Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Contents

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

1 presented to TSG for information;

2 presented to TSG for approval;

3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part 3 of a multi-part conformance test specification for the 3GPP evolved User Equipment (UE). The specification contains a TTCN-3 design frame work and the detailed test specifications in TTCN-3 for evolved UE at the UE-E-UTRAN radio interface.

- 3GPP TS 36.523-1 [1]: "User Equipment (UE) conformance specification; Part 1: Protocol conformance specification".
- 3GPP TS 36.523-2 [2]: "User Equipment (UE) conformance specification; Part 2: Implementation Conformance Statement (ICS) proforma specification".
- **3GPP TS 36.523-3: "Test Suites"** (the present document).

1 Scope

The present document specifies the protocol and signalling conformance testing in TTCN-3 for the 3GPP UE at the UE-E-UTRAN radio interface.

The following TTCN test specification and design considerations can be found in the present document:

- the test system architecture;
- the overall test suite structure;
- the test models and ASP definitions;
- the test methods and usage of communication ports definitions;
- the test configurations;
- the design principles and assumptions;
- TTCN styles and conventions;
- the partial PIXIT proforma;
- the test suites.

The Abstract Test Suites designed in the document are based on the test cases specified in prose (3GPP TS 36.523-1 [1]). The applicability of the individual test cases is specified in the test ICS proforma specification (3GPP TS 36.523-2 [1]).

The present document is valid for TTCN development for LTE and LTE-A UE conformance test according to 3GPP Releases starting from Release 8 up to the Release indicated on the cover page of the present document.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [26] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [26] apply.

4 E-UTRAN/SAE system architecture and test models

4.1 Test system architecture

4.1.1 General system architecture

The general system architecture is shown in figure 4.1.1-1.

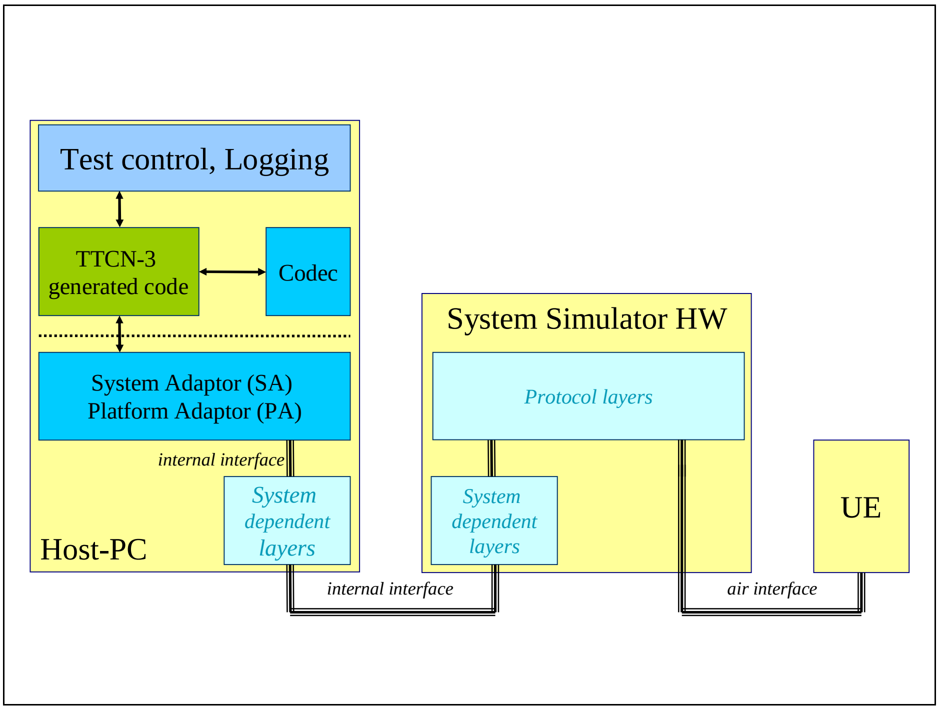

Figure 4.1.1-1: Architecture of system simulator

The scope of the present document is the TTCN-3 implementation of conformance tests. Specifications and definitions of the present document affect the codec and the system adaptor (SA). Test control and logging are out of scope as well as the interface between the TTCN-3 generated code and the system adaptor which can be either standardised TRI or proprietary.

The main assumptions regarding the system architecture are:

- TTCN-3 code runs on the host system only:
    - No TTCN-3 components are downloaded to system simulator HW.
    - Layer 2 tests (MAC, RLC) are controlled by appropriate configuration primitives in TTCN-3 but neither layer 2 nor parts of it are implemented in TTCN-3; the system simulator performs low layer procedure autonomously but all system simulator implementations shall result in the same test pattern at the air interface.
- Proprietary interfaces e.g. instead of the TRI are not considered in the test model.
- The timing considerations of the conformance tests shall be supported by appropriate timing information (e.g. system frame number) provided from/to the system simulator rather than by timing measurements in TTCN-3.

4.1.2 Component architecture

For E-UTRAN conformance tests each access technology (RAT) is hosted by a separate TTCN-3 parallel component (PTC):

- E-UTRAN.
- UTRAN.
- GERAN.
- Other technologies like 3GPP2 UTRAN.

The PTCs are controlled by the TTCN-3 master test component (MTC) which:

- is independent from the RAT;
- may host the upper tester for MMI and AT commands;
- creates, synchronises and terminates the PTCs;
- starts and terminates test cases.

Figure 4.1.2-1 shows this component architecture for a E-UTRAN and UTRAN scenario.

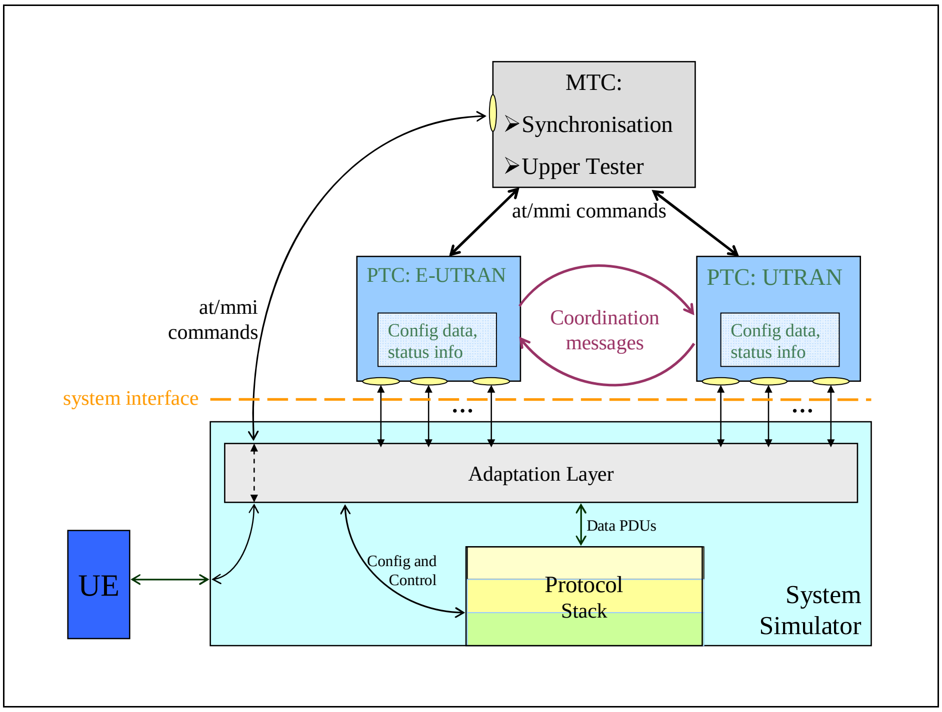

Figure 4.1.2-1:E-UTRAN-UTRAN component model

According to this model there are different interfaces to be considered:

MTC - PTC:

- common synchronisation of PTCs;
- upper tester primitives.

MTC - System Interface:

- upper tester primitives.

PTC - PTC:

- primitives containing information for IRAT handover.

PTC - System Interface:

- primitives containing peer-to-peer message;
- configuration primitives.

4.2 E-UTRAN test models

4.2.1 Layer 2 test models

When test loop mode is used for the Layer 2 tests the DRB ports at the SS side is referred to the raw DRB ones. At the SS side, DRBs are initially configured with default modes and parameters. For the purpose of L2-testing the DRBs may be reconfigured later on as indicated in the subsequent test models (see below).

4.2.1.1 MAC test model

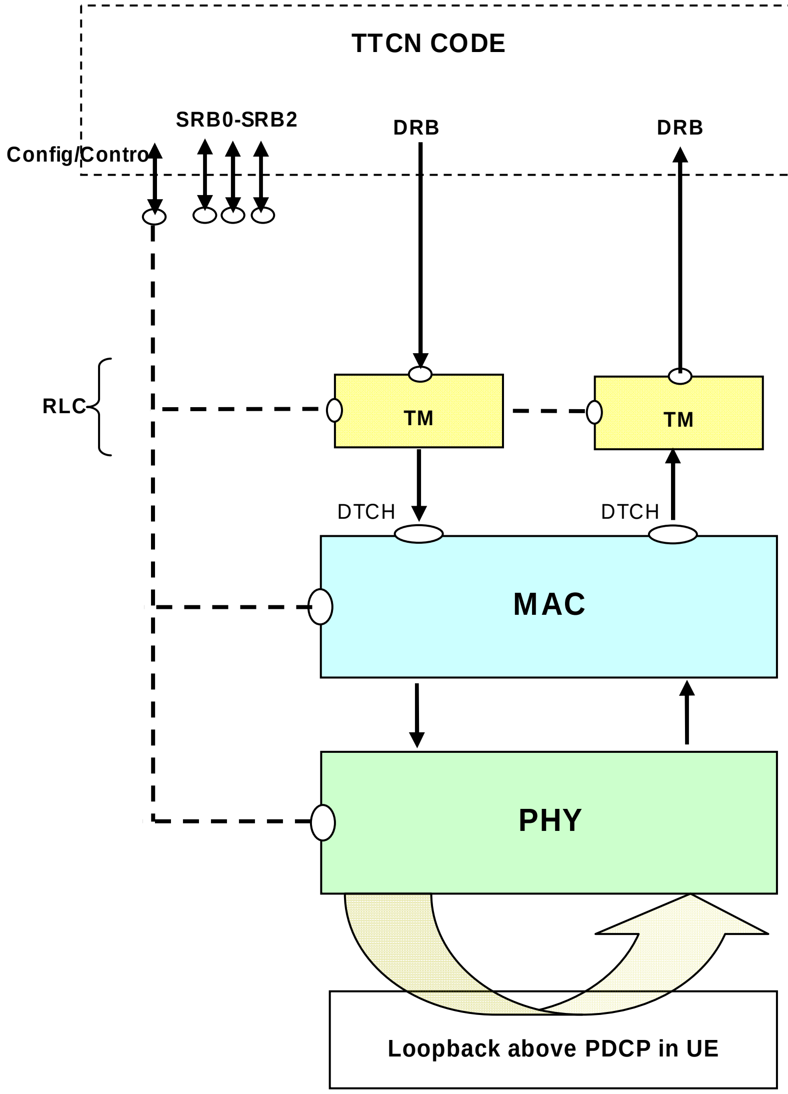

Figure 4.2.1.1-1: Test model for MAC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since Mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side, Layer 1 is configured in the normal way. MAC is configured in a special mode, where it does not add any MAC headers in DL and /or not remove any MAC headers in UL directions respectively at DRB port. In this case, the TTCN shall provide the final PDU, including padding. Except for this, the MAC layer shall perform all of its other functions.

On DRBs the RLC is configured in transparent mode. Hence with this configuration PDU's out of SS RLC are same as the SDU's in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

There are two different test modes in which MAC header addition/removal can be configured:

DL/UL header-transparent mode: no header addition in DL and no header removal in UL.

DL only header-transparent mode: no header addition in DL; UL MAC is configured in normal mode to remove MAC header and dispatch the MAC SDUs according to the logical channel Ids.

If SS MAC is configured in DL/UL header-transparent mode, the PDU's exchanged at the DRB port between TTCN and SS, shall be the final MAC PDU's consisting of MAC, RLC and PDCP headers. TTCN code shall take care in DL of building MAC header, RLC headers and PDCP headers and in UL handle MAC, RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. During testing of multiple DRBs at the UE side, it shall still be possible to configure only one DRB on SS side with configuration in the figure 4.2.1.1-1. Other DRBs will not be configured, to facilitate routing UL TBSs. Multiplexing/de-multiplexing of PDUs meant/from different DRBs shall be performed in TTCN. Since the MAC layer does not evaluate the MAC headers in UL it cannot distinguish between SRB and DRB data in UL. Therefore there shall be no SRB traffic while MAC is configured in this test mode.

If SS MAC is configured in DL only header-transparent mode, the UL PDUs exchanged at the DRB port between TTCN and SS, shall be final RLC PDUs consisting of RLC and PDCP headers. SS shall route these PDUs based on logical channel IDs. In DL, TTCN sends fully encoded MAC PDUs at the DRB port (consisting of MAC, RLC and PDCP headers). In this case TTCN needs to take care of maintaining sequence numbers and state variables for RLC and PDCP layers. Furthermore in UL and DL the SS MAC layer shall be capable of dealing with SRB data (i.e. it shall handle DL RLC PDUs coming from SRBs RLC layer or dispatch UL RLC PDUs to SRBs) as in normal mode.

NOTE: TTCN shall ensure that no DL MAC SDUs in normal mode and DL MAC PDUs in test mode are mixed for the same TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured. In a similar way the reception of RACH preambles is reported by SS over the same port.

4.2.1.2 RLC test model

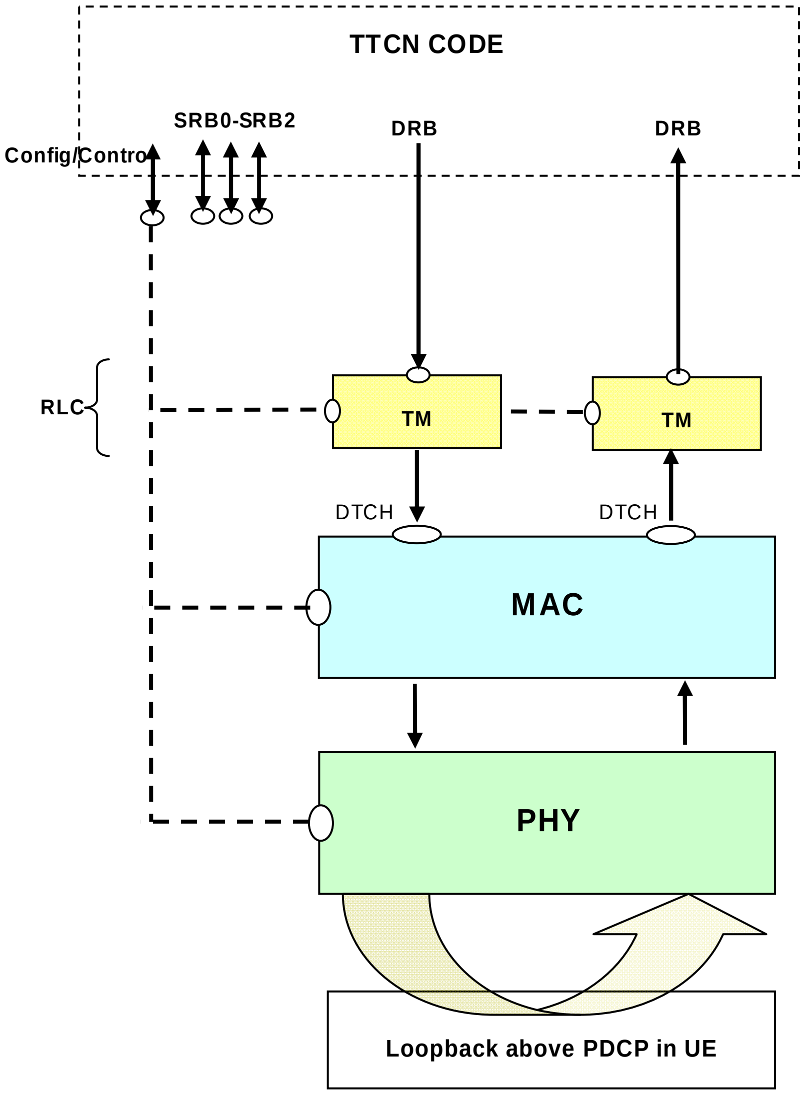

Figure 4.2.1.2.3-1: Test model for RLC AM/UM testing

This model is suitable for testing both UM/AM mode of operation of DRBs on UE side.

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side, L1 and MAC are configured in the normal way. The RLC is configured in transparent mode. Hence with this configuration PDUs out of SS RLC are same as the SDUs in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

The PDUs exchanged between TTCN and SS, shall be the final RLC PDUs consisting of RLC and PDCP headers. TTCN code shall take care in DL of building RLC headers and PDCP headers and in UL handle RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. If RLC on UE side is in AM mode, TTCN shall take care of generating polls in DL and responding with RLC control PDUs on reception of UL Poll.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port.

4.2.1.3 PDCP test model

4.2.1.3.1 PDCP ROHC test model

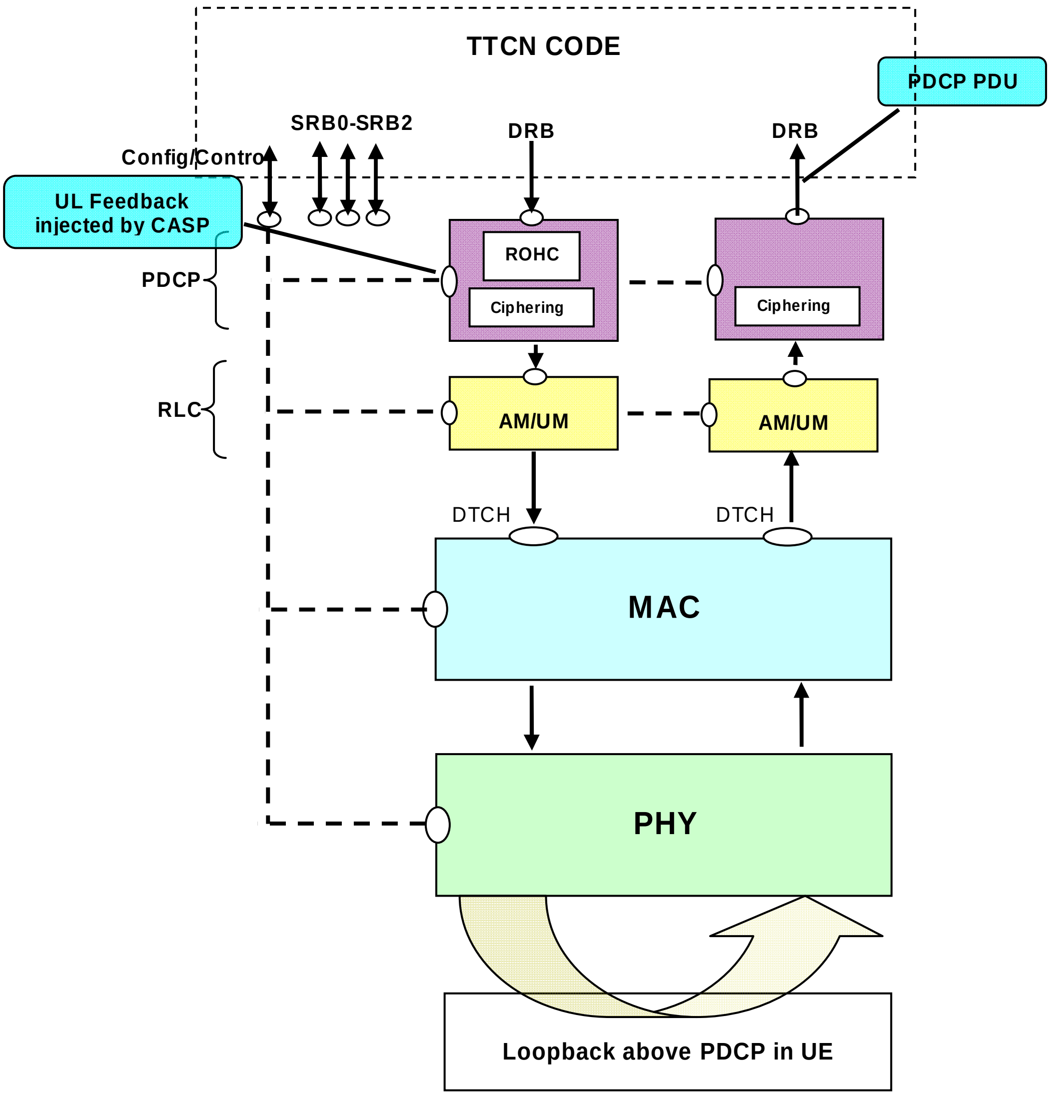

Figure 4.2.1.3.1-1: Test model for PDCP ROHC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled and ROHC is configured.

On the SS Side L1, MAC and RLC are configured in normal way. They shall perform all of their functions. The ports are above PDCP.

The PDCP is configured in special mode, with no header manipulation. Ciphering is configured in both directions. ROHC is configured in DL direction only. UL ROHC feedback can be injected by control ASP. It shall be possible to configure 'no header manipulation' mode independently in UL and DL directions. When configured in special mode, SS shall not add PDCP header (DL) and remove PDCP Header (UL). PDCP state variables shall be maintained by SS PDCP layer. It shall be possible for SS PDCP to update state variables based on the PDU's in both directions, even though headers are not added/removed. Also, it shall be possible to read or set the PDCP internal state variables, by control primitives.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.1.3.2 PDCP test model (Non ROHC)

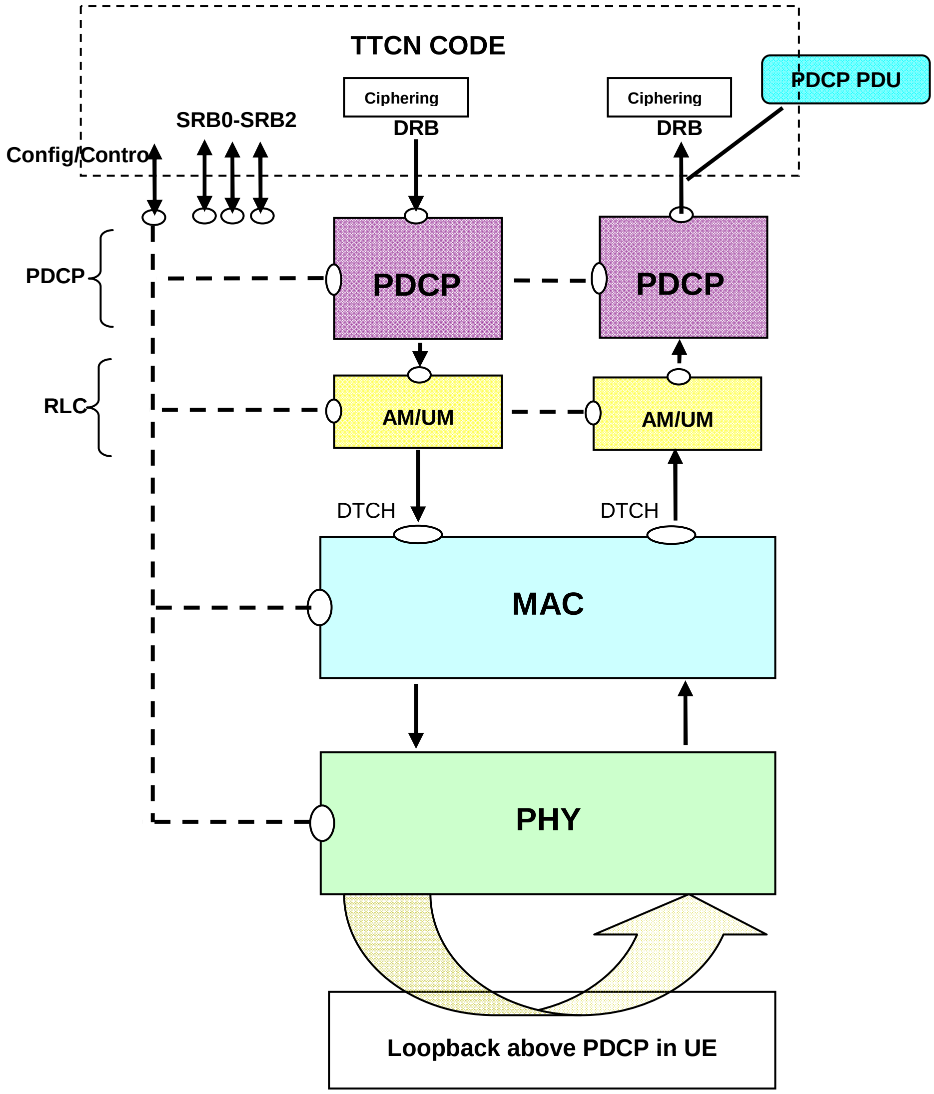

Figure 4.2.1.3.2-1: Test model for PDCP (Non ROHC) testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled and ROHC is not configured.

On the SS Side L1, MAC and RLC are configured in normal way. They shall perform all of their functions. The ports are above PDCP.

The PDCP is configured in a special mode, named transparent mode. In this mode, SS shall not add PDCP header (DL) and remove PDCP Header (UL). The TTCN maintains sequence numbers and state variables for the PDCP layer. The TTCN makes use of the AS ciphering functionality in both directions, employing the dummy ciphering algorithm. Ciphering/deciphering are performed using TTCN external functions. ROHC is not configured.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.2 RRC test model

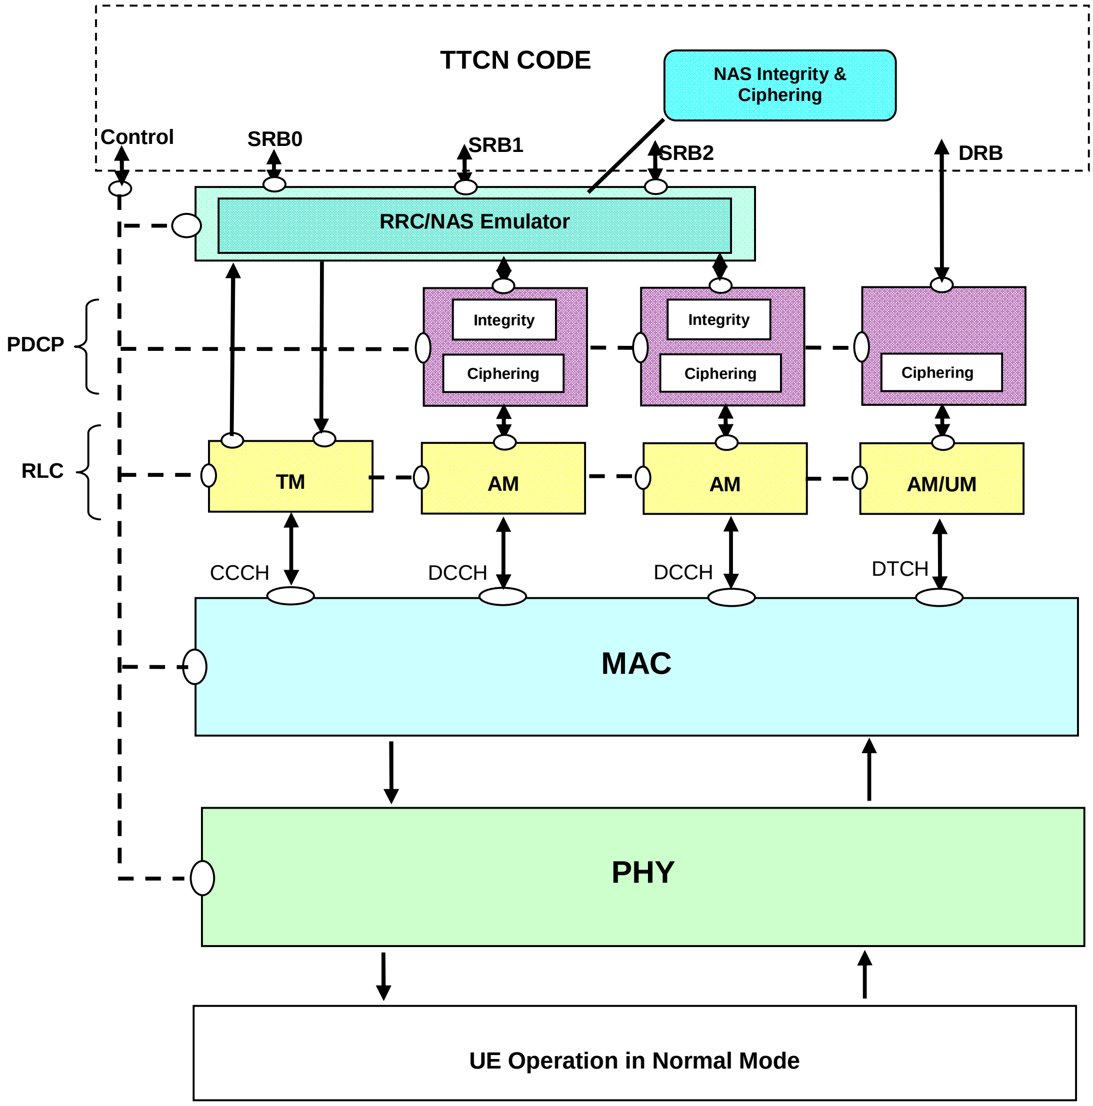

Figure 4.2.2-1: Test model for RRC testing

The UE is configured in normal mode. On UE side Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured.

On the SS Side L1, MAC, RLC and PDCP are configured in normal way. They shall perform all of their functions. For SRB0 the DL and UL port is above RLC. For SRB1 and SRB2 the port is above/below the RRC and NAS emulator, which may be implemented as a parallel test component. For DRB, the port is above PDCP. PDCP Ciphering/Integrity is enabled. NAS integrity/Ciphering is enabled.

The RRC/NAS emulator for SRB1 and SRB2 shall provide the Ciphering and integrity functionality for the NAS messages. In UL direction, SS shall report RRC messages, still containing (where appropriate) the secure and encoded NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.3 DRB test model

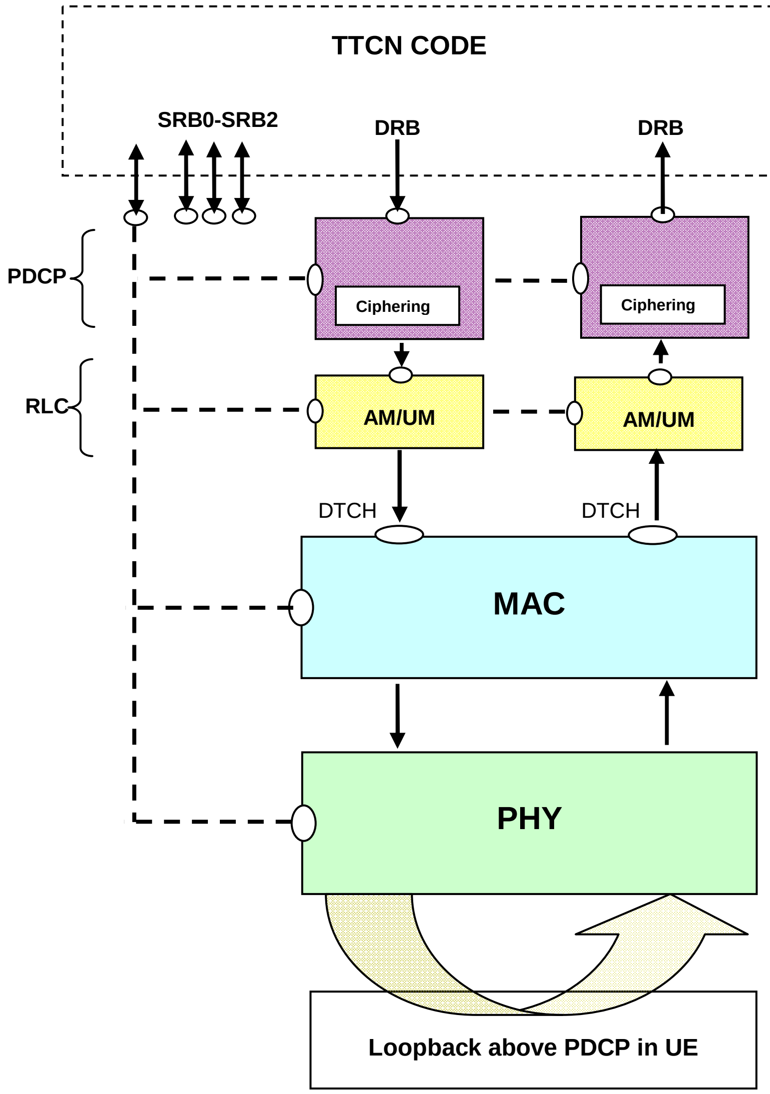

Figure 4.2.3-1: Test model for DRB testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. Ciphering is optionally configured on UE side. In TTCN the DRB data is considered as raw data and there is no IP handling while the UE is in loopback mode.

On the SS Side L1, MAC, RLC and PDCP are configured in normal way. They shall perform all of their functions. The ports are above PDCP. When test loop mode is used for the DRB, the ports at the SS side refer to the raw DRB ones. Ciphering is enabled and ROHC is not configured on SS Side.

SS shall send in DL all PDU's received from different RB's but with same timing control information in one MAC PDU and in one TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.4 IP Test Model

Depending on different test scenarios user plane data can be distinguished in:

- Raw user data upon EUTRA PDCP (Raw mode);
- IP user data (IP mode).

The raw user data are applied for L2 or DRB tests, no IP protocols are involved. The UL user data is directly routed to the EUTRA_PTC.

The IP user data are applied when IP packets data are handled in TTCN. A DRB can have one or more Transport and Internet protocols configured.

Whether a DRB is in IP or in raw mode depends on the configuration of the routing table in the DBR-Mux. This is controlled by the IP_CTRL port and independent from the configuration of the IP connections (IP_SOCKET).

4.2.4.1 IP user data

To allow the usage of common protocol implementations at the system adaptor the related interfaces in TTCN-3 are based on the Sockets API.

There can be one or several sockets (server or client) for each DRB: TCP, UDP and ICMP.

Each socket can be clearly identified by the IP address, port number and the protocol (tcp|udp\icmp). It implies that a TCP socket can be either server or client.

It is assumed that:

- Different DRBs are not using the same sockets.
- The UE behaviour of a single IP-based protocol on a specific socket like DHCP can be included in conformance tests.
- Other protocols like ESP are not considered but can easily be introduced later, if necessary, by using the same socket approach.

The routing of IP packets from the IP stack to the DRBs in DL and from the DRBs either to the DRB port (E_DRB in case of EUTRA) or to the IP stack in UL is done by the DRB-Mux. This behaviour is controlled by the DRB-Mux's routing table.

The general architecture of the IP test model is shown in figure 4.2.4.1-1 (with a DHCP server as example for IP handling).

NOTE: In figure 4.2.4.1-1 DHCP is one example for a protocol above the IP stack; other protocols like DNS can also be implemented but this a pure TTCN implementation issue and independent from the system interface.

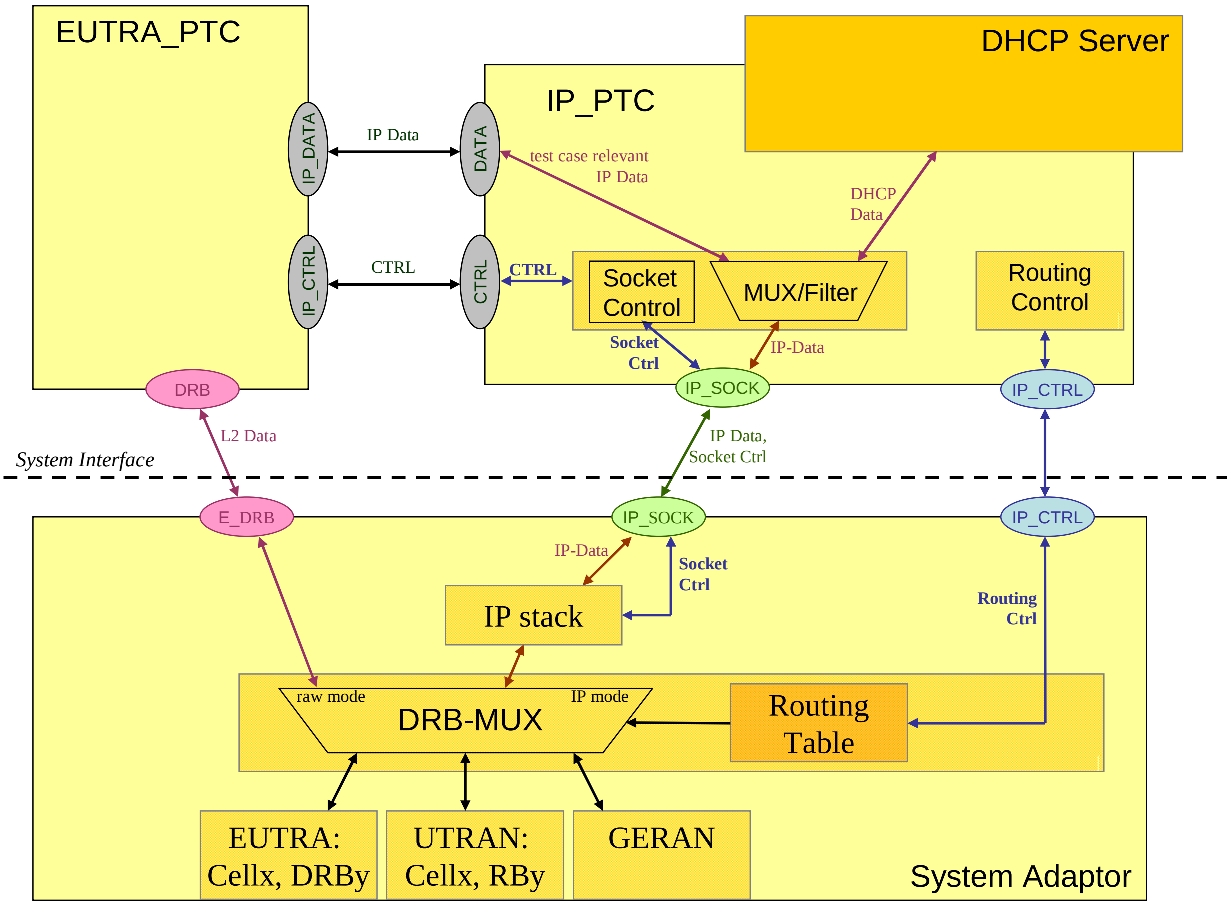

Figure 4.2.4.1-1: Example of EUTRA IP test model with a DHCP server

4.2.4.2 Configuration of Sockets

The following configurations are controlled by the IP_PTC (IP_SOCKET_REQ). The socket configuration and the sending/receiving of data are done with the same ASP on the system port IP_SOCK.

4.2.4.2.1 Socket Establishment

TCP server

TCP socket configured as server: the socket 'listens' to a 'connect' from the UE. The socket can be configured by using the following system calls of the Berkeley Sockets API:

- socket (AF_INET | AF_INET6, SOCK_STREAM, 0);
- setsockopt;
- bind (local IP address Port);
- listen.

NOTE: Currently the only socket option being defined is SO_BROADCAST

When the UE connects to the server the connection is accepted with the 'accept' system call.

TCP client

A TCP connection is established to an existing TCP server at the UE side. This can be done with the following system calls:

- socket (AF_INET|AF_INET6, SOCK_STREAM, 0);
- setsockopt;
- connect (remote Server Addr of the UE = IP-Addr + Port).

UDP socket

A UDP socket can be established with the system calls

- socket (AF_INET|AF_INET6, SOCK_DGRAM, 0);
- setsockopt;
- bind (local IP address, Port);
- connect.

NOTE 1: 'setsockopt' can be used to set the option SO_BROADCAST to allow broadcast messages (e.g. for DHCP).

NOTE 2: Usage of 'connect' depends on implementation of the system adaptor.

4.2.4.2.2 Socket Release

A socket is released:

- in case of TCP when the remote entity closes the connection;
- when it is closed explicitly by the IP_PTC (system call 'close').

NOTE: In general the sockets are independent from the configuration of the DRBs. Especially in case of UDP or ICMP the sockets can exist even without any DRB being configured.

4.2.4.3 Handling of IP data

Sending and receiving of IP data is done by the same ASPs as the socket establishment on IP_SOCK. In TTCN the IP data are handled by a separate TTCN component: IP_PTC. This PTC can deal with the data according to the respective protocol, e.g. DHCP. In general, this is out of scope for the (signalling conformance) test case in terms of pass/fail assignment.

The IP_PTC will receive data from sockets being configured for the corresponding IP protocols. Any unrecognised IP packets are discarded by the IP stack in the system adaptor.

When the IP data is relevant for the test purpose, e.g. the test purpose is to test DHCP, the IP data are routed to the EUTRA_PTC. This allows generic protocol implementations for the common case, i.e. IP_PTC and DHCP server are independent from test case specific implementations.

The interface between EUTRA_PTC and IP_PTC is a pure TTCN implementation issue and independent of the system interface. Furthermore it is irrelevant for the system interface whether e.g. the DHCP server is part of the IP_PTC or implemented as a separate PTC.

- For TCP, the primitives to send and receive data correspond to the 'send' and 'recv' system calls.
- For UDP and ICMP, the primitives correspond to the 'sendto' and 'recvfrom' system calls.
- For both UDP and TCP the system adaptor may send ("in-band") error indications in case of system errors. That results in an assignment of inconc by the IP_PTC.

4.2.4.4 Routing of IP Data

The routing of IP data is done in the DRB-Mux which gets a routing table configured. This table associates the address and protocol information of IP packets (protocol, local IP address, local port, remote IP address, remote port) with the radio bearer (RAT, cell, DRB id).

In UL a DRB is considered being in raw mode when there is no entry found in the routing table. It is considered being in IP mode when there is any entry regardless of the protocol and address information being stored, i.e. in UL, the SS does not need to evaluate the IP header to route the data (in raw mode this would cause problems in the case of loopback data).

In DL the IP packets of the IP stack are routed to the DRBs acc. to the routing information in the routing table (see annex D for details.

NOTE: Only the IP PTC can re-configure the Routing Table; if that needs to be triggered by a RAT specific PTC, this is done by appropriate coordination messages but the RAT specific PTCs don't have a direct access to the routing tables.

4.2.4.5 Multiple PDNs

In case multiple PDNs broadcast, or multicast datagrams sent by the UE, need to assigned to the respective PDN:

IPv4

When the UE does not get a valid IPv4 address assigned via NAS signalling it will request the IP address via DHCP. In this case there are DHCP broadcast messages in UL.

In the case of multiple PDNs, it cannot be distinguished by evaluating the IP address to which PDN the message belongs but additional information is necessary:

The network side needs to know which interface (i.e. network) the broadcast comes from; in case of LTE this is associated with the default bearer of the particular PDN.

NOTE: In principle the 'chaddr' field or the 'client identifier' option of the DHCP messages may be used to distinguish different interfaces (e.g. for Ethernet this would be the MAC address) but it is not specified how these fields are to be used by the UE (or how to configure them at the UE); RFCs (e.g. RFC 2131) only require the client identifier to be unique in a given subnet.

IPv6

The UE gets an interface identifier assigned via NAS signalling (TS 24.301 [21] clause 6.2.2) which is used as link-local address during stateless address auto configuration (TS 23.060 [43] clause 9.2.1.1 and TS 29.061 [44] clause 11.2):

The UE may send a ROUTER SOLICITATION message (multicast) to which the network responds with a ROUTER ADVERTISEMENT.

Since the ROUTER SOLICITATION message contains the interface identifier as assigned via NAS signalling, even in the case of multiple PDNs it can distinguished which PDN is concerned, as long as the interface identifiers are different for different PDNs (for UE side as well as for network side).

NOTE: According to TS 23.060 [43] clause 9.2.1.1 and RFC 3314 a real network (PDN-GW) itself shall send an (unsolicited) ROUTER ADVERTISEMENT after it has assigned the interface identifier.

Conclusions and Requirements:

In the case of broadcast or multicast messages TTCN needs additional information about the PDN being addressed.

When a socket connection is configured to allow broadcasts and there is a broadcast or multicast message in UL the SS shall provide information about on which bearer the datagram has been sent (RAT, cell, DRB id).

NOTE: From the socket programming point of view multiple PDNs for the SS are like a multi-homed host: Servers for different interfaces are bound to different interfaces (e.g. using the ‘bind’ system call with a specific IP address instead of IPADDR_ANY) or a server may retrieve the interface id for a received datagram from the IP stack with an appropriate system call.

Even though the details are implementation dependent, the SS shall be capable of:

determining RAT, cell, DRB id for any broadcast or multicast datagram in UL

avoiding any duplication of messages in UL even when multiple servers are listening to broadcast/multicast messages (what is a possible SS implementation)

4.2.4.6 IP Addresses Guidelines

4.2.4.6.1 Common Structure of IP Addresses

IPv4:

Network prefix (subnet address)	n bits
Host part	32-n bits

with 'n' e.g. depending on the network class

IPv6:

Network prefix

Global routing prefix	64 – n bits
Subnet ID	n bits
Interface ID	64 bits

Addresses within one network (PDN) have all the same subnet address (IPv4) or global routing prefix (IPv6)

NOTE: As a consequence at the system simulator, routing can be done based on appropriate network masks, but that is dependent on SS implementation and therefore is out of scope for this document.

4.2.4.6.2 Common Requirements regarding IP Addresses

IP addresses are configured via PIXIT parameters as defined in clause 9.1.

These PIXIT parameters shall fulfil the following requirements:

Network and UE addresses shall be different from each other

Network entities (DHCP server, DNS server, P-CSCF etc.) of a given PDN shall all have the same global routing prefix (IPv6) or subnet address (IPv4).

The IP address assigned to the UE shall have the same global routing prefix (IPv6) or subnet address (IPv4) as the corresponding network.

Requirements for IPv6: according to TS 23.401, cl. 5.3.1.2.2

The 64 bit network prefix of a UE's IPv6 address is unique

The UE may change its interface id during auto configuration

The UE must use the given interface id in the link local address for router solicitation but may use any other interface id in the global address

NOTE: As a consequence, the SS implementation needs to cope with the changing of the UE address and cannot rely on static IP address assignment to the UE.

Global routing prefix (IPv6) and subnet address (IPv4) shall be different for different PDNs

Home agent address:

The home agent is located in the UE's home network (which shall be considered to find an appropriate network prefix for the home agent's IP address)

In order to simplify implementations, the following rules shall be applied:

The IPv6 interface identifier as assigned to the UE via NAS signalling shall be unique, i.e.

It shall be different for different PDNs

It shall differ from the interface ids of the other entities on the link (in general the interface id of the PDN-GW)

Multiple PDNs shall have different IPv6 interface identifier for the PDN-GW

NOTE: Consistency checks for addresses of different PDNs can be done based on an appropriate network mask (IPv4, e.g. 255.255.255.0) and global routing prefix (IPv6, e.g. 2001:db8:1234::/48).

4.2.4.7 User Plane Signalling for Address Allocation

For IPv4, the UE gets assigned the IP address via NAS signalling unless it explicitly requests to use DHCP.

For IPv6, the UE gets assigned a unique interface identifier to be used until it has successfully performed the auto-configuration procedure (Ref. to RFC 2462).

NOTE: This clause specifies behaviour of the SS (TTCN) to achieve successful IP signalling; but in general, IP signalling is out of scope for conformance tests as defined in TS 36.523-1 [1].

4.2.4.7.1 DHCP

When the UE supports IPv4 and does not get an IPv4 address via NAS signalling it will request the address via DHCP (Ref. to RFC2131).

The UE may send a **DHCPDISCOVER** with or without Rapid Commit Option (Ref. to RFC 4039):

UE sends **DHCPDISCOVER** according to table 4.2.4.7.1-1 with Rapid Commit Option.

TTCN sends **DHCPACK** according to table 4.2.4.7.1-4

UE sends **DHCPDISCOVER** according to table 4.2.4.7.1-1 without Rapid Commit Option.

TTCN sends **DHCPOFFER** according to table 4.2.4.7.1-2

When the Rapid Commit option is not used the UE sends a DHCPREQUEST as response to the DHCPOFFER:

UE sends **DHCPREQUEST** according to table 4.2.4.7.1-3

TTCN sends **DHCPACK** according to table 4.2.4.7.1-4

Any other DHCP messages shall be ignored by TTCN.

Table 4.2.4.7.1-1: DHCPDISCOVER

4.2.4.7.2 DHCPv6

DHCPv6 is not needed for E-UTRA conformance tests as defined in 36.523-1[1]

4.2.4.7.3 ICMPv6

When the UE supports IPv6 it will perform IPv6 Stateless Address Auto configuration according to RFC 4862. The UE sends an **ICMPv6 Router Solicitation** message according to table 4.2.4.7.3-1; as response the TTCN sends an **ICMPv6 Router Advertisement** message according to table 4.2.4.7.3-2.

NOTE: The TTCN does not send any (periodic) unsolicited Router Advertisement, i.e. the UE is expected to ask for an immediate advertisement whenever it is needed.

Any other ICMPv6 messages are ignored by the TTCN (especially in accordance to TS 23.060, clause 9.2.1.1, the TTCN silently discards Neighbour Solicitation).

Table 4.2.4.7.3-1: ICMPv6 Router Solicitation

IPv6		
SRC ADDR	link local address	NOTE 1
DEST ADDR	multicast address	NOTE 2

NOTE 1: The server's link local address is derived from the server's global IPV6 address (PIXIT parameter) NOTE 2: As received as SRC address of the corresponding Router Solicitation NOTE 3: Acc. to TS 29.062 clause 11.2.1.3.2 NOTE 4: The routing prefix of the UE's global IPv6 address is derived from the respective PIXIT parameter NOTE 5: Since the UE may change its interface identifier after successful auto configuration to any value in general the IPv6 address used by the UE differs from the PIXIT		

4.2.4.7.4 DNS

DNS is not needed for E-UTRA conformance tests as defined in 36.523-1[1].

4.2.4A LTE-Carrier Aggregation test Models

4.2.4A.1 CA-MAC test model

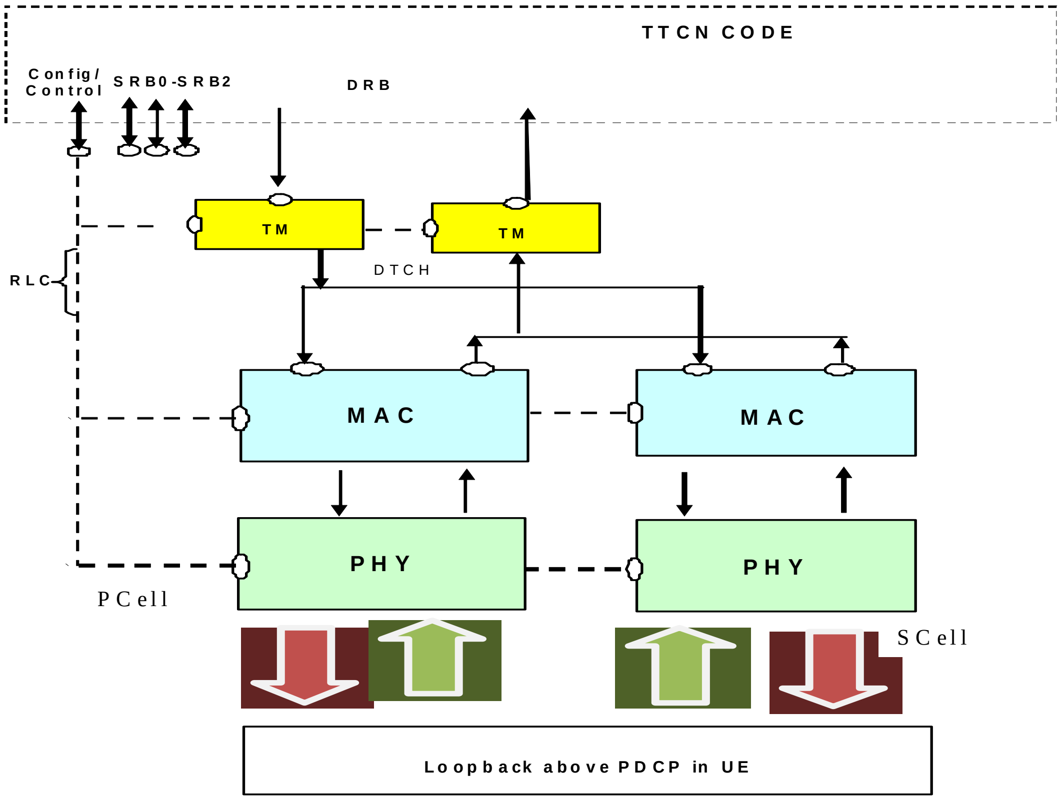

Figure 4.2.4A.1-1: Test model for CA-MAC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since Mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side,

Pcell only: On DRBs the RLC is configured in transparent mode. Hence with this configuration PDU's out of SS RLC are same as the SDU's in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

Pcell/Scell: Layer 1 is configured in the normal way. MAC is configured in a special mode, where it does not add any MAC headers in DL and /or not remove any MAC headers in UL directions respectively at DRB port. In this case, the TTCN shall provide the final PDU, including padding. Except for this, the MAC layer shall perform all of its other functions. For SRB's/BCCH/PCCH the configuration is same as in CA-RRC test model.

There are two different test modes in which MAC header addition/removal can be configured:

DL/UL header-transparent mode: no header addition in DL and no header removal in UL.

DL only header-transparent mode: no header addition in DL; UL MAC is configured in normal mode to remove MAC header and dispatch the MAC SDUs according to the logical channel Ids.

If SS MAC is configured in DL/UL header-transparent mode, the PDU's exchanged at the DRB port between TTCN and SS, shall be the final MAC PDU's consisting of MAC, RLC and PDCP headers. TTCN code shall take care in DL of building MAC header, RLC headers and PDCP headers and in UL handle MAC, RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. During testing of multiple DRBs at the UE side, it shall still be possible to configure only one DRB on SS side with configuration in the figure 4.2.4A.1-1. Other DRBs will not be configured, to facilitate routing UL TBs. Multiplexing/de-multiplexing of PDUs meant/from different DRBs shall be performed in TTCN. Since the MAC layer does not evaluate the MAC headers in UL it cannot distinguish between SRB and DRB data in UL. Therefore there shall be no SRB traffic while MAC is configured in this test mode.

If SS MAC is configured in DL only header-transparent mode, the UL PDUs exchanged at the DRB port between TTCN and SS, shall be final RLC PDUs consisting of RLC and PDCP headers. SS shall route these PDUs based on logical channel IDs. In DL, TTCN sends fully encoded MAC PDUs at the DRB port (consisting of MAC, RLC and PDCP headers). In this case TTCN needs to take care of maintaining sequence numbers and state variables for RLC and PDCP layers. Furthermore in UL and DL the SS MAC layer shall be capable of dealing with SRB data (i.e. it shall handle DL RLC PDUs coming from SRBs RLC layer or dispatch UL RLC PDUs to SRBs) as in normal mode.

NOTE: TTCN shall ensure that no DL MAC SDUs in normal mode and DL MAC PDUs in test mode are mixed for the same TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception in Pcell over system indication port, if configured. In a similar way the reception of RACH preambles in Pcell is reported by SS over the same port.

4.2.4A.2 CA-RRC test model

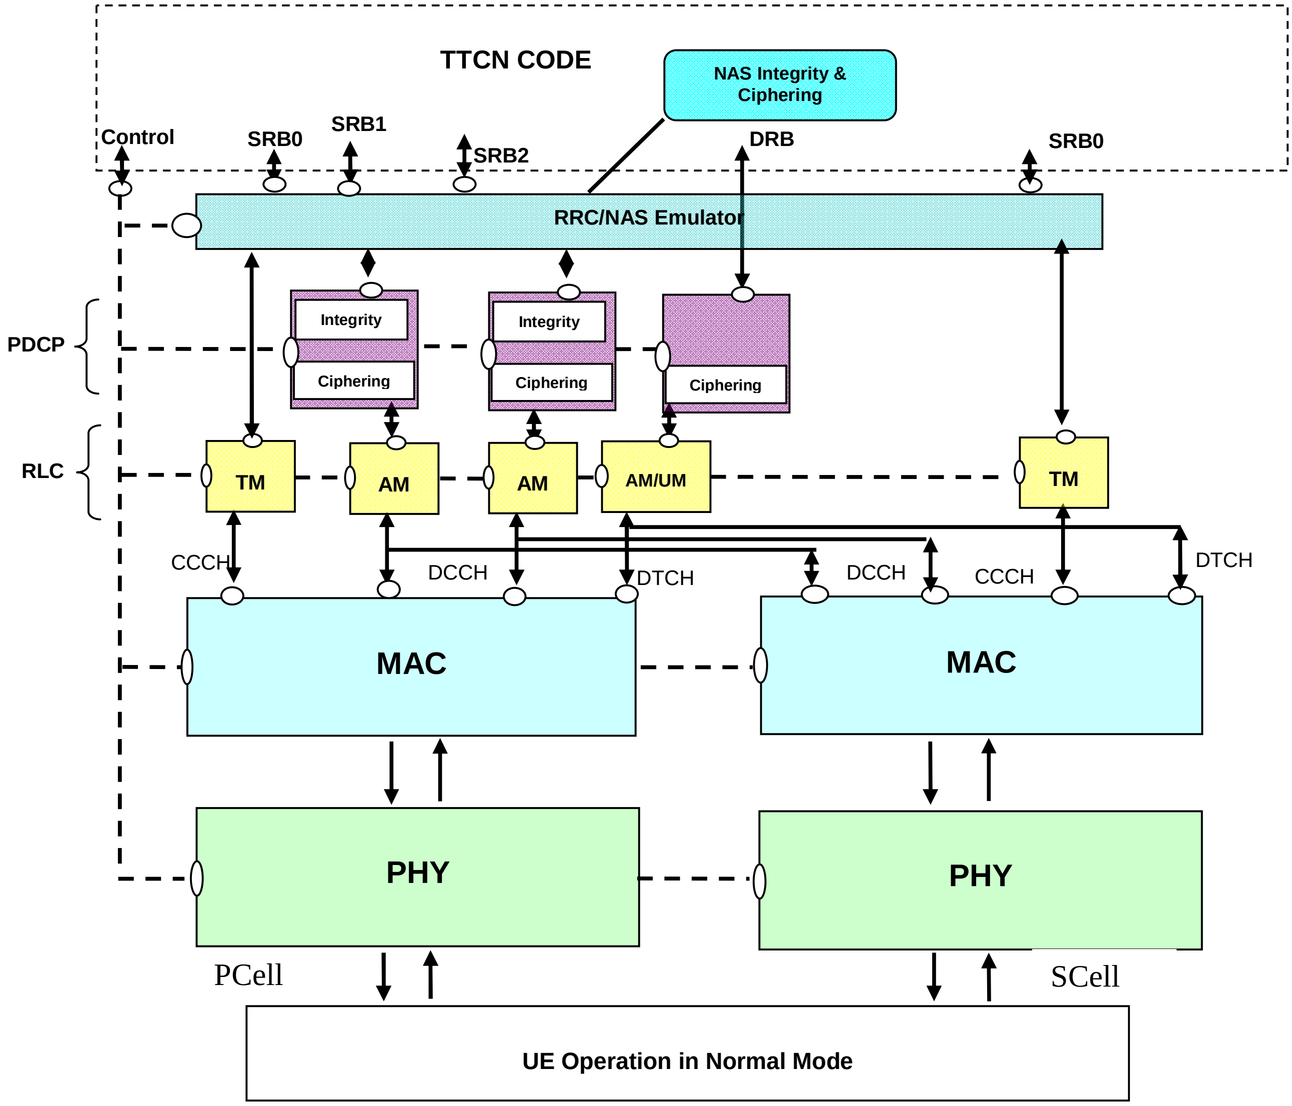

Figure 4.2.4A.2-1: Test model for CA-RRC testing

The UE is configured in normal mode. On UE side Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured.

On the SS Side L1 (Pcell/Scell), MAC (Pcell/Scell), RLC (Pcell) and PDCP (Pcell) are configured in normal way. They shall perform all of their functions. For SRB0 the DL and UL port is above RLC. For SRB1 and SRB2 the port is above/below the RRC and NAS emulator, which may be implemented as a parallel test component. For DRB, the port is above PDCP. PDCP Ciphering/Integrity is enabled. NAS integrity/Ciphering is enabled.

Note: RLC for BCCH/ PCCH/CCH are configured per serving cell; RLC and PDCP for DCCH/DTCH are configured only in Pcell and are additionally multiplexed on MAC of associated Scells.

The RRC/NAS emulator for SRB1 and SRB2 shall provide the Ciphering and integrity functionality for the NAS messages. In UL direction, SS shall report RRC messages, still containing (where appropriate) the secure and encoded NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.5 IP model extension for IMS

The IMS test model is based on the IP Test Model with extensions to support IPsec. Support of Signalling Compression (SigComp) may be added in the future if needed.

IMS in general may use TCP, UDP or alternated TCP/UDP as transport layer for signalling messages.

At TTCN-3 system interface level there are no IMS specific ports or ASPs, i.e. IMS specific issues are purely handled in TTCN and therefore out of scope for this document.

NOTE: Even though the main intention to introduce the IMS test model is to support the initial IMS registration procedure, the IMS test model is independent of any specific IMS procedures.

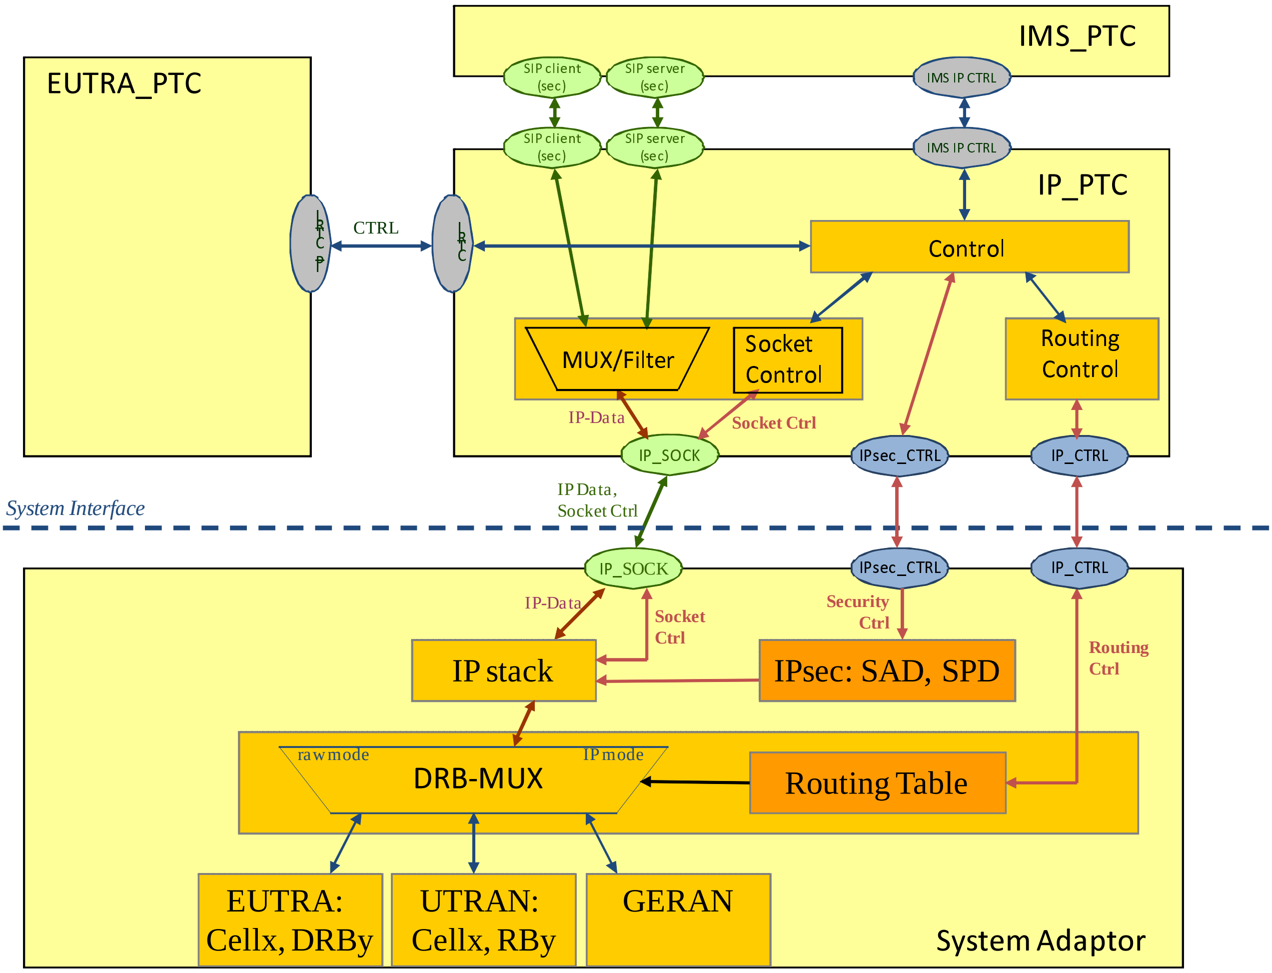

Figure 4.2.5-1: Example for IP model supporting IMS

NOTE 1: At the system interface IPsec is the only difference compared to the IP model of clause 4.2.4

NOTE 2: It is a working assumption to have a separate PTC for IMS as shown in figure 4.2.5-1

NOTE 3: Ports between the IP_PTC and the IMS_PTC are for illustration only

4.2.5.1 IPsec

IPsec involves security policy database (SPD) and security association database (SAD) (Ref. RFC4301). The entries in the databases are configured with security parameters by ASPs at the IPsec_CTRL port.

NOTE: IPsec is not directly associated to a given socket but IPsec is applied to IP packets matching a configured security association. ⇒ configuration of IPsec in general is independent of the existence of sockets but typically the IPsec configuration is done just before establishment of a corresponding socket.

The SS shall cleanup all IPsec database entries which has been setup by TTCN during a test case at the end of the test case independent of how the test case terminates (normal termination, run-time error etc.)

4.2.5.1.1 Security Association

NOTE: Within this clause SA is used as abbreviation of 'Security Association' (i.e. not as abbreviation for 'System Adaptor' as usual)

During the IMS signalling handling two pairs of SAs consisting of four unidirectional SAs will be used, one pair of SAs (SA2 and SA4) is between the server port of UE and the client port of the SS, another pair of SAs (SA1 and SA3) is between the client port of UE and the server port of the SS, see figure 4.2.5.2.3.1-1.

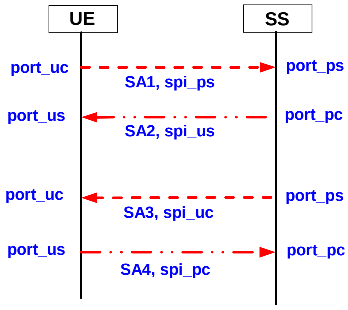

Figure 4.2.5.2.3.1-1 Two pairs of SAs

SA1 used for data flow from port_uc to port_ps is an inbound SA for protected server port of P-CSCF, its Security Parameter Index spi_ps is selected by P-CSCF (IMS Registration/Authentication function in IP_PTC) and presented in 401 Unauthorised; SA2 used for data flow from port_pc to port_us is an inbound SA for protected server port of UE, its Security Parameter Index spi_us is selected by UE and presented in initial REGISTER message; SA3 used for data flow from port_ps to port_uc is an inbound SA for protected client port of UE, its Security Parameter Index spi_uc is selected by UE and presented in initial REGISTER message; SA4 used for data flow from port_us to port_pc via an inbound SA for client port of P-CSCF, its Security Parameter Index spi_pc is selected by P-CSCF (IMS Registration/Authentication function in IP_PTC) and presented in 401 Unauthorised message. The pair of SA1 and SA3 is for bidirectional traffic between port_uc and port_ps. The pair of SA2 and SA4 is for bidirectional traffic between port_pc and port_us. Those four spi_xx and other security parameters are negotiated during security association set up procedure and shall be passed to IPsec protocol layer in the SS. See "SAD and SPD" and clause 7.2 of TS 33.203 [41].

These four unidirectional SA and relevant ports are shared by TCP and UDP. TCP transport will use all four SAs, UDP transport uses only two SAs, because there is no traffic from port_ps to port_uc, nor from port_us to port_pc. Figure 4.2.5.2.3.1-2 shows the usage of ports and SAs under UDP and TCP transport in a generic registration procedure (see clause C.2 of TS 34.229-1 [40]).

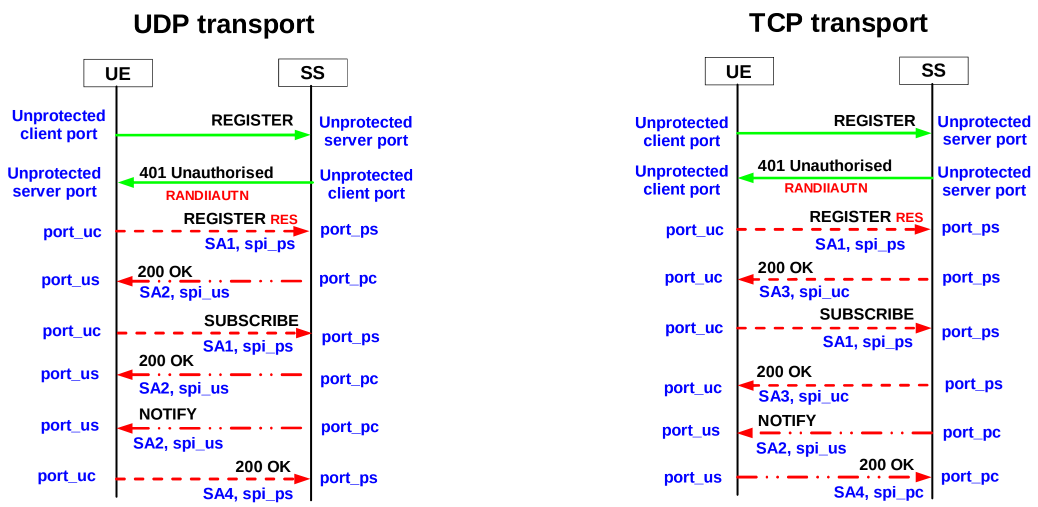

Figure 4.2.5.2.3.1-2: Usage of ports and SAs in UDP and TCP transport

4.2.5.1.2 SAD and SPD

SAD and SPD are used by IPsec to store various security parameters (per Security Association). During IMS AKA, the UE and the IMS Registration/Authentication function in IP_PTC negotiates the negotiable parameters for security association setup, this negotiation is carried out at the SIP level in TTCN-3, and the resulting security association parameters are maintained in TTCN-3. The involved parameters are:

spi_uc; spi_us; spi_pc; spi_ps

encryption algorithm

integrity algorithm

The IMS AKA will generate key IK_{IM}, the security parameters IK_{ESP} and CK_{ESP} are derived from IK_{IM} and CK_{IM} in TTCN-3 (Ref. Annex I of TS 33.203[41]). ASPs are used to pass these parameters (per security association and with its selectors) from TTCN-3 to SAD and SPD of IPsec layer in the SS.

