Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee IMS Network Testing (INT).

The present document is part 3 of a multi-part deliverable covering the test specifications for the Diameter protocol on the Gx interface, as identified below:

- Part 1: "Protocol Implementation Conformance Statement (PICS)";
- Part 2: "Test Suite Structure (TSS) and Test Purposes (TP)";
- Part 3: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification".**

1 Scope

The present document specifies the Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma for the test specifications for Diameter protocol on the Gx interface as specified in TS 129 212 [1] in compliance with the relevant requirements and in accordance with the relevant guidance given in ISO/IEC 9646-7 [5] and ETS 300 406 [6].

The test notation used in the ATS is TTCN-3 (see ES 201 873-1 [7]).

The following test specification and design considerations can be found in the body of the present document:

- the overall test suite structure;
- the testing architecture;
- the test methods and port definitions;
- the test configurations;
- TTCN styles and conventions;
- the partial PIXIT proforma;
- the modules containing the TTCN-3 ATS.

Annex A provides the Abstract Test Suite (ATS) part of the ATS.

Annex B provides the Partial Implementation Extra Information for Testing (PIXIT) Proforma for the PCRF part of the ATS.

Annex C provides the Partial Implementation Extra Information for Testing (PIXIT) Proforma for the PCEF part of the ATS.

Annex D provides the PCTR Proforma for the PCRF part of the ATS.

Annex E provides the PCTR Proforma for the PCEF part of the ATS.

2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

2.1 Normative references

The following referenced documents are necessary for the application of the present document.

- [1] ETSI TS 129 212 (V10.5.0): "Universal Mobile Telecommunications System (UMTS); LTE; Policy and charging control over Gx/Sd reference point (3GPP TS 29.212 version 10.5.0 Release 10)".
- [2] ETSI TS 101 606-2: "IMS Network Testing (INT); Diameter Conformance testing for Gx interface; Part 2: Test Suite Structure (TSS) and Test Purposes (TP)".

- [3] ISO/IEC 9646-1: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 1: General concepts".
- [4] ISO/IEC 9646-6: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 6: Protocol profile test specification".
- [5] ISO/IEC 9646-7: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".

2.2 Informative references

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

Not applicable.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in ISO/IEC 9646-7 [5] and TS 129 212 [1] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in ISO/IEC 9646-1 [3], ISO/IEC 9646-6 [4], ISO/IEC 9646-7 [5] and TS 129 212 [1] apply.

4 Abstract Test Method (ATM)

This clause describes the ATM used to test the Diameter protocol on the Gx interface at the PCEF side and at the PCRF side.

4.1 Test architecture

4.1.1 Test method

The test method chosen is the remote test method. Remote test method means that the test tool (the test machine + the executable test suite) shall behave as a PCRF when the IUT is a PCEF and shall behave as a PCEF when the IUT is a PCRF. As the exchange between the test system and the IUT is at the diameter message level, the lower layers of the test machine shall be totally conformant with the corresponding lower layers specifications to use the remote test method.

4.1.2 Test machine configuration

4.1.2.1 Test configurations for PCEF testing

The Gx interface is located between PCRF and the SUT. The GTP interfaces are used to trigger the SUT.

