**DECT**<sup>TM</sup>, **PLUGTESTS**<sup>TM</sup> and **UMTS**<sup>TM</sup> are Trade Marks of ETSI registered for the benefit of its Members. **TIPHON**<sup>TM</sup> and the **TIPHON logo** are Trade Marks currently being registered by ETSI for the benefit of its Members. **3GPP**<sup>TM</sup> is a Trade Mark of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners.

### Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key .

### Foreword

This Technical Specification (TS) has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The present document is part 3 of a multi-part TS covering the 3<sup>rd</sup> Generation Partnership Project: Technical Specification Group Services and System Aspects, as identified below:

- Part 1: "3G Fault Management Requirements";
- Part 2: "Alarm Integration Reference Point: Information Service";

#### Part 3: "Alarm Integration Reference Point: CORBA Solution Set";

Part 4: "Alarm Integration Reference Point: CMIP Solution Set".

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

### 1 Scope

The present document specifies the CORBA Solution Set (SS) for the IRP whose semantics is specified in Alarm IRP: Information Service (IS) (3G TS 32.111-2 [6]).

Clause 1 to 3 provides background information. Clause 4 provides key architectural features supporting the SS. Clause 5 defines the mapping of operations, notification, parameters and attributes defined in IS to their SS equivalents. Clause 6 describes the notification interface containing the push method. Annex A contains the IDL specification.

### 2 References

The following documents contain provisions, which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- [1] OMG TC Document telecom/98-11-01: "OMG Notification Service".
- [2] OMG CORBA Services: "Common Object Services Specification, Update: November 22, 1996" (Clause 4 contains the Event Service specification).
- [3] 3GPP TS 32.300: "Name Convention for Managed Objects".
- [4] 3GPP TS 32.302: "Notification IRP: Information Service".
- [5] 3GPP TS 32.303: "Notification IRP: CORBA Solution Set".
- [6] 3GPP TS 32.111-2: "Alarm Integration Reference Point: Information Service".

### 3 Definitions and abbreviations

### 3.1 Definitions

In addition to the terms and definitions defined in TS 32.111-2 [6], there are no additional definitions applicable to the present document.

#### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA	Common Object Request Broker Architecture
IDL	Interface Definition Language
IRP	Integration Reference Point
MOC	Managed Object Class
MOI	Managed Object Instance
NE	Network Element
OMG	Object Management Group
TMN	Telecommunications Management Network
UML	Unified Model Language

### 3.3 IRP document version number string

The IRP document version number (sometimes called "IRP version" or "version number") string is used to identify this specification. The string is derived using the following rule.

Take the 3GPP document number on the front page of this specification, such as "3GPP TS 32.106-3 V3.2.0 (2000-12)". Discard the leading "3GPP TS ". Discard all characters after and including the last period. Eliminate leading and trailing spaces. Reduce multiple consecutive spaces with one space. Express the resultant in a string. Capitalised the string. For example, if the 3GPP document version number is "3GPP TS 32.106-3 V3.2.0 (2000-12)", then the IRP document version number shall be "32.106 V3.2".

This string is returned in getAlarmIRPVersion method and is carried in the first field of the notification header of all notifications related to alarm IRP.

### 4 Architectural Features

The overall architectural feature of Alarm IRP is specified in 3G TS 32.111-2 [6]. This clause specifies features that are specific to the CORBA SS.

### 4.1 Notification Services

In implementations of CORBA SS, IRPAgent conveys Alarm Information to IRPManager via OMG Notification Service (OMG Notification Service [1]).

OMG Event Service [2] provides event routing and distribution capabilities. OMG Notification Service provides, in addition to Event Service, event filtering and Quality Of Service (QOS) as well.

A necessary and sufficient sub set of OMG Notification Services shall be used to support AlarmIRPNotifications notifications as specified in 3G TS 32.111-2 [6].

### 4.2 Push and Pull Style

OMG Notification Service defines two styles of interaction. One is called push style. In this style, IRPAgent pushes notifications to IRPManager as soon as they are available. The other is called pull style. In this style, IRPAgent keeps the notifications till IRPManager requests for them.

