect message:

- 1. if the MCPTT client accepts the incoming call the MCPTT client:
  - a. shall send the Acknowledgement message with Reason Code field set to 'Accepted';
  - b. shall use only the media streams of the pre-established session which are indicated as used in the associated call session Media Streams field, if the Connect contains a Media Streams field;
  - c. shall create an instance of the 'Floor participant state transition diagram for basic operation' as specified in subclause 6.2.4; and
  - d. shall enter the 'U: Pre-established session in use' state; or
- 2. Otherwise the MCPTT client:
  - a. shall send the Acknowledgement message with the Reason Code field set to 'Busy' or 'Not Accepted'; and
  - b. shall remain in 'U: Pre-established session not in use' state.

[TS 24.380, clause 9.2.2.3.4]

Upon reception of a Disconnect message the MCPTT client:

- 1. if the first bit in the subtype of the Disconnect message is set to '1' (acknowledgement is required), shall send the Acknowledgement message with the Reason Code set to 'Accepted'; and
- 2. shall remain in 'U: Pre-established session not in use' state.

# 6.1.1.6.3 Test description

6.1.1.6.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)

#### 6.1.1.7.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.380, clauses 4.1.2.2, 4.1.2.3, 9.2.2.3.2, 9.2.2.3.4, 9.2.2.3.3 and TS 24.379, clause 10.1.1.2.2.2, 10.1.1.2.1.2. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.380, clause 4.1.2.2]

}

For a pre-arranged group call if the controlling MCPTT function as triggered by an originating group member initiates a call as specified in 3GPP TS 24.379 [2], the participating MCPTT function which serves the terminating MCPTT client sends a Connect message to all affiliated MCPTT clients of this group. After the reception of the Connect message the terminating MCPTT client sends an Acknowledgment message by indicating that the connection is accepted or by indicating that the connection is not accepted. If the connection is accepted by the terminating MCPTT client, the floor control for this call continues a specified in clause 6.

NOTE: If a terminating client does not have an available pre-established session, the call setup proceeds as in ondemand call setup as specified in 3GPP TS 24.379 [2].

[TS 24.380, clause 4.1.2.3]

When a call is released by the controlling MCPTT function (as specified in 3GPP TS 24.379 [2]), the participating MCPTT function sends a Disconnect message to all MCPTT clients which used a pre-established session for this call. Then the call is released (see also 3GPP TS 24.379 [2]) and the pre-established session can be used for another call. When an MCPTT client leaves a call (as specified in 3GPP TS 24.379 [2]) which was setup over a pre-established session without releasing the pre-established session, this pre-established session can be used for another call.

[TS 24.380, clause 9.2.2.3.2]

Upon reception of a Connect message:

- 1. if the MCPTT client accepts the incoming call the MCPTT client:
  - a. shall send the Acknowledgement message with Reason Code field set to 'Accepted';
  - b. shall use only the media streams of the pre-established session which are indicated as used in the associated call session Media Streams field, if the Connect contains a Media Streams field;

- c. shall create an instance of the 'Floor participant state transition diagram for basic operation' as specified in subclause 6.2.4; and
- d. shall enter the 'U: Pre-established session in use' state; or
- 2. Otherwise the MCPTT client:
  - a. shall send the Acknowledgement message with the Reason Code field set to 'Busy' or 'Not Accepted'; and
  - b. shall remain in 'U: Pre-established session not in use' state.

[TS 24.380, clause 9.2.2.3.4]

Upon reception of a Disconnect message the MCPTT client:

- 1. if the first bit in the subtype of the Disconnect message is set to '1' (acknowledgement is required), shall send the Acknowledgement message with the Reason Code set to 'Accepted'; and
- 2. shall remain in 'U: Pre-established session not in use' state.

[TS 24.380, clause 9.2.2.3.3]

When the associated pre-established session between the MCPTT client and the MCPTT server is released the MCPTT client:

- 1. shall release any user plane resources including any running timers associated with the pre-established session; and
- 2. shall enter the 'Start-stop' state and then the 'Call setup control over pre-established session state machine' is released.

[TS 24.379, clause 10.1.1.2.2.2]

Upon receiving a SIP re-INVITE request within a pre-established Session without an associated MCPTT session or when generating SIP responses to the SIP re-INVITE request, the MCPTT client shall follow the procedures in subclause 10.1.1.2.1.2.

NOTE: In subclause 10.1.1.2.1.2, the reader is assumed to replace occurrences of SIP INVITE request with SIP re-INVITE request.

[TS 24.379, clause 10.1.1.2.2.2]

In the procedures in this subclause:

- 1) emergency indication in an incoming SIP INVITE request refers to the <emergency-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
- 2) imminent peril indication in an incoming SIP INVITE request refers to the <imminentperil-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body.

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

- 1) may reject the SIP INVITE request if either of the following conditions are met:
  - a) MCPTT client does not have enough resources to handle the call; or
  - b) any other reason outside the scope of this specification;
- 2) if the SIP INVITE request is rejected in step 1), shall respond toward participating MCPTT function either with appropriate reject code as specified in 3GPP TS 24.229 [4] and warning texts as specified in subclause 4.4.2 or with SIP 480 (Temporarily unavailable) response not including warning texts if the user is authorised to restrict the reason for failure and skip the rest of the steps of this subclause;

- NOTE: If the SIP INVITE request contains an emergency indication or imminent peril indication, the MCPTT client can by means beyond the scope of this specification choose to accept the request.
- shall check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of this specification to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 4) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) should display the MCPTT group identity of the group with the emergency condition contained in the <mcptt-calling-group-id> element; and
    - iii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - b) shall set the MCPTT emergency group state to "MEG 2: in-progress";
  - c) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - d) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable"; otherwise
- 5) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT imminent peril group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT imminent peril group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) should display the MCPTT group identity of the group with the imminent peril condition contained in the <mcptt-calling-group-id> element; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";
- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode, yet the invited MCPTT client allows the call to be answered with automatic commencement mode;
- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.6.1.1.7.3 Test description

#### 6.1.1.7.3.1 Pre-test conditions

# 6.1.1.8 On-network / Pre-arranged Broadcast Group Call / Client Originated (CO)

6.1.1.8.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {
 when { the MCPTT User requests the establishment of an MCPTT On-demand Pre-arranged Broadcast
Group Call }
 then { UE (MCPTT Client) requests On-demand Pre-arranged Broadcast Group Call by sending a SIP
INVITE message and sending a GROUP CALL REQUEST message to setup the Broadcast Group Call }

### 6.1.1.8.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 4.12, 6.2.8.2 and 10.1.1.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 4.12]

}

A broadcast group call is a group call where the initiating MCPTT user expects no response from the other MCPTT users, so that when the user's transmission is complete, so is the call. The functionality in the present release of the specification for broadcast group calls is not compliant to the requirements for user-broadcast group and group-broadcast group calls as specified in 3GPP TS 22.179 [2], 3GPP TS 22.280 [76] and 3GPP TS 23.379 [3]. In the present release of the specification, a broadcast group call can be initiated by an MCPTT user on any MCPTT group that the MCPTT user is part of.

- NOTE 1: Configuration related to the authorisation to create a user-broadcast group or a group-broadcast exists in the user profile document as specified in 3GPP TS 24.484 [50], but is not used by any procedures in 3GPP TS 24.481 [31] in the current release, as the ability for an authorised user to create user-broadcast groups and group-broadcast groups is not provided in the current release.
- NOTE 2: Configuration related to broadcast group hierarchies can be found in the group document as specified in 3GPP TS 24.481 [31] and in the service configuration document as specified in 3GPP TS 24.484 [50]. However, this configuration is not used by any procedures in 3GPP TS 24.380 [5] in the current release.

[TS 24.379, clause 6.2.8.2]

NOTE: This subclause is referenced from other procedures.

When the MCPTT user initiates a broadcast group call, the MCPTT client:

1) in the case of the prearranged group call is initiated on-demand, shall include in the application/vnd.3gpp.mcpttinfo+xml MIME body the <br/>broadcast-ind> element set to "true" as defined in clause F.1; and

2) in the case the prearranged group call is initiated using a pre-established session, shall include in the application/vnd.3gpp.mcptt-info+xml MIME body in the "body" URI header field in the Refer-To header field the <br/>broadcast-ind> element set to "true" as defined in clause F.1.

[TS 24.379, clause 10.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

•••

- 3) if the MCPTT user has requested the origination of a broadcast group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.2;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

• • •

- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.

- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.481 [31].
- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.

15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;

16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and

17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];

..

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

## 6.1.1.8.3 Test description

6.1.1.8.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.1.8.3.2 Test	procedure sequence
------------------	--------------------

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the MCPTT User requesting the establishment of an MCPTT On-demand pre- arranged broadcast group call for the selected MCPTT broadcast group GROUP A, with explicit floor control. NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 36.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-

6.1.1.9.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {
 when { the MCPTT Client receives a SIP INVITE message of an MCPTT On-demand Pre-arranged Broadcast
Group Call }
then { the MCPTT Client displays an indication for the Pre-arranged MCPTT group call to the user and
responds to the SS with correct SIP messages }
 }

(2)

with { UE (MCPTT Client) having an incoming Pre-arranged MCPTT group call and the Answer-Mode header in the SIP INVITE message is set to Manual } ensure that { when { the user answers the MCPTT group call }

then { UE sends a SIP 200 OK as a response to the SIP INVITE message }
}

## 6.1.1.9.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clauses 4.12, and 10.1.1.2.1.2. Unless otherwise stated, these are Rel-13 requirements.

#### [TS 24.379, clause 4.12]

A broadcast group call is a group call where the initiating MCPTT user expects no response from the other MCPTT users, so that when the user's transmission is complete, so is the call. The functionality in the present release of the specification for broadcast group calls is not compliant to the requirements for user-broadcast group and group-broadcast group calls as specified in 3GPP TS 22.179 [2], 3GPP TS 22.280 [76] and 3GPP TS 23.379 [3]. In the present release of the specification, a broadcast group call can be initiated by an MCPTT user on any MCPTT group that the MCPTT user is part of.

- NOTE 1: Configuration related to the authorisation to create a user-broadcast group or a group-broadcast exists in the user profile document as specified in 3GPP TS 24.484 [50], but is not used by any procedures in 3GPP TS 24.481 [31] in the current release, as the ability for an authorised user to create user-broadcast groups and group-broadcast groups is not provided in the current release.
- NOTE 2: Configuration related to broadcast group hierarchies can be found in the group document as specified in 3GPP TS 24.481 [31] and in the service configuration document as specified in 3GPP TS 24.484 [50]. However, this configuration is not used by any procedures in 3GPP TS 24.380 [5] in the current release.

[TS 24.379, clause 10.1.1.2.1.2]

In the procedures in this subclause:

•••

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

•••

- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode, yet the invited MCPTT client allows the call to be answered with automatic commencement mode;
- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.

## 6.1.1.9.3 Test description

### 6.1.1.9.3.1 Pre-test conditions

### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {

when { the MCPTT User requests the establishment of an MCPTT On-demand Pre-arranged Broadcast
Group Call with Temporary Group }

then { UE (MCPTT Client) requests On-demand Pre-arranged Broadcast Group Call by sending a SIP
INVITE message via HTTP POS }
}

## 6.1.1.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 4.12, 6.2.8.2 and 10.1.1.2.1.1, and TS 24.481 clause 6.3.14. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 4.12]

A broadcast group call is a group call where the initiating MCPTT user expects no response from the other MCPTT users, so that when the user's transmission is complete, so is the call. The functionality in the present release of the specification for broadcast group calls is not compliant to the requirements for user-broadcast group and group-broadcast group calls as specified in 3GPP TS 22.179 [2], 3GPP TS 22.280 [76] and 3GPP TS 23.379 [3]. In the present release of the specification, a broadcast group call can be initiated by an MCPTT user on any MCPTT group that the MCPTT user is part of.

- NOTE 1: Configuration related to the authorisation to create a user-broadcast group or a group-broadcast exists in the user profile document as specified in 3GPP TS 24.484 [50], but is not used by any procedures in 3GPP TS 24.481 [31] in the current release, as the ability for an authorised user to create user-broadcast groups and group-broadcast groups is not provided in the current release.
- NOTE 2: Configuration related to broadcast group hierarchies can be found in the group document as specified in 3GPP TS 24.481 [31] and in the service configuration document as specified in 3GPP TS 24.484 [50]. However, this configuration is not used by any procedures in 3GPP TS 24.380 [5] in the current release.

[TS 24.379, clause 6.2.8.2]

NOTE: This subclause is referenced from other procedures.

When the MCPTT user initiates a broadcast group call, the MCPTT client:

- 1) in the case of the prearranged group call is initiated on-demand, shall include in the application/vnd.3gpp.mcpttinfo+xml MIME body the <br/>broadcast-ind> element set to "true" as defined in clause F.1; and
- 2) in the case the prearranged group call is initiated using a pre-established session, shall include in the application/vnd.3gpp.mcptt-info+xml MIME body in the "body" URI header field in the Refer-To header field the <br/>broadcast-ind> element set to "true" as defined in clause F.1.

[TS 24.379, clause 10.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

•••

- 3) if the MCPTT user has requested the origination of a broadcast group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.2;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

• • •

- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.
- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.481 [31].
- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.
- 15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;
- 16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];

•••

3) may subscribe to the conference event package as specified in subclause 10.1.3.1.

•••

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

[TS 24.481, clause 6.3.14]

In order to form a temporary MCS group, a GMC shall send a HTTP POST request according to procedures specified in IETF RFC 2616 [21] and subclause 6.2.3. In the HTTP POST request, the GMC:

- a) shall set the Request-URI to an XCAP URI:
  - 1) in users tree where the XUI is set to a group creation XUI configuration parameter; and
  - 2) with the document selector identifying the temporary MCS group to be created; and
- b) shall include an application/vnd.3gpp.GMOP+xml MIME body containing a GMOP document requesting group regroup creation specified in subclause 7.3.4.3, with a <group> element containing a group document for an MCS group. In the group document, the GMC shall include the <on-network-temporary> element according to subclause 7.2. In the <on-network-temporary> element, the GMC shall include <constituent-MCPTT-group-IDs> element according to subclause 7.2. In the <constituent-MCPTT-group-IDs> element, the GMC shall include one <constituent-MCPTT-group-ID> element according to subclause 7.2 for each MCS group to be combined.

Upon reception of an HTTP 2xx response to the sent HTTP POST request, the GMC shall consider the temporary MCS group formation as successful.

Upon reception of an HTTP 409 (Conflict) response with at least one <alt-value> element in the <uniqueness-failure> error element, the GMC may repeat procedures of the present subclause and identify the temporary MCS group being formed with an MCS Group ID indicated in an <alt-value> element.

## 6.1.1.10.3 Test description

## 6.1.1.10.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE has affiliated to a MCPTT temporary group identity TGI, identifying a MCPTT temporary group GROUP B as a member of MCPTT broadcast group GROUP A.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

## 6.1.1.11.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 6.2.8.2 and 10.1.1.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 6.2.8.2]

NOTE: This subclause is referenced from other procedures.

When the MCPTT user initiates a broadcast group call, the MCPTT client:

- 1) in the case of the prearranged group call is initiated on-demand, shall include in the application/vnd.3gpp.mcpttinfo+xml MIME body the <br/>broadcast-ind> element set to "true" as defined in clause F.1; and
- 2) in the case the prearranged group call is initiated using a pre-established session, shall include in the application/vnd.3gpp.mcptt-info+xml MIME body in the "body" URI header field in the Refer-To header field the <br/>broadcast-ind> element set to "true" as defined in clause F.1.

[TS 24.379, clause 10.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

 if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT prearranged group call and the MCPTT emergency state is already set, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.1; •••

- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 12) if the MCPTT client emergency group state for this group is set to "MEG 2: in-progress" or "MEG 4: confirmpending", the MCPTT client shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2;

•••

- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.
- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.481 [31].
- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.
- 15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;
- 16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4; and
- 3) may subscribe to the conference event package as specified in subclause 10.1.3.1.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

1) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or

...

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

## 6.1.1.11.3 Test description

#### 6.1.1.11.3.1 Pre-test conditions

## System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

```
then { UE sends a SIP 200 OK as a response to the SIP INVITE message }
}
```

## 6.1.1.12.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clauses 4.12, 6.2.8.2 and 10.1.1.2.1.2. Unless otherwise stated, these are Rel-13 requirements.

## [TS 24.379, clause 4.12]

A broadcast group call is a group call where the initiating MCPTT user expects no response from the other MCPTT users, so that when the user's transmission is complete, so is the call. The functionality in the present release of the specification for broadcast group calls is not compliant to the requirements for user-broadcast group and group-broadcast group calls as specified in 3GPP TS 22.179 [2], 3GPP TS 22.280 [76] and 3GPP TS 23.379 [3]. In the present release of the specification, a broadcast group call can be initiated by an MCPTT user on any MCPTT group that the MCPTT user is part of.

- NOTE 1: Configuration related to the authorisation to create a user-broadcast group or a group-broadcast exists in the user profile document as specified in 3GPP TS 24.484 [50], but is not used by any procedures in 3GPP TS 24.481 [31] in the current release, as the ability for an authorised user to create user-broadcast groups and group-broadcast groups is not provided in the current release.
- NOTE 2: Configuration related to broadcast group hierarchies can be found in the group document as specified in 3GPP TS 24.481 [31] and in the service configuration document as specified in 3GPP TS 24.484 [50]. However, this configuration is not used by any procedures in 3GPP TS 24.380 [5] in the current release.

[TS 24.379, clause 6.2.8.2]

NOTE: This subclause is referenced from other procedures.

When the MCPTT user initiates a broadcast group call, the MCPTT client:

- 1) in the case of the prearranged group call is initiated on-demand, shall include in the application/vnd.3gpp.mcpttinfo+xml MIME body the <br/>broadcast-ind> element set to "true" as defined in clause F.1; and
- 2) in the case the prearranged group call is initiated using a pre-established session, shall include in the application/vnd.3gpp.mcptt-info+xml MIME body in the "body" URI header field in the Refer-To header field the <br/>broadcast-ind> element set to "true" as defined in clause F.1.

[TS 24.379, clause 10.1.1.2.1.2]

In the procedures in this subclause:

1) emergency indication in an incoming SIP INVITE request refers to the <emergency-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and

...

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

#### The MCPTT client:

•••

- 4) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) should display the MCPTT group identity of the group with the emergency condition contained in the <mcptt-calling-group-id> element; and
    - iii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - b) shall set the MCPTT emergency group state to "MEG 2: in-progress";

•••

6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;

...

- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.

#### 6.1.1.12.3 Test description

6.1.1.12.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

```

## 6.1.1.13.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clauses 6.2.8.2 and 10.1.1.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT prearranged group session the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

•••

2) if the MCPTT user has requested the origination of an MCPTT imminent peril group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.9;

• • •

- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 8) should include the "timer" option tag in the Supported header field;
- 9) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the "refresher" header field parameter is omitted. If included, the "refresher" header field parameter shall be set to "uac";
- 10) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 11)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

• • •

- 13) if the MCPTT client imminent peril group state for this group is set to "MIG 2: in-progress" or "MIG 3: confirmpending" shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 14) shall contain in an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "prearranged";
  - b) the <mcptt-request-uri> element set to the group identity;
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client; and
- NOTE 2: The MCPTT client does not include the MCPTT ID of the originating MCPTT user in the body, as this will be inserted into the body of the SIP INVITE request that is sent from the originating participating MCPTT function.
  - d) if the group identity can be determined to be a TGI and if the MCPTT client can associate the TGI with a MCPTT group ID, the <associated-group-id> element set to the MCPTT group ID;
- NOTE 3: The text "can associate the TGI with a MCPTT group ID" means that the MCPTT client is able to determine that there is a constituent group of the temporary group that it is a member of.
- NOTE 4: The MCPTT client is informed about temporary groups and regrouping of MCPTT groups that the user is a member of as specified in 3GPP TS 24.481 [31].
- NOTE 5: If the MCPTT user selected a TGI where there are several MCPTT groups where the MCPTT user is a member, the MCPTT client selects one of those MCPTT groups.

15) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.1;

16) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and

17) shall send the SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4; and
- 3) may subscribe to the conference event package as specified in subclause 10.1.3.1.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

•••

2) if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

## 6.1.1.13.3 Test description

## 6.1.1.13.3.1 Pre-test conditions

### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

## 6.1.1.13.3.2

## 6.1.1.14.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.1.2.1.2. Unless otherwise stated, these are Rel-13 requirements.

#### [TS 24.379, clause 10.1.1.2.1.2]

In the procedures in this subclause:

•••

2) imminent peril indication in an incoming SIP INVITE request refers to the <imminentperil-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body.

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

•••

- 5) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT imminent peril group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT imminent peril group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) should display the MCPTT group identity of the group with the imminent peril condition contained in the <mcptt-calling-group-id> element; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";

- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode, yet the invited MCPTT client allows the call to be answered with automatic commencement mode;
- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.2 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is to use manual commencement mode; or
  - b) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode, yet the invited MCPTT client allows the call to be answered with manual commencement mode; and
- 9) when the SIP 200 (OK) response to the SIP INVITE request is sent, may subscribe to the conference event package as specified in subclause 10.1.3.1.

## 6.1.1.14.3 Test description

6.1.1.14.3.1 Pre-test conditions

### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

## 6.1.1.15.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 12.1.1.1, 12.1.1.2. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

#### [TS 24.379 clause 12.1.1.1]

Upon receiving a request from the MCPTT user to send an MCPTT emergency alert to the indicated MCPTT group and this is an authorised request for an MCPTT emergency alert as determined by subclause 6.2.8.1.6, the MCPTT client shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33] with the clarifications given below.

NOTE 1: this SIP MESSAGE request is assumed to be sent out-of-dialog.

The MCPTT client:

- 1) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP MESSAGE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 3) may include a P-Preferred-Identity header field in the SIP MESSAGE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 4) shall include an application/vnd.3gpp.mcptt-info+xml MIME body as specified in clause F.1 with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <mcptt-request-uri> element set to the group identity;
  - b) the <alert-ind> element set to a value of "true"; and
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;

- 5) shall include an application/vnd.3gpp.mcptt-location-info+xml MIME body as specified in Annex F.3 with a <Report> element included in the <location-info> root element;
- 6) shall include in the <Report> element the specific location information configured for the MCPTT emergency alert location trigger;
- 7) shall set the MCPTT emergency state if not already set;
- 8) shall set the MCPTT emergency alert state to "MEA 2: emergency-alert-confirm-pending";
- 9) shall set the Request-URI to the public service identity identifying the participating MCPTT function serving the group identity; and
- 10) shall send the SIP MESSAGE request according to rules and procedures of 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP MESSAGE request, the MCPTT client shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated".

On receiving a SIP 4xx response a SIP 5xx response or a SIP 6xx response to the SIP MESSAGE request, the MCPTT client shall set the MCPTT emergency alert state to "MEA 1: no-alert".

NOTE 2: the MCPTT emergency state is left set in this case as the MCPTT user presumably is in the best position to determine whether or not they are in a life-threatening condition. The assumption is that the MCPTT user can clear the MCPTT emergency state manually if need be.

#### [TS 24.379 clause 12.1.1.2]

Upon receiving a request from the MCPTT user to send an MCPTT emergency alert cancellation to the indicated MCPTT group and this is an authorised request for an MCPTT emergency alert cancellation as determined by subclause 6.2.8.1.6, the MCPTT client shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33] with the clarifications given below.

NOTE 1: This SIP MESSAGE request is assumed to be sent out-of-dialog.

The MCPTT client:

- 1) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP MESSAGE request;
- shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 3) may include a P-Preferred-Identity header field in the SIP MESSAGE request containing the public user identity of the originator as specified in 3GPP TS 24.229 [4];
- 4) shall include an application/vnd.3gpp.mcptt-info+xml MIME body as specified in clause F.1 with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <mcptt-request-uri> element set to the MCPTT group identity;
  - b) the <alert-ind> element set to a value of "false"; and
  - c) if the MCPTT user is cancelling an MCPTT emergency alert originated by another MCPTT user, include the <originated-by> element set to the MCPTT ID of the MCPTT user who originated the MCPTT emergency alert;
- 5) if the MCPTT user has additionally requested the cancellation of the in-progress emergency state of the MCPTT group and this is an authorised request for an in-progress emergency group state cancellation as determined by subclause 6.2.8.1.7, shall include an <emergency-ind> element set to a value of "false" in the <mcpttinfo> element containing the <mcptt-Params> element;
- 6) shall set the Request-URI to the public service identity identifying the participating MCPTT function serving the group identity;

- 7) if the generated SIP MESSAGE request does not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body, shall set the MCPTT emergency alert state to "MEA 4: Emergency-alert-cancel-pending"; and
- 8) shall send the SIP MESSAGE request according to rules and procedures of 3GPP TS 24.229 [4].

On receipt of a SIP MESSAGE request containing an application/vnd.3gpp.mcptt-info+xml MIME body with an <alert-ind-rcvd> element set to true and an <mcptt-client-id> matching the MCPTT client ID included in the sent SIP MESSAGE request:

- if the <alert-ind> element is set to a value of "false" in the application/vnd.3gpp.mcptt-info+xml MIME body of the received SIP MESSAGE request and the sent SIP MESSAGE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body, shall:
  - a) set the MCPTT emergency alert state to "MEA 1: no-alert"; and
  - b) clear the MCPTT emergency state if not already cleared;
- 2) if the <alert-ind> element in the application/vnd.3gpp.mcptt-info+xml MIME body of the received SIP MESSAGE request is set to a value of "true" and if the MCPTT emergency alert state is set to "MEA 4: Emergency-alert-cancel-pending" and the sent SIP MESSAGE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body, shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated"; and
- NOTE 2: It would appear to be an unusual situation for the initiator of an MCPTT emergency alert to not be able to clear their own alert. Nevertheless, an MCPTT user can be configured to be authorised to initiate MCPTT emergency alerts but not have the authority to clear them. Hence, the case is covered here.
- 3) if an <emergency-ind> element is present in the application/vnd.3gpp.mcptt-info+xml MIME body of received SIP MESSAGE request and is set to a value of "false":
  - a) shall set the MCPTT emergency group call state of the group to "MEGC 1: emergency-gc-capable"; and
  - b) shall set the MCPTT emergency group state of the group to "MEG 1: no-emergency".
- NOTE 3: The case where an <emergency-ind> element is set to true is possible but not handled specifically above as it results in no state changes.

On receiving a SIP 4xx response, SIP 5xx response or SIP 6xx response to the sent SIP MESSAGE request:

- if the received SIP 4xx response, SIP 5xx response or SIP 6xx response contains an application/vnd.3gpp.mcpttinfo+xml MIME body as specified in clause F.1 with the <mcpttinfo> element containing the <mcptt-Params> element with the <alert-ind> element set to a value of "true", the sent SIP MESSAGE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body and the MCPTT emergency alert state is set to "MEA 4: Emergency-alert-cancel-pending", shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated"; and
- NOTE 4: In this case, an <emergency-ind> element would either not be present or would be set to true. In either case, no change in state would result. Hence, this case is not specified above.
- 2) if the received SIP 4xx response, SIP 5xx response or a SIP 6xx response to the SIP MESSAGE request does not contain an application/vnd.3gpp.mcptt-info+xml MIME body with an <alert-ind> element, the sent SIP MESSAGE request does not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body and the MCPTT emergency alert state is set to "MEA 4: Emergency-alert-cancel-pending", shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated".

## 6.1.1.15.3 Test description

6.1.1.15.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)

For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- GNSS simulator is activated and to report changed UE location coordinates, the simulator shall use OTDOA UE position technology as defined in 3GPP TS 36.509 [23].
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.1.15.3.2 Test procedure sequence

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the MCPPT User request the establishment of an emergency alert.	-	-	-	-
	Note: This is expected to be done via a suitable implementation dependent MMI

## 6.1.1.16 On-network / Emergency Alert / Client Terminated (CT)

## 6.1.1.16.1 Test Purpose (TP)

```
(1)
```

with { UE (MCPTT Client) registered and authorized for MCPTT Service}
ensure that {
 when { MCPTT Server notifies the UE (MCPTT client) with an emergency alert with the location of
 emergency by sending the UE (MCPTT Client) a SIP MESSAGE }
 then {UE (MCPTT client) acknowledges the emergency alert by sending a SIP 200 (OK) response and
 notifies the user of the emergency alert }
 }
}

(2)

with { UE (MCPTT Client) having been previously notified of an emergency alert}
ensure that {
 when { MCPTT Server sends an emergency alert cancellation to the UE (MCPTT client) }
 then {UE (MCPTT client) acknowledges the cancellation of the emergency state by sending a SIP
200 (OK) response and notifies the user of the cancellation }
 }

## 6.1.1.16.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clause 12.1.1.3. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated, these are Rel-13 requirements.

[TS24.379 clause 12.1.1.3]

Upon receipt of a "SIP MESSAGE request for emergency notification", the MCPTT client:

- 1) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <alert-ind> element set to a value of "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information, including:
  - a) the MCPTT group identity contained in <mcptt-calling-group-id> element application/vnd.3gpp.mcpttinfo+xml MIME body;

- b) the originator of the MCPTT emergency alert contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
- c) the mission critical organization of the MCPTT emergency alert originator contained in the <mc-org> element of the application/vnd.3gpp.mcptt-info+xml MIME body;

NOTE 1: This is the case of the MCPTT client receiving the notification of another MCPTT user's emergency alert.

- 2) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <alert-ind> element set to a value of "false":
  - a) should display to the MCPTT user an indication of the MCPTT emergency alert cancellation and associated information, including:
    - i) the MCPTT group identity contained in the <mcptt-calling-group-id> element application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) the originator of the MCPTT emergency alert contained in:
      - A) if present, the <originated-by> element of the application/vnd.3gpp.mcptt-info+xml MIME body; or
      - B) the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
  - b) if the MCPTT ID contained in the <originated-by> element is the MCPTT ID of the receiving MCPTT user, shall set the MCPTT emergency alert state to "MEA 1: no-alert"; and
  - c) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <emergency-ind> element set to a value of "false":
    - i) shall set the MCPTT emergency group state to "MEG 1: no-emergency"; and
    - ii) shall set the MCPTT emergency group call state to "MEGC 1: emergency-gc-capable";
- NOTE 2: This is the case of the MCPTT client receiving the notification of the cancellation by a third party of an MCPTT emergency alert. This can be the MCPTT emergency alert of another MCPTT user or the MCPTT emergency alert of the recipient, as determined by the contents of the <originated-by> element. Optionally, notification of the cancellation of the in-progress emergency state of the MCPTT group can be included.
- 3) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication of the additional emergency MCPTT user participating in the MCPTT emergency group call including the following if not already displayed as part of step 1):
    - i) the MCPTT group identity contained in the <mcptt-calling-group-id> element application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
  - b) shall set the MCPTT emergency group state to "MEG 2: in-progress" if not already set to that value;
- NOTE 3: This is the case of the MCPTT client receiving notification of an additional MCPTT user in an MCPTT emergency state (i.e., not the MCPTT user that originally triggered the in-progress emergency state of the group) joining the in-progress emergency group call. An emergency alert indication, if included, is handled in step 1).
- 4) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <emergency-ind> element set to a value of "false":
  - a) should display to the MCPTT user an indication of the cancellation of the in-progress emergency state of the MCPTT group call including the following if not already displayed as part of step 2):
    - i) the MCPTT group identity contained in the <mcptt-calling-group-id> element application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;

- b) shall set the MCPTT emergency group state to "MEG 1: no-emergency"; and
- c) shall set the MCPTT emergency group call state to "MEGC 1: emergency-gc-capable";
- NOTE 4: This is the case of the MCPTT client receiving the notification of the cancellation of the in-progress emergency state of the MCPTT group. In this case, the receiving MCPTT client is affiliated with the MCPTT group but not participating in the session. An emergency alert cancellation, if included, is handled in step 2).
- 5) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication of the MCPTT user participating in the MCPTT imminent peril group call including the following if not already displayed as part of step 1):
    - i) the MCPTT group identity contained in the <mcptt-calling-group-id> element application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress" if not already set to that value;
- NOTE 5: This is the case of the MCPTT client receiving notification of an additional MCPTT user initiating an imminent peril group call when there is already an in-progress imminent peril state in effect on the group.
- 6) if the received SIP MESSAGE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <imminentperil-ind> element set to a value of "false":
  - a) should display to the MCPTT user an indication of the cancellation of the in-progress imminent peril state of the MCPTT group including the following if not already displayed as part of step 2):
    - i) the MCPTT group identity contained in the <mcptt-calling-group-id> element application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
  - b) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - c) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable";
- NOTE 6: This is the case of the MCPTT client receiving notification of the cancellation of the in-progress imminent peril state of the group.
- 7) shall generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4]; and
- 8) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4].
- 6.1.1.16.3 Test description
- 6.1.1.16.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)

- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- GNSS simulator is activated and to report changed UE location coordinates, the simulator shall use OTDOA UE position technology as defined in 3GPP TS 36.509 [23].
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.1.16.3.2 Test procedure sequence

## 6.1.2 Chat Group Calls

### 6.1.2.1 On-network / On-demand Chat Group Call / Client Origination (CO)

#### 6.1.2.1.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service } ensure that {

when { the MCPTT User requests the establishment of an on-demand MCPTT group session using an
MCPTT group identity identifying an chat MCPTT group }

then { UE (MCPTT Client) requests to join the Chat Group Call by generating a SIP INVITE message
and, after indication from the MCPTT Server that the join request has been accepted, the UE (MCPTT
Client) generates a FLOOR REQUEST, and after indication from the MCPTT server that the Floor is
granted, the user can participate in the group call }

(2)

with { UE (MCPTT Client) having established an on-demand Chat Group Call }
ensure that {
 when { the MCPTT User (MCPTT Client) requests to leave the Chat Group Call }
 then { UE (MCPTT Client) requests to leave the chat group call by sending a Floor Release and,
 after indication from the MCPTT server that the Floor Release is accepted, the UE leaves the Chat
 Group Call }

(3)

with { UE (MCPTT Client) registered and authorised for MCPTT Services }
ensure that {
 when { the MCPTT User (MCPTT Client) requests the origination of an emergency group call }
 then { UE (MCPTT Client) requests the set up and is able to join an emergency group call, or if
 unauthorised indicates to the user that they are not authorised to set up emergency calls and no
 call is set up }

(4)

}

with { UE (MCPTT Client) having established an on-demand Chat Group Call }
ensure that {
 when { the MCPTT User (MCPTT Client) requests the origination of an imminent peril group call }
 then { UE (MCPTT Client) requests the set up and is able to join an imminent peril group call,
 or if unauthorised indicates to the user that they are not authorised to set up imminent peril calls
 and no call is set up }
 }
}

(5)

with { UE (MCPTT Client) having established an on-demand Chat Group Call }
ensure that {
 when { the UE (MCPTT Client) wishes to leave the MCPTT session }

then { UE (MCPTT Client) initiates leaving by sending a SIP INVITE and leaves the call  $\ \}$  }

## 6.1.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.4.1, 10.1.2.2.1.1, 10.1.2.2.1.2, 10.1.2.2.1.3, 10.1.2.2.1.4, 10.1.2.2.1.5, 10.1.2.2.3.1 and 10.1.2.2.3.3. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379 clause 6.2.4.1]

Upon receiving a request from an MCPTT user to leave an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to leave; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379 clause 10.1.2.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT group session using an MCPTT group identity, identifying a chat MCPTT group, the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT chat group call and the MCPTT emergency state is already set, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.1;
- 2) if the MCPTT user has requested the origination of an MCPTT imminent peril group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.9;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 4) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 5) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 6) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 7) should include the "timer" option tag in the Supported header field;
- 8) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the refresher parameter is omitted. If included, the refresher parameter shall be set to "uac";
- 9) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 10)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

•••

- 13) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "chat";
  - b) the <mcptt-request-uri> element set to the group identity; and
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;
- NOTE 2: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP INVITE request that is sent by the originating participating MCPTT function.
- 14) shall include in the SIP INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- 15) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 16) shall send the SIP INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and

[TS 24.379 clause 10.1.2.2.1.2]

This subclause covers both on-demand session and pre-established sessions.

Upon receipt of a SIP re-INVITE request the MCPTT client:

- if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user the MCPTT ID of the originator of the MCPTT emergency group call and an indication that this is an MCPTT emergency group call;
  - b) if the <mcpttinfo> element containing the <mcptt-Params> element contains an <alert-ind> element set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - c) shall set the MCPTT emergency group state to "MEG 2: in-progress";
  - d) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - e) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable";
- 2) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user the MCPTT ID of the originator of the MCPTT imminent peril group call and an indication that this is an MCPTT imminent peril group call; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";
- 3) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "false":
  - a) should display to the MCPTT user the MCPTT ID of the MCPTT user cancelling the MCPTT emergency group call;
  - b) if the <mcpttinfo> element containing the <mcptt-Params> element contains an <alert-ind> element set to "false":
    - i) should display to the MCPTT user an indication of the MCPTT emergency alert cancellation and the MCPTT ID of the MCPTT user cancelling the MCPTT emergency alert; and

- ii) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body including an <originated-by> element:
  - A) should display to the MCPTT user the MCPTT ID contained in the <originated-by> element of the MCPTT user that originated the MCPTT emergency alert; and
  - B) if the MCPTT ID contained in the <originated-by> element is the MCPTT ID of the receiving MCPTT user, shall set the MCPTT emergency alert state to "MEA 1: no-alert";
- c) shall set the MCPTT emergency group state to "MEG 1: no-emergency"; and
- d) if the MCPTT emergency group call state of the group is set to "MEGC 3: emergency-call-granted", shall set the MCPTT emergency group call state of the group to "MEGC 1: emergency-gc-capable";
- 4) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "false":
  - a) should display to the MCPTT user the MCPTT ID of the MCPTT user cancelling the MCPTT imminent peril group call and an indication that this is an MCPTT imminent peril group call;
  - b) shall set the MCPTT imminent peril group state to "MIG 1: no-imminent-peril"; and
  - c) shall set the MCPTT imminent peril group call state to "MIGC 1: imminent-peril-gc-capable";
- 5) may check if a Resource-Priority header field is included in the incoming SIP re-INVITE request and may perform further actions outside the scope of this specification to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) shall accept the SIP re-INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 8) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 9) if the SIP re-INVITE request was received within an on-demand session, shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- 10)if the SIP re-INVITE request was received within a pre-established session, shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the pre-established session; and
- NOTE: The SIP re-INVITE request can be received within an on-demand session or a pre-established session associated with an MCPTT group session. If the SIP re-INVITE request is received within a pre-established session, the media-level section for the MCPTT speech media stream and the media-level section of the media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 11) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4].

[TS 24.379 10.1.2.2.1.3]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to cancel the in-progress emergency condition on a chat MCPTT group, the MCPTT client shall generate a SIP re-INVITE request as specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) if the MCPTT user is not authorised to cancel the in-progress emergency group state of the MCPTT group as determined by the procedures of subclause 6.2.8.1.7, the MCPTT client:

- a) should indicate to the MCPTT user that they are not authorised to cancel the in-progress emergency group state of the MCPTT group; and
- b) shall skip the remaining steps of the current subclause;
- shall, if the MCPTT user is cancelling an in-progress emergency condition and optionally an MCPTT emergency alert originated by the MCPTT user, include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.3;
- shall, if the MCPTT user is cancelling an in-progress emergency condition and optionally an MCPTT emergency alert originated by another MCPTT user, include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.14;
- 4) shall, if the SIP re-INVITE request is to be sent within an on-demand session, include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- 5) if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the pre-established session;
- NOTE 1: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session associated with an MCPTT group session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the MCPTT speech media stream and the media-level section of the media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 6) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2; and
- 7) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request, the MCPTT client:

- 1) shall set the MCPTT emergency group state of the group to "MEG 1: no-emergency";
- 2) shall set the MCPTT emergency group call state of the group to "MEGC 1: emergency-gc-capable"; and
- 3) if the MCPTT emergency alert state is set to "MEA 4: Emergency-alert-cancel-pending", the sent SIP re-INVITE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body and the SIP 2xx response to the SIP request for a priority group call does not contain a Warning header field as specified in subclause 4.4 with the warning text containing the mcptt-warn-code set to "149", shall set the MCPTT emergency alert state to "MEA 1: no-alert".

On receiving a SIP 4xx response, SIP 5xx response or SIP 6xx response to the SIP re-INVITE request:

- 1) shall set the MCPTT emergency group state as "MEG 2: in-progress";
- 2) if the SIP 4xx response, SIP 5xx response or SIP 6xx response contains an application/vnd.3gpp.mcptt-info+xml MIME body with an <alert-ind> element set to a value of "true" and the sent SIP re-INVITE request did not contain an <originated-by> element in the application/vnd.3gpp.mcptt-info+xml MIME body, the MCPTT client shall set the MCPTT emergency alert state to "MEA 3: emergency-alert-initiated"; and
- 3) if the SIP 4xx response, SIP 5xx response or SIP 6xx response did not contain an application/vnd.3gpp.mcpttinfo+xml MIME body with an <alert-ind> element and did not contain an <originated-by> element, the MCPTT emergency alert (MEA) state shall revert to its value prior to entering the current procedure.
- NOTE 3: If the in-progress emergency group state cancel request is rejected, the state of the session does not change, i.e. continues with MCPTT emergency group call level priority.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

[TS 24.379 10.1.2.2.1.4]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to upgrade the MCPTT group session to an emergency condition or an imminent peril condition on a chat MCPTT group, the MCPTT client shall generate a SIP re-INVITE request as specified in 3GPP TS 24.229 [4], with the clarifications given below.

- 1) if the MCPTT user is requesting to upgrade the MCPTT group session to an in-progress emergency group state and is not authorised to do so as determined by the procedures of subclause 6.2.8.1.8, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to upgrade the MCPTT group session to an in-progress emergency group state; and
  - b) shall skip the remaining steps of the current subclause;
- 2) if the MCPTT user is requesting to upgrade the MCPTT group session to an in-progress imminent peril state and is not authorised to do so as determined by the procedures of subclause 6.2.8.1.8, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to upgrade the MCPTT group session to an in-progress imminent peril group state; and
  - b) shall skip the remaining steps of the current subclause;
- 3) if the MCPTT user has requested to upgrade the MCPTT group session to an MCPTT emergency call, the MCPTT client:
  - a) shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.1; and
  - b) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2.
- 4) if the MCPTT user has requested to upgrade the MCPTT group session to an MCPTT imminent peril call, the MCPTT client:
  - a) shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.9; and
  - b) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 5) if the SIP re-INVITE request is to be sent within an on-demand session, shall include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the preestablished session;
- NOTE: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session associated with an MCPTT group session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 7) if an implicit floor request is required, shall indicate this as specified in subclause 6.4;
- 8) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.2; and
- 9) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall perform the actions specified in subclause 6.2.8.1.4.

On receiving a SIP 4xx response, SIP 5xx response or SIP 6xx response to the SIP re-INVITE request the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

[TS 24.379 10.1.2.2.1.5]

This subclause covers both on-demand session and pre-established sessions.

Upon receiving a request from an MCPTT user to cancel the in-progress imminent peril condition on a chat MCPTT group, the MCPTT client shall generate a SIP re-INVITE request by following the procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- 1) if the MCPTT user is not authorised to cancel the in-progress imminent peril group state of the MCPTT group as determined by the procedures of subclause 6.2.8.1.10, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to cancel the in-progress imminent peril group state of the MCPTT group; and
  - b) shall skip the remaining steps of the current subclause;
- shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.1.11;
- 3) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;
- 4) shall include in the application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "chat"; and
  - b) the <mcptt-request-uri> element set to the group identity;
- NOTE 1: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP re-INVITE request that is sent by the originating participating MCPTT function.
- 5) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP re-INVITE request according to IETF RFC 3840 [16];
- 6) if the SIP re-INVITE request is to be sent within an on-demand session, shall include in the SIP re-INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- if the SIP re-INVITE request is to be sent within a pre-established session, shall include an SDP offer in the SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the preestablished session; and
- NOTE 2: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session associated with an MCPTT group session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 8) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) shall set the MCPTT imminent peril group state of the group to "MIG 1: no-imminent-peril"; and
- 3) shall set the MCPTT imminent peril group call state of the group to "MIGC 1: imminent-peril-gc-capable".

On receiving a SIP 4xx response, SIP 5xx response or SIP 6xx response to the SIP re-INVITE request:

- 1) if the SIP 4xx response, SIP 5xx response or SIP 6xx response:
  - a) contains an application/vnd.3gpp.mcptt-info+xml MIME body with an <imminentperil-ind> element set to a value of "true"; or
  - b) does not contain an application/vnd.3gpp.mcptt-info+xml MIME body with an <imminentperil-ind> element;

then the MCPTT client shall set the MCPTT imminent peril group state as "MIG 2: in-progress".

NOTE 2: This is the case where the MCPTT client requested the cancellation of the MCPTT imminent peril inprogress state and was rejected.

[TS 24.379 clause 10.1.2.2.3.1]

When an MCPTT client wants to leave the MCPTT session that has been established using on-demand session, the MCPTT client shall follow the procedures as specified in subclause 6.2.4.1.

[TS 24.379 clause 10.1.2.2.3.3]

Upon receiving a SIP BYE request for releasing the MCPTT chat session, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

#### 6.1.2.1.3 Test description

6.1.2.1.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server).
- E-UTRA related parameters are set to the default parameters for the basic single cell environment, as defined in TS 36.508 [6] subclause 4.4.

#### IUT:

- UE (MCPTT client) has been provisioned with the Initial UE Configuration Data as specified in TS 36.579-1 [2], subclause 5.5.8.1 allowing for the location of the configuration management server for configuration of the MCPTT UE initial configuration management object (MO) and the default MCPTT user profile configuration management object (MO).
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2] subclause 5.3.2.
- UE States at the end of the preamble:
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and user has registered-in as the MCPTT User with the Server as active user at the client.

6.1.2.1.3.2 Test procedure sequence

6.1.2.2 On-network / Chat Group Call Using Pre-established Session Including Emergency and Imminent Peril Calls / Client Server originated Preestablished Session Release with associated MCPTT session / Client Origination (CO)

#### 6.1.2.2.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {
 when { the MCPTT User requests the establishment of an MCPTT group session using an MCPTT group
 identity identifying a chat MCPTT group that is within a pre-established session}

then { UE (MCPTT Client) requests to join the Chat Group Call within a pre-established session
by generating a SIP REFER message and, after indication from the MCPTT Server that the join request
has been accepted, the user can participate in the group call }

(2)

with { UE (MCPTT Client) having established a Chat Group Call within a pre-established session } ensure that {

when { the MCPTT User (MCPTT Client) requests the origination of an emergency group call }
 then { UE (MCPTT Client) requests the set up and is able to join an emergency group call, or if
 unauthorised indicates to the user that they are not authorised to set up emergency calls and no
 call is set up }

(3)

}

with { UE (MCPTT Client) having established a Chat Group Call within a pre-established session } ensure that {

when { the MCPTT User (MCPTT Client) requests the origination of an imminent peril group call }
 then { UE (MCPTT Client) requests the set up and is able to join an imminent peril group call,
 or if unauthorised indicates to the user that they are not authorised to set up imminent peril calls
 and no call is set up }
 }