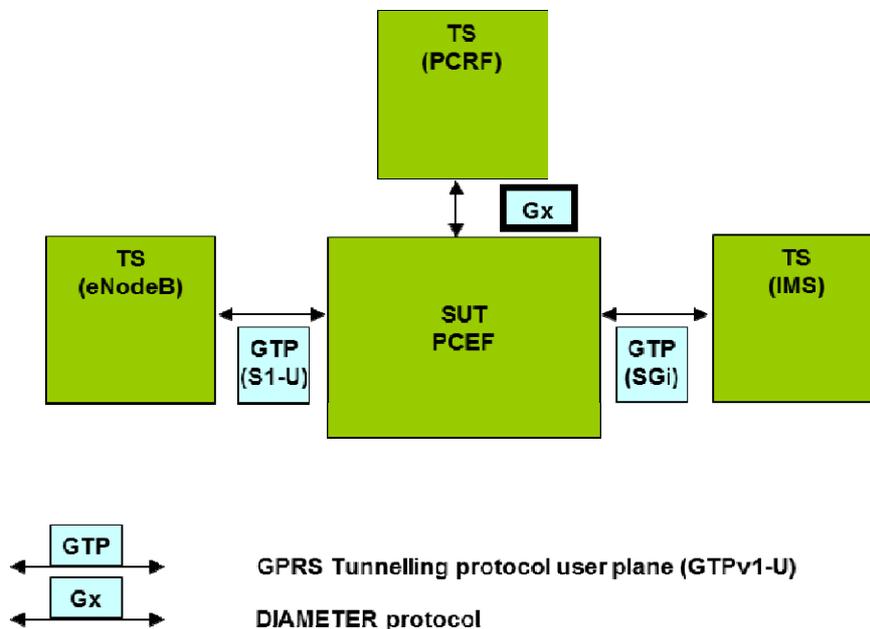

Figure 1: Test architecture with PCEF as SUT

4.1.2.2 Test configurations for PCRF testing

The Gx interface is located between PCEF and PCRF. The Rx interface is located between PCEF and the SUT.

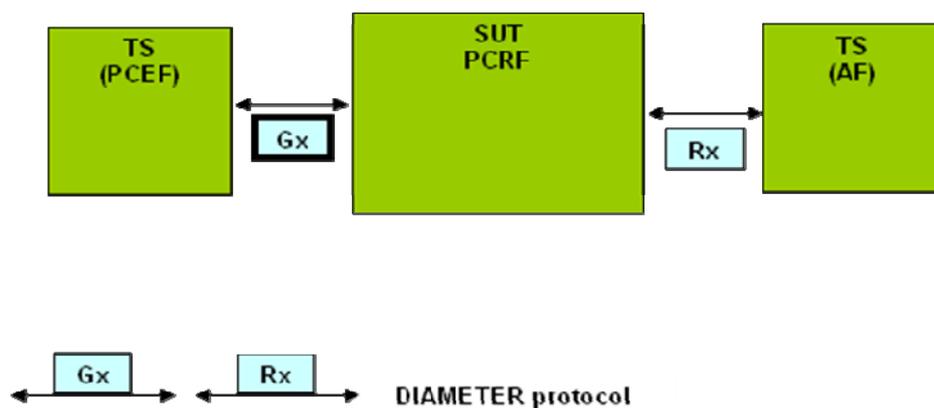

Figure 2: Test architecture with PCRF as SUT

4.1.3 Interconnection of TS and SUT

4.1.3.1 PCEF Role

Figures 3 and 4 show the interconnection of TS and SUT in terms of signalling message flows. Diameter messages are transferred over the DIAMP port. Lower Layer Primitives are transferred over the LLPP port. Some PCEF tests may require additional triggering via the GTP ports. This configuration can be disabled using PIXIT parameter "GTPsupport". GTPv1-U messages are exchanged at ports GTP1 and GTP2 (see figure 4).

