## A.8.3.10 E-UTRAN FDD-FDD Inter-frequency event triggered reporting with MGL=3ms under fading propagation conditions in synchronous cells

### A.8.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with MGL=3ms when Gap pattern configuration #2 is configured. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.3.10.1-1 and A.8.3.10.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 2 as defined in Table 8.1.2.1-1 is provided. Time offset between frame boundaries of two cells has to be chosen such that the #0 or #5 subframes of the target cell is 500uS early relative to the 2nd subframe of the measurement gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.3.10.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                   |
|--------------------------------------------|------|------------------------------------------|-------------------------------------------|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1          |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1          |
| E-UTRA RF Channel Number                   |      | 1, 2                                     | Two FDD carrier frequencies are used.     |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                           |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1          |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2          |
| Gap Pattern Id                             |      | 2                                        | As specified in TS 36.133 clause 8.1.2.1. |
| A3-Offset                                  | dB   | -6                                       |                                           |
| Hysteresis                                 | dB   | 0                                        |                                           |
| CP length                                  |      | Normal                                   |                                           |
| TimeToTrigger                              | s    | 0                                        |                                           |
| Filter coefficient                         |      | 0                                        | L3 filtering is not used                  |
| DRX                                        |      | OFF                                      | OFF                                       |

| Propagation Condition                                                                                                                                                                                                         |            | ETU70    |     |           |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                                 |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                 |            |          |     |           |     |

### A.8.3.10.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.11 E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells with burst gap

#### A.8.3.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3, when configured with the burst gap.

The test parameters are given in Table A.8.3.11.1-1 and A.8.3.11.1-2. In this test, there are two cells on different carrier frequencies and non-uniform gap pattern configuration #1 as defined in Table 8.1.2.1-2 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.3.11.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting with burst gap in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                                                                     |
|--------------------------------------------|------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                                                                                            |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                                                                                            |
| E-UTRA RF Channel Number                   |      | 1, 2                                     | Two FDD carrier frequencies are used.                                                                                       |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                                                                                             |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1                                                                                            |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2                                                                                            |
| Gap Pattern Id                             |      | nonUniform1                              | As specified in TS 36.133 clause 8.1.2.1.                                                                                   |
| A4 Hysteresis                              | dB   | 0                                        | Hysteresis for evaluation of event A4.                                                                                      |
| A4 Threshold RSRP                          | dBm  | -99                                      | Actual RSRP threshold for event A4. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin. |
| A4 Time To Trigger                         | s    | 0                                        |                                                                                                                             |

### A.8.3.11.2 Test Requirement

The UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. During the test, downlink traffic is continuously scheduled From the start of T1 until the measurement report is received during T2, at least [100]% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.12 E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeA

#### A.8.3.12.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.13.2.6.1.

The test parameters are given in Table A.8.3.12.1-1 and A.8.3.12.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

| Note 4:                                                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |           |        |           |        |

### A.8.3.12.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3.2 s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.13 E-UTRAN HD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeA

#### A.8.3.13.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the HD-FDD inter-frequency cell search requirements in clause 8.13.2.6.2.

The test parameters are given in Table A.8.3.13.1-1 and A.8.3.13.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

| Note 4:                                                | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |             |        |            |        |

### A.8.3.13.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3.2 s from the beginning of time period T2. During the test, downlink traffic is continuously scheduled.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to 2xTTI<sub>DCCH</sub> higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.14 E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeB

#### A.8.3.14.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.13.3.5.1.

The test parameters are given in Table A.8.3.14.1-1 and A.8.3.14.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

They are not settable parameters themselves.                                                           |                                                                   |        |                                                                   |        |
| Note 4:                                                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |                                                                   |        |                                                                   |        |

### A.8.3.14.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than [819.2] s from the beginning of time period T2 which is derived from section 8.13.3.5.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $pusch-maxNumRepetitionCEmodeB \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH, where  $pusch-maxNumRepetitionCEmodeB$  [2] is the maximum number of PUSCH repetitions configured

### A.8.3.15 E-UTRAN HD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeB

#### A.8.3.15.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the HD-FDD inter-frequency cell search requirements in clause 8.13.3.5.2.

The test parameters are given in Table A.8.3.15.1-1 and A.8.3.15.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

During the test, downlink traffic is continuously scheduled. MPDCCH is not collided with gap.

They are not settable parameters themselves.                                                   |                                                                       |        |                                                                        |        |
| Note 4:                                                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |                                                                       |        |                                                                        |        |

### A.8.3.15.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 819.2 s from the beginning of time period T2 which is derived from section 8.13.3.5.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $pusch-maxNumRepetitionCEmodeB \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH, where  $pusch-maxNumRepetitionCEmodeB$  [2] is the maximum number of PUSCH repetitions configured

### A.8.3.16 E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeA when DRX is used

#### A.8.3.16.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event for inter-frequency. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.13.2.6.1.

The test parameters are given in Table A.8.3.16.1-1, A.8.3.16.1-3 and A.8.3.16.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

### A.8.3.16.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6.4 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 51.2 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.3.17 E-UTRAN HD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeA in DRX

### A.8.3.17.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event. This test will partly verify the HD-FDD inter-frequency cell search requirements in clause 8.13.2.6.2.

The test parameters are given in Table A.8.3.17.1-1, A.8.3.17.1-2, A.8.3.17.1-3 and A.8.3.13.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

Table A.8.3.17.1-1: General test parameters

| Parameter                |                 | Unit | Value    |       | Comment                                          |

### A.8.3.17.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6.4 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 51.2 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the r

## A.8.3.18 E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeB in DRX

### A.8.3.18.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.13.3.5.1.

The test parameters are given in Table A.8.3.18.1-1, A.8.3.18.1-2, A.8.3.18.1-3 and A.8.3.18.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

Table A.8.3.18.1-1: General test parameters

| Parameter                |                 | Unit | Value    |       | Comment                                          |

### A.8.3.18.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 641.6 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1024 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.3.19 E-UTRAN HD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeB in DRX

#### A.8.3.19.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event. This test will partly verify the HD-FDD inter-frequency cell search requirements in clause 8.13.3.5.2.

The test parameters are given in Table A.8.3.19.1-1, A.8.3.19.1-2, A.8.3.19.1-3 and A.8.3.19.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.3.19.1-1: General test parameters**

| Parameter                |                 | Unit | Value    |       | Comment                                          |

### A.8.3.19.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 641.6 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1024 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.4 E-UTRAN TDD - TDD Inter-frequency Measurements

### A.8.4.1 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells

#### A.8.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.1.1-1 and A.8.4.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.1.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                        |

| Propagation Condition                                                                                                                                                                                                  |            | ETU70    |     |           |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |     |           |     |

### A.8.4.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2 E-UTRAN TDD-TDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in synchronous cells

### A.8.4.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These test will partly verify the TDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The common test parameters are given in Tables A.8.4.2.1-1 and A.8.4.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.4.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.4.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.2.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment                                                                                    |
|--------------------------------------------|------|------------------------------------------|--------|--------------------------------------------------------------------------------------------|
|                                            |      | Value                                    |        |                                                                                            |
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 TDD |        | As specified in clause A.3.1.1.2. Note that UE may only be allocated at <i>On Duration</i> |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 TDD |        | As specified in clause A.3.1.2.2.                                                          |

### A.8.4.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.4.3 E-UTRAN TDD-TDD inter-frequency event triggered reporting under AWGN propagation conditions in synchronous cells with DRX when L3 filtering is used

#### A.8.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX when L3 filtering is used. This test will partly verify the TDD-TDD inter-frequency cell search in DRX requirements in clause 8.1.2.3.2.2 and the UE behaviour with the filterCoefficient defined in TS 36.331 [2].

The test parameters are given in Tables A.8.4.3.1-1, A.8.4.3.1-2, A.8.4.3.1-3 and A.8.4.3.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and the filter coefficient is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 1 as defined in Table 8.1.2.1-1 is provided.

The uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.4.3.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting under AWGN propagation conditions with DRX when L3 filtering is used**

| Parameter                                   | Unit          | Value                                    | Comment                                                 |
|---------------------------------------------|---------------|------------------------------------------|---------------------------------------------------------|
| PDSCH parameters                            |               | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                        |
| PCFICH/PDCCH/PHICH parameters               |               | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                        |
| Active cell                                 |               | Cell 1                                   |                                                         |
| Neighbour cell                              |               | Cell 2                                   | Cell to be identified.                                  |
| E-UTRA RF Channel Number                    |               | 1, 2                                     | Two TDD carrier frequencies are used.                   |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz           | 10                                       |                                                         |
| Time offset between cells                   | $\mu\text{s}$ | 3                                        | synchronous cells                                       |
| Gap Pattern Id                              |               | 1                                        | As specified in TS 36.133 clause 8.1.2.1.               |
| Uplink-downlink configuration of cells      |               | 1                                        | As specified in table 4.2.2 in TS 36.211                |
| Special subframe configuration of cells     |               | 6                                        | As specified in table 4.2.1 in TS 36.211                |
| Neighbour A3-Offset Ofn                     | dB            | -14                                      |                                                         |
| CP length                                   |               | Normal                                   |                                                         |
| Hysteresis                                  | dB            | 0                                        |                                                         |
| Time To Trigger                             | s             | 0                                        |                                                         |

### A.8.4.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

#### A.8.4.4 E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

##### A.8.4.4.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.7.

The test scenario comprises of two E-UTRA TDD carriers and one cell on each carrier as given in tables A.8.4.4.1-1 and A.8.4.4.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.4.4.1-1: General test parameters for E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                                   | Unit          | Value                                    | Comment                                                                        |
|---------------------------------------------|---------------|------------------------------------------|--------------------------------------------------------------------------------|
| PDSCH parameters                            |               | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                                               |

| Propagation Condition                                                                                                                                                                                                  |            | AWGN     |          |          |           |          |          |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |          |          |           |          |          |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |          |          |           |          |          |
| Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |          |          |           |          |          |

#### A.8.4.4.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI, inter}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 42 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 42 ACK/NACK number is caused by two parts. Firstly, at least 30 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.7.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 12 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.4.5 E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX

### A.8.4.5.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.7. The requirement is verified in a DRX configuration.

The test scenario comprises of two E-UTRA TDD carriers and one cell on each carrier as given in tables A.8.4.5.1-1, A.8.4.5.1-2, A.8.4.5.1-3 and A.8.4.5.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.4.5.1-1: General test parameters for E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX**

| Parameter                                   | Unit          | Value                                    | Comment                                                                        |
|---------------------------------------------|---------------|------------------------------------------|--------------------------------------------------------------------------------|
| PDSCH parameters                            |               | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                                               |
| PCFICH/PDCCH/PHICH parameters               |               | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                                               |
| E-UTRA RF channel number                    |               | 1, 2                                     | Two TDD carrier frequencies are used.                                          |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz           | 10                                       |                                                                                |
| Active cell                                 |               | Cell 1                                   | Cell 1 is on RF channel number 1.                                              |
| Neighbour cell                              |               | Cell 2                                   | Cell 1 is on RF channel number 2.                                              |
| CP length                                   |               | Normal                                   |                                                                                |
| Special subframe configuration              |               | 6                                        | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells |
| Uplink-downlink configuration               |               | 1                                        | As specified in table 4.2-2 in TS 36.211. The same configuration in both cells |
| Gap Pattern Id                              |               | 0                                        | As specified in TS 36.133 clause 8.1.2.1.                                      |

### A.8.4.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, inter}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.4.6 E-UTRAN TDD-TDD Inter-frequency event triggered reporting for TDD UL/DL configuration 0

#### A.8.4.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.6.1-1 and A.8.4.6.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

| $N_{\text{oc}}$ <sup>Note 3</sup>            | dBm/15 kHz | -98      |     |           |     |
| RSRP <sup>Note 4</sup>                       | dBm/15 kHz | -94      | -94 | -Infinity | -91 |
| SCH_RP <sup>Note 4</sup>                     | dBm/15 kHz | -94      | -94 | -infinity | -91 |
| $\hat{E}_s/N_{\text{oc}}$                    | dB         | 4        | 4   | -Infinity | 7   |
| Propagation Condition                        |            | ETU70    |     |           |     |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{\text{oc}}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.8.4.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7920 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.7 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for Increased Carrier Monitoring without Reduced Performance Group

#### A.8.4.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.1.1-1 and A.8.4.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cells 2, 3 or 4.

**Table A.8.4.7.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |                            |                                                                                          |                                             |                                                                                          |                                         |
| Note 2: The resources for uplink transmission are assigned to the UE priori to the start of time period T2.                                                                                                            |                            |                                                                                          |                                             |                                                                                          |                                         |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                            |                                                                                          |                                             |                                                                                          |                                         |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |                            |                                                                                          |                                             |                                                                                          |                                         |

### A.8.4.7.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 61.44s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.8 TDD-TDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.4.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell measurement requirements for increased UE carrier monitoring in clause 8.1.2.3.

The test parameters are given in Tables A.8.4.8.1-1, A.8.4.8.1-2 and A.8.4.8.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.4.8.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events A3 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

| Note 5:                                                                                             | Es/Iot, RSRP, SCH_RP and Io have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                            |                                                                                       |                                             |                                                                                                                                               |                                             |

#### A.8.4.8.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.17s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

#### A.8.4.9 TDD-TDD Inter-frequency correct reporting of measurement events with reduced performance group configured, DRX

##### A.8.4.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX. This test will partly verify the TDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The test parameters are given in Tables A.8.4.9.1-1, A.8.4.9.1-2, A.8.4.9.1-3 and A.8.4.9.1-4. In this test, there are four cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle..

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells on different frequencies which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.4.9.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting for IncMon**

| Parameter                                    | Unit | Value              | Comment                                                                                                                                                                                                                                                         |
|----------------------------------------------|------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UE configured E-UTRA RF Channel Number       |      | 1, 2,3,4,5,6,7,8,9 | Serving cell and eight TDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6,7,8 and 9 are indicated to have reduced performance                                                                                                      |
| Test equipment configuration                 |      | Cell 1,2,3,4       | Cell 1 uses E-UTRA RF channel number 1<br>Cells 2 are randomly selected to use different frequencies selected from E-UTRA frequencies 2, 3, 4.<br>Cells 3, 4 are randomly selected to use different frequencies selected from E-UTRA frequencies 5, 6, 7, 8, 9. |
| Active cell                                  |      | Cell 1             | Cell 1 is on RF channel number 1                                                                                                                                                                                                                                |
| Neighbour cells                              |      | Cell 2,3,4         |                                                                                                                                                                                                                                                                 |

- |         |                                                                                                                                                                                                                |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |
| Note 2: | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |
| Note 3: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 4: | $E_s/I_{ot}$ , RSRP, SCH_RP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                    |

## A.8.4.9.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.2s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

Where:

When DRX cycle is 160ms, the delay requirement of cell identification and measurement period are specified in section 8.1.2.3.1.2 and Non DRX Requirements in clause 8.1.2.3.1.1 are applicable.