```
(4)
```

```
with { UE (MCPTT Client) having established a Chat Group Call within a pre-established session }
ensure that {
   when { the UE (MCPTT Client) wishes to leave the MCPTT session within a pre-established session }
   then { UE (MCPTT Client) initiates leaving by sending a SIP REFER and leaves the call }
   }
}
```

#### 6.1.2.2.2 Conformance Requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 4.9, 6.2.4.2, 10.1.2.2.2, 10.1.2.2.3.2. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 4.9]

When establishing a pre-established session, the MCPTT client negotiates the media parameters, including establishing IP addresses and ports using interactive connectivity establishment (ICE) as specified in IETF RFC 5245 with the participating MCPTT function, prior to using the pre-established session for establishing MCPTT sessions with other MCPTT users.

The pre-established session can later be used in MCPTT calls. This avoids the need to negotiate media parameters (including evaluating ICE candidates) and reserving bearer resources during the MCPTT call establishment that results in delayed MCPTT call establishment.

The use of pre-established session on the origination side is compatible with the use of on demand session on the termination side. The use of pre-established session on the termination side is compatible with the use of on demand session on the origination side.

#### [TS 24.379, clause 10.1.2.2.2]

Upon receiving a request from an MCPTT user to establish an MCPTT group session using an MCPTT group identity identifying a chat MCPTT group within the pre-established session, the MCPTT client shall generate a SIP REFER request as specified in IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27], and in accordance with the UE procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

#### The MCPTT client:

- 1) shall set the Request URI of the SIP REFER request to the session identity of the pre-established session;
- 2) shall set the Refer-To header field of the SIP REFER request as specified in IETF RFC 3515 [25] with a Content-ID ("cid") Uniform Resource Locator (URL) as specified in IETF RFC 2392 [62] that points to an application/resource-lists MIME body as specified in IETF RFC 5366 [20], and with the Content-ID header field set to this "cid" URL;
- 3) shall include in the application/resource-lists MIME body a single <entry> element containing a "uri" attribute set to the chat group identity, extended with the following URI header fields:
- NOTE: Characters that are not formatted as ASCII characters are escaped in the following URI header fields;
  - a) the Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
  - b) an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6]; and
  - c) an hname "body" URI header field populated with:
    - i) an application/sdp MIME body containing an SDP offer, if the session parameters of the pre-established session require modification or if implicit floor control is required, according to the conditions specified in subclause 6.4; and
    - ii) an application/vnd.3gpp.mcptt-info MIME body with:
      - A) the <session-type> element set to a value of "chat"; and
      - B) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;

- 4) if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT group call and the MCPTT emergency state is already set:
  - a) if this is an authorised request for an MCPTT emergency group call as determined by the procedures of subclause 6.2.8.8.1.8, shall comply with the procedures in subclause 6.2.8.1.1; and
  - b) if this is an unauthorised request for an MCPTT emergency group call as determined in step a) above, should indicate to the MCPTT user that they are not authorised to initiate an MCPTT emergency group call;

•••

- 6) if the MCPTT user has requested the origination of an MCPTT imminent peril group call:
  - a) if this is an authorised request for an MCPTT imminent peril group call as determined by the procedures of subclause 6.2.8.1.8, shall comply with the procedures in subclause 6.2.8.1.9;
  - b) if this is an unauthorised request for an MCPTT imminent peril group call as determined in step a) above, should indicate to the MCPTT user that they are not authorised to initiate an MCPTT imminent peril group call;

•••

- 8) shall include a P-Preferred-Service header field set to the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), according to IETF RFC 6050 [9];
- 9) shall include the following according to IETF RFC 4488 [22]:
  - a) the option tag "norefersub" in the Supported header field; and
  - b) the value "false" in the Refer-Sub header field.
- 10) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session;
- 11) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP REFER request according to IETF RFC 3840 [16]; and
- 12) shall send the SIP REFER request according to 3GPP TS 24.229 [4].

On receiving a final SIP 2xx response to the SIP REFER request, the MCPTT client:

1) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

On receiving a SIP 4xx response, SIP 5xx response or a SIP 6xx response to the SIP REFER request:

- if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or
- 2) if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5 and shall skip the remaining steps.

On receiving a SIP re-INVITE request within the pre-established session targeted by the sent SIP REFER request, and if the sent SIP REFER request was a request for an MCPTT emergency group call or an MCPTT imminent peril group call, the MCPTT client:

- 1) shall perform the actions specified in subclause 6.2.8.1.16;
- 2) shall check if a Resource-Priority header field is included in the incoming SIP re-INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 3) shall accept the SIP re-INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];

- shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP re-INVITE request according to 3GPP TS 24.229 [4], based upon the parameters already negotiated for the pre-established session; and
- 5) shall send the SIP 200 (OK) response towards the participating MCPTT function according to rules and procedures of 3GPP TS 24.229 [4].

On call release by interaction with the media plane as specified in subclause 9.2.2 of 3GPP TS 24.380 [5] if the sent SIP REFER request was a request for an MCPTT emergency group call or an MCPTT imminent peril group call, the MCPTT client shall perform the procedures specified in subclause 6.2.8.1.17.

[TS 24.379, clause 6.2.4.2]

Upon receiving a request from an MCPTT user to leave an MCPTT session within a pre-established session, the MCPTT client:

•••

- shall generate an initial SIP REFER request outside a dialog in accordance with the procedures specified in 3GPP TS 24.229 [4], IETF RFC 4488 [22] and IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27];
- 3) shall set the Request-URI of the SIP REFER request to the public service identity identifying the pre-established session on the MCPTT server serving the MCPTT user;
- 4) shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- 5) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22];
- 6) shall set the Refer-To header field of the SIP REFER request to the MCPTT session identity to leave;
- 7) shall include the "method" SIP URI parameter with the value "BYE" in the URI in the Refer-To header field;
- 8) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session; and
- 9) shall send the SIP REFER request according to 3GPP TS 24.229 [4].

[TS 24.379, clause 10.1.2.2.3.2]

When an MCPTT client wants to leave the MCPTT session within a pre-established session, the MCPTT client shall follow the procedures as specified in subclause 6.2.4.2.

#### 6.1.2.2.3 Test description

6.1.2.2.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

# IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10, is inserted.

Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The MCPTT client has followed the steps defined in TS 36.579-1 [2], subclause 5.3.3 Generic Test Procedure for MCPTT pre-established session establishment CO.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.2.2.3.2 Test procedure sequence

# Table 6.1.2.2.3.2-1: Main behaviour

St	Procedure	Procedure Message Sequence		TP	Verdict	
		U - S	Message			
1	Make the UE user initiate a chat group call	-	-	-	-	
	over the pre-established session.

# 6.1.2.3.1 Test Purpose (TP)

(1)

```
with { UE (MCPTT Client) being part of an ongoing chat group call }
ensure that {
   when { the MCPTT user disconnects and later reconnects to the ongoing chat group call }
    then { UE (MCPTT Client) performs a late entry to the chat group call }
    }
}
```

(2)

```
with { UE (MCPTT Client) having joined an ongoing chat group call via late entry }
ensure that {
  when { the chat group call is ended by the originator }
    then { UE (MCPTT Client) leaves the group call and notifies the user }
    }
}
```

#### 6.1.2.3.2 Conformance Requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 10.1.2.2.1.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.6]

Upon receipt of an initial SIP INVITE request, the MCPTT client:

•••

- 6) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 8) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;

- 9) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 10) shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. If no "refresher" parameter was included in the received SIP INVITE request the "refresher" parameter in the Session-Expires header field shall be set to "uas", otherwise shall include a "refresher" parameter set to the value received in the Session-Expires header field the received SIP INVITE request;
- 11) shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- 12) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and
- 13) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

#### 6.1.2.3.3 Test description

6.1.2.3.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10, is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.1.2.3.3.2

Test procedure sequence

St	Procedure Message Sequence		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the UE user initiate a chat group call.	-	-	-	-
	NOTE: This is expected to be done via a				
	suitable implementation dependent				
	mechanism and may be manually or				
	automatically initiated.				
-	EXCEPTION: The E-UTRA/EPC related	-	-	-	-

   identifying a chat MCPTT group that the user is not allowed to join}
      then { UE (MCPTT Client) requests to join the Chat Group Call by generating SIP INVITE message
   and, after indication from the MCPTT Server that the join request has been rejected, the user is not
   allowed to participate in the chat group call }
   }
}
```

# 6.1.2.4.2 Conformance Requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 10.1.2.2.1.1, 10.1.2.3.1.1, 10.1.2.4.1.1. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.1]

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

- 1) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or
- if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

[TS 24.379, clause 10.1.2.3.1.1]

3) if through local policy in the originating participating MCPTT function, the user identified by the MCPTT ID is not authorised to make chat group calls, shall reject the "SIP INVITE request for originating participating MCPTT function" with a SIP 403 (Forbidden) response to the SIP INVITE request, with warning text set to "108 user not authorised to make chat group calls" in a Warning header field as specified in subclause 4.4;

[TS 24.379, clause 10.1.2.4.1.1]

- 5) if the MCPTT user identified by the MCPTT ID in the SIP INVITE request is not affiliated with the MCPTT group identified by the group identity in the SIP INVITE request as determined by the procedures of subclause 6.3.6:
  - a) shall check if the MCPTT user is eligible to be implicitly affiliated with the MCPTT chat group as determined by subclause 9.2.2.3.6; and
  - b) if the MCPTT user is not eligible for implicit affiliation, shall reject the SIP INVITE request with a SIP 403 (Forbidden) response with the warning text set to "120 user is not affiliated to this group" in a Warning header field as specified in subclause 4.4 and skip the rest of the steps below;

#### 6.1.2.4.3 Test description

#### 6.1.2.4.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10, is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.1.2.5 On-network / Chat Group Broadcast Group Call / Client Originated (CO)

6.1.2.5.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {
 when { the MCPTT User requests the establishment of an MCPTT On-demand Chat Group Call }
 then { UE (MCPTT Client) requests Chat Group Call by sending a SIP INVITE message and sending a
 GROUP CALL REQUEST message to setup the Chat Group Call }
 }

# 6.1.2.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.1]

Upon receiving a request from an MCPTT user to initiate or join an MCPTT group session using an MCPTT group identity, identifying a chat MCPTT group, the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

•••

- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 4) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 5) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 6) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 7) should include the "timer" option tag in the Supported header field;

- 8) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the refresher parameter is omitted. If included, the refresher parameter shall be set to "uac";
- 9) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 10)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

•••

- 13) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "chat";
  - b) the <mcptt-request-uri> element set to the group identity; and
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;
- NOTE 2: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP INVITE request that is sent by the originating participating MCPTT function.
- 14) shall include in the SIP INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;

15) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and

16) shall send the SIP INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and

•••

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

- 6.1.2.5.3 Test description
- 6.1.2.5.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)

# 6.1.2.6 On-network / Chat Group Broadcast Group Call / Client Terminated (CT)

# 6.1.2.6.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }
ensure that {
 when { the MCPTT Client receives a SIP INVITE message of an On-demand MCPTT Chat Group Broadcast
Group Call }
 then { the MCPTT Client displays an indication for the On-demand MCPTT chat group call to the
user and sends a SIP 200 OK as a response to the SIP INVITE message }

}

## 6.1.2.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.6. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.6]

Upon receipt of an initial SIP INVITE request, the MCPTT client:

•••

- 5) shall check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 8) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 9) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 10) shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. If no "refresher" parameter was included in the received SIP INVITE request the "refresher" parameter in the Session-Expires header field shall be set to "uas", otherwise shall include a "refresher" parameter set to the value received in the Session-Expires header field the received SIP INVITE request;
- 11) shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;

- 12) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and
- 13) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

#### 6.1.2.7 On-network / Chat Group Emergency Group Call / Client Originated (CO)

#### 6.1.2.7.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service } ensure that { when  $\{$  the MCPTT User requests the establishment of an MCPTT On-demand Chat Group Emergency Group Call } then { UE (MCPTT Client) requests Chat Group Emergency Group Call by sending a SIP INVITE message and sending a GROUP CALL REQUEST message to setup the Chat Group Emergency Group Call }

}

#### 6.1.2.7.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.1]

Upon receiving a request from an MCPTT user to initiate or join an MCPTT group session using an MCPTT group identity, identifying a chat MCPTT group, the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) if the MCPTT user has requested the origination of an MCPTT emergency group call or is originating an MCPTT chat group call and the MCPTT emergency state is already set, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.1;

•••

- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 4) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 5) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 6) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 7) should include the "timer" option tag in the Supported header field;
- 8) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the refresher parameter is omitted. If included, the refresher parameter shall be set to "uac";
- 9) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 10)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 11) if the MCPTT client emergency group state for this group is set to "MEG 2: in-progress" or "MEG 4: confirmpending", the MCPTT client shall comply with the procedures in subclause 6.2.8.1.2;

•••

- 13) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "chat";
  - b) the <mcptt-request-uri> element set to the group identity; and
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;
- NOTE 2: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP INVITE request that is sent by the originating participating MCPTT function.
- 14) shall include in the SIP INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- 15) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 16) shall send the SIP INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and

2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

1) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted"; or

•••

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

- 6.1.2.7.3 Test description
- 6.1.2.7.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.

# 6.1.2.8.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.6. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.6]

This procedure is used for MCPTT emergency and MCPTT imminent peril calls when the MCPTT client is affiliated but not joined to the chat group.

In the procedures in this subclause:

1) emergency indication in an incoming SIP INVITE request refers to the <emergency-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and

•••

Upon receipt of an initial SIP INVITE request, the MCPTT client:

•••

- 3) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body;
    - ii) should display the MCPTT group identity of the group with the emergency condition contained in the <mcptt-calling-group-id> element; and
    - iii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information;
  - b) shall set the MCPTT emergency group state to "MEG 2: in-progress";

•••

- 6) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;

- 8) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 9) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 10) shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. If no "refresher" parameter was included in the received SIP INVITE request the "refresher" parameter in the Session-Expires header field shall be set to "uas", otherwise shall include a "refresher" parameter set to the value received in the Session-Expires header field the received SIP INVITE request;
- 11) shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- 12) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and
- 13) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

# 6.1.2.8.3 Test description

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

  Call }
  }

### 6.1.2.9.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.1. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 10.1.2.2.1.1]

Upon receiving a request from an MCPTT user to initiate or join an MCPTT group session using an MCPTT group identity, identifying a chat MCPTT group, the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

•••

- 2) if the MCPTT user has requested the origination of an MCPTT imminent peril group call, the MCPTT client shall comply with the procedures in subclause 6.2.8.1.9;
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 4) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 5) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- 6) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 7) should include the "timer" option tag in the Supported header field;
- 8) should include the Session-Expires header field according to IETF RFC 4028 [7]. It is recommended that the refresher parameter is omitted. If included, the refresher parameter shall be set to "uac";
- 9) shall set the Request-URI of the SIP INVITE request to the public service identity identifying the participating MCPTT function serving the MCPTT user;
- NOTE 1: The MCPTT client is configured with public service identity identifying the participating MCPTT function serving the MCPTT user.
- 10)may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];

• • •

12) if the MCPTT client imminent peril group state for this group is set to "MIG 2: in-progress" or "MIG 4: confirmpending" shall include the Resource-Priority header field and comply with the procedures in subclause 6.2.8.1.12;

- 13) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with:
  - a) the <session-type> element set to a value of "chat";
  - b) the <mcptt-request-uri> element set to the group identity; and
  - c) the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client;
- NOTE 2: The MCPTT ID of the originating MCPTT user is not included in the body, as this will be inserted into the body of the SIP INVITE request that is sent by the originating participating MCPTT function.
- 14) shall include in the SIP INVITE request an SDP offer according to 3GPP TS 24.229 [4] with the clarifications specified in subclause 6.2.1;
- 15) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 16) shall send the SIP INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and
- 2) if the MCPTT emergency group call state is set to "MEGC 2: emergency-call-requested" or "MEGC 3: emergency-call-granted" or the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-callrequested" or "MIGC 3: imminent-peril-call-granted", the MCPTT client shall perform the actions specified in subclause 6.2.8.1.4.

On receiving a SIP 4xx response, a SIP 5xx response or a SIP 6xx response to the SIP INVITE request:

•••

2) if the MCPTT imminent peril group call state is set to "MIGC 2: imminent-peril-call-requested" or "MIGC 3: imminent-peril-call-granted";

the MCPTT client shall perform the actions specified in subclause 6.2.8.1.5.

On receiving a SIP INFO request where the Request-URI contains an MCPTT session ID identifying an ongoing group session, the MCPTT client shall follow the actions specified in subclause 6.2.8.1.13.

6.1.2.9.3 Test description

## 6.1.2.9.3.1 Pre-test conditions

## System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.1.2.10 On-network Chat Group Imminent Peril Group Call / Client Terminated (CT)

## 6.1.2.10.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service }

ensure that {

when { the MCPTT Client receives a SIP INVITE message of an On-demand MCPTT Chat Group Imminent
Peril Group Call }

then { the MCPTT Client displays an indication for the On-demand MCPTT chat group imminent peril
group call to the user and sends a SIP 200 OK as a response to the SIP INVITE message }
}

## 6.1.2.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 24.379, clause 10.1.2.2.1.6. Unless otherwise stated, these are Rel-13 requirements.

### [TS 24.379, clause 10.1.2.2.1.6]

This procedure is used for MCPTT emergency and MCPTT imminent peril calls when the MCPTT client is affiliated but not joined to the chat group.

In the procedures in this subclause:

•••

2) imminent peril indication in an incoming SIP INVITE request refers to the <imminentperil-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body.

Upon receipt of an initial SIP INVITE request, the MCPTT client:

...

- 4) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <imminentperil-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT imminent peril group call and:
    - i) should display the MCPTT ID of the originator of the MCPTT imminent peril group call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) should display the MCPTT group identity of the group with the imminent peril condition contained in the <mcptt-calling-group-id> element; and
  - b) shall set the MCPTT imminent peril group state to "MIG 2: in-progress";

- 5) shall check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 7) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 8) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 9) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- 10) shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. If no "refresher" parameter was included in the received SIP INVITE request the "refresher" parameter in the Session-Expires header field shall be set to "uas", otherwise shall include a "refresher" parameter set to the value received in the Session-Expires header field the received SIP INVITE request;
- 11) shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- 12) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and

13) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

## 6.1.2.10.3 Test description

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

### 6.1.2.10.3.2

# 6.2 Private Calls

6.2.1 On-network / Private Call / On-demand / Automatic Commencement Mode / With Floor Control / Upgrade to Emergency Call / Cancellation of Emergency on User request / Client Originated (CO)

# 6.2.1.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement } ensure that {

when { the MCPTT User requests the establishment of an MCPTT private call, on-demand Automatic Commencement Mode, no Force of automatic commencement, applying End-to-end communication security with Floor Control }

then { UE (MCPTT Client) sends a SIP INVITE message requesting private call on-demand Automatic Commencement Mode, applying End-to-end communication security, and offering a media-level section for a media-floor control entity, and, after indication from the MCPTT Server that the call was established notifies the user } }

### (2)

with { UE (MCPTT Client) having established an MCPTT private call, on-demand Automatic Commencement
Mode with Floor Control }
ensure that {
 when { the MCPTT User engages in communication with the invited MCPTT User }

then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server (Floor
granting/release/deny) applying Floor Control confidentiality and integrity protection }
}

#### (3)

with { UE (MCPTT Client) having established an MCPTT private call, on-demand Automatic Commencement Mode with Floor Control }

#### ensure that $\{$

when { the MCPTT User wants to upgrade the ongoing MCPTT private call to an MCPTT emergency private call with floor control }

then { UE (MCPTT Client) sends a SIP re-INVITE message requesting private emergency call ondemand Automatic Commencement Mode offering a media-level section for a media-floor control entity, and, upon receipt of a SIP 200 (OK) response considers the call as being upgraded to emergency private call (emergency private call state = "MEPC 3: emergency-pc-granted") } }

#### (4)

with { UE (MCPTT Client) having upgraded an MCPTT private call, on-demand Automatic Commencement Mode with Floor Control to emergency private call with floor control } ensure that {

when { the MCPTT User engages in communication with the invited MCPTT User }

then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server including
override of the invited MCPTT user (who is not in MCPTT emergency state) and applying Floor Control
confidentiality and integrity protection }
}

(5)

with { UE (MCPTT Client) having upgraded an MCPTT private call, on-demand Automatic Commencement Mode with Floor Control to emergency private call with floor control } ensure that {

when { the MCPTT User wants to cancel the ongoing MCPTT emergency private call }

then { UE (MCPTT Client) sends a SIP re-INVITE request requesting the emergency state

cancellation, and. upon receipt of a SIP 200 (OK) response considers the emergency condition cancelled and the call being reverted back to MCPPT Private Call }
}

```
(6)
```

```
with { UE (MCPTT Client) having an ongoing MCPTT private call, on-demand Automatic Commencement Mode
with Floor Control }
ensure that {
   when { the MCPTT User wants to terminate the ongoing MCPTT private call }
   then { UE (MCPTT Client) sends a SIP BYE request and after receiving a SIP 200 (OK) leaves the
   MCPTT session }
```

## 6.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 4.6.2, 4.7, 6.2.1, 6.2.5.1, 6.2.8.3.4, 6.2.8.3.6, 11.1.1.2.1.1, 11.1.1.2.1.4, 11.1.1.2.1.5, 11.1.3.1.1.1, TS 24.380 clauses 4.1.1.2, 5.2.1, 5.2.2, 12.1.2.2, 13.1, 13.3.3, TS 33.179, clause 7.2.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 4.6.2]

Key aspects of MCPTT emergency private calls include:

- adjusted EPS bearer priority for both participants whether or not they are both in an emergency condition (i.e. both have their MCPTT emergency state set). This is achieved by using the Resource-Priority header field as specified in IETF RFC 4412 [29] with namespaces defined for use by MCPTT specified in draft-holmberg-dispatch-mcptt-rp-namespace [48];
- the initiator of the MCPTT emergency private call can override the other MCPTT user in the MCPTT emergency private call unless that user also has their MCPTT emergency state set;

•••

- restoration of normal floor control priority participants when the emergency elevated priority is cancelled;
- requires the MCPTT user to be authorised to either originate or cancel an MCPTT emergency private call;

•••

- the originator of the MCPTT emergency private call can request that the call use either manual or automatic commencement mode.

### [TS 24.379, clause 4.7]

If a mission critical organisation requires MCPTT users to communicate using end-to-end security, a security context needs to be established between the initiator of the call and the recipient(s) of the call, prior to the establishment of media, or floor control signalling. This provides assurance to MCPTT users that no unauthorised access to communications is taking place within the MCPTT network. An MCPTT key management server (KMS) manages the security domain. For any end-point to use or access end-to-end secure communications, it needs to be provisioned with keying material associated to its identity by the KMS as specified in 3GPP TS 33.179 [46].

•••

For private calls, the security context is initiated at call setup. An end-to-end security context is established that is unique to the pair of users involved in the call. The procedure involves transferral of an encapsulated private call key (PCK) and private call key id (PCK-ID) from the initiator to the terminator. The PCK is encrypted using the terminator's MCPTT ID and domain-specific material provided from the KMS. The PCK and PCK-ID are distributed within a MIKEY payload within the SDP offer of the private call request. This payload is called a MIKEY-SAKKE I\_MESSAGE, as defined in IETF RFC 6509 [75], which ensures the confidentiality, integrity and authenticity of the payload. The encoding of the MIKEY payload in the SDP offer is described in IETF RFC 4567 [47] using an "a=keymgmt" attribute. The payload is signed using a key associated to the identity of the initiating user. At the terminating side, the signature is validated. If valid, the UE extracts and decrypts the encapsulated PCK. The MCPTT UE also extracts the PCK-ID. This process is described in 3GPP TS 33.179 [46]. With the PCK successfully shared between the two MCPTT UEs, the UEs are able to use SRTP/SRTCP to create an end-to-end secure session.

End-to-end security is independent of the transmission path and hence is applicable to both on and off-network communications. With a security context established, the group call key and private call key can be used to encrypt media and, if required, floor control traffic between the end-points as described in 3GPP TS 24.380 [5] clause 13.

[TS 33.179, clause 7.2.4]

End-to-end communication security for either group or private calls requires the provisioning of key material from the KMS. The key material required to be provisioned to each user is listed below:

- Domain specific key material, also known as a MCPTT KMS Certificate, which includes:
  - The MCPTT KMS Public Authentication Key (KPAK in IETF RFC 6507 [9]).
  - The MCPTT KMS Public Confidentiality Key (Z\_T in IETF RFC 6508 [10]).
  - The UID conversion (as described below).
  - Choice of cryptographic domain parameters (such as those listed in IETF RFC 6509 [8]).
  - The time period for which this information is valid.
- A user signing key for each UID for the upcoming time period (SSK and PVT in IETF RFC 6507 [9]).
- A user decryption key for each UID for the upcoming time period (RSK in IETF RFC 6508 [10]).
- The time period, for which the user key material is valid (e.g. month).

The UID conversion mechanism defines how UIDs are generated. Using this information a MCPTT client can take a user identifier (e.g. an MCPTT ID), and the current time, (e.g. the year and month) and convert these to a UID.

EXAMPLE: UID = Hash (MCPTT ID, KMS URI, validity period info).

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

- 1) shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:

...

- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];
- 3) if floor control shall be used during the session, shall include an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12 for a media-floor control entity, consisting of:
  - a) the port number for the media-floor control entity selected as specified in 3GPP TS 24.380 [5]; and
  - b) the 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14; and
- 4) if end-to-end security is required for a private call and the SDP offer is not for establishing a pre-established session, shall include the MIKEY-SAKKE I\_MESSAGE in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 6.2.8.3.4]

On receiving a SIP 2xx response to a SIP request for an MCPTT emergency private call and if the MCPTT emergency private call state is set to "MEPC 2: emergency-pc-requested" or "MEPC 3: emergency-pc-granted", the MCPTT client:

- 1) shall set the MCPTT emergency private priority state of the call to "MEPP 2: in-progress" if it was not already set;
- 2) shall set the MCPTT emergency private call state to "MEPC 3: emergency-pc-granted"; and

[TS 24.379, clause 6.2.8.3.6]

When the MCPTT emergency private call state is set to "MEPC 3: emergency-pc-granted" and the MCPTT emergency alert state is set to "MPEA 1: no-alert", the MCPTT client shall generate a SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given below.

NOTE 1: This procedure assumes that the MCPTT client in the calling procedure has verified that the MCPTT user has made an authorised request for cancelling MCPTT the in-progress emergency private call state of the call.

The MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <emergency-ind> element set to "false";
- 2) shall clear the MCPTT emergency state; and
- 3) shall set MCPTT emergency private priority state of the MCPTT emergency private call to "MEPP 3: cancelpending".
- NOTE 2: This is the case of an MCPTT user who has initiated an MCPTT emergency private call and wants to cancel it.

[TS 24.379, clause 11.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) shall set the Request-URI of the SIP INVITE request to a public service identity of the participating MCPTT function serving the MCPTT user;

•••

- 3) may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];

- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref contain with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- 8) shall insert in the SIP INVITE request a MIME resource-lists body with the MCPTT ID of the invited MCPTT user, according to rules and procedures of IETF RFC 5366 [20];
- 9) if an end-to-end security context needs to be established then:
  - a) if necessary, shall instruct the key management client to request keying material from the key management server as described in 3GPP TS 33.179 [46];
  - b) shall use the keying material to generate a PCK as described in 3GPP TS 33.179 [46];
  - c) shall use the PCK to generate a PCK-ID with the four most significant bits set to "0101" to indicate that the purpose of the PCK is to protect private call communications and with the remaining twenty eight bits being randomly generated as described in 3GPP TS 33.179 [46];
  - d) shall encrypt the PCK to a UID associated to the MCPTT client using the MCPTT ID of the invited user and a time related parameter as described in 3GPP TS 33.179 [46];
  - e) shall generate a MIKEY-SAKKE I\_MESSAGE using the encapsulated PCK and PCK-ID as specified in 3GPP TS 33.179 [46]; and
  - g) shall add the MCPTT ID of the originating MCPTT to the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46]; and
  - f) shall sign the MIKEY-SAKKE I\_MESSAGE using the originating MCPTT user's signing key provided in the keying material together with a time related parameter, and add this to the MIKEY-SAKKE payload, as described in 3GPP TS 33.179 [46].
- 10) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarification given in subclause 6.2.1 and with a media stream of the offered media-floor control entity;
- 11)if implicit floor control is required, shall comply with the conditions specified in subclause 6.4;
- ...13) if force of automatic commencement mode at the invited MCPTT client is not requested by the MCPTT user and:
  - a) if automatic commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include in the SIP INVITE request an Answer-Mode header field with the value "Auto" according to the rules and procedures of IETF RFC 5373 [18]; and

...

14) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <session-type> element set to a value of "private";

•••

16) shall send SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 183(Session Progress) response to the SIP INVITE request the MCPTT client:

1) may indicate the progress of the session establishment to the inviting MCPTT user.

Upon receiving a SIP 200 (OK) response to the SIP INVITE request the MCPTT client:

1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];

•••

3) shall notify the user that the call has been successfully established.

### [TS 24.379, clause 11.1.1.2.1.4]

Upon receiving a request from an MCPTT user to cancel the in-progress emergency condition on an MCPTT emergency private call, the MCPTT client shall generate a SIP re-INVITE request by following the UE session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

- 1) if the MCPTT user is not authorised to cancel the in-progress emergency condition on an MCPTT emergency private call as determined by the procedures of subclause 6.2.8.3.1.2, the MCPTT client:
  - a) should indicate to the MCPTT user that they are not authorised to cancel the in-progress emergency condition on an MCPTT emergency private call; and
  - b) shall skip the remaining steps of the current subclause;
- shall, if the MCPTT user is cancelling an in-progress emergency condition and optionally an MCPTT emergency alert originated by the MCPTT user, include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.3.6;

•••

- 4) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.3.3;
- 5) shall include in the SIP re-INVITE request an SDP offer the media parameters as currently established;
- NOTE 1: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session associated with an MCPTT group session. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 6) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 7) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request, the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5];
- 2) shall set the MCPTT emergency private priority state of the MCPTT private call to "MEPP 1: no-emergency";
- 3) shall set the MCPTT emergency private call state of the call to "MEPC 1: emergency-pc-capable"; and

[TS 24.379, clause 11.1.1.2.1.5]

Upon receiving a request from an MCPTT user to upgrade the ongoing MCPTT private call to an MCPTT emergency private call, the MCPTT client shall generate a SIP re-INVITE request as specified in 3GPP TS 24.229 [4], with the clarifications given below.

- 1) shall include an application/vnd.3gpp.mcptt-info+xml MIME body populated as specified in subclause 6.2.8.3.2;
- 2) shall include a Resource-Priority header field and comply with the procedures in subclause 6.2.8.3.3.
- 3) shall include an SDP offer with the media parameters as currently established according to 3GPP TS 24.229 [4];
- NOTE: The SIP re-INVITE request can be sent within an on-demand session or a pre-established session associated with an MCPTT private call. If the SIP re-INVITE request is sent within a pre-established session, the media-level section for the offered MCPTT speech media stream and the media-level section of the offered media-floor control entity are expected to be the same as was negotiated in the existing pre-established session.
- 4) if an implicit floor request is required, shall indicate this as specified in subclause 6.4; and
- 5) shall send the SIP re-INVITE request according to 3GPP TS 24.229 [4].

On receiving a SIP 2xx response to the SIP re-INVITE request the MCPTT client:

- 1) shall interact with the user plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall perform the actions specified in subclause 6.2.8.3.4.

[TS 24.379, clause 11.1.3.1.1.1]

Upon receiving a request from an MCPTT user to release an MCPTT private call session established using on-demand session signalling, the MCPTT client shall follow the procedures as specified in subclause 6.2.5.1.

[TS 24.380, clause 4.1.1.2]

At any point in time a group member can request permission to talk.

When all group members are silent, a group member can press the PTT button, meaning the request for permission to talk. The floor participant entity of this user reflects this request to the floor control server by sending a Floor Request message. If the floor control server decides to permit, it informs this permission for this request by sending a Floor Granted message to the requesting group member. The floor control server informs the initiation of the talk to the other group members by sending a Floor Taken message. Once the group member receives the permission, a permission indication (permission tone) is generated and the user can talk. The media packets (encoded voice) are sent to the controlling MCPTT server and from there they are distributed to all listeners of this group. The release of the PTT button indicates the user's intension to end talking. Once the PTT button is released, the floor participant sends a Floor Release message to the floor control server indicating that this user has finished talking. This cycle, starting from the Floor Granted message and ending with Floor Release message, is known as 'talk burst' or 'media burst'.

In the beginning of a call the initial talk permission request can be implied by the SIP message which initiates the call as specified in 3GPP TS 24.379 [2] without any specific Floor Request message.

A group member can also request for permission to talk by sending a Floor Request message during a talk burst. The floor control server can resolve this request in several ways.

- 1. If this request has higher priority than the ongoing talk burst, the floor control server revokes the current talk burst by sending a Floor Revoke message to the current talker. The current talker is interrupted and the current media burst is ended by the current floor participant by sending a Floor Release message. Then the floor control server sends a Floor Granted message to the revoking user and send Floor Taken message to other group members. Then a new media burst starts.
- 2. If this request does not have higher priority and floor request queuing is not used the floor control server rejects this request by sending a Floor Deny message to the requester. Then a reject indication (reject tone) is generated for the user. The ongoing talk burst continues.

•••

During silence (when no talk burst is ongoing), the floor control server can send Floor Idle message to all floor participants from time to time. The floor control server sends Floor Idle message in the beginning of silence.

[TS 24.380, clause 5.2.1]

To be compliant with the procedures in the present document, an MCPTT client shall:

- 1. support the role of an MCPTT client as specified 3GPP TS 23.179 [5];
- 2. support the on-network MCPTT client role as specified in 3GPP TS 24.379 [2];

•••

4. support media plane security as specified in clause 13.

To be compliant with the on-network procedures in the present document, an MCPTT client shall:

- 1. provide the role of a floor participant in on-network mode as specified in subclause 5.2.2;
- 2. provide the media mixer function as described in subclause 4.2.2 and support the related procedures in subclause 6.2;

•••

4. provide PTT button events towards the on-network floor participant as specified in subclause 6.2;

- 5. provide means (sound, display, etc.) for indications towards the MCPTT user as specified in subclause 6.2;
- 6. support negotiating media plane control channel media level attributes as specified in subclause 4.3; and

[TS 24.380, clause 5.2.2]

To be compliant with the on-network procedures in the present document, a floor participant in on-network mode shall:

- 1. support the on-network floor control procedures as defined in 3GPP TS 23.179 [5];
- 2. support acting as an on-network floor participant as specified in subclause 6.2; and
- 3. support the on-network mode floor control protocol elements as specified in the clause 8.

A floor participant in on-network mode may:

1. support queuing of floor requests as specified in subclause 6.2 and subclause 4.1.1.2.

[TS 24.380, clause 12.1.2.2]

In an SDP offer, the "mc\_priority" fmtp attribute indicates (using an integer value between '1' and '255') the maximum floor priority that the offerer requests to be used with Floor Request messages sent by the offerer. In an SDP answer, the attribute parameter indicates the maximum priority level that the answerer has granted to the offerer. The value has to be equal or less than the value provided in the associated SDP offer.

NOTE 1: If the "mc\_priority" fmtp attribute is not used within an SDP offer or answer, a default priority value is assumed.

In an SDP offer, the "mc\_granted" fmtp attribute parameter indicates that the offerer supports the procedure where the answerer indicates, using the fmtp attribute in the associated SDP answer, that the floor has been granted to the offerer.

- NOTE 2: When the "mc\_granted" fmtp attribute is used in an SDP offer, it does not indicate an actual request for the floor. The SDP "mc\_implicit\_request" fmtp attribute can be used to request the floor. In an SDP answer, the attribute indicates that the floor has been granted to the offerer.
- NOTE 3: Once the offerer has been granted the floor, the offerer has the floor until it receives a Floor Revoke message, or until the offerer itself releases the floor by sending a Floor Release message, as described in the present specification.

In an SDP offer, the "mc\_implicit\_request" fmtp attribute indicates that the offerer implicitly requests the floor (without the need to send a Floor Request message). In an SDP answer, the attribute parameter indicates that the answerer has accepted the implicit floor request. Once the answerer grants the floor to the offerer, the answerer will send a Floor Granted message.

NOTE 4: The usage of the "mc\_implicit\_request" fmtp attribute in an SDP answer does not mean that the answerer has granted the floor to the offerer, only that the answerer has accepted the implicit floor request.

[TS 24.380, clause 13.1]

Media plane security provides integrity and confidentiality protection of individual media streams and media plane control messages in MCPTT sessions.

The media plane security is based on 3GPP MCPTT security solution including key management and end-to-end media and floor control messages protection as defined in 3GPP TS 33.179 [14].

Various keys and associated key identifiers protect:

- 1. RTP transported media;
- 2. RTCP transported media control messages (i.e. RTCP SR packets, RTCP RR packets, RTCP SDES packets);
- 3. RTCP APP transported floor control messages;

•••

In an on-network private call:

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

230

- 1. if protection of media is negotiated, the PCK and the PCK-ID protect media sent and received by the MCPTT clients;
- 2. if protection of floor control messages sent using unicast between the MCPTT client and the participating MCPTT function serving the MCPTT client is negotiated, the CSK and the CSK-ID protect the floor control messages sent and received by the MCPTT client and by the participating MCPTT function;

...

4. if protection of media control messages sent using unicast between the MCPTT client and the participating MCPTT function serving the MCPTT client is negotiated, the CSK and the CSK-ID protect the media control messages sent and received using unicast by the MCPTT client and by a participating MCPTT function; and

•••

The CSK and the CSK-ID are generated by the MCPTT client and provided to the participating MCPTT function serving the MCPTT client using SIP signalling according to 3GPP TS 24.379 [2].

••

The PCK and the PCK-ID are generated by the MCPTT client initiating the private call and provided to the MCPTT client receiving the private call using SIP signalling according to 3GPP TS 24.379 [2], using Connect message described in subclause 8.3.4 or using MONP signalling according to 3GPP TS 24.379 [2].

[TS 24.380, clause 13.3.3]

3. in an on-network private call:

A) if:

i) protection of media is negotiated in originating call and the PCK and the PCK-ID were sent to the remote MCPTT client using SIP signalling according to 3GPP TS 24.379 [2]; or

...

- then:
- i) shall encrypt sent media according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the PCK and PCK-ID as specified in subclause 13.2; and
- ii) shall decrypt received media according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the PCK and PCK-ID as specified in subclause 13.2;
- B) if protection of floor control messages is negotiated and the CSK and the CSK-ID were sent to the participating MCPTT function using SIP signalling according to 3GPP TS 24.379 [2]:
  - i) shall encrypt sent floor control messages according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and
  - ii) shall decrypt received floor control messages according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and
- D) if protection of media control messages sent using unicast between the participating MCPTT function and the MCPTT client is negotiated and the CSK and the CSK-ID were sent to the participating MCPTT function using SIP signalling according to 3GPP TS 24.379 [2]:
  - i) shall encrypt media control messages sent using unicast according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and
  - ii) shall decrypt media control messages received using unicast according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2;

# 6.2.1.3 Test description

# 6.2.1.3.1 Pre-test conditions

# System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.2.1.3.2 Test procedure sequence

Table 6.2.1.3.2-1: Main behaviour

St	Procedure		Message Sequence	TP	Verdict
0.	i recoulto	U - S	Message		r or anot
1	Make the UE (MCPTT User) request the	-	-	-	-
	establishment of an MCPTT private call, on-				
	demand Automatic Commencement Mode, no				
	Force of automatic commencement, applying				
	End-to-end communication security with Floor				
	Control.				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
-	EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-
	are related to the MCPTT call establishment				
	are described in TS 56.579-1 [2], subclause				
	5.4.3 'Generic Test Procedure for MCPTT CO				
	communication in E-UTRA'. The test sequence				
	below shows only the MCPTT relevant				
	messages exchanged.				
2	Check: Does the UE (MCPTT client) send an	>	SIP INVITE	1	Р
	initial SIP INVITE message requesting the				
	establishment of an MCPTT private call, on-				
	demand Automatic Commencement Mode, no				
	Force of automatic commencement, applying				
	End-to-end communication security with Floor				
3	Control? The SS (MCPTT server) sends SIP		SIP 183 (Session Progress)		
3	183(Session Progress).	<	SIP 183 (Session Progress)	-	-

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private and private emergency calls with automatic commencement } ensure that {

when { the UE (MCPTT Client) receives a request for establishment of an MCPTT private call, ondemand Automatic Commencement Mode, no Force of automatic commencement, applying End-to-end communication security with Floor Control }

then { UE (MCPTT Client) sends a SIP 200 (OK) accepting the establishment of an MCPTT private
call, on-demand Automatic Commencement Mode applying End-to-end communication security with Floor
Control, and, notifies the user for the call establishment }

#### (2)

with { UE (MCPTT Client) having established an On-demand Automatic Commencement Mode Private Call with Floor Control }

ensure that {

when { the MCPTT User (MCPTT Client) engages in communication with the inviting MCPTT User }
 then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server (Floor
 granting/release/deny) applying Floor Control confidentiality and integrity protection }

}

#### (3)

with { UE (MCPTT Client) having established an MCPTT private call, on-demand Automatic Commencement Mode with Floor Control }

ensure that {

when { the MCPTT User (MCPTT Client) receives a request for upgrade of the ongoing MCPTT private
call to an MCPTT emergency private call with floor control }

then { UE (MCPTT Client) accepts the request and upon sending SIP 200 (OK) message considers the
call as being upgraded to emergency private call (emergency private call state = "MEPC 3: emergencypc-granted") }

### (4)

with { UE (MCPTT Client) having upgraded an On-demand Automatic Commencement Mode Private Call to emergency private call }

ensure that {

when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User }
 then { UE (MCPTT Client) respects the floor control imposed by the MCPTT Server including being
 able to handle override requested by the inviting MCPTT user and applying Floor Control
 confidentiality and integrity protection }
 }

#### (5)

with { UE (MCPTT Client) having upgraded an On-demand Automatic Commencement Mode Private Call to an Emergency Private Call }

ensure that {

when { the MCPTT User (MCPTT Client) receives a request to cancel the ongoing MCPTT emergency private call }

then { UE (MCPTT Client) accepts the request and after sending a SIP 200 (OK) response considers the emergency condition cancelled and the call being reverted back to MCPPT Private Call } }

(6)

with { UE (MCPTT Client) having an ongoing On-demand Automatic Commencement Mode Private Call } ensure that {

when { the MCPTT User (MCPTT Client) receives a request for termination of the ongoing MCPTT private call }

then { UE (MCPTT Client) accept the request and after sending a SIP 200 (OK) response leaves the MCPTT session } \_\_\_\_\_\_}

# 6.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 4.6.2, 4.7, 6.2.2, 6.2.3.1.1, 6.2.6, 11.1.1.2.1.2, 11.1.1.2.1.3, 11.1.3.1.1.2, TS 24.380 clauses 4.1.1.2, 5.2.1, 5.2.2, 12.1.2.2, 13.1, 13.3.3, TS 33.179, clause 7.2.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 4.6.2]

Key aspects of MCPTT emergency private calls include:

- adjusted EPS bearer priority for both participants whether or not they are both in an emergency condition (i.e. both have their MCPTT emergency state set). This is achieved by using the Resource-Priority header field as specified in IETF RFC 4412 [29] with namespaces defined for use by MCPTT specified in draft-holmberg-dispatch-mcptt-rp-namespace [48];
- the initiator of the MCPTT emergency private call can override the other MCPTT user in the MCPTT emergency private call unless that user also has their MCPTT emergency state set;

•••

- restoration of normal floor control priority participants when the emergency elevated priority is cancelled;

•••

- requires the targeted MCPTT user to be authorised to receive an MCPTT emergency private call;

### [TS 24.379, clause 4.7]

If a mission critical organisation requires MCPTT users to communicate using end-to-end security, a security context needs to be established between the initiator of the call and the recipient(s) of the call, prior to the establishment of media, or floor control signalling. This provides assurance to MCPTT users that no unauthorised access to communications is taking place within the MCPTT network. An MCPTT key management server (KMS) manages the security domain. For any end-point to use or access end-to-end secure communications, it needs to be provisioned with keying material associated to its identity by the KMS as specified in 3GPP TS 33.179 [46].