The same IK_{ESP} and CK_{ESP} will be used for the four unidirectional SAs. All of the four unidirectional SAs will use the same negotiated encryption algorithm and integrity algorithm.

In addition to those negotiable security parameters, other security parameters are fixed in IMS environment (see clause 7.1 of TS 33.203 [41]):

Life type:	second
SA duration:	2^{32}-1
Mode:	transport
IPsec protocol:	ESP, ESP integrity applied
Key length:	192 bits for DES-EDES_CBC, 128 bits for AES-CBC and HMAC-MD5-96; 160 bits for HMAC-SHA-1-96

These parameters are hard coded with IPsec implementation in the SS, not passed from TTCN-3.

An SA have to be bound to selectors (specific parameters) of the data flows between UE and P-CSCF (IMS Registration/Authentication function in IP_PTC), the selectors are:

source IP address

destination IP address

source port

destination port

transport protocols that share the SA

IP addresses bound to the two pairs of SAs are:

For inbound SAs at the P-CSCF (the SS side):

- The source and destination IP addresses associated with the SA are identical to those in the header of the IP packet in which the initial SIP REGISTER message was received by the P-CSCF.

For outbound SAs at the P-CSCF (the SS side):

- The source IP address bound to the outbound SA equals the destination IP address bound to the inbound SA; the destination IP address bound to the outbound SA equals the source IP address bound to the inbound SA.

Ports bound to the two pairs of SAs are depictured in figure 4.2.5.2.3.1-1, port_ps and port_pc shall be different from the default SIP ports 5060 and 5061. The number of the ports port_ps and port_pc are communicated to the UE during the security association setup procedure.

The transport protocol selector shall allow UDP and TCP.

The selectors are passed to the SS IPsec layer together with the security parameters related to an SA bound to the selectors.

4.2.5.2 Signalling Compression (SigComp)

Signalling compression is mandatory (see clause 8 of TS 24.229 [42]) and Signalling compression (RFC 3320 [43], RFC 3485 [44], RFC 3486 [45], RFC 4896 [46], RFC 5049 [47]) protocol is used for SIP compression. SigComp entity in the model is used to carry out the compression/decompression functions. In receiving direction of the SS the SigComp entity will detect whether the incoming SIP message is compressed, and decompress the message if it is compressed. In the SS transmitting direction, the TTCN, via ASP, controls when the compression of outgoing SIP message is started. Stateless compression is not used in the SIP environment. For state full operation of SigComp the ASP passing compartment ID to SigComp is applied. The SS shall clean all states related to a connection in SigComp when an ASP for closing the connection is received. The SS shall also clean all states in the SigComp when abortion of a test case is detected or after the system reboots. If decompression failure occurs while decompressing a message, the message shall be discarded. The SigComp entity in the SS shall automatically find if a secure port or un-secure port is being used for transmission or reception of messages. If an un-secure port is used for transmission, it shall not include state creation instructions. If the state creation command is received in a compressed message on an un-secured port, a decompression failure shall be generated.

4.2.5.3 SIP TTCN-3 Codec

SIP is a text-based protocol, the messages exchanged between the UE and the SS are character strings. In TTCN-3 the messages are structured to take the advantages of TTCN-3 functionalities, and to make the debugging and maintenance easier.

Even though there is no encoding/decoding of SIP messages at the TTCN-3 system interface, the IMS_PTC uses the SIP codec by means of the TTCN-3 build-in functions encvalue and decvalue.

The SIP codec is specified in TS 34.229-3 [45] clause 7.

4.2.6 Support of DSMIPv6

For testing of DSMIPv6 IP packets being relevant for the test cases may be routed by the IP_PTC to the PTCs with specific test case implementation. There are not specific requirements for the system interface.

The functions of HA and ePDG are FFS.

4.3 SAE Test Model

4.3.1 NAS Test Model

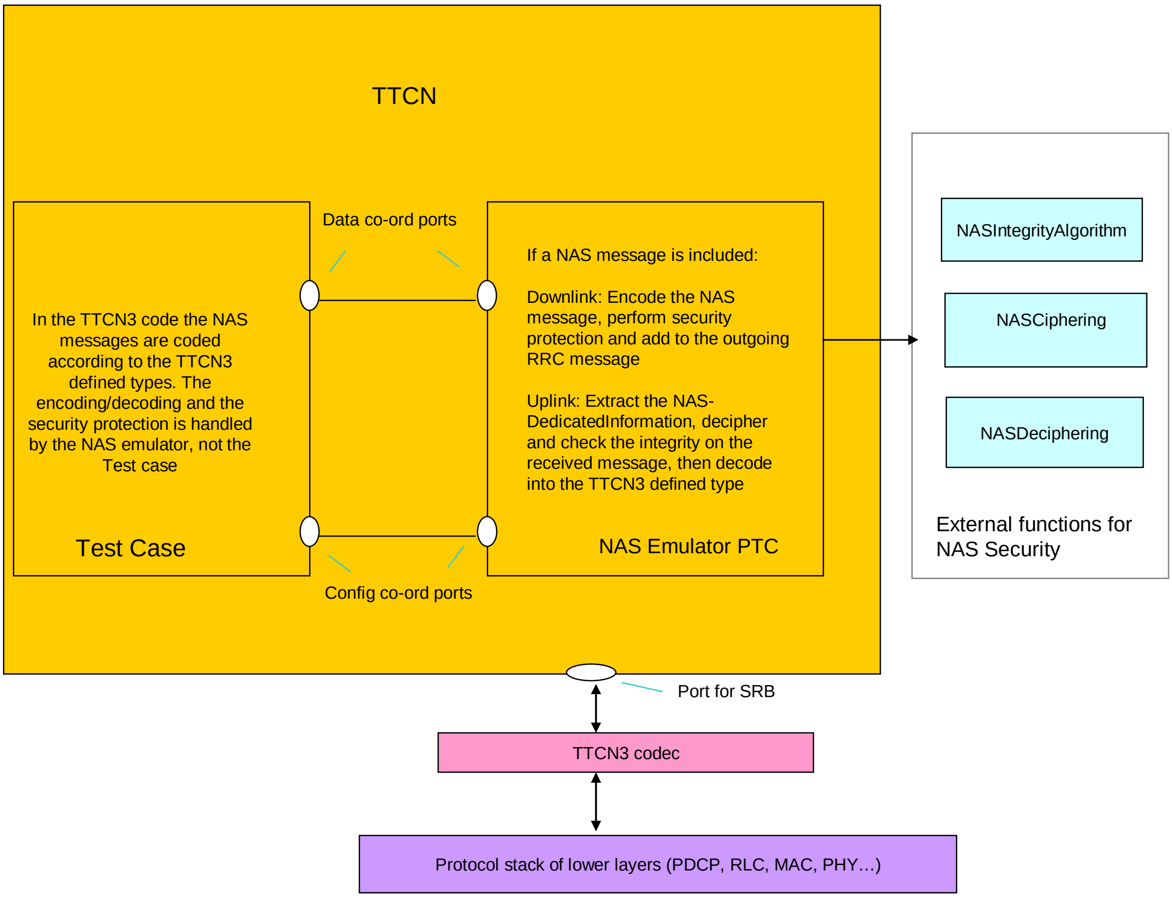

Figure 4.3.1-1: NAS Test Model

The NAS emulator is a parallel test component which handles NAS security, with the help of external functions to perform the integrity and (de)ciphering.

The interface between the emulator and the TTCN (co-ordination messages) handle data as TTCN-3 values. The interface between the emulator and the SS handles the RRC messages as TTCN-3 values, containing (where applicable) secure, encoded NAS messages.

The NAS emulator is not part of the test case in terms of verdict assignment (i.e. it does not check the correctness of any protocol message). Nevertheless, in case of fatal errors such as encode/decode errors, the NAS emulator sets the verdict to inconclusive and terminates immediately - which causes the test case to terminate. I.e. the NAS emulator does not resolve error situations.

4.4 Inter RAT Test Model

4.4.1 E-UTRAN-UTRAN Inter RAT Test Model

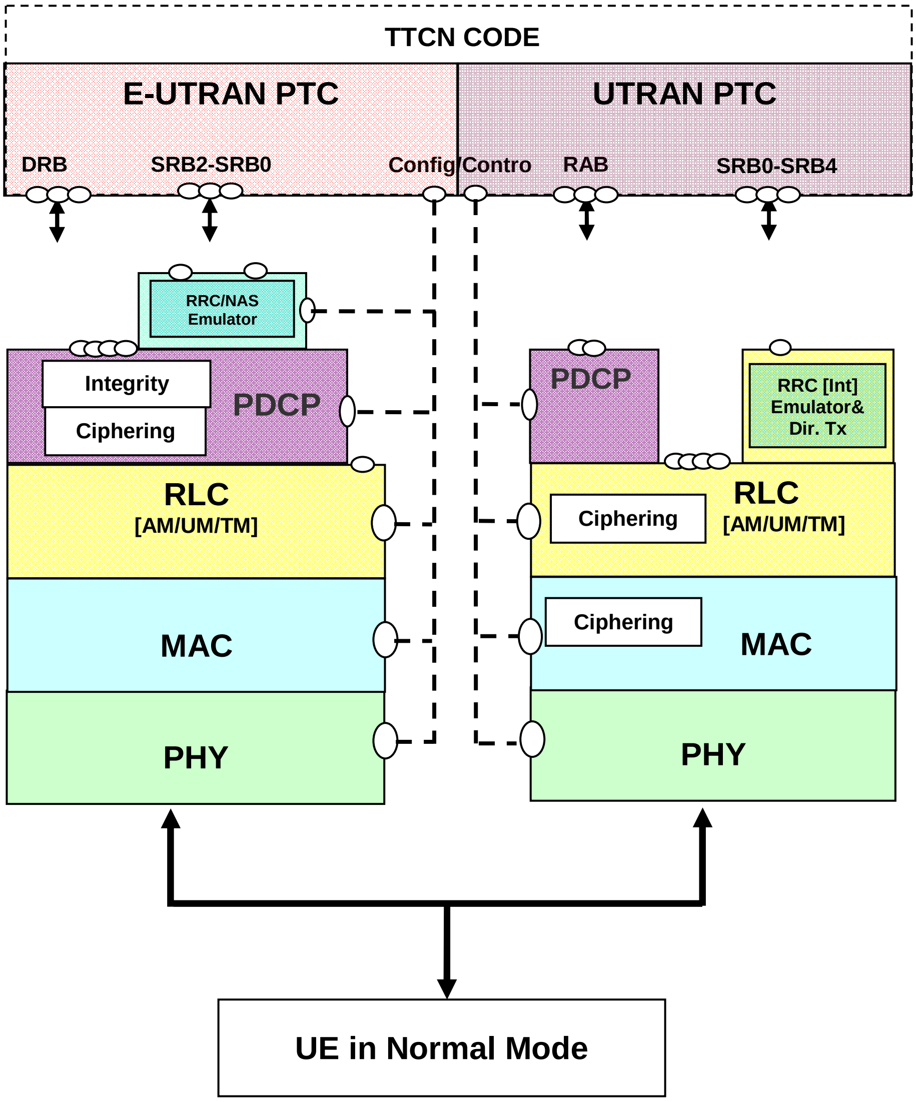

Figure 4.4.1-1: Test model for Inter RAT E-UTRAN-UTRAN testing

The model consists of dual protocol stack one for E-UTRAN and one for UTRAN. The TTCN implementation for E-UTRAN and UTRAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The SS UTRAN part consisting of PHY, MAC, RLCand PDCP (optionally) (IF PS user RB established only), are configured in normal mode. They shall perform all of their functions normally. Ciphering is enabled and shall be performed in RLC (AM/UM) and MAC (TM RLC). Integrity is enabled, and SS shall provide RRC emulator for integrity protection calculation and checking and 'Direct transfer' adaptation. Ports are above RLC (CS RAB and SRB0), PDCP (PS RAB) and RRC Emulator (SRB1 to SRB4).

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Ciphering is enabled in UTRAN.

4.4.1.1 User data over UTRAN

User data transferred over UTRAN is distinguished between:

Raw user data (raw mode),

IP data (IP mode).

Depending upon whether the user data is relevant for the purpose of test, several scenarios are listed:

Raw user data relevant for the purpose of test,

IP data relevant for the purpose of test,

IP data, considered as IP signalling, not directly relevant for the purpose of test.

4.4.1.1.1 Raw user data over UTRAN

The raw user data can be as RLC SDUs and PDCP SDUs. The DL and UL user data are routed to UTRAN_PTC (Fig. 4.4.1.1.2-1). The IP stack in SS is not involved for all raw user data applications.

RLC SDUs is applied if the test loop mode 1 with loopback of RLC SDUs in TS 34.109 [9] is activated. PDCP in SS is not configured in this case; the DL and UL user data are routed to UTRAN_PTC via the RLC port.

The raw user data as PDCP SDUs is applied in the following cases:

the test loop mode 4 (TS 34.109 [9]) is activated,

the test loop mode 1 is activated with loopback of PDCP SDUs (TS 34.109 [9]),

the test loop mode B (TS 36.509 [4]) is activated and raw data is looped back on UTRAN,

IP raw data is another type of raw user data. The test loop mode is not activated. This case is applied when sending uplink data is triggered by the upper tester.

PDCP and optional RoHC are configured in SS, the DL and UL user data are routed to UTRAN_PTC via the PDCP port.

Feeding raw user data is largely used in the pure UTRAN test in TS 34.123-3 [7].

4.4.1.1.2 IP data over UTRAN

The IP data over UTRAN is applied to E-UTRA-UTRAN I-RAT and UTRAN test cases. The IP stack in SS is involved. IP data is considered as:

IP packets data (IP mode) relevant for the purpose of test,

IP signalling (IP mode), to be handled in TTCN at IP Layer

One of the IP signalling handling is the stateless address auto configuration for IPv6, illustrated in Fig. 4.4.1.1.2-1.

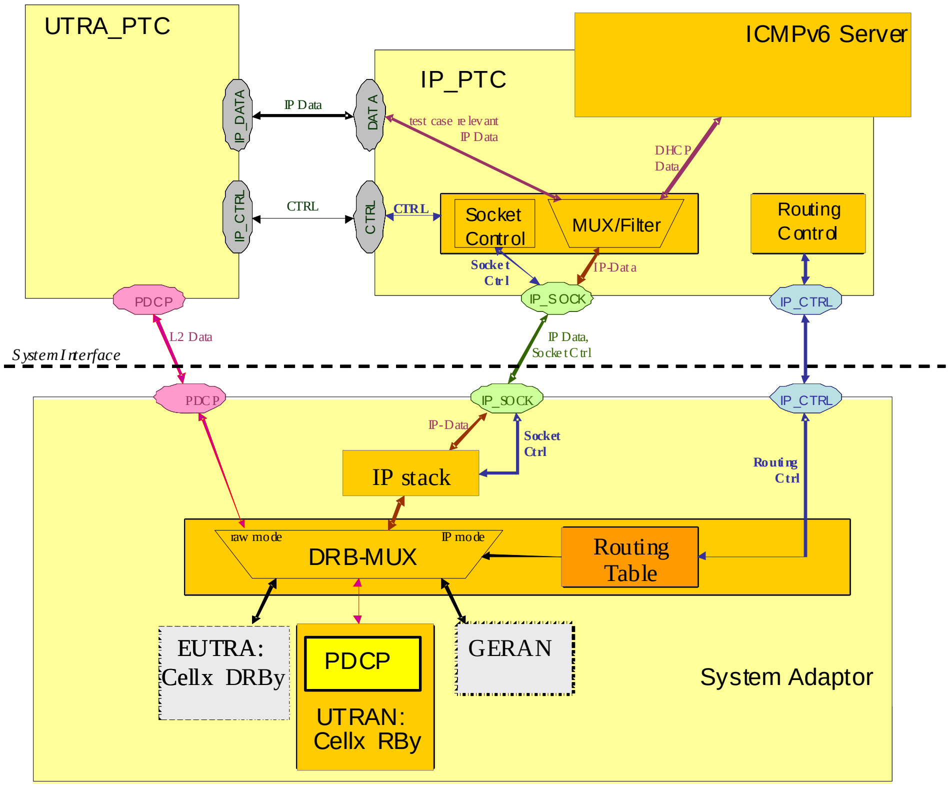

Figure 4.4.1.1.2-1: UTRAN IP test model with an ICMPv6 server

4.4.1.1.3 Routing IP data

The routing of user data is the function of DRB-Mux and controlled by a routing table.

If there is no entry in the routing table for a given RB, it is considered being in raw mode, raw user data is routed to or from the UTRAN PDCP port.

If there is an entry in the routing table for a given RB, it is considered being in IP mode, IP data is routed to or from the IP stack.

For EUTRA-UTRAN or UTRAN test, the routing entry parameters in the DRB-Mux's routing table are specified as (RAT=Utran, cell-id=-1, RB id). SS PDCP entity does not belong to a particular cell; the cellId shall be assigned to the value -1. Consequently, the UTRAN cell id provided in DRB-Mux is set to cell-id=-1.

IP protocol information of IP data (protocol, local IP address, local port, remote IP address, and remote port) is also provided in the routing table. More information can be found in 4.2.4.

4.4.2 E-UTRAN-GERAN Inter RAT Test Model

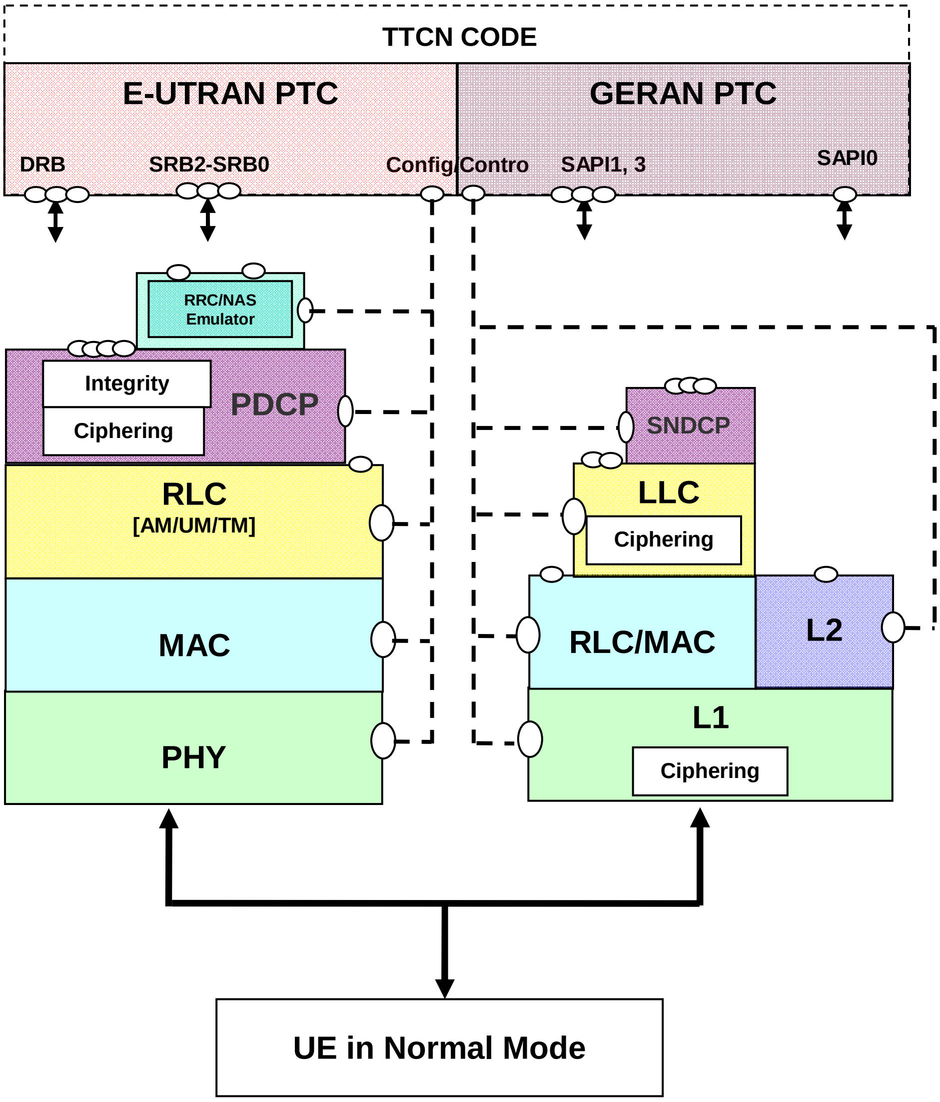

Figure 4.4.2-1: Test model for Inter RAT E-UTRAN-GERAN testing

The model consists of dual protocol stack one for E-UTRAN and one for GERAN. The TTCN implementation for E-UTRAN and GERAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is the same as the model defined in clause 4.2.2 for RRC testing.

The SS GERAN model for GPRS consists of L1, MAC/ RLC and LLC, configured in normal mode. SNDCP may also be configured. They shall perform all of their functions normally. Ciphering is enabled and shall be performed in LLC. Ports are above RLC (GRR messages), LLC (NAS and Data) and SNDCP (User Data).

The SS GERAN model for GSM consists of L1, L2 (MAC/ RLC), configured in normal mode. They shall perform all of their functions normally. Ciphering is enabled and shall be performed in L1. Ports are above L2.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured in E-UTRAN. Ciphering is enabled in GERAN.

4.4.3 E-UTRAN-CDMA2000 Inter RAT Test Model

4.4.3.1 E-UTRAN-CDMA2000 HRPD Inter RAT Test Model

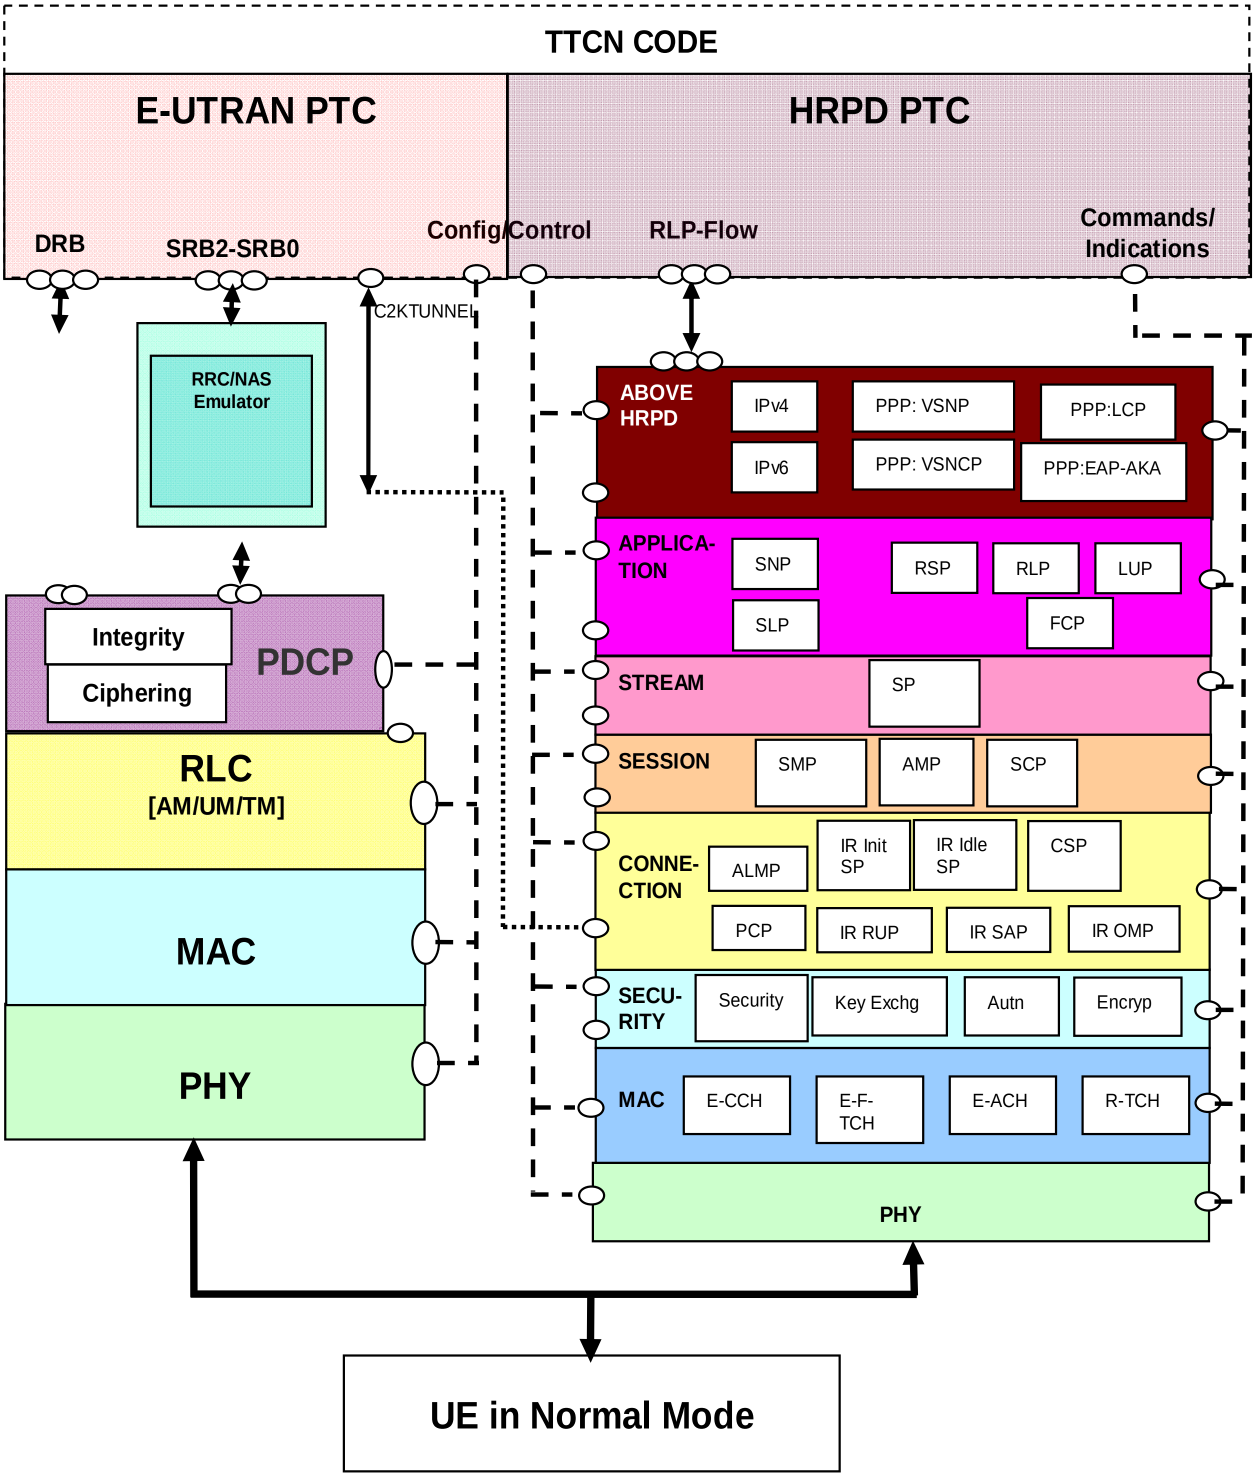

Figure 4.4.3-1: Test model for InterRAT E-UTRAN-CDMA2000 HRPD testing

The model consists of a dual protocol stack, one for E-UTRAN and one for eHRPD. The TTCN implementation for E-UTRAN and eHRPD functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The eHRPD part emulation in SS is considered as a black box. The commands/Indications port is used for commanding the SS to bring the UE into the desired state and monitoring the progress. The System commands and indications are designed with principle of having minimum command/indication per eHRPD procedure hence avoid racing conditions and timing issues. By default, the execution order of sub procedures (e.g. protocol negotiations) cannot be monitored by TTCN. The SS emulations shall be compliant with respective 3GPP/3GPP2 core specifications and guarantee execution order of respective eHRPD procedures as per relevant 3GPP/3GPP2 test/core specifications.

The C2KTUNNEL port is used for routing encapsulated

1. pre-registration messages (i.e. messages encapsulated in *ULInformationTransfer* and *DLInformationTransfer)* in the EUTRAN cell to the eHRPD and
2. handover related eHRPD messages (i.e. messages encapsulated in *HandoverFromEUTRAPreparationRequest/ ULHandoverPreparationTransfer/ MobilityFromEUTRACommand).*

The SS eHRPD part consists of Physical, MAC, Security, Connection, Session, Stream, Application and Layers for PPP and IP configured in normal mode. They shall perform all of their functions normally. Encryption may be enabled and performed in security layer.

The CDMA2000 eHRPD emulation in the SS supports the following layers and protocols:

- Physical layer (Subtype 2).
- MAC layer:
  - Enhanced (Subtype 0, Subtype 1) Control Channel MAC Protocol (ECH).
  - Enhanced (Subtype 1) Forward Traffic Channel MAC Protocol (E-F-TCH).
  - Enhanced (Subtype 1) Access Channel MAC Protocol (E-ACH).
  - Subtype 3 Reverse Traffic Channel MAC Protocol (R-TCH).
- Security Layer:
  - Default Security Protocol (Security).
- Connection Layer:
  - Default Air Link Management Protocol (ALMP).
  - Default Connected State Protocol (CSP).
  - Default Packet Consolidation Protocol (PCP).
  - Inter-RAT Signalling Adaptation Protocol (IR-SAP) (required only for optimized handover).
  - Inter-RAT Initialization State Protocol (IR-Init SP) (required only for optimized handover).
  - Inter-RAT Idle State Protocol (IR-Idle SP) (required only for optimized handover).
  - Inter-RAT Route Update Protocol (IR-RUP) (required only for optimized handover).
  - Inter-RAT Overhead Messages Protocol (IR-OMP) (required only for optimized handover).
- Session Layer:
  - Default Session Management Protocol (SMP).
  - Default Address Management Protocol (AMP).
  - Default Session Configuration Protocol (SCP).
- Stream Layer:

    - Default Stream Protocol (DSP).
- Application Layer:
    - Default Signalling Application:
        - Signalling Network Protocol (SNP).
        - Signalling Link Protocol (SLP).
    - Enhanced Multi-Flow Packet Application:
        - Route Selection Protocol (RSP).
        - Radio Link Protocol (RLP).
        - Location Update Protocol (LUP).
        - Flow Control Protocol (FCP).
    - Alternate Enhanced Multi-Flow Packet Application (to be listed along with EMPA during SCP negotiation)
- Above eHRPD:
    - PPP: Vendor Specific Network Control Protocol (PPP:VSNCP).
    - PPP: Vendor Specific Network Protocol (PPP:VSNP).
    - PPP: Link Control Protocol (PPP:LCP).
    - PPP: Extensible Authentication protocol-Authentication and Key Agreement' (PPP:EAP-AKA').
    - IPv4.
    - IPv6.

During pre-registration phase, one cell per preRegistrationZoneID (ColorCode) to be simulated will be configured by TTCN with power level as 'off', or as specified by the test case. The SS will be issued System commands for pre-registration and expect the appropriate system indications.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Encryption is enabled in HRPD.

4.4.3.2 E-UTRAN-CDMA2000 1xRTT Inter RAT test model

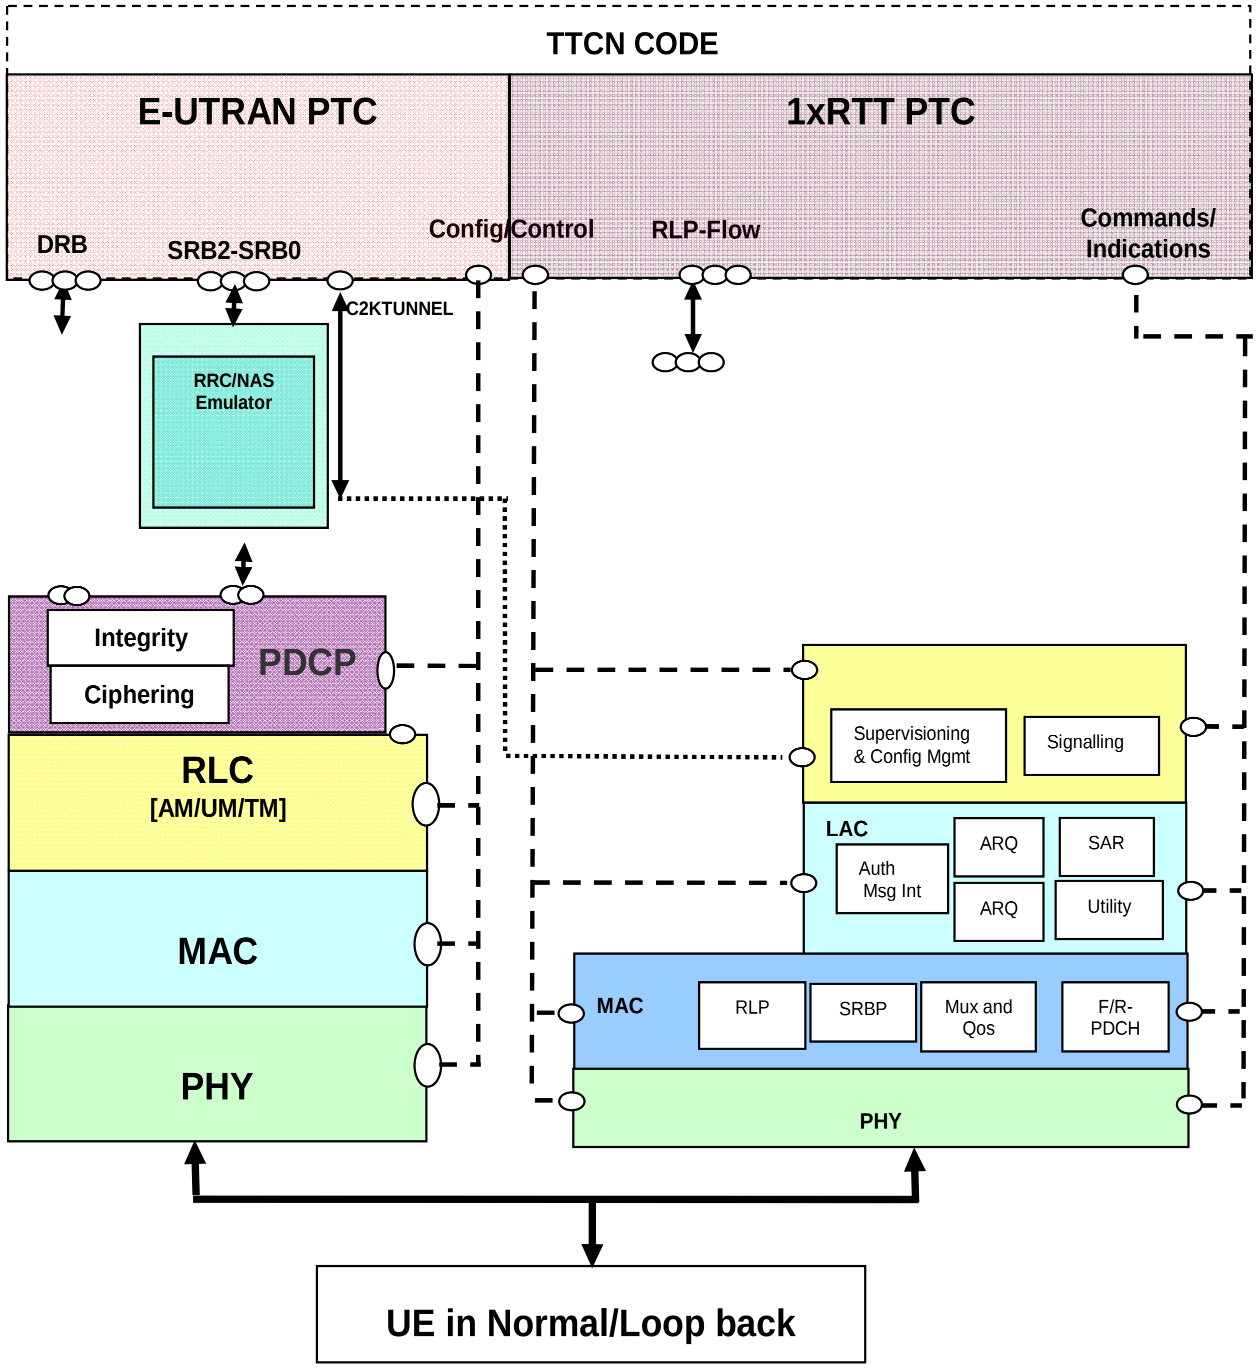

Figure 4.4.3.2-1: Test model for InterRAT E-UTRAN-CDMA2000 1xRTT testing

The 1xRTT test model consists of a dual protocol stack, one for E-UTRAN and one for 1xRTT. The TTCN implementation for E-UTRAN and 1xRTT functionalities are in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The 1xRTT part emulation in SS is considered as a black box. The commands/Indications port is used for commanding the SS to bring the UE into the desired state and monitoring the progress. The System commands and indications are designed with principle of having minimum command/indication per 1xRTT procedures hence avoid racing conditions and timing issues. By default, the execution order of sub procedures(e.g. protocol negotiations) cannot be monitored by TTCN. The SS emulations shall be compliant with respective 3GPP/3GPP2 core specifications and guarantee execution order of respective 1xRTT procedures as per relevant 3GPP/3GPP2 test/core specifications.

The C2KTUNNEL port is used for routing encapsulated

1. pre-registration messages (i.e. messages encapsulated in *CSFBParametersResponseCDMA2000, ULInformationTransfer* and *DLInformationTransfer)* in the EUTRAN cell to the 1xRTT and

2. handover, e-CSFB related 1xRTT messages (i.e. messages encapsulated in *HandoverFromEUTRAPreparationRequest/ ULHandoverPreparationTransfer/ MobilityFromEUTRACommand).*

The SS 1xRTT part consists of Physical, MAC, LAC, Session, Stream, Application and Layers for PPP and IP configured in normal mode. They shall perform all of their functions normally. Encryption may be enabled and performed in security layer.

The CDMA2000 1xRTT emulation in the SS supports the following layers and protocols:

- Physical layer.
- MAC layer:
    - Signalling Radio Burst protocol.
    - Radio Link Protocol for Data services.
    - Forward and Reverse Packet Data Channel functions.
    - Multiplexing and QoS Delivery.
- Link Access Control:
    - Authentication and Message Integrity sublayer [optional].
    - ARQ sublayer.
    - Addressing.
    - Utility.
    - Segmentation and Reassembly.
- Layer 3:
    - Super visioning and Configuration Management.
    - Signalling Protocol.

During pre-registration phase, one cell per preRegistrationZoneID (ColourCode) to be simulated will be configured by TTCN with power level as 'off', or as specified by the test case. The SS will be issued System commands for pre-registration and expect the appropriate system indications.

The UE is configured in normal mode or loop back mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Encryption may be enabled in 1xRTT.

4.4.4 E-UTRAN FDD-TDD Inter RAT Test Model

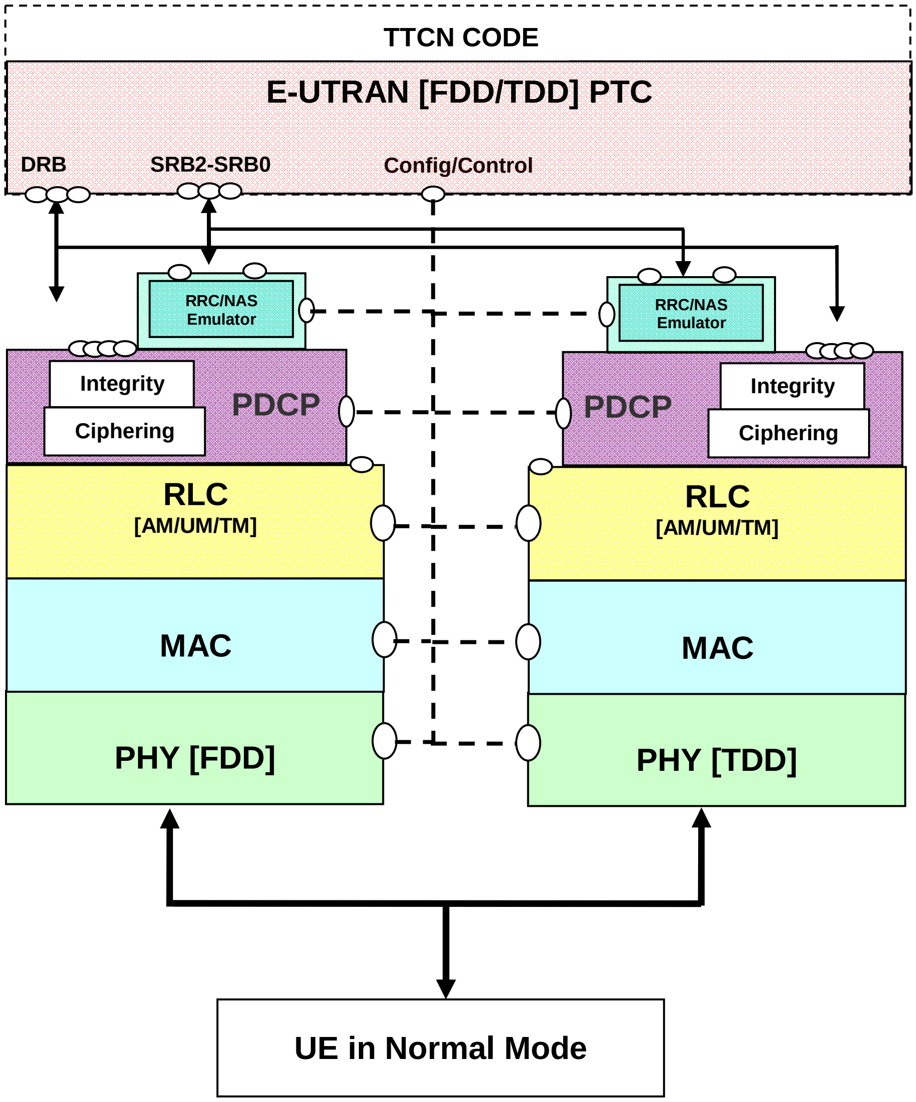

Figure 4.4.4-1: Test model for Inter RAT E-UTRANFDD-TDD testing

The model consists of dual protocol stack one for E-UTRANFDD and one for E-UTRANTDD. The TTCN implementation for E-UTRANFDD and TDD functionalities will be in the same Parallel Test Component. The SS E-UTRAN (both FDD and TDD) part is the same as the model defined in clause 4.2.2 for RRC testing. SS E-UTRANFDD and TDD shall be configured as separate cells.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured for both FDD and TDD.

4.4.5 E-UTRAN-UTRAN-GERAN Inter RAT Test Model

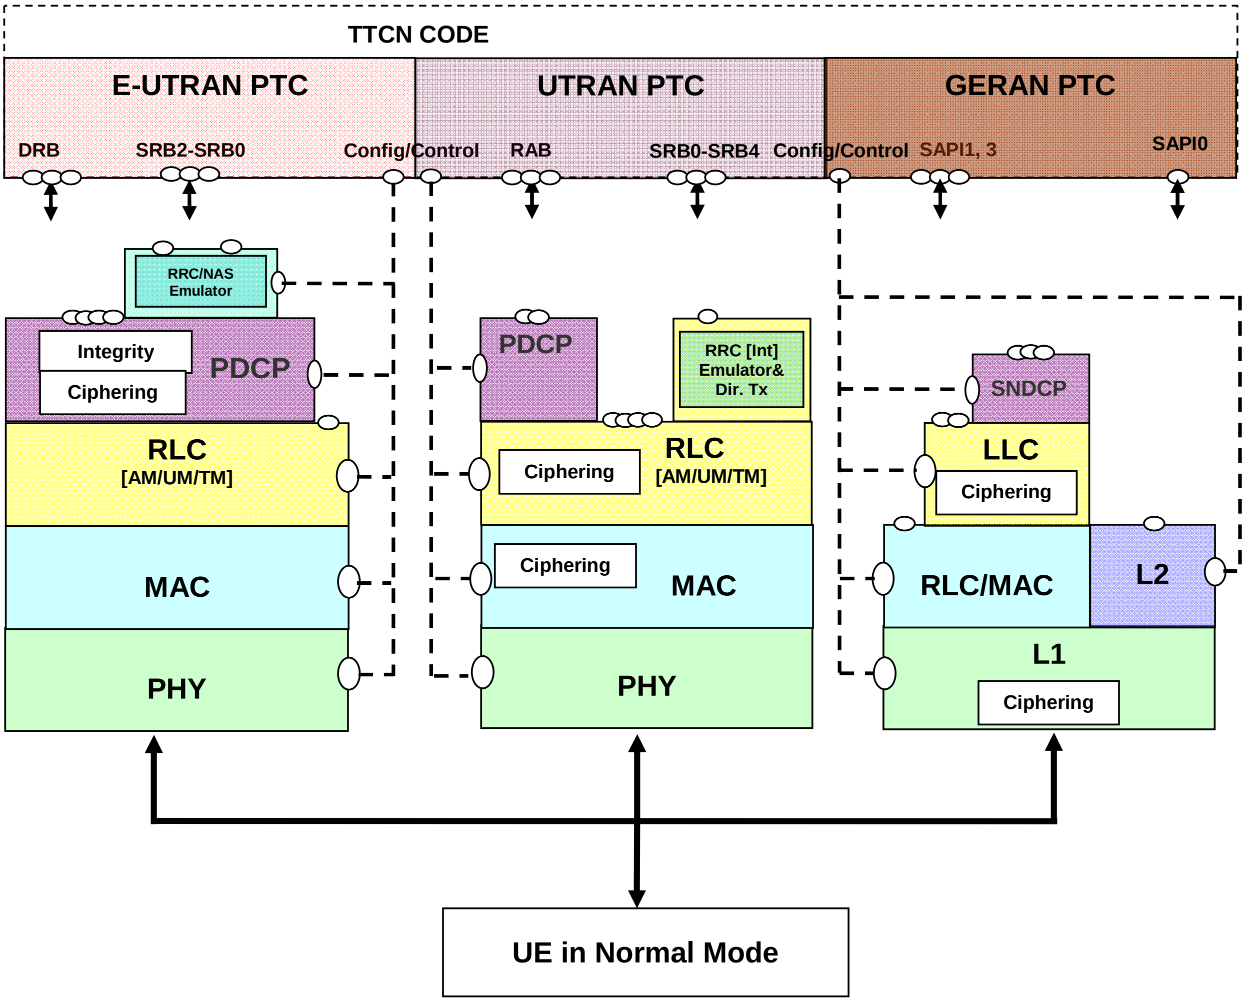

Figure 4.4.5-1: Test model for Inter RAT E-UTRANFDD-TDD testing

The model consists of integrated protocol stack supporting E-UTRAN, UTRAN and GERAN. The TTCN implementation for E-UTRAN, UTRAN and GERAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is the same as the model defined in clause 4.2.2 for RRC testing. The SS UTRAN part is the same as the model defined in clause 4.4.1. The SS GERAN part is same as the model defined in clause 4.4.2.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Ciphering/Integrity are enabled in UTRAN. Ciphering is enabled in GERAN.

5 Upper Tester Interface

This clause describes the handling of AT commands and MMI Commands at the system interface. The internal handling of those commands in TTCN is out of scope.

In the TTCN, the Upper Tester is located at the MTC; therefore there is one interface to the system adaptor common for all RATs.

There is one primitive defined carrying either an MMI or an AT command to be sent to the system adaptor and one common confirmation primitive to be sent by the system adaptor.

<table>
<tr><th colspan="4">TTCN-3 ASP Definition</th></tr>
<tr><td>Type Name</td><td colspan="3">UT_SYSTEM_REQ</td></tr>
<tr><td>TTCN-3 Type</td><td colspan="3">Record</td></tr>
<tr><td colspan="2">Cmd</td><td>TTCN-3 Type</td><td>union</td></tr>
<tr><td colspan="2">AT</td><td colspan="2">charstring carrying the AT command as defined in TS 27.007 [32], TS 27.005 [31] and TS 27.060 [33]</td></tr>
<tr><td colspan="2">MMI</td><td colspan="2">Cmd (charstring)
List of parameters:
Name (charstring)
Value (charstring)</td></tr>
<tr><td colspan="2">CnfRequired</td><td>TTCN-3 Type</td><td>Ut_CnfReq_Type</td></tr>
<tr><td colspan="2"></td><td colspan="2">CNF_REQUIRED: system adaptor shall reply with confirmation received from the UE
NO_CNF_REQUIRED: SS shall swallow any confirmation generated by the UE

LOCAL_CNF_REQUIRED: SS shall immediately send confirmation when the command is submitted to the UE i.e. in case of MMI when the operator has confirmed the command, but SS shall not wait for the UE responding.

NOTE: In the TTCN, a confirmation shall only be requested in cases when there is no signalling from the UE being triggered by the MMI/AT command</td></tr>
</table>

<table>
<tr><th colspan="4">TTCN-3 ASP Definition</th></tr>
<tr><td>Type Name</td><td colspan="3">UT_COMMON_CNF</td></tr>
<tr><td>TTCN-3 Type</td><td colspan="3">Record</td></tr>
<tr><td colspan="2">Result</td><td>TTCN-3 Type</td><td>boolean</td></tr>
<tr><td colspan="2"></td><td colspan="2">true: success
false: failure</td></tr>
<tr><td colspan="2">ResultString</td><td>TTCN-3 Type</td><td>charstring</td></tr>
<tr><td colspan="2"></td><td colspan="2">response by the UE for commands which request the UE to return a result, optional</td></tr>
</table>

All mandatory and optional AT commands are sent as AT command strings as defined above. If an optional AT command is not implemented in the UE, the system adaptor needs to parse the AT command and map it to an appropriate MMI command (which is out of scope for this document).

The following MMI commands are defined.

Table 5.1: MMI commands

Command	Parameters	
	Name	Value
"SWITCH_ON"	(none)	
"SWITCH_OFF"	(none)

6 ASP specifications

6.1 General Requirements and Assumptions

The following common requirements affect ASP definitions:

- The definition of ASPs shall have no impact on the common system architecture or on the performance.
- The codec implementation is out of scope of the present document.
- For peer-to-peer PDUs contained in an ASP encoding rules need to be considered acc. to the respective protocol:
  - ASN.1 BER and PER.
  - Tabular notation for NAS PDUs or layer 2 data PDUs.

There are no encoding rules being defined for top level ASP definitions and information exchanged between the test executable and the System Adaptor (SA) only. Instead encoding depends on implementation of the codec and the SA.

There are no encoding rules being defined for ASPs between TTCN-3 components. This is implementation dependent.

Info elements defined in the protocol specifications (e.g. RRC) shall be re-used in configuration ASPs as far as possible.

For optional fields within the configuration ASPs, the following rules will be applied:

- For ASN.1 fields - these will follow the same rules as defined in the RRC specification [19].
- For TTCN-3 fields - when the current configuration of an optional field is to be 'kept as it is' then the field will be set to omit.

- For TTCN-3 fields - when the current configuration of an optional field is to be released/deleted then a separate option is provided in a union.

6.1.1 IP ASP requirements

6.1.2 Enhancement of IP ASP for handling IMS signalling

The IMS test model handling registration signalling introduces IPsec and SigComp layers into the IP test model in Figure 4.2.5.2-1. The ASP on system port IP_SOCK needs to be enhanced to provide additional configuration/control functions for IPsec and SigComp. The enhanced IP ASP should contain:

1. Function to clean all IPsec and SigComp configurations and to put the IPsec and SigComp in the initial state.
2. Function to return SigComp layer a Compartment Id instructing SigComp layer to save the state of a received message which was compressed.
3. Function to start or stop signalling compression in sending direction (the SS to the UE) of SigComp.
4. Function to set security parameters (per security association) in IPsec layer.
5. A flag indicating whether SigComp layer shall be included in the data path when establishing a connection.
6. A flag indicating whether the received message was compressed by SigComp.
7. A parameter to point to a compartment used by SigComp to send a message.

6.2 E-UTRAN ASP Definitions

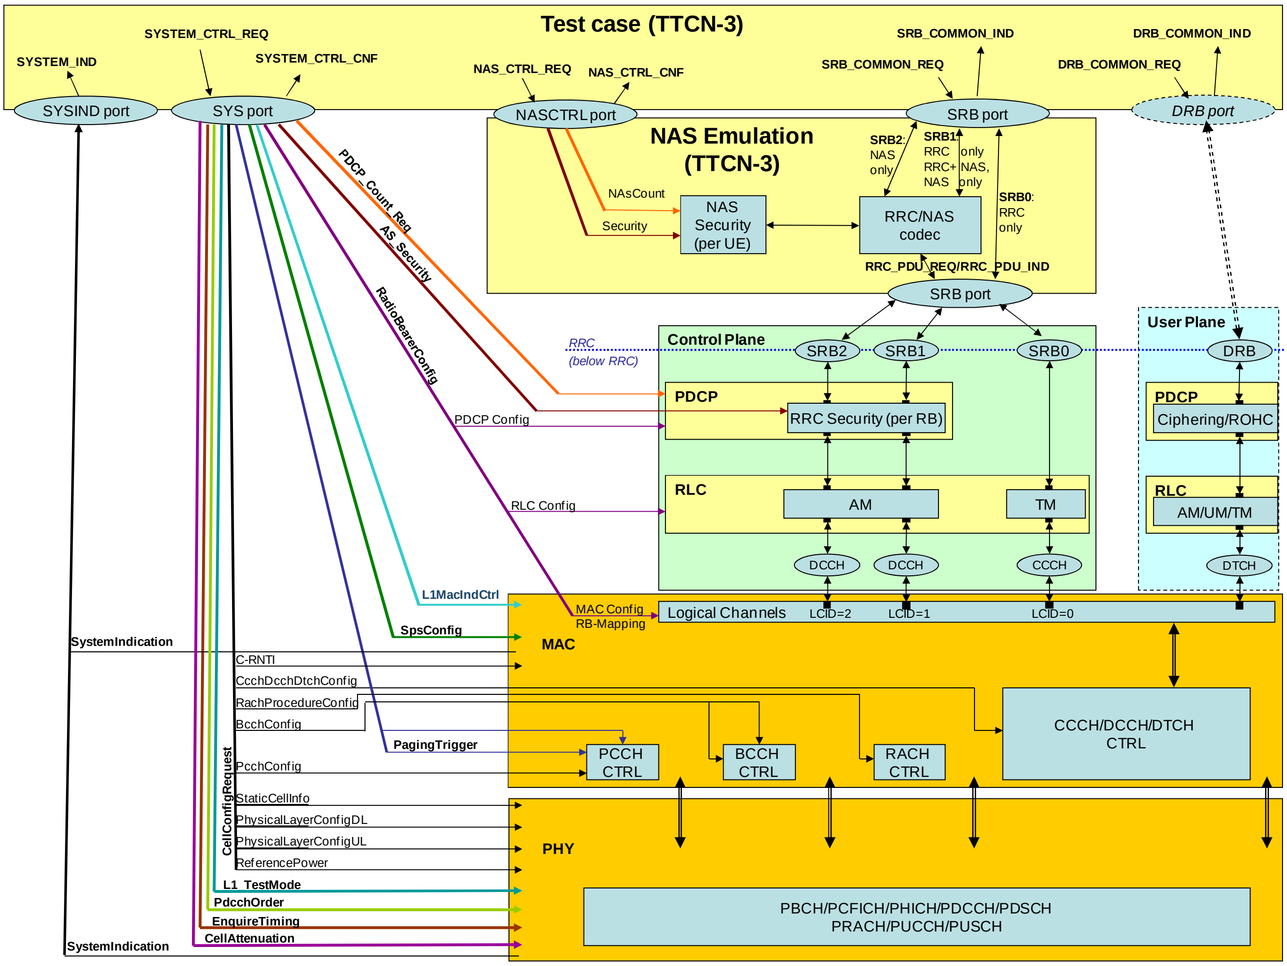

Figure 6.2-1: E-UTRAN ASP Test Model

6.2.1 Configuration Primitives

Annex D contains the ASP definitions for configurations.

6.2.2 Signalling Primitives

Annex D contains the ASP definitions for configurations.

6.2.3 Co-ordination Messages between NAS Emulation PTC and EUTRA PTC

TTCN-3 ASP Definition		
Type Name	**SRB_COMMON_REQ**	
TTCN-3 Type	Record	
Common Part	**TTCN-3 Type**	record
CellId	cell id	
RoutingInfo	SRB0, SRB1, SRB2	
TimingInfo	system frame number and sub-frame number or "Now"	
ControlInfo	CnfFlag: (normally false) FollowOnFlag: **true:** Indicates that the message(s) to be sent on the same TTI will follow NOTE 1: If the same TimingInfo is not used in the messages to be sent on the same TTI, the SS shall produce an error. **false:** Indicates that no more message(s) will follow.	
Signalling Part	**TTCN-3 Type**	record
Rrc	**TTCN-3 Type**	union
	omit: NAS message shall be present; NAS message shall be sent in DLInformationTransfer **present, NAS message present:** (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's NAS_DedicatedInformation **present, NAS message omit:** (RRC message does not contain NAS information)	
Ccch	DL_CCCH_Message as define in TS 36.331 [19], clause 6.2.1	
Dcch	DL_DCCH_Message as define in TS 36.331 [19], clause 6.2.1	
Nas	**TTCN-3 Type**	record
	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU **present, RRC message omit:** NAS message shall be sent embedded in DLInformationTransfer **present, RRC message present:** NAS message is piggybacked in RRC message NOTE 2: In case of RRC message being sent on CCCH or does not have IE NAS_DedicatedInformation NAS message shall be omitted.	
SecurityProtectionInfo	security status (if protected with integrity and/or ciphering, if at all)	
NAS message	union of all NAS messages define for DL except SECURITY PROTECTED NAS MESSAGE	

TTCN-3 ASP Definition		
Type Name	**SRB_COMMON_IND**	
TTCN-3 Type	Record	
Common Part	**TTCN-3 Type**	record
CellId	cell id	
RoutingInfo	SRB0, SRB1, SRB2	
TimingInfo	system frame number; sub-frame number when PDU has been received	
Signalling Part	**TTCN-3 Type**	record
Rrc	**TTCN-3 Type**	union
	omit: NAS message shall be present; NAS message is received in ULInformationTransfer **present, NAS message present:** NAS_DedicatedInformation contains unstructured and security protected NAS PDU and the NAS message contains the deciphered message in structured format **present, NAS message omit:** (RRC message does not contain NAS information)	
Ccch	UL_CCCH_Message as define in TS 36.331 [19], clause 6.2.1	
Dcch	UL_DCCH_Message as define in TS 36.331 [19], clause 6.2.1	

TTCN-3 ASP Definition		
Nas	**TTCN-3 Type**	record
	omit RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU **present, RRC message omit** NAS message has been received in ULInformationTransfer **present, RRC message present** NAS message is piggybacked in RRC message	
SecurityProtectionInfo	security status (if protected with integrity and/or ciphering, if at all), nas count	
NAS message	union of all NAS messages define for UL except SECURITY PROTECTED NAS MESSAGE	

TTCN-3 ASP Definition

7 Test Methods and Design Considerations

7.1 Channel Mapping

Figure 7.1 shows the channel type mapping that is used for the configuration of the SS. In layer 2 test cases non default channel mapping can be applied on SS, as explained in clause 4.2.1.

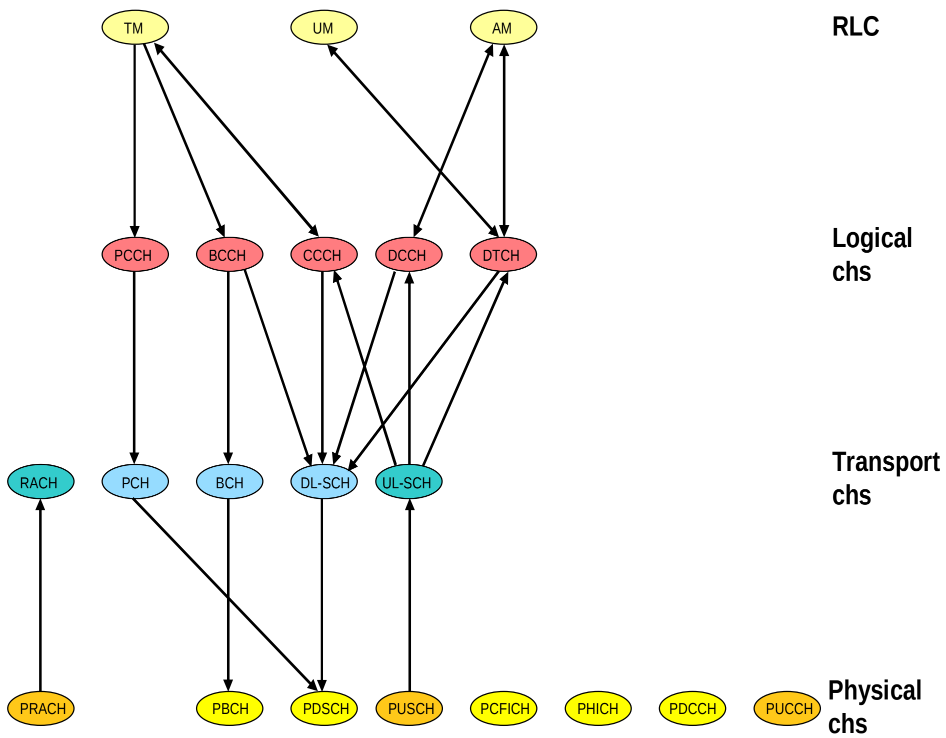

Figure 7.1-1: Channel type mapping for the default configuration of the SS

7.1.1 PDCCH Candidate Selection

In this clause following abbreviations are used:

- Common search Space Aggregation: CS_Agr.
- UE-Specific Search Space Aggregation: UE_Agr.
- Total number of CCEs available in a subframe: Max_CCE.

SS shall apply defined rules below in a DL subframe for PDCCH candidates' selection.

- Scheduled transmissions on SI-RNTI / P-RNTI / RA-RNTI, use Common Search Space. UL and DL Scheduled transmissions on C-RNTI/ SPS C-RNTI, and DL Scheduled transmissions on Temp. C-RNTI, use UE-Specific Search Space. Transmissions on TPC-PUCCH-RNTI / TPC-PUSCH-RNTI and UL Scheduled transmissions on Temp. C-RNTI is not considered for default CCE management.
- If a transmission on SI-RNTI is scheduled, PDCCH candidate corresponding to CCEs between 0 and (CS_Agr-1) is used. For FDD, this PDCCH candidate is reserved for SI-RNTI, and left vacant if no SI-RNTI transmission is scheduled. For TDD the default UL/DL configuration type 1, this PDCCH candidate is reserved forS I-RNTI in subframes 0 & 5 (i.e. subframes where PDCCH for UL grant for C-RNTI/SPS-RNTI is not scheduled).

- PDCCH candidates corresponding to CCEs between CS_Agr and (2*CS_Agr-1) can be used either for the transmission on P-RNTI or RA-RNTI. In conformance test cases with single UE, there is no requirement for transmissions scheduled for both P-RNTI and RA-RNTI in one DL subframe.

For FDD:

- For DL transmission for C-RNTI/SPS-RNTI/Temp C-RNTI the lowest value of m =m' which has a PDCCH available from CCEs between 2*CS_Agr and (Max_CCE-1) shall be used. 'm' is defined in TS 36.213 [30], clause 9.1.1.

- For UL transmission for C-RNTI/SPS-RNTI the lowest value of m =m''>m' which has a PDCCH available from CCEs between 2*CS_Agr and (Max_CCE-1) shall be used, irrespective of PDCCH candidate corresponding to m' is used or not.

For TDD:

- For DL transmission, for C-RNTI/SPS-RNTI/Temp C-RNTI the lowest value of m =m' which has a PDCCH available from CCEs between 2*CS_Agr and (Max_CCE-1) shall be used. 'm' is defined in TS 36.213 [30] clause 9.1.1.

- For UL transmission, for C-RNTI/SPS-RNTI the lowest value of m =m''>m' which has a PDCCH available from CCEs between 2*CS_Agr and (Max_CCE-1) shall be used, irrespective of PDCCH candidate corresponding to m' is used or not.

NOTE: If m' or m'' cannot be allocated in any TTI, it is a TTCN error due to X-RNTI not properly allocated. The error shall be reported to TTCN. The TTCN will exit the test case assigning an inconclusive verdict.

7.1.1.1 FDD candidates selection

Table 7.1.1.1-1 gives the CCE resources utilized for m' and m'' for default values of common search space aggregation level =4, UE-specific search space aggregation L=2 resulting in 6 PDCCH candidates m=0..5 and channel Bandwidth of 5 MHz. This give Max_CCE =20 for FDD. The table also gives the corresponding CCE start indices of PDCCH candidates for m' and m''.

Table 7.1.1.1-1: CCE Start indices(m' & m'' to be used for various C-RNTIs (5 MHz)

Tables 7.1.1.1-2, 7.1.1.1-3 and 7.1.1.1-4 give the CCE resources utilized for m' and m'' for default values of common search space aggregation level =4, UE-specific search space aggregation L=2 resulting in 6 PDCCH candidates m=0..5 and bandwidths of 10/15/20 MHz respectively. This gives Max_CCE =25(10 MHz)/37(15 MHz)/50(20 MHz) for FDD. The tables also give the corresponding CCE start indices of PDCCH candidates for m' and m''. These are in general to be applied in MAC Transport block size test cases defined in clause 7.1.7 of TS 36.523-1 [1].

7.1.1.2 TDD candidates selection

The default TDD subframe configuration 1 is applied to this clause.

Considering that each TDD subframe having different PHICH group number, and only two symbols being present for PDCCH in the special subframes 1 and 6 for bandwidth of 5 MHz, two symbols for PDCCH in all subframes for bandwidth of 10/15/20 MHz (TS 36.508 [3]), each subframe has, therefore, different number of MAX_CCE.

Table 7.1.1.2-1 gives the PDCCH candidates of m' and m'' for default values of common search space aggregation level =8, UE-specific search space aggregation L=8 resulting in 2 PDCCH candidates m=0,1 and the corresponding CCE start indices for channel bandwidth of 5MHz. SF0 and SF5 cannot be used for UL grant. SF1 and SF6 are not used for DL assignment. SF2, SF3, SF7 and SF8 are not applicable to PDCCH CCE allocation since they are uplink subframes.

Table 7.1.1.2-1: CCE Start indices (m' & m'') to be used for various C-RNTIs (5 MHz)

7.2 Uplink Grant

The Network/SS informs the UE if it is allowed to make Uplink Data transmission by transmitting 'DCI format 0' on PDCCH. The UE shall transmit (4 TTI later for FDD or variable for TDD) a Transport block of exactly the same size as specified in DCI format 0. The UE has no control of its own on TB size, and has to merely follow the network, even if that means lots of MAC padding or resource starving.

The UE has the following means to communicate if it has UL data ready for transmission and subsequently the estimate of quantity of data to be transmitted.

RACH procedure: UE in idle mode, handed over to a new cell or connected mode but PUCCH is unsynchronized (sometimes referred to as PUCCH is not configured) will trigger RACH procedure on data ready for transmission in UL.

Scheduling Request: UE in connected mode, no grant configured, PUCCH is synchronized and has data ready for transmission in UL, will transmit a scheduling request on PUCCH.

Buffer Status Reports: UE in connected mode, PUCCH synchronized, has a configured grant for current TTI, but grant is not sufficient to transmit all the data will include MAC control element BSR in the UL MAC PDU.

RACH and SR indicate on data availability and BSR provides an estimate of data available for transmission.

CQI/PMI/RI feedback from the UE which indicates the channel conditions and recommended number of layers.

Hence to determine the exact need of the grant requirement of the UE a network/SS needs to act on all four of the above. This eventually complicates the SS implementation and hence the grant allocation procedure is simplified such that SS needs only to react on reception of SR and grant allocation configured from the TTCN.

The SS disables aperiodic CQI/PMI/RI feedback from the UE by setting the ‘CQI request field’ to 0 in DCI format 0/RAR grant.

When request for periodic CQI/PMI/RI feedback is requested due to TTCN configuration, the SS does not react on periodic CQI/PMI/RI feedback received and still allocates grants as configured from TTCN.

The SS, if configured for maintaining PUCCH synchronization at UE, shall periodically transmit automatically MAC PDUs containing the MAC control element 'Timing Advance'. The period as configured by the TTCN is set to 80 % of the 'Time Alignment Timer' default value (750 ms) configured at UE.

Additionally the SS can be configured to automatically transmit a 'configured' UL grant at every reception of a Scheduling Request. This grant should be selected under the following restrictions:

- All UE categories can handle this i.e. (TBS <= 5160).
- It is sufficiently large that most of uplink signalling messages can be transmitted. In case the grant is not sufficient to fit the whole UL data, the UE will have to wait for the expiry of RETX_BSR_TIMER and retransmit a SR. And hence the procedure is repeated.

