

Recommendation T/GSI 03-09 (Nice 1985, revised by correspondence, June 1987)**SWITCHING**

Recommendation proposed by the Special Group Integration (GSI)

Amended text of the Recommendation adopted by the "Telecommunications" Commission:

"The European Conference of Posts and Telecommunications Administrations,

considering

- the common CEPT approach to the ISDN and general CEPT assumptions and policies for the evolution towards ISDN,
- the I. Series Recommendations of the CCITT, as well as other CCITT Recommendations on ISDN, to which CEPT Administrations have contributed most significantly,
- the need for CEPT Administrations to have more precise answers to their specific European requirements, i.e. to select and further define material from CCITT Recommendations,
- the need for CEPT Administrations to have as a base a comprehensive set of Recommendations, in order to promote and strengthen European harmonisation,

recommends

to the member Administrations of the CEPT that they evolve their telecommunication networks towards ISDN according to the guidelines and specifications given in the attached text."

CCITT Recommendations in the Q.51n and Q.52n series, dealing with digital transit and digital local and combined exchanges, with the modifications included in Recommendations T/CS 62-01 to 62-04 and T/CS 68-01 to 68-04 respectively are considered to apply in Europe.