•••

For private calls, the security context is initiated at call setup. An end-to-end security context is established that is unique to the pair of users involved in the call. The procedure involves transferral of an encapsulated private call key (PCK) and private call key id (PCK-ID) from the initiator to the terminator. The PCK is encrypted using the terminator's MCPTT ID and domain-specific material provided from the KMS. The PCK and PCK-ID are distributed within a MIKEY payload within the SDP offer of the private call request. This payload is called a MIKEY-SAKKE I\_MESSAGE, as defined in IETF RFC 6509 [75], which ensures the confidentiality, integrity and authenticity of the payload. The encoding of the MIKEY payload in the SDP offer is described in IETF RFC 4567 [47] using an "a=keymgmt" attribute. The payload is signed using a key associated to the identity of the initiating user. At the terminating side, the signature is validated. If valid, the UE extracts and decrypts the encapsulated PCK. The MCPTT UE also extracts the PCK-ID. This process is described in 3GPP TS 33.179 [46]. With the PCK successfully shared between the two MCPTT UEs, the UEs are able to use SRTP/SRTCP to create an end-to-end secure session.

End-to-end security is independent of the transmission path and hence is applicable to both on and off-network communications. With a security context established, the group call key and private call key can be used to encrypt media and, if required, floor control traffic between the end-points as described in 3GPP TS 24.380 [5] clause 13.

[TS 33.179, clause 7.2.4]

End-to-end communication security for either group or private calls requires the provisioning of key material from the KMS. The key material required to be provisioned to each user is listed below:

- Domain specific key material, also known as a MCPTT KMS Certificate, which includes:
  - The MCPTT KMS Public Authentication Key (KPAK in IETF RFC 6507 [9]).
  - The MCPTT KMS Public Confidentiality Key (Z\_T in IETF RFC 6508 [10]).
  - The UID conversion (as described below).
  - Choice of cryptographic domain parameters (such as those listed in IETF RFC 6509 [8]).
  - The time period for which this information is valid.
- A user signing key for each UID for the upcoming time period (SSK and PVT in IETF RFC 6507 [9]).
- A user decryption key for each UID for the upcoming time period (RSK in IETF RFC 6508 [10]).
- The time period, for which the user key material is valid (e.g. month).

The UID conversion mechanism defines how UIDs are generated. Using this information a MCPTT client can take a user identifier (e.g. an MCPTT ID), and the current time, (e.g. the year and month) and convert these to a UID.

EXAMPLE: UID = Hash (MCPTT ID, KMS URI, validity period info).

[TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;
  - b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
  - c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and
- 4) if included in the SDP offer, shall include the media-level section of the offered media-floor control entity consisting of:
  - a) an "m=application" media-level section as specified in 3GPP TS 24.380 [5] clause 12; and
  - b) 'fmtp' attributes as specified in 3GPP TS 24.380 [5] clause 14.

[TS 24.379, clause 6.2.3.1.1]

When performing the automatic commencement mode procedures, the MCPTT client:

- 1) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;

- 4) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. The "refresher" parameter in the Session-Expires header field shall be set to "uas";

...

- shall, if the incoming SIP INVITE request does not contain a Replaces header field, include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- NOTE: In the case of a new emergency call where the terminating client is using a pre-established session, the SIP INVITE request containing a Replaces header is used to replace the pre-established session.
- 8) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4];

••••

10) shall interact with the media plane as specified in 3GPP TS 24.380 [5] subclause 6.2.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 11.1.1.2.1.2]

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

•••

- 3) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency private call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency private call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and

...

- b) shall set the MCPTT emergency private priority state to "MEPP 2: in-progress" for this private call;
- 4) if the SDP offer of the SIP INVITE request contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];

- d) if authentication verification of the MIKEY-SAKKE I\_MESSAGE fails, shall reject the SIP INVITE request with a SIP 488 (Not Acceptable Here) response as specified in IETF RFC 4567 [47], and include warning text set to "136 authentication of the MIKEY-SAKE I\_MESSAGE failed" in a Warning header field as specified in subclause 4.4; and
- e) if the signature of the MIKEY-SAKKE I\_MESSAGE was successfully validated:
  - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46]; and
  - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.
- 5) may check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of this specification to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;
- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.1 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode;

[TS 24.379, clause 11.1.1.2.1.3]

Upon receipt of a SIP re-INVITE request for an existing private call session, the MCPTT client shall:

- if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP re-INVITE request to upgrade this call to an MCPTT emergency private call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency private call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and
    - ii) if the <alert-ind> element is set to "true", should display to the MCPTT user an indication of the MCPTT emergency alert and associated information; and
  - b) shall set the MCPTT emergency private priority state to "MEPP 2: in-progress" for this private call;
- 2) if the SIP re-INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "false":
  - a) should display to the MCPTT user an indication that this is a SIP re-INVITE request to downgrade this emergency private call to a normal priority private call and:
    - i) should display the MCPTT ID of the sender of the SIP re-INVITE request contained in the <mcpttcalling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and

••

- b) shall set the MCPTT emergency private priority state to "MEPP 1: no-emergency" for this private call; and
- c) if the MCPTT emergency private call state of the call is set to "MEPC 3: emergency-call-granted", shall set the MCPTT emergency private call state of the call to "MEPC 1: emergency-pc-capable";
- 3) may check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of this specification to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];

- 4) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user if not done so in step 1 or step 2 above;
- NOTE 1: As this is a re-INVITE for an existing MCPTT private call session, there is no attempt made to change the answer-mode from its current state.
- 5) shall accept the SIP re-INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 6) if the SIP re-INVITE request was received within an on-demand session, shall include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;

•••

- 8) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4]; and
- 9) shall interact with the media plane as specified in 3GPP TS 24.380 [5].

## [TS 24.379, clause 11.1.3.1.1.2]

Upon receiving a SIP BYE request for private call session, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

[TS 24.380, clause 4.1.1.2]

At any point in time a group member can request permission to talk.

When all group members are silent, a group member can press the PTT button, meaning the request for permission to talk. The floor participant entity of this user reflects this request to the floor control server by sending a Floor Request message. If the floor control server decides to permit, it informs this permission for this request by sending a Floor Granted message to the requesting group member. The floor control server informs the initiation of the talk to the other group members by sending a Floor Taken message. Once the group member receives the permission, a permission indication (permission tone) is generated and the user can talk. The media packets (encoded voice) are sent to the controlling MCPTT server and from there they are distributed to all listeners of this group. The release of the PTT button indicates the user's intension to end talking. Once the PTT button is released, the floor participant sends a Floor Release message to the floor control server indicating that this user has finished talking. This cycle, starting from the Floor Granted message and ending with Floor Release message, is known as 'talk burst' or 'media burst'.

In the beginning of a call the initial talk permission request can be implied by the SIP message which initiates the call as specified in 3GPP TS 24.379 [2] without any specific Floor Request message.

A group member can also request for permission to talk by sending a Floor Request message during a talk burst. The floor control server can resolve this request in several ways.

- 1. If this request has higher priority than the ongoing talk burst, the floor control server revokes the current talk burst by sending a Floor Revoke message to the current talker. The current talker is interrupted and the current media burst is ended by the current floor participant by sending a Floor Release message. Then the floor control server sends a Floor Granted message to the revoking user and send Floor Taken message to other group members. Then a new media burst starts.
- 2. If this request does not have higher priority and floor request queuing is not used the floor control server rejects this request by sending a Floor Deny message to the requester. Then a reject indication (reject tone) is generated for the user. The ongoing talk burst continues.

•••

During silence (when no talk burst is ongoing), the floor control server can send Floor Idle message to all floor participants from time to time. The floor control server sends Floor Idle message in the beginning of silence.

[TS 24.380, clause 5.2.1]

To be compliant with the procedures in the present document, an MCPTT client shall:

1. support the role of an MCPTT client as specified 3GPP TS 23.179 [5];

2. support the on-network MCPTT client role as specified in 3GPP TS 24.379 [2];

•••

4. support media plane security as specified in clause 13.

To be compliant with the on-network procedures in the present document, an MCPTT client shall:

- 1. provide the role of a floor participant in on-network mode as specified in subclause 5.2.2;
- 2. provide the media mixer function as described in subclause 4.2.2 and support the related procedures in subclause 6.2;

•••

- 4. provide PTT button events towards the on-network floor participant as specified in subclause 6.2;
- 5. provide means (sound, display, etc.) for indications towards the MCPTT user as specified in subclause 6.2;
- 6. support negotiating media plane control channel media level attributes as specified in subclause 4.3; and

[TS 24.380, clause 5.2.2]

To be compliant with the on-network procedures in the present document, a floor participant in on-network mode shall:

- 1. support the on-network floor control procedures as defined in 3GPP TS 23.179 [5];
- 2. support acting as an on-network floor participant as specified in subclause 6.2; and
- 3. support the on-network mode floor control protocol elements as specified in the clause 8.

A floor participant in on-network mode may:

1. support queuing of floor requests as specified in subclause 6.2 and subclause 4.1.1.2.

[TS 24.380, clause 12.1.2.2]

In an SDP offer, the "mc\_priority" fmtp attribute indicates (using an integer value between '1' and '255') the maximum floor priority that the offerer requests to be used with Floor Request messages sent by the offerer. In an SDP answer, the attribute parameter indicates the maximum priority level that the answerer has granted to the offerer. The value has to be equal or less than the value provided in the associated SDP offer.

NOTE 1: If the "mc\_priority" fmtp attribute is not used within an SDP offer or answer, a default priority value is assumed.

In an SDP offer, the "mc\_granted" fmtp attribute parameter indicates that the offerer supports the procedure where the answerer indicates, using the fmtp attribute in the associated SDP answer, that the floor has been granted to the offerer.

- NOTE 2: When the "mc\_granted" fmtp attribute is used in an SDP offer, it does not indicate an actual request for the floor. The SDP "mc\_implicit\_request" fmtp attribute can be used to request the floor. In an SDP answer, the attribute indicates that the floor has been granted to the offerer.
- NOTE 3: Once the offerer has been granted the floor, the offerer has the floor until it receives a Floor Revoke message, or until the offerer itself releases the floor by sending a Floor Release message, as described in the present specification.

In an SDP offer, the "mc\_implicit\_request" fmtp attribute indicates that the offerer implicitly requests the floor (without the need to send a Floor Request message). In an SDP answer, the attribute parameter indicates that the answerer has accepted the implicit floor request. Once the answerer grants the floor to the offerer, the answerer will send a Floor Granted message.

NOTE 4: The usage of the "mc\_implicit\_request" fmtp attribute in an SDP answer does not mean that the answerer has granted the floor to the offerer, only that the answerer has accepted the implicit floor request.

[TS 24.380, clause 13.1]

Media plane security provides integrity and confidentiality protection of individual media streams and media plane control messages in MCPTT sessions.

The media plane security is based on 3GPP MCPTT security solution including key management and end-to-end media and floor control messages protection as defined in 3GPP TS 33.179 [14].

Various keys and associated key identifiers protect:

- 1. RTP transported media;
- 2. RTCP transported media control messages (i.e. RTCP SR packets, RTCP RR packets, RTCP SDES packets);
- 3. RTCP APP transported floor control messages;

•••

In an on-network private call:

- if protection of media is negotiated, the PCK and the PCK-ID protect media sent and received by the MCPTT clients;
- 2. if protection of floor control messages sent using unicast between the MCPTT client and the participating MCPTT function serving the MCPTT client is negotiated, the CSK and the CSK-ID protect the floor control messages sent and received by the MCPTT client and by the participating MCPTT function;

•••

4. if protection of media control messages sent using unicast between the MCPTT client and the participating MCPTT function serving the MCPTT client is negotiated, the CSK and the CSK-ID protect the media control messages sent and received using unicast by the MCPTT client and by a participating MCPTT function; and

•••

The CSK and the CSK-ID are generated by the MCPTT client and provided to the participating MCPTT function serving the MCPTT client using SIP signalling according to 3GPP TS 24.379 [2].

•••

The PCK and the PCK-ID are generated by the MCPTT client initiating the private call and provided to the MCPTT client receiving the private call using SIP signalling according to 3GPP TS 24.379 [2], using Connect message described in subclause 8.3.4 or using MONP signalling according to 3GPP TS 24.379 [2].

[TS 24.380, clause 13.3.3]

3. in an on-network private call:

A) if:

...

ii) protection of media is negotiated in terminating call and the PCK and the PCK-ID were received from the remote MCPTT client using SIP signalling according to 3GPP TS 24.379 [2];

then:

- i) shall encrypt sent media according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the PCK and PCK-ID as specified in subclause 13.2; and
- ii) shall decrypt received media according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the PCK and PCK-ID as specified in subclause 13.2;
- B) if protection of floor control messages is negotiated and the CSK and the CSK-ID were sent to the participating MCPTT function using SIP signalling according to 3GPP TS 24.379 [2]:
  - shall encrypt sent floor control messages according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and

- ii) shall decrypt received floor control messages according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and
- D) if protection of media control messages sent using unicast between the participating MCPTT function and the MCPTT client is negotiated and the CSK and the CSK-ID were sent to the participating MCPTT function using SIP signalling according to 3GPP TS 24.379 [2]:
  - i) shall encrypt media control messages sent using unicast according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2; and
  - ii) shall decrypt media control messages received using unicast according to IETF RFC 3711 [16] and 3GPP TS 33.179 [14] using SRTP-MK, SRTP-MS and SRTP-MKI generated using the CSK and CSK-ID as specified in subclause 13.2;

# 6.2.2.3 Test description

## 6.2.2.3.1 Pre-test conditions

### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.2.2.3.2 Test procedure sequence

Table 6.2.2.3.2-1: Main behaviour

U - S         Message           -         EXCEPTION: The E-UTRAVEPC actions which are related to the MCPTT call establishment are described in TS 66 570-1 (2), subclause S.4.4 Generic Test Procedure for MCPTT CT communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.         -           1         The SS (MCPTT server) sends SIP INVITE to call, on-demand Automatic Commencement, applying End-to-end communication escurity with Floor Control including a "text/plain" MIME body.         -         SIP 200 (OK)         1           2         Check: Does the UE (MCPTT client) send a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Commencement Mode applying End-to-end communication security with Floor Control?         SIP 200 (OK)         1           3         Check: Does the UE MCPTT client) send a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Commencement Mode applying End-to-end communication security with Floor Control?         ->         SIP 200 (OK)         1           3         Check: Does the UE shows to the user the message received in the SIP INVITE "text/plain" MME body?         ->         -         1           4         SK (MCPTT server) sends a Floor Taken message.         -         -         -         -           5         Make the UE (MCPTT User) request to speak (e.g., pressing the PTT button)         -         -         -         -         -           6         Check: Does the UE (MCPTT clien	Se	Message S	quence TP	Vero	lict
are related to the MCPTT call establishment i are described in TS 66 574-1 [2], subclause 5.4.4 Generic Test Procedure for MCPTT CT commutication in E-UTRA. The test sequence below shows only the MCPTT relevant messages exchanged.					
are described in TS 56.579-1 [2], subclause       -         5.4.4 (Generic Test Procedure for MCPTT CT communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.       -         1       The SS (MCPTT server) sends SIP INVITE to request establishment of an MCPTT private call, on-demand Automatic Commencement, applying End-to-end communication security with Floor Control including a "text/plain" MIME body.       -         2       Check: Does the UE (MCPTT client) send a model of the originator and Automatic Commencement Mode applying End-to-end communication security with Floor Control?       -         3       Check: Does the UE (MCPTT client) send a commencement Mode applying End-to-end communication action security with Floor Control?       -         3       Check: Does the UE shows to the user the message received in the SIP INVITE "text/plain" MIME body?       ->         4       SS (MCPTT server) sends a Floor Taken       -         6       Check: Does the UE (MCPTT client) send a communication security with Floor Control?       -         6       Check: Does the UE (MCPTT client) send a communication and other incoming call relevant information.       -         6       Check: Does the UE (MCPTT client) send a communication security sends a Floor Taken       -         6       Check: Does the UE (MCPTT client) send a communication security and a communication security with Floor Control?       -         7       SS (MCPTT server) sends a Floor Deny       -		-	-	-	
5.4.4 'Generic Test Procedure' for MCPTT CT         communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.       -         1       The SS (MCPTT server) sends SIP INVITE to call, on-demand Automatic commencement, applying End-to-end communication security with Floor Control including a 'text/plain' MIME body.          2       Check: Does the UE (MCPTT client) send a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Communication security with Floor Control?      >         3       Check: Does the UE (MCPTT client) send a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Communication security with Floor Control?       ->         4       SC (Deck): Does the UE shows to the user the incoming call relevant information.       ->       -         4       SS (MCPTT Berver) sends a Floor Taken      >       -         5       Make the UE (MCPTT client) send a Floor Request message?       -       -         6       Check: Does the UE (MCPTT client) send a Floor Request message?       ->       Floor Request       2         7       SS (MCPTT server) sends a Floor Dany message.       -       -       -       -         7       SS (MCPTT server) sends a Floor Cantel message.       -       -       -       -         8       SS (MCPTT server) sends a Floor Cantel message.       ->       Floor Request					
communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.         SIP INVITE           1         The SS (MCPTT server) sends SIP INVITE to request establishment of an MCPTT private call, on-demand Automatic Commencement, Mode, no Force of automatic commencement, applying End-to-end communication security with Floor Control including a 'text/plain' MIME body.         SIP 200 (OK)         1           2         Check: Does the UE (MCPTT client) send a ommunication security with Floor Control commencement Mode applying End-to-end communication security with Floor Control?         ->         SIP 200 (OK)         1           3         Check: Does the UE shows to the user the message received in the SIP INVITE 'text/plain' MIME body?         ->         -         1           4         SS (MCPTT server) sends a Floor Taken         ->         -         1           5         Make the UE (MCPTT client) send a ->         ->         Floor Taken         -           6         Check: Does the UE Shows to the user the message.         ->         Floor Taken         -           6         Check: Does the UE (MCPTT client) send a Floor Request message?         ->         Floor Taken         -           7         SS (MCPTT server) sends a Floor Deny message.         ->         Floor Deny         -           8         SC (MCPTT server) sends a Floor Client) send a Floor Request message?         ->         Floor Request ressage. <td></td> <td></td> <td></td> <td></td> <td></td>					
below shows only the MCPTT relevant message exchanged.         SIP INVITE           1         The SS (MCPTT server) sends SIP INVITE to request establishment of an MCPTT private call, on-demand Automatic commencement, applying End-to-end communication security with Floor Control including a 'text/plain' MIME body.         SIP 200 (OK)         1           2         Check: Does the UE (MCPTT client) send a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Commencement Mode applying End-to-end communication security with Floor Control?         SIP 200 (OK)         1           3         Check: Does the UE shows to the user the message received in the SIP INVITE "text/plain' MIME body?         ->         -           NOTE: UE may provide additional information e.g. MCPTT I bot the originator and other incoming call relevant information.         -         Floor Taken         -           4         SS (MCPTT server) sends a Floor Taken message.         -         Floor Request         2           5         Make the UE (MCPTT User) request to speak (e.g. pressing the PTT button)         -         -         -           6         Check: Does the UE (MCPTT Glent) send a Floor Request message?         -         -         -           7         SS (MCPTT server) sends a Floor Deny message.         -         -         -           10         Check: Does the UE (MCPTT Glent) send a (e.g. pressing the PTT button).         -         -         -					
messages exchanged.					
request establishment of an MCPTT private call, on-demand Automatic Commencement, applying End-to-end communication security with Floor Control including a "text/plain" MIME body.       SIP 200 (OK)       1         2       Check: Does the UE (MCPTT client) send a an MCPTT private call, on-demand Automatic Commencement Mode applying End-to-end communication security with Floor Control?       ->       SIP 200 (OK)       1         3       Check: Does the UE shows to the user the rescage received in the SIP INVITE "text/plain" MIME body?       ->       -       1         4       SK (MCPTT server) sends a Floor Taken message.       ->       -       -       -         5       Make the UE (MCPTT User) request to speak (e.g. pressing the PTT button)       ->       Floor Taken       -         6       Check: Does the UE (MCPTT User) request to speak       -       -       -       -         7       SS (MCPTT server) sends a Floor Deny message.       ->       Floor Request       2       -         7       SS (MCPTT server) sends a Floor Deny message.       ->       Floor Request       2       -         9       Make the UE (MCPTT client) send a message?       ->       Floor Request       2       -         10       Check: Does the UE (MCPTT client) send a message?       ->       Floor Request       2       -         11       SS (MCPTT server) sen

# 6.2.3 On-network / Private Call / On-demand / Automatic Commencement Mode / Without Floor Control / Client Originated (CO)

# 6.2.3.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private calls with automatic commencement } ensure that {

when { the MCPTT User requests the establishment of an MCPTT private call, on-demand Automatic Commencement Mode, no Force of automatic commencement, without floor control }

then { UE (MCPTT Client) sends a SIP INVITE message requesting on-demand Automatic Commencement
Mode and not offering a media-level section for a media-floor control entity, and, after indication
from the MCPTT Server that the call was established notifies the user, and, does not apply floor
control }
}

(2)

```
with { UE (MCPTT Client) having an ongoing On-demand Automatic Commencement Mode Private Call
without Floor control }
ensure that {
   when { the MCPTT User wants to terminate the ongoing MCPTT private call }
    then { UE (MCPTT Client) sends a SIP BYE request and after receiving a SIP 200 (OK) leaves the
MCPTT session }
```

## 6.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.1, 6.2.5.1, 11.1.1.2.1.1, 11.1.2.2, 11.1.3.1.1.1. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

- shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:
    - i) if the MCPTT client is initiating a call to a group identity;
    - ii) if the <preferred-voice-encodings> element is present in the group document retrieved by the group management client as specified in 3GPP TS 24.381 [31] containing an <encoding> element with a "name" attribute; and
    - iii) if the MCPTT client supports the encoding name indicated in the value of the "name" attribute;

then the MCPTT client:

- i) shall insert the value of the "name" attribute in the <encoding name> field of the "a=rtpmap" attribute as defined in IETF RFC 4566 [12]; and
- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 11.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) shall set the Request-URI of the SIP INVITE request to a public service identity of the participating MCPTT function serving the MCPTT user;

•••

- 3) may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref contain with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- 8) shall insert in the SIP INVITE request a MIME resource-lists body with the MCPTT ID of the invited MCPTT user, according to rules and procedures of IETF RFC 5366 [20];

•••

- 13) if force of automatic commencement mode at the invited MCPTT client is not requested by the MCPTT user and:
  - a) if automatic commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include in the SIP INVITE request an Answer-Mode header field with the value "Auto" according to the rules and procedures of IETF RFC 5373 [18]; and

•••

14) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <session-type> element set to a value of "private";

•••

16) shall send SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 183(Session Progress) response to the SIP INVITE request the MCPTT client:

1) may indicate the progress of the session establishment to the inviting MCPTT user.

Upon receiving a SIP 200 (OK) response to the SIP INVITE request the MCPTT client:

1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];

•••

3) shall notify the user that the call has been successfully established.

[TS 24.379, clause 11.1.2.2]

When the MCPTT user wants to make an on-demand private call without floor control, the MCPTT client shall follow the procedures in subclause 11.1.1.2.1.1 with the following exceptions:

- 1) in step 11) of subclause 11.1.1.2.1.1, the MCPTT client shall not offer a media-level section for a media-floor control entity; and
- 2) step 12) of subclause 11.1.1.2.1.1 shall be ignored.

[TS 24.379, clause 11.1.3.1.1.1]

Upon receiving a request from an MCPTT user to release an MCPTT private call session established using on-demand session signalling, the MCPTT client shall follow the procedures as specified in subclause 6.2.5.1.

### 6.2.3.3 Test description

## 6.2.3.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.2.3.3.2 Test procedure sequence

Table 6.2.3.3.2-1: Main behaviour

St	Procedure		Message Sequence	TP	Verdict	
		U - S	Message			
1	Make the UE (MCPTT User) request the establishment of an MCPTT private call, on- demand Automatic Commencement Mode, no Force of automatic commencement, without Floor Control. NOTE: This is expected to be done via a	-	-	-	-	
-	suitable implementation dependent MMI. EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.3 'Generic Test Procedure for MCPTT CO communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-	
2	Check: Does the UE (MCPTT client) send an initial SIP INVITE message requesting the establishment of an MCPTT private call, on- demand Automatic Commencement Mode, no Force of automatic commencement, with Floor Control?	>	SIP INVITE	1	P	
3	The SS (MCPTT server) sends SIP 183(Session Progress).	<	SIP 183 (Session Progress)	-	-	
4	The SS (MCPTT server) sends SIP 200 (OK), indicates that it has accepted the call without floor control, SSRC identifier is assigned.	<	SIP 200 (OK)	-	-	
5	Check: Does the UE (MCPTT client) notify the user that the call has been successfully established? NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	1	P	
6	Make the UE (MCPTT User) request to speak (e.g. pressing the PTT button).	-	-	-	-	
7	Check: Does the UE (MCPTT client) send a Floor Request message in the next 5 sec?	>	Floor Request	1	F	
8	Make the UE (MCPTT User) request termination of the MCPTT private call. NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-	
9	Check: Does the UE (MCPTT client) send a SIP BYE request?	>	SIP BYE	2	Р	
10	The SS (MCPTT server) sends SIP 200 (OK).	<	SIP 200 (OK)	-	-	
11	Wait for 5 sec to capture any not allowed behaviour.	-	-	-	-

#### 6.2.4 On-network / Private Call / On-demand / Automatic Commencement Mode / Without Floor Control / Client Terminated (CT)

#### 6.2.4.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private and private emergency calls with automatic commencement  $\}$ ensure that {

when { the UE (MCPTT Client) receives a request for establishment of an MCPTT private call, ondemand Automatic Commencement Mode, no Force of automatic commencement, without Floor Control }

then { UE (MCPTT Client) sends a SIP 200 (OK) accepting the establishment of an MCPTT private call, on-demand Automatic Commencement Mode and not offering a media-level section for a media-floor control entity, **and**, does not apply floor control }

(2)

with { UE (MCPTT Client) having an ongoing On-demand Automatic Commencement Mode Private Call } ensure that {

when { the MCPTT User (MCPTT Client) receives a request for termination of the ongoing MCPTT private call }

then { UE (MCPTT Client) accept the request and after sending a SIP 200 (OK) response leaves the MCPTT session } }

#### 6.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.2, 6.2.3.1.1, 6.2.6, 11.1.1.2.1.2, 11.1.2.2, 11.1.3.1.1.2. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;
  - b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
  - c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and

[TS 24.379, clause 6.2.3.1.1]

When performing the automatic commencement mode procedures, the MCPTT client:

- 1) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;

- 4) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. The "refresher" parameter in the Session-Expires header field shall be set to "uas";

•••

8) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4];

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 11.1.2.2]

Upon receipt of an initial SIP INVITE request for the private call with an SDP offer not including a media-level section for a media-floor control entity, the MCPTT client shall consider it as the request for private call without floor control and shall follow the procedures as specified in subclause 11.1.1.2.1.2 for on-demand session and subclause 11.1.1.2.2.2 for pre-established session.

[TS 24.379, clause 11.1.1.2.1.2]

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

- 4) if the SDP offer of the SIP INVITE request contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];

•••

- e) if the signature of the MIKEY-SAKKE I\_MESSAGE was successfully validated:
  - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46]; and
  - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.

•••

- 7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.1 if one of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Auto" and the MCPTT service setting at the invited MCPTT client for answering the call is set to automatic commencement mode;

#### [TS 24.379, clause 11.1.3.1.1.2]

Upon receiving a SIP BYE request for private call session, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

# 6.2.4.3 Test description

# 6.2.4.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.2.5 On-network / Private Call / Emergency Private Call / On-demand / Automatic Commencement Mode / Force of automatic commencement mode / Without Floor Control / Client Originated (CO)

# 6.2.5.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service including authorization to
initiate and cancel emergency calls }

ensure that {

when { the MCPTT User requests the establishment of an MCPTT private emergency call, on-demand, automatic commencement mode, Force of automatic commencement mode without floor control } then { UE (MCPTT Client) requests Private Emergency Call establishment without floor control by

sending a SIP INVITE message including a Priv-Answer-Mode header field with the value "Auto" not
offering a media-level section for a media-floor control entity, and, after indication from the
MCPTT Server that the call was established notifies the user, and, does not apply floor control }
}

#### (2)

with { UE (MCPTT Client) having established an Emergency Private Call }
ensure that {
 when { the MCPTT User wants to terminate the ongoing MCPTT emergency private call }

then { UE (MCPTT Client) sends a SIP BYE request and after receiving a SIP 200 (OK) leaves the
MCPTT session }

}

# 6.2.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.1, 6.2.5.1, 6.2.8.3.2, 6.2.8.3.3, 6.2.8.3.4, 6.2.8.3.6, 11.1.1.2.1.1, 11.1.2.2, 11.1.3.1.1.1. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

- 1) shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:

...

- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];
- 4) if end-to-end security is required for a private call and the SDP offer is not for establishing a pre-established session, shall include the MIKEY-SAKKE I\_MESSAGE in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 6.2.8.3.2]

When the MCPTT emergency private call state is set to "MEPC 1: emergency-pc-capable" and this is an authorised request for an MCPTT emergency private call as determined by the procedures of subclause 6.2.8.3.1.1, the MCPTT client:

- 1) shall set the MCPTT emergency state if not already set;
- 2) shall include in the application/vnd.3gpp.mcptt-info+xml MIME body in the SIP request an <emergency-ind> element set to "true" and set the MCPTT emergency private call state to "MEPC 2: emergency-pc-requested";
- 3) if the MCPTT user has also requested an MCPTT emergency alert to be sent and this is an authorised request for MCPTT emergency alert as determined by the procedures of subclause 6.2.8.3.1.3, shall:
  - a) include in the application/vnd.3gpp.mcptt-info+xml MIME body the <alert-ind> element set to "true" and set the MCPTT private emergency alert state to "MPEA 2: emergency-alert-confirm-pending"; and

- b) perform the procedures specified in subclause 6.2.9.1 for the MCPTT emergency alert trigger;
- 4) if the MCPTT user has not requested an MCPTT emergency alert to be sent, shall set the <alert-ind> element of the application/vnd.3gpp.mcptt-info+xml MIME body to "false"; and
- 5) if the MCPTT emergency private priority state of this private call is set to a value other than "MEPP 2: inprogress" shall set the MCPTT emergency private priority state to "MEPP 4: confirm-pending".

[TS 24.379, clause 6.2.8.3.3]

If the MCPTT emergency private call state is set to either "MEPC 2: emergency-pc-requested" or "MEPC 3: emergency-pc-granted" and this is an authorised request for an MCPTT emergency private call as determined by the procedures of subclause 6.2.8.3.1.1, or the MCPTT emergency private priority state of the call is set to "MEPP 2: in-progress", the MCPTT client shall include in the SIP request a Resource-Priority header field populated with the values for an MCPTT emergency private call as specified in subclause 6.2.8.1.15.

NOTE: The MCPTT client ideally would not need to maintain knowledge of the in-progress emergency state of the call (as tracked on the MCPTT client by the MCPTT client emergency private state) but can use this knowledge to provide a Resource-Priority header field set to emergency level priority, which starts the infrastructure priority adjustment process sooner than otherwise would be the case.

[TS 24.379, clause 6.2.8.3.4]

On receiving a SIP 2xx response to a SIP request for an MCPTT emergency private call and if the MCPTT emergency private call state is set to "MEPC 2: emergency-pc-requested" or "MEPC 3: emergency-pc-granted", the MCPTT client:

- 1) shall set the MCPTT emergency private priority state of the call to "MEPP 2: in-progress" if it was not already set;
- 2) shall set the MCPTT emergency private call state to "MEPC 3: emergency-pc-granted"; and

#### [TS 24.379, clause 6.2.8.3.6]

When the MCPTT emergency private call state is set to "MEPC 3: emergency-pc-granted" and the MCPTT emergency alert state is set to "MPEA 1: no-alert", the MCPTT client shall generate a SIP re-INVITE request according to 3GPP TS 24.229 [4] with the clarifications given below.

NOTE 1: This procedure assumes that the MCPTT client in the calling procedure has verified that the MCPTT user has made an authorised request for cancelling MCPTT the in-progress emergency private call state of the call.

The MCPTT client:

- 1) shall include in the SIP re-INVITE request an application/vnd.3gpp.mcptt-info+xml MIME body as defined in clause F.1 with the <emergency-ind> element set to "false";
- 2) shall clear the MCPTT emergency state; and
- shall set MCPTT emergency private priority state of the MCPTT emergency private call to "MEPP 3: cancelpending".
- NOTE 2: This is the case of an MCPTT user who has initiated an MCPTT emergency private call and wants to cancel it.

[TS 24.379, clause 11.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

The MCPTT client:

1) shall set the Request-URI of the SIP INVITE request to a public service identity of the participating MCPTT function serving the MCPTT user;

- 2) if the MCPTT user has requested the origination of an MCPTT emergency private call or is originating an MCPTT private call and the MCPTT emergency state is already set, the MCPTT client:
  - a) shall, if this is an authorised request for an MCPTT emergency private call as determined by the procedures of subclause 6.2.8.3.1.1, comply with the procedures in subclause 6.2.8.3.2; and
  - b) should, if this is an unauthorised request for an MCPTT emergency private call as determined in step a) above, indicate to the MCPTT user that they are not authorised to initiate an MCPTT emergency private call;
- 3) may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;
- shall include an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref contain with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- shall insert in the SIP INVITE request a MIME resource-lists body with the MCPTT ID of the invited MCPTT user, according to rules and procedures of IETF RFC 5366 [20];
- 9) if an end-to-end security context needs to be established then:
  - a) if necessary, shall instruct the key management client to request keying material from the key management server as described in 3GPP TS 33.179 [46];
  - b) shall use the keying material to generate a PCK as described in 3GPP TS 33.179 [46];
  - c) shall use the PCK to generate a PCK-ID with the four most significant bits set to "0101" to indicate that the purpose of the PCK is to protect private call communications and with the remaining twenty eight bits being randomly generated as described in 3GPP TS 33.179 [46];
  - d) shall encrypt the PCK to a UID associated to the MCPTT client using the MCPTT ID of the invited user and a time related parameter as described in 3GPP TS 33.179 [46];
  - e) shall generate a MIKEY-SAKKE I\_MESSAGE using the encapsulated PCK and PCK-ID as specified in 3GPP TS 33.179 [46]; and
  - g) shall add the MCPTT ID of the originating MCPTT to the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46]; and
  - f) shall sign the MIKEY-SAKKE I\_MESSAGE using the originating MCPTT user's signing key provided in the keying material together with a time related parameter, and add this to the MIKEY-SAKKE payload, as described in 3GPP TS 33.179 [46].
- 10) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarification given in subclause 6.2.1 and with a media stream of the offered media-floor control entity;

•••

12) if force of automatic commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include in the SIP INVITE request a Priv-Answer-Mode header field with the value "Auto" according to the rules and procedures of IETF RFC 5373 [18];

•••

14) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <session-type> element set to a value of "private";

- 15) if the MCPTT emergency private call state is set to either "MEPC 2: emergency-pc-requested" or "MEPC 3: emergency-pc-granted" or the MCPTT emergency private priority state for this private call is set to "MEPP 2: in-progress", the MCPTT client shall comply with the procedures in subclause 6.2.8.3.3; and
- 16) shall send SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 183(Session Progress) response to the SIP INVITE request the MCPTT client:

1) may indicate the progress of the session establishment to the inviting MCPTT user.

Upon receiving a SIP 200 (OK) response to the SIP INVITE request the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) if the MCPTT emergency private call state is set to "MEPC 2: emergency-pc-requested" or "MEPC 3: emergency-pc-granted", shall perform the actions specified in subclause 6.2.8.3.4; and
- 3) shall notify the user that the call has been successfully established.

[TS 24.379, clause 11.1.2.2]

Upon receipt of an initial SIP INVITE request for the private call with an SDP offer not including a media-level section for a media-floor control entity, the MCPTT client shall consider it as the request for private call without floor control and shall follow the procedures as specified in subclause 11.1.1.2.1.2 for on-demand session and subclause 11.1.1.2.2.2 for pre-established session.

[TS 24.379, clause 11.1.3.1.1.1]

Upon receiving a request from an MCPTT user to release an MCPTT private call session established using on-demand session signalling, the MCPTT client shall follow the procedures as specified in subclause 6.2.5.1.

# 6.2.5.3 Test description

#### 6.2.5.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.2.5.3.2 Test procedure sequence

St			Message Sequence	TP	Verdict
		U - S	Message		
1	Make the UE (MCPTT User) request the	-	-	-	-
	establishment of an MCPTT private				
	emergency call, force of automatic				
	commencement mode, without Floor Control.				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
-	EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-
	are related to the MCPTT call establishment				
	are described in TS 56.579-1 [2], subclause				
	5.4.3 'Generic Test Procedure for MCPTT CO				
	communication in E-UTRA'. The test sequence				
	below shows only the MCPTT relevant				
	messages exchanged.				
2	Check: Does the UE (MCPTT client) send an	>	SIP INVITE	1	Р
	initial SIP INVITE request, including a Priv-				
	Answer-Mode header field with the value				
	"Auto" and not offering a media-level section				
	for a media-floor control entity requesting the				
	establishment of an MCPTT private call,				
	automatic commencement mode?				
3	The SS (MCPTT server) sends SIP	<	SIP 183 (Session Progress)	-	-
	183(Session Progress).				
4	The SS (MCPTT server) sends SIP 200 (OK).	<	SIP 200 (OK)	-	-
	SSRC identifier is assigned.				
5	Check: Does the UE (MCPTT client) notify the	-	-	1	Р
	user that the call has been successfully				
	established?				
	NOTE: This is expected to be done via a

# 6.2.6 On-network / Private Call / Emergency Private Call / On-demand / Automatic Commencement Mode / Force of automatic commencement mode / Without Floor Control / Client Terminated (CT)

# 6.2.6.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service including authorization to receive an MCPTT private call, the MCPTT service setting for answering the call is set to manual commencement mode } ensure that {

when { the UE (MCPTT Client) receives a request for establishment of an MCPTT emergency private
call, On-demand Automatic Commencement Mode, Force of automatic commencement mode without floor
control }

then { UE (MCPTT Client) accepts the call (automatic commencement) by sending a SIP 200 (OK)
message accepting the private emergency call, on-demand Automatic Commencement Mode, not offering a
media-level section for a media-floor control entity, and, optionally notifies the user, and, does
not apply floor control }
}

(2)

with { UE (MCPTT Client) having established an MCPTT Emergency Private Call }
ensure that {
 when { the UE (MCPTT Client) is informed by the remote client that the ongoing MCPTT emergency
private call has been cancelled }
 then { UE (MCPTT Client) accept the request and after sending a SIP 200 (OK) response leaves the
MCPTT session }
 }
}

## 6.2.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.2, 6.2.3.1.1, 6.2.6, 11.1.1.2.1.2, 11.1.2.2, 11.1.3.1.1.2. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;
  - b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
  - c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and

[TS 24.379, clause 6.2.3.1.1]

When performing the automatic commencement mode procedures, the MCPTT client:

- 1) shall accept the SIP INVITE request and generate a SIP 200 (OK) response according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- 4) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. The "refresher" parameter in the Session-Expires header field shall be set to "uas";

•••

- shall, if the incoming SIP INVITE request does not contain a Replaces header field, include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- NOTE: In the case of a new emergency call where the terminating client is using a pre-established session, the SIP INVITE request containing a Replaces header is used to replace the pre-established session.
- 8) shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4];

•••

10) shall interact with the media plane as specified in 3GPP TS 24.380 [5] subclause 6.2.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 11.1.1.2.1.2]

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

•••

- 3) if the SIP INVITE request contains an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <emergency-ind> element set to a value of "true":
  - a) should display to the MCPTT user an indication that this is a SIP INVITE request for an MCPTT emergency private call and:
    - i) should display the MCPTT ID of the originator of the MCPTT emergency private call contained in the <mcptt-calling-user-id> element of the application/vnd.3gpp.mcptt-info+xml MIME body; and

..

b) shall set the MCPTT emergency private priority state to "MEPP 2: in-progress" for this private call;

•••

5) may check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];

•••

7) shall perform the automatic commencement procedures specified in subclause 6.2.3.1.1 if one of the following conditions are met:

•••

c) SIP INVITE request contains a Priv-Answer-Mode header field with the value of "Auto"; and

[TS 24.379, clause 11.1.2.2]

Upon receipt of an initial SIP INVITE request for the private call with an SDP offer not including a media-level section for a media-floor control entity, the MCPTT client shall consider it as the request for private call without floor control and shall follow the procedures as specified in subclause 11.1.1.2.1.2 for on-demand session and subclause 11.1.1.2.2.2 for pre-established session.

[TS 24.379, clause 11.1.3.1.1.2]

Upon receiving a SIP BYE request for private call session, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

## 6.2.6.3 Test description

#### 6.2.6.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4.

The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
  - receive emergency calls; MCPTT service setting for answering the call is set to manual commencement mode (3GPP TS 24.483 [12], /<x>/Common/PrivateCall/AutoCommence="false", /<x>/Common/PrivateCall/ManualCommence="true")
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.2.7 On-network / Private Call / On-demand / Manual Commencement Mode / Without Floor Control / Client Originated (CO)

# 6.2.7.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service and authorized to initiate
private calls with manual commencement }

ensure that {

when { the MCPTT User requests the establishment of an MCPTT on-demand Manual Commencement private call without floor control }

then { UE (MCPTT Client) requests On-demand Manual Commencement Mode Private Call establishment
without floor control by sending a SIP INVITE message not offering a media-level section for a
media-floor control entity, and, after indication from the MCPTT Server that the call was
established the UE notifies the user, and, does not apply floor control }
}

#### (2)

with { UE (MCPTT Client) having established an MCPTT on-demand Manual Commencement private call
without floor control }
ensure that {
 when { the MCPTT User wants to cancel the ongoing MCPTT on-demand Manual Commencement private call
}
 then { UE (MCPTT Client) sends a SIP BYE request and after receiving a SIP 200 (OK) response
leaves the MCPTT session }
 }
}

## 6.2.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.1, 6.2.5.1, 11.1.1.2.1.1, 11.1.2.2, 11.1.3.1.1.1. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.1]

The SDP offer shall contain only one SDP media-level section for MCPTT speech according to 3GPP TS 24.229 [4] and, if floor control shall be used during the session, shall contain one SDP media-level section for a media-floor control entity according to 3GPP TS 24.380 [5].

When composing an SDP offer according to 3GPP TS 24.229 [4] the MCPTT client:

1) shall set the IP address of the MCPTT client for the offered MCPTT speech media stream and, if floor control shall be used, for the offered media-floor control entity;

- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP offer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 2) shall include an "m=audio" media-level section for the MCPTT media stream consisting of:
  - a) the port number for the media stream selected; and
  - b) the codec(s) and media parameters and attributes with the following clarification:

•••

- i) shall insert the value of the "name" attribute in the <encoding name> field of the "a=rtpmap" attribute as defined in IETF RFC 4566 [12]; and
- c) "i=" field set to "speech" according to 3GPP TS 24.229 [4];

•••

4) if end-to-end security is required for a private call and the SDP offer is not for establishing a pre-established session, shall include the MIKEY-SAKKE I\_MESSAGE in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 6.2.5.1]

When the MCPTT client wants to release an MCPTT session established using on-demand session signalling, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- 2) shall generate a SIP BYE request according to 3GPP TS 24.229 [4];
- 3) shall set the Request-URI to the MCPTT session identity to release; and
- 4) shall send a SIP BYE request towards MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 200 (OK) response to the SIP BYE request, the MCPTT client shall interact with the media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 11.1.1.2.1.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call the MCPTT client shall generate an initial SIP INVITE request by following the UE originating session procedures specified in 3GPP TS 24.229 [4], with the clarifications given below.

#### The MCPTT client:

1) shall set the Request-URI of the SIP INVITE request to a public service identity of the participating MCPTT function serving the MCPTT user;

9...