The following 4 types of grant allocation configurations are possible. Grant allocation Types 1 to 3 are applicable, when the UE is in connected state. Grant allocation Type 4 is applicable when UE is establishing /re-establishing the RRC Connection, or during handover or in connected state but PUCCH is not synchronised.

Grant Allocation Type 1:

- SS is configured to maintain PUCCH Synch.
- SS is configured to send an automatically 'configured Grant' (in terms of I_{MCS} and N_{PRB}) to the UE on every reception of a Scheduling Request, within 10 subframes. The default configured grant is I_{MCS} = 9 and N_{PRB} = 25, unless explicitly specified in test cases.
- By default this type of grant allocation is applied. The majority of Idle mode, RRC and NAS test cases, the preambles of all tests and the postambles of those tests for which UE is still PUCCH synchronised at the end of test body. A few Layer 2 tests also use this type of grant.

Grant Allocation Type 2:

- Configure SS to maintain PUCCH Synch.
- Configure SS to periodically transmit a grant (I_{MCS} and N_{PRB}). Number of grants (1 or more) and period (in ms) configured by TTCN.
- The first grant transmitted is as specified in the explicit timing information. If timing information is "now" the SS selects the first suitable subframe for UL transmission.
- The grant allocation period for TDD shall be assigned without conflict with the allowed UL subframes in the TDD subframe configurations. As example of allocation period, the TDD UL Grant allocation can be assigned as in multiples of 5 ms.
- This type of grant allocation is applicable to the majority of RLC, PDCP and a few MAC test cases.
- No additional grant is allocated on reception of any SRs.

Grant Allocation Type 3:

- SS may or may not be configured to maintain PUCCH Synch.
- Configure SS to transmit a one time grant (I_{MCS} and N_{PRB}) in the time requested by TTCN. The one time transmission is achieved by setting Number of grants=1 and period =Only once
- This type of grant allocation is suitable for MAC and DRB tests when UE is in UL Synchronised state

Grant Allocation Type 4 (RACH configuration):

- In addition to the 3 types of UL grant allocations, a fourth type of grant allocation during the RACH procedure is also possible, where the SS behaves as per the RACH procedure configured and allocates the configured grant during the RACH procedure. This UL Grant type is used in the configuration for the preamble in many situations, basically in MAC test cases. This type of grant is further used when UE is establishing/re-establishing the RRC connection or during handover, or when the UE is not PUCCH synchronised;

All the UL grant allocation methods define grant allocation in terms of I_{MCS} and N_{PRB} to be used. The SS shall allocate RBs corresponding to PRB indices 0..(N_{PRB}-1).

7.2.1 Exception TC list

This clause contains the exception test case list where the explicit uplink grant types other than UL grant type 1 are specified.

Table 7.2.1-1: Exception test case list with explicit uplink grant types other than UL grant type 1

7.3 Downlink Resource Allocation

The DL resource allocation is an SS emulation function. In order to ensure similar DL behaviours (within defined tolerances) on the different SS platforms in the timing stringent requirements, all downlink resource allocation schemes specified in the present clause shall be supported by the SS.

When the DL data is to be sent with a specific scheduling requirement, for instance, in a TTI in advance rather than "now", the TTCN shall ensure that the data is scheduled at least 100 ms in advance. The 100 ms time in general covers all time delays, from the time DL data is sent by the TTCN at the EUTRA PTC to the completion of the transmission at the SS (TTCN delays, codec delays, adaptor delays and SS processing delays at various protocol Layers). In the case of more than one NAS PDU is piggy-backed in a scheduled RRC PDU, 20ms shall be added per additional NAS PDU: 100ms + ((NoOfNASPDUs – 1) * 20ms; this calculation is based on the assumption that there are not more than 7 piggy-backed NAS messages; this is valid for LTE.

NOTE: The DL data means DL signalling and/or data in the present clause.

7.3.1 PDCCH DCI default formats

Two types of DCI combinations are identified as default formats for the signalling and protocol test.

DCI combination 1 uses:

- DCI format 1A, resource allocation type 2 localised, for all DL scheduling types.

DCI combination 2 uses:

- DCI format 1C, resource allocation type 2 distributed, for scheduling of PCCH/BCCH/RAR; and
- DCI format 1 resource allocation type 0, for UE dedicated scheduling.

7.3.1.1 Default DCI Format to be used in test cases configuring MIMO

Transmission mode 3 will be used in MIMO test cases configuring 2 Transmit antenna SS environment. As per 36.213 Table 7.1-5, in Transmission mode 3, UE is expected to decode only DCI formats 2A and 1A. Similarly for Transmission mode 4, UE is expected to decode only DCI formats 2 and 1A. Hence for all test cases configuring 2TX (2 antenna ports) at SS, DCI combination 1 is the default DCI combination to be applied. This allows DCI format 1A to be used as default DL scheduling scheme for test sequences not explicitly specified to use DCI formats 2A or 2(i.e. preamble, postamble etc.)

7.3.2 Radio parameters configured

The SS shall support DL QPSK, 16QAM and 64QAM modulation schemes. The configured radio parameters, including DCI format, resource allocation types, maximum allowed modulation scheme, first virtual / physical resource block to be used, maximum available resource blocks and redundancy version, are provided to the SS.

In the normal signalling test condition, DL RLC and HARQ retransmissions are rare. The redundancy version is provided to allow the occasional HARQ retransmissions. For those MAC, RLC tests contained in table 7.3.2-1 where timing requirements are involved the DL or UL HARQ retransmissions are not tolerable. Table 7.3.2-2 lists the RLC tests where timing requirements are involved, only one DL or UL HARQ retransmission per transport block is tolerable. Unless otherwise specified, if HARQ retransmissions occur in the test cases contained in table 7.3.2-1 or more than one HARQ retransmission occurs in the test cases of table 7.3.2-2, the test cases will be terminated with verdict inconclusive.

NOTE: If the test is expecting the reporting of UL ACK/NACK for the DL MAC PDUs, or is configuring the PHICH in a certain mode, HARQ retransmissions other than those that are already specified in the prose will have an impact on the test sequence. If test cases perform scheduling of data transmissions and/or receptions, or the testing timers in the test cases are less than 900 ms (i.e. the tolerance for 90 ms), HARQ retransmissions will make it difficult to continue testing.

Table 7.3.2-1: TC list intolerable of HARQ retransmissions

Test case	Comment
MAC	
7.1.3.1, 7.1.3.2, 7.1.3.4, 7.1.3.5, 7.1.3.6, 7.1.3.9, 7.1.6.1, 7.1.6.2	HARQ feedback reporting enabled or DL CRC errors introduced; DL HARQ un specified (re)transmissions will result in ‘Fail' in test body, UL HARQ retransmissions are allowed;
7.1.4.8	Strict relationship between grant and UL data
7.1.4.3	Up to 104 PDUs to be sent in DL every TTI;
7.1.4.2, 7.1.4.11, 7.1.4.12, 7.1.4.14, 7.1.5.4	HARQ feedback transmission specified or PHICH errors introduced
7.1.4.15, 7.1.4.16	Periodic UL grants
RLC	
7.2.2.6, 7.2.2.7, 7.2.2.8, 7.2.2.10, 7.2.3.1, 7.2.3.2, 7.2.3.4, 7.2.3.5, 7.2.3.10, 7.2.3.13, 7.2.3.14, 7.2.3.15, 7.2.3.18	Tolerating HARQ retransmissions is not feasible due to rigid timing and scheduling conditions. Testing timer < 900 ms

Table 7.3.2-2: TC list intolerable of more than one HARQ retransmission per transport block

Test case	Comment
RLC	
7.2.3.6, 7.2.3.7, 7.2.3.8, 7.2.3.9, 7.2.3.17	Tolerating more than one HARQ retransmission is not feasible due to rigid timing and scheduling conditions. Testing timer < 900 ms

7.3.2.1 HARQ Retransmission when MIMO is configured

For test cases configuring MIMO, if in a TTI more than one transport blocks are scheduled (DCI format 2/ 2A/2B), the HARQ retransmission is handled independently for each transport block by SS. In case UE ACKs one Transport block and NACKs the other and there is no fresh data scheduled for transmission, SS only schedules the NACKed transport block for retransmission, using same I_{mcs} as used in initial transmission, mapped to codeword 0. Acked Transport block (and hence codeword 1) is disabled by setting corresponding $I_{\mathrm{MCS}} = 0$ and $rv_{idx} = 1$. Resource allocation (Nprb) used in retransmission is same as in initial transmission.

It is assumed that retransmission and fresh data scheduled in one TTI will not happen.

7.3.3 General DL scheduling scheme

The rules in the present clause, unless particularly specified, are applied to both default DCI combinations.

The bandwidth of 5/10/20 MHz makes 25/50/100 available physical resource blocks respectively. The 25/50/100 resource blocks are divided into three distinct sets. Exact set sizes and the elements contained in the individual sets depend upon the DCI combination to be applied.

- The first set is reserved for BCCH mapped to DL-SCH (SI-RNTI).
- The second set is reserved for PCCH mapped to DL-SCH (P-RNTI).
- The third set is used for one of mutually exclusive transmissions of:
  - 'Random Access Response' mapped to DL-SCH (RA-RNTI); or
  - UE-dedicated scheduling mapped to DL-SCH (C-RNTI/ SPS C-RNTI/ Temp C-RNTI).

For each subframe for which data of one or more types is scheduled, the SS shall select a Transport Block Size (TBS), independently for each type of data scheduled, such that:

- All the scheduled data is transmitted respecting the timing information. More details on the timing information can be found in clause 7.8.
- Not more than MaxRbCnt resource blocks are used, for DCI format 1C, N_{PRB} = MaxRbCnt.
- Minimum MAC Padding is performed.
- If all scheduled Data cannot be transmitted in the indicated subframe, for example due to TDD and half duplex configuration, it shall be transmitted in the next available subframe.

7.3.3.1 Additional rules for BCCH scheduling scheme

This scheme is applicable for Data transmission on logical channel BCCH mapped to DL-SCH, PDCCH scrambled by SI-RNTI. For both DCI combinations 4 physical resource blocks are reserved for BCCH transmission. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- The Max TBS, the maximum TBS allowed for the scheduling scheme, is restricted to 600. (nearest value achievable for I_{TBS} = 9 and N_{PRB} = 4, as per table 7.1.7.2.1-1 of TS 36.213 [30]).

- If the scheduled Data cannot fit into a TBS smaller or equal to Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.1.1 for DCI combination 1 and in clause 7.3.3.1.2 for DCI combination 2 shall be applied.

7.3.3.1.1 BCCH with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with I_{TBS} =0..26 and columns with N_{PRB} =2 (corresponding to TPC LSB =0) and N_{PRB} =3 (corresponding to TPC LSB =1), TBS <=Max TBS are applicable.

Distinct TBSs and all (TPC LSB, I_{TBS}) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB, I_{TBS}) combinations, the combination with TPC LSB =0 is selected.

RIV indicates 4 PRBs with index 0..3 allocated.

7.3.3.1.2 BCCH with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1 , I_{TBS} =0..17 with TBS ≤Max TBS are applicable.

RIV indicates 4 virtual RBs with index 0..3 allocated. These virtual RBs correspond to the physical RBs

- with index 0, 6, 12, 18 in even slots and 12, 18, 0, 6 in odd slots for 5 MHz bandwidth;
- with index 0, 12, 27, 39 in even slots and 27, 39, 0, 12 in odd slots for 10 MHz bandwidth;
- with index 0, 24, 48, 72 in even slots and 48, 72, 0, 24 in odd slots for 20 MHz bandwidth.

7.3.3.2 Additional rules for PCCH specific scheduling scheme

This scheme is applicable for Data transmission on logical channel PCCH mapped to DL-SCH, PDCCH scrambled by P-RNTI. For DCI combination 1, one physical resource block is reserved. For DCI combination 2, two physical resource blocks are reserved for 5 MHz bandwidth, and four physical resource blocks are reserved for 10 MHz or 20 MHz bandwidth. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- If the scheduled Data cannot fit into Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.2.1 for DCI combination 1 and clause 7.3.3.2.2 for DCI combination 2 shall be applied.

7.3.3.2.1 PCCH with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with I_{TBS} =0..26 and columns with N_{PRB} =2 (corresponding to TPC LSB =0) and N_{PRB} =3 (corresponding to TPC LSB =1) TBS < =Max TBS are applicable.

The Max TBS is restricted to 120 (nearest value achievable for I_{TBS} = 9 and N_{PRB} =1, as per table 7.1.7.2.1-1 of TS 36.213 [30]).

Distinct TBSs and all (TPC LSB, I_{TBS}) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB, I_{TBS}) combinations, the combination with TPC LSB =0 is selected.

RIV indicates 1 PRBs with index 4 allocated.

7.3.3.2.2 PCCH with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1, I_{TBS} =0..11 for 5 MHz/ I_{TBS} =0..17 for 10 or 20 MHz with TBS ≤ Max TBS are applicable.

The Max TBS is restricted to

296 bits (nearest value achievable for I_{TBS} = 9 and N_{PRB} =2) for 5 MHz bandwidth,

600 bits (nearest value achievable for I_{TBS} = 9 and N_{PRB} = 4) for 10 or 20 MHz bandwidth.

RIV indicates either two virtual RBs with index 4 and 5 allocated, or four virtual RBs with index 4 to 7 allocated. These virtual RBs correspond to physical RBs:

with index 1 and 7 in even slots and 13 and 19 in odd slots for 5 MHz bandwidth;

with index 1, 13, 28, 40 in even slots and 28, 40, 1, 13in odd slots for 10 MHz bandwidth;

with index 1, 25, 49, 73 in even slots and 49, 73, 1, 25 in odd slots for 20 MHz bandwidth.

7.3.3.3 Additional rules for RAR specific scheduling scheme

This scheme is applicable for transmission of Random Access Response mapped to DL-SCH, PDCCH scrambled by RA-RNTI. For both DCI combinations four physical resource blocks are reserved. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- The Max TBS is restricted to 600 bits (nearest value achievable for I_{TBS} = 9 and N_{PRB} =4, as per table 7.1.7.2.1-1 of TS 36.213 [30]).
- If the scheduled Data cannot fit into Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.3.1 for DCI combination 1 and clause 7.3.3.3.2 for DCI combination 2 shall be applied.

7.3.3.3.1 RAR with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with I_{TBS} = 0..26 and columns with N_{PRB} = 2 (corresponding to TPC LSB = 0) and 3 (corresponding to TPC LSB = 1) TBS ≤ Max TBS are applicable

Distinct TBSs and all (TPC LSB, I_{TBS}) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB, I_{TBS}) combinations, the combination with TPC LSB = 0 is selected.

RIV indicates 4 PRBs with index 5..8 allocated.

7.3.3.3.2 RAR with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1, I_{TBS} = 0..17 with TBS <= Max TBS are applicable.

RIV indicates 4 virtual RBs are allocated. These corresponds to physical RB

with index 13, 19, 2, 8 in even slots and 1, 7, 14, 20 in odd slots for 5 MHz bandwidth;

with index 2, 14, 29, 41 in even slots and 29, 41, 2, 14 in odd slots for 10 MHz bandwidth;

with index 2, 26, 50, 74 in even slots and 50, 74, 2, 26 in odd slots for 20 MHz bandwidth.

7.3.3.4 Additional rules for UE-dedicated scheduling scheme in normal mode

The UE-dedicated DL scheduling can work in the normal mode or in the explicit mode. The two resource allocation schemes shall be reconfigurable from each other when the UE and SS are not sending and receiving data, for instance, at end of the test preamble and before the beginning of the test body.

The present clause is specified for the use of the normal mode. The explicit mode is referred to clause 7.3.3.6.

The scheme specified in the present clause is applicable for transmission of data dedicated to a UE in a DL subframe, mapped to DL-SCH, PDCCH scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI when spatial multiplexing MIMO mode is not configured. The maximum modulation scheme is restricted to 64QAM. For the DCI combination 1, 20 physical resource blocks (5 to 24), and for the DCI combination 2, 17 physical resource blocks are reserved. In the case when three intra frequency cells are applied to the test in the DCI combination 1, for the purpose of interference reduction, only 9 PRBs (16 to 24) are reserved.

In TDD normal TBS selection mode, no data is transmitted in DwPTS of the special subframe. For FDD, data can be transmitted in any subframe.

The following additional rules are applied for TBS selection:

- Multiple ASPs can also carry same explicit timing information; indicating different ASP payloads, eventually needs to be transmitted in 1 TTI.
- The Max TBS is restricted to 10296 bits (Max supported by UE category type 1).

For 5 MHz bandwidth and the DCI combination 1 with 20 PRBs or DCI combination 2, the TBS 8248, 8760, and 9528 are blocked as they result in coding rates higher than 0.93.

For 5 MHz bandwidth and special DCI combination 1 with 9 PRBs, the TBS 2216, 5992 and 6712 are blocked as they result in coding rates higher than 0.93.

For 10 MHz and 20 MHz bandwidths none of TBSs are blocked as no TBS combination result in coding rates higher than 0.93.

The blocked TBS are considered to be not available for selection.

- Data pending for transmission in a given sub-frame consists of (listed in transmission priority order):
  - MAC Control Elements that the SS needs to send.
  - AMD STATUS PDU(s) that the SS needs to send.
  - Data not sent in previous subframe(s).
  - Fresh Data scheduled for transmission in this subframe for all logical channels.
- Distinct TBSs and all (N_{PRB}, I_{TBS}) combinations for each distinct TBS are listed in the sheet.
- If a TBS size can be achieved with more than one combination of I_{MCS} (I_{TBS}) and N_{PRB}:
  - Select combination with lowest delta between N_{PRB} and I_{MCS}.
  - If still more than one combination remain, select combination with highest N_{PRB}.
- Not more than one RLC Data PDU shall be placed in a MAC PDU per logical channel (i.e. minimize RLC segmentation).
- In a subframe, in case there is data pending for transmission from more than one logical channel, for each type of data pending for transmission as defined above, priority shall be given to the logical channel with the lowest logical channel priority value. In case of more than one logical channel with the same logical channel priority value, these logical channels should be served equally. Data pending for transmission from more than one logical channel will rarely happen for the signalling and protocol test.
- Data not transmitted within a subframe is scheduled as pending for transmission in the next available subframe according to the priorities given above. Pending data for transmission will rarely happen for the signalling and protocol test.
- TBS selected in a context by various platforms shall be within an allowed deterministic tolerance of:
  - 2 bytes for potential Timing Advance Command MAC Control Element (1 byte data + 1 byte MAC sub header).
  - 4 bytes each for AMD STATUS PDU (2 bytes data + 2 bytes MAC subheader).

- Therefore in the worst case the SS may add up to (2 + 4 x N_{AMRB}) bytes to the data scheduled for transmission in a certain subframe, where N_{AMRB} is the number of AM radio bearers (SRB or DRB) actively sending DL data in the test, in any subframe.

- For DCI combination 1 RIV is calculated based on physical resource blocks corresponding to N_{PRB} of the selected TBS and (N_{PRB}, I_{TBS}) combination. The physical resource blocks that can be allocated are the first N_{PRB} resources of index range
  - 5..24 for 5 MHz bandwidth,
  - 28..49 for 10 MHz bandwidth,
  - 9..30 for 20 MHz bandwidth. Also in preamble/postamble phase of MAC TBS test cases with 15 MHz bandwidth configured.

- For DCI combination 2, RBG assignment is calculated based on physical resource blocks corresponding to N_{PRB} of the selected TBS and (N_{PRB}, I_{TBS}) combination. The size of RBG is 2 for 5 MHz, 3 for 10 MHz and 4 for 20 MHz. The available physical resource blocks for allocation are:
  - For 5 MHz bandwidth, RBG1(2,3), RBG2(4,5), RBG4(8,9), RBG5(10,11), RBG7(14,15), RBG8(16,17), RBG10(20,21), RBG11(22,23) and RBG12(24). If N_{PRB} is even, the first N_{PRB} /2 available RBGs are allocated. If N_{PRB} is odd, then first (N_{PRB} -1)/2 RBGs and RBG 12 are allocated.
  - For 10 MHz bandwidth, RBG1(3,4,5), RBG2(6,7,8), RBG3(9,10,11), RBG5(15,16,17), RBG6(18,19,20), RBG10(30,31,32), RBG11(33,34,35), RBG12(36,37,38) and RBG16(48,49). If N_{PRB} mod 3 is 0, the first N_{PRB} /3 RBGs are allocated. If mod 3 is 2, then first (N_{PRB} -2)/3 available RBGs and RBG 16 are allocated.
  - For 20 MHz bandwidth, RBG1(4,5,6,7), RBG2(8,9,10,11), RBG3(12,13,14,15), RBG4(16,17,18,19), RBG5(20,21,22,23), RBG7(28,29,30,31), RBG8(32,33,34,35), RBG9(36,37,38,39), RBG10(40,41,42,43), RBG14(56,57,58,59), RBG15(60,61,62,63), RBG16(64,65,66,67), RBG17(68,69,70,71), RBG19(76.77.78.79) and RBG20(80,81,82,83). The first N_{PRB} /4 RBGs are allocated.

7.3.3.6 UE-dedicated scheduling scheme in explicit mode

This scheme applies to:

1. *spatial multiplexing* MIMO configurations or

2. *transmit diversity MIMO configurations* and non-MIMO configuration where the normal mode scheduling scheme is inappropriate.

SS is configured with an exact TBS (modulation and coding scheme, I_{mcs}, and number of resource blocks, N_{prb}) to use. Other parameters, such as the HARQ process number and redundancy version to use for each transmission, are also configured by the TTCN. SS shall use TBS sheets with matching DCI format and Resource allocation Type. If the parameter 'FirstRbIndex' is configured different than specified in respective TBS sheet, the resource block bit maps in TBS sheet s are shifted by ' FirstRbIndex' and applied, with an exception for Resource allocation type 0 where only the full size 'Resource block groups' are shifted by ' FirstRbIndex'; if the last Resource block group is not full size, and is part of resource block bitmap, it is applied without any shift.

All data scheduled for a certain subframe shall be transmitted in the single indicated subframe, using configured parameters. The TTCN shall ensure that the configured parameters are consistent, in particular that the scheduled data size and the configured TBS match each other. Data scheduled by the prose, and hence also by the TTCN, provides possible space for the Timing Advance MAC control element and the RLC Status PDU. The SS shall include one of these if so triggered, else the bits reserved for these are filled by MAC padding.

Additionally, in the case of MIMO data scheduled for transmission in a given sub-frame, this consists of (listed in transmission priority order):

- MAC Control Elements that the SS needs to send (if triggered).
- AMD STATUS PDU(s) that the SS needs to send (if triggered).
- Fresh data scheduled for transmission in this subframe for one or more logical channels, as per logical channel priority [lower value = higher priority]; if data is available for more than one logical channel with the same priority, then the logical channel corresponding to the DRB-ID with the lower value has the higher priority.
- MAC padding.

The following additional rules need to be applied on data scheduled for transmission to be mapped on two transport blocks corresponding to two code words:

- Higher priority data (as stated above) maps on to Transport Block 1 and lower priority data maps on Transport Block 2 (if Transport Block 1 gets full); and
- Minimum MAC padding is performed in Transport Block 1; and
- If data from one logical channel needs to be mapped on to two transport blocks, the PDCP PDUs with lower PDCP sequence numbers get mapped on to Transport Block 1.

7.3.3.6.1 DL Scheduling in Transport Block Size Selection Test Cases

The MAC transport block size selection test cases defined in clause 7.1.7 of TS 36.523-1 [1], use bandwidths of 10/15/20MHz. For the preamble and post amble in these tests, the default scheduling rules defined in clauses 7.3.3.1 to 7.3.3.4 for 10/10/20 MHz and DCI combination 1A are applied respectively. During the test body, when the actual TB sizes with appropriate DCI and resource allocation formats needed are to be tested, the SS is configured in explicit mode for UE-dedicated scheduling.

7.3.3.7 Resource allocation sheets

Attached with this Technical Specification, the DL resource allocation tables can be found, providing physical resource allocations for various transport block sizes, developed as per rules specified in clause 7.3.3, in Microsoft Excel format. Each individual sheet in the workbook represents various scheduling schemes as per table 7.3.3.7-1.

Table 7.3.3.7-1: DL resource allocation sheets

S. No	Sheet Name	Description
1	DCI-1A-PCCH	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by P-RNTI (5 **MHz**, 10 **MHz**, 15 **MHz and** 20 MHz)
2	DCI-1A-BCCH	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by SI-RNTI (5 **MHz**, 10 **MHz**, 15 **MHz and** 20 MHz)
3	DCI-1A-RAR	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by RA-RNTI (5 **MHz**, 10 **MHz**, 15 **MHz and** 20 MHz)

S. No	Sheet Name	Description
4	DCI-1A-UE-Specific	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (5 MHz)
5	DCI-1A-3-IntraFreq-UE-Specific	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI and three Intra Freq cells are configured (5 MHz)
6	DCI-1A-UE-Specific-10MHz	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (10 MHz)
7	DCI-1A-UE-Specific-20MHz	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (20 MHz) Also in preamble/postamble phase of MAC TBS test cases with 15 MHz bandwidth configured
8	DCI-1C-PCCH	DL Resource scheduling for DCI format 1C and PDCCH is scrambled by P-RNTI (5 MHz)
9	DCI-1C-BCCH	DL Resource scheduling for DCI format 1C and PDCCH is scrambled by SI-RNTI (5 MHz)
10	DCI-1C-RAR	DL Resource scheduling for DCI format 1C and PDCCH is scrambled by RA-RNTI (5 MHz)
11	DCI-1-UE-Specific	DL Resource scheduling for DCI format 1, Resource allocation 0 and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (5 MHz)
12	DCI-1C-PCCH-10MHz-Gap1	DL Resource scheduling for DCI format 1C and PDCCH is scrambled by P-RNTI (10 MHz)
13	DCI-1C-BCCH-10MHz-Gap1	DL Resource scheduling for DCI format 1C and PDCCH is scrambled by SI-RNTI (10 MHz)

7.4 Cell Configurations

7.4.1 Cell Configuration Types

Three cell configurations are defined in TS 36.508 [3] clause 6.3.3: Full Cell, Minimum Uplink Cell and Broadcast Only Cell; however the TTCN always considers all cells as Full Cells, and thus always provides the complete cell configuration parameters.

The SS may:

- always configure a cell as a 'Full Cell' based on the complete information; or
- configure the cell based on the 'CellConfig_Type' flag taking only the required configuration parameters and ignoring the others.

For a given value of the 'CellConfig_Type' flag, the TTCN shall:

- For Full Cell Configuration:
    - expect normal SS behaviour.
- For Minimum Uplink Cell Configuration:
    - Configure the SS to report Preamble detection.
    - Assign verdicts based on the PRACH Preamble Indications.
    - Consume any uplink SRB0 messages (if the SS is configured as a Full Cell).
- For Broadcast Only Cell Configuration:
    - Not configure the SS to report Preamble detection.
    - Consume any uplink SRB0 messages (if the SS is configured as a Full Cell).

7.4.2 Cell Power Change

To set and adjust the cell power at the two test ports, Reference Power and Attenuation, are provided in the record Reference Power.

The field Reference Power is only set when the cell is created and is not updated during the test case execution. The SS applies the Reference Power when the cell is fully configured.

To adjust the power level in the test case, the field Attenuation is used. After initial configuration of a cell the attenuation corresponds to the value "off". When the power is changed for more than one cell, the power changes must happen at the same time for all the cells according to the time instances for power level changes specified in TS 36.523-1 [1]. The time it takes to complete the power change for all the cells shall be done:

- within a maximum of 700 ms when changing the power of a cell from "off" to a certain value; or
- within a maximum of 100 ms (10 frames) otherwise.

When adjusting the power level in the test case, separate templates will be used in order to improve code readability.

The SS shall ensure the power level at the test ports conform to the required downlink signal levels specified in clause 6.2.2.1 of TS 36.508 [3].

7.4.3 E-UTRAN cell identity

7.4.3.1 Timing parameters of cells

For RRC and Idle mode test, the timing parameters in table 7.4.3.1-1 are applied. The specification of Cell 1 - Cell 30 can be found in TS 36.508 [3].

Table 7.4.3.1-1: Timing parameters of simulated cells

cell ID	SFN offset	FDD Tcell (*Ts*)	TDD Tcell (*Ts*)	
			Synchronous	Non synchronous
Cell 1	0	0	0	0
Cell 2	124	30720	154	30720
Cell 3	257	150897	77	150897
Cell 4	1000	61440	307	61440
Cell 6	657	524	77	524
Cell 10	129	43658	77	43658
Cell 11	957	92160	154	92160
Cell 12	1015	181617	154	181617
Cell 13	890	31244	154	31244
Cell 14	680	300501	77	300501
Cell 23	383	212337	154	212337
Cell 28	890	31244	154	31244
Cell 29	680	300501	77	300501
Cell 30	1015	181617	154	181617
NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.				

Table 7.4.3.1-2 is applied to the NAS test when more than one PLMN exists in a test case. Further cell parameters can be found in TS 36.508 [3], table 6.3.2.2-3.

Table 7.4.3.1-2: Timing parameters of simulated cells for NAS TCs in different PLMNs

cell ID	SFN offset	FDD Tcell (*Ts*)	TDD Tcell (*Ts*)	
			Synchronous	Non synchronous
Cell A	0	0	0	0
Cell B	124	30720	154	30720
Cell C	257	61440	307	61440
Cell D	1000	92160	154	92160
Cell E	752	32047	77	32047
Cell F	NA	NA	NA	NA
Cell G	957	631	77	631
Cell H	1015	31351	154	31351
Cell I	890	127200	77	127200
Cell J	680	1327	77	1327
Cell K	383	157920	154	157920
Cell L	562	188640	307	188640
Cell M	471	122880	307	122880
NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.				

Figure 7.4.3.1-1 illustrates shifting DL transmission timing offset by Tcell = 1 subframe, between multiple NAS FDD cells on the same frequency (table 7.4.3.1-2) in the same PLMN.

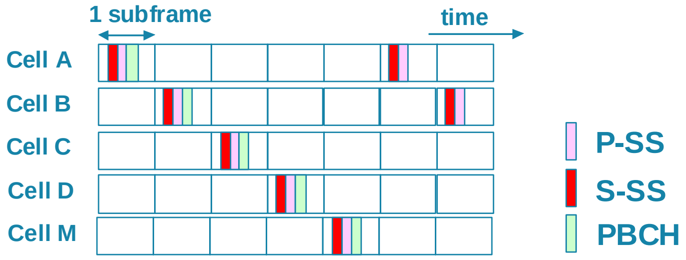

Figure 7.4.3.1-1: Timing offset between FDD cells on the same frequency

Figure 7.4.3.1-2 illustrates shifting DL transmission timing offset for three TDD cells operated on the same frequency (table 7.4.3.1-1) in the same PLMN.

Timing shift between synchronous Cell 0 and Cell 1: Tcell = 154 Ts (5 µs)

Timing shift between synchronous Cell 0 and Cell 2: Tcell = 307 Ts (10 µs)

Table 7.4.3.1-2 is applied to the NAS test when all NAS cells in a test case belong to the same PLMN. Further cell parameters can be found in TS 36.508 [3], table 6.3.2.2-2.

Table 7.4.3.1-2: Timing parameters of simulated cells for NAS TCs in same PLMN

cell ID	SFN offset	FDD Tcell (*Ts*)	TDD Tcell (*Ts*)	
			Synchronous	Non synchronous
Cell A	0	0	0	0
Cell B	124	30720	154	30720
Cell C	257	150897	77	150897
Cell D	1000	61440	307	61440
Cell E	NA	NA	NA	NA
Cell F	NA	NA	NA	NA
Cell G	NA	NA	NA	NA
Cell H	NA	NA	NA	NA
Cell I	NA	NA	NA	NA
Cell J	NA	NA	NA	NA
Cell K	NA	NA	NA	NA
Cell L	NA	NA	NA	NA
Cell M	471	31244	154	31244
NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.				

Shifting radio frame transmission timing can eliminate the following interference between intra frequency cells:

- P-SS/S-SS to P-SS/S-SS, RS, PBCH, PCFICH, PDCCH and PHICH.
- PBCH to PBCH.
- PBCH to PCFICH, PDCCH and PHICH.
- PDSCH to PCFICH, PDCCH, PHICH.

As TDD UL and DL are on same frequency, to avoid interference between DL and UL, the Random Access Response Timing Advance (RAR TA) is related to the Tcell:

For TDD cells

```
RAR TA = FLOOR ((Tcell) mod 30720 / 16)
```

For FDD, the Random Access Response Timing Advance is set to 0.

In Carrier Aggregation signalling test cases, the SFN offset and Tcell of configured cells has to be same.

Editors note: More clarification in terms of tables representing configured cells may be needed. Cell 1, Cell 2, Cell3, Cell12 & Cell 6 are configured in CA test cases.

7.4.4 Cell configurations for NAS test cases

The default cell identifiers for NAS cells are defined in 36.508[3] clause 6.3.2.2.

The allocation of Physical layer cell identifiers to the individual cells is according to (*PCI mode 6*) being differential for the cells working on the same radio frequency. The way of PCI allocation can reduce the interference between the intra-frequency cells for reference signal to reference signal, PCFICH to PCFICH and PHICH to PHICH. The definition of Cell A - Cell M can be found in TS 36.508 [3].

7.4.5 Configuration of Multi-Cell Environment

When there is more than one EUTRA cell in a test case the following rules are applied in TTCN:

- At the beginning of the preamble, before initial attachment of the UE, all EUTRA cells are configured but switched off.
- In the preamble only the serving cell is switched on; all other cells remain switched off.
- At the end of the preamble the cells are configured according to the initial power level settings (T0) of the test case.

The mapping of cells to physical resources and management of the physical resources are out of TTCN scope. The following principles can be applied to the system simulator:

- Cells being switched off need not to be mapped to physical resources.
- When a cell is switched off mapping to a physical resource may be kept and reused when the cell is switched on again.
- When a cell is switched on it can either already been mapped to a physical resource or it needs to be mapped to a free resource.
- When there are less physical resources than cells it is up to SS implementation to find strategies to dynamically map the cells to the resources.

Independent from the strategies being used the system simulator shall obey timing restrictions for changing power-levels of one or several cells as stated in clause 7.4.2.

7.5 TDD Considerations

LTE options of FDD and TDD will be contained in the same common FDD and TDD test cases, similar to the prose in TS 36.523-1 [1].

The TDD Uplink-downlink configuration 1 in 3GPP TS 36.211 [35], table 4.2-2 is applied.

7.5.1 FDD vs. TDD implementation

FDD/TDD differences are introduced in the common FDD and TDD test cases using branches at a low level in the test case. The branches are used either:

- to assign a variable;
- to implement a different behaviour;
- to change an FDD or TDD parameter in a template sent to the UE or SS.

The mode under test (FDD or TDD) is based on the value of the bands under test.

7.5.2 Guideline for FDD vs. TDD verification

With respect to EUTRA FDD vs. TDD technologies, it is recommended that separate verifications for FDD and TDD are required for the TCs in TS 36.523-1 [1]:

- clause 6, 7, 8, 12, 13;
- with MultiRAT involved.

7.6 Special RLC Modes

7.6.1 Suppression of RLC Acknowledgements

Two different modes, both applicable per radio bearer, are defined as:

- General suppression:

  - If this mode is activated, no RLC acknowledgements will be generated by the SS. This mode can be switched on and will persist until it is switched off. Afterwards the SS will continue handling the RLC acknowledgements as normal.

- One time suppression:

  - If this mode is activated, no RLC acknowledgement will be generated by SS for the next RLC message data PDU received. Once this has been done, the SS continues handling RLC acknowledgements as normal.

In case of a handover the modes continue to be active.

7.6.2 Modification of VT(S)

This mode allows to manipulate the RLC state variable VT(S) so that the SS can generate an RLC sequence number as needed during a test. The input to the special test mode is an integer (0..1023) as value of ModifyVTS, The SS shall set variable VT(S) as follows:

VT(S):= ModifyVTS.

The purpose of this special test mode is to force an incorrect RLC sequence number to be used by the SS. Once VT(S) has been modified in the RLC entity at the SS side, this RLC entity will be inconsistent. One possibility to bring the RLC entity back to normal is to re-establish the RLC peer connection. This is done in the only use case of this special RLC test mode by performing an RRC Connection reconfiguration immediately after the test mode has been applied.

Users of this test mode should ensure that the RLC AM PDU carrying the incorrect sequence number will reach the peer RLC entity. It is therefore recommended to activate the RRC Connection reconfiguration only after some delay. This delay shall be short enough to ensure that the UE will not yet request the retransmission of the RLC PDU corresponding to the skipped sequence numbers.

7.7 System information

7.7.1 System information broadcasting

The rules for the transmission of BCCH messages are specified in TS 36.331 [19], clause 5.2. The current clause provides the implementation guidelines.

The ASPs SYSTEM_CTRL_REQ and SYSTEM_CTRL_CNF are used as interface to SS; the following rules apply:

- The complete system information is provided to SS by using a single ASP.

- SS starts scheduling all system information from the same SFN.

- The scheduling information sent to SS is the same as the scheduling information sent to the UE. For each SI message, the subframeOffset in SYSTEM_CTRL_REQ indicates the exact point in time in the SI window at which SS shall start the transmission of the related SI.

- SS shall set the systemFrameNumber in the MIB to the 8 most significant bits of the SFN. A dummy value is provided by TTCN.

- The system information is sent to SS using the asn.1 types, SS shall encode in unaligned PER and add the necessary padding bits as specified in TS 36.331 [19], clause 9.1.1.1.

- In the E-UTRAN-CDMA2000 Inter RAT configuration, SS shall set the CDMA2000 synchronousSystemTime in SystemInformationBlockType8 to the SFN boundary at or after the ending boundary of the SI-window in which SystemInformationBlockType8 is transmitted (see TS 36.331 [19], clause 6.3.4). The changes of synchronousSystemTime will not result in system information change notification, nor in a modification of systemInfoValueTag in SIB1 in TTCN as specified in TS 36.331 [19], clause 6.3.1. If 1xRTT is being tested, then SS shall overwrite the longCodeState1XRTT in SystemInformationBlockType8 to the state of long code generation registers in CDMA2000 1xRTT system as defined in C.S0002-A [12, Section 1.3] at $\lceil t/10 \rceil \times 10 + 320$ ms, where *t* equals to the *cdma-SystemTime*. The changes of longCodeState1XRTT will not result in system information change notification, nor in a modification of systemInfoValueTag in SIB1 in TTCN as specified in TS 36.331 [19], clause 6.3.1.

7.7.2 Scheduling information

The maximum number of resource blocks as defined in table 7.7.2-1 are used to broadcast the system information.

Table 7.7.2-1: Maximum number of resource blocks

	Maximum number of resource blocks assigned
SIB1	4
for all SIs	4

The subframe offset values used for SI messages are according to table 7.7.2-2.

Table 7.7.2-2: SubframeOffset values

Scheduling Information No. Acc to TS 36.508 [3], clause 4.4.3.1.2	subframeOffset (FDD)	subframeOffset (TDD)
SI1	1	0
SI2	1	0
SI3	3	15
SI4	7	15
SI5	7	15

All System Information messages are sent only once within the SI-window.

Table 7.7.2-3 (FDD) and 7.7.2-4(TDD) give the SFN's and subframe numbers in which the MIB, SI1, SI2, SI3, SI4 & SI5 are actually scheduled as per default parameters for si-WindowLength(20sf), periodicity for SI1(16), SI2(32), SI3(64) , SI4(64) and SI5(64) for bandwidths 5/10/15/20 MHz defined in TS 36.508 [3]:

NOTE: Subframes 4 and 9 are avoided so as to facilitate availability of PDCCHs in the UE specific search space for transmission of PDCCH for both UL C-RNTI/SPS-RNTI and DL C-RNTI/SPS-RNTI/Temp C-RNTI.

7.7.3 System information modification

For system information modification, the same rules as defined in clause 7.7.1 are applied.

The SFN for the start of modification period is calculated by TTCN. The modified system information and the calculated SFN are provided in the ASP SYSTEM_CTRL_REQ.

7.7.3.1 Non-PWS System Information modification

The modification of system information is notified by paging messages containing the systemInfoModification. The paging messages are sent during one modification period before broadcasting the modified system information. The paging messages are sent on paging occasions (PO) within the paging frames (PF). With the default paging and sysinfo parameters provided in 36.508[3] PO is set to 9 for FDD and 0 for TDD.

7.7.3.1.1 UE in Idle_mode

When the UE is in idle mode, the paging frames calculation is based on the UE identity (see to TS 36.304 [14], clause 7). With:

defaultPagingCycle=128

nB=oneT

modificationPeriodCoeff=n4

it results in 4 paging messages to be sent on the paging occasions during the modification period in the frames of:

SFN mod 128 = (UE_ID) mod 128.

7.7.3.1.2 UE in connected mode

When the UE is in connected mode, paging messages are sent on the paging occasions of each frame within the paging cycle throughout a modification period. This results in 128*4 consecutive paging messages to be sent during the modification period.

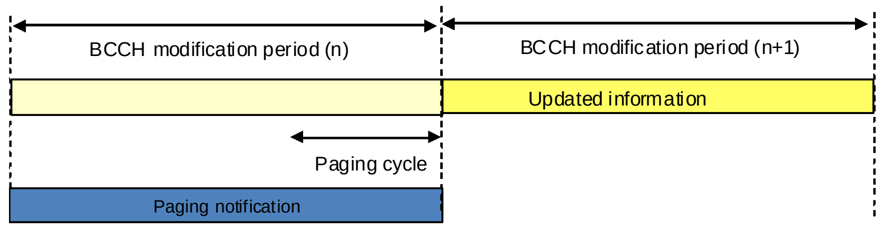

Figure 7.7.3.1.2-1: Paging notification UE in connected mode

For ETWS and/or CMAS capable UEs in connected mode, paging messages are sent on the paging occasions of each frame within the last paging cycle of the modification period. This results in 128 consecutive paging messages to be sent during the modification period.

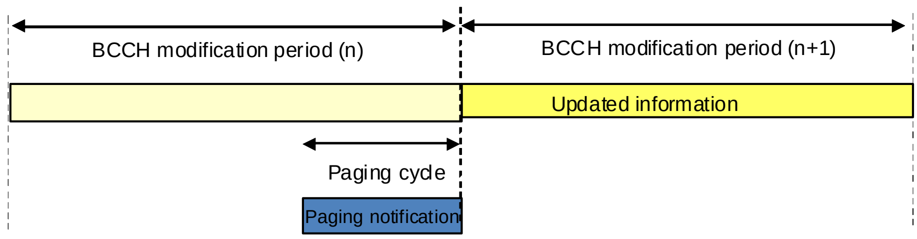

Figure 7.7.3.1.2-2: Paging notification for ETWS and/or CMAS capable UE in connected mode

7.7.3.2 PWS System Information modification

The modification of system information for ETWS and CMAS notification is notified by paging messages. The transmission of system information notification is not necessarily at the beginning of a modification period.

When the UE is in idle mode, the paging frames calculation is the same as defined in clause 7.7.3.1.1.

When the UE is in connected mode, paging messages are sent on the paging occasions of each frame during a paging cycle. This results in 128 consecutive paging messages to be sent. The transmission of the first paging message and the first system information notification are simultaneous and are sent at the beginning of a paging cycle.

7.8 Timers and Timing Restrictions

A timer is set at the beginning of each test case to guard against system failure. Behaviour on expiry of this guard timer shall be consistent for all test cases.

A watchdog timer can be specified for receive statements in order to reduce blocking time when a test case has already failed. Watchdog timers are a kind of TTCN auxiliary timer. When a watchdog timer is used to control a receive event, its expiry does not need to be handled explicitly in the test case, but will lead to a fail or inconclusive verdict due to handling in the default behaviour.

In idle mode operations, an idle mode generic timer is specified for receive statements if the test case specification does not explicitly specify a wait time for the specific test step or test purpose. The expiry of this idle mode generic timer is at least 6 minutes to safely cover most test scenarios.

The watchdog timer and the idle mode generic timer are only to be used inside the test case test body; if the timer expires a fail verdict is applied.

It is the TTCN responsibility to ensure that appropriate timer values are being used.

Tolerances (as described in TS 36.508 [3]) are not applicable to guard timers, idle mode generic timers and watchdog timers.

In general timers of less than 500 ms shall not be implemented by TTCN timers but controlled by usage of the timing information provided by the SS (This is based on an estimate of the system delay). To achieve this, there will be cases when a DL message is scheduled at a specific point in time. This shall be done by adding at least 100 ms to the current time.

If Timing is ‘now' the SS shall schedule the data transmission or the (re)configuration in the next available sub-frame, but will ensure that this period is less than 80 ms.

7.8.1 Auxiliary timers

For practical reasons, the TTCN can include timers that are not specified as part of the expected sequence. These timers are documented below.

RLC and PDCP watchdog timer.

7.8.2 RRC timers reconfiguration

Considering the allowed UE accuracy for the RRC timer T3xx being between 100 ms and 2.5 % of T3xx (see TS 36.133 [37]), the TTCN applies the RRC net timers tolerance as MAX (10% of T3xx, (100 ms + 5 RTT)), whereby:

FDD: 10 % of T3xx or 140 ms whichever is higher.

TDD: 10 % of T3xx or 155 ms whichever is higher.

7.8.3 MAC TA timer reconfiguration

Considering that the UE applies new values for MAC timers not before restart of the timer (see TS 36.321 [16], clause 5.8), when the TA timer is changed at the UE, a delay in TTCN will be added so as to allow SS to transmit

Timing advance MCE (based on current periodic Timing advance configuration) and hence resulting in restart of TA timer at UE with new value.

7.8.4 Non-protocol timers

Time durations or periods in the test specification without corresponding references in the core specifications are considered as non-protocol timers for which no timer tolerances are applied in the TTCN.

7.9 Error Indication

There are several situations on lower layer in which SS shall raise an error rather than trying to resolve the problem. This is done by sending a SystemIndicationError to the test case. SS shall raise an error in the following cases:

- HARQ retransmissions (applicable when SS is configured to indicate HARQ retransmissions as errors):
    - HARQ CRC error for UL data;
    - HARQ NACK from the UE unless SS is configured to report HARQ ACK/NACK.
- Paging, System information exceeds max. number of resource blocks.
- Configuration: max. number of resource blocks specified for a channel exceeds system bandwidth.
- When in User-Plane a DL PDCP PDU or SDU not fitting into one TTI is sent with Harq Process being explicitly specified.
- SS gets invalid TimingInfo for TDD from the test case.
- SS detects contradiction of UL grant(s) and TDD configuration.
- Data scheduled for the same TTI does not fit into an available transport block.

Further error conditions are specified in annex D.

7.10 Race Conditions

When two uplink messages are sent from the UE within a very small amount of time, they may be received in either order in the TTCN if they are received on different ports. This may cause a race condition which is due to the snapshot mechanism in TTCN. In these cases, the TTCN will accept the messages in either order and then compare the timestamps of both messages to ensure they were sent in the correct order.

For UL messages received at a single port, there are normally no race conditions, with the exception of the SRB port where the following rules shall be fulfilled, in order to achieve an ordered UL message queue:

- UL messages are queued according to the timing information.
- UL messages with the same timing information are queued according to the logical channel priority with the "higher-first-in" principle.

7.11 Radio Link Failure

A radio link failure shall be triggered by switching the downlink power level of the source cell to the value for non-suitable "Off" for the time period of least T310 + time it takes to receive N310 consecutive out-of-sync indications from lower layers (non-suitable "Off" is defined in TS 36.508 [3], whereas T310 and N310 are defined in TS 36.331 [19]).

If the RRC re-establishment procedure is used in a radio link failure context, it shall be realised by using two cells.

7.12 Test method for RRC signalling latency

Test cases testing RRC signalling latency will need special test method. The PUCCH synchronisation state of UE influences the test method. Following 2 different ways in which the UE's completeness of procedure can be probed are considered:

1. UE is still PUCCH synchronized and can respond to uplink grants.
2. UE needs a RACH procedure and hence RACH procedural delays add upon the actual procedure delay.

7.12.1 Procedure delays in PUCCH synchronized state

For latency tests there may be up to 4 HARQ retransmissions in DL (corresponding to the default configuration of the SS) but HARQ retransmissions in UL cannot be compensated , i.e. any HARQ error in UL shall result in an inconclusive verdict for the test case (otherwise a UE may get fail due to a HARQ error).

Figure 7.12.1-1 demonstrates the latency check procedure that will be applied when UE is in PUCCH synchronized state and can respond to uplink grants.

SS is configured to report ACK/NACK received from UE, to TTCN.

NOTE: Due to L2 signalling (e.g. RLC STATUS PDUs) it is necessary to limit the reporting of UL HARQ ACK/NACK to the time between sending of the RRC message and receiving the ACK.

By default SS is configured to retransmit any DL MAC PDU max 4 times.

To avoid unexpected side effects the Time Alignment timer needs to be set to infinity and the SS shall be configured to not send any Timing Advance MAC control elements during the latency tests (since this may result in additional ACK/NACK)

The SS shall be configured to report HARQ errors and in the case of an UL HARQ error, an inconclusive verdict is assigned.

In the case of HARQ retransmissions in DL the HARQ RTT Timer according to TS 36.321 clause 7.7 [16] is

- 8 for FDD
- 10 for TDD configuration 1 in case the DL PDU is sent in subframe 4 (as per default; see Table 7.12.1-1).

The SS shall schedule DL retransmission at 4th FDD TTI for FDD or 6th TTI for TDD since reception of the NACK.

Let N be the max allowed delay for procedure.

TTCN schedules at time T1 a DL message to the UE.

TTCN schedules UL grants at

$T_2(k) = T_1 + N + \Delta_1 + k * RTT;$

with
k = 0..4; number of HARQ retransmission in DL
RTT = 8 (FDD)
RTT = 10 (TDD)
$\Delta_1 = 0$ (FDD)
$\Delta_1 = 0..3$ (TDD; possible UL subframe uncertainty since not all subframes can be used for UL)

Example:
given TDD; DL PDU sent at subframe 4; N=19
$\Rightarrow \Delta_1 = 1$ since UL grant cannot be scheduled for subframe 3 but needs subframe 4 too

The UL data is sent by the UE at

$T_3(K) = T_2(K) + 4 + \Delta_2$ with $\Delta_2 = 0$ for FDD and $\Delta_2 = 0..3$ for TDD and K is the value of k corresponding to which a HARQ Ack is received

The latency requirements are fulfilled when

$T_3(K) - T_1 = N + 4 + \Delta_1 + \Delta_2 + K * RTT$

Looking at TDD configuration 1 in detail it can be shown that $\Delta = \Delta_1 + \Delta_2 = 0 .. 3$

$\Rightarrow T_3(K) - T_1 = N + 4 + \Delta + k * RTT$; with $\Delta = 0 .. 3$

NOTE:
as long as N is a multiple of 5ms even for TDD configuration 1 we get $\Delta = 0$

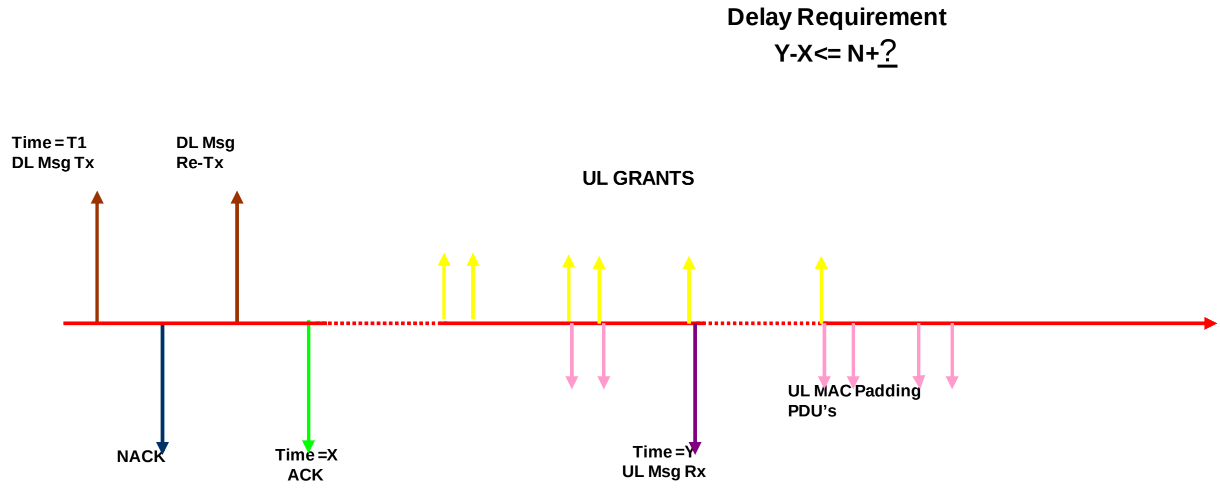

Figure 7.12.1-1: Delays in PUCCH synchronized state

Table 7.12.1-1: TDD configuration 1

Subframe	0	1	2	3	4	5	6	7	8	9
Configuration 1	D	S	U	U	D	D	S	U	U	D
Delay from DL to Ack/Nack [TTIs]			6,7	4				6,7	4	
Delay from NCK to re tx [TTIs]			4	6				4	6	
RTT	11	10			10	11	10			10

7.12.2 Procedure delays when RACH procedure required

Figure 7.12.2-1 demonstrates the latency check procedure that will be applied when UE is not PUCCH synchronized state needs RACH procedure.

PRACH configuration index is set as 14 for FDD, 12 for TDD which allows UE to send Preamble in any frame at any subframe.

SS is configured to report ACK/NACK, PRACH preambles received from UE.

By default SS is configured to retransmit any DL MAC PDU max 4 times [1 Transmission and 4 Retransmission].

Let N be the max allowed delay for procedure.

TTCN schedules at time T1, DL message to the UE. This is achieved using Time stamps in send ASP's.

The time difference between the ACK and the reception of PRACH preamble will be checked against N plus any Interruption time (TS 36.133 [37]) and verdict is assigned, when (Y-X) <= N + Tinterrupt + Δ:

Δ = 0 for FDD;

Δ = 3TTI for TDD, where 3TTI is UL subframe uncertainty.

If cell change occurs, cell timing differences, Frame number offsets need to be included for procedural delay evaluations.

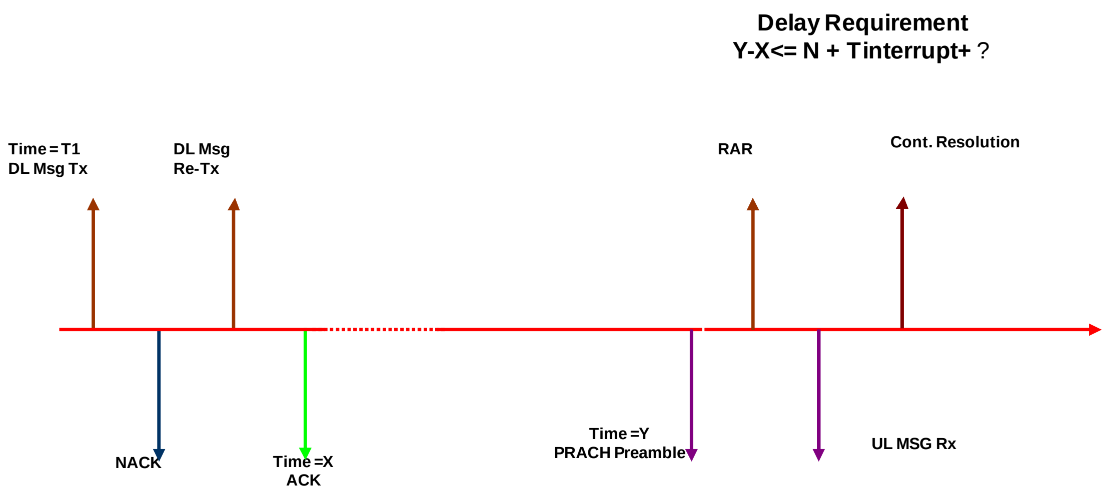

Figure 7.12.2-1: Delays when RACH procedure needed

7.13 RLC test method for scheduled data

The test loop mode is applied to the RLC tests. The allowed SS delay for sending data (< 80 ms) is comparable to the default values of the RLC timers. In order to ensure a unique TTCN implementation of the RLC test cases and the deterministic test result, independent from the SS platforms and UEs, scheduled data method can be applied to the test.

The scheduled data method is suitable to the RLC test if:

Receiving multiple UL RLC SDUs is expected in the test; the UE may send a STATUS PDU in addition.

Time measurement is required for the looped back RLC SDUs.

DL RLC PDUs are sent on consecutive TTIs; the subframe numbers to be applied are relevant in TDD.

Table 7.13-1 illustrates the data scheduling in the RLC test.

Table 7.13-1: Scheduled RLC test events

Scheduled timing		t0 (see note 1)	t1 (see note 1)	t2
Test event descriptions	Multiple SDUs	Obtain the reference time	Send DL data	Provide UL grant (see note 2)
	Time measurement		Send DL data	Receive UL data
	DL data in TDD		Send 1st DL data	Send subsequent data (see note 3)
NOTE 1: (t1-t0) ≥ 100 ms which is greater than the allowed SS max. delay time, 80 ms. NOTE 2: (t2-t1) = 60 ms, this duration will allow the UE transmitting max. 3 scheduling requests (every 20 ms once) after the UL data to be looped back being available at the UE without going onto PRACH. NOTE 3: The applied TDD subframe numbers 4, 5, 9, 10, 14, 15, 19, 20, 24, 25, ...				

If the test case prose does not indicate timely restrictions for the scheduling, sequential sending events are scheduled in consecutive TTIs.

NOTE 1: For TDD configuration 1, the subframes 0, 4, 5 and 9 are considered as consecutive.

NOTE 2: Scheduling may imply to execute the test steps in the TTCN in an order different from the order given in the test case prose. However, the sequence of the events over the air follows the prose description.

7.14 IP packets for Loopback Mode

7.14.1 IP packets used for Loopback Mode A

It is irrelevant which kind of data is used in loopback mode A. Some PDCP test cases however specify to use IP packets. In these cases, an ICMPv4 ECHO REPLY shall be used with a valid IP header checksum and valid ICMP checksum.

7.14.2 IP packets used for Loopback Mode B

According to TS 36.509 [4], the UE performs loopback mode B above the UL TFT entity. Therefore IP packets need to match the packet filters signalled to the UE according to TS 36.508 [3], clause 6.6.2:

When the UE gets configured via NAS signalling with packet filter #1 and #2 according to TS 36.508 clause 6.6.2 the IP packets shall fulfil the following requirements:

Protocol:

UDP referred to packet filter #1 and #2

IP addresses:

Referred to TS 36.508 [3], table 6.6.2-3, note 1 source and destination IP address are the same.

Ports:

packet filter #1 specifies DL filter ⇒ IP packet's source port shall match remote port of packet filter #1.

packet filter #2 specifies UL filter ⇒ IP packet's destination port shall match remote port of packet filter #2.

To summarize, on dedicated bearers for loopback mode B, UDP packets used shall match the packet filters configured at the UE side. The UDP packets, having no specific content, shall have the correct header checksum and UDP checksum. On the default bearer, any other packets can be used, as an example, ICMPv4 ECHO REPLY similar as for loopback mode A.

7.15 Connected Mode DRX

The SS shall support connected mode DRX according to TS 36.321 [16], i.e. the SS shall not send any data to the UE while the UE is not monitoring the PDCCH. To achieve this, the SS needs to estimate the UE's Active Time by considering the on-duration as well as the drx-inactivity timer:

on-duration:

The on-duration can be derived from the SS' DRX configuration.

drx-inactivity timer:

According to TS 36.321 [16], clause 5.7 at the UE the drx-inactivity timer is started or restarted during the Active Time whenever PDCCH indicates a new transmission (DL or UL).

There is no activation time for the configuration of DRX at the UE and it is not acceptable just to consider the on-duration after re-configuration of the UE (for DRX_L according to TS 36.508 [3] the DRX cycle is 1.28 s); instead the drx-inactivity timer needs to be taken in account after DRX reconfiguration as well.

The following rules shall be applied to achieve synchronisation of SS and UE:

1. SS shall consider drx-inactivity timer as restarted at the UE whenever the UE is addressed on the PDCCH (DL data or UL grant).

2. When there is a scheduling request sent by the UE, SS assigns a grant independent of DRX;
   when sending out that grant on PDCCH SS considers drx-inactivity timer as (re-)started (as per 1. above).

3. For all DL messages scheduled with specific timing information SS shall send the data at the given time irrespective of current DRX configuration.

4. DRX (re-)configuration:

   a) when DRX has not been configured at the UE yet:

      a1) TTCN will configure the SS just before the sending out the RRCConnectionReconfiguration message configuring DRX at the UE; no other send-events between the reconfiguration of the SS and sending the RRC message shall be scheduled in TTCN.

      a2) TTCN will schedule sending of the RRCConnectionReconfiguration message configuring DRX with specific timing information.

   b) Reconfiguration of DRX at the UE: Same as a) but:

      b1) TTCN shall schedule sending of the RRCConnectionReconfiguration according to the old DRX configuration (i.e. the SS does not need to cache the new configuration).

   c) RRC connection release:

      c1) TTCN will release DRX at the SS just after the RRC connection release procedure.

5. There shall be no parallel data on any DRBs during DRX reconfiguration.

NOTE: Timing requirements in the DRX test cases:

a) The drx-Inactivity Timer shall be long compared to the duration between sending RRCConnectionReconfiguration and receiving RRCConnectionReconfigurationComplete (> 50 ms). It ensures the SS in-time sending of the RLC STATUS PDU.

or

b) The drx-cycle shall be short compared to the RLC timers applied for SRB1.

Figure 7.15-1 illustrates DRX (re)configuration at the SS and the UE.

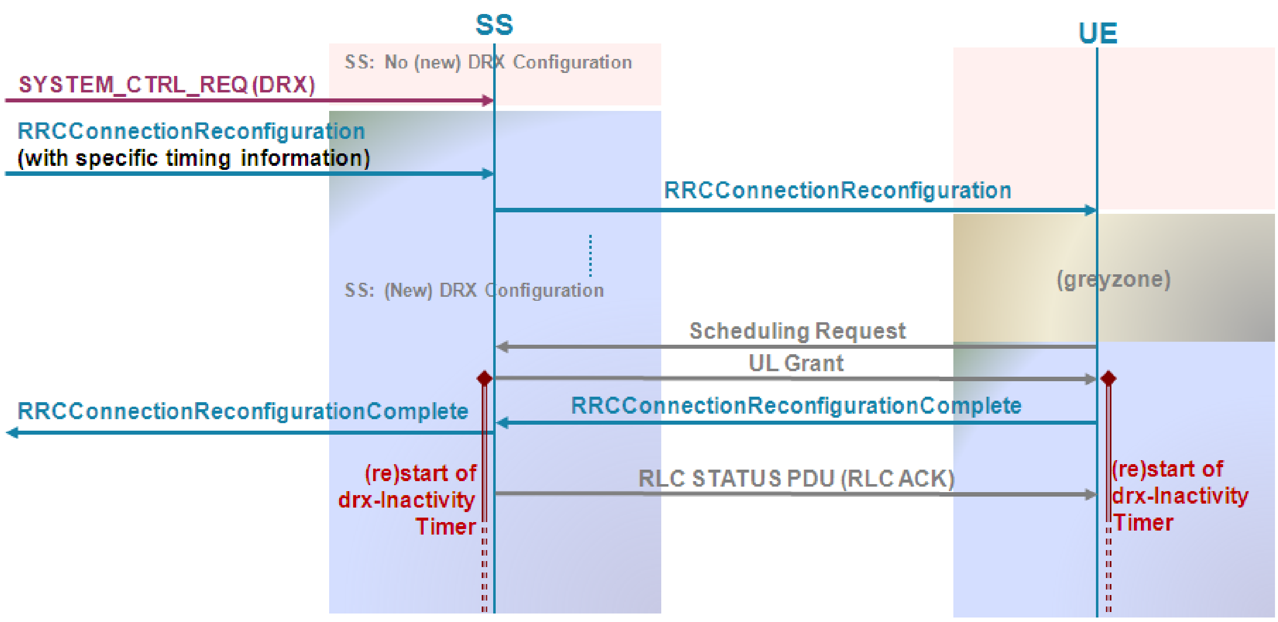

Figure 7.15-1: DRX (Re)configuration

NOTE 1: Between RRCConnectionReconfiguration and RRCConnectionReconfigurationComplete the UE may send a separate RLC STATUS PDU to acknowledge the RRCConnectionReconfiguration, but that does not affect the principle as long as SS applies rule 2.

NOTE 2: During the "greyzone" SS does not know about DRX configuration at the UE; during that period according to rule 4a1 and rule 5 there is no data to be sent by SS.

The TTCN (re)configures the connected mode DRX in SS for the test cases if DRX_S is applied (Ref. TS 36.508 [3]. The (re)configuration of DRX_L in SS is FFS.

For test case 7.1.6.1 and 7.1.6.2, DRX will not be activated at the SS. Periodic UL grants every 5ms (suitable for both FDD and TDD and less than drx-InactivityTimer 6ms) will be allocated to the UE during the steps configuring test case specific DRX parameters of the test case to prevent UE from activating DRX; These grants may result in padding MAC PDU's transmitted by UE, which will be received by SS MAC and discarded.

7.16 Handover Sequences

7.16.1 Sequence of inter-cell handover

In general, the Inter-Cell handover is done without activation time, i.e. the timing information for configuration of the SS and sending of the RRCConnectionReconfiguration is 'Now'.

1. Transfer of the PDCP Count for AM DRBs from source to target cell:
   a) Source Cell: Get PDCP COUNT.
   b) Target Cell: Set PDCP COUNT.

NOTE 1: There shall be no further sending/receiving of AM DRB data before the HO has been done.

2. Target Cell: Inform the SS about the HO and about the source cell id.
3. Target Cell: Configure RACH procedure either dedicated or C-RNTI based.
4. Target Cell: Activate security.

NOTE 2: For AM DRBs the PDCP count is maintained (for SRBs and UM DRBs the PDCP count is reset).

5. Target Cell: configure DRX and measurement gap configuration (if necessary).

NOTE 3: As long as the DRX configuration is not modified by the RRCConnectionReconfiguration the target cell gets the same DRX configuration as the source cell.

NOTE 3A: According to TS 36.331 clause 5.5.6.1 the measurement gap configuration is released at the UE due to the handover, therefore nothing needs to be configured at the target cell regarding measurement gaps unless a new measurement gap configuration is explicitly given in the RRCConnnectionReconfiguration.

6. Source Cell: Stop periodic TA.

NOTE 4: Unless explicitly specified UL grant configuration keeps configured as per default at the source cell.

7. Target Cell: Configure UL grant configuration ("OnSR", periodic TA is not started).
8. Source Cell: Send RRCConnectionReconfiguration.
9. Target Cell: Receive RRCConnectionReconfigurationComplete.
10. Target Cell: Start periodic TA.
11. Target Cell: Inform the SS about completion of the HO (e.g. to trigger PDCP STATUS PDU).
12. Target Cell: Re-configure RACH procedure as for initial access.
13. Source Cell: Reset SRBs and DRBs.

14. Source Cell: Release DRX and MeasGapConfig configuration.

7.16.2 Sequence of intra-cell handover

For Intra-Cell handover dedicated timing information is used: the sequence starts at time T with sending of the RRCConnectionReconfiguration. T is set to 300 ms in advance of the handover.

0. Before T: Get PDCP count for AM DRBs.
1. At T: Send RRCConnectionReconfiguration.
2. At T + 5ms: Release SRBs and DRBs.
3. At T + 5ms: Configure RACH procedure either dedicated or C-RNTI based.

NOTE 1: Since the RACH procedure may require a new C-RNTI to be used it cannot be configured before sending out the RRCConnectionReconfiguration.

3A At T + 5ms: Release MeasGapConfig configuration.

NOTE 2: According to TS 36.331, clause 5.5.6.1 the measurement gap configuration is released at the UE due to the handover, therefore MeasGapConfig is released unless a new measurement gap configuration is explicitly given in the RRCConnectionReconfiguration.

4. At T + 10ms: (Re-) configure SRBs and DRBs.
5. At T + 10ms: Reestablish security, disable TA transmission.

NOTE 3: For AM DRBs the PDCP count is maintained while for SRBs and UM DRBs the PDCP count is reset.

6. (after step 5) Receive RRCConnectionReconfigurationComplete.
7. (after step 6) Re-configure RACH procedure as for initial access, enable TA transmissions.
8. (after step 7) Restore the PDCP count for AM DRBs.

7.16.3 UL Grants used in RA procedure during handover

In the Random Access Procedure a grant is assigned to the UE by the Random Access Response and another grant, as initial grant, is assigned for contention resolution.

When UL data is pending, the UE will try to put as much data into given grants as possible, i.e. it will segment the user data and send it e.g. with the initial grant if possible. To avoid this segmentation of user data, the grants assigned during handover will be set in TTCN to:

Grant assigned by Random Access Response: 56 bits.

Initial grant: 104 bits.

NOTE 1: According to TS 36.321 [16], clause 5.1.4, 56 bits are the minimum grant which can be assigned by the Random Access Response. That is sufficient to convey C-RNTI (3 bytes) and short BSR (2 bytes) or long BSR (4 bytes) but even with short BSR the remaining 2 bytes are not sufficient to convey any segment of the RRCConnectionReconfigurationComplete (at least 4 bytes).

NOTE 2: The RRCConnectionReconfigurationComplete (9 bits) shall completely be conveyed in the initial grant of RA procedure. This requires a minimum of 10 bytes (1 byte MAC header + 2 bytes RLC header + 5 bytes PDCP header + 2 bytes payload). Additionally an optional PHR MAC element (2 bytes) needs to be considered since the PHR has higher priority than the MAC SDU. Any further user data would require a minimum of 5 additional bytes (2 bytes MAC header + 2 bytes RLC header + 1 byte payload).