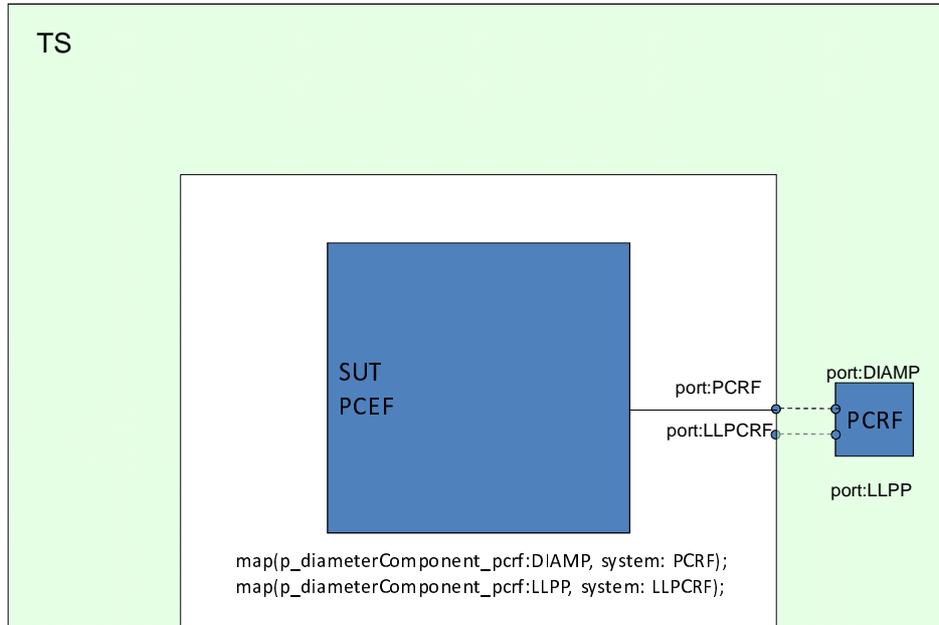

Figure 3: Interconnection for PCEF role without IP interfaces

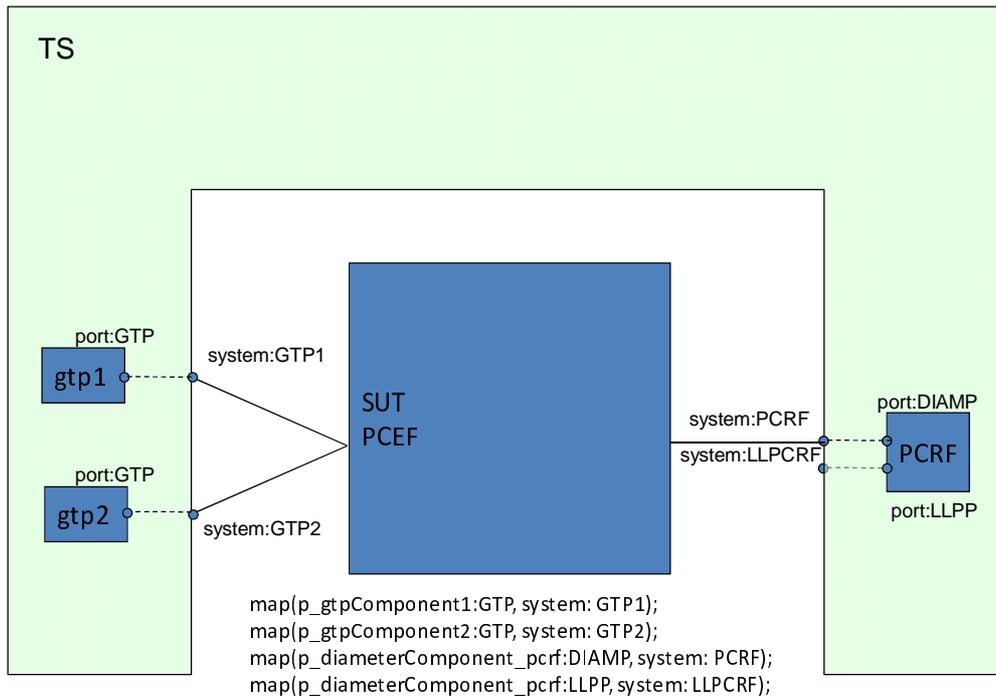

Figure 4: Interconnection for PCEF role with IP interfaces (GTP)

4.1.3.2 PCRF Role

Figures 5 and 6 show the interconnection of TS and SUT in terms of signalling message flows. Diameter messages are transferred over the DIAMP port. Lower Layer Primitives are transferred over the LLPP port. Some PCRF tests may require additional triggering via the Rx interface (see figure 6).