- 3) may include a P-Preferred-Identity header field in the SIP INVITE request containing a public user identity as specified in 3GPP TS 24.229 [4];
- shall include the g.3gpp.mcptt media feature tag and the g.3gpp.icsi-ref media feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Contact header field of the SIP INVITE request according to IETF RFC 3840 [16];
- 5) shall include an Accept-Contact header field containing the g.3gpp.mcptt media feature tag along with the "require" and "explicit" header field parameters according to IETF RFC 3841 [6];
- 6) shall include the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), in a P-Preferred-Service header field according to IETF RFC 6050 [9] in the SIP INVITE request;

- shall include an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref contain with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
- 8) shall insert in the SIP INVITE request a MIME resource-lists body with the MCPTT ID of the invited MCPTT user, according to rules and procedures of IETF RFC 5366 [20];
- 9) if an end-to-end security context needs to be established then:
  - a) if necessary, shall instruct the key management client to request keying material from the key management server as described in 3GPP TS 33.179 [46];
  - b) shall use the keying material to generate a PCK as described in 3GPP TS 33.179 [46];
  - c) shall use the PCK to generate a PCK-ID with the four most significant bits set to "0101" to indicate that the purpose of the PCK is to protect private call communications and with the remaining twenty eight bits being randomly generated as described in 3GPP TS 33.179 [46];
  - d) shall encrypt the PCK to a UID associated to the MCPTT client using the MCPTT ID of the invited user and a time related parameter as described in 3GPP TS 33.179 [46];
  - e) shall generate a MIKEY-SAKKE I\_MESSAGE using the encapsulated PCK and PCK-ID as specified in 3GPP TS 33.179 [46]; and
  - g) shall add the MCPTT ID of the originating MCPTT to the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46]; and
  - f) shall sign the MIKEY-SAKKE I\_MESSAGE using the originating MCPTT user's signing key provided in the keying material together with a time related parameter, and add this to the MIKEY-SAKKE payload, as described in 3GPP TS 33.179 [46].
- 10) shall include an SDP offer according to 3GPP TS 24.229 [4] with the clarification given in subclause 6.2.1 and with a media stream of the offered media-floor control entity;

•••

- 13) if force of automatic commencement mode at the invited MCPTT client is not requested by the MCPTT user and:
  - b) if manual commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include in the SIP INVITE request an Answer-Mode header field with the value "Manual" according to the rules and procedures of IETF RFC 5373 [18];
- 14) shall contain an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcpttinfo> element containing the <mcptt-Params> element with the <session-type> element set to a value of "private";

•••

16) shall send SIP INVITE request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a SIP 183(Session Progress) response to the SIP INVITE request the MCPTT client:

1) may indicate the progress of the session establishment to the inviting MCPTT user.

Upon receiving a SIP 200 (OK) response to the SIP INVITE request the MCPTT client:

1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];

•••

3) shall notify the user that the call has been successfully established.

[TS 24.379, clause 11.1.2.2]

When the MCPTT user wants to make an on-demand private call without floor control, the MCPTT client shall follow the procedures in subclause 11.1.1.2.1.1 with the following exceptions:

- 1) in step 11) of subclause 11.1.1.2.1.1, the MCPTT client shall not offer a media-level section for a media-floor control entity; and
- 2) step 12) of subclause 11.1.1.2.1.1 shall be ignored.

[TS 24.379, clause 11.1.3.1.1.1]

Upon receiving a request from an MCPTT user to release an MCPTT private call session established using on-demand session signalling, the MCPTT client shall follow the procedures as specified in subclause 6.2.5.1.

### 6.2.7.3 Test description

## 6.2.7.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.2.7.3.2

# 6.2.8 On-network / Private Call / On-demand / Manual Commencement Mode / Without Floor Control / Client Terminated (CT)

## 6.2.8.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service including authorization to
receive an MCPTT private call }
ensure that {

when { the UE (MCPTT Client) receives a request for establishment of an MCPTT private call, Ondemand Manual Commencement Mode without floor control }

then { UE (MCPTT Client) notifies the User for the incoming call responding to the Server with a
SIP 183 (Ringing) message, and, after the User accepts the call sends to the Server a SIP 200 (OK)
message, and, does not apply floor control }

(2)

with { UE (MCPTT Client) having established an MCPTT Private Call }
ensure that {

when { the MCPTT User (MCPTT Client) is informed for the termination of the ongoing MCPTT private
call }

6.2.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.2, 6.2.3.2.1, 6.2.6, 11.1.1.2.1.2, 11.1.1.2.1.3, 11.1.3.1.1.2. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.2]

When the MCPTT client receives an initial SDP offer for an MCPTT session, the MCPTT client shall process the SDP offer and shall compose an SDP answer according to 3GPP TS 24.229 [4].

When composing an SDP answer, the MCPTT client:

- 1) shall accept the MCPTT speech media stream in the SDP offer;
- 2) shall set the IP address of the MCPTT client for the accepted MCPTT speech media stream and, if included in the SDP offer, for the accepted media-floor control entity;
- NOTE: If the MCPTT client is behind a NAT the IP address and port included in the SDP answer can be a different IP address and port than the actual IP address and port of the MCPTT client depending on the NAT traversal method used by the SIP/IP Core.
- 3) shall include an "m=audio" media-level section for the accepted MCPTT speech media stream consisting of:
  - a) the port number for the media stream;
  - b) media-level attributes as specified in 3GPP TS 24.229 [4]; and
  - c) "i=" field set to "speech" according to 3GPP TS 24.229 [4]; and

[TS 24.379, clause 6.2.3.2.1]

#### The MCPTT client:

- 1) shall accept the SIP INVITE request and generate a SIP 180 (Ringing) response according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall include the option tag "timer" in a Require header field of the SIP 180 (Ringing) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 180 (Ringing) response;

- 4) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 180 (Ringing) response; and
- 5) shall send the SIP 180 (Ringing) response to the MCPTT server.

When sending the SIP 200 (OK) response to the incoming SIP INVITE request, the MCPTT client shall follow the procedures in subclause 6.2.3.1.1.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 11.1.1.2.1.2]

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

•••

- 4) if the SDP offer of the SIP INVITE request contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - d) if authentication verification of the MIKEY-SAKKE I\_MESSAGE fails, shall reject the SIP INVITE request with a SIP 488 (Not Acceptable Here) response as specified in IETF RFC 4567 [47], and include warning text set to "136 authentication of the MIKEY-SAKE I\_MESSAGE failed" in a Warning header field as specified in subclause 4.4; and
  - e) if the signature of the MIKEY-SAKKE I\_MESSAGE was successfully validated:
    - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46]; and
    - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.
- 5) may check if a Resource-Priority header field is included in the incoming SIP INVITE request and may perform further actions outside the scope of the present document to act upon an included Resource-Priority header field as specified in 3GPP TS 24.229 [4];
- 6) may display to the MCPTT user the MCPTT ID of the inviting MCPTT user;

•••

- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.1 if either of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode; or

#### [TS 24.379, clause 11.1.2.2]

Upon receipt of an initial SIP INVITE request for the private call with an SDP offer not including a media-level section for a media-floor control entity, the MCPTT client shall consider it as the request for private call without floor control and shall follow the procedures as specified in subclause 11.1.1.2.1.2 for on-demand session and subclause 11.1.1.2.2.2 for pre-established session.

[TS 24.379, clause 11.1.3.1.1.2]

Upon receiving a SIP BYE request for private call session, the MCPTT client shall follow the procedures as specified in subclause 6.2.6.

## 6.2.8.3 Test description

## 6.2.8.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

```

### 6.2.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.1.1.2.2.1, 11.1.3.1.2.1, 6.2.5.2, TS 24.380 clauses 4.1.2.1, 4.1.2.2, 9.2.2.3.2, 9.2.2.4.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.1.1.2.2.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call within a pre-established session the MCPTT client shall generate a SIP REFER request outside a dialog in accordance with the procedures specified in 3GPP TS 24.229 [4], IETF RFC 4488 [22] and IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27], with the clarifications given below.

•••

The MCPTT client populates the SIP REFER request as follows:

- 1) shall include the Request-URI set to the public service identity identifying the pre-established session on the MCPTT server serving the MCPTT user;
- shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- 3) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22];
- 4) shall include the option tag "multiple-refer" in the Require header field;
- 5) may include a P-Preferred-Identity header field in the SIP REFER request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 6) shall include a P-Preferred-Service header field set to the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), according to IETF RFC 6050 [9];
- 7) shall set the Refer-To header field of the SIP REFER request as specified in IETF RFC 3515 [25] with a Content-ID ("cid") Uniform Resource Locator (URL) as specified in IETF RFC 2392 [62] that points to an application/resource-lists MIME body as specified in IETF RFC 5366 [20], and with the Content-ID header field set to this "cid" URL.
- 8) shall include in the application/resource-lists MIME body a single <entry> element containing a "uri" attribute set to the MCPTT ID of the called user, extended with the following URI header fields:
- NOTE: Characters that are not formatted as ASCII characters are escaped in the following URI header fields

••

- b) if force of automatic commencement mode at the invited MCPTT client is not requested by the MCPTT user and:
  - i) if automatic commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include an Answer-Mode header field with the value "Automatic" according to rules and procedures of IETF RFC 5373 [18]; and

...

c) shall include in a hname "body" URI header field:

- i) if the SDP parameters of the pre-established session do not contain a media-level section of a media-floor control entity or if end-to-end security is required for the private call, an application/sdp MIME body containing the SDP parameters of the pre-established session according to 3GPP TS 24.229 [4] with the clarification given in subclause 6.2.1;
- ii) an application/vnd.3gpp.mcptt-info MIME body with the <session-type> element set to "private"; and
- iii) an application/resources-list MIME body with an <entry> element containing a "uri" attribute set to the MCPTT ID of the called user;

•••

11) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session.

The MCPTT client shall send the SIP REFER request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a final SIP 2xx response to the SIP REFER request the MCPTT client shall interact with media plane as specified in 3GPP TS 24.380 [5].

[TS 24.379, clause 11.1.3.1.2.1]

Upon receiving a request from an MCPTT user to release an MCPTT private call within a pre-established session, the MCPTT client shall follow the procedures as specified in subclause 6.2.5.2.

[TS 24.379, clause 6.2.5.2]

When the MCPTT client wants to release an MCPTT session using a pre-established session, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5];
- shall generate an initial SIP REFER request outside a dialog in accordance with the procedures specified in 3GPP TS 24.229 [4], IETF RFC 4488 [22] and IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27];
- 3) shall set the Request-URI of the SIP REFER request to the public service identity identifying the pre-established session on the MCPTT server serving the MCPTT user;
- 4) shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- 5) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22];
- 6) shall set the Refer-To header field of the SIP REFER request to the MCPTT session identity to release;
- 7) shall include the "method" SIP URI parameter with the value "BYE" in the URI in the Refer-To header field;
- 8) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session; and
- 9) shall send the SIP REFER request according to 3GPP TS 24.229 [4].

Upon receiving a SIP 2xx response to the SIP REFER request, the MCPTT client shall interact with media plane as specified in 3GPP TS 24.380 [5].

[TS 24.380, clause 4.1.2.1]

A pre-established session can be used when initiating a pre-arranged group call, a chat group call or a private call. Similarly a pre-established session can be released for reuse after the termination of a pre-arranged group call, chat group call and private call.

The media plane control messages related to call setup over a pre-established session are sent over the channel used for media plane control. The media plane control messages related to the release of a call which was setup over a pre-established session, without terminating the pre-established session, are sent over the channel used for media plane control. The unicast channel for media plane control is over the MCPTT-4 reference point.

[TS 24.380, clause 4.1.2.2]

For a pre-arranged group call, when the originator initiates the call setup indicating the use of a pre-established session using SIP messages as specified in 3GPP TS 24.379 [2], the participating MCPTT function (which serves the originating MCPTT client) sends to the originating MCPTT client a Connect message after the controlling MCPTT function accepts the initiation of this call. After the reception of this Connect message the originating MCPTT client sends an Acknowledgment message by indicating that the connection is accepted or by indicating that the connection is not accepted. If the connection is accepted by the originating MCPTT client, the floor control for this call continues a specified in clause 6.

[TS 24.380, clause 9.2.2.3.2]

Upon reception of a Connect message:

- 1. if the MCPTT client accepts the incoming call the MCPTT client:
  - a. shall send the Acknowledgement message with Reason Code field set to 'Accepted';
  - b. shall use only the media streams of the pre-established session which are indicated as used in the associated call session Media Streams field, if the Connect contains a Media Streams field;
  - c. shall create an instance of the 'Floor participant state transition diagram for basic operation' as specified in subclause 6.2.10; and
  - d. shall enter the 'U: Pre-established session in use' state; or

[TS 24.380, clause 9.2.2.4.6]

Upon receiving a 2xx response to the sent SIP REFER request as described in 3GPP TS 24.379 [2] when the call is released, but the Pre-established Session is kept alive the MCPTT client:

- 1. shall enter the 'U: Pre-established session not in use' state; and
- 2. shall terminate the instance of 'Floor participant state transition diagram for basic operation' state machine as specified in subclause 6.2.4.

### 6.2.9.3 Test description

#### 6.2.9.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

- The MCPTT User performs the Generic Test Procedure for MCPTT pre-established session establishment CO as specified in TS 36.579-1 [2], subclause 5.3.3.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.2.9.3.2 Test procedure sequence

St	Procedure		Message Sequence		Verdict

with { UE (MCPTT Client) having Private Call Within a pre-established session }
ensure that {
 when { the MCPTT User (MCPTT Client) receives a media plane control Disconnect message for
 termination of the ongoing MCPTT private call }
 then { UE (MCPTT Client) accept the request by sending a media plane control Acknowledgement
 message and releases the call but keeps the pre-established session, and, does not terminate the
 pre-established session }

# 6.2.10.2 Conformance requirements

}

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clause 11.1.1.2.2.1, TS 24.380 clauses 4.1.2.1, 4.1.2.3, 9.2.2.3.2, 9.2.2.3.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.1.1.2.2.1]

Upon receiving a request from an MCPTT user to establish an MCPTT private call within a pre-established session the MCPTT client shall generate a SIP REFER request outside a dialog in accordance with the procedures specified in 3GPP TS 24.229 [4], IETF RFC 4488 [22] and IETF RFC 3515 [25] as updated by IETF RFC 6665 [26] and IETF RFC 7647 [27], with the clarifications given below.

•••

The MCPTT client populates the SIP REFER request as follows:

- 1) shall include the Request-URI set to the public service identity identifying the pre-established session on the MCPTT server serving the MCPTT user;
- 2) shall include the Refer-Sub header field with value "false" according to rules and procedures of IETF RFC 4488 [22];
- 3) shall include the Supported header field with value "norefersub" according to rules and procedures of IETF RFC 4488 [22];
- 4) shall include the option tag "multiple-refer" in the Require header field;
- 5) may include a P-Preferred-Identity header field in the SIP REFER request containing a public user identity as specified in 3GPP TS 24.229 [4];
- 6) shall include a P-Preferred-Service header field set to the ICSI value "urn:urn-7:3gpp-service.ims.icsi.mcptt" (coded as specified in 3GPP TS 24.229 [4]), according to IETF RFC 6050 [9];
- 7) shall set the Refer-To header field of the SIP REFER request as specified in IETF RFC 3515 [25] with a Content-ID ("cid") Uniform Resource Locator (URL) as specified in IETF RFC 2392 [62] that points to an application/resource-lists MIME body as specified in IETF RFC 5366 [20], and with the Content-ID header field set to this "cid" URL.
- 8) shall include in the application/resource-lists MIME body a single <entry> element containing a "uri" attribute set to the MCPTT ID of the called user, extended with the following URI header fields:
- NOTE: Characters that are not formatted as ASCII characters are escaped in the following URI header fields
  - ••
  - b) if force of automatic commencement mode at the invited MCPTT client is not requested by the MCPTT user and:
    - if automatic commencement mode at the invited MCPTT client is requested by the MCPTT user, shall include an Answer-Mode header field with the value "Automatic" according to rules and procedures of IETF RFC 5373 [18]; and

•••

- c) shall include in a hname "body" URI header field:
  - i) if the SDP parameters of the pre-established session do not contain a media-level section of a media-floor control entity or if end-to-end security is required for the private call, an application/sdp MIME body containing the SDP parameters of the pre-established session according to 3GPP TS 24.229 [4] with the clarification given in subclause 6.2.1;
  - ii) an application/vnd.3gpp.mcptt-info MIME body with the <session-type> element set to "private"; and
  - iii) an application/resources-list MIME body with an <entry> element containing a "uri" attribute set to the MCPTT ID of the called user;

•••

11) shall include a Target-Dialog header field as specified in IETF RFC 4538 [23] identifying the pre-established session.

The MCPTT client shall send the SIP REFER request towards the MCPTT server according to 3GPP TS 24.229 [4].

Upon receiving a final SIP 2xx response to the SIP REFER request the MCPTT client shall interact with media plane as specified in 3GPP TS 24.380 [5].

[TS 24.380, clause 4.1.2.1]

A pre-established session can be used when initiating a pre-arranged group call, a chat group call or a private call. Similarly a pre-established session can be released for reuse after the termination of a pre-arranged group call, chat group call and private call.

The media plane control messages related to call setup over a pre-established session are sent over the channel used for media plane control. The media plane control messages related to the release of a call which was setup over a pre-established session, without terminating the pre-established session, are sent over the channel used for media plane control. The unicast channel for media plane control is over the MCPTT-4 reference point.

[TS 24.380, clause 4.1.2.3]

When an MCPTT client leaves a call (as specified in 3GPP TS 24.379 [2]) which was setup over a pre-established session without releasing the pre-established session, this pre-established session can be used for another call.

[TS 24.380, clause 9.2.2.3.2]

Upon reception of a Connect message:

- 1. if the MCPTT client accepts the incoming call the MCPTT client:
  - a. shall send the Acknowledgement message with Reason Code field set to 'Accepted';
  - b. shall use only the media streams of the pre-established session which are indicated as used in the associated call session Media Streams field, if the Connect contains a Media Streams field;
  - c. shall create an instance of the 'Floor participant state transition diagram for basic operation' as specified in subclause 6.2.10; and

d. shall enter the 'U: Pre-established session in use' state; or

[TS 24.380, clause 9.2.2.3.4]

Upon reception of a Disconnect message the MCPTT client:

- 1. if the first bit in the subtype of the Disconnect message is set to '1' (acknowledgement is required), shall send the Acknowledgement message with the Reason Code set to 'Accepted'; and
- 2. shall remain in 'U: Pre-established session not in use' state.

### 6.2.10.3 Test description

#### 6.2.10.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT pre-established session establishment CO as specified in TS 36.579-1 [2], subclause 5.3.3.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

6.2.11 On-network / Private Call / Within a pre-established session / Manual Commencement Mode / Without Floor Control / Release of the Call and the pre-established session / Client Terminated (CT)

6.2.11.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private calls with manual commencement, and, having established a pre-established session, without End-to-end communication security and without floor control } ensure that {

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

302

when { the UE (MCPTT Client) receives a SIP re-INVITE message as a part of request for establishment of a client Terminated MCPTT private call, within the pre-established session, Manual Commencement Mode }

then { UE (MCPTT Client) notifies the User for the incoming call responding to the Server with a
SIP 183 (Ringing) message, and, after the User accepts the call sends to the Server a SIP 200 (OK)
message }

(2)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private calls with automatic commencement, and, having established a pre-established session, Automatic Commencement Mode without End-to-end communication security and without floor control, and, the User having accepted a request for the establishment of a client Terminated MCPTT private call within the pre-established session } ensure that {

when { the UE (MCPTT Client) receives a media plane control Connect message as a part of request
for establishment of a client Terminated MCPTT private call, within the pre-established session }
 then { UE (MCPTT Client) sends a media plane control Acknowledgement message accepting the
 establishment of the media plane and thereby the establishment of the MCPTT private call }
 }

(3)

with { UE (MCPTT Client) having Private Call Within a pre-established session }
ensure that {
 when { the MCPTT User (MCPTT Client) is informed for the termination of the ongoing MCPTT private
 call by the Server sending a SIP BYE message }
 then { UE (MCPTT Client) accepts the request and after sending a SIP 200 (OK) response
 terminates the call and the pre-established MCPTT session }
 }
}

# 6.2.11.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 6.2.3.1.1, 6.2.3.2.1, 6.2.6, 11.1.1.2.1.2, 11.1.1.2.2.2, 11.1.2.2, TS 24.380 clauses 4.1.2.1, 4.1.2.3, 9.2.2.3.2. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 6.2.3.1.1]

- 2) shall include the option tag "timer" in a Require header field of the SIP 200 (OK) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 200 (OK) response;
- shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 200 (OK) response;
- shall include the Session-Expires header field in the SIP 200 (OK) response and start the SIP session timer according to IETF RFC 4028 [7]. The "refresher" parameter in the Session-Expires header field shall be set to "uas";
- shall, if the incoming SIP INVITE request contains a Replaces header field, include in the SDP answer in the SIP 200 (OK) response to the SDP offer the parameters used for the pre-established session identified by the contents of the Replaces header field;
- shall, if the incoming SIP INVITE request does not contain a Replaces header field, include an SDP answer in the SIP 200 (OK) response to the SDP offer in the incoming SIP INVITE request according to 3GPP TS 24.229 [4] with the clarifications given in subclause 6.2.2;
- NOTE: In the case of a new emergency call where the terminating client is using a pre-established session, the SIP INVITE request containing a Replaces header is used to replace the pre-established session.
- shall send the SIP 200 (OK) response towards the MCPTT server according to rules and procedures of 3GPP TS 24.229 [4];
- 9) shall, if the incoming SIP INVITE request contains a Replaces header field, release the pre-established session identified by the contents of the Replaces header field; and
- 10) shall interact with the media plane as specified in 3GPP TS 24.380 [5] subclause 6.2.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.2.3.2.1]

The MCPTT client:

- 1) shall accept the SIP INVITE request and generate a SIP 180 (Ringing) response according to rules and procedures of 3GPP TS 24.229 [4];
- 2) shall include the option tag "timer" in a Require header field of the SIP 180 (Ringing) response;
- 3) shall include the g.3gpp.mcptt media feature tag in the Contact header field of the SIP 180 (Ringing) response;
- 4) shall include the g.3gpp.icsi-ref media feature tag containing the value of "urn:urn-7:3gppservice.ims.icsi.mcptt" in the Contact header field of the SIP 180 (Ringing) response; and
- 5) shall send the SIP 180 (Ringing) response to the MCPTT server.

When sending the SIP 200 (OK) response to the incoming SIP INVITE request, the MCPTT client shall follow the procedures in subclause 6.2.3.1.1.

When NAT traversal is supported by the MCPTT client and when the MCPTT client is behind a NAT, generation of SIP responses is done as specified in this subclause and as specified in IETF RFC 5626 [15].

[TS 24.379, clause 6.2.6]

Upon receiving a SIP BYE request, the MCPTT client:

- 1) shall interact with the media plane as specified in 3GPP TS 24.380 [5]; and
- 2) shall send SIP 200 (OK) response towards MCPTT server according to 3GPP TS 24.229 [4].

[TS 24.379, clause 11.1.1.2.1.2]

Upon receipt of an initial SIP INVITE request, the MCPTT client shall follow the procedures for termination of multimedia sessions in the IM CN subsystem as specified in 3GPP TS 24.229 [4] with the clarifications below.

The MCPTT client:

- 4) if the SDP offer of the SIP INVITE request contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - d) if authentication verification of the MIKEY-SAKKE I\_MESSAGE fails, shall reject the SIP INVITE request with a SIP 488 (Not Acceptable Here) response as specified in IETF RFC 4567 [47], and include warning text set to "136 authentication of the MIKEY-SAKE I\_MESSAGE failed" in a Warning header field as specified in subclause 4.4; and
  - e) if the signature of the MIKEY-SAKKE I\_MESSAGE was successfully validated:
    - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46]; and
    - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.

<sup>•••</sup> 

•••

- 8) shall perform the manual commencement procedures specified in subclause 6.2.3.2.1 if either of the following conditions are met:
  - a) SIP INVITE request contains an Answer-Mode header field with the value "Manual" and the MCPTT service setting at the invited MCPTT client for answering the call is set to manual commencement mode; or

[TS 24.379, clause 11.1.1.2.2.2]

The MCPTT client shall follow the procedures for termination of multimedia sessions as specified in subclause 11.1.1.2.1.2 with the following clarifications:

•••

2) if the MCPTT client is targeted for a new normal priority private call, the MCPTT client receives a SIP re-INVITE request rather than a SIP INVITE request.

[TS 24.379, clause 11.1.2.2]

Upon receipt of an initial SIP INVITE request for the private call with an SDP offer not including a media-level section for a media-floor control entity, the MCPTT client shall consider it as the request for private call without floor control and shall follow the procedures as specified in subclause 11.1.1.2.1.2 for on-demand session and subclause 11.1.1.2.2.2 for pre-established session.

[TS 24.380, clause 4.1.2.1]

A pre-established session can be used when initiating a pre-arranged group call, a chat group call or a private call. Similarly a pre-established session can be released for reuse after the termination of a pre-arranged group call, chat group call and private call.

The media plane control messages related to call setup over a pre-established session are sent over the channel used for media plane control. The media plane control messages related to the release of a call which was setup over a pre-established session, without terminating the pre-established session, are sent over the channel used for media plane control. The unicast channel for media plane control is over the MCPTT-4 reference point.

[TS 24.380, clause 4.1.2.3]

A call setup over a pre-established session can also be released by using the specifications in 3GPP TS 24.379 [2] (without the use of Disconnect message) as a result the pre-established session, which has been used for this call, is also released.

[TS 24.380, clause 9.2.2.3.2]

Upon reception of a Connect message:

- 1. if the MCPTT client accepts the incoming call the MCPTT client:
  - a. shall send the Acknowledgement message with Reason Code field set to 'Accepted';
  - b. shall use only the media streams of the pre-established session which are indicated as used in the associated call session Media Streams field, if the Connect contains a Media Streams field;
  - c. shall create an instance of the 'Floor participant state transition diagram for basic operation' as specified in subclause 6.2.11; and
  - d. shall enter the 'U: Pre-established session in use' state; or

### 6.2.11.3 Test description

#### 6.2.11.3.1 Pre-test conditions

System Simulator:

- SS (MCPTT server)

For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT pre-established session establishment CO as specified in TS 36.579-1 [2], subclause 5.3.3.
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.3 Location

# 6.3.1 On-network / Location / Event Triggered Location Information report

### 6.3.1.1 Test Purpose (TP)

(1)