The requirement of inter frequency cell identification delay are specified as

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},n} \cdot K_n \quad \text{ms (normal performance) and}$$

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},r} \cdot K_r \quad \text{ms (reduced performance)}$$

$T_{\text{Basic\_Identify\_inter}}$  480ms, See section 8.1.2.3.1.1

$T_{\text{Inter1}}$  60ms, See section 8.1.2.1

$N_{\text{freq},n}$  and  $N_{\text{freq},r}$  3 and 5 set in this test case.

$K_n$  and  $K_r$  8/7 and 8, See section 8.1.2.1.1a.

This gives 13165.7ms for cells 2 on normal carrier, and 153600ms for cell 3 and cell 4 on reduced carriers for Event A3 triggered measurement reporting delay. The test requirements allow 13.2s and 153.6s.

## A.8.4.10 E-UTRAN TDD-TDD Inter-frequency event triggered reporting with MGL=3ms under fading propagation conditions in synchronous cells

### A.8.4.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with MGL=3ms when Gap pattern configuration #3 is configured. Time offset between frame boundaries of two cells has to be chosen such that the #0 or #5

subframes of the target cell is 500µs early relative to the 2nd subframe of the measurement gap. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.10.1-1 and A.8.4.10.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used and gap pattern configuration # 3 as defined in Table 8.1.2.1-1 is provided. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.10.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                        |

| Propagation Condition                                                                                                                                                                                                  |            | ETU70    |     |           |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |     |           |     |

### A.8.4.10.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.11 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells with burst gap

#### A.8.4.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2, when configured with the burst gap.

The test parameters are given in Table A.8.4.11.1-1 and A.8.4.11.1-2 below, including non-uniform gap pattern configuration #1 in Table 8.1.2.1-2. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is

used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.11.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting with burst gap in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                                                                     |
|--------------------------------------------|------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                                                                                            |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                                                                                            |
| Gap Pattern Id                             |      | nonUniform1                              | As specified in TS 36.133 clause 8.1.2.1.                                                                                   |
| Special subframe configuration             |      | 6                                        | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells                                              |
| Uplink-downlink configuration              |      | 1                                        | As specified in TS 36.211 clause 4.2 Table 4.2-2                                                                            |
| CP length                                  |      | Normal                                   |                                                                                                                             |
| E-UTRA RF Channel Number                   |      | 1, 2                                     | Two TDD carrier frequencies are used.                                                                                       |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |     |           |     |

### A.8.4.11.2 Test Requirement

The UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. During the test, downlink traffic is continuously scheduled. From the start of T1 until the measurement report is received during T2, at least [100]% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.12 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeA

#### A.8.4.12.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.13.2.6.3.

The test parameters are given in Table A.8.4.12.1-1 and A.8.4.12.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

**Table A.8.4.12.1-1: General test parameters**

| Parameter                      |                 | Unit | Value    | Comment                                                                        |

| Note 4:                                                | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |           |        |           |        |

### A.8.4.12.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3.2 s from the beginning of time period T2. During the test, downlink traffic is continuously scheduled.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.13 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 with discontinuous MPDCCH monitoring in CEModeB

#### A.8.4.13.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.13.3.5.3.

The test parameters are given in Table A.8.4.13.1-1 and A.8.4.13.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

### A.8.4.13.2 Test Requirement

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 819.2 s from the beginning of time period T2, which is derived from section 8.13.3.5.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $pusch-maxNumRepetitionCEmodeB \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH, where  $pusch-maxNumRepetitionCEmodeB$  [2] is the maximum number of PUSCH repetitions configured

## A.8.4.14 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeA in DRX

### A.8.4.14.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.13.2.6.3.

The test parameters are given in Table A.8.4.14.1-1, A.8.4.14.1-2, A.8.4.14.1-3 and A.8.4.14.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.4.14.1-1: General test parameters**

| Parameter                      |                 | Unit | Value    |       | Comment                                                                        |
|--------------------------------|-----------------|------|----------|-------|--------------------------------------------------------------------------------|
|                                |                 |      | Test1    | Test2 |                                                                                |

### A.8.4.14.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6.4 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 51.2 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the r

### A.8.4.15 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category M1 in CEModeB in DRX

#### A.8.4.15.1 Test Purpose and Environment

The purpose of this test is to verify that the Cat-M1 UE makes correct reporting of an event with discontinuous MPDCCH monitoring. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.13.3.5.3.

The test parameters are given in Table A.8.4.15.1-1, A.8.4.15.1-2, A.8.4.15.1-3 and A.8.4.15.1-4 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. At the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, and due to usage of an offset this shall result in reporting of Event A3.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

Table A.8.4.15.1-1: General test parameters

| Parameter                      |                 | Unit | Value      |             | Comment                                                                           |

## A.8.4.15.2 Test Requirement

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 641.6 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1024 s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.5 E-UTRAN FDD - UTRAN FDD Measurements

### A.8.5.1 E-UTRAN FDD - UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.1.1-1, A.8.5.1.1-2 and A.8.5.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.1.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter                                         | Unit | Value                                    | Comment                                                    |
|---------------------------------------------------|------|------------------------------------------|------------------------------------------------------------|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                          |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                          |
| Gap Pattern Id                                    |      | 1                                        | As specified in TS 36.133 clause 8.1.2.1.                  |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                   |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                     |
| CP length                                         |      | Normal                                   | Applicable to cell 1                                       |
| E-UTRA RF Channel Number                          |      | 1                                        | One E-UTRA FDD carrier frequency is used.                  |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                            |
| UTRA RF Channel Number                            |      | 1                                        | One UTRA FDD carrier frequency is used.                    |
| Inter-RAT (UTRA FDD) measurement quantity         |      | CPICH Ec/Io                              |                                                            |
| b1-Threshold-UTRA                                 | dB   | -18                                      | CPICH Ec/Io threshold for event B1.                        |
| Hysteresis                                        | dB   | 0                                        |                                                            |
| Time To Trigger                                   | ms   | 0                                        |                                                            |
| Filter coefficient                                |      | 0                                        | L3 filtering is not used.                                  |
| DRX                                               |      | OFF                                      |                                                            |
| Monitored UTRA FDD cell list size                 |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |

| Note 1: The DPCH level is controlled by the power control loop.                                                        |  |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ . |  |              |                 |      |
| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.                                             |  |              |                 |      |

### A.8.5.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.5.2 E-UTRAN FDD - UTRAN FDD SON ANR cell search reporting under AWGN propagation conditions

### A.8.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of the strongest UTRAN cell for SON automatic neighbour relations. This test will partly verify the E-UTRAN FDD - UTRAN FDD cell search requirements for identification of a new UTRA FDD cell for SON given in clause 8.1.2.4.7.1.

The test parameters are given in Tables A.8.5.2.1-1, A.8.5.2.1-2 and A.8.5.2.1-3 below. In the measurement control information it is indicated to the UE that periodical reporting with the purpose 'reportStrongestCellsForSON' is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior to the start of time period T1, an interRATperiodic measurement reporting configuration with purpose reportStrongestCellsForSON is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.2.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD cell search reporting for SON ANR in AWGN propagation conditions**

| Parameter                                         | Unit | Value                                    | Comment                                                                                                                                                                                                               |

| Propagation Condition                                                                                                  |  |              | AWGN      |       |
| Note 1: The DPCH level is controlled by the power control loop.                                                        |  |              |           |       |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ . |  |              |           |       |

### A.8.5.2.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.5.3 E-UTRAN FDD-UTRAN FDD event triggered reporting when DRX is used under fading propagation conditions

#### A.8.5.3.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN FDD-UTRAN FDD cell search requirements when DRX is used in clause 8.1.2.4.1.2.

In these tests, there are two cells, one E-UTRAN cell and one UTRAN cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.5.3.1-1. Cell specific test parameters are given in Table A.8.5.3.1-2 for E-UTRAN and in Table A.8.5.3.1-5 for UTRAN. DRX configuration for Test1 and Test2 are given in Table A.8.5.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.5.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.3.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                                         | Unit | Test 1                                   | Test 2 | Comment                                                                                   |
|---------------------------------------------------|------|------------------------------------------|--------|-------------------------------------------------------------------------------------------|
|                                                   |      | Value                                    |        |                                                                                           |
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD |        | As specified in clause A.3.1.1.1 Note that UE may only be allocated at <i>On Duration</i> |

### A.8.5.3.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 2400 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE sends the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report.

### A.8.5.4 E-UTRAN FDD - UTRAN FDD enhanced cell identification under AWGN propagation conditions

#### A.8.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN cells. This test will partly verify the Enhanced UTRA FDD cell identification requirements in clause 8.1.2.4.1.1a.

The test parameters are given in Tables A.8.5.4.1-1, A.8.5.4.1-2 and A.8.5.4.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of the T2

**Table A.8.5.4.1-1: General test parameters for E-UTRAN FDD - UTRAN FDD enhanced cell identification under AWGN propagation conditions**

| Parameter                                          | Unit | Value                                    | Comment                                                   |
|----------------------------------------------------|------|------------------------------------------|-----------------------------------------------------------|
| PDSCH parameters (E-UTRAN FDD)                     |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                         |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)        |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                         |
| Gap Pattern Id                                     |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.                 |
| Active cell                                        |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                  |
| Neighbour cell                                     |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                    |
| CP length                                          |      | Normal                                   | Applicable to cell 1                                      |
| E-UTRA RF Channel Number                           |      | 1                                        | One E-UTRA FDD carrier frequency is used.                 |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |                                                           |

| PICH Ec/Ior                                                                                                      | dB           | -15    |      |
| DPCH Ec/Ior                                                                                                      | dB           | N/A    |      |
| OCNS                                                                                                             |              | -0.941 |      |
| $\hat{I}_{or}/I_{oc}$                                                                                            | dB           | -∞     | 0.02 |
| $I_{oc}$                                                                                                         | dBm/3.84 MHz | -70    |      |
| CPICH Ec/Io <sup>Note 3</sup>                                                                                    | dB           | -∞     | -13  |
| Propagation Condition                                                                                            |              | AWGN   |      |
| Note 1: The DPCH level is controlled by the power control loop.                                                  |              |        |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to Ior. |              |        |      |
| Note 3: This gives an SCH Ec/Io of -15dB                                                                         |              |        |      |

## A.8.5.4.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 960 ms from the beginning of time period T2. The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH

## A.8.5.5 E-UTRAN FDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps

### A.8.5.5.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of UTRA cell with autonomous gaps in clause 8.1.2.4.17.

The test parameters are given in Tables A.8.5.5.1-1, A.8.5.5.1-2 and A.8.5.5.1-3 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B1. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

|                                                                                                                               |              | T1        | T2   |
| UTRA RF Channel Number                                                                                                        |              | 1         |      |
| CPICH Ec/lor                                                                                                                  | dB           | -10       |      |
| PCCPCH Ec/lor                                                                                                                 | dB           | -12       |      |
| SCH Ec/lor                                                                                                                    | dB           | -12       |      |
| PICH Ec/lor                                                                                                                   | dB           | -15       |      |
| DPCH Ec/lor                                                                                                                   | dB           | N/A       |      |
| OCNS                                                                                                                          |              | -0.941    |      |
| $\hat{I}_{or}/I_{oc}$                                                                                                         | dB           | $-\infty$ | 0.02 |
| $I_{oc}$                                                                                                                      | dBm/3.84 MHz | -70       |      |
| CPICH Ec/Io <sup>Note 3</sup>                                                                                                 | dB           | $-\infty$ | -13  |
| Propagation Condition                                                                                                         |              | AWGN      |      |
| Note 1: The DPCH level is controlled by the power control loop.                                                               |              |           |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |           |      |
| Note 3: This gives an SCH Ec/Io of -15dB                                                                                      |              |           |      |

### A.8.5.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within [1965] milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, UTRAN FDD}}$  + reporting delay

= 50 + [630]+40\*32 + 2ms from the start of T3

= [1962] ms, allow [1965] ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.5.6 E-UTRAN FDD - UTRAN FDD event triggered reporting without measurement gaps under AWGN propagation conditions

#### A.8.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event without measurement gaps. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.6.1-1, A.8.5.6.1-2 and A.8.5.6.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. PDCCH on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.5.6.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting without measurement gaps under AWGN propagation conditions**

| Parameter                                          | Unit | Value                                    | Comment                                                    |
|----------------------------------------------------|------|------------------------------------------|------------------------------------------------------------|
| PDSCH parameters (E-UTRAN FDD)                     |      | DL Reference Measurement Channel R.3 FDD | As specified in clause A.3.1.1.1.                          |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)        |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                          |
| Active cell                                        |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                   |
| Neighbour cell                                     |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                     |
| CP length                                          |      | Normal                                   | Applicable to cell 1                                       |
| E-UTRA RF Channel Number                           |      | 1                                        | One E-UTRA FDD carrier frequency is used.                  |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |                                                            |
| UTRA RF Channel Number                             |      | 1                                        | One UTRA FDD carrier frequency is used.                    |
| Inter-RAT (UTRA FDD) measurement quantity          |      | CPICH Ec/Io                              |                                                            |
| b1-Threshold-UTRA                                  | dB   | -18                                      | CPICH Ec/Io threshold for event B1.                        |
| Hysteresis                                         | dB   | 0                                        |                                                            |
| Time To Trigger                                    | ms   | 0                                        |                                                            |
| Filter coefficient                                 |      | 0                                        | L3 filtering is not used.                                  |
| DRX                                                |      | OFF                                      |                                                            |
| Monitored UTRA FDD cell list size                  |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |
| T1                                                 | s    | 5                                        |                                                            |
| T2                                                 | s    | 6                                        |                                                            |

**Table A.8.5.6.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for event triggered reporting of UTRAN FDD cell without measurement gaps under AWGN propagation conditions**

| Parameter                                      | Unit                                                                                                                                                  | Cell 1    |     |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----|
|                                                |                                                                                                                                                       | T1        | T2  |
| E-UTRA RF Channel Number                       |                                                                                                                                                       | 1         |     |
| BW <sub>channel</sub>                          | MHz                                                                                                                                                   | 10        |     |
| OCNG Pattern defined in A.3.2.1.10 (OP.10 FDD) |                                                                                                                                                       | OP.10 FDD |     |

| PICH Ec/Ior            | dB                                                                                                      | -15       |      |
| DPCH Ec/Ior            | dB                                                                                                      | N/A       |      |
| OCNS                   |                                                                                                         | -0.941    |      |
| $\hat{I}_{or}/I_{oc}$  | dB                                                                                                      | -Infinity | -1.8 |
| $I_{oc}$               | dBm/3.84 MHz                                                                                            | -70       |      |
| CPICH Ec/Io            | dB                                                                                                      | -Infinity | -14  |
| Propagation Condition  |                                                                                                         | AWGN      |      |
| Note 1:                | The DPCH level is controlled by the power control loop.                                                 |           |      |
| Note 2:                | The power of the OCNS channel that is added shall make the total power from the cell to be equal to Ior |           |      |

### A.8.5.6.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall send continuous ACK/NACK throughout the test, and from the start of T2 until Event B1 is reported, at least 85% ACK/NACK shall be detected.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.5.7 E-UTRAN FDD - UTRAN FDD Event Triggered Reporting under Fading Propagation Conditions for 5 MHz Bandwidth

### A.8.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The parameters of this test are the same as defined in Section A.8.5.1.1 except that the values of the parameters in the Table A.8.5.7.1-1 will replace the values of the corresponding parameters in A.8.5.1.1-1, and the values of the parameters in the Table A.8.5.7.1-2 will replace the values of the corresponding parameters in A.8.5.1.1-2.

