Contents

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This draft European Standard (EN) has been produced by ETSI Technical Committee Electronic Signatures and Infrastructures (ESI), and is now submitted for the combined Public Enquiry and Vote phase of the ETSI standards EN Approval Procedure.

The present document was previously published as ETSI TS 101 861 [i.2].

Proposed national transposition dates	
Date of latest announcement of this EN (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	12 months after doa

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document is aiming to meet the general requirements of the international community to provide trust and confidence in electronic transactions including, amongst others, applicable requirements from Regulation (EU) No 910/2014 [i.3].

Time-stamping is critical for digital signatures in order to know whether the digital signature was affixed during the validity period of the certificate. One method of assuring the signing time is to affix a time-stamp bound to the signature as defined in IETF RFC 3161 [1].

IETF RFC 3161 [1] defines a time-stamp protocol and a time-stamp token format. The present document limits the number of options by placing some additional constraints.

1 Scope

The present document defines a profile for the time-stamping protocol and the time-stamp token defined in IETF RFC 3161 [1] including optional ESSCertIDv2 update in IETF RFC 5816 [4].

It defines what a time-stamping client supports and what a time-stamping server supports.

Time-stamp validation is out of scope and is defined in ETSI EN 319 102 [i.6].

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at http://docbox.etsi.org/Reference.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1] IETF RFC 3161: "Internet X.509 Public Key Infrastructure Time-Stamp Protocol (TSP)".

[2] ETSI EN 319 412-2: "Electronic Signatures and Infrastructures (ESI); Certificate Profiles; Part 2: Certificate profile for certificates issued to natural persons".

[3] ETSI EN 319 412-3: "Electronic Signatures and Infrastructures (ESI); Certificate Profiles; Part 3: Certificate profile for certificates issued to legal persons".

[4] IETF RFC 5816: "ESSCertIDV2 update to RFC 3161".

[5] ETSI TS 119 312: "Electronic Signatures and Infrastructures (ESI); Cryptographic Suites".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] ETSI EN 319 421: "Electronic Signatures and Infrastructures (ESI); Policy and Security Requirements for Trust Service Providers issuing Time-Stamps".

[i.2] ETSI TS 101 861: "Electronic Signatures and Infrastructures (ESI); Time stamping profile".

[i.3] Regulation (EU) No 910/2014 of the European Parliament and of the Council on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC.

[i.4] Recommendation ITU-T X.520 (10/2012): "Information technology - Open Systems Interconnection - The Directory: Selected attribute types".

[i.5] IETF RFC 3739: "Internet X.509 Public Key Infrastructure: Qualified Certificates Profile".

[i.6] ETSI EN 319 102: "Electronic Signatures and Infrastructures (ESI); Procedures for Signature Creation and Validation".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

time-stamp: data in electronic form which binds other electronic data to a particular time establishing evidence that these data existed at that time

time-stamp token: data object defined in IETF RFC 3161 [1], representing a time-stamp

time-stamping authority: Trust Service Provider which issues time-stamp using one or more time-stamping units

time-stamping unit: set of hardware and software which is managed as a unit and has a single time-stamp signing key active at a time.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ASN	Abstract Syntax Notation
EU	Europe
HTTP	HyperText Transfer Protocol
HTTPS	Hypertext Transfer Protocol over TLS
OID	Object Identifier
RFC	Request for Comments
TLS	Transport Layer Security
TSA	Time-Stamping Authority
TSU	Time-Stamping Unit

4 Requirements for a time-stamping client

4.1 Profile for the format of the request

4.1.1 Core requirement

A time-stamping client shall support the time-stamping request as defined in IETF RFC 3161 [1], clause 2.4.1 with the amendments defined in the following clauses.

4.1.2 Parameters to be supported

The following parameters in the time-stamping request should be supported:

- the `reqPolicy`;
- the `nonce`; and
- the `certReq`.

4.1.3 Hash algorithms to be used

Hash algorithms used to hash the information to be time-stamped should be as specified in clause A.8 of ETSI TS 119 312 [5]. This should take into account the expected duration of the time-stamp and recommended hash functions versus time given in clause 9.2 of ETSI TS 119 312 [5].

4.2 Profile for the format of the response

4.2.1 Core requirement

A time-stamping client shall support the time-stamping response as defined in IETF RFC 3161 [1], clause 2.4.2 with the amendments defined in the following clauses.

4.2.2 Parameters to be supported

The following requirements apply:

- the `accuracy` field shall be supported and understood; and
- the `nonce` parameter should be supported;

A TSU needs not support ordering hence clients should not depend on the ordering of time-stamps.

4.2.3 Algorithms to be supported

Time-stamp token signature algorithms to be supported shall be as specified in clause A.8 of ETSI TS 119 312 [5].

4.2.4 Key lengths to be supported

Signature algorithm key lengths for the selected signature algorithm should be supported as recommended in clause 9.3 of ETSI TS 119 312 [5].

5 Requirements for a time-stamping server

5.1 Profile for the format of the request

5.1.1 Core requirement

A time-stamping server shall support the time-stamping request as defined in IETF RFC 3161 [1], clause 2.4.1 with the amendments defined in the following clauses.