7.17 Simulation of PDCP MAC-I Failure in UE

PDCP integrity protection test cases 7.3.4.x have the requirement to trigger MAC-I failures in UE for downlink messages; to achieve the MAC-I failure in UE two methods are specified in the subsequent sub clauses.

7.17.1 Integrity and ciphering not yet activated

UE has not yet started Integrity protection and it is required to trigger MAC-I failure for the PDCP PDU carrying RRC SecurityModeCommand starting integrity with one of integrity protection algorithms. Further a conformant UE will respond with SecurityModeFailure without any integrity protection.

This is achieved by:

Not configuring SS PDCP to start integrity and ciphering with selected algorithm.

RRC SecurityModeCommand is sent indicating Integrity protection through the desired algorithm.

Normal behaviour of PDCP layer in SS will include all zeros in MAC-I.

This results in MAC-I failure as UE will calculate the XMAC-I with indicated algorithm.

7.17.2 Integrity and/or ciphering already activated

UE has started Integrity protection (ciphering configured with possibly non null algorithm) and it is required to trigger MAC-I failure for the PDCP PDU carrying an RRC UECapabilityEnquiry message. A conformant UE will trigger a RRCConnectionReestablishment procedure.

This is achieved by:

Configuring SS PDCP to use a different Integrity algorithm other than used by UE (i.e. if UE is configured to use AES, SS is configured to use SNOW3G and vice versa).

Ciphering is configured at SS side same as in UE side.

The MAC-I included by SS PDCP will be as per new algorithm.

UE will calculate XMAC-I based on its own algorithm which is different from the algorithm SS has used and will result in MAC-I failure.

7.18 RRC Connection Release Sequence

According to TS 36.331 [19], clause 5.3.8.3, after reception of the RRCConnectionRelease the UE may either wait 60 ms or for indication of acknowledgement from lower layer. After the RRC connection release there are cases where the UE may immediately come up with an RRC connection request. This requires scheduled release of resources at the SS:

1. At T: Send RRCConnectionRelease, stop UL grants.
2. At T + 5ms: Release security.
3. At T + 10ms: Release DRX configuration at the SS.

3A At T + 15ms: Release measurement gap configuration at the SS.

4. At T + 50ms: no action.
5. At T + 55ms: Release SRBs and DRBs.
6. At T + 60ms: (Re-) configure SRBs and DRBs.
7. Delay of 840ms (NOTE)

T is set to 300ms in advance of RRC connection release.

NOTE: The delay ensures that the UE is camping on the serving cell again to avoid side effects e.g. due to subsequent power level changes. It does not affect any sending of messages by the UE. The delay 840ms is chosen to ensure the UE is re-camping on the cell and has read relevant system information, MIB, SIB1, SIB2 and all other SIs.

7.19 DL CCCH Message and Contention Resolution MAC Control Element transmission in one MAC PDU or in separate MAC PDUs

When the contention based RACH procedure is being executed (RRC Connection Establishment or RRC Connection Reconfiguration), in general the contention resolution MAC control element and the DL RRC PDU (RRC Connection Setup/RRC Connection Reject/RRC Connection Re-establishment/RRC Connection Re-establishment Reject) are sent in one MAC PDU. This is achieved by pre-configuring the SS (before the start of the RRC procedure) to send the encoded DL message and contention resolution MCE in one MAC PDU.

Nevertheless, due to specific test purposes there are still many cases where it is necessary to send the DL CCCH message separately:

RRC connection establishment

When RRC connection establishment is part of the test purpose

Special cases: , e.g. when no contention resolution shall be sent according to the test purpose

RRC Connection Reestablishment is part of the test purpose

RRC Connection Reject is part of the test purpose

RRC Connection Reestablishment Reject is part of the test purpose

NOTE: The way contention resolution is applied has impact on the DCI format being used in a test case: when the DL CCCH message is sent separately DCI combination 1 according to clause 7.3.1 shall be used.

7.20 RRC Connection Reconfiguration Sequence (Measurement Control)

When an RRC Connection Reconfiguration message contains information to configure measurement gaps at the UE according to TS 36.331 [19] clause 5.5.2.9, the SS needs to be configured accordingly:

IF MeasConfig contains measGapConfig:

1. At T: Send RRC Connection Reconfiguration.
2. At T + 5ms: Configure measurement gaps at the SS.
3. (after step 2) Receive RRC Connection Reconfiguration Complete

ELSE

1. Send RRC Connection Reconfiguration (without scheduling)
2. Receive RRC Connection Reconfiguration Complete.

T in general is set to 100ms in advance of the RRC connection reconfiguration.

7.21 GERAN special issues

7.21.1 Timeslot assigned for GERAN CS traffic

Timeslot 3 shall be used as the timeslot assigned for GERAN CS traffic, in order to avoid conflicts with timeslots reserved for other purposes (e.g. the GPRS channel which is assigned to timeslot 4).

7.21.2 Subchannel used in GERAN L2 access message

The subchannel is valid only for the following logical channel types: FACCH/H, SDCCH/8, SDCCH/4. For other logical channel types this field is not applicable and shall be coded as 15 for compatibility with TTCN2 test cases. The SS shall ignore it if this field is coded as 15.

7.22 EUTRAN RSRQ Calculations

7.22.1 Assumptions

- As per 36.214[53] clause 5.1.1 and 5.12, the RSRP and RSSI shall be averaged over the same set of resource blocks. It is assumed that the power calculations made over one symbol are good enough for RSRQ calculations. This is based on the assumption that the power levels remain the same across the symbols on which the UE is calculating the average. The contribution of Nprb and the OFDM symbols carrying cell specific reference symbols per PRB contribute equally in numerator and denominator, hence RSRQ calculations in dB with aggregation over cell DL bandwidth and without aggregation result in the same output.
- As per table 7.4.3.1.1-1, for FDD the timing offset between the intra frequency cells is always a multiple of sub frame duration i.e. 3072 Ts, hence in the symbols carrying cell-specific reference signals in one cell, the other cell (interference) is also carrying a cell-specific reference signal, even though in a different subframe. Hence from an interference calculation perspective, we can safely assume that the cells contributing an interference shall also transmit the same cell specific reference signal in the symbol/
- The noise source is treated as a dummy cell transmitting on all resource elements with equal EPRE. Hence to switch off the noise source, a value of non-suitable "Off" cell, as per 36.508[3] table 6.2.2.1-1 shall be used (<-145), and the signal level uncertainties similar to configured cells in 36.508[3] clause 6.2.2.1 will also be applied to the noise source.

7.22.2 The Ideal Calculation

The test case specifies the RS-EPRE (dBm/15kHz) which is the cell absolute power-cell attenuation in dBm per carrier of 15 kHz; the linear average over few measurements will give the RRP value.

It is assumed that the power levels of all contributors is fluctuating hence in the typical test environment RS-EPRE will be the RSRP over a single carrier frequency.

The RS-EPREmW(mW/15kHz) = 10 power (RSRP/10).

The energy in noise source [Noc] for the frequency is also specified in the same units of dBm/15kHz.

The RSSImW calculation(mW over a resource block frequency of 180 kHz) = 2 (the sum over all intra frequency configured cells RS-EPREmW) + 10 power ((Noc/10)*12.

The cell inference is multiplied by 2 as in a RB, cell specific reference is transmitted in only 2 carriers. But the AWGN transmits on all 12 carriers in the resource block.

The RQRQ in dB will be the 10*log (RS-EPREmW/RSSImW).

7.22.3 Additional RSRQ Calculations For Fixing Boundary Values

In addition to the ideal calculation, various RSRQ calculations take into consideration the combinations of the SS signal uncertainties and possibly all 12 carriers being used for DL transmission.

The 12 carriers being used can happen when the UE makes the measurement in a subframe when a DL PDSCH is scheduled or measurement is in subframe zero and the UE measures in OFDM symbol carrying PBCH i.e. slot 1, symbol 0.

The Min and Max RSRQ values are identified from 6 different RSRQ calculations:

RSRQ Ideal: RSRQ calculated in ideal conditions as given above

RSRQ Min: RSRQ calculation applying –ve signal uncertainty to all configured cells and noise source

RSRQ Max: RSRQ calculation applying +ve signal uncertainty to all configured cells and noise source

RSRQ Max Worst Case: RSRQ calculation applying +ve signal uncertainty for measured cell and –ve signal uncertainty to all remaining configured cells and noise source. This shall be the Max RSRQ possible

RSRQ Max And 12 Carriers: RSRQ calculation applying +ve signal uncertainty to all configured cells and noise source and cell interference considered over all 12 carriers

RSRQ Min Worst Case And 12 Carriers: RSRQ calculation applying -ve signal uncertainty for measured cell and +ve signal uncertainty to all others; and cell interference considered over all 12 carriers. This shall be the Min RSRQ possible

Applying UE measurement accuracy 36.133[37], Table 9.1.6.2-1, +/-4dB normal conditions and side conditions of RSRQ when RSRP Ês/Iot ≥ -6 dB & RSRP ≥ -124 dBm the final boundary value for RSRQ is

Min RSRQ With UE Meas Acc := Min RSRQ -4 dB

Max RSRQ With UE Meas Acc := Max RSRQ + 4 dB

For conditions to fulfil desired cell selection or reselection, the respective conditions shall be satisfied for both the boundary values Min RSRQ RSRQ With UE Measurement Accuracy and Max RSRQ With UE Measurement Accuracy.

As the Boundary conditions also consider the worst scenario of all 12 carriers being transmitted, the requirement for OCNG is removed. There is no need to restrict measurement bandwidth and will be applicable for both DCI formats.

7.23 Test method for eICIC

When periodic CQI feedback is requested due to TTCN configuration, the SS reports the periodic CQI to the TTCN. SS does not react on periodic CQI received and still allocates grants as configured from TTCN.

In the selected ABS no DL/UL user data (SRB/DRB) is scheduled, nor paging is transmitted; this is controlled by TTCN.

7.24 Carriage Aggregation Signalling Sequences

7.24.1 Initial configuration of Pcell

Cell is configured as a normal cell by using function f_EUTRA_CellConfig_Def. The missing CA default parameters (e.g. UL power control Common) are configured by using additional ASP call(s).

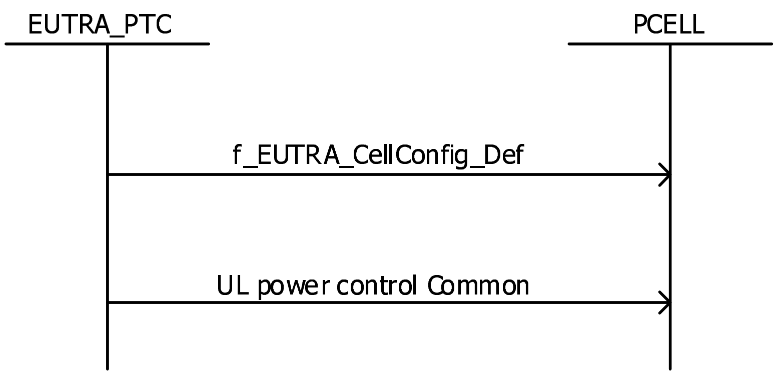

Figure 7.24.1-1: CA sequence of an initial cell configuration for a cell to be used as Pcell

7.24.2 Initial configuration of SCell

Cell is configured as a normal cell except for SRB/DRB configuration by function f_EUTRA_SS_ConfigureActiveCell.

SRB0 not yet configured in step 1 is then configured.

The missing CA default parameters (e.g. UL power control (Common + Dedicated), PUSCH config Dedicated, SRS UL Dedicated) are configured by using additional ASP call(s).

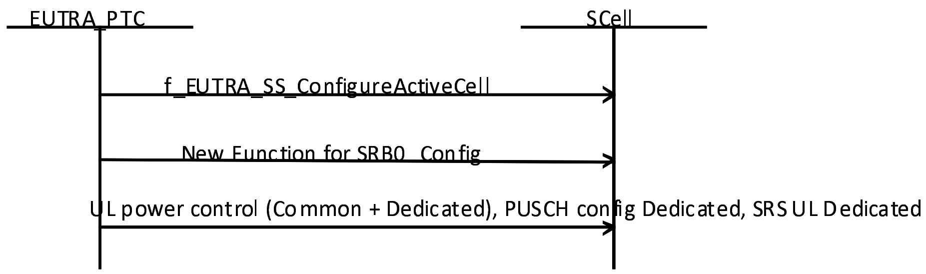

Figure 7.24.2-1: CA sequence of an initial cell configuration for a cell to be used as Scell

7.24.3 Scell Addition and/or release

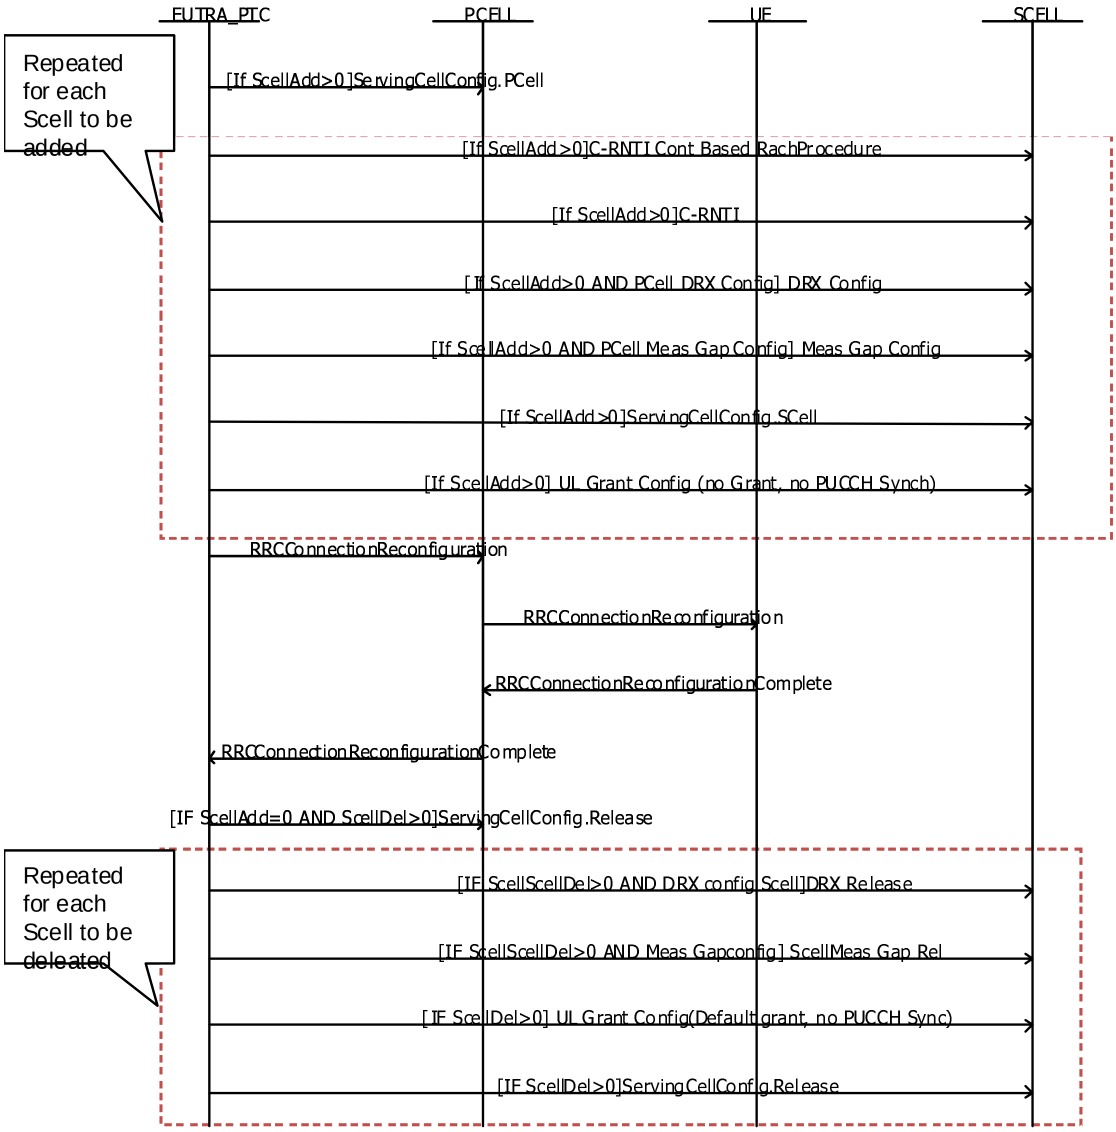

Figure 7.24.3-1: CA sequence of Scell Addition and/or release

8 External Function Definitions

The following external functions are required to be implemented by the SS.

TTCN-3 External Function		
Name	**fx_KeyDerivationFunction**	
Description	Hashing function for Hashing algorithms as defined in TS 33.401 [24] SHA-256 encoding algorithm is used as KEY Description Function	
Parameters	KDF	KDF_HMAC_SHA_256 (no other KDF defined yet)
	Key	256 bit key
	String	string being constructed acc. to TS 33.401 [24], annex A
Return Value	256 bit derived key	

TTCN-3 External Function		
Name	**fx_NasIntegrityAlgorithm**	
Description	Apply integrity protection algorithm on a given octetstring	
Parameters	NAS PDU	octetstring according to TS 24.301 [21], clause 4.4.3.3 this shall include octet 6 to n of the security protected NAS message, i.e. the sequence number IE and the NAS message IE
	Integrity Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	$KNAS_{int}$	Integrity key
	NAS COUNT	as documented in TS 24.301
	BEARER Id	fix value ('00000'B) acc. TS 33.401 [24], clause 8.1
	Direction	UL: 0 DL: 1 (acc. to TS 33.401 [24], clause B.1)
Return Value	Message Authentication Code (4 octets)	

TTCN-3 External Function		
Name	**fx_NasCiphering**	
Description	Apply ciphering on a given octetstring	
Parameters	NAS PDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	$KNAS_{enc}$	Ciphering Key
	NAS COUNT	as documented in TS 24.301
	BEARER Id	fixed value ('00000'B) acc. TS 33.401 [24], clause 8.1
Return Value	ciphered octet string	

TTCN-3 External Function		
Name	**fx_NasDeciphering**	
Description	Apply deciphering on a given octetstring	
Parameters	ciphered NAS PDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	$KNAS_{enc}$	Ciphering Key
	NAS COUNT	as documented in TS 24.301 [21]
	BEARER Id	fixed value ('00000'B) acc. TS 33.401 [24], clause 8.1
Return Value	deciphered octet string	

TTCN-3 External Function		
Name	**fx_GetCurrentTestcaseName**	
Description	external function giving back the name of the test case currently running	
Parameters	None	
Return Value	char string	

TTCN-3 External Function		
Name	**fx_AsIntegrityAlgorithm**	
Description	Apply integrity protection algorithm on a given octetstring	
Parameters	PDCP PDU	octetstring
	Integrity Algorithm	3 bits as defined in TS 33.401 [24]
	$KRRC_{int}$	Integrity key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
	Direction	UL: 0 DL: 1 (acc. to TS 33.401 [24], clause B.2)
Return Value	Message Authentication Code (4 octets)	

TTCN-3 External Function		
Name	**fx_AsCiphering**	
Description	Apply ciphering on a given octetstring	
Parameters	SDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 33.401 [24]
	$KRRC_{enc}$	Ciphering Key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
Return Value	ciphered octet string	

TTCN-3 External Function		
Name	**fx_AsDeciphering**	
Description	Apply deciphering on a given octetstring	
Parameters	ciphered SDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 33.401 [24]
	$KRRC_{enc}$	Ciphering Key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
Return Value	deciphered octet string	

TTCN-3 External Function		
Name	**fx_GetSystemTime**	
Description	Function to get the system time: Implementation is based on C standard library (time.h)	

Parameters	p_Struct_tm (out)	p_Struct_tm returns local system time equivalent to "struct tm" as defined for C standard library (time.h or ctime):
		
		`type record Struct_tm_Type {`
		`  integer tm_sec,  // seconds after the minute`
		`                   // (0..61; see NOTE)`
		`  integer tm_min,  // minutes after the hour (0..59)`
		`  integer tm_hour, // hours since midnight (0..23)`
		`  integer tm_mday, // day of the month (1..31)`
		`  integer tm_mon,  // months since January (0..11)`
		`  integer tm_year, // years since 1900`
		`  integer tm_wday, // days since Sunday (0..6)`
		`  integer tm_yday, // days since January 1 (0..365)`
		`  integer tm_isdst // Daylight Saving Time flag`
		`};`
		
		NOTE: tm_sec is generally 0-59. Extra range to accommodate for leap seconds in certain systems
		
		C implementation:
		`    time_t v_Now = time(NULL);`
		`    struct tm *v_Tm = localtime(&v_Now);`

	p_TimezoneInfo (out)	p_TimezoneInfo returns the difference (in seconds) between the UTC time (GMT) and the local time (integer value);
		
		C implementation:
		`    int timezone =`
		`      (int)difftime(mktime(gmtime(&v_Now)), v_Now);`
		
		NOTE:
		p_TimezoneInfo does not consider daylight saving e.g. it is always 3600 for CET independent of summer/winter

Return Value	None	

9 IXIT Proforma

This partial IXIT proforma contained in the present document is provided for completion, when the related Abstract Test Suite is to be used against the Implementation Under Test (IUT).

Text in *italics* is a comment for guidance for the production of an IXIT, and is not to be included in the actual IXIT.

The completed partial IXIT will normally be used in conjunction with the completed ICS, as it adds precision to the information provided by the ICS.

9.1 E-UTRAN PIXIT

Table 9.1-1: CommonPIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_AccessPointName	octetstring			Access Point Name, as defined in TS 23.003 [48] and used in TS 24.008 [20], clause 10.5.6.1
px_AttachTypeTested	EUTRA_ATTACH_TESTED_Type	EPS_ATTACH_ONLY	EPS_ATTACH_ONLY, COMBINED_ATTACH	Attach Type to be tested, if UE supports both pc_Attach and pc_Combined_Attach
px_eAuthRAND	B128_Type	oct2bit('A3DE0C6D363E30C364A4078F1BF8D577'O)		Random Challenge
px_EllipsoidPointWithAltitude	O8_Type			Ellipsoid Point With Altitude value to be provided in Update UE location information (see 36.509 cl. 6.12)
px_HorizontalVelocity	O3_Type			Horizontal Velocity value to be provided in Update UE location information (see 36.509 cl. 6.12)
px_eJapanMCC_Band6	NAS_Mcc	'442'H		Japan MCC code to be used for Band 6. The same value will be used for E-UTRA and Inter-RAT cells. Type is different to that defined in TS 34.123-3 [7]
px_PWS_CB_DataPage1	charstring			ETWS or CMAS Page 1 warning data message
px_PWS_CB_DataPage2	charstring			ETWS or CMAS Page 2 warning data message
px_PWS_CB_DataPage3	charstring			ETWS or CMAS Page 3 warning data message
px_PWS_CB_DataPage4	charstring			ETWS or CMAS Page 4 warning data message
px_ETWS_DigitalSignature	O43_Type			ETWS Digital Signature
px_IPv4_Address1_UE	charstring			IPv4 Address connected to PDN1
px_IPv4_Address2_UE	charstring			IPv4 Address connected to PDN2
px_IPv4_Address1_NW	charstring			IPv4 Gateway Address in PDN1
px_Ipv4_Address2_NW	charstring			Ipv4 Gateway Address in PDN2
px_Ipv4_Address_HomeAgent	charstring			Ipv4 Home Agent Address
px_IPv6_Address1_UE	charstring			IPv6 Address connected to PDN1
px_IPv6_Address2_UE	charstring			IPv6 Address connected to PDN2
px_IPv6_Address1_NW	charstring			IPv6 Gateway Address in PDN1
px_Ipv6_Address2_NW	charstring			Ipv6 Gateway Address in PDN2
px_Ipv6_Address_HomeAgent	charstring			Ipv6 Home Agent Address
px_SMS_ChkMsgReceived	boolean	true		Whether the operator can check an MT Short Message received
px_SMS_MsgFrmt	charstring	"1"		UE which only supports PDU mode will be configured for text mode
px_RATComb_Tested	RATComb_Tested_Type	EUTRA_UTRA	EUTRA_UTRA,	This parameter represents the network RAT capability /

Parameter Name	Parameter Type	Default Value	Supported Values	Description
			EUTRA_GERAN, EUTRA_Only	preference and indicates which, if any is supported, RAT combination is to be tested.
px_SinglePLMN_Tested	SinglePLMN_Tested_Type	MultiPLMN	SinglePLMN, MultiPLMN	This parameter represents the network capability/preference to support multi PLMNs on the same test Band and indicates the preference of multi PLMNs or single PLMN test environment.
px_UE_ CS_PS_UsageSetting_Tested	CS_PS_MODE	VOICE_CENTRIC	VOICE_CENTRIC, DATA_CENTRIC	Specifies which CS/PS mode is under test
px_UE_PS_UsageSetting_Tested	PS_MODE	VOICE_CENTRIC	VOICE_CENTRIC, DATA_CENTRIC	Specifies which PS mode is under test
px_UTRAN_ModeUnderTest	UTRAN_FDD_TDD	UTRAN_FDD	UTRAN_FDD, UTRAN_TDD	Specifies which radio access technology is being tested in UTRAN
px_TestLoopModeB_Delay	O1_Type	‘5A’		This parameter represents the IP_PDU_delay to be used for UE test loop mode B in test cases, where long delay may be needed e.g. because of user interaction.

Table 9.1-2: E-UTRAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_eTDDsubframeConfig	TDD_SubframeAssignment_Type	1		TDD uplink-downlink subframe configuration
px_ePrimaryBandChannelBandwidth	Dl_Bandwidth_Type	n25		E-UTRA primary band channel bandwidth
px_ePrimaryFrequencyBand	FrequencyBand_Type	1		E-UTRA primary frequency band
px_eSecondaryFrequencyBand	FrequencyBand_Type	2		E-UTRA secondary frequency band
px_eSecondaryBandChannelBandwidth	Dl_Bandwidth_Type	n25		E-UTRA secondary band channel bandwidth
px_NAS_CipheringAlgorithm	B3_Type	001’B		NAS Ciphering Algorithm (eea1)
px_NAS_IntegrityProtAlgorithm	B3_Type	001’B		NAS Integrity Algorithm (eia1)
px_RRC_CipheringAlgorithm	CipheringAlgorithm	eea1		Ciphering Algorithm
px_RRC_IntegrityProtAlgorithm	IntegrityProtAlgorithm	eia1		Integrity Algorithm
px_eMaxNumberROHC_ContextSessions	MaxNumberROHC_ContextSessions_Type	Cs16		Maximum number of ROHC context sessions

9.2 MultiRAT PIXIT

Table 9.2-1: GERAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_GERAN_BandUnderTest	GERAN_BandUnderTestType	GSM_P900		Indicates which band is under test

Table 9.2-2: UTRAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_UTRAN_CipheringAlgorithm	CipheringAlgorithm_r7	uea2	uea0, uea1, uea2	UTRAN Ciphering algorithm
px_UARFCN_TDD_D_Low	integer			Low Range downlink UARFCN value for LCR TDD
px_UARFCN_TDD_D_Mid	integer			Mid Range downlink UARFCN value for LCR TDD
px_UARFCN_TDD_D_High	integer			High Range downlink UARFCN value for LCR TDD
px_TDD_OperationBand	charstring			LCR TDD Operation Band

Table 9.2-3: CDMA2000 HRPD PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_HRPD_BandClass	BandclassCDMA2000_Type	1		Band Class; Table 1.5-1 of C.S0057-E v1.0 Default value corresponds to 1.8 to 2.0 GHz PCS band
px_HRPD_SectorID_Cell15	SectorID_HRPD_Type	oct2bit('FEA00000000000000000000000000001'O)		Sector ID of Cell 15; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell16	SectorID_HRPD_Type	oct2bit('FEA00000000000000000000000000002'O)		Sector ID of Cell 16; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell17	SectorID_HRPD_Type	oct2bit('FEA00000000000000000000000000003'O)		Sector ID of Cell 17; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell18	SectorID_HRPD_Type	oct2bit('FEA00000000000000000000000000004'O)		Sector ID of Cell 18; Clause 13.9 of C.S0024-C v2.0
px_ColorCode	ColorCode_Type	64		Colour code of the subnet to which the sectors belong; Same for all HRPD cells
px_ColorCodeDiff	B32_Type	128		Colour code of the subnet to which the sectors belong; Adifferent colour code than default
px_OpenLoopAdjust	OpenLoopAdjust_Type	10		The value of open loop adjust to be used by access terminals in the open loop power estimate, expressed as an unsigned value in units of 1 dB. The value used by the access terminal is -1 times the value of this field
px_UATI24	O3_Type	'123456'O		UATI to be allocated to the UE, clause 6.3.7.2.2 of C.S0024-C v2.0
px_MACIndex	integer	15		ReverseLinkMACIndex to be used. Allowed values 0...383 C.S0024-C v2.0 clause 12.4.1.3.2.2

Table 9.2-4: CDMA2000 1xRTT PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_1XRTT_BaseId_Cell19	B16_Type	int2bit (39,16)		Base ID of Cell 19
px_1XRTT_BaseId_Cell20	B16_Type	int2bit (40,16)		Base ID of Cell 20
px_1XRTT_BaseId_Cell21	B16_Type	int2bit (41,16)		Base ID of Cell 21
px_1XRTT_BaseId_Cell22	B16_Type	int2bit (42,16)		Base ID of Cell 22
px_1XRTT_NID	B16_Type	int2bit (100,16)		default Network ID of 1xRTT Cells
px_1XRTT_SID	B15_Type	int2bit (200,15)		default System ID of 1xRTT Cells
px_1XRTT_TMSI_Def	O4_Type	'1234ABCD'O		TMSI to be used in 1XRTT
px_1XRTT_MinProtRev	ProtRev_Type	0		Minimum Protocol revision supported by Base Station
px_1XRTT_UserInfo_EncMode	EncryptionMode_Type	2		Encryption Mode Rijndael algorithm
px_1XRTT_Sig_EncMode	EncryptionMode_Type	2		Encryption Mode Rijndael algorithm
px_1XRTT_BandClass	BandclassCDMA2000_Type	1		Band Class; Table 1.5-1 of C.S0057 E v1.0. Default value corresponds to 1.8 GHz to 2.0 GHz PCS band
px_PowerDownRegEnabled	boolean	true		Parameter for power down reg in 1xRTT
px_1XRTT_Zone_Timer	B3_Type	‘000’B		Zone timer sent in ‘System Parameters Message’ overhead message
px_RAND	B32_Type	'00001111000011110000111100001111'B		Random Challenge Data to be included along with mobility parameters in CSFBParametersResponseCDMA2000 or HandoverFromEUTRAPreparationRequest
px_RAND2	B32_Type	'00001111000011110000111100001111'B		Random Challenge Data to be included along with mobility parameters in CSFBParametersResponseCDMA2000 or HandoverFromEUTRAPreparationRequest

10 Postambles

The purpose of this clause is to specify postambles to bring the UE to a well defined state regardless of the UE state at the termination of main test body or of the SS conditions and values of the system information inherited from the test.

10.1 Postambles for E-UTRA to UTRA tests

This clause describes UE postamble procedures which are used at the end of inter-RAT test cases specified in TS 36.508 [3] so as to switch off the UE.

UE LTE and UTRAN postamble conditions are specified in table 10.1-1.

Table 10.1-1: UE postamble conditions

LTE UE attach type	UE UTRA CS/PS domain	Postamble condition
attach	pc_CS AND pc_PS	C1
	pc_PS AND NOT (pc_CS)	C2
combined_attach	pc_CS AND pc_PS	C3
	pc_CS AND NOT (pc_PS)	C4

10.1.1 UE postamble states and procedures for E-UTRA to UTRA

In order to bring the UE to the switched/powered off state, a number of procedures need to be executed in a hierarchical sequence, according to the reference end state specified in each test procedure sequence. The sequences and the identified procedures are shown in figure 10.1.1-1.

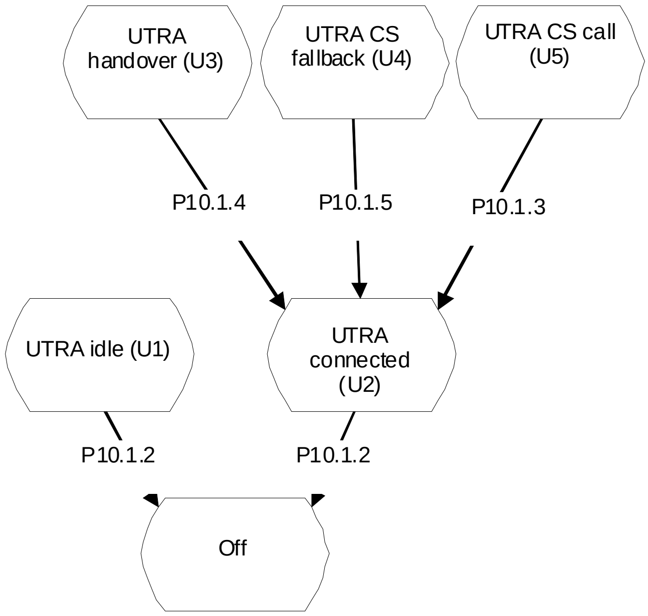

Figure 10.1.1-1: UE postamble procedures for E-UTRA / UTRA test cases

NOTE 1: Depending on the test case specifications the termination of a test case can be in any state of figure 10.1.1-1.

UE in UTRA state U2, U3, U4 and U5 may send data on the established radio bearer and shall be accepted and handled.

NOTE 2: NAS and AS security procedures during routing area update and handover are performed according to TS 33.401 [24], clauses 9.1.1 and 9.2.1 and TS 25.331 [36], clause 8.3.6.3.

10.1.2 Switch/Power off procedure

10.1.2.1 Procedure

Table 10.1.2.1-1: Switch/Power off procedure

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off, (see ICS)	-	-
-	EXCEPTION: Steps 2 to 7 specify the behaviour if UE supports pc_SwitchOnOff.	-	-
-	EXCEPTION: Steps 2 to 4 are used only when the UE is in UTRA idle end state (U1).		
2	The UE transmits RRC CONNECTION REQUEST	-->	RRC CONNECTION REQUEST
3	The SS transmit a RRC CONNECTION SETUP	<--	RRC CONNECTION SETUP
4	The UE transmits an RRC CONNECTION SETUP COMPLETE message	-->	RRC CONNECTION SETUP COMPLETE
-	EXCEPTION: Step 5a1 specifies behaviour when the current UTRA cell is in NMO I and the UE is in condition: - C1 or - C3	-	-
5a1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes a DETACH REQUEST message with the detach type='power switched off, GPRS/IMSI combined detach'	-->	DETACH REQUEST
-	EXCEPTION: Step 5b1 specifies behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition C4	-	-
5b1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
-	EXCEPTION: Step 5c1 specifies behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition C2	-	-
5c1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes a DETACH REQUEST message with detach type='power switched off, PS detach"	-->	DETACH REQUEST
-	EXCEPTION: Steps 5d1 and 5d2 specify behaviour when the current UTRA cell is in NMO II and the UE is in condition: - C1 or - C3. Both detach messages (in steps 5d1 and 5d2) can be sent by UE in any order.	-	-

Step	Procedure	Message Sequence	
		U - S	Message
5d1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1) and this is the first message received. This message includes a DETACH REQUEST message with the detach type=‘power switched off, PS detach"	-->	DETACH REQUEST
5d2	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1) and this is the first message received. This message includes an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
6	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE
7	The UE transmits a RRC CONNECTION RELEASE COMPLETE message	-->	RRC CONNECTION RELEASE COMPLETE

10.1.3 CC disconnect procedure

10.1.3.1 Procedure

Table 10.1.3.1-1: CC disconnect procedure

Step	Procedure	Message Sequence	
		U - S	Message
1	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a DISCONNECT message.	<--	DISCONNECT
2	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a RELEASE message.	-->	RELEASE
3	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a RELEASE COMPLETE message.	<--	RELEASE COMPLETE
-	EXCEPTION: Step 6 may happen in parallel to Step 4. Steps 5a to 5e are only performed if Step 6 has not already occured		
4	Wait for 5 seconds in case the UE sends the RAU on the same connection		
5a	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE
5b	The UE transmits a RRC CONNECTION RELEASE COMPLETE message	-->	RRC CONNECTION RELEASE COMPLETE
5c	The UE transmits RRC CONNECTION REQUEST	-->	RRC CONNECTION REQUEST
5d	The SS transmit a RRC CONNECTION SETUP	<--	RRC CONNECTION SETUP
5e	The UE transmits an RRC CONNECTION SETUP COMPLETE message	-->	RRC CONNECTION SETUP COMPLETE
6	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type ='Combined RA/LA Updated'	-->	ROUTING AREA UPDATE REQUEST
7	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
8	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE

10.1.4 PS Routing Area Update procedure

10.1.4.1 Procedure

Table 10.1.4.1-1: PS Routing Area Update procedure

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: steps 1a1 to 1a5 specify the UE behaviour when the current UTRA cell is in NMO I and the UE is in condition: - C1 or - C3 and the UE is not registered to the LAC of the current UTRA cell	-	-
1a1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type ='Combined RA/LA Updated'	-->	ROUTING AREA UPDATE REQUEST
1a2	Void	-	-
1a3	Void	-	-
1a4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1a5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: steps 1b1 to 1b5 specify the UE behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition: - C2 or - C3 and the UE is registered to the LAC of the current UTRA cell	-	-
1b1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type ='RA Update'	-->	ROUTING AREA UPDATE REQUEST
1b2	Void	-	-
1b3	Void	-	-
1b4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1b5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: steps 1c1 to 1c9 specify the UE behaviour when the current UTRA cell is in NMO II and the UE is in condition: - C1 or - C3 and the UE is not registered to the LAC of the current UTRA cell. The LOCATION UPDATE REQUEST message (step 1c6) can be received during the routing area updating procedure (steps 1c1 to 1c4).	-	-
1c1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type ='RA Update'.	-->	ROUTING AREA UPDATE REQUEST

Step	Procedure	Message Sequence	
		U - S	Message
1c2	Void	-	-
1c3	Void	-	-
1c4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1c5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
1c6	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST
1c7	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
1c8	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
1c9	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING ACCEPT	<--	LOCATION UPDATING ACCEPT
1c10	The EU transmits a UPLINK DIRECT TRANSFER message. This message includes a TMSI REALLOCATION COMPLETE	-->	TMSI REALLOCATION COMPLETE

10.1.5 CS fallback procedure

10.1.5.1 Procedure

Table 10.1.5.1-1: CS fallback procedure

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: In parallel to the events described in step 1a1 to 2a5 the steps specified in table 10.1.5.1-2 takes place.	-	-
-	EXCEPTION: Steps 1a1 and 1a2 specify the MO call procedure and step 1b1 specifies the MT call procedure.	-	-
1a1	The UE transmits an INITIAL DIRECT TRANSFER message including a CM SERVICE REQUEST message.	-->	CM SERVICE REQUEST
1a2	The SS transmits an UPLINK DIRECT TRNASFER message including a CM SERVICE REJECT with the reject cause #32 (Service option not supported)	<--	CM SERVICE REJECT
-	EXCEPTION: Step 1b1 specifies the MT call procedure.	-	-
1b1	The UE transmits an INITIAL DIRECT TRANSFER message including a PAGING RESPONSE message.	-->	PAGING RESPONSE
-	EXCEPTION: Steps 2a1 and 2a5 specify the location area update procedure when the current UTRA cell is in NMO II and the UE is in condition C3 and the UE is not registered to the LAC of the current UTRA cell.	-	-
2a1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST

Step	Procedure	Message Sequence	
		U - S	Message
2a2	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
2a3	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
2a4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING ACCEPT	<--	LOCATION UPDATING ACCEPT
2a5	The EU transmits a UPLINK DIRECT TRANSFER message. This message includes a TMSI REALLOCATION COMPLETE	-->	TMSI REALLOCATION COMPLETE
3	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
4	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE

10.2 Postambles for E-UTRAN to GERAN tests

This clause describes UE postamble procedures which are used at the end of inter-RAT test cases defined in TS 36.508 [3] so as to switch off the UE. UE LTE and GERAN postamble transitions are specified in table 10.2-1.

Table 10.2-1: UE postamble conditions

LTE UE attach type	UE GERAN CS/PS domain	Postamble condition
attach	pc_GPRS	C1
combined attach	pc_GPRS	C2
	NOT pc_GPRS	C3

10.2.1 UE postamble states and procedures for E-UTRA to GERAN test cases

In order to bring the UE to the switched/powered off state there are a number of procedures that need to be executed in a hierarchical sequence, according to the reference end state specified in each test procedure sequence. The sequences and the identified procedures are shown in figure 10.2.1-1.

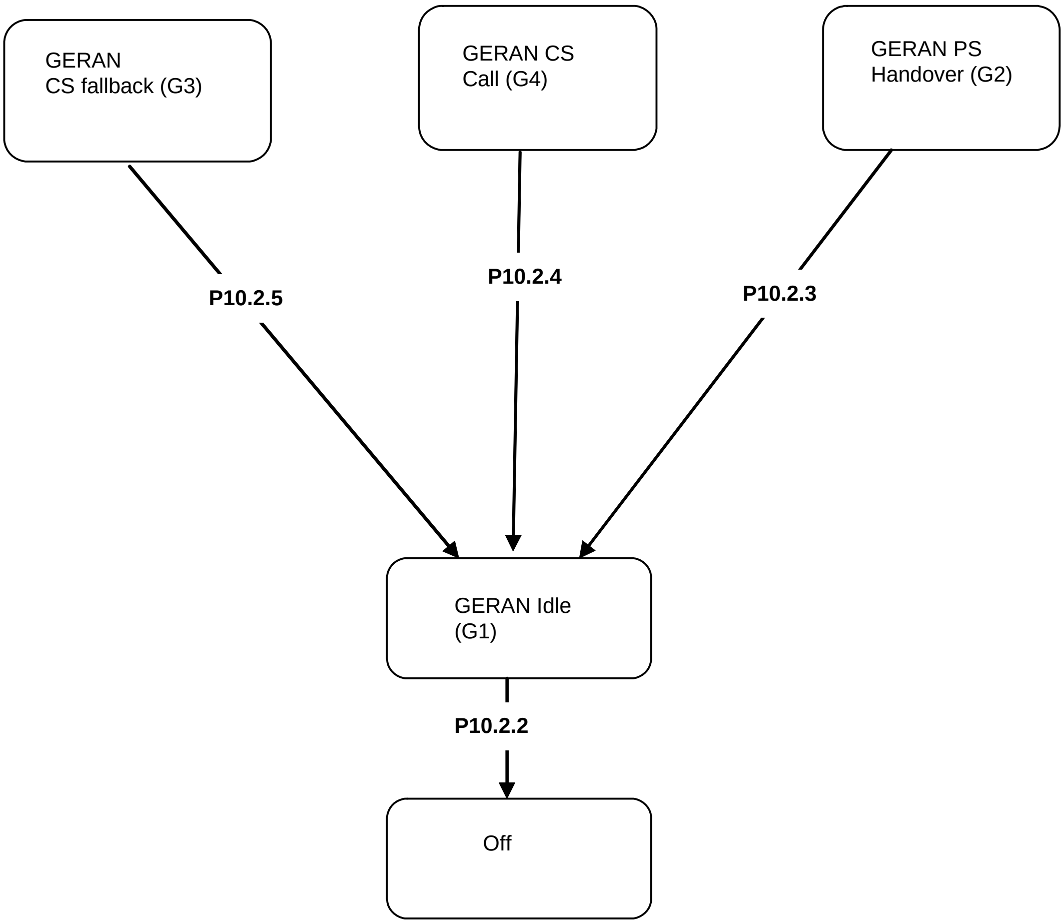

Figure 10.2.1-1: UE postamble procedures for E-UTRA / GERAN test cases

NOTE 1: Depending on the test case specifications the termination of a test case can be in any state of figure 10.2.1-1.

NOTE 2: The security procedures for interworking to GERAN are according to TS 33.401 [24] clauses 10.2.1 and 10.3.1.

10.2.2 Switch/Power off procedure

11 Guidelines on test execution

This clause provides the guidelines on test executions.

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth to accommodate the necessary number of radio frequencies for the specific operating Band as used by the test cases.

11.1 EUTRA single technology

This clause provides the guidelines for the test cases to be executed on the pure EUTRA test configuration.

A test case using more than one radio frequency, i.e. using the radio frequencies f2 or f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.3, 6.1.1.6, 6.1.2.7, 6.1.2.8, 6.1.2.9, 6.1.2.11, 6.1.2.13, 6.1.2.15, 6.1.2.17, 6.1.2.18, 6.3.1, 6.3.5, 6.3.6, 6.3.9, 6.3.10,

8.1.3.4, 8.1.3.5, 8.2.4.6, 8.3.1.3, 8.3.1.3a, 8.3.1.4, 8.3.1.6, 8.3.1.9, 8.3.1.10, 8.3.1.11, 8.3.4.2, 8.3.4.3, 8.6.2.2, 8.6.2.8, 8.6.4.2, 8.6.4.3, 8.6.4.6, 8.6.6.2, 8.6.6.3,

9.2.1.1.1a, 9.2.1.1.7, 9.2.1.1.13, 9.2.1.1.15, 9.2.1.1.16, 9.2.1.2.1, 9.2.1.2.10, 9.2.1.2.12, 9.2.1.2.14, 9.2.3.2.1, 9.2.3.2.12, 9.2.3.2.15, 9.2.3.2.16,

11.2.6, 11.2.7,

13.4.1.2.

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38

Band 39

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.3, 6.1.1.6, 6.1.2.7, 6.1.2.8, 6.1.2.9, 6.1.2.15,

8.1.3.5, 8.3.1.4, 8.6.4.3,

9.2.1.1.1a, 9.2.1.1.7, 9.2.1.1.15.

A test case using more than three radio frequencies, i.e. using the radio frequency f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 12 with 5MHz bandwidth,

Band 19,

Band 20,

Band 21,

Band 27,

Band 34.

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.6,

9.2.1.1.7.

11.1.1 Replacement of test case execution

In case of bandwidth limitation for accommodation of more frequencies, a number of test cases can be replaced with the corresponding mirror test cases without affecting the test coverage. The table 11.1.1-1 shows the possible replacements. Only one of the paired test cases is required for execution.

Table 11.1.1-1: Replacement of test cases

Original test case	Replacing test case
6.1.1.1	6.1.1.1b
6.1.1.2	6.1.1.2a
6.1.1.3	6.1.1.3b
6.1.1.6	6.1.1.6a
6.1.2.7	6.1.2.7a
6.1.2.8	6.1.2.8a
6.1.2.9	6.1.2.9a
8.3.1.9	8.3.1.9a
8.3.1.11	8.3.1.11a
9.2.1.1.1a	9.2.1.1.1b
9.2.1.1.7	9.2.1.1.7a
9.2.1.1.13	9.2.1.1.13a
9.2.1.1.15	9.2.1.1.15a
9.2.1.1.16	9.2.1.1.16a

11.2 EUTRA – UTRA - GERAN

This clause contains the guidelines for the EUTRA interRAT test cases to be executed on the different test configurations: with only UTRA configured, with only GERAN configured or with UTRA-GERAN both configured. Whether or not an EUTRA frequency band overlaps the UTRA band, the dependency will affect the restrictions of the test execution on this band.

Editor's note: an EUTRA band overlaps the GSM band is FFS.

11.2.1 UTRA configured – GERAN not configured

This clause provides the guidelines for the EUTRA interRAT test cases where UTRA is configured, while GERAN is either not needed or not configured.

11.2.1.1 EUTRA band overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA or EUTRA, UTRA radio frequencies if an E-UTRA band overlaps the UTRA Band. A test case using more than one radio frequency, on the same EUTRA and UTRA band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3, 6.2.2.1, 6.2.2.5, 6.2.2.8, 6.2.3.3, 6.2.3.3a, 6.2.3.4, 6.2.3.4a, 6.2.3.5, 6.2.3.5a, 6.2.3.6, 6.2.3.13, 6.2.3.31, 6.2.3.32, 6.2.3.33, 6.3.3, 6.3.4, 6.3.7, 6.3.8, 6.3.11, 6.3.12,

8.1.3.6, 8.1.3.6a, 8.1.3.7, 8.3.2.3, 8.3.2.3a, 8.3.2.4, 8.3.3.2, 8.3.4.4, 8.4.1.2, 8.4.1.4, 8.4.1.5, 8.4.2.2, 8.4.2.4, 8.5.2.1, 8.6.3.1, 8.6.5.1, 8.6.7.1, 8.7.1, 9.2.1.1.11, 9.2.1.1.12, 9.2.1.2.1b, 9.2.1.2.1c, 9.2.1.2.1d, 9.2.1.2.5, 9.2.1.2.8, 9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.1.2.15, 9.2.2.1.3, 9.2.2.1.10, 9.2.3.1.6, 9.2.3.1.10, 9.2.3.1.11, 9.2.3.1.12, 9.2.3.1.15, 9.2.3.1.15a, 9.2.3.1.17, 9.2.3.1.18, 9.2.3.1.18a, 9.2.3.2.1a, 9.2.3.2.1b, 9.2.3.2.1c, 9.2.3.2.3, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.9, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14, 9.2.3.3.1, 9.2.3.3.2, 9.2.3.3.3, 9.2.3.3.4, 9.2.3.3.5, 9.2.3.3.5a, 9.2.3.3.6, 9.3.1.4, 9.3.1.5, 9.3.1.6,

11.2.10, 11.2.11,

13.1.2, 13.1.2a, 13.1.3, 13.1.4, 13.1.5, 13.1.15, 13.1.16, 13.3.2.1, 13.4.2.1, 13.4.2.4, 13.4.3.1, 13.4.3.2, 13.4.3.4, 13.4.2.6, 13.4.3.7, 13.4.3.8, 13.4.3.9, 13.4.3.10, 13.4.3.11, 13.4.3.12, 13.4.3.13, 13.4.3.14, 13.4.3.16.

A test case using more than two radio frequencies on the same EUTRA and UTRA band shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38,

Band 39.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14.

A test case using more than three radio frequencies, on the same EUTRA and UTRA band shall avoid to be executed on operating

Band 12 with 5MHz bandwidth,

Band 19,

Band 20,

Band 21,

Band 27,

Band 34.

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

11.2.1.2 EUTRA band not overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accomodating the necessary number of EUTRA radio frequencies. A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14,

A test case using more than two radio frequencies shall avoid to be executed on E-UTRA operating

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38,

Band 39.

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

11.2.2 GERAN configured - UTRA not configured

This clause provides the guidelines for the EUTRA/GERAN test cases where UTRA is either not needed or not configured. The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA Band accomodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.2.1.4, 6.2.3.17, 6.2.3.18,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14.

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38

Band 39

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

11.2.3 Neither UTRA nor GERAN configured

Certain EMM test cases can be executed as EUTRA_Only configuration despite of UTRA or GERAN test branches included in the test cases. The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accomodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

9.2.3.1.15, 9.2.3.1.18.

11.2.4 Both UTRA and GERAN configured

This clause provides the guidelines for the EUTRA - UTRA - GERAN test cases where three RAT technologies are simultaneously configured.

11.2.4.1 EUTRA band overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA or EUTRA, UTRA radio frequencies if an E-UTRA band overlaps the UTRA Band.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.2.1.1, 8.3.2.5, 8.3.2.6,

9.2.1.2.6, 9.2.1.2.7, 11.2.8

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38

Band 39

The list containing such test cases is given below:

6.2.1.1.

11.2.4.2 EUTRA band not overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA Band accomodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.2.1.1

11.2.5 Replacement of test case execution

In case of bandwidth limitation for accommodation of more frequencies, a number of te st cases can be replaced with the corresponding mirror test cases without affecting the test coverage. The table 11.2.1.5-1 shows the possible replacements. Only one of the paired test cases is required for execution.

Table 11.2.5-1: Replacement of interRAT test cases

Original test case	Replacing test case
9.2.3.1.15	9.2.3.1.15a
9.2.3.1.18	9.2.3.1.18a

11.3 Guidelines for EUTRA inter-band

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA band accomodating the necessary number of EUTRA radio frequencies. The inter-band test includes also EUTRA FDD-TDD and inter-band carrier aggregation tests.

11.3.1 Primary operating band

A t est case using more than one radio frequency on the first operating band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.1.2.15a, 8.1.3.12.

11.3.2 Secondary operating band for inter-band cells

Test case using more than one radio frequency, on the second operating band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18.

The list containing such test cases is given below:

6.1.1.1a, 6.1.1.3a, 6.1.1.4a, 6.1.2.16, 8.1.3.11a, 8.2.4.13a, 8.2.4.14a, 8.3.1.12a, 8.3.1.14a, 8.6.4.4.

11.4 Guidelines for EUTRA CA

The restriction on CA test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA CA band accomodating the necessary number of EUTRA radio frequencies.

11.4.1 CA contiguous Intra-band operation

Test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA_38C.

The list containing such test cases is given below:

11.4.2 CA Inter-band operation

Test case using more than one radio frequency on the secondary band, i.e. using the radio frequency f6 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA_1A-19A,

CA_1A-21A,

CA_4A-13A.

The list containing such test cases is given below:

Annex A (normative): Test Suites

This annex contains the approved TTCN Test Suites. The test suites have been produced using the Testing and Test Control Notation version 3 (TTCN3) according to ES 201 873-1 [13].

A.1 Baseline of specifications

Table A.1 shows the baseline of the relevant cores specifications and the test specifications which the delivered TTCN test suites are referred to.

Table A.1: References of the test and Core specifications

Core specifications baseline	TS 36.331 [19]
	TS 24.301 [21]
Test specifications	TS 36.508 [3]
	TS 36.509 [4]
	TS 36.523-1 [1]
	TS 36.523-2 [2]

A.2 E-UTRA Test Suites

Table A.2 lists all approved test cases. An "X" in columns FDD or TDD indicates the test case approved for the respective variant.

Table A.2: E-UTRA/EPS TTCN test cases

Test case	Description	FDD	TDD
6.1.1.1	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN/Automatic mode	X	X
6.1.1.1a	PLMN selection / Automatic mode / between FDD and TDD	X	X
6.1.1.1b	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / Single Frequency operation	X	X
6.1.1.2	PLMN selection of “Other PLMN/access technology combinations” / Automatic mode	X	X
6.1.1.2a	PLMN selection of “Other PLMN/access technology combinations” / Automatic mode / Single Frequency operation	X	X
6.1.1.3	Cell reselection of ePLMN in manual mode	X	X
6.1.1.3a	Cell reselection of ePLMN in manual mode / between FDD and TDD	X	X
6.1.1.3b	Cell reselection of ePLMN in manual mode / Single Frequency operation	X	X
6.1.1.4	PLMN selection in shared network environment / Automatic mode	X	X
6.1.1.4a	PLMN selection in shared network environment / Automatic mode / between FDD and TDD	X	X
6.1.1.6	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / User reselection	X	X
6.1.1.6a	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / User reselection / Single Frequency operation	X	X
6.1.2.2	Cell selection, Qrxlevmin	X	X
6.1.2.2a	Cell selection / Qqualmin	X	X
6.1.2.3	Cell selection/Intra E-UTRAN/Serving cell becomes non-suitable (S<0 or barred)	X	X
6.1.2.3a	Cell selection / Intra E-UTRAN / Serving cell becomes non-suitable (Srxlev > 0 and Squal <0)	X	X
6.1.2.4	Cell reselection	X	X
6.1.2.5	Cell reselection for inter-band operation	X	X
6.1.2.6	Cell reselection using Qhyst, Qoffset and Treselection	X	X
6.1.2.7	Cell reselection/Equivalent PLMN	X	X
6.1.2.7a	Cell reselection / Equivalent PLMN / Single Frequency operation	X	X
6.1.2.8	Cell reselection using cell status and cell reservations/Access control class 0 to 9	X	X
6.1.2.8a	Cell reselection using cell status and cell reservations / Access control class 0 to 9 / Single	X	X

Test case	Description	FDD	TDD
	Frequency operation		
6.1.2.9	Cell reselection using cell status and cell reservations/Access control class 11 to15	X	X
6.1.2.9a	Cell reselection using cell status and cell reservations / Access control class 11 to 15 / Single Frequency operation	X	X
6.1.2.10	Cell reselection in shared network environment	X	X
6.1.2.11	Inter-frequency cell reselection	X	X
6.1.2.12	Cell reselection / Cell-specific reselection parameters provided by the network in a neighbouring cell list	X	X
6.1.2.13	Cell re-selection, Sintrasearch, Snonintrasearch	X	X
6.1.2.14	Speed-dependent cell reselection	X	X
6.1.2.15	Inter-frequency cell reselection according to cell reselection priority provided by SIBs	X	X
6.1.2.15a	Inter-frequency cell reselection according to cell reselection priority provided by SIBs / Between FDD and TDD	X	X
6.1.2.15b	Inter-band cell reselection according to cell reselection priority provided by SIBs	X	
6.1.2.16	Cell reselection / interband operation / Between FDD and TDD	X	X
6.1.2.17	Cell reselection for Squal to check against SIntraSearchQ and SnonIntraSearchQ	X	X
6.1.2.18	Inter-frequency cell reselection based on common priority information with parameters ThreshX, HighQ, ThreshX, LowQ and ThreshServing, LowQ	X	X
6.2.1.1	Inter-RAT PLMN selection / Selection of correct RAT for OPLMN / Automatic mode	X	X
6.2.1.2	Inter-RAT PLMN selection / Selection of correct RAT for UPLMN / Automatic mode	X	X
6.2.1.3	Inter-RAT PLMN selection / Selection of correct PLMN and RAT in shared network environment / Automatic mode	X	X
6.2.1.4	Inter-RAT PLMN selection / Selection of correct RAT from the OPLMN list / Manual mode	X	X
6.2.1.6	Inter-RAT background HPLMN search / Search for correct RAT for HPLMN / Automatic mode	X	X
6.2.2.1	Inter-RAT cell selection/From E-UTRA RRC_IDLE to UTRA_Idle/Serving cell becomes non-suitable	X	X
6.2.2.2	Inter-RAT cell selection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_idle / Serving cell becomes non-suitable	X	X
6.2.2.3	Inter-RAT cell selection / From E-UTRA RRC_IDLE to HRPD Idle / Serving cell becomes non-suitable	X	-
6.2.2.4	Inter-RAT cell selection / From E-UTRA RRC_IDLE to 1xRTT Dormant / Serving cell becomes non-suitable	X	-
6.2.2.5	Cell selection / No USIM	X	
6.2.2.6	Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA RRC_IDLE / Serving cell becomes non-suitable	X	X
6.2.2.7	Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA RRC_IDLE / Serving cell is barred	X	X
6.2.2.8	Inter-RAT cell selection / From UTRA_Idle to E-UTRA RRC_IDLE / Serving cell becomes non-suitable	X	X
6.2.3.1	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_Idle	X	X
6.2.3.1a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_Idle (Squal < ThreshServing, LowQ, Srxlev > ThreshX, LowP and Srxlev > ThreshX, HighP)	X	
6.2.3.3	Inter-RAT cell reselection/From UTRA_Idle to E-UTRA RRC_IDLE	X	X
6.2.3.3a	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE (QqualminEUTRA, SqualServingCell < Threshserving,low2, SqualnonServingCell,x > Threshx, low2 and SqualnonServingCell,x > Threshx, high2)	X	-
6.2.3.4	Inter-RAT cell reselection / From UTRA CELL_PCH state to E-UTRA RRC_IDLE	X	X
6.2.3.4a	Inter-RAT cell reselection / From UTRA_CELL_PCH state to E-UTRA RRC_IDLE based on RSRQ+RSRP evaluation	X	
6.2.3.5	Inter-RAT cell reselection/From E-UTRA RRC_IDLE to UTRA_Idle	X	X
6.2.3.5a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle (Squal > ThreshX, HighQ, Squal < ThreshServing, LowQ, Squal > ThreshX, LowQ and SnonIntraSearchQ)	X	-
6.2.3.6	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle according to RAT priority provided by dedicated signalling	X	X
6.2.3.7	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is higher reselection priority than E-UTRA	X	-
6.2.3.7a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is higher reselection priority than E-UTRA (Srxlev > ThreshX, HighP)	X	-
6.2.3.8	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is lower reselection priority than E-UTRA	X	-
6.2.3.8a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is lower reselection priority than E-UTRA (Squal < ThreshServing, LowQ and Srxlev > ThreshX, LowP)	X	-
6.2.3.9	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is	X	-

Test case	Description	FDD	TDD
	higher reselection priority than E-UTRA		
6.2.3.9a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is higher reselection priority than E-UTRA (Srxlev > ThreshX, HighP)	X	-
6.2.3.10	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is lower reselection priority than E-UTRA	X	-
6.2.3.10a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is lower reselection priority than E-UTRA (Squal < ThreshServing, LowQ and Srxlev > ThreshX, LowP)	X	-
6.2.3.13	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE according to RAT priority provided by dedicated signalling	X	X
6.2.3.14	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority of E-UTRA cells are higher than the serving cell	X	X
6.2.3.15	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority of E-UTRA cells are lower than the serving cell	X	X
6.2.3.16	Inter-RAT cell reselection / From GSM_Idle to E-UTRAN /based on H_PRIO criteria	X	X
6.2.3.17	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority E-UTRA cells	X	X
6.2.3.18	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Blacklisted E-UTRA cells	X	X
6.2.3.19	Inter-RAT cell redirection to E-UTRA cell from GSM TCH mode	X	X
6.2.3.20	Inter-RAT cell redirection to E-UTRA cell from GSM TCH mode and no suitable cell available	X	X
6.2.3.21	Inter-RAT autonomous cell reselection GPRS Packet_transfer NC0 mode to E-UTRA	X	X
6.2.3.23	Inter-RAT cell reselection from GPRS Packet_transfer to E-UTRA in CCN mode / PACKET CELL CHANGE CONTINUE	X	
6.2.3.24	Inter-RAT cell reselection from GPRS Packet_transfer to E-UTRA in CCN mode / PACKET CELL CHANGE ORDER	X	
6.2.3.31	Inter-RAT cell reselection / From UTRA_Idle (low priority) to E-UTRA RRC_IDLE (high priority) according to RAT priority provided by dedicated signalling	X	X
6.2.3.32	Inter-RAT cell re-selection / From E-UTRA RRC_IDLE to UTRA_Idle, Snonintrasearch	X	X
6.2.3.33	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle / Squal based cell reselection parameters are broadcasted in E-UTRAN / UE does not support Squal based cell reselection in UTRAN		X
6.3.1	Inter-frequency cell reselection / From E-UTRA RRC_IDLE non-CSG cell to E-UTRA RRC_IDLE CSG cell	X	
6.3.5	Manual support for CSG ID selection	X	
6.3.6	Ignoring CSG cells in cell selection/reselection when allowed CSG list is empty or not supported	X	X
6.4.1	Manual CSG ID selection / Hybrid cell whose CSG ID is not in the Allowed CSG list nor Operator's list	X	
7.1.1.1	CCCH mapped to UL SCH/ DL-SCH/Reserved LCID (Logical Channel ID)	X	X
7.1.1.2	DTCH or DCCH mapped to UL SCH/ DL-SCH/Reserved Logical Channel ID	X	X
7.1.2.1	Correct selection of RACH parameters/Random access preamble and PRACH resource explicitly signalled to the UE by RRC/Non-contention based random access procedure	X	X
7.1.2.2	Correct selection of RACH parameters/Random access preamble and PRACH resource explicitly signalled to the UE in PDCCH Order/Non-contention based random access procedure	X	X
7.1.2.3	Correct selection of RACH parameters/Preamble selected by MAC itself/Contention based random access procedure	X	X
7.1.2.4	Random access procedure/Successful	X	X
7.1.2.5	Random access procedure/MAC PDU containing multiple RARs	X	X
7.1.2.6	Maintenance of uplink time alignment	X	X
7.1.2.7	MAC contention resolution/Temporary C-RNTI	X	X
7.1.2.8	MAC contention resolution/C-RNTI	X	X
7.1.2.9	MAC backoff indicator	X	X
7.1.3.1	Correct handling of DL assignment/Dynamic case	X	X
7.1.3.2	Correct handling of DL assignment / Semi-persistent case	X	X
7.1.3.3	MAC PDU header handling	X	X
7.1.3.4	Correct HARQ process handling/DCCH and DTCH	X	X
7.1.3.5	Correct HARQ process handling/CCCH	X	X
7.1.3.6	Correct HARQ process handling/BCCH	X	X
7.1.3.7	MAC padding	X	X
7.1.3.9	MAC reset DL	X	X
7.1.4.1	Correct handling of UL assignment/Dynamic case	X	X
7.1.4.2	Correct handling of UL assignment / Semi-persistent case	X	

Test case	Description	FDD	TDD
7.1.4.3	Logical channel prioritization handling	X	X
7.1.4.4	Correct handling of MAC control information/Scheduling requests and PUCCH	X	X
7.1.4.5	Correct handling of MAC control information/Scheduling requests and random access procedure	X	X
7.1.4.6	Correct handling of MAC control information/Buffer status/UL data arrive in the UE Tx buffer and retransmission of BSR/Regular BSR	X	X
7.1.4.7	Correct handling of MAC control information/Buffer Status/UL resources are allocated/Padding BSR	X	X
7.1.4.7a	Correct handling of MAC control information / Buffer Status / UL resources are allocated / Cancellation of Padding BSR	X	X
7.1.4.8	Correct handling of MAC control information/Buffer status/Periodic BSR timer expires	X	X
7.1.4.10	MAC padding	X	X
7.1.4.11	Correct HARQ process handling	X	X
7.1.4.12	MAC reset UL	X	X
7.1.4.13	MAC PDU header handling	X	X
7.1.4.14	Correct HARQ process handling / TTI bundling	X	X
7.1.4.15	UE power headroom reporting/Periodic reporting	X	X
7.1.4.16	UE power headroom Reporting/DL pathloss change reporting	X	X
7.1.5.1	Inter-TTI PUSCH hopping by uplink grant	X	X
7.1.5.2	Predefined intra-TTI PUSCH hopping (N_sb=1)	X	X
7.1.5.3	Predefined intra-TTI PUSCH hopping (N_sb=2/3/4)	X	X
7.1.5.4	Predefined inter-TTI PUSCH hopping (N_sb=1)	X	X
7.1.5.5	Predefined inter-TTI PUSCH hopping (N_sb=2/3/4)	X	X
7.1.6.1	DRX operation/Short cycle not configured/Parameters configured by RRC	X	X
7.1.6.2	DRX operation/Short cycle not configured/DRX command MAC control element reception	X	X
7.1.7.1.1	DL-SCH transport block size selection/DCI format 1/RA type 0	X	X
7.1.7.1.2	DL-SCH transport block size selection/DCI format 1/RA type 1	X	X
7.1.7.1.3	DL-SCH transport block size selection/DCI format 1A/RA type 2/Localised VRB	X	X
7.1.7.1.4	DL-SCH transport block size selection/DCI format 1A/RA type 2/Distributed VRB	X	X
7.1.7.1.5	DL-SCH transport block size selection / DCI format 2A / RA type 0 / Two transport blocks enabled / Transport block to codeword swap flag value set to 0	X	X
7.1.7.1.6	DL-SCH transport block size selection / DCI format 2A / RA type 1/ Two transport blocks enabled / Transport block to codeword swap flag value set to 1	X	X
7.1.7.2.1	UL-SCH transport block size selection/DCI format 0	X	X
7.1.8.1	Periodic RI reporting using PUCCH / Category 1 UE / Transmission mode 3/4	X	X
7.2.2.1	UM RLC/Segmentation and reassembly/5-bit SN/Framing info field	X	X
7.2.2.2	UM RLC/Segmentation and reassembly/10-bit SN/Framing info field	X	X
7.2.2.3	UM RLC/Reassembly/5-bit SN/LI value > PDU size	X	X
7.2.2.4	UM RLC/Reassembly/10-bit SN/LI value > PDU size	X	X
7.2.2.5.1	UM RLC/5-bit SN/Correct use of sequence numbering	X	X
7.2.2.5.2	UM RLC/5-bit SN/Correct use of sequence numbering	X	X
7.2.2.6	UM RLC/Concatenation, segmentation and reassembly	X	X
7.2.2.7	UM RLC/In sequence delivery of upper layer PDUs without residual loss of RLC PDUs/Maximum re-ordering delay below t-Reordering	X	X
7.2.2.8	UM RLC/In sequence delivery of upper layer PDUs without residual loss of RLC PDUs/Maximum re-ordering delay exceeds t-Reordering	X	X
7.2.2.9	UM RLC/In sequence delivery of upper layer PDUs with residual loss of RLC PDUs/Maximum re-ordering delay exceeds t-Reordering	X	X
7.2.2.10	UM RLC/Duplicate detection of RLC PDUs	X	X
7.2.2.11	UM RLC/RLC re-establishment procedure	X	X
7.2.3.1	AM RLC/Concatenation and reassembly	X	X
7.2.3.2	AM RLC/Segmentation and reassembly/No PDU segmentation	X	X
7.2.3.3	AM RLC/Segmentation and reassembly/Framing info field	X	X
7.2.3.4	AM RLC/Segmentation and reassembly/Different numbers of length indicators	X	X
7.2.3.5	AM RLC/Reassembly/LI value > PDU size	X	X
7.2.3.6	AM RLC/Correct use of sequence numbering	X	X
7.2.3.7	AM RLC/Control of transmit window	X	X
7.2.3.8	AM RLC/Control of receive window	X	X
7.2.3.9	AM RLC/Polling for status	X	X
7.2.3.10	AM RLC/Receiver status triggers	X	X
7.2.3.13	AM RLC/Reconfiguration of RLC parameters by upper layers	X	X
7.2.3.14	AM RLC/In sequence delivery of upper layers PDUs	X	X
7.2.3.15	AM RLC/Re-ordering of RLC PDU segments	X	X
7.2.3.16	AM RLC/Re-transmission of RLC PDU without re-segmentation	X	X