This CORBA SS specifies that support of Push style is Mandatory (M) and that support of Pull style is Optional (O).

### 4.3 Support multiple notifications in one push operation

For efficiency reasons, IRPAgent may send multiple notifications using one single push operation. To pack multiple notifications into one push operation, IRPAgent may wait and not invoke the push operation as soon as notifications are available. To avoid IRPAgent to wait for an extended period of time that is objectionable to IRPManager, IRPAgent shall implement an IRPAgent wide timer configurable by administrator. On expiration of this timer, IRPAgent shall invoke push if there is at least one notification to be conveyed to IRPManager. This timer is re-started after each push invocation.

#### 4.4 Filter

IRPAgent shall optionally support alarm filtering based on IRPManager's supplied alarm filter constraints (e.g., as parameter in subscribe() of 3G TS 32.302 [4]. Alarm filtering can be applied in the following cases:

• It is applicable to alarms emitted by IRPAgent via AlarmIRPNotifications. IRPManager supplies alarm filter constraint via the subscribe method. This filter is effective during the period of subscription.

- It is applicable to alarms returned by IRPAgent via the out parameter of get\_alarm\_list method. IRPManager supplies alarm filter constraint via the get\_alarm\_list method. This filter is effective only for this method invocation.
- It is applicable to the calculation of alarm counts returned by IRPAgent via the out parameters of get\_alarm\_count method. IRPManager supplies alarm filter constraint via the get\_alarm\_count method. This filter is effective only for this method invocation.

This SS shall use of filter constraint grammar specified by reference OMG Notification Service [1]. The name of the grammar is called "EXTENDED\_TCL". See clause 2.4, Default Filter Constraint Language in OMG Notification Service [1]. This SS shall use this grammar only.

### 5 Mapping

### 5.1 Operation and Notification mapping

Alarm IRP: IS 3G TS 32.111-2 [6] defines semantics of operation and notification visible across the Alarm IRP. Table 1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

IS Operation/ notification 3G TS 32.111-2 [13]	SS Method	Qualifier
acknowledgeAlarms	acknowledge_alarms	М
unacknowledgeAlarms	unacknowledge_alarms	0
getAlarmList	get_alarm_list	Μ
getIRPVersion	get_alarm_IRP_versions	Μ
getAlarmCount	get_alarm_count	0
setComment	comment_alarms	0
getOperationProfile	get_alarm_IRP_operations_profile	0
getNotificationProfile	get_alarm_IRP_notification_profile	0
notifyNewAlarm	push_structured_event Note that OMG Notification Service OMG Notification Service [1] defines this method. See clause 6.1	Μ
notifyClearedAlarm	push_structured_event See clause 6.1	М
notifyChangedAlarm	push_structured_event See clause 6.1	М
notifyAckStateChanged	push_structured_event See clause 6.1	М
notifyAlarmListRebuilt	push_structured_event See clause 6.1	Μ
notifyComments	push_structured_event See clause 6.1	0

#### Table 1: Mapping from IS Notification/Operation to SS equivalents

### 5.2 Operation parameter mapping

Reference 3G TS 32.111-2 [6] defines semantics of parameters carried in operations across the Alarm IRP. The following set of tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

IS Operation parameter	SS Method parameter	Qualifier
alarmInformationAndSeverity	AlarmIRPConstDefs::AlarmInformationIdAndSevSeq	Μ
ReferenceList	alarm_information_id_and_sev_list	
	Note: perceivedSeverity is optional	
	{ alarmId - Mandatory;	
	perceivedSeverity - Optional	
	}	
ackUserId	string ack_user_id	Μ
ackSystemId	string ack_system_id	0
bad AlarmInformation ReferenceList	AlarmIRPConstDefs::BadAcknowledgeAlarmInfoSeq	Μ

status	Exceptions:	Μ
	GetAlarmIRPNotificationProfile,	
	ManagedGenericIRPSystem::OperationNotSupported,	
	ManagedGenericIRPSystem::InvalidParameter	

### 5.3 Notification parameter mapping

Reference 3G TS 32.111-2 [6] defines semantics of parameters carried in notifications. The following tables indicate the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [1]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [1], is:

Header Fixed Header domain\_name type\_name event\_name Variable Header Body filterable\_body\_fields remaining\_body

The following tables list all OMG Structured Event attributes in the second column. The first column identifies the Alarm IRP: IS [6] defined notification parameters.