**Table A.8.5.7.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter                                                                   | Unit | Value                                     | Comment                           |
|-----------------------------------------------------------------------------|------|-------------------------------------------|-----------------------------------|
| PDSCH parameters (E-UTRAN FDD)                                              |      | DL Reference Measurement Channel R.5 FDD  | As specified in clause A.3.1.1.1. |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)                                 |      | DL Reference Measurement Channel R.11 FDD | As specified in clause A.3.1.2.1. |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )                                 | MHz  | 5                                         |                                   |
| NOTE 1: See Table A.8.5.1.1-1 for the other parameters.                     |      |                                           |                                   |
| NOTE 2: This test is according to the principle defined in Section A.3.7.2. |      |                                           |                                   |

**Table A.8.5.7.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for event triggered reporting of UTRAN FDD cell under fading propagation conditions**

| Parameter                                             | Unit | Cell 1    |    |
|-------------------------------------------------------|------|-----------|----|
|                                                       |      | T1        | T2 |
| BW <sub>channel</sub>                                 | MHz  | 5         |    |
| OCNG Pattern defined in A.3.2.1.15                    |      | OP.15 FDD |    |
| NOTE: See Table A.8.1.3.1-2 for the other parameters. |      |           |    |

### A.8.5.7.2 Test Requirements

The test requirements defined in Section A.8.5.1 shall apply to this test case.

## A.8.5.8 E-UTRA FDD InterRAT UTRA FDD correct reporting of measurement events with reduced performance group configured, non DRX

### A.8.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA FDD-UTRA FDD inter-RAT cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.8.1-1 and A.8.5.8.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.5.8.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD for correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                    | Unit | Value                                                                                                                                                      | Comment                                                                                                                                                           |

## A.8.5.8.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 7.68s (cell 2) and 115,2s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.6 E-UTRAN TDD - UTRAN FDD Measurements

### A.8.6.1 E-UTRAN TDD - UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- UTRAN FDD cell search requirements in clause 8.1.2.4.2.

The test parameters are given in Tables A.8.6.1.1-1, A.8.6.1.1-2 and A.8.6.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.6.1.1-1: General test parameters for E-UTRAN TDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter                                         | Unit | Value                                    | Comment                                                         |
|---------------------------------------------------|------|------------------------------------------|-----------------------------------------------------------------|
| PDSCH parameters (E-UTRAN TDD)                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.                               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD)       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.                               |
| Gap Pattern Id                                    |      | 1                                        | As specified in TS 36.133 clause 8.1.2.1.                       |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                        |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                          |
| Special subframe configuration                    |      | 6                                        | As specified in table 4.2-1 in TS 36.211. Applicable to cell 1. |
| Uplink-downlink configuration                     |      | 1                                        | As specified in table 4.2-2 in TS 36.211. Applicable to cell 1. |
| CP length                                         |      | Normal                                   | Applicable to cell 1.                                           |
| E-UTRA RF Channel Number                          |      | 1                                        | One E-UTRA TDD carrier frequency is used.                       |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                                 |
| UTRA RF Channel Number                            |      | 1                                        | One UTRA FDD carrier frequency is used.                         |
| Inter-RAT (UTRA FDD) measurement quantity         |      | CPICH Ec/Io                              |                                                                 |
| b1-Threshold-UTRA                                 | dB   | -18                                      | CPICH Ec/Io threshold for event B1.                             |
| Hysteresis                                        | dB   | 0                                        |                                                                 |
| Time To Trigger                                   | ms   | 0                                        |                                                                 |
| Filter coefficient                                |      | 0                                        | L3 filtering is not used.                                       |
| DRX                                               |      | OFF                                      |                                                                 |

| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.                                                    |  |              |                 |      |

### A.8.6.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.6.2 E- UTRAN TDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps

### A.8.6.2.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of UTRA cell with autonomous gaps in clause 8.1.2.4.18.

The test parameters are given in Tables A.8.6.2.1-1, A.8.6.2.1-2 and A.8.6.2.1-3 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B1. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.6.2.1-1: General test parameters for E-UTRAN TDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps**

| Parameter                                   | Unit   | Value                                    | Comment                                                         |
|---------------------------------------------|--------|------------------------------------------|-----------------------------------------------------------------|
| PDSCH parameters (E-UTRAN TDD)              |        | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.                               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD) |        | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.                               |
| Gap Pattern Id                              |        | 0                                        | As specified in TS 36.133 clause 8.1.2.1.                       |
| Active cell                                 |        | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                        |
| Neighbour cell                              |        | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                          |
| Special subframe configuration              |        | 6                                        | As specified in table 4.2-1 in TS 36.211. Applicable to cell 1. |
| Uplink-downlink configuration               |        | 1                                        | As specified in table 4.2-2 in TS 36.211. Applicable to cell 1. |
| CP length                                   |        | Normal                                   | Applicable to cell 1.                                           |
| E-UTRA RF Channel Number                    |        | 1                                        | One E-UTRA TDD carrier frequency is used.                       |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ ) | MHz    | 10                                       |                                                                 |
| UTRA RF Channel Number                      |        | 1                                        | One UTRA FDD carrier frequency is used.                         |

| Propagation Condition                                                                                                                                                                                                  |            | AWGN     |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |
| Note 4: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                     |            |          |     |

**Table A.8.6.2.1-3: Cell specific test parameters for cell #2 E-UTRAN TDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps**

| Parameter                                                                                                                     | Unit         | Cell 2    |      |
|-------------------------------------------------------------------------------------------------------------------------------|--------------|-----------|------|
|                                                                                                                               |              | T1        | T2   |
| UTRA RF Channel Number                                                                                                        |              | 1         |      |
| CPICH Ec/lor                                                                                                                  | dB           | -10       |      |
| PCCPCH Ec/lor                                                                                                                 | dB           | -12       |      |
| SCH Ec/lor                                                                                                                    | dB           | -12       |      |
| PICH Ec/lor                                                                                                                   | dB           | -15       |      |
| DPCH Ec/lor                                                                                                                   | dB           | N/A       |      |
| OCNS                                                                                                                          |              | -0.941    |      |
| $\hat{I}_{or}/I_{oc}$                                                                                                         | dB           | $-\infty$ | 0.02 |
| $I_{oc}$                                                                                                                      | dBm/3.84 MHz | -70       |      |
| CPICH Ec/Io <sup>Note 3</sup>                                                                                                 | dB           | $-\infty$ | -13  |
| Propagation Condition                                                                                                         |              | AWGN      |      |
| Note 1: The DPCH level is controlled by the power control loop.                                                               |              |           |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |           |      |
| Note 3: This gives an SCH Ec/Io of -15dB                                                                                      |              |           |      |

### A.8.6.2.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within [1965] milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, UTRAN FDD}}$  + reporting delay

= 50 + [630]+40\*32 + 2ms from the start of T3

= [1962] ms, allow [1965] ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.6.3 E-UTRA TDD InterRAT UTRA FDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA TDD-UTRA FDD inter-RAT cell search requirements in clause 8.1.2.4.2.

The test parameters are given in Tables A.8.6.3.1-1 and A.8.6.3.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.6.3.1-1: General test parameters for E-UTRAN TDD-UTRAN FDD for correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                    | Unit | Value                                                                                                                                                        | Comment                                                                                                                                                           |
|----------------------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### A.8.6.3.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 7.68s (cell 2) and 115,2s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.7 E-UTRAN TDD – UTRAN TDD Measurements

### A.8.7.1 E-UTRAN TDD to UTRAN TDD cell search under fading propagation conditions

#### A.8.7.1.1 Test Purpose and Environment

##### A.8.7.1.1.1 Void

##### A.8.7.1.1.2 1.28 Mcps TDD option

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA TDD to UTRA TDD cell search requirements in clause 8.1.2.4.3 under fading propagation conditions.

This test scenario comprised of 1 E-UTRA TDD PCell, and 1 UTRA TDD cell to be searched. Test parameters are given in Table A.8.7.1.1.2-1, A.8.7.1.1.2-2, and A.8.7.1.1.2-3. Gap pattern configuration #0 as defined in table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

| Propagation Condition                                                                                                  |              | Case 3 <sup>NOTE3</sup> |     |       |      |
| Note 1: In the case of multi-frequency cell, the UTRA RF Channel Number is the primary frequency's channel number.     |              |                         |     |       |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ . |              |                         |     |       |      |
| Note 3: Case 3 propagation conditions are defined in Annex B of TS 25.102                                              |              |                         |     |       |      |

A.8.7.1.1.3 Void

## A.8.7.1.2 Test Requirements

A.8.7.1.2.1 Void

A.8.7.1.2.2 1.28 Mcps TDD option

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.7.1.2.3 Void

## A.8.7.2 E-UTRAN TDD-UTRAN TDD cell search when DRX is used under fading propagation conditions

### A.8.7.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN TDD to UTRAN TDD inter-RAT cell search requirements when DRX is used in clause 8.1.2.4.3.2 under fading propagation conditions.

The common test parameters are given in Tables A.8.7.2.1-1, A.8.7.2.1-2 and A.8.7.2.1-3. DRX configuration for Test1 and Test2 are given in Table A.8.7.2.1-4 and time alignment timer and scheduling request related parameters in Table A.8.7.2.1-5. In these tests, there are two cells, 1 E-UTRAN TDD PCell and 1 UTRAN TDD cell to be searched, Gap pattern configuration # 0 as defined in table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignmend. Furhtermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.7.2.1-1: General test parameters for E-UTRAN TDD to UTRAN 1.28Mcps TDD cell search when DRX is used in fading propagation conditions**

| Parameter                      | Unit | Test 1                                   | Test 2 | Comment                                                                             |
|--------------------------------|------|------------------------------------------|--------|-------------------------------------------------------------------------------------|
|                                |      | Value                                    |        |                                                                                     |
| PDSCH parameters               |      | DL Reference Measurement Channel R.0 TDD |        | As specified in clause A.3.1.1.2. Note that UE may only be allocated at On Duration |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.6 TDD |        | As specified in clause A.3.1.2.2.                                                   |

## A.8.7.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 6400ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

### A.8.7.3 E-UTRAN TDD - UTRAN TDD SON ANR cell search reporting in AWGN propagation conditions

#### A.8.7.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of the strongest UTRAN TDD cell for SON automatic neighbour relations. This test will partly verify the E-UTRAN TDD - UTRAN TDD cell search requirements for identification of a new UTRA TDD cell for SON given in clause 8.1.2.4.13.

In the measurement control information it is indicated to the UE that periodical reporting with the purpose 'reportStrongestCellsForSON' is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior to the start of time period T1, an interRATperiodic measurement reporting configuration with purpose reportStrongestCellsForSON is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. During time duration T1, the UE shall not have any timing information of cell 2.

#### A.8.7.3.2 Test Parameters

The test parameters are given in Tables A.8.7.3.1-1, A.8.7.3.1-2 and A.8.7.3.1-3.

**Table A.8.7.3.1-1: General test parameters for E-UTRAN TDD-UTRAN TDD cell search reporting for SON ANR in AWGN propagation conditions**

| Note 1:                                 | PCCPCH RSCP and Io levels have been calculated from other parameters for information purposes. They are not settable parameters themselves. |           |       |        |       |
| Note 2:                                 | In the case of multi-frequency network of 1.28 Mcps TDD, the UTRA RF Channel Number can be set for the primary frequency in this test.      |           |       |        |       |

### A.8.7.3.3 Test Requirements

The UE shall send the first measurement report containing the physical cell identity of cell 2, with a measurement reporting delay less than 12800 ms from the beginning of time period T2.

The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.7.4 E-UTRAN TDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions

### A.8.7.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN TDD cells. This test will partly verify the Enhanced UTRA TDD cell identification requirements in clause 8.1.2.4.3.1.1a under AWGN propagation conditions.

The test parameters are given in Tables A.8.7.4.1-1, A.8.7.4.1-2 and A.8.7.4.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods of T1 and T2 respectively. During time period T1, measurement gaps are activated and an inter-RAT measurement reporting configuration is configured with linkage to a UTRA measurement object corresponding to UARFCN channel number 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of T2.

**Table A.8.7.4.1-1: General test parameters for E-UTRAN TDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions**

| Parameter                                   | Unit | Value                                    | Comment                                                   |
|---------------------------------------------|------|------------------------------------------|-----------------------------------------------------------|
| PDSCH parameters (E-UTRAN TDD)              |      | DL Reference Measurement Channel R.0 TDD | As specified in section A.3.1.1.2.                        |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD) |      | DL Reference Measurement Channel R.6 TDD | As specified in section A.3.1.2.2.                        |
| Gap Pattern Id                              |      | 0                                        | As specified in 3GPP TS 36.133 section 8.1.2.1.           |
| Active cell                                 |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                  |
| Neighbour cell                              |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                    |
| Time offset between cells                   | ms   | 3                                        | Asynchronous cells                                        |
| E-UTRA RF Channel Number                    |      | 1                                        | One E-UTRA TDD carrier frequency is used.                 |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10                                       |                                                           |
| CP length                                   |      | Normal                                   | Applicable to cell 1                                      |
| Uplink-downlink configuration of cell 1     |      | 1                                        | As specified in table 4.2.2 in TS 36.211                  |
| Special subframe configuration of cell 1    |      | 6                                        | As specified in table 4.2.1 in TS 36.211                  |
| UTRA RF Channel Number                      |      | 1                                        | One UTRA TDD carrier frequency is used.                   |
| Inter-RAT (UTRA TDD) measurement quantity   |      | P-CCPCH RSCP                             |                                                           |
| Thresh                                      | dBm  | -83                                      | Absolute P-CCPCH RSCP threshold for event B1              |
| Hysteresis                                  | dB   | 0                                        |                                                           |
| Time To Trigger                             | ms   | 0                                        |                                                           |
| Filter coefficient                          |      | 0                                        | L3 filtering is not used.                                 |
| DRX                                         |      | OFF                                      |                                                           |
| Monitored UTRA TDD cell list size           |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list |

### A.8.7.4.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 1120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct measurement reports observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH

### A.8.7.5 E-UTRA TDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.7.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- UTRAN TDD measurement requirements for increased UE carrier monitoring in clause 8.1.2.4.3.