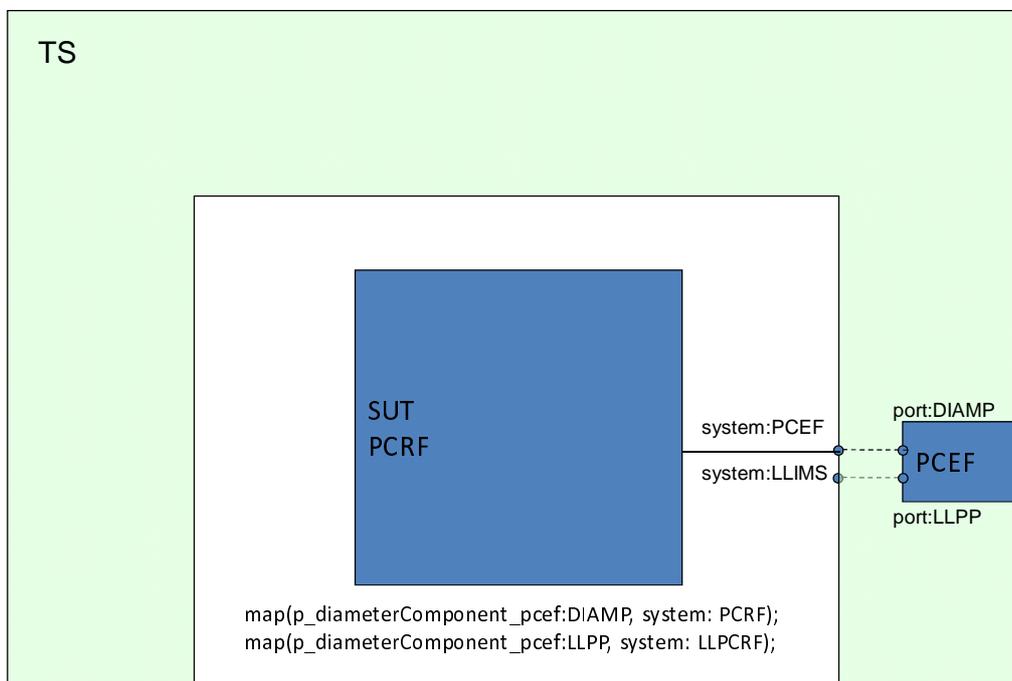

Figure 5: Interconnection for PCRF role

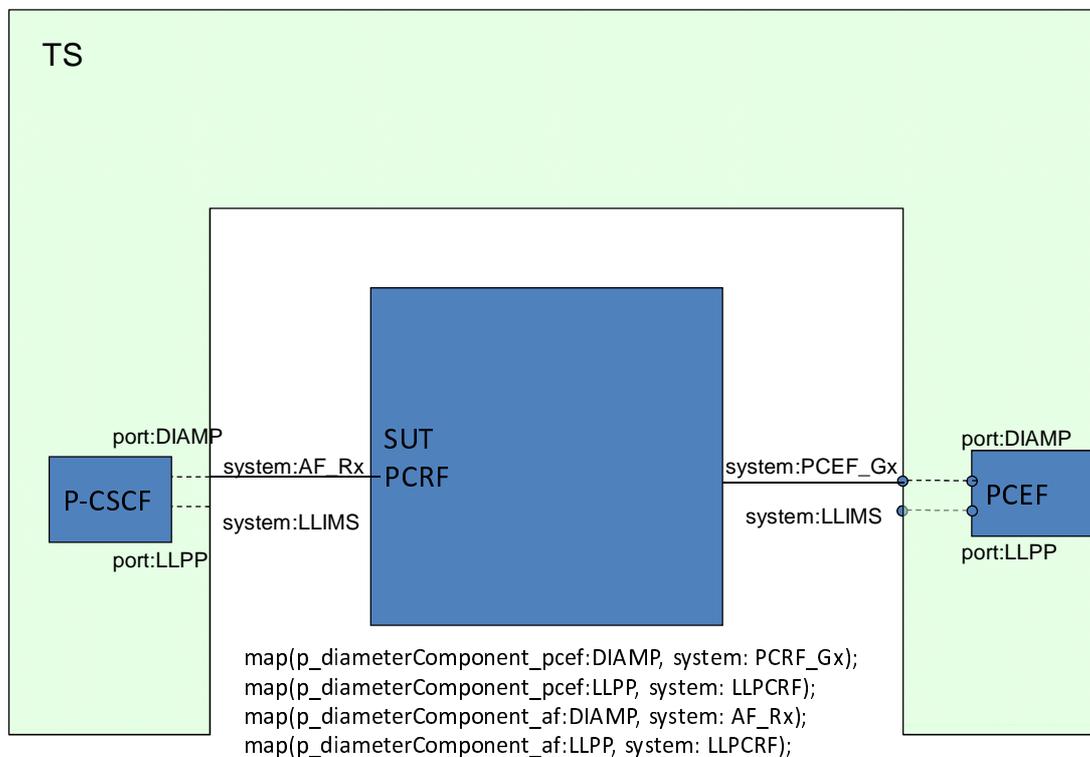

Figure 6: Interconnection for PCRF role with AF interface (Rx)