IS Parameters	Structured Event attribute	Qualifier	
There is no corresponding SS	domain_name		It carries the IRP document version number string. See sub-clause 3.3.
attribute.			It indicates the syntax and semantics of the Structured Event as defined by this specification.
notificationType	type_name	М	This is the NOTIFY_FM_NEW_ALARM of interface NotificationType of module AlarmIRPConstDefs.
alarmType	event_name	М	It identifies one of the following: communications alarm, processing error alarm, environmental alarm, quality of service alarm and equipment alarm.
			It is a string defined by interface AlarmType of module AlarmIRPConstDefs.
There is no corresponding SS attribute.	variable Header		
objectClass, objectInstance	One NV pair of filterable_ body_fields	Μ	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs.
			Value of NV pair is a string.
notification Id	One NV pair of filterable_ body_fields	М	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs.
eventTime	One NV pair of	M	Value of NV pair is a long. Name of NV pair is the EVENT_TIME of interface
eventrime	filterable_ body_fields		AttributeNameValue of module NotificationIRPConstDefs.
systemDN	One NV pair of filterable_ body_fields	М	ManagedGenericIRPConstDefs. Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs.
probableCause	One NV pair of	M	Value of NV pair is a string. Name of NV pair is the PROBABLE_CAUSE of interface
	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs. Value of NV pair is a short defined by interface ProbableCause of module AlarmIRPConstDefs.
perceivedSeverity	One NV pair of filterable_ body_fields	м	Name of NV pair is the PERCEIVED_SEVERITY of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a short defined by interface PerceivedSeverity of module AlarmIRPConstDefs.
specificProblem	One NV pair of filterable_ body_fields	0	Name of NV pair is the SPECIFIC_PROBLEM of interface AttributeNameValue of module AlarmIRPConstDefs.
correlatedNotifications	One NV pair of filterable_ body_fields	0	Value of NV pair is a string. Name of NV pair is the CORRELATED_NOTIFICATIONS of interface AttributeNameValue. Value of NV pair is a CorrelatedNotificationSetType of module
backedUpStatus	One NV pair of filterable_	0	AlarmIRPConstDefs. Name of NV pair is the BACKED_UP_STATUS of interface AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		Value of NV pair is a boolean BackedUpStatusType of module AlarmIRPConstDefs.
backUpObject	One NV pair of	0	Name of NV pair is the BACK_UP_OBJECT of interface

#### Table 10: Mapping for notifyNewAlarm

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a string carrying of DN of the back-up object. See 3G TS 32.300 [3] for the DN string representation.
trendIndication	One NV pair of filterable_ body_fields	0	Name of NV pair is the TREND_INDICATION of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is an enum TrendIndicationType of module AlarmIRPConstDefs.
thresholdInfo	One NV pair of filterable_ body_fields	0	Name of NV pair is the THRESHOLD_INFO of interface ParameterNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a ThresholdInfoType of module AlarmIRPConstDefs.
stateChange Definition	One NV pair of filterable_ body_fields	0	Name of NV pair is the STATE_CHANGE_DEFINITION of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is an AttributeChangeSetType of module AlarmIRPConstDefs.
monitoredAttributes	One NV pair of filterable_ body_fields	0	Name of NV pair is the MONITORED_ATTRIBUTES of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is an AttributeSetType of module AlarmIRPConstDefs.
proposedRepairActions	One NV pair of filterable_ body_fields	0	Name of NV pair is the PROPOSED_REPAIR_ACTIONS of interface AttributeNameValue of module AlarmIRPConstDefs.
		-	Value of NV pair is a string.
additionalText	One NV pair of filterable_body_fields	0	Name of NV pair is the ADDITIONAL_TEXT of interface AttributeNameValue of module AlarmIRPConstDefs.
	body_noide		Value of NV pair is a string.
alarmId	One NV pair of filterable_ body_fields	М	Name of NV pair is the ALARM_ID of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a string. If the string is a zero-length string or if this NV pair is absent, the default semantics is that alarmId is a concatenation of
			managedObjectInstance, eventType, probableCause and specificProblem, if present, of this Structured Event. Since probableCause is encoded as a short, it shall be converted into string before concatenation. The resultant string shall not contain spaces.
There is no corresponding IS attribute.	remaining_ body		