Test case	Description	FDD	TDD
7.2.3.17	AM RLC/Re-segmentation RLC PDU/SO, FI, LSF	X	X
7.2.3.18	AM RLC/Reassembly/AMD PDU reassembly from AMD PDU segments, Segmentation Offset and Last Segment Flag fields	X	X
7.2.3.20	AM RLC/Duplicate detection of RLC PDUs	X	X
7.2.3.21	AM RLC/RLC re-establishment at RRC connection reconfiguration including mobilityControlInfo IE	X	X
7.3.1.1	Maintenance of PDCP sequence numbers/User plane/RLC AM	X	X
7.3.1.2	Maintenance of PDCP sequence numbers/User plane/RLC UM/Short PDCP SN (7 bits)	X	X
7.3.1.3	Maintenance of PDCP sequence numbers/User plane/RLC UM/Long PDCP SN (12 bits)	X	X
7.3.3.1	Ciphering and deciphering/Correct functionality of EPS AS encryption algorithms/SNOW 3G	X	X
7.3.3.2	Ciphering and deciphering/Correct functionality of EPS UP encryption algorithms/SNOW 3G	X	X
7.3.3.3	Ciphering and deciphering/Correct functionality of EPS AS encryption algorithms/AES	X	X
7.3.3.4	Ciphering and deciphering/Correct functionality of EPS UP encryption algorithms/AES	X	X
7.3.4.1	Integrity protection/Correct functionality of EPS AS integrity algorithms/SNOW 3G	X	X
7.3.4.2	Integrity protection/Correct functionality of EPS AS integrity algorithms/AES	X	X
7.3.5.2	PDCP handover/Lossless handover/PDCP sequence number maintenance	X	X
7.3.5.3	PDCP handover/Non-lossless handover/PDCP sequence number maintenance	X	X
7.3.5.4	PDCP handover/Lossless handover/PDCP status report to convey the information on missing or acknowledged PDCP SDUs at handover	X	X
7.3.5.5	PDCP handover/In-order delivery and duplicate elimination in the downlink	X	X
7.3.6.1	PDCP discard	X	X
8.1.1.1	RRC/Paging for connection in idle mode	X	X
8.1.1.2	RRC/Paging for notification of BCCH modification in idle mode	X	X
8.1.1.3	RRC / Paging for connection in idle mode / Multiple paging records	X	X
8.1.1.4	RRC / Paging for connection in idle mode / Shared network environment	X	X
8.1.1.6	RRC/BCCH modification in connected mode	X	X
8.1.2.1	RRC connection establishment/Success	X	X
8.1.2.2	RRC connection establishment/Reject with wait time	X	X
8.1.2.3	RRC connection establishment/Return to idle state after T300 timeout	X	X
8.1.2.5	RRC connection establishment/0% access probability for MO calls, no restriction for MO signalling	X	X
8.1.2.6	RRC connection establishment / Non-zero percent access probability for MO calls, no restriction for MO signalling	X	X
8.1.2.7	RRC connection establishment/0% access probability for AC 0 to 9, AC 10 is barred, AC 11 to 15 are not barred, access for UE with access class in the range 11 to 15 is allowed	X	X
8.1.2.8	RRC connection establishment / Range of access baring time	X	X
8.1.2.9	RRC Connection Establishment / 0% access probability for MO calls, non-zero percent access probability for MO signalling	X	X
8.1.2.13	RRC connection establishment / 0% access probability for MO calls, 0% access probability for MO signalling	X	X
8.1.2.14	RRC connection establishment / High speed flag	X	X
8.1.3.1	RRC connection release/Success	X	X
8.1.3.4	RRC connection release/Redirection to another E-UTRAN frequency	X	X
8.1.3.5	RRC connection release/Success/With priority information	X	X
8.1.3.6	RRC connection release/Redirection from E-UTRAN to UTRAN	X	X
8.1.3.6a	RRC connection release / Redirection from E-UTRAN to UTRAN / Pre-redirection info	X	
8.1.3.7	RRC connection release / Redirection from UTRAN to E-UTRAN	X	X
8.1.3.8	RRC connection release / Redirection from E-UTRAN to GERAN	X	X
8.1.3.9	RRC connection release / Redirection from E-UTRAN to HRPD	X	-
8.1.3.10	RRC connection release / Redirection from E-UTRAN to 1xRTT	X	-
8.1.3.11	RRC connection release / Redirection to another E-UTRAN band	X	X
8.1.3.11a	RRC connection release / Redirection to another E-UTRAN band / Between FDD and TDD	X	X
8.1.3.12	RRC connection release / Success / With priority information / Inter-band	X	X
8.1.3.12a	RRC connection release / Success / With priority information / Inter-band / Between FDD and TDD	X	X
8.2.1.1	RRC connection reconfiguration/Radio bearer establishment for transition from RRC_IDLE to RRC_CONNECTED/Success/Default bearer/Early bearer establishment	X	X
8.2.1.3	RRC connection reconfiguration/Radio bearer establishment/Success/Dedicated bearer	X	X
8.2.1.5	RRC connection reconfiguration / Radio bearer establishment for transition from RRC_IDLE to RRC CONNECTED / Success / Latency check	X	X
8.2.1.6	RRC connection reconfiguration / Radio bearer establishment for transition from RRC_IDLE to RRC CONNECTED / Success / Latency check / SecurityModeCommand and RRCConnectionReconfiguration transmitted in the same TTI	X	X
8.2.1.7	RRC connection reconfiguration/Radio bearer establishment/Success/SRB2	X	X

Test case	Description	FDD	TDD
8.2.1.8	RRC connection reconfiguration / Radio bearer establishment / Success / Dedicated bearer / ROHC configured	X	X
8.2.2.1	RRC connection reconfiguration/Radio resource reconfiguration/Success	X	X
8.2.2.2	RRC connection reconfiguration/SRB/DRB reconfiguration/Success	X	X
8.2.3.1	RRC connection reconfiguration/Radio bearer release/Success	X	X
8.2.4.1	RRC connection reconfiguration/Handover/Success/Dedicated preamble	X	X
8.2.4.2	RRC connection reconfiguration/Handover/Success/Common preamble	X	X
8.2.4.3	RRC connection reconfiguration/Handover/Success/Intra-cell/Security reconfiguration	X	X
8.2.4.4	RRC connection reconfiguration/Handover/Failure/Intra-cell/Security reconfiguration	X	X
8.2.4.5	RRC connection reconfiguration/Handover/All parameters included	X	X
8.2.4.6	RRC connection reconfiguration/Handover/Success/Inter-frequency	X	X
8.2.4.7	RRC connection reconfiguration/Handover/Failure/Re-establishment successful	X	X
8.2.4.8	RRC connection reconfiguration / Handover / Failure / Re-establishment failure	X	X
8.2.4.9	RRC connection reconfiguration/Handover/Inter-band blind handover/Success	X	X
8.2.4.10	RRC connection reconfiguration / Handover / Between FDD and TDD	X	X
8.2.4.12	RRC connection reconfiguration / Handover / Setup and release of MIMO	X	X
8.2.4.13	RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band	X	X
8.2.4.13a	RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band / between FDD and TDD	X	X
8.2.4.14	RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band	X	X
8.2.4.14a	RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band / between FDD and TDD	X	X
8.2.4.15	RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band	X	X
8.2.4.15a	RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band / Between FDD and TDD	X	X
8.3.1.1	Measurement configuration control and reporting/Intra E-UTRAN measurements/Event A1	X	X
8.3.1.2	Measurement configuration control and reporting/Intra E-UTRAN measurements/Event A2	X	X
8.3.1.3	Measurement configuration control and reporting/Intra E-UTRAN measurements/Two simultaneous events A3 (intra and inter-frequency measurements)	X	X
8.3.1.3a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (intra and inter-frequency measurements) / RSRQ based measurements	X	X
8.3.1.4	Measurement configuration control and reporting/Intra E-UTRAN measurements/Periodic reporting (intra and inter-frequency measurements)	X	X
8.3.1.5	Measurement configuration control and reporting/Intra E-UTRAN measurements/Two simultaneous event A3 (intra-frequency measurements)	X	X
8.3.1.6	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-frequency measurements)	X	X
8.3.1.7	Measurement configuration control and reporting/Intra E-UTRAN measurements/Blacklisting	X	X
8.3.1.8	Measurement configuration control and reporting/Intra E-UTRAN measurements/Handover/IE measurement configuration present	X	X
8.3.1.9	Measurement configuration control and reporting/Intra E-UTRAN measurements/Intra-frequency handover/IE measurement configuration not present	X	X
8.3.1.9a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Intra-frequency handover / IE measurement configuration not present / Single Frequency operation	X	
8.3.1.10	Measurement configuration control and reporting/Intra E-UTRAN measurements/Inter-frequency handover/IE measurement configuration not present	X	X
8.3.1.11	Measurement configuration control and reporting/Intra E-UTRAN measurements/Continuation of the measurements after RRC connection re-establishment	X	X
8.3.1.11a	Measurement configuration control and reporting / Intra Frequency measurements / Continuation of the measurements after RRC connection re-establishment / Single Frequency operation	X	
8.3.1.12	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (Inter-band measurements)	X	X
8.3.1.12a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (inter-band measurements) / Between FDD and TDD	X	X
8.3.1.13	Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements)	X	
8.3.1.13a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements) / Between FDD and TDD	X	X
8.3.1.14	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (Inter-band measurements)	X	X

Test case	Description	FDD	TDD
8.3.1.14a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-band measurements) / Between FDD and TDD	X	X
8.3.1.15	Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present	X	X
8.3.1.15a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present / Between FDD and TDD	X	X
8.3.1.16	Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment / Inter-band	X	
8.3.1.16a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment / Inter-band / Between FDD and TDD	X	X
8.3.2.1	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of GERAN cells	X	X
8.3.2.2	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of GERAN cells	X	X
8.3.2.3	Measurement configuration control and reporting/Inter-RAT measurements/Event B2/Measurement of UTRAN cells	X	X
8.3.2.3a	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of UTRAN cells / RSRQ based measurements	X	
8.3.2.4	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of UTRAN cells	X	X
8.3.2.5	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurements of E-UTRAN, UTRAN and GERAN cells	X	
8.3.2.6	Measurement configuration control and reporting / Inter-RAT measurements / Simultaneous A2 and two B2 / Measurements of E-UTRAN, UTRAN and GERAN cells	X	X
8.3.2.7	Measurement configuration control and reporting/Inter-RAT measurements/Event B2/Measurement of HRPD cells	X	-
8.3.2.8	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of HRPD cells	X	-
8.3.2.9	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of 1xRTT cells	X	-
8.3.2.10	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of 1xRTT cells	X	-
8.3.3.1	Measurement configuration control and reporting/SON/ANR/CGI reporting of E-UTRAN cell	X	X
8.3.3.2	Measurement configuration control and reporting / SON / ANR / CGI reporting of UTRAN cell	X	
8.3.3.3	Measurement configuration control and reporting / SON / ANR / CGI reporting of GERAN cell	X	
8.3.3.4	Measurement configuration control and reporting / SON / ANR / CGI reporting of HRPD cell	X	-
8.4.1.2	Inter-RAT handover / From E-UTRA to UTRA PS / Data	X	X
8.4.1.4	Inter-RAT handover / From E-UTRA to UTRA HSPA / Data	X	X
8.4.1.5	Inter-RAT handover / from E-UTRA to UTRA HSUPA/HSDPA / Data	X	
8.4.2.2	Inter-RAT handover / From UTRA PS to E-UTRA / Data	X	X
8.4.2.4	Inter-RAT handover / From UTRA HSPA to E-UTRA / Data	X	X
8.4.3.2	Inter-RAT cell change order / From E-UTRA data RRC_CONNECTED to GPRS / Without NACC	X	X
8.4.3.3	Inter-RAT cell change order / From E-UTRA data to GPRS / With NACC	X	
8.4.7.3	Pre-registration at 1xRTT and inter-RAT handover / CS fallback from E-UTRA RRC_IDLE to 1xRTT	X	-
8.4.7.4	Pre-Registration at 1xRTT and inter-RAT handover / CS fallback caused by addition of CS service / From E-UTRA Data to 1xRTT	X	-
8.4.7.9	Pre-registration at 1xRTT and inter-RAT Handover / Enhanced CS fallback from E-UTRA RRC_CONNECTED to 1xRTT / Extended Service Reject / MO call	X	-
8.5.1.1	Radio link failure/RRC connection re-establishment Success	X	X
8.5.1.2	Radio link failure/T301 expiry	X	X
8.5.1.3	Radio link failure/T311 expiry	X	X
8.5.1.4	Radio link failure / RRC connection re-establishment reject	X	X
8.5.1.5	Radio link failure/Radio link recovery while T310 is running	X	X
8.5.1.6	Radio link failure / T311 expiry / Dedicated RLF timer	X	X
8.5.2.1	Redirection to E-UTRAN / From UTRAN upon reception of RRC CONNECTION REJECT	X	X
8.5.4.1	UE capability transfer/Success	X	X
9.1.2.1	Authentication accepted	X	X
9.1.2.3	Authentication not accepted by the network, GUTI used, authentication reject and re-authentication	X	X

Test case	Description	FDD	TDD
9.1.2.4	Authentication not accepted by the UE/MAC code failure	X	X
9.1.2.5	Authentication not accepted by the UE/SQN failure	X	X
9.1.2.6	Abnormal cases/Network failing the authentication check	X	X
9.1.3.1	NAS security mode command accepted by the UE	X	X
9.1.3.2	NAS security mode command not accepted by the UE	X	X
9.1.3.3	No emergency bearer service / NAS security mode command with EIA0 not accepted by the UE	X	X
9.1.4.2	Identification procedure/IMEI requested	X	X
9.1.5.1	EMM information procedure	X	X
9.2.1.1.1	Attach Procedure/Success/Valid GUTI	X	X
9.2.1.1.1a	Attach/Success/Last visited TAI, TAI list and equivalent PLMN list handling	X	X
9.2.1.1.1b	Attach Procedure / Success / Last visited TAI, TAI list and equivalent PLMN list handling / Single Frequency operation	X	X
9.2.1.1.2	Attach Procedure/Success/With IMSI/GUTI reallocation	X	X
9.2.1.1.7	Attach/Success/List of equivalent PLMNs in the ATTACH ACCEPT message	X	X
9.2.1.1.7a	Attach Procedure / Success / List of equivalent PLMNs in the ATTACH ACCEPT message / Single Frequency operation	X	X
9.2.1.1.9	Attach/Rejected/IMSI invalid	X	X
9.2.1.1.10	Attach/Rejected/Illegal ME	X	X
9.2.1.1.11	Attach / Rejected / EPS services and non-EPS services not allowed	X	X
9.2.1.1.12	Attach / Rejected / EPS services not allowed	X	X
9.2.1.1.13	Attach/Rejected/PLMN not allowed	X	X
9.2.1.1.13a	Attach / Rejected / PLMN not allowed / Single Frequency operation	X	X
9.2.1.1.14	Attach/Rejected/Tracking area not allowed	X	X
9.2.1.1.15	Attach/Rejected/Roaming not allowed in this tracking area	X	X
9.2.1.1.15a	Attach / Rejected / Roaming not allowed in this tracking area / Single Frequency operation	X	X
9.2.1.1.16	Attach/Rejected/EPS services not allowed in this PLMN	X	X
9.2.1.1.16a	Attach / Rejected / EPS services not allowed in this PLMN / Single Frequency operation	X	X
9.2.1.1.17	Attach/Rejected/No suitable cells in tracking area	X	X
9.2.1.1.18	Attach / Rejected / Not authorized for this CSG	X	X
9.2.1.1.19	Attach/Abnormal case/Failure due to non integrity protection	X	X
9.2.1.1.20	Attach/Abnormal case/Access barred because of access class barring or NAS signalling connection establishment rejected by the network	X	X
9.2.1.1.21	Attach/Abnormal case/Success after several attempts due to no network response	X	X
9.2.1.1.22	Attach/Abnormal case/Unsuccessful attach after 5 attempts	X	X
9.2.1.1.23	Attach/Abnormal case/Repeated rejects for network failures	X	X
9.2.1.1.24	Attach/Abnormal case/Change of cell into a new tracking area	X	X
9.2.1.1.25	Attach/Abnormal case/Mobile originated detach required	X	X
9.2.1.1.26	Attach/Abnormal case/Detach procedure collision	X	X
9.2.1.2.1	Combined attach/Success/EPS and non-EPS services	X	X
9.2.1.2.1b	Combined attach / Success / SMS only	X	X
9.2.1.2.1c	Combined attach procedure / Success / CS Fallback not preferred	X	X
9.2.1.2.1d	Combined attach procedure / Success / EPS and CS Fallback not preferred / data centric UE	X	X
9.2.1.2.2	Combined attach / Success / EPS services only / IMSI unknown in HSS	X	X
9.2.1.2.3	Combined attach / Success / EPS services only / MSC temporarily not reachable	X	X
9.2.1.2.4	Combined attach/Success/EPS services only/CS domain not available	X	X
9.2.1.2.5	Combined attach / Rejected / IMSI invalid	X	X
9.2.1.2.6	Combined attach / Rejected / Illegal ME	X	X
9.2.1.2.7	Combined attach / Rejected / EPS services and non-EPS services not allowed	X	X
9.2.1.2.8	Combined attach / Rejected / EPS services not allowed	X	X
9.2.1.2.9	Combined attach / Rejected / PLMN not allowed	X	X
9.2.1.2.10	Combined attach / Rejected / Tracking area not allowed	X	X
9.2.1.2.11	Combined attach / Rejected / Roaming not allowed in this tracking area	X	X
9.2.1.2.12	Combined attach / Rejected / EPS services not allowed in this PLMN	X	X
9.2.1.2.13	Combined attach / Rejected / No suitable cells in tracking area	X	X
9.2.1.2.14	Combined attach / Rejected / Not authorized for this CSG	X	X
9.2.1.2.15	Combined attach / Abnormal case / Handling of the EPS attach attempt counter	X	X
9.2.2.1.1	UE initiated detach/UE switched off	X	X
9.2.2.1.2	UE initiated detach/USIM removed from the UE	X	X
9.2.2.1.3	UE initiated detach/EPS capability of the UE is disabled	X	X
9.2.2.1.4	UE initiated detach / detach for non-EPS services	X	X
9.2.2.1.6	UE initiated detach/Abnormal case/Local detach after 5 attempts due to no network	X	X

Test case	Description	FDD	TDD
	response		
9.2.2.1.7	UE initiated detach/Abnormal case/Detach procedure collision	X	X
9.2.2.1.8	UE initiated detach/Abnormal case/Detach and EMM common procedure collision	X	X
9.2.2.1.9	UE initiated detach/Abnormal case/Change of cell into a new tracking area	X	X
9.2.2.1.10	UE initiated detach / Mapped security context	X	X
9.2.2.2.1	NW initiated detach/Re-attach required	X	X
9.2.2.2.2	NW initiated detach/IMSI detach	X	X
9.2.2.2.14	NW initiated detach/Abnormal case/EMM cause not included	X	X
9.2.3.1.1	Normal tracking area update/Accepted	X	X
9.2.3.1.4	Normal tracking area update/List of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message	X	X
9.2.3.1.5	Periodic tracking area update/Accepted	X	X
9.2.3.1.6	Normal tracking area update / UE with ISR active moves to E-UTRAN	X	X
9.2.3.1.8	UE receives an indication that the RRC connection was released with cause “load balancing TAU required”	X	X
9.2.3.1.9	Normal tracking area update / Correct handling of CSG list	X	X
9.2.3.1.9a	Normal tracking area update/NAS signalling connection recovery	X	X
9.2.3.1.10	Normal tracking area update / Rejected / IMSI invalid	X	X
9.2.3.1.11	Normal tracking area update / Rejected / Illegal ME	X	X
9.2.3.1.12	Normal tracking area update / Rejected / EPS service not allowed	X	X
9.2.3.1.13	Normal tracking area update/Rejected/UE identity cannot be derived by the network	X	X
9.2.3.1.14	Normal tracking area update/Rejected/UE implicitly detached	X	X
9.2.3.1.15	Normal tracking area update / Rejected / PLMN not allowed	X	X
9.2.3.1.15a	Normal tracking area update / Rejected / PLMN not allowed / Single Frequency operation	X

9.4.4	Ciphering and deciphering/Correct functionality of EPS NAS encryption algorithm/AES	X	X
10.2.1	Dedicated EPS bearer context activation/Success	X	X
10.3.1	EPS bearer context modification/Success	X	X
10.4.1	EPS bearer context deactivation/Success	X	X
10.5.1	UE requested PDN connectivity procedure accepted by the network	X	X
10.5.3	UE requested PDN connectivity procedure not accepted	X	X
10.6.1	UE requested PDN disconnect procedure accepted by the network	X	X
10.7.1	UE requested bearer resource allocation, accepted by the network/New EPS bearer context	X	X
10.7.2	UE requested bearer resource allocation accepted by the network/Existing EPS bearer context	X	X
10.7.3	UE requested bearer resource allocation not accepted by the network	X	X
10.7.4	UE requested bearer resource allocation/Expiry of timer T3480	X	X

Test case	Description	FDD	TDD
10.7.5	UE requested bearer resource allocation / BEARER RESOURCE ALLOCATION REJECT message including cause #43 “unknown EPS bearer context”	X	X
10.8.1	UE requested bearer resource modification accepted by the network/New EPS bearer context	X	X
10.8.2	UE requested bearer resource modification accepted by the network/Existing EPS bearer context	X	X
10.8.3	UE requested bearer resource modification not accepted by the network	X	X
10.8.4	UE requested bearer resource modification / Cause #36 “regular deactivation”	X	X
10.8.5	UE requested bearer resource modification / BEARER RESOURCE MODIFICATION REJECT message including cause #43 “unknown EPS bearer context”	X	X
10.8.6	UE requested bearer resource modification / Collision of a UE requested bearer resource modification procedure and EPS bearer context deactivation procedure	X	X
10.8.7	UE requested bearer resource modification / Expiry of timer T3481	X	X
10.9.1	UE routing of uplinks packets	X	X
11.1.1	MT-SMS over SGs/Idle mode	X	X
11.1.2	MT-SMS over SGs/Active mode	X	X
11.1.3	MO-SMS over SGs/Idle mode	X	X
11.1.4	MO-SMS over SGs/Active mode	X	X
11.1.5	Multiple MO-SMS over SGs / Idle mode	X	X
11.1.6	Multiple MO-SMS over SGs / Active mode	X	X
12.2.1	Data transfer of E-UTRA radio bearer combinations 1, 3, 6 and 9	X	X
12.2.2	Data transfer of E-UTRA radio bearer combinations 2, 4, 7 and 10	X	X
12.2.3	Data transfer of E-UTRA radio bearer combinations 5, 6, 8, 11 and 12	X	X
12.2.4	Data transfer of E-UTRA radio bearer combination 13	X	X
12.3.1	Data transfer of E-UTRA radio bearer combinations 1, 3, 6 and 9 / MIMO	X	X
12.3.2	Data transfer of E-UTRA radio bearer combinations 2, 4, 7 and 10 / MIMO	X	X
12.3.3	Data transfer of E-UTRA radio bearer combinations 5, 6, 8, 11 and 12 / MIMO	X	X
12.3.4	Data transfer of E-UTRA radio bearer combination 13 / MIMO	X	X
13.1.1	Activation and deactivation of additional data radio bearer in E-UTRA	X	X
13.1.2	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with redirection / MO call	X	
13.1.3	Call setup from E-UTRAN RRC_CONNECTED / CS fallback to UTRAN with redirection / MT call	X	
13.1.4	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with handover / MT call	X	
13.1.5	Call setup from E-UTRAN RRC_CONNECTED / CS fallback to UTRAN with handover / MO call	X	
13.1.7	Call setup from E-UTRA RRC_IDLE / CS fallback to GSM with redirection / MT call	X	X
13.1.8	Call setup from E-UTRA RRC_CONNECTED / CS fallback to GSM with redirection / MO call	X	X
13.1.9	Call setup from E-UTRA RRC_IDLE / CS fallback to GSM with CCO without NACC / MO call	X	X
13.1.10	Call setup from E-UTRA RRC_CONNECTED / CS fallback to GSM with CCO without NACC / MT call	X	X
13.1.15	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with redirection / MT call / UTRAN cell is barred	X	
13.1.16	Emergency call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with handover	X	
13.1.17	Call setup from E-UTRAN RRC_IDLE / mobile originating 1xCS fallback emergency call to 1xRTT	X	-
13.2.1	RRC connection reconfiguration/E-UTRA to E-UTRA	X	X
13.3.1.1	Intra-system connection re-establishment/Radio link recovery while T310 is running	X	X
13.3.1.2	Intra-system connection re-establishment/Re-establishment of a new connection when further data is to be transferred	X	X
13.3.1.3	RRC connection reconfiguration / Full configuration / DRB establishment	X	X
13.3.2.1	Inter-system connection re-establishment / E-UTRAN to UTRAN / Further data are to be transferred	X	X
13.3.2.2	Inter-system connection re-establishment / E-UTRAN to GPRS / Further data are to be transferred	X	X
13.4.1.2	Inter-frequency mobility/E-UTRA to E-UTRA packet	X	X
13.4.1.3	Intra-system mobility / E-UTRA FDD to E-UTRA TDD to E-UTRA FDD packet	X	X
13.4.1.4	Inter-band mobility / E-UTRA to E-UTRA packet	X	X
13.4.1.5	RRC connection reconfiguration / Handover / Full configuration / DRB establishment	X	X
13.4.2.1	Inter-system mobility / E-UTRA to UTRA packet	X	
13.4.2.4	Inter-system mobility / Service based redirection from UTRA to E-UTRA	X	X
13.4.2.5	Inter-system mobility / Service based redirection from GSM/GPRS to E-UTRA	X	
13.4.4.1	Pre-registration at 1xRTT and Cell reselection / 1x Zone Registration	X	-

Test case	Description	FDD	TDD
13.4.4.5	Pre-Registration at 1xRTT / Power Down Registration	X	-
14.1	ETWS reception in RRC_IDLE state / Duplicate detection	X	
14.2	ETWS reception in RRC_CONNECTED state / Duplicate detection	X	
18.1.1	PWS reception in RRC_IDLE state / Duplicate detection	X	-
18.1.2	PWS reception in RRC_CONNECTED state / Duplicate detection	X	-
18.1.3	PWS reception in RRC_CONNECTED State/Power On	X	-

The Test Suite in TTCN3 is contained in multiple ASCII files which accompany the present document.

Annex B (informative): Style Guides

B.1 Introduction

This annex is based on the style guide given in TS 34.123-3 [7], annex E but the language for UE conformance tests is TTCN-3.

B.2 General Requirements for TTCN-3 Implementations

The TTCN-3 implementation for UE conformance tests shall be based on the following general design considerations:

- Even though it is not reflected in TTCN-3 anymore in UE conformance tests ASPs and PDUs will still be distinguished. This has impact on type definitions and naming conventions.
- In general, templates for UE conformance tests shall be separated for sending and receiving.
- Modified templates shall not be modified again.
- All local variables shall be declared at the beginning of a function;
the order of declarations is:
    - local constants
    - local variables
    - local timers
- The purpose of the test case implementation is conformance testing.
- The common RAN5 approval process needs to be considered.

The TTCN-3 implementation for UE conformance tests shall fulfil the following requirements.

The implementation shall:

- follow ES 201 873-1 [13] (TTCN-3 Core Language) and ES 201 873-4 [27] (TTCN-3 Operational Semantics);
- be independent from interface specifications like TRI (ES 201 873-5 [28]) and TCI (ES 201 873-6 [29]) as well as from proprietary approaches;
- not use or rely on tool dependent features;
- support maintainability and extendibility;
- follow the naming conventions as defined below.

Further requirements:

- Usage of external functions should be avoided.
- Type definitions:
    - Existing ASN.1 type definitions contained in protocol specifications are imported from the respective standards. All other type definitions shall be done within TTCN-3.

B.3 Naming Conventions

Even though these are being used for TTCN-3 the naming conventions provided in the present document are mainly backward compatible to TTCN-2 as defined in TS 34.123-3 [7].

B.3.1 Prefixes and Restrictions for TTCN-3 Objects

Table B.3.1: Prefixes used for TTCN-3 objects

TTCN object	Initial Letter	Prefix/ Postfix	Comment
TTCN module	upper case	(none)	
TTCN group	upper case	(none)	
function parameter	upper case	p_	
function running on a component	upper case	f_	
local function (tree) not to be used by other modules	upper case	fl_	local function not to be used by other modules
external function	upper case	fx_	
altstep	upper case	a_	(including defaults)
test case selection expression			name as specified in TS 36.523-2 [2] shall be used
global constant	upper case	tsc_	(see note 1)
local constant	upper case	const_	local constant being defined in a function
Enumerated		(none)	there are no restrictions regarding enumerated types
type definition	upper case	_Type	(see note 7)
local variable	upper case	v_	(see note 6)
global (component) variable	upper case	vc_	(see note 2)
port type	upper case		
port name	upper case		
local timer	upper case	t_	
ASP template	upper case	cas_ cads_ car_ cadr_	send ASP modified (derived) send ASP receive ASP modified (derived) receive ASP
PDU template	upper case	cs_ cds_ cr_ cdr_	send PDU modified (derived) send PDU receive PDU modified (derived) receive PDU (see note 3)
CM template	upper case	cms_ cmr_	send coordination message receive coordination message
Template (neither ASP nor PDU nor CM)	upper case	cs_ cds_ cr_ cdr_ crs_	send template modified (derived) send template receive template modified (derived) receive template templates for IEs used in both directions (see note 5)
test suite parameter (PICS)	upper case	pc_	
test suite parameter (PIXIT)	upper case	px_	
test case		TC_	(see note 4)

NOTE 1: Global constants may be defined differently in imported modules (e.g. without any prefix and with lower case initial letter).
NOTE 2: Global variables or timers are those defined within the TTCN-3 components. They are visible to all the functions run in the component.
NOTE 3: Base template may have a second prefix:
- 508: PDU as defined in TS 36.508 [3];
- 108: PDU as defined in TS 34.108 [8].

NOTE 4: Test case names will correspond to the clause in the prose that specifies the test purpose. E.g. TC_8_1.
NOTE 5: Applicable only in case of "quasi-constant" definitions, e.g. to define a (constant) random pattern to be used for sending and receiving when the UE is configured in loopback mode.
NOTE 6: Counter variables do not need to have a prefix.
NOTE 7: Exceptions for type definitions:
- ASP names are fully upper case letters and typically have postfix "_REQ", "_CNF" or "_IND".
- RRC protocol type definitions are extracted and imported from TS 36.331 [19]/TS 25.331 [36] and are therefore out of scope.
- NAS protocol type definitions follow the names provided in the tabular notion of the standards and therefore do not have a "_Type" postfix.

B.3.2 Void

B.3.3 Void

B.3.4 Identifiers consisting of more than one Name

When identifiers are a concatenation of several words the words shall start with capital letters:

e.g.:. "px" + "Cell" + "A" + "Cell" + "Id" -> px_CellACellId.

Further details are described in TS 34.123-3 [7], clause E.2.1.

B.4 Implementation Issues

B.4.1 Control part

Even though the control part may not be used in a test campaign but be overruled by the test management system it is used to provide the following information:

- All test cases contained in the test suite.
- For each test case:
  - Test case selection expression.

For maintenance reasons it shall be possible to generate the control part automatically by an appropriate tool.

B.4.2 Top Level Test Case Definitions

The top level test case definitions run on the MTC exclusively. The tasks of these test case definitions are generally the same for each test case:

- Start guard timer.
- Create PTCs.
- Connect PTCs.
- Start PTCs.

- Wait for PTCs having finished.

Additionally the MTC may host the upper tester but this is left open to implementation.

For maintenance reasons it shall be possible to generate the top level test case definitions defined for the MTC automatically by an appropriate tool. To achieve this, the name of a function to be started on particular PTC need derived from the test case name:

e.g. the function for PTC_A in test case TC_XX_YY_ZZ shall be f_TC_XX_YY_ZZ_A.

Cells are created in an off-state in the preambles of the corresponding PTCs while UE is in the switched off-state.

B.4.3 Inter Component Communication

Communication between PTCs or PTCs and the MTC can be done by messages or by build-in mechanisms as *done* and *kill*. For maintenance reasons and extendibility the inter component communication shall be encapsulated by TTCN-3 implementation.

B.4.4 Encoding Information

For UE conformance tests several encoding rules need to be applied by the TTCN-3 codec. Even though the codec is out of scope of the present document there are aspects with impact on TTCN-3 implementation depending on different type definitions.

Table B.4.4-1

Type definitions	Encoding
ASN.1 types used for RRC signalling	ASN.1 PER
ASN.1 types used by NAS protocols	ASN.1 BER
NAS types	Tabular notated (see note)
SMS Types	Tabular notated (see note)
DRB types	Tabular notated (see note)
DHCPv4 types	Tabular notated (see note)
ICMPv6 types	Tabular notated (see note)
GERAN types	Tabular notated (see note)
GPRS Padding	see TS 34.123-3 [7], clause 6.10.2.9.1
GSM Spare Padding	see TS 34.123-3 [7], clause 6.10.2.9.2
LowHigh Rule	see TS 34.123-3 [7], clause 6.10.2.9.3
SACCHSysInfo Spare Padding	see TS 34.123-3 [7], clause 6.10.2.9.5
TTCN-3 types not used at the air interface: - Configuration of system simulator - Coordination between components - Types used internally in TTCN-3	(no specific encoding required)
NOTE: Tabular notated is performed by concatenation of all the present fields in the TTCN-3 template.	

Encoding information may be provided and supported in TTCN-3 by grouping of type definitions and using the *encode* attribute.

B.4.5 Verdict Assignment

In general the following rules shall be applied.

Table B.4.5-1: Rules for verdict assignment

Verdict	Rule
Pass	shall be assigned for each step defined in the prose of the test case
Fail	shall be assigned when there is a non-conformant signalling by the UE within the test body
Inconc	shall be assigned outside the test body and when it is not unequivocal whether a misbehaviour is caused by non-conformity of the UE signalling
Error	In case of obvious programming or parameterisation errors (e.g. missing *case* in a *select* statement)

B.4.5.1 PASS verdict assignment

The PASS verdicts are assigned by test cases or test case specific functions.

For generic test procedures as specified in 36.508 cl. 6.4.2, the preliminary pass is assigned directly after the procedure if all described in the procedure UL messages have been successfully received; this allows re-usage of these procedures for other purposes.

B.4.5.2 FAIL or INCONC verdict assignment

The verdict FAIL or INCONC can be assigned in test cases, in the test case-specific function, in the common functions and in the default behaviour.

Test case or test case-specific function:

In normal cases the common function f_EUTRA_SetVerdictFailOrInconc shall be used to assign FAIL or INCONC depending on whether it is in the test body or outside of the body.

If in test cases a verdict FAIL shall be assigned for watchdog timer timeouts this needs to be done explicitly.

Common Functions:

The majority of the common functions have no verdict assignment. If a verdicts assignment is required in some common functions, the common function f_EUTRA_SetVerdictFailOrInconc shall be used to assign FAIL or INCONC.

As an exception in the altstep a_EUTRA_RacingCond_AwaitRrcMessage an INCONC is assigned when the RRC message and the L1/MAC indication are in the wrong order.

B.4.5.3 Verdict assignment in default behaviour

The default behaviour handles all events not being handled in test cases or functions. Whether the verdict FAIL or INCONC to be assigned in the default behaviour it depends very much on the port where the event occurs.

Table B.4.5.3-1: Verdict assignment in default behaviour upon test ports

Test port	Message	Comment	Verdict
SYS	SYSTEM_CTRL_CNF	unexpected confirmation	INCONC
SYSIND	SYSTEM_IND: Error indication	unspecific error at SS	INCONC
	SYSTEM_IND: MAC indication	(see note 1)	FAIL in the test body INCONC outside the test body
	SYSTEM_IND: L1 indication	RachPreamble, SchedReq, UL_HARQ may be repeated by the UE in case of transmission errors (see note 1)	INCONC
SRB	SRB_COMMON_IND	Any unexpected L3 signalling (see note 3)	FAIL in the test body INCONC outside the test body
NASCTRL	NAS_CTRL_CNF	unexpected confirmation	INCONC
DRB	DRB_COMMON_IND	L2 and combined tests (see note 2)	FAIL in the test body INCONC outside the test body
		pure signalling tests (see note 2)	INCONC
UT	UT_COMMON_CNF	unexpected confirmation	INCONC

NOTE 1: L1/MAC indications need to be enabled by the test case therefore they occur only when being relevant for the test case.

NOTE 2: L2 and combined tests can be distinguished from pure signalling tests by additional global information controlled by f_EUTRA_TestBody_Set.

NOTE 3: Layer 3 signalling by definition covers NAS and RRC signalling i.e. in general unexpected RRC messages will cause a FAIL in the body of any NAS test case as well as unexpected NAS messages will cause a FAIL in the body of any RRC test case.

Table B.4.5.3-2: Verdict assignment in default behaviour when time-out

Timeout	Comment	Verdict
any timer	unspecific timeout (see note)	INCONC
NOTE: Local timers of test cases or functions cannot be distinguished in the default behaviour.		

B.4.6 Default Behaviour

As experience from UMTS conformance tests there shall be one standard default behaviour for each component.

The following rules shall be applied:

- The standard default behaviour is activated during initialisation of the respective component.
  In normal cases a TTCN writer does not need to care about the default.
- In general there is only one default behaviour activated (i.e. the standard default behaviour).
- The standard default behaviour shall cover all ports and timers of the component.
- Whenever possible deviations from the standard default behaviour shall be implemented locally rather than by introducing a new default behaviour.

If for exceptional cases the standard default behaviour needs to be replaced by another default behaviour or another default behaviour needs to be activated on top, the TTCN writer is responsible:

- to avoid side effects;
- to restore the standard behaviour.

B.4.7 Templates for Sending and Receiving

Templates used for sending and receiving shall be separated in general:

- A template shall be either for sending or for receiving; this shall be reflected in the prefix of the identifier.
- Send templates shall use no receive templates and vice versa.
- All parameters of a send template shall be restricted to:
  - values;
  - template (value);
  - template (omit).
- Parameters of receive templates may allow wildcards. They can be:
  - values;
  - unrestricted template parameters;
  - template parameters restricted to be present.
- The only exception to the above rule is for "quasi-constant" definitions, as described in note 5 of table B.3.1. Otherwise, even when the same data is expected for sending and receiving templates, there shall be different templates and the following rule shall be applied.
- The receive template is assigned the send template e.g.:
  - template My_Type cr_Template := cs_Template
- This results in separate definitions for sending and receiving and improves maintainability.

NOTE 1: For maintenance reasons, a send template shall never be derived from a receive template; and also a receive template shall never be assigned to a send template.

NOTE 2: When a send template is assigned to a receive template, the formal parameters of the receive template must follow the rules of send templates (i.e. it shall only contain 'template (value)', 'template (omit)' or values only).

B.4.8 Logging

In general no explicit log statements shall be used. As an exception log may be used to report unexpected situations in TTCN-3 like fatal programming error.

B.4.8.1 Prose Step Numbers

Informative comments containing the prose steps defined in 36.523-1 should be implemented according to the following guidelines:

- They relate to the Expected Sequence steps in the prose
- They should not be placed in common functions
- They should only be placed in functions containing the test case body
- They should always start with //@siclog
- They should always finish with siclog@
- For single steps they should be in the form //@siclog "Step 1" siclog@
- For multiple steps (where several steps are completed in a common function), they should be in the form //@siclog "Steps 1 - 3" siclog@ - i.e. Steps, space, first number, space, dash, space, second number
- They should be placed as close as possible, but always BEFORE, the line send/receive/function call
- The step number should also be included in any pass/fail verdict specified in the test case body
- If the step is listed as Void (or a group of steps) in the expected sequence, include the word Void in the comment.

Therefore the format of the comment should be:

//@siclog "Step[s] X [- Y] [Void]" siclog@

B.4.9 Top level comments

No restriction is specified for the top level comments.

B.4.10 Mapping of DRBs

LTE DRBs are mapped in TTCN according to the following rules:

- DRB1 is exclusively reserved for the default DRB and hence is always AM
- additional DRBs (AM or UM) may be assigned from DRB2 onward in any order
- there shall be no reconfiguration of a DRB from AM to UM or vice versa (unless a test case explicitly requires this); this especially means that DRB1 is never reconfigured to UM
- in general at the SS all DRBs needed by a test case may be configured at the beginning of the test case.

B.5 Modularisation

Even though there are no specific rules how to apply modularisation in general some principles can be defined:

- Maintainability and extendibility:
    - Maintainability and extendibility are essential for definition of the modular structure.
- Granularity of modules:
    - Cyclic imports are forbidden in TTCN-3; this has impact on the extendibility:
        - The granularity of modules shall not be too small.
    - Too big modules are hard to handle and may cause increase of compilation time:
        - The granularity of modules shall not be too rough.

NOTE: These are only vague principles since there is no way to define what small or huge modules are.

- General module structure:
    - The following modularisation can be applied independent from the internal structure:
        - Type definitions: TTCN-3, ASN.1.
        - Component definitions.
        - Common Templates: component dependent, component independent.
        - Common behaviour: MTC, PTCs.
        - Test case specific templates.
        - Test case specific behaviour.
- Whether or how these module groups can further be sub-divided is implementation dependent and therefore out of scope of the present document.

Annex C (informative): Design Principles

C.1 ASP Design

All ASPs consist of a common part (defined as a TTCN-3 type) and a specific part.

All ASPs sent by the SS include timing information (SFN, subframe number) in the common part.

Only one ASP is defined per direction per port, but this ASP may contain a union of several sub-ASPs in the specific part.

In general a small number of common ASPs cover all functionality, although other ASPs may be introduced to simplify TTCN-3 implementation and improve readability. Recurrent SS changes, such as power level changes, security activation and MAC scheduling are handled in dedicated ASPs. In addition, special purpose ASPs are used to control special behaviour, for example in L2 tests.

Configuration ASPs re-use ASN.1 definitions defined in the core specs.

No encoding rules are specified for the configuration ASPs; how they are encoded is left up to the SS implementation.

Configuration ASPs are 'procedure-based', rather than 'protocol layer-based' and reflect the state transitions of the SS. The same ASPs are used for reconfiguration and for initial configuration. In the case of reconfiguration the semantics of omit is to keep the configuration as it is; therefore when an IE in a configuration may be left out this is done e.g. by setting the respective field to a special value "None".

Data ASPs for sending/receiving peer-to-peer PDUs and user data all have different ASPs for the different SAPs.

The common part includes (at least):

- Timing Info:
    - SFN.
    - Subframe number (optional).
    - Which timing to use will depend on the test procedure and ASP purpose.
- Control Info:
    - Confirmation Flag.

The RRC ASN.1 IEs used in the specific part of the configuration ASPs:

- are imported using the granularity at the channel structure level or below;
- allow the ASP to be organised according to SS requirements;
- have a name that relates to SS configuration.

The SS specific IEs used in the specific part of the configuration ASPs (i.e. those elements not imported from the RRC ASN.1):

- use a naming convention such that they are easily distinguishable from the RRC ASN.1 IEs;
- are defined in TTCN-3 (i.e. not in ASN.1).

C.2 SS State Model

Figure C.2 shows the basic SS state model. It is basic in the sense that internally the SS may have more states; however, (re)configuration actions (state transitions in the model) should cause the SS to transit between the states defined below.

The following assumptions have been made about this state model:

- It presents a model of states in scope of a single cell. Hence, all configuration activities shall be performed in scope of a single cell.
- It depicts only SS states and SS (re)configuration actions between these states:
  - It does not show events which may trigger state transitions, e.g. L3 messages or procedures - i.e. it is test case and L3 procedure agnostic.
  - It does not show any peer-to-peer (i.e. between SS and UE) messages.
- Triggers for state transitions are always SS configuration messages (ASPs) coming from the test suite:
  - L2 messages coming from the UE can only trigger internal SS sub-state transitions and semi-autonomous procedures.
- L1 and L2 procedures (e.g. random access procedure, scheduling, security activation steps) are semi-autonomously handled by the SS and after being pre-configured do not require interaction with the test case:
  - The majority of test cases do not need to worry about e.g. RA procedure and letting the SS handle it would greatly simplify test case definition and implementation.
  - There may be stringent time requirements in case of some procedures that can be hard to meet in a generic way in the test suite.
  - Semi-autonomous procedures should be flexibly configurable and should have a "manual" mode in which they are handled by the test suite in order to enable testing them. What is the desired level and way of control is FFS.

Most states are stationary states, i.e. the SS can stay in them for a long time or, after performing some procedures, returns to these states. However, there is one state (indicated by dashed lines) which is part of the AS security activation procedure and is transitional, i.e. the SS can only stay in it for a short time until a transition the next stationary state is triggered.

To make the diagram more readable, a separate state called *ANY_STATE* has been introduced, together with some transitions. It shows which transitions are allowed at any point of time in any state.

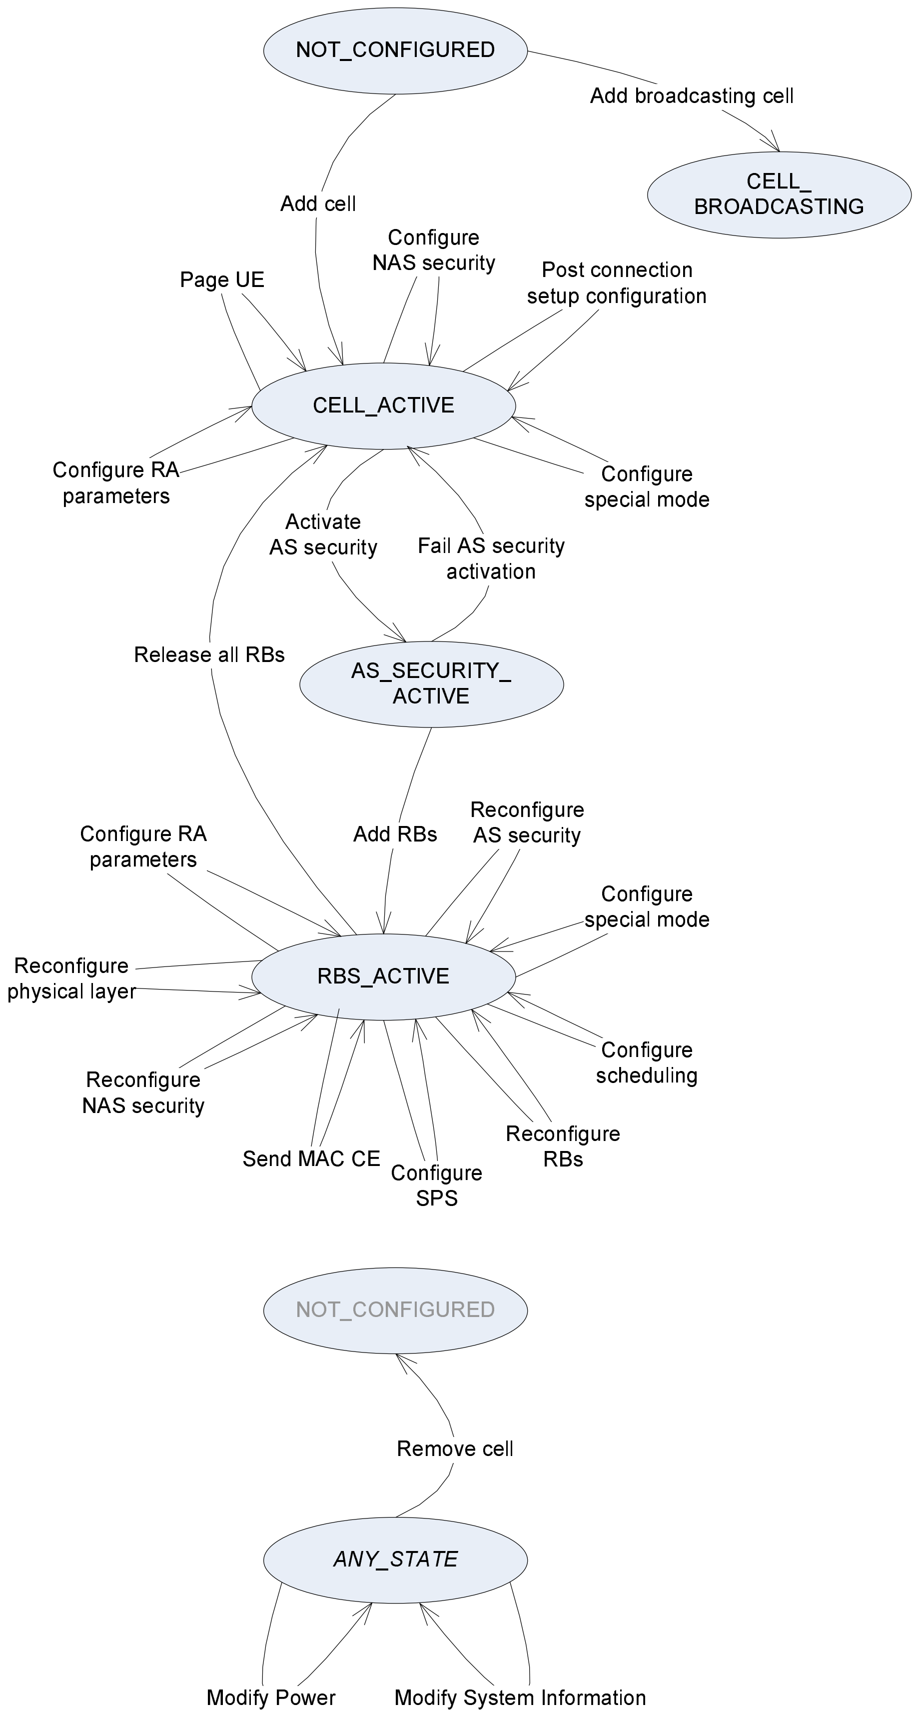

Figure C.2-1: Basic SS state model

Description of states.

Table C.2-1: Description of states

State	Description
NOT_CONFIGURED	The cell does not exist (is not configured) in the SS
CELL_BROADCASTING	Physical DL channels and signals configured Initial cell configuration done: freq, BW, antennas, MIMO mode, power, etc. Transport and logical channels configured for SI broadcast Cell is broadcasting SI and downlink signals NOTE 1: This type of cell is needed only to serve as a neighbouring cell for measurement purposes, where full cell configuration does not need to be specified. There is no need to be able to promote a broadcasting cell to a full cell. NOTE 2: It is currently open whether a separate cell type with limited PRACH/RACH Rx capability is needed - this depends on whether a justified use case is defined for such a cell type.
CELL_ACTIVE	Cell configured to send and receive data from UE (fully functional) SRB0 defined (default configuration specified in TS 36.508 [3]) SRB1 defined (default configuration specified in TS 36.508 [3])
AS_SECURITY_ACTIVE	The SS has AS security (integrity protection and ciphering) active NOTE 3: The SS needs to autonomously take care of a temporary state in which integrity protection is applied to an outgoing SMC message, but ciphering is not.
RBS_ACTIVE	SRB2 and/or DRBs are configured for the UE (in addition to SRB0 and SRB1)
ANY_STATE	Represents any of the above states (except NOT_CONFIGURED)

Annex D (informative): TTCN-3 Definitions

D.1 EUTRA_ASP_TypeDefs

Type definitions for configuration of the system simulator;
Common design principles:
Semantics of OMIT: for all TTCN-3 type definitions used in ASPs omit means "keep as it is" =>
- on initial configuration in general all fields shall be provided
- no default values for fields are foreseen
- if necessary non-existence of information shall be explicitly configured
 (e.g. with a union of "no configuration" and "configuration parameters"
- fields within structures imported from the core spec are excepted from this rule

D.1.1 ASN1_Container

Definitions containing ASN.1 types for backward compatibility;
NOTE 1: PCCH_Message and BCCH_DL_SCH_Message already have a critical extension mechanism by RRC type definition
NOTE 2: BCCH_BCH_Message contains the MIB and therefore is considered to be not extendable
NOTE 3: "simple types" are not considered: C_RNTI, PhysCellId, CellIdentity, ARFCN_ValueEUTRA

D.1.2 System_Configuration

Formal ASP Definitions for system configuration

SystemRequest_Type

TTCN-3 Union Type		
Name	**SystemRequest_Type**	
Comment		
Cell	CellConfigRequest_Type	configure/release a cell
CellAttenuationList	CellAttenuationList_Type	power attenuation for one or several cells; all cells included in the list shall be changed at the same time; all cells in the list shall reach the new cell power within a maximum of 100ms (10 frames) acc. to the tolerances given in TS 36.508 NOTE: In the common ASP part the CellId shall be set - to the cell the timing information refers to if activation time shall be applied - to eutra_Cell_NonSpecific when there is no activation time
RadioBearerList	RadioBearerList_Type	configure/release one or several SRBs and/or DRBs NOTE: RBs are not configured in an SCell
EnquireTiming	Null_Type	get SFN and sub-frame number for this cell
AS_Security	AS_Security_Type	StartRestart/Release of AS security
Sps	SpsConfig_Type	to configure/activate or release semi-persistent scheduling
Paging	PagingTrigger_Type	to trigger SS to send paging at the given paging occasion (as calculated in TTCN)
L1MacIndCtrl	L1Mac_IndicationControl_Type	to configure SS to generate indications for L1/MAC events
RlcIndCtrl	Rlc_IndicationControl_Type	to configure SS to generate indications for RLC events
PdcpCount	PDCP_CountReq_Type	to set or enquire PDCP COUNT for one ore more RBs
PdcpHandoverControl	PDCP_HandoverControlReq_Type	to inform the target cell about the handover
L1_TestMode	L1_TestMode_Type	To Set L1/MAC in special Test modes eg. DL CRC, PHICH etc
PdcchOrder	RA_PDCCH_Order_Type	to configure SS to transmit a PDCCH order with configured C-RNTI to the UE to trigger RA procedure; result in DCI Format 1A transmission as in TS 36.212, clause 5.3.3.1.3
ActivateScell	ActivateScell_Type	to configure SS to transmit a MAC control Element to activate an Scell

SystemConfirm_Type

TTCN-3 Union Type		
Name	**SystemConfirm_Type**	
Comment	confirmations for system configuration; in general to be sent after the configuration has been done	
Cell	Null_Type	(no further parameters from SS)
CellAttenuationList	Null_Type	(no further parameters from SS) NOTE 1: the confirmation shall be sent when all cells have changed power levels NOTE 2: for the CellId in the common ASP part the same rules are applied as for the SYSTEM REQ
RadioBearerList	Null_Type	(no further parameters from SS)
EnquireTiming	Null_Type	SFN and sub-frame number are included in the TimingInfo
AS_Security	Null_Type	(no further parameters from SS)
Sps	Null_Type	(no further parameters from SS)
Paging	Null_Type	normally not needed but defined for completeness
L1MacIndCtrl	Null_Type	(no further parameters from SS)
RlcIndCtrl	Null_Type	(no further parameters from SS)
PdcpCount	PDCP_CountCnf_Type	as response to 'Get' a list is returned containing COUNT information for the requested RBs
PdcpHandoverControl	Null_Type	confirmation for PDCP handover control
L1_TestMode	Null_Type	confirmation for L1 test mode
PdcchOrder	Null_Type	confirmation for PDCCH Order

SystemIndication_Type

TTCN-3 Union Type		
Name	**SystemIndication_Type**	
Comment		
Error	charstring	indicates an error situation in SS; is not explicitly handled in TTCN but causes an INCONC due to default behaviour; an additional error code can be signalled in the common part of the ASP; SS shall raise an error in case of - Invalid TimingInfo for TDD - Contradiction of periodic UL grants and TDD configuration - Data scheduled for the same TTI does not fit into an available transport block (NOTE: additional cases may occur)
RachPreamble	RachPreamble_Type	RACH preamble being sent by the UE
SchedReq	Null_Type	indication for scheduling request sent by the UE
BSR	BSR_Type	to report the Buffer/Extended Buffer status report being received
UL_HARQ	HARQ_Type	to report the UL HARQ as received on PUCCH[TTI] for corresponding DL transmission in TTI-x, where x is normally 4
C_RNTI	C_RNTI	indicates C-RNTI being contained in a MAC PDU sent by the UE
PHR	PHR_Type	to report the Power headroom report received
HarqError	HarqError_Type	indicates detection of HARQ error: 1. HARQ CRC error for UL data 2. HARQ NACK from the UE unless SS is configured to report HARQ ACK/NACK
RlcDiscardInd	RlcDiscardInd_Type	indicates e.g. discarded PDUs
PeriodicRI	RI_Type	indicates periodic Rank Indicator (RI) reported by the UE on PUCCH or PUSCH; periodic CQI/PMI/RI Reporting is semi-statically configured at the UE by higher layers (see TS 36.213 clause 7.2.2); aperiodic reporting acc. to TS 36.213 clause 7.2.1 shall not be indicated NOTE: Acc. to TS 36.213 clause 7.2 aperiodic reporting has higher precedence than periodic reporting; => as working assumption the CQI request field in DCI format 0 is expected to be 0 for UL grants assigned by the SS i.e. aperiodic reporting acc. to TS 213 clause 7.2.1 does not happen
EPHR	MAC_CTRL_ExtPowerHeadRoom_Type	indicates Extended Power headroom report reported by the UE
CqiInd	Null_Type	indicates periodic CQI reported by the UE – NOTE: Report CQI value is currently not required

D.1.3 Cell_Configuration

Specific Info for Cell Configuration Primitive

D.1.3.1 Cell_Configuration_Common

EUTRA_ASP_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_CellAttenuation_Off	Attenuation_Type	{Off:=true}	

Cell_Configuration_Common: Basic Type Definitions

TTCN-3 Basic Types		
EUTRA_FDD_Info_Type	Null_Type	no further parameters defined for FDD
CfiValue_Type	integer (1..3)	
AbsoluteCellPower_Type	integer (-145..0)	absolute cell power (dBm)
InitialAttenuation_Type	Attenuation_Type (tsc_CellAttenuation_Off)	Attenuation restricted to 'Off'
ToRS_EPRE_Ratio_Type	integer (-35..0)	any-resource-element to RS ratio in dB (e.g. PDSCH-to-RS ratio; see TS 36.213, clause 5.2)

CellConfigRequest_Type

TTCN-3 Union Type		
Name	**CellConfigRequest_Type**	
Comment		
AddOrReconfigure	CellConfigInfo_Type	for cell configuration: CellId : identifier of the cell to be configured RoutingInfo : None TimingInfo : Now (for initial configuration and for reconfiguration in general) ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)
Release	Null_Type	to remove a cell completely - CellId : identifier of the cell to be released; eutra_Cell_NonSpecific, in case all cells shall be released RoutingInfo : None TimingInfo : Now ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)

CellConfigInfo_Type

TTCN-3 Record Type			
Name	**CellConfigInfo_Type**		
Comment	common information for initial cell configuration or reconfiguration; in case of reconfiguration OMIT means 'keep configuration as it is'		
Basic	BasicCellConfig_Type	opt	basic information for a cell (e.g. broadcasting)
Active	ActiveCellConfig_Type	opt	add. configuration for active cell (i.e. cell being capable to receive RACH preamble)

CellConfigCapability_Type

TTCN-3 Enumerated Type	
Name	**CellConfigCapability_Type**
Comment	capabilities af a cell acc. to the initial condition of a test case
broadcastOnlyCell	no detection of RACH preables required; cell is only broadcasting
minimumUplinkCell	detection of RACH preables required but not any further RX capability
fullCell	full TX and RX capabilities

CA_CellInitialConfig_Type

TTCN-3 Enumerated Type	
Name	**CA_CellInitialConfig_Type**
Comment	
PCell	The cell when added as a CC in CA scenario for first time will be configured as an PCell
Scell_Active	The cell when added as a CC in CA scenario for first time will be configured as an SCell, and when configured as Scell, it may be activated, 36.508 clause 6.3.4
Scell_Inactive	The cell when added as a CC in CA scenario for first time will be configured as an SCell, and when configured as Scell, it will never be activated, 36.508 clause 6.3.4

BasicCellConfig_Type

TTCN-3 Record Type			
Name	BasicCellConfig_Type		
Comment			
ConfigCapability	CellConfigCapability_Type	opt	mandatory for the initial configuration; to be omitted afterwards
StaticCellInfo	StaticCellInfo_Type	opt	Common information which does not change during a test
PhysicalLayerConfigDL	PhysicalLayerConfigDL_Type	opt	default settings regarding physical control channels: PCFICH, PHICH, PDCCH
InitialCellPower	InitialCellPower_Type	opt	reference cell power for the RS of each antenna in DL NOTE 1: the power of the RS of an antenna may be reduced by antenna specific configuration NOTE 2: in general the power may be adjusted on a per resource element basis => all physical channel/signal power settings shall be ajusted relatively to the RS; if there are more than one TX antennas each one may have its own attenuation; independently from those relative power settings the cell power can easily be adjusted by just changing the reference power
BcchConfig	BcchConfig_Type	opt	configuration of BCCH/BCH; SS is triggered to configure RLC/MAC regardingly; BCCH data on the PDSCH is distiguished by the SI-RNTI PBCH: MIB; PDSCH: scheduling and resource allocation; SIBs
PcchConfig	PcchConfig_Type	opt	configuration of PCCH/PCH; SS is triggered to configure RLC/MAC regardingly; PCCH data on the PDSCH is distiguished by the P-RNTI (needed even to modify SI => shall be configured for CELL_BROADCASTING)
CA_CellInitialConfig	CA_CellInitialConfig_Type	opt	capability of a cell when added as a CC in CA scenario. 1. Provided at the initial configuration of a cell in CA test cases; to be omitted afterwards; 2. Always omit for a cell which remains normal non CA cell

ActiveCellConfig_Type

TTCN-3 Record Type			
Name	ActiveCellConfig_Type		
Comment			
C_RNTI	C_RNTI	opt	(pre-)configured C-RNTI; affects scrambling of PDSCH/PUSCH and CRC of PDCCH(s); shall be used implicitly in RACH procedure (i.e. as CE in RAR)
PhysicalLayerConfigUL	PhysicalLayerConfigUL_Type	opt	parameters for PRACH, PUCCH, PUSCH
RachProcedureConfig	RachProcedureConfig_Type	opt	to configure the SS's behaviour for the RACH procedure
CcchDcchDtchConfig	CcchDcchDtchConfig_Type	opt	Parameters related to CCCH/DCCH/DTCH in UL and DL
ServingCellConfig	ServingCellConfig_Type	opt	not present as long as the cell is 'normal' cell (i.e. does not act as a carrier component in CA); present to configure cell for CA (Pcell or SCell); in general at initial configuration 'ServingCellInfo' is omit; after sending/scheduling the RRCConnectionReconfiguration adding 1 or more cells for CA 'ServingCellInfo' is provided for the cell which gets Pcell and for the cell which gets SCell

StaticCellInfo_Type

TTCN-3 Record Type			
Name	**StaticCellInfo_Type**		
Comment	Common information which (normally) does not change during a test; therefore all fields are mandatory		
Common	CommonStaticCellInfo_Type		
Downlink	DownlinkStaticCellInfo_Type		
Uplink	UplinkStaticCellInfo_Type	opt	NOTE: for TDD UL and DL are using the same parameters

CommonStaticCellInfo_Type

TTCN-3 Record Type			
Name	**CommonStaticCellInfo_Type**		
Comment	information common for UL and DL; all fields are mandatory		
RAT	EUTRA_RAT_Type		FDD or TDD; FDD/TDD specific parameters
PhysicalCellId	PhysCellId		N(cell, ID): imported from core spec; -> cell specific reference signals (non-MBSFN) -> scrambling of all DL physical channels: PBCH, PCFICH, PDCCH, PHICH and PDSCH (together with nRNTI)
eNB_CellId	CellIdentity	opt	Placeholder for Cell identity (28 bits): eNB (20bits) and cell identity (8bits). The use of that field is for future usage and omit for the time being
EutraBand	FreqBandIndicator		NOTE: in 3G there are overlapping bands therefore the band needs to be provided; in EUTRA it is provided as well to be extendable in the future
CellTimingInfo	CellTimingInfo_Type		

EUTRA_TDD_Info_Type

TTCN-3 Record Type			
Name	**EUTRA_TDD_Info_Type**		
Comment			
Configuration	TDD_Config_Type		TDD_Config acc. to RRC ASN.1 (acc. TS 36.331, clause 6.3.2)

EUTRA_HalfDuplexFDD_Info_Type

TTCN-3 Record Type	
Name	**EUTRA_HalfDuplexFDD_Info_Type**
Comment	NOTE: for the time being there is no test case or test configuration using half duplex FDD; (type definition is used as place holder only)

EUTRA_RAT_Type

TTCN-3 Union Type		
Name	**EUTRA_RAT_Type**	
Comment	specifies RAT type and frame structure (TS 36.211, clause 4)	
FDD	EUTRA_FDD_Info_Type	
TDD	EUTRA_TDD_Info_Type	
HalfDuplexFDD	EUTRA_HalfDuplexFDD_Info_Type	

CellTimingInfo_Type

TTCN-3 Record Type			
Name	**CellTimingInfo_Type**		
Comment	Cell Timing		
Tcell	integer (0..307199)		frame duration Tf = 307200 * Ts = 10ms; System Time Unit Ts = 1/(15000 * 2048)
SfnOffset	integer (0..1023)		(assuming 10 bit SFN)

DownlinkStaticCellInfo_Type

TTCN-3 Record Type			
Name	**DownlinkStaticCellInfo_Type**		
Comment	DL Static Info		
Earfcn	ARFCN_ValueEUTRA		DL-EARFCN as defined in TS 36.101
Bandwidth	Dl_Bandwidth_Type		N(DL, RB) = 6..110 (6, 15, 25, 50, 75, 100)
RBSize	EUTRA_RBSize_Type		may be skipped assuming normal sub-carrier spacing => N(RB, SC) = 12
CyclicPrefix	EUTRA_CyclicPrefix_Type		

UplinkStaticCellInfo_Type

TTCN-3 Record Type			
Name	**UplinkStaticCellInfo_Type**		
Comment	UL Static Info		
Earfcn	ARFCN_ValueEUTRA		UL-EARFCN as defined in TS 36.101
Bandwidth	Ul_Bandwidth_Type		N(DL, RB) = 6..110 (6, 15, 25, 50, 75, 100)
CyclicPrefix	EUTRA_CyclicPrefix_Type		

EUTRA_RBSize_Type

TTCN-3 Enumerated Type	
Name	**EUTRA_RBSize_Type**
Comment	Resource Block Size in freq domain; N(RB,SC) is 12 for normal sub-carrier spacing
n_RB_SC_12	
n_RB_SC_24	

EUTRA_CyclicPrefix_Type

TTCN-3 Enumerated Type	
Name	**EUTRA_CyclicPrefix_Type**
Comment	NOTE: in DL extended cyclic prefix depends on sub-carrier spacing
normal	
extended	

Modulation_Type

TTCN-3 Enumerated Type	
Name	**Modulation_Type**
Comment	'unused' e.g. for 2nd codeword when there is no spatial multiplexing
unused	
qpsk	
qam16	
qam64	

Attenuation_Type

TTCN-3 Union Type		
Name	**Attenuation_Type**	
Comment	attenuation of the reference power	
Value	integer (0..144)	cell power reference power reduced by the given attenuation (value is in dB)
Off	Null_Type	even though in TS 36.508 -145dBm is given for a non suitable cell we specify an explicit "Off" value here

ToRS_EPRE_Ratios_Type

TTCN-3 Record Type			
Name	**ToRS_EPRE_Ratios_Type**		
Comment	RA and RB ratios according to see TS 36.213, clause 5.2		
RA	ToRS_EPRE_Ratio_Type	opt	
RB	ToRS_EPRE_Ratio_Type	opt	

InitialCellPower_Type

TTCN-3 Record Type			
Name	**InitialCellPower_Type**		
Comment			
MaxReference Power	AbsoluteCellPower_Type		maximum value of cell reference power (RS EPRE in dBm/15kHz as per TS 36.508, clause 4.3.4.1); a cell is initialised with this reference power; its value is the upper bound of the cell power during the test case
Attenuation	InitialAttenuation_Type		initial attenuation

D.1.3.2 Downlink_Physical_Layer_Configuration

Downlink physical layer configuration:
- DL antenna configuration
- control region (PCFICH, PHICH, PDCCH)
- primary/secondary sync signals
- power control for physical channels and signals

D.1.3.2.1 Antenna_Configuration

Antenna_Configuration: Basic Type Definitions

TTCN-3 Basic Types		
AntennaPortId_Type	integer (0, 1, 2, 3, 4, 5, 6)	Antenna port 0..3: Cell specific reference signals Antenna port 4: MBSFN reference signals Antenna port 5: UE specific reference signals Antenna port 6: Positioning reference signals (Antenna ports in DL acc. to 36.211 cl. 6.2.1)

AntennaPortInfo_Type

TTCN-3 Record Type			
Name	**AntennaPortInfo_Type**		
Comment	NOTE: for conformance tests it may not be necessary to consider propagation pathes for different antennas; => fields of AntennaPortInfo_Type are used as place holders for future usage and are of 'Dummy_Type' for the time being		
PowerAttenuation	Dummy_Type		even though eNb shall send with the same power on all antennas at the UE there may be different signal strength => RS will have reduced power NOTE: the EPRE ratios (e.g. PDSCH-to-RS ratio) are assumed to be equal for all antennas
PropagationDelay	Dummy_Type		signal from different antennas may have different propagation delay

AntennaPortConfig_Type

TTCN-3 Union Type		
Name	**AntennaPortConfig_Type**	
Comment		
AddOrReconfigure	AntennaPortInfo_Type	add / re-configure antenna port
Release	Null_Type	release antenna port

AntennaPort_Type

TTCN-3 Record Type			
Name	**AntennaPort_Type**		
Comment			
Id	AntennaPortId_Type		
Config	AntennaPortConfig_Type		

DownlinkAntennaGroupConfig_Type

TTCN-3 Record Type			
Name	**DownlinkAntennaGroupConfig_Type**		
Comment			
AntennaInfoCommon	AntennaInfoCommon_Type		acc. to TS 36.331, clause 6.3.2; contains antennaPortsCount = an1, an2, an4; static parameter; will (normally) not be modified whilst a test; NOTE: information is redundant since number of antenna ports may implicitly be determined by the number of ports being configured
AntennaPort	record length (1..4) of AntennaPort_Type		1, 2 or 4 antennas; from the UE's point of view each antenna may have a different power level and a different propagation delay

D.1.3.2.2 Physical_Channels

PbchConfig_Type

TTCN-3 Record Type			
Name	**PbchConfig_Type**		
Comment			
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PBCH's resource elements relative to the RS

PcfichConfig_Type

TTCN-3 Record Type			
Name	**PcfichConfig_Type**		
Comment			
CfiValue	CfiValue_Type	opt	control format indicator signalled on PCFICH
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PFCICH's resource elements relative to the RS

PhichConfig_Type

TTCN-3 Record Type			
Name	**PhichConfig_Type**		
Comment			
PhichConfig	PHICH_Config_Type	opt	parameters acc. TS 36.331, clause 6.3.2: phich-Duration, phich-Resource; may have impact on Cfi
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PHICH's resource elements relative to the RS

CCE_StartIndex_DL_UL_Type

TTCN-3 Record Type			
Name	**CCE_StartIndex_DL_UL_Type**		
Comment	CCE_St_Ind' or CCE_St_Ind'' acc. to table 7.1.1-1 in TS 36.523-3		
CCE_StartIndex_DL	integer		
CCE_StartIndex_UL	integer		

CCE_StartIndexList_Type

TTCN-3 Record of Type	
Name	**CCE_StartIndexList_Type**
Comment	describes PDCCH candidates for all sub-frames
record length(10) of CCE_StartIndex_DL_UL_Type	

PdcchCandidate_Type

TTCN-3 Record Type			
Name	**PdcchCandidate_Type**		
Comment	CCE start indeces for a given RNTI value acc. to table 7.1.1-1 in TS 36.523-3		
RNTI	C_RNTI		RNTI value as per table 7.1.1-1
CCE_StartIndexList	CCE_StartIndexList_Type		CCE Start Indices corresponding to the RNTI

PdcchCandidateList_Type

TTCN-3 Record of Type	
Name	**PdcchCandidateList_Type**
Comment	list of RNTIs and their corresponding CCE Start Indices
record of PdcchCandidate_Type	

PdcchConfig_Type

TTCN-3 Record Type			
Name	**PdcchConfig_Type**		
Comment	UE performs blind detection for common and UE specific search spaces for different aggregation levels (PDCCH formats acc. TS 36.211, clause 6.8.1) content of the PDCCHs (DCI formats acc. TS 36.212, clause 5.3.3) shall be controlled together with scheduling and resource allocation		
CommonSearchSpaceFormat	integer (2, 3)	opt	PDCCH format for common search space; acc. to TS 36.213, clause 9.1.1 only aggregation level 4 and 8 are allowed (i.e. PDCCH format 2 and 3
UeSpecificSearchSpaceFormat	integer (0, 1, 2, 3)	opt	UE specific search space: corresponding aggregation levels 1, 2, 4, 8
PdcchCandidateList	PdcchCandidateList_Type	opt	PDCCH candidate list acc. to table 7.1.1-1 in TS 36.523-3
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PDCCH's resource elements relative to the RS

PdschRelativeTxPower_Type

TTCN-3 Record Type			
Name	**PdschRelativeTxPower_Type**		
Comment	NOTE 1: the power control for the PDSCH is assumed to be (semi-)static for signalling conformance tests acc. to TS 36.323; nevertheless for different channels and purposes with the PDSCH there may be different power settings; NOTE 2: acc. to TS 36.213, clause 5.2 the EPRE ratio is different in time domain for OFDM symbols containing or not containing reference signals; this needs to be considered by SS		
RachResponse	ToRS_EPRE_Ratios_Type	opt	
BcchOnPdsch	ToRS_EPRE_Ratios_Type	opt	
PcchOnPdsch	ToRS_EPRE_Ratios_Type	opt	
CcchOnPdsch	ToRS_EPRE_Ratios_Type	opt	
DcchDtchOnPdsch	ToRS_EPRE_Ratios_Type	opt	

PdschConfig_Type

TTCN-3 Record Type			
Name	**PdschConfig_Type**		
Comment			
RelativeTxPower	PdschRelativeTxPower_Type	opt	

D.1.3.2.3 Physical_Signals

PrimarySyncSignal_Type

TTCN-3 Record Type			
Name	**PrimarySyncSignal_Type**		
Comment			
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PSS's resource elements relative to the RS

SecondarySyncSignal_Type

TTCN-3 Record Type			
Name	**SecondarySyncSignal_Type**		
Comment			
RelativeTxPower	ToRS_EPRE_Ratios_Type	opt	power ratio for PSS's resource elements relative to the RS

SRS_UL_Config_Type

TTCN-3 Record Type			
Name	**SRS_UL_Config_Type**		
Comment			
Common	SoundingRS_UL_ConfigCommon_Type		
Dedicated	SoundingRS_UL_ConfigDedicated_Type		

PhysicalLayerConfigDL_Type

TTCN-3 Record Type			
Name	**PhysicalLayerConfigDL_Type**		
Comment	all fields are declared as optional to allow single reconfigurations; in this case omit means "keep as it is"		
AntennaGroup	DownlinkAntennaGroupConfig_Type	opt	
Pbch	PbchConfig_Type	opt	
Pcfich	PcfichConfig_Type	opt	
Phich	PhichConfig_Type	opt	
Pdcch	PdcchConfig_Type	opt	
Pdsch	PdschConfig_Type	opt	
Pss	PrimarySyncSignal_Type	opt	
Sss	SecondarySyncSignal_Type	opt	
CSI_RS_Config	CSI_RS_Config_Type	opt	Mandatory to be configured in CA PCell; in other cells if present SS shall ignore it but shall apply the configuration if the cell is promoted as PCell later on.