The test parameters are given in Tables A.8.7.5.1-1, A.8.7.5.1-2 and A.8.7.5.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.7.5.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events B1 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 7 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

## A.8.7.5.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 21.95s (cell 2) and 204.8s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.7A TBD

### A.8.7A.1 E-UTRA FDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.7A.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN TDD measurement requirements for increased UE carrier monitoring in clause 8.1.2.4.4.

The test parameters are given in Tables A.8.7A.1.1-1, A.8.7A.1.1-2 and A.8.7A.1.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.7A.1.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events B1 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 7 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.7A.1.1-1: General test parameters for E-UTRA FDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                | Unit | Value                                                                                                                                           | Comment                                                                                                                                   |
|------------------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|

NOTE1: The DPCH of the cell is located in a timeslot other than 0.

NOTE2: Case 3 propagation conditions are specified in TS25.102 Annex B

NOTE3: PCCPCH\_RSRP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves

## A.8.7A.1.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 21.95s (cell 2) and 204.8s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.8 E-UTRAN FDD – GSM Measurements

### A.8.8.1 E-UTRAN FDD – GSM event triggered reporting in AWGN

#### A.8.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements. This test will partly verify the E-UTRAN FDD - GSM cell search requirements in clause 8.1.2.4.5.

The test parameters are given in Tables A.8.8.1.1-1, A.8.8.1.1-2 and A.8.8.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.8.1.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting in AWGN**

| Parameter                                         | Unit | Value                                    | Comment                                              |
|---------------------------------------------------|------|------------------------------------------|------------------------------------------------------|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                    |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                    |
| Gap Pattern Id                                    |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.            |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.             |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on Absolute RF Channel Number 1 (GSM cell) |
| CP length                                         |      | Normal                                   | Applicable to cell 1                                 |
| E-UTRA RF Channel Number                          |      | 1                                        | One E-UTRA FDD carrier frequency is used.            |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                      |
| Inter-RAT (GSM) measurement quantity              |      | GSM Carrier RSSI                         |                                                      |
| b1-Threshold-GERAN                                | dBm  | -80                                      | GSM Carrier RSSI threshold for event B1.             |
| Hysteresis                                        | dB   | 0                                        |                                                      |
| Time To Trigger                                   | ms   | 0                                        |                                                      |

| Note 1:                                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |          |     |
| Note 2:                                      | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                    |          |     |

**Table A.8.8.1.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFNC 1   |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.8.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 3120 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times 480\text{ms} = 960\text{ms}$ .

Initial BSIC identification delay = 2160 ms.

## A.8.8.2 E-UTRAN FDD-GSM event triggered reporting when DRX is used in AWGN

### A.8.8.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN FDD-GSM cell search requirements when DRX is used in clause 8.1.2.4.5.2.

In these tests, there are two cells, one E-UTRAN cell and one GSM cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.8.2.1-1. Cell specific test parameters are given in Table A.8.8.2.1-2 for E-UTRAN and in Table A.8.8.2.1-5 for GSM. DRX configuration for Test1 and Test2 are given in Table A.8.8.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.8.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.8.2.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting when DRX is used in AWGN**

| Parameter                                         | Unit | Test 1                                   | Test 2 | Comment                                                 |
|---------------------------------------------------|------|------------------------------------------|--------|---------------------------------------------------------|

| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

## A.8.8.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 42.8 seconds from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

### A.8.8.3 E-UTRAN FDD – GSM event triggered reporting in AWGN with enhanced BSIC identification

#### A.8.8.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements with enhanced BSIC identification. This test will partly verify the E-UTRAN FDD - GSM cell search requirements in clause 8.1.2.4.5.1.2a

The test parameters are given in Tables A.8.8.3.1-1, A.8.8.1.1-2 and A.8.8.3.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior time duration T1, the UE shall not have any timing information of cell 2. . During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a GSM measurement object including channel ARFCN 1. Cell 2 is powered up at the beginning of T2.

**Table A.8.8.3.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting in AWGN with enhanced BSIC identification**

| Parameter                                         | Unit | Value                                    | Comment                                                                         |
|---------------------------------------------------|------|------------------------------------------|---------------------------------------------------------------------------------|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                                               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                                               |
| Gap Pattern Id                                    |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.                                       |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                                        |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on Absolute RF Channel Number 1 (GSM cell)                            |
| CP length                                         |      | Normal                                   | Applicable to cell 1                                                            |
| E-UTRA RF Channel Number                          |      | 1                                        | One E-UTRA FDD carrier frequency is used.                                       |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                                                 |
| Inter-RAT (GSM) measurement quantity              |      | GSM Carrier RSSI                         |                                                                                 |

| Note 1:                                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |          |     |
| Note 2:                                      | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                    |          |     |

**Table A.8.8.3.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN with enhanced BSIC identification**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFCN 1   |       |
| RXLEV                      | dBm  | $-\infty$ | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.8.3.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 2280 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 2280 ms, which is the sum of the event triggered measurement reporting delay and the enhanced initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times 480\text{ms} = 960\text{ms}$ .

Initial BSIC identification delay = 1320 ms.

## A.8.9 E-UTRAN FDD - UTRAN TDD measurements

### A.8.9.1 E-UTRAN FDD - UTRAN TDD event triggered reporting in fading propagation conditions

#### A.8.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. The test will partly verify the E-UTRAN FDD - UTRAN TDD cell search requirements in clause 8.1.2.4.4 in fading environment.

The test parameters are given in Table A.8.9.1.1-1, A.8.9.1.1-2 and A.8.9.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.9.1.1-1: General test parameters for Event triggered reporting in fading propagation conditions**

| Parameter                      | Unit | Value                                    | Comment                                                                             |

### A.8.9.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 12800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.9.2 E-UTRAN FDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions

### A.8.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN cells. This test will partly verify the enhanced UTRA TDD cell identification requirements in clause 8.1.2.4.4 under AWGN propagation conditions.

This test scenario comprised of 1 E-UTRA FDD serving cell, and 1 UTRA TDD cell to be searched. Test parameters are given in Table A.8.9.2.1-1, A.8.9.2.1-2, and A.8.9.2.1-3. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of the T2.

| Propagation Condition                                                                                                                                                            |              | AWGN              |        |       |       |
| Note 1: In the case of multi-frequency cell, the UTRA RF Channel Number is the primary frequency's channel number.                                                               |              |                   |        |       |       |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ .                                                           |              |                   |        |       |       |
| Note 3: P-CCPCH RSRP, PCCPCH $E_c/I_o$ and DwPCH $E_c/I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |              |                   |        |       |       |

## A.8.9.2.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 1120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.10 E-UTRAN TDD – GSM Measurements

### A.8.10.1 E-UTRAN TDD – GSM event triggered reporting in AWGN

#### A.8.10.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements. This test will partly verify the E-UTRAN TDD - GSM cell search requirements in clause 8.1.2.4.6.

The test parameters are given in Tables A.8.10.1.1-1, A.8.8.1.1-2 and A.8.10.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.10.1.1-1: General test parameters for E-UTRAN TDD-GSM event triggered reporting in AWGN**

| Parameter                                         | Unit | Value                                    | Comment                                              |
|---------------------------------------------------|------|------------------------------------------|------------------------------------------------------|
| PDSCH parameters (E-UTRAN TDD)                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.                    |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD)       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.                    |
| Gap Pattern Id                                    |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.            |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.             |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on Absolute RF Channel Number 1 (GSM cell) |
| Special subframe configuration                    |      | 6                                        | As specified in table 4.2-1 in TS 36.211             |
| Uplink-downlink configuration                     |      | 1                                        | As specified in table 4.2-2 in TS 36.211             |
| CP length                                         |      | Normal                                   | Applicable to cell 1                                 |
| E-UTRA RF Channel Number                          |      | 1                                        | One E-UTRA TDD carrier frequency is used.            |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                      |
| Inter-RAT (GSM) measurement quantity              |      | GSM Carrier RSSI                         |                                                      |
| b1-Threshold-GERAN                                | dBm  | -80                                      | GSM Carrier RSSI threshold for event B1.             |
| Hysteresis                                        | dB   | 0                                        |                                                      |
| Time To Trigger                                   | ms   | 0                                        |                                                      |
| Filter coefficient                                |      | 0                                        | L3 filtering is not used.                            |
| DRX                                               |      | OFF                                      |                                                      |
| Monitored GSM cell list size                      |      | 6 GSM neighbours including ARFCN 1       | List of GSM cells provided before T2 starts.         |
| T1                                                | s    | 5                                        |                                                      |
| T2                                                | s    | 5                                        |                                                      |

**Table A.8.10.1.1-2: Cell specific test parameters for E-UTRAN TDD (cell # 1) for event triggered reporting of GSM cell in AWGN**

| Parameter                                                                                                                                                                                                              | Unit       | Cell 1   |     |

| Propagation Condition                                                                                                                                                                                                  |            | AWGN     |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |
| Note 4: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                     |            |          |     |

**Table A.8.10.1.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFNC 1   |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |
| Propagation Condition      |      | AWGN      |       |

### A.8.10.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including the valid BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 3120 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times 480\text{ms} = 960\text{ms}$ .

Initial BSIC identification delay = 2160 ms.

## A.8.10.2 E-UTRAN TDD-GSM event triggered reporting when DRX is used in AWGN

### A.8.10.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN TDD-GSM cell search requirements when DRX is used in clause 8.1.2.4.6.

In these tests, there are two cells, one E-UTRAN cell and one GSM cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.10.2.1-1. Cell specific test parameters are given in Table A.8.10.2.1-2 for E-UTRAN and in Table A.8.10.2.1-5 for GSM. DRX configuration for Test1 and Test2 are given in Table A.8.10.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.10.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.10.2.1-1: General test parameters for E-UTRAN TDD-GSM event triggered reporting when DRX is used in AWGN**

| Parameter                                         | Unit | Test 1                                   | Test 2 | Comment                                                                                    |

**Table A.8.10.2.1-5: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell when DRX is used in AWGN**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFNC 1   |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.10.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 42.8 seconds from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

## A.8.11 Monitoring of Multiple Layers

### A.8.11.1 Multiple E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions

#### A.8.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.11.1.1.1-1 and A.8.11.1.1.1-2. In this test, there are three cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 or cell 3.

**Table A. 8.11.1.1-1: General test parameters for Inter-frequency E-UTRA FDD – E-UTRA FDD and E-UTRA FDD cell search under fading**

| Parameter                                   | Unit | Value                                    | Comment                                                               |
|---------------------------------------------|------|------------------------------------------|-----------------------------------------------------------------------|
| PDSCH parameters                            |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                                      |
| PCFICH/PDCCH/PHICH parameters               |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                                      |
| E-UTRA RF Channel Number                    |      | 1, 2, 3                                  | Three FDD carrier frequencies are used.                               |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |                                                                       |
| Active cell                                 |      | Cell 1                                   | Cell 1 is on RF channel number 1                                      |
| Neighbour cell                              |      | Cell 2 and cell 3                        | Cell 2 is on RF channel number 2 and cell 3 is on RF channel number 3 |
| Gap Pattern Id                              |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.                             |
| A3-Offset                                   | dB   | -6                                       |                                                                       |
| Hysteresis                                  | dB   | 0                                        |                                                                       |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |           |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |           |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |     |           |     |           |     |

### A.8.11.1.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for both cell 2 and cell 3, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.11.2 E-UTRAN TDD – E-UTRAN TDD and E-UTRAN TDD Inter-frequency event triggered reporting under fading propagation conditions

### A.8.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of two events. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.11.2.1-1 and A.8.11.2.1-2. In this test, there are three cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

**Table A.8.11.2.1-1: General test parameters for E-UTRAN TDD - E-UTRAN TDD and E-UTRAN TDD Inter-frequency event triggered reporting under fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                        |
|--------------------------------------------|------|------------------------------------------|--------------------------------------------------------------------------------|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                                               |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                                               |
| Special subframe configuration             |      | 6                                        | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells |
| Uplink-downlink configuration              |      | 1                                        | As specified in TS 36.211 clause 4.2 Table 4.2-2                               |
| E-UTRA RF Channel Number                   |      | 1, 2, 3                                  | Three TDD carrier frequencies are used.                                        |

| <div>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</div> <div>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</div> <div>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</div> <div>Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</div> |            |          |     |          |     |          |     |

### A.8.11.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2 with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event A3 triggered measurement report for cell 3 with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.11.3 E-UTRAN FDD-FDD Inter-frequency and UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.11.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter frequency and UTRAN FDD measurements. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3 and the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.11.3.1-1, A.8.11.3.1-2 and A.8.11.3.1-3. In this test, there are two cells on different carrier frequencies and one cell on UTRAN carrier frequency and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

**Table A.8.11.3.1-1: General test parameters for Combined inter-frequency and UTRAN event triggered reporting in fading propagation conditions**

| Parameter                                      | Unit | Value                                    | Comment                                                                            |

| PCCPCH $E_c/I_{or}$                                                                                                    | dB           | -12             |      |
| SCH $E_c/I_{or}$                                                                                                       | dB           | -12             |      |
| PICH $E_c/I_{or}$                                                                                                      | dB           | -15             |      |
| DPCH $E_c/I_{or}$                                                                                                      | dB           | N/A             |      |
| OCNS                                                                                                                   |              | -0.941          |      |
| $\hat{I}_{or}/I_{oc}$                                                                                                  | dB           | -Infinity       | -1.8 |
| $I_{oc}$                                                                                                               | dBm/3.84 MHz | -70             |      |
| CPICH $E_c/I_o$                                                                                                        | dB           | -Infinity       | -14  |
| Propagation Condition                                                                                                  |              | Case 5 (Note 3) |      |
| Note 1: The DPCH level is controlled by the power control loop.                                                        |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ . |              |                 |      |
| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.                                             |              |                 |      |

### A.8.11.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.11.4 InterRAT E-UTRA TDD to E-UTRA TDD and UTRA TDD cell search test case

#### A.8.11.4.1 Test Purpose and Environment

This test is to verify that the UE makes correct reporting of an event when doing inter frequency measurements and UTRA TDD measurements. The test will partly verify the requirements in clause 8.1.2.3.2 combined 8.1.2.4.3 under fading propagation conditions.

This test scenario comprised of 2 E-UTRA TDD cells operating on different frequency, and 1 UTRA TDD cell. Test parameters are given in table A.8.11.4.1-1, A.8.11.4.1-2, and A.8.11.4.1-3. Gap pattern configuration #0 as defined in clause 8.1.2.1 is provided.

The test consists of 2 successive time periods, with time duration T1 and T2. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 and B2 shall be used.