```
with { UE (MCPTT Client)registered and authorized for MCPTT service and not in an emergency state } ensure that {
```

when { UE (MCPTT Client) receives a location information configuration message with a cell change trigger and the UE (MCPTT Client) moves to a different cell }

then { UE (MCPTT Client) sends the cell changed triggered location information report with changed current location coordinates by sending a SIP MESSAGE message }

}

}

#### (2)

with { UE (MCPTT Client)registered and authorized for MCPTT service and not in an emergency state }
ensure that {

when { UE (MCPTT Client) receives a location information configuration message with a ConfigureScope equal to "Full" and with a Periodic trigger element }

then { UE (MCPTT Client) sends the Periodic triggered location information report by sending a SIP MESSAGE message and UE (MCPTT Client) sends the subsequent Periodic triggered location information report by sending a SIP MESSAGE message only after minimumIntervalLength for NonEmergencyLocationInformation has expired }

(3)

with { UE (MCPTT Client) registered and authorized for MCPTT service } ensure that {

when { UE (MCPTT Client) receives a location information configuration message with a
ConfigureScope equal to "Update" and with a PLMN Change trigger element and the UE (MCPTT Client)
moves to a different PLMN }

then { UE (MCPTT Client) sends the cell change triggered location information report and changed current location coordinates by sending a SIP MESSAGE and UE (MCPTT Client) sends the Periodic triggered location information report by sending a separate SIP MESSAGE message only after minimumIntervalLength for NonEmergencyLocationInformation has expired } }

#### 6.3.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clause 13.3.4.1, 13.3.4.2. Unless otherwise stated, these are Rel-13 requirements.

[TS24.379 clause 13.3.4.1]

If a location reporting trigger fires the MCPTT client checks if the minimumReportInterval timer is running. If the timer is running the MCPTT client waits until the timer expires. When the minimumReportInterval timer fires, the MCPTT client:

1) shall, if any of the reporting triggers are still true, send a location information report as specified in subclause 13.3.4.2.

If the MCPTT client receives a location information request as specified in subclause 13.3.3, the MCPTT client shall send a location report as specified in subclause 13.3.4.2

[TS24.379 clause 13.3.4.2]

If the MCPTT client needs to send a SIP request for other reasons (e.g. a SIP MESSAGE request containing an MBMS listening report as described in clause 14), the MCPTT client:

1) shall include an application/vnd.3gpp.mcptt-location-info+xml MIME body and in the <location-info> root element the MCPTT client shall include:

- a) a <Report> element and if the Report was triggered by a location request include the <ReportID> attribute set to the value of the <RequestID> attribute in the received Request;
- b) <TriggerId> child elements, where each element is set to the value of the <Trigger-Id> attribute associated with the trigger that have fired; and
- c) the location reporting elements corresponding to the triggers that have fired;
- 2) shall set the minimumReportInterval timer to the minimumReportInterval time and start the timer; and
- 3) shall reset all triggers.

If the MCPTT client does not need to send a SIP request for other reasons, the MCPTT client shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33]. The MCPTT client;

- 1) shall include in the Request-URI, the SIP URI received in the P-Asserted-Identity header field in the received SIP MESSAGE request for location report configuration;
- 2) shall include a Content-Type header field set to "application/vnd.3gpp.mcptt-location-info+xml";
- 3) shall include an application/vnd.3gpp.mcptt-location-info+xml MIME body and in the <location-info> root element include:
  - a) a <Report> element and if the Report was triggered by a location request include the <ReportID> attribute set to the value of the <RequestID> attribute in the received Request;
  - b) a <TriggerId> child element set to the value of each <Trigger-Id> value of the triggers that have fired; and
  - c) the location reporting elements corresponding to the triggers that have fired;
- 4) shall include an Accept-Contact header field with the media feature tag g.3gpp.mcptt along with parameters "require" and "explicit" in accordance with IETF RFC 3841 [6];
- 5) shall set the minimumReportInterval timer to the minimumReportInterval time and start the timer;
- 6) shall reset all triggers; and
- 7) shall send the SIP MESSAGE request as specified in 3GPP TS 24.229 [4].

# 6.3.1.3 Test description

# 6.3.1.3.1 Pre-test conditions

# System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 and Cell 2 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document). The simulated Cell 4 shall belong to PLMN2.

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- GNSS simulator is activated and to report changed UE location coordinates, the simulator shall use OTDOA UE position technology as defined in 3GPP TS 36.509 [23].
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.3.1.3.2 Test procedure sequence

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message

# 6.3.2 On-network / Location/ On-demand Location Information Request

# 6.3.2.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client)registered and authorized for MCPTT service and not in an emergency state } ensure that {

when { UE (MCPTT Client) receives a location information configuration message and then receives a location information request }

then { UE (MCPTT Client) sends the location information report by sending a SIP MESSAGE and UE (MCPTT Client) includes location information for non-emergency information and uses the correct ReportID referenced in the location request }

# 6.3.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clauses 13.3.2, 13.3.3, 13.3.4.2. Unless otherwise stated, these are Rel-13 requirements.

[TS24.379 clause 13.3.2]

Upon receiving a SIP MESSAGE request containing:

- 1) an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref set to the value "urn:urn-7:3gpp-service.ims.icsi.mcptt";
- 2) a Content-Type header field set to "application/vnd.3gpp.mcptt-location-info+xml"; and
- 3) an application/vnd.3gpp.mcptt-location-info+xml MIME body with a <Configuration> root element included in the <location-info> root element;

#### then the MCPTT client:

1) shall store the contents of the <Configuration> elements;

•••

3) shall start the minimumReportInterval timer.

[TS24.379 clause 13.3.3]

Upon receiving a SIP MESSAGE request containing

- an Accept-Contact header field with the media feature tag g.3gpp.icsi-ref set to the value "urn:urn-7:3gpp-service.ims.icsi.mcptt";
- 2) a Content-Type header field set to "application/vnd.3gpp.mcptt-location-info+xml"; and
- 3) an application/vnd.3gpp.mcptt-location-info+xml MIME body with a <Request> element included in the <location-info> root element;

then the MCPTT client:

- 1) shall send a location report as specified in subclause 13.3.4; and
- 2) shall reset the minimumReportInterval timer.

[TS24.379 clause 13.3.4.2]

If the MCPTT client does not need to send a SIP request for other reasons, the MCPTT client shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33]. The MCPTT client;

- 1) shall include in the Request-URI, the SIP URI received in the P-Asserted-Identity header field in the received SIP MESSAGE request for location report configuration;
- 2) shall include a Content-Type header field set to "application/vnd.3gpp.mcptt-location-info+xml";

- 3) shall include an application/vnd.3gpp.mcptt-location-info+xml MIME body and in the <location-info> root element include:
  - a) a <Report> element and if the Report was triggered by a location request include the <ReportID> attribute set to the value of the <RequestID> attribute in the received Request;
  - •••
- 4) shall include an Accept-Contact header field with the media feature tag g.3gpp.mcptt along with parameters "require" and "explicit" in accordance with IETF RFC 3841 [6];
- 5) shall set the minimumReportInterval timer to the minimumReportInterval time and start the timer;

•••

7) shall send the SIP MESSAGE request as specified in 3GPP TS 24.229 [4].

# 6.3.2.3 Test description

# 6.3.2.3.1 Pre-test conditions

#### System Simulator:

- SS (MCPTT server)
- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- GNSS simulator is activated and to report changed UE location coordinates, the simulator shall use OTDOA UE position technology as defined in 3GPP TS 36.509 [23].
- UE States at the end of the preamble
  - The UE is in E-UTRA Registered, Idle Mode state.
  - The MCPTT Client Application has been activated and User has registered-in as the MCPTT User with the Server as active user at the Client.

# 6.3.2.3.2 Test procedure sequence

Table 6.3.2.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.4 'Generic Test Procedure for MCPTT CT	-	-	-	-
	communication in E-UTRA'. The test sequence below shows only the MCPTT relevant messages exchanged.				
1	The SS sends a location reporting configuration containing the non-emergency location information to the UE (MCPTT Client)	<	SIP MESSAGE	-	-
2	The SS sends an on-demand location reporting request	<	SIP MESSAGE	-	-
3	Check: Does the UE (MCPTT Client) send a SIP MESSAGE containing the location information report with the correct ReportID?	>	SIP MESSAGE	1	Р
4	The SS sends a location reporting configuration with update configuration scope element and containing the emergency information to the UE (MCPTT Client)	<	SIP MESSAGE	-	-
5	The SS sends on-demand location reporting request	<	SIP MESSAGE	-	-
6	Check: Does the UE (MCPTT Client) send a SIP MESSAGE containing the location information report with the correct ReportID?	>	SIP MESSAGE	1	Р
-	EXCEPTION: SS releases the E-UTRA connection.	-	-	-	-

#### 6.4.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379, clause 14.3.3.2, TS 24.380, clauses 10.3.2, 10.3.3, 10.3.4, 6.2.4.3.5, 6.2.4.5.3, 6.2.4.4.2, 6.2.4.3.2. Unless otherwise stated, these are Rel-13 requirements.

[TS 24.379, clause 14.3.3.2]

}

When the MCPTT client wants to report the MBMS bearer listening status, the MCPTT client:

- NOTE 1: The application/vnd.3gpp.mcptt-mbms-usage-info+xml can contain both the listening status "listening" and "not listening" at the same time.
- 1) shall generate a SIP MESSAGE request in accordance with 3GPP TS 24.229 [4] and IETF RFC 3428 [33]; and
- 2) the SIP MESSAGE request:
  - a) shall include in the Request-URI the MBMS public service identity of the participating MCPTT function received in the P-Asserted-Identity header field of the announcement message;
  - b) shall include an Accept-Contact header field with the g.3gpp.icsi-ref media-feature tag with the value of "urn:urn-7:3gpp-service.ims.icsi.mcptt" along with parameters "require" and "explicit" according to IETF RFC 3841 [6];
  - c) should include a public user identity in the P-Preferred-Identity header field as specified in 3GPP TS 24.229 [4];
  - d) shall include a P-Preferred-Service header field with the value "urn:urn-7:3gpp-service.ims.icsi.mcptt";
  - e) shall include an application/vnd.3gpp.mcptt-mbms-usage-info+xml MIME body with the <version> element set to "1";
  - f) if the MCPTT client is listening to the MBMS bearer, the application/vnd.3gpp.mcptt-mbms-usage-info+xml MIME body:
    - i) shall include an <mbms-listening-status> element set to "listening";
    - ii) if the intention is to report that the MCPTT client is listening to the MBMS subchannel for an ongoing conversation in a session (e.g. as the response to the Map Group To Bearer message), shall include the MCPTT session identity of the ongoing conversation in <session-identity> element;
    - iii) shall include one or more <TGMI> elements for which the listening status applies; and
    - iv) if the intention is to report that the MCPTT client is listening to the general purpose MBMS subchannel, shall include the <general-purpose> element set to "true";
  - g) if the MCPTT client is not listening, the application/vnd.3gpp.mcptt-mbms-usage-info+xml MIME body:

- i) shall include an <mbms-listening-status> element set to "not-listening";
- iii) shall include one or more <TGMI> elements for which the listening status applies;
- iii) if the intention is to report that the MCPTT client is no longer listening to the MBMS subchannel in an ongoing session (e.g. as the response to Unmap Group to Bearer message), shall include the MCPTT session identity in <session-identity> elements; and
- iv) if the intention is to report that the MCPTT client is no longer listening to general purpose MBMS subchannel, shall include the <general-purpose> element set to "false"; and
- NOTE 2: If the MCPTT client reports that the MCPTT client is no longer listening to the general purpose MBMS subchannel, it is implicitly understood that the MCPTT client no longer listens to any MBMS subchannel in ongoing conversations that the MCPTT client previously reported status "listening".
  - h) shall include an application/vnd.3gpp.mcptt-info+xml MIME body with the <mcptt-request-uri> set to the MCPTT ID; and
- 3) shall send the SIP MESSAGE request according to 3GPP TS 24.229 [4].

[TS 24.380, clause 10.3.2]

When receiving a Map Group To Bearer message over the general purpose MBMS subchannel, the MBMS interface in the MCPTT client:

1. shall associate the TMGI in the TMGI field, the MBMS subchannel for audio and for floor control with the MCPTT group identity in the MCPTT Group ID field.

[TS 24.380, clause 10.3.3]

If the MBMS interface receives RTP media packets or floor control messages over the MBMS subchannel, the MBMS interface in the MCPTT client:

- 1. if there is an association between the TMGI, the MBMS subchannel for audio and for floor control to an ongoing conversation in a group session:
  - a. shall forward the received floor control messages to the floor participant in the conversation; and
  - b. if the received RTP medias contains a different SSRC value than the SSRC value used by the MCPTT client, shall forward the received RTP packets to the media mixer in the conversation; and
- 2. if there is no such association:
  - a. shall ignore the received floor control message or received RTP media packet.

[TS 24.380, clause 10.3.4]

When receiving the Unmap Group To Bearer message over a MBMS subchannel, the MBMS interface in the MCPTT client:

1. shall remove the association between the TMGI, the MBMS subchannel for audio and for floor control from the conversation in the group session identified by the MCPTT Group ID field, if such an association exists.

[TS 24.380, clause 6.2.4.3.5]

Upon receiving an indication from the user to request permission to send media, the floor participant:

- 1. shall send the Floor Request message toward the floor control server; The Floor Request message:
  - a. if a different priority than the normal priority is required, shall include the Floor Priority field with the priority not higher than negotiated with the floor control server as specified in subclause 14.3.3; and
  - b. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall start timer T101 (Floor Request) and initialise counter C101 (Floor Request) to 1; and

3. shall enter the 'U: pending Request' state.

[TS 24.380, clause 6.2.4.5.3]

Upon receiving an indication from the user to release the permission to send RTP media, the floor participant:

- 1. shall send a Floor Release message towards the floor control server The Floor Release message:
  - a. may include the first bit in the subtype of the Floor Release message set to '1' (acknowledgement is required) as specified in subclause 8.2.2;
- NOTE: It is an implementation option to handle the receipt of the Floor Ack message and what action to take if the Floor Ack message is not received.
  - b. if the session is a broadcast call and if the session was established as a normal call, shall include the Floor Indicator with the A-bit set to '1' (Normal call); and
  - c. if the Floor Granted message included the G-bit set to '1' (Dual floor), shall include the Floor Indicator with the G-bit set to '1' (Dual floor);
- 2. shall remove the indication that the participant is overriding without revoke if this indication is stored;
- 3. shall remove the indication that the participant is overridden without revoke if this indication is stored;
- 4. shall start timer T100 (Floor Release) and initialize counter C100 (Floor Release) to 1; and
- 5. shall enter the 'U: pending Release' state.

[TS 24.380, clause 6.2.4.4.2]

Upon receiving a Floor Granted message from the floor control server or a floor granted indication in an SIP 200 (OK) response in the application and signalling layer, the floor participant:

- 1. if the first bit in the subtype of the Floor Granted message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '1' (Floor Granted); and
  - b. shall include the Source field set to '0' (the floor participant is the source);
- 2. shall provide floor granted notification to the user, if not already done;
- NOTE: Providing the floor granted notification to the user prior to receiving the Floor Granted message is an implementation option.
- 3. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call;
- 4. if the G-bit in the Floor Indicator is set to '1' (Dual floor) shall store an indication that the participant is overriding without revoke;
- 5. shall stop the optional timer T103 (End of RTP media), if running;
- 6. shall stop timer T101 (Floor Request); and
- 7. shall enter the 'U: has permission' state.

[TS 24.380, clause 6.2.4.3.2]

Upon receiving a Floor Idle message, the participant:

- 1. if the first bit in the subtype of the Floor Idle message is set to '1' (Acknowledgment is required) as described in subclause 8.3.2, shall send a Floor Ack message. The Floor Ack message:
  - a. shall include the Message Type field set to '5' (Floor Idle); and
  - b. shall include the Source field set to '0' (the floor participant is the source);

- 2. may provide floor idle notification to the user, if it has not already done so;
- 3. shall stop the optional timer T103 (End of RTP media), if it is running; and
- 4. shall remain in the 'U: has no permission' state.

## 6.4.1.3 Test description

## 6.4.1.3.1 Pre-test conditions

#### System Simulator:

- Void

#### IUT:

- Void

#### Preamble:

- A pre-activated MBMS bearer exists

6.4.1.3.2 Test procedure sequence

## Table 6.4.1.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Make the MCPTT User request the	-	-	-	-
	establishment of an MCPTT on-demand pre-				
	arranged group call, automatic				
	commencement mode, with explicit request for				
	floor control (implicit floor control).				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
-	EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-
	are related to the MCPTT call establishment				
	are described in TS 56.579-1 [2], subclause				
	5.4.3 'Generic Test Procedure for MCPTT CO				
	communication in E-UTRA'. The test sequence				
	below shows only the MCPTT relevant				
	messages exchanged.				
2	The UE (MCPTT client) sends an initial SIP	>	SIP INVITE	-	-
	INVITE request requesting the establishment				
	of an MCPTT on-demand pre-arranged group				
	call, automatic commencement mode, applying				
	End-to-end communication security with Floor				
	Control				
3	The SS sends SIP 100 Trying	<	SIP 100 Trying	-	-
4	The SS sends SIP 180 Ringing	<	SIP 180 Ringing	-	-
5	The SS sends a SIP 200 (OK) message	<	SIP 200 (OK)	-	-
	indicating that it has accepted the SIP INVITE				
6	The UE (MCPTT client) sends a SIP ACK in	>	SIP ACK	-	-
	response to the SIP 200 (OK)				
7	The UE (MCPTT client) notifies the user that	-	-	-	-
	the call has been successfully established				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
8	Make the MCPTT User request to speak (e.g.	-	-	-	-
	pressing the PTT button).				
	NOTE: This is expected to be done via a				
0	suitable implementation dependent MMI.		Flaar Dalaaa		
9	The UE (MCPTT client) sends a Floor Release	>	Floor Release	-	-
	message				
-	EXCEPTION: Step 10a1 describes behaviour that depends on the UE implementation; the	-	-	-	-
	"lower case letter" identifies a step sequence				
	that take place if the UE requests an				
	acknowledgement to the Floor Release				
	message.				
10a1	The SS sends a Floor Ack message in	<	Floor Ack	-	
1041	response to the Floor Release message	<b>~</b>		_	_
11	The SS sends a Floor Idle message with no	<	Floor Idle	-	-
	acknowledgement required				
12	The SS pre-activates an MBMS bearer and	<	SIP MESSAGE	-	-
	sends an MBMS bearer announcement				
	message via SIP MESSAGE to announce the				
	availability of an MBMS bearer.				
	NOTE: The related E-UTRA/EPC actions are				
	described in TS 56.579-1 [2], subclause 5.4.12				
	Generic Test Procedure for MCPTT				
	communication over MBMS'. The test				
	sequence below shows only the MCPTT				
	relevant messages exchanged.				
13	Check: Does the UE (MCPTT client) send a	>	SIP 200 (OK)	1	Р
	SIP 200 (OK) message in response to the SIP				
	MESSAGE message?				
14	Check: Does the UE (MCPTT Client) send an	>	SIP MESSAGE	1	Р
	MBMS Bearer listening status report via a SIP				
	MESSAGE message to the SS?				
15	The SS responds to the SIP MESSAGE	<	SIP 200 (OK)	-	-
1	message with a SIP 200 (OK) message				

16	Make the MCPTT User request to speak (e.g.	-	-	-	-
	pressing the PTT button).				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
17	The UE (MCPTT client) sends a Floor Request	>	Floor Request	-	-
	message				
18	The SS decides that a MBMS subchannel shall	<	Map Group To Bearer	-	-
	be used for a conversation and sends a Map				
	Group To Bearer message over the general				
	purpose MBMS subchannel. NOTE: The related E-UTRA/EPC actions are				
	described in TS 56.579-1 [2], subclause 5.4.12 Generic Test Procedure for MCPTT				
	communication over MBMS'. The test				
	sequence below shows only the MCPTT				
	relevant messages exchanged.				
19	Check: Does the UE (MCPTT Client) respond	>	SIP MESSAGE	2	Р
13	to the Map Group To Bearer message by	/	OII MEOOAGE	2	I
	sending an MBMS Bearer listening status				
	report via a SIP MESSAGE message?				
20	The SS responds to the SIP MESSAGE	<	SIP 200 (OK)	-	-
	message with a SIP 200 (OK) message				
21	The SS sends a Floor Granted message with	<	Floor Granted	-	-
	an acknowledgement required using unicast				
	messaging to the MCPTT Client				
22	Check: Does the UE (MCPTT client) send a	>	Floor Ack	3	Р
	Floor Ack message in response to the Floor				
	Granted message?				
23	The SS sends a Floor Taken (by client A)	<	Floor Taken	-	-
	message with no acknowledgement required				
	over the MBMS subchannel				
24	Make the MCPTT User indicate end of talking				
	(e.g. releasing the PTT button).				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
25	Check: Does the UE (MCPTT client) send a	>	Floor Release	3	Р
	Floor Release message?				
-	EXCEPTION: Step 26a1 describes behaviour	-	-	-	-
	that depends on the UE implementation; the				
	"lower case letter" identifies a step sequence				
	that take place if the UE requests an				
	acknowledgement to the Floor Release				
2601	message.		Floor Ack		
26a1	The SS sends a Floor Ack message in response to the Floor Release message using	<		-	-
	unicast messaging				
27	The SS sends a Floor Idle message with	<	Floor Idle	<del></del>	
21	acknowledgement required over the MBMS	<b>N</b>			-
	subchannel				
28	Check: Does the UE (MCPTT Client) respond	>	Floor Ack	3	Р
	to the Floor Idle message over the MBMS	-		Ŭ	•
	subchannel with a Floor Ack message?				
29	The SS sends a Floor Taken message with no	<	Floor Taken	-	-
	acknowledgement required over the MBMS				
	subchannel				
-	EXCEPTION: Step 30a1 describes behaviour	-	-	-	-
	that depends on the UE implementation; the				
	"lower case letter" identifies a step sequence				
	that take place if the UE (MCPTT Client)				
	notifies the user of the status of the floor; i.e. if				
	the UE (MCPTT Client) notifies the user when				
	the floor is idle or who currently has the floor.				
30a1	Check: Does the UE (MCPTT Client) notify the	-	-	3	Р
	user that the floor is taken?				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				

31	The SS sends a Floor Idle message with	<	Floor Idle		
51	acknowledgement required over the MBMS	<		-	-
	subchannel				
32	Check: Does the UE (MCPTT Client) respond	>	Floor Ack	3	Р
32	to the Floor Idle message over the MBMS	>	FIUUI ACK	3	Г
	subchannel with a Floor Ack message?				
22			Linman Craun to Desirer		
33	The SS ends the conversation on the MBMS	<	Unmap Group to Bearer		
	subchannel and sends an Unmap Group to				
	Bearer message on the MBMS subchannel.				
	NOTE: The related E-UTRA/EPC actions are				
	described in TS 56.579-1 [2], subclause 5.4.12				
	Generic Test Procedure for MCPTT				
	communication over MBMS'. The test				
	sequence below shows only the MCPTT				
0.1	relevant messages exchanged.				
34	Check: does the UE (MCPTT Client) respond	>	SIP MESSAGE	2	Р
	to the Unmap Group TO Bearer message with				
	a MBMS bearer listening status report via a				
	SIP MESSAGE message?				
35	The SS responds to the SIP MESSAGE	<	SIP 200 (OK)	-	-
	message with a SIP 200 (OK) message				
36	The SS cancels the MBMS bearer	<	SIP MESSAGE	-	-
	announcement and sends a SIP MESSAGE				
	message				
37	Check: Does the UE (MCPTT client) send a	>	SIP 200 (OK)	1	Р
	SIP 200 (OK) message in response to the SIP				
	MESSAGE message?				
38	Check: Does the UE (MCPTT Client) send an	>	SIP MESSAGE	1	Р
	MBMS Bearer listening status report via a SIP				
	MESSAGE message to the SS?				
39	The SS sends a Floor Idle message with an	<	Floor Idle	-	-
	acknowledgement required over the unicast				
	channel				
40	Check: Does the UE respond to the Floor Idle	>	Floor Ack	4	Р
	message with a Floor Ack message				
41	Make the MCPTT User end the on-demand	-	-	-	-
	group call.				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
42	The UE (MCPTT Client) sends a SIP BYE	>	SIP BYE	-	-
	message to end the on-demand group call.				
43	The SS sends a SIP 200 (OK)	<	SIP 200 (OK)	-	-
-	EXCEPTION: SS releases the E-UTRA	-	-	-	-
1	connection.

# 7 MCPTT Client off-network operation

## 7.1 Off-network Group Calls

7.1.1 Off-network / Group Call / Floor Control / Upgrade to Emergency Call / Downgrade from Emergency / Upgrade to Imminent Peril / Downgrade from Imminent Peril / Release Call / Client Originated (CO)

## 7.1.1.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to
initiate/cancel group calls in off-network environment, and the UE is in an off-network environment
}
ensure that {
 when { the MCPTT User requests the establishment of an MCPTT pre-arranged group call }
 then { UE (MCPTT Client) requests a pre-arranged group call by sending a GROUP CALL PROBE

message and, upon not receiving a response to the GROUP CALL PROBE, sends a GROUP CALL ANNOUNCEMENT
message }
}

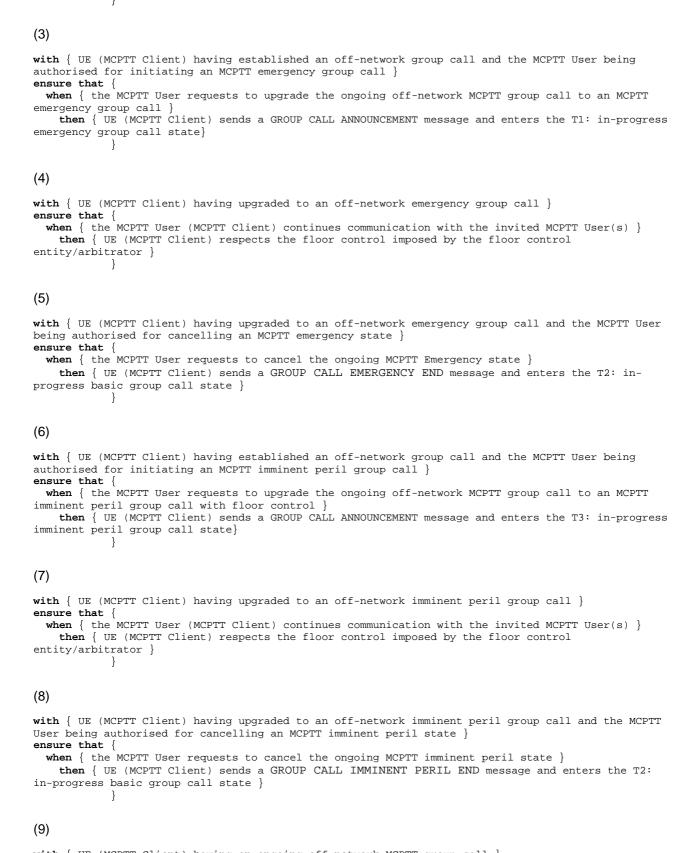

(2)

with { UE (MCPTT Client) having established an off-network MCPTT Pre-arranged Group Call } ensure that {

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

345

when { the MCPTT User (MCPTT Client) engages in communication with the invited MCPTT User(s) }
 then { UE (MCPTT Client) respects the floor control imposed by the floor control
 entity/arbitrator (Floor Request during a talk burst, Floor granting/release, Floor idle, Floor
 deny, Floor taken/revoked, Floor request queued and queue handling) }
 }

with { UE (MCPTT Client) having an ongoing off-network MCPTT group call }
ensure that {
 when { the MCPTT User (MCPTT Client) wants to release the ongoing off-network MCPTT group call }

then { UE (MCPTT Client) enters the S6: ignoring incoming call announcements state and upon
expiry of the TFG5 timer, enters the S1: start-stop state }
}

#### 7.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.2.1, 10.2.2.4.3.1, 10.2.3.4.2, 10.2.3.4.7.1, 10.2.3.4.8.1, 10.2.3.4.8.4, 10.2.2.4.5.1, 10.2.2.4.5.4, 10.2.3.4.10, TS 24.380 clauses 7.2.3.2.2, 7.2.3.5.5, 7.2.3.3.2, 7.2.3.6.7, 7.2.3.5.4, 7.2.3.5.8, 7.2.3.5.6, 7.2.3.7.3, 7.2.3.7.5, 7.2.3.3.4, 7.2.3.4.3, 7.2.3.3.6, 7.2.3.4.2, 7.2.3.6.4, 7.2.3.6.3, 7.2.3.8.11, 7.2.3.8.3, 7.2.3.8.6, 7.2.3.5.7, 7.2.3.6.9, 7.2.3.6.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.2.1]

When in the "S1: start-stop" state, upon an indication from an MCPTT user to initiate a group call for an MCPTT group ID, the MCPTT client:

- •••
- 3) shall generate a GROUP CALL PROBE message as specified in subclause 15.1.2. In the GROUP CALL PROBE message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
- 4) shall send the GROUP CALL PROBE message as specified in subclause 10.2.1.1.1;
- 5) shall start timer TFG3 (call probe retransmission);
- 6) shall start timer TFG1 (wait for call announcement); and

#### [TS 24.379, clause 10.2.2.4.3.1]

When in the "S2: waiting for call announcement" state, upon expiry of timer TFG1 (wait for call announcement), the MCPTT client:

1) shall stop timer TFG3 (call probe retransmission), if running;

•••

- 7) shall generate a GROUP CALL ANNOUNCEMENT message as specified in subclause 15.1.3. In the GROUP CALL ANNOUNCEMENT message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Call type IE to the stored current call type associated with the call type control state machine;
  - c) shall set the Refresh interval IE to the stored refresh interval of the call;
  - d) shall set the SDP IE to the stored SDP body of the call;
  - e) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call;
  - f) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
  - g) shall set the Call start time IE to the stored call start time of the call;
  - h) shall set the Last call type change time IE to the stored last call type change time of the call associated with call type control state machine;
  - i) shall set the Last user to change call type IE to last user to change call type associated with call type control state machine; and
  - j) may include the Confirm mode indication IE;
- 8) shall send the GROUP CALL ANNOUNCEMENT message as specified in subclause 10.2.1.1.1;
- 9) shall establish a media session based on the stored SDP body of the call;

10) shall start floor control as originating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];

[TS 24.379, clause 10.2.3.4.2]

When in the "T0: waiting for the call to establish " state, upon an indication from an MCPTT user to initiate a group call probe for an MCPTT group, the MCPTT client:

- if the stored emergency state associated with emergency alert state machine described in 12.2.2.2 is set to "true" and the value of "/<x>/<x>/Common/AllowedEmergencyCall" leaf node present in group configuration as specified in 3GPP TS 24.383 [45] is set to "true":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL"; and
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
- 2) if the stored emergency state associated with emergency alert state machine described in 12.2.2.2 is set to "false", and:
  - a) if the user initiates an MCPTT emergency call and the values of "/<x>/<x>/Common/MCPTTGroupCall/EmergencyCall/Enabled" leaf node present in the user profile and "/<x>/Common/AllowedEmergencyCall" leaf node present in group configuration as specified in 3GPP TS 24.383 [45] are set to "true":
    - i) shall set the stored current call type to "EMERGENCY GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
  - b) if the user initiates an MCPTT imminent peril group call and the values of "/<x>/<x>/Common/MCPTTGroupCall/ImminentPerilCall/Authorised" leaf node present in the user profile "/<x>/<x>/Common/AllowedImminentPerilCall " leaf node present in group configuration as specified in 3GPP TS 24.383 [45] are set to "true":
    - i) shall set the stored current call type to "IMMINENT PERIL GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45]; and
  - c) if the user initiates an MCPTT group call which is not an MCPTT emergency call and which is not an MCPTT imminent peril group call:
    - i) shall set the stored current call type to "BASIC GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];

[TS 24.379, clause 10.2.3.4.7.1]

When in the "T2: in-progress basic group call" state, upon receiving an indication from the user to upgrade the call to "IMMINENT PERIL GROUP CALL" or "EMERGENCY GROUP CALL" or when in the "T3: in-progress imminent peril group call" state, upon receiving an indication from the user to upgrade the call to "EMERGENCY GROUP CALL", the MCPTT client:

- 1) if the user request is to upgrade the call to "EMERGENCY GROUP CALL" and the value of  $"/\langle x \rangle/\langle x \rangle/OffNetwork/EmergencyCallChange"$  leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
  - c) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1;
  - d) shall stop timer TFG14 (implicit downgrade imminent peril), if running; and

- e) shall enter "T1: in-progress emergency group call" state;
- 2) if the user request is to upgrade the call to "IMMINENT PERIL GROUP CALL" and the value of "/<x>/<x>/OffNetwork/ ImminentPerilCallChange" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] set to "true":
  - a) shall set the stored current call type to "IMMINENT PERIL GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];
  - c) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2 and
  - d) shall enter "T3: in-progress imminent peril group call" state;

•••

- 5) shall generate a GROUP CALL ANNOUNCEMENT message as specified in subclause 15.1.3. In the GROUP CALL ANNOUNCEMENT message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call associated with the basic call control state machine;
  - b) shall set the Call type IE to the stored current call type;
  - c) shall set the Refresh interval IE to the stored refresh interval of the call associated with the basic call control state machine;
  - d) shall set the SDP IE to the stored SDP body of the call associated with the basic call control state machine;
  - e) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call associated with the basic call control state machine;
  - f) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call associated with the basic call control state machine;
  - g) shall set the call start time IE to the stored call start time of the call;
  - h) shall set the Last call type change time IE to the stored last call type change time of the call; and
  - i) shall set the Last user to change call type IE to the stored last user to change call type of the call; and
- 6) shall send the GROUP CALL ANNOUNCEMENT message as specified in subclause 10.2.1.1.1;

[TS 24.379, clause 10.2.3.4.8.1]

When in the "T1: in-progress emergency group call" state, upon receiving an indication from:

- 1) the MCPTT user who upgraded the MCPTT group call; or
- an authorized MCPTT user with the value of "/<x>/<x>/Common/MCPTTGroupCall/EmergencyCall/CancelMCPTTGroup" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true",

to downgrade "EMERGENCY GROUP CALL", the MCPTT client:

•••

- 5) shall generate a GROUP CALL EMERGENCY END message as specified in subclause 15.1.15. In the GROUP CALL EMERGENCY END message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call associated with the basic call control state machine;
  - b) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call associated with the basic call control state machine;

- c) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call associated with the basic call control state machine;
- d) shall set the Last call type change time IE to the stored last call type change time of the call; and
- e) shall set the Last user to change call type IE to the stored last user to change call type of the call;
- 6) shall send the GROUP CALL EMERGENCY END message as specified in subclause 10.2.1.1.1;

[TS 24.379, clause 10.2.3.4.8.4]

When in the "T3: in-progress imminent peril group call" state, upon receiving an indication from:

- 1) the MCPTT user who upgraded the call; or
- an authorized with the value of "/<x>/<x>/Common/MCPTTGroupCall/ImminentPerilCall/Cancel" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true",

to downgrade "IMMINENT PERIL GROUP CALL", the MCPTT client:

•••

- 5) shall generate a GROUP CALL IMMINENT PERIL END message as specified in subclause 15.1.14. In the GROUP CALL IMMINENT PERIL END message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call associated with the basic call control state machine;
  - b) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call associated with the basic call control state machine;
  - c) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call associated with the basic call control state machine;
  - d) shall set the Last call type change time IE to the stored last call type change time of the call; and
  - e) shall set the Last user to change call type IE to the stored last user to change call type of the call;
- 6) shall send the GROUP CALL IMMINENT PERIL END message as specified in subclause 10.2.1.1.1;

[TS 24.379, clause 10.2.2.4.5.1]

When in the "S3: part of ongoing call" state, the "S5: pending user action with confirm indication" state, or the "S4: pending user action without confirm indication" state, upon an indication from the MCPTT user to release the group call, the MCPTT client:

1) shall release the media session, if established;

[TS 24.379, clause 10.2.2.4.5.4]

When in the "S6: ignoring incoming call announcements" state, upon expiration of timer TFG5 (not present incoming call announcements), the MCPTT client:

- 1) shall release the stored SDP body of the call;
- 2) shall release the stored call identifier of the call;
- 3) shall release the stored originating MCPTT user ID of the call;
- 4) shall release the stored refresh interval of the call;
- 5) shall release the stored MCPTT group ID of the call;
- 6) shall release the call start time of the call;
- 7) shall destroy the call type control state machine; and
- 8) shall enter the "S1: start-stop" state.

[TS 24.379, clause 10.2.3.4.10]

When in state T1: in-progress emergency group call" or "T2: in-progress basic group call" or "T3: in-progress imminent peril group call" or upon receiving an indication from MCPTT user to release the call, the MCPTT client:

- 1) shall release stored current call type;
- 2) shall release stored ProSe per-packet priority;
- 3) shall release Last call type change time;
- 4) shall release Last user to change call type; and
- 5) shall enter "T0: waiting for the call to establish" state.

[TS 24.380, clause 7.2.3.2.2]

When an MCPTT call is established with session announcement including an explicit floor request, the originating floor participant:

- 1. shall create an instance of a floor participant state transition diagram for basic operation state machine;
- 2. shall send Floor Granted message towards other floor participants. The Floor Granted message:
  - a. shall include the granted priority in the Floor priority field;
  - b. shall include the MCPTT user's own MCPTT ID in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 3. shall set the stored SSRC of the current floor arbitrator to its own SSRC; and
- 4. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.5]

Upon receiving an indication from the MCPTT user to release permission to send RTP media, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall send a Floor Release message towards other floor participants, if no queued requests exist: The Floor Release message:
  - a. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - b. if the session is not initiated as a broadcast group call with the B-bit set to '1' (Broadcast group call), shall include a Floor Indicator field set to '0' (normal call);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the current arbitrator; and
- 6. shall enter 'O: silence' state.

[TS 24.380, clause 7.2.3.3.2]

If the floor participant receives an indication from the MCPTT user to send media, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the <User ID> value of the User ID field; and

- c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall stop timer T230 (Inactivity);
- 4. shall start timer T201 (Floor Request); and
- 5. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.6.7]

Upon receiving Floor Granted message and if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC;
- 3. shall stop timer T203 (End of RTP media), if running;
- 4. shall stop timer T201 (Floor Request);
- 5. may provide a floor granted notification to the MCPTT user;
- 6. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall enter 'O: has permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 2. shall stop timer T203 (End of RTP media);
- 3. shall stop timer T201 (Floor Request);
- 4. may provide a floor granted notification to the MCPTT user;
- 5. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 6. shall enter 'O: has permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 2. shall stop timer T203 (End of RTP media);
- 3. shall stop timer T201 (Floor Request);
- 4. may provide a floor granted notification to the MCPTT user;
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.4]

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, in a session where:

- 1. the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "false"; or
- the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" but the F-bit in the Floor Indicator field is set to '0' (i.e. indicating that queuing of floor requests is not supported) or the Floor Indicator field is not included in the Floor Request message;

then the floor participant:

- 1. shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #1 (Another MCPTT client has permission);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 2. shall remain in 'O: has permission' state.

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, and the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" and the F-bit in the Floor Indicator field is set to '1' (i.e. indicating that queuing of the floor requests is supported) in the Floor Request message, the floor participant:

- 1. shall store the received Floor Request messages;
- 2. if the pending request queue is not full, shall send the Floor Queue Position Info message. The Floor Queue Position Info message:
  - a. shall include in the User ID field the MCPTT ID of the floor participant sending the Floor Request message;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the position in the floor request queue in the Queue Info field; and
  - d. shall include the floor priority in the Queue Info field;
- 3. if the pending request queue is full, shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #7 (Queue full);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 4. shall remain in 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.8]

Upon receiving a Floor Queue Position Request message, the floor participant:

- 1. shall send the Floor Queue Position Info message. The Floor Queue Position Info message:
  - a. shall include the MCPTT ID of the queued floor participant in the Queued User ID field;
  - b. shall include the queue position and floor priority in the Queue Info field;
  - c. shall include the SSRC of floor participant sending Floor Queue Position Request message in SSRC of queue floor participant field; and

- d. shall include the User ID of floor participant sending Floor Queue Position Request message in User ID field; and
- 2. remain in the 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.6]

When no more encoded media is received from the user and if at least one Floor Request message is stored (i.e. queuing mode is used in the session), the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall request the MCPTT client to stop sending RTP media packets towards other MCPTT clients;
- 4. shall send the Floor Granted message toward the other floor participants. The Floor Granted message:
  - a. shall include the MCPTT ID of the first floor participant in the queue in the User ID field;
  - b. shall include the SSRC of the first floor participant in the queue in the SSRC of the granted floor participant field;
  - c. shall remove the first floor participant from the queue;
  - d for the remaining floor participants in the queue:
    - i. shall include the MCPTT ID of the floor participant in the Queued User ID field;
    - ii. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
    - iii. shall include the queue position of the floor participant in the Queue Info field; and
    - iv. shall include the priority of the floor participant in the Queue Info field; and
  - e. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- shall set the stored SSRC of the current arbitrator to the SSRC of user to whom the floor was granted in the Floor Granted message;
- 6. shall start timer T205 (Floor Granted ) and shall initiate counter C205 (Floor Granted ) to 1; and
- 7 shall enter the 'O: pending granted' state.

[TS 24.380, clause 7.2.3.7.3]

On expiry of timer T205 (Floor Granted) and counter C205 (Floor Granted) is less than the upper limit, the floor participant:

- 1. shall send again the Floor Granted message toward the other floor participants. For each participant in the queue the Floor Granted message:
  - a. shall include the MCPTT ID of the floor participant in the Queued User ID field;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the queue position of the floor participant in the Queue Info field; and
  - d. shall include the priority of the floor participant in the Queue Info field;
- 2. shall restart timer T205 (Floor Granted) and shall increment counter C205 (Floor Granted) by 1; and
- 3. shall remain in 'O: pending granted' state.

[TS 24.380, clause 7.2.3.7.5]

On the expiry of timer T205 (Floor Granted) for the configured upper limit of counter C205 (Floor Granted) with no request pending in the queue, the floor participant:

- 1. shall reset the value of counter C205 (Floor Granted) to 1;
- 2. shall start timer T230 (Inactivity);
- 3. shall clear the stored SSRC of the current arbitrator; and
- 4. shall enter 'O: silence' state.

[TS 24.380, clause 7.2.3.3.4]

When a Floor Granted message is received and if the User ID in the Floor Granted message does not match its own User ID, the floor participant:

- 1. may provide a floor taken notification to the MCPTT user;
- 2. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating that this is a broadcast group call;
- 3. shall set the stored SSRC of the candidate arbitrator to the SSRC of user to whom the floor was granted in the Floor Granted message;
- 4. shall stop timer T230 (Inactivity);
- 5. shall start timer T203 (End of RTP media); and
- 6. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.4.3]

When a Floor Release message is received and if the SSRC in the Floor Release message matches with the stored SSRC of the current arbitrator or with the stored SSRC of the candidate arbitrator, the floor participant:

- 1. may provide floor idle notification to the MCPTT user.
- 2. shall request the MCPTT client to stop rendering received RTP media packets;
- 3. shall stop timer T203 (End of RTP media);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. shall clear the stored SSRC of the current arbitrator; and
- 7. shall enter 'O: silence' state;

[TS 24.380, clause 7.2.3.3.6]

When a Floor Taken message is received, the floor participant:

- 1. may provide a floor taken notification to the MCPTT user;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of granted floor participant field in the Floor Taken message;
- 3. shall stop timer T230 (Inactivity);
- 4. shall start timer T203 (End of RTP media); and
- 5. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.4.2]

If the floor participant receives an indication from the MCPTT user that the MCPTT user wants to send media, the floor participant:

- 1. shall send the Floor Request message to other clients. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall start timer T201 (Floor Request); and
- 4. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.6.4]

Upon receiving Floor Deny message, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Deny message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- 2. shall provide floor deny notification to the user;
- 3. shall restart the timer T203 (End of RTP media);
- 4. may display the floor deny reason to the user using information in the Reject Cause field; and
- 5. shall enter 'O: has no permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Deny message;
- 3. shall restart the timer T203 (End of RTP media);
- 4. shall provide floor deny notification to the user;
- 5. may display the floor deny reason to the user using information in the Reject Cause field; and
- 6. shall enter 'O: has no permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Deny message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Deny message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. shall restart the timer T203 (End of RTP media);
- 5. shall provide floor deny notification to the user;
- 6. may display the floor deny reason to the user using information in the Reject Cause field; and
- 7. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.6.3]

Upon receiving Floor Queue Position Info message, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and the value in the SSRC of floor control server field as received in the Floor Queue Position Info message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall update the queue status;
- 2. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 3. shall stop timer T201 (Floor Request); and
- 4. shall enter 'O: queued' state.

Otherwise, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall update the queue status;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Queue Position Info message;
- 3. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 4. shall stop timer T201 (Floor Request); and
- 5. shall enter 'O: queued' state.

Otherwise, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and the value in the SSRC of floor control server field as received in the Floor Queue Position Info message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall update the queue status;
- 2. shall set the stored SSRC of the current arbitrator to the value in the SSRC of the floor control server field as received in the Floor Queue Position Info message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 5. shall stop timer T201 (Floor Request); and
- 6. shall enter 'O: queued' state.

#### [TS 24.380, clause 7.2.3.8.11]

Upon receipt of an indication from the MCPTT client to request the queue position information, the floor participant:

- 1. shall send the Floor Queue Position Request message; The Floor Queue Position Request message:
  - a. shall include the SSRC of sent Floor Request message in SSRC of floor participant field; and
  - b. shall include the own MCPTT User ID in User ID field;
- 2. shall initialize the counter C204 (Floor Queue Position request) with value set to 1;
- 3. shall start timer T204 (Floor Queue Position request); and
- 4. remain in the 'O: queued' state.

[TS 24.380, clause 7.2.3.8.3]

Upon receiving Floor Queue Position Info message, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Queue Position Info message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall update the queue position;
- 2. shall notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 3. shall stop timer T204 (Floor Queue Position request); and
- 4. shall remain in 'O: queued' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Queue Position Info message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall update the queue position;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Queue Position Info message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. shall notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 5. shall stop timer T204 (Floor Queue Position request); and
- 6. shall remain in 'O: queued' state.

[TS 24.380, clause 7.2.3.8.6]

Upon receiving Floor Granted message and if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall start timer T233(Pending user action), if not running already;
- 3. shall notify the MCPTT user about of the floor grant;
- 4. if the Floor Indicator field is included, and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 5. shall remain in 'O: queued' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall start timer T233(Pending user action), if not running already;
- 3. shall notify the MCPTT user about of the floor grant;
- 4. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. if the Floor Indicator field is included, and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall remain in 'O: queued' state.

[TS 24.380, clause 7.2.3.8.8]

If the floor participant receives an indication from the user that the user wants to send media and the timer T233 (pending user action) is running, the floor participant:

1. shall stop the timer T233 (Pending user action);

- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC; and
- 3. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.7]

Upon receiving a Floor Request message which is pre-emptive as determined by subclause 4.1.1.5, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall request the MCPTT client to stop sending RTP media packets towards other MCPTT clients;
- 4. shall send a Floor Granted message;
- 5. shall start timer T205 (Floor Granted) and shall initiate counter C205 (Floor Granted) to 1;
- 6. if the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true", for each floor participant in the queue the Floor Granted message:
  - a. shall include the MCPTT ID of the floor participant in the Queued User ID field;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the queue position of the floor participant in the Queue Info field; and
  - d. shall include the priority of the floor participant in the Queue Info field;
- 7. shall set the stored SSRC of the current floor arbitrator to the SSRC of the user to whom the floor was granted in the Floor Granted message; and
- 8. shall enter the 'O: pending granted' state.

[TS 24.380, clause 7.2.3.6.9]

On expiry of timer T201 (Floor Request) if the counter C201 (Floor Request) has not reached its upper limit, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the own MCPTT user in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall restart the timer T201 (Floor Request) and increment counter C201 (Floor Request) by 1; and
- 3. shall remain in the 'O: pending request' state.

[TS 24.380, clause 7.2.3.6.6]

When timer T201 (Floor Request) expires and counter C201 (Floor Request) reaches its upper limit, the floor participant:

- 1. shall send the Floor Taken message toward the other floor participants. The Floor Taken message:
  - a. shall include the floor participant's own SSRC in the SSRC of the granted floor participant field;
  - b. shall include the floor participant's own MCPTT ID in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC;

- 3. shall stop timer T203 (End of RTP media), if running; and
- 4. shall enter 'O: has permission' state.

### 7.1.1.3 Test description

7.1.1.3.1 Pre-test conditions

#### System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- -- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

7.1.1.3.2 Test procedure sequence

# Table 7.1.1.3.2-1: Main behaviour

St			Message Sequence	TP	Verdict	
			Message			
1	Power up the UE	-	-	-	-	
2	Activate the MCPTT Client Application and	-	-	-	-	
	register User A as the MCPTT User (TS					
	36.579-5 [5], px_MCPTT_User_A_username,					
	px_MCPTT_User_A_password).					
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.					
3	Make the UE (MCPTT Client) initiate an off-	-	-	-	-	
	network basic group call NOTE: This is expected to be done via a					
	suitable implementation dependent MMI. EXCEPTION: The E-UTRA/EPC actions which					
-	are related to the MCPTT off-network call	-	-	-	-	
	establishment are described in TS 56.579-					
	1 [2], subclause 5.4.11 'Generic Test					
	Procedure for MCPTT CO communication over					
	ProSe direct one-to-many communication out					
	of E-UTRA coverage / Monitoring/Discoverer					
	procedure for group member discovery / One-					
	to-many communication'. The test sequence					
	below shows only the MCPTT relevant					
	messages exchanged.					
4	Check: Does the UE (MCPTT client) send a	>	GROUP CALL PROBE	1	Р	
	GROUP CALL PROBE message to determine					
	the current call status of the group?					
-	EXCEPTION: Step 5 is executed a total of 3					
	times					
5	Check: At the expiration of TFG3 (call probe	>	GROUP CALL PROBE	1	Р	
	retransmission), does the UE (MCPTT Client)					
	send a retransmission of the GROUP CALL					
	PROBE sent in step 4?					
6	Check: At the expiration of TFG1 (wait for call	>	GROUP CALL ANNOUNCEMENT	1	Р	
	announcement), and after receiving no					
	response to the GROUP CALL PROBE, does					
	the UE (MCPTT Client) send a GROUP CALL					
	ANNOUNCEMENT message to initiate an off-					
	network basic group call?					
7	The SS-UE1 (MCPTT client) sends a GROUP	<	GROUP CALL ACCEPT	-	-	
	CALL ACCEPT accepting the GROUP CALL ANNOUNCEMENT					
0	Check: Does the UE (MCPTT Client) send a		Floor Cropted	2	Р	
8	Floor Granted message towards the other floor	>	Floor Granted	2	Р	
	participants?					
9	Make the UE (MCPTT User) release the floor	_	-	_	_	
9	before time T207 (Stop talking) expires	-		-	-	
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.					
10	Check: Does the UE (MCPPT Client) send a	>	Floor Release	2	Р	
	Floor Release message to the other floor			-		
	participants?					
11	Before timer T230 (Inactivity) expires, make	-	-	-	-	
	the UE (MCPTT User) request the floor					
12	Check: Does the UE (MCPTT Client) send a	>	Floor Request	2	Р	
	Floor Request message to the floor					
	participants?					
13	The SS-UE1 (MCPTT client) sends a Floor	<	Floor Granted	-	-	
	Granted message granting the floor to the UE					
	(MCPTT Client)					
14	The SS-UE1 (MCPTT client), having the same	<	Floor Request	-	-	
	priority as the UE (MCPTT Client), sends a					
	Floor Request message to the UE (MCPTT					
	Client) with the F bit in the Floor Indication field					
	set to '0'					

15	Check: Does the UE (MCPTT Client) send a Floor Deny message to the sender of the Floor Request message with the Reject Cause field set to #1 (Another MCPTT client has permission)?	>	Floor Deny	2	Р
16	The SS-UE1 (MCPTT client), having the same priority as the UE (MCPTT Client), sends a Floor Request message to the UE (MCPTT Client) with the F bit in the Floor Indication field set to '1'	<	Floor Request	-	-
17	Check: Does the UE (MCPTT Client) add the requester to the queue and send a Floor Queue Position Info message to the sender of the Floor Request message?	>	Floor Queue Position Info	2	Р
18	The SS-UE1 (MCPTT client) sends a Floor Queue Position Request message to the UE (MCPTT Client)	<	Floor Queue Position Request	-	-
19	Check: Does the UE (MCPTT Client) respond to the Floor Queue Position Request message with e a Floor Queue Position Info message?	>	Floor Queue Position Info	2	Р
20	Make the UE (MCPTT User) release the floor before timer T207 (Stop talking) expires NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
21	Check: Does the UE (MCPTT Client) send a Floor Granted message to the floor participants indicating the queued participant now has the floor?	>	Floor Granted	2	Р
-	EXCEPTION: Step 22 is executed a total of 3 times	-	-	-	-
22	Check: Upon expiry of timer T205 (Floor Granted) and while counter C205 (Floor Granted) is less than its maximum value, does the UE (MCPTT Client) retransmit the Floor Granted message send in step 21?	>	Floor Granted	2	Р
23	Check: Upon expiry of timer T205 (Floor Granted) and with counter C205 (Floor Granted) equal to its maximum value, does the UE (MCPTT Client) enter 'O: silence' state and notify the user that the floor is idle? NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	2	Ρ
24	The SS-UE1 (MCPTT client) sends a Floor Taken message to the UE (MCPTT Client)	<	Floor Taken	-	-

7.1.2 Off-network / Group Call / Floor Control / Upgrade to Emergency Call / Downgrade from Emergency / Upgrade to Imminent Peril / Downgrade from Imminent Peril / Release Call / Client Terminated (CT)

# 7.1.2.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive group calls in off-network environment, and the UE configured that user acknowledgement is not required, and the UE is in an off-network environment } ensure that {

when { UE (MCPTT Client) receives a GROUP CALL ANNOUNCEMENT message with Confirm mode indication present }

then { UE (MCPTT Client) enters the "S3: part of ongoing call" state and sends a GROUP CALL
ACCEPT message}
}

(2)

with { UE (MCPTT Client) being in an off-network MCPTT Pre-arranged Group Call }
ensure that {

when { the MCPTT User (MCPTT Client) engages in communication with the invited MCPTT User(s) }
 then { UE (MCPTT Client) respects the floor control imposed by the floor control
 entity/arbitrator (Floor Request during a talk burst, Floor granting/release, Floor idle, Floor
 deny, Floor taken/revoked, Floor request queued and queue handling) }
 }
}

```
(3)
```

with { UE (MCPTT Client) being in an off-network MCPTT Pre-arranged Group Call }
ensure that {
 when { UE (MCPTT Client) receives a GROUP CALL ANNOUNCEMENT to upgrade the call to an emergency
 call}
 then { UE (MCPTT Client) enters the "T1: in-progress emergency group call" state and notifies
 the user of the emergency call }
 }
}

### (4)

```
with { UE (MCPTT Client) being in an upgraded off-network emergency group call }
ensure that {
   when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) }
    then { UE (MCPTT Client) respects the floor control imposed by the floor control
   entity/arbitrator }
   }
}
```

#### (5)

```
with { UE (MCPTT Client) being in an upgraded off-network emergency group call }
ensure that {
   when { the MCPTT User (MCPTT Client) receives a GROUP CALL EMERGENCY END message }
    then { UE (MCPTT Client) enters the "T2: in-progress basic group call" state and notifies the
   user of the downgraded call}
   }
}
```

(6)

```
with { UE (MCPTT Client) being in an off-network MCPTT Pre-arranged Group Call }
ensure that {
  when { UE (MCPTT Client) receives a GROUP CALL ANNOUNCEMENT to upgrade the call to an imminent
  peril call}
    then { UE (MCPTT Client) enters the "T3: in-progress imminent peril group call" state and
  notifies the user of the imminent peril call }
  }
}
```

(7)

```
with { UE (MCPTT Client) being in an upgraded off-network imminent peril group call }
ensure that {
  when { the MCPTT User (MCPTT Client) continues communication with the invited MCPTT User(s) }
    then { UE (MCPTT Client) respects the floor control imposed by the floor control
    entity/arbitrator }
    }
}
```

(8)