D.1.3.3 Uplink_Physical_Layer_Configuration

Uplink physical channel configuration: PRACH, PUCCH, PUSCH and UL RS

PUCCH_Configuration_Type

TTCN-3 Record Type			
Name	**PUCCH_Configuration_Type**		
Comment			
Common	PUCCH_ConfigCommon_Type	opt	
Dedicated	PUCCH_ConfigDedicated_Type	opt	

PUSCH_Configuration_Type

TTCN-3 Record Type			
Name	**PUSCH_Configuration_Type**		
Comment			
Common	PUSCH_ConfigCommon_Type	opt	
Dedicated	PUSCH_ConfigDedicated_Type	opt	

SS_TimingAdvanceConfig_Type

TTCN-3 Union Type		
Name	**SS_TimingAdvanceConfig_Type**	
Comment		
InitialValue	RACH_TimingAdvance_Type	initial value corresponding to what is sent to the UE in RACH response (range acc. 11 bit value; 0 in normal cases)
Relative	TimingAdvanceIndex_Type	timing advance command to adjust changes of timing advance acc. to TS 36.213, clause 4.2.3; (range acc. 6 bit value: -31..32)

PhysicalLayerConfigUL_Type

TTCN-3 Record Type			
Name	**PhysicalLayerConfigUL_Type**		
Comment	NOTE: For the time being there is no requirement to configure the SS with TPC-PDCCH-Config; In general SS is required to keep the UE's UL power constant		
Prach	PRACH_Config_Type	opt	parameters acc. TS 36.331, clause 6.3.2; in general depending on FDD/TDD (see TS 36.211, clause 5.7)
Pucch	PUCCH_Configuration_Type	opt	parameters acc. TS 36.331, clause 6.3.2
Pusch	PUSCH_Configuration_Type	opt	parameters acc. TS 36.331, clause 6.3.2 (including configuration of RS)
TimingAdvance	SS_TimingAdvanceConfig_Type	opt	to adjust timing advance; normally timing advance is configured as 0 at the beginning and never changed during the test case; in some MAC test cases timing advance may be configured to a non-zero (11 bit value) at the beginning and modified by (6 bit) timing advance commands during the test
SRS_UL_Config	SRS_UL_Config_Type	opt	sounding reference symbol (SRS); -> TS 36.213, clause 8.2, TS 36.211, clause 5.5.3
SR_Config	SchedulingRequestConfig_Type	opt	PUCCH resources for scheduling requests acc. to TS 36.213 table 10.15; as signalled to the UE acc. to TS 36.331, clause 6.3.2
CQI_ReportConfig	CQI_ReportConfig_Type	opt	
UplinkPowerControlCommon	UplinkPowerControlCommon_Type	opt	
UplinkPowerControlDedicated	UplinkPowerControlDedicated_Type	opt	

D.1.3.4 Common_MAC_Configuration

Transport channel and MAC related procedures and configuration

Common_MAC_Configuration: Basic Type Definitions

TTCN-3 Basic Types		
ImcsValue_Type	integer (0..31)	Modulation and coding scheme index coding
TimingAdvanceIndex_Type	integer (0..63)	acc. to TS 36.321, clause 6.1.3.5 "Timing Advance Command MAC Control Element" and TS 36.213, clause 4.2.3 "Transmission timing adjustments"
TimingAdvance_Period_Type	integer (400, 600, 1020, 1530, 2040, 4090, 8190)	the values correspond to 80 % of TimeAlignmentTimer (acc. to TS 36.523-3, clause 7.2) (TS 36.331, clause 6.3.2: sf500, sf750, sf1280, sf1920, sf2560, sf5120, sf10240) rounded to nearest multiple of 10

RedundancyVersionListDL_Type

TTCN-3 Record of Type	
Name	**RedundancyVersionListDL_Type**
Comment	NOTE: in general the list shall contain maxHARQ-Tx elements; if there are not enough elements specified SS shall raise an error; per default the list is configured to 0,2,3,1,0 (TS 36.321, clause 5.4.2.2)
record length (1..28) of RedundancyVersion_Type	

UL_TransRetransmission_Type

TTCN-3 Union Type		
Name	**UL_TransRetransmission_Type**	
Comment		
NewTransmission	Null_Type	new transmission of data with redundancy version RV=0 (acc. to TS 36.321 clause 5.4.2.2); NDI is toggled
ReTransmissionAdaptive	RedundancyVersion_Type	SS assigns grant to requests retransmission of data with given redundancy version; NDI is not toggled
ReTransmissionNonAdaptive	Null_Type	place holder for non-adaptive retransmissions; SS does not send any grant

UL_TransRetransmissionList_Type

TTCN-3 Record of Type	
Name	**UL_TransRetransmissionList_Type**
Comment	list of transmission and subsequent retransmissions: in UL retransmissions are synchronous (every 8 TTIs for FDD); independent from the HARQ_ModeList SS shall send grants for every adaptive retransmissions; in case of non-adaptive retransmissions SS simply does not sent a grant (i.e. ReTransmissionNonAdaptive elements are used to adjust timing of the adaptive restransmissions only)
record length (1..28) of UL_TransRetransmission_Type	

Imcs_Type

TTCN-3 Union Type		
Name	**Imcs_Type**	
Comment		
Value	ImcsValue_Type	
NotUsed	Null_Type	

ULGrant_Period_Type

TTCN-3 Union Type		
Name	**ULGrant_Period_Type**	
Comment		
OnlyOnce	Null_Type	grant is sent out only once; no period
Duration	integer (1..infinity)	duration of the grant period (TTI=1ms); for TDD the starting time and periodicity need to be chosen in TTCN so that the grants are assigned at valid subframes only; otherwise SS shall raise an error

TransmissionRepetition_Type

TTCN-3 Union Type		
Name	**TransmissionRepetition_Type**	
Comment		
Continuous	Null_Type	
NumOfCycles	integer (1..infinity)	

PUCCH_AutoSynch_Type

TTCN-3 Record Type			
Name	**PUCCH_AutoSynch_Type**		
Comment			
TimingAdvance	TimingAdvanceIndex_Type		
TA_Period	TimingAdvance_Period_Type		time period after which TA MAC control elements need to be automatically transmitted
TA_Repetition	TransmissionRepetition_Type		number of TA MAC control element repetitions to be automatically transmitted or 'Continuous'

PUCCH_Synch_Type

TTCN-3 Union Type		
Name	**PUCCH_Synch_Type**	
Comment		
None	Null_Type	no PUCCH Synchronisation applied
Auto	PUCCH_AutoSynch_Type	SS automatically maintains PUCCH synchronization at UE

FreqDomainSchedulCommon_Type

TTCN-3 Record Type			
Name	**FreqDomainSchedulCommon_Type**		
Comment	common type to specify restrictions for frequency domain scheduling by a start index and a maximum range of RBs; in general the resource allocation refers to virtual resource blocks: - format 1A (localised): FirstRbIndex refers to the first physical RB; the RBs are subsequent (upto MaxRbCnt RBs); may be applied for all kind of channels - format 1C (distributed): FirstRbIndex refers to the first virtual RB; the virtual RBs are subsequent (upto MaxRbCnt RBs) but mapped (distributed) to physical resource; typically applied on BCCH, PCCH and RAR - format 1 (localised): FirstRbIndex refers to the first physical RB; RBs are not consecutive; SS needs to provided bitmap of RBs (see TS 36.523-3) to cope with mapping of virtual resource allocation (format 1C) applied on other channels; typically there are either - all channels having format 1A (localised) - BCCH, PCCH and RAR having format 1C (distributed) + DTCH/DCCH having format 1		
FirstRbIndex	integer		index of the first (vitual) resource block in frequency domain; 0 .. N(UL/DL, RB) - 1; NOTE: DCI format 1C refers to a virtual RB allocation i.e. the resource block index; differs from the physical resource allocation where the RBs are distributed over the whole frequency bandwidth (TS 36.213, clause 7.1.6.3)
MaxRbCnt	integer		max. number of resource blocks to be assigned; FirstRbIndex + MaxRbCnt <= N(UL/DL, RB); SS shall not assigned more than the given resource blocks to the respective channel (i.e. MaxRbCnt is the upper bound); if the the configuration for a channel exceeds the total bandwidth this is a TTCN error (=> SS shall raise an error)

FreqDomainSchedulExplicit_Type

TTCN-3 Record Type			
Name	**FreqDomainSchedulExplicit_Type**		
Comment	type used for explicit DL scheduling; Nprb is the exact nunber of RBs whereas in FreqDomainSchedulCommon_Type MaxRbCnt is the upper bound		
FirstRbIndex	integer		index of the first resource block in frequency domain; 0 .. N(UL/DL, RB) - 1
Nprb	integer		number of resource blocks to be assigned;

PdcchDciFormat_Type

TTCN-3 Enumerated Type	
Name	**PdcchDciFormat_Type**
Comment	DCI format acc. to TS 36.212, clause 5.3.3.1; SS shall apply physical parameters accordingly as specified in TS 36.508, clause 4.3.6
dci_0	physical layer parameters acc. TS 36.508 Table 4.3.6.1.1-1
dci_1	physical layer parameters acc. TS 36.508 Table 4.3.6.1.2-1
dci_1A	physical layer parameters acc. TS 36.508 Table 4.3.6.1.3-1
dci_1B	
dci_1C	physical layer parameters acc. TS 36.508 Table 4.3.6.1.4-1
dci_1D	
dci_2	physical layer parameters acc. TS 36.508 Table 4.3.6.1.5-1
dci_2A	physical layer parameters acc. TS 36.508 Table 4.3.6.1.6-1
dci_3	
dci_3A	

PdcchResourceAllocation_Type

TTCN-3 Enumerated Type	
Name	**PdcchResourceAllocation_Type**
Comment	Resource allocation acc. TS 36.213, clause 7.1.6
ra_0	
ra_1	
ra_2_Localised	=> physical and virtual RB index are identical
ra_2_Distributed	=> virtual resource allocation

MIMO_PrecodingBits_Type

TTCN-3 Union Type		
Name	**MIMO_PrecodingBits_Type**	
Comment	Number of bits for precoding information acc. TS 36.212, table 5.3.3.1.5-3 and 5.3.3.1.5A-1	
None	Null_Type	DCI 2A: 2 antenna ports at eNodeB (table 5.3.3.1.5A-1)
Bit2	B2_Type	DCI 2A: 4 antenna ports at eNodeB (table 5.3.3.1.5A-1)
Bit3	B3_Type	DCI 2: 2 antenna ports at eNodeB (table 5.3.3.1.5-3)
Bit6	B6_Type	DCI 2: 4 antenna ports at eNodeB (table 5.3.3.1.5-3)

MIMO_DciDlInfo_Type

TTCN-3 Record Type			
Name	**MIMO_DciDlInfo_Type**		
Comment	additional information for DL DCI in case of MIMO (i.e. when a 2nd CW is specified)		
RedundancyVersionList_2ndCW	RedundancyVersionListDL_Type	opt	list of Redundancy version for 2nd code word; shall have the same length as RedundancyVersionList_1stCW; if omit, for the 2nd CW the same RedundancyVersionList shall be applied as for the 1st CW
CodeWordSwapFlag	B1_Type		transport block to codeword mapping acc. to TS 36.212 Table 5.3.3.1.5-1
PrecodingBits	MIMO_PrecodingBits_Type		precoding information acc. TS 36.212, table 5.3.3.1.5-3 and 5.3.3.1.5A-1

DciDlInfoCommon_Type

TTCN-3 Record Type			
Name	**DciDlInfoCommon_Type**		
Comment	used for normal DL scheduling acc. to TS 36.523-3, clause 7.3		
Format	PdcchDciFormat_Type		BCCH, PCCH and RACH Response: 1A or 1C (TS 36.213, clause 7.1) CCCH: 1A since transmission mode is not (may not be) configured at the UE yet (TS 36.213, clause 7.1) DTCH/DCCH: depending on transmission mode
ResourceAllocType	PdcchResourceAllocation_Type		depends on DCI format, e.g. ra_2_Localised or ra_2_Distributed for DCI format 1A
Modulation_1stCW	Modulation_Type		max. modulation scheme for the 1st code word; depending on the amount of data a lower modulation scheme may be by SS but not a higher one; BCCH, PCCH and RACH Response: QPSK only
Modulation_2ndCW	Modulation_Type		modulation scheme for 2nd code word in case of spatial multiplexing; can be different than 1st code word (see TS 36.211, clause 6.3.2; TS 36.212, clause 5.3.3.1.5); 'unused' when there is no spatial multiplexing; NOTE: Acc. to 36.523-3 cl. 7.3.3.4 in normal mode MIMO shall not be used => for the time being Modulation_2ndCW is always "unused"
FreqDomainSchedul	FreqDomainSchedulCommon_Type		index of 1st RB; max. number of RBs per TTI; NOTE: in case of DCI format 1C the first RB index has no meaning since distributed virtual resource blocks assigned in this case (TS 36.213, clause 7.1.6.3)
RedundancyVersionList	RedundancyVersionListDL_Type		list of Redundancy version to be used in case of retransmission; the number of elements in the list provides the maxHARQ-Tx

DciDlInfoExplicit_Type

TTCN-3 Record Type			
Name	**DciDlInfoExplicit_Type**		
Comment	used for explicit DL scheduling acc. to TS 36.523-3, clause 7.3		
Imcs_1stCW	Imcs_Type		MCS index of table 7.1.7.1-1 of TS 36.213
Imcs_2ndCW	Imcs_Type		MCS index for the 2nd code word in case of MIMO; 'NotUsed' when MIMO is not used
Format	PdcchDciFormat_Type		
ResourceAllocType	PdcchResourceAllocation_Type		
FreqDomainSchedul	FreqDomainSchedulExplicit_Type		
RedundancyVersionList	RedundancyVersionListDL_Type		list of Redundancy version to be used in case of retransmission the number of elements in the list provides the maxHARQ-Tx
MimoInfo	MIMO_DciDlInfo_Type	opt	shall be present when Imcs_2ndCW specifies a 2nd CW to be used; shall be omit when Imcs_2ndCW is 'NotUsed'

DciDlInfo_Type

TTCN-3 Union Type		
Name	**DciDlInfo_Type**	
Comment		
Auto	DciDlInfoCommon_Type	SS shall chose the appropriate TBS up to the maximim number of resource blocks
Explicit	DciDlInfoExplicit_Type	used in MAC or RAB tests where exact TBS needs to be specified

DciUlInfo_Type

TTCN-3 Record Type			
Name	**DciUlInfo_Type**		
Comment			
Imcs	Imcs_Type		MCS index of table 8.6.1-1 of TS 36.213
TransRetransmissionList	UL_TransRetransmissionList_Type		list of possible retransmissions and their redundancy versions (depending on being adapive or non-adaptive); the list shall - start with - "New Transmission" (normal case) or - "Adaptive Retransmission" (e.g. to request a retransmission even when the data has been acknowledged with a HARQ ACK) - end with "Adaptive Retransmission" (if there are retransmissions) NOTE1: TTCN implementation shall ensure that a reconfiguration is done not before the previous list has been fully processed NOTE2: for normal operation the list contains only one NewTransmission element (i.e. possible retransmissions are non-adaptive)
FreqDomainSchedul	FreqDomainSchedulExplicit_Type		

PeriodicGrant_Type

TTCN-3 Record Type			
Name	**PeriodicGrant_Type**		
Comment			
Period	ULGrant_Period_Type		time period after which UL Grant need to be automatically transmitted or 'OnlyOnce'
NoOfRepetitions	TransmissionRepetition_Type		number of UL Grant repetitions to be automatically transmitted or continuous repetition

UL_GrantConfig_Type

TTCN-3 Union Type		
Name	**UL_GrantConfig_Type**	
Comment		
OnSR_Reception	Null_Type	SS tranmits UL Grant as configured by CommonDciInfoUL_Type at every reception of SR; to be used in non L2 Test
Periodic	PeriodicGrant_Type	SS tranmits UL Grant as configured by CommonDciInfoUL_Type periodically; to be used in L2 tests; MAC tests testing Grants might set the period as infinite and num grant as 1
None	Null_Type	disable any grant transmission

D.1.3.5 Random_Access_Procedure

EUTRA_ASP_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_RandomAccessResponseListSize	integer	10	arbitrary value (needs to be extended, if necessary); in case of RACH in idle, UE will keep on making RACH attempts until t300 expires => number of PRACH preambles maybe even greater than maximum value of PREAMBLE_TRANS_MAX

Random_Access_Procedure: Basic Type Definitions

TTCN-3 Basic Types		
RACH_TimingAdvance_Type	integer (0..2047)	11 bit timing advance as used in RACH response (absolute value)

UplinkGrant_Type

TTCN-3 Record Type			
Name	**UplinkGrant_Type**		
Comment	TS 36.213, clause 6.2		
HoppingFlag	B1_Type		Hopping flag
RB_Allocation	B10_Type		Fixed size resource block assignment
ModAndCodScheme	B4_Type		Truncated modulation and coding scheme
TPC_Command	B3_Type		TPC command for scheduled PUSCH
UL_Delay	B1_Type		UL delay
CQI_Req	B1_Type		CQI request

ContentionResolution_ContainedRlcPdu_Type

TTCN-3 Union Type		
Name	**ContentionResolution_ContainedRlcPdu_Type**	
Comment		
RlcPdu	octetstring	octetstring of an RLC PDU containing e.g. the RRC Connection Setup; to be sent in the same MAC PDU as the MAC Contention Resolution Control Element
None	Null_Type	MAC PDU containing the MAC Contention Resolution Control Element does not contain an RLC PDU (i.e. RRC Connection Setup is sent in another PDU)

ContentionResolution_ContainedId_Type

TTCN-3 Union Type		
Name	**ContentionResolution_ContainedId_Type**	
Comment		
XorMask	ContentionResolutionId_Type	When SS receives Contention Resolution ID from the UE, SS shall XOR it with the given mask and use this as Contention Resolution ID; this allows to get an unmatching Contention Resolution ID; in normal cases mask shall be set to tsc_ContentionResolutionId_Unchanged (i.e. the Contention Resolution ID remains unchanged)
None	Null_Type	MAC Contention Resolution Control Element is not contained in the MAC PDU sent out as response on Msg3

TCRNTI_ContentionResolutionMacPdu_Type

TTCN-3 Record Type			
Name	**TCRNTI_ContentionResolutionMacPdu_Type**		
Comment	NOTE: Either ContainedId or ContainedRlcPdu (or both) shall not be 'none'; (if no Contention Resolution Mac Pdu shall be sent, TCRNTI_ContentionResolutionCtrl_Type.NoContResolID shall be used instead)		
ContainedId	ContentionResolution_ContainedId_Type		Either the Contention Resolution ID as received from the UE or a modified Contention Resolution ID (XorMask != tsc_ContentionResolutionId_Unchanged) or no Contention Resolution ID at all
ContainedRlcPdu	ContentionResolution_ContainedRlcPdu_Type		the MAC PDU containing the MAC Contention Resolution Control Element may contain the RRC Connection Setup; in this case the RRC PDU shall be completely encoded been contained in an RLC PDU

TCRNTI_ContentionResolutionCtrl_Type

TTCN-3 Union Type		
Name	**TCRNTI_ContentionResolutionCtrl_Type**	
Comment	when the UE responds on a Random Access Response with a RRC Connection Request on CCCH and not with a C-RNTI SS shall assume initial Random Access Procedure (TS 36.300, clause 10.1.5.1), i.e. sends a ContentionResolutionId back to the UE	
MacPdu	TCRNTI_ContentionResolutionMacPdu_Type	MAC PDU containing the Contention Resolution ID and optionally an RRC PDU (RRC Connection Setup)
MacPdu_CRC_Error	TCRNTI_ContentionResolutionMacPdu_Type	same as MacPdu (see above), but SS shall generate CRC error by toggling CRC bits; no retransmissions shall be made as UE shall not send a NACK
NoContResolID	Null_Type	SS shall not include contention resolution ID (i.e. no MAC PDU shall be sent); used for contention resolution fail case

CRNTI_ContentionResolutionCtrl_Type

TTCN-3 Union Type		
Name	**CRNTI_ContentionResolutionCtrl_Type**	
Comment	configuration for Random Access Procedure in RRC_CONNECTED (see TS 36.300, clause 10.1.5.1); when SS receives C-RNTI MAC element sent by the UE after Random Access Response, SS shall deal with the C-RNTI as specified in this structure	
AutomaticGrant	DciUlInfo_Type	before expiry of the contention resolution timer SS shall automatically address PDCCH using C-RNTI as sent by the UE; the UL grant is specified acc. to DciUlInfo_Type
None	Null_Type	Used in case of dedicated preamble transmission or to simulate failure cases; SS shall not address PDCCH using C-RNTI => expiry of contention resolution timer on UE side

ContentionResolutionCtrl_Type

TTCN-3 Union Type		
Name	**ContentionResolutionCtrl_Type**	
Comment	NOTE: SS only needs to consider one kind of contention resolution at one time; in the initial configuration of a cell TCRNTI_Based shall be configured and the common assuption is that in RRC_CONNECTED normally there are no RACH procedures (i.e. no CRNTI_Based configuration needed) whereas e.g. in case of handover scenarios CRNTI_Based shall be configured	
TCRNTI_Based	TCRNTI_ContentionResolutionCtrl_Type	TCRNTI based contention resolution (e.g. initial access), hence involves inclusion contention resolution identity in DL message 4 of RACH procedure
CRNTI_Based	CRNTI_ContentionResolutionCtrl_Type	CRNTI based contention resolution (e.g. in case UE is being in RRC_CONNECTED): hence uplink message in step 3 (of RACH procedure) is followed by PDCCH transmission with UE C-RNTI to end procedure

RapIdCtrl_Type

TTCN-3 Union Type		
Name	**RapIdCtrl_Type**	
Comment		
Automatic	Null_Type	SS shall automatically use same RAPID as received from the UE
Unmatched	Null_Type	SS shall use RAPID being different from preamble sent by the UE; SS shall calculate this RAPID acc. to RAPID := (RAPID + 3..63) mod 64 if single RAR is transmitted in a MAC PDU then only 3 is added if multiple RAR's are transmitted in MAC PDU, then for first unmatched RAR 3 is added, second unmatched 4 is added, third unmatched 5 is added and so on

TempC_RNTI_Type

TTCN-3 Union Type		
Name	**TempC_RNTI_Type**	
Comment		
SameAsC_RNTI	Null_Type	in the RA response SS shall use the same C-RNTI as configured in ActiveCellConfig_Type; this is useful for initial random access
Explicit	C_RNTI	in the RA response SS shall use different value as configured in ActiveCellConfig_Type; this can be used when the UE already is in RRC_CONNECTED to have a temporary C-RNTI different from the one used by the UE; NOTE: when the UE is not in RRC_CONNECTED there shall be no explicit temp. C-RNTI since then the UE would assume this value as C-RNTI

RandomAccessResponseParameters_Type

TTCN-3 Record Type			
Name	**RandomAccessResponseParameters_Type**		
Comment	paramenters to control content of RAR sent to the UE		
RapId	RapIdCtrl_Type		to control Random Access Preamble Id to be sent back to the UE; used in RAR MAC sub-header
InitialGrant	UplinkGrant_Type		initial UL grant
TimingAdvance	RACH_TimingAdvance_Type		timing advance: granularity of 0.52 micro sec (16*Ts); see TS 36.300, clause 5.2.7.3, TS 36.321, clause 6.1.3.5; NOTE: timing advance has impact not only on the RA procedure; SS in general needs to adjust its timing accordingly
TempC_RNTI	TempC_RNTI_Type		NOTE: For initial Random Access Procedure at network (SS) side there is no temporary C-RNTI: network assigns the C-RNTI which is used by any UE as being temporary; the UE which 'wins' the contention resolution keeps the (temporary) C-RNTI; other UEs need to repeat the RACH procedure; => at the SS the TempC_RNTI shall be 'SameAsC_RNTI' For Random Access Procedure in RRC_CONNECTED state the NW assigns a temporary C-RNTI which is replaced by the one stored at the UE; => TempC_RNTI may be 'SameAsC_RNTI' (in this case temp. C-RNTI and C-RNTI are equal what is not likely in a real network), or there is an explicit temp. C-RNTI what is used during RA procedure only (as in a real network)

RarList_Type

TTCN-3 Record of Type	
Name	**RarList_Type**
Comment	in general MAC PDU may contain one or several RARs; normally only one RAR is contained
record of RandomAccessResponseParameters_Type	

RandomAccessResponse_Type

TTCN-3 Union Type		
Name	**RandomAccessResponse_Type**	
Comment		
None	Null_Type	used for unsuccessful RA procedure
List	RarList_Type	normally one RAR to be sent to the UE; in general there can be more than one RAR

RandomAccessBackoffIndicator_Type

TTCN-3 Union Type		
Name	**RandomAccessBackoffIndicator_Type**	
Comment		
None	Null_Type	normal case, no back off indicator included
Index	integer (0..15)	Backoff Parameter values acc. TS 36.321, clause 7.2; values 0..12 are defined, 13..15 may be used in error case

RandomAccessResponseCtrl_Type

TTCN-3 Record Type			
Name	**RandomAccessResponseCtrl_Type**		
Comment	configuration for Random Access Response mapped to DL-SCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversit else; RNTI: RA-RNTI (TS 36.321, clause 7.1); if both RAR msg and backoff indicator are 'None' SS shall not respond on RAP		
DciInfo	DciDlInfoCommon_Type		DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI
Rar	RandomAccessResponse_Type		RAR to be sent to the UE
BackoffInd	RandomAccessBackoffIndicator_Type		possible backoff indicator; 'None' for normal cases

RandomAccessResponseConfig_Type

TTCN-3 Union Type		
Name	**RandomAccessResponseConfig_Type**	
Comment		
Ctrl	RandomAccessResponseCtrl_Type	contains information to control sending of RAR
Ctrl_CRC_Error	RandomAccessResponseCtrl_Type	same as Ctrl (see above), but MAC PDU transmitted will contain CRC bits (0-3) being toggled; no retransmissions shall be made as UE shall not send a NACK
None	Null_Type	to be used when there is no RAR to be sent at all

RachProcedure_Type

TTCN-3 Record Type			
Name	**RachProcedure_Type**		
Comment			
RAResponse	RandomAccessResponseConfig_Type		control of how the SS shall react on RA preamble; this may be - the RAP id as expected by the UE - a RAP id not matching to the UE's RAP - a backoff indicator - nothing at all
ContentionResolutionCtrl	ContentionResolutionCtrl_Type		

RachProcedureList_Type

TTCN-3 Record of Type	
Name	**RachProcedureList_Type**
Comment	to simulate RACH procedure with one or more than one attempt by the UE: 1. Normal cases: one single RandomAccessResponse is sent to the UE matching the UE's RACH preamble; contention resolution is successful immediately => list contains only one element which is used for any RA procedure (Even if a RACH procedure is repeated by the UE for any reason this element shall be used; e.g. it needs not to be handled as error when the UE sends another RACH preamble instead of the RRC connection request message) 2. Special cases: there are upto tsc_RandomAccessResponseListSize preambles sent by the UE => there are upto tsc_RandomAccessResponseListSize responses to be configured as elements of the list; SS shall start with the first element in the list and use the RAR as specified in this element; if the RAR matches at the UE side the UE will send UL data and contention resolution is performed as configured for this element; if the RAR does not match the UE sends another RAP and SS continues with the next element in the list; in this case the contention resolution of the respective element is not used; if the end of the list is reached and further RACH preambles are sent by the UE SS shall repeatively apply the last element of the list (this is necessary because there might be not enough time to reconfigure SS after the end of the list has been reached and there shall be well-defined behaviour after the list has been processed); to change from a special mode to normal mode the RachProcedureList is reconfigured by TTCN to achieve transparency and readability of the code; NOTE: when there are RACH_ConfigDedicated configured (see below) and the RA preamble matches with one the configured ones the contention resolution ctrl is obsolete (non contention based random access procedure)
record length(1..tsc_RandomAccessResponseListSize) of RachProcedure_Type	

RachProcedureConfig_Type

TTCN-3 Record Type			
Name	**RachProcedureConfig_Type**		
Comment	parameters to control the random access procedure; TS 36.321, clause 5.1		
RACH_ConfigCommon	RACH_ConfigCommon_Type	opt	acc. TS 36.331, clause 6.3.2; may not be necessary for SS; omit: "keep as it is"
RACH_ConfigDedicated	RACH_ConfigDedicated_Type	opt	acc. TS 36.331, clause 6.3.2; when random access preamble sent by the UE matches with the configured one, SS shall assume the random access procedure being non-contention based; initial configuration: no RACH_ConfigDedicated are configured; omit means "keep as it is"
RachProcedureList	RachProcedureList_Type	opt	in normal cases there is one element which is used for any RA procedure; special cases are used in MAC test cases; omit means "keep as it is"

D.1.3.6 System_Information_Control

Primitive to configuration BCCH/BCH

System_Information_Control: Basic Type Definitions

TTCN-3 Basic Types		
BcchToPbchConfig_Type	Null_Type	place holder for BCCH mapped to BCH mapped to PBCH: MIB using fixed scheduling (periodicity: 40ms); transmission mode: single antenna port configuration (layer mapping acc. TS 36.211, clause 6.3.3.1) or transmit diversity (layer mapping acc. TS 36.211, clause 6.3.3.3) depending on antenna configuration

Sib1Schedul_Type

TTCN-3 Record Type			
Name	**Sib1Schedul_Type**		
Comment	SIB1: fixed scheduling in time domain acc. TS 36.331, clause 5.2.1.2 (periodicity: 80ms; repetitions every 20ms)		
DciInfo	DciDlInfoCommon_Type	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI

SingleSiSchedul_Type

TTCN-3 Record Type			
Name	**SingleSiSchedul_Type**		
Comment	specifies scheduling for a single SI in freq and time domain		
DciInfo	DciDlInfoCommon_Type	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI
SubframeOffset	integer	opt	offset within the SI-window; NOTE: SI-window may span more than one frame

SiSchedul_Type

TTCN-3 Record Type			
Name	**SiSchedul_Type**		
Comment	specifies for a specific SI scheduling and repetitions within as SI window		
Periodicity	SiPeriodicity_Type	opt	
Window	record of SingleSiSchedul_Type	opt	NOTE: acc. to TS 36.331, clause 5.2.1.2 the same SI may occur more than once in an SI-window; to allow this there is a "record of" even though acc. to TS 36.508, clause 4.4.3.3 all SIs are sent only once within the window

SiSchedulList_Type

TTCN-3 Record of Type	
Name	**SiSchedulList_Type**
Comment	
record length(1..maxSI_Message) of SiSchedul_Type	

AllSiSchedul_Type

TTCN-3 Record Type			
Name	**AllSiSchedul_Type**		
Comment			
WindowLength	SiWindowLength_Type	opt	to calculate start of each SI window acc. TS 36.331, clause 5.2.3
SiList	SiSchedulList_Type	opt	list of scheduling info for the SIs containing one ore more SIBs
SegmentedSiList	SiSchedulList_Type	opt	list of scheduling info for segmented SIs (e.g. SI containing SIB11); corresponds to SegmentedSIs in BcchInfo_Type: SS shall subsequently schedule the elements of the corresponding SegmentedSIs (BcchInfo_Type); e.g. SegmentedSiList[i] provided scheduling info for BcchInfo_Type's SegmentedSIs[i] and the kth element of SegmentedSIs[i] is sent at T0 + ((K * N) + k) * periodicity with K: number for segments k = 0 .. K-1 N = 0, 1, 2, ... T0, peridicity: scheduling info as given by SegmentedSiList[i]

BcchToPdschConfig_Type

TTCN-3 Record Type			
Name	**BcchToPdschConfig_Type**		
Comment	configuration for BCCH mapped to DL-SCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: SI-RNTI (TS 36.321, clause 7.1)		
Sib1Schedul	Sib1Schedul_Type	opt	scheduling of SIB1 in frequency domain
SiSchedul	AllSiSchedul_Type	opt	scheduling of SIs in frequency and time domain

SI_List_Type

TTCN-3 Record of Type	
Name	**SI_List_Type**
Comment	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message and clause 6.2.2 SystemInformation
record of BCCH_DL_SCH_Message	

SegmentedSI_List_Type

TTCN-3 Record of Type	
Name	**SegmentedSI_List_Type**
Comment	Each element is a list of segments; used for SIB11/12 segmentation
record of SI_List_Type	

BcchInfo_Type

TTCN-3 Record Type			
Name	**BcchInfo_Type**		
Comment	all fields are declared as optional to allow modification of single field; acc. to TS 36.331, clause 9.1.1.1 "RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5."; therefore this needs to be done by the system simulator		
MIB	BCCH_BCH_Message	opt	TS 36.331, clause 6.2.1 BCCH-BCH-Message and clause 6.2.2 MasterInformationBlock; NOTE: the sequence number included in MIB needs to be handled and maintained by the system simulator; that means that the sequence number being setup by TTCN will be overwritten by SS
SIB1	BCCH_DL_SCH_Message	opt	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message and clause 6.2.2 SystemInformationBlockType1
SIs	SI_List_Type	opt	list of SIs coerrsponding to SiList of AllSiSchedul_Type (i.e. element i of AllSiSchedul_Type's SiList specifies the scheduling for SIs[i])
SegmentedSIs	SegmentedSI_List_Type	opt	list of SIs containing segmented SIBs; corresponds to SegmentedSiList in AllSiSchedul_Type

BcchConfig_Type

TTCN-3 Record Type			
Name	**BcchConfig_Type**		
Comment	all fields are optional to allow single modifications; activation time may be applied in the common part of the ASP; NOTE 1: acc. to TS 36.331, clause 9.1.1.1 there is no PDCP and RLC/MAC are in TM NOTE 2: mapping/scheduling and contents of the System Information in general is done in one go (i.e. there are no separate ports for SIB data and configuration)		
Pbch	BcchToPbchConfig_Type	opt	
Pdsch	BcchToPdschConfig_Type	opt	
BcchInfo	BcchInfo_Type	opt	

D.1.3.7 Paging_Control

Primitive to configuration PCCH/PCH

PcchConfig_Type

TTCN-3 Record Type			
Name	**PcchConfig_Type**		
Comment	configuration for PCCH mapped to PCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: P-RNTI (TS 36.321, clause 7.1) NOTE: acc. to TS 36.331, clause 9.1.1.3 there is no PDCP and RLC/MAC are in TM		
DciInfo	DciDlInfoCommon_Type	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI

D.1.3.8 UE_Specific_Channel_Configuration

D.1.3.8.1 UE_Specific_Channel_Configuration_DL

Scheduling and other information for CCCH/DCCH/DTCH mapped to DL-SCH mapped to PDSCH

D.1.3.8.1.1 MIMO_Configuration

Precoding information for spatial multiplexing (DCI format 2)

PrecodingInfoForOneCodeWord_Type

TTCN-3 Union Type		
Name	**PrecodingInfoForOneCodeWord_Type**	
Comment	NOTE: not all index values may make sense (e.g. the indices refering to the values reported by the UE)	
TwoAntennasClosedLoop	integer (0..6)	index acc. to TS 36.212 Table 5.3.3.1.5-2; RI = 1; transmit diversity or code book index 0..3 acc. TS 36.211 Table 6.3.4.2.3-1
FourAntennasClosedLoop	integer (0..34)	index acc. to TS 36.212 Table 5.3.3.1.5-3; RI = 1..2; transmit diversity or code book index 0..15 acc. TS 36.211 Table 6.3.4.2.3-2
TwoAntennasOpenLoop	Null_Type	no precoding info; RI=1 when only codeword 1 is enabled
FourAntennasOpenLoop	integer (0..1)	index acc. to TS 36.212 Table 5.3.3.1.5-4 RI = 1..2; RI=1 => transmit diversity; RI=2 => large delay CDD

PrecodingInfoForTwoCodeWords_Type

TTCN-3 Union Type		
Name	**PrecodingInfoForTwoCodeWords_Type**	
Comment	NOTE: not all index values may make sense (e.g. the indices refering to the values reported by the UE)	
TwoAntennasClosedLoop	integer (0..2)	index acc. to TS 36.212 Table 5.3.3.1.5-2; RI = 2; code book index 1, 2 acc. TS 36.211 Table 6.3.4.2.3-1
FourAntennasClosedLoop	integer (0..50)	index acc. to TS 36.212 Table 5.3.3.1.5-3; RI = 2..4; code book index 0..15 acc. TS 36.211 Table 6.3.4.2.3-2
TwoAntennasOpenLoop	Null_Type	no precoding info; RI=2 when both codewords are enabled
FourAntennasOpenLoop	integer (0..2)	index acc. to TS 36.212 Table 5.3.3.1.5-4 RI = 2..4; large delay CDD

PrecodingInfoIndex_Type

TTCN-3 Union Type		
Name	**PrecodingInfoIndex_Type**	
Comment		
OneCodeWord	PrecodingInfoForOneCodeWord_Type	only codeword 1 shall be enabled in the DCI
TwoCodeWords	PrecodingInfoForTwoCodeWords_Type	both codewords shall be enabled in the DCI

PrecodingOperationMode_Type

TTCN-3 Enumerated Type	
Name	**PrecodingOperationMode_Type**
Comment	how to determine precoding information for spatial multiplexing is signalled on PDCCH with DCI format 2 and 2A (TS 36.212, clause 5.3.3.1.5)
hardcoded	SS shall apply configured precoding info as configured regardless RI and PMI reported by the UE
automatic	SS shall apply configured precoding info as long as there are no RI and PMI reported by the UE; when there are RI and PMI reported by the UE these shall be used

SpatialMultiplexingInfo_Type

TTCN-3 Record Type			
Name	**SpatialMultiplexingInfo_Type**		
Comment	NOTE: there may be codebookSubsetRestriction as signalled to the UE (TS 36.331, clause 6.3.2 AntennaInfoDedicated) to be considered		
OperationMode	PrecodingOperationMode_Type		
PrecodingIndex	PrecodingInfoIndex_Type		NOTE: contains information about number of code words to be used in DCI format 2

HarqProcessConfigDL_Type

TTCN-3 Union Type		
Name	**HarqProcessConfigDL_Type**	
Comment	HARQ processes to be used automatically for DL assignments	
AllProcesses	Null_Type	all HARQ processes shall be used for automatic assignmnet; this is the normal case
SpecificSubset	HarqProcessList_Type	only the HARQ processes of this list shall be used automatically, other processes are excluded from automatic assignments; nevertheless all HARQ processes may be addressed explicitly by DRB_DataPerSubframe_DL_Type.HarqProcess

CcchDcchDtchConfigDL_Type

TTCN-3 Record Type			
Name	**CcchDcchDtchConfigDL_Type**		
Comment	configuration for CCCH/DCCH/DTCH mapped to DL-SCH mapped to PDSCH TransmissionMode: as signalled to the UE (AntennaInfoDedicated in RRCConnectionSetup); RNTI: C-RNTI (TS 36.321, clause 7.1); all fields optional (omit = "keep as it is") since DCI format and modulation may be changed during a test; for initial configuration all fields are mandatory		
DciInfo	DciDlInfo_Type	opt	DCI format: 1A per default since for CCCH mimo cannot be applied in general ResourceAllocType: (depending on DCI format) Modulation: QPSK for signalling Frequency domain schedule: index of 1st RB; max. number of RBs per TTI; in case of spatial multiplexing if there are 2 code words FreqDomainSchedul shall be applied to both
AntennaInfo	AntennaInfoDedicated_Type	opt	as signalled to the UE (TS 36.331, clause 6.3.2): transmissionMode, codebookSubsetRestriction
HarqProcessConfig	HarqProcessConfigDL_Type	opt	HARQ processes automatically used by the SS in DL

D.1.3.8.2 UE_Specific_Channel_Configuration_UL

Scheduling information for CCCH/DCCH/DTCH mapped to UL-SCH mapped to PUSCH

PucchHoppingBits_Type

TTCN-3 Union Type		
Name	**PucchHoppingBits_Type**	
Comment	Number of hopping bits acc. to TS 36.213 table 8.4-2	
OneBit	B1_Type	N(UL, RB) = 6..49 i.e. default system bandwid this less than 10 MHz (does not include 10 MHz)
TwoBits	B2_Type	N(UL, RB) = 50..110 i.e. default system bandwidth is 10 MHz or above

UplinkHoppingResourceParameters_Type

TTCN-3 Record Type			
Name	**UplinkHoppingResourceParameters_Type**		
Comment			
PucchHopping	PucchHoppingBits_Type		to control hopping resource allocation as signalled in DCI format 0 (TS 36.212, clause 5.3.3.1.1)

UplinkHoppingControl_Type

TTCN-3 Union Type		
Name	**UplinkHoppingControl_Type**	
Comment	shall be considered by SS to fill in the information needed for DCI format 0 (TS 36.213, clause 7.1)	
Deactivated	Null_Type	
Activated	UplinkHoppingResourceParameters_Type	

CcchDcchDtchConfigUL_Type

TTCN-3 Record Type			
Name	**CcchDcchDtchConfigUL_Type**		
Comment	scheduling for CCCH/DCCH/DTCH mapped to UL-SCH mapped to PUSCH NOTE 1: for definition of the possible UL grants the location of the PUCCH (TS 36.211, clause 5.4.3) and the PRACH (TS 36.211, clause 5.7.3) need to be taken into account; NOTE 2: In contrast to the DL where the scheduling can be done (with consideration of some restrictions) by SS on a per need basis in the UL the scheduling depends on information provided by the UE: e.g. BSR (buffer status report), SR (scheduling request) see TS 36.523-3 clause 7.2 for further information.		
DciInfo	DciUlInfo_Type	opt	DCI format: 0 (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK per default Frequency domain schedule: index of 1st RB; max. number of RBs per TTI (upper bound up to which SS may assign grants to the UE)
Hopping	UplinkHoppingControl_Type	opt	when Hopping = 'Activated' SS shall set hopping flag in DCI format 0
PUCCH_Synch	PUCCH_Synch_Type	opt	parameters to control automatic control of timing advance
UL_GrantConfig	UL_GrantConfig_Type	opt	UL grant allocation to be applied

DrxCtrl_Type

TTCN-3 Union Type		
Name	**DrxCtrl_Type**	
Comment	DRX configuration for connected mode (TS 36.321, clause 5.7)	
None	Null_Type	DRX not configured
Config	DRX_Config_Type	DRX is configured as signalled to the UE; NOTE: the release branch of DRX-Config in general is not used for configuration of the SS

MeasGapCtrl_Type

TTCN-3 Union Type		
Name	**MeasGapCtrl_Type**	
Comment	support of measurement gap configuration	
None	Null_Type	no measurement gap configuration
Config	MeasGapConfig_Type	measurement gap configuration acc. to TS 36.331, clause 6.3.5 and gap pattern acc. TS 36.133 Table 8.1.2.1-1; NOTE: the release branch of MeasGapConfig in general is not used for configuration of the SS

CcchDcchDtchConfig_Type

TTCN-3 Record Type			
Name	**CcchDcchDtchConfig_Type**		
Comment			
MeasGapCtrl	MeasGapCtrl_Type	opt	to tell the SS when no assignments/grants shall be assigned to the UE
DL	CcchDcchDtchConfigDL_Type	opt	Scheduling, parameters related to CCCH, DCCH and DTCH in DL
UL	CcchDcchDtchConfigUL_Type	opt	Scheduling, parameters related to CCCH, DCCH and DTCH in UL
DrxCtrl	DrxCtrl_Type	opt	DRX configuration as sent to the UE (or 'None' when the UE does not support connected mode DRX)
TtiBundling	TTI_BundlingConfig_Type	opt	TTI bundling as configured at the UE
CifPresence	boolean	opt	corresponds to PhysicalConfigDedicated.cif_Presence_r10: The CIF field is applied for dedicated search space scheduling i.e. DCCH/DTCH. Not present for common search space scheduling. CIF indicator as true may be configured even in non CA cell, to facilitate the future false: no serving cell is cross scheduled by this cell true: carrier indicator field is present when the PDCCH CRC is scrambled by C-RNTI or SPS C-RNTI omit means "keep as it is"

D.1.3.9 Carrier_Aggregation

ActivateScell_Type

TTCN-3 Record Type			
Name	**ActivateScell_Type**		
Comment			
ScellActivation	ScellBitMap_Type		36.321 clause 6.1.3.8; B0=C7, B1=C6 .. B6=C1, B7 is reserved. B0 to B6, 1 means Activate associated Scell
SendMCE	boolean		If true the SS sends a MAC Control Element to the UE

Scell_Capability_Type

TTCN-3 Enumerated Type	
Name	**Scell_Capability_Type**
Comment	
DlOnly	the CC is configured in DL only, no aggregation in this cell in UL
UL_DL	the aggregation is configured in both UL and DL

ScellDeactivationTimer_Type

TTCN-3 Union Type		
Name	**ScellDeactivationTimer_Type**	
Comment	NOTE: this type is a union to allow semantic of "keep as it is" for optional fields of this type	
NumberOfRadioFrames	MAC_MainConfig_ScellDeactivationTimer_Type	SCell deactivation timer acc. to TS 36.321
1,#INF	Null_Type	ininity as when 'sCellDeactivationTimer' is omitted in 'MAC-MainConfig' sent to the UE

SCellIndexList_List

TTCN-3 Record of Type	
Name	**SCellIndexList_List**
Comment	
record length (1..7) of SCellIndex_r10	

CrossCarrierScheduledCellsList_Type

TTCN-3 Union Type		
Name	**CrossCarrierScheduledCellsList_Type**	
Comment		
None	Null_Type	No Cells Cross Scheduled by this Cell; CIF can still be true.
CrossScheduledCells	SCellIndexList_List	List of Scells Scheduled by this Scell; CIF field shall be true; Pcell cannot be cross scheduled

SchedulingCarrierConfig_Type

TTCN-3 Union Type		
Name	**SchedulingCarrierConfig_Type**	
Comment		
Own	CrossCarrierScheduledCellsList_Type	Cell is scheduled by itself and possible cross schedules other Scells
CrossScheduled	CrossSchedulingCarrierInfo_Type	Cell is cross Scheduled by other carrier; the CIF field shall be configured in the serving cell scheduling this scell

CrossCarrierSchedulingConfig_Type

TTCN-3 Union Type		
Name	**CrossCarrierSchedulingConfig_Type**	
Comment		
Config	SchedulingCarrierConfig_Type	When cross carrier scheduling is enabled then the CIF field shall be configured in the serving cell scheduling this scell
None	Null_Type	

PrimaryCellInfo_Type

TTCN-3 Record Type			
Name	**PrimaryCellInfo_Type**		
Comment			
AssociatedScellList	EUTRA_CellIdList_Type		List of Scells associated with the Pcell (needs to be consistent with AssociatedPcellId in Scell)
MeasSubframePatternPCell	MeasSubframePatternPCell_r10	opt	
CrossCarrierScheduledCellsList	CrossCarrierScheduledCellsList_Type	opt	Information of possible Cells Cross Scheduled by this cell

SecondaryCellInfo_Type

TTCN-3 Record Type			
Name	**SecondaryCellInfo_Type**		
Comment			
AssociatedPcellId	EUTRA_CellId_Type		cell ID of associated Pcell (eutra_Cell_NonSpecific is not allowed)
SCellIndex	SCellIndex_r10		
Scell_Capability	Scell_Capability_Type	opt	if DL only or both UL and DL (omit means "keep as it is")
ScellDeactivationTimer	ScellDeactivationTimer_Type	opt	SCell deactivation timer; omit means "keep as it is"; when there is more than one SCell associated to the same PCell this field shall be set to the same value for each SCell
CrossCarrierSchedulingConfig	CrossCarrierSchedulingConfig_Type	opt	omit means "keep as it is"

ServingCellConfig_Type

TTCN-3 Union Type		
Name	**ServingCellConfig_Type**	
Comment		
PCell	PrimaryCellInfo_Type	cell shall become PCell
SCell	SecondaryCellInfo_Type	cell shall become SCell
Release	Null_Type	cell is changed back to normal non CA cell

D.1.4 Cell_Power_Attenuation

CellAttenuationConfig_Type

TTCN-3 Record Type			
Name	**CellAttenuationConfig_Type**		
Comment			
CellId	EUTRA_CellId_Type		
Attenuation	Attenuation_Type		
TimingInfo	TimingInfo_Type	opt	

CellAttenuationList_Type

TTCN-3 Record of Type	
Name	**CellAttenuationList_Type**
Comment	
record length(1..tsc_EUTRA_MaxNumberOfCells) of CellAttenuationConfig_Type	

D.1.5 Radio_Bearer_Configuration

Radio Bearer Configuration: SRBs/DRBs

D.1.5.1 PDCP_Configuration

PDCP_SNLength_Type

TTCN-3 Enumerated Type	
Name	**PDCP_SNLength_Type**
Comment	PDCP Sequence Number
PDCP_SNLength5	TS 36.323 clause 6.2.2
PDCP_SNLength7	TS 36.323 clause 6.2.3
PDCP_SNLength12	TS 36.323 clause 6.2.4

PDCP_ROHC_Mode_Type

TTCN-3 Record Type			
Name	**PDCP_ROHC_Mode_Type**		
Comment			
SN_Size	PDCP_SNLength_Type		

PDCP_NonROHC_Mode_Type

TTCN-3 Record Type			
Name	**PDCP_NonROHC_Mode_Type**		
Comment			
SN_Size	PDCP_SNLength_Type		

PDCP_TestModeInfo_Type

TTCN-3 Union Type		
Name	**PDCP_TestModeInfo_Type**	
Comment		
PDCP_ROHC_Mode	PDCP_ROHC_Mode_Type	ROHC test mode acc. to TS 36.523-3, clause 4.2.1.3.1; requires PDCP to be configured for this RB => - SS applies ciphering in UL and DL - SS maintains PDCP sequence numbers and state variables Furthermore in this mode - SS does not add/remove PDCP headers (in UL the PDCP PDUs are decoded depending on SN_Size) - SS applies ROHC in DL only
PDCP_NonROHC_Mode	PDCP_NonROHC_Mode_Type	PDCP test mode acc. to TS 36.523-3, clause 4.2.1.3.2 (non-ROCH test mode); requires PDCP to be configured as transparent => - SS does not apply ciphering in UL and DL - SS does not interpret, insert or remove PDCP headers (in UL PDCP PDUs are decoded depending on SN_Size) - SS does not maintain PDCP sequence numbers and state variables

PDCP_TestModeConfig_Type

TTCN-3 Union Type		
Name	**PDCP_TestModeConfig_Type**	
Comment		
None	Null_Type	
Info	PDCP_TestModeInfo_Type	

PDCP_RbConfig_Type

TTCN-3 Union Type		
Name	**PDCP_RbConfig_Type**	
Comment		
Srb	Null_Type	for SRB1/2 there are no PDCP_Parameters; SN is always 5 bits
Drb	PDCP_Config_Type	PDCP-Configuration acc. to TS 36.331, clause 6.3.2; among others for UM here pdcp-SN-Size is configured to be either len7bits or len12bits; for AM it always is 12bit
Transparent	Null_Type	used for PDCP tests (TS 36.523-3, clause 4.2.1.3.2): the SS does not apply ciphering and does not maintain PDCP sequence numbers and state variables; in UL the PDCP PDUs are decoded acc. to the TestMode; Note: a reconfiguration of a RB from transparent mode to 'normal' mode is not foreseen (i.e. there is no mechanism to restore Ciphering, PDCP sequence numbers and state variables at the SS)

PDCP_ConfigInfo_Type

TTCN-3 Record Type			
Name	**PDCP_ConfigInfo_Type**		
Comment			
Rb	PDCP_RbConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"
TestMode	PDCP_TestModeConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"

PDCP_Configuration_Type

TTCN-3 Union Type		
Name	**PDCP_Configuration_Type**	
Comment		
None	Null_Type	for SRB0 no PDCP is configured; furthermore the PDCP may not be configured e.g. for DRBs tested in MAC test cases
Config	PDCP_ConfigInfo_Type	

D.1.5.2 RLC_Configuration

RLC configuration: radio bearer specific

RLC_Configuration: Basic Type Definitions

TTCN-3 Basic Types		
RLC_AM_SequenceNumber_Type	integer (0..1023)	RLC AM sequence number
SS_RLC_TM_Type	Null_Type	TM to configure SRB0; no parameters to be defined

RLC_ACK_Prohibit_Type

TTCN-3 Enumerated Type	
Name	**RLC_ACK_Prohibit_Type**
Comment	
Prohibit	cause SS RLC layer to stop any ACK transmission for UL PDU's received from UE
Continue	bring back the SS RLC in normal mode, where ACK/NACK are transmitted at polling

RLC_NotACK_NextRLC_PDU_Type

TTCN-3 Enumerated Type	
Name	**RLC_NotACK_NextRLC_PDU_Type**
Comment	
Start	cause SS RLC layer not to ACK the next received RLC PDU; this is done regardless of whether the poll bit is set or not; Example [from UMTS]: when the UE gets new security information in a SECURITY MODE COMMAND the response (SECURITY MODE COMPLETE) sent by the UE is not acknowledged at the RLC level; this causes the UE to continue using the "old" security information

RLC_TestModeInfo_Type

TTCN-3 Union Type		
Name	**RLC_TestModeInfo_Type**	
Comment		
AckProhibit	RLC_ACK_Prohibit_Type	valid only when the RLC is configured in AM
NotACK_NextRLC_PDU	RLC_NotACK_NextRLC_PDU_Type	valid only when the RLC is configured in AM
ModifyVTS	RLC_AM_SequenceNumber_Type	to modify the VT(S) at SS: VT(S) at the SS side is set to this (absolute) value; valid only when the RLC is configured in AM
TransparentMode_UMDwith5BitSN	Null_Type	shall be set when TTCN expects RLC PDUs as UMD in UL with an SN of 5 bits; valid only when the RLC is configured in TM
TransparentMode_UMDwith10BitSN	Null_Type	shall be set when TTCN expects RLC PDUs as UMD in UL with an SN of 10 bits; valid only when the RLC is configured in TM
TransparentMode_AMD	Null_Type	shall be set when TTCN expects RLC PDUs as AMD in UL; valid only when the RLC is configured in TM

Comment			
Rb	RLC_RbConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"
TestMode	RLC_TestModeConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"

D.1.5.3 MAC_Configuration

MAC configuration: radio bearer specific configuration

EUTRA_ASP_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_MaxHarqRetransmission	integer	28	maximum value for maxHARQ-Msg3Tx as being signalled to the UE

MAC_Test_DLLogChID_Type

TTCN-3 Union Type		
Name	**MAC_Test_DLLogChID_Type**	
Comment		
LogChId	TestLogicalChannelId_Type	Specifies to over write the logical channel ID in MAC header in all the DL messages sent on the configured logical channel
ConfigLchId	Null_Type	Specifies that the normal mode of correct logical channel ID to be used in DL MAc header. This will be the default mode, when SS is initially configured.

MAC_Test_DL_SCH_CRC_Mode_Type

TTCN-3 Enumerated Type	
Name	**MAC_Test_DL_SCH_CRC_Mode_Type**
Comment	
Normal	default mode, the CRC generation is correct
Erroneous	SS shall generate CRC error by toggling CRC bits; the CRC error shall be applied for all PDUs of the given RNTI and their retransmission until SS is configured back to 'normal' operation
Error1AndNormal	the SS generates wrong CRC for first transmission and correct CRC on first retransmission. Later SS operates in normal mode. The retransmission is automatically triggered by reception of HARQ NACK

MAC_Test_SCH_NoHeaderManipulation_Type

TTCN-3 Enumerated Type	
Name	**MAC_Test_SCH_NoHeaderManipulation_Type**
Comment	
NormalMode	MAC header is fully controlled by the SS
DL_SCH_Only	TTCN can submit a final MAC PDU including header and payloads; SS does not do anything with this MAC PDU i.e. no header is added for the DL SCH transport channel. It is possible that data belonging to multiple DRBs is sent in one MAC PDU and from one special RB configured. NOTE: SRBs shall work as in normal mode and data can be sent/received on SRBs but sending on SRBs shall be in different TTIs than sending data PDUs.
DL_UL_SCH	In UL and DL the SS' MAC layer is transparent i.e. SS does not add or remove any MAC header

HARQ_ModeList_Type

TTCN-3 Record of Type	
Name	**HARQ_ModeList_Type**
Comment	
record length (1..tsc_MaxHarqRetransmission) of HARQ_Type	

PhichTestMode_Type

TTCN-3 Union Type		
Name	**PhichTestMode_Type**	
Comment		
NormalMode	Null_Type	PHICH is configured to operate in normal mode
ExplicitMode	HARQ_ModeList_Type	the number of elements in explicit list shall match the number of retransmissions being expected

MAC_TestModeInfo_Type

TTCN-3 Record Type			
Name	**MAC_TestModeInfo_Type**		
Comment	Parameters/Configuration for MAC tests		
DiffLogChId	MAC_Test_DLLogChID_Type		to be used in test cases 7.1.1.1 and 7.1.1.2 for using a different logical channel ID in MAC-header on DL-SCH channel
No_HeaderManipulation	MAC_Test_SCH_NoHeaderManipulation_Type		to configure mode for no header manipulation in SS MAC layer for DL/UL SCH

MAC_TestModeConfig_Type

TTCN-3 Union Type		
Name	**MAC_TestModeConfig_Type**	
Comment		
None	Null_Type	
Info	MAC_TestModeInfo_Type	

MAC_LogicalChannelConfig_Type

TTCN-3 Record Type			
Name	**MAC_LogicalChannelConfig_Type**		
Comment			
Priority	integer		logical channel priority for the DL as described in TS 36.321, clause 5.4.3.1 for the UL
PrioritizedBitRate	PrioritizedBitRate_Type		PBR as described for the UL; probably not needed at SS

MAC_Configuration_Type

TTCN-3 Record Type			
Name	**MAC_Configuration_Type**		
Comment			
LogicalChannel	MAC_LogicalChannelConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"
TestMode	MAC_TestModeConfig_Type	opt	mandatory for initial configuration; omit means "keep as it is"; for none MAC tests "TestMode.None:=true"

Radio_Bearer_Configuration: Basic Type Definitions

TTCN-3 Basic Types		
LogicalChannelId_Type	integer (0..10)	acc. TS 36.331, clause 6.3.2 for DRBs DTCH-LogicalChannelIdentity is INTEGER (3..10); additionally we have 0..2 for the SRBs
TestLogicalChannelId_Type	integer (0..31)	To be used in MAC test mode for reserved values of Logical channels;

RadioBearerConfigInfo_Type

TTCN-3 Record Type			
Name	**RadioBearerConfigInfo_Type**		
Comment	semantics of omit: "keep as it is"		
Pdcp	PDCP_Configuration_Type	opt	for SRB0: "Pdcp.None:=true" mandatory for initial configuration; omit means "keep as it is"
Rlc	RLC_Configuration_Type	opt	mandatory for initial configuration; omit means "keep as it is"
LogicalChannelId	LogicalChannelId_Type	opt	DRBs: DTCH-LogicalChannelIdentity as for rb-MappingInfo in DRB-ToAddModifyList; SRBs: for SRBs specified configurations acc. to TS 36.331, clause 9.1.2 shall be applied: SRB1: ul-LogicalChannel-Identity = dl-LogicalChannel-Identity = 1 SRB2: ul-LogicalChannel-Identity = dl-LogicalChannel-Identity = 2 for SRB0 being mapped to CCCH the LCID is '00000'B acc. to TS 36.321, clause 6.2.1; mandatory for initial configuration; omit means "keep as it is"
Mac	MAC_Configuration_Type	opt	

DiscardULData	boolean	opt	if omitted:
			initial configuration: data is handed over to TTCN as usual
			re-configuration: "keep as it is"
			if set:
			true - SS shall discard any data in UL for this radio bearer
			false - (re)configuration back to normal mode
			NOTE: typically applicable for UM DRBs only

RadioBearerConfig_Type

TTCN-3 Union Type		
Name	**RadioBearerConfig_Type**	
Comment		
AddOrReconfigure	RadioBearerConfigInfo_Type	add / re-configure RB - CellId : identifier of the cell being configured RoutingInfo : None TimingInfo : 'Now' in common cases ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)
Release	Null_Type	release RB - CellId : identifier of the cell being configured RoutingInfo : None TimingInfo : 'Now' in common cases ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)

RadioBearer_Type

TTCN-3 Record Type			
Name	**RadioBearer_Type**		
Comment			
Id	RadioBearerId_Type		either for SRB or DRB
Config	RadioBearerConfig_Type		

RadioBearerList_Type

TTCN-3 Record of Type	
Name	**RadioBearerList_Type**
Comment	array of SRBs and/or DRBs (DRBs + 3 SRBs)
record length (1..tsc_MaxRB) of RadioBearer_Type	

D.1.6 AS_Security

Primitive for control of AS security

PdcpSQN_Type

TTCN-3 Record Type			
Name	**PdcpSQN_Type**		
Comment			
Format	PdcpCountFormat_Type		5 bit, 7 bit or 12 bit SQN
Value	integer		SQN value (5 bit, 7 bit or 12 bit SQN) NOTE: in TTCN the test case writer is responsible to deal with potential overflows (e.g. there shall be a "mod 32", "mod 128" or "mod 4096" according to the format)

PDCP_ActTime_Type

TTCN-3 Union Type		
Name	**PDCP_ActTime_Type**	
Comment	The sequence number in UL and DL for SRB1 should be one more than the present SQN, as Ciphering starts in UL and DL soon after SMC and SMComp; For other SRB/DRB it should be the present SQN.	
None	Null_Type	No Activation time; to be used if Ciphering is not applied
SQN	PdcpSQN_Type	PDCP sequence number

SecurityActTime_Type

TTCN-3 Record Type			
Name	**SecurityActTime_Type**		
Comment			
RadioBearerId	RadioBearerId_Type		
UL	PDCP_ActTime_Type		
DL	PDCP_ActTime_Type		

SecurityActTimeList_Type

TTCN-3 Record of Type	
Name	**SecurityActTimeList_Type**
Comment	
record length (1..tsc_MaxRB) of SecurityActTime_Type	

AS_IntegrityInfo_Type

TTCN-3 Record Type			
Name	**AS_IntegrityInfo_Type**		
Comment	for initial configuration activation time is not needed for integrity protection as all messages in DL after security activation are integrity protected; this means this ASP is invoked before transmission of Security mode command; if there is a integrity violation in UL SS shall set the IndicationStatus in the common ASP part to flag the integrity error (IndicationStatus.Error.Integrity.Pdcp := true); integrity to be provided for each SRB as per core spec		
Algorithm	IntegrityProtAlgorithm_Type		IntegrityProtAlgorithm_Type being defined in RRC ASN.1
KRRCint	B128_Key_Type		
ActTimeList	SecurityActTimeList_Type	opt	omit for initial configuration (i.e. all SRBs to be integrity protected immediately); in HO scenarios activation time may be needed e.g. for SRB1

AS_CipheringInfo_Type

TTCN-3 Record Type			
Name	**AS_CipheringInfo_Type**		
Comment			
Algorithm	CipheringAlgorithm_Type		CipheringAlgorithm_Type being defined in RRC ASN.1
KRRCenc	B128_Key_Type		
KUPenc	B128_Key_Type		KUPenc is mandatory; and SS uses it when DRB are configured
ActTimeList	SecurityActTimeList_Type		

AS_SecStartRestart_Type

TTCN-3 Record Type			
Name	**AS_SecStartRestart_Type**		
Comment			
Integrity	AS_IntegrityInfo_Type	opt	optional to allow separated activation of integrity and ciphering; omit: keep as it is
Ciphering	AS_CipheringInfo_Type	opt	optional to allow separated activation of integrity and ciphering; omit: keep as it is

AS_Security_Type

TTCN-3 Union Type		
Name	**AS_Security_Type**	
Comment	Security mode command procedure (TS 36.331, clause 5.3.4): both SMC and SMComp are integrity protected (nevertheless SS shall be able to cope with unprotected SM reject); ciphering is started just after SMComp (acc. to TS 36.331, clause 5.3.4.3 and 5.3.1.1)	
StartRestart	AS_SecStartRestart_Type	information to start/restart AS security protection in the PDCP
Release	Null_Type	to release AS security protection in the PDCP

D.1.7 Semi_Persistent_Scheduling

Semi-persistent scheduling (SPS)
NOTE 1:
configuration of SPS cannot be done completely in advance but needs to be activated by PDCCH signalling
=> SPS is configured/activated in an own primitive which may be sent to SS during RBs are being configured
NOTE 2:
semi-persistent (configured) scheduling is per UE (as well as 'normal' scheduling; see e.g. TS 36.300, clause 11.1)

SpsAssignmentUL_Type

TTCN-3 Record Type			
Name	**SpsAssignmentUL_Type**		
Comment	information to assign semi-persistent schedules in UL		
DciInfo	DciUlInfo_Type	opt	to apply a grant
SchedulInterval	SpsConfigurationUL_Type	opt	as in TS 36.331, clause 6.3.2 SPS-ConfigUL
SetNDI_1	Null_Type	opt	if present then NDI is set as 1 indicating a retransmission; If absent then NDI is set as 0 indicating a new transmission

SpsAssignmentDL_Type

TTCN-3 Record Type			
Name	**SpsAssignmentDL_Type**		
Comment	information to assign semi-persistent schedules in DL		
DciInfo	DciDlInfo_Type	opt	to apply a assignment
SchedulInterval	SpsConfigurationDL_Type	opt	as in TS 36.331, clause 6.3.2 SPS-ConfigDL
SetNDI_1	Null_Type	opt	if present then NDI is set as 1 indicating a retransmission; If absent then NDI is set as 0 indicating a new transmission

SpsActivateInfo_Type

TTCN-3 Record Type			
Name	**SpsActivateInfo_Type**		
Comment	Semi-persistent scheduling (SPS): Even though SPS is pre-configured at the UE (e.g. RRCConnectionSetup->RadioResourceConfiguration->MAC_MainConfig) it needs to be activated by L1 signalling => SS shall 'activate' SPS by sending appropriate assignments/grants to the UE; this shall be done with an activation time. If SPS is already configured and new Activate command is received, at the activation time SS locally deactivates old SPS configuration, sends UE an PDCCH assignment for new SPS assignment and locally activates new SPS configuration. In DL, in addition to SS SPS assignment configuration with activation time 'T', TTCN writer shall also schedule a DL MAC PDU with same activation time 'T' and at every SPS ScheduleInterval (NOTE: in general it is an error when TTCN does not provide data for a SchedulInterval; SS shall send no data in this case). Special fields of PDCCH assignment are filled as per table 9.2-1 of 36.213		
SPS_C_RNTI	C_RNTI		SPS C-RNTI as signalled to UE
UplinkGrant	SpsAssignmentUL_Type	opt	
DownlinkAssignment	SpsAssignmentDL_Type	opt	

SpsPdcchRelease_Type

TTCN-3 Record Type			
Name	**SpsPdcchRelease_Type**		
Comment	On reception of this information SS shall send an SPS release indicated by PDCCH transmission with indicated DCI format (0 or 1A) at the activation time. Special fields of PDCCH assignment are filled as per table 9.2-1A of 36.213		
SPS_C_RNTI	C_RNTI		
DCI_Format	PdcchDciFormat_Type		only formats 0 (UL release) and 1A (DL release) are applicable. It is a TTCN error if any other formats are used.