**Table A.8.11.4.1-1: General test parameters for combined E-UTRA TDD inter-frequency and UTRA TDD cells search under fading propagation conditions**

| Parameter                                         | Unit | Value                                    | Comment                                                                                                                                                                                         |

| Note1:                  | The DPCH of all cells are located in a timeslot other than 0.                                                                      |               |     |           |    |
| Note2:                  | In the case of multi-frequency network, the UTRA RF Channel Number can be set for the primary frequency in this test.              |               |     |           |    |
| Note3:                  | P-CCPCH RSCP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |               |     |           |    |

#### A.8.11.4.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12.8s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.11.5 Combined E-UTRAN FDD – E-UTRA FDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions

#### A.8.11.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events when doing inter frequency and GSM measurements. This test will partly verify the E-UTRAN FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.1 and simultaneously the E-UTRAN FDD- GSM cell search requirements in clause 8.1.2.4.5.

The test parameters are given in Tables A.8.11.5.1-1, A.8.11.5.1-2 and A.8.11.5.1-3. In this test, there are two cells on different carrier frequencies and one GSM cell. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

**Table A.8.11.5.1-3: Cell specific test parameters for GSM (cell # 3) for combined E-UTRAN FDD – E-UTRA FDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions**

| Parameter                  | Unit | Cell 3    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFCN3    |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.11.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report including BSIC of cell 3, with a measurement reporting delay less than 7200 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times T_{TTI_{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 7200 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times N_{\text{freq}} \times 480 \text{ms} = 1920 \text{ms}$ .

Initial BSIC identification delay = 5280 ms, when one carrier frequency other than GSM is monitored in the gaps.

## A.8.11.6 Combined E-UTRAN TDD – E-UTRA TDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions

### A.8.11.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events when doing inter frequency and GSM measurements. This test will partly verify the E-UTRAN TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2 and simultaneously the E-UTRAN TDD- GSM cell search requirements in clause 8.1.2.4.6.

The test parameters are given in Tables A.8.11.6.1-1, A.8.11.6.1-2 and A.8.11.6.1-3. In this test, there are two cells on different carrier frequencies and one GSM cell. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.11.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report including BSIC of cell 3, with a measurement reporting delay less than 7200 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 7200 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \cdot T_{\text{Measurement Period, GSM}} = 2 \cdot N_{\text{freq}} \cdot 480 \text{ms} = 1920 \text{ms}$ .

Initial BSIC identification delay = 5280 ms, when one carrier frequency other than GSM is monitored in the gaps.

## A.8.12 RSTD Intra-frequency Measurements

### A.8.12.1 E-UTRAN FDD intra-frequency RSTD measurement reporting delay test case

#### A.8.12.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 8.1.2.5.1 in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.1.1-1, Table A.8.12.1.1-2, Table A.8.12.1.1-3 and Table A.8.12.1.1-4.

**Table A.8.12.1.1-1: General test parameters for E-UTRAN FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit          | Value                                                                              | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|---------------|------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reference cell                                                                |               | Cell 1                                                                             | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |               | Cell 2 and Cell 3                                                                  | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| PCFICH/PDCCH/PHICH parameters                                                 |               | DL Reference Measurement Channel R.6 FDD                                           | As specified in clause A.3.1.2.1                                                                                                                                                                                    |

| shortDRX                 | Disable |                                             |

### A.8.12.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.1.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 2560 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1) + 160 \left\lceil \frac{n}{M} \right\rceil$ , where  $M=8$  and  $n=16$  are the parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1. This gives the total RSTD measurement time of 2560 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

### A.8.12.1.2A Test Requirements for UE Category 1bis

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.3.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1) + 160 \left\lceil \frac{n}{M} \right\rceil$ , where  $M=16$  and  $n=16$  are the parameters specified in Clause 8.1.2.5.3, Table 8.1.2.5.3-1, under Note 1. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

The test parameters are as given in Table A.8.12.1.1-1, Table A.8.12.1.1-2, Table A.8.12.1.1-3 and Table A.8.12.1.1-4, with the exceptions given in Table A.8.12.1.2A-1.

| T3              | s    | 2.56                                                                                   | The length of the time interval that follows immediately after time interval T2 |

## A.8.12.2 E-UTRAN TDD intra-frequency RSTD measurement reporting delay test case

### A.8.12.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 8.1.2.5.2 in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1 and T2. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.2.1-1, Table A.8.12.2.1-2, Table A.8.12.2.1-3, and Table A.8.12.2.1-4.

**Table A.8.12.2.1-1: General test parameters for E-UTRAN TDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit          | Value                                                                                         | Comment                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reference cell                                                                |               | Cell 1                                                                                        | Reference is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case.    |
| Neighbor cells                                                                |               | Cell 2 and Cell 3                                                                             | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |

### A.8.12.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.2.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 2560 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ , where  $M=8$  and  $n=16$  are the parameters specified for this test case in Clause 8.1.2.5.2, Table 8.1.2.5.2-1, under Note 1. This gives the total RSTD measurement time of 2560 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

### A.8.12.2.2A Test Requirements for UE Category 1bis

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.4.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ , where  $M=16$  and  $n=16$  are the parameters specified for this test case in Clause 8.1.2.5.4, Table 8.1.2.5.4-1, under Note 1. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

The test parameters are as given in Table A.8.12.2.1-1, Table A.8.12.2.1-2, Table A.8.12.2.1-3 and Table A.8.12.2.1-4, with the exceptions given in Table A.8.12.2.2A-1.

| T3              | s    | 2.56                                                                                   | The length of the time interval that follows immediately after time interval T2 |

### A.8.12.3 E-UTRAN FDD intra-frequency RSTD measurement period test case in CE Mode A

#### A.8.12.3.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.3.1 and 8.16.2.3.1, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2.

The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.3.1-1, Table A.8.12.3.1-2, Table A.8.12.3.1-3 and Table A.8.12.3.1-4.

**Table A.8.12.3.1-1: General test parameters for E-UTRAN FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |

### A.8.12.3.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.3.1.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.3.1.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 16$  and  $n = 16$  are the parameters specified in Section 8.13.2.3.1 (for Cat-M1) and in Section 8.16.2.3.1 (for Cat-M2) under Note 1. This gives the total RSTD measurement time of 5120 ms for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.12.4 E-UTRAN HD-FDD intra-frequency RSTD measurement period test case in CE Mode A

### A.8.12.4.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.3.3 and 8.16.2.3.3, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.4.1-1, Table A.8.12.4.1-2, Table A.8.12.4.1-3 and Table A.8.12.4.1-4.

**Table A.8.12.4.1-1: General test parameters for E-UTRAN HD-FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |      | DL Reference Measurement Channel R.6 HD-FDD                                           |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |

| shortDRX                 | Disable |                                             |

#### A.8.12.4.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.3.3.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.3.3.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 16$  and  $n = 16$  are the parameters specified in Section 8.13.2.3.3 (for Cat-M1) and in Section 8.16.2.3.3 (for Cat-M2) under Note 1. This gives the total RSTD measurement time of 5120 ms for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.12.5 E-UTRAN TDD intra-frequency RSTD measurement period test case in CE Mode A

### A.8.12.5.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.3.2 and 8.16.2.3.2, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.5.1-1, Table A.8.12.5.1-2, Table A.8.12.5.1-3 and Table A.8.12.5.1-4.

**Table A.8.12.5.1-1: General test parameters for E-UTRAN TDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit          | Value                                                                              |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|---------------|------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |               | Test 1                                                                             | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |               | Cell 1                                                                             |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |               | Cell 2 and Cell 3                                                                  |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |

| shortDRX                 | Disable |                                             |

### A.8.12.5.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.3.2.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.3.2.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 16$  and  $n = 16$  are the parameters specified in Section 8.13.2.3.2 (for Cat-M1) and in Section 8.16.2.3.2 (for Cat-M2) under Note 1. This gives the total RSTD measurement time of 5120 ms for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.12.6 E-UTRAN FDD intra-frequency RSTD measurement period test case in CE Mode B

### A.8.12.6.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CEMode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.3.1 and 8.16.3.1.1, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.6.1-1, Table A.8.12.6.1-2, Table A.8.12.6.1-3 and Table A.8.12.6.1-4.

**Table A.8.12.6.1-1: General test parameters for E-UTRAN FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |      | DL Reference Measurement Channel R.18 FDD                                             |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |

| shortDRX                 | Disable |                                             |

### A.8.12.6.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.3.1.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.1.1.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 12800 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 16$  and  $n = 16$  are the parameters for Test 1 and  $M = 40$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections under Note 1. This gives the total RSTD measurement time of 12800 ms (Test 1) and 5120 ms (Test 2) for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.12.7 E-UTRAN HD-FDD intra-frequency RSTD measurement period test case in CE Mode B

### A.8.12.7.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.3.3 and 8.16.3.1.3, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.7.1-1, Table A.8.12.7.1-2, Table A.8.12.7.1-3 and Table A.8.12.7.1-4.

**Table A.8.12.7.1-1: General test parameters for E-UTRAN HD-FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |

| shortDRX                 | Disable |                                             |

### A.8.12.7.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.3.3.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.1.3.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 12800 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 16$  and  $n = 16$  are the parameters for Test 1 and  $M = 40$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections under Note 1. This gives the total RSTD measurement time of 12800 ms (Test 1) and 5120 ms (Test 2) for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.12.8 E-UTRAN TDD intra-frequency RSTD measurement period test case in CE Mode B

### A.8.12.8.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.3.2 and 8.16.3.1.2, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.8.1-1, Table A.8.12.8.1-2, Table A.8.12.8.1-3 and Table A.8.12.8.1-4.

**Table A.8.12.8.1-1: General test parameters for E-UTRAN TDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit          | Value                                                                              |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|---------------|------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |               | Test 1                                                                             | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |               | Cell 1                                                                             |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |               | Cell 2 and Cell 3                                                                  |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |               | DL Reference Measurement Channel R.16 TDD                                          |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |

| shortDRX                 | Disable |                                             |

### A.8.12.8.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.3.2.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.1.2.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 12800 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 5120 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 16$  and  $n = 16$  are the parameters for Test 1 and  $M = 40$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections under Note 1. This gives the total RSTD measurement time of 12800 ms (Test 1) and 5120 ms (Test 2) for Cell 2 and Cell 3 with respect to the reference Cell 1.

## A.8.13 RSTD Inter-frequency Measurements

### A.8.13.1 E-UTRAN FDD-FDD inter-frequency RSTD measurement reporting delay test case with the reference cell on the serving carrier frequency

#### A.8.13.1.1 Test Purpose and Environment

The purpose of the test is to verify that the FDD-FDD inter-frequency RSTD measurement meets the requirements specified in Clause 8.1.2.6.1, specifically for Note 2 in Table 8.1.2.6.1-1, in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the Cell 3, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 and Cell 3 transmit PRS only in T2. Cell 2 transmits PRS only in T3. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.1.1-1, Table A.8.13.1.1-2, Table A.8.13.1.1-3 and Table A.8.13.1.1-4.

**Table A.8.13.1.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 | Comment                                                                                                                                                                                                                          |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reference cell                                                                |      | Cell 1                                                                                | Reference cell is the cell with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4]. The reference cell is the PCell on RF channel 1 in this test case.                                              |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     | Cells on RF channel 2. The cells appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |
| PCFICH/PDCCH/PHICH parameters                                                 |      | DL Reference Measurement Channel R.6 FDD                                              | As specified in clause A.3.1.2.1                                                                                                                                                                                                 |
| Channel Bandwidth (BW <sub>channel</sub> )                                    | MHz  | 10                                                                                    |                                                                                                                                                                                                                                  |
| PRS Bandwidth                                                                 | RB   | 50                                                                                    | PRS bandwidth is as indicated in prs-Bandwidth in the OTDOA assistance data defined in [24]. Here, PRS are transmitted over the system bandwidth                                                                                 |
| Gap pattern Id                                                                |      | 0                                                                                     | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3                                                                                                                                                   |
| Gap offset                                                                    |      | 9                                                                                     | As specified in TS 36.331 [2], Clause 6.3.5                                                                                                                                                                                      |
| PRS configuration index $I_{PRS}$                                             |      | Cell 1: 181,<br>Cell 2, Cell 3: 171                                                   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1                                                                                |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |      | 1                                                                                     | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion                                                                                                                                                  |
| Physical cell ID PCI                                                          |      | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters                                                                                                         |
| CP length                                                                     |      | Normal                                                                                |                                                                                                                                                                                                                                  |
| DRX                                                                           |      | ON                                                                                    | DRX parameters are further specified in Table A.8.13.1.1-3.                                                                                                                                                                      |
| prs-SubframeOffset                                                            |      | 310                                                                                   | Number of subframes rounded to the closest integer. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]                                                                   |
| slotNumberOffset                                                              |      | 0                                                                                     | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell specified in TS 36.355 [24]                                                                                            |
| Radio frame receive time offset between the cells at the UE antenna connector | μs   | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1                                           | PRS are transmitted from synchronous cells                                                                                                                                                                                       |
| Expected RSTD                                                                 | μs   | Cell 2: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3           | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator                                                        |

|                                                   |               |                                                                                        |                                                                                                                                                                                                     |

| drx-RetransmissionTimer  | sf1     |                                             |
| longDRX-CycleStartOffset | sf320   |                                             |
| shortDRX                 | Disable |                                             |

### A.8.13.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.1.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ ,  
where  $M=16$  and  $n=16$  are the parameters specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 2. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

### A.8.13.1.2A Test Requirements for UE Category 1bis

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 10080 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ ,  
where  $M=32$  and  $n=16$  are the parameters specified in Clause 8.1.2.6.5, Table 8.1.2.6.5-1, under Note 2. This gives the total RSTD measurement time of 10080 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

The test parameters are as given in Table A.8.13.1.1-1, Table A.8.13.1.1-2, Table A.8.13.1.1-3 and Table A.8.13.1.1-4, with the exceptions given in Table A.8.13.1.2A-1.

### A.8.13.2 E-UTRAN TDD-TDD inter-frequency RSTD measurement reporting delay test case with the reference cell on the serving carrier frequency

#### A.8.13.2.1 Test Purpose and Environment

The purpose of the test is to verify that the TDD-TDD inter-frequency RSTD measurement meets the requirements specified in Clause 8.1.2.6.3, specifically for Note 2 in Table 8.1.2.6.3-1, in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on TDD RF channel 1. Cell 2 and Cell 3 are on TDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1 and T2. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the Cell

3, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 and Cell 3 transmit PRS only in T2. Cell 2 transmits PRS only in T3. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.2.1-1, Table A.8.13.2.1-2, Table A.8.13.2.1-3, and Table A.8.13.2.1-4.