4.1.3.3 Test Adapter

For execution of the tests the Test Adapter (TA) shall be developed. There are two possibilities to communicate over TA:

- ATS provides only Diameter messages; or
- ATS provides Diameter messages and LL primitives.

5 ATS conventions

The ATS conventions are intended to give a better understanding of the ATS but they also describe the conventions made for the development of the ATS. These conventions shall be considered during any later maintenance or further development of the ATS.

The ATS conventions contain two clauses, the naming conventions and the implementation conventions. The naming conventions describe the structure of the naming of all ATS elements. The implementation conventions describe the functional structure of the ATS.

To define the ATS, the guidelines of the document ETS 300 406 [6] were considered.

5.1 Testing conventions

5.1.1 Test cases Preamble and Postamble

As described in the test method clause the test tool shall behave as a PCRF when the IUT is a PCEF and shall behave as a PCEF when the IUT is a PCRF. For that reason the test case preambles and postambles are named as follows:

IUT is a PCRF (example TC_PCRF_IPS_01)

```
f_preamble_PCEF
f_postamble_PCEF
```

NOTE 1: The tester also behaves as a Diameter Client.

IUT is a PCEF (example TC_PCEF_IPS_01)

```
f_preamble_PCRF
f_postamble_PCRF
```

NOTE 2: The tester also behaves as a Diameter Server.

5.2 Naming conventions

5.2.1 General guidelines

The naming conventions are based on the following underlying principles:

- In most cases, identifiers should be prefixed with a short alphabetic string (specified in table 1) indicating the type of TTCN-3 element it represents.
- Suffixes should not be used except in those specific cases identified in table 2.
- Prefixes and suffixes should be separated from the body of the identifier with an underscore ("_"):

EXAMPLE 1: c_sixteen, t_wait_max.

- Only module names, data type names and module parameters should begin with an upper-case letter. All other names (i.e. the part of the identifier following the prefix) should begin with a lower-case letter.
- The start of second and subsequent words in an identifier should be indicated by capitalizing the first character. Underscores should not be used for this purpose.

EXAMPLE 2: `f_authenticateUser`.

Table 1 specifies the naming guidelines for each element of the TTCN-3 language indicating the recommended prefix, suffixes (if any) and capitalization.

Table 1: TTCN-3 naming convention

Language element	Naming convention	Prefix	Suffix	Example	Notes
Module	Use upper-case initial letter	DiameterGx_	<i>none</i>	DiameterGx_Steps	
TSS grouping	Use all upper-case letters	<i>none</i>	<i>none</i>	TP_PCEFRole_IPS	
Message template	Use lower-case initial letter	m_	<i>none</i>	m_authApplicationId	
Message template with wildcard or matching expression	Use lower-case initial letters	mw_	<i>none</i>	mw_subscriptionId	
Port instance	Use upper-case initial letter	<i>none</i>	<i>none</i>	DiameterPort	
Constant	Use lower-case initial letter	c_	<i>none</i>	c_maxRetransmission	
Function	Use lower-case initial letter	f_	<i>none</i>	f_authentication()	
Altstep	Use lower-case initial letter	a_	<i>none</i>	a_receive()	
Variable	Use lower-case initial letter	v_	<i>none</i>	v_basicId	
PICS values	Use all upper case letters	PC_	<i>none</i>	PC_PCRF_DATA_CON	Note
PIXIT values	Use all upper case letters	PX_	<i>none</i>	PX_DIAMETER_IP_ADDR	Note
Parameterization	Use lower-case initial letter	p_	<i>none</i>	p_maId	
Enumerated Value	Use lower-case initial letter	e_	<i>none</i>	e_synCpk	
NOTE: In this case it is acceptable to use underscore as a word delimiter.					