SpsDeactivateInfo_Type

TTCN-3 Union Type		
Name	**SpsDeactivateInfo_Type**	
Comment		
LocalRelease	Null_Type	SPS configuration shall be released at the SS, that means as well that the SS shall not address SPS_C_RNTI anymore from the given TimingInfo onward; NOTE: there is no SPS release to be signalled on PDCCH (this is done with PdcchExplicitRelease - see below)
PdcchExplicitRelease	SpsPdcchRelease_Type	SS transmits PDCCH content indicating SPS release but holds the local SPS configuration until it is locally released

SpsConfig_Type

TTCN-3 Union Type		
Name	**SpsConfig_Type**	
Comment		
Activate	SpsActivateInfo_Type	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : activation time for SPS assignment/grant transmission; NOTE: the first SPS DL data packet shall be sent with the same timing information ControlInfo : CnfFlag:=false; FollowOnFlag:=false
Deactivate	SpsDeactivateInfo_Type	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : activation time for SPS release indicated by PDCCH transmission or SS local deactivation ControlInfo : CnfFlag:=false; FollowOnFlag:=false

D.1.8 Paging_Trigger

Paging_SubframeOffsetList_Type

TTCN-3 Record of Type	
Name	**Paging_SubframeOffsetList_Type**
Comment	
record length (1..infinity) of integer	

PagingTrigger_Type

TTCN-3 Record Type			
Name	**PagingTrigger_Type**		
Comment	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : Calculated paging occasion ControlInfo : CnfFlag:=false; FollowOnFlag:=false primitive to trigger transmission of a paging on the PCCH at a calculated paging occasion (TS 36.304, clause 7); the paging occasion is calculated by TTCN and activation time is applied; as for BCCH Infor acc. to TS 36.331, clause 9.1.1.3 "RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5."; therefore this needs to be done by the system simulator		
Paging	PCCH_Message		paging to be send out at paging occasion and being announced on PDCCH using P-RNTI
SubframeOffsetList	Paging_SubframeOffsetList_Type	opt	list of subframe offsets relative to the absolute timing information given in the common part of the ASP; if present, multiple pagings are sent out at all occasions given by the list; if omitted only a single paging is sent at the occasion given timing information given in the common part of the ASP

D.1.9 L1_MAC_Indication_Control

Primitive for control of L1/MAC indication for special purposes

L1Mac_IndicationMode_Type

TTCN-3 Enumerated Type	
Name	**L1Mac_IndicationMode_Type**
Comment	
enable	
disable	

L1Mac_IndicationControl_Type

TTCN-3 Record Type			
Name	**L1Mac_IndicationControl_Type**		
Comment	NOTE: Initially all indications are disabled in SS (i.e. it shall not be necessary in 'normal' test cases to use this primitive but only if a specific indication is needed); omit means indication mode is not changed		
RachPreamble	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of PRACH preamble received.
SchedReq	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of reception of Scheduling Request on PUCCH.
BSR	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of Buffer/Extended Buffer Status Report. NOTE: this is applicable only when MAC is configured in normal mode in UL; MAC configured in test mode, results in over writing the report.
UL_HARQ	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of reception of HARQ ACK/NACK.
C_RNTI	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of C-RNTI sent by the UE within MAC PDU
PHR	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of Power Headroom Report. NOTE: this is applicable only when MAC is configured in normal mode in UL; MAC configured in test mode, results in over writing the report.
HarqError	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of HARQ errors
PeriodicRI	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of reception of periodic Rank Indicators
EPHR	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of Extended Power Headroom Report. NOTE: this is applicable only when MAC is configured in normal mode for UL; MAC configured in test mode, results in overwriting the report.
PeriodicCQI	L1Mac_IndicationMode_Type	opt	To enable/disable reporting of reception of periodic CQI

D.1.10 Rlc_Indication_Control

Primitive for control of RLC indication for special purposes

Rlc_IndicationMode_Type

TTCN-3 Enumerated Type	
Name	**Rlc_IndicationMode_Type**
Comment	
enable	
disable	

Rlc_IndicationControl_Type

TTCN-3 Record Type			
Name	**Rlc_IndicationControl_Type**		
Comment			
Discard	Rlc_IndicationMode_Type	opt	To enable/disable reporting of discarded RLC PDUs

D.1.11 PDCP_Count

Primitives to enquire PDCP COUNT

PDCP_Count: Basic Type Definitions

TTCN-3 Basic Types		
PdcpCountValue_Type	B32_Type	

PdcpCountFormat_Type

TTCN-3 Enumerated Type	
Name	**PdcpCountFormat_Type**
Comment	
PdcpCount_Srb	27 bit HFN; 5 bit SQF
PdcpCount_DrbLongSQN	20 bit HFN; 12 bit SQF
PdcpCount_DrbShortSQN	25 bit HFN; 7 bit SQF

PdcpCount_Type

TTCN-3 Record Type			
Name	**PdcpCount_Type**		
Comment			
Format	PdcpCountFormat_Type		
Value	PdcpCountValue_Type		

PdcpCountInfo_Type

TTCN-3 Record Type			
Name	**PdcpCountInfo_Type**		
Comment			
RadioBearerId	RadioBearerId_Type		
UL	PdcpCount_Type	opt	omit: keep as it is
DL	PdcpCount_Type	opt	omit: keep as it is

PdcpCountInfoList_Type

TTCN-3 Record of Type	
Name	**PdcpCountInfoList_Type**
Comment	
record length (1..tsc_MaxRB) of PdcpCountInfo_Type	

PdcpCountGetReq_Type

TTCN-3 Union Type		
Name	**PdcpCountGetReq_Type**	
Comment		
AllRBs	Null_Type	return COUNT values for all RBs being configured
SingleRB	RadioBearerId_Type	

PDCP_CountReq_Type

TTCN-3 Union Type		
Name	**PDCP_CountReq_Type**	
Comment		
Get	PdcpCountGetReq_Type	Request PDCP count for one or all RBs being configured at the PDCP
Set	PdcpCountInfoList_Type	Set PDCP count for one or all RBs being configured at the PDCP; list for RBs which's COUNT shall be manipulated

PDCP_CountCnf_Type

TTCN-3 Union Type		
Name	**PDCP_CountCnf_Type**	
Comment		
Get	PdcpCountInfoList_Type	RBs in ascending order; SRBs first
Set	Null_Type	

D.1.12 PDCP_Handover

Primitives to control PDCP regarding handover

PDCP_HandoverInit_Type

TTCN-3 Record Type			
Name	**PDCP_HandoverInit_Type**		
Comment			
SourceCellId	EUTRA_CellId_Type		

PDCP_HandoverControlReq_Type

TTCN-3 Union Type		
Name	**PDCP_HandoverControlReq_Type**	
Comment		
HandoverInit	PDCP_HandoverInit_Type	to inform SS that a handover will follow: in the common ASP part the CellId shall be set to the id of the target cell
HandoverComplete	Null_Type	to inform SS that the handover has successfully been performed by the UE; this shall trigger the SS to sent a PDCP Status Report to the UE; in the common ASP part the CellId shall be set to the id of the target cell

D.1.13 L1_MAC_Test_Mode

Primitive for control of L1/MAC Test Modes

L1_TestMode_Type

TTCN-3 Record Type			
Name	**L1_TestMode_Type**		
Comment	L1 test mode; in general RACH is handled separately		
DL_SCH_CRC	DL_SCH_CRC_Type		Manipulation of CRC bit generation for DL-SCH
Phich	PhichTestMode_Type		HARQ feedback mode on the PHICH

DL_SCH_CRC_Type

TTCN-3 Union Type		
Name	**DL_SCH_CRC_Type**	
Comment	NOTE: CRC error mode for RA_RNTI is not addressed as it will be configured in RACHProcedureConfig	
C_RNTI	MAC_Test_DL_SCH_CRC_Mode_Type	to configure mode for CRC bit for all MAC PDU's for which C-RNTI is used in PDCCH transmission
SI_RNTI	MAC_Test_DL_SCH_CRC_Mode_Type	to configure mode for CRC bit for all MAC PDU's for which SI-RNTI is used in PDCCH transmission
SPS_RNTI	MAC_Test_DL_SCH_CRC_Mode_Type	to configure mode for CRC bit for all MAC PDU's for which SPS-RNTI is used in PDCCH transmission

D.1.14 PDCCH_Order

Primitive to trigger SS to send PDCCH order to initiate RA procedure (TS 36.321, clause 5.1.1)

PDCCH_Order: Basic Type Definitions

TTCN-3 Basic Types		
PrachPreambleIndex_Type	Ra_PreambleIndex_Type	
PrachMaskIndex_Type	integer (0..15)	TS 36.321, clause 7.3

RA_PDCCH_Order_Type

TTCN-3 Record Type			
Name	**RA_PDCCH_Order_Type**		
Comment	see also TS 36.212, clause 5.3.3.1.3		
PreambleIndex	PrachPreambleIndex_Type		naming acc. TS 36.212, clause 5.3.3.1.3
PrachMaskIndex	PrachMaskIndex_Type		naming acc. TS 36.212, clause 5.3.3.1.3

D.1.15 System_Indications

Primitives for System indications

System_Indications: Basic Type Definitions

TTCN-3 Basic Types		
PRTPower_Type	Dummy_Type	needs to define appropriately the power level report of PREAMBLE_RECEIVED_TARGET_POWER; NOTE: for the time being this is just a place holder for enhancements in the future.
LogicalChannelGroup_Type	integer (0..3)	
BSR_Value_Type	integer (0..63)	
PHR_Type	integer (0..63)	
RI_Type	integer (1..4)	Rank indicator reported acc. to TS 36.212 Table 5.2.2.6-6

HarqProcessInfo_Type

TTCN-3 Record Type			
Name	**HarqProcessInfo_Type**		
Comment			
Id	HarqProcessId_Type		
CURRENT_TX_NB	integer		acc. to TS 36.321 clause 5.4.2.2

HarqError_Type

TTCN-3 Union Type		
Name	**HarqError_Type**	
Comment		
UL	HarqProcessInfo_Type	indicates HARQ error detected at the SS side (error at UL transmission)
DL	HarqProcessInfo_Type	indicates HARQ NACK sent by the UE (error at DL transmission)

RachPreamble_Type

TTCN-3 Record Type			
Name	**RachPreamble_Type**		
Comment			
RAPID	PrachPreambleIndex_Type		indicates the RAPID of the preamble used (integer (0..63))
PRTPower	PRTPower_Type		represents the PREAMBLE_RECEIVED_TARGET_POWER

Short_BSR_Type

TTCN-3 Record Type			
Name	**Short_BSR_Type**		
Comment			
LCG	LogicalChannelGroup_Type		Logical channel Group
Value	BSR_Value_Type		BSR or Extended BSR value

Long_BSR_Type

TTCN-3 Record Type			
Name	**Long_BSR_Type**		
Comment			
Value_LCG1	BSR_Value_Type		BSR or Extended BSR value for LCG 1
Value_LCG2	BSR_Value_Type		BSR or Extended BSR value for LCG 2
Value_LCG3	BSR_Value_Type		BSR or Extended BSR value for LCG 3
Value_LCG4	BSR_Value_Type		BSR or Extended BSR value for LCG 4

BSR_Type

TTCN-3 Union Type		
Name	**BSR_Type**	
Comment		
Short	Short_BSR_Type	
Truncated	Short_BSR_Type	
Long	Long_BSR_Type	

HARQ_Type

TTCN-3 Enumerated Type	
Name	**HARQ_Type**
Comment	ack represents HARQ ACK; nack represents HARQ_NACK
ack	
nack	

RlcDiscardInd_Type

TTCN-3 Record Type			
Name	**RlcDiscardInd_Type**		
Comment	SS shall send this indication if it discards a received RLC AMD PDU as specified in TS 36.322 cl. 5.1.3.2.2.		
SequenceNumber	integer		sequence number of the PDU being discarded

D.1.16 System_Interface

SYSTEM_CTRL_REQ

TTCN-3 Record Type			
Name	**SYSTEM_CTRL_REQ**		
Comment			
Common	ReqAspCommonPart_Type		TimingInfo depends on respective primitive:
Request	SystemRequest_Type		- Cell TimingInfo: 'now' (in general) - CellAttenuationList TimingInfo: 'now' (in general, but activation time may be used also) - RadioBearerList TimingInfo: 'now' in general; activation time may be used in special case for release and/or reconfiguration of one or several RBs; the following rules shall be considered: - release/Reconfiguration of an RB shall not be scheduled ealier than 5ms after a previous data transmission on this RB - subsequent release and reconfiguration(s) shall be scheduled with an interval of at least 5ms - a subsequent data transmission on an RB shall not be scheduled ealier than 5ms after the last reconfiguration of the RB the configuration shall be performed exactly at the given time - EnquireTiming TimingInfo: 'now' - AS_Security TimingInfo: 'now'; NOTE: "activation time" may be specified in the primitive based on PDCP SQN - Sps TimingInfo: activation time for SPS assignment transmission - Paging TimingInfo: Calculated paging occassion - L1MacIndCtrl TimingInfo: 'now' (in general) - PdcpCount TimingInfo: 'now' - L1_TestMode TimingInfo: depends on the test mode; activation time is used e.g. for manipulation of the CRC - PdcchOrder TimingInfo: 'now' (in general)

SYSTEM_CTRL_CNF

TTCN-3 Record Type			
Name	**SYSTEM_CTRL_CNF**		
Comment			
Common	CnfAspCommonPart_Type		TimingInfo is ignored by TTCN (apart from EnquireTiming) => SS may set TimingInfo to "None"
Confirm	SystemConfirm_Type		

SYSTEM_IND

TTCN-3 Record Type			
Name	**SYSTEM_IND**		
Comment			
Common	IndAspCommonPart_Type		The SS shall provide TimingInfo (SFN + subframe number) depending on the respective indication:
Indication	SystemIndication_Type		- Error/HarqError TimingInfo: related to the error (if available) - RachPreamble TimingInfo: shall indicate start of the RACH preamble - SchedReq TimingInfo: subframe containing the SR - BSR TimingInfo: subframe in which the MAC PDU contains the BSR - UL_HARQ TimingInfo: subframe containing the UL HARQ - C_RNTI TimingInfo: subframe in which the MAC PDU contains the C_RNTI - PHR TimingInfo: subframe in which the MAC PDU contains the PHR

EUTRA_SYSTEM_PORT

TTCN-3 Port Type		
Name	**EUTRA_SYSTEM_PORT**	
Comment	EUTRA PTC: Port for system configuration	
out	SYSTEM_CTRL_REQ	
in	SYSTEM_CTRL_CNF	

EUTRA_SYSIND_PORT

TTCN-3 Port Type		
Name	**EUTRA_SYSIND_PORT**	
Comment	EUTRA PTC: Port for system indications	
in	SYSTEM_IND	

D.2 EUTRA_ASP_DrbDefs

ASP interface for DRBs

D.2.1 PDU_TypeDefs

D.2.1.1 MAC_PDU

MAC_PDU: Basic Type Definitions

TTCN-3 Basic Types		
MAC_CTRL_C_RNTI_Type	C_RNTI	TS 36.321, clause 6.1.3.2
MAC_CTRL_ContentionResolutionId_Type	ContentionResolutionId_Type	TS 36.321, clause 6.1.3.4 fix 48-bit size; consists of a single field defined UE Contention Resolution Identity (uplink CCCH SDU transmitted by MAC)
MAC_CTRL_TimingAdvance_Type	B8_Type	TS 36.321, clause 6.1.3.5 indicates the amount of timing adjustment in 0.5 ms that the UE has to apply; the length of the field is [8] bits
MAC_SDU_Type	octetstring	

MAC_PDU_Length_Type

TTCN-3 Record Type			
Name	**MAC_PDU_Length_Type**		
Comment	NOTE: since F and L field are either both present or both omitted they are put into this record; to allow homogeneous (direct) encoding the PDU length is not defined as union; TTCN-3 does allow length restrictions to one lenght or a range of length but not to two specific lengthes; further restriction may be achieved by appropriate templates (parameter either 7 or 15 bit)		
Format	B1_Type		F: The Format field indicates the size of the Length field as indicated in table 6.2.1-3. There is one F field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the F field is 1 bit. If the size of the MAC SDU or MAC control element is less than 128 bytes, the UE shall set the value of the F field to 0, otherwise the UE shall set it to 1
Value	B7_15_Type		L: The Length field indicates the length of the corresponding MAC SDU or MAC control element in bytes. There is one L field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the L field is indicated by the F field

MAC_PDU_SubHeader_Type

TTCN-3 Record Type			
Name	**MAC_PDU_SubHeader_Type**		
Comment			
Reserved	B2_Type		Reserved bits
Extension	B1_Type		E: The Extension field is a flag indicating if more fields are present in the MAC header or not. The E field is set to "1" to indicate another set of at least R/R/E/LCID fields. The E field is set to "0" to indicate that either a MAC SDU, a MAC control element or padding starts at the next byte
LCID	B5_Type		LCID: The Logical Channel ID field identifies the logical channel instance of the corresponding MAC SDU or the type of the corresponding MAC control element or padding as described in tables 6.2.1-1 and 6.2.1-2 for the DL and UL-SCH respectively. There is one LCID field for each MAC SDU, MAC control element or padding included in the MAC PDU. The LCID field size is 5 bits; NOTE: In case of DRX command the sub-header corresponds to a control element of length zero (i.e. there is no control element)
Length	MAC_PDU_Length_Type	opt	

MAC_Header_Type

TTCN-3 Record of Type	
Name	**MAC_Header_Type**
Comment	
record of MAC_PDU_SubHeader_Type	

MAC_CTRL_ShortBSR_Type

TTCN-3 Record Type			
Name	**MAC_CTRL_ShortBSR_Type**		
Comment	TS 36.321, clause 6.1.3.1		
LCG	B2_Type		
Value	B6_Type		

MAC_CTRL_LongBSR_Type

TTCN-3 Record Type			
Name	**MAC_CTRL_LongBSR_Type**		
Comment	TS 36.321, clause 6.1.3.1		
Value_LCG1	B6_Type		
Value_LCG2	B6_Type		
Value_LCG3	B6_Type		
Value_LCG4	B6_Type		

MAC_CTRL_PowerHeadRoom_Type

TTCN-3 Record Type			
Name	**MAC_CTRL_PowerHeadRoom_Type**		
Comment	TS 36.321, clause 6.1.3.6		
Reserved	B2_Type		
Value	B6_Type		

MAC_CTRL_ElementList_Type

TTCN-3 Set Type			
Name	**MAC_CTRL_ElementList_Type**		
Comment	NOTE 1: for simplicication UL and DL are not distiguished even though the control elements are either UL or DL NOTE 2: type is defined as set: the ordering is not signifficant; nevertheless the ordering is well-defined by the sub-headers; for codec implementations it is in any case necessary to evaluate the sub-header information in order to encode/decode the payload		
ShortBSR	MAC_CTRL_ShortBSR_Type	opt	UL only
LongBSR	MAC_CTRL_LongBSR_Type	opt	UL only
C_RNTI	MAC_CTRL_C_RNTI_Type	opt	UL only
ContentionResolutionID	MAC_CTRL_ContentionResolutionId_Type	opt	DL only
TimingAdvance	MAC_CTRL_TimingAdvance_Type	opt	DL only
PowerHeadRoom	MAC_CTRL_PowerHeadRoom_Type	opt	UL only
ScellActDeact	MAC_CTRL_ScellActDeact_Type	opt	DL only
ExtPowerHeadRoom	MAC_CTRL_ExtPowerHeadRoom_Type	opt	UL only. Only one among PowerHeadroom and ExtPowerHeadroom may be present

MAC_SDUList_Type

TTCN-3 Record of Type	
Name	**MAC_SDUList_Type**
Comment	
record of MAC_SDU_Type	

MAC_PDU_Type

TTCN-3 Record Type			
Name	**MAC_PDU_Type**		
Comment			
Header	MAC_Header_Type		list of MAC PDU SubHeaders corresponding to MAC control elements and MAC SDUs
CtrlElementList	MAC_CTRL_ElementList_Type	opt	Mac control elements; acc. to TS 36.321, clause 6.1.2 "MAC control elements, are always placed before any MAC SDU."
SduList	MAC_SDUList_Type	opt	MAC SDUs, which can typically be RLC PDUs
Padding	octetstring	opt	Octet aligned Padding if more than or equal to 2 bytes

MAC_PDUList_Type

TTCN-3 Record of Type	
Name	**MAC_PDUList_Type**
Comment	
record of MAC_PDU_Type	

D.2.1.2 RLC_PDU

D.2.1.2.1 Common

RLC PDU definition: common AM/UM field definitions

Common: Basic Type Definitions

TTCN-3 Basic Types		
RLC_FramingInfo_Type	B2_Type	00 - First byte of the Data field corresponds to the first byte of a RLC SDU. Last byte of the Data field corresponds to the last byte of a RLC SDU. 01 - First byte of the Data field corresponds to the first byte of a RLC SDU. Last byte of the Data field does not correspond to the last byte of a RLC SDU. 10 - First byte of the Data field does not correspond to the first byte of a RLC SDU. Last byte of the Data field corresponds to the last byte of a RLC SDU. 11 - First byte of the Data field does not correspond to the first byte of a RLC SDU. Last byte of the Data field does not correspond to the last byte of a RLC SDU.

RLC_LengthIndicator_Type

TTCN-3 Record Type			
Name	**RLC_LengthIndicator_Type**		
Comment			
Extension	B1_Type		0 - Data field follows from the octet following the LI field following this E field 1 - A set of E field and LI field follows from the bit following the LI field following this E field
LengthIndicator	B11_Type		Length Indicator

RLC_LI_List_Type

TTCN-3 Record of Type	
Name	**RLC_LI_List_Type**
Comment	
record of RLC_LengthIndicator_Type	

RLC_PDU_Header_FlexPart_Type

TTCN-3 Record Type			
Name	**RLC_PDU_Header_FlexPart_Type**		
Comment	Flexible part of the header with a number of K LIs		
LengthIndicator	RLC_LI_List_Type		List of E, LI fields
Padding	B4_Type	opt	optional 4 bit padding present in case of odd number of LI's

D.2.1.2.2 TM_Data

RLC PDU definition: UM (TS 36.322, clause 6.2.1.2)

TM_Data: Basic Type Definitions

TTCN-3 Basic Types		
RLC_TMD_PDU_Type	octetstring	TS 36.322, clause 6.2.1.2

D.2.1.2.3 UM_Data

RLC PDU definition: UM (TS 36.322, clause 6.2.1.3)
NOTE:
To allow direct encoding the definition for RLC UM Data PDU is split into data PDU with 5/10 bit sequence number

UM_Data: Basic Type Definitions

TTCN-3 Basic Types		
RLC_DataField_Type	octetstring	restrictions imposed from LI size of 11 bits is not applicable when the LI's are not present

RLC_UMD_Header_FixPartShortSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_Header_FixPartShortSN_Type**		
Comment	TS 36.322, clause 6.2.1.3 Figure 6.2.1.3-1, 6.2.1.3-3 and 6.2.1.3-4); one octet		
FramingInfo	RLC_FramingInfo_Type		2 bits FI
Extension	B1_Type		1 bit E
SequenceNumber	B5_Type		5 bits SN

RLC_UMD_Header_FixPartLongSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_Header_FixPartLongSN_Type**		
Comment	TS 36.322, clause 6.2.1.3 Figure 6.2.1.3-2, 6.2.1.3-5 and 6.2.1.3-6); two octets		
Reserved	B3_Type		3 bits reserved
FramingInfo	RLC_FramingInfo_Type		2 bits FI
Extension	B1_Type		1 bit E
SequenceNumber	B10_Type		10 bits SN

RLC_UMD_HeaderShortSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_HeaderShortSN_Type**		
Comment			
FixPart	RLC_UMD_Header_FixPartShortSN_Type		
FlexPart	RLC_PDU_Header_FlexPart_Type	opt	

RLC_UMD_HeaderLongSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_HeaderLongSN_Type**		
Comment			
FixPart	RLC_UMD_Header_FixPartLongSN_Type		
FlexPart	RLC_PDU_Header_FlexPart_Type	opt	

RLC_DataFieldList_Type

TTCN-3 Record of Type	
Name	**RLC_DataFieldList_Type**
Comment	One to one correspondence with sub headers (LengthIndicatorList_Type)
record of RLC_DataField_Type	

RLC_UMD_PDU_ShortSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_PDU_ShortSN_Type**		
Comment			
Header	RLC_UMD_HeaderShortSN_Type		
Data	RLC_DataFieldList_Type		

RLC_UMD_PDU_LongSN_Type

TTCN-3 Record Type			
Name	**RLC_UMD_PDU_LongSN_Type**		
Comment			
Header	RLC_UMD_HeaderLongSN_Type		
Data	RLC_DataFieldList_Type		

RLC_UMD_PDU_Type

TTCN-3 Union Type		
Name	**RLC_UMD_PDU_Type**	
Comment		
ShortSN	RLC_UMD_PDU_ShortSN_Type	
LongSN	RLC_UMD_PDU_LongSN_Type	

D.2.1.2.4 AM_Data

RLC PDU definition: AM (TS 36.322, clause 6.2.1.4 and 6.2.1.5)

RLC_AMD_Header_FixPart_Type

TTCN-3 Record Type			
Name	**RLC_AMD_Header_FixPart_Type**		
Comment	TS 36.322, clause 6.2.1.4 Figure 6.2.1.4-1, 6.2.1.4-2 and 6.2.1.4-3); 2 or 4 octets		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
ReSeg	B1_Type		0 - AMD PDU 1 - AMD PDU segment
Poll	B1_Type		0 - Status report not requested 1 - Status report is requested
FramingInfo	RLC_FramingInfo_Type		2 bit FI
Extension	B1_Type		1 bit E
SN	B10_Type		Sequence numbers

RLC_AMD_Header_SegmentPart_Type

TTCN-3 Record Type			
Name	**RLC_AMD_Header_SegmentPart_Type**		
Comment	AMD PDU segment related info in PDU header acc. TS 36.322, clause 6.2.1.5		
LastSegmentFlag	B1_Type		0 - Last byte of the AMD PDU segment does not correspond to the last byte of an AMD PDU 1 - Last byte of the AMD PDU segment corresponds to the last byte of an AMD PDU
SegOffset	B15_Type		The SO field indicates the position of the AMD PDU segment in bytes within the original AMD PDU. Specifically, the SO field indicates the position within the Data field of the original AMD PDU to which the first byte of the Data field of the AMD PDU segment corresponds to.

RLC_AMD_Header_Type

TTCN-3 Record Type			
Name	**RLC_AMD_Header_Type**		
Comment			
FixPart	RLC_AMD_Header_FixPart_Type		
SegmentPart	RLC_AMD_Header_SegmentPart_Type	opt	present in case of AMD Seg PDU only
FlexPart	RLC_PDU_Header_FlexPart_Type	opt	

RLC_AMD_PDU_Type

TTCN-3 Record Type			
Name	**RLC_AMD_PDU_Type**		
Comment			
Header	RLC_AMD_Header_Type		
Data	RLC_DataFieldList_Type		

D.2.1.2.5 AM_Status

AM Status PDU (TS 36.322, clause 6.2.1.6)

AM_Status: Basic Type Definitions

TTCN-3 Basic Types		
RLC_Status_Padding_Type	bitstring length (1..7)	NOTE: in TTCN-3 length restriction cannot be done inline in record definition => explicit type definition necessary

RLC_Status_ACK_Type

TTCN-3 Record Type			
Name	**RLC_Status_ACK_Type**		
Comment			
ACK_SN	B10_Type		Acknowledgement SN (TS 36.322, clause 6.2.2.14)
Extn1	B1_Type		0 - a set of NACK_SN, E1 and E2 does not follow. 1 - a set of NACK_SN, E1 and E2 follows.

RLC_Status_SegOffset_Type

TTCN-3 Record Type			
Name	**RLC_Status_SegOffset_Type**		
Comment			
Start	B15_Type		SOstart field indicates the position of the first byte of the portion of the AMD PDU in bytes within the Data field of the AMD PDU
End	B15_Type		SOend field indicates the position of the last byte of the portion of the AMD PDU in bytes within the Data field of the AMD PDU. The special SOend value '111111111111111'B is used to indicate that the missing portion of the AMD PDU includes all bytes to the last byte of the AMD PDU

RLC_Status_NACK_Type

TTCN-3 Record Type			
Name	**RLC_Status_NACK_Type**		
Comment			
NACK_SN	B10_Type		
Extn1	B1_Type		0 - A set of NACK_SN, E1 and E2 does not follow. 1 - A set of NACK_SN, E1 and E2 follows.
Extn2	B1_Type		0 - A set of SOstart and SOend does not follow for this NACK_SN. 1 - A set of SOstart and SOend follows for this NACK_SN.

D.2.1.3 PDCP

PDCP user plane SDU and PDU definitions
NOTE:
To allow direct encoding the definition for PDCP Data PDU is split into data PDU with long/short sequence number

PDCP: Basic Type Definitions

TTCN-3 Basic Types		
PDCP_SDU_Type	octetstring	

PDCP_SDUList_Type

TTCN-3 Record of Type	
Name	**PDCP_SDUList_Type**
Comment	
record of PDCP_SDU_Type	

PDCP_DataPdu_LongSN_Type

TTCN-3 Record Type			
Name	**PDCP_DataPdu_LongSN_Type**		
Comment	User plane PDCP Data PDU with long sequence number (TS 36.323, clause 6.2.3)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
Reserved	B3_Type		
SequenceNumber	B12_Type		12 bit sequence number
SDU	PDCP_SDU_Type		content (octetstring)

PDCP_DataPdu_ShortSN_Type

TTCN-3 Record Type			
Name	**PDCP_DataPdu_ShortSN_Type**		
Comment	User plane PDCP Data PDU with short sequence number (TS 36.323, clause 6.2.4)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
SequenceNumber	B7_Type		7 bit sequence number
SDU	PDCP_SDU_Type		content (octetstring)

PDCP_DataPdu_ExtSN_Type

TTCN-3 Record Type			
Name	**PDCP_DataPdu_ExtSN_Type**		
Comment	User plane PDCP Data PDU with extended sequence number (TS 36.323, clause 6.2.9)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
SequenceNumber	B15_Type		15 bit sequence number
SDU	PDCP_SDU_Type		content (octetstring)

PDCP_Ctrl_ROHC_FB_PDU_Type

TTCN-3 Record Type			
Name	**PDCP_Ctrl_ROHC_FB_PDU_Type**		
Comment	PDCP Control PDU for interspersed ROHC feedback packet (TS 36.323, clause 6.2.5)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
Type	B3_Type		000 - PDCP status report 001 - Header Compression Feedback Information 010..111 - reserved
Reserved	B4_Type		
ROHC_FB	octetstring		Contains one ROHC packet with only feedback, i.e. a ROHC packet that is not associated with a PDCP

PDCP_Ctrl_StatusReport_Type

TTCN-3 Record Type			
Name	**PDCP_Ctrl_StatusReport_Type**		
Comment	PDCP Control PDU for PDCP status report (TS 36.323, clause 6.2.6)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
Type	B3_Type		000 - PDCP status report 001 - Header Compression Feedback Information 010..111 - reserved
FMS	B12_Type		PDCP SN of the first missing PDCP SDU.
Bitmap	octetstring	opt	The MSB of the first octet of the type "Bitmap" indicates whether or not the PDCP SDU with the SN (FMS + 1) modulo 4096 has been received and, optionally decompressed correctly. 0 - PDCP SDU with PDCP SN = (FMS + bit position) modulo 4096 is missing in the receiver. The bit position of Nth bit in the Bitmap is N, i.e. the bit position of the first bit in the Bitmap is 1. 1 - PDCP SDU with PDCP SN = (FMS + bit position) modulo 4096 does not need to be retransmitted. The bit position of Nth bit in the Bitmap is N, i.e. the bit position of the first bit in the Bitmap is 1.

PDCP_Ctrl_StatusReportExt_Type

TTCN-3 Record Type			
Name	**PDCP_Ctrl_StatusReportExt_Type**		
Comment	PDCP Control PDU for PDCP status report using a 15 bit SN (TS 36.323, clause 6.2.6)		
D_C	B1_Type		0 - Control PDU 1 - Data PDU
Type	B3_Type		000 - PDCP status report 001 - Header Compression Feedback Information 010..111 - reserved
Reserved	B5_Type		5 reserved bits
FMS_Ext	B15_Type		PDCP SN of the first missing PDCP SDU.
Bitmap	octetstring	opt	The MSB of the first octet of the type "Bitmap" indicates whether or not the PDCP SDU with the SN (FMS + 1) modulo (Maximum_PDCP_SN + 1) has been received and, optionally decompressed correctly. 0 - PDCP SDU with PDCP SN = (FMS + bit position) modulo (Maximum_PDCP_SN + 1) is missing in the receiver. The bit position of Nth bit in the Bitmap is N, i.e. the bit position of the first bit in the Bitmap is 1. 1 - PDCP SDU with PDCP SN = (FMS + bit position) modulo (Maximum_PDCP_SN + 1) does not need to be retransmitted. The bit position of Nth bit in the Bitmap is N, i.e. the bit position of the first bit in the Bitmap is 1.

PDCP_PDU_Type

D.2.2 DRB_Primitive_Definitions

Primitive definitions to send/receive data PDUs over DRB's

D.2.2.1 DRB_Common

U_PlaneDataList_Type

TTCN-3 Union Type		
Name	**U_PlaneDataList_Type**	
Comment	MAC: acc. to rel-8 protocols there is not more than one MAC PDU per TTI; any MAC PDU is completely included in one subframe RLC: one or more RLC PDUs per TTI (e.g. RLC Data + Status PDU on a logical channel; more than one RLC Data PDU in one MAC PDU is valid too) any RLC PDU is completely included in one subframe PDCP: one or more PDUs per TTI; one PDCP PDU may be included in more than one subframe	
MacPdu	MAC_PDUList_Type	SS configuration: RLC TM mode, MAC no header removal (PDCP is not configured)
RlcPdu	RLC_PDUList_Type	SS configuration: RLC TM mode, MAC header removal (PDCP is not configured)
PdcpPdu	PDCP_PDUList_Type	SS configuration: RLC AM/UM mode, PDCP no header removal
PdcpSdu	PDCP_SDUList_Type	SS configuration: RLC AM/UM mode, PDCP header removal

HarqProcessAssignment_Type

TTCN-3 Union Type		
Name	**HarqProcessAssignment_Type**	
Comment	in DL the HARQ process id may be specified by the test case or automatically assigned by SS	
Id	HarqProcessId_Type	HARQ process as specified by the test case NOTE1: the scope of this type is only for data being sent in one TTI; if data needs more than one TTI the HarqProcessId is undefined for the 2nd TTI onward what shall be handled as an error at the SS; SS may send a SYSTEM_IND indicating an error in this case; NOTE2: The initial value of the NDI shall be the same for all HARQ processes and cells
Automatic	Null_Type	HARQ process id automatically assigned by SS

D.2.2.2 Downlink

DRB_DataPerSubframe_DL_Type

TTCN-3 Record Type			
Name	**DRB_DataPerSubframe_DL_Type**		
Comment	common definition for one or several PDUs/SDUs to be sent in the subframe given by the subframe offset; NOTE 1: For MAC and RLC PDUs a single PDU is always sent in one subframe; SS shall raise an error indication (using SYSTEM_IND) when that is not possible NOTE 2: For PDCP the data may be spread over more than one subframe (segmented by the RLC); the TTCN implemetation is responsible to calculate appropriate offsets accordingly; the exact timing depends on (and is exactly specified by) configuration of the DL scheduling; SS shall raise an error when there is any conflict		
SubframeOffset	integer		subframe offset relative to the absolute timing information given in the common part of the ASP; NOTE 1: Notes: Acc. to TS 36.523-3, clause 7.3.3 in case of TDD or half-duplex configuration only subframes available for DL are taken into consideration NOTE 2: if a PDCP PDU or SDU takes more than one subframe, SubframeOffset specifies the first TTI
HarqProcess	HarqProcessAssignment_Type		HARQ process to be used: specific value (0..7) or automatically assigned by SS; in automatic mode SS chooses HARQ process out of the set configured by CcchDcchDtchConfigDL_Type.HarqProcessConfig NOTE: for PDCP SDUs or PDUs automatic mode shall be used; otherwise SS shall raise an error
PduSduList	U_PlaneDataList_Type		list of PDUs/SDUs to be sent in one TTI

DRB_DataPerSubframeList_DL_Type

TTCN-3 Record of Type	
Name	**DRB_DataPerSubframeList_DL_Type**
Comment	list of user plane data to be sent in sub-frames given by the SubframeOffset in the single elements of the list; Timing: the start time for the whole sequence is given by the timing info of the ASP (common information); the timing for the respective data pdus is given by the SubframeOffset relative to the common timing info; design consideration: repetitions of this sequence are not foreseen (in which case the subframe offset could not be related to the timing info of the ASP)
record of DRB_DataPerSubframe_DL_Type	

U_Plane_Request_Type

TTCN-3 Record Type			
Name	**U_Plane_Request_Type**		
Comment	NOTE: formal type definition to allow later enhancements; U_Plane_Request_Type defines a sequence of subframes in which data shall be sent		
SubframeDataList	DRB_DataPerSubframeList_DL_Type		

D.2.2.3 Uplink

DRB_DataPerSubframe_UL_Type

TTCN-3 Record Type			
Name	**DRB_DataPerSubframe_UL_Type**		
Comment	common definition for one or several PDUs/SDUs being received in one subframe or to receive one PDCP PDU or SDU being spread over more than one TTI; NOTE: There is a fix relation between HARQ process id and subframe in UL => it is not necessary to include HARQ process id for UL data		
PduSduList	U_PlaneDataList_Type		list of PDUs/SDUs being received in one TTI; elements of the list appear in the same order as the PDUs/SDUs in the MAC PDU; for PDCP when a PDU or SDU takes more than one TTI the list only contains this PDU or SDU
NoOfTTIs	integer		in case of PDCP: number of TTIs the SDU or PDU has taken NOTE 1: for the time being the NoOfTTIs is not checked by TTCN-3 and may be set to 1 by SS; NOTE 2: the timing info in common part of the ASP refers to the last TTI NOTE 3: when NoOfTTIs > 1 => PduSduList shall only contain one PDCP PDU or SDU in case of MAC or RLC PDUs: NoOfTTIs shall always be 1 (acc. to TS 36.321 MAC is not doing segmentation of RLC PDUs and acc. to TS 36.322, clause 6.2.2.2 the maximum RLC data is calculated to fit into a MAC PDU and RLC does segmentation accordingly)

U_Plane_Indication_Type

TTCN-3 Record Type			
Name	**U_Plane_Indication_Type**		
Comment	NOTE: formal type definition to allow later enhancements; U_Plane_Indication_Type defines data being received in a single subframe i.e. PDUs of subsequent TTIs are indicated in separated ASPs		
SubframeData	DRB_DataPerSubframe_UL_Type		

D.2.3 System_Interface

DRB_COMMON_REQ

TTCN-3 Record Type			
Name	**DRB_COMMON_REQ**		
Comment	common ASP to send PDUs to DRBs		
Common	ReqAspCommonPart_Type		CellId : identifier of the cell RoutingInfo : DRB id TimingInfo : starting point when to start sending sequence of data PDUs e.g. SFN = X, subframe number = x; U_Plane.SubframeDataList[i].SubframeOffset := offset_i; => U_Plane.SubframeDataList[i].PduSduList shall be sent out at SFN = X + ((x + offset_i) / 10); subframe number = (x + offset_i) % 10 ControlInfo : CnfFlag:=false; FollowOnFlag:=false
U_Plane	U_Plane_Request_Type		
SuppressPdcchForC_RNTI	Null_Type	opt	By default all DRB_COMMON_REQ scheduled DL PDU's are associated with an appropriate explicit configured or SS selected DL assignment allocation on PDCCH. For SuppressPdcch:=true in the sub frame in which DL PDU's are transmitted, there is no associated DL assignment allocation for configured C-RNTI. This will be used for SPS assignment based transmission or in any error scenarios; NOTE: this flag has no impact on PDCCH messages required for SPS activation

DRB_COMMON_IND

TTCN-3 Record Type			
Name	**DRB_COMMON_IND**		
Comment	common ASP to receive PDUs from DRBs		
Common	IndAspCommonPart_Type		CellId : identifier of the cell RoutingInfo : DRB id TimingInfo : time when message has been received NOTE 1: For MAC and RCL PDUs per definition U_Plane_Indication_Type corresponse to exactly one subframe => TimingInfo refers to this subframe NOTE 2: For PDCP a single PDU or SDU may take more than one TTI => TimingInfo refers to the end of the PDU/SDU and the length is given by NoOfTTIs in U_Plane_Indication_Type (the end of the PDU/SDU is the last RLC PDU being received; in case of retransmissins this is not necessarily the RLC PDU with the last SN)
U_Plane	U_Plane_Indication_Type		

EUTRA_DRB_PORT

TTCN-3 Port Type		
Name	**EUTRA_DRB_PORT**	
Comment		
out	DRB_COMMON_REQ	
in	DRB_COMMON_IND	

D.3 EUTRA_ASP_SrbDefs

D.3.1 SRB_DATA_ASPs

ASP Definitions to send/receive peer-to-peer messages on SRBs

C_Plane_Request_Type

TTCN-3 Record Type			
Name	**C_Plane_Request_Type**		
Comment	RRC and/or NAS PDU to be send to the UE; Note: it may be necessary to allow more than one NAS PDU (-> "record of") => FFS		
Rrc	RRC_MSG_Request_Type	opt	omit: NAS message shall be present; NAS message shall be sent in DLInformationTransfer present: if NAS message is present also, (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's DedicatedInfoNAS
Nas	NAS_MSG_RequestList_Type	opt	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted => NAS message shall be sent embedded in DLInformationTransfer if RRC message is present => NAS message is piggybacked in RRC message in case of RRC message is sent on CCCH, NAS message shall be omitted NOTE: acc. DEC 08 ASN.1 RRCConnectionReconfiguration may contain DedicatedInfoNAS several times

C_Plane_Indication_Type

TTCN-3 Record Type			
Name	**C_Plane_Indication_Type**		
Comment	RRC and/or NAS PDU to be received from the UE; Note: it may be necessary to allow more than one NAS PDU (-> "record of") => FFS		
Rrc	RRC_MSG_Indication_Type	opt	omit: NAS message shall be present; NAS message is received in ULInformationTransfer present: if NAS message is present also, DedicatedInfoNAS contains unstructured and ciphered NAS message and the NAS message is the deciphered message in structured format
Nas	NAS_MSG_IndicationList_Type	opt	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted => NAS message has been received in ULInformationTransfer if RRC message is present => NAS message has been piggybacked in RRC message NOTE: even though currently (DEC 08 ASN.1) there is no RRC PDU in UL containing more than one DedicatedInfoNAS we provide a list to allow extendability

SRB_COMMON_REQ

TTCN-3 Record Type			
Name	**SRB_COMMON_REQ**		
Comment	common ASP to send PDUs to SRB0, SRB1 or SRB2		
Common	ReqAspCommonPart_Type		CellId identifier of the cell RoutingInfo SRB0, SRB1, SRB2 TimingInfo Now in normal cases; For latency tests TimingInfo can be set to the SFN/subframe in which the RRC messages shall be sent out (in this case and if the RRC PDU is too long to be sent in one TTI the TimingInfo corresponds to the first TTI) ControlInfo CnfFlag:=false; FollowOnFlag true: Indicates that the message(s) to be sent on the same TTI will follow NOTE 1: When FollowOnFlag is true, TimingInfo shall always be "Now". Otherwise SS shall produce an error NOTE 2: the follow on flag applies only for messages of the same SRB false: Indicates that no more message(s) will follow
Signalling	C_Plane_Request_Type		

SRB_COMMON_IND

TTCN-3 Record Type			
Name	**SRB_COMMON_IND**		
Comment	common ASP to receive PDUs from SRB0, SRB1 or SRB2		
Common	IndAspCommonPart_Type		CellId identifier of the cell RoutingInfo SRB0, SRB1, SRB2 TimingInfo time when message has been received (as received from the SS by the NAS emulator)
Signalling	C_Plane_Indication_Type

Name	**NASEMU_SRB_PORT**	
Comment	NASEMU PTC: Port for Sending/Receiving data on SRBs (interface to EUTRA PTC)	
Out	SRB_COMMON_IND	
In	SRB_COMMON_REQ	

D.4 IP_ASP_TypeDefs

General Notes:
NOTE 1:
In general the handling of IP data shall be independent from the RAT being used on lower layers.
NOTE 2:
It shall be possible for SS implementation to reuse existing IP stack implementations in the system adaptor;
therefore the well-known concept of socket programming shall be supported
(regardless of whether those are used in the system adaptor implementation or not)
NOTE 3:
Since in general at the network side there are several different IP addresses the SS needs to simulate more than one IP address;
that can be based on a concept of multiple virtual network adaptors
NOTE 4:
There is no easy way to control the routing of IP data for an IP connection from above the IP stack
i.e. there are no parameters at the socket interface to determine e.g. cell id and DRB id
=> another independent logical entity (DRB-MUX) is needed below the IP stack which is responsible to control the routing of IP packets from/to DRBs in different cells of different RATs

Reference:
An introduction to socket programming can be found in
UNIX Network Programming Volume 1, Third Edition: The Sockets Networking API
by W. Richard Stevens, Bill Fenner, Andrew M. Rudoff

D.4.1 IP_Common

IP_Common: Basic Type Definitions

TTCN-3 Basic Types		
PortNumber_Type	UInt16_Type	

IPv4_AddrInfo_Type

TTCN-3 Record Type			
Name	**IPv4_AddrInfo_Type**		
Comment	IPv4 specific info of the socket addr (AF_INET)		
Addr	charstring		IP Address as string (IP v4 dot notation) to be converted to 32-bit unsigned integer

IPv6_AddrInfo_Type

TTCN-3 Record Type			
Name	**IPv6_AddrInfo_Type**		
Comment	IPv6 specific info of the socket addr (AF_INET6); NOTE: sin6_flowinfo can be ignored and set to 0		
Addr	charstring		to be converted to sin6_addr
ScopeId	UInt32_Type	opt	sin6_scope_id in general an IPv6 address is like "fe80::1%eth0" with eth0 being the network adaptor mapped to a scope id (Unix) assumption: for UE conformance testing it is not necessary to distiguish different scopes and the scope id in general can be determined by the system adaptor => omit

IP_AddrInfo_Type

TTCN-3 Union Type		
Name	**IP_AddrInfo_Type**	
Comment		
V4	IPv4_AddrInfo_Type	
V6	IPv6_AddrInfo_Type	

IP_Socket_Type

Name	**InternetProtocol_Type**
Comment	
udp	
tcp	
icmp	
icmpv6	

IP_Connection_Type

TTCN-3 Record Type			
Name	**IP_Connection_Type**		
Comment	A connection between peer-to-peer entities is unambiguously defined by the protocol (udp/tcp/icmp/icmpv4), the local socket and the remote socket		
Protocol	InternetProtocol_Type		
Local	IP_Socket_Type	opt	
Remote	IP_Socket_Type	opt	

D.4.2 IP_Config

Configuration of the routing table managed be the system adaptor's DRB-MUX:
foreach IP connection it is specified which
- RAT
- Cell
- DRB
to be used.
The IP connection does not need to be fully specified depending on the role SS plays (e.g. in case of a server role the port number of the remote side is not known in advance).
The configurations of DRBs within the same cell shall be mutual exclusive.

With the configuration of the IP routing the DRB is configured either in IP or in raw mode:
either there are entries for the DRB in the routing table (IP mode) or not (raw mode)
=> It is not necessary to reconfigure this for the respective RAT.

Behaviour of the DRB-MUX in UL:
- SS gets data packet from the lower layers (e.g. PDCP SDU)
- SS checks whether there is any IP connection configured for this DRB (identified by {RAT, CellId, DrbId})
  if YES => packet is routed to the IP stack (IP mode)
  if NO => packet is handed over to the DRB port (raw mode)
NOTE 1:

If there is any entry for a DRB in the routing table this DRB is considered as being in IP mode and all UL IP packets are sent to the IP stack regardless of whether their addresses match the DRB's routing entries or not (in general 'unknown' packets are discarded by the IP stack)
=> a DRB can be either in IP or in raw mode
NOTE 2:
=> The SS does not need to evaluate any IP headers to decide whether data shall be routed to the DRB port or to the IP stack (i.e. there is no conflict with unstructured loopback data)

Behaviour of the DRB-MUX in DL:
- SS gets IP packets from the IP stack for an IP connection
- SS compares the IP connection (protocol, local/remote IP Addr) against the IP routing table and
  checks whether the corresponding protocol stack is configured at the lower layers =>
  1. no match:
    no entry in the routing table fits to the address in the IP packet
    or the corresponding RB is not configured
    => SS shall raise an error (DRBMUX_COMMON_IND_CNF.Error)
  2. one match:
    There is exactly one possibility to route the IP packet
    => SS shall send the packet to this RB
  3. several matches:
    There are more than one DRBs, cells or RATs to which the packet may be routed
    => SS shall raise an error if there is more than one DRB in one cell matching;
      if the DRBs belong to different cells or RATS SS shall send the data to all of them
      (whether this may occur in test cases is FFS)

General notes:
NOTE 1:
SS may use the information of the routing table to determine which network adaptors it needs to simulate (implementation dependent);
in general there will be more than one IP address at the network side.
NOTE 2:
In general the routing table is a simplified DL TFT implementation
NOTE 3:
When the routing table is empty all DRBs are in raw mode; this shall be the initial condition at the DRB-MUX;
=> for L2 testing in general (and apart from the preamble) there is no need to use/configure the IP_PTC; the configuration of the RAT specific U-plane stacks is not affected

IP_RoutingInfo_Type

TTCN-3 Record Type			
Name	**IP_RoutingInfo_Type**		
Comment			
IpInfo	IP_Connection_Type		IP connection tuple: protocol, local socket, remote socket depending on the role the SS plays the following information may be provided (informative; even less information can be sufficient): 1. TCP/UDP server - local IP addr -- provided - local port -- provided - remote IP addr -- omit - remote port -- omit 2. TCP/UDP client - local IP addr -- provided (to inform SS about the local IP addr for this service) - local port -- omit; for UDP a well-defined port may be defined (protocol dependent, e.g. DHCP) - remote IP addr -- provided - remote port -- provided 3. ICMP (in general ICMP may be mapped only to a single DRB) - local IP addr -- provided (to inform SS about the local IP addr for this service) - local port -- n/a (shall be set to omit) - remote IP addr -- omit - remote port -- n/a (shall be set to omit) NOTE: In case of broadcasts in UL the broadcast address shall match any local IP address; in DL for broadcast services typically no remote IP address is specified in the routing table

Comment	
record of IPsec_SecurityAssociation_Type	

IPsec_Configure_Type

TTCN-3 Record Type			
Name	**IPsec_Configure_Type**		
Comment	add new security associations; existing SAs are not affected		
SA_List	IPsec_SecurityAssociationList_Type		
SecurityKeys	IPsec_SecurityKeys_Type		

IPsec_Release_Type

TTCN-3 Record Type			
Name	**IPsec_Release_Type**		
Comment	release security associations; NOTE: in context with multiple PDNs it cannot be ensured that all SPIs are unique; e.g. the UE may use the same SPI values in different PDNs in which case uniqueness cannot be achieved furthermore it depends on the system implementation how entries in the IPsec SAD and SPD are administrated => to release SAs the SS gets the same information as for configuration but without the security algorithms		
SA_List	IPsec_SecurityAssociationList_Type		

D.4.4 IP_SocketHandling

Handling of IP data and IP connections
NOTE 1:
In general IP connections are distinguished by the tuple {protocol, local socket, remote socket};
this information is used at the interface between TTCN and the system adaptor.
It is up the system adaptor implementation to associate the IP connection with the internal socket (file descriptor; implementation dependent)
NOTE 2:
In general the association of the IP connections to (internal) sockets and the routing table for the DRB mapping (as configured with IP_RoutingTable_Type) are independent from each other

D.4.4.1 Socket_Common

IP_SockOpt_Type

TTCN-3 Union Type		
Name	**IP_SockOpt_Type**	
Comment	socket options acc. to the setsockopt system call (i.e. for level=SOL_SOCKET in case of Berkeley socket API); NOTE: only options being relevant for a specific applications (upon a socket) are configured by TTCN other options (e.g. SO_REUSEADDR) are out of TTCN and therefore a matter of system adaptor implementation	
SO_BROADCAST	boolean	set to true when IP broadcast messages shall be allowed for a port; this is required e.g. in case of DHCP

IP_SockOptList_Type

TTCN-3 Record of Type	
Name	**IP_SockOptList_Type**
Comment	
record of IP_SockOpt_Type	

IP_SocketError_Type

TTCN-3 Union Type		
Name	**IP_SocketError_Type**	
Comment	used to indicate errors related to sockets; the IP_Connection shall contain as much address information as available at the system adaptor	
InvalidAddress	Null_Type	TTCN error: e.g. invalid or incomplete address information
System	integer	system error caused by system call; the integer value may be used for validation but shall not be evaluated by TTCN

D.4.4.2 Socket_Datagram

Socket_Datagram: Basic Type Definitions

TTCN-3 Basic Types		
Datagram_Content_Type	octetstring	data as sent/received with sendto()/recvfrom() on UDP or ICMP socket; NOTE: For ICMP the data may depend on the socket options (FFS); in general it does not include the IP header and the checksum of the ICMP packet needs to be calculated/checked in TTCN

Datagram_DL_Type

TTCN-3 Record Type			
Name	**Datagram_DL_Type**		
Comment	datagram to be sent at a UDP or ICMP socket		
Buffer	Datagram_Content_Type		content of the IP packet

Datagram_UL_Type

TTCN-3 Record Type			
Name	**Datagram_UL_Type**		
Comment	datagram as received on a UDP or ICMP socket		
Buffer	Datagram_Content_Type		content of the IP packet
DrbInfo	IP_DrbInfo_Type	opt	"interface id" where the data comes from in case of broadcast or multicast packets: for the LTE test model this is the DRB on which the IP packet has been received; the information is necessary when the SS cannot resolve an IP address being assigned to that DRB. => when the SS provides a broadcast or multicast address as local address in the ConnectionId of the ASP, the SS shall provide the DRB information in this field When the ConnectionId of the ASP is fully specified and unique (unicast address at least for local address) the DrbId is ignored by TTCN

D.4.4.3 TCP_Socket

TCP primitives used on the IP port

TCP_Socket: Basic Type Definitions

TTCN-3 Basic Types		
TCP_Data_Type	octetstring	data as sent/received with send()/recv() on a TCP socket

InternetApplication_Type

TTCN-3 Enumerated Type	
Name	**InternetApplication_Type**
Comment	as TCP is stream oriented SS may need information about which criteria to be applied to get start/end of an application message
ims	
http	

TCP_ConnectRequest_Type

TTCN-3 Record Type			
Name	**TCP_ConnectRequest_Type**		
Comment	TCP client: -> 'connect' system call		
SockOptList	IP_SockOptList_Type		when there are no options to configure the list is empty
Application	InternetApplication_Type		to specify start/end criteria for application messages

TCP_Listen_Type

TTCN-3 Record Type			
Name	**TCP_Listen_Type**		
Comment	TCP server: -> 'listen' system call		
SockOptList	IP_SockOptList_Type		when there are no options to configure the list is empty
Application	InternetApplication_Type		to specify start/end criteria for application messages

TCP_CtrlRequest_Type

TTCN-3 Union Type		
Name	**TCP_CtrlRequest_Type**	
Comment		
ConnectReq	TCP_ConnectRequest_Type	request a 'connect' to a remote server system calls (informative) socket -- get file descriptor (setsockopt) -- normally not needed bind -- assign local IP addr (to cope with multiple IP addresses) and dedicated port number (if local port is given) connect -- connect to the client IP_Connection: protocol -- tcp local IP addr -- mandatory to distinguish different network adaptors local port -- omit (ephemeral port will be assigned by the system) or specific port to be used for this connection (e.g. to bind a given port number to the IMS client) remote IP addr -- mandatory remote port -- mandatory
Listen	TCP_Listen_Type	establish a server at the local (SS) side system calls (informative) socket -- get file descriptor (setsockopt) -- if needed bind -- assign local IP addr and port listen -- await incoming connection IP_Connection: protocol -- tcp local IP addr -- mandatory to distinguish different network adaptors local port -- mandatory remote IP add -- omit remote port -- omit
Close	Null_Type	close a connection system calls (informative): close IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandator for TCP connections, omit for TCP server y remote port -- mandator for TCP connections, omit for TCP server y

TCP_DataRequest_Type

TTCN-3 Union Type		
Name	**TCP_DataRequest_Type**	
Comment		
Send	TCP_Data_Type	send data system calls (informative): send or write IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory

TCP_CtrlIndication_Type

TTCN-3 Union Type		
Name	**TCP_CtrlIndication_Type**	
Comment		
ConnectCnf	Null_Type	confirm a 'connect' to a remote server system calls (informative): getsockname -- get local port (ephemeral port assigned by the system) IP_Connection: protocol -- tcp local IP addr -- mandatory (as in corresponding TCP_ConnectRequest) local port -- mandatory (if there is more than one connection to the same server the local port is necessary to distinguish the connections) remote IP addr -- mandatory (as in corresponding TCP_ConnectRequest) remote port -- mandatory (as in corresponding TCP_ConnectRequest)
Accept	Null_Type	sent by the SS when it 'accepts' an incoming connection system calls (informative): accept IP_Connection: protocol -- tcp local IP addr -- mandatory (as in corresponding TCP_ListenRequest) local port -- mandatory (as in corresponding TCP_ListenRequest) remote IP addr -- mandatory (as gotten from 'accept') remote port -- mandatory (as gotten from 'accept')
Close	Null_Type	indicate 'close' by the remote side system calls (informative): indicated by recv or read IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory
CloseCnf	Null_Type	Confirmation for 'close' request; necessary since for TCP there are IP packets to release the connection system calls (informative): close IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory

TCP_DataIndication_Type

TTCN-3 Union Type		
Name	**TCP_DataIndication_Type**	
Comment		
Recv	TCP_Data_Type	receive data system calls (informative): recv or read IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory

D.4.4.4 UDP_Socket

UDP primitives used on the IP port
NOTE:
In principle a UDP socket may communicate with different remote entities;
therefore the system adaptor may associate the socket handle with the local socket only
(local IP address and local port)

UDP_SocketReq_Type

TTCN-3 Record Type			
Name	**UDP_SocketReq_Type**		
Comment	to establish a UDP server or to bind local port number		
SockOptList	IP_SockOptList_Type		e.g. to allow broadcast messages; when there are no options to configure the list is empty

UDP_CtrlRequest_Type

TTCN-3 Union Type		
Name	**UDP_CtrlRequest_Type**	
Comment		
SocketReq	UDP_SocketReq_Type	request the system adaptor to bind a socket to a local address; this is needed in general when the system adaptor acts as 1. UDP server 2. UDP client when it uses a well-known port rather than an ephemeral port (this is e.g. for DHCP) 3. UDP client when a local address needs to be bond (e.g. when there are several local addresses) system calls (informative): socket -- get file descriptor (setsockopt) -- needed e.g. to allow broad cast message bind -- assign local IP address (to cope with multiple IP addresses) and local port (in case of well-known local port) IP_Connection: protocol -- udp local IP addr -- mandatory (to distinguish multiple IP addresses) local port -- optional (mandatory in case of a UDP server) remote IP addr -- omit remote port -- omit
Close	Null_Type	release local socket system calls (informative): close IP_Connection: protocol -- udp local IP addr -- mandatory (to identify local socket) local port -- mandatory (to identify local socket) remote IP addr -- omit remote port -- omit

UDP_DataRequest_Type

TTCN-3 Union Type		
Name	**UDP_DataRequest_Type**	
Comment		
SendTo	Datagram_DL_Type	send data to (any) remote socket; NOTE: To simplify implementation of the system adaptor the local socket shall be bond in any case (using 'SocketReq') to specify the local IP address before sending data; (in general the sendto system call can be used without explicitly binding the socket before; in this case the port gets implicitly bond to an ephemeral port and the default IP address is used) system calls (informative): sendto IP_Connection: protocol -- udp local IP addr -- mandatory (to identify local socket) local port -- mandatory (to identify local socket) remote IP addr -- mandatory (to address remote socket) remote port -- mandatory (to address remote socket)

UDP_CtrlIndication_Type

TTCN-3 Union Type		
Name	**UDP_CtrlIndication_Type**	
Comment		
SocketCnf	Null_Type	confirm 'SocketReq' and tell TTCN about assignment of ephemeral port; system calls (informative): getsockname -- get local port (ephemeral port assigned by the system; not needed if local port is well-known) IP_Connection: protocol -- udp local IP addr -- mandatory local port -- mandatory (well-known or ephemeral port assigned by the system) remote IP addr -- omit remote port -- omit

UDP_DataIndication_Type

TTCN-3 Union Type		
Name	**UDP_DataIndication_Type**	
Comment		
RecvFrom	Datagram_UL_Type	receive data; system calls (informative): recvfrom -- get data and src addr IP_Connection: protocol -- udp local IP addr -- mandatory (see note) local port -- mandatory remote IP addr -- mandatory (as gotten from recvfrom) remote port -- mandatory (as gotten from recvfrom) NOTE: The UE may send a UDP packet as broadcast (IP Addr 255.255.255.255 - e.g. in case of DHCP) or multicast (e.g. ICMPv6) SS shall consider a broadcast address as matching every IP for UL and DL; the SS shall not replace the broadcast/multicast address by the local unicast address, but shall provide DRB information in RecvFrom; example: - SS gets DHCPDISCOVER with DEST_Addr=255.255.255.255 DEST_Port=67, SRC_Addr=0.0.0.0 SRC_Port=68 - TTCN gets DHCPDISCOVER with local Addr=(255.255.255.255 Port=67), remote Addr=(0.0.0.0 Port=68), DrbId=(LTE, cell1, DRB1) - TTCN sends DHCPOFFER with local Addr=(local IP Addr Port=67), remote Addr=(255.255.255.255 Port=68)

D.4.4.5 ICMP_Socket

ICMP primitives used on the IP port
NOTE:
the local side is identified by the protocol and in general by the local IP address

ICMP_SocketReq_Type

TTCN-3 Record Type			
Name	**ICMP_SocketReq_Type**		
Comment	to establish a raw socket to send/receive ICMP packets		
SockOptList	IP_SockOptList_Type		e.g. to set the IP_HDRINCL socket option (to include the IP header in the data buffer) -> FFS when there are no options to configure the list is empty

ICMP_CtrlRequest_Type

TTCN-3 Union Type		
Name	**ICMP_CtrlRequest_Type**	
Comment		
SocketReq	ICMP_SocketReq_Type	request the system adaptor to open a raw socket (IPv4 or IPv6) system calls (informative): socket -- get file descriptor (IPPROTO_ICMP or IPPROTO_IPV6); (setsockopt) -- optional; to set socket options bind -- assign local IP address (to cope with multiple IP addresses) IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to distinguish multiple IP addresses) local port -- omit (not applicable for ICMP) remote IP addr -- omit remote port -- omit (not applicable for ICMP)
Close	Null_Type	release local socket system calls (informative): close IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to identify local socket) local port -- omit remote IP addr -- omit remote port -- omit

ICMP_DataRequest_Type

TTCN-3 Union Type		
Name	**ICMP_DataRequest_Type**	
Comment		
SendTo	Datagram_DL_Type	send datagram system calls (informative): sendto IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to identify local socket) local port -- omit remote IP addr -- mandatory remote port -- omit

ICMP_CtrlIndication_Type

TTCN-3 Union Type		
Name	**ICMP_CtrlIndication_Type**	
Comment		
SocketCnf	Null_Type	confirm 'SocketReq' system calls (informative): (SocketCnf is sent when all system calls for SocketReq have been successful) IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory local port -- omit remote IP addr -- omit remote port -- omit

ICMP_DataIndication_Type

TTCN-3 Union Type		
Name	**ICMP_DataIndication_Type**	
Comment		
RecvFrom	Datagram_UL_Type	receive datagram system calls (informative): recvfrom -- get data and src addr IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (see note) local port -- omit remote IP addr -- mandatory (as gotten from recvfrom) remote port -- omit NOTE: As for UDP there may be multicast/broadcast packets. In this case - as for UDP - the SS shall provide the DRB information in RecvFrom.