**Table A.8.13.2.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                   | Unit | Value                                                                                 | Comment                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reference cell                                                              |      | Cell 1                                                                                | Reference cell is the cell with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4]. The reference cell is the PCell on RF channel 1 in this test case.                                              |
| Neighbor cells                                                              |      | Cell 2 and Cell 3                                                                     | Cells on RF channel 2. The cells appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |
| PCFICH/PDCCH/PHICH parameters                                               |      | DL Reference Measurement Channel R.6 TDD                                              | As specified in clause A.3.1.2.2                                                                                                                                                                                                 |
| Channel Bandwidth (BW <sub>channel</sub> )                                  | MHz  | 10                                                                                    |                                                                                                                                                                                                                                  |
| PRS Bandwidth                                                               | RB   | 50                                                                                    | PRS bandwidth is as indicated in prs-Bandwidth in the OTDOA assistance data defined in [24]. Here, PRS are transmitted over the system bandwidth                                                                                 |
| Gap pattern Id                                                              |      | 0                                                                                     | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3                                                                                                                                                   |
| Gap offset                                                                  |      | 12                                                                                    | As specified in TS 36.331 [2], Clause 6.3.5                                                                                                                                                                                      |
| PRS configuration index $I_{PRS}$                                           |      | Cell 1: 184,<br>Cell 2, Cell 3: 174                                                   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1                                                                                |
| Number of consecutive downlink positioning subframes $N_{PRS}$              |      | 1                                                                                     | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion                                                                                                                                                  |
| Physical cell ID PCI                                                        |      | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters                                                                                                         |
| TDD uplink-downlink configuration                                           |      | 1                                                                                     | As specified in TS 36.211 [16], Clause 4.2; corresponds to a configuration with 5 ms switch-point periodicity and two downlink consecutive subframes                                                                             |
| TDD special subframe configuration                                          |      | 6                                                                                     | As specified in TS 36.211 [16], Clause 4.2; corresponds to DwPTS of $19760 \cdot T_s$ and UpPTS of $4384 \cdot T_s$                                                                                                              |
| CP length                                                                   |      | Normal                                                                                | The same CP length for DL and UL                                                                                                                                                                                                 |
| DRX                                                                         |      | ON                                                                                    | DRX parameters are further specified in Table A.8.13.2.1-3.                                                                                                                                                                      |
| prs-SubframeOffset                                                          |      | 310                                                                                   | Number of subframes rounded to the closest integer. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]                                                                   |
| slotNumberOffset                                                            |      | 0                                                                                     | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell specified in TS 36.355 [24]                                                                                            |
| Radio frame receivetime offset between the cells at the UE antenna connecto | μs   | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1                                           | PRS are transmitted from synchronous cells                                                                                                                                                                                       |
| Expected RSTD                                                               | μs   | Cell 2: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3           | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator                                                        |
| Expected RSTD uncertainty for all neighbour cells                           | μs   | 5                                                                                     | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index                                                                                                       |

|                                                   |   |                                                                                        |                                                                                                                                                                                                     |
|---------------------------------------------------|---|----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Number of cells provided in OTDOA assistance data |   | 16                                                                                     | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) on RF channel 1 and 15 other cells on RF channel 2, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. |
| PRS muting info                                   |   | Cell 1: '1111111100000000'<br>Cell 2: '0000000011111111'<br>Cell 3: '1111111100000000' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]                                                                                                                                             |

### A.8.13.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.3.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ ,  
where  $M=16$  and  $n=16$  are the parameters specified in Clause 8.1.2.6.3, Table 8.1.2.6.3-1, under Note 2. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

### A.8.13.2.2A Test Requirements for UE Category 1bis

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.7.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 10080 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1)+160\left\lceil\frac{n}{M}\right\rceil$ ,  
where  $M=32$  and  $n=16$  are the parameters specified in Clause 8.1.2.6.7, Table 8.1.2.6.7-1, under Note 2. This gives the total RSTD measurement time of 10080 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

The test parameters are as given in Table A.8.13.2.1-1, Table A.8.13.2.1-2, Table A.8.13.2.1-3 and Table A.8.13.2.1-4, with the exceptions given in Table A.8.13.2.2A-1.

## A.8.13.3 E-UTRAN FDD inter-frequency RSTD measurement period test case in CE Mode A

### A.8.13.3.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.4.1 and 8.16.2.4.1, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.3.1-1, Table A.8.13.3.1-2, Table A.8.13.3.1-3 and Table A.8.13.3.1-4.

**Table A.8.13.3.1-1: General test parameters for E-UTRAN FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |      | DL Reference Measurement Channel R.16 FDD                                             |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |
| $mPDCCH\text{-}startSF\text{-}UESS$                                           |      | 10                                                                                    |        | Parameter $G$ in $T = r_{\max} \cdot G$ which determines subframe $k0$ in which MPDCCH starts in the serving cell.                                                                                                  |
| System Channel Bandwidth ( $BW_{\text{channel}}$ )                            | MHz  | 10                                                                                    |        |                                                                                                                                                                                                                     |
| Gap pattern Id                                                                |      | 0                                                                                     |        | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3                                                                                                                                      |
| Gap offset                                                                    |      | 9                                                                                     |        | As specified in TS 36.331 [2], Clause 6.3.5                                                                                                                                                                         |

| Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                  |                |           |           |           |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                              |                |           |           |           |
| Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                |           |           |           |
| Note 4: $I_o$ levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.                                                                             |                |           |           |           |

**Table A.8.13.3.1-3: Cell-specific test parameters for E-UTRAN FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions during T2 and T3**

| Parameter                                    | Unit                                                                                                                                                                                                                                                                                                                                                                                                                                           | Cell 1    |           | Cell 2    |        | Cell 3   |           |

| Note 1:                                      | OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.                                                                                                                                                                                                      |           |           |           |        |          |           |
| Note 2:                                      | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                                                                                                                                                                                                                                             |           |           |           |        |          |           |
| Note 3:                                      | Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.                                                                                                                                                                                                                                |           |           |           |        |          |           |
| Note 4:                                      | If PRS_RA is not “N/A”, $\hat{E}_s / N_{oc}$ , $PRS \hat{E}_s / I_{ot}$ , $I_o$ , RSRP and PRP levels have been derived from other parameters and are given for information purpose. If PRS_RA is “N/A”, $I_o$ and RSRP levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. Interference conditions shall be applied to all PRS symbols of DL positioning subframes. |           |           |           |        |          |           |

**Table A.8.13.3.1-4: DRX parameters for the test of E-UTRAN FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Field                    | Value   | Comment                                     |
|--------------------------|---------|---------------------------------------------|
| onDurationTimer          | psf1    | As specified in TS 36.331 [2], Clause 6.3.2 |
| Drx-InactivityTimer      | psf1    |                                             |
| drx-RetransmissionTimer  | sf1     |                                             |
| longDRX-CycleStartOffset | sf320   |                                             |
| shortDRX                 | Disable |                                             |

### A.8.13.3.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.4.1.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.4.1.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 15360 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 48$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 15360 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.4 E-UTRAN HD-FDD inter-frequency RSTD measurement period test case in CE Mode A

### A.8.13.4.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.4.3 and 8.16.2.4.3, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.4.1-1, Table A.8.13.4.1-2, Table A.8.13.4.1-3 and Table A.8.13.4.1-4.

**Table A.8.13.4.1-1: General test parameters for E-UTRAN HD-FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |      | DL Reference Measurement Channel R.6 HD-FDD                                           |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |
| $mPDCCH\text{-}startSF\text{-}UESS$                                           |      | 10                                                                                    |        | Parameter $G$ in $T = r_{\max} \cdot G$ which determines subframe $k0$ in which MPDCCH starts in the serving cell.                                                                                                  |
| System Channel Bandwidth ( $BW_{\text{channel}}$ )                            | MHz  | 10                                                                                    |        |                                                                                                                                                                                                                     |
| Gap pattern Id                                                                |      | 0                                                                                     |        | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3                                                                                                                                      |
| Gap offset                                                                    |      | 9                                                                                     |        | As specified in TS 36.331 [2], Clause 6.3.5                                                                                                                                                                         |
| PRS Transmission Bandwidth                                                    | RB   | 50 <sup>Note 1</sup>                                                                  |        | PRS are transmitted over the system bandwidth                                                                                                                                                                       |
| PRS configuration index $I_{\text{PRS}}$                                      |      | Cell 1: 142,<br>Cell 2, Cell 3: 152                                                   |        | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{\text{PRS}} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1                                                            |
| Number of consecutive downlink positioning subframes $N_{\text{PRS}}$         |      | 4                                                                                     | 2      | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion                                                                                                                                     |
| Physical cell ID PCI                                                          |      | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 |        | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters                                                                                            |
| CP length                                                                     |      | Normal                                                                                |        |                                                                                                                                                                                                                     |

| shortDRX                 | Disable |                                             |

#### A.8.13.4.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.4.3.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.4.3.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 15360 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 48$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 15360 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.5 E-UTRAN TDD inter-frequency RSTD measurement period test case in CE Mode A

### A.8.13.5.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode A that the RSTD measurement meets the requirements specified in Sections 8.13.2.4.2 and 8.16.2.4.2, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.5.1-1, Table A.8.13.5.1-2, Table A.8.13.5.1-3 and Table A.8.13.5.1-4.

**Table A.8.13.5.1-1: General test parameters for E-UTRAN TDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                             | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |
|-----------------------------------------------------------------------|------|---------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                       |      | Test 1                                                                                | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                        |      | Cell 1                                                                                |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                        |      | Cell 2 and Cell 3                                                                     |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                |      | DL Reference Measurement Channel R.14 TDD                                             |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |
| $mPDCCH\text{-}startSF\text{-}UESS$                                   |      | 10                                                                                    |        | Parameter $G$ in $T = r_{\max} \cdot G$ which determines subframe $k0$ in which MPDCCH starts in the serving cell.                                                                                                  |
| System Channel Bandwidth ( $BW_{\text{channel}}$ )                    | MHz  | 10                                                                                    |        |                                                                                                                                                                                                                     |
| Gap pattern Id                                                        |      | 0                                                                                     |        | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3                                                                                                                                      |
| Gap offset                                                            |      | 9                                                                                     |        | As specified in TS 36.331 [2], Clause 6.3.5                                                                                                                                                                         |

| shortDRX                 | Disable |                                             |

### A.8.13.5.2 Test Requirements

For Cat-M1 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.13.2.4.2.

For Cat-M2 UE in CE Mode A, the RSTD measurement time fulfils the requirements specified in Clause 8.16.2.4.2.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 15360 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 48$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 15360 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.6 E-UTRAN FDD inter-frequency RSTD measurement period test case in CE Mode B

### A.8.13.6.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CEMode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.7.1 and 8.16.3.2.1, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.6.1-1, Table A.8.13.6.1-2, Table A.8.13.6.1-3 and Table A.8.13.6.1-4.

**Table A.8.13.6.1-1: General test parameters for E-UTRAN FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                 |        | Comment                                                                                                                                                                                                             |

### A.8.13.6.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.7.1.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.2.1.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 40960 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 128$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 40960 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.7 E-UTRAN HD-FDD inter-frequency RSTD measurement period test case in CE Mode B

### A.8.13.7.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.7.3 and 8.16.3.2.3, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.7.1-1, Table A.8.13.7.1-2, Table A.8.13.7.1-3 and Table A.8.13.7.1-4.

**Table A.8.13.7.1-1: General test parameters for E-UTRAN HD-FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter                                                                     | Unit | Value                                                                                         |        | Comment                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------|------|-----------------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                               |      | Test 1                                                                                        | Test 2 |                                                                                                                                                                                                                     |
| Reference cell                                                                |      | Cell 1                                                                                        |        | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells                                                                |      | Cell 2 and Cell 3                                                                             |        | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| MPDCCH                                                                        |      | DL Reference Measurement Channel R.8 HD-FDD                                                   |        | As specified in clause A.3.1.3.1                                                                                                                                                                                    |
| $mPDCCH\text{-}startSF\text{-}UESS$                                           |      | 10                                                                                            |        | Parameter $G$ in $T = r_{\max} \cdot G$ which determines subframe $k0$ in which MPDCCH starts in the serving cell.                                                                                                  |
| System Channel Bandwidth ( $BW_{\text{channel}}$ )                            | MHz  | 10                                                                                            |        |                                                                                                                                                                                                                     |

| shortDRX                 | Disable |                                                |

### A.8.13.7.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.7.3.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.2.3.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 40960 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 128$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 40960 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.8 E-UTRAN TDD inter-frequency RSTD measurement period test case in CE Mode B

### A.8.13.8.1 Test Purpose and Environment

The purpose of the test is to verify for Cat-M1 and Cat-M2 UE in CE Mode B that the RSTD measurement meets the requirements specified in Sections 8.13.3.7.2 and 8.16.3.2.2, respectively, in an environment with fading propagation conditions. Test 1 is applicable for Cat-M1 and Cat-M2 supporting 1.4 MHz UE RF bandwidth, while Test 2 is applicable for Cat-M2 supporting 5 MHz UE RF bandwidth.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.8.1-1, Table A.8.13.8.1-2, Table A.8.13.8.1-3 and Table A.8.13.8.1-4.

| longDRX-CycleStartOffset | sf320   |                                             |
| shortDRX                 | Disable |                                             |

### A.8.13.8.2 Test Requirements

For Cat-M1 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.13.3.7.2.

For Cat-M2 UE in CE Mode B, the RSTD measurement time fulfils the requirements specified in Clause 8.16.3.2.2.

In Test 1, the UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 40960 ms starting from the beginning of time interval T2.