```
with { UE (MCPTT Client) being in an upgraded off-network imminent peril group call } ensure that {
```

when { the MCPTT User (MCPTT Client) receives a GROUP CALL IMMINENT PERIL END message }
 then { UE (MCPTT Client) enters the "T2: in-progress basic group call" state and notifies the
 user of the downgraded call}
 }
}

## 7.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.3.3, 10.2.3.4.5, 10.2.3.4.7.2, 10.2.3.4.8.3, 10.2.3.4.8.6, 10.2.2.4.5.4, TS 24.380 clauses 7.2.3.2.7, 7.2.3.5.5, 7.2.3.3.2, 7.2.3.6.7, 7.2.3.5.4, 7.2.3.5.8, 7.2.3.5.6, 7.2.3.7.3, 7.2.3.7.5, 7.2.3.3.4, 7.2.3.4.3, 7.2.3.3.6, 7.2.3.4.2, 7.2.3.6.4, 7.2.3.6.3, 7.2.3.8.11, 7.2.3.8.3, 7.2.3.8.6, 7.2.3.5.7, 7.2.3.6.9, 7.2.3.6.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.3.3]

When in the "S1: start-stop" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE not matching MCPTT group ID of the call stored for other state machines, the MCPTT client:

 shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;

- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL ANNOUNCEMENT message as the MCPTT group ID of the call;
- 6) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 7) shall create a call type control state machine as described in subclause 10.2.3.2;

• • •

- 9) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:
  - a) shall establish a media session based on the stored SDP body of the call;
  - b) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
  - c) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE:
    - i) shall generate a GROUP CALL ACCEPT message as specified in subclause 15.1.4. In the GROUP CALL ACCEPT message, the MCPTT client:
      - A) shall set the Call identifier IE to the stored call identifier of the call;
      - B) shall set the Sending MCPTT user ID IE to own MCPTT user id;
      - C) shall set the Call type IE to the stored current call type associated with the call type control state machine; and
      - D) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
    - ii) shall send the GROUP CALL ACCEPT message as specified in subclause 10.2.1.1.1;
  - d) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
  - e) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
  - f) shall enter the "S3: part of ongoing call" state.

[TS 24.379, clause 10.2.3.4.5]

When in the "T0: waiting for the call to establish" state, upon receipt of a GROUP CALL ANNOUNCEMENT message by an idle MCPTT client when MCPTT user acknowledgement is not required, the MCPTT client:

- 1) shall set the stored last call type change time to the Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
- 2) shall set the last user to change call type to the Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message;
- 3) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "EMERGENCY GROUP CALL":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];

- c) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and
- d) shall enter "T1: in-progress emergency group call" state;
- 4) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "IMMINENT PERIL GROUP CALL":
  - a) shall set the stored current call type to "IMMINENT PERIL GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];
  - c) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
  - d) shall enter "T3: in-progress imminent peril group call" state; and
- 5) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "BASIC GROUP CALL":
  - a) shall set the stored current call type to "BASIC GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45]; and
  - c) shall enter "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.3.4.7.2]

When in the "T1: in-progress emergency group call" state or "T2: in-progress basic group call" state or "T3: in-progress imminent peril group call" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE matching with MCPTT group ID of the ongoing call and the Call Identifier IE being the same as the stored call identifier of the call, the MCPTT client:

- if the stored last user to change call type of the call is same as the Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message and the stored last call type change time is smaller than Last call type change time IE of the GROUP CALL ANNOUNCEMENT message:
  - a) shall set the stored last call type change time of the call to Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
  - b) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "EMERGENCY GROUP CALL" and the stored call type is other than "EMERGENCY GROUP CALL":
    - i) shall set the stored current call type to "EMERGENCY GROUP CALL";
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
    - iii) shall stop timer TFG14 (implicit downgrade imminent peril), if running;
    - iv) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and
    - v) shall enter "T1: in-progress emergency group call" state;
  - c) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "IMMINENT PERIL GROUP CALL" and the stored call type is other than "IMMINENT PERIL GROUP CALL":
    - i) shall set the stored current call type to "IMMINENT PERIL GROUP CALL";
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];
    - iii) shall stop timer TFG13 (implicit downgrade emergency), if running;

- iv) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
- v) shall enter "T3: in-progress imminent peril group call" state; and
- d) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "BASIC GROUP CALL" and the stored call type is other than "BASIC GROUP CALL":
  - i) shall set the stored current call type to "BASIC GROUP CALL";
  - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];
  - iii) shall stop timer TFG13 (implicit downgrade emergency), if running;
  - iv) shall stop timer TFG14 (implicit downgrade imminent peril), if running; and
  - v) shall enter "T2: in-progress basic group call" state; and
- if the stored last user to change call type of the call is different from the Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message and:
  - a) if the stored call type is same as Call type IE in the received GROUP CALL ANNOUNCEMENT message and the stored last call type change time is smaller than Last call type change time IE of the GROUP CALL ANNOUNCEMENT message:
    - i) shall set the stored last call type change time of the call to Last call type change time IE of the GROUP CALL ANNOUNCEMENT message; and
    - ii) shall set the stored last user to change call type of the call to Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message;
  - b) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "EMERGENCY GROUP CALL" and the stored call type is other than "EMERGENCY GROUP CALL":
    - i) shall set the stored last call type change time of the call to Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
    - ii) shall set the stored last user to change call type of the call to Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message;
    - iii) shall set the stored current call type to "EMERGENCY GROUP CALL";
    - iv) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
    - v) shall stop timer TFG14 (implicit downgrade imminent peril), if running;
    - vi) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and

vii)shall enter "T1: in-progress emergency group call" state; and

- c) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "IMMINENT PERIL GROUP CALL" and the stored call type is "BASIC GROUP CALL":
  - i) shall set the stored last call type change time of the call to Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
  - ii) shall set the stored last user to change call type of the call to Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message;
  - iii) shall set the stored current call type to "IMMINENT PERIL GROUP CALL ";
  - iv) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];

- v) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
- vi) shall enter "T3: in-progress imminent peril group call" state; and
- d) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "BASIC GROUP CALL" and the stored call type is other than "BASIC GROUP CALL":
  - i) shall set the stored current call type to "BASIC GROUP CALL";
  - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.483 [45];
  - iii) shall stop timer TFG13 (implicit downgrade emergency), if running;
  - iv) shall stop timer TFG14 (implicit downgrade imminent peril), if running; and
  - v) shall enter "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.3.4.8.3]

When in the "T1: in-progress emergency group call" state, upon receiving GROUP CALL EMERGENCY END message, the MCPTT client:

- shall set the stored last call type change time to the Last call type change time IE of the received GROUP CALL EMERGENCY END message;
- shall set the stored last user to change call type to the Last user to change call type IE of the received GROUP CALL EMERGENCY END message;
- 3) shall set the stored current call type to "BASIC GROUP CALL";
- shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];
- 5) shall stop timer TFG13 (implicit downgrade emergency); and
- 6) shall enter the "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.3.4.8.6]

When in the "T3: in-progress imminent peril group call" state, upon receiving GROUP CALL IMMINENT PERIL END message, the MCPTT client:

- 1) shall set the stored last call type change time to the Last call type change time IE of the received GROUP CALL IMMINENT PERIL END message;
- shall set the stored last user to change call type to the Last user to change call type IE of the received GROUP CALL IMMINENT PERIL END message;
- 3) shall set the stored current call type to "BASIC GROUP CALL";
- 4) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];
- 5) shall stop timer TFG14 (implicit downgrade imminent peril); and
- 6) shall enter the "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.2.4.5.4]

When in the "S6: ignoring incoming call announcements" state, upon expiration of timer TFG5 (not present incoming call announcements), the MCPTT client:

- 1) shall release the stored SDP body of the call;
- 2) shall release the stored call identifier of the call;

- 3) shall release the stored originating MCPTT user ID of the call;
- 4) shall release the stored refresh interval of the call;
- 5) shall release the stored MCPTT group ID of the call;
- 6) shall release the call start time of the call;
- 7) shall destroy the call type control state machine as specified in subclause 10.2.3.4.10 or 10.2.3.4.11; and
- 8) shall enter the "S1: start-stop" state.

[TS 24.380, clause 7.2.3.2.7]

When a Floor Granted message is received and if the User ID in the Floor Granted message does not match its own User ID, the floor participant:

- 1. shall create an instance of a floor participant state transition diagram for basic operation state machine;
- 2. may provide a floor taken notification to the MCPTT user;
- 3. shall set the stored SSRC of the candidate arbitrator to the SSRC of user to whom the floor was granted in the Floor Granted message;
- 4. shall start timer T203 (End of RTP media); and
- 5. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.5.5]

Upon receiving an indication from the MCPTT user to release permission to send RTP media, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- shall send a Floor Release message towards other floor participants, if no queued requests exist: The Floor Release message:
  - a. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - b. if the session is not initiated as a broadcast group call with the B-bit set to '1' (Broadcast group call), shall include a Floor Indicator field set to '0' (normal call);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the current arbitrator; and
- 6. shall enter 'O: silence' state.
- [TS 24.380, clause 7.2.3.3.2]

If the floor participant receives an indication from the MCPTT user to send media, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the <User ID> value of the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall stop timer T230 (Inactivity);

- 4. shall start timer T201 (Floor Request); and
- 5. shall enter 'O: pending request' state.
- [TS 24.380, clause 7.2.3.6.7]

Upon receiving Floor Granted message and if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC;
- 3. shall stop timer T203 (End of RTP media), if running;
- 4. shall stop timer T201 (Floor Request);
- 5. may provide a floor granted notification to the MCPTT user;
- 6. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall enter 'O: has permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 2. shall stop timer T203 (End of RTP media);
- 3. shall stop timer T201 (Floor Request);
- 4. may provide a floor granted notification to the MCPTT user;
- 5. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 6. shall enter 'O: has permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 2. shall stop timer T203 (End of RTP media);
- 3. shall stop timer T201 (Floor Request);
- 4. may provide a floor granted notification to the MCPTT user;
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. if the Floor Indicator field is included and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.4]

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, in a session where:

1. the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "false"; or

 the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" but the F-bit in the Floor Indicator field is set to '0' (i.e. indicating that queuing of floor requests is not supported) or the Floor Indicator field is not included in the Floor Request message;

then the floor participant:

- 1. shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #1 (Another MCPTT client has permission);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 2. shall remain in 'O: has permission' state.

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, and the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" and the F-bit in the Floor Indicator field is set to '1' (i.e. indicating that queuing of the floor requests is supported) in the Floor Request message, the floor participant:

- 1. shall store the received Floor Request messages;
- 2. if the pending request queue is not full, shall send the Floor Queue Position Info message. The Floor Queue Position Info message:
  - a. shall include in the User ID field the MCPTT ID of the floor participant sending the Floor Request message;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the position in the floor request queue in the Queue Info field; and
  - d. shall include the floor priority in the Queue Info field;
- 3. if the pending request queue is full, shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #7 (Queue full);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 4. shall remain in 'O: has permission' state.

#### [TS 24.380, clause 7.2.3.5.8]

Upon receiving a Floor Queue Position Request message, the floor participant:

- 1. shall send the Floor Queue Position Info message. The Floor Queue Position Info message:
  - a. shall include the MCPTT ID of the queued floor participant in the Queued User ID field;
  - b. shall include the queue position and floor priority in the Queue Info field;
  - c. shall include the SSRC of floor participant sending Floor Queue Position Request message in SSRC of queue floor participant field; and
  - d. shall include the User ID of floor participant sending Floor Queue Position Request message in User ID field; and
- 2. remain in the 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.6]

When no more encoded media is received from the user and if at least one Floor Request message is stored (i.e. queuing mode is used in the session), the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall request the MCPTT client to stop sending RTP media packets towards other MCPTT clients;
- 4. shall send the Floor Granted message toward the other floor participants. The Floor Granted message:
  - a. shall include the MCPTT ID of the first floor participant in the queue in the User ID field;
  - b. shall include the SSRC of the first floor participant in the queue in the SSRC of the granted floor participant field;
  - c. shall remove the first floor participant from the queue;
  - d for the remaining floor participants in the queue:
    - i. shall include the MCPTT ID of the floor participant in the Queued User ID field;
    - ii. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
    - iii. shall include the queue position of the floor participant in the Queue Info field; and
    - iv. shall include the priority of the floor participant in the Queue Info field; and
  - e. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 5. shall set the stored SSRC of the current arbitrator to the SSRC of user to whom the floor was granted in the Floor Granted message;
- 6. shall start timer T205 (Floor Granted ) and shall initiate counter C205 (Floor Granted ) to 1; and
- 7 shall enter the 'O: pending granted' state.

[TS 24.380, clause 7.2.3.7.3]

On expiry of timer T205 (Floor Granted) and counter C205 (Floor Granted) is less than the upper limit, the floor participant:

- 1. shall send again the Floor Granted message toward the other floor participants. For each participant in the queue the Floor Granted message:
  - a. shall include the MCPTT ID of the floor participant in the Queued User ID field;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the queue position of the floor participant in the Queue Info field; and
  - d. shall include the priority of the floor participant in the Queue Info field;
- 2. shall restart timer T205 (Floor Granted) and shall increment counter C205 (Floor Granted) by 1; and
- 3. shall remain in 'O: pending granted' state.

[TS 24.380, clause 7.2.3.7.5]

On the expiry of timer T205 (Floor Granted) for the configured upper limit of counter C205 (Floor Granted) with no request pending in the queue, the floor participant:

- 1. shall reset the value of counter C205 (Floor Granted) to 1;
- 2. shall start timer T230 (Inactivity);
- 3. shall clear the stored SSRC of the current arbitrator; and

4. shall enter 'O: silence' state.

[TS 24.380, clause 7.2.3.3.4]

When a Floor Granted message is received and if the User ID in the Floor Granted message does not match its own User ID, the floor participant:

- 1. may provide a floor taken notification to the MCPTT user;
- 2. if the Floor Indicator field is included and the B-bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating that this is a broadcast group call;
- 3. shall set the stored SSRC of the candidate arbitrator to the SSRC of user to whom the floor was granted in the Floor Granted message;
- 4. shall stop timer T230 (Inactivity);
- 5. shall start timer T203 (End of RTP media); and
- 6. shall enter 'O: has no permission' state.

### [TS 24.380, clause 7.2.3.4.3]

When a Floor Release message is received and if the SSRC in the Floor Release message matches with the stored SSRC of the current arbitrator or with the stored SSRC of the candidate arbitrator, the floor participant:

- 1. may provide floor idle notification to the MCPTT user.
- 2. shall request the MCPTT client to stop rendering received RTP media packets;
- 3. shall stop timer T203 (End of RTP media);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. shall clear the stored SSRC of the current arbitrator; and
- 7. shall enter 'O: silence' state;

[TS 24.380, clause 7.2.3.3.6]

When a Floor Taken message is received, the floor participant:

- 1. may provide a floor taken notification to the MCPTT user;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of granted floor participant field in the Floor Taken message;
- 3. shall stop timer T230 (Inactivity);
- 4. shall start timer T203 (End of RTP media); and
- 5. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.4.2]

If the floor participant receives an indication from the MCPTT user that the MCPTT user wants to send media, the floor participant:

- 1. shall send the Floor Request message to other clients. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the User ID field; and

- c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall start timer T201 (Floor Request); and
- 4. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.6.4]

Upon receiving Floor Deny message, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Deny message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- 2. shall provide floor deny notification to the user;
- 3. shall restart the timer T203 (End of RTP media);
- 4. may display the floor deny reason to the user using information in the Reject Cause field; and
- 5. shall enter 'O: has no permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Deny message;
- 3. shall restart the timer T203 (End of RTP media);
- 4. shall provide floor deny notification to the user;
- 5. may display the floor deny reason to the user using information in the Reject Cause field; and
- 6. shall enter 'O: has no permission' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Deny message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall stop the timer T201 (Floor Request);
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Deny message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. shall restart the timer T203 (End of RTP media);
- 5. shall provide floor deny notification to the user;
- 6. may display the floor deny reason to the user using information in the Reject Cause field; and
- 7. shall enter 'O: has no permission' state.

[TS 24.380, clause 7.2.3.6.3]

Upon receiving Floor Queue Position Info message, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and the value in the SSRC of floor control server field as received in the Floor Queue Position Info message matches the stored SSRC of current arbitrator, the floor participant:

1. shall update the queue status;

- 2. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 3. shall stop timer T201 (Floor Request); and
- 4. shall enter 'O: queued' state.

Otherwise, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and there is no stored SSRC of the current arbitrator, the floor participant:

- 1. shall update the queue status;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Queue Position Info message;
- 3. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 4. shall stop timer T201 (Floor Request); and
- 5. shall enter 'O: queued' state.

Otherwise, if the <User ID> value in the Queued User ID field matches its own MCPTT ID and the value in the SSRC of floor control server field as received in the Floor Queue Position Info message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall update the queue status;
- 2. shall set the stored SSRC of the current arbitrator to the value in the SSRC of the floor control server field as received in the Floor Queue Position Info message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. may notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 5. shall stop timer T201 (Floor Request); and
- 6. shall enter 'O: queued' state.

[TS 24.380, clause 7.2.3.8.11]

Upon receipt of an indication from the MCPTT client to request the queue position information, the floor participant:

- 1. shall send the Floor Queue Position Request message; The Floor Queue Position Request message:
  - a. shall include the SSRC of sent Floor Request message in SSRC of floor participant field; and
  - b. shall include the own MCPTT User ID in User ID field;
- 2. shall initialize the counter C204 (Floor Queue Position request) with value set to 1;
- 3. shall start timer T204 (Floor Queue Position request); and
- 4. remain in the 'O: queued' state.

[TS 24.380, clause 7.2.3.8.3]

Upon receiving Floor Queue Position Info message, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Queue Position Info message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall update the queue position;
- 2. shall notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 3. shall stop timer T204 (Floor Queue Position request); and

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

383

4. shall remain in 'O: queued' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Queue Position Info message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall update the queue position;
- 2. shall set the stored SSRC of the current arbitrator to the SSRC of the floor control server as received in the Floor Queue Position Info message;
- 3. shall clear the stored SSRC of the candidate arbitrator;
- 4. shall notify the MCPTT user about the queue position received in the <Queue position info> value in the Queue Info field;
- 5. shall stop timer T204 (Floor Queue Position request); and
- 6. shall remain in 'O: queued' state.

[TS 24.380, clause 7.2.3.8.6]

Upon receiving Floor Granted message and if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall start timer T233(Pending user action), if not running already;
- 3. shall notify the MCPTT user about of the floor grant;
- 4. if the Floor Indicator field is included, and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 5. shall remain in 'O: queued' state.

Otherwise, if the <User ID> value in the User ID field matches its own MCPTT ID and SSRC of floor participant sending the Floor Granted message matches the stored SSRC of candidate arbitrator, the floor participant:

- 1. shall request the MCPTT client to stop rendering received RTP media packets;
- 2. shall start timer T233(Pending user action), if not running already;
- 3. shall notify the MCPTT user about of the floor grant;
- 4. shall set the stored SSRC of the current arbitrator to its own SSRC;
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. if the Floor Indicator field is included, and the B bit is set to '1' (Broadcast group call), shall provide a notification to the user indicating the type of call; and
- 7. shall remain in 'O: queued' state.

[TS 24.380, clause 7.2.3.8.8]

If the floor participant receives an indication from the user that the user wants to send media and the timer T233 (pending user action) is running, the floor participant:

- 1. shall stop the timer T233 (Pending user action);
- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC; and
- 3. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.7]

Upon receiving a Floor Request message which is pre-emptive as determined by subclause 4.1.1.5, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall request the MCPTT client to stop sending RTP media packets towards other MCPTT clients;
- 4. shall send a Floor Granted message;
- 5. shall start timer T205 (Floor Granted) and shall initiate counter C205 (Floor Granted) to 1;
- if the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true", for each floor participant in the queue the Floor Granted message:
  - a. shall include the MCPTT ID of the floor participant in the Queued User ID field;
  - b. shall include the SSRC of the floor participant in the SSRC of queued floor participant field;
  - c. shall include the queue position of the floor participant in the Queue Info field; and
  - d. shall include the priority of the floor participant in the Queue Info field;
- 7. shall set the stored SSRC of the current floor arbitrator to the SSRC of the user to whom the floor was granted in the Floor Granted message; and
- 8. shall enter the 'O: pending granted' state.

[TS 24.380, clause 7.2.3.6.9]

On expiry of timer T201 (Floor Request) if the counter C201 (Floor Request) has not reached its upper limit, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the own MCPTT user in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall restart the timer T201 (Floor Request) and increment counter C201 (Floor Request) by 1; and
- 3. shall remain in the 'O: pending request' state.

[TS 24.380, clause 7.2.3.6.6]

When timer T201 (Floor Request) expires and counter C201 (Floor Request) reaches its upper limit, the floor participant:

- 1. shall send the Floor Taken message toward the other floor participants. The Floor Taken message:
  - a. shall include the floor participant's own SSRC in the SSRC of the granted floor participant field;
  - b. shall include the floor participant's own MCPTT ID in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall set the stored SSRC of the current floor arbitrator to its own SSRC;
- 3. shall stop timer T203 (End of RTP media), if running; and
- 4. shall enter 'O: has permission' state.

# 7.1.2.3 Test description

# 7.1.2.3.1 Pre-test conditions

# System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - -- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

## Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

7.1.2.3.2 Test procedure sequence

Table 7.1.2.3.2-1: Main Behaviour

St	Procedure Message Sequence		TP	Verdict	
0.	Troccure	U - S	Message		Vertaiot
1	Power up the UE.	-	-	-	-
2	Activate the MCPTT Client Application and	-	-	-	-
	register User A as the MCPTT User (TS				
	36.579-5 [5], px_MCPTT_User_A_username,				
	px_MCPTT_User_A_password).

# 7.1.3 Off-network / Group Call / Leave Group Call when GROUP CALL PROBE sent / Initiate Group Call for Released Call / Receive GROUP CALL ANNOUNCEMENT for Released call / No GROUP CALL ANNOUNCEMENT for Released Call / Receive Response to GROUP CALL PROBE

## 7.1.3.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to initiate/cancel group calls in off-network environment, and the UE is in an off-network environment

#### ensure that {

when { the MCPTT User requests the establishment of an MCPTT pre-arranged group call and UE (MCPTT Client) requests a pre-arranged group call by sending a GROUP CALL PROBE message and the MCPTT User requests the release of the call before the expiration of the TFG3 (call probe retransmission)timer } then { the UE (MCPTT Client) releases the call and enters the "S7: Waiting for call announcement after call release" state and the UE (MCPTT Client) does not send a GROUP CALL PROBE at the expiry

of the TFG3 (call probe retransmission)timer }
}

### (2)

with { UE (MCPTT Client) in the "S7: Waiting for call announcement after call release" state }
ensure that {
 when { the MCPTT User requests the establishment of an MCPTT pre-arranged group call }
 then { the UE (MCPTT Client) sends a GROUP CALL PROBE message and enters the "S2: waiting for
 call announcement" state }

### (3)

}

with { UE (MCPTT Client) in the "S7: Waiting for call announcement after call release" state }
ensure that {
 when { the UE (MCPTT Client receives a GROUP CALL ANNOUNCEMENT message and the UE (MCPTT Client)
enters the "S6: ignoring incoming call announcements" state }
 then { the UE (MCPTT Client) enters the "S1: start-stop" state upon expiry of the TFG5 (not
present incoming call announcement) timer }
 }
}

(4)

```
with { UE (MCPTT Client) in the "S7: Waiting for call announcement after call release" state }
ensure that {
  when { the TFG1 (wait for call announcement)timer expires}
    then { the UE (MCPTT Client) enters the "S1: start-stop" state }
    }
}
```

```
(5)
with { UE (MCPTT Client) in the "S2: waiting for call announcement" state }
ensure that {
   when { the UE (MCPTT Client receives a GROUP CALL ANNOUNCEMENT message }
     then { the UE (MCPTT Client) enters the "S3: part of ongoing call" state as a terminating floor
   participant}
   }
```

# 7.1.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.2.1, 10.2.2.4.5.5, 10.2.2.4.5.6, 10.2.2.4.5.7, 10.2.2.4.5.8, 10.2.2.4.3.2, TS 24.380 clause 7.2.3.2.3. The following represents a copy/paste extraction of the requirements relevant to the test purpose; any references within the copy/paste text should be understood within the scope of the core spec they have been copied from. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.2.1]

When in the "S1: start-stop" state, upon an indication from an MCPTT user to initiate a group call for an MCPTT group ID, the MCPTT client:

- 1) shall store the MCPTT group ID as the MCPTT group ID of the call;
- 2) shall create a call type control state machine as described in subclause 10.2.3.2;
- shall generate a GROUP CALL PROBE message as specified in subclause 15.1.2. In the GROUP CALL PROBE message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
- 4) shall send the GROUP CALL PROBE message as specified in subclause 10.2.1.1.1;
- 5) shall start timer TFG3 (call probe retransmission);
- 6) shall start timer TFG1 (wait for call announcement); and
- 7) shall enter the "S2: waiting for call announcement" state.

[TS 24.379, clause 10.2.2.4.5.5]

When in the "S2: waiting for call announcement" state, upon an indication from the MCPTT user to release the group call, the MCPTT client:

- 1) shall stop timer TFG3 (call probe retransmission); and
- 2) shall enter the "S7: Waiting for call announcement after call release" state.

[TS 24.379, clause 10.2.2.4.5.6]

When in the "S7: Waiting for call announcement after call release" state, upon an indication from the MCPTT user to initiate a group call for an MCPTT group ID matching the stored MCPTT group ID of the call, the MCPTT client:

- 1) shall stop timer TFG1 (wait for call announcement);
- 2) shall generate a GROUP CALL PROBE message as specified in subclause 15.1.2. In the GROUP CALL PROBE message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
- 3) shall send the GROUP CALL PROBE message as specified in subclause 10.2.1.1.1;
- 4) shall start timer TFG3 (call probe retransmission);
- 5) shall start timer TFG1 (wait for call announcement); and
- 6) shall enter the "S2: waiting for call announcement" state.

[TS 24.379, clause 10.2.2.4.5.7]

When in the "S7: Waiting for call announcement after call release" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE matching the stored MCPTT group ID of the call, the MCPTT client:

- 1) shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;
- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 6) shall stop timer TFG1 (wait for call announcement);
- 7) shall start timer TFG5 (not present incoming call announcements); and
- 8) shall enter the "S6: ignoring incoming call announcements" state.

[TS 24.379, clause 10.2.2.4.5.8]

When in the "S7: Waiting for call announcement after call release" state, upon expiration of timer TFG1 (wait for call announcement), the MCPTT client:

- 1) shall release the stored MCPTT group ID of the call;
- 2) shall destroy the call type control state machine as specified in subclause 10.2.3.4.11; and
- 3) shall enter the "S1: start-stop" state.

[TS 24.379, clause 10.2.2.4.3.2]

When in the "S2: waiting for call announcement" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE matching the stored MCPTT group ID of the call, the MCPTT client:

- 1) shall stop timer TFG3 (call probe retransmission);
- 2) shall stop timer TFG1 (wait for call announcement);
- shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;
- 4) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 5) shall store the value of the originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the Originating MCPTT user ID of the call;
- 6) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 7) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 8) shall establish a media session based on the stored SDP body of the call;
- 9) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 10) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;

- 11) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
- 12) shall enter the "S3: part of ongoing call" state.

[TS 24.380, clause 7.2.3.2.3]

When an MCPTT call is established the terminating floor participant:

- 1. shall create an instance of a floor participant state transition diagram for basic operation state machine;
- 2. shall start timer T230 (Inactivity); and
- 3. shall enter 'O: silence' state.7.1.3.3 Test description

## 7.1.3.2.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - -- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

### IUT:

- UE (MCPTT client)
  - TFG1 (wait for call announcement) set to 20 seconds (20,000 ms) ("/<x>/OffNetwork/Timers/TFG1" leaf
    node present in the UE initial configuration as specified in 3GPP TS 24.483 [13]; related to the D2D Sidelink
    period)
  - TFG3 (call probe retransmission) set to 15 seconds (15,000 ms) ("/<x>/OffNetwork/Counters/TFG3" leaf node present in the UE initial configuration as specified in 3GPP TS 24.483 [13])
  - TFG5 (not present incoming call announcement) set to 30 seconds ("/<x>/OffNetwork/Timers/TFG5" leaf node present in the UE initial configuration as specified in 3GPP TS 24.483 [13].)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

7.1.3.2.2 Test procedure sequence

Table 7.1.3.2.2-1: Main Behaviour

St	Procedure		Message Sequence		Verdict	
		U - S	Message	TP		
1	Power up the UE	-	-	-	-	
2	Activate the MCPTT Client Application and	-	-	-	-	
	register User A as the MCPTT User (TS					
	36.579-5 [5], px_MCPTT_User_A_username,					
	px_MCPTT_User_A_password).					
	NOTE: This is expected to be done via a					
3	suitable implementation dependent MMI. Make the UE (MCPTT Client) initiate an off-		_			
3	network basic group call	-	-	-	-	
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.					
-	EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-	
	are related to the MCPTT off-network call					
	establishment are described in TS 56.579-					
	1 [2], subclause 5.4.11 'Generic Test					
	Procedure for MCPTT CO communication over					
	ProSe direct one-to-many communication out					
	of E-UTRA coverage / Monitoring/Discoverer					
	procedure for group member discovery / One-					
	to-many communication'. The test sequence					
	below shows only the MCPTT relevant					
	messages exchanged.					
4	The UE (MCPTT client) sends a GROUP	>	GROUP CALL PROBE	-	-	
	CALL PROBE message to determine the					
_	current call status of the group	-				
5	Before the expiry of TFG3 (call probe	-	-	-	-	
	retransmission), make the UE (MCPTT Client)					
	release the off-network basic group call and					
	enter the "S7: Waiting for call announcement after call release" state					
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.					
6	Check: At the expiration of TFG3 (call probe	>	GROUP CALL PROBE	1	F	
Ũ	retransmission), does the UE (MCPTT Client)	-		•	•	
	send a retransmission of the GROUP CALL					
	PROBE sent in step 4?					
7	Before the expiry of TFG1 (wait for call	-	-	-	-	
	announcement), make the UE (MCPTT Client)					
	initiate an off-network basic group call					
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.				_	
8	Check: Does the UE (MCPTT client) send a	>	GROUP CALL PROBE	2	Р	
	GROUP CALL PROBE message to determine					
	the current call status of the group?					
9	Before the expiry of TFG3 (call probe	-	-	-	-	
	retransmission), make the UE (MCPTT Client) release the off-network basic group call and					
	enter the "S7: Waiting for call announcement					
	after call release" state					
	NOTE: This is expected to be done via a					
	suitable implementation dependent MMI.					
10	The SS-UE1 (MCPTT client) sends a GROUP	<	GROUP CALL ANNOUNCEMENT	-	-	
	CALL ANNOUNCEMENT message to the UE					
	(MCPTT Client) with the MCPTT group ID IE					
	matching the stored MCPTT group ID of the					
	released call					
11	The UE (MCPTT Client) enters the "S6:	-	-	-	-	
	ignoring incoming call announcements" state					
	and starts the TFG5 (not present incoming call

# 7.1.4 Off-network / Group Call / MCPTT User Acknowledgement Required / With Confirm Indication / MCPTT User Reject / MCPTT User Accept / Client Terminated (CT)

# 7.1.4.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive group calls in off-network environment, and the UE is configured such that user acknowledgement is required upon a terminating call request reception, and the UE is in an offnetwork environment } ensure that {

when { the UE (MCPTT Client) receives an off-network group call request via a GROUP CALL ANNOUNCEMENT message, and the MCPTT User rejects the call}

then { the UE (MCPTT Client) rejects the call and enters the "S6: ignoring incoming call
announcements" state, and the UE (MCPTT Client enters the "S1: start-stop" state upon expiration of
the TFG5 (not present incoming call announcement) timer }

(2)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to
receive group calls in off-network environment, and the UE is configured such that user
acknowledgement is required upon a terminating call request reception, and the UE is in an offnetwork environment }
ensure that {

when { the UE (MCPTT Client) receives an off-network group call request via a GROUP CALL
ANNOUNCEMENT message, and the MCPTT User accepts the call}
 then { the UE (MCPTT Client) accepts the call and sends a GROUP CALL ACCEPT message, and enters

the "S3: part of ongoing call" state as a terminating floor participant }

# 7.1.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.3.3, 10.2.2.4.3.7, 10.2.2.4.3.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.3.3]

When in the "S1: start-stop" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE not matching MCPTT group ID of the call stored for other state machines, the MCPTT client:

- 1) shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;
- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL ANNOUNCEMENT message as the MCPTT group ID of the call;
- 6) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 7) shall create a call type control state machine as described in subclause 10.2.3.2;
- 8) if the terminating UE is configured that the terminating MCPTT user acknowledgement is required upon a terminating call request reception:
  - a) shall start timer TFG4 (waiting for the user);
  - b) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE, shall enter the "S5: pending user action with confirm indication" state; and
  - c) if the GROUP CALL ANNOUNCEMENT message does not contains the Confirm mode indication IE, shall enter the "S4: pending user action without confirm indication" state; and
- 9) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:
  - a) shall establish a media session based on the stored SDP body of the call;
  - b) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
  - c) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE:
    - i) shall generate a GROUP CALL ACCEPT message as specified in subclause 15.1.4. In the GROUP CALL ACCEPT message, the MCPTT client:
      - A) shall set the Call identifier IE to the stored call identifier of the call;
      - B) shall set the Sending MCPTT user ID IE to own MCPTT user id;
      - C) shall set the Call type IE to the stored current call type associated with the call type control state machine; and
      - D) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
    - ii) shall send the GROUP CALL ACCEPT message as specified in subclause 10.2.1.1.1;
  - d) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
  - e) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
  - f) shall enter the "S3: part of ongoing call" state.

[TS 24.379, clause 10.2.2.4.3.7]

When in the "S5: pending user action with confirm indication" state or the "S4: pending user action without confirm indication" state, upon an indication from the MCPTT user to reject the incoming group call, the MCPTT client:

1) shall stop timer TFG4 (waiting for the user);

- 2) shall start timer TFG5 (not present incoming call announcements); and
- 3) shall enter the "S6: ignoring incoming call announcements" state.

[TS 24.379, clause 10.2.2.4.3.4]

When in the "S5: pending user action with confirm indication" state, upon indication from the MCPTT user to accept the incoming group call, the MCPTT client:

- 1) shall establish a media session based on the stored SDP body of the call;
- 2) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 3) shall generate a GROUP CALL ACCEPT message as specified in subclause 15.1.4. In the GROUP CALL ACCEPT message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Sending MCPTT user ID IE to own MCPTT user id;
  - c) shall set the Call type IE to the stored current call type associated with the call type control state machine; and
  - d) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
- 4) shall send the GROUP CALL ACCEPT message as specified in subclause 10.2.1.1.1;
- 5) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
- 6) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
- 7) shall enter the "S3: part of ongoing call" state.

# 7.1.4.3 Test description

### 7.1.4.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - -- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

## 7.1.5.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive group calls in off-network environment, and the UE is configured such that user acknowledgement is required upon a terminating call request reception, and the UE is in an offnetwork environment }

#### ensure that {

when { the UE (MCPTT Client) receives an off-network group call request via a GROUP CALL
ANNOUNCEMENT message that does not contains the Confirm mode indication IE, and the MCPTT User
rejects the call}

then { the UE (MCPTT Client) rejects the call and enters the "S6: ignoring incoming call
announcements" state, and the UE (MCPTT Client enters the "S1: start-stop" state upon expiration of
the TFG5 (not present incoming call announcement) timer }
}

### (2)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive group calls in off-network environment, and the UE is configured such that user acknowledgement is required upon a terminating call request reception, and the UE is in an offnetwork environment } ensure that {

when { the UE (MCPTT Client) receives an off-network group call request via a GROUP CALL
ANNOUNCEMENT message that does not contains the Confirm mode indication IE, and the MCPTT User
accepts the call}
then UE (MCPTT Client) eccepts the call and entern the "C2; next of encoder call"

then { the UE (MCPTT Client) accepts the call and enters the "S3: part of ongoing call" state as a terminating floor participant }

### 7.1.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.3.3, 10.2.2.4.3.7, 10.2.2.4.3.5. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.3.3]

When in the "S1: start-stop" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE not matching MCPTT group ID of the call stored for other state machines, the MCPTT client:

- 1) shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;
- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL ANNOUNCEMENT message as the MCPTT group ID of the call;
- 6) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 7) shall create a call type control state machine as described in subclause 10.2.3.2;
- 8) if the terminating UE is configured that the terminating MCPTT user acknowledgement is required upon a terminating call request reception:
  - a) shall start timer TFG4 (waiting for the user);
  - b) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE, shall enter the "S5: pending user action with confirm indication" state; and
  - c) if the GROUP CALL ANNOUNCEMENT message does not contains the Confirm mode indication IE, shall enter the "S4: pending user action without confirm indication" state; and
- 9) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:
  - a) shall establish a media session based on the stored SDP body of the call;
  - b) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
  - c) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE:
    - shall generate a GROUP CALL ACCEPT message as specified in subclause 15.1.4. In the GROUP CALL ACCEPT message, the MCPTT client:
      - A) shall set the Call identifier IE to the stored call identifier of the call;
      - B) shall set the Sending MCPTT user ID IE to own MCPTT user id;
      - C) shall set the Call type IE to the stored current call type associated with the call type control state machine; and
      - D) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
    - ii) shall send the GROUP CALL ACCEPT message as specified in subclause 10.2.1.1.1;
  - d) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
  - e) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
  - f) shall enter the "S3: part of ongoing call" state.

[TS 24.379, clause 10.2.2.4.3.7]

indication" state, upon an indication from the MCPTT user to reject the incoming group call, the MCPTT client:

- 1) shall stop timer TFG4 (waiting for the user);
- 2) shall start timer TFG5 (not present incoming call announcements); and
- 3) shall enter the "S6: ignoring incoming call announcements" state.

#### [TS 24.379, clause 10.2.2.4.3.5]

When in the "S4: pending user action without confirm indication" state, upon an indication from the MCPTT user to accept the incoming group call, the MCPTT client:

- 1) shall establish a media session based on the stored SDP body of the call;
- 2) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 3) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
- 4) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
- 5) shall enter the "S3: part of ongoing call" state.

# 7.1.6 Off-network / Group Call / Merge Two Calls

### 7.1.6.1 Test Purpose (TP)

#### (1)

with { UE (MCPTT Client) having established an off-network MCPTT Pre-arranged Group Call }
ensure that {

when { the UE (MCPTT Client) receives a GROUP CALL ANNOUNCEMENT message with the same call type as
the current call, the same start time as the current call, but with a lower Call identifier IE }
 then { UE (MCPTT Client) merges the two calls and restarts floor control as a terminating floor
participant }

## 7.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clause 10.2.2.4.6.1, TS 24.380 clause 7.2.3.2.3. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.6.1]

When in the "S3: part of ongoing call" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE matching the stored MCPTT group ID of the call and:

- 1) the Originating MCPTT user ID IE is different from the stored originating MCPTT user ID of the call; or
- 2) the Call identifier IE is different from the stored call identifier of the call;

then:

 if the stored current call type associated with the call type control state machine is "BASIC GROUP CALL" and the value of the Call type IE of GROUP CALL ANNOUNCEMENT message is either "IMMINENT PERIL GROUP CALL" or "EMERGENCY GROUP CALL";

- if the stored current call type associated with the call type control state machine is "IMMINENT PERIL GROUP CALL" and the value of the Call type IE of GROUP CALL ANNOUNCEMENT message is "EMERGENCY GROUP CALL";
- 3) if the stored current call type associated with the call type control state machine being equal to the Call type IE of the GROUP CALL ANNOUNCEMENT message and the Call start time IE of the GROUP CALL ANNOUNCEMENT message being lower than the stored call start time of the call; or
- 4) if the stored current call type associated with the call type control state machine being equal to the Call type IE of the GROUP CALL ANNOUNCEMENT message and the Call start time IE of the GROUP CALL ANNOUNCEMENT message being equal to the stored call start time of the call and the Call identifier IE of the GROUP CALL ANNOUNCEMENT message being lower than the stored call identifier of the call;

the MCPTT client:

- 1) shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;
- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 6) shall adjust the media session based on the stored SDP body of the call and restart floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 7) shall stop timer TFG6 (max duration);
- 8) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
- 9) shall stop timer TFG2 (call announcement); and
- 10) shall start timer TFG2 (call announcement) with value according to rules and procedures as specified in subclause 10.2.2.4.1.1.1; and
- 11) shall remain in the "S3: part of ongoing call" state.

[TS 24.380, clause 7.2.3.2.3]

When an MCPTT call is established the terminating floor participant:

- 1. shall create an instance of a floor participant state transition diagram for basic operation state machine;
- 2. shall start timer T230 (Inactivity); and
- 3. shall enter 'O: silence' state.

## 7.1.6.3 Test description

## 7.1.6.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - -- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

# 7.1.7.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.2.1, 10.2.3.4.2, 10.2.3.4.6, 10.2.2.4.3.1. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.2.1]

When in the "S1: start-stop" state, upon an indication from an MCPTT user to initiate a group call for an MCPTT group ID, the MCPTT client:

- 1) shall store the MCPTT group ID as the MCPTT group ID of the call;
- 2) shall create a call type control state machine as described in subclause 10.2.3.2;
- 3) shall generate a GROUP CALL PROBE message as specified in subclause 15.1.2. In the GROUP CALL PROBE message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
- 4) shall send the GROUP CALL PROBE message as specified in subclause 10.2.1.1.1;
- 5) shall start timer TFG3 (call probe retransmission);
- 6) shall start timer TFG1 (wait for call announcement); and

7) shall enter the "S2: waiting for call announcement" state.

[TS 24.379, clause 10.2.3.4.2]

When in the "T0: waiting for the call to establish " state, upon an indication from an MCPTT user to initiate a group call probe for an MCPTT group, the MCPTT client:

- if the stored emergency state associated with emergency alert state machine described in 12.2.2.2 is set to "true" and the value of "/<x>/<x>/Common/AllowedEmergencyCall" leaf node present in group configuration as specified in 3GPP TS 24.383 [45] is set to "true":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL"; and
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
- 2) if the stored emergency state associated with emergency alert state machine described in 12.2.2.2 is set to "false", and:
  - a) if the user initiates an MCPTT emergency call and the values of "/<x>/<x>/Common/MCPTTGroupCall/EmergencyCall/Enabled" leaf node present in the user profile and "/<x>/Common/AllowedEmergencyCall" leaf node present in group configuration as specified in 3GPP TS 24.383 [45] are set to "true":
    - i) shall set the stored current call type to "EMERGENCY GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
  - b) if the user initiates an MCPTT imminent peril group call and the values of "/<x>/<x>/Common/MCPTTGroupCall/ImminentPerilCall/Authorised" leaf node present in the user profile "/<x>/Common/AllowedImminentPerilCall " leaf node present in group configuration as specified in 3GPP TS 24.383 [45] are set to "true":
    - i) shall set the stored current call type to "IMMINENT PERIL GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45]; and
  - c) if the user initiates an MCPTT group call which is not an MCPTT emergency call and which is not an MCPTT imminent peril group call:
    - i) shall set the stored current call type to "BASIC GROUP CALL"; and
    - ii) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];
- 3) shall set the stored last call type change time to current UTC time;
- 4) shall set the last user to change call type to own MCPTT user ID; and
- 5) shall remain in "T0: waiting for the call to establish" state.

### [TS 24.379, clause 10.2.3.4.6]

When in state "T0: waiting for the call to establish", if:

- a) the MCPTT user accepts the call when MCPTT user acknowledgement is required; or
- b) the MCPTT client sends a GROUP CALL ANNOUNCEMENT message on expiry of timer TFG1 (wait for call announcement) associated with the basic call control state machine;

#### the MCPTT client:

1) if the stored current call type is set to "EMERGENCY GROUP CALL"

- a) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and
- b) shall enter "T1: in-progress emergency group call" state;
- 2) if the stored current call type is set to "IMMINENT PERIL GROUP CALL"
  - a) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
  - b) shall enter "T3: in-progress imminent peril group call" state; or
- 3) if the stored current call type is set to "BASIC GROUP CALL"
  - a) shall enter "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.2.4.3.1]

When in the "S2: waiting for call announcement" state, upon expiry of timer TFG1 (wait for call announcement), the MCPTT client:

- 1) shall stop timer TFG3 (call probe retransmission), if running;
- 2) shall generate an SDP body as specified in subclause 10.2.1.1.2 and store it as the SDP body of the call;
- 3) shall generate a random number with uniform distribution between 0 and 65535 and store it as the call identifier of the call;
- 4) shall select refresh interval value and store it as the refresh interval of the call;
- 5) shall store own MCPTT user ID as the originating MCPTT user ID of the call;
- 6) shall store the current UTC time as the call start time of the call;
- shall generate a GROUP CALL ANNOUNCEMENT message as specified in subclause 15.1.3. In the GROUP CALL ANNOUNCEMENT message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Call type IE to the stored current call type associated with the call type control state machine;
  - c) shall set the Refresh interval IE to the stored refresh interval of the call;
  - d) shall set the SDP IE to the stored SDP body of the call;
  - e) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call;
  - f) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
  - g) shall set the Call start time IE to the stored call start time of the call;
  - h) shall set the Last call type change time IE to the stored last call type change time of the call associated with call type control state machine;
  - i) shall set the Last user to change call type IE to last user to change call type associated with call type control state machine; and
  - j) may include the Confirm mode indication IE;
- 8) shall send the GROUP CALL ANNOUNCEMENT message as specified in subclause 10.2.1.1.1;
- 9) shall establish a media session based on the stored SDP body of the call;
- 10) shall start floor control as originating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 11) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
- 12) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and

13) shall enter the "S3: part of ongoing call" state.

NOTE: In this release of the present document, the refresh interval of the call is fixed to 10 seconds.

## 7.1.7.3 Test description

### 7.1.7.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - -- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble:
  - The UE is in state 'switched-off'.

(1)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive emergency group calls in off-network environment, and the UE is in an off-network environment } ensure that {

when { the UE (MCPTT Client) receives GROUP CALL ANNOUNCEMENT to initiate an MCPTT emergency group
call }

then { UE (MCPTT Client) responds by sending a GROUP CALL ACCEPT message, and respects the floor control imposed by the floor control entity/arbitrator } }

(2)

with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to receive imminent peril group calls in off-network environment, and the UE is in an off-network environment } ensure that {

when { the UE (MCPTT Client) receives GROUP CALL ANNOUNCEMENT to initiate an MCPTT imminent peril
group call }

then { UE (MCPTT Client) responds by sending a GROUP CALL ACCEPT message, and respects the floor
control imposed by the floor control entity/arbitrator }
}

# 7.1.8.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.2.2.4.3.3, 10.2.3.4.4, 10.2.3.4.5, 10.2.3.4.6. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.2.2.4.3.3]

When in the "S1: start-stop" state, upon receiving a GROUP CALL ANNOUNCEMENT message with the MCPTT group ID IE not matching MCPTT group ID of the call stored for other state machines, the MCPTT client:

1) shall store the value of the SDP IE of the GROUP CALL ANNOUNCEMENT message as the SDP body of the call;

- 2) shall store the value of the Call identifier IE of the GROUP CALL ANNOUNCEMENT message as the call identifier of the call;
- 3) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL ANNOUNCEMENT message as the originating MCPTT user ID of the call;
- 4) shall store the value of the Refresh interval IE of the GROUP CALL ANNOUNCEMENT message as the refresh interval of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL ANNOUNCEMENT message as the MCPTT group ID of the call;
- 6) shall store the value of the Call start time IE of the GROUP CALL ANNOUNCEMENT message as the call start time of the call;
- 7) shall create a call type control state machine as described in subclause 10.2.3.2;
- 8) if the terminating UE is configured that the terminating MCPTT user acknowledgement is required upon a terminating call request reception:
  - a) shall start timer TFG4 (waiting for the user);
  - b) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE, shall enter the "S5: pending user action with confirm indication" state; and
  - c) if the GROUP CALL ANNOUNCEMENT message does not contains the Confirm mode indication IE, shall enter the "S4: pending user action without confirm indication" state; and
- 9) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:
  - a) shall establish a media session based on the stored SDP body of the call;
  - b) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
  - c) if the GROUP CALL ANNOUNCEMENT message contains the Confirm mode indication IE:
    - i) shall generate a GROUP CALL ACCEPT message as specified in subclause 15.1.4. In the GROUP CALL ACCEPT message, the MCPTT client:
      - A) shall set the Call identifier IE to the stored call identifier of the call;
      - B) shall set the Sending MCPTT user ID IE to own MCPTT user id;
      - C) shall set the Call type IE to the stored current call type associated with the call type control state machine; and
      - D) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
    - ii) shall send the GROUP CALL ACCEPT message as specified in subclause 10.2.1.1.1;
  - d) shall start timer TFG6 (max duration) with value as specified in subclause 10.2.2.4.1.2;
  - e) shall start timer TFG2 (call announcement) with value as specified in subclause 10.2.2.4.1.1.1; and
  - f) shall enter the "S3: part of ongoing call" state.

[TS 24.379, clause 10.2.3.4.4]

When in the "T0: waiting for the call to establish" state, upon receipt of a GROUP CALL ANNOUNCEMENT message by an idle MCPTT client when MCPTT user acknowledgement is required, the MCPTT client:

- if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "EMERGENCY GROUP CALL":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL"; and

- b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
- 2) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "IMMINENT PERIL GROUP CALL":
  - a) shall set the stored current call type to "IMMINENT PERIL GROUP CALL"; and
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];
- 3) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "BASIC GROUP CALL":
  - a) shall set the stored current call type to "BASIC GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45];
- 4) shall set the stored last call type change time to the Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
- 5) shall set the last user to change call type to the Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message; and
- 6) shall remain in "T0: waiting for the call to establish" state.

[TS 24.379, clause 10.2.3.4.5]

When in the "T0: waiting for the call to establish" state, upon receipt of a GROUP CALL ANNOUNCEMENT message by an idle MCPTT client when MCPTT user acknowledgement is not required, the MCPTT client:

- 1) shall set the stored last call type change time to the Last call type change time IE of the GROUP CALL ANNOUNCEMENT message;
- 2) shall set the last user to change call type to the Last user to change call type IE of the GROUP CALL ANNOUNCEMENT message;
- if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "EMERGENCY GROUP CALL":
  - a) shall set the stored current call type to "EMERGENCY GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network emergency group call as described in 3GPP TS 24.383 [45];
  - c) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and
  - d) shall enter "T1: in-progress emergency group call" state;
- 4) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "IMMINENT PERIL GROUP CALL":
  - a) shall set the stored current call type to "IMMINENT PERIL GROUP CALL";
  - b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network imminent peril group call as described in 3GPP TS 24.383 [45];
  - c) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
  - d) shall enter "T3: in-progress imminent peril group call" state; and
- 5) if the Call type IE of the received GROUP CALL ANNOUNCEMENT message is set to "BASIC GROUP CALL":

- a) shall set the stored current call type to "BASIC GROUP CALL";
- b) shall set the stored current ProSe per-packet priority to value corresponding to MCPTT off-network basic group call as described in 3GPP TS 24.383 [45]; and
- c) shall enter "T2: in-progress basic group call" state.

[TS 24.379, clause 10.2.3.4.6]

When in state "T0: waiting for the call to establish", if:

- a) the MCPTT user accepts the call when MCPTT user acknowledgement is required; or
- b) the MCPTT client sends a GROUP CALL ANNOUNCEMENT message on expiry of timer TFG1 (wait for call announcement) associated with the basic call control state machine;

#### the MCPTT client:

- 1) if the stored current call type is set to "EMERGENCY GROUP CALL"
  - a) shall start timer TFG13 (implicit downgrade emergency) with value as specified in subclause 10.2.3.4.1.1; and
  - b) shall enter "T1: in-progress emergency group call" state;
- 2) if the stored current call type is set to "IMMINENT PERIL GROUP CALL"
  - a) shall start timer TFG14 (implicit downgrade imminent peril) with value as specified in subclause 10.2.3.4.1.2; and
  - b) shall enter "T3: in-progress imminent peril group call" state; or
- 3) if the stored current call type is set to "BASIC GROUP CALL"
  - a) shall enter "T2: in-progress basic group call" state.

### 7.1.8.3 Test description

### 7.1.8.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

#### IUT:

- UE (MCPTT client)
- UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception
- Other MCPTT operation relevant settings:
  - TFG1 (wait for call announcement) set to 150 ms (default value) ("/<x>/OffNetwork/Counters/TFG1" leaf node present in the UE initial configuration as specified in 3GPP TS 24.483 [13])
  - TFG3 (call probe retransmission) set to 40 ms (default value) ("/<x>/OffNetwork/Counters/TFG3" leaf node present in the UE initial configuration as specified in 3GPP TS 24.483 [13])

#### Preamble:

- The UE is switched-off

# 7.1.9.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 12.2.3.1, 12.2.3.2, 12.2.3.5. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 12.2.3.1]

When in state "E1: Not in emergency state", upon receiving an indication from the MCPTT user to transmit an emergency alert for an MCPTT group ID, and the values of

"/<x>/<x>/Common/MCPTTGroupCall/EmergencyAlert/Authorised" leaf node present in the user profile and "/<x>/<x>/Common/AllowedEmergencyAlert" present in group configuration as specified in 3GPP TS 24.383 [45] are set to "true", the MCPTT client:

- 1) shall set the stored emergency state as "true";
- 2) shall set the stored MCPTT group ID to the indicated MCPTT group ID;
- 3) shall generate a GROUP EMERGENCY ALERT message as specified in subclause 15.1.16. In the GROUP EMERGENCY ALERT message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID;
  - b) shall set the Originating MCPTT user ID IE to own MCPTT user ID;
  - c) shall set the Organization name IE to own organization name; and
  - d) may set the User location IE with client's current location, if requested;
- 4) shall send the GROUP EMERGENCY ALERT message as specified in subclause 10.2.1.1.1;
- 5) shall start timer TFE2 (emergency alert retransmission); and

6) shall enter "E2: Emergency state" state.

[TS 24.379, clause 12.2.3.2]

When in state "E2: Emergency state", upon expiry of timer TFE2 (emergency alert retransmission), the MCPTT client:

- 1) shall generate a GROUP EMERGENCY ALERT message as specified in subclause 15.1.16. In the GROUP EMERGENCY ALERT message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID;
  - b) shall set the originating MCPTT user ID IE to own MCPTT user ID;
  - c) shall set the Organization name IE to own organization name; and
  - d) may set the Location IE with client's current location, if requested; and
- 2) shall send the GROUP EMERGENCY ALERT message as specified in subclause 10.2.1.1.1;
- 3) shall start the timer TFE2 (emergency alert retransmission); and
- 4) shall remain in the current state.

[TS 24.379, clause 12.2.3.5]

When in "E2: Emergency state", upon receiving an indication from the MCPTT user to cancel an emergency alert and the value of "/<x>/<x>/Common/MCPTTGroupCall/EmergencyAlert/Cancel" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] set to "true", the MCPTT client:

- 1) shall set the stored emergency state as "false";
- 2) shall generate a GROUP EMERGENCY ALERT CANCEL message as specified in subclause 15.1.18. In the GROUP EMERGENCY ALERT CANCEL message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the stored MCPTT group ID;
  - b) shall set the Originating MCPTT user ID IE to own MCPTT user ID; and
  - c) shall set the Sending MCPTT user ID IE to own MCPTT user ID;
- 3) shall send the GROUP EMERGENCY ALERT CANCEL message as specified in subclause 10.2.1.1.1;
- 4) shall stop timer TFE2 (emergency alert retransmission); and
- 5) shall enter "E1: Not in emergency state" state.

# 7.1.9.3 Test description

### 7.1.9.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)

- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

# 7.1.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 12.2.3.3, 12.2.3.4, 12.2.3.6, 12.2.3.7. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 12.2.3.3]

When in state "E1: Not in emergency state" or in "E2: Emergency state", upon receiving a GROUP EMERGENCY ALERT message with the Originating MCPTT user ID IE not stored in the list of users in emergency, the MCPTT client:

- 1) shall store the Originating MCPTT user ID IE and location IE in the list of users in emergency;
- 2) shall generate a GROUP EMERGENCY ALERT ACK message as specified in subclause 15.1.17. In the GROUP EMERGENCY ALERT ACK message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the MCPTT group ID IE of the received GROUP EMERGENCY ALERT message;
  - b) shall set the Sending MCPTT user ID IE to own MCPTT user ID; and
  - c) shall set the Originating MCPTT user ID IE to the Originating MCPTT user ID IE of the received GROUP EMERGENCY ALERT message; and
- 3) shall send the GROUP EMERGENCY ALERT ACK message as specified in subclause 10.2.1.1.1;
- 4) shall start timer TFE1 (Emergency Alert); and
- 5) shall remain in the current state.

NOTE: Each instance of timer TFE1 is per MCPTT user ID.

[TS 24.379, clause 12.2.3.4]

When in state "E1: Not in emergency state" or in "E2: Emergency state", upon receiving a GROUP EMERGENCY ALERT message with the Originating MCPTT user ID IE stored in the list of users in emergency, the MCPTT client:

- 1) may update the stored location of the user with the received Location IE;
- 2) shall restart the associated timer TFE1 (Emergency Alert); and
- 3) shall remain in the current state.

[TS 24.379, clause 12.2.3.6]

When in state "E1: Not in emergency state" or in "E2: Emergency state", upon receiving a GROUP EMERGENCY ALERT CANCEL message with the Originating MCPTT user ID IE stored in the list of users in emergency, the MCPTT client:

- 1) shall remove the MCPTT user ID and associated location information from the stored list of users in emergency;
- 2) shall generate a GROUP EMERGENCY ALERT CANCEL ACK message as specified in subclause 15.1.19. In the GROUP EMERGENCY ALERT CANCEL ACK message, the MCPTT client:
  - a) shall set the MCPTT group ID IE to the MCPTT group ID IE of the received GROUP EMERGENCY ALERT CANCEL message; and
  - b) shall set the Sending MCPTT user ID IE to own MCPTT user ID; and
  - c) shall set the Originating MCPTT user ID IE to the Originating MCPTT user ID IE of the received GROUP EMERGENCY ALERT message;
- 3) shall send the GROUP EMERGENCY ALERT CANCEL ACK message as specified in subclause 10.2.1.1.1;
- 4) shall stop the associated timer TFE1 (Emergency Alert); and5) shall remain in the current state.

[TS 24.379, clause 12.2.3.7]

When in state "E1: Not in emergency state" or in "E2: Emergency state", upon expiry of timer TFE1 (Emergency Alert) associated with a stored MCPTT user ID, the MCPTT client:

- 1) shall remove the MCPTT user ID and associated location information from the stored list of users in emergency; and
- 2) shall remain in the current state.

#### 7.1.10.3 Test description

### 7.1.11.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.3.2.4.1, 10.3.2.4.9, 10.3.2.4.7. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.3.2.4.1]

When in the "B1: start-stop" state, upon the indication from MCPTT user to initiate the broadcast group call, the MCPTT client:

- 1) shall generate an SDP body as specified in subclause 10.2.1.1.2 and store it as the SDP body of the call;
- 2) shall generate a random number with uniform distribution between 0 and 65535 and store it as the call identifier of the call;
- 3) shall store own MCPTT user ID as the originating MCPTT user ID of the call;
- 4) shall store "BROADCAST GROUP CALL" as the current call type;
- 5) shall generate a GROUP CALL BROADCAST message as specified in subclause 15.1.20. In the GROUP CALL BROADCAST message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Call type IE to the stored current call type;
  - c) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call;

- d) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
- e) shall set the SDP IE to the stored SDP body of the call;
- shall set the ProSe per-packet priority to the value corresponding to MCPTT off-network broadcast callas described in 3GPP TS 24.383 [45];
- 7) shall start floor control as originating floor participant as described specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 8) shall send the GROUP CALL BROADCAST message as specified in subclause 10.2.1.1.1;
- 9) shall establish a media session based on the stored SDP body of the call;
- 10) shall start timer TFB2 (broadcast retransmission); and
- 11) shall enter the "B2: in-progress broadcast group call" state.

[TS 24.379, clause 10.3.2.4.1]

When in the "B2: in-progress broadcast group call" state, upon expiry of timer TFB2 (broadcast retransmission), the MCPTT client:

- shall generate a GROUP CALL BROADCAST message as specified in subclause 15.1.20. In the GROUP CALL BROADCAST message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Call type IE to the stored current call type;
  - c) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call;
  - d) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call; and
  - e) shall set the SDP IE to the stored SDP body of the call;
- 2) shall send the GROUP CALL BROADCAST message as specified in subclause 10.2.1.1.1;
- 3) shall restart timer TFB2 (broadcast retransmission); and
- 4) shall remain in the "B2: in-progress broadcast group call" state.

[TS 24.379, clause 10.3.2.4.1]

When in the "B2: in-progress broadcast group call" state, upon an indication from the originating MCPTT user to release the in-progress broadcast group call, the MCPTT client:

- 1) shall release the media session;
- 2) shall generate a GROUP CALL BROADCAST END message as specified in subclause 15.1.21. In the GROUP CALL BROADCAST END message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier of the call;
  - b) shall set the Originating MCPTT user ID IE to the stored originating MCPTT user ID of the call; and
  - c) shall set the MCPTT group ID IE to the stored MCPTT group ID of the call;
- 3) shall send the GROUP CALL BROADCAST END message as specified in subclause 10.2.1.1.1;
- 4) shall stop timer TFB2 (broadcast retransmission);
- 5) shall stop floor control; and
- 6) shall enter the "B1: start-stop" state.

# 7.1.11.3 Test description

### 7.1.11.3.1 Pre-test conditions

#### System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

## 7.1.11.3.2 Test procedure sequence

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Power up the UE	-	-	-	-
2	Activate the MCPTT Client Application and register User A as the MCPTT User (TS 36.579-5 [5], px_MCPTT_User_A_username, px_MCPTT_User_A_password). NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
3	Make the UE (MCPTT Client) initiate an off- network broadcast call NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT off-network call establishment are described in TS 56.579- 1 [2], subclause 5.4.11 'Generic Test Procedure for MCPTT CO communication over ProSe direct one-to-many communication out of E-UTRA coverage / Monitoring/Discoverer procedure for group member discovery / One- to-many communication'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-
4	Check: Does the UE (MCPTT client) send a GROUP CALL BROADCAST message and enter the "B2: in-progress broadcast group call" state?	>	GROUP CALL BROADCAST	1	Р
5	Check: Does the UE (MCPTT Client) send a Floor Granted message towards the other floor participants?	>	Floor Granted	1	Р
6	Wait for the expiry of timer TFB2 (broadcast retransmission)	-	-	-	-
7	Check: Does the UE (MCPTT client) send a GROUP CALL BROADCAST message using the same Call identifier IE as used in step3 and remain in the "B2: in-progress broadcast group call" state?	>	GROUP CALL BROADCAST	2	Р
8	Before the next expiry of the timer TFB1 (max duration), make the UE (MCPTT Client) cancel the broadcast call NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
9	Check: Does the UE (MCPTT client) send a GROUP CALL BROADCAST END message and enter the "B1: start-stop" state?	>	GROUP CALL BROADCAST END	3	Р

## 7.1.12.1 Test Purpose (TP)

(1)