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name		See that of notifyNewAlarm.

There is no corresponding IS attribute.	domain_name		See that of notifyNewAlarm.
notificationType	type_name	Μ	This is the NOTIFY_FM_COMMENT_ADDED of interface NotificationType of module AlarmIRPConstDefs.
alarmType	event_name	М	See that of notifyNewAlarm.
There is no corresponding IS attribute.	variable Header		
objectClass, objectInstance	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
notification Id	One NV pair of filterable_body_fields	М	See that of notifyNewAlarm.
eventTime	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
systemDN	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
probableCause	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
perceived Severity	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
alarmId	One NV pair of filterable_ body_fields	М	See that of notifyNewAlarm.
comments	One NV pair of filterable_ body_fields	Μ	Name of NV pair is the COMMENTS of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a CommentSet of module AlarmIRPConstDefs.
There is no corresponding IS attribute.	remaining_ body		

#### Table 15: Mapping for notifyComments

### 6 AlarmIRPNotifications Interface

OMG CORBA Notification push operation is used to realise the notification of AlarmIRPNotifications. All the notifications in this interface are implemented using this push\_structured\_event method.

### 6.1 Method push (M)

```
module CosNotifyComm {
```

...

```
Interface SequencePushConsumer : NotifyPublish {
    void push_structured_events(
        in CosNotification::EventBatch notifications)
    raises( CosEventComm::Disconnected);
    ...
}; // SequencePushConsumer
```

```
}; // CosNotifyComm
```

....

- NOTE 1: The push\_structured\_events method takes an input parameter of type EventBatch as defined in the OMG CosNotification module (OMG Notification Service [1]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter will contain a sequence of Structured Events being delivered to IRPManager by IRPAgent to which it is connected.
- NOTE 2: The maximum number of events that will be transmitted within a single invocation of this operation is controlled by IRPAgent wide configuration parameter.
- NOTE 3: The amount of time the supplier (IRPAgent) of a sequence of Structured Events will accumulate individual events into the sequence before invoking this operation is controlled by IRPAgent wide configuration parameter as well.
- NOTE 4: IRPAgent may push EventBatch with only one Structured Event.

### Annex A (normative): IDL specification (file name "AlarmIRPConstDefs.idl")

```
#ifndef AlarmIRPConstDefs idl
#define AlarmIRPConstDefs idl
#include "CosNotification.idl"
#include "ManagedGenericIRPConstDefs.idl"
// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
/* ## Module: AlarmIRPConstDefs

  This string is used for the return value of
      get_alarm_IRP_versions().
  It is used as return value of get_notification_categories()
       if the Notification IRP supports the emission of notifications
      defined by this Alarm IRP version.
  It is also used in the domain_name attribute of a structured event
      carrying alarm information defined by this Alarm IRP version.
  See definition "IRP document version number string".
  const string ALARM_IRP_VERSION = "<to be updated using the rule>";
   /*
  This block identifies the alarm types specified for this IRP version.
  These types carry the same semantics as the TMN ITU-T defined event
  types of the same name.
  Their encodings for this version of Alarm IRP are defined here. Other IRP
  documents, or other versions of Alarm IRP, shall identify their own
  alarm types for their use. They shall define their encodings
  as well. Values defined here are unique among themselves.