In Test 2, the shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 10240 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 320 \cdot \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 128$  and  $n = 16$  are the parameters for Test 1 and  $M = 32$  and  $n = 16$  are the parameters for Test 2, specified in the corresponding requirements sections, under Note 2. This gives the total RSTD measurement time of 40960 ms in Test 1 and 10240 ms in Test 2 for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.14 E-UTRAN TDD - FDD Inter-frequency Measurements

### A.8.14.1 E-UTRAN TDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

#### A.8.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.3.

The test parameters are given in Tables A.8.14.1.1-1 and A.8.14.1.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.14.1.1-1: General test parameters for E-UTRAN TDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                           |
|--------------------------------------------|------|------------------------------------------|---------------------------------------------------|
| Cell 1 PDSCH parameters                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                  |
| Cell 1 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                  |
| Cell1 Special subframe configuration       |      | 6                                        | As specified in table 4.2-1 in TS 36.211.         |
| Cell1 Uplink-downlink configuration        |      | 1                                        | As specified in TS 36.211 clause 4.2 Table 4.2-2. |
| Cell 2 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                  |
| Cell 1 E-UTRA TDD RF Channel Number        |      | 1                                        | One TDD carrier frequency is used.                |
| Cell 2 E-UTRA FDD RF Channel Number        |      | 2                                        | One FDD carrier frequency is used.                |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                   |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1                  |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2                  |
| Gap Pattern Id                             |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.         |
| A3-Offset                                  | dB   | -6                                       |                                                   |
| Hysteresis                                 | dB   | 0                                        |                                                   |
| CP length                                  |      | Normal                                   |                                                   |
| TimeToTrigger                              | s    | 0                                        |                                                   |
| Filter coefficient                         |      | 0                                        | L3 filtering is not used                          |
| DRX                                        |      | OFF                                      | OFF                                               |
| Time offset between cells                  |      | 3 ms                                     | Asynchronous cells                                |
| T1                                         | s    | 5                                        |                                                   |
| T2                                         | s    | 5                                        |                                                   |

**Table A.8.14.1.1-2: Cell specific test parameters for E-UTRAN TDD-FDD inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells**

| Parameter                                                                                                                                                                                                                     | Unit       | Cell 1   |     | Cell 2    |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|----------|-----|-----------|-----|

| Propagation Condition                                                                                                                                                                                                         |            | ETU70    |     |           |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                                 |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                 |            |          |     |           |     |

### A.8.14.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.14.2 E-UTRAN TDD-FDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells

#### A.8.14.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These test will partly verify the TDD-FDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The common test parameters are given in Tables A.8.14.2.1-1 and A.8.14.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.14.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.14.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.14.2.1-1: General test parameters for E-UTRAN TDD-FDD inter-frequency event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment                                                                                    |
|--------------------------------------------|------|------------------------------------------|--------|--------------------------------------------------------------------------------------------|
|                                            |      | Value                                    |        |                                                                                            |
| Cell1 PDSCH parameters                     |      | DL Reference Measurement Channel R.0 TDD |        | As specified in clause A.3.1.1.2. Note that UE may only be allocated at <i>On Duration</i> |
| Cell1PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 TDD |        | As specified in clause A.3.1.2.2.                                                          |
| Cell2 PDSCH parameters                     |      | DL Reference Measurement Channel R.0 FDD |        | As specified in clause A.3.1.1.1. Note that UE may only be allocated at <i>On Duration</i> |
| Cell2PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 FDD |        | As specified in clause A.3.1.2.1.                                                          |
| E-UTRA RF Channel Number                   |      | 1                                        |        | one TDD carrier frequencies is used.                                                       |
| E-UTRA RF Channel Number                   |      | 2                                        |        | one FDD carrier frequencies is used.                                                       |

### A.8.14.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report

### A.8.14.3 E-UTRAN TDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

#### A.8.14.3.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.6.

The test scenario comprises of one E-UTRA FDD carriers and one cell on each carrier as given in tables A.8.14.3.1-1 and A.8.14.3.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.14.3.1-1: General test parameters for E-UTRAN TDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                                  | Unit | Value                                    | Comment                                         |
|--------------------------------------------|------|------------------------------------------|-------------------------------------------------|
| Cell1PDSCH parameters                      |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                |
| Cell1 PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                |

| Propagation Condition                                                                                                                                                                                                  |            | AWGN     |          |          |           |          |          |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |          |          |           |          |          |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |          |          |           |          |          |
| Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |          |          |           |          |          |

### A.8.14.3.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, inter}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 42 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 42 ACK/NACK number is caused by two parts. Firstly, at least 30 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.7.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 12 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.15 E-UTRAN FDD - TDD Inter-frequency Measurements

### A.8.15.1 E-UTRAN FDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

#### A.8.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.4.

The test parameters are given in Table A.8.15.1.1-1 and A.8.15.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.15.1.1-1: General test parameters for E-UTRAN FDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                                                 |
|--------------------------------------------|------|------------------------------------------|-------------------------------------------------------------------------|
| Cell 1 PDSCH parameters                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                                        |
| Cell 1 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                                        |
| Cell 2 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                                        |
| Gap Pattern Id                             |      | 1                                        | As specified in TS 36.133 clause 8.1.2.1.                               |
| Cell2 Special subframe configuration       |      | 6                                        | As specified in table 4.2-1 in TS 36.211. Applicable to Cell 2.         |
| Cell2 Uplink-downlink configuration        |      | 1                                        | As specified in TS 36.211 clause 4.2 Table 4.2-2. Applicable to Cell 2. |
| CP length                                  |      | Normal                                   |                                                                         |
| Cell 1 E-UTRA FDD RF Channel Number        |      | 1                                        | One TDD carrier frequency is used.                                      |
| Cell 2 E-UTRA TDD RF Channel Number        |      | 2                                        | One FDD carrier frequency is used.                                      |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                                                         |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1                                        |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |          |     |           |     |

### A.8.15.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC

## A.8.15.2 E-UTRAN FDD-TDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells

### A.8.15.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the FDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.4.

The common test parameters are given in Tables A.8.15.2.1-1 and A.8.15.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.15.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.15.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.15.2.1-1: General test parameters for E-UTRAN FDD-TDD inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment                                                                                   |
|--------------------------------------------|------|------------------------------------------|--------|-------------------------------------------------------------------------------------------|
|                                            |      | Value                                    |        |                                                                                           |
| Cell 1 PDSCH parameters                    |      | DL Reference Measurement Channel R.0 FDD |        | As specified in clause A.3.1.1.1 Note that UE may only be allocated at <i>On Duration</i> |
| Cell 1 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 FDD |        | As specified in clause A.3.1.2.1.                                                         |

### A.8.15.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.15.3 E-UTRAN FDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

### A.8.15.3.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.8.

The test scenario comprises of one E-UTRA FDD carrier and one E-UTRA TDD carrier and one cell on each carrier as given in tables A.8.15.3-1 and A.8.15.3-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.15.3-1: General test parameters for E-UTRAN FDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                                   | Unit | Value                                    | Comment                                         |
|---------------------------------------------|------|------------------------------------------|-------------------------------------------------|
| Cell1 PDSCH parameters                      |      | DL Reference Measurement Channel R.3 FDD | As specified in clause A.3.1.1.1                |
| Cell1 PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                |
| Cell2 PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                |
| E-UTRA RF channel number                    |      | 1, 2                                     | One FDD and one TDD carrier frequency are used. |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |                                                 |
| Active cell                                 |      | Cell 1                                   | Cell 1 is on RF channel number 1.               |
| Neighbour cell                              |      | Cell 2                                   | Cell 1 is on RF channel number 2.               |
| CP length                                   |      | Normal                                   |                                                 |
| Cell 2 Special subframe configuration       |      | 6                                        | As specified in table 4.2-1 in TS 36.211.       |
| Cell 2 Uplink-downlink configuration        |      | 1                                        | As specified in table 4.2-2 in TS 36.211.       |
| Gap Pattern Id                              |      | 0                                        | As specified in TS 36.133 clause 8.1.2.1.       |
| A3-Offset                                   | dB   | -6                                       |                                                 |
| Hysteresis                                  | dB   | 0                                        |                                                 |

| Propagation Condition                                                                                                                                                                                                  |            | AWGN      |           |           |           |          |          |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                          |            |           |           |           |           |          |          |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |           |           |           |           |          |          |
| Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |           |           |           |           |          |          |

### A.8.15.3.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, inter}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 60 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 80 ACK/NACK number is caused by two parts. Firstly, at least 60 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.5.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 20 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.16 E-UTRAN Carrier Aggregation Measurements

### A.8.16.1 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX

#### A.8.16.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.1.1-1 and A.8.16.1.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.16.1.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter                                                                                                                                                      |                 | Unit | Value                                                                 | Comment                                                                                                                             |

| Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                                  |            |          |     |      |          |       |       |           |       |       |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |            |          |     |      |          |       |       |           |       |       |
| Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                 |            |          |     |      |          |       |       |           |       |       |
| Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |            |          |     |      |          |       |       |           |       |       |

### A.8.16.1.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 6.4s (20×measCycleSCell) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s (5× measCycleSCell) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to 2×TTI<sub>DCCH</sub> higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.2 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX

### A.8.16.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.2.1-1 and A.8.16.2.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.16.2.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter                                                                                                                                                      |                 | Unit | Value                                                                 | Comment                                                                                                                             |

| Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                                  |            |          |     |      |          |       |       |           |       |       |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |            |          |     |      |          |       |       |           |       |       |
| Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                                 |            |          |     |      |          |       |       |           |       |       |
| Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                                    |            |          |     |      |          |       |       |           |       |       |

### A.8.16.2.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 6.4s (20× measCycleSCell) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s (5× measCycleSCell) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to 2×TTI<sub>DCCH</sub> higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.16.3 E-UTRAN FDD-FDD Event triggered reporting on deactivated SCell with PCell interruption in non-DRX

#### A.8.16.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.3.1-1 and A.8.16.3.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

### A.8.16.3.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.3A E-UTRAN FDD-FDD Event triggered reporting on deactivated SCell with network controlled PCell interruption in non-DRX

### A.8.16.3A.1 Test Purpose and Environment

The purpose of this test is to verify that the UE configured with the network controlled small gap correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on the controlled interruption in clause 7.8.2.6.

The test parameters are given in Table A.8.16.3A.1-1 and A.8.16.3A.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. UE is also configured with the network controlled small gap of pattern Id 0 with gapOffset of zero. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously according to the unicast PDSCH scheduling pattern in Table A.8.16.3A.1-1 to ensure that the UE sends ACK/NACKs throughout the test.

| Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                           |            |           |     |          |       |           |       |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.                                                                                                             |            |           |     |          |       |           |       |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |           |     |          |       |           |       |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                          |            |           |     |          |       |           |       |

### A.8.16.3A.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least [100]% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.4 E-UTRAN TDD-TDD Event triggered reporting on deactivated SCell with PCell interruption in non-DRX

### A.8.16.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.4.1-1 and A.8.16.4.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

### A.8.16.4.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.4A E-UTRAN TDD-TDD Event triggered reporting on deactivated SCell with PCell interruption in non-DRX

### A.8.16.4A.1 Test Purpose and Environment

The purpose of this test is to verify that the UE configured with the network controlled small gap correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on the controlled interruption in clause 7.8.2.6.

The test parameters are given in Table A.8.16.4A.1-1 and A.8.16.4A.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. UE is also configured with the network controlled small gap of pattern Id 0 and gapOffset of zero. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously according to the unicast PDSCH scheduling pattern in Table A.8.16.4A.1-1 to ensure that the UE sends ACK/NACKs throughout the test.

They are not settable parameters themselves.                                                                          |          |     |          |       |           |       |

### A.8.16.4A.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least [100]% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.5 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 20 MHz bandwidth

### A.8.16.5.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.5.1-1 and A.8.16.5.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.5.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter                                                                                                                                                        |                | Unit | Value                                     | Comment                                                                                                                    |

### A.8.16.5.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.6 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 20 MHz bandwidth

### A.8.16.6.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.6.1-1 and A.8.16.6.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.6.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter                                                                                                                                                        |                | Unit | Value                                     | Comment                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|

## A.8.16.6.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

## A.8.16.7 E-UTRA FDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 20 MHz bandwidth

### A.8.16.7.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.7.1-1 and A.8.16.7.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.7.1-1: General test parameters for E-UTRAN FDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter                                                                                                                                                        |  | Unit | Value                                     | Comment                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|------|-------------------------------------------|-------------------------------------------------------------------------|

### A.8.16.7.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.8 E-UTRA TDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 20 MHz bandwidth

### A.8.16.8.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.8.1-1 and A.8.16.8.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.8.1-1: General test parameters for E-UTRAN TDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|-------------------------------------------------------------------------|
| PDSCH parameters                                                                                                                                                 |      | DL Reference Measurement Channel R.3 TDD  | As specified in section A.3.1.1.2                                       |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                    |      | DL Reference Measurement Channel R.10 TDD | As specified in section A.3.1.2.2                                       |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                                                                                                      | MHz  | 20                                        | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.4.1-1 for other general test parameters.                                                                                                |      |                                           |                                                                         |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                                         |

**Table A.8.16.8.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter                                                                 | Unit       | Cell 1   |     | Cell 2   |       | Cell 3    |       |

| Note: See Table A.8.16.4.1-2 for other cell-specific test parameters.     |            |          |     |          |       |           |       |

### A.8.16.8.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

### A.8.16.9 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 10MHz+5MHz

#### A.8.16.9.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1.1.

The test parameters are the same as defined in Subclause A.8.16.1.1 except those described in the following section. The listed parameter values in Tables A.8.16.9.1-1 and A.8.16.9.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.9.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value | Comment                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|---------------------------------------------------|
| Channel bandwidth for cells on primary carriers ( $BW_{channel}$ )                                                                                               | MHz  | 10    | Channel bandwidth for cells on primary carriers   |
| Channel bandwidth for cells on secondary carriers ( $BW_{channel}$ )                                                                                             | MHz  | 5     | Channel bandwidth for cells on secondary carriers |
| Note 1: See Table A.8.16.1.1-1 for the other general parameters.                                                                                                 |      |       |                                                   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |       |                                                   |

**Table A.8.16.9.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter                                                                   | Unit      | Cell 1   |    |    | Cell 2    |    |    | Cell 3    |    |    |

## A.8.16.9.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.10 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 10MHz+5MHz

### A.8.16.10.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2.1.

The test parameters are the same as defined in Subclause A.8.16.2.1 except those described in the following section. The listed parameter values in Tables A.8.16.10.1-1 and A.8.16.10.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.10.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value | Comment                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|---------------------------------------------------|
| Channel bandwidth for cells on primary carriers ( $BW_{\text{channel}}$ )                                                                                        | MHz  | 10    | Channel bandwidth for cells on primary carriers   |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ )                                                                                      | MHz  | 5     | Channel bandwidth for cells on secondary carriers |
| Note 1: See Table A.8.16.2.1-1 for the other general parameters.                                                                                                 |      |       |                                                   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |       |                                                   |

**Table A.8.16.10.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter                                                                   | Unit                    | Cell 1   |    |    | Cell 2    |    |    | Cell 3    |    |    |
|-----------------------------------------------------------------------------|-------------------------|----------|----|----|-----------|----|----|-----------|----|----|
|                                                                             |                         | T1       | T2 | T3 | T1        | T2 | T3 | T1        | T2 | T3 |

### A.8.16.10.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

### A.8.16.11 E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz

#### A.8.16.11.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.11.1-1 and A.8.16.11.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.11.1-1: General test parameters for E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|------------------------------------------------------------|
| Channel bandwidth for cells on primary carrier ( $BW_{\text{channel}}$ )                                                                                         | MHz  | 10                                        | Channel bandwidth for cells on primary component carrier   |
| PDSCH parameters for cells on primary carriers                                                                                                                   |      | DL Reference Measurement Channel R.3 FDD  | As specified in section A.3.1.1.1                          |
| PCFICH/PDCCH/PHICH parameters for cells on primary carriers                                                                                                      |      | DL Reference Measurement Channel R.6 FDD  | As specified in section A.3.1.2.1                          |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ )                                                                                      | MHz  | 5                                         | Channel bandwidth for cells on secondary component carrier |
| PCFICH/PDCCH/PHICH parameters for cells on secondary carrier                                                                                                     |      | DL Reference Measurement Channel R.11 FDD | As specified in section A.3.1.2.1                          |
| Note 1: See Table A.8.16.3.1-1 for other general test parameters.                                                                                                |      |                                           |                                                            |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                            |