D.4.4.6 Socket_Primitives

IP_CtrlRequest_Type

TTCN-3 Union Type		
Name	**IP_CtrlRequest_Type**	
Comment		
TCP	TCP_CtrlRequest_Type

D.4.5 System_Interface

DRBMUX_CONFIG_REQ

TTCN-3 Union Type		
Name	**DRBMUX_CONFIG_REQ**	
Comment	NOTE 1: There is just one primitive to configure the whole routing table. It is not foreseen to add, remove or manipulate single entries but the table is managed in TTCN and completely configured on any change; (otherwise it might get complicated to identify single entries) NOTE 2: the SS's routing table shall be empty at the beginning and can be cleared by an empty record (DRBMUX_CONFIG_REQ.RoutingInfo = {}) NOTE 3: In general a reconfiguration of the routing table during a test case would be necessary only if an ephemeral port is needed to distinguish different routing (e.g. when there are several TCP connections of the same service routed to different DRBs)	
RoutingInfo	IP_RoutingTable_Type	

DRBMUX_COMMON_IND_CNF

TTCN-3 Union Type		
Name	**DRBMUX_COMMON_IND_CNF**	
Comment		
Confirm	Null_Type	confirm DRBMUX_CONFIG_REQ
Error	Null_Type	indication of errors at the DRB-MUX: An Error shall be raised by the DRB-MUX e.g. in the following cases: - in DL when there are IP packets which cannot be routed to any DRB i.e. the IP packet does not match to any entry in the routing table or the corresponding RB is not configured - in DL when there are several DRBs possible for routing in the same cell

IPSEC_CONFIG_REQ

TTCN-3 Union Type		
Name	**IPSEC_CONFIG_REQ**	
Comment

RadioBearerId	RadioBearerId_Type	

D.6.4.1.2 Timing_Info

Timing_Info: Basic Type Definitions

TTCN-3 Basic Types		
SystemFrameNumber_Type	integer (0..1023)	
SubFrameNumber_Type	integer (0..9)	

SubFrameInfo_Type

TTCN-3 Union Type		
Name	**SubFrameInfo_Type**	
Comment		
Number	SubFrameNumber_Type	
Any	Null_Type	no specific sub-frame (valid for REQ ASPs only)

SystemFrameNumberInfo_Type

TTCN-3 Union Type		
Name	**SystemFrameNumberInfo_Type**	
Comment		
Number	SystemFrameNumber_Type	
Any	Null_Type	no specific frame number (valid for REQ ASPs only)

SubFrameTiming_Type

TTCN-3 Record Type			
Name	**SubFrameTiming_Type**		
Comment			
SFN	SystemFrameNumberInfo_Type		
Subframe	SubFrameInfo_Type		

TimingInfo_Type

TTCN-3 Union Type		
Name	**TimingInfo_Type**	
Comment		
SubFrame	SubFrameTiming_Type	
Now	Null_Type	to be used in REQ ASPs when there is no 'activation time'
None	Null_Type	only to be used in SYSTEM_CTRL_CNF but not for EnquireTiming

D.6.4.2 REQ_ASP_CommonPart

ReqAspControlInfo_Type

TTCN-3 Record Type			
Name	**ReqAspControlInfo_Type**		
Comment			
CnfFlag	boolean		true => SS shall send CNF: when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue. Example: when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event. If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message. When there is an activation time SS shall send the CNF after the configuration has been scheduled; that means SS shall not wait until the activation time has been expired.
FollowOnFlag	boolean		false => no further (related) information true: further related information will be sent to SS (semantics depending on respective ASP)

ReqAspCommonPart_Type

TTCN-3 Record Type			
Name	**ReqAspCommonPart_Type**		
Comment			
CellId	EUTRA_CellId_Type		
RoutingInfo	RoutingInfo_Type		
TimingInfo	TimingInfo_Type		
ControlInfo	ReqAspControlInfo_Type		
CA_Info	CarrierAggregationInfo_Type	opt	place holder for additional routing information for carrier aggregation

D.6.4.3 CNF_ASP_CommonPart

ConfirmationResult_Type

TTCN-3 Union Type		
Name	**ConfirmationResult_Type**	
Comment		
Success	Null_Type	
Error	integer	may contain SS specific error code; this will not be evaluated by TTCN

CnfAspCommonPart_Type

TTCN-3 Record Type			
Name	**CnfAspCommonPart_Type**		
Comment			
CellId	EUTRA_CellId_Type		
RoutingInfo	RoutingInfo_Type		
TimingInfo	TimingInfo_Type		
Result	ConfirmationResult_Type		

D.6.4.4 IND_ASP_CommonPart

IntegrityErrorIndication_Type

TTCN-3 Record Type			
Name	**IntegrityErrorIndication_Type**		
Comment			
Nas	boolean		NAS Integrity: set to true when received MAC does not match calculated MAC
Pdcp	boolean		PDCP Integrity: set to true when received MAC does not match calculated MAC

ErrorIndication_Type

TTCN-3 Record Type			
Name	**ErrorIndication_Type**		
Comment			
Integrity	IntegrityErrorIndication_Type		Integrity error: received MAC does not match calculated MAC
System	integer		any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE requests retransmission of an RLC PDU

IndicationStatus_Type

TTCN-3 Union Type		
Name	**IndicationStatus_Type**	
Comment		
Ok	Null_Type	
Error	ErrorIndication_Type	

IndAspCommonPart_Type

TTCN-3 Record Type

Comment			
CellId	EUTRA_CellId_Type		
RoutingInfo	RoutingInfo_Type		
TimingInfo	TimingInfo_Type		
Status	IndicationStatus_Type		
CA_Info	CarrierAggregationInfo_Type	opt	place holder for additional routing information for carrier aggregation

D.6.5 CA_CommonDefs

Common definitions for carrier aggregation needed for configuration of the SS (EUTRA_ASP_TypeDefs) as well as for MAC test cases (EUTRA_ASP_DrbDefs)

CA_CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
MAC_CTRL_ScellActDeact_Type	ScellBitMap_Type	36.321 clause 6.1.3.8

ScellBitMap_Type

TTCN-3 Record Type			
Name	**ScellBitMap_Type**		
Comment			
Reserved	B1_Type		LSBit Reserved. Shall be set to 0
Value	B7_Type		7 MSB bits the C Fields C7 to C1. 1 => the corresponding Scell is Active 0 => Inactive

PH_Record_Type

TTCN-3 Record Type			
Name	**PH_Record_Type**		
Comment	36.321 clause 6.1.3.6a		
P_Bit	B1_Type		P bit: 1 indicates the UE applies power backoff due to power management
V_Bit	B1_Type		V bit: Indicates if the PH value is based on a real transmission or a reference format. For Type 1 PH, V=0 indicates real transmission on PUSCH and V=1 indicates that a PUSCH reference format is used
Valve	B6_Type		The power headroom level. Ph Type 2 (if configured) for Pcell and Type 1 for Pcell and Scell
Reserved	B2_Type	opt	2 reservid bits. Present if V=1
PCMaxc	B6_Type	opt	Present if V=1

PH_RecordList_Type

TTCN-3 Record of Type	
Name	**PH_RecordList_Type**
Comment	If simultaneousPUCCH-PUSCH is not configured at least oneType 1 PH record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1. If simultaneousPUCCH-PUSCH is configured then one PH Type 2 record for P cell followed by PH Type 1 record for P cell is present. Additional one record per Scell for which respective 'C' bit is set as 1
record length(1..9) of PH_Record_Type	

MAC_CTRL_ExtPowerHeadRoom_Type

TTCN-3 Record Type			
Name	**MAC_CTRL_ExtPowerHeadRoom_Type**		
Comment			
EPH_Octet1	ScellBitMap_Type		
PH_RecordList	PH_RecordList_Type		At least one record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1

D.7 CDMA2000_ASP_TypeDefs

D.7.1 CDMA2000_Common

Common definitions for CDMA2000 and CDMA2000 ASPs

D.7.1.1 CDMA2000_SystemContants

CDMA2000_ASP_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_CDMA2000_MaxNumberOfCells	integer	8	Maximum number of CDMA2000 cells; in TS 36.508 in, clause 6.3.1.5 and 6.3.1.6 define 4 cells each for HRPD and 1XRTT; hence total is 8

D.7.1.2 CDMA2000_Routing

CDMA2000_Routing: Basic Type Definitions

TTCN-3 Basic Types		
RLP_FlowId_Type	integer (0..30)	As per S.0024, clause 4.8.2.10 both MaxNumRLPFlowsFwd and MaxNumRLPFlowsRvs need to be in the range of 0x06(6) to 0x1F(31) As per X.S007 clause 10, the PDN ID and Flow ID identify a flow

RLP_FlowIdList_Type

TTCN-3 Record of Type	
Name	**RLP_FlowIdList_Type**
Comment	
record of RLP_FlowId_Type	

CDMA2000_RoutingInfo_Type

TTCN-3 Union Type		
Name	**CDMA2000_RoutingInfo_Type**	
Comment		
None	Null_Type	
RLP_FlowId	RLP_FlowId_Type	

D.7.1.3 CDMA2000_TimingInfo

CDMA2000_TimingInfo: Basic Type Definitions

TTCN-3 Basic Types		
HRPD_FrameNumber_Type	integer	CDMA system time specified in units of 16 slots i.e. 26.66 ms.
RTT1X_FrameNumber_Type	integer	CDMA System Time, in integer multiples of 20 ms

HRPD_SubFrameInfo_Type

TTCN-3 Union Type		
Name	**HRPD_SubFrameInfo_Type**	
Comment		
Number	SubFrameNumber_Type	
Any	Null_Type	no specific sub-frame (valid for REQ ASPs only)

HRPD_Frame_Type

TTCN-3 Union Type		
Name	**HRPD_Frame_Type**	
Comment		
Number	HRPD_FrameNumber_Type	
Any	Null_Type	no specific TimeStamp (valid for REQ ASPs only)

RTT1X_Frame_Type

TTCN-3 Union Type			
Name	**RTT1X_Frame_Type**		
Comment			
Number	RTT1X_FrameNumber_Type		
Any	Null_Type	no specific TimeStamp (valid for REQ ASPs only)	

HRPD_SubFrameTiming_Type

TTCN-3 Record Type			
Name	**HRPD_SubFrameTiming_Type**		
Comment			
Frame	HRPD_Frame_Type		
Subframe	HRPD_SubFrameInfo_Type		

CDMA2000_SubFrameTiming_Type

TTCN-3 Union Type		
Name	**CDMA2000_SubFrameTiming_Type**	
Comment		
HRPD	HRPD_SubFrameTiming_Type	HRPD Timing
RTT1X	RTT1X_Frame_Type	RTT1X Timing specified in terms of Frames only

CDMA2000_TimingInfo_Type

TTCN-3 Union Type		
Name	**CDMA2000_TimingInfo_Type**	
Comment		
SubFrame	CDMA2000_SubFrameTiming_Type	
Now	Null_Type	to be used in REQ ASPs when there is no 'activation time'
None	Null_Type	only to be used in SYSTEM_CTRL_CNF but not for EnquireTiming

D.7.1.4 CDMA2000_ReqAspCommonPart

CDMA2000_ReqAspControlInfo_Type

TTCN-3 Record Type			
Name	**CDMA2000_ReqAspControlInfo_Type**		
Comment			
CnfFlag	boolean		true => SS shall send CNF: when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue. Example: when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event or system Command. If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message. When there is an activation time SS shall send the CNF after the configuration has been scheduled; that means SS shall not wait until the activation time has been expired.
FollowOnFlag	boolean		false => no further (related) information true: further related information will be sent to SS ; Currently this value is not foreseen to be used.

CDMA2000_ReqAspCommonPart_Type

TTCN-3 Record Type			
Name	**CDMA2000_ReqAspCommonPart_Type**		
Comment			
CellId	CDMA2000_CellId_Type		
RoutingInfo	CDMA2000_RoutingInfo_Type		
TimingInfo	CDMA2000_TimingInfo_Type		
ControlInfo	CDMA2000_ReqAspControlInfo_Type		

D.7.1.5 CDMA2000_IndAspCommonPart

CDMA2000_ErrorIndication_Type

TTCN-3 Record Type			
Name	**CDMA2000_ErrorIndication_Type**		
Comment			
System	integer		any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE requests retransmission of an RLC PDU

CDMA2000_IndicationStatus_Type

TTCN-3 Union Type		
Name	**CDMA2000_IndicationStatus_Type**	
Comment		
Ok	Null_Type	
Error	CDMA2000_ErrorIndication_Type	

CDMA2000_IndAspCommonPart_Type

TTCN-3 Record Type			
Name	**CDMA2000_IndAspCommonPart_Type**		
Comment			
CellId	CDMA2000_CellId_Type		
RoutingInfo	CDMA2000_RoutingInfo_Type		
TimingInfo	CDMA2000_TimingInfo_Type		
Status	CDMA2000_IndicationStatus_Type		

D.7.1.6 CDMA2000_CnfAspCommonPart

CDMA2000_ConfirmationResult_Type

TTCN-3 Union Type		
Name	**CDMA2000_ConfirmationResult_Type**	
Comment		
Success	Null_Type	
Error	integer	may contain SS specific error code; this will not be evaluated by TTCN

CDMA2000_CnfAspCommonPart_Type

TTCN-3 Record Type			
Name	**CDMA2000_CnfAspCommonPart_Type**		
Comment			
CellId	CDMA2000_CellId_Type		
RoutingInfo	CDMA2000_RoutingInfo_Type		
TimingInfo	CDMA2000_TimingInfo_Type		
Result	CDMA2000_ConfirmationResult_Type		Similar definition as EUTRA

D.7.2 CDMA2000_PowerLevel

CDMA2000_ASP_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_CDMA2000_Attenuation_Off	CDMA2000_Attenuation_Type	{Off:=true}	

CDMA2000_PowerLevel: Basic Type Definitions

TTCN-3 Basic Types		
CDMA2000_InitialAttenuation_Type	CDMA2000_Attenuation_Type (tsc_CDMA2000_Attenuation_Off)	Attenuation restricted to 'Off'

CDMA2000_Attenuation_Type

TTCN-3 Union Type		
Name	**CDMA2000_Attenuation_Type**	
Comment	attenuation of the reference power	
Value	Attenuation_Type	cell power reference power reduced by the given attenuation (value is in dB)
Off	Null_Type	for non suitable off cell we specify an explicit "Off" value here

CDMA2000_CellAttenuation_Type

TTCN-3 Record Type			
Name	**CDMA2000_CellAttenuation_Type**		
Comment			
CellId	CDMA2000_CellId_Type		
Attenuation	CDMA2000_Attenuation_Type		

CDMA2000_CellAttenuationList_Type

TTCN-3 Record of Type	
Name	**CDMA2000_CellAttenuationList_Type**
Comment	
record length(1..tsc_CDMA2000_MaxNumberOfCells) of CDMA2000_CellAttenuation_Type	

CDMA2000_AbsoluteCellPower_Type

TTCN-3 Record Type			
Name	**CDMA2000_AbsoluteCellPower_Type**		
Comment			
Powerloc	Powerloc_Type		TTCN writer Shall set same vale in all cells; SS shall have only one AWGN channel for all configured cells per frequency SS shall create a AWGN channel in first cell per frequency and ignore this in later cell creations on the same frequency; i.e. this channel is created along once for Cell 15 or 16 and one each per 17 and 19 similarly for RTT1X once for 19 or 20 and one each per 21 and 22
Powerlor	Powerlor_Type		Total Transmit power in cell before attenuation
PilotOffset	PilotOffset_Type		Default -7

CDMA2000_InitialCellPower_Type

TTCN-3 Record Type			
Name	**CDMA2000_InitialCellPower_Type**		
Comment			
MaxReferencePower	CDMA2000_AbsoluteCellPower_Type		maximum value of cell reference power corresponding to Max Ior/Ioc in power level table; a cell is initialised with this reference power; its value is the upper bound of the cell power during the test case
Attenuation	CDMA2000_InitialAttenuation_Type		initial attenuation Cell is off

D.7.3 CDMA2000_Data

Data primitives sent/received at CDMA2000_RLP_FLOW_PORT

CDMA2000_Data: Basic Type Definitions

TTCN-3 Basic Types		
RLP_SDU_Type	octetstring	

RLP_SDUList_Type

TTCN-3 Record of Type	
Name	**RLP_SDUList_Type**
Comment	
record of RLP_SDU_Type	

CDMA2000_U_PlaneData_Type

TTCN-3 Union Type		
Name	**CDMA2000_U_PlaneData_Type**	
Comment	Union structure is provided for future possible enhancements	
RLP_Sdu	RLP_SDUList_Type	RLP SDU's

RLPFlow_DataPerSubframe_DL_Type

TTCN-3 Record Type			
Name	**RLPFlow_DataPerSubframe_DL_Type**		
Comment	common definition for one or several SDUs to be sent in the subframe given by the subframe offset; SS shall raise an error indication (using SYSTEM_IND) when that is not possible NOTE 1: For RLP the data may be spread over more than one subframe ; the TTCN implementation is responsible to calculate appropriate offsets accordingly		
SubframeOffset	integer		subframe offset relative to the absolute timing information given in the common part of the ASP; NOTE : if a RLP SDU takes more than one subframe, SubframeOffset specifies the first TTI
SduList	CDMA2000_U_PlaneData_Type		list of PDUs/SDUs to be sent in one subframe

RLPFlow_DataPerSubframeList_DL_Type

TTCN-3 Record of Type	
Name	**RLPFlow_DataPerSubframeList_DL_Type**
Comment	list of user plane data to be sent in sub-frames given by the SubframeOffset in the single elements of the list; Timing: the start time for the whole sequence is given by the timing info of the ASP (common information); the timing for the respective data pdus is given by the SubframeOffset relative to the common timing info; design consideration: repetitions of this sequence are not foreseen (in which case the subframe offset could not be related to the timing info of the ASP)
record of RLPFlow_DataPerSubframe_DL_Type	

CDMA2000_U_Plane_Request_Type

TTCN-3 Record Type			
Name	**CDMA2000_U_Plane_Request_Type**		
Comment	NOTE: formal type definition to allow later enhancements; CDMA2000_U_Plane_Request_Type defines a sequence of subframes in which data shall be sent		
SubframeDataList	RLPFlow_DataPerSubframeList_DL_Type		

D.7.4 CDMA2000_CellConfiguration

HRPD_CellParameters_Type

TTCN-3 Record Type			
Name	**HRPD_CellParameters_Type**		
Comment	Parameters specific to HRPD		
SystemType	SystemType_Type		Specifies the system type of Channel As per Table 13.1-1 of C.S0024-C v2.0 0, 1, 2 are defined values and 3 to 255 are reserved
SubNetMask	B8_Type		7.11.6.2.2 of C.S0024-C v2.0 Sector Subnet identifier set this field to the number of consecutive 1s in the subnet mask of the subnet to which this sector belongs
ColorCode	ColorCode_Type		7.11.6.2.1 of C.S0024-C v2.0 set to the colour code corresponding to this sector part of QuickConfig Over head message
CountryCode	MCC_Type		7.11.6.2.2 of C.S0024-C v2.0 three-digit BCD (binary coded decimal) encoded representation of the Mobile Country Code associated with this sector
OpenLoopAdjust	OpenLoopAdjust_Type		9.4.6.2.6 of C.S0024-C v2.0; The negative of the nominal power to be used by access terminals in the open loop power estimate, expressed as an unsigned value in units of 1 dB. The value used by the access terminal is -1 times the value of this field
ReverseRateLimit	ReverseRateLimit_Type		Table 9.9.6.3-2 of C.S0024-C v2.0; set to the highest data rate that the access terminal is allowed to use on the Reverse Traffic Channel
MACIndex	ReverseLinkMACIndex_Type		C.S0024-C v2.0 clause 12.4.1.3.2.2 Forward channel MAC is derived from this based on table 12.4.1.3.2.2-1
PacketApp	PacketApplication_Type		Multi Flow Packet Application to be used Enhanced Multi-Flow Packet Application subtype(0x0009) defined in C.S0087-A v2.0 or as per C.S0087-A v2.0, clause 2.3 the UE Shall not propose AEMPA during stream protocol negotiation (0xFFFE) in C.R1001
ControlChannelRate	ControlChannelRate_Type		MAC index to be used for the Control Channel
PDN_Id	PDN_Id_Type		PDN_ID of the bearer
PDN_Address	PDN_Address_Type		the PDN Address to be provided to the UE in VSNCP ConfigAck
UATI	UATI_Type		UATI to be Assigned to the UE

RTT1X_CellParameters_Type

TTCN-3 Record Type			
Name	**RTT1X_CellParameters_Type**		
Comment	Parameters specific to 1XRTT		
Reg_Zone	B12_Type		C.S0005-F v1.0 clause 3.7.2.3.2.1 and 2.6.5.1.5 Registration Zone of the base station Reg_Zone, SID and NID shall be unique for each base station
Base_Class	B4_Type		C.S0005-F v1.0 clause 3.7.2.3.2.1 Base station class. The base station shall set this field as follows: For Band Class 1 and 4, the base station shall set this field to '0001'; otherwise, the base station shall set this field to '0000'
MCC	B10_Type		3.7.2.3.2.13 and 2.3.1.1 of C.S0005-F v1.0 encoding is int2bit (100*D1+10*D2+D3 -111,10) with digit 0 being mapped to 10 binary representation of the Mobile Country Code associated with this sector
IMSI_11_12	B7_Type		3.7.2.3.2.13 and 2.3.1.2 of C.S0005-F v1.0 encoding is int2bit (10*D2+D3 -11,7) with digit 0 being mapped to 10 binary representation of the Mobile Network Code associated with this sector
TMSI	TMSI_Type		the TMSI to be assigned to the MS
ProtRev	ProtRev_Type		Protocol Revision
Min_ProtRev	ProtRev_Type		the minimum protocol revision supported by Base station
Sig_EncryptionMode	EncryptionMode_Type		Encryption mode for Common and dedicated signalling
USerInfo_EncryptionMode	EncryptionMode_Type		User information Encryption mode

ModeSpecificCellParams_Type

TTCN-3 Union Type		
Name	**ModeSpecificCellParams_Type**	
Comment		
RTT1X	RTT1X_CellParameters_Type	
HRPD	HRPD_CellParameters_Type	

CDMA2000_CellParameters_Type

TTCN-3 Record Type			
Name	**CDMA2000_CellParameters_Type**		
Comment			
Type	CDMA2K_Type		Gives if cell is EHRPD or RTT1X
CarrierFreq	CarrierFreqCDMA2000_Type		Contains bandclass (5 bit) and arfcn i.e. 11 bit channel number
PhysCellId	PhysCellIdCDMA2000_Type		PN offset of pilot 0..511
CellGlobalId	CellGlobalIdCDMA2000_Type		Contains the 128 bit cell ID for HRPD and 47 bit cell ID for 1XRTT
SearchWindow	SearchWindowSizeRecord_Type		contains the SearchWindow for Active, Neighbour & Remaining cells

CDMA2000_CellConfigInfo_Type

TTCN-3 Record Type			
Name	**CDMA2000_CellConfigInfo_Type**		
Comment			
CellParameters	CDMA2000_CellParameters_Type		Parameters common to HRPD and RTT1X
InitialCellPower	CDMA2000_InitialCellPower_Type		Power level parameters
ModeSpecificCellParams	ModeSpecificCellParams_Type		Parameters specific to RTT1X or HRPD

CDMA2000_CellConfigRequest_Type

TTCN-3 Union Type		
Name	**CDMA2000_CellConfigRequest_Type**	
Comment		
AddOrReconfigure	CDMA2000_CellConfigInfo_Type	for cell configuration: CellId : identifier of the cell to be configured RoutingInfo : None TimingInfo : Now (for initial configuration and for reconfiguration in general) ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)
Release	Null_Type	to remove a cell completely - CellId : identifier of the cell to be released; eutra_Cell_NonSpecific, in case all cells shall be released RoutingInfo : None TimingInfo : Now ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)

D.7.5 CDMA2000_HRPD

D.7.5.1 CDMA2000_PDN_Defs

CDMA2000_PDN_Defs: Basic Type Definitions

TTCN-3 Basic Types		
CDMA2000_AttachType	O3_Type	Defined values: 1: Initial Attach to a PDN, 3: Handover attach to a PDN. Rest undefined and not used
IPv4_Address_Type	O4_Type	represents the IPv4 address as per 24.301 clause 9.9.4.9
IPv6_Address_Type	O8_Type	represents the IPv6 interface identifier as per 24.301 clause 9.9.4.9
PDN_Id_Type	B4_Type	indicates the PDN Id associated with the bearer PDN Identifier of the PDN for which the user data is sent. it is the low order 4 bits of, containing the PDN-ID identifies the PDN (i.e. one per default bearer) Reference X.S0057-E v1.0 clause 10.1.5; gives only low order 4 bits, and high order 4 bits are added as all zero's
Flow_Id_Type	B4_Type	the lower 4 bits of the Flow Identifier, as defined in Table 15 of X.S0057-E v1.0 identify each reservation that is requested to be added or deleted the complete 8 bit flow Identifier is formed by PDN-ID and Flow-Id

IPv4v6_Address_Type

TTCN-3 Record Type			
Name	**IPv4v6_Address_Type**		
Comment			
IPv4	IPv4_Address_Type		IP v4 address to be allocated
IPv6	IPv6_Address_Type		IP v6 interface identifier to be allocated

PDN_Address_Type

TTCN-3 Union Type		
Name	**PDN_Address_Type**	
Comment	based on 24.301 cl. 9.9.4.9	
IPv4	IPv4_Address_Type	only IP v4 address to be allocated
IPv6	IPv6_Address_Type	only IP v6 interface identifier to be allocated
IPv4v6	IPv4v6_Address_Type	both IP v4 address and IP v6 interface identifier to be allocated

Flow_IdList_Type

TTCN-3 Record of Type	
Name	**Flow_IdList_Type**
Comment	
record of Flow_Id_Type	

D.7.5.2 CDMA2000_SubProtocols

LCP_DetachInit_Type

TTCN-3 Enumerated Type	
Name	**LCP_DetachInit_Type**
Comment	
networkInitiated	X.S0057-E v1.0 clause 11.2
UEInitiated	X.S0057-E v1.0 clause 11.1.2

DHCP_Ind_Type

TTCN-3 Record Type			
Name	**DHCP_Ind_Type**		
Comment			
RapidCommit	boolean		indicates if Rapid Comit option of DHCP is used

UATI104_Type

TTCN-3 Union Type		
Name	**UATI104_Type**	
Comment		
Value	O13_Type	
None	Null_Type	

UATI_Type

TTCN-3 Record Type			
Name	**UATI_Type**		
Comment			
UATI24	O3_Type		Represents UATI(0:23), as per clause 6.3.7.2.2 of C.S0024-C v2.0
UATI104	UATI104_Type		Represents UATI(127:24), as per clause 6.3.7.2.2 of C.S0024-C v2.0 if has to be assigned

VSNCP_ConfigCmpl	Null_Type		PDN connection establishment started and UE has sent PPP Vendor Specific Network Control Protocol Configuration Request PDN Connection and default bearer establishment is completed with possible IPV4 address (optional) and or IPv6 interface ID (Mandatory) provided Attach type shall be Handover Attach(pre-registration) or Initial Attach (if normal registration in HRPD cell)
DHCP_ConfigCmpl	DHCP_Ind_Type	opt	UE and SS decided for IPv4 address allocation by DHCP IPv4 address allocation completed by UE and SS Completion of IP Address through DHCP
ICMPv6_ConfigCmpl	Null_Type	opt	UE optionally sent ICMPv6 Router solicitation message and SS has responded with IPv6 Router Advertisement message

HRPD_SystemIndication_Type

TTCN-3 Union Type		
Name	HRPD_SystemIndication_Type	
Comment		
Error	Null_Type	Used by SS to indicate any error; the Actual Error types reported in ASP common part in CDMA2000_IndicationStatus_Type
InitialAccessProbeRcvd	Null_Type	Initial Access probe is received;
RegAndDefBearerEstInd	RegAndDefBearerEstInd_Type	UE has successfully performed registration and default bearer establishment
DedicatedBearerEstInd	Null_Type	Vendor specific network protocXol (RFC 3772) procedures to re-establish Dedicated bearer as defined in S.0057 clause 5.5.3.1 (BCM is MS/NW) or clause 5.5.4.1.1 (BCM = MS-Only) Bearer Configuration Mode Dedicated bearers are (re) established
DedicatedBearerRelInd	DedicatedBearerRelInd_Type	To indicate the Dedicated bearer is released
DefaultBearerRelDetachInd	DefaultBearerRelDetachInd_Type	To Release configured default bearer and hence associated Dedicated bearer X.S0057-E v1.0 clause 11.3 and 11.1.1 Dedicated bearers are deactivated/released To detach the UE X.S0057-E v1.0 clause 11.2 Detach completed
MovedToDormantMode	Null_Type	The channels are released and UE is moved to PPP dormant mode/Air interface Idle.
MobilityFromEUTRACmpl	MobilityFromEUTRACmpl_Type	To confirm that Handover from EUTRAN is completed by receiving Traffic Channel Complete and the MessageSequence is same as in Traffic Channel Assignment
AdditionalDefBearerEstInd	AdditionalDefBearerEstInd_Type	UE has successfully performed additional default bearer establishment (additional PDN)
HRPD_ZoneRegistrationInd	HRPD_ZoneRegistrationInd_Type	Initially pre-registered UE detects change in HRPD Zone ID in SIB and hence updates registration

D.7.5.4 HRPD_Commands

HRPD_UE_InitStateType

TTCN-3 Enumerated Type	
Name	**HRPD_UE_InitStateType**
Comment	HRPD UE states as defined in C.S0057-E v1.0 clause 3.1
idle_Null	In the Inactive/Null State, 1. there is no physical traffic channel between the UE and the eAN, and no connection exists between the eAN and the ePCF 2. no PPP link between the UE and the HSGW . 3. The UE may have a Universal Access Terminal Identifier (UATI) that has been assigned by an eHRPD eAN
dormant	In the Dormant State, 1. no physical traffic channel exists between the UE and the eAN and no connection exists between the eAN and the ePCF. 2. PPP link between the UE and the HSGW 3. eHRPD DORMANT state equates to the "idle" state referred to in TS 23.402
active_Connected	In the Active/Connected State, 1. a physical traffic channel exists between the UE and the eAN over which data may be sent. A connection exists between the eAN and the ePCF, and between the ePCF and the HSGW, 2. there is a PPP link between the UE and the HSGW
preregister	The UE is performing pre-register though a different Access network

RegAndDefBearerEst_Type

TTCN-3 Record Type			
Name	**RegAndDefBearerEst_Type**		
Comment			
InitState	HRPD_UE_InitStateType		
RLP_FlowId	RLP_FlowId_Type		Associated RLP Flow ID
AttachType	CDMA2000_AttachType		The Attach Type to be expected in VSNCP procedure

DefaultBearerRelDetach_Type

TTCN-3 Record Type			
Name	**DefaultBearerRelDetach_Type**		
Comment			
InitState	HRPD_UE_InitStateType		
PDN_Id	PDN_Id_Type		PDN_ID of the bearer
RLP_FlowId	RLP_FlowId_Type		Associated RLP Folw ID
UE_NW_Initiated	LCP_DetachInit_Type		If initiated by UE or Network

DedicatedBearerEstRel_Type

TTCN-3 Record Type			
Name	**DedicatedBearerEstRel_Type**		
Comment			
InitState	HRPD_UE_InitStateType		PPP and Air Interface state of UE when the procedure is being executed
AssociatedDefaultBearer	PDN_Id_Type		the PDN ID of the associated default bearer; Gives the APN with which additional Dedicated Bearer needs to be established
Flow_Ids	Flow_IdList_Type		Flow_ID's of the multiple dedicated bearers to be Activated/Deactivated
RLP_FlowIds	RLP_FlowIdList_Type		Associated RLP Folw ID; There is one to one association between elements in Flow_IdList_Type and RLP_FlowIdList_Type; it's a TTCN programming error otherwise

AdditionalDefBearerEst_Type

TTCN-3 Record Type			
Name	**AdditionalDefBearerEst_Type**		
Comment	used for multiple PDN connections		
InitState	HRPD_UE_InitStateType		
RLP_FlowId	RLP_FlowId_Type		Associated RLP Flow ID

HRPD_SystemCommand_Type

TTCN-3 Union Type		
Name	**HRPD_SystemCommand_Type**	
Comment		
ReportInitialAccesProbe	Null_Type	SS is expected to report any possible Access probes received on HRPD Cell; will be used in situations where UE is not expected to camp on a HRPD Cell
RegAndDefBearerEst	RegAndDefBearerEst_Type	To complete registration and establish Default bearer; Initial UE State is Idle_Null State Indications up to VSNCP protocol and possible IP signalling over DHCPv4 and/or ICMPv6 is performed At the end of procedure, UE is still in Active/Connected state (not pre-registration); SS is expected to send InitialAccessProbeRcvd(only if initial state is not Active and not pre-registration) and RegAndDefBearerEstInd as an indication for successful completion of procedure
DedicatedBearerEst	DedicatedBearerEstRel_Type	Dedicated bearers are established/Activated by VSNP/EMPA protocol; PDN ID and RLP flow ID pairs are provided for each Dedicated bearer At the end of procedure, UE is still in Active/Connected state SS is expected to send InitialAccessProbeRcvd(only if initial state is not Active) and DedicatedBearerEstInd as an indication for successful completion of procedure
MoveToDormantState	Null_Type	UE is Active_Connected state and is moved to Dormant state SS is expected to send MovedToDormantMode
MoveToActiveState	RLP_FlowIdList_Type	UE is initially Dormant state; UE is made to Move to Active_Connected State List of RLP flow Id's (associated with default + dedicated bearer), need to be established are provided SS is expected to send InitialAccessProbeRcvd
DedicatedBearerRel	DedicatedBearerEstRel_Type	Dedicated bearers are released/De-Activated by VSNP terminate and SCP release protocol; At the end of procedure, UE is still in Active/Connected state (not pre-registration) SS is expected to send InitialAccessProbeRcvd(only if initial state is not Active and not pre-registration) and DedicatedBearerRelInd as an indication for successful completion of procedure
DefaultBearerRelDetach	DefaultBearerRelDetach_Type	Default bearer is released by VSNCP terminate and SCP release protocol UE is made to detach by LCP protocol and Possible Channels are released At the end of procedure, UE is in Idle_Null state Notes: When Detach is network initiated the sequence is 1. Default bearer (and hence all associated Dedicated bearers) released by VSNCP terminate 2. UE is detached by LCP terminate procedure When Detach is UE initiated, UE may only perform LCP terminate procedure SS is expected to send InitialAccessProbeRcvd(only if initial state is not Active) and DefaultBearerRelDetachInd as an indication for successful completion of procedure
MobilityFromEUTRA	Null_Type	Prepare CDMA SS for receiving tunnelled HRPD Connection Request and Route Update tunnelled in ULHandoverPreparationTransfer Respond with GCSNA encapsulated HRPD Silence Parameters and HRPD Open Loop Parameters, HRPD Traffic Channel Assignment to be sent tunnelled in MobilityFromEUTRACommand Receive Traffic Channel Complete in the HRPD Cell; After Receiving Traffic Channel Assignment , HRPD Silence Parameters and HRPD Open Loop Parameters embedded in EUTRA message MobilityFromEUTRACommand, UE has

		Tuned to HRPD Radio and transmitted Traffic Channel Complete in the HRPD Cell SS is expected to send MobilityFromEUTRACmpl as an indication for successful completion of procedure
AdditionalDefBearerEst	AdditionalDefBearerEst_Type	To establish an additional PDN connection Initial UE State is Idle_Null State or procedure performed through pre-registration Indications up to VSNCP protocol and possible IP signalling over DHCPv4 and/or ICMPv6 is performed At the end of procedure, UE is still in Active/Connected state(not pre-registration); SS is expected to send InitialAccessProbeRcvd (only if initial state is not Active and not pre-registration) and AdditionalDefBearerEstInd as an indication for successful completion of procedure
HRPDZoneRegister	RegAndDefBearerEst_Type	To update registration by a UE already registered and established Default bearer; Initial UE State is Idle_Null State Indications up to VSNCP protocol and possible IP signalling over DHCPv4 and/or ICMPv6 is performed At the end of procedure, UE is still in Active/Connected state (not pre-registration); SS is expected to send InitialAccessProbeRcvd(only if initial state is not Active and not pre-registration) and RegAndDefBearerEstInd as an indication for successful completion of procedure

D.7.6 CDMA2000_RTT1X

D.7.6.1 RTT1X_Indications

RTT1X call flows in RTT1x cell
Expected Sequence for Attach (Power Up Attach)
1. Initial AccessProbeRcvd
2. CS_RegistrationStart(Powerup)
3. CS_RegistrationCmpl
Expected Sequence for Detach (Power Down Attach)
1. Initial AccessProbeRcvd
2. CS_RegistrationStart (PowerDown)
3. CS_RegistrationCmpl
Expected Sequence for CSFB Call Establishment
1. Initial AccessProbeRcvd
2. CS_CallEstStart (Origination/ PageResponse)
3. ChAssignCmpl (Extended Channel Assignment is sent)
4. CS_CallEstCompleted (Acknowledgement Order Sent, Service Connect sent, Service Connect Completion received, Alert Sent/Received and ConnectOrder is received)
Expected Sequence for SRVCC call handover
1. HandoffCmpl

RTT1X_CS_CallType

TTCN-3 Enumerated Type	
Name	**RTT1X_CS_CallType**
Comment	
mo	Call is UE originated
mt	Call is UE Terminated
mo_Emergency	UE originated Emergency Call

RTT1XAttachType

TTCN-3 Enumerated Type	
Name	**RTT1XAttachType**
Comment	Ref C.S005 Table 2.7.1.3.2.1-1
powerUpAttach	UE is doing Power up attach REG_Type = '0001'B; it was not previously attached
powerDownAttach	UE is doing power down attach REG_Type = '0011'B; it was previously attached
zoneBasedAttach	UE is doing Zone based attach REG_Type = '0010'B
orderedAttach	UE is doing Ordered attach REG_Type = '0101'B
OtherAttach	Any other Attach REG_Type does not equal above values

CS_RegCmplInd_Type

TTCN-3 Record Type			
Name	**CS_RegCmplInd_Type**		
Comment			
CS_RegistrationCmpl	RTT1XAttachType		CS power up/down registration is completed UE Sent Registration message and received an L2 Acknowledgement Optionally SS can perform Authentication and has sent Registration Accepted order

CS_Reg_CallCmplInd_Type

TTCN-3 Record Type			
Name	**CS_Reg_CallCmplInd_Type**		
Comment			
CS_RegistrationCmpl	RTT1XAttachType	opt	CS power up/down registration is completed; This is omit if implicit registration is done UE Sent Registration message and received an L2 Acknowledgement Optionally SS can perform Authentication and has sent Registration Accepted order UE can also do a implicit registration; i.e. reception of Origination/reconnect/CallRecovery/Page message by Base station is treated as implicit registration
CS_CallEstStarted	RTT1X_CS_CallType		Received Origination message for MO and Page Response for MT
ChAssignCmpl	Null_Type		(Extended) Channel Assignment procedure started UE has sent ConnectionRequestTraffic Extended Channel assignment is completedUE has sent TrafficChannelComplete
CS_CallEstCompleted	Null_Type		SS received Service Connect Completion(Mo) or ConnectOrder(MT) (i.e. User Accepted call)

CS_CallCmplInd_Type

TTCN-3 Record Type			
Name	**CS_CallCmplInd_Type**		
Comment			
CS_CallEstStarted	RTT1X_CS_CallType		Received Origination message for MO and Page Response for MT
ChAssignCmpl	Null_Type		(Extended) Channel Assignment procedure started completed
CS_CallEstCompleted	Null_Type		SS received Service Connect Completion(MO) or ConnectOrder(MT) (i.e. User Accepted call)
IsEmergencyCall	boolean		True indicates the established call is emergency call, false indicates a normal voice has been established

ECSFB_CallCmplInd_Type

TTCN-3 Record Type

CS_Registration_Type

TTCN-3 Record Type			
Name	**CS_Registration_Type**		
Comment			
AttachType	RTT1XAttachType		
IsPreRegistration	boolean		Indicates if it is done as pre registration Value is ignored if Attach Type is Power down (Assumption detach happens only in 1XRTT cell)
RAND	B32_Type	opt	RAND [From eNB] to be included in CSFBParametersResponseCDMA2000, HandoverFromEUTRAPreparationRequest Value not present for power down registration

RTT1X_SystemCommand_Type

TTCN-3 Union Type		
Name	RTT1X_SystemCommand_Type	
Comment		
ReportInitialAccesProbe	Null_Type	SS is expected to report any possible Access probes received on 1XRTT Cell; will be used in situations where UE is not expected to camp on a 1XRTT Cell
CS_Registration	CS_Registration_Type	Power up attach/ power down attach in 1xRTT cell or Pre registration (Power up attach) tunnelled through a different RAT in case of pre-registration attach, the CDMA SS starts by sending mobilityParameters to be tunnelled in CSFBParametersRequestCDMA2000 SS is expected to send InitialAccessProbeRcvd (only if initial state is not pre-registration) and CS_RegistrationCmpl as an indication for successful completion of procedure
CSFB_Call	RTT1X_CS_CallType	CSFB by a (pre-)registered UE If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunnelled in DLInformation Transfer SS is expected to send InitialAccessProbeRcvd and CS_CallCmplInd as an indication for successful completion of procedure
CS_Reg_CSFB_Call	RTT1X_CS_CallType	UE not previously pre-registered hence performs registration (Power up attach) and CSFB call Registration can be implicit registration SS is expected to send InitialAccessProbeRcvd and CS_Reg_CallCmplInd as an indication for successful completion of procedure
MobilityFromEUTRA_1XRTT	NullType	Prepare SS for Mobility from Eutra CDMA SS sends mobilityParameters to be tunnelled in HandoverFromEUTRAPreparationRequest Receive tunnelled 1xRTT GCSNA Encapsulated Origination message and MEID in ULHandoverPreparationTransfer Respond with GCSNA encapsulated 1xRTT Handoff Direction message to be sent tunnelled in MobilityFromEUTRACommand Receive HandoffCmpl in the 1xRTT Cell; SS is expected to send HandoffCmpl as an indication for successful completion of procedure
CS_OrderedRegistration	CS_Registration_Type	ordered registration on (already registered) 1xRTT cell or Pre registration Power up attach) through a different RAT. SS triggers the procedure by sending Registration Request order (GCSNA encapsulated in case of pre-registration) and sends mobilityParameters to be tunnelled in CSFBParametersRequestCDMA2000 SS is expected to send InitialAccessProbeRcvd (only if initial state is not pre-registration) and CS_RegistrationCmpl as an indication for successful completion of procedure
E_CSFB_Call	RTT1X_CS_CallType	Prepare SS for Enhanced CSFB call If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (M0)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA encapsulated 1xRTT Handoff Direction message to be sent tunneled in MobilityFromEUTRACommand Receive HandoffCmpl in the 1xRTT Cell; SS responds with Alert With Information (MT)/Sevice connect (MO) in the 1xRTT cell. SS receives Connect order (MT)/Service Connect Completion (MO)

		SS is expected to send ECSFB_CallCmplInd as an indication for succesful completion of procedure
E_CSFB_Call_ ECAM	RTT1X_CS_CallType	Prepare SS for Enhanced CSFB call with Extended channel assignment If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (M0)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA Encapsulated ECAM message to be sent tunneled in MobilityFromEUTRACommand Receive Origination in the 1xRTT Cell; After extended channel assignment, SS receives Connect order (MT)/Service Connect Completion (MO) SS is expected to send ECSFB_ECAM_CallCmplInd as an indication for succesful completion of procedure
E_CSFB_Call_ Reject	RTT1X_CS_CallType	Prepare SS for Enhanced CSFB call, which needs to be rejected If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (M0)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA encapsulated 1xRTT Release Order message to be sent tunneled in DLInformation Transfer SS is expected to send ECSFB_CallRejInd as an indication for succesful completion of procedure

D.8 CDMA2000_CommonDefs

type definitions used by CDMA2000 and EUTRA

CDMA2000_CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
BandclassCDMA2000_Type	integer (0..31)	Band class defined as in 36.331 ASN.1 definition for BandclassCDMA2000
ARFCN_ValueCDMA2000_Type	integer (0..2047)	ARFCN for CDMA2000 cell as in 36.331 ASN.1 definition for ARFCN_ValueCDMA2000
PhysCellIdCDMA2000_Type	integer (0..511)	PN offset for CDMA2000 cell as in 36.331 ASN.1 definition for PhysCellIdCDMA2000
ProtRev_Type	integer (0..255)	protocol revision
OpenLoopAdjust_Type	integer (0..255)	9.4.6.2.6 of C.S0024-C v2.0
BCD_Digit_Type	integer (0..9)	To represent BCD digit of MCC
TMSI_Code_Type	O4_Type	
EncryptionMode_Type	integer (0..7)	C.S0005-F v1.0 table 3.7.4.5-1 & 3.7.5.7-3 0 ... Encryption disabled 1 ... Encryption with ORYX algorithm for User Info and Enhanced Cellular Msg Encryption Algorithm for Signalling 2 ... Encryption with Rijndael algorithm 3-7 ... reserved
TMSI_ZoneLen_Type	integer (1..8)	TMSI Zone Length; On encoding this is encoded to B4_Type
SectorID_HRPD_Type	B128_Type	Sector ID for HRPD as in 36.331 ASN.1 definition for CellGlobalIdCDMA2000.cellGlobalIdHRPD
PilotOffset_Type	integer (-31..0)	Represents the offset i.e. Pilot Channel power to total cell power(dB); By default shall be set to -7 127 selected Max value by 7 bits
PowerIor_Type	integer (-127..0)	Represents the cell total Tx power Ior (dBm/1.23 MHz)
PowerIoc_Type	integer (-127..0)	Represents the cell total AWGN power Ioc (dBm/1.23 MHz) which is independent of cell
SystemType_Type	integer (0..255)	0 to 2 are allowed and 3 to 255 are reserved 13.1 of C.S0024-C v2.0
ColorCode_Type	integer (0..255)	7.11.6.2.1 of C.S0024-C v2.0
ReverseLinkMACIndex_Type	integer (0..383)	C.S0024-C v2.0 clause 12.4.1.3.2.2

MCC_Type

TTCN-3 Record of Type	
Name	**MCC_Type**
Comment	Represents Mobile Country Code
record length (3) of BCD_Digit_Type	

TMSI_Zone_Type

TTCN-3 Record of Type	
Name	**TMSI_Zone_Type**
Comment	TMSI Zone 1 to 8 octets
record length (1..8) of B8_Type	

TMSI_Type

TTCN-3 Record Type			
Name	**TMSI_Type**		
Comment	Globally unique TMSI as defined in C.S0005-F v1.0 clause 3.7.2.3.2.19		
TMSI_ZoneLen	TMSI_ZoneLen_Type		Length of TMSI_Zone 1..8
TMSI_Zone	TMSI_Zone_Type		TMSI_ZoneLen octets of TMSI_Zone
TMSI_Code	TMSI_Code_Type		TMSI code

SectorID_RTT1X_Type

TTCN-3 Record Type			
Name	**SectorID_RTT1X_Type**		
Comment	Sector ID for 1XRTT acc. to C.S0005-F v1.0 clause 3.7.2.3.2.1 and as in 36.331 ASN.1 clause 6.3.4, definition of CellGlobalIdCDMA2000.cellGlobalId1XRTT		
BaseId	B16_Type		Base station identification. The base station shall set this field to its identification number
NID	B16_Type		Network identification This field serves as a sub-identifier of a system as defined by the owner of the SID. The base station shall set this field to the network identification number for this network
SID	B15_Type		System identification. set to the system identification number for this system

CarrierFreqCDMA2000_Type

TTCN-3 Record Type			
Name	**CarrierFreqCDMA2000_Type**		
Comment	Carrier Frequency for CDMA2000 cell as in 36.331 ASN.1 definition for CarrierFreqCDMA2000; contains Band class 5 bit and Channel number 11 bit part of Sector Channel over head message contained in 24 bit Channel IE		
BandClass	BandclassCDMA2000_Type		
ARFCN	ARFCN_ValueCDMA2000_Type		

CDMA2K_Type

TTCN-3 Enumerated Type	
Name	**CDMA2K_Type**
Comment	CDMA 2000 Type for CDMA2000 cell as in 36.331 ASN.1 definition for CDMA2000-Type
type1XRTT	
typeHRPD	

CellGlobalIdCDMA2000_Type

TTCN-3 Union Type		
Name	**CellGlobalIdCDMA2000_Type**	
Comment	CDMA 2000 Type Sector ID of the Cell as in 36.331 ASN.1 definition CellGlobalIdCDMA2000	
RTT1X	SectorID_RTT1X_Type	
HRPD	SectorID_HRPD_Type	

ReverseRateLimit_Type

TTCN-3 Enumerated Type	
Name	**ReverseRateLimit_Type**
Comment	Table 9.9.6.3-2 of C.S0024-C v2.0; set to the highest data rate that the access terminal is allowed to use on the Reverse Traffic Channel; 10 Reserved values

SearchWindowSizeRecord_Type

TTCN-3 Record Type			
Name	**SearchWindowSizeRecord_Type**		
Comment			
SearchWindow_Active	SearchWindowSize_Type		Search Window for Active Cells
SearchWindow_Neighbor	SearchWindowSize_Type		Search Window for Neighbour Cells
SearchWindow_Remaining	SearchWindowSize_Type		Search Window for Rest Cells

D.9 HRPD_MsgTypeDefs

HRPD_MsgTypeDefs: Basic Type Definitions

TTCN-3 Basic Types		
MessageId_Type	B8_Type	
TransactionId_Type	B8_Type	
B34_Type	bitstring length(34)	
RAChannelGain	B2_Type	
MACIndexMSB	B1_Type	
DSC	B3_Type	
DeltaT2P	B6_Type	

CONNECTION_REQUEST

TTCN-3 Record Type			
Name	**CONNECTION_REQUEST**		
Comment	clause 7.4.6.2.2		
MessageId	MessageId_Type		The access terminal shall set this field to 0x01
TransactionId	TransactionId_Type		The access terminal shall increment this value for each new ConnectionRequest message sent
RequestReason	B4_Type		0x0 Access Terminal Initiated 0x1 Access Network Initiated
Reserved	B4_Type		The access terminal shall set this field to zero. The access network shall ignore this field.

Pilot

TTCN-3 Record Type			
Name	**Pilot**		
Comment			
PilotPN	B9_Type		The access network shall set this field to the PN Offset associated with the sector that will transmit a Power Control Channel to the access terminal, to whom the access terminal is allowed to point its DRC, and whose Control Channel and Forward Traffic Channel the access terminal may monitor.
SoftHandoff	B1_Type		If the Forward Traffic Channel associated with this pilot will carry the same closed-loop power-control bits as that of the previous pilot in this message, the access network shall set this field to '1'; otherwise, the access network shall set this field to '0'. The access network shall set the first instance of this field to '0'. If the SofterHandoff field associated with a PilotPN is equal to '1', then the PilotPN is defined to belong to the same cell as the previous PilotPN in this message
MACIndexLSBs	B6_Type		Least Significant Bits of the Medium Access Control Index. The access network shall set this field to the six least significant bits of the MACIndex assigned to the access terminal by this sector
DRCCover	B3_Type		The access network shall set this field to the index of the DRC cover associated with the sector specified in this record.
RABLength	B2_Type		If the traffic channel being assigned by this message is to use Subtype 0 or Subtype 1 Reverse Traffic Channel MAC protocol, the access network shall set the RABLength to specify the Reverse Activity Bit length according to Table 9.7.6.2-2. Otherwise, the access network shall set this field to '00'. '00':8,'01':16,'10:32,'11':64
RABOffset	B3_Type		If the traffic channel being assigned 1 by this message is to use Subtype 0 or Subtype 1 Reverse Traffic Channel MAC protocol, the access network shall set this field to indicate the offset associated with the Reverse Activity Bit. Otherwise, the access network shall set this field to '000'. The value (in slots) of RABOffset is the number the field is set to multiplied by RABLength/8

PilotList

TTCN-3 Record of Type	
Name	**PilotList**
Comment	
record length (1..15) of Pilot	

RAChannelGainList

TTCN-3 Record of Type	
Name	**RAChannelGainList**
Comment	
record length (1..15) of RAChannelGain	

MACIndexMSBList

TTCN-3 Record of Type	
Name	**MACIndexMSBList**
Comment	
record length (1..15) of MACIndexMSB	

DSCList

TTCN-3 Record of Type	
Name	**DSCList**
Comment	
record length (1..15) of DSC	

DeltaT2PList

TTCN-3 Record of Type	
Name	**DeltaT2PList**
Comment	
record length (1..15) of DeltaT2P	

PilotRec

TTCN-3 Record Type			
Name	**PilotRec**		
Comment			
PilotPNPhase	B15_Type		The PN offset in resolution of 1 chip of a pilot in the Active Set or Candidate Set of the access terminal that is not the reference pilot
ChannelInclude d	B1_Type		The access terminal shall set this field to '1' if the channel for this pilot offset is not the same as the current channel. Otherwise, the access terminal shall set this field to '0'.
Channel	B24_Type	opt	The access terminal shall include this field if the ChannelIncluded field is set to '1'. The access terminal shall set this to the channel record corresponding to this pilot (see 14.1). Otherwise, the access terminal shall omit this field for this pilot offset
PilotStrength	B6_Type		The access terminal shall set this field to - 2 * 10 * log10PS , where PS is the strength of the pilot in the above field, measured as specified in 8.7.6.1.2.3. If this value is less than 0, the access terminal shall set this field to '000000'. If this value is greater than'111111', the access terminal shall set this field to '111111'
Keep	B1_Type		If the pilot drop timer corresponding to the pilot in the above field has expired, the access terminal shall set this field to '0'; otherwisethe access terminal shall set this field to '1'

PilotRecList

TTCN-3 Record of Type	
Name	**PilotRecList**
Comment	
record length (1..15) of PilotRec	

ReservedVariable

TTCN-3 Record of Type	
Name	**ReservedVariable**
Comment	
record length (0..7) of bitstring	

ROUTE_UPDATE

TTCN-3 Record Type			
Name	**ROUTE_UPDATE**		
Comment	clause 8.7.6.2.1		
MessageId	MessageId_Type		The access network shall set this field to '00'O
MessageSequence	B8_Type		The access terminal shall set this field to the sequence number of this message. The sequence number of this message is 1 more than the sequence number of the last RouteUpdate message (modulo 284)sent by this access terminal. If this is the first RouteUpdate message sent by the access terminal, it shall set this field to 0x00
ReferencePilotPN	B9_Type		The access terminal shall set this field to the access terminal's time reference (the reference pilot), relative to the zero offset pilot PN sequence in units of 64 PN chips
ReferencePilotStrength	B6_Type		The access terminal shall set this field to - 2 * 10 * log10PS , where PS is the strength of the reference pilot, measured as specified in 8.7.6.1.2.3. If this value is less than 0, the access terminal shall set this field to '000000'. If this value is greater than '111111', the access terminal shall set this field to '111111'
ReferenceKeep	B1_Type		If the pilot drop timer corresponding to the reference pilot has expired, the access terminal shall set this field to '0'; otherwise the access terminal shall set this field to '1'
NumPilots	B4_Type		The access terminal shall set this field to the number of pilots that follow this field in the message
PilotsRecList	PilotRecList		Pilot record
Reserved	ReservedVariable		The number of bits in this field is equal to the number needed to make the message length an integer number of octets. This field shall be set to all zeros

Header_Format

TTCN-3 Record Type			
Name	**Header_Format**		
Comment	When TunnelModeEnabled is not set to '0', the access terminal and the access network shall place the following header in front of each packet receivedfrom the Packet Consolidation Protocol		
SAPState	B1_Type		The sender shall set this field to '1' if the Inter-RAT Signalling Adaptation Protocol is currently in the Open State, otherwise the sender shall setthis field to '0'
SessionConfigurationToken	B16_Type		If SAP is in the Open State, the access terminal shall omit this field. Otherwise, the access terminal shall set this field to the value of theSessionConfigurationToken which is public data of the Session Configuration Protocol. The access network shall omit this field
ConnectionLayerFormat	B1_Type		The access terminal or the access network shall set this field to '1' if the connection layer packet is Format B; otherwise, it shall set this field to '0'
ATI_Record	B34_Type		Access Terminal Identifier Record. The access terminal or the access network shall set this field to the record specifying the access terminal'sID specified by TransmitATI.ATI and TransmitATI.ATIType. This record is defined in 14.2 in [1]
Reserved	B4_Type		The access terminal or the access network shall this field to all zeros

D.10 EUTRA_ASP_CDMA2000TunnellingDefs

ASP definitions for tunnelling of CDMA2000 messages e.g. during CDMA2000 pre-registration

EUTRA_ASP_CDMA2000TunnellingDefs: Basic Type Definitions

TTCN-3 Basic Types		
TunneledInfoCDMA2000	octetstring	
MEID_Type	ULHandoverPreparationTransfer_r8_IEs .meid	
CDMA2000_MSG_REQ	CDMA2000_UL_Container_Type	
CDMA2000_MSG_IND	CDMA2000_DL_Container_Type	

UL_TunneledInfoCDMA2000

TTCN-3 Record Type			
Name	**UL_TunneledInfoCDMA2000**		
Comment			
Msg	TunneledInfoCDMA2000		OCTET STRING
Meid	MEID_Type	opt	ASN.1 type: BIT STRING (SIZE (56)) used to tunnel meid received from UE in ULHandoverPreparationTransfer for 1xRTT, not present other wise

CDMA2000_UL_Container_Type

TTCN-3 Record Type			
Name	**CDMA2000_UL_Container_Type**		
Comment			
CDMA2000Type	CDMA2000_Type		ASN.1 type: type1XRTT, typeHRPD
UL_Msg	UL_TunneledInfoCDMA2000		

DL_TunneledInfoCDMA2000

TTCN-3 Record Type			
Name	**DL_TunneledInfoCDMA2000**		
Comment			
Msg	TunneledInfoCDMA2000		OCTET STRING

CDMA2000_DL_Container_Type

TTCN-3 Record Type			
Name	**CDMA2000_DL_Container_Type**		
Comment			
CDMA2000Type	CDMA2000_Type		ASN.1 type: type1XRTT, typeHRPD
DL_Msg	DL_TunneledInfoCDMA2000		OCTET STRING

CDMA2000_TUNNELLING_PORT

TTCN-3 Port Type		
Name	**CDMA2000_TUNNELLING_PORT**	
Comment	EUTRA PTC: Port to deal with tunnelling of CDMA2000 messages	
out	CDMA2000_MSG_REQ	
in	CDMA2000_MSG_IND	

D.11 EUTRA_ASP_VirtualNoiseDefs

ASP definitions for virtual noise generation in EUTRA cells.
The noise is configurated for an already existing EUTRA cell.
For UEs with 2 antenna connectors the AWGN (Additive white Gaussian noise) signals applied to each receiver antenna connector shall be uncorrelated.

EUTRA_ASP_VirtualNoiseDefs: Basic Type Definitions

TTCN-3 Basic Types		
EUTRA_VngConfigConfirm_Type	Null_Type	

EUTRA_VngConfigInfo_Type

TTCN-3 Record Type			
Name	**EUTRA_VngConfigInfo_Type**		
Comment			
Bandwidth	Dl_Bandwidth_Type		Bandwidth to be used for the noise (in general the same bandwidth as for the associated EUTRA cell)
NocLevel	integer		Noc level; calculation is FFS

EUTRA_VngConfigRequest_Type

TTCN-3 Union Type		
Name	**EUTRA_VngConfigRequest_Type**	
Comment	configure/activate noise for a given cell; NOTE: it is assumed the associated EUTRA cell has been created beforehand	
Configure	EUTRA_VngConfigInfo_Type	configuration of the virtual noise generator; regardless of the power level the noise generator is off before it gets activated for this cell; whether the configuration can be changed during a test is FFS but if so the noise generator shall be deactivated for this cell
Activate	Null_Type	noise is activated (switched on) for the given cell acc. to the previous configuration; while being active the configuration shall not be modified
Deactivate	Null_Type	deactivate noise for given cell

EUTRA_VNG_CTRL_REQ

TTCN-3 Record Type			
Name	**EUTRA_VNG_CTRL_REQ**		
Comment			
Common	ReqAspCommonPart_Type		CellId : as for the associated EUTRA cell RoutingInfo : None TimingInfo : Now ControlInfo : CnfFlag:=true; FollowOnFlag:=false
Request	EUTRA_VngConfigRequest_Type		

EUTRA_VNG_CTRL_CNF

TTCN-3 Record Type			
Name	**EUTRA_VNG_CTRL_CNF**		
Comment			
Common	CnfAspCommonPart_Type		TimingInfo is ignored by TTCN (apart from EnquireTiming) => SS may set TimingInfo to "None"
Confirm	EUTRA_VngConfigConfirm_Type		

EUTRA_VNG_PORT

TTCN-3 Port Type		
Name	**EUTRA_VNG_PORT**	
Comment	EUTRA PTC: Port for virtual noise generator	
out	EUTRA_VNG_CTRL_REQ	
in	EUTRA_VNG_CTRL_CNF	

D.12 UTRAN_ASP_VirtualNoiseDefs

ASP definitions for virtual noise generation in UTRAN cells.
The noise is configurated for an already existing UTRAN cell.
NOTE: For the time being VNG is applicable for UTRAN FDD only as acc. to TS 36.304 clause 5.2.4.5 there is no quality based measurement for UTRAN TDD, GERAN or CDMA2000

UTRAN_ASP_VirtualNoiseDefs: Basic Type Definitions

TTCN-3 Basic Types		
UTRAN_VngConfigConfirm_Type	Null_Type	

UTRAN_VngConfigInfo_Type

TTCN-3 Record Type			
Name	**UTRAN_VngConfigInfo_Type**		
Comment			
IocLevel	integer		Ioc level; calculation is FFS

UTRAN_VngConfigRequest_Type

TTCN-3 Union Type		
Name	**UTRAN_VngConfigRequest_Type**	
Comment	configure/activate noise for a given cell; NOTE: it is assumed the associated UTRAN cell has been created beforehand	
Configure	UTRAN_VngConfigInfo_Type	configuration of the virtual noise generator; regardless of the power level the noise generator is off before it gets activated for this cell; whether the configuration can be changed during a test is FFS but if so the noise generator shall be deactivated for this cell
Activate	Null_Type	noise is activated (switched on) for the given cell acc. to the previous configuration; while being active the configuration shall not be modified
Deactivate	Null_Type	deactivate noise for given cell

UTRAN_VNG_CTRL_REQ

TTCN-3 Record Type			
Name	**UTRAN_VNG_CTRL_REQ**		
Comment			
CellId	integer		id of associated UTRAN cell
Request	UTRAN_VngConfigRequest_Type		

UTRAN_VNG_CTRL_CNF

TTCN-3 Record Type			
Name	**UTRAN_VNG_CTRL_CNF**		
Comment			
CellId	integer		id of associated UTRAN cell
Confirm	UTRAN_VngConfigConfirm_Type		

UTRAN_VNG_PORT

TTCN-3 Port Type		
Name	**UTRAN_VNG_PORT**	
Comment	UTRAN PTC: Port for virtual noise generator	
out	UTRAN_VNG_CTRL_REQ	
in	UTRAN_VNG_CTRL_CNF	

D.13 CommonDefs

CommonDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_UInt8Max	integer	255	
tsc_UInt16Max	integer	65535	
tsc_UInt20Max	integer	1048575	
tsc_UInt32Max	integer	4294967295	
tsc_GuardTimePreamble	float	180	

CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
B1_Type	bitstring length(1)	
B2_Type	bitstring length(2)	
B3_Type	bitstring length(3)	
B4_Type	bitstring length(4)	
B5_Type	bitstring length(5)	
B6_Type	bitstring length(6)	
B7_Type	bitstring length(7)	
B7_15_Type	bitstring length(7..15)	NOTE: length restriction can only be a range but not two distinct lengths
B8_Type	bitstring length(8)	
B9_Type	bitstring length(9)	
B10_Type	bitstring length(10)	
B11_Type	bitstring length(11)	
B12_Type	bitstring length(12)	
B15_Type	bitstring length(15)	
B16_Type	bitstring length(16)	
B24_Type	bitstring length(24)	
B32_Type	bitstring length(32)	
B128_Type	bitstring length(128)	
B256_Type	bitstring length(256)	
B128_Key_Type	B128_Type	128 bit security key
O3_Type	octetstring length(3)	
O4_Type	octetstring length(4)	
O8_Type	octetstring length(8)	
O13_Type	octetstring length(14)	
Null_Type	boolean (true)	dummy type for 'typeless' fields in unions
Dummy_Type	boolean (true)	dummy type for temporary purposes only
UInt16_Type	integer (0 .. tsc_UInt16Max)	
UInt32_Type	integer (0 .. tsc_UInt32Max)	
Char1_Type	charstring length (1)	
IP_DrbId_Type	integer	DRB identity type common for all RATs: - for EUTRA it corrensponds to the ASN.1 type DRB-Identity - for UTRAN it corrensponds to the ASN.1 type RB-Identity and values are as defined in TS 34.123-3 Table 8.2.4.1 - for GERAN the NSAPI value (type record NSAPI) may be used (FFS) NOTE: this is introduced to simplify the dependencies (i.e. to keep IP_ASP_TypeDefs independent from any RAT specific type definitions)

Annex E (informative): Change history

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2008-05					Creation of draft TS		0.0.2
2008-08					Add test models	0.0.2	0.1.0
2008-10					Add ASPs and state model	0.1.1	0.3.0
2008-12					Add details of UL/DL scheduling and cell configurations	0.4.0	0.5.0
2009-02					Change naming conventions, add more design considerations	0.5.0	1.0.0
2009-03	RAN#43	RP-090271			Presentation for Information	1.0.0	1.0.2
2009-03					Add Upper tester interface	1.0.2	1.1.0
2009-04					Improved DL scheduling	1.1.0	1.2.0
2009-06					Add normative annex D for ASP definitions	1.2.0	1.3.0
2009-08					General update	1.3.0	1.4.0
2009-09					Style /format check from ETSI EditHelp	1.4.0	1.4.1
2009-09	RAN#45	RP-090753			Presentation of v2.0.0 for approval	1.4.1	2.0.0
2009-09					Updated to 8.0.0 with no change	2.0.0	8.0.0
2009-12	RAN#46	RP-091122	0001	-	LTE ASP clarifications and update	8.0.0	8.1.0
2009-12	RAN#46	RP-091119	0002	-	CR to 36.523-3: Add new e-mail agreed LTE TTCN test cases in the TC list of Annex A and update Annex D	8.0.0	8.1.0
2009-12	RAN#46	R5s090180	0003	-	Resubmission of GCF WI 81 LTE RRC test case 8.1.2.1 on wk42 TTCN	8.0.0	8.1.0
2009-12	RAN#46	R5s090139	0004	-	Addition of GCF WI 81 LTE RRC test case 8.1.1.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090144	0005	-	Addition of GCF WI 81 LTE RRC test case 8.1.3.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090163	0006	-	Addition of GCF WI 82 EUTRA NAS test case 9.2.1.1.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090141	0007	-	Addition of GCF WI 81 LTE MAC test case 7.1.1.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090160	0008	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090156	0009	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090154	0010	-	Addition of GCF WI 82 EPC test case 9.2.2.2.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090165	0011	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.3	8.0.0	8.1.0
2009-12	RAN#46	R5s090171	0012	-	Addition of GCF WI 81 EUTRA MAC test case 7.1.3.3	8.0.0	8.1.0
2009-12	RAN#46	R5s090176	0013	-	Addition of GCF WI 82 EPC test case 9.3.2.1	8.0.0	8.1.0

2013-06	RAN#60	R5s130308	1653	-	Correction to EUTRA RRC Test Case 8.4.1.5	10.3.0	10.4.0
2013-06	RAN#60	R5s130310	1654	-	Correction to UTRAN Capability information Procedure in EUTRA Testcases	10.3.0	10.4.0
2013-06	RAN#60	R5s130312	1655	-	Correction to EUTRA Multi-layer Test Case 13.3.1.3	10.3.0	10.4.0
2013-06	RAN#60	R5s130313	1656	-	Correction to GCF WI-082 E-UTRA EMM test case 9.1.2.6	10.3.0	10.4.0
2013-06	RAN#60	R5s130314	1657	-	Correction to GCF WI-151 LTE FDD-TDD Inter-mode test case 8.1.3.12a	10.3.0	10.4.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2013-06	RAN#60	R5s130316	1658	-	LTE_TDD: Addition of GCF WI-096 TD-LTE<>TDSDMA Testcase 13.3.2.1	10.3.0	10.4.0
2013-06	RAN#60	R5s130318	1659	-	LTE_TDD: Addition of GCF WI-096 TD-LTE<>TDSDMA Testcase 9.2.1.2.1c	10.3.0	10.4.0
2013-06	RAN#60	R5s130320	1660	-	Correction to function f_DeriveSuppEutraBandsFromPics	10.3.0	10.4.0
2013-06	RAN#60	R5s130321	1661	-	Correction to EMM TC 9.2.1.1.24	10.3.0	10.4.0
2013-06	RAN#60	R5s130322	1662	-	LTE_TDD: Addition of Rel9 TD-LTE<>TDSDMA Testcase 6.2.3.33	10.3.0	10.4.0
2013-06	RAN#60	R5s130324	1663	-	Correction to GCF WI-086 E-UTRA EMM testcase 9.2.1.2.8	10.3.0	10.4.0
2013-06	RAN#60	R5s130325	1664	-	Correction to the EMM Test Case 9.2.3.3.5a	10.3.0	10.4.0
2013-06	RAN#60	R5s130326	1665	-	Correction to Eutra Idle Mode TC 6.2.3.1a	10.3.0	10.4.0
2013-06	RAN#60	R5s130327	1666	-	Correction to manual PLMN selection test cases 6.1.1.3, 6.1.1.3a, 6.1.1.3b, 6.2.1.4, 9.2.1.1.13 and 9.2.1.1.13a	10.3.0	10.4.0
2013-06	RAN#60	R5s130329	1667	-	Correction to IXIT px_MaxNumberROHC_ContextSessions in module EUTRA_Parameters in LTE TTCN suite.	10.3.0	10.4.0
2013-06	RAN#60	R5s130330	1668	-	Correction to EUTRA RRC test case 8.1.2.8	10.3.0	10.4.0
2013-06	RAN#60	R5s130331	1669	-	Correction for EUTRA RRC test case 8.1.3.7	10.3.0	10.4.0
2013-06	RAN#60	R5s130337	1670	-	Correction of RRC test case 8.5.4.1	10.3.0	10.4.0
2013-06	RAN#60	R5s130338	1671	-	LTE_TDD: Addition of GCF WI-096 EMM test case 9.2.3.3.4	10.3.0	10.4.0
2013-06	RAN#60	R5s130340	1672	-	Correction to GCF WI-086 testcase 9.2.2.2.2	10.3.0	10.4.0
2013-06	RAN#60	R5s130341	1673	-	Correction in LLC XID negotiation	10.3.0	10.4.0
2013-06	RAN#60	R5s130342	1674	-	LTE_TDD: Correction of GCF WI-096 test cases 8.4.2.2 and 8.4.2.4	10.3.0	10.4.0
2013-06	RAN#60	R5s130344	1675	-	Corrections to GCF WI-088 EUTRA<>HRPD and 1xRTT Test cases 8.3.2.8 and 8.3.2.10	10.3.0	10.4.0
2013-06	RAN#60	R5s130345	1676	-	LTE_TDD: Correction to GCF WI-096 EUTRA test case 13.1.2	10.3.0	10.4.0
2013-06	RAN#60	R5s130347	1677	-	Local guard timer for common preamble functions	10.3.0	10.4.0
2013-06	RAN#60	R5-131068	1557	-	Update of CDMA2000 specification references: Clause 2 of TS 36.523-3	10.4.0	11.0.0
2013-06	RAN#60	R5-131070	1558	-	Update of CDMA2000 specification references: PIXIT for TS 36.523-3	10.4.0	11.0.0
2013-06	RAN#60	R5-131125	1559	-	Clarification of CA test model	10.4.0	11.0.0
2013-06	RAN#60	R5-131129	1560	-	36523-3: Routine maintenance and updates	10.4.0	11.0.0
2013-06	RAN#60	R5-131870	1562	-	Update of CDMA2000 specification references: Annex D of TS 36.523-3	10.4.0	11.0.0