5.2.2 Test case grouping

The ATS structure is based on the Test Purposes for the Diameter protocol on the Gx interface as defined in TS 101 606-2 [2].

5.2.3 Test case identifiers

The test cases have been divided according to the functionalities into several groups.

The test case names are built up according to the following scheme:

Table 2: TC identifier naming convention scheme

Identifier:	"<tc>"_"<iut >"_"<scope >"_"<number>"		
<tc>	=	Test Case:	fixed to "TC"
<iut >	=	type of IUT:	PCRF or PCEF
<scope >	=	group	IPS Initial Provisioning Session MSI Modification of Session Information INV Invalid Behaviour ST Session Termination PCC PCC rules EMS Emergency services UMC Usage monitoring control IRS IMS Restoration Support MPS Multimedia Priority Support SDC Sponsored Data Connectivity RAU Reporting Accumulated Usage
<number>	=	sequential number	(01-99)

NOTE: This naming scheme results into a one-to-one correspondence between the test purpose identifiers as defined in TS 101 606-2 [2] and the test case identifiers.
The TP identifier of the test case TC_XXX_01 is TP_XXX_01.

Annex A (normative): DIAMETER Gx Abstract Test Suite (ATS)

This ATS has been produced using the Testing and Test Control Notation (TTCN-3) according to ES 201 873-1 [7].

A.1 The TTCN-3 Module

The TTCN-3 library modules corresponding to the ATS are contained in archive ts10160603v010101p0.zip which accompanies the present document.

Annex B (normative): DIAMETER Gx Partial PIXIT proforma for IUT PCRF

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the Partial PIXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed Partial PIXIT.

The PIXIT Proforma is based on ISO/IEC 9646-6 [4]. Any additional information which may be needed can be found in this international standard document.

23	PX_ACTIVATION_TIME	octetstring, avp_Data within Rule_Activation_Time_AVP (parameter is part of Charging_Rule_Install_AVP)
24	PX_DEACTIVATION_TIME	octetstring, avp_Data within Rule_DeActivation_Time_AVP (parameter is part of Charging_Rule_Install_AVP)
25	PX_EMERGENCY_APN	UTF8String, avp_Data within Called_Station_Id_AVP (parameter is part of Called_Station_Id_AVP)
26	PX_GTPsupport	Boolean indicator, TRUE if GTP interface is accessible to trigger Diameter events

Annex D (normative): DIAMETER Gx PCTR Proforma for IUT PCRF

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PCTR proforma in this annex so that it can be used for its intended purposes and may further publish the completed PCTR.

The PCTR proforma is based on ISO/IEC 9646-6 [4]. Any additional information which may be needed can be found in this International standard document.

D.1 Identification summary

D.1.4 Limits and reservation

Additional information relevant to the technical contents or further use of the test report, or the rights and obligations of the test laboratory and the client, may be given here. Such information may include restriction on the publication of the report.

.....

.....

.....

.....

.....

.....

D.1.5 Comments

Additional comments may be given by either the client or the test laboratory on any of the contents of the PCTR, for example, to note disagreement between the two parties.

.....

.....

.....

.....

D.2 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non-conforming to the specified protocol specification.

Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause C.3 in the present document) and there are no "FAIL" verdicts to be recorded (in clause C.6 in the present document) strike the words "has or", otherwise strike the words "or has not".

D.3 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

Strike the appropriate words in this sentence.

D.4 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded (in clause C.6 of the present document) strike the words "did or" otherwise strike the words "or did not".

Summary of the results of groups of test:

.....

.....

.....

.....

.....

.....

.....

D.5 Static conformance review report

If clause C.3 indicates non-conformance, this clause itemises the mismatches between the PICS and the static conformance requirements of the specified protocol specification.

E.2 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non-conforming to the specified protocol specification.

Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause C.3 in the present document) and there are no "FAIL" verdicts to be recorded (in clause C.6 in the present document) strike the words "has or", otherwise strike the words "or has not".

E.3 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

Strike the appropriate words in this sentence.

E.4 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded (in clause C.6 of the present document) strike the words "did or" otherwise strike the words "or did not".