5.1.2 Parameters to be supported

The following requirements apply:

- `reqPolicy` shall be supported;
- the `nonce` shall be supported; and
- `certReq` shall be supported.

5.1.3 Algorithms to be supported

Hash algorithms for the time-stamp data to be supported shall be as specified in clause A.8 of ETSI TS 119 312 [5]. This should take into account the expected duration of the time-stamp and recommended hash functions versus time given in clause 9.2 of ETSI TS 119 312 [5].

5.2 Profile for the format of the response

5.2.1 Core requirement

A time-stamping server shall support the time-stamping response as defined in IETF RFC 3161 [1] clause 2.4.2 with the amendments defined in the following clauses.

5.2.2 Parameters to be supported

The requirements from IETF RFC 3161 [1], clause 2.4.2 shall apply and the following requirements apply:

- the policy parameter shall be present as an identifier for the time-stamp policy and shall conform to annex A;
- a `genTime` parameter representing time with a precision necessary to support the declared accuracy shall be supported;
- the `accuracy` parameter shall be present and a minimum accuracy of one second shall be supported;
- the `ordering` parameter shall not be present or shall be set to false; and
- no extension shall be critical.

The following requirement applies to the content of the `SignedData` structure in which the `TSTInfo` structure is encapsulated:

- the certificate identifier of the TSU certificate (`ESSCertID` as in IETF RFC 3161 [1] or `ESSCertIDv2` as in IETF RFC 5816 [4]) shall be included as a `signerInfo` attribute inside a `SigningCertificate` or a `SigningCertificateV2` attribute as specified in IETF RFC 5816 [4], clause 2.2.1.

5.2.3 Algorithms to be used

Hash algorithms used to hash the information to be time-stamped and time-stamp token signature algorithms shall be as specified in clause A.8 of ETSI TS 119 312 [5].

6 TSU certificate profile

6.1 General requirements

The TSU certificate shall be as defined in ETSI EN 319 412-2 [2] for natural person or as defined in ETSI EN 319 412-3 [3] for legal person with the amendments defined in the present document.

6.2 Subject name requirements

The `countryName` attribute shall specify the country in which the TSA is established (which is not necessarily the name of the country where the time-stamping unit is located).

The `organizationName`, when applicable, shall contain the full registered name of the TSA responsible for managing the time-stamping unit. That name should be an officially registered name of the TSA.

For legal person, an `organizationIdentifier` attribute should be used as defined in Recommendation ITU-T X.520 [i.4].

The `commonName` shall be present. It specifies an identifier for the time-stamping unit. Within the TSA, the attribute `commonName` uniquely identifies the time-stamping unit used.

For natural person, a `serialNumber` attribute should be used.

Additional attributes may be present.

6.3 Key lengths requirements

The key length for the selected signature algorithm of the TSU certificate should be as recommended in clause 9.3 of ETSI TS 119 312 [5].

6.4 Key usage requirements

The TSU certificate key usage shall be as defined in IETF RFC 3161 [1], clause 2.3.

6.5 Algorithm requirements

The TSU public key and the TSU certificate signature should use the algorithms as specified in clauses A.9 of ETSI TS 119 312 [5].

7 Profiles for the transport protocols to be supported

The time-stamp client and the time-stamp server shall support the time-stamp protocol via HTTP or HTTPS as defined in clause 3.4 of IETF RFC 3161 [1].

8 Object identifiers of the cryptographic algorithms

Object identifiers for the recommended hashing and signature algorithms are specified in annex F of ETSI TS 119 312 [5].

9 Additional requirements for Regulation (EU) No 910/2014

9.1 Regulation statement

When a time-stamp token is a qualified electronic time-stamp as per Regulation (EU) No 910/2014 [i.3], it should contain one instance of the `qcStatements` extension with the syntax as defined in IETF RFC 3739 [i.5], clause 3.2.6. If the `qcStatements` extension is present, it shall contain one instance of the statement "`esi4-qtstStatement-1`" defined in annex B.

Annex A (normative): Structure for the policy field

When the time-stamp token is issued by a TSA that conforms to ETSI EN 319 421 [i.1], then the policy field in the `TSTInfo` shall include:

- itu-t(0) identified-organization(4) etsi(0) time-stamp-policy (2023) policy-identifiers(1) baseline-ts-policy (1), or
- TSA's own identifier when the TSA incorporates or further constrains the policy above.

Annex B (normative): ASN.1 declarations

```
-- object identifiers
id-etsi-tsts                    OBJECT IDENTIFIER ::= { itu-t(0) identified-organization(4) etsi(0)
id-tst-profile(19422) 1 }
id-etsi-tsts-EuQCompliance  OBJECT IDENTIFIER ::= { id-etsi-tsts 1 }

-- statements
  esi4-qtstStatement-1 QC-STATEMENT ::= { IDENTIFIED BY id-etsi-tsts-EuQCompliance }
  --  By inclusion of this statement the issuer asserts that this
  --  time-stamp token is issued as a qualified electronic time-stamp according to
  --  the REGULATION (EU) No 910/2014.
```