**Table A.8.16.11.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                                                             | Unit | Cell 1    |    | Cell 2    |    | Cell 3    |    |
|-----------------------------------------------------------------------|------|-----------|----|-----------|----|-----------|----|
|                                                                       |      | T1        | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>                                                 | MHz  | 10        |    | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.1                                      |      | OP.10 FDD |    | OP.16 FDD |    | OP.16 FDD |    |
| Note: See Table A.8.16.3.1-2 for other cell-specific test parameters. |      |           |    |           |    |           |    |

### A.8.16.11.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.12 E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz

### A.8.16.12.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.12.1-1 and A.8.16.12.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.12.1-1: General test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|------------------------------------------------------------|
| Channel bandwidth for cells on primary carrier ( $BW_{\text{channel}}$ )                                                                                         | MHz  | 10                                        | Channel bandwidth for cells on primary component carrier   |
| PDSCH parameters for cells on primary carriers                                                                                                                   |      | DL Reference Measurement Channel R.0 TDD  | As specified in section A.3.1.1.2                          |
| PCFICH/PDCCH/PHICH parameters for cells on primary carriers                                                                                                      |      | DL Reference Measurement Channel R.6 TDD  | As specified in section A.3.1.2.2                          |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ )                                                                                      | MHz  | 5                                         | Channel bandwidth for cells on secondary component carrier |
| PCFICH/PDCCH/PHICH parameters for cells on secondary carrier                                                                                                     |      | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                          |
| Note 1: See Table A.8.16.4.1-1 for other general test parameters.                                                                                                |      |                                           |                                                            |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                            |

**Table A.8.16.12.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                                                             | Unit | Cell 1   |    | Cell 2    |    | Cell 3    |    |
|-----------------------------------------------------------------------|------|----------|----|-----------|----|-----------|----|
|                                                                       |      | T1       | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>                                                 | MHz  | 10       |    | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.2                                      |      | OP.1 TDD |    | OP.10 TDD |    | OP.10 TDD |    |
| Note: See Table A.8.16.4.1-2 for other cell-specific test parameters. |      |          |    |           |    |           |    |

### A.8.16.12.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

## A.8.16.13 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 5MHz +5 MHz bandwidth

### A.8.16.13.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.13.1-1 and A.8.16.13.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.13.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5MHz +5 MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|------------------------------------------------------------|
| PDSCH parameters                                                                                                                                                 |      | DL Reference Measurement Channel R.5 FDD  | As specified in section A.3.1.1.1                          |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                    |      | DL Reference Measurement Channel R.11 FDD | As specified in section A.3.1.2.1                          |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                         | Channel bandwidth for cells on primary component carrier   |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                         | Channel bandwidth for cells on secondary component carrier |
| Note 1: See Table A.8.16.1.1-1 for other general test parameters.                                                                                                |      |                                           |                                                            |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                            |

**Table A.8.16.13.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5MHz +5 MHz bandwidth**

| Parameter                                                                     | Unit                                                            | Cell 1    |    |    | Cell 2    |    |    | Cell 3    |    |    |

## A.8.16.13.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.14 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 5 MHz +5 MHz bandwidth

### A.8.16.14.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.14.1-1 and A.8.16.14.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.14.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5 MHz +5 MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|------------------------------------------------------------|
| PDSCH parameters                                                                                                                                                 |      | DL Reference Measurement Channel R.4.TDD  | As specified in section A.3.1.1.2                          |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                    |      | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                          |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                         | Channel bandwidth for cells on primary component carrier   |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                         | Channel bandwidth for cells on secondary component carrier |
| Note 1: See Table A.8.16.2.1-1 for other general test parameters.                                                                                                |      |                                           |                                                            |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                            |

**Table A.8.16.14.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5 MHz +5 MHz bandwidth**

| Parameter                                                                   | Unit                                                            | Cell 1   |    |    | Cell 2    |    |    | Cell 3   |    |    |
|-----------------------------------------------------------------------------|-----------------------------------------------------------------|----------|----|----|-----------|----|----|----------|----|----|
|                                                                             |                                                                 | T1       | T2 | T3 | T1        | T2 | T3 | T1       | T2 | T3 |
| BW <sub>channel</sub>                                                       | MHz                                                             | 5        |    |    | 5         |    |    | 5        |    |    |

### A.8.16.14.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

## A.8.16.15 E-UTRA FDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 5 +5 MHz bandwidth

### A.8.16.15.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.15.1-1 and A.8.16.14.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.15.1-1: General test parameters for E-UTRAN FDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5 + 5 MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value                                             | Comment                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------------------------------------|-------------------------------------------------------------------------|
| PDSCH parameters                                                                                                                                                 |      | DL Reference Measurement Channel R.7 FDD (Cell 1) | As specified in section A.3.1.1.1                                       |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                    |      | DL Reference Measurement Channel R.11 FDD         | As specified in section A.3.1.2.1                                       |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                                 | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.3.1-1 for other general test parameters.                                                                                                |      |                                                   |                                                                         |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                                   |                                                                         |

| Note: See Table A.8.16.3.1-2 for other cell-specific test parameters.         |      |           |    |           |    |           |    |

### A.8.16.7.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.16 E-UTRA TDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 5+5 MHz bandwidth

### A.8.16.16.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.16.1-1 and A.8.16.16.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.16.1-1: General test parameters for E-UTRAN TDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5+5 MHz bandwidth**

| Parameter                                                                                                                                                        | Unit | Value                                     | Comment                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------------|-------------------------------------------------------------------------|
| PDSCH parameters                                                                                                                                                 |      | DL Reference Measurement Channel R.4 TDD  | As specified in section A.3.1.1.2                                       |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                    |      | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                                       |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                       | MHz  | 5                                         | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.4.1-1 for other general test parameters.                                                                                                |      |                                           |                                                                         |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                           |                                                                         |

| Note: See Table A.8.16.4.1-2 for other cell-specific test parameters.       |      |          |    |           |    |           |    |

## A.8.16.16.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

## A.8.16.17 E-UTRAN FDD activation and deactivation of known SCell in non-DRX

### A.8.16.17.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.17.1-1 and cell-specific parameters in A.8.16.17.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m which is an even number, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+24). The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.17.1-1: General test parameters for known SCell activation case**

| Parameter                                                                                                                                                      | Unit | Value                                                                      | Comment                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| PDSCH parameters                                                                                                                                               |      | DL Reference Measurement Channel R.3 FDD (Cell 1)                          | As specified in section A.3.1.1.1                                                |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                  |      | DL Reference Measurement Channel R.6 FDD                                   | As specified in section A.3.1.2.1                                                |
| E-UTRA RF Channel Number                                                                                                                                       |      | 1, 2                                                                       | Two radio channels are used for this test                                        |
| Active PCell                                                                                                                                                   |      | Cell 1                                                                     | Primary cell on RF channel number 1.                                             |
| Configured deactivated SCell                                                                                                                                   |      | Cell 2                                                                     | Configured deactivated secondary cell on RF channel number 2.                    |
| CP length                                                                                                                                                      |      | Normal                                                                     |                                                                                  |

| Note 3:                                                                   | Es/I <sub>ot</sub> , RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                            |           |    |    |          |    |    |
| Note 4:                                                                   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.                                                                                                                   |           |    |    |          |    |    |

### A.8.16.17.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

**NOTE:** During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.17A E-UTRAN FDD activation and deactivation of known SCell in non-DRX for 20MHz

### A.8.16.17A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.17. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.17A.1-1 and A.8.16.17A.1-2 will replace the values of corresponding parameters in Tables A.8.16.17.1-1 and A.8.16.17.1-2.

## A.8.16.17B.2 Test Requirements

The test requirements defined in section A.8.16.17.2 shall apply to this test case.

## A.8.16.17C E-UTRAN FDD activation and deactivation of known SCell in non-DRX for 5MHz + 5MHz

### A.8.16.17C.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.17. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.17C.1-1 and A.8.16.17C.1-2 will replace the values of corresponding parameters in Tables A.8.16.17.1-1 and A.8.16.17.1-2.

**Table A.8.16.17C.1-1: General test parameters for known SCell activation case, 5+5MHz bandwidth**

| Parameter                     | Unit | Value                                             | Comment                           |
|-------------------------------|------|---------------------------------------------------|-----------------------------------|
| PDSCH parameters              |      | DL Reference Measurement Channel R.7 FDD (Cell 1) | As specified in section A.3.1.1.1 |
| PCFICH/PDCCH/PHICH parameters |      | DL Reference Measurement Channel R.11 FDD         | As specified in section A.3.1.2.1 |

### A.8.16.17C.2 Test Requirements

The test requirements defined in section A.8.16.17.2 shall apply to this test case.

## A.8.16.18 E-UTRAN TDD activation and deactivation of known SCell in non-DRX

### A.8.16.18.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.18.1-1 and cell-specific parameters in A.8.16.18.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m, where m is 4 or 9, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+24). The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+11).

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted n where n is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+11).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.18.1-1: General test parameters for known SCell activation case**

| Parameter                                                                                                                                                      | Unit | Value                                                                      | Comment                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| PDSCH parameters                                                                                                                                               |      | DL Reference Measurement Channel R.0 TDD                                   | As specified in section A.3.1.1.2                                                      |
| PCFICH/PDCCH/PHICH parameters                                                                                                                                  |      | DL Reference Measurement Channel R.6 TDD                                   | As specified in section A.3.1.2.2                                                      |
| E-UTRA RF Channel Number                                                                                                                                       |      | 1, 2                                                                       | Two radio channels are used for this test                                              |
| Active PCell                                                                                                                                                   |      | Cell 1                                                                     | Primary cell on RF channel number 1.                                                   |
| Configured deactivated SCell                                                                                                                                   |      | Cell 2                                                                     | Configured deactivated secondary cell on RF channel number 2.                          |
| Channel Bandwidth (BW <sub>channel</sub> )                                                                                                                     | MHz  | 10                                                                         | Channel bandwidth for cells on primary and secondary component carriers                |
| CP length                                                                                                                                                      |      | Normal                                                                     |                                                                                        |
| Special subframe configuration                                                                                                                                 |      | 6                                                                          | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |
| Uplink-downlink configuration                                                                                                                                  |      | 1                                                                          |                                                                                        |
| DRX                                                                                                                                                            |      | OFF                                                                        | Continuous monitoring of primary cell                                                  |
| CQI/PMI periodicity and offset configuration index                                                                                                             |      | 0                                                                          | CQI reporting for SCell every UL subframe                                              |
| Cell-individual offset for cells on RF channel number 1                                                                                                        | dB   | 0                                                                          | Individual offset for cells on primary component carrier.                              |
| Cell-individual offset for cells on RF channel number 2                                                                                                        | dB   | 0                                                                          | Individual offset for cells on secondary component carrier.                            |
| SCell measurement cycle (measCycleSCell)                                                                                                                       | ms   | 320                                                                        |                                                                                        |
| Cell2 timing offset to cell1                                                                                                                                   | μs   | 0                                                                          |                                                                                        |
| Time alignment error between cell2 and cell1                                                                                                                   | μs   | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |
| Cell3 timing offset to cell1                                                                                                                                   | μs   | 3                                                                          | Synchronous cells                                                                      |
| T1                                                                                                                                                             | s    | 7                                                                          | During this time the PCell shall be known and the SCell configured and detected.       |
| T2                                                                                                                                                             | s    | 1                                                                          | During this time the UE shall activate the SCell.                                      |
| T3                                                                                                                                                             | s    | 1                                                                          | During this time the UE shall deactivate the SCell.                                    |
| Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |                                                                            |                                                                                        |

**Table A.8.16.18.1-2: Cell specific test parameters for E-UTRAN TDD known SCell activation**

| Parameter                                                                 | Unit                                                                                                                                                                                                                  | Cell 1   |    |    | Cell 2   |    |    |

| Note 1:                                                                   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                                  |          |    |    |          |    |    |
| Note 2:                                                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |          |    |    |          |    |    |
| Note 3:                                                                   | Es/I <sub>ot</sub> , RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                            |          |    |    |          |    |    |
| Note 4:                                                                   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.                                                                                                                   |          |    |    |          |    |    |

### A.8.16.18.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption, or in a subframe (m+13) if the subframes (m+8) and (m+9) were subject to interruption when an intra-band SCell is activated. Whether CSI report in subframe (m+8) and/or (m+9) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8) and/or (m+9).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (m+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+11).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+11).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

**NOTE:** During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.18A E-UTRAN TDD activation and deactivation of known SCell in non-DRX for 20MHz

### A.8.16.18A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.18. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.18A.1-1 and A.8.16.18A.1-2 will replace the values of corresponding parameters in Tables A.8.16.18.1-1 and A.8.16.18.1-2.

## A.8.16.18D.2 Test Requirements

The test requirements defined in section A.8.16.18.2 shall apply to this test case.

## A.8.16.19 E-UTRAN FDD activation and deactivation of unknown SCell in non-DRX

### A.8.16.19.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.19.1-1 and cell-specific parameters in A.8.16.19.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (cell2) becomes configured on radio channel 2 (SCC). During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m which is an even number. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.19.1-1: General test parameters for unknown SCell activation case**

| Parameter                                                                                                                                                      | Unit | Value                                                                      | Comment                                                                               |

| SCH_RP <sup>Note 3</sup>   | dBm/15 kHz                                                                                                                                                                                                     | -87  | -infinity | -87 |
| $\bar{E}_s/N_{oc}$         | dB                                                                                                                                                                                                             | 17   | -infinity | 17  |
| Propagation Condition      |                                                                                                                                                                                                                | AWGN |           |     |
| Note 1:                    | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.                                                           |      |           |     |
| Note 2:                    | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |           |     |
| Note 3:                    | Es/lot, RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                                                  |      |           |     |
| Note 4:                    | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.                                                                                                            |      |           |     |

### A.8.16.19.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+34).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 Interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 Interruption of PCell during SCell1 deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation and deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+34) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.19A E-UTRAN FDD activation and deactivation of unknown SCell in non-DRX for 20MHz

### A.8.16.19A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.19. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.19A.1-1 and A.8.16.19A.1-2 will replace the values of corresponding parameters in Tables A.8.16.19.1-1 and A.8.16.19.1-2.

**Table A.8.16.19A.1-1: General test parameters for unknown SCell activation case, 20MHz bandwidth**

## A.8.16.19C.2 Test Requirements

The test requirements defined in section A.8.16.19.2 shall apply to this test case.

## A.8.16.20 E-UTRAN TDD activation and deactivation of unknown SCell in non-DRX

### A.8.16.20.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.20.1-1 and cell-specific parameters in A.8.16.20.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (cell2) becomes configured on radio channel 2 (SCC). During T1 the signal level of SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m, where m is 4 or 9. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+11).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+11).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.20.1-1: General test parameters for unknown SCell activation case**

| Parameter                                                                                                                                                      | Unit | Value                                                                      | Comment                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
