## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This Technical Specification (TS) has been produced by ETSI Project Telecommunications and Internet Protocol Harmonization Over Networks (TIPHON).

---

## Introduction

To evaluate conformance of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a telecommunication specification. Such a statement is called an Implementation Conformance Statement (ICS).

---

# 1 Scope

The present document provides the Protocol Implementation Conformance Statement (PICS) proforma for the Inter-domain pricing, authorization and usage exchange defined in TS 101 321 [4] in compliance with the relevant requirements, and in accordance with the relevant guidance given in ISO/IEC 9646-7 [3] and ETS 300 406 [1].

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.

- [1] ETS 300 406 (1995): "Methods for testing and Specification (MTS); Protocol and profile conformance testing specifications; Standardization methodology".
- [2] ISO/IEC 9646-1: "Information technology - Open systems interconnection - Conformance testing methodology and framework - Part 1: General concepts".
- [3] ISO/IEC 9646-7: "Information technology - Open systems interconnection - Conformance testing methodology and framework - Part 7: Implementation Conformance Statements".
- [4] TS 101 321 (V1.4): "Telecommunications and Internet Protocol Harmonization Over Networks (TIPHON); Inter-domain pricing, authorization and usage exchange".

---

# 3 Definitions and abbreviations

## 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

- terms defined in TS 101 321 [4];
- terms defined in ISO/IEC 9646-1 [2] and in ISO/IEC 9646-7 [3].

In particular, the following terms defined in ISO/IEC 9646-1 [2] apply:

**Implementation Conformance Statement (ICS):** statement made by the supplier of an implementation or system claimed to conform to a given specification, stating which capabilities have been implemented. The ICS can take several forms: protocol ICS, profile ICS, profile specific ICS, information object ICS, etc.

**ICS proforma:** document, in the form of a questionnaire, which when completed for an implementation or system becomes an ICS

**Protocol ICS (PICS):** ICS for an implementation or system claimed to conform to a given protocol specification

## 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

HTTP	Hyper Text Transfer Protocol
ICS	Implementation Conformance Statement
IUT	Implementation Under Test
OSP	Open Settlement Protocol
PICS	Protocol ICS
SCS	System Conformance Statement
SSL	Secure Socket Layer
SUT	System Under Test
TLS	Transport Layer Security

---

## 4 Conformance to this PICS proforma specification

If it claims to conform to TS 101 321 [4], the actual PICS proforma to be filled in by a supplier shall be technically equivalent to the text of the PICS proforma given in annex A, and shall preserve the numbering/naming and ordering of the proforma items.

A PICS which conforms to TS 101 321 [4] shall be a conforming PICS proforma completed in accordance with the guidance for completion given in clause A.1.

---

## Annex A (normative): PICS proforma for TS 101 321

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed PICS.
--

---

### A.1 Guidance for completing the PICS proforma

#### A.1.1 Purposes and structure

The purpose of this PICS proforma is to provide a mechanism whereby a supplier of an implementation of the requirements defined in ETSI Technical Specification TS 101 321 [4] may provide information about the implementation in a standardized manner.

The PICS proforma is subdivided into subclauses for the following categories of information:

- guidance for completing the PICS proforma;
- identification of the implementation;
- identification of the protocol;
- global statement of conformance;
- roles;
- major capabilities;
- subsidiary capabilities;
- operations;
- arguments, results and errors;
- timers.

#### A.1.2 Abbreviations and conventions

The PICS proforma contained in this annex is comprised of information in tabular form in accordance with the guidelines presented in ISO/IEC 9646-7 [3].

##### **Item column**

The item column contains a number which identifies the item in the table.

##### **Item description column**

The item description column describes in free text each respective item (e.g. parameters, timers, etc.). It implicitly means "is <item description> supported by the implementation?".

### Status column

The following notations, defined in ISO/IEC 9646-7 [3] , are used for the status column:

m	mandatory - the capability is required to be supported;
o	optional - the capability may be supported or not;
n/a	not applicable - in the given context, it is impossible to use the capability;
x	prohibited (excluded) - there is a requirement not to use this capability in the given context;
o.i	qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies a unique group of related optional items and the logic of their selection which is defined immediately following the table;
ci	conditional - the requirement on the capability ("m", "o", "x" or "n/a") depends on the support of other optional or conditional items. "i" is an integer identifying a unique conditional status expression which is defined immediately following the table;
i	irrelevant (out-of-scope) - capability outside the scope of the reference specification. No answer is requested from the supplier.