```
with { UE (MCPTT Client) registered and authorised for MCPTT Service, including authorised to
receive broadcast calls in off-network environment, and the UE is in an off-network environment }
ensure that {
  when { UE (MCPTT Client) receives a GROUP CALL BROADCAST message }
    then { UE (MCPTT Client) start floor control as terminating floor participant and enters the
    "B2: in-progress broadcast group call" state }
    }
(2)
with { UE (MCPTT Client) in the "B2: in-progress broadcast group call" state, and the UE is in an
```

```
off-network environment }
ensure that {
   when { UE (MCPTT Client) receives a GROUP CALL BROADCAST END message }
    then { UE (MCPTT Client) stops floor control and enters the "B1: start-stop" state }
   }
}
```

### 7.1.12.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.3.2.4.2, 10.3.2.4.8. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 10.3.2.4.2]

When in the "B1: start-stop" state, upon receiving a GROUP CALL BROADCAST message with the Call identifier IE not matching any in-progress broadcast group call, the MCPTT client:

- 1) shall store the value of the Call identifier IE of the GROUP CALL BROADCAST message as the call identifier of the call;
- 2) shall store the value of the Call type IE of the GROUP CALL BROADCAST message as the received current call type;
- 3) shall store the value of the SDP IE of the GROUP CALL BROADCAST message as the SDP body of the call;
- 4) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL BROADCAST message as the originating MCPTT user ID of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL BROADCAST message as the MCPTT group ID of the call;
- 6) if the terminating UE is configured that the terminating MCPTT user acknowledgement is required upon a terminating call request reception:
  - i) shall start timer TFB3 (waiting for the user); and
  - ii) shall enter the "B3: pending user action" state; and
- 7) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:
  - i) shall establish a media session based on the stored SDP body of the call;
  - ii) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
  - iii) shall start timer TFB1 (max duration); and
  - iv) shall enter the "B2: in-progress broadcast group call" state.

#### [TS 24.379, clause 10.3.2.4.8]

When in the "B2: in-progress broadcast group call" state or "B4: ignoring same call ID" state, upon receiving GROUP CALL BROADCAST END message with the same Call identifier IE as the stored call identifier, the MCPTT client:

- 1) shall release media session;
- 2) shall stop floor control, if running; and
- 3) shall enter the "B1: start-stop" state.

### 7.1.12.3 Test description

### 7.1.12.3.1 Pre-test conditions

#### System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

#### IUT:

- UE (MCPTT client)
  - TFG4 (waiting for the user) set to 0 (a value to suit the test case sequence) ("/<x>/OffNetwork/Timers/TFB1" leaf node present in the UE initial configuration as specified in 3GPP TS 24.483 [13])
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.

- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

### 7.1.12.3.2 Test procedure sequence

```

### 7.1.13.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.379 clauses 10.3.2.4.2, 10.3.2.4.4, 10.3.2.4.8, 10.3.2.4.3, 10.3.2.4.6, 10.3.2.4.10, 10.3.2.4.11. Unless otherwise stated these are Rel-13 requirements.

#### [TS 24.379, clause 10.3.2.4.2]

When in the "B1: start-stop" state, upon receiving a GROUP CALL BROADCAST message with the Call identifier IE not matching any in-progress broadcast group call, the MCPTT client:

- shall store the value of the Call identifier IE of the GROUP CALL BROADCAST message as the call identifier of the call;
- 2) shall store the value of the Call type IE of the GROUP CALL BROADCAST message as the received current call type;
- 3) shall store the value of the SDP IE of the GROUP CALL BROADCAST message as the SDP body of the call;
- 4) shall store the value of the Originating MCPTT user ID IE of the GROUP CALL BROADCAST message as the originating MCPTT user ID of the call;
- 5) shall store the value of the MCPTT group ID IE of the GROUP CALL BROADCAST message as the MCPTT group ID of the call;
- 6) if the terminating UE is configured that the terminating MCPTT user acknowledgement is required upon a terminating call request reception:
  - i) shall start timer TFB3 (waiting for the user); and
  - ii) shall enter the "B3: pending user action" state; and
- 7) if the terminating UE is configured that the terminating MCPTT user acknowledgement is not required upon a terminating call request reception:

- i) shall establish a media session based on the stored SDP body of the call;
- ii) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- iii) shall start timer TFB1 (max duration); and
- iv) shall enter the "B2: in-progress broadcast group call" state.

[TS 24.379, clause 10.3.2.4.4]

When in the "B3: pending user action" state, upon an indication from the MCPTT user to reject the incoming broadcast group call, the MCPTT client:

- 1) shall stop timer TFB3 (waiting for the user); and
- 2) shall enter the "B4: ignoring same call ID" state.

[TS 24.379, clause 10.3.2.4.8]

When in the "B2: in-progress broadcast group call" state or "B4: ignoring same call ID" state, upon receiving GROUP CALL BROADCAST END message with the same Call identifier IE as the stored call identifier, the MCPTT client:

- 1) shall release media session;
- 2) shall stop floor control, if running; and
- 3) shall enter the "B1: start-stop" state.

[TS 24.379, clause 10.3.2.4.3]

When in the "B3: pending user action" state, upon indication from the MCPTT user to accept the incoming broadcast group call, the MCPTT client:

- 1) shall establish a media session based on the stored SDP body of the call;
- 2) shall start floor control as terminating floor participant as described specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 3) shall stop timer TFB3 (waiting for the user);
- 4) shall start timer TFB1 (max duration); and
- 5) shall enter the "B2: in-progress broadcast group call" state.

[TS 24.379, clause 10.3.2.4.6]

When in the "B2: in-progress broadcast group call" state, upon an indication from the terminating MCPTT user to release the in-progress broadcast group call, the MCPTT client:

- 1) shall release the media session;
- 2) shall stop floor control; and
- 3) shall enter the "B4: ignoring same call ID" state.

[TS 24.379, clause 10.3.2.4.10]

When in the "B4: ignoring same call ID" state, upon receiving GROUP CALL BROADCAST message and if the call identifier in GROUP CALL BROADCAST message matches with the stored call identifier the MCPTT client:

- 1) shall restart timer TFB1 (max duration); and
- 2) shall remain in "B4: ignoring same call ID" state.

[TS 24.379, clause 10.3.2.4.11]

When in the "B2: in-progress broadcast group call" state or "B4: ignoring same call ID" state, upon expiry of timer TFB1 (max duration) the MCPTT client:

- 1) shall release the media session;
- 2) shall clear the stored call identifier;
- 3) shall stop floor control, if running; and
- 4) shall enter the "B1: start-stop" state.

### 7.1.13.3 Test description

### 7.1.13.3.1 Pre-test conditions

#### System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

#### IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The UE has performed the Generic Test Procedure for MCPTT UE registration as specified in TS 36.579-1 [2], subclause 5.4.2.
- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is switched-off.
- UE States at the end of the preamble
  - The UE is in state 'switched-off'.

7.1.13.3.2 Test procedure sequence

Table 7.1.13.3.2-1: Main Behaviour

St	Procedure		Message Sequence	TP	Verdict
	110004410	U - S	Message		, or anot
1	Power up the UE.	-	-	-	-
2	Activate the MCPTT Client Application and	-	-	-	-
	register User A as the MCPTT User (TS				
	36.579-5 [5], px_MCPTT_User_A_username,				
	px_MCPTT_User_A_password). NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.

Information Element	Value/remark	Comment	Condition
Call identifier	Use a different Call identifier than used in the GROUP CALL BROADCAST message sent in step 2		

# 7.2 Off-network Private Calls

- 7.2.1 Off-network / Private Call / On-demand / Automatic Commencement Mode / No Response to Private Call Setup Request / Private call setup success / With Floor Control / Upgrade to Emergency Call / Cancellation of Emergency on User request / Client Originated (CO)
- 7.2.1.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement in off-network environment, and, the UE is in an off-network environment } ensure that {

#### 3GPP TS 36.579-2 version 13.0.0 Release 13

}

464

when { the MCPTT User requests the establishment of an MCPTT private call, on-demand Automatic Commencement Mode }

then { UE (MCPTT Client) sends a PRIVATE CALL SETUP REQUEST message requesting establishment of a private call on-demand Automatic Commencement Mode }

(2)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement in off-network environment, and, the UE is in an off-network environment, and, UE (MCPTT Client) having sent a PRIVATE CALL SETUP REQUEST message requesting establishment of a private call } ensure that {

when { the UE (MCPTT Client) does not receive response to the request until the timer TFP1
(private call request retransmission) expires }

then { UE (MCPTT Client) retransmits the PRIVATE CALL SETUP REQUEST message requesting private
call if the counter CFP1 (private call request retransmission) has not reached its max value and
increments the counter CFP1 with one, and, stops re-transmitting if the counter CFP1 (private call
request retransmission) has reached its max value }
}

#### (3)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement in off-network environment, and, the UE is in an off-network environment, and, UE (MCPTT Client) having sent a PRIVATE CALL SETUP REQUEST message requesting establishment of a private call } ensure that {

when { the UE (MCPTT Client) receives a PRIVATE CALL ACCEPT message }

then { UE (MCPTT Client) transmits a PRIVATE CALL ACCEPT ACK message and considers the call as being established }
}

(4)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment } ensure that {

when { the MCPTT User engages in communication with the invited MCPTT User }
 then { UE (MCPTT Client) respects the floor control procedures in off-network environment
 imposed by Client having the floor (Floor request/grant/release/deny) }
 }
}

(5)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment } ensure that {

when { the MCPTT User wants to upgrade the ongoing MCPTT private call to an MCPTT emergency private call }

then { UE (MCPTT Client) sends a PRIVATE CALL SETUP REQUEST message requesting private emergency
call on-demand Automatic Commencement Mode, and, after receiving a PRIVATE CALL ACCEPT message the
UE (MCPTT Client) sends a PRIVATE CALL ACCEPT ACK message and considers the emergency call as being
established }

#### (6)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment, and, having successfully upgraded it to an MCPTT Private Emergency call } ensure that {

when { the MCPTT User wants to downgrade the ongoing MCPTT private emergency call to a normal
MCPTT private call }

then { UE (MCPTT Client) sends a PRIVATE CALL EMERGENCY CANCEL message, and, after receiving a
PRIVATE CALL EMERGENCY CANCEL ACK message, the UE (MCPTT Client) considers the call downgraded to a
Private normal call }
}

(7)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment } ensure that {

when { the MCPTT User wants to terminate the ongoing MCPTT private call }

then { UE (MCPTT Client) sends a PRIVATE CALL RELEASE request and after receiving a PRIVATE CALL
RELEASE ACK messages, leaves the MCPTT session }

}

### 7.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.2.1.1.1, 11.2.1.1.2, 11.2.2.4.2.1, 11.2.2.4.2.2, 11.2.2.4.2.4, 11.2.2.4.2.8, 11.2.2.4.5.7, TS 24.380 clauses 7.1, 7.2.3.2.2, 7.2.3.5.2, 7.2.3.4.2, 7.2.3.5.4, 7.2.3.5.5, 7.2.3.4.3, 7.2.3.3.2, 7.2.3.3.5, 7.2.3.7.2, 11.2.3.4.5.1, 11.2.3.4.6.1, 11.2.3.4.6.3, 11.2.2.4.5.1, 11.2.2.4.5.5. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.2.1.1.1]

In order to participate in a private call, the MCPTT client:

1) shall send the MONP message as a UDP message to the local IP address of the MCPTT user, on UDP port TBD, with an IP time-to-live set to 255; and

Editor's note [CT1#95, C1-160392]: Port number for the message is FFS.

- 2) shall treat UDP messages received on the port TBD as received MONP messages.
- NOTE: An MCPTT client that supports IPv6 is supposed to listen to the IPv6 addresses.

[TS 24.379, clause 11.2.1.1.2]

For an off-network MCPTT session, only MCPTT speech is used.

One off-network MCPTT session includes one media-floor control entity.

The MCPTT client shall generate an SDP body for a group call in accordance with rules and procedures of IETF RFC 4566 [12] and IETF RFC 3264 [44].

#### The MCPTT client:

- 1) shall include in the session-level section:
  - a) the "o=" field with the <username> portion set to a dash;
  - b) the "s=" field with the <session name> portion set to a dash; and
  - c) the "c=" field with the <nettype> portion set to "IN", the <addrtype> portion set to the IP version of the unicast IP address of the MCPTT client and the <connection-address> portion set to the unicast IP address of the MCPTT client;
- 2) shall include the media-level section for MCPTT speech consisting of:
  - a) the "m=" field with the <media> portion set to "audio", the <port> portion set to a port number for MCPTT speech of the MCPTT group, the <proto> field set to "RTP/AVP" and <fmt> portion set indicating RTP payload type numbers;
  - b) the "i=" field with the <session description> portion set to "speech";
  - c) the "a=fmtp:" attribute(s), the "a=rtpmap:" attribute(s) or both, indicating the codec(s) and media parameters of the MCPTT speech; and
  - d) the "a=rtcp:" attribute indicating port number to be used for RTCP at the MCPTT client selected according to the rules and procedures of IETF RFC 3605 [13], if the media steam uses other than the default IP address;
- 3) shall include the media-level section for media-floor control entity consisting of:
  - a) an "m=" line, with the <media> portion set to "application", the <port> portion set to a port number for media-floor control entity of the MCPTT group, the <proto> field set to "udp" and <fmt> portion set to "MCPTT"; and
  - b) the "a=fmtp:MCPTT" attribute indicating the parameters of the media-floor control entity as specified 3GPP TS 24.380 [5]; and

4) shall include the MIKEY-SAKKE I\_MESSAGE, if generated by the MCPTT client, in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 11.2.2.4.2.1]

When in the "P0: start-stop" state or "P1: ignoring same call id", upon an indication from MCPTT User to initiate a private call and the value of "/<x>/Common/PrivateCall/Authorised" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true", the MCPTT client:

- 1) shall generate and store the call identifier as a random number uniformly distributed between (0, 65536);
- 2) shall store own MCPTT user ID as caller ID;
- 3) shall store MCPTT user ID of the callee as callee ID;
- 4) shall store "AUTOMATIC COMMENCEMENT MODE" as commencement mode, if requested and the value of "/<x>/<x>/Common/PrivateCall/AutoCommence" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true". Otherwise if the value of "/<x>/<x>/Common/PrivateCall/ManualCommence" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true", store "MANUAL COMMENCEMENT MODE" as commencement mode;
- 5) shall create a call type control state machine as described in subclause 11.2.3.2;
- 6) if an end-to-end security context needs to be established then:
  - a) shall use keying material provided by the key management server to generate a PCK as described in 3GPP TS 33.179 [46];
  - b) shall use the PCK to generate a PCK-ID with the four most significant bits set to "0011" to indicate that the purpose of the PCK is to protect private call communications and with the remaining twenty eight bits being randomly generated as described in 3GPP TS 33.179 [46];
  - c) shall encrypt the PCK to a UID associated to the MCPTT client using the MCPTT ID of the invited user and a time related parameter as described in 3GPP TS 33.179 [46];
  - d) shall generate a MIKEY-SAKKE I\_MESSAGE using the encapsulated PCK and PCK-ID as specified in 3GPP TS 33.179 [46];
  - e) shall add the MCPTT ID of the originating MCPTT to the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - f) shall sign the MIKEY-SAKKE I\_MESSAGE using the originating MCPTT user's signing key provided in the keying material together with a time related parameter, and add this to the MIKEY-SAKKE payload, as described in 3GPP TS 33.179 [46] and;
  - g) shall store the MIKEY-SAKKE I\_MESSAGE for later inclusion in an SDP body;
- 7) may store current user location as user location;
- 8) shall generate and store offer SDP, as defined in subclause 11.2.1.1.2;
- 9) shall generate a PRIVATE CALL SETUP REQUEST message as specified in subclause 15.1.5. In the PRIVATE CALL SETUP REQUEST message, the MCPTT client:
  - a) shall set the Call identifier IE with the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID;
  - d) shall set the Commencement mode IE with the stored commencement mode;
  - e) shall set the Call type IE with the stored current call type associated with the call type control state machine;
  - f) shall set the SDP offer IE with the stored offer SDP; and

- g) may set the User location IE with the stored user location if the stored current call type associated with the call type control state machine is "EMERGENCY PRIVATE CALL".
- 10) shall send the PRIVATE CALL SETUP REQUEST message towards other MCPTT client according to rules and procedures as specified in subclause 11.2.1.1.1;
- 11) shall initialize the counter CFP1 (private call request retransmission) with the value set to 1;
- 12) shall start timer TFP1 (private call request retransmission); and
- 13) shall enter the "P2: waiting for call response" state.

[TS 24.379, clause 11.2.2.4.2.2]

When in the "P2: waiting for call response" state, upon expiry of timer TFP1 (private call request retransmission), the MCPTT client:

- 1) may update the stored user location with current user location;
- 2) shall increment the value of counter CFP1 (private call request retransmission) by 1;
- 3) shall generate a PRIVATE CALL SETUP REQUEST message as specified in subclause 15.1.5. In the PRIVATE CALL SETUP REQUEST message, the MCPTT client:
  - a) shall set the Call identifier IE with the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID;
  - d) shall set the Commencement mode IE with the stored commencement mode;
  - e) shall set the Call type IE with the stored current call type associated with the call type control state machine;
  - f) shall set the SDP offer IE with the stored offer SDP; and
  - g) may set the User location IE with stored user location if the stored current call type is "EMERGENCY PRIVATE CALL" associated with the call type control state machine.
- shall send the PRIVATE CALL SETUP REQUEST message towards other MCPTT client according to rules and procedures as specified in subclause 11.2.1.1.1;
- 5) shall start timer TFP1 (private call request retransmission); and
- 6) shall remain in the "P2: waiting for call response" state.

[TS 24.379, clause 11.2.2.4.2.4]

In the "P2: waiting for call response" state, when timer TFP1 (private call request retransmission) expires and the value of the counter CFP1 (private call request retransmission) is equal to the upper limit and the stored commencement mode is "AUTOMATIC COMMENCEMENT MODE", the MCPTT client:

- 1) shall start timer TFP7 (waiting for any message with same call identifier); and
- 2) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.2.8]

When in the "P2: waiting for call response" state, upon receiving a PRIVATE CALL ACCEPT message response to PRIVATE CALL SETUP REQUEST message with the same call identifier, the MCPTT client:

- 1) shall store the SDP answer IE received in the PRIVATE CALL ACCEPT message as answer SDP;
- 2) shall generate a PRIVATE CALL ACCEPT ACK message as specified in subclause 15.1.11:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and

- c) shall set the MCPTT user ID of the callee IE with the stored callee ID.
- 3) shall send the PRIVATE CALL ACCEPT ACK message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1;
- 4) shall stop timer TFP1 (call setup retransmission), if running;
- 5) shall stop timer TFP2 (waiting for call response message), if running;
- 6) shall establish a media session based on the SDP body of the stored answer SDP;
- 7) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 8) shall start timer TFP5 (max duration); and
- 9) shall enter the "P4: part of ongoing call" state.

[TS 24.379, clause 11.2.2.4.5.7]

When in the "P1: ignoring same call id" state, upon expiry of timer TFP7 (waiting for any message with same call identifier) the MCPTT client:

- 1) shall clear the stored call identifier; and
- 2) shall enter the "P0: start-stop" state.

[TS 24.380, clause 7.1]

In off-network, floor control is performed using floor control messages among the MCPTT clients without a centralized floor arbitrator. When off-network, if a floor control session is active, the floor arbitrator and the floor participant are co-located in the MCPTT client (see 3GPP TS 23.179 [5]). During a floor control session the MCPTT client currently speaking serves as the temporary floor arbitrator. All other MCPTT clients in the call play the role of floor participant. When the floor arbitrator grants the floor to another MCPTT client, that new MCPTT client, when starts to send media, becomes the new floor arbitrator and the former (the MCPTT client which granted the floor) becomes a floor participant.

•••

It is assumed that the MCPTT user presses the PTT for requesting talk permission and it keeps it pressed until the request is resolved. If queuing of floor requests is not supported, this request is either granted or rejected or no answer is received. If the request is granted the user is notified with talk permission tone (or equivalent) and the user continues to press the PTT until it finishes the talk burst. If the request is rejected or no answer is received the user is notified and releases the PTT button.

[TS 24.380, clause 7.2.3.2.2]

When an MCPTT call is established with session announcement including an explicit floor request, the originating floor participant:

- 1. shall create an instance of a floor participant state transition diagram for basic operation state machine;
- 2. shall send Floor Granted message towards other floor participants. The Floor Granted message:
  - a. shall include the granted priority in the Floor priority field;
  - b. shall include the MCPTT user's own MCPTT ID in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types; and
- 3. shall enter 'O: has permission' state.

[TS 24.380, clause 7.2.3.5.2]

Upon receiving encoded media from the user or if encoded media is already buffered the floor participant:

1. shall start timer T206 (Stop talking warning);

- 2. shall request the MCPTT client to start sending RTP media packets towards other MCPTT clients; and
- 3. shall remain in 'O: has permission' state.

[TS 24.380, clause 7.2.3.4.2]

If the floor participant receives an indication from the MCPTT user that the MCPTT user wants to send media, the floor participant:

- 1. shall send the Floor Request message to other clients. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall start timer T201 (Floor Request); and
- 4. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.5.4]

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, in a session where:

- 1. the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "false"; or
- the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" but the F-bit in the Floor Indicator field is set to '0' (i.e. indicating that queuing of floor requests is not supported) or the Floor Indicator field is not included in the Floor Request message;

then the floor participant:

- 1. shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #1 (Another MCPTT client has permission);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 2. shall remain in 'O: has permission' state.

#### [TS 24.380, clause 7.2.3.5.5]

Upon receiving an indication from the MCPTT user to release permission to send RTP media, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall send a Floor Release message towards other floor participants, if no queued requests exist: The Floor Release message:
  - a. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - b. if the session is not initiated as a broadcast group call with the B-bit set to '1' (Broadcast group call), shall include a Floor Indicator field set to '0' (normal call);

- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the current arbitrator; and
- 6. shall enter 'O: silence' state.

```
[TS 24.380, clause 7.2.3.4.3]
```

When a Floor Release message is received and if the SSRC in the Floor Release message matches with the stored SSRC of the current arbitrator or with the stored SSRC of the candidate arbitrator, the floor participant:

- 1. may provide floor idle notification to the MCPTT user.
- 2. shall request the MCPTT client to stop rendering received RTP media packets;
- 3. shall stop timer T203 (End of RTP media);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. shall clear the stored SSRC of the current arbitrator; and
- 7. shall enter 'O: silence' state;

[TS 24.380, clause 7.2.3.3.2]

If the floor participant receives an indication from the MCPTT user to send media, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the <User ID> value of the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall stop timer T230 (Inactivity);
- 4. shall start timer T201 (Floor Request); and
- 5. shall enter 'O: pending request' state.

The transition is used in private call only. When a Floor Request message is received, the floor participant:

- 1. shall send a Floor Granted message toward the other floor participant. The Floor Granted message:
  - a. shall include the MCPTT ID of the Floor Request message received in User ID value of the User ID field;
  - b. shall include the SSRC of the Floor Request message received in the SSRC of floor control server field;
  - c. shall include the max duration as configured in the MCPTT client in the OffNetwork/MaxDuration parameter in the <Duration> value of the Duration field; and
  - d. shall include the priority of the Floor Request message received in the <Floor Priority> value of the Floor Priority field;
- 2. shall stop timer T230 (Inactivity);
- 3. shall start timer T205 (Floor Granted ); and
- 4. shall enter 'O: pending granted' state.

<sup>[</sup>TS 24.380, clause 7.2.3.3.5]

[TS 24.380, clause 7.2.3.7.2]

Upon receiving the RTP media and the SSRC of RTP media packet matches with the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to render the received RTP media packets;
- 2. shall stop timer T205 (Floor Granted), if running;
- 3. shall stop timer T233 (Pending user action), if running;
- 4. shall start timer T203 (End of RTP media); and
- 5. shall enter 'O: has no permission' state.

[TS 24.379, clause 11.2.3.4.5.1]

When in the "Q1: in-progress private call" state, upon an indication from MCPTT User to upgrade the call to emergency and the value of " $/\langle x \rangle /\langle x \rangle /$ Common/PrivateCall/EmergencyCall/Authorised" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true", the MCPTT client:

- 1) shall generate and store emergency offer SDP as defined in subclause 11.2.1.1.2;
- 2) shall update caller ID as own MCPTT user ID;
- 3) shall update callee ID as MCPTT user ID of the other user;
- 4) shall store current user location as user location;
- 5) shall set the stored current call type to "EMERGENCY PRIVATE CALL";
- 6) shall generate a PRIVATE CALL SETUP REQUEST message as specified in subclause 15.1.5. In the PRIVATE SETUP REQUEST message, the MCPTT client:
  - a) shall set the Call identifier IE with the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID;
  - d) shall set the Commencement mode IE as "AUTOMATIC COMMENCEMENT MODE";
  - e) shall set the Call type IE to the stored current call type;
  - f) shall set the SDP offer IE with emergency offer SDP; and
  - g) may set the User location IE with user location.
- shall set the ProSe per-packet priority to the value corresponding to MCPTT off-network emergency private call as described in 3GPP TS 24.383 [45];
- shall send the PRIVATE CALL SETUP REQUEST message towards other MCPTT client according to rules and procedures as specified in subclause 11.2.1.1.1;
- 9) shall initialize the counter CFP1 (private call request retransmission) with value set to 1;
- 10) shall start timer TFP1 (private call request retransmission); and
- 11) shall enter the "Q2: in-progress emergency private call" state.

[TS 24.379, clause 11.2.3.4.6.1]

- When in the "Q2: in-progress emergency private call" state, upon an indication from:
  - 1) the caller of the emergency private call; or
  - •••

to cancel the emergency private call, the MCPTT client:

- 1) shall generate a PRIVATE CALL EMERGENCY CANCEL message as specified in subclause 15.1.12. In the PRIVATE CALL EMERGENCY CANCEL message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller; and
  - c) shall set the MCPTT user ID of the callee IE with the stored callee.
- 2) shall send the PRIVATE CALL EMERGENCY CANCEL message according to rules and procedures as specified in subclause 11.2.1.1;
- 3) shall stop TFP8 (implicit downgrade) timer;
- 4) shall initialize the counter CFP6 (emergency private call cancel retransmission) with the value set to 1;
- 5) shall start timer TFP6 (emergency private call cancel retransmission);
- 6) shall set the stored current call type to "PRIVATE CALL"; and
- 7) shall enter the "Q1: in-progress private call" state.

[TS 24.379, clause 11.2.3.4.6.3]

When in the "Q1: in-progress private call" state, upon receiving a PRIVATE CALL EMERGENCY CANCEL ACK message response to PRIVATE CALL EMERGENCY CANCEL message with the same "call identifier", the MCPTT client:

- 1) shall stop timer TFP6 (emergency private call cancel retransmission), if running;
- 2) shall establish a media session based on the SDP body of the stored answer SDP;
- 3) shall set the ProSe per-packet priority to the value corresponding to MCPTT off-network private call as described in 3GPP TS 24.383 [45]; and
- 4) shall remain in the "Q1: in-progress private call" state.

[TS 24.379, clause 11.2.2.4.5.1]

When in the "P4: part of ongoing call" state, upon an indication from MCPTT User to release a private call, the MCPTT client:

- 1) shall generate a PRIVATE CALL RELEASE message as specified in subclause 15.1.9. In the PRIVATE CALL RELEASE message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with stored caller ID; and
  - c) shall set the MCPTT user ID of the callee IE with stored callee ID.
- 2) shall send the PRIVATE CALL RELEASE message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall initialize the counter CFP3 (private call release retransmission) with the value set to 1;
- 4) shall start timer TFP3 (private call release retransmission); and
- 5) shall enter the "P3: waiting for release response" state.

[TS 24.379, clause 11.2.2.4.5.5]

When in the "P3: waiting for release response" state, upon receiving a PRIVATE CALL RELEASE ACK to PRIVATE CALL RELEASE message, the MCPTT client:

1) shall stop timer TFP3 (private call release retransmission), if running;

- 2) shall terminate the media session;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall release the call type control state machine; and
- 5) shall enter the "P1: ignoring same call id" state.

## 7.2.1.3 Test description

#### 7.2.1.3.1 Pre-test conditions

#### System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2..

#### IUT:

- UE (MCPTT client)
  - The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is Switched OFF (state 1) according to TS 36.508 [24].

7.2.1.3.2 Test procedure sequence

Table 7.2.1.3.2-1: Main behaviour

St	St Procedure		Message Sequence		Verdict	
		U - S	Message			
1	Power up the UE.	-	-	-	-	
2	Activate the MCPTT Client Application and register User A as the MCPTT User (TS 36.579-5 [5], px_MCPTT_User_A_username, px_MCPTT_User_A_password). NOTE: This is expected to be done via a	-	-	-	-	
2	suitable implementation dependent MMI.					
3	Make the UE (MCPTT User) request the establishment of an MCPTT private call, on- demand Automatic Commencement Mode, with Floor Control. NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-	
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.5 'Generic Test Procedure for MCPTT CO communication over ProSe direct one-to-one communication out of E-UTRA coverage- establishment'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-	
-	EXCEPTION: Steps 4-6 are repeated CFP1=3 times	-	-	-	-	
4	Check: Does the UE (MCPTT client) send a PRIVATE CALL SETUP REQUEST? NOTE: It is expected that the UE - shall initialize the counter CFP1 (private call request retransmission) with the value set to 1 - shall start timer TFP1 (private call request retransmission)	>	PRIVATE CALL SETUP REQUEST	1,2	Ρ	
5	Start TFP1 (private call request retransmission) 40 milliseconds.	-	-	-	-	
6	TFP1 expires.	-	-	-	-	
13	Start TFP7 (waiting for any message with same call identifier) 6 sec (value chosen to facilitate the test sequence in steps 14-16). NOTE: TFP7 is expected to be started after TFP6 expires and CFP1 is equal to the upper limit.	-	-	-	-	
14	SS-UE1 (MCPTT Client) sends a PRIVATE CALL ACCEPT message,	<	PRIVATE CALL ACCEPT	-	-	
15	Check: Does the UE (MCPTT client) send a PRIVATE CALL ACCEPT ACK?	>	PRIVATE CALL ACCEPT ACK	2	F	
16	TFP7 (waiting for any message with same call identifier) expires.	-	-	-	-	
-	EXCEPTION: UE releases the E-UTRA connection. The E-UTRA/EPC actions which are related to the MCPTT call release are described in TS 56.579-1 [2], subclause 5.4.8, 'Generic Test Procedure for MCPTT CO communication over ProSe direct one-to-one communication out of E-UTRA coverage- release by the UE'.	-	-	-	-	
17	Make the UE (MCPTT User) request the establishment of an MCPTT private call, on- demand Automatic Commencement Mode, with Floor Control. NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-	

-	EXCEPTION: The E-UTRA/EPC actions which	-	-	-	-
	are related to the MCPTT call establishment				
	are described in TS 56.579-1 [2], subclause				
	5.4.5 'Generic Test Procedure for MCPTT CO				
	communication over ProSe direct one-to-one				
	communication out of E-UTRA coverage-				
	establishment'. The test sequence below				
	shows only the MCPTT relevant messages				
	exchanged.				
18	Check: Does the UE (MCPTT client) send a	>	PRIVATE CALL SETUP	1	Р
	PRIVATE CALL SETÙP REQUEST?		REQUEST		
19	SS-UE1 (MCPTT Client) sends a PRIVATE	<	PRIVATE CALL ACCEPT	-	-
15	CALL ACCEPT message,				
				-	<u> </u>
20	Check: Does the UE (MCPTT client) send a	>	PRIVATE CALL ACCEPT ACK	3	Р

# 7.2.2 Off-network / Private Call / On-demand / Automatic Commencement Mode / No Response to Private Call Setup Accept / Private call setup success / With Floor Control / Upgrade to Emergency Call / Cancellation of Emergency on User request / Client Originated (CO)

## 7.2.2.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private and private emergency calls with automatic commencement, and, the UE is in an offnetwork environment } ensure that { when { the UE (MCPTT Client) receives a request for establishment of an MCPTT private call, ondemand Automatic Commencement Mode } then { UE (MCPTT Client) sends a PRIVATE CALL ACCEPT message accepting the establishment of a private call on-demand Automatic Commencement Mode } } (2)with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to receive private and private emergency calls with automatic commencement, and, the UE is in an offnetwork environment, and, UE (MCPTT Client) having sent a PRIVATE CALL ACCEPT message accepting the establishment of a private call } ensure that  $\{$ when { the UE (MCPTT Client) does not receive response from the calling Client until the timer

when { the UE (MCPTT Client) does not receive response from the calling Client until the timer TFP4 (private call accept retransmission) expires }

then { UE (MCPTT Client) retransmits the PRIVATE CALL ACCEPT message if the counter CFP4
(private call accept retransmission) has not reached its max value and increments the counter CFP4
with one, and, stops re-transmitting if the counter CFP4 (private call accept retransmission) has
reached its max value }
}

(3)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to
receive private and private emergency calls with automatic commencement, and, the UE is in an offnetwork environment, and, UE (MCPTT Client) having sent a PRIVATE CALL ACCEPT message accepting the
establishment of a private call }
ensure that {

```
when { the UE (MCPTT Client) receives a PRIVATE CALL ACCEPT ACK message }
   then { UE (MCPTT Client) considers the private call as established }
   }
}
```

(4)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment }
ensure that {
 when { the MCPTT User engages in communication with the inviting MCPTT User }
 then { UE (MCPTT Client) respects the floor control procedures in off-network environment
 imposed by Client having the floor (Floor request/grant/release/deny) }
 }
 (r)

(5)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment }
ensure that {
 when { the UE (MCPTT Client) receives a request from the remote Client to upgrade the ongoing
 MCPTT private call to an MCPTT emergency private call }
 then { UE (MCPTT Client) sends a PRIVATE CALL ACCEPT message accepting the upgrade, and, after
 receiving a PRIVATE CALL ACCEPT ACK message, UE (MCPTT Client) considers the emergency private call
 as established }
 }
 (6)
 with { UE (MCPTT Client) having established an MCPTT private call, in off-network environment, and,

having successfully upgraded it to an MCPTT Private Emergency call }
ensure that {
 when { the UE (MCPTT Client) receives a request from the remote Client to downgrade the ongoing
MCPTT private emergency call to a normal MCPTT private call }
 then { UE (MCPTT Client) sends a PRIVATE CALL EMERGENCY CANCEL ACK message, and, considers the
 call downgraded to a Private normal call }
 }

(7)

with { UE (MCPTT Client) having established an MCPTT private call in off-network environment } ensure that {

when { the MCPTT User receives a request from the remote Client to release the ongoing MCPTT private call }

then { UE (MCPTT Client) sends a PRIVATE CALL RELEASE ACK message and leaves the MCPTT session } }

## 7.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.2.1.1, 11.2.1.1.2, 11.2.2.4.3.2, 11.2.2.4.3.3, 11.2.2.4.3.5, 11.2.2.4.3.4, TS 24.380 clauses 7.1, 7.2.3.4.2, 7.2.3.5.4, 7.2.3.5.5, 7.2.3.4.3, 7.2.3.3.2, 7.2.3.3.5, 7.2.3.5.2, 7.2.3.7.2, 11.2.3.4.5.6, 11.2.3.4.6.5, 11.2.2.4.5.4. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.2.1.1.1]

In order to participate in a private call, the MCPTT client:

1) shall send the MONP message as a UDP message to the local IP address of the MCPTT user, on UDP port TBD, with an IP time-to-live set to 255; and

Editor's note [CT1#95, C1-160392]: Port number for the message is FFS.

2) shall treat UDP messages received on the port TBD as received MONP messages.

NOTE: An MCPTT client that supports IPv6 is supposed to listen to the IPv6 addresses.

[TS 24.379, clause 11.2.1.1.2]

For an off-network MCPTT session, only MCPTT speech is used.

One off-network MCPTT session includes one media-floor control entity.

The MCPTT client shall generate an SDP body for a group call in accordance with rules and procedures of IETF RFC 4566 [12] and IETF RFC 3264 [44].