### Reference column

The reference column makes reference to TS 101 321 [4], except where explicitly stated otherwise.

### Support column

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7 [3] , are used for the support column:

Y or y	supported by the implementation;
N or n	not supported by the implementation;
N/A, n/a or -	no answer required (allowed only if the status is n/a, directly or after evaluation of a conditional status).

If this PICS proforma is completed in order to describe a multiple-profile support in a system, it is necessary to be able to answer that a capability is supported for one profile and not supported for another. In that case, the supplier shall enter the unique reference to a conditional expression, preceded by "?" (e.g. ?3). This expression shall be given in the space for comments provided at the bottom of the table. It uses predicates defined in the SCS, each of which refers to a single profile and which takes the value TRUE if and only if that profile is to be used.

EXAMPLE:     ?3: IF prof1 THEN Y ELSE N.

It is also possible to provide a comment to an answer in the space provided at the bottom of the table.

NOTE:     As stated in ISO/IEC 9646-7 [3] , support for a received PDU requires the ability to parse all valid parameters of that PDU. Supporting a PDU while having no ability to parse a valid parameter is non-conformant. Support for a parameter on a PDU means that the semantics of that parameter are supported.

### Values allowed column

The values allowed column contains the type, the list, the range, or the length of values allowed. The following notations are used:

- range of values:            <min value> .. <max value>:
- example:                 5 .. 20.
- list of values:             <value1>, <value2>, ....., <valueN>:
- example:         2 ,4 ,6 ,8, 9;

example: '1101'B, '1011'B, '1111'B;

example: '0A'H, '34'H, '2F'H.

- list of named values: <name1>(<val1>), <name2>(<val2>), ....., <nameN>(<valN>):
- example: reject(1), accept(2).
- length: size (<min size> .. <max size>):
- example: size (1 .. 8).

### Values supported column

The values supported column shall be filled in by the supplier of the implementation. In this column, the values or the ranges of values supported by the implementation shall be indicated.

### References to items

For each possible item answer (answer in the support column) within the PICS proforma a unique reference exists, used, for example, in the conditional expressions. It is defined as the table identifier, followed by a solidus character "/", followed by the item number in the table. If there is more than one support column in a table, the columns are discriminated by letters (a, b, etc.), respectively.

EXAMPLE 1: A.5/4 is the reference to the answer of item 4 in table 5 of annex A.

EXAMPLE 2: A.6/3b is the reference to the second answer (i.e. in the second support column) of item 3 in table 6 of annex A.

### Prerequisite line

A prerequisite line takes the form: Prerequisite: <predicate>.

A prerequisite line after a clause or table title indicates that the whole clause or the whole table is not required to be completed if the predicate is FALSE.

## A.1.3 Instructions for completing the PICS proforma

The supplier of the implementation shall complete the PICS proforma in each of the spaces provided. In particular, an explicit answer shall be entered, in each of the support or supported column boxes provided, using the notation described in subclause A.1.2.

If necessary, the supplier may provide additional comments in space at the bottom of the tables, or separately on sheets of paper.

More detailed instructions are given at the beginning of the different subclauses of the PICS proforma.

---

## A.2 Identification of the implementation

Identification of the Implementation Under Test (IUT) and the system in which it resides (the System Under Test (SUT)) should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the PICS should be named as the contact person.

## A.2.1 Date of the statement

.....

## A.2.2 Implementation Under Test (IUT) identification

IUT name:

.....  
.....

IUT version:

.....

## A.2.3 System Under Test (SUT) identification

SUT name:

.....  
.....

Hardware configuration:

.....  
.....  
.....

Operating system:

.....

## A.2.4 Product supplier

Name:

.....

Address:

.....  
.....  
.....

Telephone number:

.....

Facsimile number:

.....

E-mail address:

.....

Additional information:

.....  
.....  
.....

### A.2.5 Client (if different from product supplier)

Name:

.....

Address:

.....  
.....  
.....

Telephone number:

.....

Facsimile number:

.....

E-mail address:

.....

Additional information:

.....

### A.2.6 PICS contact person

(A person to contact if there are any queries concerning the content of the PICS)

Name:

.....