The MCPTT client:

- 1) shall include in the session-level section:
  - a) the "o=" field with the <username> portion set to a dash;
  - b) the "s=" field with the <session name> portion set to a dash; and
  - c) the "c=" field with the <nettype> portion set to "IN", the <addrtype> portion set to the IP version of the unicast IP address of the MCPTT client and the <connection-address> portion set to the unicast IP address of the MCPTT client;
- 2) shall include the media-level section for MCPTT speech consisting of:
  - a) the "m=" field with the <media> portion set to "audio", the <port> portion set to a port number for MCPTT speech of the MCPTT group, the <proto> field set to "RTP/AVP" and <fmt> portion set indicating RTP payload type numbers;
  - b) the "i=" field with the <session description> portion set to "speech";
  - c) the "a=fmtp:" attribute(s), the "a=rtpmap:" attribute(s) or both, indicating the codec(s) and media parameters of the MCPTT speech; and
  - d) the "a=rtcp:" attribute indicating port number to be used for RTCP at the MCPTT client selected according to the rules and procedures of IETF RFC 3605 [13], if the media steam uses other than the default IP address;
- 3) shall include the media-level section for media-floor control entity consisting of:
  - a) an "m=" line, with the <media> portion set to "application", the <port> portion set to a port number for media-floor control entity of the MCPTT group, the <proto> field set to "udp" and <fmt> portion set to "MCPTT"; and
  - b) the "a=fmtp:MCPTT" attribute indicating the parameters of the media-floor control entity as specified 3GPP TS 24.380 [5]; and
- 4) shall include the MIKEY-SAKKE I\_MESSAGE, if generated by the MCPTT client, in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 11.2.2.4.3.2]

When in the "P0: start-stop" or "P1: ignoring same call id" state, upon receiving a PRIVATE CALL SETUP REQUEST message with Commencement mode IE set to "AUTOMATIC COMMENCEMENT MODE" and Call identifier IE different than stored call identifier and media session declared in SDP body of PRIVATE CALL SETUP REQUEST message can be established, the MCPTT client:

- 1) shall store the Call identifier IE in the received message as call identifier;
- 2) shall create the call type control state machine as described in subclause 11.2.3.2;
- shall store the MCPTT user ID of the caller IE in the received PRIVATE CALL SETUP REQUEST message as caller ID;
- 4) shall store own MCPTT user ID as callee ID;
- 5) if the SDP offer contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT user from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];

•••

- e) if the validation of the signature was successful:
  - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46];
  - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
  - iii) shall generate and store answer SDP based on received SDP offer IE in PRIVATE CALL SETUP REQUEST message, as defined in subclause 11.2.1.1.2;
  - iv) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7. In the PRIVATE CALL ACCEPT message, the MCPTT client:
    - A) shall set the Call identifier IE to the stored call identifier; and
    - B) shall set the MCPTT user ID of the caller IE with stored caller ID.
    - C) shall set the MCPTT user ID of the callee IE with stored callee ID; and
    - D) shall set the SDP answer IE with the stored answer SDP;
  - v) shall send PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
  - vi) shall establish a media session based on the SDP body of the stored answer SDP;
  - vii)shall initialize the counter CFP4 with value set to 1;
  - viii) shall start timer TFP4 (private call accept retransmission); and
  - ix) shall enter the "P5: pending" state; and
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.
- 6) if the SDP offer does not contain an "a=key-mgmt" attribute, the MCPTT client:
  - a) shall generate and store answer SDP based on received SDP offer IE in PRIVATE CALL SETUP REQUEST message, as defined in subclause 11.2.1.1.2;
  - b) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7:
    - i) shall set the Call identifier IE to the stored call identifier;
    - ii) shall set the MCPTT user ID of the caller IE with stored caller ID.
    - iii) shall set the MCPTT user ID of the callee IE with stored callee ID; and
    - iv) shall set the SDP answer IE with the stored answer SDP;
  - c) shall send PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
  - d) shall establish a media session based on the SDP body of the stored answer SDP;
  - e) shall initialize the counter CFP4 with value set to 1;
  - f) shall start timer TFP4 (private call accept retransmission); and
  - g) shall enter the "P5: pending" state.

[TS 24.379, clause 11.2.2.4.3.3]

When in the "P5: pending" state, upon expiry of timer TFP4 (private call accept retransmission), the MCPTT client:

1) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7. In the PRIVATE CALL ACCEPT message, the MCPTT client:

- a) shall set the Call identifier IE to the stored call identifier;
- b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
- c) shall set the MCPTT user ID of the callee IE with the stored callee ID; and
- d) shall set the SDP answer IE with the stored answer SDP;
- 2) shall send PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall increment the value of the counter CFP4 (private call accept retransmission) by 1;
- 4) shall start timer TFP4 (private call accept retransmission); and
- 5) shall remain in the "P5: pending" state.

[TS 24.379, clause 11.2.2.4.3.5]

In the "P5: pending" state, when timer TFP4 (private call accept retransmission) expires and the value of the counter CFP4 (private call accept retransmission) is equal to the upper limit, the MCPTT client:

- 1) shall start timer TFP7 (waiting for any message with same call identifier);
- 2) shall release the call type control state machine; and
- 3) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.3.4]

When in the "P5: pending" state, upon receiving a PRIVATE CALL ACCEPT ACK message or RTP media from originating user, the MCPTT client:

- 1) shall stop timer TFP4(private call accept retransmission);
- 2) shall start floor control as terminating MCPTT client as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 3) shall start timer TFP5 (max duration); and
- 4) shall enter the "P4: part of ongoing call" state.

[TS 24.379, clause 11.2.2.4.5.7]

When in the "P1: ignoring same call id" state, upon expiry of timer TFP7 (waiting for any message with same call identifier) the MCPTT client:

- 1) shall clear the stored call identifier; and
- 2) shall enter the "P0: start-stop" state.

[TS 24.380, clause 7.1]

In off-network, floor control is performed using floor control messages among the MCPTT clients without a centralized floor arbitrator. When off-network, if a floor control session is active, the floor arbitrator and the floor participant are co-located in the MCPTT client (see 3GPP TS 23.179 [5]). During a floor control session the MCPTT client currently speaking serves as the temporary floor arbitrator. All other MCPTT clients in the call play the role of floor participant. When the floor arbitrator grants the floor to another MCPTT client, that new MCPTT client, when starts to send media, becomes the new floor arbitrator and the former (the MCPTT client which granted the floor) becomes a floor participant.

•••

It is assumed that the MCPTT user presses the PTT for requesting talk permission and it keeps it pressed until the request is resolved. If queuing of floor requests is not supported, this request is either granted or rejected or no answer is received. If the request is granted the user is notified with talk permission tone (or equivalent) and the user continues to press the PTT until it finishes the talk burst. If the request is rejected or no answer is received the user is notified and releases the PTT button.

[TS 24.380, clause 7.2.3.4.2]

If the floor participant receives an indication from the MCPTT user that the MCPTT user wants to send media, the floor participant:

- 1. shall send the Floor Request message to other clients. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall start timer T201 (Floor Request); and
- 4. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.5.4]

Upon receiving a Floor Request message which is not pre-emptive as determined by subclause 4.1.1.5, in a session where:

- 1. the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "false"; or
- the value of "/<x>/<x>/OffNetwork/QueueUsage" leaf node present in the group configuration as specified in 3GPP TS 24.383 [4] is set to "true" but the F-bit in the Floor Indicator field is set to '0' (i.e. indicating that queuing of floor requests is not supported) or the Floor Indicator field is not included in the Floor Request message;

then the floor participant:

- 1. shall send the Floor Deny message. The Floor Deny message:
  - a. shall include in the Reject Cause field the <Reject Cause> value cause #1 (Another MCPTT client has permission);
  - b. may include in the Reject Cause field an additional text string explaining the reason for rejecting the floor request in the <Reject Phrase> value; and
  - c. shall include the User ID field received in the Floor Request message; and
- 2. shall remain in 'O: has permission' state.

#### [TS 24.380, clause 7.2.3.5.5]

Upon receiving an indication from the MCPTT user to release permission to send RTP media, the floor participant:

- 1. shall stop timer T206 (Stop talking warning), if running;
- 2. shall stop timer T207 (Stop talking), if running;
- 3. shall send a Floor Release message towards other floor participants, if no queued requests exist: The Floor Release message:
  - a. shall include the MCPTT ID of the MCPTT user in the User ID field; and
  - b. if the session is not initiated as a broadcast group call with the B-bit set to '1' (Broadcast group call), shall include a Floor Indicator field set to '0' (normal call);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the current arbitrator; and

6. shall enter 'O: silence' state.

[TS 24.380, clause 7.2.3.4.3]

When a Floor Release message is received and if the SSRC in the Floor Release message matches with the stored SSRC of the current arbitrator or with the stored SSRC of the candidate arbitrator, the floor participant:

- 1. may provide floor idle notification to the MCPTT user.
- 2. shall request the MCPTT client to stop rendering received RTP media packets;
- 3. shall stop timer T203 (End of RTP media);
- 4. shall start timer T230 (Inactivity);
- 5. shall clear the stored SSRC of the candidate arbitrator;
- 6. shall clear the stored SSRC of the current arbitrator; and
- 7. shall enter 'O: silence' state;

[TS 24.380, clause 7.2.3.3.2]

If the floor participant receives an indication from the MCPTT user to send media, the floor participant:

- 1. shall send the Floor Request message to other floor participants. The Floor Request message:
  - a. if a priority different than the default floor priority is required, shall include the Floor Priority field with the requested priority in the <Floor Priority> element;
  - b. shall include the MCPTT ID of the MCPTT user in the <User ID> value of the User ID field; and
  - c. if the floor request is a broadcast group call, system call, emergency call or an imminent peril call, shall include a Floor Indicator field indicating the relevant call types;
- 2. shall initialize the counter C201 (Floor request) with value set to 1;
- 3. shall stop timer T230 (Inactivity);
- 4. shall start timer T201 (Floor Request); and
- 5. shall enter 'O: pending request' state.

[TS 24.380, clause 7.2.3.3.5]

The transition is used in private call only. When a Floor Request message is received, the floor participant:

- 1. shall send a Floor Granted message toward the other floor participant. The Floor Granted message:
  - a. shall include the MCPTT ID of the Floor Request message received in User ID value of the User ID field;
  - b. shall include the SSRC of the Floor Request message received in the SSRC of floor control server field;
  - c. shall include the max duration as configured in the MCPTT client in the OffNetwork/MaxDuration parameter in the <Duration> value of the Duration field; and
  - d. shall include the priority of the Floor Request message received in the <Floor Priority> value of the Floor Priority field;
- 2. shall stop timer T230 (Inactivity);
- 3. shall start timer T205 (Floor Granted ); and
- 4. shall enter 'O: pending granted' state.

[TS 24.380, clause 7.2.3.5.2]

Upon receiving encoded media from the user or if encoded media is already buffered the floor participant:

- 1. shall start timer T206 (Stop talking warning);
- 2. shall request the MCPTT client to start sending RTP media packets towards other MCPTT clients; and
- 3. shall remain in 'O: has permission' state.

[TS 24.380, clause 7.2.3.7.2]

Upon receiving the RTP media and the SSRC of RTP media packet matches with the stored SSRC of current arbitrator, the floor participant:

- 1. shall request the MCPTT client to render the received RTP media packets;
- 2. shall stop timer T205 (Floor Granted), if running;
- 3. shall stop timer T233 (Pending user action), if running;
- 4. shall start timer T203 (End of RTP media); and
- 5. shall enter 'O: has no permission' state.

[TS 24.379, clause 11.2.3.4.5.6]

When in the "Q1: in-progress private call" state or "Q2: in-progress emergency private call" state, upon receiving a PRIVATE CALL SETUP REQUEST message with the Call identifier IE same as the stored call identifier of the call, the Call type IE set as "EMERGENCY PRIVATE CALL", the MCPTT client:

- 1) if the media session declared in SDP body of PRIVATE CALL SETUP REQUEST message can be established:
  - a) shall generate and store emergency answer SDP based on received SDP offer IE in PRIVATE CALL SETUP REQUEST message, as defined in subclause 11.2.1.1.2;
  - b) shall update the caller ID with the MCPTT user ID of the caller IE as received in the PRIVATE CALL SETUP REQUEST message;
  - c) shall update the callee ID with own MCPTT user ID;
  - d) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7:
    - i) shall set the Call identifier IE to the stored call identifier;
    - ii) shall set the MCPTT user ID of the callee IE with stored callee ID;
    - iii) shall set the MCPTT user ID of the caller IE with stored caller ID; and
    - iv) shall set the SDP answer IE with the stored emergency answer SDP;
  - e) shall set the ProSe per-packet priority to the value corresponding to MCPTT off-network emergency private call as described in 3GPP TS 24.383 [45];
  - f) shall start TFP8 (implicit downgrade) timer;
  - g) shall send PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
  - h) shall set the stored current call type to "EMERGENCY PRIVATE CALL"; and
  - i) shall enter the "Q2: in-progress emergency private call" state;

[TS 24.379, clause 11.2.3.4.6.5]

When in the "Q1: in-progress private call" state or "Q2: in-progress emergency private call" state, upon receiving a PRIVATE CALL EMERGENCY CANCEL message with the same "call identifier" IE, the MCPTT client:

- 1) shall generate a PRIVATE CALL EMERGENCY CANCEL ACK as specified in subclause 15.1.13:
  - a) shall set the Call identifier IE to the stored call identifier;

- b) shall set the MCPTT user ID of the callee IE with own MCPTT user ID; and
- c) shall set the MCPTT user ID of the caller IE with MCPTT user ID of the caller IE in received message;
- 2) shall send PRIVATE CALL EMERGENCY CANCEL ACK message according to rules and procedures as specified in subclause 11.2.1.1;
- 3) shall stop TFP8 (implicit downgrade) timer;
- 4) shall establish a media session based on the SDP body of the stored answer SDP;
- 5) shall set the ProSe per-packet priority to the value corresponding to MCPTT off-network private call as described in 3GPP TS 24.383 [45]; and
- 6) shall enter the "Q1: in-progress private call" state and set the stored current call type to "PRIVATE CALL", if current state is the "Q2: in-progress emergency private call" state.

[TS 24.379, clause 11.2.2.4.5.4]

When in the "P4: part of ongoing call" state, upon receiving a PRIVATE CALL RELEASE message, the MCPTT client:

- 1) shall generate a PRIVATE CALL RELEASE ACK message as specified in subclause 15.1.10;
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE the stored caller ID; and
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID.
- 2) shall send the PRIVATE CALL RELEASE ACK message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall terminate the media session for private call;
- 4) shall start timer TFP7 (waiting for any message with same call identifier);
- 5) shall release the call type control state machine; and
- 6) shall enter the "P1: ignoring same call id" state.

## 7.2.2.3 Test description

## 7.2.2.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24]

clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).

NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2..

IUT:

- UE (MCPTT client)
  - The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is Switched OFF (state 1) according to TS 36.508 [24].

7.2.2.3.2 Test procedure sequence

Table 7.2.2.3.2-1: Main behaviour

St	Procedure		Message Sequence	TP	Verdict
		U - S	Message		
1	Power up the UE.	-	-	-	-
-	EXCEPTION: The E-UTRA/EPC actions which are related to the MCPTT call establishment are described in TS 56.579-1 [2], subclause 5.4.6 'Generic Test Procedure for MCPTT CT communication over ProSe direct one-to-one communication out of E-UTRA coverage- establishment'. The test sequence below shows only the MCPTT relevant messages exchanged.	-	-	-	-
2	Activate the MCPTT Client Application and register User A as the MCPTT User (TS 36.579-5 [5], px_MCPTT_User_A_username, px_MCPTT_User_A_password). NOTE: This is expected to be done via a suitable implementation dependent MMI.	-	-	-	-
3	SS-UE1 (MCPTT Client) sends a PRIVATE CALL SETUP REQUEST.	<	PRIVATE CALL SETUP REQUEST	-	-
-	EXCEPTION: Steps 4-6 are repeated CFP4=3 times	-	-	-	-
4	Check: Does the UE (MCPTT client) send a PRIVATE CALL ACCEPT? NOTE: It is expected that the UE - shall initialize the counter CFP4 (private call accept retransmission) with value set to 1 - shall start timer TFP4 (private call accept retransmission).	>	PRIVATE CALL ACCEPT	1,2	Р
5	Start TFP4 (private call accept retransmission) 40 milliseconds.	-	-	-	-
6	TFP4 expires.	-	-	-	-
13	Start TFP7 (waiting for any message with same call identifier) 6 sec (value chosen to facilitate the test sequence in steps 14-17). NOTE: TFP7 is expected to be started after TFP6 expires and CFP1 is equal to the upper limit.	-	-	-	-
14	SS-UE1 (MCPTT Client) sends a PRIVATE CALL ACCEPT message.	<	PRIVATE CALL ACCEPT ACK	-	-

# 7.2.3 Off-network / Private Call / On-demand / Automatic Commencement Mode / Upgrade to Emergency Call Reject / Downgrade from Emergency Call Failure / Client Originated (CO)

# 7.2.3.1 Test Purpose (TP)

}

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement in off-network environment, and, the UE is in an off-network environment, and, upon User request the UE (MCPTT Client) has requested upgrade of an established Private Call to an Emergency Private call } ensure that {

when { the called Client rejects the upgrade requests }

then { UE (MCPTT Client) continues with the established Private call }

(2)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private and private emergency calls with automatic commencement in off-network environment, and, the UE is in an off-network environment, and, upon User request the UE (MCPTT Client) has requested downgrade of an Emergency Private call to a Private call } ensure that {

when { the UE (MCPTT Client) does not receive response to the request until the timer TFP6
 (emergency private call cancel retransmission) expires }

then { UE (MCPTT Client) retransmits the PRIVATE CALL EMERGENCY CANCEL message requesting the downgrade of the emergency private call if the counter CFP6 (emergency private call cancel retransmission) has not reached its max value and increments the counter CFP6 with one, and, stops re-transmitting if the counter CFP1 (emergency private call cancel retransmission) has reached its max value and considers the private call as terminated }

# 7.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.2.3.4.5.4, 11.2.3.4.6.1, 11.2.3.4.6.2, 11.2.3.4.6.4, 11.2.2.4.5.9, 11.2.2.4.5.9. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.2.3.4.5.4]

When in the "Q2: in-progress emergency private call" state, upon receiving a PRIVATE CALL REJECT message in response to PRIVATE CALL SETUP REQUEST message with Call identifier IE same as stored call identifier, the MCPTT client:

- 1) shall stop timer TFP1 (call setup retransmission), if running;
- 2) shall set the ProSe per-packet priority to the value corresponding to the MCPTT off-network private call as described in 3GPP TS 24.383 [45];
- 3) shall set the stored current call type to "PRIVATE CALL"; and
- 4) shall enter the "Q1: in-progress private call" state.

[TS 24.379, clause 11.2.3.4.6.1]

When in the "Q2: in-progress emergency private call" state, upon an indication from:

1) the caller of the emergency private call; or

•••

to cancel the emergency private call, the MCPTT client:

- 1) shall generate a PRIVATE CALL EMERGENCY CANCEL message as specified in subclause 15.1.12. In the PRIVATE CALL EMERGENCY CANCEL message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller; and
  - c) shall set the MCPTT user ID of the callee IE with the stored callee.
- 2) shall send the PRIVATE CALL EMERGENCY CANCEL message according to rules and procedures as specified in subclause 11.2.1.1;
- 3) shall stop TFP8 (implicit downgrade) timer;
- 4) shall initialize the counter CFP6 (emergency private call cancel retransmission) with the value set to 1;
- 5) shall start timer TFP6 (emergency private call cancel retransmission);
- 6) shall set the stored current call type to "PRIVATE CALL"; and
- 7) shall enter the "Q1: in-progress private call" state.

[TS 24.379, clause 11.2.3.4.6.2]

When in the "Q1: in-progress private call" state, upon expiry of timer TFP6 (emergency private call cancel retransmission), the MCPTT client:

- shall generate a PRIVATE CALL EMERGENCY CANCEL message as specified in subclause 15.1.12. In the PRIVATE CALL EMERGENCY CANCEL message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and
  - c) shall set the MCPTT user ID of the callee IE with store callee ID.
- shall send the PRIVATE CALL EMERGENCY CANCEL message according to rules and procedures as specified in subclause 11.2.1.1;
- 3) shall increment the value of the timer CFP6 (emergency private call cancel retransmission) by 1;
- 4) shall start timer TFP6 (emergency private call cancel retransmission); and
- 5) shall remain in the "Q1: in-progress private call" state.

[TS 24.379, clause 11.2.3.4.6.4]

In the "Q1: in-progress private call" state, when timer TFP6 (emergency private call cancel retransmission) expires and the value of the counter CFP6 (emergency private call cancel retransmission) is equal to the upper limit, the MCPTT client:

- 1) shall release the stored current call type;
- 2) shall release the stored Prose per-packet priority; and
- 3) shall enter "Q0: waiting for the call to be established".

[TS 24.379, clause 11.2.2.4.5.9]

In the "P4: part of ongoing call" state, when timer TFP6 (emergency private call cancel retransmission) expires and the value of the counter CFP6 (emergency private call cancel retransmission) is equal to the upper limit, the MCPTT client:

- 1) shall start timer TFP7 (waiting for any message with same call identifier);
- 2) shall release the call type control state machine; and
- 3) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.5.9]

When in the "P1: ignoring same call id" state, upon expiry of timer TFP7 (waiting for any message with same call identifier) the MCPTT client:

- 1) shall clear the stored call identifier; and
- 2) shall enter the "P0: start-stop" state.

#### 7.2.3.3 Test description

## 7.2.3.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
  - NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)
  - For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
  - NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.

IUT:

- UE (MCPTT client)

- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

#### Preamble:

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is Switched OFF (state 1) according to TS 36.508 [24].

7.2.3.3.2 Test procedure sequence

Table 7.2.3.3.2-1: Main behaviour

St	Procedure Message Sequence		TP	Verdict	
		U - S	Message		
1	Power up the UE.	-	-	-	-
2	Activate the MCPTT Client Application and	-	-	-	-
	register User A as the MCPTT User (TS				
	36.579-5 [5], px_MCPTT_User_A_username,				
	px_MCPTT_User_A_password).				
	NOTE: This is expected to be done via a				
	suitable implementation dependent MMI.				
3	Make the UE (MCPTT User) request the	-	-	-	-
	establishment of an MCPTT private call, on-				
	demand Automatic Commencement Mode,				
	with Floor Control.

	button pressed until otherwise written.				
42	Check: Does the UE (MCPTT client) send		Eleer Request	+ +	F
42		>	Floor Request		Г
	Floor Release message in the next 2/3 TFP7				
	sec?				
43	Make the UE (MCPTT User) to release the	-	-	-	-
	PTT button.				
44	TFP7 (waiting for any message with same call	-	-	-	-
	identifier) expires.				

-	EXCEPTION: SS releases the E-UTRA	-	-	-	-
	connection. The E-UTRA/EPC actions which				
	are related to the MCPTT call release are				
	described in TS 56.579-1 [2], subclause 5.4.8,				
	'Generic Test Procedure for MCPTT CO				
	communication over ProSe direct one-to-one				
	communication out of E-UTRA coverage-				
	release by the SS'.				
	NOTE: Depending on UE implementation the				
	UE may start independently ProSe release				
	procedure.

7.2.4 Off-network / Private Call / On-demand / Manual Commencement Mode / Call Released before establishment completion / Call request Rejected / Call establishment successful / Client Originated (CO)

## 7.2.4.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to
initiate/cancel private calls with manual commencement, and, the UE is in an off-network environment
}

#### ensure that {

when { the MCPTT User requests the establishment of an MCPTT private call, on-demand Manual Commencement Mode }

then { UE (MCPTT Client) sends a PRIVATE CALL SETUP REQUEST message requesting the establishment
of an MCPTT private call, on-demand Manual Commencement Mode }

```
}
```

}

}

(2)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private calls with manual commencement, and, the UE is in an off-network environment, and, UE (MCPTT Client) having sent a PRIVATE CALL SETUP REQUEST message requesting establishment of an MCPTT private call, on-demand Manual Commencement Mode } ensure that { when { the User requests termination of the call after a PRIVATE CALL RINGING message has been received but before the completion of the call establishment } then { UE (MCPTT Client) sends a PRIVATE CALL RELEASE message and terminates the call establishment }

(3)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to initiate/cancel private calls with manual commencement, and, the UE is in an off-network environment, and, UE (MCPTT Client) having sent a PRIVATE CALL SETUP REQUEST message requesting establishment of an MCPTT private call, on-demand Manual Commencement Mode } ensure that {

when { the UE (MCPTT Client) receives a PRIVATE CALL REJECT message after a PRIVATE CALL RINGING
message has been received but before the completion of the call establishment }
 then { UE (MCPTT Client) terminates the call establishment }

(4)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including authorized to
initiate/cancel private calls with manual commencement, and, the UE is in an off-network
environment, and, UE (MCPTT Client) having sent a PRIVATE CALL SETUP REQUEST message requesting
establishment of an MCPTT private call, on-demand Manual Commencement Mode }
ensure that {
 when { the UE (MCPTT Client) receives a PRIVATE CALL RINGING message followed by a PRIVATE CALL
SETUP REQUEST message }

then { UE (MCPTT Client) transmits a PRIVATE CALL ACCEPT ACK message and considers the call as being established }

### 7.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.2.1.1, 11.2.1.1.2, 11.2.2.4.4.1, 11.2.2.4.2.7, 11.2.2.4.2.8, 11.2.2.4.4.8. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.2.1.1.1]

}

In order to participate in a private call, the MCPTT client:

1) shall send the MONP message as a UDP message to the local IP address of the MCPTT user, on UDP port TBD, with an IP time-to-live set to 255; and

Editor's note [CT1#95, C1-160392]: Port number for the message is FFS.

2) shall treat UDP messages received on the port TBD as received MONP messages.

NOTE: An MCPTT client that supports IPv6 is supposed to listen to the IPv6 addresses.

[TS 24.379, clause 11.2.1.1.2]

For an off-network MCPTT session, only MCPTT speech is used.

One off-network MCPTT session includes one media-floor control entity.

The MCPTT client shall generate an SDP body for a group call in accordance with rules and procedures of IETF RFC 4566 [12] and IETF RFC 3264 [44].

The MCPTT client:

1) shall include in the session-level section:

- a) the "o=" field with the <username> portion set to a dash;
- b) the "s=" field with the <session name> portion set to a dash; and
- c) the "c=" field with the <nettype> portion set to "IN", the <addrtype> portion set to the IP version of the unicast IP address of the MCPTT client and the <connection-address> portion set to the unicast IP address of the MCPTT client;
- 2) shall include the media-level section for MCPTT speech consisting of:
  - a) the "m=" field with the <media> portion set to "audio", the <port> portion set to a port number for MCPTT speech of the MCPTT group, the <proto> field set to "RTP/AVP" and <fmt> portion set indicating RTP payload type numbers;
  - b) the "i=" field with the <session description> portion set to "speech";
  - c) the "a=fmtp:" attribute(s), the "a=rtpmap:" attribute(s) or both, indicating the codec(s) and media parameters of the MCPTT speech; and
  - d) the "a=rtcp:" attribute indicating port number to be used for RTCP at the MCPTT client selected according to the rules and procedures of IETF RFC 3605 [13], if the media steam uses other than the default IP address;
- 3) shall include the media-level section for media-floor control entity consisting of:
  - a) an "m=" line, with the <media> portion set to "application", the <port> portion set to a port number for media-floor control entity of the MCPTT group, the <proto> field set to "udp" and <fmt> portion set to "MCPTT"; and
  - b) the "a=fmtp:MCPTT" attribute indicating the parameters of the media-floor control entity as specified 3GPP TS 24.380 [5]; and
- 4) shall include the MIKEY-SAKKE I\_MESSAGE, if generated by the MCPTT client, in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 11.2.2.4.4.1]

When in the "P0: start-stop" state or "P1: ignoring same call id", upon an indication from MCPTT User to initiate a private call and the value of "/<x>//common/PrivateCall/Authorised" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true", the MCPTT client:

- 1) shall generate and store the call identifier as a random number uniformly distributed between (0, 65536);
- 2) shall store own MCPTT user ID as caller ID;
- 3) shall store MCPTT user ID of the callee as callee ID;
- 4) shall store "AUTOMATIC COMMENCEMENT MODE" as commencement mode, if requested and the value of "/<x>/<x>/Common/PrivateCall/AutoCommence" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true". Otherwise if the value of "/<x>/<x>/Common/PrivateCall/ManualCommence" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true", store "MANUAL COMMENCEMENT MODE" as commencement mode;
- 5) shall create a call type control state machine as described in subclause 11.2.3.2;
- 6) if an end-to-end security context needs to be established then:
  - a) shall use keying material provided by the key management server to generate a PCK as described in 3GPP TS 33.179 [46];
  - b) shall use the PCK to generate a PCK-ID with the four most significant bits set to "0011" to indicate that the purpose of the PCK is to protect private call communications and with the remaining twenty eight bits being randomly generated as described in 3GPP TS 33.179 [46];
  - c) shall encrypt the PCK to a UID associated to the MCPTT client using the MCPTT ID of the invited user and a time related parameter as described in 3GPP TS 33.179 [46];

- d) shall generate a MIKEY-SAKKE I\_MESSAGE using the encapsulated PCK and PCK-ID as specified in 3GPP TS 33.179 [46];
- e) shall add the MCPTT ID of the originating MCPTT to the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
- f) shall sign the MIKEY-SAKKE I\_MESSAGE using the originating MCPTT user's signing key provided in the keying material together with a time related parameter, and add this to the MIKEY-SAKKE payload, as described in 3GPP TS 33.179 [46] and;
- g) shall store the MIKEY-SAKKE I\_MESSAGE for later inclusion in an SDP body;
- 7) may store current user location as user location;
- 8) shall generate and store offer SDP, as defined in subclause 11.2.1.1.2;
- 9) shall generate a PRIVATE CALL SETUP REQUEST message as specified in subclause 15.1.5. In the PRIVATE CALL SETUP REQUEST message, the MCPTT client:
  - a) shall set the Call identifier IE with the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID;
  - d) shall set the Commencement mode IE with the stored commencement mode;
  - e) shall set the Call type IE with the stored current call type associated with the call type control state machine;
  - f) shall set the SDP offer IE with the stored offer SDP; and
  - g) may set the User location IE with the stored user location if the stored current call type associated with the call type control state machine is "EMERGENCY PRIVATE CALL".
- 10) shall send the PRIVATE CALL SETUP REQUEST message towards other MCPTT client according to rules and procedures as specified in subclause 11.2.1.1.1;
- 11) shall initialize the counter CFP1 (private call request retransmission) with the value set to 1;
- 12) shall start timer TFP1 (private call request retransmission); and
- 13) shall enter the "P2: waiting for call response" state.

[TS 24.379, clause 11.2.2.4.2.7]

When in the "P2: waiting for call response" state, upon receiving a PRIVATE CALL REJECT message in response to PRIVATE CALL SETUP REQUEST message with Call identifier IE same as the stored call identifier, the MCPTT client:

- 1) shall stop timer TFP1 (call setup retransmission), if running;
- 2) shall stop timer TFP2 (waiting for call response message), if running;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall release the call control state machine; and
- 5) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.2.8]

When in the "P2: waiting for call response" state, upon receiving a PRIVATE CALL ACCEPT message response to PRIVATE CALL SETUP REQUEST message with the same call identifier, the MCPTT client:

- 1) shall store the SDP answer IE received in the PRIVATE CALL ACCEPT message as answer SDP;
- 2) shall generate a PRIVATE CALL ACCEPT ACK message as specified in subclause 15.1.11:

- a) shall set the Call identifier IE to the stored call identifier;
- b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and
- c) shall set the MCPTT user ID of the callee IE with the stored callee ID.
- 3) shall send the PRIVATE CALL ACCEPT ACK message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1;
- 4) shall stop timer TFP1 (call setup retransmission), if running;
- 5) shall stop timer TFP2 (waiting for call response message), if running;
- 6) shall establish a media session based on the SDP body of the stored answer SDP;
- 7) shall start floor control as terminating floor participant as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 8) shall start timer TFP5 (max duration); and
- 9) shall enter the "P4: part of ongoing call" state.

[TS 24.379, clause 11.2.2.4.4.8]

When in the "P5: pending" state or "P1: ignoring same call id" state, upon receiving a PRIVATE CALL RELEASE message, the MCPTT client:

- 1) shall generate a PRIVATE CALL RELEASE ACK message as specified in subclause 15.1.10. In the PRIVATE CALL RELEASE ACK message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and.
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID.
- 2) shall send the PRIVATE CALL RELEASE ACK message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall stop timer TFP4 (private call accept retransmission) if running;
- 5) shall release the call type control state machine, if the current state is "P5: pending" state; and
- 6) shall enter the "P1: ignoring same call id" state, if the current state is "P5: pending" state.

## 7.2.4.3 Test description

## System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)

- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2..

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

## Preamble:

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is Switched OFF (state 1) according to TS 36.508 [24].

7.2.5 Off-network / Private Call / On-demand / Manual Commencement Mode / Call Released before establishment completion / User does not answer to Ringing / User Rejects call request / Call establishment successful / Client Terminated (CT)

# 7.2.5.1 Test Purpose (TP)

(1)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including the MCPTT user being
authorized to receive private calls in manual commencement mode, and, the UE is in an off-network
environment }
ensure that {

when { the UE (MCPTT Client) receives a request for establishment of an MCPTT private call, Ondemand Manual Commencement Mode }

then { UE (MCPTT Client) sends a PRIVATE CALL RINGING message and provides indication to the
user for the incoming call request }
}

(2)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including the MCPTT user being authorized to receive private calls in manual commencement mode, and, the UE is in an off-network environment, and, the UE (MCPTT Client) has responded to a request for establishment of an MCPTT private call, On-demand Manual Commencement Mode by sending a PRIVATE CALL RINGING message } ensure that {

when { the originating Client requests release of the call establishment before the terminating
user has accepted the call }

then { UE (MCPTT Client) sends a PRIVATE CALL RELEASE ACK message and terminates the call establishment }

}

## (3)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including the MCPTT user being authorized to receive private calls in manual commencement mode, and, the UE is in an off-network environment, and, the UE (MCPTT Client) has informed the User for an incoming MCPTT private call request }

#### ensure that {

when { the terminating User does not answer before the expiry of timer TFP2 (waiting for call response message) }

then { UE (MCPTT Client) rejects the call establishment }
}

#### (4)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including the MCPTT user being authorized to receive private calls in manual commencement mode, and, the UE is in an off-network environment, and, the UE (MCPTT Client) has informed the User for an incoming MCPTT private call request }

ensure that {

```
when { the terminating User rejects the call request }
  then { UE (MCPTT Client) rejects the call establishment }
  }
```

#### (5)

with { UE (MCPTT Client) registered and authorized for MCPTT Service, including the MCPTT user being authorized to receive private calls in manual commencement mode, and, the UE is in an off-network environment, and, the UE (MCPTT Client) has responded to a request for establishment of an MCPTT private call, On-demand Manual Commencement Mode by sending a PRIVATE CALL RINGING message } ensure that {

```
when { the terminating User accepts the incoming call }
    then { UE (MCPTT Client) sends a PRIVATE CALL ACCEPT message, and, after receiving a PRIVATE
CALL ACCEPT ACK message considers the call as being established }
    }
}
```

(6)

with { UE (MCPTT Client) having established an MCPTT private call, Manual Commencement Mode in offnetwork environment }
ensure that {

when { (MCPTT Client) receives a requests from the calling Client for release of the call }
 then { UE (MCPTT Client) sends a PRIVATE CALL RELEASE ACK message and leaves the MCPTT session }

}

## 7.2.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.379 clauses 11.2.1.1, 11.2.1.1.2, 11.2.2.4.4.1, 11.2.2.4.4.2, 11.2.2.4.4.3, 11.2.2.4.4.5, 11.2.2.4.4.7, 11.2.2.4.4.8. Unless otherwise stated these are Rel-13 requirements.

[TS 24.379, clause 11.2.1.1.1]

In order to participate in a private call, the MCPTT client:

1) shall send the MONP message as a UDP message to the local IP address of the MCPTT user, on UDP port TBD, with an IP time-to-live set to 255; and

Editor's note [CT1#95, C1-160392]: Port number for the message is FFS.

2) shall treat UDP messages received on the port TBD as received MONP messages.

NOTE: An MCPTT client that supports IPv6 is supposed to listen to the IPv6 addresses.

[TS 24.379, clause 11.2.1.1.2]

For an off-network MCPTT session, only MCPTT speech is used.

One off-network MCPTT session includes one media-floor control entity.

The MCPTT client shall generate an SDP body for a group call in accordance with rules and procedures of IETF RFC 4566 [12] and IETF RFC 3264 [44].

#### The MCPTT client:

- 1) shall include in the session-level section:
  - a) the "o=" field with the <username> portion set to a dash;
  - b) the "s=" field with the <session name> portion set to a dash; and
  - c) the "c=" field with the <nettype> portion set to "IN", the <addrtype> portion set to the IP version of the unicast IP address of the MCPTT client and the <connection-address> portion set to the unicast IP address of the MCPTT client;
- 2) shall include the media-level section for MCPTT speech consisting of:
  - a) the "m=" field with the <media> portion set to "audio", the <port> portion set to a port number for MCPTT speech of the MCPTT group, the <proto> field set to "RTP/AVP" and <fmt> portion set indicating RTP payload type numbers;
  - b) the "i=" field with the <session description> portion set to "speech";
  - c) the "a=fmtp:" attribute(s), the "a=rtpmap:" attribute(s) or both, indicating the codec(s) and media parameters of the MCPTT speech; and
  - d) the "a=rtcp:" attribute indicating port number to be used for RTCP at the MCPTT client selected according to the rules and procedures of IETF RFC 3605 [13], if the media steam uses other than the default IP address;
- 3) shall include the media-level section for media-floor control entity consisting of:
  - a) an "m=" line, with the <media> portion set to "application", the <port> portion set to a port number for media-floor control entity of the MCPTT group, the <proto> field set to "udp" and <fmt> portion set to "MCPTT"; and
  - b) the "a=fmtp:MCPTT" attribute indicating the parameters of the media-floor control entity as specified 3GPP TS 24.380 [5]; and
- 4) shall include the MIKEY-SAKKE I\_MESSAGE, if generated by the MCPTT client, in an "a=key-mgmt" attribute as a "mikey" attribute value in the SDP offer as specified in IETF RFC 4567 [47].

[TS 24.379, clause 11.2.2.4.4.1]

When in the "P0: start-stop" or "P1: ignoring same call id" state, upon receiving a PRIVATE CALL SETUP REQUEST message with Commencement mode IE set to "MANUAL COMMENCEMENT MODE" and Call identifier IE different from stored call identifier, the MCPTT client:

- 1) shall store the Call identifier IE in the received message as call identifier;
- 2) shall create the call type control state machine as described in subclause 11.2.3.2;
- shall store the MCPTT user ID of the caller IE as received in the PRIVATE CALL SETUP REQUEST as caller ID;
- 4) shall store own MCPTT user ID as callee ID;
- 5) shall generate a PRIVATE CALL RINGING message as specified in subclause 15.1.6;

- a) shall set the Call identifier IE to the stored call identifier;
- b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and
- c) shall set the MCPTT user ID of the callee IE with the stored callee ID;
- 6) shall send PRIVATE CALL RINGING message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 7) shall start timer TFP2 (waiting for call response message); and
- 8) shall enter the "P5: pending" state.
- [TS 24.379, clause 11.2.2.4.4.2]

When in the "P5: pending" state, upon expiry of timer TFP2 (waiting for call response message), the MCPTT client:

- 1) shall generate a PRIVATE CALL REJECT message as specified in subclause 15.1.8:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID; and
  - d) shall set the Reason IE as "FAILED".
- 2) shall send the PRIVATE CALL REJECT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall release the call type control state machine; and
- 5) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.4.3]

When in the "P5: pending" state, upon an indication from MCPTT User to accept the incoming private call, the MCPTT client:

- if the SDP offer contains an "a=key-mgmt" attribute field with a "mikey" attribute value containing a MIKEY-SAKKE I\_MESSAGE:
  - a) shall extract the MCPTT ID of the originating MCPTT user from the initiator field (IDRi) of the I\_MESSAGE as described in 3GPP TS 33.179 [46];
  - b) shall convert the MCPTT ID to a UID as described in 3GPP TS 33.179 [46];
  - c) shall use the UID to validate the signature of the MIKEY-SAKKE I\_MESSAGE as described in 3GPP TS 33.179 [46];

•••

- e) if the validation of the signature was successful:
  - i) shall extract and decrypt the encapsulated PCK using the terminating user's (KMS provisioned) UID key as described in 3GPP TS 33.179 [46];
  - ii) shall extract the PCK-ID, from the payload as specified in 3GPP TS 33.179 [46];
  - iii) shall generate and store answer SDP based on received SDP offer IE in PRIVATE CALL SETUP REQUEST message, as defined in subclause 11.2.1.1.2;
  - iv) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7. In the PRIVATE CALL ACCEPT message, the MCPTT client:
    - A) shall set the Call identifier IE to the stored call identifier;

- B) shall set the MCPTT user ID of the caller IE with the stored caller ID;
- C) shall set the MCPTT user ID of the callee IE with the stored callee ID; and
- D) shall set the SDP answer IE with the stored answer SDP;
- v) shall send the PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1;
- vi) shall establish a media session based on the SDP body of the private call;
- vii)shall stop timer TFP2 (waiting for call response message);
- viii) shall initialize the counter CFP4 with value set to 1;
- ix) shall start timer TFP4 (private call accept retransmission); and
- x) shall remain in the "P5: pending" state; and
- NOTE: With the PCK successfully shared between the originating MCPTT client and the terminating MCPTT client, both clients are able to use SRTP/SRTCP to create an end-to-end secure session.
- 2) if the SDP offer does not contain an "a=key-mgmt" attribute, the MCPTT client:
  - a) shall generate and store answer SDP based on received SDP offer IE in PRIVATE CALL SETUP REQUEST message, as defined in subclause 11.2.1.1.2;
  - b) shall generate a PRIVATE CALL ACCEPT message as specified in subclause 15.1.7. In the PRIVATE CALL ACCEPT message, the MCPTT client:
    - i) shall set the Call identifier IE to the stored call identifier;
    - ii) shall set the MCPTT user ID of the caller IE with the stored caller ID;
    - iii) shall set the MCPTT user ID of the callee IE with the stored callee ID; and
    - iv) shall set the SDP answer IE with the stored answer SDP;
  - c) shall send the PRIVATE CALL ACCEPT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
  - d) shall establish a media session based on the SDP body of the private call;
  - e) shall stop timer TFP2 (waiting for call response message);
  - f) shall initialize the counter CFP4 with value set to 1;
  - g) shall start timer TFP4 (private call accept retransmission); and
  - h) shall remain in the "P5: pending" state.

[TS 24.379, clause 11.2.2.4.4.5]

When in the "P5: pending" state, upon receiving a PRIVATE CALL ACCEPT ACK message or RTP media from originating user, the MCPTT client:

- 1) shall stop timer TFP4 (private call accept retransmission);
- 2) shall start floor control as terminating MCPTT client as specified in subclause 7.2 in 3GPP TS 24.380 [5];
- 3) shall start timer TFP5 (max duration); and
- 4) shall enter the "P4: part of ongoing call" state.

[TS 24.379, clause 11.2.2.4.4.7]

When in the "P5: pending" state, upon an indication from MCPTT User to reject the incoming private call, the MCPTT client:

- 1) shall generate a PRIVATE CALL REJECT message as specified in subclause 15.1.8:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID;
  - c) shall set the MCPTT user ID of the callee IE with stored callee ID; and
  - d) shall set the Reason IE as "FAILED", if requested to restrict notification of call failure and the value of "/<x>/<x>/Common/PrivateCall/FailRestrict" leaf node present in the user profile as specified in 3GPP TS 24.383 [45] is set to "true". Otherwise, shall set the Reason IE as "REJECT";
- 2) shall send the PRIVATE CALL REJECT message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall release the call type control state machine; and
- 5) shall enter the "P1: ignoring same call id" state.

[TS 24.379, clause 11.2.2.4.4.8]

When in the "P5: pending" state or "P1: ignoring same call id" state, upon receiving a PRIVATE CALL RELEASE message, the MCPTT client:

- 1) shall generate a PRIVATE CALL RELEASE ACK message as specified in subclause 15.1.10. In the PRIVATE CALL RELEASE ACK message, the MCPTT client:
  - a) shall set the Call identifier IE to the stored call identifier;
  - b) shall set the MCPTT user ID of the caller IE with the stored caller ID; and.
  - c) shall set the MCPTT user ID of the callee IE with the stored callee ID.
- 2) shall send the PRIVATE CALL RELEASE ACK message in response to the request message according to rules and procedures as specified in subclause 11.2.1.1.1;
- 3) shall start timer TFP7 (waiting for any message with same call identifier);
- 4) shall stop timer TFP4 (private call accept retransmission) if running;
- 5) shall release the call type control state machine, if the current state is "P5: pending" state; and
- 6) shall enter the "P1: ignoring same call id" state, if the current state is "P5: pending" state.

# 7.2.5.3 Test description

## 7.2.5.3.1 Pre-test conditions

System Simulator:

- SS-UE1 (MCPTT client)
  - For the underlining "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.
- GNSS simulator configured to simulate a location in the centre of area 1 and providing timing reference as defined in TS 36.508 [24] for the assistance of E-UTRAN off-network testing such as e.g. V2X testing.
- NOTE 1: For operation in off-network environment, it needs be ensured that after the UE is powered up it considers the geographical area as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".
- SS-NW (MCPTT server)

- For the underlining "transport bearer" over which the SS and the UE will communicate Parameters are set to the default parameters for the basic E-UTRA Single cell network scenarios, as defined in TS 36.508 [24] clause 4.4. The simulated Cell 1 shall belong to PLMN1 (the PLMN specified for MCPTT operation in the MCPTT configuration document).
- NOTE 2: The SS operation as NW (MCPTT server) is needed only for the Preamble if the UE has to perform the MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2..

## IUT:

- UE (MCPTT client)
- The test USIM set as defined in TS 36.579-1 [2], subclause 5.5.10 is inserted.
- For the underlining "transport bearer" over which the SS and the UE will communicate, the UE is behaving as a ProSe enabled UE as defined in TS 36.508 [24], configured for and operating as ProSe Direct Communication transmitting and receiving device.

## Preamble:

- The MCPTT User performs the Generic Test Procedure for MCPTT Authorization/Configuration and Key Generation as specified in TS 36.579-1 [2], subclause 5.3.2.
- The UE is Switched OFF (state 1) according to TS 36.508 [24].