Telephone number:

.....

Facsimile number:

.....

E-mail address:

.....

Additional information:

.....  
.....  
.....

---

## A.3 PICS/System Conformance Statement (SCS)

Provide the relationship of the PICS with the SCS for the system:

.....

.....

.....

---

## A.4 Identification of the protocol

The PICS proforma applies to the following standard.

**TS 101 321 (V1.4):** "Telecommunications and Internet Protocol Harmonization Over Networks (TIPHON); Inter-domain pricing, authorization and usage exchange".

---

## A.5 Global Statement of Conformance

Are all mandatory capabilities implemented? (Yes/No).

NOTE: Answering "No" to this question indicates non-conformance to the protocol specification. Non-supported mandatory capabilities are to be identified in the PICS, with an explanation of why the implementation is non-conforming, on pages attached to the PICS proforma.

---

## A.6 Roles

**Table A.1: Roles**

Item	Role	Reference	Status	Support Y   N   n/a
R 1	OSP Client		o.1	
R 2	OSP Server		o.1	
o.1: Support of at least one of these options is required				
Comments:				

## A.7 Secure Socket Layer / Transport Layer Security Capabilities

Table A.2: SSL/TLS Capabilities

Item	Capability	Reference	Status	Support Y   N   n/a
S 1	SSL version 3.0	5.1.1	m	
S 2	TLS version 1.0	5.1.1	o	
S 3	SSL/TLS client authentication	5.1.3	o

## A.9 Multipurpose Internet Mail Extensions Capabilities

Table A.4: MIME Capabilities

Item	Capability	Reference	Status	Support Y   N   n/a
M 1	MIME RFC 2045	6.1.1	m	
M 2	Primary message content	4.2, 5.2.7		
M 2.1	multipart/signed	5.2.7	o	
M 2.2	text/plain	6.1.1.1	o	
M 3	S/MIME signatures	7		
M 3.1	S/MIME version 2	5.2.7	M 2.1: m	
M 3.2	Canonical Form	7.1	M 2.1: m	
M 3.3	Signature algorithms	7.2, B.2		
M 3.3.1	md2WithRSAEncryption	SMIME A.4	M 2.1: o	
M 3.3.2	md5WithRSAEncryption	SMIME A.4	M 2.1: o	
M 3.3.3	sha-1WithRSAEncryption	SMIME A.4	M 2.1: o	
M 3.4	binary transfer encoding	7.3	M 2.1: m	
M 4	XML transfer	6.1		
M 4.1	binary transfer encoding	6.1.1.3	m	
Comments:				

## A.10 Extensible Markup Language Capabilities

Table A.5: XML Capabilities

Item	Capability	Reference	Status	Support Y   N   n/a	Values allowed	Values supported
X 1	XML version 1.0	6.1.2.1	m			
X 2	Character encoding	6.1.2.3				
X 2.1	UTF-8	6.1.2.3	m			
X 2.2	UTF-16	6.1.2.3	m			
X 2.3	other(s)	6.1.2.3	o		note	
X 3	well-formed	6.1.2.2	m			
NOTE: Permissible character encodings defined by ISO/IEC 10646.						
Comments:						

## A.11 Root Message Capabilities

Table A.6: Root Message Capabilities

Item	Capability	Reference	Status	Support Y   N   n/a	Values allowed	Values supported
G 1	Message as root entity	6.1.3.1	m			
G 2	Maximum components sent per client message	6.1.3	R 1: m		1 ..	
G 3	Maximum components recognized per client message	6.1.3	R 2: m		1 ..	
G 4	Equal components in server messages as received in client messages	6.1.3	R 2: m note			
G 5	Random attribute	6.1.3.2				
G 5.1	Random attribute present in messages	6.1.3.2	m			
G 5.2	Random value statistically valid	6.1.3.2	m			
G 6	Identifier attribute	6.1.3.3				
G 6.1	Identifier present in client messages	6.1.3.3	R 1: m			
G 6.2	Identifier unique	6.1.3.3	R 1: m			
G 6.3	Identifier returned in server messages	6.1.3.3	R 2: m			
G 6.4	Identifier associates server messages with client request/indication	6.1.4.4	R 1: m			
NOTE: Up to limit specified by G 3.						
Comments:
