Important notice

The present document can be downloaded from the
[ETSI Search & Browse Standards](#) application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on [ETSI deliver](#) repository.

Users should be aware that the present document may be revised or have its status changed,
this information is available in the [Milestones listing](#).

If you find errors in the present document, please send your comments to
the relevant service listed under [Committee Support Staff](#).

If you find a security vulnerability in the present document, please report it through our
[Coordinated Vulnerability Disclosure \(CVD\)](#) program.

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

4.2.1 Introduction.....	135
4.2.2 Requirements	135
4.2.2.1 UE measurement capability	135
4.2.2.2 Measurement and evaluation of serving cell	135
4.2.2.3 Measurements of intra-frequency NR cells.....	137
4.2.2.4 Measurements of inter-frequency NR cells.....	141
4.2.2.5 Measurements of inter-RAT E-UTRAN cells.....	145
4.2.2.6 Maximum interruption in paging reception.....	148
4.2.2.7 General requirements	148
4.2.2.8 Minimum requirement at transitions	149
4.2.2.9 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion	149
4.2.2.9.1 Introduction	149

4.2.2.9.2	Measurements for UE fulfilling low mobility criterion	149
4.2.2.9.3	Measurements for UE fulfilling not-at-cell edge criterion.....	152
4.2.2.9.4	Measurements for UE fulfilling low mobility and not-at-cell edge criteria.....	154
4.2.2.10	Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion	154
4.2.2.10.1	Introduction	154
4.2.2.10.2	Measurements for UE fulfilling low mobility criterion	154
4.2.2.10.3	Measurements for UE fulfilling not-at-cell edge criterion.....	157
4.2.2.10.4	Measurements for UE fulfilling low mobility and not-at-cell edge criterion	160
4.2.2.11	Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion	160
4.2.2.11.1	Introduction	160
4.2.2.11.2	Measurements for UE fulfilling low mobility criterion	160
4.2.2.11.3	Measurements for UE fulfilling with not-at-cell edge criterion	162
4.2.2.11.4	Measurements for UE fulfilling low mobility and not-at-cell edge criterion	164
4.2A	Cell Re-selection when subject to CCA	165
4.2A.1	Introduction.....	165
4.2A.2	Requirements	165
4.2A.2.1	UE measurement capability	165
4.2A.2.2	Measurement and evaluation when subject to CCA on the serving cell	165
4.2A.2.3	Measurements of intra-frequency NR cells when subject to CCA on the serving cell and target cell	166
4.2A.2.4	Measurements of inter-frequency NR cells when subject to CCA on the target cell	168
4.2A.2.5	Measurements of inter-RAT E-UTRAN cells when subject to CCA on the serving cell.....	169
4.2A.2.6	Maximum interruption in paging reception when subject to CCA on the target cell	170
4.2A.2.7	General requirements	170
4.2B	Cell Re-selection for RedCap.....	170
4.2B.1	Introduction.....	170
4.2B.2	Requirements	170
4.2B.2.1	UE measurement capability for RedCap.....	170
4.2B.2.1.1	UE measurement capability for 1 Rx RedCap.....	170
4.2B.2.1.2	UE measurement capability for 2 Rx RedCap.....	171
4.2B.2.2	Measurement and evaluation of serving cell for RedCap UE	171
4.2B.2.3	Measurements of intra-frequency NR cells for RedCap UE	172
4.2B.2.4	Measurements of inter-frequency NR cells for RedCap UE	175
4.2B.2.5	Measurements of inter-RAT E-UTRAN cells for RedCap UE	178
4.2B.2.6	Maximum interruption in paging reception for RedCap	180
4.2B.2.7	General requirements for RedCap.....	180
4.2B.2.8	Minimum requirement at transitions	180
4.2B.2.9	Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion for RedCap.....	181
4.2B.2.9.1	Introduction	181
4.2B.2.9.2	Measurements for UE fulfilling stationary criterion.....	182
4.2B.2.9.3	Measurements for a UE fulfilling not-at-cell edge while stationary criterion	184
4.2B.2.9.3A	Measurements for a UE fulfilling stationary and not-at-cell-edge criteria	185
4.2B.2.9.4	Measurements for a UE fulfilling low mobility and stationary criteria	185
4.2B.2.9.5	Measurements for a UE fulfilling low mobility and not-at-cell-edge while stationary criteria	185
4.2B.2.9.6	Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria.....	185
4.2B.2.9.7	Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell- edge while stationary criteria.....	186
4.2B.2.9.8	Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criterion	186
4.2B.2.9.9	Measurements for UE fulfilling low mobility criterion	186
4.2B.2.9.10	Measurements for UE fulfilling not-at-cell edge criterion.....	189
4.2B.2.9.11	Measurements for UE fulfilling low mobility and not-at-cell edge criteria.....	191
4.2B.2.10	Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion	192
4.2B.2.10.1	Introduction	192
4.2B.2.10.2	Measurements for UE fulfilling stationary criterion.....	192
4.2B.2.10.3	Measurements for a UE fulfilling not-at-cell edge while stationary criterion	194
4.2B.2.10.3A	Measurements for a UE fulfilling stationary and not-at-cell-edge-criterion.....	195
4.2B.2.10.4	Measurements for a UE fulfilling low mobility and stationary criteria	195

4.2B.2.10.5	Measurements for a UE fulfilling low mobility and not-at-cell-edge while stationary criteria	196
4.2B.2.10.6	Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria.....	196
4.2B.2.10.7	Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell- edge while stationary criteria.....	196
4.2B.2.10.8	Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criteria	196
4.2B.2.10.9	Measurements for UE fulfilling low mobility criterion	197
4.2B.2.10.10	Measurements for UE fulfilling not-at-cell edge criterion.....	199
4.2B.2.10.11	Measurements for UE fulfilling low mobility and not-at-cell edge criterion	202
4.2B.2.11	Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion	202
4.2B.2.11.1	Introduction	202
4.2B.2.11.2	Measurements for UE fulfilling stationary criterion.....	202
4.2B.2.11.3	Measurements for a UE not-at-cell edge while stationary criterion	204
4.2B.2.11.3A	Measurements for a UE fulfilling stationary and not-at-cell-edge criterion	204
4.2B.2.11.4	Measurements for a UE fulfilling low mobility and stationary criteria	205
4.2B.2.11.5	Measurements for a UE fulfilling low mobility and stationary not-at-cell-edge while stationary criteria	205
4.2B.2.11.6	Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria.....	205
4.2B.2.11.7	Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell- edge while stationary criteria.....	205
4.2B.2.11.8	Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criteria	205
4.2B.2.11.9	Measurements for UE fulfilling low mobility criterion	206
4.2B.2.11.10	Measurements for UE fulfilling with not-at-cell edge criterion	207
4.2B.2.11.11	Measurements for UE fulfilling low mobility and not-at-cell edge criterion	208
4.2C	Cell Re-selection for NR UE for Satellite Access	209
4.2C.1	Introduction.....	209
4.2C.2	Requirements	209
4.2C.2.1	UE measurement capability	209
4.2C.2.2	Measurement and evaluation of serving cell	209
4.2C.2.3	Measurements of intra-frequency NR cells.....	210
4.2C.2.4	Measurements of inter-frequency NR cells.....	213
4.2C.2.5	Maximum interruption in paging reception.....	216
4.2C.2.6	Minimum requirement at transitions	216
4.2C.2.7	Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion	216
4.2C.2.8	Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion	216
4.2C.2.9	General requirements	217
4.3	Minimization of Drive Tests (MDT)	217
4.3.1	Introduction.....	217
4.3.2	Measurement Requirements.....	217
4.3.3	Requirements for Relative Time Stamp Accuracy.....	218
4.3.4	Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting	218
4.3.5	Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting	218
4.3C	Minimization of Drive Tests (MDT) for Satellite Access	218
4.3C.1	Introduction.....	218
4.3C.2	Measurement Requirements.....	219
4.3C.3	Requirements for Relative Time Stamp Accuracy.....	219
4.3C.4	Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting	219
4.3C.5	Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting	220
4.4	Idle Mode CA/DC Measurements	220
4.4.1	Introduction.....	220
4.4.2	Measurement Requirements.....	220
4.4.2.1	Detected cell requirement during state transition and Idle mode	220
4.4.2.2	Measurements of inter-frequency CA/DC candidate cells	221
4.4.2.3	Measurements on serving cell	222

4.4.2.4	Measurements of E-UTRAN inter-RAT DC candidate cells	222
5	SA: RRC_INACTIVE state mobility	223
5.1	Cell Re-selection	223
5.1.1	Introduction.....	223
5.1.2	Requirements	223
5.1.2.1	UE measurement capability	223
5.1.2.2	Measurement and evaluation of serving cell	223
5.1.2.3	Measurements of intra-frequency NR cells.....	224
5.1.2.4	Measurements of inter-frequency NR cells.....	225
5.1.2.5	Measurements of inter-RAT E-UTRAN cells.....	226
5.1.2.6	Maximum interruption in paging reception.....	226
5.1.2.7	General requirements	226
5.1.2.8	Minimum requirement at transitions	227
5.1.2.9	Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion	227
5.1.2.10	Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion	228
5.1.2.11	Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion	229
5.1A	Cell Re-selection with CCA	229
5.1A.1	Introduction.....	229
5.1A.2	Requirements	229
5.1A.2.1	UE measurement capability	229
5.1A.2.2	Measurement and evaluation when CCA is used on the serving cell.....	229
5.1A.2.3	Measurements of intra-frequency NR cells when CCA is used on the serving cell and target cell.....	230
5.1A.2.4	Measurements of inter-frequency NR cells when CCA is used on the target cell.....	230
5.1A.2.5	Measurements of inter-RAT E-UTRAN cells when CCA is used on the serving cell.....	230
5.1A.2.6	Maximum interruption in paging reception when CCA is used on the target cell	230
5.1A.2.7	General requirements	230
5.1B	Cell Re-selection for RedCap.....	230
5.1B.1	Introduction.....	230
5.1B.2	Requirements	230
5.1B.2.1	UE measurement capability	230
5.1B.2.2	Measurement and evaluation of serving cell	230
5.1B.2.3	Measurements of intra-frequency NR cells.....	231
5.1B.2.4	Measurements of inter-frequency NR cells.....	232
5.1B.2.5	Measurements of inter-RAT E-UTRAN cells.....	233
5.1B.2.6	Maximum interruption in paging reception.....	233
5.1B.2.7	General requirements	233
5.1B.2.8	Minimum requirement at transitions	233
5.1B.2.9	Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion	234
5.1B.2.10	Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion	234
5.1B.2.11	Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion	235
5.1C	Cell Re-selection	236
5.1C.1	Introduction.....	236
5.1C.2	Requirements	236
5.1C.2.1	UE measurement capability	236
5.1C.2.2	Measurement and evaluation of serving cell	236
5.1C.2.3	Measurements of intra-frequency NR cells.....	236
5.1C.2.4	Measurements of inter-frequency NR cells.....	237
5.1C.2.5	Maximum interruption in paging reception.....	237
5.1C.2.6	General requirements	237
5.2	Void.....	237
5.2B	Configured Grant based Small Data Transmissions (CG-SDT) for RedCap.....	237
5.2B.1	Introduction.....	237
5.2B.2	Requirements on UE synchronization for small data transmissions for RedCap.....	237
5.2B.2.1	Void.....	237
5.2B.3	TA validation requirements for RedCap	237

5.2B.3.1	Void.....	238
5.2B.3.2	Void.....	238

5.4	Inactive Mode CA/DC Measurements	241
5.4.1	Introduction.....	241
5.4.2	Measurement Requirements.....	241
5.4.2.1	Detected cell requirement during state transition and inactive mode.....	241
5.4.2.2	Measurements of inter-frequency CA/DC candidate cells	241
5.4.2.3	Measurements on serving cell	241
5.4.2.4	Measurements on E-UTRAN inter-RAT DC candidate cells	241
5.5	Configured Grant based Small Data Transmissions (CG-SDT).....	241
5.5.1	Introduction.....	241
5.5.2	Requirements on UE synchronization for small data transmissions	241
5.5.3	TA validation requirements	242
5.5.4	Scheduling restriction	243
5.5.4.1	Scheduling availability of UE performing measurements in TDD bands on FR1	243
5.5.4.2	Scheduling availability of UE performing measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	243
5.5.4.3	Scheduling availability of UE performing measurements on FR2.....	243
5.5.5	Applicability conditions for SDT.....	244
5.6	NR measurements for positioning	244
5.6.1	Introduction.....	244
5.6.2	RSTD measurements	245
5.6.2.1	Introduction.....	245
5.6.2.2	Requirements Applicability.....	245
5.6.2.3	Measurement Capability	245
5.6.2.5	Measurements Period Requirements	245
5.6.3	PRS-RSRP measurements	248
5.6.3.1	Introduction.....	248
5.6.3.2	Requirements applicability.....	248
5.6.3.3	Measurement Capability	248
5.6.3.4	Measurement Reporting Requirements.....	248
5.6.3.5	Measurement Period Requirements	249
5.6.4	UE Rx-Tx time difference measurements.....	251
5.6.4.1	Introduction.....	251
5.6.4.2	Requirements Applicability.....	251
5.6.4.3	Measurement Capability	251
5.6.4.4	Measurement Reporting Requirements.....	251
5.6.4.5	Measurement Period Requirements	252
5.6.5	PRS-RSRPP measurements	255
5.6.5.1	Introduction.....	255
5.6.5.2	Requirements Applicability.....	255
5.6.5.3	Measurement Capability	255

5.6.5.4	Measurement Reporting Requirements	255
5.6.5.5	Measurement Period Requirements	255
5.7	Random access based Small Data Transmissions (RA-SDT)	256
5.7.1	Introduction.....	256
5.7.2	Requirements for small data transmissions based on 2-step RA	257
5.7.3	Requirements for small data transmissions based on 4-step RA	257
5.7.4	Applicability conditions for SDT.....	257
5.7B	Random access based Small Data Transmissions (RA-SDT) for RedCap	257
5.7B.1	Introduction.....	257
5.7B.2	Requirements for small data transmissions based on 2-step RA	257
5.7B.3	Requirements for small data transmissions based on 4-step RA	257
5.7B.4	Applicability conditions for RA-SDT for RedCap	257
6	RRC_CONNECTED state mobility	258
6.1	Handover	258
6.1.1	NR Handover	258
6.1.1.1	Introduction.....	258
6.1.1.2	NR FR1 - NR FR1 Handover.....	258
6.1.1.2.1	Handover delay.....	258
6.1.1.2.2	Interruption time	258
6.1.1.3	NR FR2- NR FR1 Handover	259
6.1.1.3.1	Handover delay.....	259
6.1.1.3.2	Interruption time	259
6.1.1.4	NR FR2- NR FR2 Handover	260
6.1.1.4.1	Handover delay.....	260
6.1.1.4.2	Interruption time	260
6.1.1.5	NR FR1- NR FR2 Handover	261
6.1.1.5.1	Handover delay.....	261
6.1.1.5.2	Interruption time	261
6.1.2	NR Handover to other RATs	262
6.1.2.1	NR – E-UTRAN Handover	262
6.1.2.1.1	Introduction	262
6.1.2.1.2	Handover delay.....	262
6.1.2.1.3	Interruption time	262
6.1.2.2	NR – UTRAN Handover.....	263
6.1.2.2.1	Introduction.....	263
6.1.2.2.2	Handover delay.....	263
6.1.2.2.3	Interruption time	263
6.1.3	NR DAPS Handover	264
6.1.3.1	Introduction.....	264
6.1.3.2	NR FR1 - NR FR1 DAPS Handover.....	264
6.1.3.2.1	DAPS handover delay	264
6.1.3.2.2	Interruption time	265
6.1.3.3	NR FR2- NR FR1 DAPS Handover.....	267
6.1.3.3.1	DAPS handover delay	267
6.1.3.3.2	Interruption time	267
6.1.3.4	NR FR1- NR FR2 DAPS Handover.....	268
6.1.3.4.1	DAPS handover delay	268
6.1.3.4.2	Interruption time	268
6.1.4	NR Conditional Handover	269
6.1.4.1	Introduction.....	269
6.1.4.2	NR FR1 – NR FR1 conditional handover	269
6.1.4.3	NR FR2 – NR FR1 conditional handover	270
6.1.4.4	NR FR2 – NR FR2 conditional handover	270
6.1.4.4.1	Handover delay.....	270
6.1.4.4.2	Measurement time	271
6.1.4.4.3	Preparation time.....	271
6.1.4.4.4	Interruption time	271
6.1.4.5	NR FR1 – NR FR2 conditional handover	272
6.1.5	NR Handover with PSCell	272
6.1.5.1	Introduction.....	272
6.1.5.2	Handover with PSCell from NR SA to EN-DC	272

6.1.5.2.1	Interruption time for inter-RAT HO from NR to E-UTRAN	272
6.1.5.2.2	PSCell addition in HO with PSCell for NR SA to EN-DC.....	273
6.1.5.3	HO with PSCell from NE-DC to NE-DC.....	273
6.1.5.3.1	Handover delay.....	273
6.1.5.3.2	HO with PSCell - PCell Interruption time	274
6.1.5.3.3	PSCell addition/change in NE-DC to NE-DC HO with PSCell	274
6.1.5.4	HO with PSCell from NR-DC to NR-DC	274
6.1.5.5	Handover with PSCell from NR SA to EN-DC with PSCell using CCA	276
6.1.5.5.1	Introduction	276
6.1.5.5.2	NR SA to EN-DC HO with PSCell- NR to E-UTRA HO Interruption time	276
6.1.5.5.3	NR SA to EN-DC HO with PSCell - NR PSCell Addition Delay requirements	276
6.1A	Void.....	277
6.1A.1	Void	277
6.1A.1.1	Void.....	277
6.1A.1.2	Void.....	277
6.1A.1.2.1	Void	277
6.1A.1.2.2	Void	277
6.1B	Handover to target cell using CCA.....	278
6.1B.1	NR Handover	278
6.1B.1.1	Introduction.....	278
6.1B.1.2	NR FR1 - NR FR1 Handover	278
6.1B.1.2.1	Handover delay.....	278
6.1B.1.2.2	Interruption time	278
6.1B.1.3	NR FR2-2 NR FR2-2 Handover.....	279
6.1B.1.3.1	Handover delay.....	279
6.1B.1.3.2	Interruption time	279
6.1B.1.4	NR FR1- NR FR2-2 Handover.....	280
6.1B.1.4.1	Handover delay.....	280
6.1B.1.4.2	Interruption time	280
6.1C	Handover for SAN.....	281
6.1C.1	NR SAN Handover	281
6.1C.1.1	Introduction.....	281
6.1C.1.2	NR SAN FR1 – NR SAN FR1 Handover	281
6.1C.1.2.1	Handover delay.....	282
6.1C.1.2.2	Interruption time	282
6.1C.2	NR SAN Conditional Handover	283
6.1C.2.1	Introduction.....	283
6.1C.2.2	NR SAN FR1 – NR SAN FR1 conditional handover	283
6.1C.2.2.1	Handover delay.....	283
6.1C.2.2.2	Measurement time	283
6.1C.2.2.3	Preparation time.....	284
6.1C.2.2.4	Interruption time	284
6.1D	Handover for RedCap.....	285
6.1D.1	NR Handover	285
6.1D.1.1	Introduction.....	285
6.1D.1.2	NR FR1 - NR FR1 Handover	285
6.1D.1.2.1	Handover delay.....	285
6.1D.1.2.2	Interruption time	286
6.1D.1.3	NR FR2- NR FR2 Handover.....	287
6.1D.1.3.1	Handover delay.....	287
6.1D.1.3.2	Interruption time	287
6.1D.2	NR Handover to other RATs	289
6.1D.2.1	NR – E-UTRAN Handover	289
6.2	RRC Connection Mobility Control.....	289
6.2.1	SA: RRC Re-establishment	289
6.2.1.1	Introduction.....	289
6.2.1.2	Requirements	289
6.2.1.2.1	UE Re-establishment delay requirement	289
6.2.1A	RRC Re-establishment with CCA	291
6.2.1A.1	Introduction.....	291
6.2.1A.2	Requirements	291
6.2.1A.2.1	UE Re-establishment with CCA delay requirement	291

6.2.1B	SA: RRC Re-establishment for RedCap	293
6.2.1B.1	Introduction	293
6.2.1B.2	Requirements	293
6.2.2	Random access	294
6.2.2.1	Introduction	294
6.2.2.2	Requirements for 4-step RA type	294
6.2.2.2.1	Contention based random access	294
6.2.2.2.1.1	Correct behaviour when transmitting Random Access Preamble	294
6.2.2.2.1.2	Correct behaviour when receiving Random Access Response	295
6.2.2.2.1.3	Correct behaviour when not receiving Random Access Response	295
6.2.2.2.1.4	Correct behaviour when receiving an UL grant for msg3 retransmission	295
6.2.2.2.1.5	SA: Correct behaviour when receiving a message over Temporary C-RNTI	295
6.2.2.2.1.6	Correct behaviour when contention Resolution timer expires	295
6.2.2.2.2	Non-Contention based random access	295
6.2.2.2.2.1	Correct behaviour when transmitting Random Access Preamble	295
6.2.2.2.2.2	Correct behaviour when receiving Random Access Response	296
6.2.2.2.2.3	Correct behaviour when not receiving Random Access Response	296
6.2.2.2.3	UE behaviour when configured with supplementary UL	296
6.2.2.3	Requirements for 2-step RA type	296
6.2.2.3.1	Contention based random access	297
6.2.2.3.1.1	Correct behaviour when transmitting MsgA	297
6.2.2.3.1.2	Correct behaviour when receiving MsgB	297
6.2.2.3.1.3	Correct behaviour when not receiving MsgB	297
6.2.2.3.2	Non-Contention based random access	297
6.2.2.3.2.1	Correct behaviour when transmitting MsgA	297
6.2.2.3.2.2	Correct behaviour when receiving MsgB	298
6.2.2.3.2.3	Correct behaviour when not receiving MsgB	298
6.2.2.3.3	UE behaviour when configured with supplementary UL	298
6.2.2A	Random access when CCA is used on target frequency	298
6.2.2A.1	Introduction	298
6.2.2A.2	Requirements for 4-step RA type	298
6.2.2A.2.1	Contention based random access	299
6.2.2A.2.1.1	Correct behaviour when transmitting Random Access Preamble	299
6.2.2A.2.1.2	Correct behaviour when receiving Random Access Response	299
6.2.2A.2.1.3	Correct behaviour when not receiving Random Access Response	299
6.2.2A.2.1.4	Correct behaviour when receiving an UL grant for msg3 retransmission	299
6.2.2A.2.1.6	Correct behaviour when contention Resolution timer expires	300
6.2.2A.2.2	Non-Contention based random access	300
6.2.2A.2.2.1	Correct behaviour when transmitting Random Access Preamble	300
6.2.2A.2.2.2	Correct behaviour when receiving Random Access Response	300
6.2.2A.2.2.3	Correct behaviour when not receiving Random Access Response	301
6.2.2A.3	Requirements for 2-step RA type	301
6.2.2A.3.1	Contention based random access	301
6.2.2A.3.1.1	Correct behaviour when transmitting MsgA	301
6.2.2A.3.1.2	Correct behaviour when receiving MsgB	302
6.2.2A.3.1.3	Correct behaviour when not receiving MsgB	302
6.2.2A.3.2	Non-Contention based random access	302
6.2.2A.3.2.1	Correct behaviour when transmitting MsgA	302
6.2.2A.3.2.2	Correct behaviour when receiving MsgB	303
6.2.2A.3.2.3	Correct behaviour when not receiving MsgB	303
6.2.2B	Random access for RedCap	303
6.2.2B.1	Introduction	303
6.2.2B.2	Requirements	303
6.2.3	SA: RRC Connection Release with Redirection	304
6.2.3.1	Introduction	304
6.2.3.2	Requirements	304
6.2.3.2.1	RRC connection release with redirection to NR	304
6.2.3.2.2	RRC connection release with redirection to E-UTRAN	305
6.2.3.2.3	RRC connection release with redirection to NR carrier subject to CCA	305
6.2.3A	SA: RRC Connection Release with Redirection for RedCap	307
6.2.3A.1	Introduction	307
6.2.3A.2	Requirements	307

6.2.3A.2.1	RRC connection release with redirection to NR.....	307
6.2.3A.2.2	RRC connection release with redirection to E-UTRAN.....	307
6.2C	RRC Connection Mobility Control for Satellite Access.....	307
6.2C.1	SA: RRC Re-establishment for Satellite Access.....	307
6.2C.1.1	Introduction.....	307
6.2C.1.2	Requirements	307
6.2C.1.2.1	UE Re-establishment delay requirement	308
6.2C.2	Random access for satellite access	309
6.2C.2.1	Introduction.....	309
6.2C.2.2	Requirements for 4-step RA type.....	309
6.2C.2.2.1	Contention based random access	309
6.2C.2.2.1.1	Correct behaviour when transmitting Random Access Preamble	309
6.2C.2.2.1.2	Correct behaviour when receiving Random Access Response	310
6.2C.2.2.1.3	Correct behaviour when not receiving Random Access Response	310
6.2C.2.2.1.4	Correct behaviour when receiving an UL grant for msg3 retransmission.....	310
6.2C.2.2.1.5	SA: Correct behaviour when receiving a message over Temporary C-RNTI.....	310
6.2C.2.2.1.6	Correct behaviour when contention Resolution timer expires	310
6.2C.2.2.2	Non-Contention based random access.....	310
6.2C.2.2.2.1	Correct behaviour when transmitting Random Access Preamble	310
6.2C.2.2.2.2	Correct behaviour when receiving Random Access Response	311
6.2C.2.2.2.3	Correct behaviour when not receiving Random Access Response	311
6.2C.2.3	Requirements for 2-step RA type.....	311
6.2C.2.3.1	Contention based random access	312
6.2C.2.3.1.1	Correct behaviour when transmitting MsgA.....	312
6.2C.2.3.1.2	Correct behaviour when receiving MsgB	312
6.2C.2.3.1.3	Correct behaviour when not receiving MsgB	312
6.2C.2.3.2	Non-Contention based random access.....	312
6.2C.2.3.2.1	Correct behaviour when transmitting MsgA.....	312
6.2C.2.3.2.2	Correct behaviour when receiving MsgB	313
6.2C.2.3.2.3	Correct behaviour when not receiving MsgB	313
6.2C.3	SA: RRC Connection Release with Redirection for Satellite Access.....	313
6.2C.3.1	Introduction.....	313
6.2C.3.2	Requirements	313
6.2C.3.2.1	RRC connection release with redirection to NR.....	313
7	Timing	314
7.1	UE transmit timing	314
7.1.1	Introduction.....	314
7.1.2	Requirements	314
7.1.2.1	Gradual timing adjustment.....	316
7.1.2.2	Void.....	317
7.1.2.3	One shot large UL timing adjustment for FR2 Power Class 6 UE.....	317
7.1A	UE transmit timing for RedCap.....	317
7.1A.1	Introduction.....	317
7.1A.2	Requirements	317
7.1A.2.1	Gradual timing adjustment.....	318
7.1C	UE transmit timing for Satellite Access	319
7.1C.1	Introduction.....	319
7.1C.2	Requirements	319
7.1C.2.1	Gradual timing adjustment.....	320
7.2	UE timer accuracy	320
7.2.1	Introduction.....	320
7.2.2	Requirements	320
7.2A	UE timer accuracy for RedCap.....	321
7.2A.1	Introduction.....	321
7.2A.2	Requirements	321
7.2C	UE timer accuracy for satellite access.....	321
7.2C.1	Introduction.....	321
7.2C.2	Requirements	321
7.3	Timing advance	322
7.3.1	Introduction.....	322
7.3.2	Requirements	322

7.3.2.1	Timing Advance adjustment delay.....	322
7.3.2.2	Timing Advance adjustment accuracy	322
7.3A	Timing Advance for RedCap.....	322
7.3A.1	Introduction.....	322
7.3A.2	Requirements	322
7.3A.2.1	Timing Advance adjustment delay.....	322
7.3A.2.2	Timing Advance adjustment accuracy	322
7.3C	Timing advance for satellite access.....	323
7.3C.1	Introduction.....	323
7.3C.2	Requirements	323
7.3C.2.1	Timing Advance adjustment delay.....	323
7.3C.2.2	Timing Advance adjustment accuracy	323
7.4	Cell phase synchronization accuracy.....	323
7.4.1	Definition.....	323
7.4.2	Minimum requirements.....	323
7.5	Maximum Transmission Timing Difference	324
7.5.1	Introduction.....	324
7.5.2	Minimum Requirements for inter-band EN-DC	324
7.5.2.1	Minimum Requirements for inter-band synchronous EN-DC	324
7.5.3	Minimum Requirements for intra-band EN-DC	325
7.5.4	Minimum Requirements for NR Carrier Aggregation	325
7.5.5	Minimum Requirements for inter-band NE-DC	326
7.5.5.1	Minimum Requirements for inter-band synchronous NE-DC	326
7.5.6	Minimum Requirements for inter-band NR DC	327
7.6	Maximum Receive Timing Difference.....	327
7.6.1	Introduction.....	327
7.6.2	Minimum Requirements for inter-band EN-DC	328
7.6.2.1	Minimum Requirements for inter-band synchronous EN-DC	328
7.6.3	Minimum Requirements for intra-band EN-DC	329
7.6.4	Minimum Requirements for NR Carrier Aggregation	329
7.6.5	Minimum Requirements for inter-band NE-DC	330
7.6.5.1	Minimum Requirements for inter-band synchronous NE-DC	330
7.6.6	Minimum Requirements for inter-band NR DC	331
7.7	<i>deriveSSB-IndexFromCell</i> tolerance	331
7.7.1	Minimum requirements.....	331
7.7A	<i>deriveSSB-IndexFromCell</i> tolerance for RedCap	332
7.7A.1	Minimum requirements.....	332
7.8	Void.....	332
7.9	<i>deriveSSB-IndexFromCellInter-r17</i> tolerance.....	332
7.9.1	Minimum requirements.....	332
8	Signalling characteristics.....	333
8.1	Radio Link Monitoring.....	333
8.1.1	Introduction.....	333
8.1.1.1	Introduction of Requirement on Radio Link Monitoring for UE Configured with Relaxed Measurement Criteria	334
8.1.2	Requirements for SSB based radio link monitoring	334
8.1.2.1	Introduction.....	335
8.1.2.2	Minimum requirement	335
8.1.2.3	Measurement restrictions for SSB based RLM.....	339
8.1.2.4	Minimum requirement of SSB based radio link monitoring for UE fulfilling relaxed measurement criteria	339
8.1.3	Requirements for CSI-RS based radio link monitoring	340
8.1.3.1	Introduction.....	340
8.1.3.2	Minimum requirement	341
8.1.3.3	Measurement restrictions for CSI-RS based RLM.....	344
8.1.3.4	Minimum requirement of CSI-RS based radio link monitoring for UE fulfilling relaxed measurement criteria	345
8.1.4	Minimum requirement at transitions.....	346
8.1.5	Minimum requirement for UE turning off the transmitter	346
8.1.6	Minimum requirement for L1 indication	346
8.1.7	Scheduling availability of UE during radio link monitoring.....	346

8.1.7.1	Scheduling availability of UE performing radio link monitoring with a same subcarrier spacing as PDSCH/PDCCH on FR1	347
8.1.7.2	Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	347
8.1.7.3	Scheduling availability of UE performing radio link monitoring on FR2.....	347
8.1.7.4	Scheduling availability of UE performing radio link monitoring on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC.....	348
8.1A	Radio Link Monitoring with CCA on Target Frequency	348
8.1A.1	Introduction.....	348
8.1A.2	Requirements for SSB Based Radio Link Monitoring.....	349
8.1A.2.1	Introduction.....	349
8.1A.2.2	Minimum Requirement	350
8.1A.3	Minimum requirement at transitions.....	353
8.1A.4	Minimum requirement for UE turning off the transmitter	353
8.1A.5	Minimum requirement for L1 indication	353
8.1A.6	Scheduling availability of UE during radio link monitoring.....	353
8.1A.6.3	Scheduling availability of UE performing radio link monitoring on FR2-2	354
8.1A.6.4	Scheduling availability of UE performing radio link monitoring on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR-DC	354
8.1B	Radio Link Monitoring for RedCap	355
8.1B.1	Introduction.....	355
8.1B.2	Requirements for SSB based radio link monitoring	356
8.1B.2.1	Introduction.....	356
8.1B.2.2	Minimum requirement	356
8.1B.2.3	Measurement restrictions for SSB based RLM.....	358
8.1B.3	Requirements for CSI-RS based radio link monitoring	359
8.1B.3.1	Introduction.....	359
8.1B.3.2	Minimum requirement	360
8.1B.3.3	Measurement restrictions for CSI-RS based RLM.....	362
8.1B.4	Minimum requirement at transitions.....	363
8.1B.5	Minimum requirement for UE turning off the transmitter	363
8.1B.6	Minimum requirement for L1 indication	363
8.1B.7	Scheduling availability of UE during radio link monitoring.....	363
8.1B.7.1	Scheduling availability of UE performing radio link monitoring with a same subcarrier spacing as PDSCH/PDCCH on FR1	364
8.1B.7.2	Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	364
8.1B.7.3	Scheduling availability of UE performing radio link monitoring on FR2.....	364
8.1C	Radio Link Monitoring for Satellite Access.....	364
8.1C.1	Introduction.....	364
8.1C.2	Requirements for SSB based radio link monitoring	365
8.1C.2.1	Introduction.....	365

8.2.1	EN-DC Interruption	371
8.2.1.1	Introduction.....	371
8.2.1.2	Requirements	372
8.2.1.2.1	Interruptions at transitions between active and non-active during DRX	372
8.2.1.2.2	Interruptions at transitions from non-DRX to DRX	372

8.2.1.2.3	Interruptions at SCell addition/release.....	372
8.2.1.2.4	Interruptions at SCell activation/deactivation.....	373
8.2.1.2.5	Interruptions during measurements on SCC.....	375
8.2.1.2.5.1	Interruptions during measurements on deactivated NR SCC.....	375
8.2.1.2.5.2	Interruptions during measurements on deactivated E-UTRAN SCC.....	375
8.2.1.2.5.3	Interruptions during CQI measurements on dormant E-UTRAN SCell	375
8.2.1.2.5.4	Interruptions during RRM measurements on dormant E-UTRAN SCC.....	376
8.2.1.2.6	Interruptions at UL carrier RRC reconfiguration	376
8.2.1.2.7	Interruptions due to Active BWP switching Requirement	376
8.2.1.2.8	Interruptions at direct SCell activation and hibernation	378
8.2.1.2.8.1	Interruptions during direct SCell activation and hibernation of E-UTRA SCell	378
8.2.1.2.8.2	Interruptions during direct SCell activation.....	378
8.2.1.2.9	Interruptions at SCell hibernation.....	378
8.2.1.2.10	Interruptions at SCell activation/deactivation with multiple downlink SCells	378
8.2.1.2.11	Interruptions due to UE-specific CBW change	379
8.2.1.2.12	Interruptions at NR SRS carrier based switching	379
8.2.1.2.13	Interruptions at E-UTRA SRS carrier based switching	380
8.2.1.2.14	DL Interruptions at switching between two uplink carriers.....	381
8.2.1.2.15	Interruptions due to SCell dormancy	382
8.2.1.2.15.1	Interruptions due to SCell dormancy switch.....	382
8.2.1.2.15.2	Interruptions due to CQI measurements during SCell dormancy	382
8.2.1.2.15.3	Interruptions due to RRM measurements during SCell dormancy	382
8.2.1.2.16	Interruptions when identifying CGI of an NR cell with autonomous gaps.....	382
8.2.1.2.17	Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps.....	383
8.2.1.2.18	Interruptions at NR SRS antenna port switching.....	383
8.2.1.2.19	Interruptions at fast SCell activation	384
8.2.1.2.20	Interruptions due to PUCCH SCell activation/deactivation	385
8.2.2	SA: Interruptions with Standalone NR Carrier Aggregation	385
8.2.2.1	Introduction.....	385
8.2.2.2	Requirements	386
8.2.2.2.1	Interruptions at SCell addition/release.....	386
8.2.2.2.2	Interruptions at SCell activation/deactivation.....	387
8.2.2.2.3	Interruptions during measurements on deactivated SCC.....	388
8.2.2.2.4	Interruptions at UL carrier RRC reconfiguration	389
8.2.2.2.5	Interruptions due to Active BWP switching Requirement	389
8.2.2.2.6	Interruptions at inter-frequency SFTD measurement	390
8.2.2.2.7	Interruptions at SCell activation/deactivation with multiple downlink SCells	391
8.2.2.2.8	Interruptions due to UE-specific CBW change	392
8.2.2.2.9	Interruptions at NR SRS carrier based switching	392
8.2.2.2.10	DL Interruptions at UE switching between two uplink carriers	393
8.2.2.2.10A	DL Interruptions at UE switching between two uplink carriers with two transmit antenna connectors.....	394
8.2.2.2.10B	DL Interruptions at UE switching between one uplink band with one transmit antenna connector and one uplink band with two transmit antenna connectors	394
8.2.2.2.10C	DL Interruptions at UE switching between two uplink bands with two transmit antenna connectors.....	395
8.2.2.2.11	Interruptions at direct SCell activation.....	395
8.2.2.2.12	Interruptions due to SCell dormancy.....	395
8.2.2.2.12.1	Interruptions due to SCell dormancy switch.....	395
8.2.2.2.12.2	Interruptions due to CQI measurements during SCell dormancy	396
8.2.2.2.12.3	Interruptions due to RRM measurements during SCell dormancy	396
8.2.2.2.13	Interruptions at transitions between active and non-active during DRX	396
8.2.2.2.14	Interruptions when identifying CGI of an NR cell with autonomous gaps.....	396
8.2.2.2.15	Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps.....	396
8.2.2.2.16	Interruptions at NR SRS antenna port switching.....	397
8.2.2.2.17	Interruptions at fast SCell activation	398
8.2.2.2.18	Interruptions due to PUCCH SCell activation/deactivation	399
8.2.3	NE-DC Interruptions.....	399
8.2.3.1	Introduction.....	399
8.2.3.2	Requirements	400
8.2.3.2.1	Interruptions at transitions between active and non-active during DRX	400
8.2.3.2.2	Interruptions at transitions from non-DRX to DRX	400

8.2.3.2.3	Interruptions at PSCell/SCell addition/release	400
8.2.3.2.4	Interruptions at SCell activation/deactivation.....	401
8.2.3.2.5	Interruptions during measurements on SCC	402
8.2.3.2.5.1	Interruptions during measurements on deactivated NR SCC.....	402
8.2.3.2.5.2	Interruptions during measurements on deactivated E-UTRAN SCC.....	402
8.2.3.2.5.3	Interruptions during CQI measurements on dormant E-UTRAN SCC.....	403
8.2.3.2.5.4	Interruptions during RRM measurements on dormant E-UTRAN SCC.....	403
8.2.3.2.6	Interruptions at UL carrier RRC reconfiguration	403
8.2.3.2.7	Interruptions due to Active BWP switching Requirement	404
8.2.3.2.8	Interruptions at direct SCell activation and hibernation	404
8.2.3.2.9	Interruptions at SCell hibernation.....	405
8.2.3.2.10	Interruptions at SCell activation/deactivation with multiple downlink SCells	405
8.2.3.2.11	Interruptions at NR SRS carrier based switching	405
8.2.3.2.12	Interruptions at E-UTRA SRS carrier based switching	406
8.2.3.2.13	Interruptions due to SCell dormancy.....	407
8.2.3.2.14	Interruptions when identifying CGI of an NR cell with autonomous gaps.....	408
8.2.3.2.15	Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps	408
8.2.3.2.17	Interruptions at fast SCell activation	410
8.2.3.2.18	Interruptions due to UE-specific CBW change	410
8.2.3.2.19	Interruptions due to PUCCH SCell activation/deactivation	411
8.2.4	NR-DC: Interruptions	411
8.2.4.1	Introduction.....	411
8.2.4.2	Requirements	412
8.2.4.2.1	Interruptions at PSCell/SCell addition/release	412
8.2.4.2.2	Interruptions at SCell activation/deactivation.....	413
8.2.4.2.3	Interruptions during measurements on SCC.....	414
8.2.4.2.4	Interruptions at UL carrier RRC reconfiguration	414
8.2.4.2.5	Interruptions due to Active BWP switching Requirement	414
8.2.4.2.6	Interruptions at transitions between active and non-active during DRX	415
8.2.4.2.7	Interruptions at transitions from non-DRX to DRX	415
8.2.4.2.8	Interruptions at SCell activation/deactivation with multiple downlink SCells	415
8.2.4.2.9	Interruptions at NR SRS carrier based switching	415
8.2.4.2.10	Interruptions at direct SCell activation.....	417
8.2.4.2.11	Interruptions when identifying CGI of an NR cell with autonomous gaps.....	417
8.2.4.2.12	Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps.....	418
8.2.4.2.13	Interruptions due to SCell dormancy	418
8.2.4.2.14	Interruptions at NR SRS antenna port switching.....	419
8.2.4.2.15	Interruptions at fast SCell activation	420
8.2.4.2.16	Interruptions at SCG activation/deactivation.....	420
8.2.4.2.17	Interruptions due to RRM measurements on deactivated SCG	421
8.2.4.2.18	Interruptions during RLM/BFD measurements on deactivated PSCell.....	421
8.2.4.2.19	Interruptions due to UE-specific CBW change	421
8.2.4.2A	Void.....	422
8.2.4.2A.1	Void	422
8.2.4.2A.2	Void	422
8.2.4.2A.3	Void	422
8.3	SCell Activation and Deactivation Delay.....	422
8.3.1	Introduction.....	422
8.3.2	SCell Activation Delay Requirement for Deactivated SCell	422
8.3.3	SCell Deactivation Delay Requirement for Activated SCell	427
8.3.4	Direct SCell Activation at SCell addition	427
8.3.5	Direct SCell Activation at Handover	428
8.3.7	SCell Activation Delay Requirement for Deactivated SCell with Multiple Downlink SCells	430
8.3.8	SCell Deactivation Delay Requirement for Activated SCell with Multiple Downlink SCells	434
8.3.9	Direct SCell Activation of Multiple Downlink SCells at SCell addition.....	435
8.3.10	Direct SCell Activation of Multiple Downlink SCells at Handover.....	436
8.3.12	SCell Activation Delay Requirement for Deactivated PUCCH SCell	437
8.3.13	SCell activation delay Requirement for Deactivated PUCCH SCell with Multiple SCells.....	440
8.3.14	SCell Deactivation Delay Requirement for Activated PUCCH SCell	442
8.3.15	SCell Deactivation Delay Requirement for Activated PUCCH SCell with Multiple Downlink SCells	442
8.3.16	Fast SCell Activation Delay Requirement for Deactivated SCell.....	443
8.3A	SCell Activation and Deactivation Delay in Carriers with CCA.....	445

8.3A.1	Introduction.....	445
8.3A.2	SCell Activation Delay Requirement for Deactivated SCell	446
8.3A.3	SCell Deactivation Delay Requirement for Activated SCell	450
8.4	UE UL carrier RRC reconfiguration delay	451
8.4.1	Introduction.....	451
8.4.2	UE UL carrier configuration delay requirement	451
8.4.3	UE UL carrier deconfiguration delay requirement	451
8.5	Link Recovery Procedures	451
8.5.1	Introduction.....	451
8.5.1.1	Introduction of Requirement on Link Recovery Procedures for UE configured with relaxed measurement criteria	452
8.5.2	Requirements for SSB based beam failure detection	453
8.5.2.1	Introduction.....	453
8.5.2.2	Minimum requirement	454
8.5.2.3	Measurement restriction for SSB based beam failure detection.....	457
8.5.2.4	Minimum requirement of SSB based beam failure detection for UE fulfilling relaxed measurement criteria	457
8.5.3	Requirements for CSI-RS based beam failure detection.....	458
8.5.3.1	Introduction.....	458
8.5.3.2	Minimum requirement	458
8.5.3.3	Measurement restrictions for CSI-RS beam failure detection.....	462
8.5.3.4	Minimum requirement of CSI-RS based beam failure detection for UE fulfilling relaxed measurement criteria	463
8.5.4	Minimum requirement for L1 indication	463
8.5.5	Requirements for SSB based candidate beam detection	464
8.5.5.1	Introduction.....	464
8.5.5.2	Minimum requirement	464
8.5.5.3	Measurement restriction for SSB based candidate beam detection.....	467
8.5.6	Requirements for CSI-RS based candidate beam detection.....	467
8.5.6.1	Introduction.....	467
8.5.6.2	Minimum requirement	468
8.5.6.3	Measurement restriction for CSI-RS based candidate beam detection	471
8.5.7	Scheduling availability of UE during beam failure detection	471
8.5.7.1	Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1	471
8.5.7.2	Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	471
8.5.7.3	Scheduling availability of UE performing beam failure detection on FR2	472
8.5.7.4	Scheduling availability of UE performing beam failure detection on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR DC	472
8.5.8	Scheduling availability of UE during candidate beam detection	473
8.5.8.1	Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1	473
8.5.8.2	Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	473
8.5.8.3	Scheduling availability of UE performing L1-RSRP measurement on FR2	473
8.5.8.4	Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC.....	474
8.5.9	Requirements for Beam Failure Recovery in SCell	474
8.5.9.1	Introduction.....	474
8.5.9.2	Requirement	474
8.5.10	Minimum requirement at transitions for beam failure detection.....	474
8.5A	Link Recovery Procedures when CCA is used on target frequency	475
8.5A.1	Introduction.....	475
8.5A.2	Requirements for SSB based beam failure detection	475
8.5A.2.1	Introduction.....	475
8.5A.2.2	Minimum requirement	476
8.5A.2.3	Measurement restriction for SSB based beam failure detection.....	478
8.5A.3	Void	478
8.5A.4	Minimum requirement for L1 indication	478
8.5A.5	Requirements for SSB based candidate beam detection	479
8.5A.5.1	Introduction.....	479

8.5A.5.2	Minimum requirement	479
8.5A.5.3	Measurement restriction for SSB based candidate beam detection.....	481
8.5A.6	Void	482
8.5A.7	Scheduling availability of UE during beam failure detection	482
8.5A.7.1	Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH	482
8.5A.7.2	Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH	482
8.5A.7.3	Scheduling availability of UE performing beam failure detection on FR2-2.....	482
8.5A.7.4	Scheduling availability of UE performing beam failure detection on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR DC.....	482
8.5A.8	Scheduling availability of UE during candidate beam detection	482
8.5A.8.3	Scheduling availability of UE performing L1-RSRP measurement on FR2-2.....	482
8.5A.8.4	Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR-DC	482
8.5B	Link Recovery Procedures for Redcap.....	483
8.5B.1	Introduction.....	483
8.5B.2	Requirements for SSB based beam failure detection for Redcap	483
8.5B.2.1	Introduction.....	483
8.5B.2.2	Minimum requirement	484
8.5B.2.3	Measurement restriction for SSB based beam failure detection.....	485
8.5B.3	Requirements for CSI-RS based beam failure detection for Redcap	486
8.5B.3.1	Introduction.....	486
8.5B.3.2	Minimum requirement	486
8.5B.3.3	Measurement restrictions for CSI-RS beam failure detection.....	488
8.5B.4	Minimum requirement for L1 indication for Redcap.....	489
8.5B.5	Requirements for SSB based candidate beam detection for Redcap.....	489
8.5B.5.1	Introduction.....	489
8.5B.5.2	Minimum requirement	490
8.5B.5.3	Measurement restriction for SSB based candidate beam detection.....	491
8.5B.6	Requirements for CSI-RS based candidate beam detection for Redcap	492
8.5B.6.1	Introduction.....	492
8.5B.6.2	Minimum requirement	492
8.5B.6.3	Measurement restriction for CSI-RS based candidate beam detection	494
8.5B.7	Scheduling availability of UE during beam failure detection for Redcap.....	494
8.5B.7.1	Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1	495
8.5B.7.2	Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	495
8.5B.7.3	Scheduling availability of UE performing beam failure detection on FR2	495
8.5B.8	Scheduling availability of UE during candidate beam detection for Redcap.....	495
8.5B.8.1	Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1	495
8.5B.8.2	Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	496
8.5B.8.3	Scheduling availability of UE performing L1-RSRP measurement on FR2	496
8.5B.9	Minimum requirement at transitions for beam failure detection for Redcap	496
8.5C	Link Recovery Procedures for Satellite Access.....	496
8.5C.1	Introduction.....	496
8.5C.2	Requirements for SSB based beam failure detection	497
8.5C.2.1	Introduction.....	497
8.5C.2.2	Minimum requirement	497
8.5C.2.3	Measurement restriction for SSB based beam failure detection.....	498
8.5C.3	Requirements for CSI-RS based beam failure detection.....	498
8.5C.3.1	Introduction.....	498
8.5C.3.2	Minimum requirement	499
8.5C.3.3	Measurement restrictions for CSI-RS beam failure detection.....	500
8.5C.4	Minimum requirement for L1 indication	500
8.5C.5	Requirements for SSB based candidate beam detection	501
8.5C.5.1	Introduction.....	501
8.5C.5.2	Minimum requirement	501
8.5C.5.3	Measurement restriction for SSB based candidate beam detection.....	502

8.5C.6	Requirements for CSI-RS based candidate beam detection.....	502
8.5C.6.1	Introduction.....	502
8.5C.6.2	Minimum requirement	502
8.5C.6.3	Measurement restriction for CSI-RS based candidate beam detection	503
8.5C.7	Scheduling availability of UE during beam failure detection	504
8.5C.7.1	Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1	504
8.5C.7.2	Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	504
8.5C.8	Scheduling availability of UE during candidate beam detection	504
8.5C.8.1	Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1	504
8.5C.8.2	Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	504
8.5C.9	Minimum requirement at transitions for beam failure detection.....	505
8.6	Active BWP switch delay.....	505
8.6.1	Introduction.....	505
8.6.2	DCI and timer based BWP switch delay on a single CC	505
8.6.2A	DCI based BWP switch delay on multiple CCs.....	507
8.6.2A.1	Simultaneous DCI based BWP switch delay on multiple CCs	507
8.6.2A.2	Non-simultaneous DCI based BWP switch delay on multiple CCs	508
8.6.2B	Timer based BWP switch delay on multiple CCs.....	508
8.6.2B.1	Simultaneous timer based BWP switch delay on multiple CCs.....	509
8.6.2B.2	Non-simultaneous timer based BWP switch delay on multiple CCs	509
8.6.3	RRC based BWP switch delay on a single CC	510
8.6.3A	RRC based BWP switch delay on multiple CCs.....	510
8.6.3A.1	Simultaneous RRC based BWP switch delay on multiple CCs	510
8.6.3A.2	Non-simultaneous RRC based BWP switch delay on multiple CCs	511
8.6.4	BWP switch delay on Consistent UL CCA recovery.....	511
8.6A	Active BWP switch delay for RedCap	512
8.6A.1	Introduction.....	512
8.6A.2	DCI and timer based BWP switch delay on a single CC	512
8.6A.3	RRC based BWP switch delay on a single CC	513
8.6C	Active BWP switch delay for satellite access.....	514
8.6C.1	Introduction.....	514
8.6C.2	DCI and timer based BWP switch delay on a single CC	514
8.6C.3	RRC based BWP switch delay on a single CC	515
8.7	Void.....	516
8.8	NE-DC: E-UTRAN PSCell Addition and Release Delay	516
8.8.1	Introduction.....	516
8.8.2	E-UTRAN PSCell Addition Delay Requirement.....	516
8.8.3	E-UTRAN PSCell Release Delay Requirement	517
8.9	NR-DC: PSCell Addition and Release Delay.....	517
8.9.1	Introduction.....	517
8.9.2	PSCell Addition Delay Requirement	517
8.9.3	PSCell Release Delay Requirement.....	518
8.9A	Conditional PSCell Addition Delay	518
8.9A.1	Introduction.....	518
8.9A.2	Conditional PSCell Addition Delay Requirement	518
8.9A.2.1	Measurement time.....	519
8.9B	NR-DC: PSCell Addition and Release Delay in Carriers with CCA.....	519
8.9B.1	Introduction.....	519
8.9B.2	PSCell Addition Delay Requirement	519
8.9B.3	PSCell Release Delay Requirement.....	520
8.10	Active TCI state switching delay	520
8.10.3A	MAC-CE based TCI state switch delay in HST FR2 scenarios	522
8.10.4	DCI based TCI state switch delay.....	522
8.10.5	RRC based TCI state switch delay.....	522
8.10.6	Active TCI state list update delay.....	523
8.10A	Active TCI state switching delay with CCA	523
8.10A.1	Introduction.....	523
8.10A.2	Known conditions for TCI state.....	523

8.10A.3	MAC-CE based TCI state switch delay	524
8.10A.4	DCI based TCI state switch delay.....	525
8.10A.5	RRC based TCI state switch delay.....	525
8.10A.6	Active TCI state list update delay.....	526
8.10B	Active TCI state switching delay for RedCap	526
8.10B.1	Introduction.....	526
8.10B.2	Known conditions for TCI state.....	526
8.10B.3	MAC-CE based TCI state switch delay	526
8.10B.4	DCI based TCI state switch delay.....	527
8.10B.5	RRC based TCI state switch delay.....	527
8.10B.6	Active TCI state list update delay.....	528
8.10C	Active TCI state switching delay for satellite access	528
8.10C.1	Introduction.....	528
8.10C.2	MAC-CE based TCI state switch delay	528
8.10C.4	DCI based TCI state switch delay.....	529
8.10C.5	RRC based TCI state switch delay.....	529
8.10C.6	Active TCI state list update delay.....	529
8.11	PSCell Change.....	529
8.11A	PSCell Change in Carriers with CCA.....	530
8.11B	Conditional PSCell Change	530
8.11B.1	Introduction.....	530
8.11B.2	Conditional PSCell Change delay.....	530
8.11B.2.1	Measurement time	531
8.11D	Conditional PSCell Change in Carriers with CCA.....	531
8.11D.1	Introduction.....	531
8.11D.2	Conditional PSCell Change delay.....	531
8.11D.2.1	Measurement time.....	532
8.12	Uplink spatial relation switch delay	533
8.12.1	Introduction.....	533
8.12.2	Known conditions for spatial relation when associated with DL-RS	533
8.12.3	MAC-CE based spatial relation switch delay	533
8.12.4	DCI based spatial relation switch delay.....	534
8.12.5	RRC based spatial relation switch delay.....	534
8.12A	Uplink spatial relation switch delay for RedCap	535
8.12A.1	Introduction.....	535
8.12A.2	Known conditions for spatial relation when associated with DL-RS	535
8.12A.3	MAC-CE based spatial relation switch delay	535
8.12A.4	DCI based spatial relation switch delay.....	536
8.12A.5	RRC based spatial relation switch delay.....	536

8.13	UE-specific CBW change.....	537
8.13.1	Introduction.....	537
8.13.2	UE-specific CBW change delay	537
8.13A	UE-specific CBW change for RedCap	538
8.13A.1	Introduction.....	538
8.13A.2	UE-specific CBW change delay	538
8.13C	UE-specific CBW change for satellite access	538
8.13C.1	Introduction.....	538
8.13C.2	UE-specific CBW change delay	538
8.14	Pathloss reference signal switching delay	539
8.14.1	Introduction.....	539
8.14.2	Known conditions for pathloss reference signal	539
8.14.3	MAC-CE based pathloss reference signal switch delay.....	539
8.14C	Pathloss reference signal switching delay for satellite access	540
8.14C.1	Introduction.....	540
8.14C.2	Known conditions for pathloss reference signal	540
8.14C.3	MAC-CE based pathloss reference signal switch delay.....	541

8.15	Active downlink TCI state switching delay for unified TCI	541
8.15.1	Introduction.....	541
8.15.4	DCI based downlink TCI state switch delay.....	543
8.15.5	Active Downlink TCI state list update delay	543
8.16	Active uplink TCI state switching delay for unified TCI	544
8.16.1	Introduction.....	544
8.16.4	DCI based uplink TCI state switch delay.....	547
8.16.5	Active Uplink TCI state list update delay	547
8.17	SCG Activation and Deactivation Delay	549
8.17.1	Introduction.....	549
8.17.2	SCG Activation Delay Requirement.....	549
8.17.3	SCG Deactivation Delay Requirement	550
8.18	TRP specific Link Recovery Procedures.....	550
8.18.1	Introduction.....	550
8.18.2	Requirements for TRP specific SSB based beam failure detection	551
8.18.2.1	Introduction.....	551
8.18.2.2	Minimum requirement	551
8.18.2.3	Measurement restriction for SSB based beam failure detection.....	553
8.18.3	Requirements for CSI-RS based beam failure detection.....	554
8.18.3.1	Introduction.....	554
8.18.3.2	Minimum requirement	554
8.18.3.3	Measurement restrictions for CSI-RS beam failure detection.....	556
8.18.4	Minimum requirement for L1 indication	557
8.18.5	Requirements for SSB based candidate beam detection	557
8.18.5.1	Introduction.....	557
8.18.5.2	Minimum requirement	557
8.18.5.3	Measurement restriction for SSB based candidate beam detection.....	559
8.18.6	Requirements for CSI-RS based candidate beam detection.....	560
8.18.6.1	Introduction.....	560
8.18.6.2	Minimum requirement	560
8.18.6.3	Measurement restriction for CSI-RS based candidate beam detection	562
8.18.7	Requirements for TRP specific Beam Failure Recovery	563
8.18.7.1	Introduction.....	563
8.18.7.2	Requirement.....	563
8.18.8	Scheduling availability of UE during TRP specific beam failure detection	564
8.18.8.1	Scheduling availability of UE performing TRP specific beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1	564
8.18.8.2	Scheduling availability of UE performing TRP specific beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1	564
8.18.8.3	Scheduling availability of UE performing TRP specific beam failure detection on FR2	564
8.18.8.4	Scheduling availability of UE performing TRP specific beam failure detection on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR DC.....	565
8.18.9	Scheduling availability of UE during TRP specific candidate beam detection.....	565
8.18.9.1	Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1	565
8.18.9.2	Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1.....	565
8.18.9.3	Scheduling availability of UE performing L1-RSRP measurement on FR2	565
8.18.9.4	Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC.....	566
8.19	Pre-configured measurement gap activation/deactivation delay	566
8.19.1	Introduction.....	566
8.19.2	Pre-configured measurement gap activation/deactivation upon DCI/timer-based BWP switch.....	566
8.19.2.1	Activation/deactivation upon DCI/timer-based BWP switch delay on a single CC.....	566
8.19.3	Pre-configured measurement gap activation/deactivation upon SCell activation/deactivation	567
8.19.4	Pre-configured measurement gap activation/deactivation upon RRC reconfiguration	567

A.3.8A.2.1	FR1 PRACH configuration 1 under CCA	1078
A.3.8A.2.2	FR1 PRACH configuration 2 under CCA	1079
A.3.9	BWP configurations	1080

A.3.9.1	Introduction.....	1080
A.3.9.2	Downlink BWP configurations.....	1080
A.3.9.2.1	Initial BWP	1080
A.3.9.2.2	Dedicated BWP.....	1080
A.3.9.3	Uplink BWP configurations.....	1081
A.3.9.3.1	Initial BWP	1081
A.3.9.3.2	Dedicated BWP.....	1081
A.3.9A	BWP configurations for RedCap.....	1082
A.3.9A.1	Introduction.....	1082
A.3.9A.2	Downlink BWP configurations.....	1082
A.3.9A.2.1	Dedicated BWP	1082
A.3.9A.3	Uplink BWP configurations.....	1082
A.3.9A.3.1	Dedicated BWP	1082
A.3.10	SSB Configurations.....	1083
A.3.10.1	SSB Configurations for FR1.....	1083
A.3.10.1.1	SSB pattern 1 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz.....	1083
A.3.10.1.2	SSB pattern 2 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz.....	1083
A.3.10.1.3	SSB pattern 3 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz.....	1083
A.3.10.1.4	SSB pattern 4 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz.....	1084
A.3.10.1.5	SSB pattern 5 in FR1: SSB allocation for SSB SCS=15 kHz starting from odd SFN in 10 MHz	1084
A.3.10.1.6	SSB pattern 6 in FR1: SSB allocation for SSB SCS=30 kHz starting from odd SFN in 40 MHz	1085
A.3.10.1.7	SSB pattern 7 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz.....	1085
A.3.10.1.8	SSB pattern 8 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz.....	1085
A.3.10.2	SSB Configurations for FR2.....	1086
A.3.10.2.1	SSB pattern 1 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1086
A.3.10.2.2	SSB pattern 2 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1086
A.3.10.2.3	SSB pattern 3 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1087
A.3.10.2.4	SSB pattern 4 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1087
A.3.10.2.5	SSB pattern 5 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1087
A.3.10.2.6	SSB pattern 6 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1088
A.3.10.2.7	SSB pattern 7 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1088
A.3.10.2.8	SSB pattern 8 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1088
A.3.10.2.9	SSB pattern 9 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1089
A.3.10.2.10	SSB pattern 10 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1089
A.3.10.2.11	SSB pattern 11 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz.....	1090
A.3.10.2.12	SSB pattern 12 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz.....	1090
A.3.10.2.13	SSB pattern 13 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz.....	1090
A.3.10.2.14	SSB pattern 14 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz.....	1091
A.3.10.2.15	SSB pattern 15 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz.....	1091
A.3.10.2.16	SSB pattern 16 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz.....	1092
A.3.10.2.17	SSB pattern 17 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz.....	1092
A.3.10.2.18	SSB pattern 18 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz.....	1092
A.3.10A	SSB Configurations under CCA.....	1093
A.3.10A.1	SSB Configurations under CCA for FR1.....	1093
A.3.10A.1.1	SSB pattern 1 under CCA for semi-static channel access: SSB allocation for SSB SCS=30kHz in 40MHz	1093
A.3.10A.1.2	SSB pattern 2 under CCA for dynamic channel access: SSB allocation for SSB SCS=30kHz in 40MHz	1093
A.3.10A.1.3	SSB pattern 3 under CCA for semi-static channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz	1094
A.3.10A.1.4	SSB pattern 4 under CCA for dynamic channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz	1094
A.3.10B	SSB Configurations for RedCap	1095
A.3.10B.1	SSB Configurations for FR1.....	1095
A.3.10B.1.1	SSB pattern 1 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz.....	1095
A.3.10B.1.2	SSB pattern 2 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz.....	1095
A.3.10B.1.3	SSB pattern 3 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz starting from odd SFN in 20 MHz	1096
A.3.10B.1.4	SSB pattern 4 for RedCap in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz.....	1096
A.3.10B.1.5	SSB pattern 5 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz.....	1096
A.3.10B.1.6	SSB pattern 6 for RedCap in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz.....	1097
A.3.10B.1.7	SSB pattern 7 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz.....	1097

A.3.10B.2	SSB Configurations for FR2.....	1098
A.3.10B.2.1	SSB pattern 1 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1098
A.3.10B.2.2	SSB pattern 2 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1098
A.3.10B.2.3	SSB pattern 3 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz.....	1099
A.3.10B.2.4	SSB pattern 4 for RedCap in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1099
A.3.10B.2.5	SSB pattern 5 for RedCap in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz.....	1099
A.3.11	SMTC Configurations	1100
A.3.11.1	SMTC pattern 1: SMTC period = 20 ms with SMTC duration = 1 ms.....	1100
A.3.11.2	SMTC pattern 2: SMTC period = 20 ms with SMTC duration = 5 ms.....	1100
A.3.11.3	SMTC pattern 3: SMTC period = 160 ms with SMTC duration = 1 ms.....	1100
A.3.11.4	SMTC pattern 4: SMTC period = 20 ms with SMTC duration = 1 ms.....	1100
A.3.11.5	SMTC pattern 5: SMTC period = 20 ms with SMTC duration = 5 ms.....	1101
A.3.11.6	SMTC pattern 6: SMTC period = 20 ms with SMTC duration = 5 ms.....	1101
A.3.11.7	SMTC pattern 7: SMTC period = 20 ms with SMTC duration = 5 ms.....	1101
A.3.11.8	SMTC pattern 8: SMTC period = 10 ms with SMTC duration = 1 ms.....	1101
A.3.11.9	SMTC pattern 9: SMTC period = 20 ms with SMTC duration = 1 ms.....	1101
A.3.11A	SMTC Configurations for RedCap.....	1102
A.3.11A.1	SMTC pattern 1 for RedCap: SMTC period = 40 ms with SMTC duration = 1 ms	1102
A.3.11A.2	SMTC pattern 2 for RedCap: SMTC period = 80 ms with SMTC duration = 1 ms	1102
A.3.11A.3	SMTC pattern 3 for RedCap: SMTC period = 40 ms with SMTC duration = 1 ms	1102
A.3.11A.4	SMTC pattern 4 for RedCap: SMTC period = 80 ms with SMTC duration = 5 ms	1102

A.4.3.2.2.4	2-step RA type n on-contention based random access test in FR1 for PSCell in EN-DC	1163
A.4.3.2.3	Void.....	1166
A.4.3.3	Handover with PSCell from EN-DC to EN-DC with known target PSCell in FR1.....	1166
A.4.3.3.1	Test Purpose and Environment	1166
A.4.3.3.2	Test Requirements.....	1170
A.4.4	Timing	1171
A.4.4.1	UE transmit timing	1171
A.4.4.1.1	NR UE Transmit Timing Test for FR1	1171
A.4.4.1.1.1	Test Purpose and environment	1171
A.4.4.1.1.2	Test requirements	1174
A.4.4.2	UE timer accuracy	1174
A.4.4.3	Timing advance	1174
A.4.4.3.1	EN-DC FR1 timing advance adjustment accuracy.....	1174
A.4.4.3.1.1	Test Purpose and Environment.....	1174

A.4.4.3.1.2	Test Parameters	1174
A.4.4.3.1.3	Test Requirements	1177
A.4.5	Signaling characteristics	1177
A.4.5.1	Radio link Monitoring	1177
A.4.5.1.1	Radio Link Monitoring Out-of-sync Test for FR1 PSCell configured with SSB-based RLM RS in non-DRX mode	1178
A.4.5.1.1.1	Test Purpose and Environment	1178
A.4.5.1.1.2	Test Requirements	1181
A.4.5.1.2	Radio Link Monitoring In-sync Test for FR1 PSCell configured with SSB-based RLM RS in non-DRX mode	1181
A.4.5.1.2.1	Test Purpose and Environment	1181
A.4.5.1.2.2	Test Requirements	1185
A.4.5.1.3	Radio Link Monitoring Out-of-sync Test for FR1 PSCell configured with SSB-based RLM RS in DRX mode	1185
A.4.5.1.3.1	Test Purpose and Environment	1185
A.4.5.1.3.2	Test Requirements	1188
A.4.5.1.4	Radio Link Monitoring In-sync Test for FR1 PSCell configured with SSB-based RLM RS in DRX mode	1189
A.4.5.1.4.1	Test Purpose and Environment	1189
A.4.5.1.4.2	Test Requirements	1192
A.4.5.1.5	EN-DC Radio Link Monitoring Out-of-sync Test for FR1 PSCell configured with CSI-RS-based RLM in non-DRX mode	1192
A.4.5.1.5.1	Test Purpose and Environment	1192
A.4.5.1.5.2	Test Requirements	1195
A.4.5.1.6	EN-DC Radio Link Monitoring In-sync Test for FR1 PSCell configured with CSI-RS-based RLM in non-DRX mode	1196
A.4.5.1.6.1	Test Purpose and Environment	1196
A.4.5.1.6.2	Test Requirements	1199
A.4.5.1.7	EN-DC Radio Link Monitoring Out-of-sync Test for FR1 PSCell configured with CSI-RS-based RLM in DRX mode	1199
A.4.5.1.7.1	Test Purpose and Environment	1199
A.4.5.1.7.2	Test Requirements	1202
A.4.5.1.8	EN-DC Radio Link Monitoring In-sync Test for FR1 PSCell configured with CSI-RS-based RLM in DRX mode	1203
A.4.5.1.8.1	Test Purpose and Environment	1203
A.4.5.1.8.2	Test Requirements	1206
A.4.5.1.9	Radio Link Monitoring Out-of-sync Test for FR1 PSCell configured with SSB-based RLM RS for UE fulfilling relaxed measurement criterion	1207
A.4.5.1.9.1	Test Purpose and Environment	1207
A.4.5.2	Interruption	1210
A.4.5.2.1	E-UTRAN – NR FR1 interruptions at transitions between active and non-active during DRX in synchronous EN-DC	1210
A.4.5.2.1.1	Test Purpose and Environment	1210
A.4.5.2.1.2	Test Requirements	1212
A.4.5.2.2	E-UTRAN – NR FR1 interruptions at transitions between active and non-active during DRX in asynchronous EN-DC	1213
A.4.5.2.2.1	Test Purpose and Environment	1213
A.4.5.2.2.2	Test Requirements	1215
A.4.5.2.3	E-UTRAN – NR FR1 interruptions during measurements on deactivated NR SCC in synchronous EN-DC	1215
A.4.5.2.3.1	Test Purpose and Environment	1215
A.4.5.2.3.2	Test Requirements	1219
A.4.5.2.4	E-UTRAN – NR FR1 interruptions during measurements on deactivated NR SCC in asynchronous EN-DC	1220
A.4.5.2.4.1	Test Purpose and Environment	1220
A.4.5.2.4.2	Test Requirements	1224
A.4.5.2.5	E-UTRAN – NR FR1 interruptions during measurements on deactivated E-UTRAN SCC in synchronous EN-DC	1225
A.4.5.2.5.1	Test Purpose and Environment	1225
A.4.5.2.5.2	Test Requirements	1227
A.4.5.2.6	E-UTRAN – NR FR1 interruptions during measurements on deactivated E-UTRAN SCC in asynchronous EN-DC	1227

A.4.5.2.6.1	Test Purpose and Environment.....	1227
A.4.5.2.6.2	Test Requirements.....	1230
A.4.5.2.7	Void.....	1230
A.4.5.2.8	E-UTRAN - NR FR1 interruptions at NR SRS carrier based switching in asynchronous EN-DC....	1230
A.4.5.2.8.1	Test Purpose and Environment.....	1230
A.4.5.2.8.2	Test Requirements.....	1233
A.4.5.2.9	E-UTRAN – NR interruptions at E-UTRA SRS carrier based switching.....	1233
A.4.5.2.9.1	Test Purpose and Environment.....	1233
A.4.5.2.9.2	Test Requirements.....	1236
A.4.5.2.10	E-UTRAN – NR FR1 interruptions due to RRM and RLM/BFD measurements on deactivated NR PSCell	1236
A.4.5.2.10.1	Test Purpose and Environment.....	1236
A.4.5.2.10.2	Test Requirements.....	1238
A.4.5.2.11	E-UTRAN - NR FR1 interruptions at NR SRS antenna port switching with 1 SRS symbol in a slot in synchronous EN-DC	1239
A.4.5.2.11.1	Test Purpose and Environment.....	1239
A.4.5.2.11.2	Test Requirements.....	1242
A.4.5.2.12	E-UTRAN - NR FR1 interruptions at NR SRS antenna port switching in asynchronous EN-DC....	1242
A.4.5.2.12.1	Test Purpose and Environment.....	1242
A.4.5.3	SCell Activation and Deactivation Delay	1247
A.4.5.3.1	SCell Activation and deactivation of known SCell in FR1 for 160ms SCell measurement cycle	1247
A.4.5.3.1.1	Test Purpose and Environment.....	1247
A.4.5.3.1.2	Test Requirements.....	1252
A.4.5.3.2	SCell Activation and deactivation of known SCell in FR1 for 640ms SCell measurement cycle	1253
A.4.5.3.2.1	Test Purpose and Environment.....	1253
A.4.5.3.2.2	Test Requirements.....	1253
A.4.5.3.3	SCell Activation and deactivation of unknown SCell in FR1	1254
A.4.5.3.3.1	Test Purpose and Environment.....	1254
A.4.5.3.3.2	Test Requirements.....	1255
A.4.5.3.4	SCell Activation and deactivation of multiple unknown SCells in FR1 with single activation/deactivation command.....	1255
A.4.5.3.4.1	Test Purpose and Environment.....	1255
A.4.5.3.4.2	Test Requirements.....	1258
A.4.5.3.5	Direct SCell activation at SCell addition of known SCell in FR1.....	1258
A.4.5.3.5.1	Test Purpose and Environment.....	1258
A.4.5.3.5.2	Test Requirements.....	1263
A.4.5.3.6	Fast SCell Activation of known SCell in FR1 for 160ms SCell measurement cycle	1263
A.4.5.3.6.1	Test Purpose and Environment.....	1263
A.4.5.3.6.2	Test Requirements.....	1267
A.4.5.3.7	Fast SCell Activation of known SCell in FR1 for 640 ms SCell measurement cycle	1268
A.4.5.3.7.1	Test Purpose and Environment.....	1268
A.4.5.3.7.2	Test Requirements.....	1268
A.4.5.4	UE UL carrier RRC reconfiguration Delay	1268
A.4.5.4.1	UE UL carrier RRC reconfiguration Delay.....	1268
A.4.5.4.1.1	Test Purpose and Environment.....	1268
A.4.5.4.1.2	Test Requirements.....	1275
A.4.5.5	Beam Failure Detection and Link recovery procedures.....	1275
A.4.5.5.1	EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in non-DRX mode	1275
A.4.5.5.1.1	Test Purpose and Environment.....	1275
A.4.5.5.1.2	Test Requirements.....	1279
A.4.5.5.2	EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in DRX mode.....	1279
A.4.5.5.2.1	Test Purpose and Environment.....	1279
A.4.5.5.2.2	Test Requirements.....	1283
A.4.5.5.3	EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with CSI-RS-based BFD and LR in non-DRX mode	1284
A.4.5.5.3.1	Test Purpose and Environment.....	1284
A.4.5.5.3.2	Test Requirements.....	1288
A.4.5.5.4	EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with CSI-RS-based BFD and LR in DRX mode.....	1288
A.4.5.5.4.1	Test Purpose and Environment.....	1288

A.4.5.5.4.2	Test Requirements	1293
A.4.5.5.5	EN-DC Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in non-DRX mode	1293
A.4.5.5.5.1	Test Purpose and Environment.....	1293
A.4.5.5.5.2	Test Requirements	1297
A.4.5.5.6	EN-DC Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in DRX mode	1298
A.4.5.5.6.1	Test Purpose and Environment.....	1298
A.4.5.5.6.2	Test Requirements	1302
A.4.5.5.7	EN-DC TRP specific Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in non-DRX mode	1303
A.4.5.5.7.1	Test Purpose and Environment.....	1303
A.4.5.5.7.2	Test Requirements	1307
A.4.5.5.8	EN-DC TRP specific Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in non-DRX mode	1308
A.4.5.5.8.1	Test Purpose and Environment.....	1308
A.4.5.5.8.2	Test Requirements	1312
A.4.5.6	Active BWP switch.....	1313
A.4.5.6.1	DCI-based and Timer-based Active BWP Switch	1313
A.4.5.6.1.1	E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC	1313
A.4.5.6.1.2	E-UTRAN – NR PSCell FR1 DL active BWP switch with FR1 SCell in non-DRX in synchronous EN-DC.....	1317
A.4.5.6.2	RRC-based Active BWP Switch	1323
A.4.5.6.3	Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs.....	1326
A.4.5.6.3.1	Simultaneous E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in EN-DC on multiple CCs	1326
A.4.5.6.3.1.1	Test Purpose and Environment	1326
A.4.5.6.4	Simultaneous RRC-based Active BWP Switch on multiple CCs	1332
A.4.5.6.4.1	E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC on multiple CCs.....	1332
A.4.5.6.4.1.1	Test Purpose and Environment	1332
A.4.5.6.4.1.2	Test Requirements	1336
A.4.5.6.4.2	E-UTRAN – NR FR1 PSCell SCell dormancy switch of two FR1 SCells inside active time.....	1336
A.4.5.6.4.2.1	Test Purpose and Environment	1336
A.4.5.6.4.2.2	Test Requirements	1343
A.4.5.6.5	SCell dormancy switch	1343
A.4.5.6.5.1	E-UTRAN – NR FR1 PSCell SCell dormancy switch of single FR1 SCell outside active time.....	1343
A.4.5.6.5.2	E-UTRAN – NR FR1 PSCell SCell dormancy switch of two FR1 SCells inside active time.....	1349
A.4.5.6.5.2.1	Test Purpose and Environment	1349
A.4.5.6.5.2.2	Test Requirements	1353
A.4.5.7	PSCell addition and release delay.....	1353
A.4.5.7.1	Addition and Release Delay of known NR PSCell	1353
A.4.5.7.1.1	Test purpose and environment.....	1353
A.4.5.7.1.2	Test Requirements	1356
A.4.5.8	DL Interruptions at switching between two uplink carriers	1357
A.4.5.8.1	Test Purpose and Environment	1357
A.4.5.8.2	Test Requirements.....	1359
A.4.5.9	UE specific CBW change	1360
A.4.5.9.1	UE specific CBW change on FR1 NR PSCell with non-DRX in synchronous EN- DC	1360
A.4.5.9.1.1	Test Purpose and Environment.....	1360
A.4.5.9.1.2	Test Requirements	1363
A.4.5.10	PSCell activation and deactivation delay.....	1363
A.4.5.10.1	PSCell activation and deactivation delay	1363
A.4.5.10.1.1	Test purpose and environment.....	1363
A.4.5.10.1.2	Test Requirements	1365
A.4.5.11	Conditional PSCell addition and release delay (FR1 EN-DC)	1366
A.4.5.11.1	Conditional PSCell Addition and Release Delay	1366
A.4.5.11.1.1	Test purpose and environment.....	1366
A.4.5.11.1.2	Test Parameters	1366
A.4.5.11.1.3	Test Requirements	1369
A.4.6	Measurement procedure	1369
A.4.6.1	Intra-frequency Measurements	1369

A.4.6.1.1	EN-DC event triggered reporting tests without gap under non-DRX	1369
A.4.6.1.1.1	Test purpose and Environment	1369
A.4.6.1.1.2	Test parameters.....	1369
A.4.6.1.1.3	Test Requirements	1371
A.4.6.1.2	EN-DC event triggered reporting tests without gap under DRX.....	1372
A.4.6.1.2.1	Test purpose and Environment	1372
A.4.6.1.2.2	Test parameters.....	1372
A.4.6.1.2.2	Test Requirements	1374
A.4.6.1.3	EN-DC event triggered reporting tests with per-UE gaps under non-DRX	1374
A.4.6.1.3.1	Test purpose and Environment	1374
A.4.6.1.3.2	Test parameters.....	1374
A.4.6.1.3.3	Test Requirements	1377
A.4.6.1.4	EN-DC event triggered reporting tests with per-UE gaps under DRX	1377
A.4.6.1.4.1	Test purpose and Environment	1377
A.4.6.1.4.2	Test parameters.....	1377
A.4.6.1.4.3	Test Requirements	1380
A.4.6.1.5	EN-DC event triggered reporting tests without gap under non-DRX with SSB index reading	1380
A.4.6.1.5.1	Test purpose and Environment	1380
A.4.6.1.5.2	Test parameters.....	1380
A.4.6.1.5.3	Test Requirements	1382
A.4.6.1.6	EN-DC event triggered reporting tests with SSB index reading with per-UE gaps	1382
A.4.6.1.6.1	Test purpose and Environment	1382
A.4.6.1.6.2	Test parameters.....	1382
A.4.6.1.6.3	Test Requirements	1384
A.4.6.1.7	EN-DC event triggered reporting tests under DRX for UE configured with highSpeedMeasFlag-r16	1384
A.4.6.1.7.1	Test purpose and Environment	1384
A.4.6.1.7.2	Test parameters.....	1384
A.4.6.1.7.3	Test Requirements	1387
A.4.6.1.8	EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is used for UE configured with <i>highSpeedMeasCA-Scell-r17</i>	1387
A.4.6.1.8.1	Test Purpose and Environment.....	1387
A.4.6.1.8.2	Test Requirements	1391
A.4.6.2	Inter-frequency Measurements	1391
A.4.6.2.1	EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is not used	1391
A.4.6.2.1.1	Test Purpose and Environment.....	1391
A.4.6.2.1.2	Test Requirements	1394
A.4.6.2.2	EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is used.....	1394
A.4.6.2.2.1	Test Purpose and Environment.....	1394
A.4.6.2.2.2	Test Requirements	1397
A.4.6.2.3	Void.....	1398
A.4.6.2.4	Void.....	1398
A.4.6.2.5	EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is not used	1398
A.4.6.2.5.1	Test Purpose and Environment.....	1398
A.4.6.2.5.2	Test Requirements	1401
A.4.6.2.6	EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is used	1401
A.4.6.2.6.1	Test Purpose and Environment.....	1401
A.4.6.2.6.2	Test Requirements	1404
A.4.6.2.7	Void.....	1404
A.4.6.2.8	Void.....	1404
A.4.6.2.9	EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is used for UE configured with <i>highSpeedMeasInterFreq-r17</i>	1405
A.4.6.2.9.1	Test Purpose and Environment.....	1405
A.4.6.2.9.2	Test Requirements	1408
A.4.6.3	Void	1408
A.4.6.4	L1-RSRP measurement for beam reporting	1408
A.4.6.4.1	SSB based L1-RSRP measurement when DRX is not used.....	1408
A.4.6.4.1.1	Test Purpose and Environment.....	1408

A.6.5.1.3	Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode	2011
A.6.5.1.3.1	Test Purpose and Environment	2011
A.6.5.1.3.2	Test Requirements	2015
A.6.5.1.4	Radio Link Monitoring In-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode	2015
A.6.5.1.4.1	Test Purpose and Environment	2015
A.6.5.1.4.2	Test Requirements	2018
A.6.5.1.5	Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode	2018
A.6.5.1.5.1	Test Purpose and Environment	2018
A.6.5.1.5.2	Test Requirements	2021
A.6.5.1.6	Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode	2022
A.6.5.1.6.1	Test Purpose and Environment	2022
A.6.5.1.6.2	Test Requirements	2025
A.6.5.1.7	Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode	2025
A.6.5.1.7.1	Test Purpose and Environment	2025
A.6.5.1.7.2	Test Requirements	2028
A.6.5.1.8	Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode	2029
A.6.5.1.8.1	Test Purpose and Environment	2029
A.6.5.1.8.2	Test Requirements	2032
A.6.5.1.9	Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM for UE fulfilling relaxed measurement criterion	2032
A.6.5.1.9.1	Test Purpose and Environment	2032
A.6.5.1.9.2	Test Requirements	2035
A.6.5.2	Interruption	2036
A.6.5.2.1	Interruptions during measurements on deactivated NR SCC in FR1	2036
A.6.5.2.1.2	Test Requirements	2039
A.6.5.2.2	SA interruptions at NR SRS carrier based switching	2040
A.6.5.2.2.1	Test Purpose and Environment	2040
A.6.5.2.2.2	Test Parameters	2040
A.6.5.2.2.3	Test Requirements	2042
A.6.5.2.3	SA interruptions at NR SRS antenna port switching with 1 SRS symbol in a slot in NR-CA	2042
A.6.5.2.3.1	Test Purpose and Environment	2042
A.6.5.2.3.2	Test Parameters	2043
A.6.5.2.3.3	Test Requirements	2045
A.6.5.2.4	SA interruptions at NR SRS antenna port switching	2045
A.6.5.2.4.1	Test Purpose and Environment	2045
A.6.5.2.4.2	Test Parameters	2046
A.6.5.2.4.3	Test Requirements	2048
A.6.5.3	SCell Activation and Deactivation Delay	2048

A.6.5.3.1	SCell Activation and deactivation of known SCell in FR1 in non-DRX for 160ms SCell measurement cycle	2048
A.6.5.3.1.1	Test Purpose and Environment.....	2048
A.6.5.3.1.2	Test Requirements	2053
A.6.5.3.2	SCell Activation and deactivation of known SCell in FR1 in non-DRX for 640 ms SCell measurement cycle	2054
A.6.5.3.2.1	Test Purpose and Environment.....	2054
A.6.5.3.2.2	Test Requirements	2054
A.6.5.3.3	SCell Activation and deactivation of unknown SCell in FR1 in non-DRX	2054
A.6.5.3.3.1	Test Purpose and Environment.....	2054
A.6.5.3.3.2	Test Requirements	2055
A.6.5.3.4	Direct SCell activation at SCell addition of known SCell in FR1.....	2055
A.6.5.3.4.1	Test Purpose and Environment.....	2055
A.6.5.3.4.2	Test Requirements	2059
A.6.5.3.5	Direct SCell activation at handover with known SCell in FR1	2060
A.6.5.3.5.1	Test Purpose and Environment.....	2060
A.6.5.3.5.2	Test Requirements	2064
A.6.5.3.6	PUCCH SCell Activation and deactivation of known SCell in FR1	2065
A.6.5.3.6.1	Test Purpose and Environment.....	2065
A.6.5.3.6.2	Test Requirements	2068
A.6.5.3.7	SCell Activation and deactivation of unknown SCell in FR1 in non-DRX	2069
A.6.5.3.7.1	Test Purpose and Environment.....	2069
A.6.5.3.7.2	Test Requirements	2072
A.6.5.3.8	SCell Activation and Deactivation of one FR1 known PUCCH SCell and one FR1 unknown SCell with single activation/deactivation command	2073
A.6.5.3.8.1	Test Purpose and Environment.....	2073
A.6.5.3.8.2	Test Requirements	2077
A.6.5.3.9	SCell Activation and deactivation of unknown PUCCH SCell and unknown DL SCell in FR1 in non-DRX	2077
A.6.5.3.9.1	Test Purpose and Environment.....	2077
A.6.5.3.9.2	Test Requirements	2081
A.6.5.3.10	Fast SCell Activation of known SCell in FR1 in non-DRX for 160ms SCell measurement cycle ...	2081
A.6.5.3.10.1	Test Purpose and Environment.....	2081
A.6.5.3.10.2	Test Requirements	2085
A.6.5.3.11	SCell Activation of known SCell in FR1 in non-DRX for 640 ms SCell measurement cycle.....	2085
A.6.5.3.11.1	Test Purpose and Environment.....	2085
A.6.5.3.11.2	Test Requirements	2085
A.6.5.4	UE UL carrier RRC reconfiguration Delay	2086
A.6.5.4.1	UE UL carrier RRC reconfiguration Delay.....	2086
A.6.5.4.1.1	Test Purpose and Environment.....	2086
A.6.5.4.1.2	Test Requirements	2092
A.6.5.4.2	Void.....	2093
A.6.5.5	Beam Failure Detection and Link recovery procedures.....	2093
A.6.5.5.1	Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode	2093
A.6.5.5.1.1	Test Purpose and Environment.....	2093
A.6.5.5.2	Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in DRX mode	2097
A.6.5.5.2.1	Test Purpose and Environment.....	2097
A.6.5.5.2.2	Test Requirements	2102
A.6.5.5.3	Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in non-DRX mode	2102
A.6.5.5.3.1	Test Purpose and Environment.....	2102
A.6.5.5.3.2	Test Requirements	2106
A.6.5.5.4	Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in DRX mode.....	2107
A.6.5.5.4.1	Test Purpose and Environment.....	2107
A.6.5.5.4.2	Test Requirements	2111
A.6.5.5.5	Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in non-DRX mode	2111
A.6.5.5.5.1	Test Purpose and Environment.....	2111
A.6.5.5.5.2	Test Requirements	2115

A.6.5.5.6	Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in DRX mode	2116
A.6.5.5.6.1	Test Purpose and Environment.....	2116
A.6.5.5.6.2	Test Requirements	2120
A.6.5.5.7	TRP Specific Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in DRX mode	2121
A.6.5.5.7.1	Test Purpose and Environment.....	2121
A.6.5.5.7.2	Test Requirements	2125
A.6.5.6	Active BWP switch.....	2125
A.6.5.6.1	DCI-based and Timer-based Active BWP Switch	2125
A.6.5.6.1.1	NR FR1- NR FR1 DL active BWP switch of SCell with non-DRX in SA	2125
A.6.5.6.1.2	NR FR1 DL active BWP switch with non-DRX in SA	2131
A.6.5.6.2	RRC-based Active BWP Switch	2134
A.6.5.6.2.1	NR FR1 DL active BWP switch of Cell with non-DRX in SA	2134
A.6.5.6.3	Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs	2137
A.6.5.6.3.1	NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA	2137
A.6.5.6.4	SCell dormancy switch	2143
A.6.5.6.4.1	NR FR1 PCell SCell dormancy switch of single FR1 SCell outside active time	2143
A.6.5.6.4.1.1	Test Purpose and Environment	2143
A.6.5.6.4.1.2	Test Requirements	2148
A.6.5.6.4.2	NR FR1 PCell SCell dormancy switch of two FR1 SCells inside active time	2149
A.6.5.6.4.2.1	Test Purpose and Environment	2149
A.6.5.6.4.2.2	Test Requirements	2155
A.6.5.6.5	Simultaneous RRC-based Active BWP Switch on multiple CCs	2155
A.6.5.6.5.1	NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA	2155
A.6.5.7	DL interruptions at switching between two uplink carriers	2160
A.6.5.7.1	DL interruptions at switching between two uplink carriers in FDD-TDD CA	2160
A.6.5.7.1.1	Test Purpose and Environment.....	2160
A.6.5.7.1.2	Test Requirements	2162
A.6.5.7.2	DL interruptions at switching between two uplink carriers in TDD-TDD CA	2162
A.6.5.7.2.1	Test Purpose and Environment.....	2162
A.6.5.7.2.2	Test Requirements	2165
A.6.5.7A	DL interruptions at switching between two uplink carriers with two transmit antenna connectors.....	2165
A.6.5.7A.1	DL interruptions at switching between two uplink carriers in FDD-TDD CA	2165
A.6.5.7A.1.1	Test Purpose and Environment.....	2165
A.6.5.7A.1.2	Test Requirements	2167
A.6.5.7A.2	DL interruptions at switching between two uplink carriers in TDD-TDD CA	2167
A.6.5.7A.2.1	Test Purpose and Environment.....	2167
A.6.5.7A.2.2	Test Requirements	2170
A.6.5.7B	DL interruptions at switching between one uplink band with one transmit antenna connector and one uplink band with two transmit antenna connectors.....	2170
A.6.5.7B.1	DL interruptions at switching between two uplink bands in FDD-TDD CA	2170
A.6.5.7B.1.1	Test Purpose and Environment.....	2170
A.6.5.7B.1.2	Test Requirements	2173
A.6.5.7B.2	DL interruptions at switching between two uplink bands in TDD-TDD CA.....	2173
A.6.5.7B.2.1	Test Purpose and Environment.....	2173
A.6.5.7B.2.2	Test Requirements	2175
A.6.5.7C	DL interruptions at switching between two uplink bands with two transmit antenna connectors	2176
A.6.5.7C.1	DL interruptions at switching between two uplink bands with two transmit antenna connectors in FDD-TDD CA.....	2176
A.6.5.7C.1.1	Test Purpose and Environment.....	2176
A.6.5.7C.1.2	Test Requirements	2179
A.6.5.7C.2	DL interruptions at switching between two uplink bands with two transmit antenna connectors in TDD-TDD CA	2179
A.6.5.7C.2.1	Test Purpose and Environment.....	2179
A.6.5.7C.2.2	Test Requirements	2182
A.6.5.8	UE specific CBW change	2183
A.6.5.8.1	UE specific CBW change on PCell in FR1 in non-DRX	2183
A.6.5.8.1.1	Test Purpose and Environment.....	2183
A.6.5.8.1.2	Test Requirements	2186
A.6.5.9	Pathloss reference signal switching delay.....	2186
A.6.5.9.1	MAC-CE based pathloss reference signal switch delay.....	2186

A.6.5.9.1.1	Test Purpose and Environment.....	2186
A.6.5.9.1.2	Test Requirements.....	2189
A.6.6	Measurement procedure	2189
A.6.6.1	Intra-frequency Measurements	2189
A.6.6.1.1	SA event triggered reporting tests without gap under non-DRX	2189
A.6.6.1.1.1	Test purpose and Environment.....	2189
A.6.6.1.1.2	Test parameters.....	2189
A.6.6.1.1.3	Test Requirements.....	2191
A.6.6.1.2	SA event triggered reporting tests without gap under DRX.....	2191
A.6.6.1.2.1	Test purpose and Environment.....	2191
A.6.6.1.2.2	Test parameters.....	2192
A.6.6.1.2.3	Test Requirements.....	2194
A.6.6.1.3	SA event triggered reporting tests with per-UE gaps under non-DRX	2194
A.6.6.1.3.1	Test purpose and Environment.....	2194
A.6.6.1.3.2	Test parameters.....	2194
A.6.6.1.3.3	Test Requirements.....	2196
A.6.6.1.4	SA event triggered reporting tests with per-UE gaps under DRX.....	2196
A.6.6.1.4.1	Test purpose and Environment.....	2196
A.6.6.1.4.2	Test parameters.....	2196
A.6.6.1.4.3	Test Requirements.....	2199

B.1.5	Conditions for measurements on NR inter-frequency cells for cell re-selection for RedCap.....	4684
B.1.6	Conditions for measurements on NR intra-frequency cells for cell re-selection for satellite access	4684
B.1.7	Conditions for measurements on NR inter-frequency cells for cell re-selection for satellite access	4685
B.2	Conditions for UE measurements procedures and performance requirements in RRC_CONNECTED state	4685
B.2.1	Introduction	4685
B.2.1.1	General.....	4685
B.2.1.2	Derivation of Minimum SSB_RP values for FR1.....	4685
B.2.1.3	Derivation of Minimum SSB_RP values for FR2.....	4685
B.2.1.3.1	Minimum SSB_RP values for Rx Beam Peak angle of arrival	4685
B.2.1.3.2	Minimum SSB_RP values for angle of arrival within Spherical coverage	4686
B.2.1.4	Gain to SS-RSRP and CSI-RSRP measurement point for FR1	4687
B.2.1.5	Gain to SS-RSRP and CSI-RSRP measurement point for FR2	4687
B.2.1.5.1	Gain to SS-RSRP and CSI-RSRP measurement point for Rx Beam Peak angle of arrival.....	4687
B.2.1.5.2	Gain to SS-RSRP measurement point for different frequency	4687
B.2.1.5.3	Alignment of Rough beam to Rx beam Peak	4688
B.2.1.6	Gain to PRS-RSRP measurement point for FR2.....	4688
B.2.1.6.1	Gain to PRS-RSRP measurement point for Rx Beam Peak angle of arrival	4688
B.2.2	Conditions for NR intra-frequency measurements	4689

B.2.3	Conditions for NR inter-frequency measurements	4690
B.2.4	Conditions for NR L1-RSRP reporting	4691
B.2.4.1	Conditions for SSB based L1-RSRP reporting	4691
B.2.4.2	Conditions for CSI-RS based L1-RSRP reporting	4692
B.2.5	Conditions for RRC connection release with redirection to NR	4693
B.2.6	Void	4694
B.2.6.1	Void	4694
B.2.6.2	Void	4694
B.2.7	Conditions for SRS-RSRP measurements	4694
B.2.8	Conditions for NR L1-SINR reporting	4695
B.2.8.1	Conditions for L1-SINR reporting with CSI-RS based CMR and no dedicated IMR configured	4695
B.2.8.2	Conditions for L1-SINR reporting with SSB based CMR and dedicated IMR configured	4696
B.2.8.2.1	L1-SINR reporting with SSB based CMR and dedicated ZP-IMR configured	4696
B.2.8.2.2	L1-SINR reporting with SSB based CMR and dedicated NZP-IMR configured	4697
B.2.8.3	Conditions for L1-SINR reporting with CSI-RS based CMR and dedicated IMR configured	4698
B.2.8.3.1	L1-SINR reporting with CSI-RS based CMR and dedicated ZP-IMR configured	4698
B.2.8.3.2	L1-SINR reporting with CSI-RS based CMR and dedicated NZP-IMR configured	4699
B.2.9	Conditions for NR intra-frequency measurements under CCA	4700
B.2.10	Conditions for NR inter-frequency measurements under CCA	4700
B.2.11	Conditions for NR L1-RSRP reporting under CCA	4701
B.2.11.1	Conditions for SSB based L1-RSRP reporting	4701
B.2.12	Conditions for NR CSI-RS based intra-frequency measurements	4701
B.2.13	Conditions for NR CSI-RS based inter-frequency measurements	4702
B.2.14	Conditions for NR PRS-based measurements	4703
B.2.15	Conditions for NR intra-frequency measurements for RedCap	4705
B.2.16	Conditions for NR inter-frequency measurements for RedCap	4706
B.2.17	Conditions for NR intra-frequency measurements for satellite access	4708
B.2.18	Conditions for NR inter-frequency measurements for satellite access	4708
B.2.19	Conditions for NR L1-RSRP reporting for satellite access	4709
B.2.19.1	Conditions for SSB based L1-RSRP reporting for satellite access	4709
B.2.19.2	Conditions for CSI-RS based L1-RSRP reporting for satellite access	4709
B.2.20	Conditions for RRC connection release with redirection to NR for satellite access	4709
B.3	RRM Requirements Exceptions	4709
B.3.1	Introduction	4709
B.3.2	Receiver sensitivity relaxation for CA	4710
B.3.2.1	Receiver sensitivity relaxation for UE supporting CA in FR1	4710
B.3.2.2	Receiver sensitivity relaxation for UE configured with CA in FR1	4710
B.3.2.2.1	Inter-band carrier aggregation	4710
B.3.2.2.2	Reference sensitivity exceptions due to UL harmonic interference for CA	4710
B.3.2.2.3	Reference sensitivity exceptions due to intermodulation interference due to 2UL CA	4710
B.3.2.3	Receiver sensitivity relaxation for UE supporting CA in FR2	4711
B.3.2.4	Receiver sensitivity relaxation for UE configured with CA in FR2	4711
B.3.2.4.1	Intra-band contiguous carrier aggregation	4711
B.3.2.4.2	Intra-band non-contiguous carrier aggregation	4711
B.3.3	Receiver sensitivity relaxation for DC	4711
B.3.3.1	Receiver sensitivity relaxation for EN-DC	4711
B.3.3.2	Receiver sensitivity relaxation for NE-DC	4711
B.3.4	Receiver sensitivity relaxation for SUL	4711
B.3.4.1	Receiver sensitivity relaxation for UE supporting SUL in FR1	4711
B.3.4.2	Receiver sensitivity relaxation for UE configured with SUL in FR1	4711
B.3.4.2.1	Reference sensitivity exceptions due to UL harmonic interference for SUL	4711
B.4	Conditions for V2X	4712
B.4.1	Test parameters for GNSS signals	4712
B.4.2	Conditions for PSBCH-RSRP Accuracy Requirements	4712
B.4.3	Conditions for Selection/Reselection to Intra-frequency SyncRef UE	4712
B.4.4	Conditions for L1 SL-RSRP Accuracy Requirements	4713
B.5	High level test procedure for SAN RRM tests	4713
Annex C (informative):	Change history	4714

History	4746
---------------	------

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

- shall** indicates a mandatory requirement to do something
- shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

- should** indicates a recommendation to do something
- should not** indicates a recommendation not to do something
- may** indicates permission to do something
- need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

- can** indicates that something is possible
- cannot** indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

- will** indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- will not** indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- might** indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

1 Scope

The present document specifies requirements for support of Radio Resource Management for the FDD and TDD modes of New Radio (NR). These requirements include requirements on measurements in NR and the UE as well as requirements on node dynamical behaviour and interaction, in terms of delay and response characteristics.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [11] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [11].

1 Rx RedCap: RedCap UE for which requirements are derived assuming 1 Rx branch.

2 Rx RedCap: RedCap UE for which requirements are derived assuming 2 Rx branches.

Active DL BWP: Active DL bandwidth part as defined in TS 38.213 [3].

Blackbox Approach: Testing methodology, in which the UE internal implementation of certain specific UE functionality involved in the test, is unknown.

CD-SSB: Cell defining SSB as defined in TS 38.300 [10].

Control Resource Set: As defined in TS 38.213 [3].

DL BWP: DL bandwidth part as defined in TS 38.213 [3].

EN-DC: E-UTRA-NR Dual Connectivity as defined in clause 4.1.2 of TS 37.340 [17].

en-gNB: As defined in TS 37.340 [17].

FR1: Frequency range 1 as defined in clause 5.1 of TS 38.104 [13].

FR2: Frequency range 2 as defined in clause 5.1 of TS 38.104 [13].

gNB: as defined in TS 38.300 [10].

IBM (Independent Beam Management): As defined in TS 38.101-2 [19].

LMF: as defined in TS 38.305 [22].

Master Cell Group: As defined in TS 38.331 [2].

Multi-Radio Dual Connectivity: Dual Connectivity between E-UTRA and NR nodes, or between two NR nodes, as defined in TS 37.340 [17].

NCD-SSB: Non cell defining SSB as defined in TS 38.300 [10].

ng-eNB: As defined in TS 38.300 [10].

NE-DC: NR-E-UTRA Dual Connectivity as defined in clause 4.1.3.2 of TS 37.340 [17].

NGEN-DC: NG-RAN E-UTRA-NR Dual Connectivity as defined in clause 4.1.3.1 of TS 37.340 [17].

NR-DC: NR-NR Dual Connectivity as defined in clause 4.1.3.3 of TS 37.340 [17].

Primary Cell: As defined in TS 38.331 [2].

PRS resource instance: An instance in time of a configured PRS resource as defined in TS 38.331 [2], which may or not overlap with a measurement gap occasion.

Quasi Co-Location: As defined in TS 38.214 [26].

RedCap UE: A UE with reduced capabilities as defined in clause 4.2 in TS 38.306 [14].

RLM-RS resource: A resource out of the set of resources configured for RLM by higher layer parameter RLM-RS-List [2] as defined in TS 38.213 [3].

SA operation mode: Operation mode when the UE is configured with at least PCell and not any MR-DC.

Secondary Cell: As defined in TS 38.331 [2].

Secondary Cell Group: As defined in TS 38.331 [2].

Serving Cell: As defined in TS 38.331 [2].

SMTC: An SSB-based measurement timing configuration configured by *SSB-MeasurementTimingConfiguration* as specified in TS 38.331 [2].

Special Cell: As defined in TS 38.331 [2].

SSB: SS/PBCH block as defined in clause 7.8.3 of TS 38.211 [6].

Timing Advance Group: As defined in TS 38.331 [2].

3.2 Symbols

For the purposes of the present document, the following symbols apply:

BW_{Channel}	Channel bandwidth, defined in TS 38.101-1, 38.101-2 and 38.101-3 subclause 3.2
$\hat{E}_s$	Received energy per RE (power normalized to the subcarrier spacing) during the useful part of the symbol, i.e. excluding the cyclic prefix, at the UE antenna connector or radiated interface boundary
F_C	<i>RF reference frequency</i> on the channel raster, given in table 5.4.2.2-1 in TS 38.101-1 and 38.101-2
$F_{C,\text{low}}$	The F_C of the lowest carrier, expressed in MHz
I_o	The total received power density, including signal and interference, as measured at the UE antenna connector or radiated interface boundary.
I_{oc}	The power spectral density (integrated in a noise bandwidth equal to the chip rate and normalized to the chip rate) of a band limited noise source (simulating interference from cells, which are not defined in a test procedure) as measured at the UE antenna connector or radiated interface boundary.
I_{ot}	The received power spectral density of the total noise and interference for a certain RE (power integrated over the RE and normalized to the subcarrier spacing) as measured at the UE antenna connector or radiated interface boundary
N_{oc}	The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing), simulating interference from cells that are not defined in a test procedure, as measured at the UE antenna connector or radiated interface boundary
n_{PRB}	Physical Resource Block number as defined in clause 3.2 in TS 38.211.
N_{TA}	Timing offset between uplink and downlink radio frames at the UE, as defined in clause 4.2 in TS 38.213.
$N_{TA \text{ offset}}$	Fixed timing advance offset, as defined in clause 7.1.2 in TS 38.133.
P_{CMAX}	Configured UE transmitted power as defined in clause 6.2.4 in TS 38.101-1, 38-101-2 and 38.101-3.
$P_{CMAX,c}$	Configured UE transmitted power on a serving cell c as defined in clause 6.2.4 in TS 38.101-1, 38-101-2 and 38.101-3
S	Cell Selection Criterion defined in TS 38.304, subclause 5.2.3.2 for NR
SSB_RP	Received (linear) average power of the resource elements that carry NR synchronisation burst, measured at the UE antenna connector or radiated interface boundary
S_{rxlev}	Cell selection RX level, defined in TS 38.304, subclause 5.2.3.2
S_{qual}	Cell selection quality, defined in TS 38.304, subclause 5.2.3.2
$S_{intrasearch}$	Defined in TS 38.304, subclause 5.2.4.7 for E-UTRAN and 38.304 subclause 5.2.4.7 for NR
$S_{nonintrasearch}$	Defined in TS 38.304, subclause 5.2.4.7
$Thresh_{x, \text{high}}$	Defined in TS 38.304, subclause 5.2.4.7
$Thresh_{x, \text{low}}$	Defined in TS 38.304, subclause 5.2.4.7
$Thresh_{\text{serving, low}}$	Defined in TS 38.304, subclause 5.2.4.7
$T_{RE-ESTABLISH-REQ}$	The RRC Re-establishment delay requirement, the time between the moment when erroneous CRCs are applied, to when the UE starts to send preambles on the PRACH.
T_c	Basic time unit, defined in clause 4.1 of TS 38.211 [6].
T_s	Reference time unit, defined in clause 4.1 of TS 38.211 [6].
$T_{\text{reselection}}$	Defined in TS 25.304, subclause 5.2.6.1.5
$T_{\text{reselectionRAT}}$	Defined in TS 36.304, subclause 5.2.4.7
$T_{\text{reselectionEUTRA}}$	Defined in TS 36.304, subclause 5.2.4.7
$T_{\text{reselectionUTRA}}$	Defined in TS 36.304, subclause 5.2.4.7
$T_{\text{reselectionGERAN}}$	Defined in TS 36.304, subclause 5.2.4.
$Thresh_{x, \text{high}}$	Defined in TS 38.304, subclause 5.2.4.7
$Thresh_{x, \text{low}}$	Defined in TS 38.304, subclause 5.2.4.7
$Thresh_{\text{serving, low}}$	Defined in TS 38.304, subclause 5.2.4.7
$T_{UE_re-establish_delay}$	Time between the moments when any of the conditions requiring RRC re-establishment as defined in clause 5.3.7 in TS 38.331 [2] is detected by the UE and when the UE sends PRACH to the target PCell.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [11] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [11].

AoA	Angle of Arrival
AoD	Angle of Departure
BFD	Beam Failure Detection
BFD-RS	BFD Reference Signal
BLER	Block Error Rate
BM-RS	Beam Management Reference Signal
BWP	Bandwidth Part
CA	Carrier Aggregation
CBD	Candidate Beam Detection
CBW	Channel Bandwidth
CC	Component Carrier
CCA	Clear Channel Assessment
CG-SDT	Configured Grant Small Data Transmisison
CLI	Cross Link Interference
CMR	Channel Measurement Resource
CORESET	Control Resource Set
CP	Cyclic Prefix
CSI	Channel-State Information
CSI-RS	CSI Reference Signal
CSI-RSRP	CSI Reference Signal based Reference Signal Received Power
CSI-RSRQ	CSI Reference Signal based Reference Signal Received Quality
CSI-SINR	CSI Reference Signal based Signal to Noise and Interference Ratio
CSI_RP	Received (linear) average power of the resource elements that carry NR CSI-RS signals and channels, measured at the UE antenna connector
DAPS	Dual Active Protocol Stack
DBT	Discovery Burst Transmission
DC	Dual Connectivity
DCI	Downlink Control Information
DL	Downlink
DL-AoD	Downlink Angle-of-Departure
DL-TDOA	Downlink Time Difference Of Arrival
DMRS	Demodulation Reference Signal
DRX	Discontinuous Reception
E-CID	Enhanced Cell ID
E-UTRA	Evolved UTRA
E-UTRAN	Evolved UTRAN
EN-DC	E-UTRA-NR Dual Connectivity
FDD	Frequency Division Duplex
FR	Frequency Range
GEO	Geostationary Earth Orbit
HARQ	Hybrid Automatic Repeat Request
HO	Handover
GAP	Refers to any of Measurement Gap, activated Pre-MG and NCSG
IMR	Interference Measurement Resource
L1-RSRP	Layer 1 RSRP
L1 SL-RSRP	Layer 1 Sidelink RSRP which corresponds to PSCCH-RSRP and/or PSSCH-RSRP
LEO	Low Earth Orbit
LMF	Location Management Function
LPP	LTE Positioning Protocol
MAC	Medium Access Control
MCG	Master Cell Group
MDT	Minimization of Drive Tests
MG	Measurement Gap
MGL	Measurement Gap Length
MGRP	Measurement Gap Repetition Period

MIB	Master Information Block
ML	Measurement Length
MN	Master Node
MR-DC	Multi-Radio Dual Connectivity
MUSIM	Multi-Universal Subscriber Identity Module
NCSG	Network Controlled Small Gap
NE-DC	NR-E-UTRA Dual Connectivity
NGEN-DC	NG-RAN E-UTRA-NR Dual Connectivity
NR	New Radio
NR-DC	NR-NR Dual Connectivity
NTN	Non-Terrestrial Network
OFDM	Orthogonal Frequency Division Multiplexing
OFDMA	Orthogonal Frequency Division Multiple Access
OTDOA	Observed Time Difference Of Arrival
PBCH	Physical Broadcast Channel
PCC	Primary Component Carrier
PCell	Primary Cell
PDCCH	Physical Downlink Control Channel
PDSCH	Physical Downlink Shared Channel
PLMN	Public Land Mobile Network
PRACH	Physical RACH
Pre-MG	Pre-configured Measurement Gap
PRP	PRS Received Power
PRS	Positioning Reference Signal
PRS-RSRP	Positioning Reference Signal based Reference Signal Received Power
PPW	PRS Processing Window
PSBCH	Physical Sidelink Broadcast Channel
PSBCH-RSRP	Physical Sidelink Broadcast Channel DMRS based Reference Signal Received Power
PSCCH	Physical Sidelink Control Channel
PSCCH-RSRP	Physical Sidelink Control Channel DMRS based Reference Signal Received Power
PSCell	Primary SCell
PSS	Primary Synchronization Signal
PSSCH	Physical Sidelink Shared Channel
PSSCH-RSRP	Physical Sidelink Shared Channel DMRS based Reference Signal Received Power
pTAG	Primary Timing Advance Group
PUCCH	Physical Uplink Control Channel
PUSCH	Physical Uplink Shared Channel
QCL	Quasi Co-Location
RACH	Random Access Channel
RAT	Radio Access Technology
RLM	Radio Link Monitoring
RLM-RS	Reference Signal for RLM
RMSI	Remaining Minimum System Information
RRC	Radio Resource Control
RRH	Remote Radio Head
RRM	Radio Resource Management
RSSI	Received Signal Strength Indicator
RSRP	Reference Signal Received Power
RSRQ	Reference Signal Received Quality
RSTD	Reference Signal Time Difference
RTT	Round Trip Time
S-SSB	Sidelink Synchronization Signal Block
SSB_RP	Received (linear) average power of the resource elements that carry NR SSB signals and channels, measured at the UE antenna connector or radiated interface boundary.
SA	Standalone operation mode
SAB	Satellite access band
SAN	Satellite Access Node
SCC	Secondary Component Carrier
SCell	Secondary Cell
SCG	Secondary Cell Group
SCS	Subcarrier Spacing
SCS _{SSB}	SSB subcarrier spacing

SDL	Supplementary Downlink
SDT	Small Data Transmission
SFN	System Frame Number
SFTD	SFN and Frame Timing DifferenceSI System Information
SIB	System Information Block
SL-RSSI	Sidelink Received Signal Strength Indicator
SLSS	Sidelink Synchronization Signal
SMTC	SSB-based Measurement Timing configuration
SpCell	Special Cell
SRS	Sounding Reference Signal
SRS-RSRP	Sounding Reference Signal based Reference Signal Received Power
SS-RSRP	Synchronization Signal based Reference Signal Received Power
SS-RSRQ	Synchronization Signal based Reference Signal Received Quality
SS-SINR	Synchronization Signal based Signal to Noise and Interference Ratio
SSB	Synchronization Signal Block
SSB_RP	Received (linear) average power of the resource elements that carry NR SSB signals and channels, measured at the UE antenna connector.
SSS	Secondary Synchronization Signal
sTAG	Secondary Timing Advance Group
SUL	Supplementary Uplink
TA	Timing Advance
TAG	Timing Advance Group
TCI	Transmission Configuration Indicator
TDD	Time Division Duplex
TDOA	Time Difference Of Arrival
TN	Terrestrial Network
TRP	Transmission-Reception Point
TTI	Transmission Time Interval
UE	User Equipment
UL	Uplink
VIL	Visible Interruption Length
VIRP	Visible Interruption Repetition Period
VSAT	Very Small Aperture Terminal

3.4 Test tolerances

The requirements given in the present document make no allowance for measurement uncertainty. The test specification 38.533 [5] defines the test tolerances.

3.5 Frequency bands grouping

3.5.1 Introduction

The intention with the frequency band grouping below is to increase the readability of the specification.

The frequency bands grouping is derived based on UE REFSENS requirements specified in [18, 19, 20] and assuming 0.5 dB step between the neighbour groups. The groups are defined in the order of increasing REFSENS, i.e., the group A has the smallest REFSENS among the groups. For the same SCS and a given bandwidth, the bands within the same group have the same I_0 conditions in a corresponding requirement in this specification, provided the bands support this SCS. For different SCSs supported by a frequency band and the same bandwidth, different I_0 conditions may apply for the frequency band in the requirements, while the band group is the same, based on the lowest REFSENS requirement normalized by the number of subcarriers among its supported SCSs for this bandwidth. For the same SCS but different supported bandwidths, the group for a band is determined based on the lowest REFSENS requirement normalized by the number of subcarriers among its supported bandwidths.

3.5.2 NR operating bands in FR1

NR frequency bands grouping for FR1 is specified in Table 3.5.2-1.

Table 3.5.2-1: NR frequency band groups for FR1

Group	NR FDD		NR TDD		NR SDL		NR CCA ¹⁰	
	Band group notation	Operating bands	Band group notation	Operating bands	Band group notation	Operating bands	Band group notation	Operating bands
A	NR_FDD_FR1_A	n1, n18, n24, n70, n74 ⁴ , n91, n92, n93, n94, n100	NR_TDD_FR1_A	n34, n38 ⁹ , n39, n40, n50, n51, n53, n101	NR_SDL_FR1_A	n67, n75, n76	NR_CCA_FR1_A	-
B	NR_FDD_FR1_B	n65, n66, n74 ³	NR_TDD_FR1_B	n38 ⁷	NR_SDL_FR1_B	-	NR_CCA_FR1_B	-
C	NR_FDD_FR1_C	n30	NR_TDD_FR1_C	n48, n77 ¹ , n78, n79	NR_SDL_FR1_C	-	NR_CCA_FR1_C	-
D	NR_FDD_FR1_D	n28	NR_TDD_FR1_D	n77 ²	NR_SDL_FR1_D	-	NR_CCA_FR1_D	-
E	NR_FDD_FR1_E	n2, n5, n7	NR_TDD_FR1_E	n41, n90	NR_SDL_FR1_E	-	NR_CCA_FR1_E	-
F	NR_FDD_FR1_F	n26 ⁶	NR_TDD_FR1_F	-	NR_SDL_FR1_F	-	NR_CCA_FR1_F	-
G	NR_FDD_FR1_G	n3, n8, n12, n13, n14, n20, n71, n85	NR_TDD_FR1_G	n104	NR_SDL_FR1_G	n29	NR_CCA_FR1_G	-
H	NR_FDD_FR1_H	n25	NR_TDD_FR1_H	-	NR_SDL_FR1_H	-	NR_CCA_FR1_H	-
I	NR_FDD_FR1_I	-	NR_TDD_FR1_I	-	NR_SDL_FR1_I	-	NR_CCA_FR1_I	n46
J	NR_FDD_FR1_J	-	NR_TDD_FR1_J	n47 ⁸	NR_SDL_FR1_J	-	NR_CCA_FR1_J	n96, n102

NOTE 1: Except 3.8 GHz to 4.2 GHz.

NOTE 2: Only 3.8 GHz to 4.2 GHz.

NOTE 3: Except 1475.9 MHz to 1510.9 MHz.

NOTE 4: Only when the band is confined in 1475.9 MHz to 1510.9 MHz.

NOTE 5: These bands are used only in NR carrier aggregation with other NR bands according to NR CA band combinations specified in TS 38.101-1 [18] and TS 38.101-3 [20].

NOTE 6: The minimum Io condition is reduced by 0.5 dB when the carrier frequency of the assigned NR channel bandwidth is within 865-894 MHz.

NOTE 7: When this band is only used for V2X SL service, the band is exclusively used for NR V2X in particular regions.

NOTE 8: This band is unlicensed band used for V2X service. There is no expected network deployment in this band.

NOTE 9: When this band is only used for WAN service.

NOTE 10: Operating bands where operation on carrier frequencies with CCA is supported.

3.5.2A NR operating bands for satellite access in FR1

NR frequency bands grouping for satellite access in FR1 is specified in Table 3.5.2A-1.

Table 3.5.2A-1: NR frequency band groups for satellite access in FR1

Group	NR FDD	
	Band group notation	Operating bands
A	NR_FDD_SAB_FR1_A	n255, n256
B	NR_FDD_SAB_FR1_B	
C	NR_FDD_SAB_FR1_C	
D	NR_FDD_SAB_FR1_D	
E	NR_FDD_SAB_FR1_E	
F	NR_FDD_SAB_FR1_F	
G	NR_FDD_SAB_FR1_G	
H	NR_FDD_SAB_FR1_H	
I	NR_FDD_SAB_FR1_I	
J	NR_FDD_SAB_FR1_J	

3.5.3 NR operating bands in FR2

NR frequency bands grouping for FR2 is specified in Table 3.5.3-1.

Table 3.5.3-1: NR frequency band groups for FR2

Group	Band group notation	Operating bands
A	NR TDD FR2 A	n257 ¹ , n258 ¹ , n261 ¹
B	NR TDD FR2 B	n257 ⁴ , n258 ⁴ , n261 ⁴
C	NR TDD FR2 C	
D	NR TDD FR2 D	
E	NR TDD FR2 E	
F	NR TDD FR2 F	n260 ⁴
G	NR TDD FR2 G	n260 ¹
H	NR TDD FR2 H	
I	NR TDD FR2 I	
J	NR TDD FR2 J	
K	NR TDD FR2 K	n257 ^{5,6} , n258 ^{5,6} , n262 ¹ , n261 ⁶
L	NR TDD FR2 L	n257 ² , n258 ² , n261 ²
M	NR TDD FR2 M	
N	NR TDD FR2 N	n262 ⁴
O	NR TDD FR2 O	
P	NR TDD FR2 P	
Q	NR TDD FR2 Q	n259 ⁵
R	NR TDD FR2 R	
S	NR TDD FR2 S	
T	NR TDD FR2 T	n257 ³ , n258 ³ , n261 ³
U	NR TDD FR2 U	
V	NR TDD FR2 V	
W	NR TDD FR2 W	n262 ²
X	NR TDD FR2 X	
Y	NR TDD FR2 Y	n260 ³
Z	NR TDD FR2 Z	n257 ⁷ , n258 ⁷ , n261 ⁷
AA	NR TDD FR2 AA	n259 ³
AB	NR TDD FR2 AB	
AC	NR TDD FR2 AC	
AD	NR TDD FR2 AD	
AE	NR TDD FR2 AE	n262 ³
NOTE 1: UE power class 1. NOTE 2: UE power class 2. NOTE 3: UE power class 3. NOTE 4: UE power class 4. NOTE 5: UE power class 5. NOTE 6: UE power class 6. NOTE 7: UE power class 7.		

3.6 Applicability of requirements in this specification version

In this specification,

- ‘cell’, ‘PCell’, ‘PSCell’ and ‘SCell’ refer to NR cell, NR PCell, NR PSCell, and NR SCell,
- E-UTRA cells are referred to as ‘E-UTRA cell’, ‘E-UTRA PCell’, ‘E-UTRA PSCell’, and ‘E-UTRA SCell’,
- E-UTRA-NR dual connectivity where E-UTRA is the master is referred to as ‘E-UTRA-NR dual connectivity’ or ‘EN-DC’.
- NR-NR dual connectivity which involves two gNB acting as Master gNB and Secondary gNB is referred to as “NR-NR dual connectivity” or “NR-DC”. NR-DC in Rel-15 only includes the scenarios where all serving cells in MCG in FR1 and all serving cells in SCG in FR2.
- ‘active serving cell’ refers to PCell, PSCell and activated SCells

For UE configured with supplementary UL, the requirements in clause 7.1 and 7.3 shall also apply to uplink transmissions on supplementary UL.

Unless explicitly stated, requirements do not apply when CCA is used on serving or neighbour cells.

3.6.1 RRC connected state requirements in DRX

For the requirements in RRC connected state specified in this version of the specification, the UE shall assume that no DRX is used provided the following conditions are met:

- DRX parameters are not configured or
- DRX parameters are configured and
 - *drx-InactivityTimer* is running or
 - *drx-RetransmissionTimerDL* is running or
 - *drx-RetransmissionTimerUL* is running or
 - *ra-ContentionResolutionTimer* is running or
- a Scheduling Request sent on PUCCH is pending or
- a PDCCH indicating a new transmission addressed to the C-RNTI of the MAC entity has not been received after successful reception of a Random Access Response for the preamble not selected by the MAC entity

Otherwise the UE shall assume that DRX is used.

3.6.2 Number of serving carriers

3.6.2.1 Number of serving carriers for SA

Requirements for standalone NR with NR PCell are applicable for the UE configured with the following number of serving NR CCs:

- up to 16 NR DL CCs in total, with 1 UL (or 2 UL if SUL is configured) in PCell and up to 8 UL (or 9 UL if SUL is configured) in total for SCells.
- SUL may be configured together with one of the UL

3.6.2.2 Number of serving carriers for EN-DC

Requirements for EN-DC operation of E-UTRA and NR with E-UTRA PCell and NR PSCell are applicable for the UE configured with the following number of serving NR CCs:

- up to 9 NR DL CCs in total, with 1 UL (or 2 UL if SUL is configured) in PSCell, up to 7 UL (or 8 UL if SUL is configured) in total for SCells in the FR of PSCell and up to 1 UL (or 2 UL if SUL is configured) in SCell in different FR with PSCell.
- SUL may be configured together with one of the UL

The applicable number of E-UTRA CC for EN-DC in the MCG for both UL and DL is specified in TS 36.133 [15].

3.6.2.3 Number of serving carriers for NE-DC

Requirements for NE-DC operation of NR and E-UTRA with NR PCell and E-UTRA PSCell are applicable for the UE configured with the following number of serving NR CCs:

- up to 7 NR DL CCs in total, with 1 UL (or 2 UL if SUL is configured) in PCell and up to 1 UL (or 2 UL if SUL is configured) in SCell.
- SUL may be configured together with one of the UL

The applicable number of E-UTRA CC for NE-DC in the SCG for both UL and DL is specified in TS 36.133 [15].

3.6.2.4 Number of serving carriers for NR-DC

Requirements for NR-DC are applicable for the UE configured with the following number of serving NR CCs:

- up to 2 NR DL CCs in total in FR1, up to 8 NR DL CCs in total in FR2, with 1 UL in PCell, 1 UL in PSCell, and up to 1 UL in each SCell.

3.6.3 Applicability for intra-band FR2

For the requirements in RRC connected state specified in this version of the specification, UE shall assume that the transmitted signals from the serving cells have the same downlink spatial domain transmission filter on one OFDM symbol in the same band in FR2. Otherwise, the UE is not required to satisfy any requirements for SCell.

3.6.4 Applicability for FR2 UE power classes

For the requirements of each FR2 power class specified in this version of the specification, certain UE types with specific device architectures are assumed. The UE types can be found in TS 38.101-2 [19].

3.6.5 Applicability for SDL bands

The measurements accuracy requirements for SDL bands in this version of specification in clause 10.1 shall apply for NR intra-frequency measurements on SCC (SS-RSRP, SS-RSRQ, SS-SINR, and L1-RSRP) and inter-frequency measurements (SS-RSRP, SS-RSRQ, and SS-SINR).

3.6.6 Applicability of requirements for NGEN-DC operation

All the requirements in this specification applicable for EN-DC are also applicable for NGEN-DC.

3.6.7 Applicability of QCL

For the requirements specified in this version of the specification for TCI state switching, DL TCI state switching for unified TCI or UL TCI state switching for unified TCI, a reference signal is considered to be QCLed to another reference signal if it is in the same TCI chain as the other reference signal, provided that the number of Reference Signals in the chain is no more than 4. It is assumed there is single QCL type per TCI chain.

A DL TCI chain consists of an SSB, and one or more CSI-RS resources, and the TCI state of each Reference Signal includes another Reference Signal in the same TCI chain, where the SSB can be associated with serving cell PCID or associated with a PCID different from serving cell PCID.

DMRS of PDCCH or PDSCH is QCLed with the reference signal in its active TCI state and any other reference signal that is QCLed, based on the criteria for DL TCI chain, with the reference signal in the active TCI state.

A UL TCI chain consists of an SSB, and one or more CSI-RS resources, and the TCI state of each Reference Signal includes another Reference Signal in the same TCI chain, where the SSB can be associated with serving cell PCID or associated with a PCID different from serving cell PCID.

DMRS of PUCCH or PUSCH is QCLed with the reference signal in its active TCI state and any other reference signal that is QCLed, based on the criteria for UL TCI chain, with the reference signal in the active TCI state.

3.6.8 Applicability of 2-step RA and 4-step RA in RRM requirements

Unless explicitly stated otherwise the requirements under the following clauses, where the UE transmits random access (with requirements in clause 6.2.2) to NR serving cell or NR target cell, are applicable for both 2-step RA and 4-step RA procedures [3]:

- Handover requirements in clause 6.1, except for clauses 6.1.2 and 6.1B,
- RRC connection re-establishment requirements in clause 6.2.1,
- RRC connection release with redirection to NR requirements in clause 6.2.3.2.1,

- UE transmit timing requirements in clause 7.1,
- PSCell addition delay requirements in clause 8.9.2,
- PSCell change requirements in clause 8.11 and
- Conditional PSCell change requirements in clause 8.11B.

Unless explicitly stated otherwise the requirements under the following clauses, where the UE transmits random access (with requirements in clause 6.2.2A) to NR serving cell or NR target cell subject to uplink CCA, are applicable for both 2-step RA and 4-step RA procedures [3]:

- Handover requirements with CCA in clause 6.1B,
- RRC connection re-establishment requirements with CCA in clause 6.2.1A,
- RRC connection release with redirection to NR requirements with CCA in clause 6.2.3.2.3, and
- UE transmit timing requirements with CCA in clause 7.1.

3.6.9 Applicability of requirements for scheduling availability

The scheduling availability requirements in clause 8.1.7.3, 8.5.7.3, 8.5.8.3, 9.5.6.3 and 9.10.2.6.2 assumes that:

- The UE is not configured with simultaneous UL/DL between two FR2 bands if the UE does not have the capability of supporting *simultaneousRxTxInterBandCA*, and
- The UE is not configured with mixed numerology on two FR2 CCs if the UE does not have the capability of supporting simultaneous reception with two different numerologies between FR2 CCs in DL.

The scheduling availability requirements in clause 8.1.7.1, 8.1.7.2, 8.5.7.1, 8.5.7.2, 8.5.8.1, 8.5.8.2, 9.5.6.1, 9.5.6.2, 9.8.6.1, and 9.8.6.2 assumes that the UE is not configured with simultaneous UL/DL between two FR1 bands if the UE does not have the capability of supporting *simultaneousRxTxInterBandCA*.

The scheduling availability requirements in clause 8.1.7.4, 8.5.7.4, 8.5.8.4, 9.5.6.4 and 9.8.6.4 assumes that the UE is not configured with simultaneous UL/DL between FR1 and FR2 bands if the UE does not have the capability of supporting *simultaneousRxTxInterBandCA* on this band combination.

3.6.10 Applicability of requirements for measurement restrictions

The requirements for measurement restrictions in clause 8.1.2.3, 8.1.3.3, 8.5.2.3, 8.5.3.3, 8.5.5.3, 8.5.6.3, 8.18.2.3, 8.18.3.3, 8.18.5.3, 8.18.6.3, 9.5.5, 9.8.5 and 9.13.5 are not applicable if the following condition is met:

- The network configures mixed numerology on two CCs if the UE does not have the capability of supporting simultaneous reception with different numerologies between the two CCs in DL.

3.6.11 Applicability of requirements for Redcap UEs

3.6.11.1 RRC connected state requirements in DRX

The requirements in clause 3.6.1 shall apply.

3.6.11.2 Applicability for FR2 Redcap UE power classes

The requirements in clause 3.6.4 shall apply.

3.6.11.3 Applicability of QCL

The requirements in clause 3.6.7 shall apply.

3.6.12 Applicability of requirements for Satellite Access

The requirements for Satellite Access defined in clauses with suffix ‘C’ apply provided that UE indicates *nonTerrestrialNetwork* and is accessing a cell served by a Satellite Access Node (SAN). The requirements apply provided that serving and all neighbour satellites on the same layer are of same satellite type (LEO or GEO).

3.6.13 Applicability of requirements for FR2

Unless stated otherwise, the requirements for FR2 are applicable to both FR2-1 and FR2-2, except for the following cases:

SFTD measurement requirements in clause 9.2.5.4, 9.3.8, 10.1.21 for FR2 are only applicable for FR2-1,

CGI identification requirements in clause 9.11 for FR2 are only applicable for FR2-1,

Inter-band CA requirements in all corresponding clauses for FR2 are only applicable for FR2-1.

L1-RSRP measurements for a cell with different PCI from serving cell in clause 9.13 for FR2 are only applicable for FR2-1.

3.6.14 Applicability of requirements for FR2 Power Class 6

For Rel-17 FR2 power class 6 for the UE type of high speed train roof-mounted UE, UE shall only be in NR SA operation.

Measurement and evaluation period requirements with *highSpeedMeasFlagFR2-r17* configured in clause 4.2.2.3, 8.1.2.2, 8.5.2.2, 9.2.5, 9.2.6, 9.5.4, [9.8.4], delay requirements in clause 6.2.1.2.1, 8.10.3A, and UL timing adjustment in clause 7.1.2.3, are only applicable when any two SSBs from non-collocated adjacent RRHs are not on the same or consecutive symbols.

L1-SINR accuracy requirements for FR2 configured in clause 10.1.28 and intra-frequency SS-SINR accuracy requirements configured in clause 10.1.13 are not applicable to Rel-17 HST FR2 power class 6 UEs.

3.6.15 Applicability of requirements for per-FR gap

Requirements for per-FR gap are applicable for the UE indicating one of the following capabilities:

- Rel-15 capability “independentGapConfig”;
- Rel-17 capability “independentGapConfig-maxCC-r17,” and the number of configured serving cells is less than or equal to the indicated parameters “fr1-Only,” “fr2-Only,” and “fr1And2,” as specified in TS 38.306 [14].

4 SA: RRC_IDLE state mobility

4.1 Cell Selection

After a UE has switched on and a PLMN has been selected, the Cell selection process takes place, as described in TS 38.304 [1]. This process allows the UE to select a suitable cell where to camp on in order to access available services. In this process, the UE can use stored information (*Stored information cell selection*) or not (*Initial cell selection*).

The 1 Rx RedCap UE for the cell selection procedure [1] applies:

- *Qrxlevmin* as the signaled value of *Qrxlevmin* [2] -1 dB.
- *Qqualmin* as the signaled value of *Qqualmin* [2] -1 dB.

4.2 Cell Re-selection

4.2.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it.

When the UE is in either *Camped Normally* state or *Camped on Any Cell* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency and inter-RAT cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS 38.304 [1], allowing the UE to limit its measurement activity

In the requirements of clause 4.2, the exceptions for side conditions apply as follows:

- for the UE capable of CA, the applicable exceptions for side conditions are specified in Annex B, clause B.3.2.1, B.3.2.3, or B.3.2.5 for UE supporting CA in FR1, CA in FR2 and CA between FR1 and FR2, respectively;
- for the UE capable of SUL, the applicable exceptions for side conditions are specified in Annex B, clause B.3.4.1 for UE supporting SUL in FR1.

4.2.2 Requirements

4.2.2.1 UE measurement capability

For idle mode cell re-selection purposes, and for UE supporting *idleInactiveNR-MeasReport-r16*, *idleInactiveEUTRA-MeasReport-r16* or *idleInactiveNR-MeasReport-r17*, for NR CA and MR-DC measurement purpose, the UE shall be capable of monitoring at least:

- Intra-frequency carrier, and
- Depending on UE capability, 7 NR inter-frequency carriers, and
- Depending on UE capability, 7 FDD E-UTRA inter-RAT carriers, and
- Depending on UE capability, 7 TDD E-UTRA inter-RAT carriers.

In addition to the requirements defined above, a UE supporting E-UTRA measurements in RRC_IDLE state shall be capable of monitoring a total of at least 14 carrier frequency layers, which includes serving layer, comprising of any above defined combination of E-UTRA FDD, E-UTRA TDD and NR layers.

4.2.2.2 Measurement and evaluation of serving cell

The UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $M1 \cdot N1$ DRX cycle; where:

$M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and DRX cycle ≤ 0.64 second,
otherwise $M1=1$.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least $eDRX_IDLE$ cycle/2, if the UE is configured with $eDRX$ cycle ≤ 10.24 s; otherwise DRX cycle/2.

For UE not configured with *highSpeedMeasFlagFR2-r17*, N_{serv} is specified in Table 4.2.2.2-1. For FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*, N_{serv} is specified in Table 4.2.2.2-4.

If the UE is not configured with $eDRX_IDLE$ cycle and the UE has evaluated according to Table 4.2.2.2-1 or Table 4.2.2.2-4 in N_{serv} consecutive DRX cycles that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

If the UE is configured with eDRX_IDLE cycle ≤ 10.24 s and the UE has evaluated according to Table 4.2.2.2-2 and Table 4.2.2.2-3 in N_{serv} consecutive eDRX cycles that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

If the UE is configured with eDRX_IDLE cycle > 10.24 s and the UE has evaluated according to Table 4.2.2.2-2 and Table 4.2.2.2-3 in N_{serv} consecutive DRX cycles within a single PTW that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

If the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency, inter-frequency and inter-RAT information indicated in the system information during the time T, the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1], where

- T= 10 s if the UE is not configured with eDRX_IDLE cycle, or
- T= MAX (10 s, one eDRX_IDLE cycle) if the UE is configured with eDRX_IDLE cycle in FR1, or
- T= MAX (10 s, $N1 \cdot \text{eDRX_IDLE cycle}$) if the UE is configured with eDRX_IDLE cycle less than 20.48s in FR2,
- Otherwise, T= MAX (10 s, one eDRX_IDLE cycle) if the UE is configured with eDRX_IDLE cycle no less than 20.48 s in FR2

Table 4.2.2.2-1: N_{serv}

DRX cycle length [s]	Scaling Factor (N1)			N _{serv} [number of DRX cycles]
	FR1	FR2-1 ^{Note1}	FR2-2 ^{Note2}	
0.32	1	8	12	M1*N1*4
0.64		5	8	M1*N1*4
1.28		4	6	N1*2
2.56		3	5	N1*2
Note 1:	Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.			
Note 2:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.			

Table 4.2.2.2-2: N_{serv} for UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1)	Nserv [number of DRX or eDRX cycles Note 3]
2.56	N/A	N/A	1	N1*2
5.12	N/A	N/A		N1*2
10.24	N/A	N/A		N1*2
20.48 ≤ eDRX_IDLE cycle length ≤10485.76	0.32	≥1.28 (1)		N1*M1*2
	0.64	≥ 1.28 (1) (M1=1) or ≥ 2.56 (2) (M1=2)		N1*M1*2
	1.28	≥2.56 (2)		N1*2
	2.56	≥5.12 (4)	N1*2	
NOTE 1: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs, when PTW is configured.				
NOTE 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008[39].				
NOTE 3: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.				
NOTE 4: The lower bound of PTW length is derived based on $\left\lceil \frac{N_{serv} \cdot DRX_cycle}{1.28} \right\rceil \cdot 1.28$.				

Table 4.2.2.2-3: N_{serv} for UE configured with eDRX_IDLE cycle (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1) Note1	N_{serv} [number of DRX or eDRX cycles] Note 4]
2.56	N/A	N/A	3	$N1*2$
5.12	N/A	N/A	3	$N1*2$
10.24	N/A	N/A	3	$N1*2$
$20.48 \leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	≥ 5.12 (4)	8	$N1*2$
	0.64	≥ 6.4 (5)	5	$N1*2$
	1.28	≥ 10.24 (8)	4	$N1*2$
	2.56	≥ 15.36 (12)	3	$N1*2$
NOTE 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, $N1 = 8$ for all DRX cycle length. NOTE 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs, when PTW is configured. NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008[39]. NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles. NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{N_{serv} * \text{DRX_cycle}}{1.28} \right\rceil * 1.28$. NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.				

Table 4.2.2.2-4: N_{serv} for UE configured with *highSpeedMeasFlagFR2-r17* (Frequency range FR2)

DRX cycle length [s]	Scaling Factor (N1)	N_{serv} [number of DRX cycles]
0.32	$N2^{\text{Note1}}$	$M1*N1*4$
0.64	5	$M1*N1*4$
1.28	4	$N1*2$
2.56	3	$N1*2$
Note 1: $N2 = 2$ when <i>highSpeedMeasFlagFR2-r17</i> = set1; $N2 = 6$ when <i>highSpeedMeasFlagFR2-r17</i> = set2.		

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2.2.3 Measurements of intra-frequency NR cells

The UE shall be able to identify new intra-frequency cells and perform SS-RSRP and SS-RSRQ measurements of the identified intra-frequency cells without an explicit intra-frequency neighbour list containing physical layer cell identities.

The UE shall be able to evaluate whether a newly detectable intra-frequency cell meets the reselection criteria defined in TS38.304 [1] within $T_{\text{detect,NR_Intra}}$ when that $T_{\text{reselection}} = 0$. An intra frequency cell is considered to be detectable according to the conditions defined in Annex B.1.2 for a corresponding Band.

The UE shall measure SS-RSRP and SS-RSRQ at least every $T_{\text{measure,NR_Intra}}$ (see table 4.2.2.3-1, table 4.2.2.3-2, table 4.2.2.3-3, table 4.2.2.3-4 or table 4.2.2.3-5) for intra-frequency cells that are identified and measured according to the measurement rules.

The UE shall filter SS-RSRP and SS-RSRQ measurements of each measured intra-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Intra}}/2$.

The UE shall not consider aN NR neighbour cell for cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an intra-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the intra-frequency cell has met reselection criterion defined in TS38.304 [1] within $T_{\text{evaluate,NR_Intra}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2.2.3-1, table 4.2.2.3-2, table 4.2.2.3-3, table 4.2.2.3-4 or table 4.2.2.3-5 provided that

when *rangeToBestCell* is not configured:

- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2.

when *rangeToBestCell* is configured:

- the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
- if there are multiple such cells, the cell has the highest rank among them.
- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2 if the current serving cell is among them.

When evaluating cells for reselection, the SSB side conditions apply to both serving and non-serving intra-frequency cells.

If the $T_{\text{reselection}}$ timer has a non-zero value and an intra-frequency cell satisfies the reselection criteria defined in TS38.304 [1], the UE shall evaluate this intra-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

For UE neither configured with *highSpeedMeasFlag-r16* nor *highSpeedMeasFlagFR2-r17*, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are specified in Table 4.2.2.3-1. For UE configured with *highSpeedMeasFlag-r16*, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are specified in Table 4.2.2.3-2. For FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are specified in Table 4.2.2.3-3.

For a UE configured with *highSpeedMeasFlag-r16*, and configured with relaxed measurement criterion (*lowMobilityEvaluation* or both *lowMobilityEvaluation* and *cellEdgeEvaluation*),

- if the relaxed measurement criteria in section 4.2.2.9.2 are fulfilled, it is up to UE implementation whether to apply the relaxed measurements requirements specified in clause 4.2.2.9.2 or high speed requirements specified in this clause
- otherwise, high speed requirements specified in this clause shall be applied.

For UE not configured with *eDRX_IDLE* cycle, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are specified in Table 4.2.2.3-1, 4.2.2.3-2 and 4.2.2.3-3.

For UE configured with *eDRX_IDLE* cycle, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are specified in Table 4.2.2.3-4 and Table 4.2.2.3-5 for FR1 and FR2 respectively, where the requirements apply provided that the serving cell is configured with *eDRX_IDLE* and the DRX cycle length is same in all PTWs during any of $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ when multiple PTWs are used.

The requirements in Table 4.2.2.3-2 apply only when the UE supports *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16*. For UE neither supporting *measurementEnhancement-r16* nor *intraNR-MeasurementEnhancement-r16*, the UE is not required to meet the requirements specified in Table 4.2.2.3-2.

Table 4.2.2.3-1: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$

DRX cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of DRX cycles)

	FR1	FR2-1 ^{Note1}	FR2-2 ^{Note2}			
0.32	1	8	12	11.52 x N1 x M2 (36 x N1 x M2)	1.28 x N1 x M2 (4 x N1 x M2)	5.12 x N1 x M2 (16 x N1 x M2)
0.64		5	8	17.92 x N1 (28 x N1)	1.28 x N1 (2 x N1)	5.12 x N1 (8 x N1)
1.28		4	6	32 x N1 (25 x N1)	1.28 x N1 (1 x N1)	6.4 x N1 (5 x N1)
2.56		3	5	58.88 x N1 (23 x N1)	2.56 x N1 (1 x N1)	7.68 x N1 (3 x N1)
Note 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.						
Note 2: Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.						
Note 3: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer T _{detect, NR intra} is expected.						

Table 4.2.2.3-2: $T_{\text{detect, NR_Intra}}$, $T_{\text{measure, NR_Intra}}$ and $T_{\text{evaluate, NR_Intra}}$ for UE configured with *highSpeedMeasFlag-r16* (Frequency range FR1)

DRX cycle length [s]	$T_{\text{detect, NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{measure, NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{evaluate, NR_Intra}}$ [s] (number of DRX cycles)
0.32	$2.56 \times M2$ (8 x M2)	$0.32 \times M3$ (1 x M3)	$0.96 \times M4$ (3 x M4)

	2.56	≥15.36 (12)	3		2.56 x N1 (1 x N1)	5.12 x N1 (2 x N1)
NOTE 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.						
NOTE 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs when PTW is configured.						
NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].						
NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.						
NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Intra} \times DRX_cycle}{1.28} \right\rceil * 1.28$.						
NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.						

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the

second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2.2.4 Measurements of inter-frequency NR cells

The UE shall be able to identify new inter-frequency cells and perform SS-RSRP or SS-RSRQ measurements of identified inter-frequency cells if carrier frequency information is provided by the serving cell, even if no explicit neighbour list with physical layer cell identities is provided.

If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7.

If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the UE shall search for and measure inter-frequency layers of higher, equal, or lower priority in preparation for possible reselection. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority layers shall be the same as that defined below in this clause.

For a UE configured with *highSpeedMeasInterFreq-r17*, and configured with relaxed measurement criterion (*lowMobilityEvaluation* or both *lowMobilityEvaluation* and *cellEdgeEvaluation*),

- if the relaxed measurement criteria in section 4.2.2.9.2 are fulfilled, it is up to UE implementation whether to apply the relaxed measurements requirements specified in clause 4.2.2.10.2 or high speed requirements specified in this clause
- otherwise, high speed requirements specified in this clause shall be applied

The UE shall be able to evaluate whether a newly detectable inter-frequency cell meets the reselection criteria defined in TS38.304 [1] within $K_{carrier} * T_{detect,NR_Inter} + K_{carrier_HST} * T_{detect,NR_Inter_HST}$ if at least carrier frequency information is provided for inter-frequency neighbour cells by the serving cells when $T_{reselection} = 0$ provided that the reselection criteria is met by a margin of at least 5 dB in FR1 or 6.5dB in FR2 for reselections based on ranking or 6dB in FR1 or 7.5dB in FR2 for SS-RSRP reselections based on absolute priorities or 4dB in FR1 and 4dB in FR2 for SS-RSRQ reselections based on absolute priorities.

The parameter $K_{carrier}$ is the number of NR inter-frequency carriers which are not configured with *highSpeedMeasInterFreq-r17* for FR1 indicated by the serving cell. The parameter $K_{carrier_HST}$ is the number of NR inter-frequency carriers which are configured with *highSpeedMeasInterFreq-r17* for FR1 indicated by the serving cell. The parameter $K_{carrier}$ for a UE configured with idle mode CA measurements (while T331 is running), is the combined number of NR inter-frequency carriers indicated by the serving cell and the number of NR inter-frequency carriers configured for idle mode CA measurements which are not configured with *highSpeedMeasInterFreq-r17* for FR1. The parameter $K_{carrier_HST}$ for a UE configured with idle mode CA measurements (while T331 is running), is the combined number of NR inter-frequency carriers indicated by the serving cell and the number of NR inter-frequency carriers configured for idle mode CA measurements which are configured with *highSpeedMeasInterFreq-r17* for FR1.

Note: combined total number means that if a carrier is an inter-frequency carrier indicated by the serving cell for mobility and additionally a carrier configured for idle mode CA measurements, it only counts as one carrier.

An inter-frequency cell is considered to be detectable according to the conditions defined in Annex B.1.3 for a corresponding Band.

When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{measure,NR_Inter}$. If, after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

A UE not configured with eDRX_IDLE cycle shall measure SS-RSRP or SS-RSRQ at least every $K_{carrier} * T_{measure,NR_Inter} + K_{carrier_HST} * T_{measure,NR_Inter_HST}$ (see table 4.2.2.4-1 and table 4.2.2.4-2 if UE declares support of idle mode inter-frequency measurement enhancement when configured with *highSpeedMeasInterFreq-r17* for FR1, otherwise see table 4.2.2.4-1 only) for identified lower or equal priority inter-frequency cells. If the UE detects on a NR

carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

A UE not configured with eDRX_IDLE cycle shall filter SS-RSRP or SS-RSRQ measurements of each measured higher, lower and equal priority inter-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Inter}}/2$ for carriers which are not configured with *highSpeedMeasInterFreq-r17* for FR1 or $T_{\text{measure,NR_Inter_HST}}/2$ for carriers which are configured with *highSpeedMeasInterFreq-r17* for FR1.

A UE configured with eDRX_IDLE cycle shall measure SS-RSRP or SS-RSRQ at least every $K_{\text{carrier}} * T_{\text{measure,NR_Inter}}$ (see table 4.2.2.4-3 and table 4.2.2.4-4) for identified lower or equal priority inter-frequency cells. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

A UE is configured with eDRX_IDLE cycle shall filter SS-RSRP or SS-RSRQ measurements of each measured higher, lower and equal priority inter-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Inter}}/2$.

The UE shall not consider a NR neighbour cell in cell reselection if it is indicated as not allowed in the measurement control system information of the serving cell.

For an inter-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE not configured with eDRX_IDLE cycle shall be capable of evaluating that the inter-frequency cell has met reselection criterion defined TS 38.304 [1] within $K_{\text{carrier}} * T_{\text{evaluate,NR_Inter}} + K_{\text{carrier_HST}} * T_{\text{evaluate,NR_Inter_HST}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2.2.4-1 and table 4.2.2.4-2 if UE declares support of idle mode inter-frequency measurement enhancement when configured with *highSpeedMeasInterFreq-r17* for FR1, otherwise see table 4.2.2.4-1 only, provided that the reselection criteria is met by

- the condition when performing equal priority reselection and
 - when *rangeToBestCell* is not configured:
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2.
 - when *rangeToBestCell* is configured:
 - the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
 - if there are multiple such cells, the cell has the highest rank among them
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2 if the current serving cell is among them. or
- 6dB in FR1 or 7.5dB in FR2 for SS-RSRP reselections based on absolute priorities or
- 4dB in FR1 or 4dB in FR2 for SS-RSRQ reselections based on absolute priorities.

For an inter-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE configured with eDRX_IDLE cycle shall be capable of evaluating that the inter-frequency cell has met reselection criterion defined TS 38.304 [1] within $K_{\text{carrier}} * T_{\text{evaluate,NR_Inter}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2.2.4-3 and table 4.2.2.4-4, provided that the reselection criteria is met by

- the condition when performing equal priority reselection and
 - when *rangeToBestCell* is not configured:
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2 or.
 - when *rangeToBestCell* is configured:
 - the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.

- if there are multiple such cells, the cell has the highest rank among them
- the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2 if the current serving cell is among them. or
- 6dB in FR1 or 7.5dB in FR2 for SS-RSRP reselections based on absolute priorities or
- 4dB in FR1 or 4dB in FR2 for SS-RSRQ reselections based on absolute priorities.

When evaluating cells for reselection, the SSB side conditions apply to both serving and inter-frequency cells.

If the $T_{\text{reselection}}$ timer has a non-zero value and the inter-frequency cell satisfies the reselection criteria, the UE shall evaluate this inter-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

The UE is not expected to meet the measurement requirements for an inter-frequency carrier under DRX cycle=320 ms defined in Table 4.2.2.4-1 and Table 4.2.2.4-2 under the following conditions:

- $T_{\text{SMTC_intra}} = T_{\text{SMTC_inter}} = 160$ ms; where
- $T_{\text{SMTC_intra}}$ is the periodicity of the SMTC configured for the intra-frequency carrier if no identified intra-frequency cell is in the PCI list of *smtc2-LP* on this intra-frequency carrier; $T_{\text{SMTC_intra}}$ is the periodicity of the *smtc2-LP* configured for the intra-frequency carrier if at least one identified intra-frequency cell is in the PCI list of *smtc2-LP* on this intra-frequency carrier. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed for $T_{\text{SMTC_intra}}$. If the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_intra}}$ is expected.
- $T_{\text{SMTC_inter}}$ is the actual SMTC periodicity used by the inter-frequency cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the inter-frequency carrier is assumed for $T_{\text{SMTC_inter}}$. If the actual SSB transmission periodicity is greater than the SMTC configured for the inter-frequency carrier, longer $T_{\text{detect, NR_inter}}$ is expected.
- SMTC occasions configured for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the SMTC occasions configured for the intra-frequency carrier, and
- SMTC occasions configured for the intra-frequency carrier and for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the paging occasion in TS38.304 [1].

For UE not configured with eDRX_IDLE cycle, $T_{\text{detect, NR_Inter}}$, $T_{\text{measure, NR_Inter}}$ and $T_{\text{evaluate, NR_Inter}}$ are specified in Table 4.2.2.4.1-1 and 4.2.2.4.1-2.

For UE configured with eDRX_IDLE cycle, $T_{\text{detect, NR_Inter}}$, $T_{\text{measure, NR_Inter}}$ and $T_{\text{evaluate, NR_Inter}}$ are specified in Table 4.2.2.4-3 and Table 4.2.2.4-4 for FR1 and FR2 respectively. The requirements apply provided that the serving cell is configured with eDRX_IDLE and the DRX cycle length is same in all PTWs during any of $T_{\text{detect, NR_Inter}}$, $T_{\text{measure, NR_Inter}}$ and $T_{\text{evaluate, NR_Inter}}$ when multiple PTWs are used.

Table 4.2.2.4-1: $T_{\text{detect, NR_Inter}}$, $T_{\text{measure, NR_Inter}}$ and $T_{\text{evaluate, NR_Inter}}$

DRX cycle length [s]	Scaling Factor (N1)			T _{detect,NR_Inter} [s] (number of DRX cycles)	T _{measure,NR_Inter} [s] (number of DRX cycles)	T _{evaluate,NR_Inter} [s] (number of DRX cycles)
	FR1	FR2-1 ^{Note1}	FR2-2 ^{Note2}			
0.32	1	8	12	11.52 x N1 x 1.5 (36 x N1 x 1.5)	1.28 x N1 x 1.5 (4 x N1 x 1.5)	5.12 x N1 x 1.5 (16 x N1 x 1.5)
0.64		5	8	17.92x N1 (28 x N1)	1.28 x N1 (2 x N1)	5.12 x N1 (8 x N1)
1.28		4	6	32 x N1 (25 x N1)	1.28 x N1 (1 x N1)	6.4 x N1 (5 x N1)
2.56		3	5	58.88 x N1 (23 x N1)	2.56 x N1 (1 x N1)	7.68 x N1 (3 x N1)
Note 1:	Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.					
Note 2:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.					

Table 4.2.2.4-2: $T_{\text{detect,NR_Inter_HST}}$, $T_{\text{measure,NR_Inter_HST}}$ and $T_{\text{evaluate,NR_Inter_HST}}$ for FR1 configured with *highSpeedMeasInterFreq-r17* ^{note2}

DRX cycle length [s]	$T_{\text{detect,NR_Inter_HST}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Inter_HST}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Inter_HST}}$ [s] (number of DRX cycles)
0.32	$3.2 \times M2$ ($10 \times M2$) ^{Note 1}	$0.32 \times M3$ ($[1] \times M3$) ^{Note 1}	$0.96 \times M4$ ($3 \times M4$) ^{Note 1}
0.64	6.4 (10)	0.64 (1)	1.92 (3)
1.28	10.24 (8)	1.28 (1)	3.84 (3)
2.56	58.88 (23)	2.56 (1)	7.68 (3)
Note 1: When SMTC <= 40 ms, $M2 = M3 = M4 = 1$; and when SMTC > 40 ms, $M2 = 1.5$, $M3 = M4 = 2$			
Note 2: The support of HST Idle mode inter-frequency measurement enhancement is optional without capability signalling. The requirements apply to UE that declares support of IDLE mode inter-frequency measurement enhancement for HST in FR1, otherwise Table 4.2.2.4-1 shall be used.			

Table 4.2.2.4-3: $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR1)

	0.64	≥1.28 (1)		0.64 (1)	1.28 (2)
	1.28	≥2.56 (2)		1.28 (1)	2.56 (2)
	2.56	≥5.12 (4)		2.56 (1)	5.12 (2)
NOTE 1: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs when PTW is configured.					
NOTE 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [34].					
NOTE 3: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.					
NOTE 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Inter} \times DRX_cycle}{1.28} \right\rceil * 1.28$.					

Table 4.2.2.4-4: $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1) ^{Note1}	$T_{\text{detect,NR_Inter}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})	$T_{\text{measure,NR_Inter}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})	$T_{\text{evaluate,NR_Inter}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})
2.56	-	-	3	$58.88 \times N1$ (23 x N1)	$2.56 \times N1$ (1 x N1)	$7.68 \times N1$ (3 x N1)

5.12	-	-	3	117.76 x N1 (23 x N1)	5.12 x N1 (1 x N1)	10.24 x N1 (2 x N1)
10.24	-	-	3	235.52 x N1 (23 x N1)	10.24 x N1 (1 x N1)	20.48 x N1 (2 x N1)
20.48 ≤ eDRX_IDLE cycle length ≤10485.76	0.32	≥5.12 (4)	8	$eDRX_cycle_length \times \left\lceil \frac{23 \times N1}{PTW/DRX_cycle_length} \right\rceil$ (23 x N1)	0.32 x N1 (1 x N1)	0.64 x N1 (2 x N1)
	0.64	≥6.4 (5)	5		0.64 x N1 (1 x N1)	1.28 x N1 (2 x N1)
	1.28	≥10.24 (8)	4		1.28 x N1 (1 x N1)	2.56 x N1 (2 x N1)
	2.56	≥15.36 (12)	3		2.56 x N1 (1 x N1)	5.12 x N1 (2 x N1)
NOTE 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.						
NOTE 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs when PTW is configured.						
NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].						
NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.						
NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Inter} \times DRX_cycle}{1.28} \right\rceil \times 1.28$.						
NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.						

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2.2.5 Measurements of inter-RAT E-UTRAN cells

If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for inter-RAT E-UTRAN layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.

If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the UE shall search for and measure inter-RAT E-UTRAN layers of higher, lower priority in preparation for possible reselection. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority inter-RAT E-UTRAN layers shall be the same as that defined below for lower priority RATs.

The requirements in this clause apply to inter-RAT E-UTRAN FDD measurements and E-UTRA TDD measurements. When the measurement rules indicate that inter-RAT E-UTRAN cells are to be measured, the UE shall measure RSRP and RSRQ of detected E-UTRA cells in the neighbour frequency list at the minimum measurement rate specified in this clause.

The parameter $N_{EUTRA_carrier}$ is the total number of configured E-UTRA carriers indicated to meet non high-speed requirements in the neighbour frequency list. The parameter $N_{EUTRA_carrier_HST}$ is the total number of configured E-UTRA carriers indicated to meet high speed requirements in the neighbour frequency list. If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$, an inter-RAT E-UTRAN layer is indicated to meet high speed requirements if *highSpeedMeasFlag-r16* is configured and the carrier to be measured is configured with *highSpeedEUTRACarrier-r16* and UE supports the enhanced inter-RAT E-UTRAN measurement requirements. If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, UE is required to meet non high-speed requirements no matter whether *highSpeedMeasFlag-r16* or *highSpeedEUTRACarrier-r16* is configured or not.

For a UE configured with *highSpeedMeasFlag-r16*, and configured with relaxed measurement criterion (*lowMobilityEvaluation* or both *lowMobilityEvaluation* and *cellEdgeEvaluation*),

- if the relaxed measurement criteria in section 4.2.2.9.2 are fulfilled, it is up to UE implementation whether to apply the relaxed measurements requirements specified in clause 4.2.2.11.2 or high speed requirements specified in this clause

- otherwise, high speed requirements specified in this clause shall be applied

The parameter $N_{\text{EUTRA_carrier}}$ for a UE configured with idle mode DC measurements (while T331 is running), is the combined number of configured E-UTRA carriers in the neighbour frequency list and E-UTRA carriers configured for idle mode DC measurements, excluding the configured E-UTRA carriers indicated to meet high speed requirements in the neighbour frequency list.

Note: combined total number means that if a carrier is an E-UTRA carrier indicated by the serving cell for mobility and additionally a carrier configured for idle mode CA/DC measurements, it only counts as one carrier.

The UE shall filter RSRP and RSRQ measurements of each measured E-UTRA cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least half the minimum specified measurement period.

An inter-RAT E-UTRA cell is considered to be detectable provided the following conditions are fulfilled:

- the same conditions as for inter-frequency RSRP measurements specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band, and
- the same conditions as for inter-frequency RSRQ measurements specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band.
- SCH conditions specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band

The UE shall be able to evaluate whether a newly detectable inter-RAT E-UTRAN cell meets the reselection criteria defined in TS38.304 [1] within $N_{\text{EUTRA_carrier_HST}} * T_{\text{detect,EUTRAN_HST}} + N_{\text{EUTRA_carrier}} * T_{\text{detect,EUTRAN}}$ when $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ when $T_{\text{reselection}} = 0$ provided that the reselection criteria is met by a margin of at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities.

Cells which have been detected shall be measured at least every $N_{\text{EUTRA_carrier_HST}} * T_{\text{measure,EUTRAN_HST}} + N_{\text{EUTRA_carrier}} * T_{\text{measure,EUTRAN}}$ when $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$.

When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{\text{measure,EUTRAN}}$. If, after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell.

If the UE detects on an inter-RAT E-UTRAN carrier, a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall not consider an inter-RAT E-UTRA cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For a cell that has been already detected, but has not been reselected to, the filtering shall be such that a UE not configured with eDRX_IDLE cycle shall be capable of evaluating that an already identified inter-RAT E-UTRA cell has met reselection criterion defined in TS 38.304 [1] within $N_{\text{EUTRA_carrier_HST}} * T_{\text{evaluate,EUTRAN_HST}} + N_{\text{EUTRA_carrier}} * T_{\text{evaluate,EUTRAN}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2.2.5-1 and 4.2.2.5-2 provided that the reselection criteria is met by a margin of at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities.

For a cell that has been already detected, but has not been reselected to, the filtering shall be such that the UE configured with eDRX_IDLE cycle shall be capable of evaluating that an already identified inter-RAT E-UTRA cell has met reselection criterion defined in TS 38.304 [1] within $N_{\text{EUTRA_carrier}} * T_{\text{evaluate,EUTRAN}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2.2.5-3 provided that the reselection criteria is met by a margin of at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities.

If the $T_{\text{reselection}}$ timer has a non-zero value and an inter-RAT E-UTRA cell satisfies with the reselection criteria defined in TS 38.304 [1], the UE shall evaluate this E-UTRA cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

For UE not configured with eDRX_IDLE cycle, $T_{\text{detect,EUTRAN}}$, $T_{\text{measure,EUTRAN}}$ and $T_{\text{evaluate, E-UTRAN}}$ are specified in Table 4.2.2.5-1 and . 4.2.2.5-2

For UE configured with eDRX_IDLE cycle, $T_{\text{detect,EUTRAN}}$, $T_{\text{measure,EUTRAN}}$ and $T_{\text{evaluate,E-UTRAN}}$ are specified in Table 4.2.2.5-3, where the requirements apply provided that the serving cell is configured with eDRX_IDLE and the DRX cycle length is the same in all PTWs during any of $T_{\text{detect,EUTRAN}}$, $T_{\text{measure,EUTRAN}}$ and $T_{\text{evaluate,E-UTRAN}}$ when multiple PTWs are used.

Table 4.2.2.5-1: $T_{\text{detect,EUTRAN}}$, $T_{\text{measure,EUTRAN}}$, and $T_{\text{evaluate,EUTRAN}}$

DRX cycle length [s]	$T_{\text{detect,EUTRAN}}$ [s] (number of DRX cycles)	$T_{\text{measure,EUTRAN}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,EUTRAN}}$ [s] (number of DRX cycles)
0.32	11.52 (36)	1.28 (4)	5.12 (16)
0.64	17.92 (28)	1.28 (2)	5.12 (8)
1.28	32(25)	1.28 (1)	6.4 (5)
2.56	58.88 (23)	2.56 (1)	7.68 (3)

Table 4.2.2.5-2: $T_{\text{detect,EUTRAN_HST}}$, $T_{\text{measure,EUTRAN_HST}}$, and $T_{\text{evaluate,EUTRAN_HST}}$ for UE configured with highSpeedMeasFlag-r16

DRX cycle length [s]	$T_{\text{detect,EUTRAN_HST}}$ [s] (number of DRX cycles)	$T_{\text{measure,EUTRAN_HST}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,EUTRAN_HST}}$ [s] (number of DRX cycles)
0.32	4.16 (13)	0.64 (2)	0.96 (3)
0.64	7.68 (12)	1.28 (2)	1.92 (3)
1.28	8.96 (7)	1.28 (1)	3.84 (3)
2.56	58.88 (23)	2.56 (1)	7.68 (3)
Note 1: When highSpeedMeasFlag-r16 is configured, the requirements apply only to UE supporting either <i>measurementEnhancement-r16</i> or <i>interRAT-MeasurementEnhancement-r16</i> .			

The requirements in Table 4.2.2.5-2 apply only when the UE supports *measurementEnhancement-r16* or *interRAT-MeasurementEnhancement-r16*. For UE not supporting either *measurementEnhancement-r16* or *interRAT-MeasurementEnhancement-r16*, the UE is not required to meet the requirements specified in Table 4.2.2.5-2.

Table 4.2.2.5-3: $T_{\text{detect,EUTRAN}}$, $T_{\text{measure,EUTRAN}}$, and $T_{\text{evaluate,EUTRAN}}$ for UE configured with eDRX_IDLE cycle

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	$T_{\text{detect,EUTRAN}}$ [s] (number of DRX or eDRX cycles ^{Note 3})	$T_{\text{measure,EUTRAN}}$ [s] (number of DRX or eDRX cycles ^{Note 3})	$T_{\text{evaluate,E-UTRAN}}$ [s] (number of DRX or eDRX cycles ^{Note 3})
2.56	N/A	N/A	58.88 (23)	2.56 (1)	7.68 (3)
5.12	N/A	N/A	117.76 (23)	5.12 (1)	10.24 (2)
10.24	N/A	N/A	235.52 (23)	10.24 (1)	20.48 (2)
$20.48 \leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	≥ 1.28 (1)	$\text{eDRX_cycle_length} \times \left\lceil \frac{23}{\text{PTW} / \text{DRX_cycle_length}} \right\rceil$ (23)	0.32 (1)	0.64 (2)
	0.64	≥ 1.28 (1)		0.64 (1)	1.28 (2)
	1.28	≥ 2.56 (2)		1.28 (1)	2.56 (2)
	2.56	≥ 5.12 (4)		2.56 (1)	5.12 (2)

NOTE 1:	The number of DRX cycles in this table corresponds to the DRX cycles within PTWs when PTW is configured..
NOTE 2:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].
NOTE 3:	Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s, and 10.24s; number of DRX cycles otherwise.
NOTE 4:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,E-UTRAN}} \cdot \text{DRX_cycle}}{1.28} \right\rceil \cdot 1.28$.
NOTE 5:	When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2.2.6 Maximum interruption in paging reception

UE shall perform the cell re-selection with minimum interruption in monitoring downlink channels for paging reception. In addition, when the UE is configured with eDRX_IDLE cycle, the UE shall not miss any paging in a PTW provided the paging is sent in at least 2 DRX cycles before the end of that PTW.

At intra-frequency and inter-frequency cell re-selection, the UE shall monitor the downlink of serving cell for paging reception until the UE is capable to start monitoring downlink channels of the target intra-frequency and inter-frequency cell for paging reception. The interruption time shall not exceed $T_{\text{SI-NR}} + 2 \cdot T_{\text{target_cell_SMTC_period}}$ ms. $T_{\text{target_cell_SMTC_period}}$ is the periodicity of the SMTC occasions configured for the target NR cell. If the target cell is in the PCI list of *smtc2-LP*, the SMTC periodicity follows *smtc2-LP*; otherwise, the SMTC periodicity follows *smtc*.

At inter-RAT cell re-selection, the UE shall monitor the downlink of serving cell for paging reception until the UE is capable to start monitoring downlink channels for paging reception of the target inter-RAT cell. For NR to E-UTRAN cell re-selection the interruption time must not exceed $T_{\text{SI-EUTRA}} + 55$ ms.

$T_{\text{SI-NR}}$ is the time required for receiving all the relevant system information data according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for an NR cell.

$T_{\text{SI-EUTRA}}$ is the time required for receiving all the relevant system information data according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 36.331 [16] for an E-UTRAN cell.

These requirements assume sufficient radio conditions, so that decoding of system information can be made without errors and does not take into account cell re-selection failure.

4.2.2.7 General requirements

When configured with eDRX_IDLE, the UE shall search every layer of higher priority at least every $T_{\text{higher_priority_search}}$, where $T_{\text{higher_priority_search}}$ is defined as follows:

- $T_{\text{higher_priority_search}} = \max(60, 15 \cdot \text{eDRX_IDLE cycle length}) \cdot N_{\text{layers}}$ seconds if eDRX_IDLE cycle ≤ 10.24 s,
- $T_{\text{higher_priority_search}} = \max(60, \text{ceil}(15/N_{\text{DRX-PTW}}) \cdot \text{eDRX_IDLE cycle length}) \cdot N_{\text{layers}}$ seconds if eDRX_IDLE cycle > 10.24 s, where $N_{\text{DRX-PTW}}$ is the number of DRX cycles within a single PTW.

Otherwise if the UE is not configured with eDRX_IDLE cycle, the UE shall search every layer of higher priority at least every $T_{\text{higher_priority_search}} = (60 \cdot N_{\text{layers}})$ seconds.

N_{layers} is the total number of higher priority NR and E-UTRA carrier frequencies broadcasted in system information.

For a UE configured with early measurement reporting, while T331 is running, N_{layers} is the combined total number of higher priority NR and E-UTRA carrier frequencies broadcasted in system information and carriers configured for idle mode CA measurements.

Note: combined total number means that if a carrier is a high priority carrier and additionally a carrier configured for idle mode CA measurements, it only counts as one carrier.

4.2.2.8 Minimum requirement at transitions

When switching from low mobility scenario or not-at-cell-edge scenario to low mobility and not-at-cell-edge scenario during cell-reselection period, the UE shall fulfill the requirements corresponding to low mobility scenario or not-at-cell-edge scenario over measurement period (T_{relaxed}) and thereafter switch to requirements corresponding to low mobility and not-at-cell-edge scenario. The measurement period, T_{relaxed} , is any of:

- $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$, defined in section 4.2.2.9 for intra-frequency measurements on NR cells,
- $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ defined in section 4.2.2.10 for inter-frequency measurements on NR cells and
- $T_{\text{measure,EUTRAN}}$ and $T_{\text{evaluate,EUTRAN}}$ defined in sections 4.2.2.11 for inter-RAT E-UTRAN measurements.

When switching from low mobility and not-at-cell-edge scenario to low mobility scenario or not-at-cell-edge scenario during cell-reselection period, the UE shall fulfill the requirements corresponding to low mobility scenario or not-at-cell-edge scenario upon fulfilling the switching criteria.

When switching from normal mode to low mobility scenario or not-at-cell-edge scenario or low mobility and not-at-cell-edge scenario during cell-reselection period, the UE shall fulfill the requirements corresponding to normal mode over measurement period (T_{normal}) and thereafter switch to requirements corresponding to low mobility scenario or not-at-cell-edge scenario or low mobility and not-at-cell-edge scenario. The measurement period, T_{normal} , is any of:

- $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$, defined in section 4.2.2.3 for intra-frequency measurements on NR cells,
- $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ defined in section 4.2.2.4 for inter-frequency measurements on NR cells and
- $T_{\text{measure,EUTRAN}}$ and $T_{\text{evaluate,EUTRAN}}$ defined in sections 4.2.2.5 for inter-RAT E-UTRAN measurements.

When switching from low mobility scenario or not-at-cell-edge scenario or low mobility and not-at-cell-edge scenario to normal mode during cell-reselection period, the UE shall fulfill the requirements corresponding to normal mode upon fulfilling the switching criteria.

No requirement is defined for multiple transitions of scenarios within one measurement period.

4.2.2.9 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion

4.2.2.9.1 Introduction

This clause contains the requirements for measurements on intra-frequency NR cells when $S_{\text{rxlev}} \leq S_{\text{IntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{IntraSearchQ}}$ and when the UE is configured any of the following relaxed measurement criteria:

- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4.9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4.9.1 and 5.2.4.9.2 in [1] respectively.

4.2.2.9.2 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is only configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

The requirements defined in clause 4.2.2.3 apply for this clause except that:

- For a UE not configured with *eDRX_IDLE*, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in Table 4.2.2.9.2-1.

- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in Table 4.2.2.9.2-2 and Table 4.2.2.9.2-3 for FR1 and FR2, respectively.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in Table 4.2.2.9.2-4 and Table 4.2.2.9.2-5 for FR1 and FR2, respectively, provided eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement period with relaxation on one carrier is not greater than single PTW length.

Table 4.2.2.9.2-1: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$

DRX cycle length [s]	Scaling Factor (N1)			T _{detect,NR_Intra} [s] (number of DRX cycles)	T _{measure,NR_Intra} [s] (number of DRX cycles)	T _{evaluate,NR_Intra} [s] (number of DRX cycles)
	FR1	FR2-1 Note1	FR2-2 Note2			
0.32	1	8	12	11.52 x N1 x M2 x K1 (36 x N1 x M2 x K1)	1.28 x N1 x M2 x K1 (4 x N1 x M2 x K1)	5.12 x N1 x M2 x K1 (16 x N1 x M2 x K1)
0.64		5	8	17.92 x N1 x K1 (28 x N1 x K1)	1.28 x N1 x K1 (2 x N1 x K1)	5.12 x N1 x K1 (8 x N1 x K1)
1.28		4	6	32 x N1 x K1 (25 x N1 x K1)	1.28 x N1 x K1 (1 x N1 x K1)	6.4 x N1 x K1 (5 x N1 x K1)
2.56		3	5	58.88 x N1 x K1 (23 x N1 x K1)	2.56 x N1 x K1 (1 x N1 x K1)	7.68 x N1 x K1 (3 x N1 x K1)
Note 1:	Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.					
Note 2:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.					
Note 3:	M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If high layer signalling <i>smtc2-LP-r16</i> is configured, for cells indicated in the <i>pci-List</i> parameter in <i>smtc2-LP-r16</i> , the SMTC periodicity corresponds to the value of higher layer parameter <i>smtc2-LP-r16</i> ; for the other cells, the SMTC periodicity corresponds to the value of higher layer parameter <i>smtc</i> .					
Note 4:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.					

Table 4.2.2.9.2-2: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR1) for eDRX_IDLE cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{\text{detect,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)
2.56	$58.88 \times K1$ ($23 \times K1$)	$2.56 \times K1$ ($1 \times K1$)	$7.68 \times K1$ ($3 \times K1$)
5.12	$117.76 \times K1$ ($23 \times K1$)	$5.12 \times K1$ ($1 \times K1$)	$10.24 \times K1$ ($2 \times K1$)
10.24	$235.52 \times K1$ ($23 \times K1$)	$10.24 \times K1$ ($1 \times K1$)	$20.48 \times K1$ ($2 \times K1$)
Note 1: Void.			
Note 2: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.			

Table 4.2.2.9.2-3: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR2-1) for eDRX_IDLE cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{\text{detect,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)
2.56	$58.88 \times N1 \times K1$ ($23 \times N1 \times K1$)	$2.56 \times N1 \times K1$ ($1 \times N1 \times K1$)	$7.68 \times N1 \times K1$ ($3 \times N1 \times K1$)

	0.64	≥ 19.2 (15)	5		$0.64 \times N1 \times K1$ (1 x N1 x K1)	$1.28 \times N1 \times K1$ (2 x N1 x K1)
	1.28	≥ 30.72 (24)	4		$1.28 \times N1 \times K1$ (1 x N1 x K1)	$2.56 \times N1 \times K1$ (2 x N1 x K1)
	2.56	40.96 (32)	3		20.48	40.96
Note 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length. Note 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$. Note 5: The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW. Note 6: The evaluation shall not be performed across PTW's. Note 7: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation criterion</i> [2].						

4.2.2.9.3 Measurements for UE fulfilling not-at-cell edge criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is only configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *cellEdgeEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criteria and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

The requirements defined in clause 4.2.2.3 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in Table 4.2.2.9.3-1.
- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in $T_{\text{measure,NR_Intra}}$ as specified in Table 4.2.2.9.3-2 and Table 4.2.2.9.3-3 for FR1 and FR2, respectively.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ are as specified in Table 4.2.2.9.3-4 and Table 4.2.2.9.3-5 for FR1 and FR2, respectively, provided eDRX cycle is $\leq$ [163.84] sec and evaluation/measurement period with relaxation on one carrier is not greater than single PTW length.

Table 4.2.2.9.3-1: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$

DRX cycle length [s]	Scaling Factor (N1)			T _{detect,NR_Intra} [S] (number of DRX cycles)	T _{measure,NR_Intra} [S] (number of DRX cycles)	T _{evaluate,NR_Intra} [s] (number of DRX cycles)
	FR1	FR2-1 _{Note1}	FR2-2 _{Note2}			
0.32	1	8	12	11.52 × N1 × M2 × K1 (36 × N1 × M2 × K1)	1.28 × N1 × M2 × K1 (4 × N1 × M2 × K1)	5.12 × N1 × M2 × K1 (16 × N1 × M2 × K1)
0.64		5	8	17.92 × N1 × K1 (28 × N1 × K1)	1.28 × N1 × K1 (2 × N1 × K1)	5.12 × N1 × K1 (8 × N1 × K1)
1.28		4	6	32 × N1 × K1 (25 × N1 × K1)	1.28 × N1 × K1 (1 × N1 × K1)	6.4 × N1 × K1 (5 × N1 × K1)
2.56		3	5	58.88 × N1 × K1 (23 × N1 × K1)	2.56 × N1 × K1 (1 × N1 × K1)	7.68 × N1 × K1 (3 × N1 × K1)
Note 1:	Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.					
Note 2:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.					
Note 3:	M2 = 1.5 if SMTc periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If high layer signalling <i>smtc2-LP-r16</i> is configured, for cells indicated in the <i>pci-List</i> parameter in <i>smtc2-LP-r16</i> , the SMTc periodicity corresponds to the value of higher layer parameter <i>smtc2-LP-r16</i> ; for the other cells, the SMTc periodicity corresponds to the value of higher layer parameter <i>smtc</i> .					
Note 4:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.					

Table 4.2.2.9.3-2: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR1) for eDRX_IDLE cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{\text{detect,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of eDRX_IDLE cycles)

Note 2:	The number of DRX cycles in this table corresponds to the DRX cycles within PTWs.					
Note 3:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].					
Note 4:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra*DRX_cycle}}}{1.28} \right\rceil * 1.28$.					
Note 5:	The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW.					
Note 6:	The evaluation shall not be performed across PTW's.					
Note 7:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation criterion</i> [2].					

4.2.2.9.4 Measurements for UE fulfilling low mobility and not-at-cell edge criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and
- both *lowMobilityEvaluation* [2] and *cellEdgeEvaluation* [2] criteria are fulfilled, and
- less than 1 hour have passed since measurements for cell reselection were last performed

In this case the UE is not required to meet $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ as defined in Table 4.2.2.3-1 or Table 4.2.2.3-4 or Table 4.2.2.3-5.

4.2.2.10 Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion

4.2.2.10.1 Introduction

This clause contains the requirements for measurements on inter-frequency NR cells when the UE is configured with any of following relaxed measurement criteria:

- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4. 9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4. 9.1 and 5.2.4.9.2 in [1] respectively.

4.2.2.10.2 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is only configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and
- UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

The UE shall not relax measurements on NR inter-frequency carriers configured for idle mode CA/DC measurements (defined in clause 4.4) while T331 is running.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements are defined as follows:

- The UE shall be able to evaluate whether a newly detectable inter-frequency NR cell meets the reselection criteria defined in TS38.304 [1] within $N_{\text{carrier_Relax}} * T_{\text{detect,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} * T_{\text{detect,NR_Inter}}$. Cells which have been detected shall be measured at least every $N_{\text{carrier_Relax}} * T_{\text{measure,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} *$

$T_{\text{measure,NR_Inter}}$. The UE shall be able to evaluate that an already identified inter-frequency NR cell has met reselection criterion defined in TS 38.304 [1] within $N_{\text{carrier_Relax}} * T_{\text{evaluate,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} * T_{\text{evaluate,NR_Inter}}$.

- When T331 is running,
 - The parameter $N_{\text{carrier_Relax}}$ is the total number of NR inter-frequency carriers not configured for idle mode CA/DC measurements.
 - The parameter $N_{\text{carrier_Non_relax}}$ is the total number of NR inter-frequency carriers configured for idle mode CA/DC measurements.
- When T331 is not running,
 - The parameter $N_{\text{carrier_Relax}}$ is the total number of inter-frequency carriers configured for mobility measurements only and the number of inter-frequency carriers configured for both mobility measurement and idle mode CA/DC measurements.
 - The parameter $N_{\text{carrier_Non_relax}} = 0$
- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.2-1 and $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ are as specified in Table 4.2.2.4.1-1.
- For a UE configured with eDRX_IDLE, $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ are as specified in Table 4.2.2.4-3 and Table 4.2.2.4-4 for FR1 and FR2 respectively.
- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.2-2 and Table 4.2.2.10.2-3 for FR1 and FR2, respectively.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.2-4 and Table 4.2.2.10.2-5 for FR1 and FR2, respectively, provided eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW length.

When UE is only configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, and $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$,

- if the UE is configured with *highPriorityMeasRelax* [2] then the UE shall search for inter-frequency layers of higher priority at least every $K2 * \text{Thigher_priority_search}$ where *Thigher_priority_search* is described in clause 4.2.2.7 and, $K2 = 60$
- otherwise, the UE shall search for inter-frequency layers of higher priority at least every *Thigher_priority_search* where *Thigher_priority_search* is described in clause 4.2.2.7.

Table 4.2.2.10.2-1: $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$

DRX cycle length [s]	Scaling Factor (N1)			T _{detect,NR_Inter_Relax} [s] (number of DRX cycles)	T _{measure,NR_Inter_Relax} [s] (number of DRX cycles)	T _{evaluate,NR_Inter_Relax} [s] (number of DRX cycles)
	FR1	FR2-1 ^{Note1}	FR2-2 ^{Note2}			
0.32	1	8	12	11.52 x N1 x K1 x 1.5 (36 x N1 x K1 x 1.5)	1.28 x N1 x K1x 1.5 (4 x N1 x K1 x 1.5)	5.12 x N1 x K1x 1.5 (16 x N1 x K1 x 1.5)
0.64		5	8	17.92x N1 x K1 (28 x N1 x K1)	1.28 x N1 x K1 (2 x N1 x K1)	5.12 x N1 x K1 (8 x N1 x K1)
1.28		4	6	32 x N1 x K1 (25 x N1 x K1)	1.28 x N1 x K1 (1 x N1 x K1)	6.4 x N1 x K1 (5 x N1 x K1)
2.56		3	5	58.88 x N1 x K1 (23 x N1 x K1)	2.56 x N1 x K1 (1 x N1 x K1)	7.68 x N1 x K1 (3 x N1 x K1)
Note 1:	Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length.					
Note 2:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.					
Note 3:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling <i>lowMobilityEvaluation</i> [2] criterion.					

Table 4.2.2.10.2-2: $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s (Frequency range FR1)

Note 1: Applies for UE supporting FR2-1 power class 2&3&4. For UE supporting FR2-1 power class 1 or 5, N1 = 8 for all DRX cycle length. Note 2: The number of DRX cycles in this table correspond to the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Inter_relax} \times DRX_cycle}{1.28} \right\rceil \times 1.28$. Note 5: The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW. Note 6: The evaluation shall not be performed across PTW's. Note 7: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation criterion</i> [2].						

4.2.2.10.3 Measurements for UE fulfilling not-at-cell edge criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is only configured with *cellEdgeEvaluation* [2] criterion, and UE has fulfilled the *cellEdgeEvaluation* [2] criterion or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and
- UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

The UE shall not relax measurements on NR inter-frequency carriers configured for idle mode CA/DC measurements (defined in clause 4.4) while T331 is running.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements defined in clause 4.2.2.4 apply for this clause except that:

- The UE shall be able to evaluate whether a newly detectable inter-frequency NR cell meets the reselection criteria defined in TS38.304 [1] within $N_{\text{carrier_Relax}} \times T_{\text{detect,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} \times T_{\text{detect,NR_Inter}}$. Cells which have been detected shall be measured at least every $N_{\text{carrier_Relax}} \times T_{\text{measure,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} \times T_{\text{measure,NR_Inter}}$. The UE shall be able to evaluate that an already identified inter-frequency NR cell has met reselection criterion defined in TS 38.304 [1] within $N_{\text{carrier_Relax}} \times T_{\text{evaluate,NR_Inter_Relax}} + N_{\text{carrier_Non_relax}} \times T_{\text{evaluate,NR_Inter}}$.
- When T331 is running,
 - The parameter $N_{\text{carrier_Relax}}$ is the total number of NR inter-frequency carriers not configured for idle mode CA/DC measurements.

- The parameter $N_{\text{carrier_Non_relax}}$ is the total number of NR inter-frequency carriers configured for idle mode CA/DC measurements.
- When T331 is not running,
 - The parameter $N_{\text{carrier_Relax}}$ is the total number of inter-frequency carriers configured for mobility measurements only and the number of inter-frequency carriers configured for both mobility measurement and idle mode CA/DC measurements.

The parameter $N_{\text{carrier_Non_relax}} = 0$.

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.3-1 and $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ are as specified in Table 4.2.2.4.1-1.
- For a UE configured with eDRX_IDLE, $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ are as specified in Table 4.2.2.4-3 and Table 4.2.2.4-4 for FR1 and FR2 respectively.
- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.3-2 and Table 4.2.2.10.3-3 for FR1 and FR2, respectively.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ are as specified in Table 4.2.2.10.3-4 and Table 4.2.2.10.3-5 for FR1 and FR2, respectively, provided eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW length.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, then regardless of whether the UE is configured with *highPriorityMeasRelax* [2] or not, the UE shall search for inter-frequency layers of higher priority at least every $T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7.

Table 4.2.2.10.3-1: $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$

Note 5:	The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW.					
Note 6:	The evaluation shall not be performed across PTW's.					
Note 7:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation criterion</i> [2].					

4.2.2.10.4 Measurements for UE fulfilling low mobility and not-at-cell edge criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- T331 timer is not running for EMR measurements on inter-frequency NR carrier, and
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and
- both *lowMobilityEvaluation* [2] and *cellEdgeEvaluation* [2] criteria are fulfilled.

In this case the UE is not required to meet $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ as defined in Table 4.2.2.4-1 or Table 4.2.2.4-3 or Table 4.2.2.4-4.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the UE shall search for, measure and evaluate inter-frequency layers of higher, equal, or lower priority at least every 1 hour.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE shall search for inter-frequency layers of higher priority at least every $K2 \cdot T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and $K2=60$.

4.2.2.11 Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion

4.2.2.11.1 Introduction

This clause contains the requirements for measurements on inter-RAT E-UTRAN cells when the UE is configured with any of following relaxed measurement criteria:

- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4.9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4.9.1 and 5.2.4.9.2 in [1] respectively.

4.2.2.11.2 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- T331 timer is not running for EMR measurements on inter-RAT E-UTRAN, and
- UE is only configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and

- UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

The UE shall not relax measurements on inter-RAT E-UTRAN carriers configured for idle mode CA/DC measurements (defined in clause 4.4) while T331 is running.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements defined in clause 4.2.2.5 apply for this clause except that:

- The UE shall be able to evaluate whether a newly detectable inter-RAT E-UTRAN cell meets the reselection criteria defined in TS38.304 [1] within $N_{EUTRAN\ carrier_Relax} * T_{detect,EUTRAN_Relax} + N_{EUTRAN\ carrier_Non_relax} * T_{detect,EUTRAN}$. Cells which have been detected shall be measured at least every $N_{EUTRAN\ carrier_Relax} * T_{measure,EUTRAN_Relax} + N_{EUTRAN\ carrier_Non_relax} * T_{measure,EUTRAN}$. The UE shall be able to evaluate that an already identified inter-RAT E-UTRAN cell has met reselection criterion defined in TS 38.304 [1] within $N_{EUTRAN\ carrier_Relax} * T_{evaluate,EUTRAN_Relax} + N_{EUTRAN\ carrier_Non_relax} * T_{evaluate,EUTRAN}$.
- When T331 is running,
 - The parameter $N_{EUTRAN\ carrier_Relax}$ is the total number of inter-RAT E-UTRAN carriers not configured for idle mode CA/DC measurements.
 - The parameter $N_{EUTRAN\ carrier_Non_relax}$ is the total number of inter-RAT E-UTRAN carriers configured for idle mode CA/DC measurements.
- When T331 is not running,
 - The parameter $N_{EUTRAN\ carrier_Relax}$ is the total number of inter-RAT E-UTRAN carriers configured for mobility measurements only and the number of inter-RAT E-UTRAN carriers configured for both mobility measurement and idle mode CA/DC measurements.
 - The parameter $N_{EUTRAN\ carrier_Non_relax} = 0$.
- For a UE not configured with eDRX_IDLE, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.2-1 and $T_{detect,EUTRAN}$, $T_{measure,EUTRAN}$ and $T_{evaluate,EUTRAN}$ are as specified in Table 4.2.2.5-1.
- For a UE configured with eDRX_IDLE, $T_{detect,EUTRAN}$, $T_{measure,EUTRAN}$ and $T_{evaluate,EUTRAN}$ are as specified in Table 4.2.2.5-3.
- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.2-2.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.2-3, provided eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW length.

When UE is only configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, and $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$,

- if the UE is configured with *highPriorityMeasRelax* [2] then the UE shall search for E-UTRA inter-RAT frequency layers of higher priority at least every $K2 * T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7 and, $K2 = 60$
- otherwise, the UE shall search for E-UTRA inter-RAT frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7.

	1.28	≥7.68 (6)		1.28 x K1 (1 x K1)	2.56 x K1 (2 x K1)
	2.56	≥15.36 (12)		2.56 x K1 (1 x K1)	5.12 x K1 (2 x K1)
Note 1: The number of DRX cycles in this table correspond to the DRX cycles within PTWs.					
Note 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].					
Note 3: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,EUTRAN_Relax} \times DRX_cycle}{1.28} \right\rceil \times 1.28$.					
Note 4: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.					

4.2.2.11.3 Measurements for UE fulfilling with not-at-cell edge criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- T331 timer is not running for EMR measurements on inter-RAT E-UTRAN, and
- UE is only configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *cellEdgeEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and
- UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

The UE shall not relax measurements on inter-RAT E-UTRAN carriers configured for idle mode CA/DC measurements (defined in clause 4.4) while T331 is running.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements defined in clause 4.2.2.5 apply for this clause except that:

- The UE shall be able to evaluate whether a newly detectable inter-RAT E-UTRAN cell meets the reselection criteria defined in TS38.304 [1] within $N_{EUTRAN_carrier_Relax} * T_{detect,EUTRAN_Relax} + N_{EUTRAN_carrier_Non_relax} * T_{detect,EUTRAN}$. Cells which have been detected shall be measured at least every $N_{EUTRAN_carrier_Relax} * T_{measure,EUTRAN_Relax} + N_{EUTRAN_carrier_Non_relax} * T_{measure,EUTRAN}$. The UE shall be able to evaluate that an already identified inter-RAT E-UTRAN cell has met reselection criterion defined in TS 38.304 [1] within $N_{EUTRAN_carrier_Relax} * T_{evaluate,EUTRAN_Relax} + N_{EUTRAN_carrier_Non_relax} * T_{evaluate,EUTRAN}$.
- When T331 is running,
 - The parameter $N_{EUTRAN_carrier_Relax}$ is the total number of inter-RAT E-UTRAN carriers not configured for idle mode CA/DC measurements.
 - The parameter $N_{EUTRAN_carrier_Non_relax}$ is the total number of inter-RAT E-UTRAN carriers configured for idle mode CA/DC measurements.
- When T331 is not running,
 - The parameter $N_{EUTRAN_carrier_Relax}$ is the total number of inter-RAT E-UTRAN carriers configured for mobility measurements only and the number of inter-RAT E-UTRAN carriers configured for both mobility measurement and idle mode CA/DC measurements.
 - The parameter $N_{EUTRAN_carrier_Non_relax} = 0$.
- For a UE not configured with eDRX_IDLE, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.3-1 and $T_{detect,EUTRAN}$, $T_{measure,EUTRAN}$ and $T_{evaluate,EUTRAN}$ are as specified in Table 4.2.2.5-1.
- For a UE configured with eDRX_IDLE, $T_{detect,EUTRAN}$, $T_{measure,EUTRAN}$ and $T_{evaluate,EUTRAN}$ are as specified in Table 4.2.2.5-3.
- For a UE configured with eDRX_IDLE cycle up to 10.24s, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.3-2.
- For a UE configured with eDRX_IDLE cycle greater than 10.24s, $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$ and $T_{evaluate,EUTRAN_Relax}$ are as specified in Table 4.2.2.11.3-3, provided eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, then regardless of whether the UE is configured with *highPriorityMeasRelax* [2] or not, the UE shall search for inter-RAT E-UTRAN frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7.

Table 4.2.2.11.3-1: $T_{detect,EUTRAN_Relax}$, $T_{measure,EUTRAN_Relax}$, and $T_{evaluate,EUTRAN_Relax}$

DRX cycle length [s]	$T_{detect,EUTRAN_Relax}$ [s] (number of DRX cycles)	$T_{measure,EUTRAN_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,EUTRAN_Relax}$ [s] (number of DRX cycles)
0.32	$11.52 \times K1$ (36 $\times$ K1)	$1.28 \times K1$ (4 $\times$ K1)	$5.12 \times K1$ (16 $\times$ K1)
0.64	$17.92 \times K1$ (28 $\times$ K1)	$1.28 \times K1$ (2 $\times$ K1)	$5.12 \times K1$ (8 $\times$ K1)

10.24	$235.52 \times K1$ ($23 \times K1$)	$10.24 \times K1$ ($1 \times K1$)	$20.48 \times K1$ ($2 \times K1$)
Note 1: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.			

Table 4.2.2.11.3-3: $T_{\text{detect, EUTRAN_Relax}}$, $T_{\text{measure, EUTRAN_Relax}}$ and $T_{\text{evaluate, EUTRAN_Relax}}$ for UE configured with eDRX_IDLE cycle greater than 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	T _{detect, EUTRAN_Relax} [s] (number of DRX cycles ^{Note 3)}	T _{measure, EUTRAN_Relax} [s] (number of DRX cycles ^{Note 3)}	T _{evaluate, EUTRAN_Relax} [s] (number of DRX cycles ^{Note 3)}
20.48 ≤ eDRX_IDLE cycle length ≤[163.84]	0.32	≥3.84 (3)	$eDRX_cycle_length \times \left\lceil \frac{PTW/DRX_cycle_length}{23} \right\rceil \times K1$ (23 × K1)	0.32 × K1 (1 × M2 × K1)	0.64 × K1 (2 × M2 × K1)
	0.64	≥3.84 (3)		0.64 × K1 (1 × K1)	1.28 × K1 (2 × K1)
	1.28	≥7.68 (6)		1.28 × K1 (1 × K1)	2.56 × K1 (2 × K1)
	2.56	≥15.36 (12)		2.56 × K1 (1 × K1)	5.12 × K1 (2 × K1)
Note 1:	The number of DRX cycles in this table corresponds to the DRX cycles within PTWs.				
Note 2:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].				
Note 3:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate, EUTRAN_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$.				
Note 4:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.				

4.2.2.11.4 Measurements for UE fulfilling low mobility and not-at-cell edge criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- T331 timer is not running for EMR measurements on inter-RAT E-UTRAN, and
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and
- both *lowMobilityEvaluation* [2] and *cellEdgeEvaluation* [2] criteria are fulfilled.

In this case the UE is not required to meet $T_{\text{detect, EUTRAN}}$, $T_{\text{measure, EUTRAN}}$ and $T_{\text{evaluate, EUTRAN}}$ as defined in Table 4.2.2.5-1 or Table 4.2.2.5-3.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the UE shall search for, measure and evaluate inter-RAT E-UTRAN layers of higher or lower priority at least every 1 hour.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE shall search for inter-RAT E-UTRAN of higher priority at least every $K2 \times T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and $K2=60$.

4.2A Cell Re-selection when subject to CCA

4.2A.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it. The requirements in clauses 4.2A.2.3, 4.2A.2.4, and 4.2A.2.6, apply when at least the target cell is on a carrier frequency subject to CCA, and the requirements in clauses 4.2A.2.2, and 4.2A.2.5 apply when at least the camping cell is on a carrier frequency subject to CCA.

When the UE is in either *Camped Normally* state or *Camped on Any Cell* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency and inter-RAT cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS 38.304, allowing the UE to limit its measurement activity.

In the requirements of clause 4.2A, the exceptions for side conditions apply as follows:

- for the UE capable of CA, the applicable exceptions for side conditions are specified in Annex B, clause B.x.y for UE supporting CA in FR1.

In the requirements of clause 4.2A.2, the term SMTC occasion not available at the UE refers to when the SMTC contains SSBs configured by gNB in a cell on a carrier frequency subject to CCA, but N candidate SSB positions for the same SS/PBCH block index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding detection, measurement, or evaluation period, where:

- For the cell detection procedure: N is at least one candidate SSB position (NOTE: the one candidate SSB position for the cell detection shall not be impacted by the set of candidate SSB positions which are already being measured by the UE within the current measurement period of the on-going measurements), and
- For other procedures in clause 4.2A.2: N are the first two successive candidate SSB positions when two or more candidate SSB positions are configured for this SSB index in one discovery burst transmission window, otherwise N is one candidate SSB position;

otherwise the SMTC occasion is considered as available at the UE.

4.2A.2 Requirements

4.2A.2.1 UE measurement capability

For idle mode cell re-selection purposes, the UE shall be capable of monitoring at least:

- Intra-frequency carrier, and
- Depending on UE capability, 7 NR inter-frequency carriers, and
- Depending on UE capability, 7 FDD E-UTRA inter-RAT carriers, and
- Depending on UE capability, 7 TDD E-UTRA inter-RAT carriers.

In addition to the requirements defined above, a UE supporting E-UTRA measurements in RRC_IDLE state shall be capable of monitoring a total of at least 14 carrier frequency layers, which includes serving layer, comprising of any above defined combination of E-UTRA FDD, E-UTRA TDD and NR layers. The inter-frequency carriers include carriers on unlicensed band and/or licensed band.

4.2A.2.2 Measurement and evaluation when subject to CCA on the serving cell

The UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $(1+M_n)*M1*N1$ DRX cycles in $N_{\text{serv_CCA}}$ consecutive DRX cycles; where:

- $M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and DRX cycle ≤ 0.64 second,

- otherwise $M_1=1$.
- $N_1 \cdot M_n$ is the maximum separation in DRX cycles between two measurements that are used for filtering.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least DRX cycle/2 but not separated in time by more than $N_1 \cdot M_n$, where $M_n=2$.

If the UE has evaluated according to Table 4.2A.2.2-1 in N_{serv_CCA} consecutive DRX cycles that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

UE shall initiate measurements on neighbour cells indicated by the serving cell if it is unable to measure on the serving cell for at least $N_1 \cdot M_p$ consecutive number of DRX cycles each with at least one SMTC occasion not available at the UE, where $M_p=4$ when DRX cycle length < 1.28 s, $M_p=2$ when DRX cycle length ≥ 1.28 s.

UE shall initiate the measurements on neighbour cells of any intra-frequency or inter-frequency if it is unable to measure on serving cell during at least consecutive $N_1 \cdot M_q$ number of DRX cycles each with at least one SMTC occasion not available at the UE, regardless of any condition of $S_{nonIntraSearchP}$ and $S_{nonIntraSearchQ}$, where $M_q=8$ when DRX cycle length < 1.28 s, $M_q=4$ when DRX cycle length ≥ 1.28 s.

If the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency, inter-frequency and inter-RAT information indicated in the system information for 10 s, the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1].

Table 4.2A.2.2-1: N_{serv_CCA}

DRX cycle length [s]	Scaling Factor (N1)		Nserv_CCA [number of DRX cycles]
	FR1	FR2-2 ^{Note 3}	
0.32	1	12	N1*M1*(4+ Ms)
0.64		8	N1*M1*(4+ Ms)
1.28		6	N1*(2+Ms)
2.56		5	N1*(2+Ms)
Note 1:	Ms is the number of groups of consecutive N1 DRX cycles each group with at least one SMTC occasion not available at the UE during Nserv_CCA, and Ms< Ms,max		
Note 2:	Ms,max=8 for DRX cycle length < 1.28 s, Ms,max= 4 for DRX cycle length ≥ 1.28 s.		
Note 3:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.		

The UE shall restart the measurements used for serving cell evaluation if M_s exceeds $M_{s,max}$.

4.2A.2.3 Measurements of intra-frequency NR cells when subject to CCA on the serving cell and target cell

The UE shall be able to identify new intra-frequency cells with CCA and perform SS-RSRP and SS-RSRQ measurements of the identified intra-frequency cells without an explicit intra-frequency neighbour list containing physical layer cell identities.

When the intra-frequency measurement is performed on a neighbour cell in FR2-2 with shared spectrum channel access, UE shall determine the CCA mode of the neighbour cell according to *channelAccessMode2-r17* of the cell configured in SIB3. If *channelAccessMode2-r17* of the cell is enabled, UE shall assume that CCA applies to the cell and perform measurement accordingly, and the requirements in clause 4.2A.2.3 shall apply; otherwise, UE shall assume that CCA does not apply to the cell and perform measurement accordingly, and requirements in 4.2.2.3 shall apply.

The UE shall be able to evaluate whether a newly detectable intra-frequency cell meets the reselection criteria defined in TS38.304 within T_{detect,NR_Intra_CCA} when that $T_{reselection} = 0$. An intra frequency cell is considered to be detectable according to the conditions defined in Annex B.1.2A for a corresponding Band.

The UE shall measure SS-RSRP and SS-RSRQ at least every $T_{measure,NR_Intra_CCA}$ (see table 4.2A.2.3-1) for intra-frequency cells that are identified and measured according to the measurement rules. For a cell that is already identified, after 2 unsuccessful measurement attempts due to exceeding the maximum number of SMTC occasions not available at the UE, the UE shall detect cells on any of the configured serving- and/or non-serving carriers.

The UE shall filter SS-RSRP and SS-RSRQ measurements of each measured intra-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Intra_CCA}}/2$.

The UE shall not consider a NR neighbour cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an intra-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the intra-frequency cell has met reselection criterion defined [1] within $T_{\text{evaluate,NR_Intra_CCA}}$ when $T_{\text{reselection}} = 0$ as specified in table 4.2A.2.3-1 provided that:

when *rangeToBestCell* is not configured:

- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2-2.

when *rangeToBestCell* is configured:

- the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
- if there are multiple such cells, the cell has the highest rank among them.
- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2-2 if the current serving cell is among them.

When evaluating cells for reselection, the SSB side conditions apply to both serving and non-serving intra-frequency cells.

If $T_{\text{reselection}}$ timer has a non-zero value and the intra-frequency cell is satisfied with the reselection criteria, which are defined in TS38.304 [1], the UE shall evaluate this intra-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect that cell.

Table 4.2A.2.3-1: $T_{\text{detect,NR_Intra_CCA}}$, $T_{\text{measure,NR_Intra_CCA}}$ and $T_{\text{evaluate,NR_Intra_CCA}}$

DRX cycle length [s]	Scaling Factor (N1)		T _{detect,NR_Intra_CCA} [s] (number of DRX cycles)	T _{measure,NR_Intra_CCA} [s] (number of DRX cycles)	T _{evaluate,NR_Intra_CCA} [s] (number of DRX cycles)
	FR1	FR2-2 ^{Note 5}			
0.32	1	12	0.32xN1x(36+M _d)xM2 {(36+M _d)xN1xM2}	0.32xN1x(4+M _m)xM2 {(4+M _m)xN1 xM2}	0.32xN1x(16+M _e) x M2 {(16+M _e)xN1xM2}
0.64		8	0.64xN1x(28+M _d) {(28+M _d)xN1 }	0.64xN1x(2+M _m) {(2+M _m)xN1 }	0.64xN1x(8+M _e) {(8+M _e)xN1 }
1.28		6	1.28xN1x(25+M _d) {(25+M _d)xN1 }	1.28xN1x(1+M _m) {(1+M _m)xN1 }	1.28xN1x(5+M _e) {(5+M _e)xN1 }
2.56		5	2.56xN1x(23+M _d) {(23+M _d)xN1 }	2.56xN1x(1+M _m) {(1+M _m)xN1 }	2.56xN1x(3+M _e) {(3+M _e)xN1 }
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. Note 2: M _d , M _m , M _e are the number of groups of consecutive N1 DRX cycles each group with at least one SMTC occasion not available during the T _{detect,NR_Intra_CCA} , T _{measure,NR_Intra_CCA} and T _{evaluate,NR_Intra_CCA} , and M _m ≤ M _{m,max} , M _d ≤ M _{d,max} and M _e ≤ M _{e,max} Note 3: M _{m,max} = 16 for DRX cycle length = 0.32s; M _{m,max} = 8 for DRX cycle length = 0.64s; M _{m,max} = 4 for DRX cycle length = 1.28s; M _{m,max} = 4 for DRX cycle length = 2.56s. Note 4: M _{d,max} = 4*M _{m,max} , M _{e,max} = 2*M _{m,max} . Note 5: Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.					

The UE shall restart the measurements upon exceeding $M_{m,\text{max}}$, $M_{d,\text{max}}$, or $M_{e,\text{max}}$.

4.2A.2.4 Measurements of inter-frequency NR cells when subject to CCA on the target cell

The UE shall be able to identify new inter-frequency cells and perform SS-RSRP or SS-RSRQ measurements of identified inter-frequency cells if carrier frequency information is provided by the serving cell, even if no explicit neighbour list with physical layer cell identities is provided.

When the inter-frequency measurement is performed on a neighbour cell in FR2-2 with shared spectrum channel access, UE shall determine the CCA mode of the neighbour cell according to *channelAccessMode2-r17* of the cell configured in *SIB4*. If *channelAccessMode2-r17* of the cell is enabled, UE shall assume that CCA applies to the cell and perform measurement accordingly, and the requirements in clause 4.2A.2.4 shall apply; otherwise, UE shall assume that CCA does not apply to the cell and perform measurement accordingly, and requirements in 4.2.2.4 shall apply.

If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2A.2.7.

If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the UE shall search for and measure inter-frequency layers of higher, equal or lower priority in preparation for possible reselection. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority layers shall be the same as that defined below in this clause.

The UE shall be able to evaluate whether a newly detectable inter-frequency cell meets the reselection criteria defined in TS38.304 within $K_{carrier} * T_{detect,NR_Inter} + K_{carrier_CCA} * T_{detect,NR_Inter_CCA}$ if at least carrier frequency information is provided for inter-frequency neighbour cells by the serving cells when $T_{reselection} = 0$ provided that the reselection criteria is met by a margin of at least 5 dB in FR1 or 6.5dB in FR2-2 for reselections based on ranking or 6dB in FR1 or 7.5dB in FR2-2 for SS-RSRP reselections based on absolute priorities or 4dB in FR1 and 4dB in FR2-2 for SS-RSRQ reselections based on absolute priorities. The parameter $K_{carrier}$ is the number of NR inter-frequency carriers on licensed band and $K_{carrier_CCA}$ is the number of NR inter-frequency carriers on unlicensed band indicated by the serving cell. An inter-frequency cell is considered to be detectable according to the conditions defined in Annex B.1.3A for a corresponding Band.

When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{measure,NR_Inter_CCA}$. If after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall measure SS-RSRP or SS-RSRQ at least every $K_{carrier} * T_{measure,NR_Inter} + K_{carrier_CCA} * T_{measure,NR_Inter_CCA}$ for identified lower or equal priority inter-frequency cells. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

For a cell that is already identified, after 2 unsuccessful measurement attempts due to exceeding the maximum number of SMTC occasions not available at the UE, the UE shall detect cells on any of the configured serving- and/or non-serving carriers.

The UE shall filter SS-RSRP or SS-RSRQ measurements of each measured higher, lower and equal priority inter-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{measure,NR_Inter_CCA}/2$.

The UE shall not consider a NR neighbour cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an inter-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the inter-frequency cell has met reselection criterion defined TS 38.304 within $K_{carrier} * T_{evaluate,NR_Inter} + K_{carrier_CCA} * T_{evaluate,NR_Inter_CCA}$ when $T_{reselection} = 0$ as specified in table 4.2A.2.4-1 provided that the reselection criteria is met by

- the condition when performing equal priority reselection and when *rangeToBestCell* is not configured:
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2-2 or.

when *rangeToBestCell* is configured:

- the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
- if there are multiple such cells, the cell has the highest rank among them
- the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2-2 if the current serving cell is among them. or
- 6dB in FR1 or 7.5dB in FR2-2 for SS-RSRP reselections based on absolute priorities or
- 4dB in FR1 or 4dB in FR2-2 for SS-RSRQ reselections based on absolute priorities.

When evaluating cells for reselection, the SSB side conditions apply to both serving and inter-frequency cells.

If $T_{\text{reselection}}$ timer has a non zero value and the inter-frequency cell is satisfied with the reselection criteria, the UE shall evaluate this inter-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect that cell.

The UE is not expected to meet the measurement requirements for an inter-frequency carrier under DRX cycle=320 ms defined in Table 4.2A.2.4-1 under the following conditions:

- $T_{\text{SMTC_intra}} = T_{\text{SMTC_inter}} = 160$ ms; where $T_{\text{SMTC_intra}}$ and $T_{\text{SMTC_inter}}$ are periodicities of the SMTC occasions configured for the intra-frequency carrier and the inter-frequency carrier respectively, and
- SMTC occasions configured for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the SMTC occasions configured for the intra-frequency carrier, and
- SMTC occasions configured for the intra-frequency carrier and for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the paging occasion [1].

Table 4.2A.2.4-1: $T_{\text{detect,NR_Inter_CCA}}$, $T_{\text{measure,NR_Inter_CCA}}$ and $T_{\text{evaluate,NR_Inter_CCA}}$

DRX cycle length [s]	Scaling Factor (N1)		T _{detect,NR_Inter_CCA} [s] (number of DRX cycles)	T _{measure,NR_Inter_CCA} [s] (number of DRX cycles)	T _{evaluate,NR_Inter_CCA} [s] (number of DRX cycles)
	FR1	FR2-2 ^{Note 5}			
0.32	1	12	0.32xN1x(36+M _d)xM2 {(36+M _d)xN1xM2}	0.32xN1x(4+M _m) xM2 {(4+M _m)xN1xM2}	0.32xN1x(16+M _e) x M2 {(16+M _e)xN1 xM2}
0.64		8	0.64xN1x(28+M _d) {(28+M _d)xN1 }	0.64xN1x(2+M _m) {(2+M _m)xN1 }	0.64xN1x(8+M _e) {(8+M _e)xN1 }
1.28		6	1.28xN1x(25+M _d) {(25+M _d)xN1 }	1.28xN1x(1+M _m) {(1+M _m)xN1 }	1.28xN1x(5+M _e) {(5+M _e)xN1 }
2.56		5	2.56xN1x(23+M _d) {(23+M _d)xN1 }	2.56xN1x(1+M _m) {(1+M _m)xN1 }	2.56xN1x(3+M _e) {(3+M _e)xN1 }
Note 1:	M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1.				
Note 2:	M _d , M _m , M _e are the number of groups of consecutive N1 DRX cycles each group with at least one SMTC occasion not available at the UE during T _{detect,NR_Inter_CCA} , T _{measure,NR_Inter_CCA} and T _{evaluate,NR_Inter_CCA} , and M _m ≤ M _{m,max} , M _d ≤ M _{d,max} and M _e ≤ M _{e,max}				
Note 3:	M _{m,max} = 16 for DRX cycle length = 0.32s; M _{m,max} = 8 for DRX cycle length = 0.64s; M _{m,max} = 4 for DRX cycle length = 1.28s; M _{m,max} = 4 for DRX cycle length = 2.56s				
Note 4:	M _{d,max} = 4*M _{m,max} , M _{e,max} = 2*M _{m,max} .				
Note 5:	Applies for UE supporting FR2-2 power class 2&3. For UE supporting FR2-2 power class 1, N1 = 12 for all DRX cycle length.				

The UE shall restart the measurements upon exceeding $M_{m,\text{max}}$, $M_{d,\text{max}}$, or $M_{e,\text{max}}$.

4.2A.2.5 Measurements of inter-RAT E-UTRAN cells when subject to CCA on the serving cell

The requirements in clause 4.2.2.5 shall apply.

4.2A.2.6 Maximum interruption in paging reception when subject to CCA on the target cell

UE shall perform the cell re-selection with minimum interruption in monitoring downlink channels for paging reception.

At intra-frequency and inter-frequency cell re-selection, the UE shall monitor the downlink of serving cell for paging reception until the UE is capable to start monitoring downlink channels of the target intra-frequency and inter-frequency cell for paging reception. The interruption time shall not exceed $T_{SI,CCA} + 2 \cdot T_{\text{target_cell_SMTC_period}}$.

At inter-RAT cell re-selection, the UE shall monitor the downlink of serving cell for paging reception until the UE is capable to start monitoring downlink channels for paging reception of the target inter-RAT cell. For NR to E-UTRAN cell re-selection the interruption time shall not exceed $T_{SI-EUTRA} + 55$ ms.

$T_{SI,CCA}$ is the time required for receiving all the relevant system information data according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for an NR cell.

$T_{SI-EUTRA}$ is the time required for receiving all the relevant system information data according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 36.331 [16] for an E-UTRAN cell.

These requirements assume sufficient radio conditions, so that decoding of system information can be made without errors and does not take into account cell re-selection failure.

4.2A.2.7 General requirements

The requirements in clause 4.2.2.7 shall apply.

4.2B Cell Re-selection for RedCap

4.2B.1 Introduction

The terms SSB and SMTC in this clause apply to CD-SSB only if not specified otherwise.

The 1 Rx RedCap UE for performing the cell reselection procedure [1] applies:

- $Q_{rxlevmin}$ as the signaled value of $Q_{rxlevmin}$ [2] -1 dB.
- $Q_{qualmin}$ as the signaled value of $Q_{qualmin}$ [2] -1 dB.

4.2B.2 Requirements

4.2B.2.1 UE measurement capability for RedCap

4.2B.2.1.1 UE measurement capability for 1 Rx RedCap

For idle mode cell re-selection purposes, and for UE supporting *IdleInactiveMeasurements-r16* or *idleInactiveEUTRA-MeasReport-r16*, the UE shall be capable of monitoring at least:

- Intra-frequency carrier, and
- Depending on UE capability, 6 NR inter-frequency carriers, and
- Depending on UE capability, 6 FDD E-UTRA inter-RAT carriers, and
- Depending on UE capability, 6 TDD E-UTRA inter-RAT carriers.

In addition to the requirements defined above, a UE supporting E-UTRA measurements in RRC_IDLE state shall be capable of monitoring a total of at least 11 carrier frequency layers, which includes serving layer, comprising of any above defined combination of E-UTRA FDD, E-UTRA TDD and NR layers.

4.2B.2.1.2 UE measurement capability for 2 Rx RedCap

The capability defined in section 4.2.2.1 apply for this section.

4.2B.2.2 Measurement and evaluation of serving cell for RedCap UE

The UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $M1 \cdot N1$ DRX cycle; where:

- $M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and DRX cycle ≤ 0.64 second,
- otherwise $M1=1$.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least eDRX_IDLE cycle/2, if the UE is configured with eDRX cycle ≤ 10.24 s; otherwise DRX cycle/2.

If the UE is not configured with eDRX_IDLE cycle and the UE has evaluated according to Table 4.2B.2.2-1 for both 1Rx RedCap and 2Rx RedCap in N_{serv_RedCap} consecutive DRX cycles that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities. In this case the UE shall not relax measurements on any of the neighbour cells even if UE has fulfilled the criteria for meeting the relaxed measurement requirements defined clauses 4.2B.2.9.3, 4.2B.2.9.5, 4.2B.2.9.6, 4.2B.2.9.7, 4.2B.2.10.3, 4.2B.2.10.5, 4.2B.2.10.6, 4.2B.2.10.7, 4.2B.2.11.3, 4.2B.2.11.5, 4.2B.2.11.6, and 4.2B.2.11.7.

If the UE is configured with eDRX_IDLE cycle and has evaluated, according to Table 4.2B.2.2-2 or Table 4.2B.2.2-3, in N_{serv_RedCap} consecutive eDRX cycles if eDRX_IDLE cycle ≤ 10.24 s, otherwise N_{serv_RedCap} consecutive DRX cycles within a single PTW that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities. In this case the UE shall not relax measurements on any of the neighbour cells even if UE has fulfilled the criteria for meeting the relaxed measurement requirements defined clauses 4.2B.2.9.3, 4.2B.2.9.5, 4.2B.2.9.6, 4.2B.2.9.7, 4.2B.2.10.3, 4.2B.2.10.5, 4.2B.2.10.6, 4.2B.2.10.7, 4.2B.2.11.3, 4.2B.2.11.5, 4.2B.2.11.6, and 4.2B.2.11.7.

For the UE configured with eDRX_IDLE cycle, N_{serv_RedCap} is specified in Table 4.2B.2.2-2 for 1 Rx RedCap and 2 Rx RedCap in FR1 and in Table 4.2B.2.2-3 for FR2 for 2 Rx RedCap.

If the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency, inter-frequency and inter-RAT information indicated in the system information during the time T, the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1], where

- $T=10$ s if the UE is not configured with eDRX_IDLE cycle, or
- $T=MAX(10$ s, one eDRX_IDLE cycle) if the UE is configured with eDRX_IDLE cycle in FR1, or
- $T=MAX(10$ s, $N1 \cdot eDRX_IDLE$ cycle) if the UE is configured with eDRX_IDLE cycle less than 20.48s in FR2,
- Otherwise, $T=MAX(10$ s, one eDRX_IDLE cycle) if the UE is configured with eDRX_IDLE cycle no less than 20.48 s in FR2

Table 4.2B.2.2-1: N_{serv_RedCap}

DRX cycle length [s]	Scaling Factor (N1)		N _{serv_RedCap} [number of DRX cycles]
	FR1	FR2 ^{Note1}	
0.32	1	8	M1*N1*4
0.64		5	M1*N1*4
1.28		4	N1*2
2.56		3	N1*2
Note 1: Applies for RedCap UE of all FR2 power class.			

Table 4.2B.2.2-2: $N_{\text{serv_RedCap}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1)	Nserv_RedCap [number of DRX or eDRX cycles ^{Note 3}]
2.56	N/A	N/A	1	N1*2
5.12	N/A	N/A		N1*2
10.24	N/A	N/A		N1*2
20.48 ≤ eDRX_IDLE cycle length ≤10485.76	0.32	≥[1.28] (1)		N1*M1*2
	0.64	≥ 1.28 (1) (M1=1) or ≥ 2.56 (2) (M1=2)		N1*M1*2
	1.28	≥2.56 (2)		N1*2
	2.56	≥5.12 (4)		N1*2
NOTE 1: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs, when PTW is configured.				
NOTE 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].				
NOTE 3: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.				
NOTE 4: The lower bound of PTW length is derived based on				
Nserv_RedCap *DRX_cycle 1.28 * 1.28.				

Table 4.2B.2.2-3: $N_{\text{serv_RedCap}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1) ^{Note1}	$N_{\text{serv_RedCap}}$ [number of DRX or eDRX cycles ^{Note 4}]
2.56	N/A	N/A	3	$N1*2$
5.12	N/A	N/A	3	$N1*2$
10.24	N/A	N/A	3	$N1*2$
$20.48 \leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	$\geq 5.12 (4)$	8	$N1*2$
	0.64	$\geq 6.4 (5)$	5	$N1*2$
	1.28	$\geq 10.24 (8)$	4	$N1*2$
	2.56	$\geq 15.36 (12)$	3	$N1*2$
NOTE 1: Applies for RedCap UE of all FR2 power class. NOTE 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs, when PTW is configured. NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles. NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{N_{\text{serv_RedCap}} * \text{DRX_cycle}}{1.28} \right\rceil * 1.28$. NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.				

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2B.2.3 Measurements of intra-frequency NR cells for RedCap UE

The UE shall be able to identify new intra-frequency cells and perform SS-RSRP and SS-RSRQ measurements of the identified intra-frequency cells without an explicit intra-frequency neighbour list containing physical layer cell identities.

The UE shall be able to evaluate whether a newly detectable intra-frequency cell meets the reselection criteria defined in TS 38.304 [1] within $T_{\text{detect,NR_Intra_RedCap}}$ when that $T_{\text{reselection}} = 0$. An intra frequency cell is considered to be detectable according to the conditions defined in Annex B.1.4 for a corresponding Band.

The UE shall measure SS-RSRP and SS-RSRQ at least every $T_{\text{measure,NR_Intra_RedCap}}$ for intra-frequency cells that are identified and measured according to the measurement rules.

The UE shall filter SS-RSRP and SS-RSRQ measurements of each measured intra-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Intra_RedCap}}/2$.

The UE shall not consider an NR neighbour cell for cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an intra-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the intra-frequency cell has met reselection criterion defined in TS 38.304 [1] within $T_{\text{evaluate,NR_Intra_RedCap}}$ when $T_{\text{reselection}} = 0$ provided that:

when *rangeToBestCell* is not configured:

- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2 for 2 Rx RedCap.
- the cell is at least 4dB better ranked in FR1 for 1 Rx RedCap.

when *rangeToBestCell* is configured:

- the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS 38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
- if there are multiple such cells, the cell has the highest rank among them.
 - the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2 if the current serving cell is among them for 2 Rx RedCap.
 - the cell is at least 4dB better ranked in FR1 if the current serving cell is among them for 1 Rx RedCap.

The 1 Rx RedCap UE applies *absThreshSS-BlocksConsolidation* as the signaled value of *absThreshSS-BlocksConsolidation* [2] + 1 dB.

When evaluating cells for reselection, the SSB side conditions apply to both serving and non-serving intra-frequency cells.

If the $T_{\text{reselection}}$ timer has a non-zero value and an intra-frequency cell satisfies with the reselection criteria which are defined in TS 38.304 [1], the UE shall evaluate this intra-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

For both 1Rx RedCap and 2Rx RedCap not configured with eDRX_IDLE cycle, $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$ are specified in Table 4.2B.2.3-1

For 1 Rx RedCap and 2 Rx RedCap configured with eDRX_IDLE cycle, $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$ are specified in Table 4.2B.2.3-2 and Table 4.2B.2.3-3 for FR1 and FR2 respectively, where the requirements apply provided that the serving cell is configured with eDRX_IDLE and the DRX cycle length is same in all PTWs during any of $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$ when multiple PTWs are used.

Table 4.2B.2.3-1: $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$

DRX cycle length [s]	Scaling Factor (N1)		$T_{\text{detect,NR_Intra_RedCap}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_RedCap}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_RedCap}}$ [s] (number of DRX cycles)
	FR1	FR2 ^{Note1}			
0.32	1	8	$11.52 \times N1 \times M2$ ($36 \times N1 \times M2$)	$1.28 \times N1 \times M2$ ($4 \times N1 \times M2$)	$5.12 \times N1 \times M2$ ($16 \times N1 \times M2$)
0.64		5	$17.92 \times N1$ ($28 \times N1$)	$1.28 \times N1$ ($2 \times N1$)	$5.12 \times N1$ ($8 \times N1$)

1.28	4	32 x N1 (25 x N1)	1.28 x N1 (1 x N1)	6.4 x N1 (5 x N1)
2.56	3	58.88 x N1 (23 x N1)	2.56 x N1 (1 x N1)	7.68 x N1 (3 x N1)
Note 1: Applies for RedCap UE of all FR2 power class. Note 2: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_intra_RedCap}}$ is expected.				

Table 4.2B.2.3-2: $T_{\text{detect, NR_intra_RedCap}}$, $T_{\text{measure, NR_intra_RedCap}}$ and $T_{\text{evaluate, NR_intra_RedCap}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Tdetect,NR_Intra_RedCap [s] (number of DRX cycles or eDRX cycles ^{Note 3)}	Tmeasure,NR_Intra_RedCap [s] (number of DRX cycles or eDRX cycles ^{Note 3)}	Tevaluate,NR_Intra_RedCap [s] (number of DRX cycles or eDRX cycles ^{Note 3)}
2.56	-	-	58.88 (23)	2.56 (1)	7.68 (3)

NOTE 1: Applies for RedCap UE of all power class.

NOTE 2: The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs, when PTW is configured.

NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].

NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles.

NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Intra_RedCap} \times DRX_cycle}{1.28} \right\rceil * 1.28$.

NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2B.2.4 Measurements of inter-frequency NR cells for RedCap UE

The UE shall be able to identify new inter-frequency cells and perform SS-RSRP or SS-RSRQ measurements of identified inter-frequency cells if carrier frequency information is provided by the serving cell, even if no explicit neighbour list with physical layer cell identities is provided.

If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7.

If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the UE shall search for and measure inter-frequency layers of higher, equal, or lower priority in preparation for possible reselection. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority layers shall be the same as that defined below in this clause.

The UE shall be able to evaluate whether a newly detectable inter-frequency cell meets the reselection criteria defined in TS 38.304 [1] within $K_{carrier_RedCap} \times T_{detect,NR_Inter_RedCap}$ if at least carrier frequency information is provided for inter-frequency neighbour cells by the serving cells when $T_{reselection} = 0$ provided that the reselection criteria is met

For 2 Rx RedCap by a margin of at least

- 5 dB in FR1 or 6.5 dB in FR2 for reselections based on ranking or
- 6 dB in FR1 or 7.5 dB in FR2 for SS-RSRP reselections based on absolute priorities or
- 4 dB in FR1 and 4 dB in FR2 for SS-RSRQ reselections based on absolute priorities

For 1 Rx RedCap by a margin of at least

- 6 dB in FR1 for reselections based on ranking or
- 7 dB in FR1 for SS-RSRP reselections based on absolute priorities or
- 5 dB in FR1 for SS-RSRQ reselections based on absolute priorities.

The parameter $K_{\text{carrier_RedCap}}$ is the number of NR inter-frequency carriers indicated by the serving cell. An inter-frequency cell is considered to be detectable according to the conditions defined in Annex B.1.5 for a corresponding Band. When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{\text{measure,NR_Inter_RedCap}}$. If, after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall measure SS-RSRP or SS-RSRQ at least every $K_{\text{carrier_RedCap}} * T_{\text{measure,NR_Inter_RedCap}}$ for identified lower or equal priority inter-frequency cells. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall filter SS-RSRP or SS-RSRQ measurements of each measured higher, lower and equal priority inter-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Inter}}/2$.

The UE shall not consider a NR neighbour cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an inter-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the inter-frequency cell has met reselection criterion defined TS 38.304 [1] within $K_{\text{carrier}} * T_{\text{evaluate,NR_Inter_RedCap}}$ when $T_{\text{reselection}} = 0$ provided that the reselection criteria is met by

- the condition when performing equal priority reselection and
 - when *rangeToBestCell* is not configured:
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2 for 2 Rx RedCap.
 - the cell is at least 6dB better ranked in FR1 for 1 Rx RedCap.
 - when *rangeToBestCell* is configured:
 - the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value defined in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
 - if there are multiple such cells, the cell has the highest rank among them
 - the cell is at least 5dB better ranked in FR1 or 6.5dB better ranked in FR2 if the current serving cell is among them, or 6dB in FR1 or 7.5dB in FR2 for SS-RSRP reselections based on absolute priorities for 2 Rx RedCap or 4dB in FR1 or 4dB in FR2 for SS-RSRQ reselections based on absolute priorities for 2 Rx RedCap.
 - the cell is at least 6dB better ranked in FR1 if the current serving cell is among them, or [7dB] in FR1 for SS-RSRP reselections based on absolute priorities or [5dB] in FR1 for SS-RSRQ reselections based on absolute priorities for 1 Rx RedCap.

The 1 Rx RedCap UE applies *absThreshSS-BlocksConsolidation* as the signaled value of *absThreshSS-BlocksConsolidation* [2] + 1 dB.

When evaluating cells for reselection, the SSB side conditions apply to both serving and inter-frequency cells.

If the $T_{\text{reselection}}$ timer has a non-zero value and the inter-frequency cell satisfies with the reselection criteria, the UE shall evaluate this inter-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

The UE is not expected to meet the measurement requirements for an inter-frequency carrier under DRX cycle=320 ms defined in Table 4.2B.2.4-1 for both 1Rx RedCap and 2Rx RedCap under the following conditions:

- $T_{\text{SMTC_intra}} = T_{\text{SMTC_inter}} = 160$ ms; where $T_{\text{SMTC_intra}}$ and $T_{\text{SMTC_inter}}$ are periodicities of the SMTC occasions configured for the intra-frequency carrier and the inter-frequency carrier respectively, and

- SMTC occasions configured for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the SMTC occasions configured for the intra-frequency carrier, and
- SMTC occasions configured for the intra-frequency carrier and for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the paging occasion defined in TS38.304 [1].

For 1 Rx RedCap and 2 Rx RedCap not configured with eDRX_IDLE cycle, $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ are specified in Table 4.2B.2.4.1-1.

For 1 Rx RedCap and 2 Rx RedCap configured with eDRX_IDLE cycle, $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ are specified in Table 4.2B.2.4-2 and Table 4.2B.2.4-3 for FR1 and FR2 respectively. The requirements apply provided that the serving cell is configured with eDRX_IDLE and the DRX cycle length is same in all PTWs during any of $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ when multiple PTWs are used.

	2.56	≥15.36 (12)	3		2.56 x N1 (1 x N1)	5.12 x N1 (2 x N1)
NOTE 1: Applies for RedCap UE of all power class. NOTE 2: The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs, when PTW is configured. NOTE 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. NOTE 4: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s and 10.24s. Otherwise, number of DRX cycles. NOTE 5: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Inter_RedCap} \times DRX_cycle}{1.28} \right\rceil \times 1.28$. NOTE 6: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.						

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2B.2.5 Measurements of inter-RAT E-UTRAN cells for RedCap UE

If $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$ then the UE shall search for inter-RAT E-UTRAN layers of higher priority at least every $T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2B.2.7.

If $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the UE shall search for and measure inter-RAT E-UTRAN layers of higher, lower priority in preparation for possible reselection. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority inter-RAT E-UTRAN layers shall be the same as that defined below for lower priority RATs.

The requirements in this clause apply to inter-RAT E-UTRAN FDD measurements and E-UTRA TDD measurements. When the measurement rules indicate that inter-RAT E-UTRAN cells are to be measured, the UE shall measure RSRP and RSRQ of detected E-UTRA cells in the neighbour frequency list at the minimum measurement rate specified in this clause.

The parameter $N_{\text{EUTRA_carrier_RedCap}}$ is the total number of configured E-UTRA carriers in the neighbour frequency list. The UE shall filter RSRP and RSRQ measurements of each measured E-UTRA cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,EUTRAN_RedCap}}/2$.

An inter-RAT E-UTRA cell is considered to be detectable provided the following conditions are fulfilled:

- the same conditions as for inter-frequency RSRP measurements specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band, and
- the same conditions as for inter-frequency RSRQ measurements specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band.
- SCH conditions specified in TS 36.133 [15, Annex B.1.2] are fulfilled for a corresponding Band

The UE shall be able to evaluate whether a newly detectable inter-RAT E-UTRAN cell meets the reselection criteria defined in TS38.304 [1] within $(N_{\text{EUTRA_carrier_RedCap}}) * T_{\text{detect,EUTRAN_RedCap}}$ when $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ when $T_{\text{reselction}} = 0$ provided that the reselection criteria are met by a margin of at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities for 2 Rx RedCap and at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities for 1 Rx RedCap.

Cells which have been detected shall be measured at least every $(N_{\text{EUTRA_carrier_RedCap}}) * T_{\text{measure,EUTRAN_RedCap}}$ when $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$.

When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{\text{measure,EUTRAN_RedCap}}$. If, after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell.

If the UE detects on an inter-RAT E-UTRAN carrier, a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall not consider an inter-RAT E-UTRA cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For a cell that has been already detected, but has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that an already identified inter-RAT E-UTRA cell has met reselection criterion defined in TS 38.304 [1] within $(N_{\text{EUTRA_carrier_RedCap}}) * T_{\text{evaluate,EUTRAN_RedCap}}$ when $T_{\text{reselction}} = 0$ provided that the reselection criteria are met by a margin of at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities for 2 Rx RedCap and at least 6dB for RSRP reselections based on absolute priorities or 4dB for RSRQ reselections based on absolute priorities for 1 Rx RedCap.

If the $T_{\text{reselction}}$ timer has a non-zero value and the inter-RAT E-UTRA cell satisfies with the reselection criteria defined in TS 38.304 [1], the UE shall evaluate this E-UTRA cell for the $T_{\text{reselction}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect to this cell.

For 1 Rx RedCap and 2 Rx RedCap not configured with eDRX_IDLE cycle, $T_{\text{detect,EUTRAN_RedCap}}$, $T_{\text{measure,EUTRAN_RedCap}}$ and $T_{\text{evaluate, E-UTRAN_RedCap}}$ are specified in Table 4.2B.2.5-1.

For 1 Rx RedCap and 2 Rx RedCap configured with eDRX_IDLE cycle, $T_{\text{detect,EUTRAN_RedCap}}$, $T_{\text{measure,EUTRAN_RedCap}}$ and $T_{\text{evaluate, E-UTRAN_RedCap}}$ are specified in Table 4.2B.2.5-2, where the requirements apply provided that the serving cell is configured with eDRX_IDLE and the DRX cycle length is the same in all PTWs during any of $T_{\text{detect,EUTRAN_RedCap}}$, $T_{\text{measure,EUTRAN_RedCap}}$ and $T_{\text{evaluate, E-UTRAN_RedCap}}$ when multiple PTWs are used.

10.24	N/A	N/A	235.52 (23)	10.24 (1)	20.48 (2)
20.48 ≤ eDRX_IDLE cycle length ≤ 10485.76	0.32	≥1.28 (1)	$eDRX_cycle_length \times \left\lceil \frac{23}{\left\lceil PTW / DRX_cycle_length \right\rceil} \right\rceil$ (23)	0.32 (1)	0.64 (2)
	0.64	≥1.28 (1)		0.64 (1)	1.28 (2)
	1.28	≥2.56 (2)		1.28 (1)	2.56 (2)
	2.56	≥5.12 (4)		2.56 (1)	5.12 (2)
NOTE 1: The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs, if PTW is configured. NOTE 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. NOTE 3: Number of eDRX cycles when eDRX_IDLE cycle length equals 2.56s, 5.12s, and 10.24s; number of DRX cycles otherwise. NOTE 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,EUTRAN_RedCap}} \cdot DRX_cycle}{1.28} \right\rceil * 1.28$. NOTE 5: When eDRX=20.48s and DRX=0.32s, UE is allowed to perform cell evaluation within PTW in every 2 eDRX cycles.					

For any requirement in this section, when the UE transitions between any two states when being configured with eDRX_IDLE, changing eDRX_IDLE cycle length, or changing PTW configuration, the UE shall meet the transition requirement, which is the less stringent requirement of the two requirements corresponding to the first state and the second state, during the transition time interval which is the time corresponding to the transition requirement. After the transition time interval, the UE shall meet the requirement corresponding to the second state.

4.2B.2.6 Maximum interruption in paging reception for RedCap

The FDD, HD-FDD and TDD RedCap UE shall meet all applicable requirements specified in clause 4.2.2.6. In addition, when the UE is configured with eDRX_IDLE cycle, the UE shall not miss any paging in a PTW provided the paging is sent in at least 2 DRX cycles before the end of that PTW.

The 1 Rx RedCap in HD-FDD shall meet all applicable requirements specified in clause 4.2.2.6 under the following conditions

- at least 1 SSB is available at the UE in the serving cell during the last 160 ms duration.

4.2B.2.7 General requirements for RedCap

The requirements defined in section 4.2.2.7 apply for this section.

4.2B.2.8 Minimum requirement at transitions

When switching from:

- low mobility scenario to stationary scenario, or
- from low mobility scenario to stationary and not-at-cell-edge scenario,

the UE shall fulfill the requirements corresponding to low mobility scenario over measurement period (T_{relaxed}) and thereafter switch to requirements corresponding to stationary scenario, or stationary and not-at-cell-edge scenario. The measurement period, T_{relaxed} , is any of:

- $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$, defined in section 4.2B.2.9 for intra-frequency measurements on NR cells,

- $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ defined in section 4.2B.2.10 for inter-frequency measurements on NR cells and
- $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ defined in sections 4.2B.2.11 for inter-RAT E-UTRAN measurements.

When switching from:

stationary scenario to low mobility scenario, or

stationary and not-at-cell-edge scenario to low mobility scenario,

the UE shall fulfill the requirements corresponding to low mobility scenario upon fulfilling the switching criteria.

When switching from normal mode to low mobility scenario, stationary scenario or stationary and not-at-cell edge scenario during cell-reselection period, the UE shall fulfill the requirements corresponding to normal mode over measurement period (T_{normal}) and thereafter switch to requirements corresponding to low mobility scenario, stationary scenario or stationary and not-at-cell edge scenario. The measurement period, T_{normal} , is any of:

- $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$, defined in section 4.2B.2.3 for intra-frequency measurements on NR cells,
- $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ defined in section 4.2B.2.4 for inter-frequency measurements on NR cells and
- $T_{\text{measure,EUTRAN_RedCap}}$ and $T_{\text{evaluate,EUTRAN_RedCap}}$ defined in sections 4.2B.2.5 for inter-RAT E-UTRAN measurements.

When switching from:

low mobility scenario to normal mode, or

stationary scenario to normal mode, or

stationary and not-at-cell-edge scenario to normal mode

the UE shall fulfill the requirements corresponding to normal mode upon fulfilling the switching criteria.

No requirement is defined for multiple transitions of scenarios within one measurement period.

4.2B.2.9 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion for RedCap

4.2B.2.9.1 Introduction

This clause contains the requirements for measurements on intra-frequency NR cells when $S_{\text{rxlev}} \leq S_{\text{IntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{IntraSearchQ}}$ and when the UE is configured any of the following relaxed measurement criteria:

- Relaxed measurement criterion for a stationary UE defined in clause 5.2.4.9.3 in [1],
- Relaxed measurement criteria for a stationary UE and not-at-cell edge defined in clause 5.2.4.9.4 in [1],
- Both low mobility criterion and stationary criterion as defined in clause 5.2.4.9.1 and 5.2.4.9.3 or 5.2.4.9.4 in [1] respectively.
- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4.9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4.9.1 and 5.2.4.9.2 in [1] respectively.

4.2B.2.9.2 Measurements for UE fulfilling stationary criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *stationaryMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluationWhileStationary* [2] criterion and UE has fulfilled the *stationaryMobilityEvaluation* [2] criterion, or
- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled only the *stationaryMobilityEvaluation* [2] criterion

The requirements defined in clause 4.2B.2.3 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-1 and Table 4.2B.2.9.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-3 and Table 4.2B.2.9.2-4 for 1 Rx RedCap and 2 Rx RedCap respectively..
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-5 and Table 4.2B.2.9.2-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

Table 4.2B.2.9.2-1: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UEs fulfilling stationary criterion for 1 Rx RedCap UE

DRX cycle length [s]	$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)
0.32	$11.52 \times M2 \times K3$ (36 x M2 x K3)	$1.28 \times M2 \times K3$ (4 x M2 x K3)	$5.12 \times M2 \times K3$ (16 x M2 x K3)
0.64	$17.92 \times K3$ (28 x K3)	$1.28 \times K3$ (2 x K3)	$5.12 \times K3$ (8 x K3)
1.28	$32 \times K3$ (25 x K3)	$1.28 \times K3$ (1 x K3)	$6.4 \times K3$ (5 x K3)
2.56	$58.88 \times K3$ (23 x K3)	$2.56 \times K3$ (1 x K3)	$7.68 \times K3$ (3 x K3)
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_Intra_RedCap_Relax}}$ is expected. Note 2: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.9.2-2: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UEs fulfilling stationary criterion for 2 Rx RedCap UE

DRX cycle length [s]	Scaling Factor (N1)		$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)
	FR1	FR2 ^{Note1}			
0.32	1	8	$11.52 \times N1 \times M2 \times K3$ (36 x N1 x M2 x K3)	$1.28 \times N1 \times M2 \times K3$ (4 x N1 x M2 x K3)	$5.12 \times N1 \times M2 \times K3$ (16 x N1 x M2 x K3)
0.64		5	$17.92 \times N1 \times K3$ (28 x N1 x K3)	$1.28 \times N1 \times K3$ (2 x N1 x K3)	$5.12 \times N1 \times K3$ (8 x N1 x K3)
1.28		4	$32 \times N1 \times K3$ (25 x N1 x K3)	$1.28 \times N1 \times K3$ (1 x N1 x K3)	$6.4 \times N1 \times K3$ (5 x N1 x K3)
2.56		3	$58.88 \times N1 \times K3$ (23 x N1 x K3)	$2.56 \times N1 \times K3$ (1 x N1 x K3)	$7.68 \times N1 \times K3$ (3 x N1 x K3)

Note 1:	Applies for RedCap UE of all supporting FR2 power classes.
Note 2:	M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_Intra_RedCap_Relax}}$ is expected.
Note 3:	K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.

Table 4.2B.2.9.2-3: $T_{\text{detect, NR_Intra_RedCap_Relax}}$, $T_{\text{measure, NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	$T_{\text{detect, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)	$T_{\text{measure, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)	$T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)
2.56	$58.88 \times K3$ (23 x K3)	$2.56 \times K3$ (1 x K3)	$7.68 \times K3$ (3 x K3)
5.12	$117.76 \times K3$ (23 x K3)	$5.12 \times K3$ (1 x K3)	$10.24 \times K3$ (2 x K3)
10.24	$235.52 \times K3$ (23 x K3)	$10.24 \times K3$ (1 x K3)	$20.48 \times K3$ (2 x K3)
Note 1: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.9.2-4: $T_{\text{detect, NR_Intra_RedCap_Relax}}$, $T_{\text{measure, NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s (Frequency range FR2)

eDRX_IDLE cycle length [s]	$T_{\text{detect, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)	$T_{\text{measure, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)	$T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ [s] (number of eDRX IDLE cycles)
2.56	$58.88 \times N1 \times K3$ (23 x N1 x K3)	$2.56 \times N1 \times K3$ (1 x N1 x K3)	$7.68 \times N1 \times K3$ (3 x N1 x K3)
5.12	$117.76 \times N1 \times K3$ (23 x N1 x K3)	$5.12 \times N1 \times K3$ (1 x N1 x K3)	$10.24 \times N1 \times K3$ (2 x N1 x K3)
10.24	$235.52 \times N1 \times K3$ (23 x N1 x K3)	$10.24 \times N1 \times K3$ (1 x N1 x K3)	$20.48 \times N1 \times K3$ (2 x N1 x K3)
Note 1: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.9.2-5: $T_{\text{detect, NR_Intra_RedCap_Relax}}$, $T_{\text{measure, NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle greater than 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	$T_{\text{detect, NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})	$T_{\text{measure, NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})	$T_{\text{evaluate, NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles or eDRX cycles ^{Note 3})
$20.48 \leq \text{eDRX_IDLE cycle length} \leq [163.84]$	0.32	≥ 6.4 ([5])	$\left\lceil \frac{\text{eDRX_cycle_length}}{23} \right\rceil \times K3$ (23 x K3)	$0.32 \times M2 \times K3$ (1 x M2 x K3)	$0.64 \times M2 \times K3$ (2 x M2 x K3)
	0.64	≥ 12.8 ([10])		$0.64 \times K3$ (1 x K3)	$1.28 \times K3$ (2 x K3)

	1.28	≥ 15.36 ([12])		1.28 x K3 (1 x K3)	2.56 x K3 (2 x K3)
	2.56	≥ 30.72 ([24])		2.56 x K3 (1 x K3)	5.12 x K3 (2 x K3)
Note 1: The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs. Note 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 3: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra_RedCap_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$. Note 4: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect,NR_Intra_RedCap_Relax}}$ is expected. Note 5: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion.					

Table 4.2B.2.9.2-6: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle greater than 10.24s (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1) Note1	T _{detect,NR_Intra_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)	T _{measure,NR_Intra_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)	T _{evaluate,NR_Intra_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)
20.48 ≤ eDRX_IDLE cycle length ≤[163.84]	0.32	≥30.72 (24)	8	$K3 \times eDRX_cycle_length \times \left\lceil \frac{23 \times N1}{PTW / DRX_cycle_length} \right\rceil$ (23 x N1 x K3)	0.32 x N1 x K3 (1 x N1 x K3)	0.64 x N1 x K3 (2 x N1 x K3)
	0.64	≥38.4 (30)	5		0.64 x N1 x K3 (1 x N1 x K3)	1.28 x N1 x K3 (2 x N1 x K3)
	1.28	40.96 (32)	4		1.28 x N1 x K3 (1 x N1 x K3)	2.56 x N1 x K3 (2 x N1 x K3)
	2.56	40.96 (32)	3		20.48 (8)	40.96 (16)
Note 1: Applies for RedCap UE of all supporting FR2 power classes. Note 2: The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra_RedCap_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$. Note 5: The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW. Note 6: The evaluation shall not be performed across PTW's. In this case the evaluation is performed in the next available PTW. Note 7: For DRX cycle length is 0.32s, 0.64s, and 2.56s, K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion. For DRX cycle length is 1.28s, K3 = 4 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion.						

4.2B.2.9.3 Measurements for a UE fulfilling not-at-cell edge while stationary criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and
- both criteria are fulfilled, and,
- less than 4 hours have passed since measurements for cell reselection were performed

The requirements defined in this clause apply regardless of eDRX_IDLE configurations.

In this case the UE is not required to meet $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$ as defined in clause 4.2B.2.3.

4.2B.2.9.3A Measurements for a UE fulfilling stationary and not-at-cell-edge criteria

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has also fulfilled both criteria, or
- UE is configured with *cellEdgeEvaluation* [2] criterion, *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *cellEdgeEvaluation* and *stationaryMobilityEvaluation* [2] criteria

The requirements defined in clause 4.2B.2.3 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-1 and Table 4.2B.2.9.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-3 and Table 4.2B.2.9.2-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.2-5 and Table 4.2B.2.9.2-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

4.2B.2.9.4 Measurements for a UE fulfilling low mobility and stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and *stationaryMobilityEvaluation* [2] criterion, and has also fulfilled both criteria, or
- UE is configured with *lowMobilityEvaluation* [2] criterion, *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *lowMobilityEvaluation* and *stationaryMobilityEvaluation* [2] criteria

The requirements defined in clause 4.2B.2.9.2 apply for this clause.

4.2B.2.9.5 Measurements for a UE fulfilling low mobility and not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled this criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] and *cellEdgeEvaluationWhileStationary* [2] criterion, and UE has fulfilled both criteria

The requirements defined in clause 4.2B.2.9.3 apply for this clause.

4.2B.2.9.6 Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled that criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and has fulfilled both criteria

The requirements defined in clause 4.2B.2.9.3 apply for this clause.

4.2B.2.9.7 Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has fulfilled both criteria

The requirements defined in clause 4.2B.2.9.3 apply for this clause.

4.2B.2.9.8 Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and has also fulfilled that criterion, or UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *stationaryMobilityEvaluation* [2] criteria

The requirements defined in clause 4.2.2.9.4 apply for this clause.

4.2B.2.9.9 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

The requirements defined in clause 4.2B.2.3 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.9-1 and Table 4.2B.2.9.9-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.9-3 and Table 4.2B.2.9.9-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.9-5 and Table 4.2B.2.9.9-6 for 1 Rx RedCap and 2 Rx RedCap respectively.

RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

Table 4.2B.2.9.9-1: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UEs fulfilling low mobility criterion for 1 Rx RedCap UE

DRX cycle length [s]	$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)
0.32	$11.52 \times M2 \times K1$ ($36 \times M2 \times K1$)	$1.28 \times M2 \times K1$ ($4 \times M2 \times K1$)	$5.12 \times M2 \times K1$ ($16 \times M2 \times K1$)

	2.56	40.96 (32)	3		20.48 (8)	40.96 (16)
Note 1:	Applies for RedCap UE of all supporting FR2 power classes.					
Note 2:	The number of DRX cycles in this table is given for the DRX cycles within PTWs.					
Note 3:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].					
Note 4:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra_RedCap_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$.					
Note 5:	The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW.					
Note 6:	The evaluation shall not be performed across PTW's.					
Note 7:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation criterion</i> [2].					

4.2B.2.9.10 Measurements for UE fulfilling not-at-cell edge criterion

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion and UE is not configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *cellEdgeEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criteria and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

The requirements defined in clause 4.2B.2.3 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.10-1 and Table 4.2B.2.9.10-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.10-3 and Table 4.2B.2.9.10-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ are as specified in Table 4.2B.2.9.10-5 and Table 4.2B.2.9.10-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

Table 4.2B.2.9.10-1: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UEs fulfilling not-at-cell edge criterion for 1 Rx RedCap UE

DRX cycle length [s]	$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX cycles)
0.32	$11.52 \times M2 \times K1$ (36 x M2 x K1)	$1.28 \times M2 \times K1$ (4 x M2 x K1)	$5.12 \times M2 \times K1$ (16 x M2 x K1)
0.64	$17.92 \times K1$ (28 x K1)	$1.28 \times K1$ (2 x K1)	$5.12 \times K1$ (8 x K1)
1.28	$32 \times K1$ (25 x K1)	$1.28 \times K1$ (1 x K1)	$6.4 \times K1$ (5 x K1)
2.56	$58.88 \times K1$ (23 x K1)	$2.56 \times K1$ (1 x K1)	$7.68 \times K1$ (3 x K1)
Note 1: M2 = 1.5 if SMTTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1.			
Note 2: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.			

Table 4.2B.2.9.10-2: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for UEs fulfilling not-at-cell edge criterion for 2 Rx RedCap UE

Note 1: Applies for RedCap UE of all supporting FR2 power classes. Note 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Intra_RedCap_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$. Note 5: The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW. Note 6: The evaluation shall not be performed across PTW's. Note 7: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation criterion</i> [2].						

4.2B.2.9.11 Measurements for UE fulfilling low mobility and not-at-cell edge criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and
- both criteria are fulfilled, and
- less than 1 hour have passed since measurements for cell reselection were performed

In this case the UE is not required to meet $T_{\text{detect,NR_Intra_RedCap}}$, $T_{\text{measure,NR_Intra_RedCap}}$ and $T_{\text{evaluate,NR_Intra_RedCap}}$ as defined in Table 4.2B.2.3.

4.2B.2.10 Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion

4.2B.2.10.1 Introduction

This clause contains the requirements for measurements on inter-frequency NR cells when $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ and when the UE is configured any of the following relaxed measurement criteria:

- Relaxed measurement criterion for a stationary UE defined in clause 5.2.4.9.3 in [1],
- Relaxed measurement criterion for a stationary UE not at cell edge defined in clause 5.2.4.9.4 in [1],
- Both low mobility criterion and stationary criterion as defined in clause 5.2.4.9.1 and 5.2.4.9.3 or 5.2.4.9.4 in [1] respectively.
- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4. 9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4. 9.1 and 5.2.4.9.2 in [1] respectively.

4.2B.2.10.2 Measurements for UE fulfilling stationary criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with *stationaryMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluationWhileStationary* [2] criterion and UE has fulfilled the *stationaryMobilityEvaluation* [2] criterion, or
- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled only the *stationaryMobilityEvaluation* [2] criterion.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements defined in clause 4.2B.2.4 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.2-1 and Table 4.2B.2.10.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.2-3 and Table 4.2B.2.10.2-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.2-5 and Table 4.2B.2.10.2-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for inter-frequency layers of higher priority at least every $K2 \cdot T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7 and, $K2 = 240$.

Table 4.2B.2.10.2-1: $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ for 1 Rx RedCap UE

DRX cycle length [s]	$T_{detect,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)
0.32	$11.52 \times 1.5 \times K3$ ($36 \times 1.5 \times K3$)	$1.28 \times 1.5 \times K3$ ($4 \times 1.5 \times K3$)	$5.12 \times 1.5 \times K3$ ($16 \times 1.5 \times K3$)
0.64	$17.92 \times K3$ ($28 \times K3$)	$1.28 \times K3$ ($2 \times K3$)	$5.12 \times K3$ ($8 \times K3$)
1.28	$32 \times K3$ ($25 \times K3$)	$1.28 \times K3$ ($1 \times K3$)	$6.4 \times K3$ ($5 \times K3$)

2.56	58.88 x K3 (23 x K3)	2.56 x K3 (1 x K3)	7.68 x K3 (3 x K3)
Note 1: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.10.2-2: $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ for 2 Rx RedCap UE

DRX cycle length [s]	Scaling Factor (N1)		T _{detect,NR_Inter_RedCap_Relax} [s] (number of DRX cycles)	T _{measure,NR_Inter_RedCap_Relax} [s] (number of DRX cycles)	T _{evaluate,NR_Inter_RedCap_Relax} [s] (number of DRX cycles)
	FR1	FR2 ^{Note1}			
0.32	1	8	11.52 × N1 × 1.5 × K3 (36 × N1 × 1.5 × K3)	1.28 × N1 × 1.5 × K3 (4 × N1 × 1.5 × K4)	5.12 × N1 × 1.5 × K3 (16 × N1 × 1.5 × K3)
0.64		5	17.92x N1 × K3 (28 × N1 × K3)	1.28 × N1 × K3 (2 × N1 × K3)	5.12 × N1 × K3 (8 × N1 × K3)
1.28		4	32 × N1 × K3 (25 × N1 × K3)	1.28 × N1 × K3 (1 × N1 × K3)	6.4 × N1 × K3 (5 × N1 × K3)
2.56		3	58.88 × N1 × K3 (23 × N1 × K3)	2.56 × N1 × K3 (1 × N1 × K3)	7.68 × N1 × K3 (3 × N1 × K3)
Note 1:	Applies for RedCap UE of all supporting power class.				
Note 2:	K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.				

Table 4.2B.2.10.2-3: $T_{\text{detect, NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate, NR_Inter_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	$T_{\text{detect, NR_Inter_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure, NR_Inter_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate, NR_Inter_RedCap_Relax}}$ [s] (number of DRX cycles)
2.56	58.88 x K3 (23 x K3)	2.56 x K3 (1 x K3)	5.12 x K3 (2 x K3)
5.12	117.76 x K3 (23 x K3)	5.12 x K3 (1 x K3)	10.24 x K3 (2 x K3)
10.24	235.52 x K3 (23 x K3)	10.24 x K3 (1 x K3)	20.48 x K3 (2 x K3)
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_Inter_RedCap_Relax}}$ is expected.			
Note 2: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.10.2-4: $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s (Frequency range FR2) f

eDRX_IDLE cycle length [s]	$T_{\text{detect,NR_Inter_RedCap_Relax}}$ [s] (number of eDRX cycles)	$T_{\text{measure,NR_Inter_RedCap_Relax}}$ [s] (number of eDRX cycles)	$T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ [s] (number of eDRX cycles)
2.56	58.88 x N1 x K3 (23 x N1 x K3)	2.56 x N1 x K3 (1 x N1 x K3)	7.68 x N1 x K3 (3 x N1 x K3)
5.12	117.76 x N1 x K3 (23 x N1 x K3)	5.12 x N1 x K3 (1 x N1 x K3)	10.24 x N1 x K3 (2 x N1 x K3)
10.24	235.52 x N1 x K3 (23 x N1 x K3)	10.24 x N1 x K3 (1 x N1 x K3)	20.48 x N1 x K3 (2 x N1 x K3)
Note 1: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.10.2-5: $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle greater than 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Tdetect,NR_Inter_RedCap_Relax [s] (number of DRX cycles)	Tmeasure,NR_Inter_RedCap_Relax [s] (number of DRX cycles)	Tevaluate,NR_Inter_RedCap_Relax [s] (number of DRX cycles)
20.48 ≤ eDRX_IDLE cycle length ≤[163.84]	0.32	≥64] (5)	$eDRX_cycle_length \times \left\lceil \frac{23}{PTW/DRX_cycle_length} \right\rceil \times K$ (23 x K3)	0.32 x M2 x K3 (1 x M2 x K3)	0.64 x M2 x K3 (2 x M2 x K3)
	0.64	≥12.8 (10)		0.64 x K3 (1 x K3)	1.28 x K3 (2 x K3)
	1.28	≥15.36 (12)		1.28 x K3 (1 x K3)	2.56 x K3 (2 x K3)
	2.56	≥30.72 (4)		2.56 x K3 (1 x K3)	5.12 x K3 (2 x K3)
Note 1:	The number of DRX cycles in this table corresponds to for the DRX cycles within PTWs.				
Note 2:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].				
Note 3:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Inter_RedCap_Relax} \times DRX_cycle}{1.28} \right\rceil \times 1.28$.				
Note 4:	K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion.				

Table 4.2B.2.10.2-6: $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle (Frequency range FR2) for eDRX_IDLE cycle larger than 10.24 s

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	Scaling Factor (N1) Note1	T _{detect,NR_Inter_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)	T _{measure,NR_Inter_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)	T _{evaluate,NR_Inter_RedCap_Relax} [s] (number of DRX cycles or eDRX cycles Note 3)
20.48 ≤ eDRX_IDLE cycle length ≤[163.84]	0.32	≥30.72 (24)	8	$K3 \times eDRX_cycle_length \times \left\lceil \frac{23 \times N1}{PTW/DRX_cycle_length} \right\rceil$ (23 x N1 x K3)	0.32 x N1 x K3 (1 x N1 x K3)	0.64 x N1 x K3 (2 x N1 x K3)
	0.64	≥38.4 (30)	5		0.64 x N1 x K3 (1 x N1 x K3)	1.28 x N1 x K3 (2 x N1 x K3)
	1.28	40.96 (32)	4		1.28 x N1 x K3 (1 x N1 x K3)	2.56 x N1 x K3 (2 x N1 x K3)
	2.56	40.96 (32)	3		20.48 (8)	40.96 (16)
Note 1: Applies for RedCap UE of all supporting FR2 power classes. Note 2: The number of DRX cycles in this table is given for the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Inter_RedCap_Relax}} \times DRX_cycle}{1.28} \right\rceil \times 1.28$. Note 5: For DRX cycle length is 0.32s, 0.64s and 2.56s, K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion. For DRX cycle length is 1.28s, K3 = 4 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion.						

4.2B.2.10.3 Measurements for a UE fulfilling not-at-cell edge while stationary criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and
- both criteria are fulfilled, and
- less than 4 hours have passed since measurements for cell reselection were performed.

In this case the UE is not required to meet $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ as defined in clause 4.2B.2.4.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the UE shall search for, measure and evaluate inter-frequency layers of higher, equal or lower priority at least every 4 hours.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE shall search for inter-frequency layers of higher priority at least every $K2 \cdot T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and $K2=240$.

The requirements defined in this clause apply regardless of eDRX_IDLE configurations.

4.2B.2.10.3A Measurements for a UE fulfilling stationary and not-at-cell-edge-criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, has also fulfilled both criteria, or
- UE is configured with *cellEdgeEvaluation* [2] criterion and with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *cellEdgeEvaluation* and *stationaryMobilityEvaluation* [2] criteria

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements defined in clause 4.2B.2.4 apply for this clause except that:

- $T_{\text{detect,NR_Inter_RedCap_Relax}}$ as specified in Table 4.2B.2.10.2-1 and Table 4.2B.2.10.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- $T_{\text{measure,NR_Inter_RedCap_Relax}}$ as specified in Table 4.2B.2.10.2-1 and Table 4.2B.2.10.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ as specified in Table 4.2B.2.10.2-1 and Table 4.2B.2.10.2-2 for 1 Rx RedCap and 2 Rx RedCap respectively.

If the UE is configured with eDRX_IDLE cycle then the requirements in Table 4.2B.2.10.2-3 and Table 4.2B.2.10.2-4 are applicable for eDRX cycle up to 10.24 s in FR1 and FR2 respectively.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, then the requirements in Table 4.2B.2.10.2-5 and Table 4.2B.2.10.2-6 respectively apply provided that eDRX cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$ then the UE shall search for inter-frequency layers of higher priority at least every $K2 \cdot T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and, $K2 = 240$.

4.2B.2.10.4 Measurements for a UE fulfilling low mobility and stationary criteria

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and *stationaryMobilityEvaluation* [2] criterion, and has also fulfilled both criteria, or,
- UE is configured with *lowMobilityEvaluation* [2] criterion and with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] not configured, and UE has fulfilled *lowMobilityEvaluation* and *stationaryMobilityEvaluation* [2] criteria

The requirements defined in clause 4.2B.2.10.2 apply for this clause.

4.2B.2.10.5 Measurements for a UE fulfilling low mobility and not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled this criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] and *cellEdgeEvaluationWhileStationary* [2] criterion, and UE has fulfilled both criteria

The requirements defined in clause 4.2B.2.10.3 apply for this clause.

4.2B.2.10.6 Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled that criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has fulfilled both criteria

The requirements defined in clause 4.2B.2.10.3 apply for this clause.

4.2B.2.10.7 Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on intra-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has fulfilled both criteria

The requirements defined in clause 4.2B.2.10.3 apply for this clause.

4.2B.2.10.8 Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criteria

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and has also fulfilled that criterion, or UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *stationaryMobilityEvaluation* [2] criterion.

In this case the UE is not required to meet $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ as defined in clause 4.2B.2.4.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the requirements of $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ defined in clause 4.2.2.10.4 apply for this clause.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, the UE the requirements of $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ defined in clause 4.2B.2.10.2 apply for this clause.

4.2B.2.10.9 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements are defined as follows:

- For a UE not configured with eDRX_IDLE, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.9-1 and Table 4.2B.2.10.9-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.9-3 and Table 4.2B.2.10.9-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ are as specified in Table 4.2B.2.10.9-5 and Table 4.2B.2.10.9-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ and the UE is configured with *highPriorityMeasRelax* [2] then the UE shall search for inter-frequency layers of higher priority at least every $K2 \cdot T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2B.2.7 and, $K2 = 60$. Otherwise, if the UE is not configured with *highPriorityMeasRelax* [2] then the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2B.2.7.

Table 4.2B.2.10.9-1: $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ for UEs fulfilling low mobility criterion for 1 Rx RedCap UE

DRX cycle length [s]	$T_{detect,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)
0.32	$11.52 \times M2 \times K1$ (36 $\times M2 \times K1$)	$1.28 \times M2 \times K1$ (4 $\times M2 \times K1$)	$5.12 \times M2 \times K1$ (16 $\times M2 \times K1$)
0.64	$17.92 \times K1$ (28 $\times K1$)	$1.28 \times K1$ (2 $\times K1$)	$5.12 \times K1$ (8 $\times K1$)
1.28	$32 \times K1$ (25 $\times K1$)	$1.28 \times K1$ (1 $\times K1$)	$6.4 \times K1$ (5 $\times K1$)
2.56	$58.88 \times K1$ (23 $\times K1$)	$2.56 \times K1$ (1 $\times K1$)	$7.68 \times K1$ (3 $\times K1$)
Note 1: $M2 = 1.5$ if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise $M2=1$.			
Note 2: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.10.9-2: $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ for UEs fulfilling low mobility criterion for 2 Rx RedCap UE

DRX cycle length [s]	Scaling Factor (N1)		$T_{detect,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,NR_Inter_RedCap_Relax}$ [s] (number of DRX cycles)
	FR1	FR2 ^{Note1}			
0.32	1	8	$11.52 \times N1 \times M2 \times K1$ (36 $\times N1 \times M2 \times K1$)	$1.28 \times N1 \times M2 \times K1$ (4 $\times N1 \times M2 \times K1$)	$5.12 \times N1 \times M2 \times K1$ (16 $\times N1 \times M2 \times K1$)
0.64		5	$17.92 \times N1 \times K1$ (28 $\times N1 \times K1$)	$1.28 \times N1 \times K1$ (2 $\times N1 \times K1$)	$5.12 \times N1 \times K1$ (8 $\times N1 \times K1$)
1.28		4	$32 \times N1 \times K1$ (25 $\times N1 \times K1$)	$1.28 \times N1 \times K1$ (1 $\times N1 \times K1$)	$6.4 \times N1 \times K1$ (5 $\times N1 \times K1$)

	1.28	≥30.72 (24)	4		1.28 × N1 × K1 (1 × N1 × K1)	2.56 × N1 × K1 (2 × N1 × K1)
	2.56	40.96 (32)	3		20.48 (8)	40.96 (16)
Note 1: Applies for RedCap UE of all supporting FR2 power classes. Note 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39]. Note 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Inter_RedCap_Relax}} \times \text{DRX_cycle}}{1.28} \right\rceil \times 1.28$. Note 5: The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW. Note 6: The evaluation shall not be performed across PTW's. Note 7: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation criterion</i> [2].						

4.2B.2.10.10 Measurements for UE fulfilling not-at-cell edge criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion, and UE is not configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled the *cellEdgeEvaluation* [2] criterion or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements defined in clause 4.2B.2.4 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ are as specified in Table 4.2B.2.10.10-1 and Table 4.2B.2.10.10-2 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ are as specified in Table 4.2B.2.10.10-3 and Table 4.2B.2.10.10-4 for 1 Rx RedCap and 2 Rx RedCap respectively.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ are as specified in Table 4.2B.2.10.10-5 and Table 4.2B.2.10.10-6 for 1 Rx RedCap and 2 Rx RedCap respectively, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ and regardless of whether the UE is configured with *highPriorityMeasRelax* [2] or not, the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2B.2.7

Table 4.2B.2.10.10-1: $T_{detect,NR_Inter_RedCap_Relax}$, $T_{measure,NR_Inter_RedCap_Relax}$ and $T_{evaluate,NR_Inter_RedCap_Relax}$ for UEs fulfilling low mobility criterion for 1 Rx RedCap UE

	2.56	40.96 (32)	3		20.48 (8)	40.96 (16)
Note 1: Applies for RedCap UE of all supporting FR2 power classes. Note 2: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs. Note 3: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].						

Note 4:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{\text{evaluate,NR_Inter_RedCap_Relax*DRX_cycle}}}{1.28} \right\rceil * 1.28$.
Note 5:	The measurement shall not be performed across PTW's. In this case the measurement is performed in the next available PTW.
Note 6:	The evaluation shall not be performed across PTW's.
Note 7:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation criterion</i> [2].

4.2B.2.10.11 Measurements for UE fulfilling low mobility and not-at-cell edge criterion

This clause contains requirements for measurements on inter-frequency NR cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- less than 1 hour have passed since measurements for cell reselection were last performed

In this case the UE is not required to meet $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ as defined in clause 4.2B.2.4.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the UE shall search for, measure and evaluate inter-frequency layers of higher, equal or lower priority at least every 1 hours.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE shall search for inter-frequency layers of higher priority at least every $K2 * T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and $K2=60$.

The requirements defined in this clause apply regardless of eDRX_IDLE configurations.

4.2B.2.11 Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion

4.2B.2.11.1 Introduction

This clause contains the requirements for measurements on inter-RAT E-UTRAN cells when the UE is configured any of the following relaxed measurement criteria:

- Relaxed measurement criterion for a stationary UE defined in clause 5.2.4.9.3 in [1],
- Relaxed measurement criterion for a stationary UE not at cell edge defined in clause 5.2.4.9.4 in [1],
- Both low mobility criterion and stationary criterion as defined in clause 5.2.4.9.1 and 5.2.4.9.3 in [1] respectively.
- Relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1],
- Relaxed measurement criterion for UE not-at-cell edge defined in clause 5.2.4.9.2 in [1],
- Both low mobility criterion and not-at-cell edge criterion as defined in clauses 5.2.4.9.1 and 5.2.4.9.2 in [1] respectively.

4.2B.2.11.2 Measurements for UE fulfilling stationary criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *stationaryMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluationWhileStationary* [2] criterion and UE has fulfilled the *stationaryMobilityEvaluation* [2] criterion, or

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled only the *stationaryMobilityEvaluation* [2] criterion

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements defined in clause 4.2B.2.5 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-1.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-2.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-3, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ then the UE shall search for E-UTRA inter-RAT frequency layers of higher priority at least every $K2 \cdot T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7 and, $K2 = 240$.

Table 4.2B.2.11.2-1: $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$, and $T_{evaluate,EUTRAN_RedCap_Relax}$

DRX cycle length [s]	$T_{detect,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)
0.32	$11.52 \times K3$ ($36 \times K3$)	$1.28 \times K3$ ($4 \times K3$)	$5.12 \times K3$ ($16 \times K3$)
0.64	$17.92 \times K3$ ($28 \times K3$)	$1.28 \times K3$ ($2 \times K3$)	$5.12 \times K3$ ($8 \times K3$)
1.28	$32 \times K3$ ($25 \times K3$)	$1.28 \times K3$ ($1 \times K3$)	$6.4 \times K3$ ($5 \times K3$)
2.56	$58.88 \times K3$ ($23 \times K3$)	$2.56 \times K3$ ($1 \times K3$)	$7.68 \times K3$ ($3 \times K3$)
Note 1: $K3 = 6$ is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.11.2-2: $T_{detect,E-UTRAN_RedCap_Relax}$, $T_{measure,E-UTRAN_RedCap_Relax}$ and $T_{evaluate,E-UTRAN_RedCap_Relax}$ for UE configured with eDRX_IDLE cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{detect,E-UTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,E-UTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,E-UTRAN_RedCap_Relax}$ [s] (number of DRX cycles)
2.56	$58.88 \times K3$ ($23 \times K3$)	$2.56 \times K3$ ($1 \times K3$)	$7.68 \times K3$ ($3 \times K3$)
5.12	$117.76 \times K3$ ($23 \times K3$)	$5.12 \times K3$ ($1 \times K3$)	$10.24 \times K3$ ($2 \times K3$)
10.24	$235.52 \times K3$ ($23 \times K3$)	$10.24 \times K3$ ($1 \times K3$)	$20.48 \times K3$ ($2 \times K3$)
Note 1: Void. Note 2: $K3 = 6$ is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.11.2-3: $T_{detect,E-UTRAN_RedCap_Relax}$, $T_{measure,E-UTRAN_RedCap_Relax}$ and $T_{evaluate,E-UTRAN_RedCap_Relax}$ for UE configured with eDRX_IDLE cycle greater than 10.24s

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	$T_{detect,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,E-UTRAN_RedCap_Relax}$ [s] (number of DRX cycles)
----------------------------	----------------------	--	---	--	--

10.24 ≤ eDRX_IDLE cycle length ≤ [163.84]	0.32	≥6.4 (5)	$eDRX_cycle_length \times \left\lceil \frac{K3 \times 23}{PTW / DRX_cycle_length} \right\rceil$ (23 x K3)	0.32 x K3 (1 x K3)	0.64 x K3 (2 x K3)
	0.64	≥12.8 (10)		0.64 x K3 (1 x K3)	1.28 x K3 (2 x K3)
	1.28	≥15.36 (12)		1.28 x K3 (1 x K3)	2.56 x K3 (2 x K3)
	2.56	≥30.72 (4)		2.56 x K3 (1 x K3)	5.12 x K3 (2 x K3)
NOTE 1: The number of DRX cycles in this table corresponds to the DRX cycles within PTWs.					
NOTE 2: The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].					
NOTE 3: Void.					
NOTE 4: The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,E-UTRAN_RedCap_Relax} \times DRX_cycle}{1.28} \right\rceil * 1.28$.					
NOTE 5: K3 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion.					

4.2B.2.11.3 Measurements for a UE not-at-cell edge while stationary criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has fulfilled both criteria, and
- less than 4 hours have passed since measurements for cell reselection were last performed.

In this case the UE is not required to meet $T_{detect,EUTRAN_RedCap}$, $T_{measure,EUTRAN_RedCap}$ and $T_{evaluate,EUTRAN_RedCap}$ as defined in clause 4.2B.2.5.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$, the UE shall search for, measure and evaluate inter-RAT E-UTRAN layers of higher or lower priority at least every 4 hour.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, the UE shall search for inter-RAT E-UTRAN of higher priority at least every $K2 \cdot T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7 and $K2=240$.

The requirements defined in this clause apply regardless of eDRX_IDLE configurations.

4.2B.2.11.3A Measurements for a UE fulfilling stationary and not-at-cell-edge criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, or,
- UE is configured with *cellEdgeEvaluation* [2] criterion *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *cellEdgeEvaluation* and *stationaryMobilityEvaluation* [2] criterion.

When $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ then the requirements defined in clause 4.2B.2.5 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-1.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-2.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.2-3, provided eDRX_IDLE cycle is ≤ [163.84] sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, the UE shall search for inter-RAT E-UTRAN of higher priority at least every $K2 \cdot T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2.7 and $K2=240$.

4.2B.2.11.4 Measurements for a UE fulfilling low mobility and stationary criteria

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and *stationaryMobilityEvaluation* [2] criterion, and has also fulfilled both criteria, or,
- UE is configured with *lowMobilityEvaluation* [2] criterion and with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *lowMobilityEvaluation* and *stationaryMobilityEvaluation* [2] criteria

The requirements defined in clause 4.2B.2.11.2 apply for this clause.

4.2B.2.11.5 Measurements for a UE fulfilling low mobility and stationary not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE has fulfilled this criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] and *cellEdgeEvaluationWhileStationary* [2] criterion, and UE has fulfilled both criteria

The requirements defined in clause 4.2B.2.11.3 apply for this clause.

4.2B.2.11.6 Measurements for a UE fulfilling not-at-cell edge and not-at-cell edge while stationary criteria

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled that criterion, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has fulfilled both criteria

The requirements defined in clause 4.2B.2.11.3 apply for this clause.

4.2B.2.11.7 Measurements for a UE fulfilling low mobility and not-at-cell edge criteria and not-at-cell-edge while stationary criteria

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion, and has also fulfilled both criteria

The requirements defined in clause 4.2B.2.11.3 apply for this clause.

4.2B.2.11.8 Measurements for a UE fulfilling low mobility, not-at-cell edge and stationary criteria

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and has fulfilled both criteria, and
- UE is configured with *stationaryMobilityEvaluation* [2] criterion and has also fulfilled that criterion, or UE is configured with both *stationaryMobilityEvaluation* [2] criterion and *cellEdgeEvaluationWhileStationary* [2] criterion and *combineRelaxedMeasCondition2* [2] is not configured, and UE has fulfilled *stationaryMobilityEvaluation* [2] criteria.

In this case the UE is not required to meet $T_{\text{detect,NR_Inter_RedCap}}$, $T_{\text{measure,NR_Inter_RedCap}}$ and $T_{\text{evaluate,NR_Inter_RedCap}}$ as defined in clause 4.2B.2.5.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the requirements of $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ defined in clause 4.2.2.11.4 apply for this clause.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE the requirements of $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$ defined in clause 4.2B.2.11.2 apply for this clause.

4.2B.2.11.9 Measurements for UE fulfilling low mobility criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *lowMobilityEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *lowMobilityEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *lowMobilityEvaluation* [2] criterion.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements defined in clause 4.2B.2.5 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ are as specified in Table 4.2B.2.11.9-1.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ are as specified in Table 4.2B.2.11.9-2.
- For a UE configured with eDRX_IDLE greater than 10.24s, $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ are as specified in Table 4.2B.2.11.9-3, provided eDRX_IDLE cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$ and the UE is configured with *highPriorityMeasRelax* [2] then the UE shall search for E-UTRA inter-RAT frequency layers of higher priority at least every $K2 \cdot T_{\text{higher_priority_search}}$ seconds where $T_{\text{higher_priority_search}}$ is described in clause 4.2B.2.7 and, $K2 = 60$. Otherwise, if the UE is not configured with *highPriorityMeasRelax* [2] then the UE shall search for E-UTRA inter-RAT frequency layers of higher priority at least every $T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2B.2.7.

Table 4.2B.2.11.9-1: $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$, and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$

DRX cycle length [s]	$T_{\text{detect,EUTRAN_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{measure,EUTRAN_RedCap_Relax}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ [s] (number of DRX cycles)
0.32	$11.52 \times K1$ ($36 \times K1$)	$1.28 \times K1$ ($4 \times K1$)	$5.12 \times K1$ ($16 \times K1$)
0.64	$17.92 \times K1$ ($28 \times K1$)	$1.28 \times K1$ ($2 \times K1$)	$5.12 \times K1$ ($8 \times K1$)
1.28	$32 \times K1$ ($25 \times K1$)	$1.28 \times K1$ ($1 \times K1$)	$6.4 \times K1$ ($5 \times K1$)
2.56	$58.88 \times K1$ ($23 \times K1$)	2.56 ($1 \times K1$)	$7.68 \times K1$ ($3 \times K1$)
Note 1: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.11.9-2: $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{\text{detect,EUTRAN_RedCap_Relax}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{measure,EUTRAN_RedCap_Relax}}$ [s] (number of eDRX_IDLE cycles)	$T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ [s] (number of eDRX_IDLE cycles)
2.56	$58.88 \times K1$ (23 x K1)	2.56 (1 x K1)	$7.68 \times K1$ (3 x K1)
5.12	$117.76 \times K1$ (23 x K1)	$5.12 \times K1$ (1 x K1)	$10.24 \times K1$ (2 x K1)
10.24	$235.52 \times K1$ (23 x K1)	$10.24 \times K1$ (1 x K1)	$20.48 \times K1$ (2 x K1)
Note 1: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.			

Table 4.2B.2.11.9-3: $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ for UE configured with eDRX_IDLE cycle greater than 10.24s (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	T _{detect, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)	T _{measure, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)	T _{evaluate, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)
20.48 ≤ eDRX_IDLE cycle length ≤ [163.84]	0.32	≥3.84 (3)	$eDRX_cycle_length \times \left\lceil \frac{23}{PTW/DRX_cycle_length} \right\rceil \times K$ (23 x K1)	0.32 x K1 (1 x K1)	0.64 x K1 (2 x K1)
	0.64	≥3.84 (3)		0.64 x K1 (1 x K1)	1.28 x K1 (2 x K1)
	1.28	≥7.68 (6)		1.28 x K1 (1 x K1)	2.56 x K1 (2 x K1)
	2.56	≥15.36 (12)		2.56 x K1 (1 x K1)	5.12 x K1 (2 x K1)
Note 1:	The number of DRX cycles in this table corresponds to the DRX cycles within PTWs.				
Note 2:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].				
Note 3:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate, EUTRAN_RedCap_Relax} \times DRX_cycle}{1.28} \right\rceil \times 1.28$.				
Note 4:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion.				

4.2B.2.11.10 Measurements for UE fulfilling with not-at-cell edge criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with *cellEdgeEvaluation* [2] criterion and UE is not configured with *cellEdgeEvaluation* [2] criterion and UE has fulfilled the *cellEdgeEvaluation* [2] criterion, or
- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion and *combineRelaxedMeasCondition* [2] is not configured, and UE has fulfilled only the *cellEdgeEvaluation* [2] criterion.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$ then the requirements defined in clause 4.2B.2.5 apply for this clause except that:

- For a UE not configured with eDRX_IDLE, $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ are as specified in Table 4.2B.2.11.10-1.
- For a UE configured with eDRX_IDLE up-to 10.24s, $T_{\text{detect,EUTRAN_RedCap_Relax}}$, $T_{\text{measure,EUTRAN_RedCap_Relax}}$ and $T_{\text{evaluate,EUTRAN_RedCap_Relax}}$ are as specified in Table 4.2B.2.11.10-2.

- For a UE configured with $eDRX_IDLE$ greater than 10.24s, $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ are as specified in Table 4.2B.2.11.10-3, provided $eDRX_IDLE$ cycle is $\leq [163.84]$ sec and evaluation/measurement time with relaxation on one carrier is not greater than single PTW window length.

When $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, then regardless of whether the UE is configured with *highPriorityMeasRelax* [2] or not, the UE shall search for inter-RAT E-UTRAN frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2B.2.7.

Table 4.2B.2.11.10-1: $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$

DRX cycle length [s]	$T_{detect,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{measure,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)	$T_{evaluate,EUTRAN_RedCap_Relax}$ [s] (number of DRX cycles)
0.32	$11.52 \times K1$ (36 x K1)	$1.28 \times K1$ (4 x K1)	$5.12 \times K1$ (16 x K1)
0.64	$17.92 \times K1$ (28 x K1)	$1.28 \times K1$ (2 x K1)	$5.12 \times K1$ (8 x K1)
1.28	$32 \times K1$ (25 x K1)	$1.28 \times K1$ (1 x K1)	$6.4 \times K1$ (5 x K1)
2.56	$58.88 \times K1$ (23 x K1)	$2.56 \times K1$ (1 x K1)	$7.68 \times K1$ (3 x K1)
Note 1: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.			

Table 4.2B.2.11.10-2: $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ for UE configured with $eDRX_IDLE$ cycle upto 10.24s

eDRX_IDLE cycle length [s]	$T_{detect,EUTRAN_RedCap_Relax}$ [s] (number of eDRX_IDLE cycles)	$T_{measure,EUTRAN_RedCap_Relax}$ [s] (number of eDRX_IDLE cycles)	$T_{evaluate,EUTRAN_RedCap_Relax}$ [s] (number of eDRX_IDLE cycles)
2.56	$58.88 \times K1$ (23 x K1)	$2.56 \times K1$ (1 x K1)	$7.68 \times K1$ (3 x K1)
5.12	$117.76 \times K1$ (23 x K1)	$5.12 \times K1$ (1 x K1)	$10.24 \times K1$ (2 x K1)
10.24	$235.52 \times K1$ (23 x K1)	$10.24 \times K1$ (1 x K1)	$20.48 \times K1$ (2 x K1)
Note 1: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.			

Table 4.2B.2.11.10-3: $T_{detect,EUTRAN_RedCap_Relax}$, $T_{measure,EUTRAN_RedCap_Relax}$ and $T_{evaluate,EUTRAN_RedCap_Relax}$ for UE configured with $eDRX_IDLE$ cycle greater than 10.24s

eDRX_IDLE cycle length [s]	DRX cycle length [s]	PTW length [s] (number of 1.28s periods)	T _{detect, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)	T _{measure, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)	T _{evaluate, EUTRAN_RedCap_Relax} [s] (number of DRX cycles)
20.48 ≤ eDRX_IDLE cycle length ≤[163.84]	0.32	≥3.84 (3)	$eDRX_cycle_length \times \left\lceil \frac{23}{PTW/DRX_cycle_length} \right\rceil \times K1$ (23 x K1)	0.32 x K1 (1 x M2 x K1)	0.64 x K1 (2 x M2 x K1)
	0.64	≥3.84 (3)		0.64 x K1 (1 x K1)	1.28 x K1 (2 x K1)
	1.28	≥7.68 (6)		1.28 x K1 (1 x K1)	2.56 x K1 (2 x K1)
	2.56	≥15.36 (12)		2.56 x K1 (1 x K1)	5.12 x K1 (2 x K1)
Note 1:	The number of DRX cycles in this table correspond to the DRX cycles within PTWs.				
Note 2:	The eDRX_IDLE cycle lengths are as specified in Section 10.5.5.32 of TS 24.008 [39].				
Note 3:	The lower bound of PTW length is derived based on $\left\lceil \frac{T_{evaluate,NR_Intra_RedCap_Relax} \times DRX_cycle}{1.28} \right\rceil \times 1.28$.				
Note 4:	K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the cellEdgeEvaluation [2] criterion.				

4.2B.2.11.11 Measurements for UE fulfilling low mobility and not-at-cell edge criterion

This clause contains requirements for measurements on inter-RAT E-UTRAN cells provided that:

- UE is configured with both *lowMobilityEvaluation* [2] criterion and *cellEdgeEvaluation* [2] criterion, and both criteria are fulfilled, and
- less than 1 hour have passed since measurements for cell reselection were performed,

In this case the UE is not required to meet $T_{\text{detect,EUTRAN_RedCap}}$, $T_{\text{measure,EUTRAN_RedCap}}$ and $T_{\text{evaluate,EUTRAN_RedCap}}$ as defined in clause 4.2B.2.5.

When $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, the UE shall search for, measure and evaluate inter-RAT E-UTRAN layers of higher or lower priority at least every 1 hour.

When $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, the UE shall search for inter-RAT E-UTRAN layers of higher priority at least every $K2 \cdot T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7 and $K2=60$.

The requirements defined in this clause apply regardless of eDRX_IDLE configurations.

4.2C Cell Re-selection for NR UE for Satellite Access

4.2C.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it.

When the UE is in either *Camped Normally* state or *Camped on Any Cell* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency and inter-frequency cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS 38.304 [1], allowing the UE to limit its measurement activity.

4.2C.2 Requirements

4.2C.2.1 UE measurement capability

For idle mode cell re-selection purposes, the UE shall be capable of monitoring at least:

- Intra-frequency carrier, and
- Depending on UE capability, 7 NR inter-frequency carriers.

4.2C.2.2 Measurement and evaluation of serving cell

The UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $M1 \cdot N1$ DRX cycle; where:

- $M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and DRX cycle ≤ 0.64 second and $N_{\text{SMTC}}=1$, upon one SMTC configured at the UE,
- $M1=2.5$ if SMTC periodicity (T_{SMTC}) > 20 ms and DRX cycle ≤ 0.64 second and $1 < N_{\text{SMTC}} \leq 4$,
- otherwise $M1=1$.

Where, N_{SMTC} is the number of SMTCs configured by SAN.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least DRX cycle/2.

If the UE has evaluated according to Table 4.2C.2.2-1 in N_{serv} consecutive DRX cycles that the serving cell does not fulfil the cell selection criterion S , the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities. Additionally, if the UE is

configured with ‘*t-service*’ [2], the UE shall start measurements of the neighbour cells indicated by the serving cell before ‘*t-service*’ is reached according to the requirements provided in clause 4.2C.2.3 and 4.2C.2.4. Also, if *distanceThresh* and *referenceLocation* are configured by the network [2] and the UE supports location-based measurement initiation and has obtained its location information, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell if the distance between UE and the serving cell reference location – *referenceLocation* – is larger than *distanceThresh*. The requirements apply provided that the distance exceeds the *distanceThresh* by a margin of 50 m.

If the UE is not configured with ‘*t-Service*’ [2] in the serving cell and if the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency and inter-frequency information indicated in the system information for 10 s, the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1].

If the UE is configured with ‘*t-Service*’ in the serving cell then the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 when any of the following conditions is fulfilled:

- If the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency and inter-frequency information indicated in the system information within 10 s since time instance T1 provided that ‘*t-Service*’ > T1 or
- If the UE in RRC_IDLE has not found any new suitable cell based on searches and measurements using the intra-frequency and inter-frequency information indicated in the system information within 10 s since the time instance ‘*t-Service*’.
- Where, T1 is the time instance in seconds when the UE has determined that the serving cell does not fulfil the cell selection criterion S.

Table 4.2C.2.2-1: N_{serv}

DRX cycle length [s]	Scaling Factor (N1)	N _{serv} [number of DRX cycles]
	FR1	
0.32	1	M1*N1*4
0.64		M1*N1*4
1.28		N1*2
2.56		N1*2
Note 1: The UE is not required to meet the requirements for 2.56s DRX cycle length for earth-moving LEO deployment.		

4.2C.2.3 Measurements of intra-frequency NR cells

The UE shall be able to identify new intra-frequency cells and perform SS-RSRP and SS-RSRQ measurements of the identified intra-frequency cells without an explicit intra-frequency neighbour list containing physical layer cell identities.

If $S_{rxlev} > S_{IntraSearchP}$ and $S_{qual} > S_{IntraSearchQ}$, and the distance between UE and serving cell reference location is smaller than *distanceThresh* if the *distanceThresh* is configured (see TS 38.304[1]) and UE has location information, then the UE is not required to perform measurement of intra-frequency.

The UE shall be able to evaluate whether a newly detectable intra-frequency cell meets the reselection criteria defined in TS38.304 [1] within $K_{multi_SMTC} \cdot T_{detect,NR_Intra}$ when that $T_{reselection} = 0$ if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or within $K_{multi_SMTC} \cdot T_{detect,NR_Intra_enh}$ if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled. An intra frequency cell is considered to be detectable according to the conditions defined in Annex B.1.6 for a corresponding Band.

The UE shall measure SS-RSRP and SS-RSRQ at least every $K_{multi_SMTC} \cdot T_{measure,NR_Intra}$ (see table 4.2C.2.3-1) if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or every $K_{multi_SMTC} \cdot T_{measure,NR_Intra_enh}$ (see table 4.2C.2.3-2) if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled, for intra-frequency cells that are identified and measured according to the measurement rules.

The UE shall filter SS-RSRP and SS-RSRQ measurements of each measured intra-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{\text{measure,NR_Intra}}/2$.

The parameter $K_{\text{multi_SMTc}}$ is the scaling factor for measurements of multiple SMTcs which correspond to different satellites.

If SMTcs do not overlap with each other,

- $K_{\text{multi_SMTc}} = 1$, if GEO satellites are measured on the carrier;
- $K_{\text{multi_SMTc}} = \left\lceil \frac{N_{\text{LEO},i}}{N_{\text{LEO},\text{simul}}} \right\rceil$, if LEO satellites are measured on the carrier;
- If SMTcs partially overlap with each other,
 - $K_{\text{multi_SMTc}} = N_{\text{SMTc},\text{overlap}}$, if only GEO satellites are measured on the carrier;
 - $K_{\text{multi_SMTc}} = \sum_{i=1}^{N_{\text{SMTc},\text{overlap}}} \left\lceil \frac{N_{\text{LEO},i}}{N_{\text{LEO},\text{simul}}} \right\rceil$, if only LEO satellites are measured on the carrier;

where

$N_{\text{LEO},i}$ is the number of LEO satellites to be measured within i-th SMTc,

$N_{\text{LEO},\text{simul}}$ is the number of LEO satellites that UE can measure in parallel within an SMTc,

$N_{\text{SMTc},\text{overlap}}$ is the number of SMTcs that partially overlap with each other.

Note: for deriving $K_{\text{multi_SMTc}}$ for $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$, two SMTcs are considered as overlapping if they overlap in one or more occasions during a single $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ or $T_{\text{evaluate,NR_Intra}}$.

The UE shall not consider a NR neighbour cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an intra-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the intra-frequency cell has met reselection criterion defined in TS38.304 [1] within $K_{\text{multi_SMTc}} * T_{\text{evaluate,NR_Intra}}$ if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or within $K_{\text{multi_SMTc}} * T_{\text{evaluate,NR_Intra_enh}}$ if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled, when $T_{\text{reselection}} = 0$ as specified in table 4.2C.2.3-1 or table 4.2C.2.3-2 provided that:

- when *rangeToBestCell* is not configured:
- the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2.
- when *rangeToBestCell* is configured:
- the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
- if there are multiple such cells, the cell has the highest rank among them.
 - the cell is at least 3dB better ranked in FR1 or 4.5dB better ranked in FR2 if the current serving cell is among them.

When evaluating cells for reselection, the SSB side conditions apply to both serving and non-serving intra-frequency cells.

If $T_{\text{reselection}}$ timer has a nonzero value and the intra-frequency cell is satisfied with the reselection criteria which are defined in TS38.304 [1], the UE shall evaluate this intra-frequency cell for the $T_{\text{reselection}}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect that cell.

Table 4.2C.2.3-1: $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$

DRX cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of DRX cycles)
	FR1			
0.32	1	$11.52 \times N1 \times M2$ (36 x N1 x M2)	$1.28 \times N1 \times M2$ (4 x N1 x M2)	$5.12 \times N1 \times M2$ (16 x N1 x M2)
0.64		$17.92 \times N1$ (28 x N1)	$1.28 \times N1$ (2 x N1)	$5.12 \times N1$ (8 x N1)
1.28		$32 \times N1$ (25 x N1)	$1.28 \times N1$ (1 x N1)	$6.4 \times N1$ (5 x N1)
2.56		$58.88 \times N1$ (23 x N1)	$2.56 \times N1$ (1 x N1)	$7.68 \times N1$ (3 x N1)
Note 1:	M2 = 2 if SMTC periodicity of measured intra-frequency cell > 20 ms and $1 < N_{\text{SMTC}} \leq 4$ upon more than 1 SMTC configured at the UE; M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms and $N_{\text{SMTC}}=1$ upon 1 SMTC configured at the UE; otherwise M2=1. Where, N_{SMTC} is the number of SMTCs configured by SAN If different SMTC periodicities are configured for different cells, the SMTC periodicity in this note is the one used by the cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed, and if the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_intra}}$ is expected.			
Note 2:	The UE is not required to meet the requirements for 2.56s DRX cycle length for earth-moving LEO deployment.			

Table 4.2C.2.3-2: $T_{\text{detect,NR_Intra_enh}}$, $T_{\text{measure,NR_Intra_enh}}$ and $T_{\text{evaluate,NR_Intra_enh}}$

DRX cycle length [s]	$T_{\text{detect,NR_Intra_enh}}$ [s] (number of DRX cycles)	$T_{\text{measure,NR_Intra_enh}}$ [s] (number of DRX cycles)	$T_{\text{evaluate,NR_Intra_enh}}$ [s] (number of DRX cycles)
0.32	$2.56 \times M2$ (8 x M2) ^{Note 1}	$0.32 \times M3$ (1 x M3) ^{Note 1}	$0.96 \times M4$ (3 x M4) ^{Note 1}
0.64	5.12 (8)	0.64 (1)	1.92 (3)
1.28	8.96 (7)	1.28 (1)	3.84 (3)
2.56	58.88 (23)	2.56 (1)	7.68 (3)
Note 1: When $\text{SMTC} \leq 40$ ms, $M2 = M3 = M4 = 1$; and when $\text{SMTC} > 40$ ms, $M2 = 2$, $M3 = M4 = 2.5$			

If ‘*t-Service*’ is broadcasted and applicable, UE shall be able to detect, measure, and evaluate neighbour cells before the serving cell stops serving the area regardless of whether the distance condition based on serving cell reference location is met or the legacy S_{rxlev} / S_{qual} condition are met, and when to start the detection, measurement and evaluation on neighbour cells is up to UE implementation. This requirement does not apply when the time span from the last slot of SI transmission within SI modification period where the broadcasting of the last updated value for *t-Service* is acquired by the UE for the first time to the first slot when the cell is scheduled to stop serving the area according to the broadcasted information is less than T_{trigger} .

$$T_{\text{trigger}} = \max(K_{\text{multi_SMTC}} * T_{\text{detect,NR_Intra}}, K_{\text{multi_SMTC}} * K_{\text{carrier}} * T_{\text{detect,NR_Inter}}),$$

where

- K_{carrier} is the number of NR inter-frequency carriers indicated by the serving cell,
- $T_{\text{detect,NR_Intra}}$ refers to intra-frequency cell detection delay in IDLE/INACTIVE mode defined in Table 4.2C.2.3-2,
- $T_{\text{detect,NR_Inter}}$ refers to inter-frequency cell detection delay in IDLE/INACTIVE mode defined in Table 4.2C.2.4-2.

The requirements in this clause apply provided that the number of SMTCs for intra-frequency carrier does not exceed the *parallelSMTC-r17*, otherwise UE may select one or subset of all the configured SMTCs sequentially for performing the measurements until all of the SMTCs can be measured. The selection of SMTCs to be used is up to UE implementation, and in this case, measurement period longer than the corresponding measurement period specified in Table 4.2C.2.3-1 and Table 4.2C.2.3-2 is expected.

4.2C.2.4 Measurements of inter-frequency NR cells

The UE shall be able to identify new inter-frequency cells and perform SS-RSRP or SS-RSRQ measurements of identified inter-frequency cells if carrier frequency information is provided by the serving cell, even if no explicit neighbour list with physical layer cell identities is provided.

If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$, and the distance between UE and serving cell reference location is smaller than *distanceThresh* if *distanceThresh* is configured and UE has location information, then the UE shall search for inter-frequency layers of higher priority at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2C.2.9.

If $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$, or the distance between UE and serving cell reference location is larger than *distanceThresh* if *distanceThresh* is configured and UE has location information, then the UE shall search for and measure inter-frequency layers of higher, equal or lower priority in preparation for possible reselection. The requirements apply provided that the distance exceeds the *distanceThresh* by a margin of 50 m. In this scenario, the minimum rate at which the UE is required to search for and measure higher priority layers shall be the same as that defined below in this clause.

The UE shall be able to evaluate whether a newly detectable inter-frequency cell meets the reselection criteria defined in TS38.304 [1] within $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{detect,NR_Inter}$ if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or within $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{detect,NR_Inter_enh}$ if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled, if at least carrier frequency information is provided for inter-frequency neighbour cells by the serving cells when $T_{reselection} = 0$ provided that the reselection criteria is met by a margin of at least [5]dB in FR1 for reselections based on ranking or [6]dB in FR1 for SS-RSRP reselections based on absolute priorities or [4]dB in FR1 for SS-RSRQ reselections based on absolute priorities. The parameter $K_{carrier}$ is the number of NR inter-frequency carriers indicated by the serving cell.

The parameter $K_{multi_SMTC,i}$ is the scaling factor for measurement of multiple SMTCs or multiple satellites

- If SMTCs do not overlap with each other,
 - $K_{multi_SMTC,i} = 1$, if GEO satellites are measured on the carrier;
 - $K_{multi_SMTC,i} = \left\lceil \frac{N_{LEO,i}}{N_{LEO,simul}} \right\rceil$, if LEO satellites are measured on the carrier;
- If SMTCs partially overlap with each other,
 - $K_{multi_SMTC,i} = N_{SMTC,overlap}$, if only GEO satellites are measured on the carrier;
 - $K_{multi_SMTC,i} = \sum_{i=1}^{N_{SMTC,overlap}} \left\lceil \frac{N_{LEO,i}}{N_{LEO,simul}} \right\rceil$, if only LEO satellites are measured on the carrier;

where

$N_{LEO,i}$ is the number of LEO satellites to be measured within i-th SMTC,

$N_{LEO,simul}$ is the number of LEO satellites that UE can measure in parallel within an SMTC, $N_{SMTC,overlap}$ is the number of SMTCs that partially overlap with each other.

Note: for deriving $K_{multi_SMTC,i}$ for T_{detect,NR_Inter} , $T_{measure,NR_Inter}$ and $T_{evaluate,NR_Inter}$ of frequency layer i , two SMTCs are considered as overlapping if they overlap in one or more occasions during a single T_{detect,NR_Inter} , $T_{measure,NR_Inter}$ or $T_{evaluate,NR_Inter}$.

An inter-frequency cell is considered to be detectable according to the conditions defined in Annex B.1.7 for a corresponding Band.

When higher priority cells are found by the higher priority search, they shall be measured at least every $T_{measure,NR_Inter}$. If, after detecting a cell in a higher priority search, it is determined that reselection has not occurred then the UE is not required to continuously measure the detected cell to evaluate the ongoing possibility of reselection. However, the minimum measurement filtering requirements specified later in this clause shall still be met by the UE before it makes any determination that it may stop measuring the cell. If the UE detects on a NR carrier a cell whose physical identity is

indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall measure SS-RSRP or SS-RSRQ at least every $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{measure,NR_Inter}$ (see table 4.2C.2.4-1) if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or every $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{measure,NR_Inter_enh}$ (see table 4.2C.2.4-2) if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled, for identified lower or equal priority inter-frequency cells. If the UE detects on a NR carrier a cell whose physical identity is indicated as not allowed for that carrier in the measurement control system information of the serving cell, the UE is not required to perform measurements on that cell.

The UE shall filter SS-RSRP or SS-RSRQ measurements of each measured higher, lower and equal priority inter-frequency cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by at least $T_{measure,NR_Inter}/2$.

The UE shall not consider a NR neighbour cell in cell reselection, if it is indicated as not allowed in the measurement control system information of the serving cell.

For an inter-frequency cell that has been already detected, but that has not been reselected to, the filtering shall be such that the UE shall be capable of evaluating that the inter-frequency cell has met reselection criterion defined TS 38.304 [1] within $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{evaluate,NR_Inter}$ if the UE does not support Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] or if the *enhancedMeasurementNGSO-r17* is not enabled, or within $\sum_{i=1}^{K_{carrier}} K_{multi_SMTC,i} * T_{evaluate,NR_Inter_enh}$ if the UE supports Enhanced RRM requirements for measurements in IDLE and INACTIVE modes defined in TS38.306 [14] and the *enhancedMeasurementNGSO-r17* is enabled, when $T_{reselection} = 0$ as specified in table 4.2C.2.4-1 provided that the reselection criteria is met by

- the condition when performing equal priority reselection and when *rangeToBestCell* is not configured:
 - the cell is at least [5]dB better ranked in FR1 or.
- when *rangeToBestCell* is configured:
 - the cell has the highest number of beams above the threshold *absThreshSS-BlocksConsolidation* among all detected cells whose cell-ranking criterion R value in TS38.304 [1] is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.
 - if there are multiple such cells, the cell has the highest rank among them
 - the cell is at least [5]dB better ranked in FR1 if the current serving cell is among them. or
 - [6]dB in FR1 for SS-RSRP reselections based on absolute priorities or
 - 4]dB in FR1 for SS-RSRQ reselections based on absolute priorities.

When evaluating cells for reselection, the SSB side conditions apply to both serving and inter-frequency cells.

If $T_{reselection}$ timer has a non zero value and the inter-frequency cell is satisfied with the reselection criteria, the UE shall evaluate this inter-frequency cell for the $T_{reselection}$ time. If this cell remains satisfied with the reselection criteria within this duration, then the UE shall reselect that cell.

The UE is not expected to meet the measurement requirements for an inter-frequency carrier under DRX cycle=320 ms defined in Table 4.2C.2.4-1 under the following conditions:

- $T_{SMTC_intra} = T_{SMTC_inter} = 160$ ms; where
 - T_{SMTC_intra} is the periodicity of the SMTC configured for the intra-frequency carrier if no identified intra-frequency cell is in the PCI list of smtc2-LP on this intra-frequency carrier; T_{SMTC_intra} is the periodicity of the smtc2-LP configured for the intra-frequency carrier if at least one identified intra-frequency cell is in the PCI list of smtc2-LP on this intra-frequency carrier. During PSS/SSS detection, the periodicity of the SMTC configured for the intra-frequency carrier is assumed for T_{SMTC_intra} . If

the actual SSB transmission periodicity is greater than the SMTC configured for the intra-frequency carrier, longer $T_{\text{detect, NR_intra}}$ is expected.

- $T_{\text{SMTC_inter}}$ is the actual SMTC periodicity used by the inter-frequency cell being identified. During PSS/SSS detection, the periodicity of the SMTC configured for the inter-frequency carrier is assumed for $T_{\text{SMTC_inter}}$. If the actual SSB transmission periodicity is greater than the SMTC configured for the inter-frequency carrier, longer $T_{\text{detect, NR_inter}}$ is expected.
- SMTC occasions configured for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the SMTC occasions configured for the intra-frequency carrier, and
- SMTC occasions configured for the intra-frequency carrier and for the inter-frequency carrier occur up to 1 ms before the start or up to 1 ms after the end of the paging occasion in TS38.304 [1].

Table 4.2C.2.4-1: $T_{\text{detect, NR_Inter}}$, $T_{\text{measure, NR_Inter}}$ and $T_{\text{evaluate, NR_Inter}}$

DRX cycle length [s]	Scaling Factor (N1)	T _{detect,NR_Inter} [s] (number of DRX cycles)	T _{measure,NR_Inter} [s] (number of DRX cycles)	T _{evaluate,NR_Inter} [s] (number of DRX cycles)
	FR1			
0.32	1	11.52 x N1 x 1.5 (36 x N1 x 1.5)	1.28 x N1 x 1.5 (4 x N1 x 1.5)	5.12 x N1 x 1.5 (16 x N1 x 1.5)
0.64		17.92x N1 (28 x N1)	1.28 x N1 (2 x N1)	5.12 x N1 (8 x N1)
1.28		32 x N1 (25 x N1)	1.28 x N1 (1 x N1)	6.4 x N1 (5 x N1)
2.56		58.88 x N1 (23 x N1)	2.56 x N1 (1 x N1)	7.68 x N1 (3 x N1)
Note 1: UE is not required to fulfil the requirements for 2.56s DRX cycle length for earth-moving LEO deployment.				

Table 4.2C.2.4-2: $T_{\text{detect, NR_Inter_enh}}$, $T_{\text{measure, NR_Inter_enh}}$ and $T_{\text{evaluate, NR_Inter_enh}}$

DRX cycle length [s]	$T_{\text{detect, NR_Inter_enh}}$ [s] (number of DRX cycles)	$T_{\text{measure, NR_Inter_enh}}$ [s] (number of DRX cycles)	$T_{\text{evaluate, NR_Inter_enh}}$ [s] (number of DRX cycles)
0.32	$[3.2 \times M2 (10 \times M2)]$ Note 1	$[0.32 \times M3 ([1] \times M3)]$ Note 1	$0.96 \times M4 (3 \times M4)$ Note 1
0.64	$[6.4 (10)]$	$[0.64 (1)]$	$1.92 (3)$
1.28	$[10.24 (8)]$	$1.28 (1)$	$3.84 (3)$
2.56	$58.88 (23)$	$2.56 (1)$	$7.68 (3)$
Note 1: When $\text{SMTC} \leq 40$ ms, $M2 = M3 = M4 = 1$; and when $\text{SMTC} > 40$ ms, $M2 = 1.5$, $M3 = M4 = 2$			

If $t\text{-Service}$ is broadcasted and applicable, UE shall be able to detect, measure, and evaluate neighbour cells before the serving cell stops serving the area regardless of whether the distance condition based on serving cell reference location or the legacy $S_{\text{rxlev}}/S_{\text{squal}}$ condition is met, and when to start detection, measurement, and evaluation is up to UE implementation. This requirement does not apply when the time span from the last slot of SI transmission within SI modification period where the broadcasting of the last updated value for $t\text{-Service}$ is acquired by the UE for the first time to the first slot when the cell is scheduled to stop serving the area according to the broadcasted information is less than T_{trigger} , and $T_{\text{trigger}} = \max(K_{\text{multi_SMTC}} \cdot T_{\text{detect, NR_Intra}}, K_{\text{carrier}} \cdot T_{\text{detect, NR_Inter}})$ when serving cell is below the search threshold, and $T_{\text{trigger}} = \max(K_{\text{multi_SMTC}} \cdot T_{\text{detect, NR_Intra}}, N_{\text{layer}} \cdot [60\text{s}])$ when serving cell is above the search threshold, where

- K_{carrier} is the number of NR inter-frequency carriers indicated by the serving cell,
- N_{layer} is the total number of higher priority NR carrier frequencies broadcasted in system information,
- $T_{\text{detect, NR_Intra}}$ refers to HST intra-frequency cell detection delay in IDLE/INACTIVE mode defined Table 4.2.2.3-2,
- $T_{\text{detect, NR_Inter}}$ refers to HST inter-frequency cell detection delay in IDLE/INACTIVE mode defined Table 4.2.2.4-2.

The requirements in this clause apply provided that the number of SMTCs for any inter-frequency carrier does not exceed the *parallelSMTC-r17*, otherwise UE may select one or subset of all the configured SMTCs sequentially until all

of the SMTCs can be measured, the selection of SMTCs to be used is up to UE implementation, and longer measurement delay than the corresponding measurement period specified in Table 4.2C.2.4-1 and Table 4.2C.2.4-2 is expected.

The requirements in this clause apply provided that the valid information for the satellite serving the target cell has been provided by the serving cell.

The requirements in this clause apply provided that SSB of neighbour cells are within the time shifted SMTC.

4.2C.2.5 Maximum interruption in paging reception

UE shall perform the cell re-selection with minimum interruption in monitoring downlink channels for paging reception.

At intra-frequency and inter-frequency cell re-selection, the UE shall monitor the downlink of serving cell for paging reception until the UE is capable to start monitoring downlink channels of the target intra-frequency and inter-frequency cell for paging reception. The interruption time shall not exceed $T_{SI-NR} + K \cdot T_{\text{target_cell_SMTC_period}}$ ms.

Where,

If the target cell belongs to the same satellite as the current one, and if the target cell is known, then $K = 2$.

If the target cell belongs to a different satellite than the current one and the target cell's satellite is GEO, and if the target cell is known, then $K = 2$.

If the target cell belongs to a different satellite than the current one and the target cell's satellite is non-GEO, then $K = 5$ if the target cell is known.

$T_{\text{target_cell_SMTC_period}}$ is the periodicity of the SMTC occasions configured for the target NR cell. If the target cell is in the PCI list of *smtc2-LP*, the SMTC periodicity follows *smtc2-LP*; otherwise, the SMTC periodicity follows *smtc*.

T_{SI-NR} is the time required for receiving all the relevant system information data according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for an NR cell.

The target cell is considered as known if it has been detectable during $T_{\text{detect,NR_Intra}}$ or $T_{\text{detect,NR_Inter}}$, and the time span between SIB broadcasting cell stop time and the cell stop time is not less than T_{trigger} . Otherwise, the target cell is considered as unknown, where $T_{\text{detect,NR_Intra}}$, $T_{\text{detect,NR_Inter}}$ and T_{trigger} are defined in 4.2C.2.3 and 4.2C.2.4. A longer interruption can be expected if the target cell is unknown.

These requirements assume sufficient radio conditions, so that decoding of system information can be made without errors and does not take into account cell re-selection failure.

4.2C.2.6 Minimum requirement at transitions

The requirements in clause 4.2.2.8 apply provided that target cell's satellite is GEO.

4.2C.2.7 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2.2.9 apply provided that target cell's satellite is GEO.

4.2C.2.8 Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2.2.10 apply provided that target cell's satellite is GEO.

4.2C.2.9 General requirements

The UE shall search every layer of higher priority at least every $T_{\text{higher_priority_search}} = (60 * N_{\text{layers}})$ seconds, where N_{layers} is the total number of higher priority NR carrier frequencies broadcasted in system information.

4.3 Minimization of Drive Tests (MDT)

4.3.1 Introduction

UE supporting minimisation of drive tests in RRC_IDLE shall be capable of:

- logging measurements in RRC_IDLE, reporting the logged measurements and meeting requirements in clause 4.3;
- logging of RRC connection establishment failure, reporting the logged failure and meeting requirements in clause 4.3;
- logging of radio link failure and handover failure, reporting the logged failure and meeting requirements in clause 4.3.

The logged MDT requirements consist of measurement requirements as specified in clause 4.3.2 and relative time stamp accuracy requirements as specified in clause 4.3.3. Both sets of requirements are applicable for intra-frequency, inter-frequency and inter-RAT cases in RRC_IDLE state. The MDT procedures are described in TS 37.320 [31].

For RRC connection establishment failure logging and reporting, the MDT requirements consist of requirements for measurements performed and logged in RRC_IDLE state specified in clause 4.3.2 and relative time stamp accuracy requirement for RRC connection establishment failure log reporting as specified in clause 4.3.4.

4.3.2 Measurement Requirements

The requirements specified in this clause apply for the following measurements performed and logged by the UE for MDT in RRC_IDLE:

- inter-RAT E-UTRA FDD and TDD RSRP,
- inter-RAT E-UTRA FDD and TDD RSRQ,
- SS-RSRP per cell,
- SS-RSRQ per cell,
- SS-RSRP per SSB index of the serving cell,
- SS-RSRQ per SSB index of the serving cell,
- best SSB index of the serving cell,
- the number of SSBs with different SSB index which are above the threshold *absThreshSS-BlocksConsolidation* for all detected cells whose cell-ranking criterion R value is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.

The requirements apply for the measurements included in logged MDT reports and RRC connection establishment failure reports.

The measurement values that are used to meet

- serving cell and reselection requirements as specified in clauses 4.2.2.2–4.2.2.7
- shall also apply to values logged for MDT measurements in RRC_IDLE state.

4.3.3 Requirements for Relative Time Stamp Accuracy

The relative time stamp for a logged measurement is defined as the time from the moment the MDT configuration was received at the UE until the measurement was logged, see TS 38.331 [2].

The accuracy of the relative time stamping is such that the drift of the time stamping shall be not more than ± 2 seconds per hour.

4.3.4 Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting

Relative time stamp for RRC connection establishment failure log reporting is defined as the time elapsed from the last RRC connection establishment failure to the time when the log is included in the report TS 38.331 [2]. The UE shall report the RRC connection establishment failure log, while meeting the accuracy requirement specified in this clause.

The accuracy of the relative time stamping for RRC connection establishment failure log reporting is such that the drift of the time stamping shall not be larger than ± 0.72 seconds per hour and ± 10 seconds over 48 hours. The relative time stamp accuracy requirements shall apply provided that:

- no power off or detach occurs after the RRC connection establishment failure had been detected and until the log is time-stamped.

4.3.5 Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting

The UE shall report the radio link and handover failure log, while meeting the accuracy requirements specified in this clause.

Relative time stamp accuracy requirements for *timeSinceFailure* reported for MDT in a radio link failure or handover failure log are specified in this clause. *timeSinceFailure* determines the time elapsed from the last radio link failure or handover failure in NR to the time when the log is included in the report TS 38.331 [2].

The accuracy of the relative time stamping for *timeSinceFailure* is such that the drift of the time stamping shall not be larger than ± 0.72 seconds per hour and ± 10 seconds over 48 hours. These relative time stamp accuracy requirements shall apply provided that:

- no power off or detach occurs after the RLF or handover failure had been detected and until the log is time-stamped.

4.3C Minimization of Drive Tests (MDT) for Satellite Access

Editor's note: the exact signalling names in the clause and values are subject to confirmation by RAN2 and change during performance requirement phase, respectively. And the brackets shall be removed by further agreements.

4.3C.1 Introduction

UE supporting minimisation of drive tests in RRC_IDLE shall be capable of:

- logging measurements in RRC_IDLE, reporting the logged measurements and meeting requirements in clause 4.3C;
- logging of RRC connection establishment failure, reporting the logged failure and meeting requirements in clause 4.3C;
- logging of radio link failure and handover failure, reporting the logged failure and meeting requirements in clause 4.3C.

The logged MDT requirements consist of measurement requirements as specified in clause 4.3C.2 and relative time stamp accuracy requirements as specified in clause 4.3C.3. Both sets of requirements are applicable for intra-frequency, inter-frequency and inter-RAT cases in RRC_IDLE state. The MDT procedures are described in TS 37.320 [31].

For RRC connection establishment failure logging and reporting, the MDT requirements consist of requirements for measurements performed and logged in RRC_IDLE state specified in clause 4.3C.2 and relative time stamp accuracy requirement for RRC connection establishment failure log reporting as specified in clause 4.3C.4.

4.3C.2 Measurement Requirements

The requirements specified in this clause apply for the following measurements performed and logged by the UE for MDT in RRC_IDLE:

- SS-RSRP per cell,
- SS-RSRQ per cell,
- SS-RSRP per SSB index of the serving cell,
- SS-RSRQ per SSB index of the serving cell,
- best SSB index of the serving cell,
- the number of SSBs with different SSB index which are above the threshold *absThreshSS-BlocksConsolidation* for all detected cells whose cell-ranking criterion R value is within *rangeToBestCell* of the cell-ranking criterion R value of the highest ranked cell.

The requirements apply for the measurements included in logged MDT reports and RRC connection establishment failure reports.

The measurement values that are used to meet

- serving cell and reselection requirements as specified in clauses 4.2C.2.2–4.2C.2.9

shall also apply to values logged for MDT measurements in RRC_IDLE state.

4.3C.3 Requirements for Relative Time Stamp Accuracy

The relative time stamp for a logged measurement is defined as the time from the moment the MDT configuration was received at the UE until the measurement was logged, see TS 38.331 [2].

The accuracy of the relative time stamping is such that the drift of the time stamping shall be not more than ± 2 seconds per hour.

4.3C.4 Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting

Relative time stamp for RRC connection establishment failure log reporting is defined as the time elapsed from the last RRC connection establishment failure to the time when the log is included in the report TS 38.331 [2]. The UE shall report the RRC connection establishment failure log, while meeting the accuracy requirement specified in this clause.

The accuracy of the relative time stamping for RRC connection establishment failure log reporting is such that the drift of the time stamping shall not be larger than ± 0.72 seconds per hour and ± 10 seconds over 48 hours. The relative time stamp accuracy requirements shall apply provided that:

- no power off or detach occurs after the RRC connection establishment failure had been detected and until the log is time-stamped.

4.3C.5 Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting

The UE shall report the radio link and handover failure log, while meeting the accuracy requirements specified in this clause.

Relative time stamp accuracy requirements for *timeSinceFailure* reported for MDT in a radio link failure or handover failure log are specified in this clause. *timeSinceFailure* determines the time elapsed from the last radio link failure or handover failure in NR to the time when the log is included in the report TS 38.331 [2].

The accuracy of the relative time stamping for *timeSinceFailure* is such that the drift of the time stamping shall not be larger than ± 0.72 seconds per hour and ± 10 seconds over 48 hours. These relative time stamp accuracy requirements shall apply provided that:

- no power off or detach occurs after the RLF or handover failure had been detected and until the log is time-stamped.

4.4 Idle Mode CA/DC Measurements

4.4.1 Introduction

A UE supporting *idleInactiveNR-MeasReport-r16* or *idleInactiveEUTRA-MeasReport-r16* shall perform the idle mode measurement on the inter-frequency CA and DC candidate frequencies/cells and E-UTRAN inter-RAT DC candidate frequencies/cells indicated by higher layers and meet the requirement specified in this clause. The UE shall perform idle mode measurements provided that the serving cell support early measurement and is within the validity area. The idle mode measurement requirements apply to a configured carrier frequency and the serving cell are among the supported band combination of the UE.

4.4.2 Measurement Requirements

For a UE which supports *idleInactiveNR-MeasReport-r16* or *idleInactiveEUTRA-MeasReport-r16* the UE shall support the idle mode CA measurements on the serving cell, and carriers configured for idle mode CA/DC measurement reporting provided T331 has not expired, the serving cell is supporting idle mode CA/DC measurement reporting and the serving cell is in the validity area.

4.4.2.1 Detected cell requirement during state transition and Idle mode

This subclause defines the requirements for the detected cell status for the idle mode CA/DC measurement when UE transitions from RRC Connected mode to Idle mode and after UE has entered Idle mode. The requirements are applicable to an NE-DC and NR carrier aggregation capable UE which has been configured with one or more of following, one or more SCells, one E-UTRAN PSCell or one or more downlink E-UTRAN SCells during the Connected mode and which supports *idleInactiveNR-MeasReport-r16* or *idleInactiveEUTRA-MeasReport-r16*. The requirements are applicable for SCell(s) and E-UTRAN FDD and TDD PSCell and SCells.

Upon releasing the connection and if the UE has been configured with idle mode CA measurement reporting, following requirements apply concerning the detected cells in Connected mode upon state transitioning to Idle mode and during Idle mode:

- A cell which is detected cell in Connected mode prior to connection release, shall remain detected after UE has entered Idle mode and during Idle mode, provided that the following conditions are met:
 - The UE has been provided with a list of cells and/or carrier frequencies for early measurement reporting by dedicated RRC signaling and
 - The detected cell is among the list of cells or on a carrier frequency provided for early measurement reporting, and
 - The UE is provided with a valid timer T331 by dedicated RRC signaling, and

- The detected cell and SSBs remains detectable until UE reconnect to the network and transmits the early measurement report, and
- The carrier frequency of the detected cell and the carrier frequency of the serving cell are among the supported band combination of the UE.

An inter-RAT E-UTRAN cell is considered detectable according to RSRP, $\text{RSRP} \hat{E}_s/\text{Iot}$, SCH_RP and $\text{SCH} \hat{E}_s/\text{Iot}$ defined in Annex B.1.1 and Annex B.1.2 in [15] for a corresponding Band. An inter-frequency cell is considered detectable according to the conditions in Annex B.1.2 and B.1.3 for a corresponding band. An SSB of an inter-frequency cell is considered detectable according to SSB_RP and $\text{SSB} \hat{E}_s/\text{Iot}$ defined in Annex B.1.2 and B.1.3 for a corresponding Band.

4.4.2.2 Measurements of inter-frequency CA/DC candidate cells

While T331 is running, the UE shall perform measurement on the configured inter-frequency carriers for idle mode CA/DC measurement reporting according to the UE measurement capability.

A UE which supports *idleInactiveNR-MeasReport-r16* shall support idle mode CA/DC measurements of:

- at least 7 inter-frequency carriers which are also configured for inter-frequency mobility measurements, and
- at least 7 inter-frequency carriers which are not configured for inter-frequency mobility measurements.

The UE shall be capable of monitoring a total of at least 7 inter-frequency carriers for idle mode CA/DC measurements comprising of carriers configured for inter-frequency mobility measurements and carriers not configured for inter-frequency mobility measurements.

For inter-frequency carriers configured for idle mode CA/DC measurements, if $\text{Srxlev} \leq \text{S}_{\text{nonIntraSearchP}}$ or $\text{Squal} \leq \text{S}_{\text{nonIntraSearchQ}}$ the inter-frequency measurement requirements in clause 4.2.2.4 shall apply, where UE shall search for and measure inter-frequency layers configured for idle mode CA/DC measurements in preparation for possible reporting. If $\text{Srxlev} > \text{S}_{\text{nonIntraSearchP}}$ and $\text{Squal} > \text{S}_{\text{nonIntraSearchQ}}$ the UE shall search for inter-frequency layers configured for idle mode CA/DC measurements at least every $T_{\text{higher_priority_search}}$ where $T_{\text{higher_priority_search}}$ is described in clause 4.2.2.7, where UE shall search for and measure inter-frequency layers configured for idle mode CA/DC measurements in preparation for possible reporting.

For UE supporting *idleInactiveNR-MeasBeamReport-r16*, if the UE is configured with *beamMeasConfigIdle-r16* for idle mode CA/DC measurement, the UE shall be capable of performing SS-RSRP, SS-RSRQ for at least

- 7 SSBs with different SSB index and/or PCI on an inter-frequency layer in FR1,
- 10 SSBs with different SSB index and/or PCI on an inter-frequency layer in FR2.

For UE supporting *idleInactiveNR-MeasBeamReport-r16*, if the UE is configured with *beamMeasConfigIdle-r16* on one or more carrier for idle mode CA/DC measurement, the UE, on each carrier, shall be able to:

- detect a newly detectable inter-frequency NR cell and perform RSRP/RSRQ measurement in preparation for reporting, and
- acquire the SSB index for a newly detectable inter-frequency NR cell if *beamMeasConfigIdle-r16* is configured on this carrier and perform RSRP/RSRQ measurement in preparation for reporting,

within the requirements defined in clause 4.2.2.4 plus $k \cdot T_{\text{SSB_index,NR_Inter}}$, where k is the number of carriers configured for idle mode CA measurement with *beamMeasConfigIdle-r16*, and $T_{\text{SSB_index,NR_Inter}}$ is the additional time period used to acquire the index of the SSB being measured as defined in table 4.4.2.2-1.

Table 4.4.2.2-1: $T_{\text{SSB_index,NR_Inter}}$

DRX cycle length [s]	Scaling Factor (N1)		$T_{\text{SSB_index,NR_Inter}}$ [s] (number of DRX cycles)
	FR1	FR2 ^{Note1}	
0.32	1	8	$N2 \times 1.28 \times N1 \times 1.5$ ($N2 \times 4 \times N1 \times 1.5$)
0.64		5	$N2 \times 1.28 \times N1$ ($N2 \times 2 \times N1$)

1.28		4	$N2 \times 1.28 \times N1$ ($N2 \times 1 \times N1$)
2.56		3	$N2 \times 2.56 \times N1$ ($N2 \times 1 \times N1$)
Note 1: Applies for UE supporting power class 2&3&4. For UE supporting power class 1, $N1 = 8$ for all DRX cycle length. NOTE 2: $N2 = 3$ if the NR inter-frequency carrier for idle mode CA/DC measurement reporting is in FR1, and $N2 = 5$ if the NR inter-frequency carrier for idle mode CA/DC measurement reporting is in FR2.			

In the absence or expiration of T331, it is up to UE implementation to perform the idle mode CA/DC measurement.

For inter-frequency carriers configured for idle mode CA/DC measurements, the UE shall be capable of performing SS-RSRP and SS-RSRQ measurements of the carriers, and the UE physical layer shall be capable of reporting SS-RSRP and SS-RSRQ measurements of the carriers configured for idle mode CA/DC measurements to higher layers, with measurement accuracy as specified in clauses 10.1.4B and 10.1.5B and 10.1.9B and 10.1.10B, respectively.

The UE shall be able to report idle mode CA/DC measurements when idle mode CA/DC measurement reporting is requested by the network.

4.4.2.3 Measurements on serving cell

The UE shall measure the RSRP and RSRQ level of the serving cell and evaluate the cell selection criterion S defined in clause 4.2.2.2 and the UE physical layer shall be capable of reporting RSRP and RSRQ measurements of the serving cell to higher layers, with measurement accuracy as specified in 10.1.2B, 10.1.3B, 10.1.7B and 10.1.8B.

4.4.2.4 Measurements of E-UTRAN inter-RAT DC candidate cells

While T331 is running, the UE shall perform measurement on the configured inter-RAT carriers for idle mode CA/DC measurement reporting according to the UE measurement capability.

A UE which supports *idleInactiveEUTRA-MeasReport-r16* shall support idle mode DC measurements of:

- at least 7 E-UTRAN inter-RAT carriers which are also configured for E-UTRAN inter-RAT mobility measurements, and
- at least 1 E-UTRAN inter-RAT carrier which is not configured for E-UTRAN inter-RAT mobility measurements.

The UE shall be capable of monitoring a total of at least 7 inter-RAT carriers for idle mode CA/DC measurements comprising of carriers configured for inter-RAT mobility measurements and carriers not configured for inter-RAT mobility measurements.

For inter-RAT carriers configured for idle mode CA/DC measurements, if $S_{rxlev} \leq S_{nonIntraSearchP}$ or $S_{qual} \leq S_{nonIntraSearchQ}$ the inter-RAT measurement requirements in clause 4.2.2.5 shall apply, where UE shall search for and measure inter-RAT layers configured for idle mode CA/DC measurements in preparation for possible reporting. If $S_{rxlev} > S_{nonIntraSearchP}$ and $S_{qual} > S_{nonIntraSearchQ}$ the UE shall search for inter-RAT layers configured for idle mode CA/DC measurements at least every $T_{higher_priority_search}$ where $T_{higher_priority_search}$ is described in clause 4.2.2, where UE shall search for and measure inter-RAT layers configured for idle mode CA/DC measurements in preparation for possible reporting.

For overlapping inter-RAT carriers configured for idle mode CA/DC measurements, the UE shall be capable of performing RSRP and RSRQ measurements of the carriers, and the UE physical layer shall be capable of reporting RSRP and RSRQ measurements of the carriers configured for idle mode CA/DC measurements to higher layers, with measurement accuracy as specified in clauses 9.1.3B.2 and 9.1.6B.2 [15], respectively.

The UE shall be able to report idle mode CA measurements when idle mode CA measurement reporting is requested by the network.

5 SA: RRC_INACTIVE state mobility

5.1 Cell Re-selection

5.1.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it.

When the UE is in *Camped Normally* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency and inter-RAT cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS38.304 [1], allowing the UE to limit its measurement activity.

5.1.2 Requirements

5.1.2.1 UE measurement capability

The requirements in clause 4.2.2.1 shall apply.

5.1.2.2 Measurement and evaluation of serving cell

The requirements in this clause apply when UE is configured with eDRX_IDLE, otherwise the requirements in clause 4.2.2.2 shall apply.

When UE is configured with eDRX_IDLE, the UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $M1 \cdot T$ for FR1 and $N1 \cdot T$ for FR2; where:

- T is determined according to clause 7.1 in [1],
- $M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and $T \leq 0.64$ second, otherwise $M1=1$.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least $T/2$.

If the UE has evaluated according to Table 5.1.2.2-1 or and Table 5.1.2.2-2 in N_{serv} consecutive T cycles that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

Table 5.1.2.2-1: N_{serv} for UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length[s]	T [s]	Nserv [number of T]
2.56 ≤eDRX_IDLE cycle length ≤10485.76	0.32 ≤DRX_Inactive cycle length ≤2.56; or 2.56 ≤eDRX_Inactive cycle length ≤10.24 if inactive eDRX is configured	0.32	4*M1
		0.64	4*M1
		1.28	2
		2.56	2
		5.12	2
		10.24	2
Note1: T is dertermined according to clause 7.1 in [1].			

Table 5.1.2.2-2: N_{serv} for UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length[s]	T [s]	Scaling Factor (N1)	N_{serv} [number of T]
		0.32	8	$4 \cdot N1$

2.56 ≤eDRX_IDLE cycle length ≤10485.76	0.32 ≤DRX_Inactive cycle length ≤2.56; or 2.56 ≤eDRX_Inactive cycle length ≤10.24 if inactive eDRX is configured	0.64	5	4* N1
		1.28	4	2* N1
		2.56	3	2* N1
		5.12	3	2* N1
		10.24	3	2* N1
Note1: T is dertermined according to clause 7.1 in [1].				

When UE transitions from measurements within PTW to measurements outside PTW or vice versa during one measurement period, the UE measurement requirements apply based on the longer measurement period requirements before or after the transition.

If the UE in RRC_INACTIVE has not found any new suitable cell based on searches and measurements using the intra-frequency, inter-frequency and inter-RAT information indicated in the system information during the time T', the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1], where:

- T' = 10 s, if the UE is not configured with eDRX_inactive cycle, or
- T' = MAX (10 s, one eDRX_INACTIVE cycle) if the UE is configured with eDRX_INACTIVE cycle for FR1, or
- T' = MAX (10 s, N1* eDRX_INACTIVE cycle) if the UE is configured with eDRX_INACTIVE cycle for FR2.

5.1.2.3 Measurements of intra-frequency NR cells

The requirements in this clause apply when UE is configured with eDRX_IDLE, otherwise the requirements in clause 4.2.2.3 shall apply. The requirements in clause 4.2.2.9 apply for UE configured with relaxed measurement criterion when UE is not configured with eDRX_IDLE.

When UE is configured with eDRX_IDLE, the requirements defined in section 4.2.2.3 shall apply with $T_{\text{detect,NR_Intra}}$, $T_{\text{measure,NR_Intra}}$ and $T_{\text{evaluate,NR_Intra}}$ defined in Table 5.1.2.3-1 and Table 5.1.2.3-2.

Table 5.1.2.3-1: T_{detect} , T_{meas} and T_{evaluate} for UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Intra}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of DRX or INACTIVE eDRX cycles)
2.56 $\leq \text{eDRX_IDLE}$ cycle length $\leq$ 10485.76	0.32	11.52 x M2 (36 x M2)	1.28 x M2 (4 x M2)	5.12 x M2 (16 x M2)
	0.64	17.92 (28)	1.28 (2)	5.12 (8)
	1.28	32 (25)	1.28 (1)	6.4 (5)
	2.56	58.88 (23)	2.56 (1)	7.68 (3)
	5.12	117.76 (23)	5.12 (1)	15.36 (3)
	10.24	235.52 (23)	10.24 (1)	30.72 (3)
Note1: M2 = 1.5 if SMTTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1.				

Table 5.1.2.3-2: T_{detect} , T_{meas} and T_{evaluate} for UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Intra}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra}}$ [s] (number of DRX or eDRX INACTIVE cycles)
2.56 $\leq \text{eDRX_IDLE}$	0.32	8	11.52 x N1 x M2 (36 x N1 x M2)	1.28 x N1 x M2 (4 x N1 x M2)	5.12 x N1 x M2 (16 x N1 x M2)

cycle length $\leq$ 10485.76	0.64	5	$17.92 \times N1$ (28 x N1)	$1.28 \times N1$ (2 x N1)	$5.12 \times N1$ (8 x N1)
	1.28	4	$32 \times N1$ (25 x N1)	$1.28 \times N1$ (1 x N1)	$6.4 \times N1$ (5 x N1)
	2.56	3	$58.88 \times N1$ (23 x N1)	$2.56 \times N1$ (1 x N1)	$7.68 \times N1$ (3 x N1)
	5.12	3	$117.76 \times N1$ (23 x N1)	$5.12 \times N1$ (1 x N1)	$15.36 \times N1$ (3 x N1)
	10.24	3	$235.52 \times N1$ (23 x N1)	$10.24 \times N1$ (1 x N1)	$30.72 \times N1$ (3 x N1)
Note1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1.					

5.1.2.4 Measurements of inter-frequency NR cells

The requirements in this clause apply when UE is configured with eDRX_IDLE, otherwise the requirements in clause 4.2.2.4 shall apply.

When UE is configured with eDRX_IDLE, the requirements defined in section 4.2.2.4 shall apply with $T_{\text{detect,NR_Inter}}$, $T_{\text{measure,NR_Inter}}$ and $T_{\text{evaluate,NR_Inter}}$ defined in Table 5.1.2.4-1 and Table 5.1.2.4-2, and with K_{carrier} defined as follows.

Table 5.1.2.4-1: T_{detect} , T_{meas} and T_{evaluate} for UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)
$2.56 \leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	11.52×1.5 (36 x 1.5)	1.28×1.5 (4 x 1.5)	5.12×1.5 (16 x 1.5)
	0.64	17.92 (28)	1.28 (2)	5.12 (8)
	1.28	32 (25)	1.28 (1)	6.4 (5)
	2.56	58.88 (23)	2.56 (1)	7.68 (3)
	5.12	117.76 (23)	5.12 (1)	15.36 (3)
	10.24	235.52 (23)	10.24 (1)	30.72 (3)

Table 5.1.2.4-2: T_{detect} , T_{meas} and T_{evaluate} for UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Inter}}$ [s] (number of DRX or eDRX INACTIVE cycles)
$2.56 \leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	8	$11.52 \times N1 \times 1.5$ (36 x N1 x 1.5)	$1.28 \times N1 \times 1.5$ (4 x N1 x 1.5)	$5.12 \times N1 \times 1.5$ (16 x N1 x 1.5)
	0.64	5	$17.92 \times N1$ (28 x N1)	$1.28 \times N1$ (2 x N1)	$5.12 \times N1$ (8 x N1)
	1.28	4	$32 \times N1$ (25 x N1)	$1.28 \times N1$ (1 x N1)	$6.4 \times N1$ (5 x N1)
	2.56	3	$58.88 \times N1$ (23 x N1)	$2.56 \times N1$ (1 x N1)	$7.68 \times N1$ (3 x N1)
	5.12	3	$117.76 \times N1$ (23 x N1)	$5.12 \times N1$ (1 x N1)	$15.36 \times N1$ (3 x N1)
	10.24	3	$235.52 \times N1$ (23 x N1)	$10.24 \times N1$ (1 x N1)	$30.72 \times N1$ (3 x N1)

If UE is not configured to perform PRS measurement, or if UE is configured to perform PRS measurement and supports *parallelPRS-MeasRRC-Inactive-r17*, K_{carrier} in clause 4.2.2.4 shall apply regardless of whether the serving cell is subject to CCA or not.

If UE is configured to perform PRS measurement but does not support *parallelPRS-MeasRRC-Inactive-r17*, K_{carrier} is replaced with $K_{\text{carrier}} + 1$, regardless of whether the serving cell is subject to CCA or not.

If UE is not configured to perform PRS measurement, or if UE is configured to perform PRS measurement and supports *parallelPRS-MeasRRC-Inactive-r17*, the requirements in clause 4.2.2.10 shall apply regardless of whether the serving cell is subject to CCA or not for UE configured with relaxed measurement criterion.

If UE is configured to perform PRS measurement but does not support *parallelPRS-MeasRRC-Inactive-r17*, the requirements in clause 4.2.2.10 shall apply with K_{carrier} being replaced with $K_{\text{carrier}} + 1$, regardless of whether the serving cell is subject to CCA or not for UE configured with relaxed measurement criterion.

5.1.2.5 Measurements of inter-RAT E-UTRAN cells

The requirements in this clause apply when UE is configured with eDRX_IDLE, otherwise the requirements clause 4.2.2.5 shall apply. The requirements in clause 4.2.2.11 shall apply for UE configured with relaxed measurement criterion when UE is not configured with eDRX_IDLE.

When UE is configured with eDRX_IDLE, the requirements defined in section 4.2.2.5 shall apply with $T_{\text{detect, EUTRAN}}$, $T_{\text{measure, EUTRAN}}$ and $T_{\text{evaluate, EUTRAN}}$ defined in Table 5.1.2.5-1.

Table 5.1.2.5-1: $T_{\text{detect, EUTRAN}}$, $T_{\text{measure, EUTRAN}}$ and $T_{\text{evaluate, EUTRAN}}$ for inactive UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect, EUTRAN}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure, EUTRAN}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate, EUTRAN}}$ [s] (number of DRX or eDRX INACTIVE cycles)
2.56 $\leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	11.52 x 1.5 (36 x 1.5)	1.28 x 1.5 (4 x 1.5)	5.12 x 1.5 (16 x 1.5)
	0.64	17.92 (28)	1.28 (2)	5.12 (8)
	1.28	32 (25)	1.28 (1)	6.4 (5)
	2.56	58.88 (23)	2.56 (1)	7.68 (3)
	5.12	117.76 (23)	5.12 (1)	15.36 (3)
	10.24	235.52(23)	10.24 (1)	30.72 (3)

5.1.2.6 Maximum interruption in paging reception

The requirements in clause 4.2.2.6 shall apply.

5.1.2.7 General requirements

When configured with eDRX_INACTIVE, the UE shall search every layer of higher priority at least every $T_{\text{higher_priority_search}}$, where $T_{\text{higher_priority_search}}$ is defined as follows:

- $T_{\text{higher_priority_search}} = \max(60, 15 \cdot \text{eDRX_INACTIVE cycle length}) \cdot N_{\text{layers}}$ seconds if eDRX_INACTIVE cycle ≤ 10.24 s,

Otherwise, if the UE is not configured with eDRX_INACTIVE cycle, the UE shall search every layer of higher priority at least every $T_{\text{higher_priority_search}} = (60 \cdot N_{\text{layers}})$ seconds.

N_{layers} is the total number of higher priority NR and E-UTRA carrier frequencies broadcasted in system information. For a UE configured with early measurement reporting, while T331 is running, N_{layers} is the combined total number of higher priority NR and E-UTRA carrier frequencies broadcasted in system information and carriers configured for idle mode CA measurements.

Note: combined total number means that if a carrier is a high priority carrier and additionally a carrier configured for idle mode CA measurements, it only counts as one carrier.

If UE is not configured to perform PRS measurement, or if UE is configured to perform PRS measurement and supports *parallelPRS-MeasRRC-Inactive-r17*, the requirements in this clause shall apply.

If UE is configured to perform PRS measurement but does not support *parallelPRS-MeasRRC-Inactive-r17*, the requirements in this clause shall apply with N_{layers} being replaced with $N_{layers} + 1$.

5.1.2.8 Minimum requirement at transitions

The requirements in sub-clause 4.2.2.8 shall apply.

5.1.2.9 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2.2.9 apply for UE configured with relaxed measurement criterion except when UE is configured with eDRX_IDLE cycle greater than 10.24 s and UE has fulfilled low mobility criterion or not-at-cell edge criterion.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, and UE has fulfilled low mobility criterion or not-at-cell edge criterion, then the requirements in Table 5.1.2.9-1 and Table 5.1.2.9-2 respectively apply provided that eDRX cycle is $\leq [10485.76]$ sec.

Table 5.1.2.9-1: $T_{\text{detect,NR_Intra_Relax}}$, $T_{\text{measure,NR_Intra_Relax}}$ and $T_{\text{evaluate,NR_Intra_Relax}}$ for inactive UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Intra_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra_Relax}}$ [s] (number of DRX or INACTIVE eDRX cycles)
20.48 $\leq$ eDRX_IDLE cycle length ≤ 10485.76	0.32	$11.52 \times M2 \times K1$ (36 x $M2 \times K1$)	$1.28 \times M2 \times K1$ (4 x $M2 \times K1$)	$5.12 \times M2 \times K1$ (16 x $M2 \times K1$)
	0.64	$17.92 \times K1$ (28 x $K1$)	$1.28 \times K1$ (2 x $K1$)	$5.12 \times K1$ (8 x $K1$)
	1.28	$32 \times K1$ (25 x $K1$)	$1.28 \times K1$ (1 x $K1$)	$6.4 \times K1$ (5 x $K1$)
	2.56	$58.88 \times K1$ (23 x $K1$)	$2.56 \times K1$ (1 x $K1$)	$7.68 \times K1$ (3 x $K1$)
	5.12	$117.76 \times K1$ (23 x $K1$)	$5.12 \times K1$ (1 x $K1$)	$15.36 \times K1$ (3 x $K1$)
	10.24	$235.52 \times K1$ (23)	$10.24 \times K1$ (1 x $K1$)	$30.72 \times K1$ (3 x $K1$)
Note 1: $M2 = 1.5$ if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise $M2=1$. Note 2: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.				

Table 5.1.2.9-2: $T_{\text{detect,NR_Intra_Relax}}$, $T_{\text{measure,NR_Intra_Relax}}$ and $T_{\text{evaluate,NR_Intra_Relax}}$ for inactive UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Intra_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)
20.48 $\leq$ eDRX_IDLE cycle length ≤ 10485.76	0.32	8	$11.52 \times N1 \times M2 \times K1$ (36 x $N1 \times M2 \times K1$)	$1.28 \times N1 \times M2 \times K1$ (4 x $N1 \times M2 \times K1$)	$5.12 \times N1 \times M2 \times K1$ (16 x $N1 \times M2 \times K1$)
	0.64	5	$17.92 \times N1 \times K1$ (28 x $N1 \times K1$)	$1.28 \times N1 \times K1$ (2 x $N1 \times K1$)	$5.12 \times N1 \times K1$ (8 x $N1 \times K1$)
	1.28	4	$32 \times N1 \times K1$ (25 x $N1 \times K1$)	$1.28 \times N1 \times K1$ (1 x $N1 \times K1$)	$6.4 \times N1 \times K1$ (5 x $N1 \times K1$)
	2.56	3	$58.88 \times N1 \times K1$ (23 x $N1 \times K1$)	$2.56 \times N1 \times K1$ (1 x $N1 \times K1$)	$7.68 \times N1 \times K1$ (3 x $N1 \times K1$)
	5.12	3	$117.76 \times N1 \times K1$ (23 x $N1 \times K1$)	$5.12 \times N1 \times K1$ (1 x $N1 \times K1$)	$15.36 \times N1 \times K1$ (3 x $N1 \times K1$)

	10.24	3	$235.52 \times N1 \times K1$ ($23 \times N1 \times K1$)	$10.24 \times N1 \times K1$ (1 x $N1 \times K1$)	$30.72 \times N1 \times K1$ (3 x $N1 \times K1$)
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. Note 2: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.					

5.1.2.10 Measurements of inter-frequency NR cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2.2.10 apply for UE configured with relaxed measurement criterion except when UE is configured with eDRX_IDLE cycle greater than 10.24 s and UE has fulfilled or low mobility criterion or not-at-cell edge criterion.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, and UE has fulfilled low mobility criterion or not-at-cell edge criterion, then the requirements in Table 5.1.2.10-1 and Table 5.1.2.10-2 respectively apply provided that eDRX cycle is $\leq [10485.76]$ sec.

Table 5.1.2.10-1: $T_{\text{detect,NR_Inter_Relax}}$, $T_{\text{measure,NR_Inter_Relax}}$ and $T_{\text{evaluate,NR_Inter_Relax}}$ for inactive UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Inter_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Inter_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Inter_Relax}}$ [s] (number of DRX or INACTIVE eDRX cycles)
20.48 $\leq$ eDRX_IDLE cycle length ≤ 10485.76	0.32	$11.52 \times M2 \times K1$ (36 x $M2 \times K1$)	$1.28 \times M2 \times K1$ (4 x $M2 \times K1$)	$5.12 \times M2 \times K1$ (16 x $M2 \times K1$)
	0.64	$17.92 \times K1$ (28 x $K1$)	$1.28 \times K1$ (2 x $K1$)	$5.12 \times K1$ (8 x $K1$)

	1.28	4	$32 \times N1 \times K1$ (25 x $N1 \times K1$)	$1.28 \times N1 \times K1$ (1 x $N1 \times K1$)	$6.4 \times N1 \times K1$ (5 x $N1 \times K1$)
	2.56	3	$58.88 \times N1 \times K1$ (23 x $N1 \times K1$)	$2.56 \times N1 \times K1$ (1 x $N1 \times K1$)	$7.68 \times N1 \times K1$ (3 x $N1 \times K1$)
	5.12	3	$117.76 \times N1 \times K1$ (23 x $N1 \times K1$)	$5.12 \times N1 \times K1$ (1 x $N1 \times K1$)	$15.36 \times N1 \times K1$ (3 x $N1 \times K1$)
	10.24	3	$235.52 \times N1 \times K1$ (23 x $N1 \times K1$)	$10.24 \times N1 \times K1$ (1 x $N1 \times K1$)	$30.72 \times N1 \times K1$ (3 x $N1 \times K1$)
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. Note 2: K1 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.					

5.1.2.11 Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2.2.11 apply for UE configured with relaxed measurement criterion except when UE is configured with eDRX_IDLE cycle greater than 10.24 s and UE has fulfilled low mobility criterion or not-at-cell edge criterion.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, and UE has fulfilled low mobility criterion or not-at-cell edge criterion, then the requirements in Table 5.1.2.11-1 apply provided that eDRX cycle is $\leq [10485.76]$ sec.

Table 5.1.2.11-1: $T_{\text{detect, EUTRAN_Relax}}$, $T_{\text{measure, EUTRAN_Relax}}$ and $T_{\text{evaluate, EUTRAN_Relax}}$ for inactive UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect, EUTRAN_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure, EUTRAN_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate, EUTRAN_Relax}}$ [s] (number of DRX or INACTIVE eDRX cycles)
$\leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	$11.52 \times M2 \times K1$ ($36 \times M2 \times K1$)	$1.28 \times M2 \times K1$ (4 $\times M2 \times K1$)	$5.12 \times M2 \times K1$ (16 $\times M2 \times K1$)
	0.64	$17.92 \times K1$ (28 $\times$ $K1$)	$1.28 \times K1$ (2 $\times$ $K1$)	$5.12 \times K1$ (8 $\times$ $K1$)

	10.24	$235.52 \times K1$ (23 $\times K1$)	$10.24 \times K1$ (1 $\times$ $K1$)	$30.72 \times K1$ (3 $\times$ $K1$)
Note 1: $M2 = 1.5$ if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise $M2=1$. Note 2: $K1 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.				

5.1A Cell Re-selection with CCA

5.1A.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it. The requirements in subclauses 5.1A.2.3, 5.1A.2.4, and 5.1A.2.6 apply when at least the target cell is on a carrier frequency with CCA, and the requirements in subclauses 5.1A.2.2 and 5.1A.2.5 apply when at least the camping cell is on a carrier frequency with CCA.

When the UE is in *Camped Normally* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency and inter-RAT cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS38.304, allowing the UE to limit its measurement activity.

5.1A.2 Requirements

5.1A.2.1 UE measurement capability

The requirements in clause 4.2A.2.1 shall apply.

5.1A.2.2 Measurement and evaluation when CCA is used on the serving cell

The requirements in clause 4.2A.2.2 shall apply.

5.1A.2.3 Measurements of intra-frequency NR cells when CCA is used on the serving cell and target cell

The requirements in clause 4.2A.2.3 shall apply.

5.1A.2.4 Measurements of inter-frequency NR cells when CCA is used on the target cell

The requirements in clause 4.2A.2.4 shall apply.

5.1A.2.5 Measurements of inter-RAT E-UTRAN cells when CCA is used on the serving cell

The requirements in clause 4.2.2.5 shall apply.

5.1A.2.6 Maximum interruption in paging reception when CCA is used on the target cell

The requirements in clause 4.2A.2.6 shall apply.

5.1A.2.7 General requirements

The requirements in clause 4.2.2.7 shall apply.

5.1B Cell Re-selection for RedCap

5.1B.1 Introduction

The cell reselection procedure allows the RedCapUE to select a more suitable cell and camp on it.

The requirements in subclause 5.1B.2 apply to 1 Rx RedCap UE and 2 Rx Redcap UE.

When the UE is in *Camped Normally* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency and inter-RAT cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS38.304, allowing the UE to limit its measurement activity.

5.1B.2 Requirements

5.1B.2.1 UE measurement capability

The requirements in clause 4.2B.2.1 shall apply.

5.1B.2.2 Measurement and evaluation of serving cell

The requirements in clause 4.2B.2.2 shall apply when UE is not configured with eDRX_IDLE.

When UE is configured with eDRX_IDLE, the UE shall measure the SS-RSRP and SS-RSRQ level of the serving cell and evaluate the cell selection criterion S defined in TS 38.304 [1] for the serving cell at least once every $M1 \cdot T$ for FR1 and $N1 \cdot T$ for FR2; where:

- T is determined according to clause 7.1 in [1],
- $M1=2$ if SMTC periodicity (T_{SMTC}) > 20 ms and $T \leq 0.64$ second, otherwise $M1=1$.

The UE shall filter the SS-RSRP and SS-RSRQ measurements of the serving cell using at least 2 measurements. Within the set of measurements used for the filtering, at least two measurements shall be spaced by, at least $T/2$.

If the UE has evaluated according to Table 5.1B.2.2-1or and Table 5.1B.2.2-2 in N_{serv_RedCap} consecutive T that the serving cell does not fulfil the cell selection criterion S, the UE shall initiate the measurements of all neighbour cells indicated by the serving cell, regardless of the measurement rules currently limiting UE measurement activities.

Table 5.1B.2.2-1: N_{serv_RedCap} for inactive Redcap UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length[s]	T [s]	N _{serv} _RedCap [number of T]
2.56 ≤eDRX_IDLE cycle length ≤10485.76	0.32 ≤DRX_Inactive cycle length ≤2.56; or 2.56 ≤eDRX_Inactive cycle length ≤10.24 if inactive eDRX is configured	0.32	4*M1
		0.64	4*M1
		1.28	2
		2.56	2
		5.12	2
		10.24	2
Note1: T is dertermined according to clause 7.1 in [1]. Note2: M1=2 if SMTC periodicity (T _{SMTC}) > 20 ms and T≤ 0.64 second, otherwise M1=1.			

Table 5.1B.2.2-2: N_{serv_RedCap} for inactive Redcap UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length[s]	T [s]	Scaling Factor (N1)	Nserv_RedCap [number of T]
2.56 ≤eDRX_IDLE cycle length ≤10485.76	0.32 ≤DRX_Inactive cycle length ≤2.56; or 2.56 ≤eDRX_Inactive cycle length ≤10.24 if inactive eDRX is configured	0.32	8	4* N1
		0.64	5	4* N1
		1.28	4	2* N1
		2.56	3	2* N1
		5.12	3	2* N1
		10.24	3	2* N1
Note1: T is dertermined according to clause 7.1 in [1].				

When UE transitions from measurements within PTW and to measurements outside PTW or vice versa during one measurement period, the UE measurement requirements apply based on the longer measurement period requirements before or after the transition.

If the UE in RRC_INACTIVE has not found any new suitable cell based on searches and measurements using the intra-frequency, inter-frequency and inter-RAT information indicated in the system information during the time T', the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1], where

- $T' = 10$ s, if the UE is not configured with eDRX_inactive cycle, or
- $T' = \text{MAX}(10 \text{ s, one eDRX_inactive cycle})$ if the UE is configured with eDRX_inactive cycle for FR1, or
- $T' = \text{MAX}(10 \text{ s, } N1 \cdot eDRX_inactive \text{ cycle})$ if the UE is configured with eDRX_inactive cycle for FR2.

5.1B.2.3 Measurements of intra-frequency NR cells

The requirements in clause 4.2B.2.3 shall apply when UE is not configured with eDRX_IDLE. When UE is configured with eDRX_IDLE, the requirements defined in section 4.2B.2.3 shall apply with $T_{detect,NR_Intra_RedCap}$, $T_{measure,NR_Intra_RedCap}$ and $T_{evaluate,NR_Intra_RedCap}$ defined in Table 5.1B.2.3-1 and Table 5.1B.2.3-2.

Table 5.1B.2.3-1: T_{detect} , T_{meas} and $T_{evaluate}$ for inactive Redcap UE configured with eDRX_IDLE cycle, (Frequency range FR1)

--	--	--	--	--

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Intra_RedCap}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra_RedCap}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra_RedCap}}$ [s] (number of DRX or INACTIVE eDRX cycles)
2.56 $\leq$ eDRX_IDLE cycle length $\leq$ 10485.76	0.32	$11.52 \times M2$ (36 x M2)	$1.28 \times M2$ (4 x M2)	$5.12 \times M2$ (16 x M2)

5.1B.2.5 Measurements of inter-RAT E-UTRAN cells

The requirements in clause 4.2B.2.5 shall apply when UE is not configured with eDRX_IDLE. When UE is configured with eDRX_IDLE, the requirements defined in section 4.2B.2.5 shall apply with $T_{\text{detect, EUTRAN_RedCap}}$, $T_{\text{measure, EUTRAN_RedCap}}$ and $T_{\text{evaluate, EUTRAN_RedCap}}$ defined in Table 5.1B.2.5-1.

Table 5.1B.2.5-1: $T_{\text{detect, EUTRAN_RedCap}}$, $T_{\text{measure, EUTRAN_RedCap}}$ and $T_{\text{evaluate, EUTRAN_RedCap}}$ for inactive Redcap UE configured with eDRX_IDLE cycle, (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect, EUTRAN_RedCap}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure, EUTRAN_RedCap}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate, EUTRAN_RedCap}}$ [s] (number of DRX or eDRX INACTIVE cycles)
2.56 $\leq eDRX_IDLE$ cycle length $\leq$ 10485.76	0.32	11.52×1.5 (36 x 1.5)	1.28×1.5 (4 x 1.5)	5.12×1.5 (16 x 1.5)
	0.64	17.92 (28)	1.28 (2)	5.12 (8)
	1.28	32 (25)	1.28 (1)	6.4 (5)
	2.56	58.88 (23)	2.56 (1)	7.68 (3)
	5.12	117.76 (23)	5.12 (1)	15.36 (3)
	10.24	235.52(23)	10.24 (1)	30.72 (3)

5.1B.2.6 Maximum interruption in paging reception

The requirements in clause 4.2B.2.6 shall apply for RedCap UEs.

For RedCap UE in HD-FDD mode, if paging occasions partially overlap with CG-SDT transmission, the UE is only required to monitor for SI change indication in any paging occasion at least once per modification period [2] during SDT if the initial downlink BWP on which the SDT procedure is ongoing is associated with a CD-SSB.

5.1B.2.7 General requirements

The requirements in sub-clause 5.1.2.7 shall apply.

5.1B.2.8 Minimum requirement at transitions

The requirements in sub-clause 4.2B.2.8 shall apply.

5.1B.2.9 Measurements of intra-frequency NR cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2B.2.9 apply for UE configured with relaxed measurement criterion except when UE is configured with eDRX_IDLE cycle greater than 10.24 s and UE has fulfilled stationary criterion or low mobility criterion or not-at-cell edge criterion.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, and UE has fulfilled stationary criterion or low mobility criterion or not-at-cell edge criterion, then the requirements in Table 5.1B.2.9-1 and Table 5.1B.2.9-2 respectively apply provided that eDRX cycle is ≤ 10485.76 sec.

Table 5.1B.2.9-1: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for inactive Redcap UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or INACTIVE eDRX cycles)
20.48 $\leq$ eDRX_IDLE cycle length ≤ 10485.76	0.32	$11.52 \times M2 \times K4$ (36 x M2 x K4)	$1.28 \times M2 \times K4$ (4 x M2 x K4)	$5.12 \times M2 \times K4$ (16 x M2 x K4)
	0.64	$17.92 \times K4$ (28 x K4)	$1.28 \times K4$ (2 x K4)	$5.12 \times K4$ (8 x K4)
	1.28	$32 \times K4$ (25 x K4)	$1.28 \times K4$ (1 x K4)	$6.4 \times K4$ (5 x K4)
	2.56	$58.88 \times K4$ (23 x K4)	$2.56 \times K4$ (1 x K4)	$7.68 \times K4$ (3 x K4)
	5.12	$117.76 \times K4$ (23 x K4)	$5.12 \times K4$ (1 x K4)	$15.36 \times K4$ (3 x K4)
	10.24	$235.52 \times K4$ (23 x K4)	$10.24 \times K4$ (1 x K4)	$30.72 \times K4$ (3 x K4)
Note 1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. Note 2: K4 = 6 is the measurement relaxation factor applicable for UE fulfilling the stationaryMobilityEvaluation [2] criterion. K4 = 3 is the measurement relaxation factor applicable for UE fulfilling the lowMobilityEvaluation [2] criterion or fulfilling the cellEdgeEvaluation [2] criterion.				

Table 5.1B.2.9-2: $T_{\text{detect,NR_Intra_RedCap_Relax}}$, $T_{\text{measure,NR_Intra_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ for inactive Redcap UE configured with eDRX_IDLE cycle, (Frequency range FR2)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	Scaling Factor (N1)	$T_{\text{detect,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate,NR_Intra_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)
20.48 $\leq$ eDRX_IDLE cycle length ≤ 10485.76	0.32	8	$11.52 \times N1 \times M2 \times K4$ (36 x N1 x M2 x K4)	$1.28 \times N1 \times M2 \times K4$ (4 x N1 x M2 x K4)	$5.12 \times N1 \times M2 \times K4$ (16 x N1 x M2 x K4)

Note1: M2 = 1.5 if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise M2=1. Note 2: K4 = 6 is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion. K4 = 3 is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.					

5.1B.2.11 Measurements of inter-RAT E-UTRAN cells for UE configured with relaxed measurement criterion

The requirements in clause 4.2B.2.11 apply for UE configured with relaxed measurement criterion except when UE is configured with eDRX_IDLE cycle greater than 10.24 s and UE has fulfilled stationary criterion or low mobility criterion or not-at-cell edge criterion.

If the UE is configured with eDRX_IDLE cycle greater than 10.24 s in FR1 and FR2, and UE has fulfilled stationary criterion or low mobility criterion or not-at-cell edge criterion, then the requirements in Table 5.1B.2.11-1 apply provided that eDRX cycle is ≤ 10485.76 sec.

Table 5.1B.2.11-1: $T_{\text{detect,NR_Inter_RedCap_Relax}}$, $T_{\text{measure,NR_Inter_RedCap_Relax}}$ and $T_{\text{evaluate,NR_Inter_RedCap_Relax}}$ for inactive Redcap UE configured with eDRX_IDLE cycle (Frequency range FR1)

eDRX_IDLE cycle length [s]	DRX or eDRX INACTIVE cycle length [s]	$T_{\text{detect, EUTRAN_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{measure, EUTRAN_RedCap_Relax}}$ [s] (number of DRX or eDRX INACTIVE cycles)	$T_{\text{evaluate, EUTRAN_RedCap_Relax}}$ [s] (number of DRX or INACTIVE eDRX cycles)
20.48 $\leq \text{eDRX_IDLE cycle length} \leq 10485.76$	0.32	$11.52 \times M2 \times K4$ ($36 \times M2 \times K4$)	$1.28 \times M2 \times K4$ (4 x $M2 \times K4$)	$5.12 \times M2 \times K4$ (16 x $M2 \times K4$)
	0.64	$17.92 \times K4$ (28 x $K4$)	$1.28 \times K4$ (2 x $K4$)	$5.12 \times K4$ (8 x $K4$)
	1.28	$32 \times K4$ (25 x $K4$)	$1.28 \times K4$ (1 x $K4$)	$6.4 \times K4$ (5 x $K4$)
	2.56	$58.88 \times K4$ (23 x $K4$)	$2.56 \times K4$ (1 x $K4$)	$7.68 \times K4$ (3 x $K4$)
	5.12	$117.76 \times K4$ (23 x $K4$)	$5.12 \times K4$ (1 x $K4$)	$15.36 \times K4$ (3 x $K4$)
	10.24	$235.52 \times K4$ (23 x $K4$)	$10.24 \times K4$ (1 x $K4$)	$30.72 \times K4$ (3 x $K4$)
Note1: $M2 = 1.5$ if SMTC periodicity of measured intra-frequency cell > 20 ms; otherwise $M2=1$. Note 2: $K4 = 6$ is the measurement relaxation factor applicable for UE fulfilling the <i>stationaryMobilityEvaluation</i> [2] criterion. $K4 = 3$ is the measurement relaxation factor applicable for UE fulfilling the <i>lowMobilityEvaluation</i> [2] criterion or fulfilling the <i>cellEdgeEvaluation</i> [2] criterion.				

5.1C Cell Re-selection

5.1C.1 Introduction

The cell reselection procedure allows the UE to select a more suitable cell and camp on it.

When the UE is in *Camped Normally* state on a cell, the UE shall attempt to detect, synchronise, and monitor intra-frequency, inter-frequency cells indicated by the serving cell. For intra-frequency and inter-frequency cells the serving cell may provide explicit neighbour list, or only carrier frequency information and bandwidth information. UE measurement activity is also controlled by measurement rules defined in TS38.304 [1], allowing the UE to limit its measurement activity.

5.1C.2 Requirements

5.1C.2.1 UE measurement capability

The requirements in clause 4.2C.2.1 shall apply.

5.1C.2.2 Measurement and evaluation of serving cell

The requirements in clause 4.2C.2.2 shall apply.

5.1C.2.3 Measurements of intra-frequency NR cells

The requirements in clause 4.2C.2.3 shall apply. The requirements in clause 4.2C.2.7 apply for UE configured with relaxed measurement criterion.

5.1C.2.4 Measurements of inter-frequency NR cells

The requirements in clause 4.2C.2.4 shall apply. The requirements in clause 4.2C.2.8 apply for UE configured with relaxed measurement criterion.

5.1C.2.5 Maximum interruption in paging reception

The requirements in clause 4.2C.2.5 shall apply.

5.1C.2.6 General requirements

The requirements in clause 4.2C.2.9 shall apply.

5.2 Void

5.2B Configured Grant based Small Data Transmissions (CG-SDT) for RedCap

5.2B.1 Introduction

This section contains the requirements for Small Data Transmissions (SDT) for 1 Rx RedCap and 2 Rx RedCap.

The 1 Rx RedCap UE for determining whether to perform SDT procedure defined in clause 5.27 [7] applies:

- sdt-RSRP-Threshold-r17 as the signaled value of sdt-RSRP-Threshold-r17 [2] + 1 dB.

5.2B.2 Requirements on UE synchronization for small data transmissions for RedCap

The requirements in this clause are applicable for the RedCap UE performing small data transmissions using configured resources as [TS 38.331].

The UE is allowed to transmit using the configured uplink resources provided that the UE is synchronized towards (i.e. using the timing derived using the latest available N_{TA} value as specified in subclause 7.1A.2) the serving cell prior to transmission. If the UE is not able to obtain the synchronization towards the serving cell then the UE shall drop the small data transmission. The UE determines the small data transmission occasion according to the received CG-SDT configuration [TS 38.331].

5.2B.2.1 Void

5.2B.3 TA validation requirements for RedCap

When *cg-SDT-RSRP-ChangeThreshold* [TS 38.331] is configured for TA validation based on the RSRP change criterion according to clause 5.27.2 in [TS 38.321], the UE is allowed to transmit using CG-SDT using the timing derived using the latest available N_{TA} value as specified in subclause 7.1 provided that

- the first RSRP ($RSRP_1$) measurement and the second RSRP ($RSRP_2$) measurements used in the TA validation are valid measurements and,
- timing alignment validation for transmission using CG-SDT is valid according to the validation criteria in clause 5.27.2 in [TS 38.321].

$RSRP_1$ and $RSRP_2$ are considered valid provided that the conditions in Table 5.2B.3-1 are met for FR1 when UE is not configured with any eDRX cycle by serving gNB or core network.

RSRP₁ and RSRP₂ are considered valid provided that the conditions in Table 5.2B.3-2 are met for FR2-1 regardless of whether the UE is configured with eDRX cycle by serving gNB or core network (AMF).

RSRP₁ and RSRP₂ are considered valid provided that the conditions in Table 5.2B.3-3 are met for FR1 when UE is configured:

- only with RAN eDRX cycle ($T_{\text{eDRX-RAN}}$) by the serving gNB, or
- with both $T_{\text{eDRX-RAN}}$ by serving gNB and CN eDRX cycle ($T_{\text{eDRX-CN}}$) by the core network (AMF)

Table 5.2B.3-1 Valid measurement for FR1 without eDRX cycle

Measurement	FR1
RSRP ₁	$(T1 - \min(640\text{ms}, M1 \cdot T_{\text{DRX}})) \leq T1' \leq (T1 + \min(640\text{ms}, M1 \cdot T_{\text{DRX}}))$
RSRP ₂	$(T2 - \min(640\text{ms}, M1 \cdot T_{\text{DRX}})) \leq T2' \leq T2$

Table 5.2B.3-2 Valid measurement for FR2-1

Measurement	FR2-1
RSRP ₁	$(T1 - \max\{480\text{ms}, 8 \cdot \text{SMTC periodicity}\}) \leq T1' \leq (T1 + \max\{480\text{ms}, 8 \cdot \text{SMTC periodicity}\})$
RSRP ₂	$(T2 - \max\{480\text{ms}, 8 \cdot \text{SMTC periodicity}\}) \leq T2' \leq T2$

Table 5.2B.3-3 Valid measurement for FR1 with eDRX cycle

Measurement	FR1
RSRP ₁	$(T1 - \min(640\text{ms}, M1 \cdot T)) \leq T1' \leq (T1 + \min(640\text{ms}, M1 \cdot T))$
RSRP ₂	$(T2 - \min(640\text{ms}, M1 \cdot T_{\text{eDRX-RAN}})) \leq T2' \leq T2$
Note 1: T is determined according to clause 7.1 in [1].	

If at least one of RSRP₁ and RSRP₂ is considered to be invalid based on the above conditions, then the UE shall not validate the CG-SDT using RSRP₁ and RSRP₂ and shall not transmit using CG-SDT. Additionally, for the initial CG-SDT transmission, the UE shall not transmit in an CG-SDT occasion that occurs more than 640 ms after T2.

Where:

- T1 is the time when the latest N_{TA} was obtained by the UE via:
 - *RRCRelease* with CG-SDT configuration (TS 38.331 [2]) is received, or
 - the latest TA is received if TA is received while in RRC_INACTIVE state.
- T1' is the time when the UE has completed RSRP₁.
- T2 is the time when the UE performs TA validation as defined in clause 5.27.2 in [TS 38.321] for transmission using CG-SDT.
- T2' is the time when the UE has completed RSRP₂.
- T_{DRX} is the DRX cycle length in ms.
- M1 the scaling factor as defined in clause 4.2.2.2.

5.2B.3.1 Void

5.2B.3.2 Void

5.2B.4 Scheduling restriction

The requirements in clause 5.5.4 shall apply for RedCap UEs.

5.2B.5 Applicability conditions for CG-SDT for RedCap

The UE is not required to meet the following measurement requirements during subsequent SDT transmissions:

- Measurements of inter-frequency NR cells in clause 5.1B.2.4
- Measurements of inter-RAT E-UTRAN cells in clause 5.1B.2.5

5.3 Minimization of Drive Tests (MDT)

5.3.1 Introduction

UE supporting minimisation of drive tests in RRC_INACTIVE shall be capable of:

- logging measurements in RRC_INACTIVE, reporting the logged measurements and meeting requirements in clause 5.3.1;
- logging of RRC connection establishment failure, reporting the logged failure and meeting requirements in clause 5.3.1;
- logging of radio link failure and handover failure, reporting the logged failure and meeting requirements in clause 5.3.1.

The logged MDT requirements consist of measurement requirements as specified in clause 5.3.2 and relative time stamp accuracy requirements as specified in clause 5.3.3. Both sets of requirements are applicable for intra-frequency, inter-frequency and inter-RAT cases in RRC_INACTIVE state. The MDT procedures are described in TS 37.320 [31].

For RRC connection establishment failure logging and reporting, the MDT requirements consist of requirements for measurements performed and logged in RRC_INACTIVE state specified in clause 5.3.2 and relative time stamp accuracy requirement for RRC connection establishment failure log reporting as specified in clause 5.3.4.

5.3.2 Measurement Requirements

The measurements and measurement requirements applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3.2.

5.3.3 Requirements for Relative Time Stamp Accuracy

The requirements for relative time stamp accuracy applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3.3.

5.3.4 Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting

The requirements for relative time stamp accuracy for RRC connection establishment failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3.4.

5.3.5 Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting

The requirements for relative time stamp accuracy for RRC link failure and handover failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3.5.

5.3.6 Requirements for Relative Time Stamp Accuracy for RRC Resume Failure Log Reporting

The requirements for relative time stamp accuracy for RRC resume failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3.4.

5.3C Minimization of Drive Tests (MDT) for Satellite Access

Editor's note: the exact signalling names in the clause and values are subject to confirmation by RAN2 and change during performance requirement phase, respectively. And the brackets shall be removed by further agreements.

5.3C.1 Introduction

UE supporting minimisation of drive tests in RRC_INACTIVE shall be capable of:

- logging measurements in RRC_INACTIVE, reporting the logged measurements and meeting requirements in clause 5.3C;
- logging of RRC connection establishment failure, reporting the logged failure and meeting requirements in clause 5.3C;
- logging of radio link failure and handover failure, reporting the logged failure and meeting requirements in clause 5.3C.

The logged MDT requirements consist of measurement requirements as specified in clause 5.3C.2 and relative time stamp accuracy requirements as specified in clause 5.3C.3. Both sets of requirements are applicable for intra-frequency and inter-frequency cases in RRC_INACTIVE state. The MDT procedures are described in TS 37.320 [31].

For RRC connection establishment failure logging and reporting, the MDT requirements consist of requirements for measurements performed and logged in RRC_INACTIVE state specified in clause 5.3C.2 and relative time stamp accuracy requirement for RRC connection establishment failure log reporting as specified in clause 5.3C.4.

5.3C.2 Measurement Requirements

The measurements and measurement requirements applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3C.2.

5.3C.3 Requirements for Relative Time Stamp Accuracy

The requirements for relative time stamp accuracy applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3C.3.

5.3C.4 Requirements for Relative Time Stamp Accuracy for RRC Connection Establishment Failure Log Reporting

The requirements for relative time stamp accuracy for RRC connection establishment failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3C.4.

5.3C.5 Requirements for Relative Time Stamp Accuracy for Radio Link Failure and Handover Failure Log Reporting

The requirements for relative time stamp accuracy for RRC link failure and handover failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3C.5.

5.3C.6 Requirements for Relative Time Stamp Accuracy for RRC Resume Failure Log Reporting

The requirements for relative time stamp accuracy for RRC resume failure applicable for MDT in RRC_INACTIVE are the same as specified for MDT in RRC_IDLE in clause 4.3C.4.

5.4 Inactive Mode CA/DC Measurements

5.4.1 Introduction

A UE supporting *idleInactiveNR-MeasReport-r16*, *idleInactiveEUTRA-MeasReport-r16* or *idleInactiveNR-MeasReport-r17* shall perform the inactive mode measurement on the inter-frequency CA and DC candidate frequencies/cells and E-UTRAN inter-RAT DC candidate frequencies/cells indicated by higher layers and meet the requirement specified in this clause. The UE shall perform inactive mode measurements provided that the serving cell support early measurement and is within the validity area. The inactive mode measurement requirements apply to a configured carrier frequency and the serving cell are among the supported band combination of the UE.

5.4.2 Measurement Requirements

The requirements in clause 4.4.2 shall apply.

5.4.2.1 Detected cell requirement during state transition and inactive mode

The requirements in clause 4.4.2.1 shall apply.

5.4.2.2 Measurements of inter-frequency CA/DC candidate cells

The requirements in clause 4.4.2.2 shall apply.

5.4.2.3 Measurements on serving cell

The requirements in clause 4.4.2.3 shall apply.

5.4.2.4 Measurements on E-UTRAN inter-RAT DC candidate cells

The requirements in clause 4.4.2.4 shall apply.

5.5 Configured Grant based Small Data Transmissions (CG-SDT)

5.5.1 Introduction

The requirements in this clause are applicable when the UE is configured with timing alignment (TA) validation using *cg-SDT-RSRP-ChangeThreshold* for transmitting in uplink using CG-SDT as specified in [TS 38.331].

5.5.2 Requirements on UE synchronization for small data transmissions

The requirements in this clause are applicable for the UE performing small data transmissions using configured resources as [TS 38.331].

The UE is allowed to transmit using the configured uplink resources provided that the UE is synchronized towards (i.e. using the timing derived using the latest available N_{TA} value as specified in subclause 7.1.2) the serving cell prior to transmission. If the UE is not able to obtain the synchronization towards the serving cell then the UE shall drop the small data transmission. The UE determines the small data transmission occasion according to the received CG-SDT configuration [TS 38.331].

5.5.3 TA validation requirements

When *cg-SDT-RSRP-ChangeThreshold* [TS 38.331] is configured for TA validation based on the RSRP change criterion according to clause 5.8.2 in [TS 38.321], the UE is allowed to transmit using CG-SDT using the timing derived using the latest available N_{TA} value as specified in subclause 7.1 provided that

- the first RSRP ($RSRP_1$) measurement and the second RSRP ($RSRP_2$) measurements used in the TA validation are valid measurements and,
- timing alignment validation for transmission using CG-SDT is valid according to the validation criteria in clause 5.8.2 in [TS 38.321].

$RSRP_1$ and $RSRP_2$ are considered valid provided that the conditions in Table 5.5.3-1 and Table 5.5.3-2 are met for FR1 and FR2-1.

Table 5.5.3-1 Valid measurement for FR1 for UE not configurd with eDRX cycle

Measurement	FR1
$RSRP_1$	$(T1 - \min(640\text{ms}, M1 \cdot T_{DRX})) \leq T1' \leq (T1 + \min(640\text{ms}, M1 \cdot T_{DRX}))$
$RSRP_2$	$(T2 - \min(640\text{ms}, M1 \cdot T_{DRX})) \leq T2' \leq T2$

Table 5.5.3-2 Valid measurement for FR2-1

Measurement	FR2-1
$RSRP_1$	$(T1 - \max(480\text{ms}, 8 \cdot \text{SMTC periodicity})) \leq T1' \leq (T1 + \max(480\text{ms}, 8 \cdot \text{SMTC periodicity}))$
$RSRP_2$	$(T2 - \max(480\text{ms}, 8 \cdot \text{SMTC periodicity})) \leq T2' \leq T2$

Table 5.5.3-3 Valid measurement for FR1 for UE configured with eDRX_cycle

Measurement	FR1
$RSRP_1$	$(T1 - \min(640\text{ms}, M1 \cdot T_{eDRX-RAN})) \leq T1' \leq (T1 + \min(640\text{ms}, M1 \cdot T_{eDRX-RAN}))$
$RSRP_2$	$(T2 - \min(640\text{ms}, M1 \cdot T_{eDRX-RAN})) \leq T2' \leq T2$

If at least one of $RSRP_1$ and $RSRP_2$ is considered to be invalid based on the above conditions, then the UE shall not validate the CG-SDT using $RSRP_1$ and $RSRP_2$ and shall not transmit using CG-SDT. Additionally, for the initial CG-SDT transmission, the UE shall not transmit in an CG-SDT occasion that occurs more than 640 ms after T2.

Where:

- T1 is the time when
 - *RRCRelease* with CG-SDT configuration (TS 38.331 [2]) is received, or
 - the latest TA is received if TA is received while in RRC_INACTIVE state.
- T1' is the time when the UE has completed $RSRP_1$.
- T2 is the time when the UE performs TA validation as defined in clause 5.27.2 in (TS 38.321 [7]) for transmission using CG-SDT.
- T2' is the time when the UE has completed $RSRP_2$.
- T_{DRX} is the DRX cycle length in ms.

- M1 the scaling factor as defined in clause 4.2.2.2.

5.5.4 Scheduling restriction

5.5.4.1 Scheduling availability of UE performing measurements in TDD bands on FR1

When the UE performs intra-frequency measurements in a TDD band, the following restrictions apply due to SS-RSRP measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on SSB symbols to be measured, and on 1 data symbol before each consecutive SSB symbols to be measured and 1 data symbol after each consecutive SSB symbols to be measured within SMTC window duration.

When the UE performs intra-frequency measurements in a TDD band, the following restrictions apply due to SS-RSRQ measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol before each consecutive SSB to be measured/RSSI symbols and 1 data symbol after each consecutive SSB to be measured/RSSI symbols within SMTC window duration.

5.5.4.2 Scheduling availability of UE performing measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UE which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to SS-RSRP/RSRQ measurement

- If *deriveSSB_IndexFromCell* is enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH on SSB symbols to be measured, and on 1 data symbol before each consecutive SSB symbols to be measured and 1 data symbol after each consecutive SSB symbols to be measured within SMTC window duration.
- If *deriveSSB_IndexFromCell* is not enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH on all symbols within SMTC window duration.

For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to measurement of serving cell.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/ on SSB symbols of the serving cell.

5.5.4.3 Scheduling availability of UE performing measurements on FR2

The following scheduling restriction applies due to SS-RSRP measurement on an FR2 intra-frequency cell

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH on SSB symbols to be measured, and on 1 data symbol before each consecutive SSB symbols to be measured and 1 data symbol after each consecutive SSB symbols to be measured within SMTC window duration (The signaling *deriveSSB_IndexFromCell* is always enabled for FR2).

The following scheduling restriction applies to SS-RSRQ measurement on an FR2 intra-frequency cell

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/ on SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol before each consecutive SSB to be measured/RSSI symbols and 1 data symbol after each consecutive SSB to be measured/RSSI symbols within SMTC window duration (The signaling *deriveSSB_IndexFromCell* is always enabled for FR2).

The following scheduling restriction applies to measurement on an FR2 serving cell

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/ on SSB symbols of the serving cell.

5.5.5 Applicability conditions for SDT

The UE is not required to meet the following measurement requirements during subsequent SDT transmissions:

- Measurements of inter-frequency NR cells in clause 5.1.2.4
- Measurements of inter-RAT E-UTRAN cells in clause 5.1.2.5
- Inactive Mode CA/DC Measurements in clause 5.4

The UE is allowed to delay the reception of PRS resources on the positioning frequency layer until the SDT session is completed if the measurement using PRS resource overlaps with the SDT resources.

5.6 NR measurements for positioning

5.6.1 Introduction

This clause contains requirements for UE capable of performing NR positioning measurements defined in TS 38.215 [4], including RSTD, PRS-RSRP, UE Rx-Tx time difference and PRS-RSRPP, in RRC_INACTIVE state.

The requirements in clauses 5.6.2, 5.6.3, 5.6.4 and 5.6.5 are applicable to PRS resources that do not collide with other DL signals/channels which include SSB, SIB1, CORESET0, MSG2/MSGB, paging and DL SDT. In addition, a UE is not expected to receive PRS resources that collide with a time interval starting at symbol m and ending at symbol $m + N_2$, where symbol m is the last symbol in which the UE is configured to receive PDCCH and N_2 is defined in clause 6.4 of [26, TS 38.214] for the subcarrier spacing μ of the DL PRS.

If a PRS resource is outside or partially overlapped with the initial DL BWP, a PRS resource instance collides with another DL signal/channel if any portion of the other DL signal/channel overlaps with the time interval starting X symbols before the PRS instance and ending X symbols after the PRS instance, taking into account *nr-DL-PRS-ExpectedRSTD-Uncertainty* and *nr-DL-PRS-ExpectedRSTD*, where X is defined in Table 5.6.1-1.

Table 5.6.1-1: Value of X number of symbols

FR	μ	NR Slot length (ms)	X symbols
FR1	0	1	7
	1	0.5	14
	2	0.25	28
FR2	2	0.25	14
	3	0.125	28
Note 1: The FR1 value applies if one or both of the serving cell and the positioning frequency layer are in FR1. FR2 value applies if both of the serving cell and the positioning frequency layer are in FR2.			

All measurement requirements specified in clauses 5.6.2, 5.6.3, 5.6.4 and 5.6.5 shall apply for any DRX configuration specified in TS 38.331 [2].

The requirements in clauses 5.6.2, 5.6.3, 5.6.4 and 5.6.5 are applicable provided that the cell selection procedure for the selected PLMN defined in TS 38.304 [1] is not triggered during PRS measurement period.

The requirements in clauses 5.6.2, 5.6.3, 5.6.4 and 5.6.5 apply provided that all PRS resources within a PFL are within up to 2 separate windows within $T_{\text{PRS},i}$ for each positioning frequency layer i as defined in clauses 5.6.2, 5.6.3, 5.6.4 and 5.6.5, where each window is up to 10ms.

The UE is not required to perform additional SSB measurement for the SSB configured as QCL source of PRS resources.

When the UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

5.6.2 RSTD measurements

5.6.2.1 Introduction

The requirements in clause 5.6.2 shall apply provided the UE has received *NR-DL-TDOA-RequestLocationInformation* message from the LMF via LPP [34] requesting the UE to measure and report DL RSTD measurements defined in TS 38.215 [4].

5.6.2.2 Requirements Applicability

The requirements in clause 5.6.2 apply for periodic and triggered RSTD measurements, provided:

- PRS-RSTD related side conditions given in clause 10.1.23.2 for FR1 and FR2 are fulfilled, for a corresponding Band.

5.6.2.3 Measurement Capability

The UE PRS RSTD measurement capability in RRC_INACTIVE state is as indicated by the UE in *NR-DL-TDOA-ProvideCapabilities*, according to TS 37.355 [34].

5.6.2.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE is ready to transmit the measurement report over the air interface. If the UE supports reporting of NR positioning measurements via SDT, the UE may be able to report the measurements while it remains in RRC_INACTIVE state; otherwise, the UE will transition to RRC_CONNECTED state prior to transmitting the measurement report.

For RSTD measurements performed by the UE in RRC_INACTIVE state, the measurement reporting delay excludes all of the following:

- additional delay caused by other LPP signalling on the DCCH,
- delay uncertainty introduced when inserting the measurement report in the TTI of the uplink DCCH, equal to 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration,
- any delay caused by unavailability of UL resources to transmit the measurement report,
- any transmission delay needed by SDT,
- the time needed to transition to RRC_CONNECTED state to report the measurements.

The reported RSTD measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.23.3.

The RSTD measurements performed and reported according to this section shall meet the RSTD measurement accuracy requirements in clause 10.1.23.2, for each measured DL PRS resource.

5.6.2.5 Measurements Period Requirements

After receiving both *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from the LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in Clause 5.6.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined as:

$$T_{RSTD,Total} = \sum_{i=1}^L T_{RSTD,i} + (L - 1) * \max(T_{effect,i})$$

Where:

- i is the index of positioning frequency layer,
- L is total number of positioning frequency layers, and
- $T_{\text{effect},i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i

$T_{\text{RSTD},i}$ is the measurement period for PRS RSTD measurement in positioning frequency layer i as specified below:

$$T_{\text{RSTD},i} = \left(K_{\text{carrier_PRS}} * N_{\text{Rx,TEG},i} * N_{\text{RxBeam},i} * \left\lceil \frac{N_{\text{PRS},i}^{\text{slot}}}{N'} \right\rceil * \left\lceil \frac{L_{\text{available_PRS},i}}{N} \right\rceil * N_{\text{sample}} - 1 \right) * T_{\text{effect},i} + T_{\text{last},i} ,$$

Where:

- $N_{\text{RxBeam},i}$ is the UE Rx beam sweeping factor:
- $N_{\text{RxBeam},i} = 1$ if positioning frequency layer i is in FR1, and if positioning frequency layer i is in FR2
 - $N_{\text{RxBeam},i}$ equals to the value as UE reported in *supportedLowerRxBeamSweepingFactor-FR2* if the capability is reported by the UE for the band containing positioning frequency layer i , and LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*.
- $N_{\text{RxBeam},i}$ equals to 8, otherwise.
- $K_{\text{carrier_PRS}}$ is a scaling factor for PRS-based NR positioning measurements in RRC_INACTIVE. If the UE supports *parallelPRS-MeasRRC-Inactive-r17*, $K_{\text{carrier_PRS}} = 1$; otherwise,
- If $S_{\text{rxlev}} \leq S_{\text{nonIntraSearchP}}$ or $S_{\text{qual}} \leq S_{\text{nonIntraSearchQ}}$, $K_{\text{carrier_PRS}} = K_{\text{carrier}} + 1$, where K_{carrier} is defined in clause 4.2.2.4
- If $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$ and $S_{\text{qual}} > S_{\text{nonIntraSearchQ}}$, $K_{\text{carrier_PRS}} = N_{\text{layers}} + 1$, where N_{layers} is defined in clause 4.2.2.7.
- $N_{\text{Rx,TEG},i}$ is the Rx TEG specific scaling factor:
 - $N_{\text{Rx,TEG},i} = 1$ if the UE is not configured by the LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34].
 - $N_{\text{Rx,TEG},i}$ is defined as follows if the UE is configured by the LMF with *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] to perform measurement on same DL PRS resource of a TRP using different Rx TEGs in *NR-DL-TDOA-RequestLocationInformation* [34]:
 - $N_{\text{Rx,TEG},i} = P$, if the UE is not capable of measuring same DL PRS resource simultaneously from multiple Rx TEGs, where P is the number of UE Rx TEGs that the UE is requested by LMF to measure the same DL-PRS Resource of a TRP indicated by *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* in [34], and in case 'n0' is indicated, P is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*.
 - $N_{\text{Rx,TEG},i} = \left\lceil \frac{P}{Q} \right\rceil$, if the UE is capable of measuring the same DL PRS resource simultaneously from multiple Rx TEGs, where Q is the number of UE Rx TEGs for measuring the same DL-PRS Resource simultaneously indicated by *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul-r17* in [34].
- $N_{\text{PRS},i}^{\text{slot}}$ is the maximum number of DL PRS resources in positioning frequency layer i configured in a slot.
- $L_{\text{available_PRS},i}$ is the time duration of available PRS in positioning frequency layer i to be measured within $T_{\text{PRS},i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{\text{available_PRS},i}$, only unmuted PRS resources that are not fully overlapped with other higher-priority DL signals/channels are considered.
- N_{sample} is the number of PRS RSTD samples, where

- $N_{sample} = 1$ if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- $N_{sample} = 2$ if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- $N_{sample} = 4$ otherwise.
- $T_{last,i}$ is the measurement duration for the last PRS RSTD sample in positioning frequency layer i , including the sampling time and processing time, $T_{last,i} = T_i + T_{available_PRS,i}$,
- $T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where:

- T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34],
- $T_{available_PRS,i} = LCM(T_{PRS,i}, T_{DRX})$, the least common multiple between $T_{PRS,i}$ and the DRX cycle length T_{DRX}
- $T_{PRS,i}$ is the periodicity of DL PRS resource with muting on positioning frequency layer i .

If more than one PRS periodicities are configured in positioning frequency layer i , the least common multiple of PRS periodicities $T_{per}^{PRS \text{ with muting}}$ among all DL PRS resource sets in the positioning frequency layer is used to derive $T_{PRS,i}$, where,

- $T_{per}^{PRS \text{ with muting}} = N_{muting} * T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,
- T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.
- N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where
- T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.
- $\{N, T\}$ is the UE capability combination per band for RRC_INACTIVE state where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSymbols-r17* in TS 37.355 [34], T (ms) corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34], $[$ and $T-N (>0)$ is the time required to process duration N of DL PRS symbols already buffered in memory], for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34],
- N' is UE capability for number of DL PRS resources that it can process in a slot [in RRC_INACTIVE state as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot-RRC-Inactive-r17* specified in TS 37.355 [34].

The time $T_{RSTD,Total}$ starts from the first DRX cycle containing the DL PRS resource(s) in the assistance data after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message are delivered from LMF to the UE via LPP [34].

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

If the DRX cycle is reconfigured during the RSTD measurement period, then the measurement period can be longer.

When PRS-RSRP is configured for DL-TDOA, RSTD and PRS-RSRP are performed over the same measurement period.

The measurement requirements do not apply to any PRS resource that always collides with other higher-priority DL signals/channels, as specified in clause 5.6.1.

Longer RSTD measurement period is expected when there are collisions between PRS resources and other higher-priority DL signals/channels.

If $K_{\text{carrier_PRS}}$ changes for any PFL during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{\text{available_PRS},i}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N .

The requirements in clause 5.6.2 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If cell re-selection occurs while RSTD measurements are being performed, then the UE shall continue and complete the on-going RSTD measurements after the cell selection is completed. The RSTD measurement period can be longer.

If the RRC state transition occurs from *RRC_INACTIVE* to *RRC_CONNECTED* state during the RSTD measurement period then the UE shall continue the RSTD measurement in the *RRC_CONNECTED* state. The RSTD measurement period can be longer.

5.6.3 PRS-RSRP measurements

5.6.3.1 Introduction

The requirements in clause 5.6.3 shall apply provided the UE has received a message from LMF via LPP [34] requesting the UE to measure and report PRS-RSRP measurements defined in TS 38.215 [4] and the UE is capable of supporting the PRS-RSRP measurement in *RRC_INACTIVE* state.

5.6.3.2 Requirements applicability

The requirements in clause 5.6.3 apply for periodic and triggered PRS-RSRP measurements, provided:

- PRS-RSRP related side conditions given in clause 10.1.24.2 are met for a corresponding Band.

5.6.3.3 Measurement Capability

UE PRS-RSRP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

5.6.3.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE is ready to transmit the measurement report over the air interface. If the UE supports reporting of NR positioning measurements via SDT, the UE may be able to report the measurements while it remains in *RRC_INACTIVE* state; otherwise, the UE will transition to *RRC_CONNECTED* state prior to transmitting the measurement report.

For PRS-RSRP measurements performed by the UE in *RRC_INACTIVE* state, the measurement reporting delay excludes all of the following:

- any delay caused by other LPP signalling on the DCCH,
- delay uncertainty introduced when inserting the measurement report in the TTI of the uplink DCCH which is equal to $2 \times \text{TTI}_{\text{DCCH}}$ where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration,
- any delay caused by no UL resources for UE to send the measurement report,
- any transmission delay needed by SDT,
- the time needed to transition to RRC_CONNECTED state to report the measurements.

The reported PRS-RSRP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.1.24.3.

The PRS-RSRP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requirements specified in the clauses 10.1.24.2.

5.6.3.5 Measurement Period Requirements

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in Clause 5.6.3.3) PRS-RSRP measurements, defined in TS 38.215 [4], from configured PRS resources for configured TRPs on configured positioning frequency layers, within $T_{\text{PRS-RSRP, total}}$ ms.

$$T_{\text{PRS-RSRP, total}} = \sum_{i=1}^L T_{\text{PRS-RSRP, } i} + (L - 1) * \max(T_{\text{effect, } i})$$

Where:

- i is the index of positioning frequency layer,
- L is total number of positioning frequency layers,
- $T_{\text{effect, } i}$ is the periodicity of the PRS-RSRP measurement in positioning frequency layer i .

$$T_{\text{PRS-RSRP, } i} = \left(K_{\text{carrier_PRS}} * N_{\text{RxBeam, } i} * \left\lceil \frac{N_{\text{PRS, } i}^{\text{slot}}}{N'} \right\rceil \left\lceil \frac{L_{\text{available_PRS, } i}}{N} \right\rceil * N_{\text{sample}} - 1 \right) * T_{\text{effect, } i} + T_{\text{last, } i} \text{ Where:}$$

- $K_{\text{carrier_PRS}}$ is a scaling factor for PRS-based NR positioning measurements in RRC_INACTIVE. If the UE supports *parallelPRS-MeasRRC-Inactive-r17*, $K_{\text{carrier_PRS}} = 1$. Otherwise,
- If $\text{Srxlev} \leq \text{S}_{\text{nonIntraSearchP}}$ or $\text{Squal} \leq \text{S}_{\text{nonIntraSearchQ}}$, $K_{\text{carrier_PRS}}$ equals to the sum of K_{carrier} in 4.2.2.4 and one positioning layer.
- If $\text{Srxlev} > \text{S}_{\text{nonIntraSearchP}}$ and $\text{Squal} > \text{S}_{\text{nonIntraSearchQ}}$, $K_{\text{carrier_PRS}}$ equals to the sum of N_{layer} in 4.2.2.7 and one positioning layer.
- $N_{\text{RxBeam, } i}$ is the scaling factor for Rx beam sweeping:
 - $N_{\text{RxBeam, } i} = 1$ if positioning frequency layer i is in FR1, and if positioning frequency layer i is in FR2
 - $N_{\text{RxBeam, } i}$ equals to the value as UE reported in *supportedLowerRxBeamSweepingFactor-FR2* if the capability is reported by the UE for the band containing positioning frequency layer i , and LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-AoD-RequestLocationInformation*.
 - $N_{\text{RxBeam, } i}$ equals to 8, otherwise.
- $L_{\text{available_PRS, } i}$ is the time duration of available PRS to be measured in the positioning frequency layer i to be measured during $T_{\text{PRS, } i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{\text{available_PRS, } i}$, only unmuted PRS resources that are not fully overlapped with other higher-priority DL signals/channels are considered.
- $N_{\text{PRS, } i}^{\text{slot}}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

- $\{N, T\}$ is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSymbols-r17* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34],
- N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot-RRC-Inactive-r17* in clause 6.4.3 of TS 37.355 [34],
- N_{sample} is the number of PRS-RSRP measurement samples and
 - $N_{sample} = 1$, if UE supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* [34], and the LMF indicates the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34], and the following conditions are met:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
 - $N_{sample} = 2$, if UE supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* [34], and the LMF indicates the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34], and the following conditions are not met:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
 - $N_{sample} = 4$ otherwise
- $T_{last,i} = T_i + T_{available_PRS,i}$ is the measurement duration for the last PRS-RSRP sample, including the sampling time and processing time,
 - $T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$ is the periodicity of PRS-RSRP measurement in positioning frequency layer i ,
 - T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34],
 - $T_{available_PRS,i} = LCM(T_{PRS,i}, T_{DRX})$ is the least common multiple between $T_{PRS,i}$ and T_{DRX} ,
 - $T_{PRS,i}$ is the maximum PRS resource periodicity among all PRS resources in positioning frequency layer i ,
 - T_{DRX} is the DRX cycle length.

If positioning frequency layer i has more than one DL PRS resource set with different PRS periodicities with muting, $T_{per}^{PRS \text{ with muting}} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS \text{ with muting}}$ among the DL PRS resource sets is used to derive $T_{PRS,i}$, where:

- T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.
- N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

When PRS-RSRP measurements are configured for DL-AoD, the time $T_{PRS-RSRP,total}$ starts from the first DRX cycle containing the DL PRS resources in the assistance data after both the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When the PRS-RSRP measurement is configured together with RSTD measurement then the PRS-RSRP measurement shall meet the RSTD measurement requirements defined in clause 5.6.2.

When the PRS-RSRP measurement is configured together with UE Rx-Tx time difference measurement then the PRS-RSRP measurement shall meet the UE Rx-Tx time difference measurement requirements defined in clause 5.6.4.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N .

Longer PRS-RSRP measurement period is expected when there is collision/overlap between other DL signals/channels and PRS resources in RRC_INACTIVE state.

The requirements in clause 5.6.3 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AoD-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If the DRX cycle is reconfigured during the PRS-RSRP measurement period then the PRS-RSRP measurement period can be longer.

If cell reselection occurs while PRS-RSRP measurement is being performed, then the UE shall continue and complete the on-going PRS-RSRP measurement after the cell selection is completed. The PRS-RSRP measurement period can be longer.

If the UE's RRC state changes from the RRC_INACTIVE to RRC_CONNECTED during the PRS-RSRP measurement period, then the UE shall continue the PRS-RSRP measurement in the RRC_CONNECTED state. The PRS-RSRP measurement period can be longer.

5.6.4 UE Rx-Tx time difference measurements

5.6.4.1 Introduction

The requirements in this clause shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4].

5.6.4.2 Requirements Applicability

The requirements in clause 5.6.4 apply for periodic and triggered UE Rx-Tx time difference measurements, provided:

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25.2 are met for a corresponding band.
- SRS is configured on the PCell.

5.6.4.3 Measurement Capability

UE Rx-Tx time difference measurement capability is as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities*, according to TS 37.355 [34].

5.6.4.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

This measurement reporting delay excludes the delay caused by any of the following:

- delay caused by other LPP signalling on the DCCH.

- delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: $2 \times \text{TTI}_{\text{DCCH}}$ where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration.
- delay caused due to lack of UL resources for UE to send the measurement report.
- delay required by SDT for reporting the measurement using SDT resources.
- delay required for transition to RRC_CONNECTED state for report the measurement in RRC_CONNECTED.

The UE Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1. 25.3.

The UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1. 25.2.

5.6.4.5 Measurement Period Requirements

When physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34], UE shall be able to measure multiple (up to the UE capability specified in clause 5.6.4.3) UE Rx-Tx time difference measurements as defined in TS 38.215 [4] in configured positioning frequency layers within the measurement period $T_{\text{UERxTx,Total}}$ ms.

$$T_{\text{UERxTx, Total}} = \sum_{i=1}^L T_{\text{UERxTx},i} + (L - 1) * \max(T_{\text{effect},i})$$

Where:

- i is the index of positioning frequency layer,
- $T_{\text{UERxTx},i}$ is the measurement period for UE Rx-Tx time difference measurements in positioning frequency layer i as further defined in this clause,
- L is total number of positioning frequency layers,
- $T_{\text{effect},i}$ is the periodicity of the UE Rx-Tx time difference measurement in positioning frequency layer i as defined further in this clause.

$$T_{\text{UERxTx},i} = \left(K_{\text{carrier_PRS}} * N_{\text{RxTx,TEG},i} * N_{\text{RxBeam},i} * \left\lceil \frac{N_{\text{PRS},i}^{\text{slot}}}{N'} \right\rceil \left\lfloor \frac{L_{\text{available_PRS},i}}{N} \right\rfloor * N_{\text{sample}} - 1 \right) * T_{\text{effect},i} + T_{\text{last},i}$$

Where:

- $K_{\text{carrier_PRS}} = 1$ if the UE is capable of *parallelPRS-MeasRRC-Inactive-r17* defined in [34].
- $K_{\text{carrier_PRS}} = N_{\text{layer}} + 1$ if the UE is not capable of *parallelPRS-MeasRRC-Inactive-r17* defined in [34] and if $\text{Srxlev} > \text{S}_{\text{nonIntraSearchP}}$ and $\text{Squal} > \text{S}_{\text{nonIntraSearchQ}}$; where N_{layer} is defined in clause 4.2.2.7.
- $K_{\text{carrier_PRS}} = K_{\text{carrier}} + 1$ if the UE is not capable of *parallelPRS-MeasRRC-Inactive-r17* defined in [34] and if $\text{Srxlev} \leq \text{S}_{\text{nonIntraSearchP}}$ or $\text{Squal} \leq \text{S}_{\text{nonIntraSearchQ}}$; where K_{carrier} is defined in clause 4.2.2.4.
- $N_{\text{RxBeam},i}$ is the scaling factor for UE Rx beam sweeping:
 - $N_{\text{RxBeam},i} = 1$ if positioning frequency layer i is in FR1, and if positioning frequency layer i is in FR2.
 - $N_{\text{RxBeam},i}$ equals to the value as UE reported in *supportedLowerRxBeamSweepingFactor-FR2* if the capability is reported by the UE for the band containing positioning frequency layer i , and LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-Multi-RTT -RequestLocationInformation*.
 - $N_{\text{RxBeam},i}$ equals to 8, otherwise.

$N_{\text{RxTx,TEG},i}$ is the Rx TEG specific scaling factor:

- $N_{RxTx,TEG,i} = 1$ if UE is not configured by LMF with *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34].

Otherwise,

- $N_{RxTx,TEG,i} = N_{TEG,i}$, if UE is not capable of measuring same DL PRS resource simultaneously from multiple Rx TEGs, where $N_{TEG,i}$ is the number of Rx TEGs or RxTx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34], and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*.
- $N_{RxTx,TEG,i} = \left\lfloor \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rfloor$, if UE is capable of measuring same DL PRS resource simultaneously from multiple Rx TEGs, where $k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.
- $L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer i , to be measured during $T_{PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only unmuted PRS resources that are not fully overlapped with other higher-priority DL signals/channels are considered.
- $N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,
- $\{N, T\}$ is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSymbols-r17* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in clause 4.2.7.2 of TS 37.355 [34],
- N' is UE capability for number of DL PRS resources that it can process in a slot corresponding to *maxNumOfDL-PRS-ResProcessedPerSlot-RRC-Inactive-r17* as specified in clause 6.4.3 of TS 37.355 [34],
- N_{sample} is the number of UE Rx-Tx time difference measurement samples:
 - $N_{sample} = 4$ if the UE is not capable of *supportedDL-PRS-ProcessingSamples-RRC-Inactive* defined in [34] or not configured to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples-r17* [34].
 - $N_{sample} = 1$ if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-Inactive* defined in [34] and LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples-r17* [34] and the following conditions are met:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
 - $N_{sample} = 2$ if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-Inactive* defined in [34] and the LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples-r17* [34] but the following conditions are not met:
 - PRS bandwidth is within the initial BWP and
 - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- $T_{last,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the positioning layer i , including the sampling time and processing time, $T_{last,i} = T_i + T_{available_PRS,i}$,
- $T_{effect,i}$ is periodicity of UE Rx-Tx time difference measurement in positioning frequency layer i :

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where:

- T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms-r17* in TS 37.355 [34],
- $T_{available_PRS,i} = LCM(T_{PRS,i}, T_{DRX})$, the least common multiple between $T_{PRS,i}$ and T_{DRX} .
- T_{DRX} is the DRX cycle of the UE in the serving cell.
- $T_{PRS,i}$ is the PRS resource periodicity in positioning frequency layer i . If the positioning frequency layer i has more than one DL PRS resource sets with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among DL PRS resource sets is used to derive $T_{PRS,i}$, where:
 - T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.
 - N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$

The time $T_{UERxTx,Total}$ starts from the first DRX cycle containing the DL PRS resources in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

If the RRC state transition occurs from RRC_INACTIVE to RRC_CONNECTED state during the UE Rx-Tx time difference measurement period then the UE shall restart the UE Rx-Tx time difference measurement after it obtains SRS configuration and Timing Advance command from the serving cell.

If cell reselection occurs during the UE Rx-Tx time difference measurement period then the UE shall restart the UE Rx-Tx time difference measurement after it obtains SRS configuration and Timing Advance command from the new serving cell.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N .

If the DRX cycle is reconfigured during the UE Rx-Tx time difference measurement period then the UE Rx-Tx time difference measurement period can be longer.

If during UE Rx-Tx time difference measurement period PRS resources overlap with other DL signals/channels then the UE Rx-Tx time difference measurement period can be longer.

When PRS-RSRP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

The requirements in clause 5.6.4 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in Table 7.1.2-2 during the UE Rx-Tx measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

5.6.5 PRS-RSRPP measurements

5.6.5.1 Introduction

The requirements in clause 5.6.5 shall apply provided the UE has received a message from LMF via LPP requesting the UE to measure and report PRS-RSRPP measurements defined in TS 38.215 [4]. And the UE is capable of supporting the PRS-RSRPP measurement in RRC_INACTIVE state.

5.6.5.2 Requirements Applicability

The requirements in clause 5.6.5 apply for periodic and triggered PRS-RSRPP measurements, provided:

- PRS-RSRPP related side conditions given in clause 10.1.38.2 are met for a corresponding Band.

5.6.5.3 Measurement Capability

UE PRS-RSRPP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

5.6.5.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE is ready to transmit the measurement report over the air interface. If the UE supports reporting of NR positioning measurements via SDT, the UE may be able to report the measurements while it remains in RRC_INACTIVE state; otherwise, the UE will transition to RRC_CONNECTED state prior to transmitting the measurement report.

For PRS-RSRPP measurements performed by the UE in RRC_INACTIVE state, the measurement reporting delay excludes all of the following:

- any delay caused by other LPP signalling on the DCCH,
- delay uncertainty introduced when inserting the measurement report in the TTI of the uplink DCCH which is equal to $2 \times TTI_{DCCH}$ where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration,
- any delay caused by no UL resources for UE to send the measurement report,
- any transmission delay needed by SDT,
- the time needed to transition to RRC_CONNECTED state to report the measurements.

The reported PRS-RSRPP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.38.3.

The PRS-RSRPP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requirements specified in the clause 10.1.38.2.

5.6.5.5 Measurement Period Requirements

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message in RRC_INACTIVE state, measurement period requirements for PRS-RSRP defined in 5.6.3 is re-used for PRS-RSRPP measurement.

5.6.6 TA validation requirements for positioning SRS

5.6.6.1 Introduction

The requirements in clause 5.6.6 shall apply when the UE is configured with the SRS transmission on the PCell and with *inactivePosSRS-RSRP-ChangeThreshold* for the time alignment (TA) validation before the SRS transmission [2].

5.6.6.2 TA validation requirements

When *inactivePosSRS-RSRP-ChangeThreshold* [2] is configured for TA validation based on the RSRP change criterion according to clause 5.26.2 in [7], the UE is allowed to transmit the SRS using the timing derived using the latest available N_{TA} value as specified in subclause 7.1 provided that the following conditions are met:

- the first RSRP ($RSRP_1$) measurement and the second RSRP ($RSRP_2$) measurements used in the TA validation are valid measurements and,
- TA for the SRS transmission is valid according to the TA validation criteria defined in clause 5.26.2 in [7].

$RSRP_1$ and $RSRP_2$ are considered valid provided that the conditions in Table 5.6.6.2-1 and Table 5.6.6.2-2 are met for FR1 and FR2-1 respectively.

Table 5.6.6.2-1 Valid measurement for FR1

Measurement	FR1
$RSRP_1$	$(T1 - \min(640\text{ms}, M1 \cdot T_{DRX})) \leq T1' \leq (T1 + \min(640\text{ms}, M1 \cdot T_{DRX}))$
$RSRP_2$	$(T2 - \min(640\text{ms}, M1 \cdot T_{DRX})) \leq T2' \leq T2$

Table 5.6.6.2-2 Valid measurement for FR2-1

Measurement	FR2-1
$RSRP_1$	$(T1 - \max(480\text{ms}, 8 \cdot \text{SMTC periodicity})) \leq T1' \leq (T1 + \max(480\text{ms}, 8 \cdot \text{SMTC periodicity}))$
$RSRP_2$	$(T2 - \max(480\text{ms}, 8 \cdot \text{SMTC periodicity})) \leq T2' \leq T2$

If at least one of $RSRP_1$ and $RSRP_2$ is invalid based on the above conditions, then the UE shall not validate the SRS transmission using $RSRP_1$ and $RSRP_2$ and shall not transmit the SRS. The UE shall not transmit in an SRS resource that occurs more than 640 ms after T2.

Where:

- T1 is the time when:
 - *RRCRelease* with *SRS-PosRRC-InactiveConfig* [2] is received by the UE, or
 - the latest TA is received by the UE while in RRC_INACTIVE state.
- T1' is the time when the UE has completed $RSRP_1$.
- T2 is the time when the UE performs TA validation as defined in clause 5.26.2 in [7] for the SRS transmission.
- T2' is the time when the UE has completed $RSRP_2$.
- T_{DRX} is the DRX cycle length in ms.
- M1 the scaling factor as defined in clause 4.2.2.2.

5.7 Random access based Small Data Transmissions (RA-SDT)

5.7.1 Introduction

The requirements in this clause are applicable for the UE performing small data transmissions using 2-step RA or 4-step RA procedures [3].

5.7.2 Requirements for small data transmissions based on 2-step RA

The requirements in clause 6.2.2.3 shall apply.

5.7.3 Requirements for small data transmissions based on 4-step RA

The requirements in clause 6.2.2.2 shall apply.

5.7.4 Applicability conditions for SDT

The UE is not required to meet the following measurement requirements during subsequent SDT transmissions:

- Measurements of inter-frequency NR cells in clause 5.1.2.4
- Measurements of inter-RAT E-UTRAN cells in clause 5.1.2.5
- Idle Mode CA/DC Measurements in clause 5.4

The UE is allowed to delay the reception of PRS resources on the positioning frequency layer until the SDT session is completed if the measurement using PRS resource overlaps with the SDT resources.

5.7B Random access based Small Data Transmissions (RA-SDT) for RedCap

5.7B.1 Introduction

The requirements in this clause are applicable for the UE performing small data transmissions 1 Rx RedCap and 2 Rx RedCap UE using 2-step RA or 4-step RA procedures [3].

The 1 Rx RedCap UE for determining whether to perform SDT procedure defined in clause 5.27 [7] applies:

- sdt-RSRP-Threshold-r17 as the signaled value of sdt-RSRP-Threshold-r17 [2] + 1 dB.

5.7B.2 Requirements for small data transmissions based on 2-step RA

The requirements in clause 6.2.2.3 shall apply.

5.7B.3 Requirements for small data transmissions based on 4-step RA

The requirements in clause 6.2.2.2 shall apply.

5.7B.4 Applicability conditions for RA-SDT for RedCap

The UE is not required to meet the following measurement requirements during SDT transmissions:

- Measurements of inter-frequency NR cells in clause 5.1B.2.4
- Measurements of inter-RAT E-UTRAN cells in clause 5.1B.2.5

6 RRC_CONNECTED state mobility

6.1 Handover

6.1.1 NR Handover

6.1.1.1 Introduction

The purpose of NR handover is to change the NR PCell to another NR cell. The requirements in this clause are applicable to SA NR, NE-DC and NR-DC.

6.1.1.2 NR FR1 - NR FR1 Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR1 cell to NR FR1 cell, and to inter-frequency handover from NR FR1 cell in a carrier frequency with CCA to NR FR1 cell.

6.1.1.2.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} msec from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1.1.2.2.

6.1.1.2.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = T_{\text{rs}}$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = 3 * T_{\text{rs}}$ ms. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$ for both known and unknown target cell.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the `measObjectNR` having the same SSB frequency and subcarrier spacing. If the `measObjectNR`s having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is

5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2.5 for intra-frequency handover and Clause 9.3.4 for inter-frequency handover.

6.1.1.3 NR FR2- NR FR1 Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR2 cell to NR FR1 cell.

6.1.1.3.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ ms from the end of the last TTI containing the RRC command.

Where:

$D_{handover}$ equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1.1.3.2.

6.1.1.3.2 Interruption time

The interruption time is the time between the end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When inter-frequency handover is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{search} = 0$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{ot} \geq -2$ dB, then $T_{search} = 3 * T_{rs}$ ms. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{rs}$ for both known and unknown target cell.

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 40ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If such *measObjectNRs* configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}=5$ ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2.5 for intra-frequency handover and Clause 9.3.4 for inter-frequency handover.

6.1.1.4 NR FR2- NR FR2 Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR2 cell to NR FR2 cell.

6.1.1.4.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} ms from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1.1.4.2.

6.1.1.4.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the handover command is received by the UE. If the target cell is a known cell, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = N * T_{\text{rs}}$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = N * 3 * T_{\text{rs}}$ ms. $N = 8$ when the target cell is in FR2-1, and $N = 12$ when the target cell is in FR2-2. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$ for both known and unknown target cell.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If such measObjectNRs configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc1* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

In FR2, the target cell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the handover command:
 - the UE has sent a valid measurement report for the target cell and
 - One of the SSBs measured from the NR target cell being configured remains detectable according to the cell identification conditions specified in clause 9.2 for intra-frequency cell and in clause 9.3 for inter-frequency cell,

- One of the SSBs measured from the target cell also remains detectable during the handover delay according to the cell identification conditions specified in clause 9.2 for intra-frequency cell and in clause 9.3 for inter-frequency cell.

otherwise it is unknown.

6.1.1.5 NR FR1- NR FR2 Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR1 cell to NR FR2 cell.

6.1.1.5.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} ms from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1.1.5.2.

6.1.1.5.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When in inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the handover command is received by the UE. If the target cell is a known cell, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = N \cdot 3 \cdot T_{\text{rs}}$ ms. $N = 8$ when the target cell is in FR2-1, and $N = 12$ when the target cell is in FR2-2. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 40ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$ for both known and unknown target cell.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If such measObjectNRs configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

In FR2, the target cell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the handover command:
 - the UE has sent a valid measurement report for the target cell and
 - One of the SSBs measured from the NR target cell being configured remains detectable according to the cell identification conditions specified in clause 9.3,

- One of the SSBs measured from the target cell also remains detectable during the handover delay according to the cell identification conditions specified in clause 9.3.

otherwise it is unknown.

6.1.2 NR Handover to other RATs

6.1.2.1 NR – E-UTRAN Handover

6.1.2.1.1 Introduction

The purpose of inter-RAT handover from NR to E-UTRAN is to change the radio access mode of PCell from NR to E-UTRAN. The handover procedure is initiated from NR with a RRC message that implies a handover as described in TS 38.331 [2]. The requirements in this clause are applicable to SA NR, NE-DC and NR-DC, and to handover from SA NR cell in a carrier frequency with CCA to E-UTRAN.

6.1.2.1.2 Handover delay

When the UE receives a RRC message implying handover to E-UTRAN the UE shall be ready to start the transmission of the uplink PRACH channel in E-UTRA within D_{handover} ms from the end of the last TTI containing the RRC command. D_{handover} is defined as

$$D_{\text{handover}} = T_{\text{RRC_procedure_delay}} + T_{\text{interrupt}}$$

Where:

$T_{\text{RRC_procedure_delay}}$: it is the RRC procedure delay, which is 50ms

$T_{\text{interrupt}}$: it is the time between end of the last TTI containing the RRC command on the NR PDSCH and the time the UE starts transmission of the PRACH in E-UTRAN, excluding $T_{\text{RRC_procedure_delay}}$. $T_{\text{interrupt}}$ is defined in clause 6.1.2.1.3.

6.1.2.1.3 Interruption time

When the inter-RAT handover to E-UTRAN is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + 20 \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{\text{search}} = 0$ ms. If the target cell is unknown and signal quality is sufficient for successful cell detection on the first attempt, then $T_{\text{search}} = 80$ ms. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to 30 ms. If PRACH occasion is configured in radio frames with even SFN and the relative time difference between radio frame i in the current cell and the target cell is larger than or equal to $153600 \cdot T_s$, the UE is allowed an additional MIB reception delay of [50]ms.

NOTE: The actual value of T_{IU} shall depend upon the PRACH configuration used in the target cell.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant E-UTRAN cell identification requirements are described in clause 9.4.1.

6.1.2.2 NR – UTRAN Handover

6.1.2.2.1 Introduction

The purpose of inter-RAT handover from NR to UTRAN is to change the radio access mode from NR to UTRAN. The handover procedure is initiated from NR with a RRC message that implies a hard handover as described in TS 38.331 [2].

6.1.2.2.2 Handover delay

When the UE receives a RRC message implying handover to UTRAN the UE shall be ready to start the transmission of the new UTRA uplink DPCH within D_{handover} ms from the end of the last NR TTI containing the RRC *MobilityfromNRCommand* command.

where:

- D_{handover} equals the RRC procedure delay, which is 50 ms plus the interruption time stated in clause 6.1.2.2.3.

6.1.2.2.3 Interruption time

The interruption time is the time between the end of the last TTI containing the RRC command on the NR PDSCH and the time the UE starts transmission on the uplink DPCH in UTRAN, excluding the RRC procedure delay. The interruption time depends on whether the target cell is known to the UE or not.

The target cell is known if it has been measured by the UE during the last 5 seconds otherwise it is unknown. The UE shall always perform a UTRA synchronisation procedure as part of the handover procedure.

If the target cell is known the interruption time shall be less than $T_{\text{interrupt1}}$

$$T_{\text{interrupt1}} = T_{\text{IU}} + T_{\text{sync}} + 50 + 10 \cdot F_{\text{max}} + T_{\text{MC}} \text{ ms}$$

If the target cell is unknown the interruption time shall be less than $T_{\text{interrupt2}}$

$$T_{\text{interrupt2}} = T_{\text{IU}} + T_{\text{sync}} + 150 + 10 \cdot F_{\text{max}} + T_{\text{MC}} \text{ ms}$$

This requirement shall be met, provided that there is one target cell in the *MobilityfromNRCommand* command. Performance requirements for E-UTRA to UTRA soft handover are not specified. When UE is connected to an NR cell, UTRA SFN timing measurements are not reported. This implies that the timing of the DPCH of the UTRA target cells in the active set cannot be configured by UTRAN to guarantee that all target cells fall within the UE reception window of $T_0 \pm 148$ chips.

Where:

- T_{IU} is the interruption uncertainty when changing the timing from the NR to the new UTRAN cell. T_{IU} can be up to one UTRA frame (10 ms).
- F_{max} denotes the maximum number of radio frames within the transmission time intervals of all transport channels that are multiplexed into the same CCTrCH on the UTRA target cell. If HS-PDSCH is configured in the UTRA target cell, F_{max} is 4 radio frames.
- T_{sync} is the time required for measuring the downlink DPCH channel as stated in TS 25.214 [32], clause 4.3.1.2. In case higher layers indicate the usage of a post-verification period $T_{\text{sync}}=0$ ms. Otherwise $T_{\text{sync}}=40$ ms.
- T_{MC} is 0ms if a single UTRA cell is configured as the handover target, otherwise 20ms if handover to UTRA with 1, 2 or 3 UTRA carriers with secondary HS-PDSCH is configured.

The phase reference is the primary CPICH.

The requirements in this clause assume that N312 has the smallest possible value i.e. only one insync is required.

6.1.3 NR DAPS Handover

6.1.3.1 Introduction

The requirements in this clause are applicable to DAPS handover to change the NR PCell to another NR cell.

Note: requirements only apply if

- the UE indicates ‘no-gap’ via *intraFreq-needForGap* for intra-frequency measurement of source cell and intra-frequency measurement of target cell, or
- the SSB of source cell is completely contained in the active DL BWP of the source cell, and the SSB of target cell is completely contained in the active DL BWP of the target cell, or
- the initial DL and UL BWP of source cell is confined within the active DL and UL BWP of the source cell respectively, and the initial DL and UL BWP of target cell is confined within the active DL and UL BWP of the target cell respectively.

6.1.3.2 NR FR1 - NR FR1 DAPS Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR1 cell to NR FR1 cell. A DAPS handover is intra-frequency if the centre frequency of the SSB of the source cell and the centre frequency of the SSB of the target cell are the same, and the subcarrier spacing of the two SSBs are also the same.

Note: For intra-frequency DAPS handover, no requirement applies if active DL and UL BWP of target cell is not confined within the active DL and UL BWP of the source cell respectively.

Note: For inter-frequency DAPS handover, no requirement applies if the BWP of target cell is overlapped with the BWP of source cell in frequency domain.

An FR1 DAPS handover is synchronous if it meets the conditions in table 6.1.3.2-1, otherwise it is asynchronous

Table 6.1.3.2-1: Sync conditions for FR1 DAPS handover

Type of handover	Maximum receive timing difference between source and target cell (μ s) for sync DAPS handover	Maximum transmit timing difference between source and target cell (μ s) for sync DAPS handover
Intra-frequency ^{Note 1,2,3}	6 μ s	7.6 μ s
Intra-band inter-frequency ^{Note 1,2,3}	6 μ s	7.6 μ s
Inter-band inter-frequency	33 μ s	34.6 μ s
Note 1: For synchronous DAPS handover, if the receive time difference exceeds the cyclic prefix length of that SCS, demodulation performance degradation is expected for the first symbol of the slot. For asynchronous DAPS handover, if the receive time difference exceeds the cyclic prefix length of that SCS, interruptions may occur depending on UE implementation. The duration and frequency of occurrence of such interruptions is not specified. Note 2: For DAPS handover on a TDD band, after starting RACH procedure, a UE is not required to transmit in the uplink to any of source and target cells earlier than N_{RX-TX} after the end of the last received downlink symbol from any of source and target cells in the same TDD band where $N_{RX-TX}=25600T_c$. Note 3: For DAPS handover on a TDD band, after starting RACH procedure, a UE is not required to receive in the downlink from any of source and target cells earlier than N_{TX-RX} after the end of the last transmitted uplink symbol to any of source and target cells in the same TDD band where $N_{TX-RX}=25600T_c$.		

6.1.3.2.1 DAPS handover delay

Procedure delays for the procedure that can command a DAPS handover are specified in TS 38.331 [2].

When the UE receives a RRC message implying handover, the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{\text{handover1}}$ seconds from the end of the last TTI containing the RRC command when UE is configured with dual active protocol stack handover.

$$D_{\text{handover1}} = T_{\text{RRC_procedure}} + T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

$T_{\text{RRC_procedure}}$ is the maximum RRC procedure delay as specified in clause 12 in TS 38.331 [2].

T_{search} , T_{IU} , $T_{\text{processing}}$, T_{Δ} and T_{margin} are defined in clause 6.1.1.2.2.

After successful RACH procedure of the target cell, when the UE receives an RRC message implying source cell release command, the UE shall accomplish the release actions specified in TS 38.331 [2] within $D_{\text{handover2}}$.

$$D_{\text{handover2}} = T_{\text{RRC_procedure}} + T_{\text{interrupt2}}$$

Where:

$T_{\text{RRC_procedure}}$ is the RRC procedure delay as specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt2}}$ is defined in clause 6.1.3.2.2.

6.1.3.2.2 Interruption time

During $D_{\text{handover1}}$, the UE is allowed an interruption of up to $T_{\text{interrupt1}}$ on source cell.

For FR1-to-FR1 intra-frequency handover, $T_{\text{interrupt1}}$ is specified in Table 6.1.3.2.2-1.

Table 6.1.3.2.2-1: $T_{\text{interrupt1}}$ for FR1-to-FR1 intra-frequency DAPS HO

μ	NR Slot length (ms)	Interruption length $T_{\text{interrupt1}}$ (slots ^{Note 1}), synchronous DAPS HO	Interruption length $T_{\text{interrupt1}}$ (slots ^{Note 1}), asynchronous DAPS HO
0	1	1	2
1	0.5	2	3
2	0.25	4	5
Note 1: The same SCS of source cell and target cell is assumed.			
Note 2: It is assumed that the BWP of target cell is not larger than the BWP of source cell. It is assumed that the CBW of target cell is not larger than the CBW of source cell			
Note 3: Void			

For FR1-to-FR1 intra-band inter-frequency handover, $T_{\text{interrupt1}}$ is specified in Table 6.1.3.2.2-2.

Table 6.1.3.2.2-2: $T_{\text{interrupt1}}$ for FR1-to-FR1 intra-band inter-frequency DAPS HO

μ	NR Slot length (ms)	$T_{\text{interrupt1}}$ (slots ^{Note 1}), synchronous DAPS HO	$T_{\text{interrupt1}}$ (slots ^{Note 1}), asynchronous DAPS HO
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
1	0.5	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$3 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$5 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
Note 1: The same SCS of source cell and target cell is assumed.			
Note 2: $T_{\text{SMTC_duration}}$ measured in subframes is the longest SMTC duration between source cell and target cell.			
Note 3: Void			
Note 4: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].			

For FR1-to-FR1 inter-band handover, $T_{\text{interrupt1}}$ is specified in Table 6.1.3.2.2-3.

Table 6.1.3.2.2-3: $T_{\text{interrupt1}}$ for FR1-to-FR1 inter-band DAPS HO

μ	NR Slot length (ms) of source cell	$T_{\text{interrupt1}}$ (slots)	
		Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	5

For FR1-to-FR1 intra-frequency handover, $T_{\text{interrupt2}}$ is specified in Table 6.1.3.2.2-4 when the BWP of target cell is smaller than the BWP of source cell, and $T_{\text{interrupt2}}$ is specified in Table 6.1.3.2.2-5 when the same BWP is used for target cell and source cell.

Table 6.1.3.2.2-4: $T_{\text{interrupt2}}$ for FR1-to-FR1 intra-frequency DAPS HO

μ	NR Slot length (ms)	Interruption length X (slots ^{Note 1})	$T_{\text{interrupt2}}$ (slots ^{Note 1}) for asynchronous DAPS HO
0	1	2	3
1	0.5	4	5
2	0.25	8	9
Note 1: The same SCS of source cell and target cell is assumed.			
Note 2: It is assumed that the BWP of target cell is smaller than the BWP of source cell.			

Table 6.1.3.2.2-5: $T_{\text{interrupt2}}$ for FR1-to-FR1 intra-frequency DAPS HO

μ	NR Slot length (ms)	Interruption length X (slots ^{Note 1})	$T_{\text{interrupt2}}$ (slots ^{Note 1}) for asynchronous DAPS HO
0	1	1	2
1	0.5	2	3
2	0.25	4	5
Note 1: The same SCS of source cell and target cell is assumed.			
Note 2: It is assumed that the BWP of target cell is the same as the BWP of source cell.			
Note 3: Void			

For FR1-to-FR1 intra-band inter-frequency handover, $T_{\text{interrupt2}}$ is specified in Table 6.1.3.2.2-6.

Table 6.1.3.2.2-6: $T_{\text{interrupt2}}$ for FR1-to-FR1 intra-band inter-frequency DAPS HO

μ	NR Slot length (ms)	$T_{\text{interrupt2}}$ (slots ^{Note 1}) for synchronous DAPS HO	$T_{\text{interrupt2}}$ (slots ^{Note 1}) for asynchronous DAPS HO
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
1	0.5	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$3 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$	$5 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
Note 1: The same SCS of source cell and target cell is assumed.			
Note 2: $T_{\text{SMTC_duration}}$ measured in subframes is the longest SMTC duration between source cell and target cell.			
Note 3: Void.			
Note 4: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].			

For FR1-to-FR1 inter-band handover, $T_{\text{interrupt2}}$ is specified in Table 6.1.3.2.2-7.

Table 6.1.3.2.2-7: $T_{\text{interrupt2}}$ for FR1-to-FR1 inter-band DAPS HO

μ	NR slot length (ms) of target cell	$T_{\text{interrupt2}}$ (slots)	
		Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	5

6.1.3.3 NR FR2- NR FR1 DAPS Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR2 cell to NR FR1 cell.

An FR2-FR1 DAPS handover is synchronous if it meets the conditions in table 6.1.3.3-1, otherwise it is asynchronous

Table 6.1.3.3-1: Sync condition for FR2-FR1 DAPS handover

Frequency Range of the pair of carriers	Maximum receive timing difference between source and target cell (μ s) for sync DAPS handover	Maximum transmit timing difference between source and target cell (μ s) for sync DAPS handover
Between FR1 and FR2	25	26.1

6.1.3.3.1 DAPS handover delay

Procedure delays for the procedure that can command a DAPS handover are specified in TS 38.331 [2].

When the UE receives a RRC message implying handover, the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{\text{handover1}}$ ms from the end of the last TTI containing the RRC command when UE is configured with dual active protocol stack handover.

$$D_{\text{handover1}} = T_{\text{RRC_procedure}} + T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

$T_{\text{RRC_procedure}}$ is the maximum RRC procedure delay as specified in clause 12 in TS 38.331 [2].

T_{search} , T_{IU} , $T_{\text{processing}}$, T_{Δ} and T_{margin} are defined in clause 6.1.1.3.2.

After successful RACH procedure of the target cell, when the UE receives an RRC message implying source cell release command, the UE shall accomplish the release actions specified in TS 38.331 [2] within $D_{\text{handover2}}$.

$$D_{\text{handover2}} = T_{\text{RRC_procedure}} + T_{\text{interrupt2}}$$

Where:

$T_{\text{RRC_procedure}}$ is the RRC procedure delay as specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt2}}$ is defined in clause 6.1.3.3.2.

6.1.3.3.2 Interruption time

During $D_{\text{handover1}}$, the UE is allowed an interruption of up to $T_{\text{interrupt1}}$ on source cell.

For FR2-to-FR1 inter-band handover, $T_{\text{interrupt1}}$ is specified in Table 6.1.3.3.2-1.

Table 6.1.3.3.2-1: $T_{\text{interrupt1}}$ for FR2-to-FR1 inter-band DAPS HO

μ	NR slot length (ms) of source cell	$T_{\text{interrupt1}}$ (slots)	
		Sync	Async
2	0.25	5	5
3	0.125	9	9

During $D_{\text{handover2}}$, the UE is allowed an interruption of up to $T_{\text{interrupt2}}$ on target cell.

For FR2-to-FR1 inter-band handover, $T_{\text{interrupt2}}$ is specified in Table 6.1.3.3.2-2.

Table 6.1.3.3.2-2: $T_{\text{interrupt2}}$ for FR2-to-FR1 inter-band DAPS HO

μ	NR slot length (ms)	$T_{\text{interrupt2}}$ (slots)
-------	---------------------	---------------------------------

	of target cell	Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	5

6.1.3.4 NR FR1- NR FR2 DAPS Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR1 cell to NR FR2 cell.

An FR1-FR2 DAPS handover is synchronous if it meets the conditions in table 6.1.3.4-1, otherwise it is asynchronous

Table 6.1.3.4-1, : Sync condition for FR1-FR2 DAPS handover

Frequency Range of the pair of carriers	Maximum receive timing difference between source and target cell (μ s) for sync DAPS handover	Maximum transmit timing difference between source and target cell (μ s)Note 1 sync DAPS handover
Between FR1 and FR2	25	26.1

6.1.3.4.1 DAPS handover delay

Procedure delays for the procedure that can command a DAPS handover are specified in TS 38.331 [2].

When the UE receives a RRC message implying handover, the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{\text{handover1}}$ ms from the end of the last TTI containing the RRC command when UE is configured with dual active protocol stack handover.

$$D_{\text{handover1}} = T_{\text{RRC_procedure}} + T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

$T_{\text{RRC_procedure}}$ is the maximum RRC procedure delay as specified in clause 12 in TS 38.331 [2].

T_{search} , T_{IU} , $T_{\text{processing}}$, T_{Δ} and T_{margin} are defined in clause 6.1.1.5.2.

After successful RACH procedure of the target cell, when the UE receives an RRC message implying source cell release command, the UE shall accomplish the release actions specified in TS 38.331 [2] within $D_{\text{handover2}}$.

$$D_{\text{handover2}} = T_{\text{RRC_procedure}} + T_{\text{interrupt2}}$$

Where:

$T_{\text{RRC_procedure}}$ is the RRC procedure delay as specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt2}}$ is defined in clause 6.1.3.4.2.

6.1.3.4.2 Interruption time

During $D_{\text{handover1}}$, the UE is allowed an interruption of up to $T_{\text{interrupt1}}$ on source cell.

For FR1-to-FR2 inter-band handover, $T_{\text{interrupt1}}$ is specified in Table 6.1.3.4.2-1.

Table 6.1.3.4.2-1: $T_{\text{interrupt1}}$ for FR1-to-FR2 inter-band DAPS HO

μ	NR slot length (ms) of source cell	$T_{\text{interrupt1}}$ (slots)	
		Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	5

During $D_{\text{handover}2}$, the UE is allowed an interruption of up to $T_{\text{interrupt}2}$ on target cell.

For FR1-to-FR2 inter-band handover, $T_{\text{interrupt}2}$ is specified in Table 6.1.3.4.2-2.

Table 6.1.3.4.2-2: $T_{\text{interrupt}2}$ for FR1-to-FR2 inter-band DAPS HO

6.1.4 NR Conditional Handover

6.1.4.1 Introduction

The requirements in this clause are applicable to conditional handover to change the NR PCell to another NR cell.

6.1.4.2 NR FR1 – NR FR1 conditional handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency conditional handover from NR FR1 cell to NR FR1 cell.

6.1.4.2.1 Handover delay

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [2].

When the UE receives a RRC message implying conditional handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{CHO} seconds from the end of the last TTI containing the RRC command.

$$D_{\text{CHO}} = T_{\text{RRC}} + T_{\text{Event_DU}} + T_{\text{measure}} + T_{\text{CHO_execution}} + T_{\text{interrupt}}$$

Where:

T_{RRC} is the RRC procedure delay defined in clause 12 in TS 38.331 [2].

$T_{\text{Event_DU}}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover.

T_{measure} is the time for the UE to measure and realize the condition for CHO is fulfilled. T_{measure} equals to the measurements time stated in clause 6.1.4.2.2.

$T_{\text{CHO_execution}}$ is the conditional execution preparation time in clause 6.1.4.2.3.

$T_{\text{interrupt}}$ is the interruption time stated in clause 6.1.4.2.4.

6.1.4.2.2 Measurement time

The measurement time delay is defined from the end of $T_{\text{Event_DU}}$ until UE starts handover execution preparation ($T_{\text{CHO_execution}}$) to a target cell.

For intra-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{\text{identify_intra_with_index}}$ or $T_{\text{identify_intra_without_index}}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{\text{identify_inter_with_index}}$ or $T_{\text{identify_inter_without_index}}$ defined in clause 9.3.4 or clause 9.3.9.

When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{\text{identify_intra_without_index}}$ or $T_{\text{identify_intra_with_index}}$ for intra-frequency handover or $T_{\text{identify_inter_without_index}}$ for inter-frequency handover. If a cell which has been detectable at least for the time period $T_{\text{identify_intra_without_index}}$ or

$T_{\text{identify_intra_with_index}}$ for intra-frequency handover or $T_{\text{identify_inter_without_index}}$ for inter-frequency handover becomes undetectable for a period and then the cell becomes detectable again and triggers a handover, the measurement time delay shall be less than $T_{\text{SSB_measurement_period_intra}}$ or $T_{\text{SSB_measurement_period_inter}}$ provided the timing to that cell has not changed more than $\pm 3200/2^\mu T_c$ while the measurement gap has not been available and the L3 filter has not been used, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

6.1.4.2.3 Preparation time

$T_{\text{CHO_execution}}$ is the UE execution preparation time for conditional handover, and starts after UE realizes the condition of CHO is fulfilled and identity of the target cell is determined. $T_{\text{CHO_execution}}$ can be up to 10ms.

6.1.4.2.4 Interruption time

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional handover, the interruption time shall be less than

$$T_{\text{interrupt}} = T_{\text{processing}} + T_{\text{IU}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3]

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of T_{IU} shall depend upon the PRACH configuration used in the target cell.

6.1.4.3 NR FR2 – NR FR1 conditional handover

The requirements in this clause are applicable to inter-frequency conditional handover from NR FR2 cell to NR FR1 cell.

The requirements defined in clause 6.1.4.2 applies assuming inter-frequency handover and:

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 40ms.

6.1.4.4 NR FR2 – NR FR2 conditional handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency conditional handover from NR FR2 cell to NR FR2 cell.

6.1.4.4.1 Handover delay

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [2].

When the UE receives a RRC message implying conditional handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{CHO} seconds from the end of the last TTI containing the RRC command.

$$D_{CHO} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{CHO_execution} + T_{interrupt}$$

Where:

T_{RRC} is the RRC procedure delay defined in clause 12 in TS 38.331 [2].

T_{Event_DU} is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover.

$T_{measure}$ is the time for the UE to measure and realize the condition for CHO is fulfilled. $T_{measure}$ equals to the measurements time stated in clause 6.1.4.4.2.

$T_{CHO_execution}$ is the conditional execution preparation time in clause 6.1.4.4.3.

$T_{interrupt}$ is the interruption time stated in clause 6.1.4.4.4.

6.1.4.4.2 Measurement time

The measurement time delay is defined from the end of T_{Event_DU} until UE starts handover execution preparation ($T_{CHO_execution}$) to a target cell.

For intra-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_intra_with_index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency handover, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_with_index}$ or $T_{identify_inter_without_index}$ defined in clause 9.3.4 or clause 9.3.9.

When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover. If a cell which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency handover or $T_{identify_inter_without_index}$ for inter-frequency handover becomes undetectable for a period and then the cell becomes detectable again and triggers a handover, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^\mu T_c$ while the measurement gap has not been available and the L3 filter has not been used, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

6.1.4.4.3 Preparation time

$T_{CHO_execution}$ is the UE execution preparation time for conditional handover, and starts after UE realizes the condition of CHO is fulfilled and identity of the target cell is determined. $T_{CHO_execution}$ can be up to 10ms.

6.1.4.4.4 Interruption time

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional handover, the interruption time shall be less than

$$T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 20ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3]

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{rs}$.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}=5ms$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of T_{IU} shall depend upon the PRACH configuration used in the target cell.

6.1.4.5 NR FR1 – NR FR2 conditional handover

The requirements in this clause are applicable to inter-frequency conditional handover from NR FR1 cell to NR FR2 cell.

The requirements defined in clause 6.1.4.4 applies assuming inter-frequency handover and:

$T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 40ms.

6.1.5 NR Handover with PSCell

6.1.5.1 Introduction

The purpose of NR handover with PSCell is to change the NR PCell to another NR cell or E-UTRA cell and add or change the PSCell along with PCell handover. The requirements in this clause are applicable to:

- Handover with PSCell from NR SA to EN-DC
- Handover with PSCell from NR-DC to NR-DC
 - Requirements in this clause only applies to FR1+FR2 NR-DC
- Handover with PSCell from NE-DC to NE-DC
 - Requirements in this clause only applies to NE-DC with FR1 PCell

6.1.5.2 Handover with PSCell from NR SA to EN-DC

The requirements in this clause are applicable to inter-RAT handover from NR to E-UTRAN and FR1/FR2 PSCell addition.

When the UE receives a RRC message implying handover with PSCell, the UE shall be ready to start the transmission of the new uplink PRACH channel on target E-UTRA PCell within $D_{HOwithPSCell_PCell}$ msec from the end of the last TTI containing the RRC command, and the UE shall be ready to start the transmission of the new uplink PRACH channel on target PSCell within $D_{HOwithPSCell_PSCell}$ msec from the end of the last TTI containing the RRC command.

Where:

- $D_{HOwithPSCell_PCell}$ equals the applicable RRC procedure delay (i.e., 50ms) plus the interruption time stated in clause 6.1.5.2.1.
- $D_{HOwithPSCell_PSCell}$ equals the PSCell addition delay stated in clause 6.1.5.2.2.

6.1.5.2.1 Interruption time for inter-RAT HO from NR to E-UTRAN

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay

When handover with PSCell from NR SA to EN-DC is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{\text{interrupt}} = T_{\text{search_HO}} + T_{\text{IU}} + T_{\text{processing}}$$

Where:

- $T_{\text{search_HO}}$ is same as the T_{search} defined in section 6.1.2.1.3.
- T_{IU} is same as the one defined in section 6.1.2.1.3.
- $T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. When target PSCell is unknown and SMTC configuration of target unknown PSCell is present in *RRCConnectionReconfiguration* [2], $T_{\text{processing}} = 30\text{ms}$ if new PSCell is in FR1, $T_{\text{processing}} = 50\text{ms}$ if new PSCell is in FR2; otherwise, $T_{\text{processing}} = 25\text{ms}$ if new PSCell is in FR1, $T_{\text{processing}} = 45\text{ms}$ if new PSCell is in FR2.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant E-UTRA cell identification requirements are described in clause 9.4.1.

6.1.5.2.2 PSCell addition in HO with PSCell for NR SA to EN-DC

The requirements in this section shall apply for PSCell addition during handover with PSCell from NR SA to EN-DC.

When handover with PSCell from NR SA to EN-DC is commanded, the PSCell addition time shall be less than $D_{\text{HOwithPSCell_PSCell}}$:

- $D_{\text{HOwithPSCell_PSCell}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search_PCell}} + T_{\text{search_PSCell}} + T_{\Delta} + T_{\text{PSCell_DU}} + 2 \text{ ms}$

Where:

- $T_{\text{RRC_delay}}$ is the RRC procedure delay. $T_{\text{RRC_delay}} = 50\text{ms}$.
- $T_{\text{processing}}$ is as defined in section 6.1.5.2.1.
- $T_{\text{search_PCell}}$ is the time for obtaining the timing reference of target PCell. $T_{\text{search_PCell}} = T_{\text{search_HO}}$ which is as defined in section 6.1.5.2.1 if target PSCell is unknown and SMTC configuration of target unknown PSCell is configured in *RRCConnectionReconfiguration* of *targetRAT-MessageContainer* [2]. Otherwise, $T_{\text{search_PCell}} = 0$.
- $T_{\text{search_PSCell}}$ is same as T_{search} in section 7.31.2 of TS36.133[15], and T_{Δ} and $T_{\text{PSCell_DU}}$ is same as the one defined in section 7.31.2 of TS36.133[15]. The T_{rs} definition from section 7.31.2 of TS36.133[15] is modified as following for requirement in this section:
- T_{rs} is the SMTC periodicity of the target NR cell if target PSCell is unknown and SMTC configuration of target unknown PSCell is present in *RRCConnectionReconfiguration* [2], otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this section is applied with $T_{\text{rs}} = 5 \text{ ms}$ assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

PSCell known and unknown condition is as defined in section 7.31.2 of TS36.133[15].

6.1.5.3 HO with PSCell from NE-DC to NE-DC

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR PCell to NR PCell on FR1, and the PSCell addition is on LTE.

6.1.5.3.1 Handover delay

When the UE receives a RRC message implying PCell handover with PSCell change, the UE shall be ready to start the transmission of the new uplink PRACH channel on target NR PCell within $D_{\text{HOwithPSCell_PSCell}}$ from the end of the last TTI containing the RRC command, and UE shall be ready to start the transmission of the new uplink PRACH channel on target E-UTRA PSCell within $D_{\text{HOwithPSCell_PSCell}}$ from the end of the last TTI containing the RRC command.

The PCell handover delay, $D_{\text{HOwithPSCell_PCell}}$, equals to the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the PCell interruption time ($T_{\text{interrupt}}$) define in clause 6.1.5.3.2.

PSCell addition/change delay, $D_{\text{HOwithPSCell_PSCell}}$ is defined in clause 6.1.5.3.3.

6.1.5.3.2 HO with PSCell - PCell Interruption time

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search_PCell}} + T_{\Delta_PCell} + T_{\text{margin_PCell}} + T_{\text{IU_PCell}} + T_{\text{processing}} \text{ ms}$$

Where:

- If the source cell is in FR1 and target cell is in FR1, $T_{\text{search_PCell}}$, T_{Δ_PCell} , $T_{\text{margin_PCell}}$ is same as the T_{search} , T_{Δ} , T_{margin} defined in section 6.1.1.2.2 respectively.
- $T_{\text{processing}}$ is UE software processing and RF warmup delay for PCell HO and for this case $T_{\text{processing}}$ can be up to 25ms.
- $T_{\text{IU_PCell}}$ can be up to the summation of SSB to PRACH occasion association period and 10 ms if there is no collision between PCell RACH and PSCell RACH occasion or UE can perform PCell RACH and PSCell RACH occasion simultaneously as defined in TS38.213[39] section 7.6.1A; otherwise, longer $T_{\text{IU_PCell}}$ is expected to include the uncertainty in acquiring the next available RACH occasion for PCell RACH transmission.

6.1.5.3.3 PSCell addition/change in NE-DC to NE-DC HO with PSCell

When HO with PSCell addition is commanded, the PSCell addition/change time shall be less than $D_{\text{HOwithPSCell_PSCell}}$.

- $D_{\text{HOwithPSCell_PSCell}} = T_{\text{config_EUTRAN-PSCell}} + T_{\text{processing_margin}}$.

where

- $T_{\text{config_EUTRAN-PSCell}}$ is defined in clause 8.8.2, and
- $T_{\text{processing_margin}} = 5\text{ms}$ is the additional delay margin for RF warm-up and software processing in handover with PSCell.

6.1.5.4 HO with PSCell from NR-DC to NR-DC

The requirements in this clause are applicable to handover with PSCell from NR-DC to NR-DC. The requirements in this clause are only applicable to FR1+FR2 NR-DC.

This clause defines requirements for the delay within which the UE shall be able to handover from NR cell to NR cell and change NR PSCell in the meantime.

When the UE receives a RRC message implying handover with PSCell,

- The UE shall be ready to start the transmission of the new uplink PRACH channel of the target PCell within $D_{\text{HOwithPSCell_PCell}}$ ms from the end of the last TTI containing the RRC command, and
- The UE shall be capable of transmitting PRACH preamble towards the target PSCell no later than $D_{\text{HOwithPSCell_PSCell}}$ ms from the end of the last TTI containing the RRC command.

Where:

- $D_{\text{HOwithPSCell_PCell}}$ equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1.5.4.1.
- $D_{\text{HOwithPSCell_PSCell}}$ is the PSCell change delay stated in clause 6.1.5.4.2.

6.1.5.4.1 HO with PSCell – PCell Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When handover with PSCell from NR-DC to NR-DC is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

- T_{search} , T_{IU} , T_{Δ} and T_{margin} are the same as defined in clause 6.1.1.2.2.
- $T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 30$ ms if SMTC of the target unknown PSCell is configured in *targetcellSMTC-SCG-r16* but not configured in *reconfigurationWithSync*. Otherwise, $T_{\text{processing}} = 25$ ms.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2.5 for intra-frequency handover and Clause 9.3.4 for inter-frequency handover.

6.1.5.4.2 HO with PSCell – PSCell change delay

The requirements in this section shall apply for PSCell change during handover with PSCell from NR-DC to NR-DC.

When handover with PSCell from NR-DC to NR-DC is commanded, the PSCell change time shall be less than $D_{\text{HOwithPSCell_PSCell}}$:

$$D_{\text{HOwithPSCell_PSCell}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search_PCell}} + T_{\text{search_PSCell}} + T_{\Delta} + T_{\text{PSCell_DU}} + 2 \text{ ms}$$

Where:

- $T_{\text{RRC_delay}}$, $T_{\text{search_PSCell}}$, T_{Δ} and $T_{\text{PSCell_DU}}$ are the same as defined in clause 8.9.2.
- $T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 30$ ms if SMTC of the target unknown PSCell is configured in *targetcellSMTC-SCG-r16* but not configured in *reconfigurationWithSync*. Otherwise, $T_{\text{processing}} = 25$ ms.
- $T_{\text{search_PCell}}$ is the time for obtaining the timing reference of target PCell. If SMTC of the target unknown PSCell is configured in *targetcellSMTC-SCG-r16* but not configured in *reconfigurationWithSync*, $T_{\text{search_PCell}} = T_{\text{search}} + T_{\Delta} + T_{\text{margin}}$, where T_{search} , T_{Δ} and T_{margin} are specified in clause 6.1.5.4.1. Otherwise, $T_{\text{search_PCell}} = 0$ ms.

The T_{rs} definition from clause 8.9.2 is modified as following for requirements in this section:

- T_{rs} is the SMTC periodicity of the target NR cell if target PSCell is unknown and SMTC configuration of target unknown PSCell is present in either *targetcellSMTC-SCG-r16* or *reconfigurationWithSync*, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this section is applied with $T_{\text{rs}} = 5$ ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

PSCell known and unknown condition is as defined in clause 8.9.2.

6.1.5.5 Handover with PSCell from NR SA to EN-DC with PSCell using CCA

6.1.5.5.1 Introduction

When the UE receives a RRC message implying handover with PSCell change, the UE shall be ready to start the transmission of the new uplink PRACH channel on target E-UTRA PCell within $D_{\text{HOwithPSCell_PCell}}$ ms from the end of the last TTI containing the RRC command, and UE shall be ready to start the transmission of the new uplink PRACH channel on a target PSCell on a carrier frequency with CCA within $D_{\text{HOwithPSCell_PSCell}}$ seconds and from the end of the last TTI containing the RRC command.

Where:

$D_{\text{HOwithPSCell_PCell}}$ equals the maximum RRC procedure delay defined in clause 11.2 in TS 36.331 [2] plus the interruption time stated in clause 6.1.5.5.2.

$D_{\text{HOwithPSCell_PSCell}}$ is the PSCell addition delay stated in clause 6.1.5.5.3

6.1.5.5.2 NR SA to EN-DC HO with PSCell- NR to E-UTRA HO Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH excluding the RRC procedure delay. This requirement applies when UE is not required to perform any synchronisation procedure before transmitting on the new PRACH or on the new PUSCH.

When Handover with PSCell is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} \text{ ms}$$

Where:

T_{search} is same as the T_{search} defined in section 6.1.2.1.3

T_{IU} is same as the one defined in section 6.1.2.1.3.

$T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. When target PSCell is unknown and SMTC configuration of target unknown PSCell is present in *RRCCConnectionReconfiguration* [2], $T_{\text{processing}} = 30\text{ms}$, otherwise, $T_{\text{processing}} = 25 \text{ ms}$.

NOTE: The actual value of T_{IU} shall depend upon the PRACH configuration used in the target E-UTRA cell.

In the interruption requirement, a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds. Otherwise, it is unknown. Relevant E-UTRA cell identification requirements are described in clause 9.4.1.

6.1.5.5.3 NR SA to EN-DC HO with PSCell - NR PSCell Addition Delay requirements

When Handover with PSCell is commanded, the NR PSCell on a carrier frequency with CCA changing delay shall be less than $D_{\text{HOwithPSCell_PSCell}}$:

$$D_{\text{HOwithPSCell_PSCell}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search_PCell}} + T_{\text{search_PSCell}} + T_{\Delta} + T_{\text{IU_PSCell}} + 2 \text{ ms}$$

Where:

$T_{\text{RRC_delay}}$ is maximum RRC procedure delay defined in clause 11.2 in TS 36.331 [2].

$T_{\text{search_PCell}}$ is the time for obtaining the timing reference of target PCell. $T_{\text{search_PCell}}$ is same as $T_{\text{search_HO}}$ as defined in section 6.1.5.2.1, if target PSCell is unknown and SMTC configuration of target unknown PSCell is present in *RRCCConnectionReconfiguration* [2]. Otherwise, $T_{\text{search_PCell}} = 0$

$T_{\text{search_PSCell}}$ is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{\text{search_PSCell}} = 0 \text{ ms}$. If the target cell is

an unknown cell and target cell $E_s/I_{ot} \geq [-2]$ dB, then $T_{\text{search_PSCell}} = (3+L_1) * T_{\text{rs}}$ ms. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

L_1 is the number of SMTC occasions not available at the UE during the inter-RAT detection period. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is same as T_{Δ} in section 7.31A.2.

$T_{\text{processing}}$ is time for UE processing and is same as defined in 6.1.5.5.2.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2 ms.

$T_{\text{IU_PSCell}}$ is the delay uncertainty due to the random-access procedure when sending PRACH to the new cell. $T_{\text{IU_PSCell}}$ can be up to: $(1+L_3) * T_{\text{SSB,RO}} + 10$ ms; where $T_{\text{SSB,RO}}$ is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [39] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failures or RACH collision between PCell and PSCell. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [57] and when there are no RACH collisions between PCell and PSCell. When the UE is configured with both the UL BWP with PRACH occasion on the target cell and UL LBT failure detection/recovery, the interruption can be longer.

NOTE 1: The actual value of $T_{\text{IU_PSCell}}$ shall depend upon the PRACH configuration used in the target cell.

NOTE 2: The interruption time extended by L_1 , L_2 , and L_3 parameters, and by the UL LBT failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is specified in TS 38.331 [38].

T_{rs} is the SMTC periodicity of the target NR cell if target PSCell is unknown and SMTC configuration of target unknown PSCell is present in *RRCCONNECTIONRECONFIGURATION* [2], otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this section is applied with $T_{\text{rs}} = 5$ ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

A cell on a carrier frequency with CCA is known if it has been meeting the relevant cell identification requirement during the last 5 seconds. Otherwise, it is unknown. Relevant cell identification requirements are described in clause 8.1.2.4.21A, and 8.1.2.4.22A.

6.1B Handover to target cell using CCA

6.1B.1 NR Handover

6.1B.1.1 Introduction

The purpose of NR handover to target cell using CCA is to change the NR PCell to a target NR cell in a carrier frequency with CCA. The requirements in this clause are applicable to NR SA.

In the requirements of clause 6.1B.1, the term SMTC occasion not available at the UE refers to when the SMTC contains SSBs configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding detection or time tracking period; otherwise the SMTC occasion is considered as available at the UE.

In the requirements of clause 6.1B.1, the term PRACH occasion unavailable for transmission refers to when the PRACH occasion is configured by gNB but not transmitted by the UE during the corresponding period due to UL CCA failure at the UE.

6.1B.1.2 NR FR1 - NR FR1 Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR1 cell to NR FR1 cell in carrier frequencies with CCA, and to both intra-frequency and inter-frequency handovers from NR FR1 cell in carrier frequencies with CCA to NR FR1 cell in carrier frequencies with CCA.

6.1B.1.2.1 Handover delay

When the UE receives an RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} ms from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay to be defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1B.1.2.2.

6.1B.1.2.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = (1+L_1) * T_{\text{rs}}$. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = (3+L_1') * T_{\text{rs}}$ where L_1 and L_1' are the number of SMTC occasions not available at the UE during the intra-frequency and inter-frequency detection period, respectively. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = (1+L_2) * T_{\text{rs}}$ ms, where L_2 is the number of SMTC occasions not available at the UE during the time tracking period.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{IU} is the interruption uncertainty due to the random access procedure when sending PRACH to the new cell. T_{IU} can be up to: $(1 + L_3) \cdot T_{SSB,RO} + 10$ ms where $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [3] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. When the UE is configured with both the UL BWP with PRACH occasion on the target cell and UL CCA failure detection/recovery, the interruption can be longer.

T_{rs} is the SMTC periodicity of the target NR cell in a carrier frequency with CCA if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs}=5$ ms assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

NOTE 1: The interruption time considering the potential extensions caused by L_1, L_1', L_2, L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2A.5 for intra-frequency handover and Clause 9.3A.4 for inter-frequency handover to a carrier frequency with CCA.

6.1B.1.3 NR FR2-2 NR FR2-2 Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR2-2 cell to NR FR2-2 cell in carrier frequencies with CCA, and to both intra-frequency and inter-frequency handovers from NR FR2-2 cell in carrier frequencies with CCA to NR FR2-2 cell in carrier frequencies with CCA.

6.1B.1.3.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ ms from the end of the last TTI containing the RRC command.

Where:

- $D_{handover}$ equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1B.1.3.2.

6.1B.1.3.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

- T_{search} is the time required to search the target cell when the handover command is received by the UE. If the target cell is a known cell, then $T_{search} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{ot} \geq -2$ dB, then $T_{search} = (1 + L_1) \cdot N \cdot T_{rs}$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{ot} \geq -2$ dB, then $T_{search} = (3 + L_1') \cdot N \cdot T_{rs}$ where L_1 and L_1' are the number of SMTC occasion groups not available at the UE during the intra-frequency and inter-frequency detection period, respectively. An SMTC occasion group consists of N consecutive SMTC occasions. An SMTC occasion group is not available, when at least one SMTC occasion in the group is not transmitted by the gNB. N is equal to 12. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.
- $T_{processing}$ is time for UE processing. $T_{processing}$ can be up to 20ms.
- T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.
- T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = (1 + L_2) \cdot T_{rs}$, where L_2 is the number of SMTC occasions not available at the UE during the time tracking period.

- T_{IU} is the interruption uncertainty due to the random access procedure when sending PRACH to the new cell. T_{IU} can be up to $(1 + L_3) \cdot T_{SSB,RO} + 10\text{ms}$, where $T_{SSB,RO}$ is SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 3 channel access procedure as defined in TS 37.213 [33]. $L_3 = 0$ if *ra-ChannelAccess-r17* is not configured in FR2-2.
- T_{IS} is the SMTC periodicity of the target NR cell in a carrier frequency with CCA if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{IS} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{IS}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

NOTE 1: The interruption time considering the potential extensions caused by L_1, L_2, L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

In FR2-2, the target cell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the handover command:
 - the UE has sent a valid measurement report for the target cell and
 - One of the SSBs measured from the NR target cell being configured remains detectable according to the cell identification conditions specified in Clause 9.2A.5 for intra-frequency handover and Clause 9.3A.4 for inter-frequency handover to a carrier frequency with CCA,
 - One of the SSBs measured from the target cell also remains detectable during the handover delay according to the cell identification conditions specified in Clause 9.2A.5 for intra-frequency handover and Clause 9.3A.4 for inter-frequency handover to a carrier frequency with CCA.

otherwise it is unknown.

6.1B.1.4 NR FR1- NR FR2-2 Handover

The requirements in this clause are applicable to inter-frequency handovers from NR FR1 cell to NR FR2-2 cell in carrier frequencies with CCA.

6.1B.1.4.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} ms from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1B.1.4.2.

6.1B.1.4.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When in inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{IU} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell when the handover command is received by the UE. If the target cell is a known cell, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{ot} \geq -2$ dB, then $T_{\text{search}} = (3 + L_1) \cdot N \cdot T_{IS}$, where L_1 is the number of SMTC occasion groups not available at the UE during the inter-frequency detection period. An SMTC occasion group consists of N consecutive

SMTC occasions. An SMTC occasion group is not available, when at least one SMTC occasion in the group is not transmitted by the gNB. N is equal to 12. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 40ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = (1 + L_2) * T_{\text{rs}}$, where L_2 is the number of SMTC occasions not available at the UE during the time tracking period.

T_{IU} is the interruption uncertainty due to the random access procedure when sending PRACH to the new cell. T_{IU} can be up to $(1 + L_3) * T_{\text{SSB,RO}} + 10\text{ms}$, where $T_{\text{SSB,RO}}$ is SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 3 channel access procedure as defined in TS 37.213 [33]. $L_3 = 0$ if *ra-ChannelAccess-r17* is not configured in FR2-2.

- T_{rs} is the SMTC periodicity of the target NR cell in a carrier frequency with CCA if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms.

NOTE 1: The interruption time considering the potential extensions caused by L_1 , L_2 , L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

In FR2-2, the target cell is known if it has been meeting the following conditions:

During the last 5 seconds before the reception of the handover command:

- the UE has sent a valid measurement report for the target cell and

One of the SSBs measured from the NR target cell being configured remains detectable according to the cell identification conditions specified in Clause 9.2A.5 for intra-frequency handover and Clause 9.3A.4 for inter-frequency handover to a carrier frequency with CCA,

- One of the SSBs measured from the target cell also remains detectable during the handover delay according to the cell identification conditions specified in Clause 9.2A.5 for intra-frequency handover and Clause 9.3A.4 for inter-frequency handover to a carrier frequency with CCA.

otherwise it is unknown.

6.1C Handover for SAN

6.1C.1 NR SAN Handover

6.1C.1.1 Introduction

The purpose of NR SAN handover is to change the NR SAN PCell to another NR SAN cell. The requirements in this clause are applicable to SA NR SAN.

6.1C.1.2 NR SAN FR1 – NR SAN FR1 Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR SAN FR1 cell to NR SAN FR1 cell. The requirements in this clause apply provided that UE has the valid and applicable

parameters of ephemeris information, common TA, DL and UL Polarization information, K_{offset} , and K_{mac} for target NR SAN cell during D_{handover} , otherwise interruption time may be longer than the requirements in clause 6.1C.1.2.2.

6.1C.1.2.1 Handover delay

When the UE receives a RRC message implying handover to NR SAN cell, the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} msec from the end of the last TTI containing the RRC command.

Where:

- D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1C.1.2.2.

6.1C.1.2.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover to NR SAN cell is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Otherwise, no interruption time requirement is applied.

Where:

- T_{search} is the time required to search the target NR SAN cell when the target cell is not already known when the handover command is received by the UE. If the target cell is known, then $T_{\text{search}} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = T_{\text{rs}}$ ms. If the target cell is an unknown inter-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = 3 * T_{\text{rs}}$ ms. Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.
- T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$.
- $T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.
- T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.
- T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and [10] ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].
- T_{rs} is the SMTC periodicity of the target NR SAN cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

In the interruption requirement a cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown. Relevant cell identification requirements are described in Clause 9.2C.5 for intra-frequency handover and Clause 9.3C.4 for inter-frequency handover.

6.1C.2 NR SAN Conditional Handover

6.1C.2.1 Introduction

The requirements in this clause are applicable to conditional handover to change the NR SAN PCell to another NR SAN cell.

6.1C.2.2 NR SAN FR1 – NR SAN FR1 conditional handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency conditional handover from NR SAN FR1 cell to NR SAN FR1 cell. The requirements in this clause apply provided that UE has the valid and applicable parameters of ephemeris information, common TA, DL and UL Polarization information, K_{offset} , and K_{mac} for target NR SAN cell during D_{CHO} , otherwise the measurement time, preparation time and interruption time may be longer than the requirements in clause 6.1C.2.2.2, 6.1C.2.2.3 and 6.1C.2.2.4.

6.1C.2.2.1 Handover delay

Procedure delays for all procedures that can command a conditional handover are specified in TS 38.331 [2]. UE shall start RRM measurement before the time or distance condition is met, the time/distance condition is defined in clause 5.5.4 in TS 38.331[2]

When the UE receives a RRC message implying conditional handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{CHO} seconds from the end of the last TTI containing the RRC command.

$$D_{\text{CHO}} = T_{\text{RRC}} + T_{\text{Event_DU}} + T_{\text{measure}} + T_{\text{interrupt}} + T_{\text{CHO_execution}}$$

Where:

- T_{RRC} is the RRC procedure delay defined in clause 12 in TS 38.331 [2].
- $T_{\text{Event_DU}}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional handover command until a condition exists at the measurement reference point which will trigger the conditional handover
- T_{measure} is the measurements time stated in clause 6.1C.2.2.2.
- $T_{\text{CHO_execution}}$ is the UE conditional execution preparation time for conditional handover in clause 6.1C.2.2.3.
- $T_{\text{interrupt}}$ is the interruption time stated in clause 6.1C.2.2.4.

The conditional handover delay requirements are applied if condition T1-2 is later than the end of T_{measure} for time based CHO, or both condition D1-1 and condition D1-2 are fulfilled before the end of T_{measure} for location-based CHO, otherwise no CHO requirement is applied.

6.1C.2.2.2 Measurement time

The measurement time delay is defined from the end of $T_{\text{Event_DU}}$ until UE executes a handover to a target cell and interruption time starts.

For intra-frequency handover, the requirements for identifying a new detectable intra frequency cell measured without Time To Trigger (TTT) and L3 filtering, $T_{\text{identify_intra_with_index}}$ or $T_{\text{identify_intra_without_index}}$, defined in clause 9.2C.5.1 and clause 9.2C.6.1 are used.

For time-based conditional intra-frequency handover:

- If condition T1-1 occurs earlier than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_intra_with_index}}$ or $T_{\text{Event_DU}} + T_{\text{identify_intra_without_index}}$, then the measurement time delay equal to $T_{\text{identify_intra_with_index}}$ or $T_{\text{identify_intra_without_index}}$ assuming UE only performs the measurements within SMTC window of the target cell.

- If condition T1-1 occurs later than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_intra_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_intra_without_index}}$, then the measurement time delay equals to the time from the end of $T_{\text{Event_DU}}$ until condition T1-1.

For location-based conditional intra-frequency handover:

- If both condition D1-1 and condition D1-2 are fulfilled earlier than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_intra_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_intra_without_index}}$, then the measurement time delay equal to $T_{\text{identify_intra_with_index}}$ Or $T_{\text{identify_intra_without_index}}$ assuming UE only performs measurements within SMTC window of the target cell.
- If both condition D1-1 and condition D1-2 are fulfilled is later than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_intra_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_intra_without_index}}$ for intra-frequency handover, then the measurement time delay equal to the time from the end of $T_{\text{Event_DU}}$ until time when both condition D1-1 and condition D1-2 are fulfilled.

For inter-frequency handover, the requirements for identifying a new detectable inter frequency cell measured without Time To Trigger (TTT) and L3 filtering, $T_{\text{identify_inter_with_index}}$ Or $T_{\text{identify_inter_without_index}}$, defined in clause 9.3C.7.1 are used.

For time-based conditional inter-frequency handover:

- If condition T1-1 occurs earlier than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_inter_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_inter_without_index}}$, then the measurement time delay equal to $T_{\text{identify_inter_with_index}}$ Or $T_{\text{identify_inter_without_index}}$ assuming that the UE uses only the SMTC window of the target inter-frequency carrier for performing the measurements. In this case $K_{\text{satellite}}=1$, $\text{CSSF}_{\text{inter}}=1$.
- If condition T1-1 occurs later than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_inter_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_inter_without_index}}$, then the measurement time delay equals to the time from the end of $T_{\text{Event_DU}}$ until condition T1-1.

For location-based conditional inter-frequency handover,

- If both condition D1-1 and condition D1-2 are fulfilled earlier than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_inter_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_inter_without_index}}$, then the measurement time delay equal to $T_{\text{identify_inter_with_index}}$ Or $T_{\text{identify_inter_without_index}}$, assuming that the UE uses only the SMTC window of the target inter-frequency carrier for performing the measurements. In this case $K_{\text{satellite}}=1$, $\text{CSSF}_{\text{inter}}=1$.
- If both condition D1-1 and condition D1-2 are fulfilled later than the time at the end of $T_{\text{Event_DU}} + T_{\text{identify_inter_with_index}}$ Or $T_{\text{Event_DU}} + T_{\text{identify_inter_without_index}}$, then the measurement time delay equal to the time from the end of $T_{\text{Event_DU}}$ until time of both condition D1-1 and condition D1-2 are fulfilled.

When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $[T_{\text{identify_intra_without_index}}]$ or $[T_{\text{identify_intra_with_index}}]$ for intra-frequency handover or $[T_{\text{identify_inter_without_index}}]$ for inter-frequency handover.

6.1C.2.2.3 Preparation time

$T_{\text{CHO_execution}}$ is the UE execution preparation time for conditional handover, and starts after UE realizes the condition of CHO is met and identity of the target cell is determined. $T_{\text{CHO_execution}}$ can be up to 10ms.

6.1C.2.2.4 Interruption time

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH.

For intra-frequency or inter-frequency conditional handover, the measurement time shall be less than

$$T_{\text{interrupt}} = T_{\text{processing}} + T_{\text{IU}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

- $T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.
- T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and [10] ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3]
- T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$.
- T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.
- T_{rs} is the SMTC periodicity of the target NR SAN cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise T_{rs} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

NOTE 1: The actual value of T_{IU} shall depend upon the PRACH configuration used in the target cell.

6.1D Handover for RedCap

6.1D.1 NR Handover

6.1D.1.1 Introduction

The purpose of NR handover is to change the NR PCell to another NR cell for RedCap UE. The requirements in this clause are applicable to SA NR.

Handover for a RedCap UE is defined as intra-frequency handover if the center frequency and subcarrier spacing (SCS) of the reference SSB of the serving cell is same as the center frequency and SCS of the reference SSB of the target cell, where:

- The reference SSB of the serving cell is the SSB in the active DL BWP of serving cell
- The reference SSB of the target cell is the SSB in the first active DL BWP of the target cell upon reconfiguration.

The requirements in this clause apply for the following handover scenarios:

- Handover to a target cell's DL BWP associated with CD-SSB;
- Handover to a target cell's Redcap specific DL BWP associated with NCD-SSB with RACH on the corresponding Redcap specific UL BWP.

6.1D.1.2 NR FR1 - NR FR1 Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR1 cell to NR FR1 cell.

6.1D.1.2.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within D_{handover} msec from the end of the last TTI containing the RRC command.

Where:

D_{handover} equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1D.1.2.2.

6.1D.1.2.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{\text{interrupt}}$

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell which depends on whether the target cell is already known when the handover command is received by the UE.

- If the target cell is a known intra-frequency cell, $T_{\text{search}} = 0\text{ms}$. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = 1 \cdot T_{\text{rs}}$ ms if UE is capable of 2 Rx antennas; $T_{\text{search}} = 2 \cdot T_{\text{rs}}$ ms if UE is only required to support 1 Rx antenna.
- If the target cell is a known inter-frequency cell, then
 - if the measured SSB is the target SSB for HO of the target cell, $T_{\text{search}} = 0\text{ms}$;
 - if the measured SSB and the target SSB for HO belong to the same NR target cell, $T_{\text{search}} = T_{\text{rs}}$ ms provided one of the following conditions is fulfilled:
 - The measured SSB is the CD-SSB in the DL BWP and the target SSB for HO is the NCD-SSB in RedCap specific DL BWP, or
 - The measured SSB is the NCD-SSB in RedCap specific DL BWP and the target SSB for HO is the CD-SSB in DL BWP, or
 - The measured SSB is the NCD-SSB and the target SSB for HO is the NCD-SSB and both are within different RedCap specific DL BWPs
 - If the target cell is an unknown inter-frequency cell and if the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = 3 \cdot T_{\text{rs}}$ ms if the UE is operating with 2 Rx antennas; $T_{\text{search}} = 5 \cdot T_{\text{rs}}$ ms if UE is operating with only 1 Rx antenna.

Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$ for both known and unknown target cell.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise,

- T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing as NCD-SSB indicated by nonCellDefiningSSB-r17 if the first active DL BWP included in handover command is configured with nonCellDefiningSSB-r17, otherwise, as CD-SSB indicated by *absoluteFrequencySSB* in *frequencyInfoDL* in handover command.
- If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2]

signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

For RedCap UE with HD-FDD, the handover requirements are met provided that

- SSB is available at the UE once every SMTC period during T_{search}
- One SSB is available during T_{Δ}
- One SSB is available during T_{IU} .

In FR1, the target cell is known if it has been meeting the following conditions:

- At least one of the SSBs measured belongs to the same NR target cell,
- During the last 5 seconds before the reception of the handover command:
 - at least one of the SSBs measured which belongs to the same NR target cell remains detectable according to the cell identification requirements as described in clause 9.2B for intra-frequency measurements and clause 9.3B for inter-frequency measurements,
 - The reference SSB of the NR target cell also remains detectable during the handover delay according to the cell identification requirements are described in clause 9.2B for intra-frequency handover and clause 9.3B for inter-frequency handover.

Otherwise, it is unknown.

6.1D.1.3 NR FR2- NR FR2 Handover

The requirements in this clause are applicable to both intra-frequency and inter-frequency handovers from NR FR2 cell to NR FR2 cell.

6.1D.1.3.1 Handover delay

When the UE receives a RRC message implying handover the UE shall be ready to start the transmission of the new uplink PRACH channel within $D_{handover}$ msec from the end of the last TTI containing the RRC command.

Where:

$D_{handover}$ equals the applicable RRC procedure delay defined in clause 12 in TS 38.331 [2] plus the interruption time stated in clause 6.1D.1.3.2.

6.1D.1.3.2 Interruption time

The interruption time is the time between end of the last TTI containing the RRC command on the old PDSCH and the time the UE starts transmission of the new PRACH, excluding the RRC procedure delay.

When intra-frequency or inter-frequency handover is commanded, the interruption time shall be less than $T_{interrupt}$

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin} \text{ ms}$$

Where:

T_{search} is the time required to search the target cell which depends on whether the target cell is already known when the handover command is received by the UE.

- If the target cell is a known intra-frequency cell, $T_{search} = 0$ ms. If the target cell is an unknown intra-frequency cell and the target cell $E_s/I_{ot} \geq -2$ dB, then $T_{search} = N \cdot T_{rs}$ ms, where $N = 8$.
- If the target cell is a known inter-frequency cell, then

if the measured SSB is the target SSB for HO of the target cell, $T_{search} = 0$ ms;

if the measured SSB and the target SSB for HO belong to the same NR target cell, $T_{\text{search}} = T_{\text{rs}}$ ms provided one of the following conditions is fulfilled:

- The measured SSB is the CD-SSB in the DL BWP and the target SSB for HO is the NCD-SSB in RedCap specific DL BWP, or
- The measured SSB is the NCD-SSB in RedCap specific DL BWP and the target SSB for HO is the CD-SSB in DL BWP, or
- The measured SSB is the NCD-SSB and the target SSB for HO is the NCD-SSB and both are within different RedCap specific DL BWPs
- If the target cell is an unknown inter-frequency cell and if the target cell $E_s/I_{\text{ot}} \geq -2$ dB, then $T_{\text{search}} = 3 \cdot N \cdot T_{\text{rs}}$ ms.

Regardless of whether DRX is in use by the UE, T_{search} shall still be based on non-DRX target cell search times.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = T_{\text{rs}}$ for both known and unknown target cell.

$T_{\text{processing}}$ is time for UE processing. $T_{\text{processing}}$ can be up to 20ms.

T_{margin} is time for SSB post-processing. T_{margin} can be up to 2ms.

T_{IU} is the interruption uncertainty in acquiring the first available PRACH occasion in the new cell. T_{IU} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the handover command, otherwise,

- T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing as NCD-SSB indicated by nonCellDefiningSSB-r17 if the first active DL BWP included in handover command is configured with nonCellDefiningSSB-r17, otherwise, as CD-SSB indicated by absoluteFrequencySSB in frequencyInfoDL in handover command.
- If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}}=5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There is no requirement if the SSB transmission periodicity is not 5ms. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the handover command, T_{rs} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

In FR2, the target cell is known if it has been meeting the following conditions:

- At least one of the SSBs measured belongs to the same NR target cell,
- During the last 5 seconds before the reception of the handover command:
 - the UE has sent a valid measurement report for the target cell and
 - at least one of the SSBs measured which belongs to the same NR target cell remains detectable according to the cell identification requirements as described in clause 9.2B for intra-frequency measurements and clause 9.3B for inter-frequency measurements,
- The reference SSB of the NR target cell also remains detectable during the handover delay according to the cell identification requirements are described in clause 9.2B for intra-frequency handover and clause 9.3B for inter-frequency handover.

Otherwise, it is unknown.

6.1D.2 NR Handover to other RATs

6.1D.2.1 NR – E-UTRAN Handover

The purpose of inter-RAT handover from NR to E-UTRAN is to change the radio access mode of PCell from NR to E-UTRAN for RedCap UE. The handover procedure is initiated from NR with a RRC message that implies a handover as described in TS 38.331 [2]. The requirements in this clause are applicable to SA NR.

The requirements in clause 6.1.2.1 shall apply when RedCap UE is capable of 2 Rx. When UE is only required to support 1 Rx antenna, the requirements for category 1bis UE defined in clause 5.1.2 in [15] shall apply.

6.2 RRC Connection Mobility Control

6.2.1 SA: RRC Re-establishment

6.2.1.1 Introduction

This clause contains requirements on the UE regarding RRC connection re-establishment procedure. RRC connection re-establishment is initiated when a UE in RRC_CONNECTED state on the carrier without CCA or on the carrier with CCA loses RRC connection due to any of failure cases, including radio link failure, handover failure, and RRC connection reconfiguration failure. The RRC connection re-establishment procedure is specified in clause 5.3.7 of TS 38.331 [2].

The requirements in this clause are applicable for RRC connection re-establishment to NR cell.

6.2.1.2 Requirements

In RRC_CONNECTED state the UE shall be capable of sending *RRCReestablishmentRequest* message within $T_{\text{re-establish_delay}}$ seconds from the moment it detects a loss in RRC connection. The total RRC connection delay ($T_{\text{re-establish_delay}}$) shall be less than:

$$T_{\text{re-establish_delay}} = T_{\text{UE_re-establish_delay}} + T_{\text{UL_grant}}$$

$T_{\text{UL_grant}}$: It is the time required to acquire and process uplink grant from the target PCell. The uplink grant is required to transmit *RRCReestablishmentRequest* message.

The UE re-establishment delay ($T_{\text{UE_re-establish_delay}}$) is specified in clause 6.2.1.2.1.

6.2.1.2.1 UE Re-establishment delay requirement

The UE re-establishment delay ($T_{\text{UE_re-establish_delay}}$) is the time between the moments when any of the conditions requiring RRC re-establishment as defined in clause 5.3.7 in TS 38.331 [2] is detected by the UE and when the UE sends PRACH to the target PCell. The UE re-establishment delay ($T_{\text{UE_re-establish_delay}}$) requirement shall be less than:

$$T_{\text{UE_re-establish_delay}} = 50 \text{ ms} + T_{\text{identify_intra_NR}} + \sum_{i=1}^{N_{\text{freq}}-1} T_{\text{identify_inter_NR},i} + T_{\text{SI-NR}} + T_{\text{PRACH}}$$

The intra-frequency target NR cell shall be considered detectable if each relevant SSB can satisfy that:

- SS-RSRP related side conditions given in clause 10.1.2 and 10.1.3 are fulfilled for a corresponding NR Band for FR1 and FR2, respectively, and
- the conditions of SSB_{RP} and SSB_{Ês}/I_{ot} according to Annex B.2.2 for a corresponding NR Band are fulfilled.

The inter-frequency target NR cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in clause 10.1.4 and 10.1.5 are fulfilled for a corresponding NR Band for FR1 and FR2, respectively, and

- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.3 for a corresponding NR Band are fulfilled.

$T_{identify_intra_NR}$: It is the time to identify the target intra-frequency NR cell and it depends on whether the target NR cell is known cell or unknown cell and on the FR of the target NR cell. If the UE is not configured with intra-frequency NR carrier for RRC re-establishment then $T_{identify_intra_NR}=0$; otherwise $T_{identify_intra_NR}$ shall not exceed the values defined in Table 6.2.1.2.1-1 when *highSpeedMeasFlagFR2-r17* is not configured or UE is not capable of FR2 power class 6 and Table 6.2.1.2.1-3 when *highSpeedMeasFlagFR2-r17* is configured and UE is capable of FR2 power class 6.

$T_{identify_inter_NR,i}$: It is the time to identify the target inter-frequency NR cell on inter-frequency carrier *i* configured for RRC re-establishment and it depends on whether the target NR cell is known cell or unknown cell and on the FR of the target NR cell. $T_{identify_inter_NR,i}$ shall not exceed the values defined in Table 6.2.1.2.1-2.

T_{SMTC} : It is the periodicity of the SMTC occasion configured for the intra-frequency carrier. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2*, T_{smtc} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

$T_{SMTC,i}$: It is the periodicity of the SMTC occasion configured for the inter-frequency carrier *i*. If it is not configured, the UE may assume that the target SSB periodicity is no larger than 20 ms.

T_{SI-NR} : It is the time required for receiving all the relevant system information according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for the target NR cell.

T_{PRACH} : It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. T_{PRACH} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

N_{freq} : It is the total number of NR frequencies to be monitored for RRC re-establishment; $N_{freq} = 1$ if the target intra-frequency NR cell is known, else $N_{freq} = 2$ and $T_{identify_intra_NR} = 0$ if the target inter-frequency NR cell is known.

There is no requirement if the target cell does not contain the UE context.

In the requirement defined in the below tables, the target FR1 cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown.

Table 6.2.1.2.1-1: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell

Serving cell SSB $\hat{E}_s/I_{ot}$ (dB)	FR of target NR cell	$T_{identify_intra_NR}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $5 \times T_{SMTC}$)	MAX (800 ms, $10 \times T_{SMTC}$)
≥ -8	FR2-1	N/A	MAX (1000 ms, $80 \times T_{SMTC}$)
≥ -8	FR2-2	N/A	MAX (1000 ms, $120 \times T_{SMTC}$)
< -8	FR1	N/A	800 ^{Note1}
< -8	FR2-1	N/A	3520 ^{Note1}
< -8	FR2-2	N/A	5280 ^{Note1}
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{SMTC} > 20$ ms and serving cell SSB $\hat{E}_s/I_{ot} < -8$ dB.			

T Table 6.2.1.2.1-2: Time to identify target NR cell for RRC connection re-establishment to NR inter-frequency cell

Serving cell SSB $\hat{E}_s/I_{ot}$ (dB)	FR of target NR cell	$T_{identify_inter_NR,i}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $6 \times T_{SMTC,i}$)	MAX (800 ms, $13 \times T_{SMTC,i}$)
≥ -8	FR2-1	N/A	MAX (1000 ms, $104 \times T_{SMTC,i}$)
≥ -8	FR2-2	N/A	MAX (1000 ms, $156 \times T_{SMTC,i}$)
< -8	FR1	N/A	800 ^{Note1}
< -8	FR2-1	N/A	4000 ^{Note1}
< -8	FR2-2	N/A	6000 ^{Note1}
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{SMTC,i} > 20$ ms and serving cell SSB $\hat{E}_s/I_{ot} < -8$ dB.			

Table 6.2.1.2.1-3: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell when *highSpeedMeasFlagFR2-r17* is configured (Frequency range FR2)

Serving cell SSB $\hat{E}_s/\text{lot}$ (dB)	FR of target NR cell	T _{identify_intra_NR} [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR2	N/A	MAX (1000 ms, 10 x N2 x T _{SMTC})
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when T _{SMTC} > 20 ms and serving cell SSB $\hat{E}_s/\text{lot} < -8$ dB. Note 2: When SMTC ≤ 40 ms, N2=2 when <i>highSpeedMeasFlagFR2-r17</i> = set1; N2=6 when <i>highSpeedMeasFlagFR2-r17</i> = set2.			

6.2.1A RRC Re-establishment with CCA

6.2.1A.1 Introduction

This clause contains requirements on the UE regarding RRC connection re-establishment procedure on the carrier with CCA. RRC connection re-establishment on the carrier with CCA is initiated when a UE in RRC_CONNECTED state on the carrier w/o or with CCA loses RRC connection due to any of failure cases, including radio link failure, handover failure, and RRC connection reconfiguration failure. The RRC connection re-establishment procedure is specified in clause 5.3.7 of TS 38.331 [2].

In the requirements of clause 6.2.1A, the term SMTC occasion not available at the UE refers to when the SMTC contains SSBs configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding RRC re-establishment period; otherwise the SMTC occasion is considered as available at the UE.

In the requirements of clause 6.2.1A, the term PRACH occasion unavailable for transmission refers to when the PRACH occasion is configured by gNB but not transmitted by the UE during the corresponding period due to UL CCA failure at the UE; otherwise the PRACH occasion is considered as available for transmission.

The requirements in this clause are applicable for RRC connection re-establishment to NR cell on the carrier with CCA.

When the RRC connection re-establishment is performed on a cell in FR2-2 with shared spectrum channel access, UE shall determine the CCA mode of the neighbour cell according to *channelAccessMode2-r17* if configured. If *channelAccessMode2-r17* of the cell is enabled, UE shall assume that CCA applies to the cell and perform measurement accordingly, and the requirements in clause 6.2.1A shall apply; otherwise, UE shall assume that CCA does not apply to the cell and perform measurement accordingly, and requirements in 6.2.1 shall apply.

6.2.1A.2 Requirements

In RRC_CONNECTED state on the carrier w/o or with CCA the UE shall be capable of sending *RRCReestablishmentRequest* message within T_{re-establish_delay_CCA} seconds from the moment it detects a loss in RRC connection. The total RRC connection delay (T_{re-establish_delay_CCA}) shall be less than:

$$T_{re-establish_delay_CCA} = T_{UE_re-establish_delay_CCA} + T_{UL_grant}$$

T_{UL_grant}: It is the time required to acquire and process uplink grant from the target PCell with CCA. The uplink grant is required to transmit *RRCReestablishmentRequest* message.

The UE re-establishment delay (T_{UE_re-establish_delay_CCA}) is specified in clause 6.2.1A.2.1.

6.2.1A.2.1 UE Re-establishment with CCA delay requirement

The UE re-establishment on the carrier with CCA delay (T_{UE_re-establish_delay_CCA}) is the time between the moments when any of the conditions requiring RRC re-establishment on the carrier with CCA as defined in clause 5.3.7 in TS 38.331 [2] is detected by the UE and when the UE sends PRACH to the target PCell on the carrier with CCA. The UE re-establishment delay requirement (T_{UE_re-establish_delay_CCA}) on the carrier with CCA shall be less than:

$$T_{UE_re-establish_delay_CCA} = 50 \text{ ms} + T_{identify_intra_NR_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR_CCA,i} + T_{SI-NR_CCA} + T_{PRACH_CCA}$$

The intra-frequency target NR cell with CCA shall be considered detectable if each relevant SSB can satisfy that:

- SS-RSRP related side conditions given in clause 10.1.2 and 10.1.3 are fulfilled for a corresponding NR Band for FR1 and FR2-2, respectively, and
- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.3 for a corresponding NR Band are fulfilled.

The inter-frequency target NR cell on the carrier with CCA shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in clause 10.1.4 and 10.1.5 are fulfilled for a corresponding NR Band for FR1 and FR2-2, respectively, and
- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.2 for a corresponding NR Band are fulfilled.

$T_{identify_intra_NR_CCA}$: If the target intra-frequency carrier is the carrier without CCA, it is the time to identify the target intra-frequency NR cell which is defined in clause 6.2.1; otherwise it is the time to identify the target intra-frequency NR cell on the carrier with CCA and it depends on whether the target NR cell on the carrier with CCA is known cell or unknown cell and on the frequency range (FR) of the target NR cell on the carrier with CCA. If the UE is not configured with intra-frequency NR carrier with CCA for RRC re-establishment then $T_{identify_intra_NR_CCA}=0$; otherwise $T_{identify_intra_NR_CCA}$ shall not exceed the values defined in Table 6.2.1A.2.1-1.

$T_{identify_inter_NR_CCA,i}$: If the target inter-frequency carrier is the carrier without CCA, it is the time to identify the target inter-frequency NR cell which is defined in clause 6.2.1; otherwise it is the time to identify the target inter-frequency NR cell on inter-frequency carrier i with CCA configured for RRC re-establishment and it depends on whether the target NR cell on the inter-frequency carrier with CCA is known or unknown. $T_{identify_inter_NR_CCA,i}$ shall not exceed the values defined in Table 6.2.1A.2.1-2.

T_{SMTC} : It is the periodicity of the SMTC occasion configured for the intra-frequency carrier. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2*, T_{smtc} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

$T_{SMTC,i}$: It is the periodicity of the SMTC occasion configured for the inter-frequency carrier i . If it is not configured, the UE may assume that the target SSB periodicity is not larger than 20 ms.

T_{SI-NR_CCA} : It is the time required for receiving all the relevant system information according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for the target NR cell on the carrier with CCA.

T_{PRACH_CCA} is the delay uncertainty in acquiring the first available PRACH occasion in the target NR Cell on the carrier with CCA:

$T_{PRACH_CCA} = (1 + K_3) \cdot T_{SSB,RO} + 10 \text{ ms}$, where:

- $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [39].
- K_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $K_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [57]. $L_3 = 0$ if *ra-ChannelAccess-r17* is not configured in FR2-2.

N_{freq} : It is the total number of NR frequencies to be monitored for RRC re-establishment; $N_{freq} = 1$ if the target NR cell on the intra-frequency carrier with CCA is known, else $N_{freq} = 2$ and $T_{identify_intra_NR_CCA} = 0$ if the target NR cell on the inter-frequency carrier with CCA is known.

There is no requirement if the target cell on the carrier with CCA does not contain the UE context.

In the requirement defined in the below tables, the target FR1 cell on the carrier with CCA is known if it has been meeting the relevant cell identification requirement during the last 8 seconds otherwise it is unknown.

Table 6.2.1A.2.1-1: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell with CCA

Serving cell SSB $\hat{E}_s$ /lot (dB)	Frequency range (FR) of target NR cell	$T_{\text{identify_intra_NR_CCA}}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $(5+K_1) \times T_{\text{SMTC}}$)	MAX (800 ms, $(10+K_1) \times T_{\text{SMTC}}$)
≥ -8	FR2-2	N/A	MAX (1000 ms, $N \times (10+K_3) \times T_{\text{SMTC}}$)
< -8	FR1	N/A	$(800+20 \times K_1)^{\text{Note1}}$
< -8	FR2-2	N/A	$N \times (440+20 \times K_3)^{\text{Note1}}$
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer with CCA when $T_{\text{SMTC}} > 20$ ms and serving cell SSB $\hat{E}_s$ /lot < -8 dB. Note 2: K_1 is the number of SMTC occasions not available at the UE due during RRC re-establishment period on the carrier with CCA. Note 3: K_3 is the number of SMTC occasion groups not available at the UE during RRC re-establishment period on the carrier with CCA. An SMTC occasion group consists of N consecutive SMTC occasions. An SMTC occasion group is not available, when at least one SMTC occasion in the group is not transmitted by the gNB. N is equal to 12.			

Table 6.2.1A.2.1-2: Time to identify target NR cell for RRC connection re-establishment to NR inter-frequency cell on the carrier with CCA

Serving cell SSB $\hat{E}_s$ /lot (dB)	Frequency range (FR) of target NR cell	$T_{\text{identify_inter_NR_CCA, i}}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $([6]+K_{2,i}) \times T_{\text{SMTC, i}}$)	MAX (800 ms, $([13]+K_{2,i}) \times T_{\text{SMTC, i}}$)
< -8	FR1	N/A	$(800+20 \times K_{2,i})^{\text{Note1}}$
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer with CCA when $T_{\text{SMTC, i}} > 20$ ms and serving cell SSB $\hat{E}_s$ /lot < -8 dB. Note 2: $K_{2,i}$ is the number of SMTC occasions not available at the UE during RRC re-establishment period on the "i" th carrier with CCA,			

6.2.1B SA: RRC Re-establishment for RedCap

6.2.1B.1 Introduction

This clause contains requirements on the RedCap UE regarding RRC connection re-establishment procedure.

A neighbour cell for RRC re-establishment procedures for a RedCap UE is defined as an intra-frequency cell if the centre frequency and subcarrier spacing (SCS) of the reference SSB of the serving cell is same as the centre frequency and SCS of the reference SSB of the neighbor cell; else it is considered as inter-frequency cell, where:

- The reference SSB of the target cell is the CD-SSB of the target cell.
- The reference SSB of the serving cell is the CD-SSB of the serving cell.

6.2.1B.2 Requirements

The requirements in clause 6.2.1 shall apply for 2 Rx RedCap UE. For 1 Rx RedCap UE, the requirements defined in clause 6.2.1 shall apply except that:

- $T_{\text{identify_intra_NR}}$ as specified in Table 6.2.1B.2-1.
- $T_{\text{identify_inter_NR, i}}$ as specified in Table 6.2.1B.2-2.

Table 6.2.1B.2-1: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell

Serving cell SSB $\hat{E}_s$ /lot (dB)	FR of target NR cell	$T_{\text{identify_intra_NR}}$ [ms]	
		Known NR cell	Unknown NR cell

≥ -8	FR1	MAX (200 ms, $6 \times T_{\text{SMTc}}$)	MAX (800 ms, $[11] \times T_{\text{SMTc}}$)
< -8	FR1	N/A	800 ^{Note1}
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{\text{SMTc}} > 20$ ms and serving cell SSB $\hat{E}_s/\text{lot} < -8$ dB.			

Table 6.2.1B.2-2: Time to identify target NR cell for RRC connection re-establishment to NR inter-frequency cell

Serving cell SSB $\hat{E}_s/\text{lot}$ (dB)	FR of target NR cell	$T_{\text{identify_inter_NR}, i}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $7 \times T_{\text{SMTc}, i}$)	MAX (800 ms, $[14] \times T_{\text{SMTc}, i}$)
< -8	FR1	N/A	800 ^{Note1}
Note 1: The UE is not required to successfully identify a cell on any NR frequency layer when $T_{\text{SMTc}, i} > 20$ ms and serving cell SSB $\hat{E}_s/\text{lot} < -8$ dB.			

When the Redcap specific initial BWP is configured for random access, $T_{\text{UE_re-establish_delay}}$ in clause 6.2.1 is extended by 6ms.

6.2.2 Random access

6.2.2.1 Introduction

This clause contains requirements on the UE regarding random access procedure. The random access procedure is initiated to establish uplink time synchronization for a UE which either has not acquired or has lost its uplink synchronization, or to convey UE's request Other SI, or for beam failure recovery. The random access is specified in clause 8 of TS 38.213 [3] and the control of the RACH transmission is specified in clause 5.1 of TS 38.321 [7]. Two types of procedure are defined for the random access, the 4-step RA type, and the 2-step RA type [7]. The decision on which type of procedure to adopt is as described in clause 5.1.1 of TS 38.321 [7]. The requirements for the 4-step RA type procedure are described in clause 6.2.2.2, whereas the requirements for the 2-step RA type procedure are described in the clause 6.2.2.3 of this specification.

6.2.2.2 Requirements for 4-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and apply this power level at the first preamble or additional preambles. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18] for FR1 and in Table 6.3.4.2-1 of TS 38.101-2 [19] for FR2. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18] for FR1 and clause 6.3.4.3 of TS 38.101-2 [19] for FR2.

The UE shall indicate a random access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in clause 5.1.4 in TS 38.321 [7].

The requirements in this clause apply for UE in SA operation mode or any MR-DC operation mode.

6.2.2.2.1 Contention based random access

6.2.2.2.1.1 Correct behaviour when transmitting Random Access Preamble

With the UE selected SSB with SS-RSRP above $rsrp\text{-}Threshold_{\text{SSB}}$, UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SSB is configured, as specified in clause 5.1.2 in TS 38.321 [7].

With the UE selected SSB with SS-RSRP above $rsrp\text{-}Threshold_{\text{SSB}}$, UE shall have the capability to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB

permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

6.2.2.2.1.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2.2.1.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window defined in clause 5.1.4 in TS 38.321 [7].

6.2.2.2.1.4 Correct behaviour when receiving an UL grant for msg3 retransmission

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

6.2.2.2.1.5 SA: Correct behaviour when receiving a message over Temporary C-RNTI

The UE shall send ACK if the Contention Resolution is successful.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

6.2.2.2.1.6 Correct behaviour when contention Resolution timer expires

The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

6.2.2.2.2 Non-Contention based random access

6.2.2.2.2.1 Correct behaviour when transmitting Random Access Preamble

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs is configured, with the UE selected CSI-RS with CSI-RSRP above *rsrp-ThresholdCSI-RS* amongst the associated CSI-RSs, UE shall have the capability to select the Random Access Preamble corresponding to the selected CSI-RS, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions in *ra-OccasionList* corresponding to the selected CSI-RS, and PRACH occasion shall be randomly selected with equal probability amongst the selected CSI-RS associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If the random access procedure is initialized for beam failure recovery and if the contention-free Random Access Resources and the contention-free PRACH occasions for beam failure recovery request associated with any of the SSBs and/or CSI-RSs is configured, UE shall have the capability to select the Random Access Preamble corresponding to the

selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs or the selected CSI-RS with CSI-RSRP above *rsrp-ThresholdCSI-RS* amongst the associated CSI-RSs, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, or from the PRACH occasions in *ra-OccasionList* corresponding to the selected CSI-RS, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions or the selected CSI-RS associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

6.2.2.2.2.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s), if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble, unless the random access procedure is initialized for Other SI request from UE.

The UE may stop monitoring for Random Access Response(s) and shall monitor the Other SI transmission if the Random Access Response only contains a Random Access Preamble identifier which is corresponding to the transmitted Random Access Preamble and the random access procedure is initialized for SI request from UE, as specified in clause 5.1.4 in TS 38.321 [7].

The UE may stop monitoring for Random Access Response(s), if the contention-free Random Access Preamble for beam failure recovery request was transmitted and if the PDCCH addressed to UE's C-RNTI is received, as specified in clause 5.1.4 in TS 38.321 [7].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2.2.2.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power, if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon* or if no PDCCH addressed to UE's C-RNTI is received within the RA Response window configured in *BeamFailureRecoveryConfig*, as defined in clause 5.1.4 in TS 38.321 [7].

6.2.2.2.3 UE behaviour when configured with supplementary UL

In addition to the requirements defined in clause 6.2.2.2.1 and 6.2.2.2.2, a UE configured with supplementary UL carrier shall use RACH configuration for the supplementary UL carrier contained in RMSI and RRC dedicated signalling. If the cell for the random access procedure is configured with supplementary UL, the UE shall transmit or re-transmit PRACH preamble on the supplementary UL carrier if the SS-RSRP measured by the UE on the DL carrier is lower than the *rsrp-ThresholdSSB-SUL* as defined in TS 38.331 [2].

6.2.2.3 Requirements for 2-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate MsgA PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and the MsgA PUSCH power formula of clause 7.1.1 of TS 38.213 [3] and apply this power level at the first MsgA or additional MsgA repetitions. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18] for frequency range 1 and in Table 6.3.4.2-1 of TS 38.101-2 [19] for frequency range 2. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18] for frequency range 1 and clause 6.3.4.3 of TS 38.101-2 [19] for frequency range 2.

The UE shall switch to 4-step RA type procedure if the MsgA transmission counter has exceeded *msgA-TransMax*, if configured, as specified in clause 5.1.4a of TS 38.321 [7]. The UE shall indicate a Random Access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in clause 5.1.4a in TS 38.321 [7].

The requirements in this clause apply for UE in SA operation mode or any MR-DC operation mode.

6.2.2.3.1 Contention based random access

6.2.2.3.1.1 Correct behaviour when transmitting MsgA

With the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, the UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SS blocks is configured, as specified in clause 5.1.2a in TS 38.321 [7].

With the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, UE shall have the capability to transmit MsgA PRACH on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured.

The PRACH preamble and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, the UE shall be able to transmit MsgA PUSCH on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

6.2.2.3.1.2 Correct behaviour when receiving MsgB

The UE shall stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

The UE shall send ACK if Success RAR is received in MsgB and the Contention Resolution is successful, as defined in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH and monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2.3.1.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2.3.2 Non-Contention based random access

6.2.2.3.2.1 Correct behaviour when transmitting MsgA

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, the UE shall be able to transmit MsgA PUSCH on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

6.2.2.3.2.2 Correct behaviour when receiving MsgB

The UE may stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated MsgA PRACH and MsgA PUSCH transmission power if all received MsgBs contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2.3.2.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit MsgA with the calculated MsgA PRACH and MsgA PUSCH transmission power, if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA* and the Random Access Response Reception has not been considered as successful as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2.3.3 UE behaviour when configured with supplementary UL

In addition to the requirements defined in clause 6.2.2.3.1 and 6.2.2.3.2, a UE configured with supplementary UL carrier shall use RACH configuration for the supplementary UL carrier contained in RMSI and RRC dedicated signalling. If the cell for the random access procedure is configured with supplementary UL, the UE shall transmit or re-transmit PRACH preamble on the supplementary UL carrier if the SS-RSRP measured by the UE on the DL carrier is lower than the *rsrp-ThresholdSSB-SUL* as defined in TS 38.321 [7].

6.2.2A Random access when CCA is used on target frequency

6.2.2A.1 Introduction

This clause contains requirements on the UE regarding random access procedure when CCA is used on the target frequency. The random access procedure is initiated to establish uplink time synchronization for a UE which either has not acquired or has lost its uplink synchronization, or to convey UE's request Other SI, or for beam failure recovery. The random access is specified in clause 8 of TS 38.213 [3] and the control of the RACH transmission is specified in clause 5.1 of TS 38.321 [7]. Two types of procedure are defined for the random access, the 4-step RA type, and the 2-step RA type [7]. The decision on which type of procedure to adopt is as described in clause 5.1.1 of TS 38.321 [7]. The requirements for the 4-step RA type procedure are described in clause 6.2.2A.2, whereas the requirements for the 2-step RA type procedure are described in the clause 6.2.2A.3 of this specification.

6.2.2A.2 Requirements for 4-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and apply this power level at the first preamble or additional preambles. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18].

The UE shall indicate a random access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in clause 5.1.4 in TS 38.321 [7].

The requirements in this clause apply for UE operating in a carrier frequency with CCA in SA operation mode or any MR-DC operation mode, in a carrier frequency with CCA.

6.2.2A.2.1 Contention based random access

6.2.2A.2.1.1 Correct behaviour when transmitting Random Access Preamble

With the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SSB is configured, as specified in clause 5.1.2 in TS 38.321 [7].

If the UL CCA is successful on the next available PRACH occasion, with the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If UE is configured *lbt-FailureRecoveryConfig* and is capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for random access preamble transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall perform the Random Access Resource selection procedure again, as specified in clause 5.1.3 in TS 38.321 [7].

If UE is not configured *lbt-FailureRecoveryConfig* or is not capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for random access preamble transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall increment `PREAMBLE_TRANSMISSION_COUNTER` by 1. The UE shall again perform the Random Access Resource selection procedure if `PREAMBLE_TRANSMISSION_COUNTER` < *preambleTransMax* + 1, as specified in clause 5.1.3 in TS 38.321 [7].

6.2.2A.2.1.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2A.2.1.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], if the UL CCA is successful, and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window defined in clause 5.1.4 in TS 38.321 [7].

6.2.2A.2.1.4 Correct behaviour when receiving an UL grant for msg3 retransmission

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission, if the UL CCA is successful,

6.2.2A.2.1.5 Correct behaviour when receiving a message over Temporary C-RNTI

If the UL CCA is successful, The UE shall send ACK if the Contention Resolution is successful.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires and the UL CCA is successful, unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

6.2.2A.2.1.6 Correct behaviour when contention Resolution timer expires

The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

6.2.2A.2.2 Non-Contention based random access

6.2.2A.2.2.1 Correct behaviour when transmitting Random Access Preamble

If the UL CCA is successful on the next available PRACH occasion and if the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If the UL CCA is successful, and if the random access procedure is initialized for beam failure recovery and if the contention-free Random Access Resources and the contention-free PRACH occasions for beam failure recovery request associated with SSBs configured, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If UE is configured *lbt-FailureRecoveryConfig* and is capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for random access preamble transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall perform the Random Access Resource selection procedure again, as specified in clause 5.1.3 in TS 38.321 [7].

If UE is not configured *lbt-FailureRecoveryConfig* or is not capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for random access preamble transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall increment *PREAMBLE_TRANSMISSION_COUNTER* by 1. The UE shall again perform the Random Access Resource selection procedure if *PREAMBLE_TRANSMISSION_COUNTER* < *preambleTransMax* + 1, as specified in clause 5.1.3 in TS 38.321 [7].

6.2.2A.2.2.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s), if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble, unless the random access procedure is initialized for Other SI request from UE.

The UE may stop monitoring for Random Access Response(s) and shall monitor the Other SI transmission if the Random Access Response only contains a Random Access Preamble identifier which is corresponding to the transmitted Random Access Preamble and the random access procedure is initialized for SI request from UE, as specified in clause 5.1.4 in TS 38.321 [7].

The UE may stop monitoring for Random Access Response(s), if the contention-free Random Access Preamble for beam failure recovery request was transmitted and if the PDCCH addressed to UE's C-RNTI is received, as specified in clause 5.1.4 in TS 38.321 [7].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion if the UL CCA is successful, and transmit the preamble with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2A.2.2.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion if the UL CCA is successful, and transmit the preamble with the calculated PRACH transmission power, if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon* or if no PDCCH addressed to UE's C-RNTI is received within the RA Response window configured in *BeamFailureRecoveryConfig*, as defined in clause 5.1.4 in TS 38.321 [7].

6.2.2A.3 Requirements for 2-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate MsgA PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and the MsgA PUSCH power formula of clause 7.1.1 of TS 38.213 [3] and apply this power level at the first MsgA or additional MsgA repetitions. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18].

The UE shall switch to 4-step RA type procedure if the MsgA transmission counter has exceeded *msgA-TransMax*, if configured, as specified in clause 5.1.4a of TS 38.321 [7]. The UE shall indicate a Random Access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in clause 5.1.4a in TS 38.321 [7].

The requirements in this clause apply for UE operating in a carrier frequency with CCA in SA operation mode or any MR-DC operation mode, in a carrier frequency with CCA.

6.2.2A.3.1 Contention based random access

6.2.2A.3.1.1 Correct behaviour when transmitting MsgA

With the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, the UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SS blocks is configured, as specified in clause 5.1.2a in TS 38.321 [7].

If the UL CCA is successful on the next available PRACH occasion, with the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, UE shall have the capability to transmit MsgA PRACH on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured.

The PRACH preamble and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, if the UL CCA is successful, the UE shall be able to transmit MsgA PUSCH on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

If UE is configured *lbt-FailureRecoveryConfig* and is capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for MsgA transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall cancel the transmission of the MsgA payload on the associated PUSCH resource and perform the Random Access Resource selection procedure, as specified in clause 5.1.3a in TS 38.321 [7].

If UE is not configured *lbt-FailureRecoveryConfig* or is not capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for MsgA transmission, as outlined in Clause 5.21.2

of TS 38.321 [7], the UE shall cancel the transmission of the MsgA payload on the associated PUSCH resource and increment PREAMBLE_TRANSMISSION_COUNTER by 1. The UE shall again perform the Random Access Resource selection procedure if PREAMBLE_TRANSMISSION_COUNTER < *preambleTransMax* + 1, as specified in clause 5.1.3a in TS 38.321 [7]. If the Random Access Procedure is not complete and the UE is configured with *msgA-TransMax* then, as specified in clause 5.1.3a in TS 38.321 [7], the UE shall perform the Random Access Resource selection procedure with 4-step RA type provided that PREAMBLE_TRANSMISSION_COUNTER = *msgA-TransMax* + 1.

6.2.2A.3.1.2 Correct behaviour when receiving MsgB

The UE shall stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

If the UL CCA is successful, the UE shall send ACK if Success RAR is received in MsgB and the Contention Resolution is successful, as defined in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH if the UL CCA is successful, and monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power, if the UL CCA is successful on the next available PRACH occasion, when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2A.3.1.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and if the UL CCA is successful, transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power if the UL CCA is successful on the next available PRACH occasion when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2A.3.2 Non-Contention based random access

6.2.2A.3.2.1 Correct behaviour when transmitting MsgA

If the UL CCA is successful, if the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, the UE shall be able to transmit MsgA PUSCH, if the UL CCA is successful, on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

If UE is configured *lbt-FailureRecoveryConfig* and is capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for MsgA transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall have cancel the transmission of the MsgA payload on the associated PUSCH resource and perform the Random Access Resource selection procedure, as specified in clause 5.1.3a in TS 38.321 [7].

If UE is not configured *lbt-FailureRecoveryConfig* or is not capable of *ul-LBT-FailureDetectionRecovery* [2] then upon detecting uplink CCA failure during the random access procedure for MsgA transmission, as outlined in Clause 5.21.2 of TS 38.321 [7], the UE shall cancel the transmission of the MsgA payload on the associated PUSCH resource and increment PREAMBLE_TRANSMISSION_COUNTER by 1. The UE shall again perform the Random Access Resource selection procedure if PREAMBLE_TRANSMISSION_COUNTER < *preambleTransMax* + 1, as specified in clause 5.1.3a in TS 38.321 [7]. If the Random Access Procedure is not complete and the UE is configured with *msgA-TransMax* then, as specified in clause 5.1.3a in TS 38.321 [7], the UE shall perform the Random Access Resource

selection procedure with 4-step RA type provided that $\text{PREAMBLE_TRANSMISSION_COUNTER} = \text{msgA-TransMax} + 1$.

6.2.2A.3.2.2 Correct behaviour when receiving MsgB

The UE may stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH if the UL CCA is successful, as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated MsgA PRACH and MsgA PUSCH transmission power if the UL CCA is successful, if all received MsgBs contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2.2A.3.2.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit MsgA with the calculated MsgA PRACH and MsgA PUSCH transmission power if the UL CCA is successful on the next available PRACH occasion, if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA* and the Random Access Response Reception has not been considered as successful as defined in clause 5.1.4a in TS 38.321 [7].

6.2.2B Random access for RedCap

6.2.2B.1 Introduction

This clause contains requirements on the RedCap UE regarding random access procedure. The random access procedure is initiated to establish uplink time synchronization for a UE which either has not acquired or has lost its uplink synchronization, or to convey UE's request Other SI, or for beam failure recovery. The random access is specified in clause 8 of TS 38.213 [3] and the control of the RACH transmission is specified in clause 5.1 of TS 38.321 [7]. Two types of procedure are defined for the random access, the 4-step RA type, and the 2-step RA type [7]. The decision on which type of procedure to adopt is as described in clause 5.1.1 of TS 38.321 [7].

The 1 Rx RedCap UE for performing the random access procedure defined in clause 5.1 [7] applies:

- rsrp-ThresholdSSB as the signaled value of rsrp-ThresholdSSB [2] + 1 dB.
- $\text{msgA-RSRP-ThresholdSSB}$ as the signaled value of $\text{msgA-RSRP-ThresholdSSB}$ [2] + 1 dB.
- $\text{msgA-RSRP-Threshold}$ as the signaled value of $\text{msgA-RSRP-Threshold}$ [2] + 1 dB.
- $\text{rsrp-ThresholdMsg3}$ as the signaled value of $\text{rsrp-ThresholdMsg3}$ [2] - 1 dB.

6.2.2B.2 Requirements

The requirements for the 4-step RA type procedure described in clause 6.2.2.2 and the requirements for the 2-step RA type procedure described in the clause 6.2.2.3 are applicable for TDD and FDD RedCap UEs. The 4-step and 2-step RA requirements for contention based random access defined in clause 6.2.2.2 and 6.2.2.3 respectively apply to HD-FDD UE with the following conditions:

- The RedCap UE operating in HD-FDD mode is not expected to perform PRACH transmission on a PRACH resource of a cell if UE has not received at least one SSB associated with that PRACH resource during the last T_p period in the cell, where $T_p=160$ ms.

- The RedCap UE operating in HD-FDD mode shall meet the PRACH requirements when performing PRACH transmission on a PRACH resource of a cell provided that the UE has received at least one SSB associated with that PRACH resource during the last T_p period before the PRACH transmission, where $T_p=160$ ms.

6.2.3 SA: RRC Connection Release with Redirection

6.2.3.1 Introduction

This clause contains requirements on the UE regarding RRC connection release with redirection procedure. RRC connection release with redirection is initiated by the *RRCRelease* message with redirection to E-UTRAN or NR from NR specified in TS 38.331 [2]. The RRC connection release with redirection procedure is specified in clause 5.3.8 of TS 38.331 [2].

In the requirements of clause 6.2.3.2, the term SMTC occasion not available at the UE refers to when the SMTC contains SSBs configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding identification period; otherwise the SMTC occasion is considered as available at the UE.

In the requirements of clause 6.2.3.2, the term PRACH occasion unavailable for transmission refers to when the PRACH occasion is configured by gNB but not transmitted by the UE during the corresponding period due to UL CCA failure at the UE.

When the RRC connection release with redirection is performed on a cell in FR2-2 with shared spectrum channel access, UE shall determine the CCA mode of the neighbour cell according to *channelAccessMode2-r17* if configured. If *channelAccessMode2-r17* of the cell is enabled, UE shall assume that CCA applies to the cell and perform measurement accordingly, and the requirements in clause 6.2.3.2.3 shall apply; otherwise, UE shall assume that CCA does not apply to the cell and perform measurement accordingly, and requirements in 6.2.3.2.1 shall apply.

6.2.3.2 Requirements

6.2.3.2.1 RRC connection release with redirection to NR

The UE shall be capable of performing the RRC connection release with redirection to the target NR cell within $T_{\text{connection_release_redirect_NR}}$.

The time delay ($T_{\text{connection_release_redirect_NR}}$) is the time between the end of the last slot containing the RRC command, “*RRCRelease*” (TS 38.331 [2]) on the NR PDSCH and the time the UE starts to send random access to the target NR cell. The time delay ($T_{\text{connection_release_redirect_NR}}$) shall be less than:

$$T_{\text{connection_release_redirect_NR}} = T_{\text{RRC_procedure_delay}} + T_{\text{identify-NR}} + T_{\text{SI-NR}} + T_{\text{RACH}}$$

The target NR cell shall be considered detectable when for each relevant SSB, the following side conditions are met,

- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.5 for a corresponding NR Band are fulfilled.

$T_{\text{RRC_procedure_delay}}$: It is the RRC procedure delay for processing the received message “*RRCRelease*” as defined in clause 6.2.2 of TS 38.331 [2].

$T_{\text{identify-NR}}$: It is the time to identify the target NR cell and depends on the FR of the target NR cell. It is defined in Table 6.2.3.2.1-1. Note that $T_{\text{identify-NR}} = T_{\text{PSS/SSS-sync}} + T_{\text{meas}}$, in which $T_{\text{PSS/SSS-sync}}$ is the cell search time and T_{meas} is the measurement time due to cell selection criteria evaluation.

$T_{\text{SI-NR}}$: It is the time required for acquiring all the relevant system information of the target NR cell. This time depends upon whether the UE is provided with the relevant system information of the target NR cell or not by the old NR cell before the RRC connection is released. T_{RACH} : It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. T_{RACH} can be up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

T_{TS} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the redirection command, otherwise T_{TS} is the SMTC periodicity configured in the *measObjectNR* having the

same SSB frequency and subcarrier spacing configured for the RRC connection release with redirection. If the measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided with SMTC configuration or measurement object for the frequency which is also configured for the RRC connection release with redirection then:

- the requirement in this clause is applied with $T_{rs} = 20$ ms if the SSB transmission periodicity is not larger than 20 ms; otherwise,
- there is no requirement if the SSB transmission periodicity is larger than 20ms.

Table 6.2.3.2.1-1: Time to identify target NR cell for RRC connection release with redirection to NR

FR of target NR cell	$T_{\text{identify-NR}}$
FR1	MAX (680 ms, $11 \times T_{rs}$)
FR2-1	MAX (880 ms, $8 \times 11 \times T_{rs}$)
FR2-2	MAX (880 ms, $12 \times 11 \times T_{rs}$)
Note: If the UE has been provided with higher layer signaling of <i>smtc2</i> specified in TS 38.331 [2] prior to the redirection command, T_{rs} follows <i>smtc1</i> or <i>smtc2</i> according to the physical cell ID of the target cell.	

6.2.3.2.2 RRC connection release with redirection to E-UTRAN

The UE shall be capable of performing the RRC connection release with redirection to the target E-UTRAN cell within $T_{\text{connection_release_redirect_E-UTRA}}$.

The time delay ($T_{\text{connection_release_redirect_E-UTRA}}$) is the time between the end of the last slot containing the RRC command, “*RRCRelease*” (TS 38.331 [2]) on the PDSCH and the time the UE starts to send random access to the target E-UTRA cell. The time delay ($T_{\text{connection_release_redirect_E-UTRA}}$) shall be less than:

$$T_{\text{connection_release_redirect_E-UTRA}} = T_{\text{RRC_procedure_delay}} + T_{\text{identify-E-UTRA}} + T_{\text{SI-E-UTRA}} + T_{\text{RACH}}$$

The target E-UTRA FDD or TDD cell shall be considered detectable provided the following conditions are fulfilled:

- the same conditions as for inter-frequency RSRP measurements specified in annex B.1.2 of TS 36.133 [15] are fulfilled for a corresponding Band, and
- the same conditions as for inter-frequency RSRQ measurements specified in annex B.1.2 of TS 36.133 [15] are fulfilled for a corresponding Band, and
- SCH conditions specified in annex B.1.2 of TS 36.133 [15] are fulfilled for a corresponding Band.

$T_{\text{RRC_procedure_delay}}$: It is the RRC procedure delay for processing the received message “*RRCRelease*” as defined in clause 6.2.2 of TS 38.331 [2].

$T_{\text{identify-E-UTRA}}$: It is the time to identify the target E-UTRA cell. It shall be less than 320 ms.

$T_{\text{SI-E-UTRA}}$: It is the time required for acquiring all the relevant system information of the target E-UTRA cell. This time depends upon whether the UE is provided with the relevant system information (SI) of the target E-UTRA cell or not by the old NR cell before the RRC connection is released.

T_{RACH} : It is the delay caused due to the random access procedure when sending random access to the target E-UTRA cell.

6.2.3.2.3 RRC connection release with redirection to NR carrier subject to CCA

The UE shall be capable of performing the RRC connection release with redirection to the target NR cell subject to CCA within $T_{\text{connection_release_redirect_NR_CCA}}$.

The time delay ($T_{\text{connection_release_redirect_NR_CCA}}$) is the time between the end of the last slot containing the RRC command, “*RRCRelease*” (TS 38.331 [2]) on the NR PDSCH and the time the UE starts to send random access to the target NR cell. The time delay ($T_{\text{connection_release_redirect_NR_CCA}}$) shall be less than:

$$T_{\text{connection_release_redirect_NR_CCA}} = T_{\text{RRC_procedure_delay}} + T_{\text{identify-NR_CCA}} + T_{\text{SI-NR_CCA}} + T_{\text{RACH_CCA}}$$

The target NR cell shall be considered detetable when for each relevant SSB, the following side conditions are met .

- the conditions of SSB_RP and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.5 for a corresponding NR Band are fulfilled.
- $T_{RRC_procedure_delay}$: It is the RRC procedure delay for processing the received message “*RRCRelease*” as defined in clause 6.2.2 of TS 38.331 [2].
- $T_{identify-NR_CCA}$: It is the time to identify the target NR cell and is defined as:
 - $T_{identify-NR_CCA} = T_{PSS/SSS-sync} + T_{meas}$; $T_{PSS/SSS-sync}$ is the cell search time and T_{meas} is the measurement time due to cell selection criteria evaluation.
 - For FR1 target NR cell: $T_{identify-NR_CCA} = \text{MAX} (680 \text{ ms}, (L_1+11) \times T_{rs})$;
 - For FR2-2 target NR cell: $T_{identify-NR_CCA} = \text{MAX} (880 \text{ ms}, N \times (L_1'+11) \times T_{rs})$;
 - where L_1 is the number of SMTC occasions not available at the UE due to DL CCA failures and L_1' is the number of SMTC occasion groups not available at the UE due to DL CCA failures. An SMTC occasion group consists of N consecutive SMTC occasions. An SMTC occasion group is not available, when at least one SMTC occasion in the group is not transmitted by the gNB. N is equal to 12. If $L_1 > L_{1,max}$ or $L_1' > L_{1,max}$ then the UE shall initiate cell selection procedures for the selected PLMN as defined in TS 38.304 [1]; where $L_{1,max}$ is defined in Table 6.2.3.2.3-1.
- T_{SI-NR_CCA} : It is the time required for acquiring all the relevant system information of the target NR cell. This time depends upon whether the UE is provided with the relevant system information of the target NR cell or not by the old NR cell before the RRC connection is released.
- T_{RACH_CCA} : It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell:
- $T_{RACH_CCA} = (1+L_2) \times T_{SSB,RO} + 10 \text{ ms } T_{PRACH}$; where:
 - L_2 is the consecutive number of SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failures. $L_2 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. $L_3 = 0$ if *ra-ChannelAccess-r17* is not configured in FR2-2.
 - $T_{SSB,RO}$ is the SSB to PRACH occasion association period as defined in the table 8.1-1 of TS 38.213 [3].
 - The value of L_2 is limited by *PREAMBLE_TRANSMISSION_COUNTER*, which is increased when PRACH occasion is unavailable for PRACH transmission due to UL CCA failure as specified in TS 38.321 [7]. The UE behaviour when *PREAMBLE_TRANSMISSION_COUNTER* reaches the *preambleTransMax* is specified in TS 38.321 [7].
- T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the redirection command, otherwise T_{rs} is the SMTC periodicity configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing configured for the RRC connection release with redirection. If the UE is not provided with SMTC configuration or measurement object for the frequency which is also configured for the RRC connection release with redirection then:
 - the requirement in this clause is applied with $T_{rs} = 20 \text{ ms}$ if the SSB transmission periodicity is not larger than 20 ms;
 - otherwise, there is no requirement if the SSB transmission periodicity is larger than 20ms.

Table 6.2.3.2.3-1: Maximum allowed number of missed SMTC occasions during cell identification

SMTC periodicity (T_{rs}) [ms]	Maximum allowed number of missed SMTC occasions ($L_{1,max}$)
$T_{rs} \leq 40$	8
$T_{rs} > 40$	4

6.2.3A SA: RRC Connection Release with Redirection for RedCap

6.2.3A.1 Introduction

This clause contains requirements on the RedCap UE regarding RRC connection release with redirection procedure. RRC connection release with redirection is initiated by the *RRCRelease* message with redirection to E-UTRAN or NR from NR specified in TS 38.331 [2]. The RRC connection release with redirection procedure is specified in clause 5.3.8 of TS 38.331 [2].

6.2.3A.2 Requirements

6.2.3A.2.1 RRC connection release with redirection to NR

The requirements in clause 6.2.3.2.1 shall apply for 2 Rx RedCap UE. For 1 Rx RedCap UE, the requirements defined in clause 6.2.3.2.1 shall apply except that:

- $T_{\text{identify-NR}}$ as specified in Table 6.2.3A.2.1-1.

Table 6.2.3A.2.1-1: Time to identify target NR cell for RRC connection release with redirection to NR

FR of target NR cell	$T_{\text{identify-NR}}$
FR1	MAX (680 ms, $\lceil 12 \rceil \times T_{\text{rs}}$)
Note: If the UE has been provided with higher layer signaling of <i>smtc2</i> specified in TS 38.331 [2] prior to the redirection command, T_{rs} follows <i>smtc1</i> or <i>smtc2</i> according to the physical cell ID of the target cell.	

The HD-FDD UE shall meet the RRC connection release with redirection requirements provided that SSB is available at the UE once every SMTC period during T_{search} .

When the Redcap specific initial BWP is configured for random access, $T_{\text{connection_release_redirect_NR}}$ in clause 6.2.3.2.1 is extended by 6ms.

6.2.3A.2.2 RRC connection release with redirection to E-UTRAN

The requirements in clause 6.2.3.2.2 shall apply.

6.2C RRC Connection Mobility Control for Satellite Access

6.2C.1 SA: RRC Re-establishment for Satellite Access

6.2C.1.1 Introduction

This clause contains requirements on the UE regarding RRC connection re-establishment procedure. RRC connection re-establishment is initiated when a UE in RRC_CONNECTED state on the carrier loses RRC connection due to any of failure cases, including radio link failure, handover failure, and RRC connection reconfiguration failure. The RRC connection re-establishment procedure is specified in clause 5.3.7 of TS 38.331 [2].

The requirements in this clause are applicable for RRC connection re-establishment to NR cell, which is served by satellite access node (SAN).

6.2C.1.2 Requirements

In RRC_CONNECTED state the UE shall be capable of sending *RRCReestablishmentRequest* message within $T_{\text{re-establish_delay}}$ seconds from the moment it detects a loss in RRC connection. The total RRC connection delay ($T_{\text{re-establish_delay}}$) shall be less than:

$$T_{\text{re-establish_delay}} = T_{\text{UE_re-establish_delay}} + T_{\text{UL_grant}}$$

T_{UL_grant} : It is the time required to acquire and process uplink grant from the target PCell. The uplink grant is required to transmit *RRCReestablishmentRequest* message.

The UE re-establishment delay ($T_{UE_re-establish_delay}$) is specified in clause 6.2C.1.2.1.

6.2C.1.2.1 UE Re-establishment delay requirement

The UE re-establishment delay ($T_{UE_re-establish_delay}$) is the time between the moments when any of the conditions requiring RRC re-establishment as defined in clause 5.3.7 in TS 38.331 [2] is detected by the UE and when the UE sends PRACH to the target PCell. The UE re-establishment delay ($T_{UE_re-establish_delay}$) requirement shall be less than:

$$T_{UE_re-establish_delay} = 50 \text{ ms} + T_{identify_intra_NR} + \sum_{i=1}^{N_{freq}-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

The intra-frequency target NR cell shall be considered detectable if each relevant SSB can satisfy that:

- SS-RSRP related side conditions given in clause 10.1.2C are fulfilled for a corresponding NR Band for FR1, and
- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.17 for a corresponding NR Band are fulfilled.

The inter-frequency target NR cell shall be considered detectable when for each relevant SSB:

- SS-RSRP related side conditions given in clause 10.1.4C are fulfilled for a corresponding NR Band for FR1, and
- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.18 for a corresponding NR Band are fulfilled.

$T_{identify_intra_NR}$: It is the time to identify the target intra-frequency NR cell and it depends on whether the target NR cell is known cell or unknown cell. If the UE is not configured with intra-frequency NR carrier for RRC re-establishment then $T_{identify_intra_NR}=0$; otherwise $T_{identify_intra_NR}$ shall not exceed the values defined in Table 6.2C.1.2.1-1.

$T_{identify_inter_NR,i}$: It is the time to identify the target inter-frequency NR cell on inter-frequency carrier i configured for RRC re-establishment and it depends on whether the target NR cell is known cell or unknown cell. $T_{identify_inter_NR,i}$ shall not exceed the values defined in Table 6.2C.1.2.1-2.

T_{SMTc} : It is the periodicity of the SMTc occasion configured for the intra-frequency carrier. If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2*, T_{smtc} follows *smtc1* or *smtc2* according to the physical cell ID of the target cell.

$T_{SMTc,i}$: It is the periodicity of the SMTc occasion configured for the inter-frequency carrier i . If it is not configured, the UE may assume that the target SSB periodicity is no larger than 20 ms.

T_{SI-NR} : It is the time required for receiving all the relevant system information according to the reception procedure and the RRC procedure delay of system information blocks defined in TS 38.331 [2] for the target NR cell.

T_{PRACH} : It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. T_{PRACH} can be up to the summation of SSB to PRACH occasion association period and [10] ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

N_{freq} : It is the total number of NR frequencies to be monitored for RRC re-establishment; $N_{freq} = 1$ if the target intra-frequency NR cell is known, else $N_{freq} = 2$ and $T_{identify_intra_NR} = 0$ if the target inter-frequency NR cell is known.

There is no requirement if the target cell does not contain the UE context.

In the requirement defined in the below tables, the target FR1 cell is known if it has been meeting the relevant cell identification requirement during the last 5 seconds otherwise it is unknown.

The requirements in this clause apply provided that the ephemeris information provided by the serving cell for the target cell is valid during UE re-establishment delay ($T_{UE_re-establish_delay}$).

Table 6.2C.1.2.1-1: Time to identify target NR cell for RRC connection re-establishment to NR intra-frequency cell

Serving cell SSB $\hat{E}_s/I_{ot}$ (dB)	FR of target NR cell	$T_{identify_intra_NR}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $5 \times T_{SMTc}$)	$K_{multi_SMTc} * \text{MAX} (800 \text{ ms}, 10 \times T_{SMTc})$
< -8	FR1	N/A	$k * 800 \text{ ms}$ Note1, 3

Note 1:	The UE is not required to successfully identify a cell on any NR frequency layer when $T_{\text{SMTc}} > 20$ ms and serving cell SSB $\hat{E}_s/\text{lot} < -8$ dB.
Note 2:	$K_{\text{multi_SMTc}}$ is defined in clause 9.2C.5.1.
Note 3:	$k = 1$ if the cells on the target frequency are served by GEO. $k = (N+1)$ if the cells on the target frequency are served by LEO, where N is the number of different satellites associated to the list of configured neighbor cells in <code>ntn-NeighCellConfigList</code> and <code>ntn-NeighCellConfigListExt</code> .

Table 6.2C.1.2.1-2: Time to identify target NR cell for RRC connection re-establishment to NR inter-frequency cell

Serving cell SSB $\hat{E}_s/\text{lot}$ (dB)	FR of target NR cell	$T_{\text{identify_inter_NR}, i}$ [ms]	
		Known NR cell	Unknown NR cell
≥ -8	FR1	MAX (200 ms, $6 \times T_{\text{SMTc}, i}$)	$K_{\text{satellite}} * \text{MAX} (800 \text{ ms}, 13 \times T_{\text{SMTc}, i})$
< -8	FR1	N/A	$k * 800 \text{ ms}$ ^{Note1, 3}
Note 1:	The UE is not required to successfully identify a cell on any NR frequency layer when $T_{\text{SMTc}, i} > 20$ ms and serving cell SSB $\hat{E}_s/\text{lot} < -8$ dB.		
Note 2:	$K_{\text{satellite}}$ is defined in clause 9.3C.4.		
Note 3:	$k = 1$ if the cells on the target frequency are served by GEO. $k = (N+1)$ if the cells on the target frequency are served by LEO, where N is the number of different satellites associated to the list of configured neighbor cells in <code>ntn-NeighCellConfigList</code> and <code>ntn-NeighCellConfigListExt</code> .		

6.2C.2 Random access for satellite access

6.2C.2.1 Introduction

This clause contains requirements on the UE regarding random access procedure. The random access procedure is initiated to establish uplink time synchronization for a UE which either has not acquired or has lost its uplink synchronization, or to convey UE's request Other SI, or for beam failure recovery. The random access is specified in clause 8 of TS 38.213 [3] and the control of the RACH transmission is specified in clause 5.1 of TS 38.321 [7]. Two types of procedure are defined for the random access, the 4-step RA type, and the 2-step RA type [7]. The decision on which type of procedure to adopt is as described in clause 5.1.1 of TS 38.321 [7]. The requirements for the 4-step RA type procedure are described in clause 6.2C.2.2, whereas the requirements for the 2-step RA type procedure are described in the clause 6.2C.2.3 of this specification.

6.2C.2.2 Requirements for 4-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and apply this power level at the first preamble or additional preambles. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18] for FR1. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18] for FR1.

The UE shall indicate a random access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell or PSCell as specified in clause 5.1.4 in TS 38.321 [7].

The requirements in this clause apply for UE in SA operation mode.

6.2C.2.2.1 Contention based random access

6.2C.2.2.1.1 Correct behaviour when transmitting Random Access Preamble

With the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SSB is configured, as specified in clause 5.1.2 in TS 38.321 [7].

With the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB*, UE shall have the capability to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

6.2C.2.2.1.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2C.2.2.1.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window defined in clause 5.1.4 in TS 38.321 [7].

6.2C.2.2.1.4 Correct behaviour when receiving an UL grant for msg3 retransmission

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

6.2C.2.2.1.5 SA: Correct behaviour when receiving a message over Temporary C-RNTI

The UE shall send ACK if the Contention Resolution is successful.

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

6.2C.2.2.1.6 Correct behaviour when contention Resolution timer expires

The UE shall re-select a preamble and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

6.2C.2.2.2 Non-Contention based random access

6.2C.2.2.2.1 Correct behaviour when transmitting Random Access Preamble

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs is configured, with the UE selected CSI-RS with CSI-RSRP above *rsrp-ThresholdCSI-RS* amongst the associated CSI-RSs, UE shall have the capability to select the Random Access Preamble corresponding to the selected CSI-RS, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions in *ra-OccasionList* corresponding to the selected CSI-RS, and PRACH occasion shall be randomly selected with equal probability amongst the selected CSI-RS associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

If the random access procedure is initialized for beam failure recovery and if the contention-free Random Access Resources and the contention-free PRACH occasions for beam failure recovery request associated with any of the SSBs and/or CSI-RSs is configured, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB with SS-RSRP above *rsrp-ThresholdSSB* amongst the associated SSBs or the selected CSI-RS with CSI-RSRP above *rsrp-ThresholdCSI-RS* amongst the associated CSI-RSs, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex* if configured, or from the PRACH occasions in *ra-OccasionList* corresponding to the selected CSI-RS, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions or the selected CSI-RS associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2 in TS 38.321 [7].

6.2C.2.2.2.2 Correct behaviour when receiving Random Access Response

The UE may stop monitoring for Random Access Response(s), if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble, unless the random access procedure is initialized for Other SI request from UE.

The UE may stop monitoring for Random Access Response(s) and shall monitor the Other SI transmission if the Random Access Response only contains a Random Access Preamble identifier which is corresponding to the transmitted Random Access Preamble and the random access procedure is initialized for SI request from UE, as specified in clause 5.1.4 in TS 38.321 [7].

The UE may stop monitoring for Random Access Response(s), if the contention-free Random Access Preamble for beam failure recovery request was transmitted and if the PDCCH addressed to UE's C-RNTI is received, as specified in clause 5.1.4 in TS 38.321 [7].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2C.2.2.2.3 Correct behaviour when not receiving Random Access Response

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2 in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated PRACH transmission power, if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon* or if no PDCCH addressed to UE's C-RNTI is received within the RA Response window configured in *BeamFailureRecoveryConfig*, as defined in clause 5.1.4 in TS 38.321 [7].

6.2C.2.3 Requirements for 2-step RA type

The UE shall select the type of random access at initiation of the random access procedure based on network configuration, as specified in clause 5.1.1 in TS 38.321 [7].

The UE shall have capability to calculate MsgA PRACH transmission power according to the PRACH power formula defined in clause 7.4 of TS 38.213 [3] and the MsgA PUSCH power formula of clause 7.1.1 of TS 38.213 [3] and apply this power level at the first MsgA or additional MsgA repetitions. The absolute power applied to the first preamble shall have an accuracy as specified in Table 6.3.4.2-1 of TS 38.101-1 [18] for frequency range 1. The relative power applied to additional preambles shall have an accuracy as specified in Table 6.3.4.3-1 of TS 38.101-1 [18] for frequency range 1.

The UE shall switch to 4-step RA type procedure if the MsgA transmission counter has exceeded *msgA-TransMax*, if configured, as specified in clause 5.1.4a of TS 38.321 [7]. The UE shall indicate a Random Access problem to upper layers if the maximum number of preamble transmission counter has been reached for the random access procedure on PCell as specified in clause 5.1.4a in TS 38.321 [7].

The requirements in this clause apply for UE in SA operation mode.

6.2C.2.3.1 Contention based random access

6.2C.2.3.1.1 Correct behaviour when transmitting MsgA

With the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, the UE shall have the capability to select a Random Access Preamble randomly with equal probability from the Random Access Preambles associated with the selected SSB if the association between Random Access Preambles and SS blocks is configured, as specified in clause 5.1.2a in TS 38.321 [7].

With the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB*, UE shall have the capability to transmit MsgA PRACH on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, if the association between PRACH occasions and SSBs is configured.

The PRACH preamble and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, the UE shall be able to transmit MsgA PUSCH on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

6.2C.2.3.1.2 Correct behaviour when receiving MsgB

The UE shall stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

The UE shall send ACK if Success RAR is received in MsgB and the Contention Resolution is successful, as defined in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH and monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2C.2.3.1.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires unless the Random Access Response reception is considered as successful, as defined in clause 5.1.4a in TS 38.321 [7].

6.2C.2.3.2 Non-Contention based random access

6.2C.2.3.2.1 Correct behaviour when transmitting MsgA

If the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs is configured, with the UE selected SSB with SS-RSRP above *msgA-RSRP-ThresholdSSB* amongst the associated SSBs, UE shall have the capability to select the Random Access Preamble corresponding to the selected SSB, and to transmit Random Access Preamble on the next available PRACH occasion from the PRACH occasions corresponding to the selected SSB permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured, and PRACH occasion shall be randomly selected with equal probability amongst the selected SSB associated PRACH occasions occurring simultaneously but on different subcarriers, as specified in clause 5.1.2a in TS 38.321 [7].

In association with the MsgA PRACH, the UE shall be able to transmit MsgA PUSCH on the corresponding PUSCH occasion associated with a DMRS resource, which is mapped from the MsgA PRACH occasion, and preamble index as defined in clause 8.1A in TS 38.213 [3].

6.2C.2.3.2.2 Correct behaviour when receiving MsgB

The UE may stop monitoring for MsgB, when the UE has successfully received the PDCCH addressed to UE as specified in clause 8.2A in TS 38.213 [3] containing a successRAR MAC subPDU or a fallbackRAR MAC subPDU as described in clause 5.1.4a in TS 38.321 [7].

If MsgB contains a fallbackRAR MAC subPDU the UE shall fallback to the 4-step RA type by transmitting the msg3 containing the payload of MsgA PUSCH as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit the preamble with the calculated MsgA PRACH and MsgA PUSCH transmission power if all received MsgBs contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

6.2C.2.3.2.3 Correct behaviour when not receiving MsgB

The UE shall again perform the Random Access Resource selection procedure defined in clause 5.1.2a in TS 38.321 [7] for the next available PRACH occasion, and transmit MsgA with the calculated MsgA PRACH and MsgA PUSCH transmission power, if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA* and the Random Access Response Reception has not been considered as successful as defined in clause 5.1.4a in TS 38.321 [7].

6.2C.3 SA: RRC Connection Release with Redirection for Satellite Access

6.2C.3.1 Introduction

This clause contains requirements on the UE regarding RRC connection release with redirection procedure. RRC connection release with redirection is initiated by the *RRCRelease* message with redirection to NR from NR specified in TS 38.331 [2]. The RRC connection release with redirection procedure is specified in clause 5.3.8 of TS 38.331 [2].

6.2C.3.2 Requirements

6.2C.3.2.1 RRC connection release with redirection to NR

The UE shall be capable of performing the RRC connection release with redirection to the target NR cell within $T_{\text{connection_release_redirect_NR}}$.

The time delay ($T_{\text{connection_release_redirect_NR}}$) is the time between the end of the last slot containing the RRC command, “*RRCRelease*” (TS 38.331 [2]) on the NR PDSCH and the time the UE starts to send random access to the target NR cell. The time delay ($T_{\text{connection_release_redirect_NR}}$) shall be less than:

$$T_{\text{connection_release_redirect_NR}} = T_{\text{RRC_procedure_delay}} + T_{\text{identify-NR}} + T_{\text{SI-NR}} + T_{\text{RACH}}$$

The target NR cell shall be considered detectable when for each relevant SSB, the following side conditions are met.,

- the conditions of SSB_{RP} and SSB $\hat{E}_s/I_{ot}$ according to Annex B.2.5 for a corresponding NR Band are fulfilled.
- $T_{\text{RRC_procedure_delay}}$: It is the RRC procedure delay for processing the received message “*RRCRelease*” as defined in clause 6.2.2 of TS 38.331 [2].
- $T_{\text{identify-NR}}$: It is the time to identify the target NR cell and depends on the FR of the target NR cell. It is defined in Table 6.2C.3.2.1-1. Note that $T_{\text{identify-NR}} = T_{\text{PSS/SSS-sync}} + T_{\text{meas}}$, in which $T_{\text{PSS/SSS-sync}}$ is the cell search time and T_{meas} is the measurement time due to cell selection criteria evaluation.
- $T_{\text{SI-NR}}$: It is the time required for acquiring all the relevant system information of the target NR cell. This time depends upon whether the UE is provided with the relevant system information of the target NR cell or not by the old NR cell before the RRC connection is released. T_{RACH} : It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell. T_{RACH} can be up to the summation of SSB to PRACH occasion

association period and 10 ms. SSB to PRACH occasion associated period is defined in the table 8.1-1 of TS 38.213 [3].

- T_{rs} is the SMTC periodicity of the target NR cell if the UE has been provided with an SMTC configuration for the target cell in the redirection command, otherwise T_{rs} is the SMTC periodicity configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing configured for the RRC connection release with redirection.. If the UE is not provided with SMTC configuration or measurement object for the frequency which is also configured for the RRC connection release with redirection then:
- the requirement in this clause is applied with $T_{rs} = 20$ ms if the SSB transmission periodicity is not larger than 20 ms; otherwise,
- there is no requirement if the SSB transmission periodicity is larger than 20ms.

The requirements in this clause apply provided that the ephemeris information provided by the serving cell for the target cell is valid during time delay ($T_{\text{connection_release_redirect_NR}}$).

Table 6.2C.3.2.1-1: Time to identify target NR cell for RRC connection release with redirection to NR

FR of target NR cell	$T_{\text{identify-NR}}$
FR1	$K_{\text{satellite}} * \text{MAX}(680 \text{ ms}, 11 * T_{rs})$
Note 1: If the UE has been provided with higher layer signaling of <i>smtc2</i> specified in TS 38.331 [2] prior to the redirection command, T_{rs} follows <i>smtc1</i> or <i>smtc2</i> according to the physical cell ID of the target cell.	
Note 2: $K_{\text{satellite}}$ is defined in clause 9.3C.4.	

7 Timing

7.1 UE transmit timing

7.1.1 Introduction

The UE shall have capability to follow the frame timing change of the reference cell in connected state or when transmitting PUSCH on CG resources for SDT in RRC_Inactive. The uplink frame transmission takes place $(N_{TA} + N_{TA \text{ offset}}) \times T_c$ before the reception of the first detected path (in time) of the corresponding downlink frame from the reference cell. For serving cell(s) in pTAG, UE shall use the SpCell as the reference cell for deriving the UE transmit timing for cells in the pTAG. For serving cell(s) in sTAG, UE shall use any of the activated SCells as the reference cell for deriving the UE transmit timing for the cells in the sTAG. UE initial transmit timing accuracy and gradual timing adjustment requirements are defined in the following requirements.

In the requirements of clause 7.1.2, the term reference cell on a carrier frequency subject to CCA is not available at the UE refers to when at least one SSB is configured by gNB, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available during at least one discovery burst transmission window, at the UE due to DL CCA failures at gNB during the last 1280 ms; otherwise the reference cell on the carrier frequency subject to CCA is considered as available at the UE.

7.1.2 Requirements

The UE initial transmission timing error shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is specified in Table 7.1.2-1. This requirement applies:

- when it is the first transmission in a DRX cycle for PUCCH, PUSCH and SRS, or it is the PRACH transmission, or it is the msgA transmission, or it is the first transmission sent on the PSCell for activating the deactivated SCG without RACH.
- when it is the transmission for PUSCH on CG resources for SDT in RRC_Inactive.

When the UL SCS is 120 kHz or smaller, the UE shall meet the T_e requirement for an initial transmission provided that at least one SSB is available at the UE during the last 160 ms. When the UL SCS is 480 kHz the UE shall meet the T_e requirement for an initial transmission provided that at least one SSB is available in the last 80 ms. When the UL SCS is 960 kHz the UE shall meet the T_e requirement for an initial transmission provided that at least one SSB is available in the last 40 ms. The reference point for the UE initial transmit timing control requirement shall be the downlink timing of the reference cell minus $(N_{TA} + N_{TA\ offset}) \times T_c$. The downlink timing is defined as the time when the first path (in time) of the corresponding downlink frame used by the UE to determine downlink timing is received from the reference cell at the UE antenna. N_{TA} for PRACH is defined as 0.

$(N_{TA} + N_{TA\ offset}) \times T_c$ (in T_c units) for other channels is the difference between UE transmission timing and the downlink timing immediately after when the last timing advance in clause 7.3 was applied. N_{TA} for other channels is not changed until next timing advance is received. The value of $N_{TA\ offset}$ depends on the duplex mode of the cell in which the uplink transmission takes place and the frequency range (FR). $N_{TA\ offset}$ is defined in Table 7.1.2-2.

Table 7.1.2-1: T_e Timing Error Limit

Frequency Range	SCS of SSB signals (kHz)	SCS of uplink signals (kHz)	T_e
1	15	15	$12 \cdot 64 \cdot T_c$
		30	$10 \cdot 64 \cdot T_c$
		60	$10 \cdot 64 \cdot T_c$
	30	15	$8 \cdot 64 \cdot T_c$
		30	$8 \cdot 64 \cdot T_c$
		60	$7 \cdot 64 \cdot T_c$
2-1	120	60	$3.5 \cdot 64 \cdot T_c$
		120	$3.5 \cdot 64 \cdot T_c$
	240	60	$3 \cdot 64 \cdot T_c$
		120	$3 \cdot 64 \cdot T_c$
2-2	120	120	$3.5 \cdot 64 \cdot T_c$
		480	$1.58 \cdot 64 \cdot T_c$
	480	120	$2.86 \cdot 64 \cdot T_c$
		480	$1.35 \cdot 64 \cdot T_c$
		960	$0.90 \cdot 64 \cdot T_c$
	960	120	$2.80 \cdot 64 \cdot T_c$
		480	$1.13 \cdot 64 \cdot T_c$
		960	$0.86 \cdot 64 \cdot T_c$

Note 1: T_c is the basic timing unit defined in TS 38.211 [6]

Table 7.1.2-2: The Value of $N_{TA\ offset}$

Frequency range and band of cell used for uplink transmission	$N_{TA\ offset}$ (Unit: T_c)
FR1 FDD or TDD band with neither E-UTRA–NR nor NB-IoT–NR coexistence case	25600 (Note 1)
FR1 FDD band with E-UTRA–NR and/or NB-IoT–NR coexistence case	0 (Note 1)
FR1 TDD band with E-UTRA–NR and/or NB-IoT–NR coexistence case	39936 (Note 1)
FR2	13792
Note 1: The UE identifies $N_{TA\ offset}$ based on the information n-TimingAdvanceOffset as specified in TS 38.331 [2]. If UE is not provided with the information n-TimingAdvanceOffset, the default value of $N_{TA\ offset}$ is set as 25600 for FR1 band. In case of multiple UL carriers in the same TAG, UE expects that the same value of n-TimingAdvanceOffset is provided for all the UL carriers according to clause 4.2 in TS 38.213 [3] and the value 39936 of $N_{TA\ offset}$ can also be provided for a FDD serving cell. Note 2: Void	

When it is not the first transmission in a DRX cycle or there is no DRX cycle, and when it is the transmission for PUCCH, PUSCH and SRS transmission, the UE shall be capable of changing the transmission timing according to the received downlink frame of the reference cell except when the timing advance in clause 7.3 is applied.

Table 7.1.2-3: void

If the UE uses a reference cell on a carrier frequency subject to CCA for deriving the UE transmit timing, then the UE shall meet all the transmit timing requirements defined in clause 7.1.2 provided that the reference cell is available at the UE. If the reference cell is not available at the UE on a carrier frequency subject to CCA, then the UE is allowed to transmit in the uplink provided that the UE meets all the transmit timing requirements defined in clause 7.1.2; otherwise the UE shall not transmit any uplink signal.

If a reference cell on a carrier frequency belonging to the PTAG, which is subject to CCA, is not available at the UE then the UE is allowed to use any of available activated SCell(s) at the UE in PTAG as a new reference cell. If the SCell used as reference cell is deactivated, or becomes not available, the UE is allowed to use another active serving cell in PTAG as new reference cell.

If a reference cell on a carrier frequency belonging to the STAG, which is subject to CCA is not available at the UE then the UE is allowed to use any of available activated SCell(s) at the UE in STAG as a new reference cell.

7.1.2.1 Gradual timing adjustment

Requirements in this section shall apply regardless of whether the reference cell is on a carrier frequency subject to CCA or not.

When the transmission timing error between the UE and the reference timing exceeds $\pm T_e$ then the UE shall adjust the timing such that timing error is within $\pm T_e$. The reference timing shall be $(N_{TA} + N_{TA\text{ offset}}) \times T_c$ before the downlink timing of the reference cell. All adjustments made to the UE uplink timing shall follow these rules:

- 1) The maximum amount of the magnitude of the timing change in one adjustment shall be T_q .
- 2) The minimum aggregate adjustment rate shall be T_p per second.
- 3) The maximum aggregate adjustment rate shall be T_q per 200 ms for SCS of UL signals smaller or equal to 120 kHz and 100 ms for SCS of uplink signals larger or equal to 480 kHz.

where the maximum autonomous time adjustment step T_q and the aggregate adjustment rate T_p are specified in Table 7.1.2.1-1.

Table 7.1.2.1-1: T_q Maximum Autonomous Time Adjustment Step and T_p Minimum Aggregate Adjustment rate

Frequency Range	SCS of uplink signals (kHz)	T_q	T_p
1	15	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	30	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	60	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
2-1	60	$K \cdot 64 \cdot T_c$	$2.5 \cdot 64 \cdot T_c$
	120	$K \cdot 64 \cdot T_c$	$2.5 \cdot 64 \cdot T_c$
2-2	120	$2.5 \cdot 64 \cdot T_c$	$2.5 \cdot 64 \cdot T_c$
	480	$0.8 \cdot 64 \cdot T_c$	$0.8 \cdot 64 \cdot T_c$
	960	$0.8 \cdot 64 \cdot T_c$	$0.8 \cdot 64 \cdot T_c$
NOTE 1: T_c is the basic timing unit defined in TS 38.211 [6]			
NOTE 2: When <i>highSpeedMeasFlagFR2-r17</i> is configured for UE supporting power class 6, $K = 4.5$; otherwise, $K = 2.5$.			

7.1.2.2 Void

Table 7.1.2.2-1: Void

7.1.2.3 One shot large UL timing adjustment for FR2 Power Class 6 UE

When *highSpeedMeasFlagFR2-r17* is configured and *highSpeedLargeOneStepUL-TimingFR2-r17* is enabled for UE supporting FR2 power class 6 and *ue-OneShotUL-TimingAdj-r17* capability, the following requirements apply to the UE:

- If the absolute value $|T_{old} - T_{new}| \leq CP/4$, the requirement in clause 7.1.2.1 apply to the first UL transmission after a TCI state switch.
- Otherwise, the UE transmit timing immediately after TCI state switch shall be $T_{new} - (N_{TA} + N_{TA\ offset}) + 2 \times (T_{old} - T_{new})$ and clause 7.1.2.1 requirements don't apply.
- The UE UL transmission timing error after the TCI state switching procedure shall be less than or equal to $\pm T_e$ as specified in clause 7.1.2 if the new target TCI state is within active TCI state list, otherwise $\pm 7 \cdot 64 \cdot T_c$, and the reference point is $T_{new} - (N_{TA} + N_{TA\ offset}) + 2 \times (T_{old} - T_{new})$.

Above,

- T_{new} (in T_c units) is the DL timing defined as the time when UE receives downlink frame with new target TCI state.
- T_{old} (in T_c units) is the DL timing defined as the time when UE receives downlink frame with old source TCI state.

7.1A UE transmit timing for RedCap

7.1A.1 Introduction

The UE shall have capability to follow the frame timing change of the reference cell in connected state or when transmitting PUSCH on CG resources for SDT in RRC_Inactive. The uplink frame transmission takes place $(N_{TA} + N_{TA\ offset}) \times T_c$ before the reception of the first detected path (in time) of the corresponding downlink frame from the reference cell. UE initial transmit timing accuracy and gradual timing adjustment requirements are defined in the following requirements.

7.1A.2 Requirements

The UE initial transmission timing error shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is specified in Table 7.1A.2-1. This requirement applies:

- when it is the first transmission in a DRX cycle for PUCCH, PUSCH and SRS, or it is the PRACH transmission, or it is the msgA transmission.
- when it is the transmission for PUSCH on CG resources for SDT in RRC_Inactive.

The UE shall meet the T_e requirement for an initial transmission provided that at least one SSB (CD-SSB or NCD-SSB) is available at the UE for acquiring the frame timing of the reference cell during the last 160 ms on the condition that:

- the SSB is within the UE's active BWP, or
- the SSB is not within the UE's active BWP, and the measurement gap is configured.

The reference point for the UE initial transmit timing control requirement shall be the downlink timing of the reference cell minus $(N_{TA} + N_{TA\ offset}) \times T_c$. The downlink timing is defined as the time when the first ~~detected~~ path (in time) of the corresponding downlink frame used by the UE to determine downlink timing is received from the reference cell at UE antenna. N_{TA} for PRACH is defined as 0.

$(N_{TA} + N_{TA\ offset}) \times T_c$ (in T_c units) for other channels is the difference between UE transmission timing and the downlink timing immediately after when the last timing advance in clause 7.3A was applied. N_{TA} for other channels is not changed until next timing advance is received. The value of $N_{TA\ offset}$ depends on the duplex mode of the cell in which the uplink transmission takes place and the frequency range (FR). $N_{TA\ offset}$ is defined in Table 7.1A.2-2.

Table 7.1A.2-1: T_e Timing Error Limit

Frequency Range	SCS of SSB signals (kHz)	SCS of uplink signals (kHz)	T_e
1	15	15	$12 \cdot 64 \cdot T_c$
		30	$10 \cdot 64 \cdot T_c$
		60	$10 \cdot 64 \cdot T_c$
	30	15	$8 \cdot 64 \cdot T_c$
		30	$8 \cdot 64 \cdot T_c$
		60	$7 \cdot 64 \cdot T_c$
2	120	60	$3.5 \cdot 64 \cdot T_c$
		120	$3.5 \cdot 64 \cdot T_c$
	240	60	$3 \cdot 64 \cdot T_c$
		120	$3 \cdot 64 \cdot T_c$

Note 1: T_c is the basic timing unit defined in TS 38.211 [6]

Table 7.1A.2-2: The Value of $N_{TA\ offset}$

Frequency range and band of cell used for uplink transmission	$N_{TA\ offset}$ (Unit: T_c)
FR1 FDD or TDD band with neither E-UTRA–NR nor NB–IoT–NR coexistence case	25600 (Note 1)
FR1 FDD band with E-UTRA–NR and/or NB–IoT–NR coexistence case	0 (Note 1)
FR1 TDD band with E-UTRA–NR and/or NB–IoT–NR coexistence case	39936 (Note 1)
FR2	13792
Note 1: The UE identifies $N_{TA\ offset}$ based on the information n-TimingAdvanceOffset as specified in TS 38.331 [2]. If UE is not provided with the information n-TimingAdvanceOffset, the default value of $N_{TA\ offset}$ is set as 25600 for FR1 band. Note 2: Void	

When it is not the first transmission in a DRX cycle or there is no DRX cycle, and when it is the transmission for PUCCH, PUSCH and SRS transmission, the UE shall be capable of changing the transmission timing according to the received downlink frame of the reference cell except when the timing advance in clause 7.3A is applied.

7.1A.2.1 Gradual timing adjustment

When the transmission timing error between the UE and the reference timing exceeds $\pm T_e$ then the UE is required to adjust its timing to within $\pm T_e$. The reference timing shall be $(N_{TA} + N_{TA\ offset}) \times T_c$ before the downlink timing of the reference cell. All adjustments made to the UE uplink timing shall follow these rules:

- 1) The maximum amount of the magnitude of the timing change in one adjustment shall be T_q .
- 2) The minimum aggregate adjustment rate shall be T_p per second.
- 3) The maximum aggregate adjustment rate shall be T_q per 200 ms.

where the maximum autonomous time adjustment step T_q and the aggregate adjustment rate T_p are specified in Table 7.1A.2.1-1.

Table 7.1A.2.1-1: T_q Maximum Autonomous Time Adjustment Step and T_p Minimum Aggregate Adjustment rate

Frequency Range	SCS of uplink signals (kHz)	T_q	T_p
1	15	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	30	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	60	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
2	60	$2.5 \cdot 64 \cdot T_c$	$2.5 \cdot 64 \cdot T_c$
	120	$2.5 \cdot 64 \cdot T_c$	$2.5 \cdot 64 \cdot T_c$
NOTE: T_c is the basic timing unit defined in TS 38.211 [6]			

7.1C UE transmit timing for Satellite Access

7.1C.1 Introduction

The UE shall have capability to follow the frame timing change of the reference cell in connected state. The uplink frame transmission takes place $(N_{TA} + N_{TA\text{-offset}} + N_{TA,adj}^{common} + N_{TA,adj}^{UE}) \times T_c$ before the reception of the first detected path (in time) of the corresponding downlink frame from the reference cell. UE initial transmit timing accuracy and gradual timing adjustment requirements are defined in the following requirements.

7.1C.2 Requirements

The UE initial transmission timing error shall be less than or equal to $\pm T_{e_NTN}$ where the timing error limit value T_{e_NTN} is specified in Table 7.1C.2-1. This requirement applies:

- when it is the first transmission in a DRX cycle for PUCCH, PUSCH and SRS, or it is the PRACH transmission, or it is the msgA transmission..

The UE shall meet the T_{e_NTN} requirement for an initial transmission provided that at least one SSB is available at the UE during the last 160 ms.. The reference point for the UE initial transmit timing control requirement shall be the downlink timing of the reference cell minus $(N_{TA} + N_{TA\text{-offset}} + N_{TA,adj}^{common} + N_{TA,adj}^{UE}) \times T_c$.

The downlink timing is defined as the time when the first path (in time) of the corresponding downlink frame used by the UE to determine downlink timing is received from the reference cell at the UE antenna.

N_{TA} for PRACH is defined as 0. $(N_{TA} + N_{TA\text{-offset}} + N_{TA,adj}^{common} + N_{TA,adj}^{UE}) \times T_c$ (in T_c units) for other channels is the difference between UE transmission timing and the downlink timing immediately after when the last timing advance in clause 7.3C was applied, or after the last update in $N_{TA,adj}^{common}$ or $N_{TA,adj}^{UE}$.

The value of $N_{TA\text{-offset}}$ depends on the duplex mode of the cell in which the uplink transmission takes place and the frequency range (FR). $N_{TA\text{-offset}}$ is defined in Table 7.1.2-2.

$N_{TA,adj}^{common}$ and $N_{TA,adj}^{UE}$ are as defined in TS38.211 [6].

Table 7.1C.2-1: T_{e_NTN} Timing Error Limit

Frequency Range	SCS of SSB signals (kHz)	SCS of uplink signals (kHz)	T _{e,NTN}
1	15	15	29*64*T _c
		30	24*64*T _c
		60	N/A
	30	15	24*64*T _c
		30	22*64*T _c
		60	N/A
Note 1: T _c is the basic timing unit defined in TS 38 211 [6]			

When it is not the first transmission in a DRX cycle or there is no DRX cycle, and when it is the transmission for PUCCH, PUSCH and SRS transmission, the UE shall be capable of changing the transmission timing according to the received downlink frame of the reference cell, the updating of $N_{TA,adj}^{common}$ and the updating of $N_{TA,adj}^{UE}$, except when the timing advance in clause 7.3C is applied.

7.1C.2.1 Gradual timing adjustment

When the transmission timing error between the UE and the reference timing exceeds $\pm T_{e_NTN}$ then the UE shall adjust the timing such that timing error is within $\pm T_{e_NTN}$. The reference timing shall be $(N_{TA} + N_{TA_offset} + N_{TA,adj}^{common} + N_{TA,adj}^{UE}) \times T_c$ before the downlink timing of the reference cell. All adjustments made to the UE uplink timing shall follow these rules:

- 1) The maximum amount of the magnitude of the timing change, apart from a change of $N_{TA,adj}^{UE}$ due to satellite position update and $N_{TA,adj}^{common}$ between the previous transmission and the current transmission, in one adjustment shall be T_{q_NTN} .
- 2) The minimum aggregate adjustment rate, apart from a change of $N_{TA,adj}^{UE}$ due to satellite position update and $N_{TA,adj}^{common}$ during the last one second, shall be T_{p_NTN} per second.
- 3) The maximum aggregate adjustment rate, apart from a change of $N_{TA,adj}^{UE}$ due to satellite position update and $N_{TA,adj}^{common}$ during the last 200ms, shall be T_{q_NTN} per 200 ms.

Where, the maximum autonomous time adjustment step T_{q_NTN} and the aggregate adjustment rate T_{p_NTN} are specified in Table 7.1C.2.1-1.

Table 7.1C.2.1-1: T_{q_NTN} Maximum Autonomous Time Adjustment Step and T_{p_NTN} Minimum Aggregate Adjustment rate

Frequency Range	SCS of uplink signals (kHz)	T_{q_NTN}	T_{p_NTN}
1	15	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	30	$5.5 \cdot 64 \cdot T_c$	$5.5 \cdot 64 \cdot T_c$
	60	N/A	N/A
NOTE: T_c is the basic timing unit defined in TS 38.211 [6]			

7.2 UE timer accuracy

7.2.1 Introduction

UE timers are used in different protocol entities to control the UE behaviour.

7.2.2 Requirements

For UE timers specified in TS 38.331 [2], the UE shall comply with the timer accuracies according to Table 7.2.2-1.

The requirements are only related to the actual timing measurements internally in the UE. They do not include the following:

- Inaccuracy in the start and stop conditions of a timer (e.g. UE reaction time to detect that start and stop conditions of a timer is fulfilled), or
- Inaccuracies due to restrictions in observability of start and stop conditions of a UE timer (e.g. slot alignment when UE sends messages at timer expiry).

Table 7.2.2-1

Timer value [s]	Accuracy
-----------------	----------

timer value < 4	$\pm 0.1s$
timer value ≥ 4	$\pm 2.5\%$

7.2A UE timer accuracy for RedCap

7.2A.1 Introduction

UE timers are used in different protocol entities to control the UE behaviour.

7.2A.2 Requirements

For UE timers specified in TS 38.331 [2], the UE shall comply with the timer accuracies according to Table 7.2A.2-1.

The requirements are only related to the actual timing measurements internally in the UE. They do not include the following:

- Inaccuracy in the start and stop conditions of a timer (e.g. UE reaction time to detect that start and stop conditions of a timer is fulfilled), or
- Inaccuracies due to restrictions in observability of start and stop conditions of a UE timer (e.g. slot alignment when UE sends messages at timer expiry).

Table 7.2A.2-1

Timer value [s]	Accuracy
timer value < 4	$\pm 0.1s$
timer value ≥ 4	$\pm 2.5\%$

7.2C UE timer accuracy for satellite access

7.2C.1 Introduction

UE timers are used in different protocol entities to control the UE behaviour.

7.2C.2 Requirements

For UE timers specified in TS 38.331 [2], the UE shall comply with the timer accuracies according to Table 7.2C.2-1.

The requirements are only related to the actual timing measurements internally in the UE. They do not include the following:

- Inaccuracy in the start and stop conditions of a timer (e.g. UE reaction time to detect that start and stop conditions of a timer is fulfilled), or
- Inaccuracies due to restrictions in observability of start and stop conditions of a UE timer (e.g. slot alignment when UE sends messages at timer expiry).

Table 7.2C.2-1

Timer value [s]	Accuracy
timer value < 4	$\pm 0.1s$
timer value ≥ 4	$\pm 2.5\%$

7.3 Timing advance

7.3.1 Introduction

The timing advance is initiated from gNB to UE in EN-DC, NR-DC, NE-DC and NR SA operation modes, with MAC message that implies the adjustment of the timing advance, as defined in clause 5.2 of TS 38.321 [7].

7.3.2 Requirements

7.3.2.1 Timing Advance adjustment delay

UE shall adjust the timing of its uplink transmission timing at time slot $n + k + 1$ for a timing advance command received in time slot n , and the value of k is defined in clause 4.2 in TS 38.213 [3]. The same requirement applies also when the UE is not able to transmit a configured uplink transmission due to the channel assessment procedure.

7.3.2.2 Timing Advance adjustment accuracy

The UE shall adjust the timing of its transmissions with a relative accuracy better than or equal to the UE Timing Advance adjustment accuracy requirement in Table 7.3.2.2-1, to the signalled timing advance value compared to the timing of preceding uplink transmission. The timing advance command step is defined in TS 38.213 [3].

Table 7.3.2.2-1: UE Timing Advance adjustment accuracy

UL Sub Carrier Spacing(kHz)	15	30	60	120	480	960
UE Timing Advance adjustment accuracy	$\pm 256 T_c$	$\pm 256 T_c$	$\pm 128 T_c$	$\pm 32 T_c$	$\pm 10 T_c$	$\pm 6 T_c$

7.3A Timing Advance for RedCap

7.3A.1 Introduction

The timing advance is initiated from gNB to UE configured with only PCell, with MAC message that implies the adjustment of the timing advance, as defined in clause 5.2 of TS 38.321 [7].

7.3A.2 Requirements

7.3A.2.1 Timing Advance adjustment delay

UE shall adjust the timing of its uplink transmission at time slot $n + k + 1$ for a timing advance command received in time slot n , and the value of k is defined in clause 4.2 in TS 38.213 [3]. The same requirement applies also when the UE is not able to transmit a configured uplink transmission due to the channel assessment procedure.

7.3A.2.2 Timing Advance adjustment accuracy

The UE shall adjust the timing of its transmissions with a relative accuracy better than or equal to the UE Timing Advance adjustment accuracy requirement in Table 7.3A.2.2-1, to the signalled timing advance value compared to the timing of preceding uplink transmission. The timing advance command step is defined in TS 38.213 [3].

Table 7.3A.2.2-1: UE Timing Advance adjustment accuracy

UL Sub Carrier Spacing(kHz)	15	30	60	120
UE Timing Advance adjustment accuracy	$\pm 256 T_c$	$\pm 256 T_c$	$\pm 128 T_c$	$\pm 32 T_c$

7.3C Timing advance for satellite access

7.3C.1 Introduction

The timing advance is initiated by UE configured with only PCell served by SAN, upon initiating a validity timer for $N_{TA,adj}^{common}$ and $N_{TA,adj}^{UE}$. The timing advance can be adjusted with MAC message that implies the adjustment of the timing advance, as defined in clause 5.2 of TS 38.321 [7].

7.3C.2 Requirements

7.3C.2.1 Timing Advance adjustment delay

UE shall adjust the timing of its uplink transmission timing from the beginning of uplink time slot $n + k + 1 + 2^\mu \cdot K_{offset}$ for a timing advance command received in time slot n , and the value of k , μ and K_{offset} are defined in clause 4.2 in TS 38.213 [3]. The same requirement applies also when the UE is not able to transmit a configured uplink transmission due to the channel assessment procedure.

7.3C.2.2 Timing Advance adjustment accuracy

The UE shall adjust the timing of its transmissions, apart from a change of $N_{TA,adj}^{UE}$ and $N_{TA,adj}^{common}$ between the preceding uplink transmission and the current transmission, with a relative accuracy better than or equal to the UE Timing Advance adjustment accuracy requirement in Table 7.3C.2.2-1, to the signalled timing advance value compared to the timing of preceding uplink transmission. The timing advance command step is defined in TS 38.213 [3].

Table 7.3C.2.2-1: UE Timing Advance adjustment accuracy

UL Sub Carrier Spacing(kHz)	15	30	60
UE Timing Advance adjustment accuracy	$\pm 256 T_c$	$\pm 256 T_c$	N/A

Editor's Note: it would be further clarified with the additional conditions for TA adjustment accuracy requirement for satellite access

7.4 Cell phase synchronization accuracy

7.4.1 Definition

Cell phase synchronization accuracy for TDD is defined as the maximum absolute deviation in frame start timing between any pair of cells on the same frequency that have overlapping coverage areas.

7.4.2 Minimum requirements

The cell phase synchronization accuracy measured at BS antenna connectors or radiated interface boundaries shall be better than 3 μ s.

7.5 Maximum Transmission Timing Difference

7.5.1 Introduction

A UE shall be capable of handling a relative transmission timing difference between subframe timing boundary of E-UTRA PCell and the closest slot timing boundary of PSCell to be aggregated for EN-DC operation.

A UE shall be capable of handling a relative transmission timing difference among the closest slot timing boundaries of different carriers in FR1 and/or FR2-1 to be aggregated in NR carrier aggregation.

A UE shall be capable of handling a relative transmission timing difference among the closest subframe timing boundaries of different carriers to be aggregated in FR1 and FR2-2 NR inter-band carrier aggregation.

A UE shall be capable of handling a relative transmission timing difference between slot timing boundary of PCell and subframe timing boundary of E-UTRA PSCell to be aggregated for NE-DC operation.

A UE shall be capable of handling a relative transmission timing difference between slot timing boundaries of PCell in FR1 or FR2-1 and the closest slot timing boundary of PSCell in FR1 or FR2-1 to be aggregated in NR DC operation.

A UE shall be capable of handling a relative transmission timing difference between subframe timing boundaries of PCell in FR1 and the closest subframe timing boundary of PSCell in FR2-2 to be aggregated in NR DC operation.

7.5.2 Minimum Requirements for inter-band EN-DC

The UE shall be capable of handling a maximum uplink transmission timing difference between E-UTRA PCell and PSCell as shown in Table 7.5.2-1.

Table 7.5.2-1 Maximum uplink transmission timing difference requirement for asynchronous EN-DC

Sub-carrier spacing in E-UTRA PCell (kHz)	UL Sub-carrier spacing for data in PSCell (kHz)	Maximum uplink transmission timing difference (μs)
15	15	500
15	30	250
15	60	125
15	120 ^{Note1}	62.5
NOTE 1: For E-UTRA FDD-NR FDD intra-band EN-DC, for which the requirement is defined in clause 7.5.3 and this Table 7.5.2-1 is also applicable, the scenario with 120kHz PSCell does not exist.		

Table 7.5.2-2 Void

7.5.2.1 Minimum Requirements for inter-band synchronous EN-DC

The requirements in this clause apply as a reference for inter-band synchronous EN-DC.

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between E-UTRA PCell and PSCell for inter-band synchronous EN-DC as shown in Table 7.5.2.1-1 1. The requirements for synchronous EN-DC are applicable for E-UTRA TDD-NR TDD, E-UTRA FDD-NR FDD, E-UTRA TDD-NR FDD and E-UTRA FDD-NR TDD inter-band EN-DC.

For E-UTRA TDD-NR TDD inter-band EN-DC with overlapping or partially overlapping DL bands, only synchronized operation is assumed. The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between E-UTRA PCell and PSCell as shown in Table 7.5.2.1-1 provided that UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and in Table 7.5.3-1 provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

For E-UTRA FDD-NR FDD inter-band EN-DC with overlapping DL bands, only synchronized operation is assumed if UE does not indicate that it is capable of asynchronous FDD-FDD EN-DC operation. The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between E-UTRA PCell and PSCell as shown in Table 7.5.2.1-1 if UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and in Table 7.5.3-1 provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

Table 7.5.2.1-1 Maximum uplink transmission timing difference requirement for inter-band synchronous EN-DC

Sub-carrier spacing in E-UTRA PCell (kHz)	UL Sub-carrier spacing for data in PSCell (kHz)	Maximum uplink transmission timing difference (μs)
15	15	35.21
15	30	35.21
15	60	35.21
15	120	35.21

7.5.3 Minimum Requirements for intra-band EN-DC

For intra-band EN-DC, only co-located deployment is applied.

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between E-UTRA PCell and PSCell as shown in Table 7.5.2-1 for E-UTRA FDD-NR FDD intra-band EN-DC provided the UE indicates that it is capable of asynchronous EN-DC operation [2].

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between E-UTRA PCell and PSCell as shown in Table 7.5.3-1 for E-UTRA TDD-NR TDD and E-UTRA FDD-NR FDD intra-band EN-DC provided the UE does not indicate that it is capable of asynchronous FDD-FDD EN-DC operation [16].

Table 7.5.3-1: Maximum uplink transmission timing difference requirement for intra-band synchronous EN-DC

Sub-carrier spacing in E-UTRA PCell (kHz)	UL Sub-carrier spacing for data in PSCell (kHz)	Maximum uplink transmission timing difference (μs)
15	15	5.21 ^{Note 1, Note 2}
15	30	5.21 ^{Note 2}
15	60	5.21 ^{Note 2}
NOTE 1: This is not applicable for a UE which indicates the capability of only supporting single UL timing (<i>ul-TimingAlignmentEUTRA-NR</i> is signalled). Single UL timing for E-UTRA and NR cell is assumed for this UE. NOTE 2: If the transmission timing difference exceeds the cyclic prefix length of the UL Sub-carrier spacing for data in PSCell, NR UE Tx EVM degradation is expected for the symbol that is overlapping the LTE subframe boundary. NOTE 3: The requirement in this table is also applicable for intra-band synchronous NE-DC.		

7.5.4 Minimum Requirements for NR Carrier Aggregation

The UE shall be capable of handling at least a relative transmission timing difference between slot timing of all pairs of TAGs in FR1 and/or FR2-1 as shown in Table 7.5.4-1, provided that the UE is:

- configured with the pTAG and the sTAG for inter-band NR carrier aggregation in SA or NR-DC mode, or
- configured with more than one sTAG for inter-band NR carrier aggregation in EN-DC or NE-DC mode.

The UE shall be capable of handling at least a relative transmission timing difference between subframe timing of all pairs of TAGs between FR1 and FR2-2 as shown in Table 7.5.4-1, provided that the UE is:

- configured with the pTAG and the sTAG for inter-band NR carrier aggregation in SA or NR-DC mode.

Table 7.5.4-1: Maximum uplink transmission timing difference requirement for inter-band NR carrier aggregation

Frequency Range of the pair of TAGs	Maximum uplink transmission timing difference (μs)
FR1	34.6
FR2-1	8.5 ^{Note1}
Between FR1 and FR2-1	26.1
Between FR1 and FR2-2	26.1
Note1: This requirement applies to the UE capable of independent beam management for FR2-1 inter-band CA.	

7.5.5 Minimum Requirements for inter-band NE-DC

The UE shall be capable of handling a maximum uplink transmission timing difference between PCell and E-UTRA PSCell as shown in Table 7.5.5-1 for inter-band asynchronous NE-DC.

Table 7.5.5-1: Maximum uplink transmission timing difference requirement for inter-band asynchronous NE-DC

15	15	500
30	15	250
60	15	125
120	15	62.5
NOTE 1: Void		

Table 7.5.5-2 Void

7.5.5.1 Minimum Requirements for inter-band synchronous NE-DC

The requirements in this clause apply as a reference for inter-band synchronous NE-DC.

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between PCell and E-UTRA PSCell for inter-band synchronous NE-DC as shown in Table 7.5.5.1-1. The requirements for synchronous NE-DC are applicable for NR TDD- E-UTRA TDD, NR FDD- E-UTRA FDD, NR TDD- E-UTRA FDD and NR FDD- E-UTRA TDD inter-band NE-DC.

For NR FDD-E-UTRA FDD inter-band NE-DC with overlapping DL bands, only synchronized operation is assumed if UE does not indicate that it is capable of asynchronous FDD-FDD NE-DC operation. The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between NR PCell and PSCell as shown in Table 7.5.5.1-1 if UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and the same requirement as in Table 7.5.3-1 apply provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

Table 7.5.5.1-1: Maximum uplink transmission timing difference requirement for inter-band synchronous NE-DC

15	15	35.21
30	15	35.21
60	15	35.21

120	15	35.21
-----	----	-------

7.5.6 Minimum Requirements for inter-band NR DC

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between PCell and PSCell as shown in Table 7.5.6-1 provided that the UE indicates that it is capable of synchronous NR DC only [14].

Table 7.5.6-1: Maximum uplink transmission timing difference requirement for inter-band synchronous NR DC

Frequency Range		Maximum uplink transmission timing difference (μs)
Cell in MCG	Cell in SCG	
FR1	FR1	34.6
FR2-1	FR2-1	8.5
FR1	FR2-1	34.1
FR1	FR2-2	34.1

The UE shall be capable of handling a maximum uplink transmission timing difference (MTTD) between PCell and PSCell as shown in Table 7.5.6-2 provided that the UE indicates that it is capable of asynchronous NR DC [14].

Table 7.5.6-2 Maximum uplink transmission timing difference requirement for inter-band asynchronous NR DC

960	7.8125

7.6 Maximum Receive Timing Difference

7.6.1 Introduction

A UE shall be capable of handling a relative receive timing difference between subframe timing boundary of an E-UTRA cell belonging to the MCG and the closest slot timing boundary of a cell belonging to SCG to be aggregated for EN-DC operation.

A UE shall be capable of handling a relative receive timing difference between subframe timing boundary of an E-UTRA cell belonging to the SCG to be aggregated for NE-DC operation and the closest slot timing boundary of a cell belonging to MCG.

A UE shall be capable of handling a relative receive timing difference between slot timing boundary of a cell belonging to MCG in FR1 or FR2-1 and the closest slot timing boundary of a cell belonging to the SCG FR1 or FR2-1 to be aggregated for NR DC operation.

A UE shall be capable of handling a relative receive timing difference between subframe timing boundary of a cell belonging to MCG in FR1 and the closest subframe timing boundary of a cell belonging to the SCG in FR2-2 to be aggregated for NR DC operation.

A UE shall be capable of handling a relative receive timing difference among the closest slot timing boundaries of different carriers in FR1 and/or FR2-1 to be aggregated in NR carrier aggregation.

A UE shall be capable of handling a relative receive timing difference among the closest subframe timing boundaries of different carriers to be aggregated in FR1 and FR2-2 NR inter-band carrier aggregation.

The requirements defined in clause 7.6 are also applicable when UE is configured to receive multiple PDSCH transmission occasions from one or more QCL sources on any one of the aggregated NR carriers.

7.6.2 Minimum Requirements for inter-band EN-DC

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to SCG at the UE receiver as shown in Table 7.6.2-1.

Table 7.6.2-1: Maximum receive timing difference requirement for asynchronous EN-DC

Sub-carrier spacing of E-UTRA cell in MCG (kHz)	DL Sub-carrier spacing of cell in SCG (kHz) (Note 1)	Maximum receive timing difference (μs)
15	15	500
15	30	250
15	60	125
15	120 ^{Note2}	62.5
NOTE 1: DL Sub-carrier spacing is min{SCS _{SS} , SCS _{DATA} }.		
NOTE 2: For E-UTRA FDD-NR FDD intra-band EN-DC, for which the requirement is defined in clause 7.6.3 and this Table 7.6.2-1 is also applicable, the scenario with 120 kHz does not exit.		

Table 7.6.2-2 Void

Table 7.6.2-3 Void

7.6.2.1 Minimum Requirements for inter-band synchronous EN-DC

The requirements in this clause apply as a reference for inter-band synchronous EN-DC.

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from an E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to SCG at the UE receiver for inter-band synchronous EN-DC as shown in Table 7.6.2.1-1. The requirements for synchronous EN-DC are applicable for E-UTRA TDD-NR TDD, E-UTRA FDD-NR FDD, E-UTRA TDD-NR FDD and E-UTRA FDD-NR TDD inter-band EN-DC.

For E-UTRA TDD-NR TDD inter-band EN-DC with overlapping or partially overlapping DL bands, only synchronized operation is assumed. The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to the SCG at the UE receiver as shown in Table 7.6.2.1-1 provided that UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and in Table 7.6.3-1 provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

For E-UTRA FDD-NR FDD inter-band EN-DC with overlapping DL bands, only synchronized operation is assumed if UE does not indicate that it is capable of asynchronous FDD-FDD EN-DC operation. The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to the SCG at the UE receiver as shown in Table 7.6.2.1-1 provided that UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and in Table 7.6.3-1 provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

Table 7.6.2.1-1: Maximum receive timing difference requirement for inter-band synchronous EN-DC

Sub-carrier spacing of E-UTRA cell in MCG (kHz)	DL Sub-carrier spacing of cell in SCG (kHz) (Note1)	Maximum receive timing difference (μs)
15	15	33
15	30	
15	60	
15	120	
Note 1: DL Sub-carrier spacing is min{SCS _{SS} , SCS _{DATA} }.		

7.6.3 Minimum Requirements for intra-band EN-DC

For intra-band EN-DC, only co-located deployment is applied.

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to the SCG as shown in Table 7.6.2-1 for E-UTRA FDD-NR FDD intra-band EN-DC provided the UE indicates that it is capable of asynchronous EN-DC operation [2].

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a E-UTRA cell belonging to the MCG and slot timing of signal from a cell belonging to the SCG as shown in Table 7.6.3-1 for E-UTRA FDD-NR FDD and E-UTRA TDD-NR TDD intra-band EN-DC provided the UE does not indicate that it is capable of asynchronous FDD-FDD EN-DC operation [16].

Table 7.6.3-1 Maximum receive timing difference requirement for intra-band synchronous EN-DC

Sub-carrier spacing of E-UTRA cell in MCG (kHz)	DL Sub-carrier spacing of cell in SCG (kHz) ^{Note1}	Maximum receive timing difference (μs)
15	15	3
15	30	3
15	60	3
NOTE 1: DL Sub-carrier spacing is min{SCS _{SS} , SCS _{DATA} }.		
NOTE 2: The requirement in this table is also applicable for intra-band synchronous NE-DC.		

Table 7.6.3-2: Void

7.6.4 Minimum Requirements for NR Carrier Aggregation

For intra-band CA, only co-located deployment is applied. For intra-band non-contiguous NR carrier aggregation, the UE shall be capable of handling at least a relative receive timing difference between slot timing of different carriers to be aggregated at the UE receiver as shown in Table 7.6.4-1 below.

Table 7.6.4-1: Maximum receive timing difference requirement for intra-band non-contiguous NR carrier aggregation

Frequency Range	Maximum receive timing difference (μs)
FR1	3 ¹
FR2-1	0.26
Note 1: In the case of different SCS on different CCs, if the receive time difference exceeds the cyclic prefix length of that SCS, demodulation performance degradation is expected for the first symbol of the slot.	

For inter-band NR carrier aggregation,

- the UE shall be capable of handling at least a relative receive timing difference between slot timing of all pairs of carriers in FR1 and FR2-1 to be aggregated at the UE receiver as shown in Table 7.6.4-2 below.
- the UE shall be capable of handling at least a relative receive timing difference between subframe timing of all pairs of carriers in FR1 and FR2-2 to be aggregated at the UE receiver as shown in Table 7.6.4-2 below.

Table 7.6.4-2: Maximum receive timing difference requirement for inter-band NR carrier aggregation

Frequency Range of the pair of carriers	Maximum receive timing difference (μ s)
FR1	33
FR2-1	8 ^{note1}
Between FR1 and FR2-1	25
Between FR1 and FR2-2	25
Note1: This requirement applies to the UE capable of independent beam management for FR2-1 inter-band CA.	

7.6.5 Minimum Requirements for inter-band NE-DC

The UE shall be capable of handling at least a relative receive timing difference between slot timing of signal from a cell belonging to the MCG and subframe timing of signal from an E-UTRA cell belonging to the SCG at the UE receiver for asynchronous NE-DC as shown in Table 7.6.5-1.

Table 7.6.5-1: Maximum receive timing difference requirement for asynchronous NE-DC

15	15	500
30	15	250
60	15	125
120	15	62.5
NOTE 1: DL Sub-carrier spacing is $\min\{SCS_{SS}, SCS_{DATA}\}$.		
NOTE 2: Void		

Table 7.6.5-2: Void

7.6.5.1 Minimum Requirements for inter-band synchronous NE-DC

The requirements in this clause apply as a reference for inter-band synchronous NE-DC.

The UE shall be capable of handling at least a relative receive timing difference between slot timing of signal from a cell belonging to the MCG and subframe timing of signal from a E-UTRA cell belonging to the SCG at the UE receiver for inter-band synchronous NE-DC as shown in Table 7.6.5.1-1. The requirements for synchronous NE-DC are applicable for NR TDD- E-UTRA TDD, NR FDD- E-UTRA FDD, NR TDD- E-UTRA FDD and NR FDD- E-UTRA TDD inter-band NE-DC.

For NR FDD-E-UTRA FDD inter-band NE-DC with overlapping DL bands, only synchronized operation is assumed if UE does not indicate that it is capable of asynchronous FDD-FDD NE-DC operation. The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a cell belonging to the MCG and slot timing of signal from a cell belonging to the SCG at the UE receiver as shown in Table 7.6.2.1-1 provided that UE indicates that it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*, and the same requirement as in Table 7.6.3-1 apply provided that UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16*.

Table 7.6.5.1-1: Maximum receive timing difference requirement for inter-band synchronous NE-DC

Sub-carrier spacing of cell in MCG (kHz)	DL Sub-carrier spacing of EUTRA cell in SCG (kHz) (Note1)	Maximum receive timing difference (μ s)
15	15	33
30	15	
60	15	
120	15	

7.6.6 Minimum Requirements for inter-band NR DC

The UE shall be capable of handling at least a relative receive timing difference between slot timing of signal from a cell belonging to the MCG in FR1 or FR2-1 and slot timing of signal from a cell belonging to the SCG in FR1 or FR2-1 at the UE receiver as shown in Table 7.6.6-1 provided that the UE indicates that it is capable of synchronous NR DC only [16].

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a cell belonging to the MCG in FR1 and subframe timing of signal from a cell belonging to the SCG in FR2-2 at the UE receiver as shown in Table 7.6.6-1 provided that the UE indicates that it is capable of synchronous NR DC only [16].

Table 7.6.6-1: Maximum receive timing difference requirement for inter-band synchronous NR DC

Frequency Range		Maximum receive timing difference (μs)
Cell in MCG	Cell in SCG	
FR1	FR1	33
FR2-1	FR2-1	8
FR1	FR2-1	33
FR1	FR2-2	33

The UE shall be capable of handling at least a relative receive timing difference between slot timing of signal from a cell belonging to the MCG in FR1 or FR2-1 and slot timing of signal from a cell belonging to the SCG in FR1 or FR2-1 at the UE receiver as shown in Table 7.6.6-2 provided that the UE indicates that it is capable of asynchronous NR DC [16].

The UE shall be capable of handling at least a relative receive timing difference between subframe timing of signal from a cell belonging to the MCG in FR1 and subframe timing of signal from a cell belonging to the SCG in FR2-2 at the UE receiver as shown in Table 7.6.6-2 provided that the UE indicates that it is capable of asynchronous NR DC [16].

Table 7.6.6-2 Maximum receive timing difference requirement for inter-band asynchronous NR DC

Max {Sub-carrier spacing in PCell (kHz), Sub-carrier spacing in PSCell (kHz)}	Maximum receive timing difference (μs)
15	500
30	250
60	125
120	62.5
480	15.625
960	7.8125

7.7 *deriveSSB-IndexFromCell* tolerance

7.7.1 Minimum requirements

When *deriveSSB-IndexFromCell* is enabled, the UE assumes frame boundary alignment (including half frame, subframe and slot boundary alignment) across cells on the same frequency carrier is within a tolerance not worse than

- min (2 SSB symbols, 1 PDSCH symbol) for sub-carrier spacings of SSB and PDSCH up-to 240 kHz,
- min (3 SSB symbols, N_{PDSCH} PDSCH symbols) for sub-carrier spacing of 480 kHz and 960kHz of either SSB or PDSCH where N_{PDSCH} is defined in Table 7.7.1-1

and the SFNs of all cells on the same frequency carrier are the same.

Table 7.7.1-1 N_{PDSCH} when *deriveSSB-IndexFromCell* is enabled

SSB SCS (KHz)	PDSCH SCS (KHz)	N_{PDSCH}
120	480	3
120	960	6
480	120	1
480	480	3
480	960	6
960	120	1
960	480	2
960	960	3

When *deriveSSB-IndexFromCell* is not enabled, the UE assumes frame boundary alignment (including half frame, subframe and slot boundary alignment) across cells on the same frequency carrier is within a tolerance not worse than 6 SSB symbols for sub-carrier spacing of 960kHz and the SFNs of all cells on the same frequency carrier are the same.

7.7A *deriveSSB-IndexFromCell* tolerance for RedCap

7.7A.1 Minimum requirements

When *deriveSSB-IndexFromCell* is enabled, the RedCap UE assumes frame boundary alignment (including half frame, subframe and slot boundary alignment) across cells on the same frequency carrier is within a tolerance not worse than min(2 SSB symbols, 1 PDSCH symbol) and the SFNs of all cells on the same frequency carrier are the same.

7.8 Void

7.9 *deriveSSB-IndexFromCellInter-r17* tolerance

7.9.1 Minimum requirements

When *deriveSSB-IndexFromCellInter-r17* is enabled, the UE assumes frame boundary alignment (including half frame, subframe and slot boundary alignment) across cells on the target carrier and reference cell is within a tolerance not worse than min(2 SSB symbols of target carrier, 1 PDSCH symbol of the reference cell) and the SFNs of all cells on the target carrier and reference cell are the same. The reference cell is the serving cell which is used for SSB indexes derivation as indicated via *deriveSSB-IndexFromCellInter-r17*.

8 Signalling characteristics

8.1 Radio Link Monitoring

8.1.1 Introduction

The requirements in clause 8.1 apply for radio link monitoring on:

- PCell in SA NR, NR-DC and NE-DC operation mode,
- PSCell in NR-DC and EN-DC operation mode,
- Deactivated PSCell in NR-DC and EN-DC operation mode, when configured.

The UE shall monitor the downlink radio link quality based on the reference signal configured as RLM-RS resource(s) in order to detect the downlink radio link quality of the PCell, PSCell and deactivated PSCell if configured with *bfd-and-RLM* as specified in TS 38.331[2] with value *true* as specified in TS 38.213 [3]. The configured RLM-RS resources can be all SSBs, or all CSI-RSs, or a mix of SSBs and CSI-RSs. UE is not required to perform RLM outside the active DL BWP.

On each RLM-RS resource, the UE shall estimate the downlink radio link quality and compare it to the thresholds Q_{out} and Q_{in} for the purpose of monitoring downlink radio link quality of the cell.

When a CORESET that the UE uses for monitoring PDCCH includes two TCI states and the UE is provided *sfnSchemePdcch* set to 'sfnSchemeA' or 'sfnSchemeB', the UE shall estimate a single downlink radio link quality to derive single SNR and compare it to the single thresholds Q_{out} and Q_{in} for the purpose of monitoring downlink radio link quality of the cell(s). How to compute the single SNR based on two active TCI states is up to UE implementation.

The threshold Q_{out} is defined as the level at which the downlink radio link cannot be reliably received and shall correspond to the out-of-sync block error rate ($BLER_{out}$) as defined in Table 8.1.1-1. For SSB based radio link monitoring, Q_{out_SSB} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1.2.1-1. For CSI-RS based radio link monitoring, Q_{out_CSI-RS} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1.3.1-1.

The threshold Q_{in} is defined as the level at which the downlink radio link quality can be received with significantly higher reliability than at Q_{out} and shall correspond to the in-sync block error rate ($BLER_{in}$) as defined in Table 8.1.1-1. For SSB based radio link monitoring, Q_{in_SSB} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1.2.1-2. For CSI-RS based radio link monitoring, Q_{in_CSI-RS} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1.3.1-2.

The out-of-sync block error rate ($BLER_{out}$) and in-sync block error rate ($BLER_{in}$) are determined from the network configuration via parameter *rlmInSyncOutOfSyncThreshold* signalled by higher layers. When UE is not configured with *rlmInSyncOutOfSyncThreshold* from the network, UE determines out-of-sync and in-sync block error rates from Configuration #0 in Table 8.1.1-1 by default. All requirements in clause 8.1 are applicable for BLER Configuration #0 in Table 8.1.1-1.

Table 8.1.1-1: Out-of-sync and in-sync block error rates

Configuration	$BLER_{out}$	$BLER_{in}$
0	10%	2%

UE shall be able to monitor up to N_{RLM} RLM-RS resources of the same or different types in each corresponding carrier frequency range, depending on a maximum number L_{max} of SSBs per half frame according to TS 38.213 [3], where N_{RLM} is specified in Table 8.1.1-2 according TS 38.213 [3], and meet the requirements as specified in clause 8.1. UE is not required to meet the requirements in clause 8.1 if RLM-RS is not configured and no TCI state for PDCCH is activated.

Table 8.1.1-2: Maximum number of RLM-RS resources N_{RLM}

Carrier frequency range of PCell/PSCell	L_{max}	Maximum number of RLM-RS resources, N_{RLM}
FR1, ≤ 3 GHz ^{Note}	4	2
FR1, > 3 GHz ^{Note}	8	4
FR2	64	8
NOTE: For unpaired spectrum operation with Case C - 30 kHz SCS, 3GHz is replaced by 1.88GHz, as specified in clause 4.1 in TS 38.213 [3].		

8.1.1.1 Introduction of Requirement on Radio Link Monitoring for UE Configured with Relaxed Measurement Criteria

For the UE supports *rlm-Relaxation-r17* and configured with explicit signaling *goodServingCellEvaluationRLM*, which is always configured to the UE when the network enables RLM relaxation for the UE as specified in TS 38.331 [2], the relaxed requirements defined in clause 8.1.2.4 for SSB based radio link monitoring and the relaxed requirements defined in clause 8.1.3.4 for CSI-RS based radio link monitoring are allowed to apply to the relaxed RLM measurements on SpCell after fulfilling the following conditions:

- for the serving cells in intra-band carrier aggregation configured with SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell, when
 - the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell in the intra-band carrier aggregation if the *lowMobilityEvaluationConnected* is not configured, or
 - the UE is also configured with *lowMobilityEvaluationConnected* and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [2] is fulfilled for a period of $T_{SearchDeltaP-Connected}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell in the intra-band carrier aggregation.
- for other serving cells, when
 - the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the SpCell if the *lowMobilityEvaluationConnected* is not configured, or
 - the UE is also configured with *lowMobilityEvaluationConnected* and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [2] is fulfilled for a period of $T_{SearchDeltaP-Connected}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the SpCell.

otherwise, UE shall apply the requirements defined in clause 8.1.2.2 for SSB based radio link monitoring and the requirements defined in clause 8.1.3.2 for CSI-RS based radio link monitoring. Note that when multiple resources are configured on a serving cell for RLM or BFD evaluation, the good serving cell quality criterion is considered as fulfilled for the serving cell when any resource configured for the cell fulfills the good serving defined in clause 5.7.13.2 of TS 38.331 [2].

The UE is no longer allowed to relax RLM measurements and apply the relaxed radio link monitoring provided that at least one of the following conditions is met:

- The UE sends out-of sync indications to the higher layers,
- The timer T310 is running.
- No DRX is configured or configured DRX cycle is longer than 80ms

Note: Applicability of DRX configuration follows TS38.331 Clause 5.7.13.0.

8.1.2 Requirements for SSB based radio link monitoring

8.1.2.1 Introduction

The requirements in this clause apply for each SSB based RLM-RS resource configured for PCell, PSCell or deactivated PSCell, provided that the SSB configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1.2.2.

Table 8.1.2.1-1: PDCCH transmission parameters for out-of-sync evaluation

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	4dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

Table 8.1.2.1-2: PDCCH transmission parameters for in-sync evaluation

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	4
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.1.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_SSB}}$ [ms] period becomes worse than the threshold $Q_{\text{out_SSB}}$ within $T_{\text{Evaluate_out_SSB}}$ [ms] evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_SSB}}$ [ms] period becomes better than the threshold $Q_{\text{in_SSB}}$ within $T_{\text{Evaluate_in_SSB}}$ [ms] evaluation period.

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1.2.2-1 for FR1.

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1.2.2-2 for FR2 with scaling factor $N=8$ for FR2-1 and $N=12$ for FR2-2, for FR2 power classes other than power class 6 or for FR2 power class 6 when *highSpeedMeasFlagFR2-r17* is not configured

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1.2.2-3 for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*.

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1.2.2-4 for FR1 (deactivated PSCell).

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1.2.2-5 for FR2 (deactivated PSCell) with scaling factor $N=8$ for FR2-1 and $N=12$ for FR2-2.

For a UE supporting *concurrentMeasGap-r17* and when concurrent measurement gaps are configured,

- P value for an RLM-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any RLM-RS resource occasion:
 - N_{total} is the total number of RLM-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
 - $N_{\text{available}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
 - T_{L1} is periodicity of the target RLM-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent measurement gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{SSB}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, and these GAPS are overlapping with some but not all occasions of the SSB; and
- $P = 1$ when in the monitored cell there are no GAPS overlapping with any occasion of the SSB.

For FR2

- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when RLM-RS resource is not overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- P is $P_{\text{sharing factor}}$, when the RLM-RS resource is not overlapped with GAP and RLM-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$).
- $P = \frac{1}{1 - \frac{T_{SSB}}{xRP} - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and
 - $T_{SMTCperiod} \neq xRP$ or
 - $T_{SMTCperiod} = xRP$ and $T_{SSB} < 0.5 * T_{SMTCperiod}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{SSB}}{xRP}}$, when the RLM-RS is partially overlapped with GAP and the RLM-RS is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod} = xRP$ and $T_{SSB} = 0.5 \times T_{SMTCperiod}$

- $P = \frac{1}{1 - \frac{T_{SSB}}{\text{Min}(xRP, T_{SMTCperiod})}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with GAP
- $P = \frac{P_{sharing factor}}{1 - \frac{T_{SSB}}{xGP}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with GAP ($T_{SMTCperiod} < xRP$)

where,

- $P_{sharing factor} = 1$, if the RLM-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{sharing factor} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - an RLM-RS resource or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $xRP = MGRP$
- Otherwise, when NCSG measurement gap is configured,
 - an RLM-RS resource or an SMTC occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
 - and
 - $xRP = VIRP$
- If the UE is configured with Pre-MG, an RLM-RS resource or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When concurrent gaps are configured, an RLM-RS resource or an SMTC occasion is not considered as overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and GAP configurations does not meet previous conditions

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

DRX cycle ≤ 320 ms	$\text{Ceil}(15 \times P \times N) \times \text{Max}(T_{\text{DRX}}, \text{measCyclePSCell})$	$\text{Ceil}(7.5 \times P \times N) \times \text{Max}(T_{\text{DRX}}, \text{measCyclePSCell})$
DRX cycle > 320 ms	$\text{Ceil}(10 \times P \times N) \times \text{Max}(T_{\text{DRX}}, \text{measCyclePSCell})$	$\text{Ceil}(5 \times P \times N) \times \text{Max}(T_{\text{DRX}}, \text{measCyclePSCell})$
NOTE: T_{DRX} is the DRX cycle length of SCG. measCyclePSCell is the measurement cycle length of the deactivated PSCell.		

8.1.2.3 Measurement restrictions for SSB based RLM

The UE is required to be capable of measuring SSB for RLM without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB OFDM symbols used for RLM fully or partially overlap with CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for RLM without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for RLM without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined

For FR2, when the SSB for RLM measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

For FR2, when the SSB for RLM measurement on one CC is in the same or adjacent OFDM symbol as SSB from cell with additional PCI for BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

For FR2, there is no measurement restriction allowed when the network configures mixed numerology between SSB for RLM measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, provided that UE is capable of independent beam management on this FR2 band pair.

8.1.2.4 Minimum requirement of SSB based radio link monitoring for UE fulfilling relaxed measurement criteria

This clause contains minimum requirements for relaxed radio link monitoring based on SSB.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_SSB_Relax}}$ [ms] period becomes worse than the threshold $Q_{\text{out_SSB}}$ within $T_{\text{Evaluate_out_SSB_Relax}}$ [ms] evaluation period.

$T_{\text{Evaluate_out_SSB_Relax}}$ is defined in Table 8.1.2.4-1 for FR1.

$T_{\text{Evaluate_out_SSB_Relax}}$ is defined in Table 8.1.2.4-2 for FR2 with scaling factor $N=8$.

The value of P is defined in clause 8.1.2.2.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Table 8.1.2.4-1: Evaluation period $T_{\text{Evaluate_out_SSB_Relax}}$ for FR1

Configuration	$T_{\text{Evaluate_out_SSB_Relax}}$ (ms)
---------------	---

$\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80\text{ms}$	$\text{Max}(200 \times K3^{\text{NOTE3}}, \text{Ceil}(15 \times K1^{\text{NOTE2}} \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
$80\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 160\text{ms}$	$\text{Ceil}(15 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}})$
NOTE 1: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length and no longer than 80ms.	
NOTE 2: $K1 = 4$ for $\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 40\text{ms}$ and $K1 = 2$ for $40\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80\text{ms}$.	
NOTE 3: $K3 = K1$, if $K1 \leq 2$; otherwise $K3 = 1$.	

Table 8.1.2.4-2: Evaluation period $T_{\text{Evaluate_out_SSB_Relax}}$ for FR2

Configuration	$T_{\text{Evaluate_out_SSB_Relax}}$ (ms)
$\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80\text{ms}$	$\text{Max}(200 \times K4^{\text{NOTE3}}, \text{Ceil}(15 \times K2^{\text{NOTE2}} \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
$80\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 160\text{ms}$	$\text{Ceil}(15 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}})$
NOTE 1: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length and no longer than 80ms.	
NOTE 2: $K2 = 2$.	
NOTE 3: $K4 = K2$, if $K2 \leq 2$; otherwise $K4 = 1$.	

8.1.3 Requirements for CSI-RS based radio link monitoring

8.1.3.1 Introduction

The requirements in this clause apply for each CSI-RS based RLM-RS resource configured for PCell, PSCell or deactivated PSCell, provided that the CSI-RS configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1.3.2. UE is not expected to perform radio link monitoring measurements on the CSI-RS configured as RLM-RS if the CSI-RS is not in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.1.3.1-1: PDCCH transmission parameters for out-of-sync evaluation

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	4dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

Table 8.1.3.1-2: PDCCH transmission parameters for in-sync evaluation

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	4

Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.1.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_CSI-RS}}$ ms period becomes worse than the threshold $Q_{\text{out_CSI-RS}}$ within $T_{\text{Evaluate_out_CSI-RS}}$ ms evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_CSI-RS}}$ ms period becomes better than the threshold $Q_{\text{in_CSI-RS}}$ within $T_{\text{Evaluate_in_CSI-RS}}$ ms evaluation period.

- $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ are defined in Table 8.1.3.2-1 for FR1.
- $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ are defined in Table 8.1.3.2-2 for FR2 with scaling factor $N=1$.
- $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ are defined in Table 8.1.3.2-3 for FR1 (deactivated PSCell).
- $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ are defined in Table 8.1.3.2-4 for FR2 (deactivated PSCell) with scaling factor $N=1$.

The requirements of $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ apply provided that the CSI-RS for RLM is not in a resource set configured with repetition ON. The requirements do not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for RLM and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

For a UE supporting *concurrentMeasGap-r17* and when concurrent measurement gaps are configured,

- P value for an RLM-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any RLM-RS resource occasion:
 - N_{total} is the total number of RLM-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
 - $N_{\text{available}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
- T_{L1} is periodicity of the target RLM-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent measurement gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{CSI-RS}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, and these GAPS] are overlapping with some but not all occasions of the CSI-RS; and
- $P=1$ when in the monitored cell there are no GAPS overlapping with any occasion of the CSI-RS.

For FR2,

- $P=1$, when the RLM-RS resource is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{CSI-RS}}{xRP}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is not overlapped with SMTC occasion ($T_{CSI-RS} < xRP$)
- $P = \frac{1}{1 - \frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when the RLM-RS resource is not overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$).
- $P = P_{\text{sharing factor}}$, when the RLM-RS resource is not overlapped with GAP and RLM-RS resource is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$).
- $P = \frac{1}{1 - \frac{T_{CSI-RS}}{xRP} - \frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and
 - $T_{SMTCperiod} \neq xRP$ or
 - $T_{SMTCperiod} = xRP$ and $T_{CSI-RS} < 0.5 \times T_{SMTCperiod}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{CSI-RS}}{xRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod} = xRP$ and $T_{CSI-RS} = 0.5 \times T_{SMTCperiod}$
- $P = \frac{1}{1 - \frac{T_{CSI-RS}}{\min(xRP, T_{SMTCperiod})}}$, when the RLM-RS resource is partially overlapped with GAP and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with GAP
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{CSI-RS}}{xRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} < xRP$)

where,

- $P_{\text{sharing factor}} = 1$, if the RLM-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

- When a measurement gap is configured and the measurement gap is not NCSG,
 - an RLM-RS resource or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $xRP = MGRP$
- Otherwise, when NCSG measurement gap is configured,
 - an RLM-RS resource or an SMTC occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
 - and
 - $xRP = VIRP$

If the UE is configured with Pre-MG, an RLM-RS resource or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.

When concurrent gaps are configured, an RLM-RS resource or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*.

Note: The overlap between CSI-RS for RLM and SMTC means that CSI-RS based RLM is within the SMTC window duration.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and GAP configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI,E-UTRAN}$ when the UE is requested to decode an LTE CGI.

The values of M_{out} and M_{in} used in Table 8.1.3.2-1, Table 8.1.3.2-2, Table 8.1.3.2-3 and Table 8.1.3.2-4 are defined as:

- $M_{out} = 20$ and $M_{in} = 10$, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth ≥ 24 PRBs.

Table 8.1.3.2-1: Evaluation period $T_{Evaluate_out_CSI-RS}$ and $T_{Evaluate_in_CSI-RS}$ for FR1

Configuration	$T_{Evaluate_out_CSI-RS}$ (ms)	$T_{Evaluate_in_CSI-RS}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(M_{out} \times P) \times T_{CSI-RS})$	$\text{Max}(100, \text{Ceil}(M_{in} \times P) \times T_{CSI-RS})$
$DRX \leq 320\text{ms}$	$\text{Max}(200, \text{Ceil}(1.5 \times M_{out} \times P) \times \text{Max}(T_{DRX}, T_{CSI-RS}))$	$\text{Max}(100, \text{Ceil}(1.5 \times M_{in} \times P) \times \text{Max}(T_{DRX}, T_{CSI-RS}))$
$DRX > 320\text{ms}$	$\text{Ceil}(M_{out} \times P) \times T_{DRX}$	$\text{Ceil}(M_{in} \times P) \times T_{DRX}$
NOTE: T_{CSI-RS} is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for T_{CSI-RS} equal to 5 ms, 10ms, 20 ms or 40 ms. T_{DRX} is the DRX cycle length.		

Table 8.1.3.2-2: Evaluation period $T_{Evaluate_out_CSI-RS}$ and $T_{Evaluate_in_CSI-RS}$ for FR2

Configuration	$T_{Evaluate_out_CSI-RS}$ (ms)	$T_{Evaluate_in_CSI-RS}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(M_{out} \times P \times N) \times T_{CSI-RS})$	$\text{Max}(100, \text{Ceil}(M_{in} \times P \times N) \times T_{CSI-RS})$
$DRX \leq 320\text{ms}$	$\text{Max}(200, \text{Ceil}(1.5 \times M_{out} \times P \times N) \times \text{Max}(T_{DRX}, T_{CSI-RS}))$	$\text{Max}(100, \text{Ceil}(1.5 \times M_{in} \times P \times N) \times \text{Max}(T_{DRX}, T_{CSI-RS}))$

NOTE: T_{DRX} is the DRX cycle length of SCG. measCyclePSCell is the measurement cycle length of the deactivated PSCell.		

8.1.3.3 Measurement restrictions for CSI-RS based RLM

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

The UE is required to be capable of measuring CSI-RS for RLM without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following clauses.

For both FR1 and FR2, when the CSI-RS for RLM is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for RLM in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD, or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS for RLM measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for RLM and SSB. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.

For FR1, when the CSI-RS for RLM is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for RLM without any restriction.

For FR2, when the CSI-RS for RLM measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for RLM and SSB. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.

For FR2, when the CSI-RS for RLM measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for RLM and the other CSI-RS. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.
 - The CSI-RS for RLM or the other CSI-RS in a resource set configured with repetition ON, or
 - The other CSI-RS is configured in q1 and beam failure is detected, or
 - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for RLM without any restriction.

8.1.3.4 Minimum requirement of CSI-RS based radio link monitoring for UE fulfilling relaxed measurement criteria

This clause contains minimum requirements for relaxed radio link monitoring based on CSI-RS.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_CSI-RS_Relax}}$ [ms] period becomes worse than the threshold $Q_{\text{out_CSI-RS}}$ within $T_{\text{Evaluate_out_CSI-RS_Relax}}$ [ms] evaluation period.

$T_{\text{Evaluate_out_CSI-RS_Relax}}$ is defined in Table 8.1.3.4-1 for FR1.

$T_{\text{Evaluate_out_CSI-RS_Relax}}$ is defined in Table 8.1.3.4-2 for FR2 with scaling factor $N=1$.

The value of P is defined in clause 8.1.3.2.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{out} used in Table 8.1.3.4-1 and Table 8.1.3.4-2 are defined as:

- $M_{\text{out}} = 20$, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth ≥ 24 PRBs.

Table 8.1.3.4-1: Evaluation period $T_{\text{Evaluate_out_CSI-RS_Relax}}$ for FR1

Configuration	$T_{\text{Evaluate_out_CSI-RS_Relax}}$ (ms)
$\text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80$ ms	$\text{Max}(200 \times K3^{\text{NOTE3}}, \text{Ceil}(1.5 \times M_{\text{out}} \times P \times K1^{\text{NOTE2}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}})^{\text{NOTE1}})$
NOTE1: $T_{\text{CSI-RS}}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{\text{CSI-RS}}$ equal to 5 ms, 10ms, 20 ms or 40 ms. T_{DRX} is the DRX cycle length and no longer than 80ms.	
NOTE2: $K1 = 2$ for $40 \text{ ms} < \text{MAX}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80$ ms, $K1 = 4$ for $\text{MAX}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 40$ ms	
NOTE3: $K3 = K1$, if $K1 \leq 2$; $K3 = 1$ otherwise.	

Table 8.1.3.4-2: Evaluation period $T_{\text{Evaluate_out_CSI-RS_Relax}}$ for FR2

Configuration	$T_{\text{Evaluate_out_CSI-RS_Relax}}$ (ms)
$\text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80$ ms	$\text{Max}(200 \times K4^{\text{NOTE3}}, \text{Ceil}(1.5 \times M_{\text{out}} \times P \times N \times K2^{\text{NOTE2}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}})^{\text{NOTE1}})$
NOTE1: $T_{\text{CSI-RS}}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{\text{CSI-RS}}$ equal to 5 ms, 10 ms, 20 ms or 40 ms. T_{DRX} is the DRX cycle length and no longer than 80ms.	
NOTE2: $K2 = 2$.	
NOTE3: $K4 = K2$, if $K2 \leq 2$; $K4 = 1$ otherwise.	

8.1.4 Minimum requirement at transitions

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each RLM-RS resource. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of RLM resources to a second configuration of RLM resources that is different from the first configuration, for each RLM resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each RLM resource present in the second configuration. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of active TCI state of the CORESET to a second configuration of active TCI state of the CORESET, for each CSI-RS for RLM present in the second configuration, the UE shall use an evaluation period corresponding to the second configuration from the time of transition. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

8.1.5 Minimum requirement for UE turning off the transmitter

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [2].

8.1.6 Minimum requirement for L1 indication

When the downlink radio link quality on all the configured RLM-RS resources is worse than Q_{out} , layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [2].

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than Q_{in} , layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [2].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{Indication_interval}$.

When DRX is not used $T_{Indication_interval}$ is $\max(10\text{ms}, T_{RLM-RS,M})$, where $T_{RLM-RS,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to T_{SSB} specified in clause 8.1.2 if the RLM-RS resource is SSB, or T_{CSI-RS} specified in clause 8.1.3 if the RLM-RS resource is CSI-RS.

In case DRX is used, $T_{Indication_interval}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{RLM-RS,M})$ if DRX_cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX_cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [2], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

For deactivated PSCell, when DRX is not used $T_{Indication_interval}$ is $\text{Max}(10\text{ms}, \text{measCyclePSCell})$. In case DRX is used, $T_{Indication_interval}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times \text{measCyclePSCell})$ if DRX_cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is $\text{Max}(\text{DRX_cycle_length}, \text{measCyclePSCell})$ if DRX_cycle_length is greater than 320ms.

8.1.7 Scheduling availability of UE during radio link monitoring

When the reference signal to be measured for RLM has different subcarrier spacing than PDSCH/PDCCH or is on frequency range 2, there are restrictions on the scheduling availability as described in the following clauses.

8.1.7.1 Scheduling availability of UE performing radio link monitoring with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to radio link monitoring performed with a same subcarrier spacing as PDSCH/PDCCH on FR1.

8.1.7.2 Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for radio link monitoring.

When intra-band carrier aggregation in FR1 is performed, the scheduling restrictions on FR1 serving PCell or PSCell applies to all serving cells in the same band on the symbols that fully or partially overlap with the restricted symbols. When inter-band carrier aggregation within FR1 is performed, there are no scheduling restrictions on FR1 serving cell(s) in the bands due to radio link monitoring performed on FR1 serving PCell or PSCell in different bands.

8.1.7.3 Scheduling availability of UE performing radio link monitoring on FR2

The following scheduling restriction applies due to radio link monitoring on an FR2 serving PCell and/or PSCell.

- If the RLM-RS is CSI-RS which is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON,
 - There are no scheduling restrictions due to radio link monitoring based on the CSI-RS.
- Otherwise
 - For FR2-1 or the RLM-RS is not using 480 kHz SCS or 960 kHz SCS on FR2-2, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on RLM-RS symbols to be measured for radio link monitoring.
 - For FR2-2 and the RLM-RS is using 480 kHz SCS or 960 kHz SCS, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on RLM-RS symbols to be measured for radio link monitoring, and on one data symbol before each RLM-RS symbol to be measured and one data symbol after each RLM-RS symbol to be measured.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions on FR2 serving PCell or PSCell applies to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cell(s) in the bands for the following cases, provided that UE is capable of independent beam management on this FR2 band pair:

- when performing radio link monitoring performed on FR2 serving PCell or PSCell in different bands,
- the UE is configured with same or different numerology between SSB on one FR2 band and data on the other FR2 band.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for RLM; and

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for RLM.

8.1.7.4 Scheduling availability of UE performing radio link monitoring on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC

There are no scheduling restrictions on FR1 serving cell(s) due to radio link monitoring performed on FR2 serving PCell and/or PSCell.

There are no scheduling restrictions on FR2 serving cell(s) due to radio link monitoring performed on FR1 serving PCell and/or PSCell.

8.1A Radio Link Monitoring with CCA on Target Frequency

8.1A.1 Introduction

The requirements in clause 8.1A apply for radio link monitoring on a carrier frequency with CCA for cells:

- PCell in SA NR operation mode,
- PSCell in EN-DC operation mode.
- PSCell in NR-DC operation mode.

The UE shall monitor the downlink radio link quality based on the reference signal configured as RLM-RS resource(s) in order to detect the downlink radio link quality of the PCell and PSCell as specified in TS 38.213 [3]. The configured RLM-RS resources can be all SSBs, or all CSI-RSs, or a mix of SSBs and CSI-RSs. UE is not required to perform RLM outside the active DL BWP.

On each RLM-RS resource, the UE shall estimate the downlink radio link quality and compare it to the thresholds $Q_{out,CCA}$ and $Q_{in,CCA}$ for the purpose of monitoring downlink radio link quality of the cell.

The threshold $Q_{out,CCA}$ is defined as the level at which the downlink radio link cannot be reliably received and shall correspond to the out-of-sync block error rate ($BLER_{out,CCA}$) as defined in Table 8.1A.1-1. For SSB based radio link monitoring, $Q_{out,SSB,CCA}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1A.2.1-1.

The threshold $Q_{in,CCA}$ is defined as the level at which the downlink radio link quality can be received with significantly higher reliability than at $Q_{out,CCA}$ and shall correspond to the in-sync block error rate ($BLER_{in}$) as defined in Table 8.1A.1-1. For SSB based radio link monitoring, $Q_{in,SSB,CCA}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1A.2.1-2.

The out-of-sync block error rate ($BLER_{out,CCA}$) and in-sync block error rate ($BLER_{in,CCA}$) are determined from the network configuration via parameter *rlmInSyncOutOfSyncThreshold* signalled by higher layers. When UE is not configured with *rlmInSyncOutOfSyncThreshold* from the network, UE determines out-of-sync and in-sync block error rates from Configuration #0 in Table 8.1A.1-1 as default. All requirements in clause 8.1A are applicable for BLER Configuration #0 in Table 8.1A.1-1.

Table 8.1A.1-1: Out-of-sync and in-sync block error rates

Configuration	$BLER_{out,CCA}$	$BLER_{in,CCA}$
0	10%	2%

UE shall be able to monitor up to N_{RLM} RLM-RS resources of the same or different types in each corresponding carrier frequency range, depending on a maximum number L_{max} of SSBs per half frame according to TS 38.213 [3], where N_{RLM} is specified in Table 8.1A.1-2, and meet the requirements as specified in clause 8.1A. UE is not required to meet the requirements in clause 8.1A if RLM-RS is not configured and no TCI state for PDCCH is activated.

Table 8.1A.1-2: Maximum number of RLM-RS resources N_{RLM}

Carrier frequency range of PCell/PSCell	L_{max}	Maximum number of RLM-RS resources, N_{RLM}
FR1	8	4
FR2-2	64	8

In the requirements of clause 8.1A, the term RLM-RS SSB occasion not available at the UE refers to when the RLM-RS SSB is configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the set of configured RLM-RS resources are not available at the UE due to DL CCA failures at gNB during the corresponding evaluation period; otherwise the RLM-RS SSB is considered as available at the UE.

The requirements in clause 8.1A apply for any *channelAccessMode* configuration [TS 38.331, 2].

8.1A.2 Requirements for SSB Based Radio Link Monitoring

8.1A.2.1 Introduction

The requirements in this clause apply for each SSB based RLM-RS resource configured for PCell or PSCell, provided that the SSB configured for RLM are actually configured to be transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1A.2.2 but occasionally may not be transmitted due to CCA operation.

Table 8.1A.2.1-1: PDCCH transmission parameters for out-of-sync evaluation

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	4 dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	4 dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

Table 8.1A.2.1-2: PDCCH transmission parameters for in-sync evaluation

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	4
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.1A.2.2 Minimum Requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_SSB,CCA}}$ [ms] period becomes worse than the threshold $Q_{\text{out_SSB,CCA}}$ within $T_{\text{Evaluate_out_SSB,CCA}}$ [ms] evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_SSB,CCA}}$ [ms] period becomes better than the threshold $Q_{\text{in_SSB,CCA}}$ within $T_{\text{Evaluate_in_SSB,CCA}}$ [ms] evaluation period. During the in-sync evaluation procedure, layer 1 of the UE shall not send any in-sync indication for the cell to the higher layers when L_{in} exceeds $L_{\text{in,max}}$, where L_{in} and $L_{\text{in,max}}$ are defined in Table 8.1A.2.2-1.

$T_{\text{Evaluate_out_SSB,CCA}}$ and $T_{\text{Evaluate_in_SSB,CCA}}$ are defined in Table 8.1A.2.2-1 for FR1.

$T_{\text{Evaluate_out_SSB,CCA}}$ and $T_{\text{Evaluate_in_SSB,CCA}}$ are defined in Table 8.1A.2.2-2 for FR2-2 with scaling factor $N = 12$.

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for an RLM-RS resource to be measured is defined as $N_{\text{total}} / N_{\text{outside_MG}}$
- For a window W of duration $\max(T_{\text{L1}}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gap and per-FR measurement gap within the same FR as serving cell, and starting at the beginning of any RLM-RS resource occasion:
 - N_{total} is the total number of RLM-RS resource occasions within the window W, including those overlapped with measurement gap occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, and these GAPS are overlapping with some but not all occasions of the SSB RLM-RS resources; and
- $P=1$ when in the monitored cell there are no GAPS overlapping with any occasion of the SSB RLM-RS resources.

When a measurement gap is configured and the measurement gap is not NCSG,

- an RLM-RS resource is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
- $xRP = \text{MGRP}$

Otherwise, when NCSG measurement gap is configured,

- an RLM-RS resource is considered to be overlapped with the GAP if it overlaps the VIL1 or VIL2 of NCSG, and
- $xRP = \text{VIRP}$

If the UE is configured with Pre-MG, an RLM-RS resource is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.

When concurrent gaps are configured, an RLM-RS resource is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

For FR2-2,

- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when RLM-RS resource is not overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- P is $P_{sharing}$ factor, when the RLM-RS resource is not overlapped with measurement gap and RLM-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$).
- $P = \frac{1}{1 - \frac{T_{SSB}}{MGRP} - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{SMTCperiod} \neq MGRP$ or
 - $T_{SMTCperiod} = MGRP$ and $T_{SSB} < 0.5 * T_{SMTCperiod}$
- $P = \frac{P_{sharing factor}}{1 - \frac{T_{SSB}}{MGRP}}$, when the RLM-RS is partially overlapped with measurement gap and the RLM-RS is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod} = MGRP$ and $T_{SSB} = 0.5 \times T_{SMTCperiod}$
- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{sharing factor}}{1 - \frac{T_{SSB}}{MGRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} < MGRP$)
- $P_{sharing factor} = 1$, if the RLM-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and K data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and K data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and K is defined in clause 9.2.5.3.3, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and K data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and K data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured, and K is defined in clause 9.2.5.3.3.
- $P_{sharing factor} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{SMTCperiod}$ follows *smtc2*; Otherwise $T_{SMTCperiod}$ follows *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2-2 band, provided the SMTC offset of all CCs in FR2-2 have the same offset.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and GAP configurations does not meet previous conditions.

Table 8.1A.2.2-1: Evaluation period $T_{Evaluate_out_SSB,CCA}$ and $T_{Evaluate_in_SSB,CCA}$ for FR1

Configuration	$T_{Evaluate_out_SSB,CCA}$ (ms)		$T_{Evaluate_in_SSB,CCA}$ (ms)
	RLM-RS SSB Es/Iot ^{Note4} ≥ -7 dB	RLM-RS SSB Es/Iot ^{Note4} < -7 dB	
no DRX	$\text{Max}(200, \text{Ceil}(17 * P) * T_{SSB})$	$\text{Max}(200, \text{Ceil}(24 * P) * T_{SSB})$	$\text{Max}(100, \text{Ceil}((5 + L_{in}) * P) * T_{SSB})$
DRX cycle ≤ 320	$\text{Max}(200, \text{Ceil}(1.5 * 15 * P) * \text{Max}(T_{DRX}, T_{SSB}))$	$\text{Max}(200, \text{Ceil}(1.5 * 20 * P) * \text{Max}(T_{DRX}, T_{SSB}))$	$\text{Max}(100, \text{Ceil}(1.5 * (5 + L_{in}) * P) * \text{Max}(T_{DRX}, T_{SSB}))$

DRX cycle>320	$\text{Ceil}(13 \cdot P) \cdot T_{\text{DRX}}$	$\text{Ceil}(16 \cdot P) \cdot T_{\text{DRX}}$	$\text{Ceil}((5 + L_{\text{in}}) \cdot P) \cdot T_{\text{DRX}}$
NOTE 1: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length. NOTE 2: When DRX is not configured, L_{in} is the number of RLM-RS SSB occasions which are not available at the UE during $T_{\text{Evaluate_in_SSB,CCA}}$, where $L_{\text{in}} \leq L_{\text{in,max}}$. When DRX is configured, L_{in} is the number of DRX cycles in which at least one RLM-RS SSB occasion is not available at the UE during $T_{\text{Evaluate_in_SSB,CCA}}$, where $L_{\text{in}} \leq L_{\text{in,max}}$. The UE is not required to determine the availability of SSB occasions more frequent than Once per $\text{Max}(10\text{ms}, P \cdot T_{\text{SSB}})$ if no DRX is used, Once per $\text{Max}(10\text{ms}, \text{Ceil}(1.5 \cdot P) \cdot \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$ if DRX cycle $\leq 320\text{ms}$, Once per $P \cdot T_{\text{DRX}}$ if DRX cycle $> 320\text{ms}$. NOTE 3: $L_{\text{in,max}}=7$ for $\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 40$ assuming $T_{\text{DRX}}=0$ for non-DRX case, $L_{\text{in,max}}=5$ for $40 < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 320$, $L_{\text{in,max}}=3$ for $T_{\text{DRX}} > 320$. NOTE 4: RLM-RS SSB Es/lot is the averaged Es/lot over the most recent previous out-of-sync evaluation period.			

Table 8.1A.2.2-2: Evaluation period $T_{\text{Evaluate_out_SSB,CCA}}$ and $T_{\text{Evaluate_in_SSB,CCA}}$ for FR2-2

Configuration	$T_{\text{Evaluate_out_SSB,CCA}}$ (ms)	$T_{\text{Evaluate_in_SSB,CCA}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(12 \cdot P \cdot N) \cdot T_{\text{SSB}})$	$\text{Max}(100, \text{Ceil}((5 + L_{\text{in}}) \cdot P \cdot N) \cdot T_{\text{SSB}})$
DRX cycle ≤ 320	$\text{Max}(200, \text{Ceil}(1.5 \cdot 10 \cdot P \cdot N) \cdot \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(100, \text{Ceil}(1.5 \cdot (5 + L_{\text{in}}) \cdot P \cdot N) \cdot \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320	$\text{Ceil}(10 \cdot P \cdot N) \cdot T_{\text{DRX}}$	$\text{Ceil}((5 + L_{\text{in}}) \cdot P \cdot N) \cdot T_{\text{DRX}}$
NOTE 1: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length. NOTE 2: When DRX is not configured, L_{in} is the number of RLM-RS SSB occasions groups which are not available at the UE during $T_{\text{Evaluate_in_SSB,CCA}}$, where $L_{\text{in}} \leq L_{\text{in,max}}$. A RLM-RS SSB occasions group consists of N consecutive RLM-RS SSB occasions, and the RLM-RS SSB occasions group is not available at the UE when at least one RLM-RS SSB occasion in the group is not transmitted by the gNB. When DRX is configured, L_{in} is the number of DRX cycles groups which are not available at the UE during $T_{\text{Evaluate_in_SSB,CCA}}$, where $L_{\text{in}} \leq L_{\text{in,max}}$. A DRX group consists of N DRX cycles, and the DRX group is not available when there is at least one DRX in which at least one RLM-RS SSB occasion is not available. The UE is not required to determine the availability of SSB occasions more frequent than once per DRX cycle length, when configured with DRX. NOTE 3: $L_{\text{in,max}}=7$ for $\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 40$ assuming $T_{\text{DRX}}=0$ for non-DRX case, $L_{\text{in,max}}=5$ for $40 < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 320$, $L_{\text{in,max}}=3$ for $T_{\text{DRX}} > 320$.		

8.1A.2.3 Measurement Restrictions for SSB based RLM

The UE is required to be capable of measuring SSB for RLM without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following clauses.

For FR1, when the SSB for RLM is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for RLM without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for RLM without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure SSB for RLM.

For FR2-2, when the SSB for RLM measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

8.1A.3 Minimum requirement at transitions

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each RLM-RS resource. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of RLM resources to a second configuration of RLM resources that is different from the first configuration, for each RLM resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each RLM resource present in the second configuration. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

8.1A.4 Minimum requirement for UE turning off the transmitter

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [2]. The UE shall not perform CCA procedure on any of the serving carrier frequencies with CCA after the expiry of T310.

8.1A.5 Minimum requirement for L1 indication

When the downlink radio link quality on all the configured RLM-RS resources is worse than $Q_{out,CCA}$, layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [2].

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than $Q_{in,CCA}$, layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [2].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{Indication_interval,CCA}$.

When DRX is not used $T_{Indication_interval,CCA}$ is $\max(10\text{ms}, T_{RLM-RS,M})$, where $T_{RLM,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to T_{SSB} specified in clause 8.1A.2 if the RLM-RS resource is SSB.

In case DRX is used, $T_{Indication_interval,CCA}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{RLM-RS,M})$ if DRX_cycle_length is less than or equal to 320ms, and $T_{Indication_interval,CCA}$ is DRX_cycle_length if DRX_cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [2], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

8.1A.6 Scheduling availability of UE during radio link monitoring

When the reference signal to be measured for RLM on a carrier frequency with CCA has different subcarrier spacing than PDSCH/PDCCH, there are restrictions on the scheduling availability as described in the following clauses.

8.1A.6.1 Scheduling availability of UE performing radio link monitoring with the same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to radio link monitoring performed with a same subcarrier spacing as PDSCH/PDCCH on FR1.

8.1A.6.2 Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for radio link monitoring.

When intra-band carrier aggregation is performed, the scheduling restrictions on PCell or PSCell applies to all serving cells in the same band on the symbols that fully or partially overlap with the restricted symbols.

8.1A.6.3 Scheduling availability of UE performing radio link monitoring on FR2-2

The following scheduling restriction applies due to radio link monitoring on an FR2-2 serving PCell and/or PSCell.

- If the RLM-RS is CSI-RS which is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON,
 - There are no scheduling restrictions due to radio link monitoring based on the CSI-RS.
- Otherwise
 - When the RLM-RS is using 120 KHz SCS, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on RLM-RS symbols to be measured for radio link monitoring.
 - When the RLM-RS is using 480 kHz SCS or 960 kHz SCS, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on RLM-RS resource symbols to be measured for radio link monitoring, and on one data symbol before each RLM-RS symbol to be measured and one data symbol after each RLM-RS symbol to be measured.

When intra-band carrier aggregation in FR2-2 is performed, the scheduling restrictions on FR2-2 serving PCell or PSCell applies to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

For FR2-2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for RLM; and

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for RLM.

8.1A.6.4 Scheduling availability of UE performing radio link monitoring on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR-DC

There are no scheduling restrictions on FR1 serving cell(s) due to radio link monitoring performed on FR2-2 serving PCell and/or PSCell.

There are no scheduling restrictions on FR2-2 serving cell(s) due to radio link monitoring performed on FR1 serving PCell and/or PSCell.

8.1B Radio Link Monitoring for RedCap

8.1B.1 Introduction

The requirements in clause 8.1B apply for radio link monitoring on UE with reduced capabilities:

- PCell in SA NR operation mode,

The UE shall monitor the downlink radio link quality based on the reference signal configured as RLM-RS resource(s) in order to detect the downlink radio link quality of the PCell as specified in TS 38.213 [3]. The configured RLM-RS resources can be all SSBs, or all CSI-RSs, or a mix of SSBs and CSI-RSs. UE is not required to perform RLM outside the active DL BWP. The SSB and SMTC in this section applies for both CD-SSB and NCD-SSB if it is not additional specified.

On each RLM-RS resource, the UE shall estimate the downlink radio link quality and compare it to the thresholds $Q_{out,RedCap}$ and $Q_{in,RedCap}$ for the purpose of monitoring downlink radio link quality of the cell.

The threshold $Q_{out,RedCap}$ is defined as the level at which the downlink radio link cannot be reliably received and shall correspond to the out-of-sync block error rate ($BLER_{out}$) as defined in Table 8.1B.1-1. For SSB based radio link monitoring, $Q_{out_SSB,RedCap}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1B.2.1-1. For CSI-RS based radio link monitoring, $Q_{out_CSI-RS,RedCap}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1B.3.1-1.

The threshold $Q_{in,RedCap}$ is defined as the level at which the downlink radio link quality can be received with significantly higher reliability than at $Q_{out,RedCap}$ and shall correspond to the in-sync block error rate ($BLER_{in,RedCap}$) as defined in Table 8.1B.1-1. For SSB based radio link monitoring, $Q_{in_SSB,RedCap}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1B.2.1-2. For CSI-RS based radio link monitoring, $Q_{in_CSI-RS,RedCap}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1B.3.1-2.

The out-of-sync block error rate ($BLER_{out,RedCap}$) and in-sync block error rate ($BLER_{in,RedCap}$) are determined from the network configuration via parameter *rlmInSyncOutOfSyncThreshold* signalled by higher layers. When UE is not configured with *rlmInSyncOutOfSyncThreshold* from the network, UE determines out-of-sync and in-sync block error rates from Configuration #0 in Table 8.1B.1-1 by default. All requirements in clause 8.1B are applicable for BLER Configuration #0 in Table 8.1B.1-1.

Table 8.1B.1-1: Out-of-sync and in-sync block error rates for RedCap UE

Configuration	$BLER_{out,RedCap}$	$BLER_{in,RedCap}$
0	10%	2%

UE shall be able to monitor up to N_{RLM} RLM-RS resources of the same or different types in each corresponding carrier frequency range, depending on a maximum number L_{max} of SSBs per half frame according to TS 38.213 [3], where N_{RLM} is specified in Table 8.1B.1-2 according TS 38.213 [3], and meet the requirements as specified in clause 8.1B. UE is not required to meet the requirements in clause 8.1B if RLM-RS is not configured and no TCI state for PDCCH is activated.

Table 8.1B.1-2: Maximum number of RLM-RS resources N_{RLM} for RedCap UE

Carrier frequency range of PCell	L_{max}	Maximum number of RLM-RS resources, N_{RLM}
FR1, ≤ 3 GHz ^{Note}	4	2
FR1, > 3 GHz ^{Note}	8	4
FR2	64	8
NOTE: For unpaired spectrum operation with Case C - 30 kHz SCS, 3GHz is replaced by 1.88GHz, as specified in clause 4.1 in TS 38.213 [3].		

8.1B.2 Requirements for SSB based radio link monitoring

8.1B.2.1 Introduction

The requirements in this clause apply for each SSB based RLM-RS resource configured for PCell, provided that the SSB configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1B.2.2.

Table 8.1B.2.1-1: PDCCH transmission parameters for out-of-sync evaluation for RedCap UE

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	16; for RedCap UE with 1Rx branch. 8; for RedCap UE with 2Rx branches.
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	4dB
Bandwidth (PRBs)	48; for RedCap UE with 1Rx branch. 24; for RedCap UE with 2Rx branches.
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed
Note: SCS = 60KHz is not applicable for FR1.	

Table 8.1B.2.1-2: PDCCH transmission parameters for in-sync evaluation for RedCap UE

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8; for RedCap UE with 1Rx branch. 4; for RedCap UE with 2Rx branches.
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	48; for RedCap UE with 1Rx branch. 24; for RedCap UE with 2Rx branches.
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed
Note: SCS = 60KHz is not applicable for FR1.	

8.1B.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_SSB,RedCap}}$ [ms] period becomes worse than the threshold $Q_{\text{out_SSB,RedCap}}$ within $T_{\text{Evaluate_out_SSB,RedCap}}$ [ms] evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_SSB,RedCap}}$ [ms] period becomes better than the threshold $Q_{\text{in_SSB,RedCap}}$ within $T_{\text{Evaluate_in_SSB,RedCap}}$ [ms] evaluation period.

$T_{\text{Evaluate_out_SSB,RedCap}}$ and $T_{\text{Evaluate_in_SSB,RedCap}}$ are defined in Table 8.1B.2.2-1 and Table 8.1B.2.2-3 for FR1 for UE with 2Rx RedCap and 1Rx RedCap, respectively.

$T_{\text{Evaluate_out_SSB,RedCap}}$ and $T_{\text{Evaluate_in_SSB,RedCap}}$ are defined in Table 8.1B.2.2-2 and for FR2 with scaling factor $N=8$ for 2Rx RedCap.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, and these measurement gaps are overlapping with some but not all occasions of the SSB; and
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when RLM-RS resource is not overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- P is $P_{\text{sharing factor}}$, when the RLM-RS resource is not overlapped with measurement gap and RLM-RS resource is fully overlapped with SMTC period ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq \text{MGRP}$ or
 - $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} < 0.5 * T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when the RLM-RS is partially overlapped with measurement gap and the RLM-RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < \text{MGRP}$)
- $P_{\text{sharing factor}} = 1$, if the RLM-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTcperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTcperiod}}$ follows *smtc1*.

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTcperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTcperiod}}$ follows *smtc1*.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTc occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Table 8.1B.2.2-1: Evaluation period $T_{\text{Evaluate_out_SSB,RedCap}}$ and $T_{\text{Evaluate_in_SSB,RedCap}}$ for FR1 for 2Rx RedCap UE

Configuration	$T_{\text{Evaluate_out_SSB,RedCap}}$ (ms)	$T_{\text{Evaluate_in_SSB,RedCap}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(10 \times P) \times T_{\text{SSB}})$	$\text{Max}(100, \text{Ceil}(5 \times P) \times T_{\text{SSB}})$
DRX cycle ≤ 320 ms	$\text{Max}(200, \text{Ceil}(15 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(100, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(10 \times P) \times T_{\text{DRX}}$	$\text{Ceil}(5 \times P) \times T_{\text{DRX}}$
NOTE: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length.

Configuration	$T_{\text{Evaluate_out_SSB,RedCap}}$ (ms)	$T_{\text{Evaluate_in_SSB,RedCap}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(10 \times P \times N) \times T_{\text{SSB}})$	$\text{Max}(100, \text{Ceil}(5 \times P \times N) \times T_{\text{SSB}})$
DRX cycle ≤ 320 ms	$\text{Max}(200, \text{Ceil}(15 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(100, \text{Ceil}(7.5 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(10 \times P \times N) \times T_{\text{DRX}}$	$\text{Ceil}(5 \times P \times N) \times T_{\text{DRX}}$
NOTE: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length.		

Table 8.1B.2.2-3: Evaluation period $T_{\text{Evaluate_out_SSB,RedCap}}$ and $T_{\text{Evaluate_in_SSB,RedCap}}$ for FR1 for 1Rx RedCap UE

Configuration	$T_{\text{Evaluate_out_SSB,RedCap}}$ (ms)	$T_{\text{Evaluate_in_SSB,RedCap}}$ (ms)
no DRX	$\text{Max}(400, \text{Ceil}(20 \times P) \times T_{\text{SSB}})$	$\text{Max}(100, \text{Ceil}(5 \times P) \times T_{\text{SSB}})$
DRX cycle ≤ 320 ms	$\text{Max}(400, \text{Ceil}(30 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(100, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(20 \times P) \times T_{\text{DRX}}$	$\text{Ceil}(5 \times P) \times T_{\text{DRX}}$
NOTE: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length.		

8.1B.2.3 Measurement restrictions for SSB based RLM

The UE is required to be capable of measuring SSB for RLM without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB for RLM is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for RLM without any restriction;
- If SSB and CSI-RS have different SCS,

- If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for RLM without any restriction;
- If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

For FR2, when the SSB for RLM measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

8.1B.3 Requirements for CSI-RS based radio link monitoring

8.1B.3.1 Introduction

The requirements in this clause apply for each CSI-RS based RLM-RS resource configured for PCell, provided that the CSI-RS configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1B.3.2. UE is not expected to perform radio link monitoring measurements on the CSI-RS configured as RLM-RS if the CSI-RS is not in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.1B.3.1-1: PDCCH transmission parameters for out-of-sync evaluation for RedCap UE

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	16; for RedCap UE with 1Rx branch. 8; for RedCap UE with 2Rx branches.
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	4dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed
Note: SCS = 60KHz is not applicable for FR1.

DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8; for RedCap UE with 1Rx branch. 4; for RedCap UE with 2Rx branches.
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal

Mapping from REG to CCE	Distributed
Note: SCS = 60KHz is not applicable for FR1.	

8.1B.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ ms period becomes worse than the threshold $Q_{\text{out_CSI-RS,RedCap}}$ within $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ ms evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ ms period becomes better than the threshold $Q_{\text{in_CSI-RS,RedCap}}$ within $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ ms evaluation period.

- $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ and $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ are defined in Table 8.1B.3.2-1 and Table 8.1B.3.2-3 for FR1 for RedCap 2Rx RedCap and 1Rx RedCap, respectively.
- $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ and $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ are defined in Table 8.1B.3.2-2 for FR2 with scaling factor $N=1$ for 2 Rx RedCap.

The requirements of $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ and $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ apply provided that the CSI-RS for RLM is not in a resource set configured with repetition ON. The requirements do not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for RLM and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, and these measurement gaps are overlapping with some but not all occasions of the CSI-RS; and
- $P=1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- $P=1$, when the RLM-RS resource is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < MGRP$)
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the RLM-RS resource is not overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the RLM-RS resource is not overlapped with measurement gap and RLM-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq MGRP$ or
 - $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the RLM-RS resource is partially overlapped with measurement gap and the RLM-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the RLM-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smtc1*.

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smtc1*.

Note: The overlap between CSI-RS for RLM and SMTC means that CSI-RS based RLM is within the SMTC window duration.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of $M_{\text{out,RedCap}}$ and $M_{\text{in,RedCap}}$ used in Table 8.1B.3.2-1 and Table 8.1B.3.2-2 for UE with 2Rx are defined as:

- $M_{\text{out,RedCap}} = 20$ and $M_{\text{in,RedCap}} = 10$, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth ≥ 24 PRBs.

The values of $M_{\text{out,RedCap}}$ and $M_{\text{in,RedCap}}$ used in Table 8.1B.3.2-3 for RedCap UE with 1Rx are defined as:

- $M_{\text{out,RedCap}} = 40$ and $M_{\text{in,RedCap}} = 10$, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth ≥ 24 PRBs.

Table 8.1B.3.2-1: Evaluation period $T_{\text{Evaluate_out_CSI-RS,RedCap}}$ and $T_{\text{Evaluate_in_CSI-RS,RedCap}}$ for FR1 for 2Rx RedCap UE

Configuration	$T_{\text{Evaluate_out_CSI-RS,RedCap}}$ (ms)	$T_{\text{Evaluate_in_CSI-RS,RedCap}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(M_{\text{out,RedCap}} \times P) \times T_{\text{CSI-RS}})$	$\text{Max}(100, \text{Ceil}(M_{\text{in,RedCap}} \times P) \times T_{\text{CSI-RS}})$

no DRX	$\text{Max}(400, \text{Ceil}(M_{\text{out,RedCap}} \times P) \times T_{\text{CSI-RS}})$	$\text{Max}(100, \text{Ceil}(M_{\text{in,RedCap}} \times P) \times T_{\text{CSI-RS}})$
$\text{DRX} \leq 320\text{ms}$	$\text{Max}(400, \text{Ceil}(1.5 \times M_{\text{out,RedCap}} \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$	$\text{Max}(100, \text{Ceil}(1.5 \times M_{\text{in,RedCap}} \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
$\text{DRX} > 320\text{ms}$	$\text{Ceil}(M_{\text{out,RedCap}} \times P) \times T_{\text{DRX}}$	$\text{Ceil}(M_{\text{in,RedCap}} \times P) \times T_{\text{DRX}}$
NOTE: $T_{\text{CSI-RS}}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{\text{CSI-RS}}$ equal to 5 ms, 10ms, 20 ms or 40 ms. T_{DRX} is the DRX cycle length.		

8.1B.3.3 Measurement restrictions for CSI-RS based RLM

The UE is required to be capable of measuring CSI-RS for RLM without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following clauses.

For both FR1 and FR2, when the CSI-RS for RLM is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for RLM in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD, or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS for RLM measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for RLM and SSB. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.

For FR1, when the CSI-RS for RLM is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for RLM without any restriction.

For FR2, when the CSI-RS for RLM is in the same OFDM symbol as SSB for RLM, BFD, or L1-RSRP measurement, or in the same symbol as SSB for CBD when beam failure is detected, UE is required to measure one of but not both CSI-RS for RLM and SSB. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.

For FR2, when the CSI-RS for RLM measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- In the following cases, UE is required to measure one of but not both CSI-RS for RLM and the other CSI-RS. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.
 - The CSI-RS for RLM or the other CSI-RS in a resource set configured with repetition ON, or
 - The other CSI-RS is configured in q1 and beam failure is detected, or

- The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for RLM without any restriction.

8.1B.4 Minimum requirement at transitions

When the UE transitions between RLM CD-SSB resource and RLM NCD-SSB resource due to BWP switching during one evaluation period, the UE shall use an evaluation period that is the maximum of the evaluation periods corresponding to the first SSB type and the second SSB type after the BWP switching. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second SSB type for each RLM-RS resource.

The requirements in clause 8.1.4 shall also apply except the scenarios described above.

8.1B.5 Minimum requirement for UE turning off the transmitter

The requirements in clause 8.1.5 shall apply.

8.1B.6 Minimum requirement for L1 indication

When the downlink radio link quality on all the configured RLM-RS resources is worse than $Q_{out,RedCap}$, layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [2].

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than $Q_{in,RedCap}$, layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [2].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{Indication_interval,RedCap}$.

When DRX is not used for RedCap UEs, $T_{Indication_interval,RedCap}$ is $\max(10\text{ms}, T_{RLM-RS,M})$, where $T_{RLM-RS,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to T_{SSB} specified in clause 8.1B.2 if the RLM-RS resource is SSB, or T_{CSI-RS} specified in clause 8.1B.3 if the RLM-RS resource is CSI-RS.

In case DRX is used for RedCap UEs, $T_{Indication_interval,RedCap}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{RLM-RS,M})$ if DRX_cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX_cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [2], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

When DRX is not used for HD-FDD RedCap UEs, $T_{Indication_interval,RedCap}$ is $\max(10\text{ms}, T_{RLM-RS,M})$, where $T_{RLM-RS,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to T_{SSB} specified in clause 8.1B.2 if the RLM-RS resource is SSB, or T_{CSI-RS} specified in clause 8.1B.3 if the RLM-RS resource is CSI-RS, under the following condition

- For each RLM-RS configuration, at least one RLM-RS sample must fall with DL occasion within an indication period.

In case DRX is used for HD-FDD RedCap UEs, $T_{Indication_interval,RedCap}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{RLM-RS,M})$ if DRX_cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX_cycle_length is greater than 320ms, under the following condition

- For each RLM-RS configuration, at least one RLM-RS sample must fall with DL occasion within an indication period.

8.1B.7 Scheduling availability of UE during radio link monitoring

The requirements in clause 8.1.7 shall apply.

8.1B.7.1 Scheduling availability of UE performing radio link monitoring with a same subcarrier spacing as PDSCH/PDCCH on FR1

The requirements in clause 8.1.7.1 shall apply.

8.1B.7.2 Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for radio link monitoring.

8.1B.7.3 Scheduling availability of UE performing radio link monitoring on FR2

The following scheduling restriction applies due to radio link monitoring on an FR2 serving PCell.

- If the RLM-RS is CSI-RS which is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON,
 - There are no scheduling restrictions due to radio link monitoring based on the CSI-RS.
- Otherwise
 - The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on RLM-RS symbols to be measured for radio link monitoring.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for RLM; and

For the SSB for RLM and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for RLM.

8.1C Radio Link Monitoring for Satellite Access

8.1C.1 Introduction

The requirements in clause 8.1C apply for radio link monitoring on PCell and the UE is configured with only PCell, which is served by satellite access node (SAN). The UE shall monitor the downlink radio link quality based on the reference signal configured as RLM-RS resource(s) in order to detect the downlink radio link quality of the PCell as specified in TS 38.213 [3]. The configured RLM-RS resources can be all SSBs, or all CSI-RSs, or a mix of SSBs and CSI-RSs. UE is not required to perform RLM outside the active DL BWP.

On each RLM-RS resource, the UE shall estimate the downlink radio link quality and compare it to the thresholds Q_{out} and Q_{in} for the purpose of monitoring downlink radio link quality of the cell.

The threshold Q_{out} is defined as the level at which the downlink radio link cannot be reliably received and shall correspond to the out-of-sync block error rate ($BLER_{out}$) as defined in Table 8.1C.1-1. For SSB based radio link

monitoring, Q_{out_SSB} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1C.2.1-1. For CSI-RS based radio link monitoring, Q_{out_CSI-RS} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1C.3.1-1.

The threshold Q_{in} is defined as the level at which the downlink radio link quality can be received with significantly higher reliability than at Q_{out} and shall correspond to the in-sync block error rate ($BLER_{in}$) as defined in Table 8.1C.1-1. For SSB based radio link monitoring, Q_{in_SSB} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1C.2.1-2. For CSI-RS based radio link monitoring, Q_{in_CSI-RS} is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.1C.3.1-2.

The out-of-sync block error rate ($BLER_{out}$) and in-sync block error rate ($BLER_{in}$) are determined from the network configuration via parameter *rlmInSyncOutOfSyncThreshold* signalled by higher layers. When UE is not configured with *rlmInSyncOutOfSyncThreshold* from the network, UE determines out-of-sync and in-sync block error rates from Configuration #0 in Table 8.1C.1-1 by default. All requirements in clause 8.1C are applicable for BLER Configuration #0 in Table 8.1C.1-1.

Table 8.1C.1-1: Out-of-sync and in-sync block error rates

Configuration	$BLER_{out}$	$BLER_{in}$
0	10%	2%

UE shall be able to monitor up to N_{RLM} RLM-RS resources of the same or different types in each corresponding carrier frequency range, depending on a maximum number L_{max} of SSBs per half frame according to TS 38.213 [3], where N_{RLM} is specified in Table 8.1C.1-2 according TS 38.213 [3], and meet the requirements as specified in clause 8.1C. UE is not required to meet the requirements in clause 8.1C if RLM-RS is not configured and no TCI state for PDCCH is activated.

Table 8.1C.1-2: Maximum number of RLM-RS resources N_{RLM}

Carrier frequency range of PCell	L_{max}	Maximum number of RLM-RS resources, N_{RLM}
FR1, ≤ 3 GHz ^{Note}	4	2
FR1, > 3 GHz ^{Note}	8	4
NOTE: For unpaired spectrum operation with Case C - 30 kHz SCS, 3GHz is replaced by 1.88GHz, as specified in clause 4.1 in TS 38.213 [3].		

8.1C.2 Requirements for SSB based radio link monitoring

8.1C.2.1 Introduction

The requirements in this clause apply for each SSB based RLM-RS resource configured for PCell, provided that the SSB configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1C.2.2.

Table 8.1C.2.1-1: PDCCH transmission parameters for out-of-sync evaluation

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	4dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size

REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

Table 8.1C.2.1-2: PDCCH transmission parameters for in-sync evaluation

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	4
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.1C.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_SSB}}$ [ms] period becomes worse than the threshold $Q_{\text{out_SSB}}$ within $T_{\text{Evaluate_out_SSB}}$ [ms] evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_SSB}}$ [ms] period becomes better than the threshold $Q_{\text{in_SSB}}$ within $T_{\text{Evaluate_in_SSB}}$ [ms] evaluation period.

$T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ are defined in Table 8.1C.2.2-1 for FR1.

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise
- T_{L1} is periodicity of the target RLM-RS
- $P_{\text{sharing factor}} = 3$.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

Table 8.1C.2.2-1: Evaluation period $T_{\text{Evaluate_out_SSB}}$ and $T_{\text{Evaluate_in_SSB}}$ for FR1

Configuration	$T_{\text{Evaluate_out_SSB}}$ (ms)	$T_{\text{Evaluate_in_SSB}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(10 \times P) \times T_{\text{SSB}})$	$\text{Max}(100, \text{Ceil}(5 \times P) \times T_{\text{SSB}})$
DRX cycle ≤ 320 ms	$\text{Max}(200, \text{Ceil}(15 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(100, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(10 \times P) \times T_{\text{DRX}}$	$\text{Ceil}(5 \times P) \times T_{\text{DRX}}$
NOTE: T_{SSB} is the periodicity of the SSB configured for RLM. T_{DRX} is the DRX cycle length.		

8.1C.2.3 Measurement restrictions for SSB based RLM

The UE is required to be capable of measuring SSB for RLM without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB for RLM is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for RLM without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for RLM without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for RLM and CSI-RS. Longer measurement period for SSB based RLM is expected, and no requirements are defined.

8.1C.3 Requirements for CSI-RS based radio link monitoring

8.1C.3.1 Introduction

The requirements in this clause apply for each CSI-RS based RLM-RS resource configured for PCell, provided that the CSI-RS configured for RLM is actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.1C.3.2. UE is not expected to perform radio link monitoring measurements on the CSI-RS configured as RLM-RS if the CSI-RS is not in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.1C.3.1-1: PDCCH transmission parameters for out-of-sync evaluation

Attribute	Value for BLER Configuration #0
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	4dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	4dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6

CP length	Normal
Mapping from REG to CCE	Distributed

Table 8.1C.3.1-2: PDCCH transmission parameters for in-sync evaluation

Attribute	Value for BLER Configuration #0
DCI payload size	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	4
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.1C.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_out_CSI-RS}}$ ms period becomes worse than the threshold $Q_{\text{out_CSI-RS}}$ within $T_{\text{Evaluate_out_CSI-RS}}$ ms evaluation period.

UE shall be able to evaluate whether the downlink radio link quality on the configured RLM-RS resource estimated over the last $T_{\text{Evaluate_in_CSI-RS}}$ ms period becomes better than the threshold $Q_{\text{in_CSI-RS}}$ within $T_{\text{Evaluate_in_CSI-RS}}$ ms evaluation period.

- $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ are defined in Table 8.1C.3.2-1 for FR1.

The requirements of $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ apply provided that the CSI-RS for RLM is not in a resource set configured with repetition ON. The requirements do not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for RLM and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise

- T_{L1} is periodicity of the target RLM-RS
- $P_{\text{sharing factor}} = 3$.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

The values of M_{out} and M_{in} used in Table 8.1C.3.2-1 are defined as:

- $M_{\text{out}} = 20$ and $M_{\text{in}} = 10$, if the CSI-RS resource configured for RLM is transmitted with higher layer CSI-RS parameter *density* [6, clause 7.4.1] set to 3 and over the bandwidth ≥ 24 PRBs.

Table 8.1C.3.2-1: Evaluation period $T_{\text{Evaluate_out_CSI-RS}}$ and $T_{\text{Evaluate_in_CSI-RS}}$ for FR1

Configuration	$T_{\text{Evaluate_out_CSI-RS}}$ (ms)	$T_{\text{Evaluate_in_CSI-RS}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(M_{\text{out}} \times P) \times T_{\text{CSI-RS}})$	$\text{Max}(100, \text{Ceil}(M_{\text{in}} \times P) \times T_{\text{CSI-RS}})$
$\text{DRX} \leq 320\text{ms}$	$\text{Max}(200, \text{Ceil}(1.5 \times M_{\text{out}} \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$	$\text{Max}(100, \text{Ceil}(1.5 \times M_{\text{in}} \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
$\text{DRX} > 320\text{ms}$	$\text{Ceil}(M_{\text{out}} \times P) \times T_{\text{DRX}}$	$\text{Ceil}(M_{\text{in}} \times P) \times T_{\text{DRX}}$
NOTE: $T_{\text{CSI-RS}}$ is the periodicity of the CSI-RS resource configured for RLM. The requirements in this table apply for $T_{\text{CSI-RS}}$ equal to 5 ms, 10ms, 20 ms or 40 ms. T_{DRX} is the DRX cycle length.		

8.1C.3.3 Measurement restrictions for CSI-RS based RLM

The UE is required to be capable of measuring CSI-RS for RLM without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following clauses.

For FR1, when the CSI-RS for RLM is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for RLM in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD, or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for RLM, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS for RLM measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for RLM and SSB. Longer measurement period for CSI-RS based RLM is expected, and no requirements are defined.

For FR1, when the CSI-RS for RLM is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for RLM without any restriction.

8.1C.4 Minimum requirement at transitions

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each RLM-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each RLM-RS resource. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of RLM resources to a second configuration of RLM resources that is different from the first configuration, for each RLM resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration

and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each RLM resource present in the second configuration. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

When the UE transitions from a first configuration of active TCI state of the CORESET to a second configuration of active TCI state of the CORESET, for each CSI-RS for RLM present in the second configuration, the UE shall use an evaluation period corresponding to the second configuration from the time of transition. This requirement shall be applied to both out-of-sync evaluation and in-sync evaluation of the monitored cell.

8.1C.5 Minimum requirement for UE turning off the transmitter

The transmitter power of the UE in the monitored cell shall be turned off within 40ms after expiry of T310 timer as specified in TS 38.331 [2].

8.1C.6 Minimum requirement for L1 indication

When the downlink radio link quality on all the configured RLM-RS resources is worse than Q_{out} , layer 1 of the UE shall send an out-of-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the out-of-sync indications as specified in TS 38.331 [2].

When the downlink radio link quality on at least one of the configured RLM-RS resources is better than Q_{in} , layer 1 of the UE shall send an in-sync indication for the cell to the higher layers. A layer 3 filter shall be applied to the in-sync indications as specified in TS 38.331 [2].

The out-of-sync and in-sync evaluations for the configured RLM-RS resources shall be performed as specified in clause 5 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{Indication_interval}$.

When DRX is not used $T_{Indication_interval}$ is $\max(10\text{ms}, T_{RLM-RS,M})$, where $T_{RLM-RS,M}$ is the shortest periodicity of all configured RLM-RS resources for the monitored cell, which corresponds to T_{SSB} specified in clause 8.1C.2 if the RLM-RS resource is SSB, or T_{CSI-RS} specified in clause 8.1C.3 if the RLM-RS resource is CSI-RS.

In case DRX is used, $T_{Indication_interval}$ is $\text{Max}(10\text{ms}, 1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{RLM-RS,M})$ if DRX cycle_length is less than or equal to 320ms, and $T_{Indication_interval}$ is DRX_cycle_length if DRX cycle_length is greater than 320ms. Upon start of T310 timer as specified in TS 38.331 [2], the UE shall monitor the configured RLM-RS resources for recovery using the evaluation period and layer 1 indication interval corresponding to the no DRX mode until the expiry or stop of T310 timer.

8.1C.7 Scheduling availability of UE during radio link monitoring

When the reference signal to be measured for RLM has different subcarrier spacing than PDSCH/PDCCH, there are restrictions on the scheduling availability as described in the following clauses.

8.1C.7.1 Scheduling availability of UE performing radio link monitoring with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to radio link monitoring performed with a same subcarrier spacing as PDSCH/PDCCH on FR1.

8.1C.7.2 Scheduling availability of UE performing radio link monitoring with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to radio link monitoring based on SSB as RLM-RS. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to radio link monitoring based on SSB as RLM-RS.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for radio link monitoring.

8.2 Interruption

8.2.1 EN-DC Interruption

8.2.1.1 Introduction

This clause contains the requirements related to the interruptions on PSCell, and SCell, when

- E-UTRA PCell transitions between active and non-active during DRX, or
- E-UTRA PCell transitions from non-DRX to DRX, or
- E-UTRA SCell in MCG or SCell in SCG is added or released, or
- E-UTRA SCell in MCG or SCell(s) in SCG is activated or deactivated, or
- measurements on SCC with deactivated SCell in either E-UTRA MCG or NR SCG, or
- a supplementary UL carrier or an UL carrier is configured or de-configured, or
- UL/DL active BWP is switched on PSCell or SCell in SCG, or
- E-UTRA SCell in MCG or SCell(s) in SCG is directly activated and hibernated, or
- E-UTRA SCell in MCG is hibernated, or
- Multiple SCells in SCG are activated or deactivated, or
- SCell dormancy switches, or
- CQI/RRM measurement happens during SCell dormancy, or
- UE-specific CBW is changed on PSCell or SCell in SCG, or
- CGI reading of an NR neighbour cell with autonomous gaps, or
- CGI reading of an E-UTRA neighbour cell with autonomous gaps.
- NR SRS carrier based switching, or
- E-UTRA SRS carrier based switching, or
- NR SRS antenna port switching, or
- UE dynamic Tx switches between two uplink carriers, or
- SCell in SCG is activated based on aperiodic CSI-RS.

The requirements shall apply for E-UTRA-NR DC with an E-UTRA PCell.

This clause contains interruptions where victim cell is PSCell or SCell belonging to SCG. Requirements for interruptions requirements when the victim cell is E-UTRA PCell or E-UTRA SCell belonging to MCG are specified in TS 36.133 [15].

For a UE which does not support per-FR measurement gaps, interruptions to the PSCell or activated SCG SCells may be caused by EUTRA PCell, EUTRA SCells or SCells on any frequency range. For UE which support per-FR gaps, interruptions to the PSCell or activated SCG SCells may be caused by EUTRA PCell, EUTRA SCells or SCells on the same frequency range as the victim cell.

8.2.1.2 Requirements

8.2.1.2.1 Interruptions at transitions between active and non-active during DRX

Interruption on PSCell and the activated SCell if configured due to E-UTRA PCell transitions between active and non-active during DRX when PSCell or SCell is in non-DRX are allowed with up to 1% probability of missed ACK/NACK when the configured E-UTRA PCell DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured E-UTRA PCell DRX cycle is 640 ms or longer. Each interruption shall not exceed X slot as defined in table 8.2.1.2.1-1.

Table 8.2.1.2.1-1: Interruption length X at transition between active and non-active during DRX

μ	NR Slot length (ms)	Interruption length X (slots)	
		Sync	Async
0	1	1	2
1	0.5	1	2
2	0.25	3	
3	0.125	5	

When both E-UTRA PCell and PSCell are in DRX, no interruption is allowed.

8.2.1.2.2 Interruptions at transitions from non-DRX to DRX

Interruption on PSCell and the activated SCell if configured due to E-UTRA PCell transitions from non-DRX to DRX when PSCell or SCell is in non-DRX shall not exceed X slot as defined in table 8.2.1.2.1-1.

When PSCell and the activated SCell are in DRX, no interruption due to E-UTRA PCell transitions from non-DRX to DRX is allowed.

8.2.1.2.3 Interruptions at SCell addition/release

The requirements in this clause shall apply for the UE configured with PSCell.

When one E-UTRA SCell in MCG is added or released:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X1 slot, if the active serving cell is not in the same band as any of the E-UTRA SCells being added or released, or
 - of up to X1 slot, if the active serving cell is in the band overlapping or partially overlapping with the E-UTRA SCell being added or released and UE indicates it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
 - of up to $\max\{Y1 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$, if the active serving cells are in the same band or in the band overlapping or partially overlapping with the E-UTRA SCells being added or released, and UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being added or released are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in SCG;

Where X1 and Y1 are specified in Table 8.2.1.2.3-1.

When one SCell in SCG is added or released:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X1 slot, if the active serving cell and the SCell being added or released are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X1 slot, if the active serving cell and the SCell being added or released are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair

or

- of up to $Y1 \text{ slot} + T_{\text{SMTC_duration}}$ if the active serving cells are in the same band as any of the SCells being added or released, provided the cell specific reference signals from the active serving cells and the SCells being added or released are available in the same slot, where, $T_{\text{SMTC_duration}}$ is
 - the longest SMTC duration among all above active serving cells in SCG and the SCell being added when one SCell is added. If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being added, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being added is $x \text{ ms}$, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being added. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being added, $T_{\text{SMTC_duration}}$ for the SCell being added is 0 ms;
 - the longest SMTC duration among all above active serving cells in SCG when one SCell is released.

Where X1 and Y1 are specified in Table 8.2.1.2.3-2.

Table 8.2.1.2.3-1: Interruption length X1 and Y1 at E-UTRA SCell addition/Release

μ	NR Slot length (ms)	Interruption length X1 (slots)		Interruption length Y1 (slots)	
		Sync	Async	Sync	Async
0	1	1	2	1	2
1	0.5	2	3	2	3
2	0.25	5		4	5
3	0.125	9		N/A	- N/A

Table 8.2.1.2.3-2: Interruption length X1 and Y1 at SCell addition/Release

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)		Interruption length Y1 (slots)
0	1	1		1
1	0.5	2		2
2	0.25	Both aggressor cell and victim cell are on FR2	4	4
		Either aggressor cell or victim cell is on FR1	5	
3	0.125	Aggressor cell is on FR2	8	8
		Aggressor cell is on FR1	9	

8.2.1.2.4 Interruptions at SCell activation/deactivation

The requirements in this clause shall apply for the UE configured with PSCell and one SCell.

When one E-UTRA SCell in MCG is activated from deactivated or dormant state, or deactivated from activated or dormant state:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X2 slot, if the active serving cell is not in the same band as any of the E-UTRA SCells being activated or deactivated, or
 - of up to X2 slot, if the active serving cell is in the band overlapping or partially overlapping with the E-UTRA SCell being activated or deactivated and UE indicates it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
 - of up to $\max\{Y2 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$, if the active serving cells are in the same band or in the band overlapping or partially overlapping with the E-UTRA SCells being activated or deactivated, and UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell

specific reference signals from the active serving cells and the E-UTRA SCells being activated or deactivated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in SCG.

Where X2 and Y2 are specified in Table 8.2.1.2.4-1.

When one SCell in SCG is activated or deactivated:

- an interruption on any active serving cell in SCG:
 - of up to X2 slot, if the active serving cell and the SCell being activated or deactivated are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X2 slot, if the active serving cells and the SCells being activated or deactivated are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.

or

- of up to Y2 slot + $T_{\text{SMTC_duration}}$ if the active serving cells are in the same band as any of the SCells being activated or deactivated, provided the cell specific reference signals from the active serving cells and the SCells being activated or deactivated are available in the same slot, where, $T_{\text{SMTC_duration}}$ is
 - the longest SMTC duration among all above active serving cells in SCG and the SCell being activated when one SCell is activated. If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being activated is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being activated. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being activated, $T_{\text{SMTC_duration}}$ for the SCell being activated is 0ms;
 - the longest SMTC duration among all above active serving cells in SCG when one SCell is deactivated.

Where X2 and Y2 are specified in Table 8.2.1.2.4-2.

Table 8.2.1.2.4-1: Interruption length X2 and Y2 at E-UTRA SCell activation/deactivation

μ	NR Slot length (ms)	Interruption length X2 (slots)		Interruption length Y2 (slots)	
		Sync	Async	Sync	Async
0	1	1	2	1	2
1	0.5	1	2	1	2
2	0.25	3		2	3
3	0.125	5		N/A	N/A

Table 8.2.1.2.4-2: Interruption length X2 and Y2 at SCell activation/deactivation

μ	NR Slot length (ms) of victim cell	Interruption length X2 (slots)		Interruption length Y2 (slots)
0	1	1		1
1	0.5	1		1
2	0.25	Both aggressor cell and victim cell are on FR2	2	2
		Either aggressor cell or victim cell is on FR1	3	
3	0.125	Aggressor cell is on FR2	4	4
		Aggressor cell is on FR1	5	

8.2.1.2.5 Interruptions during measurements on SCC

8.2.1.2.5.1 Interruptions during measurements on deactivated NR SCC

Interruption on PSCell and other activated NR SCell(s) during measurement on the deactivated NR SCC shall meet requirements in clause 8.2.2.2.3, where the term PCell in clause 8.2.2.2.3 shall be deemed to be replaced with PSCell.

8.2.1.2.5.2 Interruptions during measurements on deactivated E-UTRAN SCC

When one E-UTRA SCell in MCG is deactivated, the UE is allowed due to measurements on the E-UTRA SCC with the deactivated E-UTRA SCell:

- an interruption on PSCell or any activated SCell with up to 0.5% probability of missed ACK/NACK when any of the configured *measCycleSCell* [15] for the deactivated E-UTRA SCells is 640 ms or longer.
- an interruption on PSCell or any activated SCell with up to 0.5% probability of missed ACK/NACK regardless of the configured *measCycleSCell* [15] for the deactivated E-UTRA SCells if indicated by the network using IE *allowInterruptions* [15].

Each interruption shall not exceed

- X3 slot, if the PSCell or activated SCell is not in the same band as the E-UTRA deactivated SCC being measured, or
- X3 slot, if the PSCell or activated SCell is in the band overlapping or partially overlapping with the E-UTRA deactivated SCC being measured, and UE indicates it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
- Y3 slot + SMTC duration, if the PSCell or activated SCell is in the same band or in the band overlapping or partially overlapping with the E-UTRA deactivated SCC being measured, and UE does not indicate it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals from the PSCell or activated SCell and the E-UTRA deactivated SCC being measured are available in the same slot.

Table 8.2.1.2.5.2-1: Interruption length X3 and Y3 at measurements on deactivated E-UTRA SCC

μ	NR Slot length (ms)	Interruption length X3 (slots)		Interruption length Y3 (slots)	
		Sync	Async	Sync	Async
0	1	1	2	1	2
1	0.5	1	2	1	2
2	0.25	3		2	3
3	0.125	5		N/A	N/A

8.2.1.2.5.3 Interruptions during CQI measurements on dormant E-UTRAN SCell

When one E-UTRA SCell in MCG is dormant, the UE is allowed due to CQI measurements on the dormant E-UTRA SCell:

- an interruption on PSCell or any activated SCell with up to 0.5% probability of missed ACK/NACK.

Each interruption shall not exceed

- X3 slot, if the PSCell or activated SCell is not in the same band as the E-UTRA dormant SCell being measured, or
- X3 slot, if the PSCell or activated SCell is in the band overlapping or partially overlapping with the E-UTRA dormant SCC being measured, and UE indicates it is capable of *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
- Y3 slot + SMTC duration, if the PSCell or activated SCell is in the same band or in the band overlapping or partially overlapping with the E-UTRA dormant SCell being measured, and UE does not report *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals

from the PSCell or activated SCell and the E-UTRA dormant SCell being measured are available in the same slot.

Where X3 and Y3 are defined in Table 8.2.1.2.5.2-1.

8.2.1.2.5.4 Interruptions during RRM measurements on dormant E-UTRAN SCC

When one E-UTRA SCell in MCG is dormant, the UE is allowed due to RRM measurements on the E-UTRA SCC with the dormant E-UTRA SCell:

- an interruption on PSCell or any activated SCell with up to 0.5% probability of missed ACK/NACK.

Each interruption shall not exceed

- X3 slot, if the PSCell or activated SCell is not in the same band as the E-UTRA dormant SCC being measured, or
- X3 slot, if the PSCell or activated SCell is in the band overlapping or partially overlapping with the E-UTRA dormant SCC being measured and UE reports *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
- Y3 slot + SMTC duration, if the PSCell or activated SCell is in the same band or in the band overlapping or partially overlapping with the E-UTRA dormant SCC being measured, and UE does not report *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals from the PSCell or activated SCell and the E-UTRA dormant SCC being measured are available in the same slot.

Where X3 and Y3 are defined in Table 8.2.1.2.5.2-1.

8.2.1.2.6 Interruptions at UL carrier RRC reconfiguration

The requirements in this clause shall apply when a supplementary UL carrier or an UL carrier is configured or de-configured in NR non-standalone operation as defined in TS 38.331 [2].

When an UL carrier or supplementary UL carrier is configured or de-configured, an interruption of up to X4 slot, is allowed during the RRC reconfiguration procedure [2] on E-UTRA PCell, all activated E-UTRA SCells, PSCell and all activated SCells within the same FR as the reconfigured uplink carrier. The interruption is for both uplink and downlink of E-UTRA PCell, all activated E-UTRA SCells, PSCell and all activated SCells within the same FR as the configured or de-configured UL.

Table 8.2.1.2.6-1: Interruption length X4 at UL carrier RRC reconfiguration

μ	NR Slot length (ms)	Interruption length X4 (slots)	
		Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	
3	0.125	9	

8.2.1.2.7 Interruptions due to Active BWP switching Requirement

The requirements for DCI-based BWP switch, timer-based BWP switch or UL BWP switch triggered by consistent uplink CCA failures in this clause apply to the case that the BWP switch is performed on a single CC or multiple CCs.

When either of the DCI-based, timer-based or RRC-based downlink BWP switch and/or uplink BWP switch occur on multiple CCs simultaneously or over partially overlapping period, the interruption requirements described in this clause apply for each BWP switch.

When UE receives a DCI indicating UE to switch its active BWP involving changes in any of the parameters listed in Table 8.2.1.2.7-2, the UE is allowed to cause interruption of up to X slot to other active serving cells if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.1.2.7-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 8.2.1.2.7-1. The starting time of interruption is only allowed within the BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2 when BWP switch occurs on a single CC. The starting time of interruption caused by each BWP switch is only allowed within the BWP switch delay $T_{\text{MultipleBWPswitchDelay}} + Y$ as defined in clause 8.6.2A.1 when BWP switch occurs on multiple CCs. Interruptions are not allowed during BWP switch involving any other parameter change.

When a BWP timer *bwp-InactivityTimer* defined in TS 38.331 [2] expires, UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active BWP involving changes in any of the parameters listed in Table 8.2.1.2.7-2 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.1.2.7-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 8.2.1.2.7-1. The starting time of interruption is only allowed within the BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2 when BWP switch occurs on a single CC. The starting time of interruption caused by each BWP switch is only allowed within the BWP switch delay $T_{\text{MultipleBWPswitchDelay}}$ as defined in clause 8.6.2B.1 when BWP switch occurs on multiple CCs simultaneously or $T_{\text{MultipleBWPswitchDelayTotal}}$ as defined in clause 8.6.2B.2 when BWP switch occurs on multiple CCs over partially overlapping time period. Interruptions are not allowed during BWP switch involving any other parameter change.

When UE receives an RRC reconfiguration that only requests UE to switch its active BWP on one single CC, the UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active BWP involving changes in any of the parameters listed in Table 8.2.1.2.7-2 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.1.2.7-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 8.2.1.2.7-1. The interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}$ defined in clause 8.6.3 when BWP switch occurs on a single CC. The interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}} + D_{\text{RRC}} \cdot (N-1)$ as defined in clause 8.6.3A when BWP switch occurs on multiple CCs.

When UL BWP switch is triggered by consistent uplink CCA failures [7], the UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active UL BWP involving changes in any of the parameters listed in Table 8.2.1.2.7-2 if the UE is not capable of per-FR gap, or if the UL BWP switching involves SCS changing. When the UL BWP switch imposes changes in any of the parameters listed in Table 8.2.1.2.7-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing UL BWP switching. X is defined in Table 8.2.1.2.7-1. The starting time of interruption is only allowed within the UL BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2. Interruptions are not allowed during UL BWP switch involving other parameter change.

8.2.1.2.8 Interruptions at direct SCell activation and hibernation

8.2.1.2.8.1 Interruptions during direct SCell activation and hibernation of E-UTRA SCell

When one E-UTRA SCell in MCG is directly activated and hibernated:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X1 slots, if the active serving cell is not in the same band as any of the E-UTRA SCells being directly activated or hibernated, or
 - of up to X1 slots, if the active serving cell is in the band overlapping or partially overlapping with any of the E-UTRA SCells being directly activated or hibernated and UE reports *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
 - of up to $\max\{Y1 \text{ slots} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band or in the band overlapping or partially overlapping with any of the E-UTRA SCells being directly activated or hibernated, and UE does not report *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being directly activated or hibernated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in MCG Where X1 and Y1 are specified in Table 8.2.1.2.3-1.

8.2.1.2.8.2 Interruptions during direct SCell activation

When one or multiple SCell(s) in SCG are directly activated at SCell addition:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X1 slot, if the active serving cell is not in the same band as the SCell being directly activated, or
 - of up to $\max\{Y1 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as the SCell being directly activated, provided the cell specific reference signals from the active serving cells and the SCell being directly activated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in SCG.

Where X1 and Y1 are specified in Table 8.2.1.2.3-2.

8.2.1.2.9 Interruptions at SCell hibernation

When one E-UTRA SCell in MCG is hibernated:

- the UE is allowed an interruption on any active serving cell in SCG:
 - of up to X2 slots, if the active serving cell is not in the same band as any of the E-UTRA SCells being hibernated, or
 - of up to X2 slots, if the active serving cell is in the band overlapping or partially overlapping with any of the E-UTRA SCells being hibernated and UE reports *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, or
 - of up to $\max\{Y2 \text{ slots} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band or in the same band overlapping or partially overlapping with any of the E-UTRA SCells being hibernated, and UE does not report *interBandMRDC-WithOverlapDL-Bands-r16* on this band pair, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being hibernated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in MCG.

Where X2 and Y2 are specified in Table 8.2.1.2.4-1.

8.2.1.2.10 Interruptions at SCell activation/deactivation with multiple downlink SCells

The requirements in this clause shall apply for the UE configured with PSCell and up to 6 downlink SCell(s).

When multiple SCells in SCG are activated or deactivated by one single MAC CE command:

- an interruption on any serving cell in SCG is specified as in clause 8.2.1.2.4.

8.2.1.2.11 Interruptions due to UE-specific CBW change

When UE receives an RRC reconfiguration that changes *offsetToCarrier* or *carrierBandwidth*, the UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its CBW. X is defined in Table 8.2.1.2.11-1. The interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{CBWchangeDelayRRC}}$ defined in clause 8.7.

Table 8.2.1.2.11-1: interruption length X

μ	NR Slot length (ms)	Interruption length X (slots)
0	1	1
1	0.5	1
2	0.25	3
3	0.125	5

8.2.1.2.12 Interruptions at NR SRS carrier based switching

SRS transmission can be configured on a carrier not configured for PUCCH/PUSCH transmission. When a UE needs to transmit periodic, semi-persistent or aperiodic SRS on a carrier of a serving cell not configured for PUCCH/PUSCH transmission, the UE can perform carrier based switching to one or more carriers not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission or from a carrier not configured for PUCCH/PUSCH transmission prior to transmitting SRS, provided that:

- switching is from a configured carrier to an active UL BWP of another activated carrier;
- the carrier of SCells not configured for PUCCH/PUSCH transmission to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission, or indicated by MAC-CE for semi-persistent SRS transmission, or configured via RRC for periodic SRS transmission;
- the serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by srs-SwitchFromServCellIndex and srs-SwitchFromCarrier in TS38.331 [2];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS 38.214 [26].
- the SRS switching is not colliding with any SSB/CSI-RS based L3 measurements and the measurements for RLM/BFD in SCG.
- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 38.331 [2], and is compliant to the requirements for inter-band CA with uplink in one NR band and without simultaneous Rx/Tx specified in TS 38.101-3 [20], the SRS transmission are not simultaneously scheduled with DL SSB/CSI-RS for L3 or L1 measurements transmission on other carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR1 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.1.2.12-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR2 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.1.2.12-2.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR1 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.1.2.12-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR2 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.1.2.12-2.

Table 8.2.1.2.12-1: Interruption length X1 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note 1}	Interruption length X1 (slots)	
			Sub carrier spacing for agressor cell (kHz)	
			15	30

		300, 500	5	4
		900	7	6
3	0.125	≤ 200	7	5
		300, 500	9	7
		900	12	10
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .				

Table 8.2.1.2.12-2: Interruption length X2 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note}	Interruption length X2 (slots)	
			Sub carrier spacing for aggressor cell (kHz)	
			60	120
0	1	≤ 200	2	2
1	0.5	≤ 200	2	2
2	0.25	≤ 200	3	3
3	0.125	≤ 200	4	4
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .				

For intra-band SRS carrier switching in FR1 or FR2, interruptions in Table 8.2.1.2.12-1 and in Table 8.2.1.2.12-2 based on SRS carrier switching time $\leq 200\mu\text{s}$ shall apply. For inter-band SRS carrier switching in FR1, interruptions in Table 8.2.1.2.12-1 and in Table 8.2.1.2.12-2 shall apply.

8.2.1.2.13 Interruptions at E-UTRA SRS carrier based switching

A PUSCH-less carrier of E-UTRA SCell is a TDD carrier without PUCCH/PUSCH configured. When a UE needs to transmit periodic or aperiodic SRS [23] and/or non-contention based PRACH on a PUSCH-less carrier of E-UTRA SCell, the UE can perform carrier based switching to one or more PUSCH-less carrier of E-UTRA SCells from a E-UTRA carrier with PUSCH or from another PUSCH-less E-UTRA carrier of SCell prior to transmitting SRS and/or PRACH, provided that:

- switching is from a configured E-UTRA carrier to another activated TDD E-UTRA carrier;
- the PUSCH-less carrier of E-UTRA SCells to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission or configured via RRC [15] for periodic SRS transmission;
- the E-UTRA serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by *srs-SwitchFromServCellIndex* [15];

- the SRS switching is not colliding with any other transmission with higher priority defined in TS36.213 [26];
- the SRS switching is not colliding with PDCCH in subframe 0 and 5 as specified in TS36.213 [26];
- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 36.331 [2], and is compliant to the requirements for inter-band CA with uplink in one E-UTRA band and without simultaneous Rx/Tx specified in TS 36.101 [25], the SRS or RACH transmission are not simultaneously scheduled with DL subframe #0 or DL subframe #5 on other E-UTRA carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between E-UTRA carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR1 if UE is capable of Per-FR gap, during the switching to the PUSCH-less carrier of a serving cell,

- with up to X3 slot as specified in Table 8.2.1.2.13-1.

When SRS carrier based switching is performed between E-UTRA carriers, the UE is allowed interruptions on any active serving cell in SCG if UE is not capable of Per-FR gap, or on active serving cell(s) in SCG in FR1 if UE is capable of Per-FR gap, during the switching from the PUSCH-less carrier of a serving cell,

- with up to X3 slot as specified in Table 8.2.1.2.13-1

Table 8.2.1.2.13-1: Interruption length X3 (slot)

μ	NR Slot length (ms)	Interruption length X3 (slots)
0	1	2
1	0.5	3
2	0.25	5
3	0.125	9

8.2.1.2.14 DL Interruptions at switching between two uplink carriers

The DL interruption requirements at dynamic switching between two uplink carriers specified in this clause are applicable for an uplink band pair of an inter-band EN-DC configuration when the capability *uplinkTxSwitchingPeriod* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [26], where E-UTRA UL carrier is capable of one transmit antenna connector and NR UL carrier is capable of two transmit antenna connectors, and the two uplink carriers are in different bands with different carrier frequencies.

When dynamic switching between two uplink carriers is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [2]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in NR carrier. The DL interruption lengths of X for NR carrier(s) are defined in Table 8.2.1.2.14-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band EN-DC configurations as specified in clause 5.5B.4 of TS 38.101-3 [20].

Table 8.2.1.2.14-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers

μ	NR Slot length (ms)	Uplink Tx switching period Note1	
		35us	140us
0	1	2	3
1	0.5	3	6
2	0.25	4	10
Note 1: Uplink Tx switching period depends on UE capability <i>uplinkTxSwitchingPeriod</i> .			

8.2.1.2.15 Interruptions due to SCell dormancy

8.2.1.2.15.1 Interruptions due to SCell dormancy switch

When one SCell in SCG is switched from dormancy to non-dormancy or from non-dormancy to dormancy [7] when UE is in DRX active time,

- the UE is allowed an interruption on active serving cell in SCG as defined in clause 8.2.1.2.7, except that the interruption is allowed regardless of which parameters change between the dormant BWP and the non-dormant BWP
- The starting time of interruption shall be within the dormancy switching delay as defined in clause 8.6.2.

When multiple SCells in SCG are switched from dormancy to non-dormancy or vice versa when the UE is in DRX active time, the interruption requirement described above applies for each BWP switch.

8.2.1.2.15.2 Interruptions due to CQI measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of CQI measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements on dormant SCells shall not exceed 0.5%.

8.2.1.2.15.3 Interruptions due to RRM measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of RRM measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements on dormant SCells shall not exceed 1.0%.

8.2.1.2.16 Interruptions when identifying CGI of an NR cell with autonomous gaps

When a UE is identifying CGI of an NR cell with autonomous gaps, the UE is allowed interruptions on PSCell or any activated SCell:

- with up to K1 interruptions with interrupted slots up to interruption length X1 specified in Table 8.2.1.2.16-1 for each interruption during MIB decoding time period T_{MIB} (ms) specified in clause 9.11.
- with up to L1 interruptions with interrupted slots up to interruption length Y1 specified in Table 8.2.1.2.16-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 1.
- with up to L2 interruptions with interrupted slots up to interruption length Y2 specified in Table 8.2.1.2.16-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 2 and 3.

Where:

- $K1 = 6$ for the target cell carrier frequency on FR1 and $K1 = 25$ for the target cell carrier frequency on FR2, and
- $L1 = T_{\text{SIB1}}/20$, and
- $L2 = T_{\text{SIB1}}/T_{\text{SMTc}}$, where T_{SMTc} is the periodicity of the SMTc occasion configured for the target cell carrier.

Table 8.2.1.2.16-1: Interruption length X1, Y1 and Y2 during measurements with autonomous gaps

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	Interruption length Y1 (slots)	Interruption length Y2 (slots)
0	1	6	7	6
1	0.5	12	13	10
2	0.25	24	25	19

3	0.125	48	49	37
---	-------	----	----	----

8.2.1.2.17 Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps

When a UE is identifying CGI of an E-UTRA FDD cell or E-UTRA TDD cell with autonomous gaps, within time period

- $T_{\text{identify_CGI, intra}}$ specified in clause 8.1.2.2.3, or clause 8.1.2.2.4 in TS 36.133 [15], or
- $T_{\text{identify_CGI, inter}}$ specified in clause 8.1.2.3.5, or clause 8.1.2.3.6, or clause 8.1.2.3.7, or clause 8.1.2.3.6 in TS 36.133 [15], or
- $T_{\text{identify_CGI, E-UTRA}}$ specified in clause 9.4.7.1

the UE shall be able to transmit at least the number of ACK/NACKs specified in Table 8.2.1.2.17-1 on PSCell or any activated SCell in the frequency range where autonomous gaps are used, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured.

Table 8.2.1.2.17-1: Minimum number of ACK/NACKs transmitted by the UE

Minimum number of transmitted ACK/NACKs	Configuration of the serving cell in which the transmitted ACK/NACKs are counted	
	Duplex mode configuration	SCS
84	FDD	15 kHz
193	FDD	30 kHz
402	FDD	60 kHz
28	TDD ^{Note 1}	15 kHz
81	TDD ^{Note 1}	30 kHz
159	TDD ^{Note 1}	60 kHz
233	TDD ^{Note 2}	60 kHz
491	TDD ^{Note 2}	120 kHz
NOTE 1: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-1 [18].		
NOTE 2: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-2 [19].		

8.2.1.2.18 Interruptions at NR SRS antenna port switching

The requirements in this clause are applicable to SRS antenna port switching on FR1 and SRS resource(s) is only configured within the last 6 symbols of a slot. For interruption caused by SRS antenna port switching, the victim cell is based on the entry number of the band indicated by *txSwitchImpactToRx* and/or *txSwitchWithAnotherBand* regardless of per-FR MG capability. An UL interruption is allowed on any of the serving cells as indicated in *txSwitchWithAnotherBand*, and a DL interruption is allowed on any of the serving cells as indicated in *txSwitchImpactToRx*.

The UE shall perform SRS antenna port switching only if the below conditions are met.

- the SRS switching is not colliding with any other UL transmission with higher priority defined in TS 38.214 [26] if the serving cell on which the higher priority transmission is performed is a victim cell based on *txSwitchWithAnotherBand* or is the same carrier on which SRS is transmitted.
- the SRS switching is not colliding with any NR measurements (i.e. SSB/CSI-RS based L1/L3 measurements) and the measurements for RLM/BFD/CBD if the serving cell on which the NR measurements and the

measurements for RLM/BFD/CBD is performed is a victim cell based on *txSwitchImpactToRx* or is the same carrier on which SRS is transmitted.

No requirements are defined for SRS antenna port switching if aperiodic SRS switching is colliding with aperiodic L1-RSRP/L1-SINR measurements and the serving cell on which the aperiodic L1-RSRP/L1-SINR measurement is configured is indicated in *txSwitchImpactToRx* or is the same carrier on which aperiodic SRS is scheduled/configured.

No requirements apply when SRS antenna port switching is colliding with E-UTRA measurement if the carrier on which the E-UTRA measurement is performed is indicated in *txSwitchImpactToRx* or is the same carrier on which SRS is scheduled/configured. When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are synchronized, the interruption requirement in Table 8.2.1.2.18-1 applies.

When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are asynchronized, the interruption requirement in Table 8.2.1.2.18-2 applies. For the rest of SRS configurations, the interruption requirement in Table 8.2.1.2.18-3 applies.

Table 8.2.1.2.18-1: Interruption length in symbols of victim CC when 1 SRS symbol is configured, and aggressor and victim cells are synchronized

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	3	2	2
30	4	3	3
60	8	6	5
120	14	10	8

60	3	2	2
120	5	3	3

8.2.1.2.19 Interruptions at fast SCell activation

The requirements in this clause shall apply for the UE configured with PSCell and one SCell when aperiodic CSI-RS resources is configured for fast SCell activation.

When one SCell in SCG configured with aperiodic CSI-RS resources is configured for fast SCell activation is activated from deactivated, the UE is allowed:

- an interruption on any serving cell in SCG:
- of up to X2 slot, if the active serving cell and the SCell being activated are in a FR1 band pair or in a FR1+FR2 band pair.
- of up to X2 slot, if the active serving cells and the SCells being activated are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.

or

- of up to Y2 slot + $T_{\text{ATRS_duration}}$ if the active serving cells are in the same band as any of the SCells being activated, when
- SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is larger than 2400ms, or
- SCell is unknown and belongs to FR1, and SCell is contiguous to an active serving cell in the same band

or

- of up to Y2 slot if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is equal to or smaller than 2400ms, or
- SCell to be activated belongs to FR2

Where:

- $T_{\text{ATRS_duration}}$ is CSI-RS burst for SCell activation where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots on the being activated SCell.
- X2 and Y2 are specified in Table 8.2.1.2.4-2.

8.2.1.2.20 Interruptions due to PUCCH SCell activation/deactivation

When one SCell in SCG configured with PUCCH is activated or deactivated,

The UE is allowed an interruption on active serving cell in SCG as defined in clause 8.2.1.2.4.

- The starting time of interruption shall be within the delay as defined in clause 8.3.12.
- For inter-band CA, if the UE is not capable of *parallelTxPRACH-SRS-PUCCH-PUSCH*, additional interruption is allowed on SRS/PUCCH/PUSCH of active serving cells when colliding with RACH transmission on PUCCH SCell. . Interruption occurs on the symbols containing SRS/PUCCH/PUSCH, which overlap with the duration of the PRACH preamble [3] transmitted on the PUCCH SCell.

8.2.2 SA: Interruptions with Standalone NR Carrier Aggregation

8.2.2.1 Introduction

This clause contains the requirements related to the interruptions on PCell and activated SCell if configured, when

up to 7 SCells are configured, de-configured, activated or deactivated, or

a supplementary UL carrier or an UL carrier is configured or de-configured, or

measurements on SCC with deactivated SCell in NR SCG, or

UL/DL BWP is switched on PCell or SCell, or

CGI reading of an NR neighbour cell with autonomous gaps, or

CGI reading of an E-UTRA neighbour cell with autonomous gaps.

UE-specific CBW is changed on PCell or SCell, or

NR SRS carrier based switching, or

NR SRS antenna port switching, or

UE dynamic Tx switches between two uplink carriers, or
SCell is activated based on aperiodic CSI-RS.

Note: interruptions at SCell addition/release, activation/deactivation and during measurements on SCC may not be required by all UEs.

The interruptions shall not interrupt RRC signalling or ACK/NACKs related to RRC reconfiguration procedure according to TS38.331 [2] for SCell addition/release or MAC control signalling according to TS37.340 [17] for SCell activation/deactivation command.

This clause additionally contains requirements related to interruptions at inter-frequency SFTD between PCell in FR1 and neighbour cell in FR2.

For a UE which does not support per-FR measurement gap, interruptions to the PCell and activated SCell may be caused by SCells on any frequency range. For a UE which supports per-FR gaps, interruptions to PCell and activated SCell may be caused by SCells on the same frequency range as the victim cell.

In addition to standalone NR carrier aggregation when no CCA is configured, the requirements in clause 8.2.2. and all subclauses of 8.2.2 apply when the UE is configured with

- A PCell not using CCA in downlink and one or more SCells using CCA in downlink or
- A PCell and one or more SCells using CCA in downlink

8.2.2.2 Requirements

8.2.2.2.1 Interruptions at SCell addition/release

When any number of SCells between one and 7 is added or released using the same *RRCConnectionReconfiguration* message as defined in TS 38.331 [2], the UE is allowed an interruption on any active serving cell during the RRC reconfiguration procedure as follows:

- an interruption on any active serving cell:
 - of up to X1 slot, if the active serving cell and the SCell being added or released are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X1 slot, if the active serving cell and the SCell being added or released are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.

Where X1 is specified in Table 8.2.2.2.1-1.

or

- of up to the duration shown in table 8.2.2.2.1-2, if the active serving cells are in the same band as any of the SCells being added or released, provided the cell specific reference signals from the active serving cells and the SCells being added or released are available in the same slot.

Table 8.2.2.2.1-1: Interruption length X1 for SCell addition/release for inter-band CA

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	
0	1	1	
1	0.5	2	
2	0.25	Both aggressor cell and victim cell are on FR2	4
		Either aggressor cell or victim cell is on FR1	5
3	0.125	Aggressor cell is on FR2	8
		Aggressor cell is on FR1	9
5	0.03125	Aggressor cell is on FR1	33
6	0.015625	Aggressor cell is on FR1	65

Table 8.2.2.2.1-2: Interruption duration for SCell addition/release for intra-band CA

μ	NR Slot length (ms)	Interruption length (slots)
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
1	0.5	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
3	0.125	$8 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
5	0.03125	$32 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
6	0.015625	$64 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
NOTE 1: $T_{\text{SMTC_duration}}$ measured in subframes is - the longest SMTC duration among all above active serving cells and the SCell being added when one SCell is added. If SSB configuration (<i>absoluteFrequencySSB</i>) but no SMTC configuration is provided for the SCell being added, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being added is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being added. If no SSB configuration (<i>absoluteFrequencySSB</i>) nor SMTC configuration is provided for the SCell being added, $T_{\text{SMTC_duration}}$ for the SCell being added is 0ms; - the longest SMTC duration among all active serving cells in the same band when one SCell is released. NOTE 2: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].		

8.2.2.2.2 Interruptions at SCell activation/deactivation

When an SCell is activated or deactivated as defined in TS 37.340 [17], the UE is allowed

- an interruption on any active serving cell:
 - of up to X2 slot, if the active serving cell and the SCell being activated or deactivated are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X2 slot, if the active serving cell and the SCell being activated or deactivated are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.

Where X2 is specified in Table 8.2.2.2.2-1.

or

- of up to the duration shown in table 8.2.2.2.2-2, if the active serving cells are in the same band as any of the SCells being activated or deactivated provided the cell specific reference signals from the active serving cells and the SCells being activated or deactivated are available in the same slot.

Table 8.2.2.2.2-1: Interruption length X2 for SCell activation/deactivation for inter-band CA

μ	NR Slot length (ms) of victim cell	Interruption length X2 (slots)	
0	1		1
1	0.5		1
2	0.25	Both aggressor cell and victim cell are on FR2	2

		Either aggressor cell or victim cell is on FR1	3
3	0.125	Aggressor cell is on FR2	4
		Aggressor cell is on FR1	5
5	0.03125	Aggressor cell is on FR1	17
6	0.015625	Aggressor cell is on FR1	33

Table 8.2.2.2-2: Interruption duration for SCell activation/deactivation for intra-band CA

μ	NR Slot length (ms)	Interruption length (slots)
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
1	0.5	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
3	0.125	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
5	0.03125	$16 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
6	0.015625	$32 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
NOTE 1: $T_{\text{SMTC_duration}}$ measured in subframes is - the longest SMTC duration among all above active serving cells and the SCell being activated when one SCell is activated. If SSB configuration (<i>absoluteFrequencySSB</i>) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being activated is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being activated. If no SSB configuration (<i>absoluteFrequencySSB</i>) nor SMTC configuration is provided for the SCell being activated, $T_{\text{SMTC_duration}}$ for the SCell being activated is 0ms; - the longest SMTC duration among all active serving cells in the same band when one SCell is deactivated. NOTE 2: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].		

8.2.2.2.3 Interruptions during measurements on deactivated SCC

Interruptions on PCell or activated SCell(s) due to measurements when an SCell is deactivated are allowed with up to 0.5% probability of missed ACK/NACK when the configured *measCycleSCell* [2] is 640 ms or longer.

- If the PCell or activated SCell(s) is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on PCell or activated SCell(s) immediately before and immediately after an SMTC. Each interruption shall not exceed requirement in Table 8.2.2.2-1.

If the PCell or activated SCell(s) is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell or activated SCell(s) no earlier than X slots before $T_{\text{SMTC_duration}}$ and no later than X slots after $T_{\text{SMTC_duration}}$, provided the cell specific reference signals from the active serving cells and the deactivated SCell are available in the same slot, where X and $T_{\text{SMTC_duration}}$ are given by Table 8.2.2.2.3-1. The interruption shall not exceed requirements in Table 8.2.2.2.3-1.

The interruption requirements in Table 8.2.2.2.3-1 are not applicable when a UE is configured with NCSG in the same frequency range as the SCell unless the SMTC on the deactivated SCC is fully non-overlapped with NCSG.

Table 8.2.2.2.3-1: Interruption duration for measurement on deactivated SCell for intra-band CA

μ	NR Slot length (ms)	X (slots)	Interruption length (slots)
0	1	1	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$

1	0.5	1	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	2	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
3	0.125	4	$8 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
5	0.03125	16	$32 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
6	0.015625	32	$64 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
NOTE 1: $T_{\text{SMTC_duration}}$ measured in subframes is the longest SMTC duration among all above active serving cells and the deactivated SCell to be measured;			
NOTE 2: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].			

8.2.2.2.4 Interruptions at UL carrier RRC reconfiguration

The requirements in this clause shall apply when a supplementary UL carrier or an UL carrier is configured or de-configured in NR standalone carrier aggregation as defined in TS 38.331 [2]. Further, the requirements in this clause are applicable to UE capable of independent beam management in FR2 inter-band CA and UE capable of FR2 intra-band CA and FR1.

When an UL carrier or supplementary UL carrier is configured or de-configured, an interruption of up to the duration shown in table 8.2.2.2.4-1, is allowed during the RRC reconfiguration procedure [2] on PCell and all activated SCells within the same FR as the reconfigured uplink carrier. The interruption is for both uplink and downlink of PCell and all the activated SCells within the same FR as the configured or de-configured UL.

Table 8.2.2.2.4-1: Interruption duration for UL carrier RRC reconfiguration

μ	NR Slot length (ms)	Interruption length (slots)
0	1	1
1	0.5	2
2	0.25	4
3	0.125	8
5	0.03125	32
6	0.015625	64

8.2.2.2.5 Interruptions due to Active BWP switching Requirement

The requirements for DCI-based BWP switch, timer-based BWP switch or UL BWP switch triggered by consistent uplink CCA failures in this clause apply to the case that the BWP switch is performed on a single CC or multiple CCs.

When either of the DCI-based, timer-based or RRC-based downlink BWP switch and/or uplink BWP switch occur on multiple CCs simultaneously or over partially overlapping period, the interruption requirements described in this clause apply for each BWP switch. Further, the requirements in this clause are applicable to UE capable of independent beam management in FR2 inter-band CA and UE capable of FR2 intra-band CA and FR1.

When UE receives a DCI indicating UE to switch its active BWP involving changes in any of the parameters listed in Table 8.2.2.2.5-2, the UE is allowed to cause interruption of up to X slot to other active serving cells if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.2.2.5-2 and the UE is capable of per-FR gap the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 8.2.2.2.5-1. The starting time of interruption is only allowed within the BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2 when BWP switch occurs on a single CC. The starting time of interruption caused by each BWP switch is only allowed within the BWP switch delay $T_{\text{MultipleBWPswitchDelay}} + Y$ as defined in clause 8.6.2A.1 when BWP switch occurs on multiple CCs. Interruptions are not allowed during BWP switch involving any other parameter change.

When a BWP timer *bwp-InactivityTimer* defined in TS 38.331 [2] expires, UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active BWP involving changes in any of the parameters listed in Table 8.2.2.2.5-2 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.2.2.5-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein

the UE is performing BWP switching. X is defined in Table 8.2.2.2.5-1. The starting time of interruption is only allowed within the BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2 when BWP switch occurs on a single CC. The starting time of interruption caused by each BWP switch is only allowed within the BWP switch delay $T_{\text{MultipleBWPswitchDelay}}$ as defined in clause 8.6.2B.1 when BWP switch occurs on multiple CCs simultaneously or $T_{\text{MultipleBWPswitchDelayTotal}}$ as defined in clause 8.6.2B.2 when BWP switch occurs on multiple CCs over partially overlapping time period. Interruptions are not allowed during BWP switch involving any other parameter change.

When UE receives an RRC reconfiguration that only requests UE to switch its active BWP on one single CC, the UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active BWP involving changes in any of the parameters listed in Table 8.2.2.2.5-2 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the BWP switch imposes changes in any of the parameters listed in Table 8.2.2.2.5-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing BWP switching. X is defined in Table 8.2.2.2.5-1. The interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}$ defined in clause 8.6.3 when BWP switch occurs on a single CC. The interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}} + D_{\text{RRC}} \cdot (N-1)$ as defined in clause 8.6.3A when BWP switch occurs on multiple CCs.

When UL BWP switch is triggered by consistent uplink CCA failures [7], UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its active UL BWP involving changes in any of the parameters listed in Table 8.2.2.2.5-2 if the UE is not capable of per-FR gap, or if the BWP switching involves SCS changing. When the UL BWP switch imposes changes in any of the parameters listed in Table 8.2.2.2.5-2 and the UE is capable of per-FR gap, the UE is allowed to cause interruption of up to X slot to other active serving cells in the same frequency range wherein the UE is performing UL BWP switching. X is defined in Table 8.2.2.2.5-1. The starting time of interruption is only allowed within the UL BWP switching delay $T_{\text{BWPswitchDelay}}$ as defined in clause 8.6.2. Interruptions are not allowed during BWP switch involving other parameter change.

8.2.2.2.6 Interruptions at inter-frequency SFTD measurement

The requirements in this clause concern interruptions on PCell, as well as on activated SCells in MCG, when the UE is performing SFTD measurements on inter-frequency neighbour cell(s). The following requirements apply when no PSCell is configured.

For a UE with per-FR gap capability:

- for neighbour cell in FR1:
- the percentage of interrupted slots on uplink and downlink on FR1 serving cells during the SFTD measurement period $T_{\text{measure_SFTD1}}$ specified in Clause 9.3.8 shall not exceed the percentages specified in Table 8.2.2.2.6-1. No interruption is allowed on FR2 serving cells.

- the length of each interruption on FR1 serving cells shall not exceed the number of slots specified in Table 8.2.2.2.6-2.
- for neighbour cell in FR2:
 - the percentage of interrupted slots on uplink and downlink on FR2 serving cells during the SFTD measurement period $T_{\text{measure_SFTD1}}$ specified in Clause 9.3.8 shall not exceed the percentages specified in Table 8.2.2.2.6-1. No interruption is allowed on FR1 serving cells.
 - the length of each interruption on FR2 serving cells shall not exceed the number of slots specified in Table 8.2.2.2.6-2.

For a UE with per-UE gap capability:

- for neighbour cell in FR1 or FR2:
 - the percentage of interrupted slots on uplink and downlink on FR1 and FR2 serving cells during the SFTD measurement period $T_{\text{measure_SFTD1}}$ specified in Clause 9.3.8 shall not exceed the percentages specified in Table 8.2.2.2.6-1.
 - the length of each interruption on FR1 and FR2 serving cells shall not exceed the number of slots specified in Table 8.2.2.2.6-2.

Table 8.2.2.2.6-1: Requirements on maximum percentage of interrupted slots in serving cell in inter-frequency SFTD

SFTD configuration	Serving cell μ	Neighbour cell SMTC periodicity					
		5ms	10ms	20ms	40ms	80ms	160ms
With RSRP report	0	8.4%	6.3%	8.4%	6.3%	5.3%	4.7%

Table 8.2.2.2.6-4: Void

8.2.2.2.7 Interruptions at SCell activation/deactivation with multiple downlink SCells

The requirements in this clause shall apply for the UE configured with PCell and up to 7 downlink SCell(s).

When multiple SCell is activated or deactivated by one single MAC CE command:

- an interruption on any active serving cell is specified as in clause 8.2.2.2.2:

8.2.2.2.8 Interruptions due to UE-specific CBW change

When UE receives an RRC reconfiguration that changes *offsetToCarrier* or *carrierBandwidth*, the UE is allowed to cause interruption of up to X slot to other active serving cells due to switching its CBW. X is defined in Table 8.2.2.2.8-1. The interruption is only allowed within the delay $T_{\text{RRCProcessingDelay}} + T_{\text{CBWchangeDelayRRC}}$ defined in clause 8.13.

Table 8.2.2.2.8-1: interruption length X

6	0.015625	33

8.2.2.2.9 Interruptions at NR SRS carrier based switching

SRS transmission can be configured on a carrier not configured for PUCCH/PUSCH transmission. When a UE needs to transmit periodic, semi-persistent or aperiodic SRS on a carrier of a serving cell not configured for PUCCH/PUSCH transmission, the UE can perform carrier based switching to one or more carriers not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission or from a carrier not configured for PUCCH/PUSCH transmission prior to transmitting SRS, provided that:

- switching is from a configured carrier to another activated carrier;
- the carrier of SCells not configured for PUCCH/PUSCH transmission to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission, or indicated by MAC-CE for semi-persistent SRS transmission, or configured via RRC for periodic SRS transmission;
- the serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by *srs-SwitchFromServCellIndex* and *srs-SwitchFromCarrier* in TS38.331 [2];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS 38.214 [26].
- the SRS switching is not colliding with any SSB/CSI-RS based L3 measurements and the measurements for RLM/BFD.
- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 38.331 [2], and is compliant to the requirements for inter-band CA with uplink in one NR band and without simultaneous Rx/Tx specified in TS 38.101-1 [18] for frequency range 1 and TS 38.101-2 [19] for frequency range 2, the SRS transmission are not simultaneously scheduled with DL SSB/CSI-RS for L3 or L1 measurements transmission on other carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.2.2.9-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.2.2.9-2.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.2.2.9-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.2.2.9-2.

Table 8.2.2.2.9-1: Interruption length X1 (slot)

μ	length (ms) of victim cell	switching time (us) ^{Note 1}	Sub carrier spacing for aggressor cell (kHz)			
			60	120	480	960
0	1	≤ 200	2	2	2	2
1	0.5	≤ 200	2	2	2	2
2	0.25	≤ 200	3	3	2	2
3	0.125	≤ 200	4	4	3	3
5	0.03125	≤ 200	11	10	8	8
6	0.015625	≤ 200	21	18	15	15
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .						

For intra-band SRS carrier switching in FR1 or FR2, interruptions in Table 8.2.2.2.9-1 and in Table 8.2.2.2.9-2 based on SRS carrier switching time $\leq 200\mu\text{s}$ shall apply. For inter-band SRS carrier switching in FR1, interruptions in Table 8.2.2.2.9-1 and in Table 8.2.2.2.9-2 shall apply.

8.2.2.2.10 DL Interruptions at UE switching between two uplink carriers

The DL interruption requirements at dynamic switching between two uplink carriers specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration in FR1 when the capability *uplinkTxSwitchingPeriod* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [26], where NR uplink carrier 1 is capable of one transmit antenna connector and NR uplink carrier 2 is capable of two transmit antenna connectors, and the two uplink carriers are in different bands with different carrier frequencies.

When dynamic switching between two uplink carriers is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [2]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR carrier 1 or carrier 2 as indicated in RRC signalling [2]. The DL interruption lengths of X are defined in Table 8.2.2.2.10-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [18].

Table 8.2.2.2.10-1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers

μ	NR Slot length (ms)	Uplink Tx switching period ^{Note1}		
		35us	140us	210us
0	1	2	3	4
1	0.5	3	6	7
2	0.25	4	10	14
Note 1: Uplink Tx switching period depends on UE capability <i>uplinkTxSwitchingPeriod</i>				

8.2.2.2.10A DL Interruptions at UE switching between two uplink carriers with two transmit antenna connectors

The DL interruption requirements at dynamic switching between two uplink carriers specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability [*uplinkTxSwitchingPeriod2T2T*] is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [26], where NR UL carrier 1 is capable of two transmit antenna connectors and NR UL carrier 2 is capable of two transmit antenna connectors, and the two uplink carriers are in different bands with different carrier frequencies.

When dynamic switching between two uplink carriers is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [2]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR carrier 1 or carrier 2 as indicated in RRC signalling [2]. The DL interruption lengths of X are defined in Table 8.2.2.2.10A-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [18].

Table 8.2.2.2.10A -1: DL interruption length on NR carrier(s) in the unit of OFDM symbols (X) for switching between two uplink carriers

μ	NR Slot length (ms)	Uplink Tx switching period ^{Note1}		
		35us	140us	210us
0	1	2	3	4
1	0.5	3	6	7
2	0.25	4	10	14
Note 1: Uplink Tx switching period depends on UE capability [<i>uplinkTxSwitchingPeriod2T2T</i>].				

8.2.2.2.10B DL Interruptions at UE switching between one uplink band with one transmit antenna connector and one uplink band with two transmit antenna connectors

The DL interruption requirements at dynamic switching between two uplink bands specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability [*uplinkTxSwitchingPeriod*] is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [26], where NR UL carrier 1 in band A is capable of one transmit antenna connector, NR UL carrier 2 and

carrier 3 in band B are capable of two transmit antenna connectors. NR UL carrier 2 and carrier 3 are two contiguous aggregated carriers, and band A and band B are different bands with different carrier frequencies.

When dynamic switching between two uplink bands is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [2]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR band A or band B as indicated in RRC signalling [2]. The DL interruption lengths of X are defined in Table 8.2.2.2.10-1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [18].

8.2.2.2.10C DL Interruptions at UE switching between two uplink bands with two transmit antenna connectors

The DL interruption requirements at dynamic switching between two uplink bands specified in this clause are applicable for an uplink band pair of an inter-band UL CA configuration when the capability *[uplinkTxSwitchingPeriod2T2T]* is present, and is only applicable for uplink switching mechanism specified in clause 6.1.6 of TS 38.214 [26], where NR UL carrier 1 in band A is capable of two transmit antenna connectors, NR UL carrier 2 and carrier 3 in band B are capable of two transmit antenna connectors. NR UL carrier 2 and carrier 3 are two contiguous aggregated carriers, and band A and band B are different bands with different carrier frequencies.

When dynamic switching between two uplink bands is conducted, UE is allowed to cause DL interruption of X OFDM symbols in NR downlink carrier(s) as indicated by *uplinkTxSwitching-DL-Interruption* [2]. The DL interruption starts from the first OFDM symbol which fully or partially overlaps with the UL switching period located in either NR band A or band B as indicated in RRC signalling [2]. The DL interruption lengths of X are defined in Table 8.2.2.2.10A -1.

No DL interruption is allowed in the NR downlink carrier(s) which is not indicated by *uplinkTxSwitching-DL-Interruption*. No DL interruption is allowed for some inter-band UL CA configurations as specified in clause 5.2A.2 of TS 38.101-1 [18].

8.2.2.2.11 Interruptions at direct SCell activation

When one or multiple SCell(s) are directly activated at SCell addition,

- the UE is allowed an interruption on any active serving cell:
 - of up to the duration shown in Table 8.2.2.2.1-1, if the active serving cell is not in the same band as the SCell being directly activated, or
 - of up to the duration shown in Table 8.2.2.2.1-2, if the active serving cells are in the same band as the SCell being activated provided the cell specific reference signals from the active serving cells and the SCell being activated are available in the same slot.

8.2.2.2.12 Interruptions due to SCell dormancy

8.2.2.2.12.1 Interruptions due to SCell dormancy switch

When one SCell in MCG is switched from dormancy to non-dormancy or from non-dormancy to dormancy [7] when UE is in DRX active time,

- the UE is allowed an interruption on active serving cell in MCG as defined in clause 8.2.2.2.5, except that the interruption is allowed regardless of which parameters change between the dormant BWP and the non-dormant BWP
- The starting time of interruption shall be within the dormancy switching delay as defined in clause 8.6.2.

When multiple SCells in MCG are switched from dormancy to non-dormancy or vice versa when the UE is in DRX active time, the interruption requirement described above applies for each BWP switch.

8.2.2.2.12.2 Interruptions due to CQI measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of CQI measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements on dormant SCells shall not exceed 0.5%.

8.2.2.2.12.3 Interruptions due to RRM measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of RRM measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements on dormant SCells shall not exceed 1.0%.

8.2.2.2.13 Interruptions at transitions between active and non-active during DRX

For the UEs that are capable of *secondaryDRX-Group*[14] in FR1+FR2 CA, when two DRX groups are configured each group of serving cells, no interruption is allowed for UEs supporting either per UE or per FR gaps.

8.2.2.2.14 Interruptions when identifying CGI of an NR cell with autonomous gaps

When a UE is identifying CGI of an NR cell with autonomous gaps, the UE is allowed interruptions on PCell or any activated SCell:

- with up to K1 interruptions with interrupted slots up to interruption length X1 specified in Table 8.2.2.2.14-1 for each interruption during MIB decoding time period T_{MIB} (ms) specified in clause 9.11.
- with up to L1 interruptions with interrupted slots up to interruption length Y1 specified in Table 8.2.2.2.14-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 1.
- with up to L2 interruptions with interrupted slots up to interruption length Y2 specified in Table 8.2.2.2.14-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 2 and 3.

Where:

- $K1 = 6$ for the target cell carrier frequency on FR1 and $K1 = 25$ for the target cell carrier frequency on FR2, and
- $L1 = T_{SIB1}/20$ and
- $L2 = T_{SIB1}/T_{SMTc}$, where T_{SMTc} is the periodicity of the SMTc occasion configured for the target cell carrier.

Table 8.2.2.2.14-1: Interruption length X1, Y1 and Y2 during measurements with autonomous gaps

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	Interruption length Y1 (slots)	Interruption length Y2 (slots)
0	1	6	7	6
1	0.5	12	13	10
2	0.25	24	25	19
3	0.125	48	49	37

8.2.2.2.15 Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps

When a UE is identifying CGI of an E-UTRA FDD cell or E-UTRA TDD cell with autonomous gaps, within time period $T_{identify_CGI, E-UTRA}$ specified in clause 9.4.7.1, the UE shall be able to transmit at least the number of ACK/NACKs specified in Table 8.2.2.2.15-1 on PCell or any activated SCell in the frequency range where autonomous gaps are used, provided that:

- there is continuous DL data allocation,

- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured.

Table 8.2.2.2.15-1: Minimum number of ACK/NACKs transmitted by the UE during $T_{\text{identify_CGI}}$, E-UTRA

Minimum number of transmitted ACK/NACKs	SCS	
	Duplex mode configuration	SCS
	Duplex mode configuration	SCS
84	FDD	15 kHz
193	FDD	30 kHz
402	FDD	60 kHz
28	TDD ^{Note 1}	15 kHz
81	TDD ^{Note 1}	30 kHz
159	TDD ^{Note 1}	60 kHz
233	TDD ^{Note 2}	60 kHz
491	TDD ^{Note 2}	120 kHz
NOTE 1: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-1 [18].		
NOTE 2: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-2 [19].		

8.2.2.2.16 Interruptions at NR SRS antenna port switching

The requirements in this clause are applicable to SRS antenna port switching on FR1 and SRS resource(s) is only configured within the last 6 symbols of a slot. For interruption caused by SRS antenna port switching, the victim cell is based on the entry number of the band indicated by *txSwitchImpactToRx* and/or *txSwitchWithAnotherBand* regardless of per-FR MG capability. An UL interruption is allowed on any of the serving cells as indicated in *txSwitchWithAnotherBand*, and a DL interruption is allowed on any of the serving cells as indicated in *txSwitchImpactToRx*.

The UE shall perform SRS antenna port switching only if the below conditions are met.

- the SRS switching is not colliding with any other UL transmission with higher priority defined in TS 38.214 [26] if the serving cell on which the higher priority transmission is performed is a victim cell based on *txSwitchWithAnotherBand* or is the same carrier on which SRS is transmitted.
- the SRS switching is not colliding with any NR measurements (i.e. SSB/CSI-RS based L1/L3 measurements) and the measurements for RLM/BFD/CBD if the serving cell on which the NR measurements and the measurements for RLM/BFD/CBD is performed is a victim cell based on *txSwitchImpactToRx* or is the same carrier on which SRS is transmitted.

No requirements are defined for SRS antenna port switching if aperiodic SRS switching is colliding with aperiodic L1-RSRP/L1-SINR measurements and the serving cell on which the aperiodic L1-RSRP/L1-SINR measurement is configured is indicated in *txSwitchImpactToRx* or is the same carrier on which aperiodic SRS is scheduled/configured.

When 1 SRS symbol is configured in a slot for SRS antenna switching, the interruption requirement in Table 8.2.2.2.16-1 applies. For the rest of SRS configurations, the interruption requirement in Table 8.2.2.2.16-3 applies.

Table 8.2.2.2.16-1: Interruption length in symbols of victim CC when 1 SRS symbol is configured

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	3	2	2
30	4	3	3

60	8	6	5
120	14	10	8

Table 8.2.2.2.16.2: Void**Table 8.2.2.2.16-3: Interruption length in slots of victim CC for rest of the SRS configurations**

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	2	2	2
30	2	2	2
60	3	2	2
120	5	3	3

8.2.2.2.17 Interruptions at fast SCell activation

The requirements in this clause shall apply for the UE configured with PCell and one SCell when aperiodic CSI-RS resources is configured for fast SCell activation.

When one SCell in MCG configured with aperiodic CSI-RS resources is configured for fast SCell activation is activated from deactivated, the UE is allowed:

- an interruption on any active serving cell:
 - of up to X2 slot, if the active serving cell and the SCell being activated are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X2 slot, if the active serving cell and the SCell being activated are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.
 - Where X2 is specified in Table 8.2.2.2.2-1.

or

- of up to Y2 slot + $T_{\text{ATRS_duration}}$, if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is larger than 2400ms, or
 - SCell is unknown and belongs to FR1, and SCell is contiguous to an active serving cell in the same band

or

- of up to Y2 slot if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is equal to or smaller than 2400ms, or
- SCell to be activated belongs to FR2

Where:

- $T_{\text{ATRS_duration}}$ is CSI-RS burst for SCell activation where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots on the being activated SCell.
- Y2 are specified in Table 8.2.1.2.4-2.

8.2.2.2.18 Interruptions due to PUCCH SCell activation/deactivation

When one SCell configured with PUCCH is activated or deactivated,

- The UE is allowed an interruption on active serving cell as defined in clause 8.2.2.2.2.
- The starting time of interruption shall be within the delay as defined in clause 8.3.12.
- For inter-band CA, if the UE is not capable of *parallelTxPRACH-SRS-PUCCH-PUSCH*, additional interruption is allowed on SRS/PUCCH/PUSCH of active serving cells when colliding with RACH transmission on PUCCH SCell. Interruption occurs on the symbols containing SRS/PUCCH/PUSCH, which overlap with the duration of the PRACH preamble [3] transmitted on the PUCCH SCell.

8.2.3 NE-DC Interruptions

8.2.3.1 Introduction

This clause contains the requirements related to the interruptions on PCell and SCell, when

- E-UTRA PSCell transitions between active and non-active during DRX, or
- E-UTRA PSCell transitions from non-DRX to DRX, or
- E-UTRA PSCell/SCell in SCG or SCell in MCG is added or released, or
- E-UTRA PSCell/SCell in SCG or SCell(s) in MCG is activated or deactivated, or
- measurements on SCC with deactivated SCell in either E-UTRA SCG or NR MCG or
- PUSCH/PUCCH carrier configuration and deconfiguration in NR MCG, or
- UL/DL BWP is switched on PCell or SCell in MCG, or
- UE-specific CBW is changed on PCell or SCell in MCG, or
- CGI reading of an NR neighbour cell with autonomous gaps, or
- CGI reading of an E-UTRA neighbour cell with autonomous gaps.
- NR SRS carrier based switching, or
- E-UTRA SRS carrier based switching, or
- NR SRS antenna port switching.
- SCell in NR MCG is activated based on aperiodic CSI-RS.

The requirements shall apply for NE-DC with an NR PCell.

This clause contains interruptions where victim cell is PCell or SCell belonging to MCG. Requirements for interruptions requirements when the victim cell is E-UTRA PSCell or E-UTRA SCell belonging to SCG are specified in TS 36.133 [15].

For a UE which does not support per-FR measurement gap, interruptions to the PCell, E-UTRA PSCell or activated MCG SCells may be caused by EUTRA PSCell, EUTRA SCells or SCells on any frequency range. For UE which support per-FR gap, interruptions to the PCell, E-UTRA PSCell or activated MCG SCells may be caused by EUTRA PSCell, EUTRA SCells or SCells on the same frequency range as the victim cell.

8.2.3.2 Requirements

8.2.3.2.1 Interruptions at transitions between active and non-active during DRX

Interruption on PCell and the activated SCell if configured due to E-UTRA PSCell transitions between active and non-active during DRX when PCell or SCell is in non-DRX are allowed with up to 1% probability of missed ACK/NACK when the configured E-UTRA PSCell DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured E-UTRA PCell DRX cycle is 640 ms or longer. Each interruption shall not exceed X slot as defined in table 8.2.3.2.1-1.

Table 8.2.3.2.1-1: Interruption length X at transition between active and non-active during DRX

μ	NR slot length (ms)	Interruption length X (slots)	
		Sync	Async
0	1	1	2
1	0.5	1	2
2	0.25	3	
3	0.125	5	

When both PCell and E-UTRA PSCell are in DRX, no interruption is allowed.

8.2.3.2.2 Interruptions at transitions from non-DRX to DRX

Interruption on PCell and the activated SCell if configured due to E-UTRA PSCell transitions from non-DRX to DRX when PCell or SCell is in non-DRX shall not exceed X slots as defined in table 8.2.3.2.1-1.

8.2.3.2.3 Interruptions at PSCell/SCell addition/release

The requirements in this clause shall apply for the UE configured with E-UTRA PSCell.

When one E-UTRA PSCell/SCell in SCG is added or released:

- the UE is allowed an interruption on any active serving cell in MCG:
 - of up to X1 slots, if the active serving cell is not in the same band as any of the E-UTRA PSCell/SCells being added or released, or
 - of up to $\max\{Y1 \text{ slots} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as any of the E-UTRA PSCell/SCells being added or released, provided the cell specific reference signals from the active serving cells and the E-UTRA PSCell/SCells being added or released are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above activated serving cells in MCG;

Where X1 and Y1 are specified in Table 8.2.3.2.3-1.

When one SCell in MCG is added or released:

- the UE is allowed an interruption on any activated serving cell in MCG:
 - of up to X1 slots, if the active serving cell and the SCell being added or released are in a FR1 band pair or in a FR1+FR2 band pair.
 - of up to X1 slot, if the active serving cell and the SCell being added or released are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair.

or

- of up to $Y1 \text{ slots} + T_{\text{SMTC_duration}}$ if the active serving cells are in the same band as any of the SCells being added or released, provided the cell specific reference signals from the active serving cells and the SCells being added or released are available in the same slot, where, $T_{\text{SMTC_duration}}$ is
 - the longest SMTC duration among all above active serving cells in MCG and the SCell being added when one SCell is added. If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is

provided for the SCell being added, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC duration}}$ for the SCell being added is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being added. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being added, $T_{\text{SMTC duration}}$ for the SCell being added is 0ms;

- the longest SMTC duration among all above active serving cells in MCG when one SCell is released.

Where X1 and Y1 are specified in Table 8.2.3.2.3-2.

Table 8.2.3.2.3-1: Interruption length X1 and Y1 at E-UTRA PSCell/SCell addition/release

μ	NR Slot length (ms)	Interruption length X1 (slots)		Interruption length Y1 (slots)	
		Sync	Async	Sync	Async
0	1	1	2	1	2

1	0.5	2		2
2	0.25	Both aggressor cell and victim cell are on FR2	4	4
		Either aggressor cell or victim cell is on FR1	5	
3	0.125	Aggressor cell is on FR2	8	8
		Aggressor cell is on FR1	9	

8.2.3.2.4 Interruptions at SCell activation/deactivation

The requirements in this clause shall apply for the UE configured with E-UTRA PSCell and one SCell.

When one E-UTRA SCell in SCG is activated from deactivated or dormant state, or deactivated from activated or dormant state:

- the UE is allowed an interruption on any active serving cell in MCG:
- of up to X2 slots, if the active serving cell is not in the same band as any of the SCells being activated or deactivated, or
- of up to $\max\{Y2 \text{ slots} + T_{\text{SMTC duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as any of the E-UTRA SCells being activated or deactivated, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being activated or deactivated are available in the same slot, where $T_{\text{SMTC duration}}$ is the longest SMTC duration among all above active serving cells in MCG.

Where X2 and Y2 are specified in Table 8.2.3.2.4-1.

When one SCell in MCG is activated or deactivated:

- the UE is allowed an interruption on any serving cell in MCG:
- of up to X2 slots, if the active serving cell is not in the same band as any of the SCells being activated or deactivated, or

- of up to Y2 slots + $T_{\text{SMTC_duration}}$ if the active serving cells are in the same band as any of the SCells being activated or deactivated, provided the cell specific reference signals from the active serving cells and the SCells being activated or deactivated are available in the same slot, where, $T_{\text{SMTC_duration}}$ is
 - the longest SMTC duration among all above active serving cells in MCG and the SCell being activated when one SCell is activated, If SSB configuration (*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being activated is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being activated. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being activated, $T_{\text{SMTC_duration}}$ for the SCell being activated is 0ms;
 - the longest SMTC duration among all above active serving cells in MCG when one SCell is deactivated.

Where X2 and Y2 are specified in Table 8.2.3.2.4-2.

Table 8.2.3.2.4-1: Interruption length X2 and Y2 at E-UTRA SCell activation/deactivation

0	1	1		1
1	0.5	1		1
2	0.25	Both aggressor cell and victim cell are on FR2	2	2
		Either aggressor cell or victim cell is on FR1	3	
3	0.125	Aggressor cell is on FR2	4	4
		Aggressor cell is on FR1	5	

8.2.3.2.5 Interruptions during measurements on SCC

8.2.3.2.5.1 Interruptions during measurements on deactivated NR SCC

Interruption on PCell and other activated SCell(s) during measurement on the deactivated NR SCC shall meet requirements in clause 8.2.2.2.3.

8.2.3.2.5.2 Interruptions during measurements on deactivated E-UTRAN SCC

When one E-UTRA SCell in SCG is deactivated, the UE is allowed due to measurements on the E-UTRA SCC with the deactivated E-UTRA SCell:

- an interruption on PCell or any activated SCell with up to 0.5% probability of missed ACK/NACK when any of the configured *measCycleSCell* [15] for the deactivated E-UTRA SCells is 640 ms or longer.
- an interruption on PCell or any activated SCell with up to 0.5% probability of missed ACK/NACK regardless of the configured *measCycleSCell* [15] for the deactivated E-UTRA SCells if indicated by the network using IE *allowInterruptions* [15].

Each interruption shall not exceed

- X3 slots, if the PCell or activated SCell is not in the same band as the E-UTRA deactivated SCC being measured, or
- Y3 slots + SMTC duration, if the PCell or activated SCell is in the same band as the E-UTRA deactivated SCC being measured, provided the cell specific reference signals from the PCell or activated SCell and the E-UTRA deactivated SCC being measured are available in the same slot.

Where X3 and Y3 are specified in Table 8.2.3.2.5-1

Table 8.2.3.2.5-1: Interruption length X3 and Y3 at measurements on deactivated E-UTRA SCC

μ	NR Slot length (ms)	Interruption length X3 (slots)		Interruption length Y3 (slot)	
		Sync	Async	Sync	Async
0	1	1	2	1	2
1	0.5	1	2	1	2
2	0.25	3		2	3
3	0.125	5		N/A	N/A

8.2.3.2.5.3 Interruptions during CQI measurements on dormant E-UTRAN SCC

When one E-UTRA SCell in SCG is dormant, the UE is allowed due to CQI measurements on the dormant E-UTRA SCell:

- an interruption on PCell or any activated SCell with up to 0.5% probability of missed ACK/NACK.

Each interruption shall not exceed

- X3 slots, if the PCell or activated SCell is not in the same band as the E-UTRA dormant SCell being measured, or
- Y3 slots + SMTC duration, if the PCell or activated SCell is in the same band as the E-UTRA dormant SCell being measured, provided the cell specific reference signals from the PCell or activated SCell and the E-UTRA dormant SCell being measured are available in the same slot.

Where X3 and Y3 are defined in Table 8.2.3.2.5.2-1.

8.2.3.2.5.4 Interruptions during RRM measurements on dormant E-UTRAN SCC

When one E-UTRA SCell in SCG is dormant, the UE is allowed due to RRM measurements on the E-UTRA SCC with the dormant E-UTRA SCell:

- an interruption on PCell or any activated SCell with up to 0.5% probability of missed ACK/NACK.

Each interruption shall not exceed

- X3 slots, if the PCell or activated SCell is not in the same band as the E-UTRA dormant SCC being measured, or
- Y3 slots + SMTC duration, if the PCell or activated SCell is in the same band as the E-UTRA dormant SCC being measured, provided the cell specific reference signals from the PCell or activated SCell and the E-UTRA dormant SCC being measured are available in the same slot.

Where X3 and Y3 are defined in Table 8.2.3.2.5.2-1.

8.2.3.2.6 Interruptions at UL carrier RRC reconfiguration

The requirements in this clause shall apply when a supplementary UL carrier or an UL carrier is configured or de-configured in NE-DC.

When an UL carrier or supplementary UL carrier is configured or deconfigured, an interruption of up to X4 slot as specified in Table 8.2.3.2.6-1, is allowed during the RRC reconfiguration procedure in TS 38.331 [2] on PCell, all

activated SCells within the same FR as the reconfigured uplink carrier. The interruption is for both uplink and downlink of PCell, all activated E-UTRA SCells, E-UTRA PSCell and all activated SCells within the same FR as the configured or de-configured UL.

Table 8.2.3.2.6-1: Interruption length X4 at UL carrier RRC reconfiguration

μ	NR Slot length (ms)	Interruption length X4 (slots)	
		Sync	Async
0	1	1	2
1	0.5	2	3
2	0.25	5	
3	0.125	9	

8.2.3.2.7 Interruptions due to Active BWP switching Requirement

The requirements for DCI-based BWP switch, timer-based BWP switch or UL BWP switch triggered by consistent uplink CCA failures in this clause apply to the case that the BWP switch is performed on a single CC or multiple CCs.

When either of the DCI-based, timer-based or RRC-based downlink BWP switch and/or uplink BWP switch occur on multiple CCs simultaneously or over partially overlapping period, the interruption requirements described in this clause apply for each BWP switch.

When UE receives a DCI indicating the UE to switch its active BWP, or when a BWP timer *bwp-InactivityTimer* defined in TS 38.331 [2] expires, or when the UE receives an RRC command indicating the UE to switch its active BWP or when UL BWP switch is triggered by consistent uplink CCA failures, the UE is allowed an interruption on PCell and any activated SCells as defined in clause 8.2.2.2.5.

8.2.3.2.8 Interruptions at direct SCell activation and hibernation

8.2.3.2.8.1 Interruptions during direct SCell activation and hibernation of E-UTRA SCell

When one E-UTRA SCell in SCG is directly activated and hibernated:

- the UE is allowed an interruption on any active serving cell in MCG:
- of up to X1 slot, if the active serving cell is not in the same band as any of the E-UTRA SCells being directly activated or hibernated, or
- of up to $\max\{Y1 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as any of the E-UTRA SCells being directly activated or hibernated, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being directly activated or hibernated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in MCG.

Where X1 and Y1 are specified in Table 8.2.3.2.3-1.

8.2.3.2.8.2 Interruptions during direct SCell activation

When one or multiple SCell(s) in MCG are directly activated at SCell addition:

- the UE is allowed an interruption on any active serving cell in MCG:
- of up to X1 slot, if the active serving cell is not in the same band as the SCell being directly activated, or
- of up to $\max\{Y1 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as the SCell being directly activated, provided the cell specific reference signals from the active serving cells and the SCell being directly activated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in MCG.

Where X1 and Y1 are specified in Table 8.2.3.2.3-2.

8.2.3.2.9 Interruptions at SCell hibernation

When one E-UTRA SCell in SCG is hibernated:

- the UE is allowed an interruption on any active serving cell in MCG:
- of up to X2 slot, if the active serving cell is not in the same band as any of the E-UTRA SCells being hibernated, or
- of up to $\max\{Y2 \text{ slot} + T_{\text{SMTC_duration}}, 5\text{ms}\}$ if the active serving cells are in the same band as any of the E-UTRA SCells being hibernated, provided the cell specific reference signals from the active serving cells and the E-UTRA SCells being hibernated are available in the same slot, where $T_{\text{SMTC_duration}}$ is the longest SMTC duration among all above active serving cells in MCG.

Where X2 and Y2 are specified in Table 8.2.3.2.4-1.

8.2.3.2.10 Interruptions at SCell activation/deactivation with multiple downlink SCells

The requirements in this clause shall apply for the UE configured with E-UTRA PCell and up to 6 downlink SCell(s).

When multiple SCells in MCG are activated or deactivated by one single MAC CE command:

- an interruption on any serving cell in MCG is specified as in clause 8.2.3.2.4.

8.2.3.2.11 Interruptions at NR SRS carrier based switching

SRS transmission can be configured on a carrier not configured for PUCCH/PUSCH transmission. When a UE needs to transmit periodic, semi-persistent or aperiodic SRS on a carrier of a serving cell not configured for PUCCH/PUSCH transmission, the UE can perform carrier based switching to one or more carriers not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission or from a carrier not configured for PUCCH/PUSCH transmission prior to transmitting SRS, provided that:

- switching is from a configured carrier to another activated carrier;
- the carrier of SCells not configured for PUCCH/PUSCH transmission to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission, or indicated by MAC-CE for semi-persistent SRS transmission, or configured via RRC for periodic SRS transmission;
- the serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by srs-SwitchFromServCellIndex and srs-SwitchFromCarrier in TS38.331 [2];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS 38.214 [26].
- the SRS switching is not colliding with any SSB/CSI-RS based L3 measurements and the measurements for RLM/BFD in MCG.- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 38.331 [2], and is compliant to the requirements for inter-band CA with uplink in one NR band and without simultaneous Rx/Tx specified in TS 38.101-3 [20], the SRS transmission are not simultaneously scheduled with DL SSB/CSI-RS for L3 or L1 measurements transmission on other carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR1 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.3.2.11-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR2 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.3.2.11-2.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR1 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.3.2.11-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR2 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.3.2.11-2.

Table 8.2.3.2.11-1: Interruption length X1 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note 1}	Interruption length X1 (slots)	
			Sub carrier spacing for aggressor cell (kHz)	
			15	30
0	1	≤ 200	2	2
		300, 500	2	2
		900	3	3
1	0.5	≤ 200	3	2
		300, 500	3	3
		900	4	4
2	0.25	≤ 200	4	3
		300, 500	5	4
		900	7	6
3	0.125	≤ 200	7	5
		300, 500	9	7
		900	12	10
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .				

Table 8.2.3.2.11-2: Interruption length X2 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note 1}	Interruption length X2 (slots)	
			Sub carrier spacing for aggressor cell (kHz)	
			60	120
0	1	≤ 200	2	2
1	0.5	≤ 200	2	2
2	0.25	≤ 200	3	3
3	0.125	≤ 200	4	4
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .				

For intra-band SRS carrier switching in FR1 or FR2, interruptions in Table 8.2.3.2.11-1 and in Table 8.2.3.2.11-2 based on SRS carrier switching time $\leq 200\mu\text{s}$ shall apply. For inter-band SRS carrier switching in FR1, interruptions in Table 8.2.3.2.11-1 and in Table 8.2.3.2.11-2 shall apply.

8.2.3.2.12 Interruptions at E-UTRA SRS carrier based switching

A PUSCH-less carrier of E-UTRA SCell is a TDD carrier without PUCCH/PUSCH configured. When a UE needs to transmit periodic or aperiodic SRS [23] and/or non-contention based PRACH on a PUSCH-less E-UTRA carrier of SCell, the UE can perform carrier based switching to one or more PUSCH-less carrier of E-UTRA SCells from a E-UTRA carrier with PUSCH or from another PUSCH-less E-UTRA carrier of SCell prior to transmitting SRS and/or PRACH, provided that:

- switching is from a configured E-UTRA carrier to another activated TDD carrier;

- the PUSCH-less carrier of E-UTRA SCells to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission or configured via RRC [15] for periodic SRS transmission;
- the E-UTRA serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by srs-SwitchFromServCellIndex [15];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS36.213 [TBD];
- the SRS switching is not colliding with PDCCH in subframe 0 and 5 as specified in TS36.213 [TBD];
- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 36.331 [2], and is compliant to the requirements for inter-band CA with uplink in one E-UTRA band and without simultaneous Rx/Tx specified in TS 36.101 [25], the SRS or RACH transmission are not simultaneously scheduled with DL subframe #0 or DL subframe #5 on other E-UTRA carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between E-UTRA carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR1 if UE is capable of Per-FR gap, during the switching to the PUSCH-less carrier of a serving cell,

- with up to X2 slot as specified in Table 8.2.3.2.12-1.

When SRS carrier based switching is performed between E-UTRA carriers, the UE is allowed interruptions on any active serving cell in MCG if UE is not capable of Per-FR gap, or on active serving cell(s) in MCG in FR1 if UE is capable of Per-FR gap, during the switching from the PUSCH-less carrier of a serving cell,

- with up to X2 slot as specified in Table 8.2.3.2.12-1

Table 8.2.3.2.12-1: Interruption length X2 (slot)

μ	NR Slot length (ms)	Interruption length X2 (slots)
0	1	2
1	0.5	3
2	0.25	5
3	0.125	9

8.2.3.2.13 Interruptions due to SCell dormancy

8.2.3.2.13.1 Interruptions due to SCell dormancy switch

When one SCell in MCG is switched from dormancy to non-dormancy or from non-dormancy to dormancy [7] when UE is in DRX active time,

- the UE is allowed an interruption on active serving cell in MCG as defined in clause 8.2.3.2.7, except that the interruption is allowed regardless of which parameters change between the dormant BWP and the non-dormant BWP
- The starting time of interruption shall be within the dormancy switching delay as defined in clause 8.6.2.

When multiple SCells in MCG are switched from dormancy to non-dormancy or vice versa when the UE is in DRX active time, the interruption requirement described above applies for each BWP switch.

8.2.3.2.13.2 Interruptions due to CQI measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of CQI measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements on dormant SCells shall not exceed 0.5%.

8.2.3.2.13.3 Interruptions due to RRM measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of RRM measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements on dormant SCells shall not exceed 1.0%.

8.2.3.2.14 Interruptions when identifying CGI of an NR cell with autonomous gaps

When a UE is identifying CGI of an NR cell with autonomous gaps, the UE is allowed interruptions on PCell or any activated SCell:

- with up to K1 interruptions with interrupted slots up to interruption length X1 specified in Table 8.2.3.2.14-1 for each interruption during MIB decoding time period T_{MIB} (ms) specified in clause 9.11.
- with up to L1 interruptions with interrupted slots up to interruption length Y1 specified in Table 8.2.3.2.14-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 1.
- with up to L2 interruptions with interrupted slots up to interruption length Y2 specified in Table 8.2.3.2.14-1 for each interruption during SIB1 decoding time period T_{SIB} Where:
- $K1 = 6$ for the target cell carrier frequency on FR1 and $K1 = 25$ for the target cell carrier frequency on FR2, and
- $L1 = T_{SIB1}/20$, and
- $L2 = T_{SIB1}/T_{SMTC}$, where T_{SMTC} is the periodicity of the SMTC occasion configured for the target cell carrier.

Table 8.2.3.2.14-1: Interruption length X1, Y1 and Y2 during measurements with autonomous gaps

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	Interruption length Y1 (slots)	Interruption length Y2 (slots)
0	1	6	7	6
1	0.5	12	13	10
2	0.25	24	25	19
3	0.125	48	49	37

8.2.3.2.15 Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps

When a UE is identifying CGI of an E-UTRA FDD cell or E-UTRA TDD cell with autonomous gaps, within time period

- $T_{\text{identify_CGI, intra}}$ specified in clause 8.1.2.2.3, or clause 8.1.2.2.4 in TS 36.133 [15], or
- $T_{\text{identify_CGI, inter}}$ specified in clause 8.1.2.3.5, or clause 8.1.2.3.6, or clause 8.1.2.3.7, or clause 8.1.2.3.6 in TS 36.133 [15], or
- $T_{\text{identify_CGI, E-UTRA}}$ specified in clause 9.4.7.1

the UE shall be able to transmit at least the number of ACK/NACKs specified in Table 8.2.3.2.15-1 on PCell or any activated SCell in the frequency range where autonomous gaps are used, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured.

Table 8.2.3.2.15-1: Minimum number of ACK/NACKs transmitted by the UE

Minimum number of transmitted ACK/NACKs	Configuration of the serving cell in which the transmitted ACK/NACKs are counted	
	Duplex mode configuration	SCS
84	FDD	15 kHz
193	FDD	30 kHz
402	FDD	60 kHz
28	TDD ^{Note 1}	15 kHz
81	TDD ^{Note 1}	30 kHz
159	TDD ^{Note 1}	60 kHz
233	TDD ^{Note 2}	60 kHz
491	TDD ^{Note 2}	120 kHz
NOTE 1: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-1 [18].		
NOTE 2: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-2 [19].		

8.2.3.2.16 Interruptions at NR SRS antenna port switching

The requirements in this clause are applicable to SRS antenna port switching on FR1 and SRS resource(s) is only configured within the last 6 symbols of a slot. For interruption caused by SRS antenna port switching, the victim cell is based on the entry number of the band indicated by *txSwitchImpactToRx* and/or *txSwitchWithAnotherBand* regardless of per-FR MG capability. An UL interruption is allowed on any of the serving cells as indicated in *txSwitchWithAnotherBand*, and a DL interruption is allowed on any of the serving cells as indicated in *txSwitchImpactToRx*.

The UE shall perform SRS antenna port switching only if the below conditions are met.

- the SRS switching is not colliding with any other UL transmission with higher priority defined in TS 38.214 [26] if the serving cell on which the higher priority transmission is performed is a victim cell based on *txSwitchWithAnotherBand* or is the same carrier on which SRS is transmitted.
- the SRS switching is not colliding with any NR measurements (i.e. SSB/CSI-RS based L1/L3 measurements) and the measurements for RLM/BFD/CBD if the serving cell on which the NR measurements and the measurements for RLM/BFD/CBD is performed is a victim cell based on *txSwitchImpactToRx* or is the same carrier on which SRS is transmitted.

No requirements are defined for SRS antenna port switching if aperiodic SRS switching is colliding with aperiodic L1-RSRP/L1-SINR measurements and the serving cell on which the aperiodic L1-RSRP/L1-SINR measurement is configured is indicated in *txSwitchImpactToRx* or is the same carrier on which aperiodic SRS is scheduled/configured.

No requirements apply when SRS antenna port switching is colliding with E-UTRA measurement if the carrier on which the E-UTRA measurement is performed is indicated in *txSwitchImpactToRx* or is the same carrier on which SRS is scheduled/configured.

When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are synchronized, the interruption requirement in Table 8.2.3.2.16-1 applies. When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are asynchronous, the interruption requirement in Table 8.2.3.2.16-2 applies. For the rest of SRS configurations, the interruption requirement in Table 8.2.3.2.16-3 applies.

Table 8.2.3.2.16-1: Interruption length in symbols of victim CC when 1 SRS symbol is configured, and aggressor and victim cells are synchronized

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	3	2	2
30	4	3	3
60	8	6	5
120	14	10	8

Table 8.2.3.2.16-2: Interruption length in slots of victim CC when 1 SRS symbol is configured, and aggressor and victim cells are asynchronized

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	2	2	2
30	2	2	2
60	2	2	2
120	2	2	2

Table 8.2.3.2.16-3: Interruption length in slots of victim CC for rest of the SRS configurations for synchronised and asynchronized scenarios

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	2	2	2
30	2	2	2
60	3	2	2
120	5	3	3

8.2.3.2.17 Interruptions at fast SCell activation

The requirements in this clause shall apply for the UE configured with E-UTRA PSCell and one SCell in MCG when aperiodic CSI-RS resources is configured for fast SCell activation.

When one SCell in MCG configured with aperiodic CSI-RS resources is configured for fast SCell activation is activated from deactivated, the UE is allowed:

- the UE is allowed an interruption on any serving cell in MCG:
 - of up to X2 slots, if the active serving cell is not in the same band as any of the SCells being activated, or
 - of up to Y2 slots + $T_{\text{ATRS_duration}}$ if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is larger than 2400ms, or
 - SCell is unknown and belongs to FR1, and SCell is contiguous to an active serving cell in the same band
 - of up to Y2 slot if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is equal to or smaller than 2400ms, or
- SCell to be activated belongs to FR2

Where

- $T_{\text{ATRS_duration}}$ is CSI-RS burst for SCell activation where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots on the being activated SCell.
- X2 and Y2 are specified in Table 8.2.3.2.4-2.

8.2.3.2.18 Interruptions due to UE-specific CBW change

The requirements in clause 8.2.1.2.11 apply for this clause.

8.2.3.2.19 Interruptions due to PUCCH SCell activation/deactivation

When one SCell in MCG configured with PUCCH is activated or deactivated,

The UE is allowed an interruption on active serving cell in MCG as defined in clause 8.2.3.2.4.

- The starting time of interruption shall be within the delay as defined in clause 8.3.12.
- For inter-band CA, if the UE is not capable of *parallelTxPRACH-SRS-PUCCH-PUSCH*, additional interruption is allowed on SRS/PUCCH/PUSCH of active serving cells when colliding with RACH transmission on PUCCH SCell. Interruption occurs on the symbols containing SRS/PUCCH/PUSCH, which overlap with the duration of the PRACH preamble [3] transmitted on the PUCCH SCell.

8.2.4 NR-DC: Interruptions

8.2.4.1 Introduction

This clause contains the requirements related to the interruptions on PCell, PSCell and activated SCell if configured, when

up to 1 SCell in FR1 and up to 7 SCell(s) in FR2 are configured, deconfigured, activated or deactivated or,
a supplementary UL carrier or an UL carrier is configured or de-configured, or
measurements on SCC with deactivated SCell in NR SCG, or
measurements on the deactivated PSCell in NR SCG, or
UL/DL BWP is switched on PCell, PSCell or SCell,
UE-specific CBW is changed on PCell, PSCell or SCell, or
transitions between active and non-active during DRX, or
transitions from non-DRX to DRX, or
CGI reading of an NR neighbour cell with autonomous gaps, or
CGI reading of an E-UTRA neighbour cell with autonomous gaps.
NR SRS carrier based switching, or
NR SRS antenna port switching.
RLM/BFD Measurement on deactivated NR PSCell, or
NR SCell is activated based on aperiodic CSI-RS.

Note: interruptions at SCell addition/release, activation/deactivation and during measurements on SCC may not be required by all UEs.

The interruptions shall not interrupt RRC signalling or ACK/NACKs related to RRC reconfiguration procedure [2] for SCell addition/release or MAC control signalling [17] for SCell activation/deactivation command.

The requirements shall apply for NR-DC with an NR PCell, PSCell or SCell.

For a UE which does not support per-FR measurement gap, interruptions to the PCell and activated SCell may be caused by SCells on any frequency range. For a UE which supports per-FR gaps, interruptions to PCell, PSCell and activated SCell may be caused by SCells on the same frequency range as the victim cell.

8.2.4.2 Requirements

8.2.4.2.1 Interruptions at PSCell/SCell addition/release

When PSCell or one or more SCells is added or released using the same *RRCConnectionReconfiguration* message as defined in TS 38.331 [2], the UE is allowed an interruption on any activated serving cell during the RRC reconfiguration procedure as follows:

- an interruption on any active serving cell:
- of up to the duration shown in table 8.2.4.2.1-1, if the active serving cell is not in the same band as the PSCell or SCell being added or released, where the requirements for Sync apply for synchronous NR-DC, and for asynchronous NR-DC if the active serving cell is in the same CG as the PSCell or SCell being added or released, and the requirements for Async apply for asynchronous NR-DC if the active serving cell is not in the same CG as the PSCell or SCell being added or released, or
- of up to the duration shown in table 8.2.4.2.1-2, if the active serving cells are in the same band as the SCell being added or released, provided the cell specific reference signals from the active serving cells and the SCell being added or released are available in the same slot.

Table 8.2.4.2.1-1: Interruption duration for PSCell/SCell addition/release for inter-band DC/CA

μ	NR Slot length (ms) of victim cell	Interruption length (slots)		
		Sync		Async
0	1	1		2
1	0.5	2		3
2	0.25	Both aggressor cell and victim cell are on FR2	4	5
		Either aggressor cell or victim cell is on FR1	5	
3	0.125	Aggressor cell is on FR2	8	9
		Aggressor cell is on FR1	9	
5	0.03125	Aggressor cell is on FR1	33	33
6	0.015625	Aggressor cell is on FR1	65	65

Table 8.2.4.2.1-2: Interruption duration for SCell addition/release for intra-band DC/CA

μ	NR Slot length (ms)	Interruption length (slots)
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
1	0.5	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
2	0.25	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
3	0.125	$8 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
5	0.03125	$32 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
6	0.015625	$64 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe}, \mu}$
NOTE 1: $T_{\text{SMTC_duration}}$ measured in subframes is - the longest SMTC duration among all above activeserving cells and the SCell being added when one SCell is added. If SSB configuration (<i>absoluteFrequencySSB</i>) but no SMTC configuration is provided for the SCell being added, the SSB transmission		

periodicity is assumed to be 5ms and $T_{\text{SMTC_duration}}$ for the SCell being added is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being added. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being added, $T_{\text{SMTC_duration}}$ for the SCell being added is 0ms;
 - the longest SMTC duration among all active serving cells in the same band when one SCell is released.

NOTE 2: $N_{\text{slot}}^{\text{subframe},\mu}$ is as defined in TS 38.211 [6].

8.2.4.2.2 Interruptions at SCell activation/deactivation

When a SCell is activated or deactivated as defined in TS 37.340 [17], the UE is allowed

- an interruption on any active serving cell:
- of up to the duration shown in table 8.2.4.2.2-1, if the active serving cell is not in the same band as any of the SCells being activated or deactivated, where the requirements for Sync apply for synchronous NR-DC, and for asynchronous NR-DC if the active serving cell is in the same CG as all the SCells being activated, and the requirements for Async apply for asynchronous NR-DC if the active serving cell is not in the same CG as any of the SCells being activated, or
- of up to the duration shown in table 8.2.4.2.2-2, if the active serving cells are in the same band as any of the SCells being activated or deactivated provided the cell specific reference signals from the active serving cells and the SCells being activated or deactivated are available in the same slot.

Table 8.2.4.2.2-1: Interruption duration for SCell activation/deactivation for inter-band DC/CA

μ	NR Slot length (ms) of victim cell	Interruption length (slots)	
		Sync	Async
0	1	1	2
1	0.5	1	2
2	0.25	Both aggressor cell and victim cell are on FR2	3
		Either aggressor cell or victim cell is on FR1	
3	0.125	Aggressor cell is on FR2	5
		Aggressor cell is on FR1	
5	0.03125	Aggressor cell is on FR1	17
6	0.015625	Aggressor cell is on FR1	33

Table 8.2.4.2.2-2: Interruption duration for SCell activation/deactivation for intra-band DC/CA

μ	NR Slot length (ms)	Interruption length (slots)
0	1	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
1	0.5	$1 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
2	0.25	$2 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
3	0.125	$4 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
5	0.03125	$16 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
6	0.015625	$32 + T_{\text{SMTC_duration}} * N_{\text{slot}}^{\text{subframe},\mu}$
NOTE 1: $T_{\text{SMTC_duration}}$ measured in subframes is - the longest SMTC duration among all above active serving cells and the SCell being activated when one SCell is activated. If SSB configuration		

(*absoluteFrequencySSB*) but no SMTC configuration is provided for the SCell being activated, the SSB transmission periodicity is assumed to be 5ms and $T_{\text{SMTC duration}}$ for the SCell being activated is x ms, where x = the number of consecutive subframes containing all SSBs in one SSB burst transmitted by the SCell being activated. If no SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration is provided for the SCell being activated, $T_{\text{SMTC duration}}$ for the SCell being activated is 0ms;
 - the longest SMTC duration among all active serving cells in the same band when one SCell is deactivated.

NOTE 2: $N_{\text{slot}}^{\text{subframe}, \mu}$ is as defined in TS 38.211 [6].

8.2.4.2.3 Interruptions during measurements on SCC

Interruption on PCell, PSCell and other activated SCell(s) during measurement on the deactivated NR SCC shall meet requirements in clause 8.2.2.2.3, where the term PCell in clause 8.2.2.2.3 shall be deemed to be replaced with SpCell.

8.2.4.2.4 Interruptions at UL carrier RRC reconfiguration

The requirements in this clause shall apply when a supplementary UL carrier or an UL carrier is configured or de-configured in NR-DC as defined in TS 38.331 [2].

When an UL carrier or supplementary UL carrier is configured or de-configured, an interruption of up to the duration shown in table 8.2.4.2.4-1, is allowed during the RRC reconfiguration procedure in TS38.331 [2] on all the other activated serving cells within the same FR as the reconfigured uplink carrier. The interruption is for both uplink and downlink of all the other serving cells within the same FR as the configured or de-configured UL.

Table 8.2.4.2.4-1: Interruption duration for UL carrier RRC reconfiguration

μ	NR Slot length (ms)	Interruption length (slots)
0	1	1
1	0.5	2
2	0.25	4
3	0.125	8
5	0.03125	32
6	0.015625	64

8.2.4.2.5 Interruptions due to Active BWP switching Requirement

The requirements for DCI-based BWP switch, timer-based BWP switch or UL BWP switch triggered by consistent uplink CCA failures in this clause apply to the case that the BWP switch is performed on a single CC or multiple CCs.

When either of the DCI-based, timer-based or RRC-based downlink BWP switch and/or uplink BWP switch occur on multiple CCs simultaneously or over partially overlapping period, the interruption requirements described in this clause apply for each BWP switch.

When UE receives a DCI indicating the UE to switch its active BWP, or when a BWP timer *bwp-InactivityTimer* defined in TS 38.331 [2] expires, or when the UE receives an RRC command indicating the UE to switch its active BWP or when UL BWP switch is triggered by consistent uplink CCA failures,, the UE is allowed to cause an interruption on any other serving cells as defined in clause 8.2.2.2.5. In addition to what is defined in 8.2.2.5, when RRC-based BWP switch occurs on multiple CCs over partially overlapping period, the interruption is only allowed within the delay $T_{\text{RRCprocessingDelay}} + T_{\text{Waiting}} + T_{\text{BWPswitchDelayRRC}} + D_{\text{RRC}} \cdot (M-1)$ as defined in clause 8.6.3A.3. Besides, in asynchronous scenario the UE is allowed an additional interrupt of 1 slot length.

8.2.4.2.6 Interruptions at transitions between active and non-active during DRX

When PCell is in non-DRX and PSCell is in DRX, interruptions on PCell and the activated SCell in MCG if configured due to transitions from active to non-active and from non-active to active during PSCell DRX are allowed with up to 1% probability of missed ACK/NACK when the configured PSCell DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured PSCell DRX cycle is 640 ms or longer. Each interruption shall not exceed X slot as defined in table 8.2.4.2.6-1.

When PSCell is in non-DRX and PCell is in DRX, interruptions on PSCell on the activated SCell in SCG if configured due to transitions from active to non-active and from non-active to active during PCell DRX are allowed with up to 1 % probability of missed ACK/NACK when the configured PCell DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured PCell DRX cycle is 640 ms or longer. Each interruption shall not exceed X slot as defined in table 8.2.4.2.6-1.

Table 8.2.4.2.6-1: Interruption length X at transition between active and non-active during DRX

μ	NR Slot length (ms)	Interruption length X (slots)	
		Sync	Async
0	1	1	2
1	0.5	1	2
2	0.25	3	
3	0.125	5	
5	0.03125	17	
6	0.015625	33	

When both PCell and PSCell are in DRX, no interruption is allowed.

8.2.4.2.7 Interruptions at transitions from non-DRX to DRX

Interruption on PCell and the activated SCell in MCG if configured due to PSCell transitions from non-DRX to DRX when PCell is in non-DRX shall not exceed X slots as defined in table 8.2.4.2.6-1.

Interruption on PSCell and the activated SCell in SCG if configured due to PCell transitions from non-DRX to DRX when PSCell is in non-DRX shall not exceed X slots as defined in table 8.2.4.2.6-1.

8.2.4.2.8 Interruptions at SCell activation/deactivation with multiple downlink SCells

The requirements in this clause shall apply for the UE configured with NR-DC and up to 1 downlink SCell in FR1 and up to 7 downlink SCell(s) in FR2.

When multiple SCell are activated or deactivated by one single MAC CE command in MCG or SCG:

- an interruption on any serving cell in MCG or SCG is specified as in clause 8.2.4.2.2.

When multiple SCell are activated or deactivated in both MCG and SCG by two MAC CE commands respectively:

- an interruption on any serving cell in MCG is specified as in clause 8.2.4.2.2, and
- an interruption on any serving cell in SCG is specified as in clause 8.2.4.2.2.

8.2.4.2.9 Interruptions at NR SRS carrier based switching

SRS transmission can be configured on a carrier not configured for PUCCH/PUSCH transmission. When a UE needs to transmit periodic, semi-persistent or aperiodic SRS on a carrier of a serving cell not configured for PUCCH/PUSCH transmission, the UE can perform carrier based switching to one or more carriers not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission or from a carrier not configured for PUCCH/PUSCH transmission prior to transmitting SRS, provided that:

- switching is from a configured carrier to another activated carrier;

- the carrier of SCells not configured for PUCCH/PUSCH transmission to which SRS carrier based switching is performed is indicated by DCI SRS request field for aperiodic SRS transmission, or indicated by MAC-CE for semi-persistent SRS transmission, or configured via RRC for periodic SRS transmission;
- the serving cell, from which SRS carrier based switching is performed and whose UL transmission may therefore be interrupted, is indicated by srs-SwitchFromServCellIndex and srs-SwitchFromCarrier in TS38.331 [2];
- the SRS switching is not colliding with any other transmission with higher priority defined in TS 38.214 [26].
- the SRS switching is not colliding with any SSB/CSI-RS based L3 measurements and the measurements for RLM/BFD in the same CG.- for UE, which does not support simultaneous reception and transmission for inter-band TDD CA specified in TS 38.331 [2], and is compliant to the requirements for inter-band CA with uplink in one NR band and without simultaneous Rx/Tx specified in TS 38.101-3 [20], the SRS transmission are not simultaneously scheduled with DL SSB/CSI-RS for L3 or L1 measurements transmission on other carriers.

The UE shall not perform SRS carrier based switching if the above conditions cannot be met.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.4.2.9-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching to the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.4.2.9-2.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR1 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR1 not configured for PUCCH/PUSCH transmission,

- with up to X1 slot as specified in Table 8.2.4.2.9-1.

When SRS carrier based switching is performed between carriers, the UE is allowed interruptions on any active serving cell if UE is not capable of Per-FR gap, or on active serving cell(s) in FR2 if UE is capable of Per-FR gap, during the switching from the carrier of a serving cell in FR2 not configured for PUCCH/PUSCH transmission,

- with up to X2 slot as specified in Table 8.2.4.2.9-2.

Table 8.2.4.2.9-1: Interruption length X1 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note 1}	Interruption length X1 (slots)	
			Sub carrier spacing for aggressor cell (kHz)	
			15	30
0	1	≤ 200	2	2
		300, 500	2	2
		900	3	3
1	0.5	≤ 200	3	2
		300, 500	3	3
		900	4	4
2	0.25	≤ 200	4	3
		300, 500	5	4
		900	7	6
3	0.125	≤ 200	7	5
		300, 500	9	7
		900	12	10
5	0.03125	≤ 200	22	15
		300, 500	31	24
		900	44	37
6	0.015625	≤ 200	42	28
		300, 500	61	47
		900	87	73

Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .
--

Table 8.2.4.2.9-2: Interruption length X2 (slot)

μ	NR Slot length (ms) of victim cell	SRS carrier switching time (us) ^{Note 1}	Interruption length X2 (slots)			
			Sub carrier spacing for aggressor cell (kHz)			
			60	120	480	960
0	1	≤ 200	2	2	2	2
1	0.5	≤ 200	2	2	2	2
2	0.25	≤ 200	3	3	2	2
3	0.125	≤ 200	4	4	3	3
5	0.03125	≤ 200	11	10	8	8
6	0.015625	≤ 200	21	18	15	15
Note1: NR SRS carrier switching time is UE capability indicated by higher layer parameter <i>SRS-SwitchingTimeNR</i> .						

For intra-band SRS carrier switching in FR1 or FR2, interruptions in Table 8.2.2.2.9-1 and in Table 8.2.2.2.9-2 based on SRS carrier switching time $\leq 200\mu\text{s}$ shall apply. For inter-band SRS carrier switching in FR1, interruptions in Table 8.2.2.2.9-1 and in Table 8.2.2.2.9-2 shall apply.

8.2.4.2.10 Interruptions at direct SCell activation

When one or multiple SCell(s) are directly activated at SCell addition:

- the UE is allowed an interruption on any active serving cell:
- of up to the duration shown in Table 8.2.4.2.1-1, if the active serving cell is not in the same band as the SCell being directly activated, where the requirements for Sync apply for synchronous NR-DC, and for asynchronous NR-DC if the active serving cell is in the same CG as the SCell being directly activated, and the requirements for Async apply for asynchronous NR-DC if the active serving cell is not in the same CG as the SCell being directly activated, or
- of up to the duration shown in Table 8.2.4.2.1-2, if the active serving cells are in the same band as the SCell being directly activated provided the cell specific reference signals from the active serving cells and the SCell being directly activated are available in the same slot.

8.2.4.2.11 Interruptions when identifying CGI of an NR cell with autonomous gaps

When a UE is identifying CGI of an NR cell with autonomous gaps, the UE is allowed interruptions on PCell, PSCell or any activated SCell:

- with up to K1 interruptions with interrupted slots up to interruption length X1 specified in Table 8.2.4.2.11-1 for each interruption during MIB decoding time period T_{MIB} (ms) specified in clause 9.11.
- with up to L1 interruptions with interrupted slots up to interruption length Y1 specified in Table 8.2.4.2.11-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 1.
- with up to L2 interruptions with interrupted slots up to interruption length Y2 specified in Table 8.2.4.2.11-1 for each interruption during SIB1 decoding time period T_{SIB1} (ms) specified in clause 9.11 for SSB and CORESET for RMSI scheduling multiplexing patterns 2 and 3.

Where:

- $K1 = 6$ for the target cell carrier frequency on FR1 and $K1 = 25$ for the target cell carrier frequency on FR2, and
- $L1 = T_{\text{SIB1}}/20$, and
- $L2 = T_{\text{SIB1}}/T_{\text{SMTC}}$, where T_{SMTC} is the periodicity of the SMTC occasion configured for the target cell carrier.

Table 8.2.4.2.11-1: Interruption length X1, Y1 and Y2 during measurements with autonomous gaps

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	Interruption length Y1 (slots)	Interruption length Y2 (slots)
0	1	6	7	6
1	0.5	12	13	10
2	0.25	24	25	19
3	0.125	48	49	37
5	0.03125	192	193	145
6	0.015625	384	385	289

8.2.4.2.12 Interruptions when identifying CGI of an E-UTRA cell with autonomous gaps

When a UE is identifying CGI of an E-UTRA FDD cell or E-UTRA TDD cell with autonomous gaps, within time period $T_{\text{identify_CGI, E-UTRA}}$ specified in clause 9.4.7.1, the UE shall be able to transmit at least the number of ACK/NACKs specified in Table 8.2.4.2.12-1 on PCell, PSCell or any activated SCell in the frequency range where autonomous gaps are used, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured.

Table 8.2.4.2.12-1: Minimum number of ACK/NACKs transmitted by the UE during $T_{\text{identify_CGI, E-UTRA}}$

Minimum number of transmitted ACK/NACKs	Configuration of the serving cell in which the transmitted ACK/NACKs are counted	
	Duplex mode configuration	SCS
84	FDD	15 kHz
193	FDD	30 kHz
402	FDD	60 kHz
28	TDD ^{Note 1}	15 kHz
81	TDD ^{Note 1}	30 kHz
159	TDD ^{Note 1}	60 kHz
233	TDD ^{Note 2}	60 kHz
491	TDD ^{Note 2}	120 kHz
NOTE 1: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-1 [18].		
NOTE 2: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-2 [19].		

8.2.4.2.13 Interruptions due to SCell dormancy

8.2.4.2.13.1 Interruptions due to SCell dormancy switch

When one SCell in MCG or SCG is switched from dormancy to non-dormancy or from non-dormancy to dormancy [7] when UE is in DRX active time,

- the UE is allowed an interruption on active serving cell in MCG and SCG as defined in clause 8.2.4.2.5, except that the interruption is allowed regardless of which parameters change between the dormant BWP and the non-dormant BWP
- The starting time of interruption shall be within the dormancy switching delay as defined in clause 8.6.2.

When multiple SCells in MCG or SCG are switched from dormancy to non-dormancy or vice versa when the UE is in DRX active time, the interruption requirement described above applies for each BWP switch.

8.2.4.2.13.2 Interruptions due to CQI measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of CQI measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements on dormant SCells shall not exceed 0.5%.

8.2.4.2.13.3 Interruptions due to RRM measurements during SCell dormancy

When one or more SCells are in dormancy, the UE is for the purpose of RRM measurements on the dormant SCell(s) allowed to cause interruptions to non-dormant serving cell(s).

The rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements on dormant SCells shall not exceed 1.0%.

8.2.4.2.14 Interruptions at NR SRS antenna port switching

The requirements in this clause are applicable to SRS antenna port switching on FR1 and SRS resource(s) is only configured within the last 6 symbols of a slot. For interruption caused by SRS antenna port switching, the victim cell is based on the entry number of the band indicated by *txSwitchImpactToRx* and/or *txSwitchWithAnotherBand* regardless of per-FR MG capability. An UL interruption is allowed on any of the serving cells as indicated in *txSwitchWithAnotherBand*, and a DL interruption is allowed on any of the serving cells as indicated in *txSwitchImpactToRx*.

The UE shall perform SRS antenna port switching only if the below conditions are met.

- the SRS switching is not colliding with any other UL transmission with higher priority defined in TS 38.214 [26] if the serving cell on which the higher priority transmission is performed is a victim cell based on *txSwitchWithAnotherBand* or is the same carrier on which SRS is transmitted.
- the SRS switching is not colliding with any NR measurements (i.e. SSB/CSI-RS based L1/L3 measurements) and the measurements for RLM/BFD/CBD if the serving cell on which the NR measurements and the measurements for RLM/BFD/CBD is performed is a victim cell based on *txSwitchImpactToRx* or is the same carrier on which SRS is transmitted.

No requirements are defined for SRS antenna port switching if aperiodic SRS switching is colliding with aperiodic L1-RSRP/L1-SINR measurements and the serving cell on which the aperiodic L1-RSRP/L1-SINR measurement is configured is indicated in *txSwitchImpactToRx* or is the same carrier on which aperiodic SRS is scheduled/configured.

When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are synchronized, the interruption requirement in Table 8.2.4.2.14-1 applies. When 1 SRS symbol is configured in a slot for SRS antenna switching and the aggressor and victim cells are asynchronized, the interruption requirement in Table 8.2.4.2.14-2 applies. For the rest of SRS configurations, the interruption requirement in Table 8.2.4.2.14-3 applies.

Table 8.2.4.2.14-1: Interruption length in symbols of victim CC when 1 SRS symbol is configured, and aggressor and victim cells are synchronized

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	3	2	2
30	4	3	3
60	8	6	5
120	14	10	8

Table 8.2.4.2.14-2: Interruption length in slots of victim CC when 1 SRS symbol is configured, and aggressor and victim cells are asynchronized

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	2	2	2
30	2	2	2

60	2	2	2
120	2	2	2

Table 8.2.4.2.14-3: Interruption length in slots of victim CC for rest of the SRS configurations for synchronised and asynchronised scenarios

Victim cell SCS(kHz)	Aggressor cell SCS (kHz)		
	15	30	60
15	2	2	2
30	2	2	2
60	3	2	2
120	5	3	3

8.2.4.2.15 Interruptions at fast SCell activation

The requirements in this clause shall apply for the UE configured with one SCell when aperiodic CSI-RS resources is configured for fast SCell activation.

When one SCell in MCG or SCG is activated from deactivated, and aperiodic CSI-RS resources is configured for fast SCell activation, the UE is allowed.

- an interruption on any active serving cell:
 - of up to the duration shown in table 8.2.4.2.2-1, if the active serving cell is not in the same band as the SCell being activated, where the requirements for Sync apply for synchronous NR-DC, and for asynchronous NR-DC if the active serving cell is in the same CG as the SCell being activated, and the requirements for Async apply for asynchronous NR-DC if the active serving cell is not in the same CG as the SCell being activated, or
 - of up to $Y2 \text{ slots} + T_{\text{ATRS_duration}}$ if the active serving cells are in the same band as the SCell being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is larger than 2400ms, or
 - SCell is unknown and belongs to FR1, and SCell is contiguous to an active serving cell in the same band
 - of up to Y2 slot if the active serving cells are in the same band as any of the SCells being activated, when
 - SCell to be activated is known and belongs to FR1, if the measurement period of the SCell being activated is equal to or smaller than 2400ms, or
- SCell to be activated belongs to FR2

Where

- $T_{\text{ATRS_duration}}$ is CSI-RS burst for SCell activation where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots on the being activated SCell.
- Y2 are specified in Table 8.2.3.2.4-2.

8.2.4.2.16 Interruptions at SCG activation/deactivation

When SCG is activated or deactivated using an *RRConnectionReconfiguration* message as defined in TS 38.331 [2], the UE is allowed an interruption on any activated serving cell in MCG during the RRC reconfiguration procedure as follows:

- an interruption on any active serving cell in MCG:

- of up to the duration shown in table 8.2.4.2.16-1, if the active serving cell is not in the same band as the PSCell being activated or deactivated, where the requirements for Sync apply for synchronous NR-DC. The requirements for Async apply for asynchronous NR-DC.

Table 8.2.4.2.16-1: Interruption duration for SCG activation/deactivation for inter-band DC/CA

μ	NR Slot length (ms) of victim cell	Interruption length (slots)		
		Sync		Async
0	1	1		2
1	0.5	2		3
2	0.25	Both aggressor cell and victim cell are on FR2	4	5
		Either aggressor cell or victim cell is on FR1	5	
3	0.125	Aggressor cell is on FR2	8	9
		Aggressor cell is on FR1	9	

8.2.4.2.17 Interruptions due to RRM measurements on deactivated SCG

If the UE is not configured with RLM or BFD on the deactivated PSCell, interruptions on PCell or activated SCell(s) due to measurements on the deactivated PSCell are allowed with up to 0.5% probability of missed ACK/NACK feedback when the configured *measCyclePSCell* is 640ms or longer. The UE is only allowed to cause interruptions on PCell or activated SCell(s) immediately before and immediately after an SMTC. Each interruption shall not exceed requirement in Table 8.2.2.2.2-1.

If the UE is configured with RLM or BFD on the deactivated PSCell, the rate of ACK/NACK feedback loss on any active serving cell resulting from RRM measurements on the deactivated PSCell shall not exceed 1.0%.

8.2.4.2.18 Interruptions during RLM/BFD measurements on deactivated PSCell

When PSCell is configured with *bfd-and-RLM* with value *true*, if NR PSCell is deactivated, the UE is for the purpose RLM/BFD measurements on the deactivated PSCell allowed to cause interruptions to activated serving cell(s) which can either be Pcell or SCell in MCG.

The rate of ACK/NACK feedback loss on any activated serving cell resulting from RLM/BFD measurements on deactivated PSCell shall not exceed 0.5%.

8.2.4.2.19 Interruptions due to UE-specific CBW change

The requirements in clause 8.2.2.2.8 apply for this clause.

8.2.4.2A Void

8.2.4.2A.1 Void

8.2.4.2A.2 Void

8.2.4.2A.3 Void

8.3 SCell Activation and Deactivation Delay

8.3.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to activate at least one deactivated SCell and deactivate at least one activated SCell in EN-DC, or in standalone NR carrier aggregation, or in NE-DC, or in NR-DC.

The requirements shall apply for EN-DC, standalone NR carrier aggregation, NE-DC, and NR-DC.

8.3.2 SCell Activation Delay Requirement for Deactivated SCell

The requirements in this clause shall apply for the UE configured with at least one downlink SCell in EN-DC, or in standalone NR carrier aggregation or in NE-DC or in NR-DC and when one SCell is being activated.

The delay within which the UE shall be able to activate the deactivated SCell depends upon the specified conditions.

Upon receiving SCell activation command in slot n , the UE shall be capable to transmit valid CSI report and apply actions related to the activation command for the SCell being activated no later than in slot $n +$

$\frac{T_{HARQ} + T_{activation_time} + T_{CSI_Reporting}}{NR\ slot\ length}$, where:

T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3]

$T_{activation_time}$ is the SCell activation delay in millisecond.

If the SCell is known and belongs to FR1, $T_{activation_time}$ is:

- $T_{FirstSSB} + 5\text{ms}$, if the measurement period of the SCell being activated is equal to or smaller than 2400ms.
- $T_{FirstSSB_MAX} + T_{rs} + 5\text{ms}$, if the measurement period of the SCell being activated is larger than 2400ms.

If the SCell is unknown and belongs to FR1, and if one of the following conditions is met

- ‘ssb-PositionInBurst’ indicates only one SSB is being actually transmitted, or
- ‘ssb-PositionInBurst’ indicates multiple SSBs and TCI indication is provided in same MAC PDU with SCell activation,

provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, $T_{activation_time}$ is:

- $T_{FirstSSB_MAX} + T_{SMTC_MAX} + T_{rs} + 5\text{ms}$, if the following conditions are met,
 - the SCell is contiguous to an active serving cell in the same band, and
 - its *ssb-PositionInBurst* is same as the one of contiguous FR1 active serving cell, and
 - its SMTC offset is same as the one of contiguous FR1 active serving cell, and
 - its RTD with contiguous FR1 active serving cell is smaller than or equal to 260ns and its reception power difference with contiguous FR1 active serving cell is smaller than or equal to 6dB;
- $T_{FirstSSB_MAX} + T_{SMTC_MAX} + 2 \cdot T_{rs} + 5\text{ms}$, otherwise.

otherwise, provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, $T_{\text{activation_time}}$ is:

- $6\text{ms} + T_{\text{FirstSSB_MAX}} + T_{\text{SMTC_MAX}} + T_{\text{rs}} + T_{\text{L1-RSRP,measure}} + T_{\text{L1-RSRP,report}} + T_{\text{HARQ}} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$, if semi-persistent CSI-RS is used for CSI reporting,
- $3\text{ms} + T_{\text{FirstSSB_MAX}} + T_{\text{SMTC_MAX}} + T_{\text{rs}} + T_{\text{L1-RSRP,measure}} + T_{\text{L1-RSRP,report}} + \max(T_{\text{HARQ}} + T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}, T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}})$, if periodic CSI-RS is used for CSI reporting.
- However, when the following conditions are fulfilled, no activation requirement will be applied for this unknown SCell:
 - the SCell is contiguous to an active serving cell in the same band, and
 - A single SSB is used in the unknown SCell; or multiple SSBs are used in the SCell and TCI state indication for PDCCH is provided by the same MAC PDU used for SCell activation; and
 - its *ssb-PositionInBurst* is same as the one of contiguous FR1 active serving cell, and
 - its SMTC offset is same as the one of contiguous FR1 active serving cell
 - its RTD with contiguous FR1 active serving cell is larger than 260ns, or its reception power difference with contiguous FR1 active serving cell is larger than 6dB;

If the SCell being activated belongs to FR1 and if there is at least one active serving cell contiguous to the SCell on that FR1 band, if the UE is not provided with SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration for the target SCell, $T_{\text{activation_time}}$ is 3 ms for UE supporting *scellWithoutSSB*, provided

- The RTD between the target SCell and the contiguous active serving cell is within $\pm 260\text{ns}$, and
- The difference of the reception power with the contiguous active serving cell is $\leq 6\text{dB}$, and
- The RS(s) of SCell being activated is (are) QCL-TypeA with TRS(s) of the SCell being activated, and the TRS(s) of the SCell being activated is (are) further QCL-TypeC with SSB(s) of any active serving cell that is contiguous to the SCell being activated on that FR1 band.

If the SCell being activated belongs to FR2 and if there is at least one active serving cell on that FR2 band, then $T_{\text{activation_time}}$ is $T_{\text{FirstSSB}} + 5\text{ms}$ provided:

- The UE is provided with SMTC for the target SCell, and
- The SSBs in the serving cell(s) and the SSBs in the SCell fulfil the condition defined in clause 3.6.3, and
- The parameter *ssb-PositionsInBurst* is same for the serving cell(s) and the SCell, and
- SSB is in the same half-frame on the SCell and the FR2 active serving cell.

If the SCell being activated belongs to FR2 and if there is at least one active serving cell on that FR2 band, if the UE supporting *scellWithoutSSB* is not provided with any SMTC for the target SCell, $T_{\text{activation_time}}$ is 3 ms, provided

- the RS (s) of SCell being activated is (are) QCL-TypeD with RS (s) of one active serving cell on that FR2 band.

If the SCell being activated belongs to FR2 and if there is no active serving cell on that FR2 band provided that PCell or PSCell is in FR1 or in FR2:

If the target SCell is known to UE and semi-persistent CSI-RS is used for CSI reporting, then $T_{\text{activation_time}}$ is:

- $3\text{ms} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$, where $T_{\text{uncertainty_MAC}}=0$ and $T_{\text{uncertainty_SP}}=0$ if:
 - UE receives the SCell activation command, semi-persistent CSI-RS activation command and TCI state activation command at the same time, or
 - Provided this is the initial activation after SCell addition, and
 - TCI-ActivatedConfig is configured for the SCell, and UE receives the SCell activation command and semi-persistent CSI-RS activation command at the same time.

If the target SCell is known to UE and periodic CSI-RS is used for CSI reporting, then $T_{\text{activation_time}}$ is:

- $\max(T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}, T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}} - T_{\text{HARQ}})$, where $T_{\text{uncertainty_MAC}}=0$ if:
 - UE receives the SCell activation command and TCI state activation commands at the same time, or
 - Provided this is the initial activation after SCell addition, and
- UE receives the SCell activation command and TCI-ActivatedConfig is configured for the SCell.

If the PCell/PSCell and the target SCell are configured as FR1-FR2-1 CA or if the PCell/PSCell and the target SCell are in a FR2-1 band pair with independent beam management, and the target SCell is unknown to UE and semi-persistent CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time}}$ is:

- $6\text{ms} + T_{\text{FirstSSB_MAX}} + 15 \cdot T_{\text{SMTC_MAX}} + 8 \cdot T_{\text{TS}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + T_{\text{HARQ}} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$.

If the PCell/PSCell and the target SCell are configured as FR1-FR2-2 CA or if the PCell/PSCell and the target SCell are in a FR2-2 band pair with independent beam management, and the target SCell is unknown to UE and semi-persistent CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time}}$ is:

- $6\text{ms} + T_{\text{FirstSSB_MAX}} + 23 \cdot T_{\text{SMTC_MAX}} + 12 \cdot T_{\text{TS}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + T_{\text{HARQ}} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$.

If the PCell/PSCell and the target SCell are configured as FR1-FR2-1 CA or if the PCell/PSCell and the target SCell are in a FR2-1 band pair with independent beam management, and the target SCell is unknown to UE and periodic CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time}}$ is:

- $3\text{ms} + T_{\text{FirstSSB_MAX}} + 15 \cdot T_{\text{SMTC_MAX}} + 8 \cdot T_{\text{TS}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + \max\{(T_{\text{HARQ}} + T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}), (T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}})\}$.

If the PCell/PSCell and the target SCell are configured as FR1-FR2-2 CA or if the PCell/PSCell and the target SCell are in a FR2-2 band pair with independent beam management, and the target SCell is unknown to UE and periodic CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/I_{ot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time}}$ is:

- $3\text{ms} + T_{\text{FirstSSB_MAX}} + 23 \cdot T_{\text{SMTC_MAX}} + 12 \cdot T_{\text{TS}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + \max\{(T_{\text{HARQ}} + T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}), (T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}})\}$.

where,

$T_{\text{SMTC_MAX}}$:

- In FR1, in case of intra-band SCell activation, $T_{\text{SMTC_MAX}}$ is the longer SMTC periodicity between active serving cells and SCell being activated provided the cell specific reference signals from the active serving cells and the SCells being activated or released are available in the same slot; in case of inter-band SCell activation, $T_{\text{SMTC_MAX}}$ is the SMTC periodicity of SCell being activated.
- In FR2, in case of intra-band SCell activation, $T_{\text{SMTC_MAX}}$ is the longer SMTC periodicity between active serving cells and SCell being activated provided that in Rel-15 only support FR2 intra-band CA; in case of FR2 inter-band SCell activation, $T_{\text{SMTC_MAX}}$ is the SMTC periodicity of SCell being activated.
- $T_{\text{SMTC_MAX}}$ is bounded to a minimum value of 10ms.

T_{TS} is the SMTC periodicity of the SCell being activated if the UE has been provided with an SMTC configuration for the SCell in SCell addition message, otherwise T_{TS} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{TS} is the periodicity of one of the SMTC which is up to UE implementation. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement which involves T_{TS} is applied with T_{TS}

= 5ms assuming the SSB transmission periodicity is 5ms. There are no requirements if the SSB transmission periodicity is not 5ms

T_{FirstSSB} : is the time to the end of the first complete SSB burst indicated by the SMTC, or within 5ms if SMTC is not configured, after slot $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{NR \text{ slot length}}$.

$T_{\text{FirstSSB_MAX}}$: Is the time to the end of the first complete SSB burst indicated by the SMTC, or within 5ms if SMTC is not configured, after slot $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{NR \text{ slot length}}$, further fulfilling:

- In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCell being activated is transmitting SSB burst.
- In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

$T_{\text{FineTiming}}$ is the time period between UE finish processing the last activation command for PDCCH TCI, PDSCH TCI (when applicable) and the timing of first complete available SSB corresponding to the TCI state.

$T_{\text{L1-RSRP, measure}}$ is L1-RSRP measurement delay $T_{\text{L1-RSRP_Measurement_Period_SSB}}$ ms or $T_{\text{L1-RSRP_Measurement_Period_CSI-RS}}$ based on applicability as defined in clause 9.5 assuming $M=1$ and $T_{\text{Report}}=0$.

$T_{\text{L1-RSRP, report}}$ is delay of acquiring CSI reporting resources.

$T_{\text{uncertainty_MAC}}$ is the time period between reception of the last activation command for PDCCH TCI, PDSCH TCI (when applicable) relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

$T_{\text{uncertainty_RRC}}$ is the time period between reception of the RRC configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

$T_{\text{uncertainty_SP}}$ is the time period between reception of the activation command for semi-persistent CSI-RS resource set for CQI reporting relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS38.331 [2].

Longer delays for RRM measurement requirements, and in case of FR2 also SSB based RLM/BFD/CBD/L1-RSRP measurement requirements, can be expected during the cell detection time for unknown SCell activation.

When *absoluteFrequencySSB* is not configured in *DownlinkConfigCommon* for target SCell but SMTC for target SCell is configured, no requirement would be applied.

$T_{\text{CSI_reporting}}$ is the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2].

SCell in FR1 is known if it has been meeting the following conditions:

- During the period equal to $\max(5 \cdot \text{measCycleSCell}, 5 \cdot \text{DRX cycles})$ for FR1 before the reception of the SCell activation command;
- the UE has sent a valid measurement report for the SCell being activated and

- the SSB measured remains detectable according to the cell identification conditions specified in clause 9.2 and 9.3.
- the SSB measured during the period equal to $\max(5 \cdot \text{measCycleSCell}, 5 \cdot \text{DRX cycles})$ also remains detectable during the SCell activation delay according to the cell identification conditions specified in clause 9.2 and 9.3.

Otherwise SCell in FR1 is unknown.

For the first SCell activation in FR2 bands, the SCell is known if it has been meeting the following conditions:

- During the period equal to 4s for UE supporting power class 1/5 and 3s for UE supporting power class 2/3/4 before UE receives the last activation command for PDCCH TCI, PDSCH TCI (when applicable) and semi-persistent CSI-RS for CQI reporting (when applicable):
 - the UE has sent a valid L3-RSRP measurement report with SSB index, and
 - SCell activation command is received after L3-RSRP reporting and no later than the time when UE receives MAC-CE command for TCI activation
- During the period from L3-RSRP reporting to the valid CQI reporting, the reported SSBs with indexes remain detectable according to the cell identification conditions specified in clauses 9.2 and 9.3, and the TCI state is selected based on one of the latest reported SSB indexes.

Otherwise, the first SCell in FR2 band is unknown. The requirement for unknown SCell applies provided that the activation commands for PDCCH TCI, PDSCH TCI (when applicable), semi-persistent CSI-RS for CQI reporting (when applicable), and configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) are based on the latest valid L1-RSRP reporting.

If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the activation command, $T_{\text{SMTc_SCell}}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell being activated. $T_{\text{SMTc_MAX}}$ follows *smtc1* or *smtc2* according to the physical cell IDs of the target cells being activated and the active serving cells.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS 38.331 [2] for a SCell at the first opportunities for the corresponding actions once the SCell is activated.

The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1+\frac{T_{\text{HARQ}}}{\text{NR slot length}}$ and not occur after slot $n+1+\frac{T_{\text{HARQ}}+3\text{ms}+T_X}{\text{NR slot length}}$, where NR slot length is with respect to the numerology used in the SCell being activated, and T_X is:

- 0, if $T_{\text{activation_time}}$ is 3ms;
- T_{FirstSSB} , for any scenario where $T_{\text{activation_time}}$ includes T_{FirstSSB} ;
- $T_{\text{FirstSSB_MAX}}$, for any scenario where $T_{\text{activation_time}}$ includes $T_{\text{FirstSSB_MAX}}$;
- $T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}}$, for any scenario where $T_{\text{activation_time}}$ includes only $T_{\text{FineTiming}}$ and no $T_{\text{FirstSSB_MAX}}$.

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

The requirements in this clause and requirements on interruption due to SCell activation in clause 8.2 apply provided that the SSB of the to-be-activated SCell is within the first active DL BWP of the SCell.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed a first L1-RSRP measurement, the UE shall report lowest valid L1 SS-RSRP range if the UE has available uplink resources to report L1-RSRP for the SCell.

8.3.3 SCell Deactivation Delay Requirement for Activated SCell

The requirements in this clause shall apply for the UE configured with at least one downlink SCell in EN-DC, or in standalone NR carrier aggregation or in NE-DC or in NR-DC and when one SCell is being deactivated.

Upon receiving SCell deactivation command in slot n , the UE shall accomplish the deactivation actions for the SCell being deactivated no later than in slot $n + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$. The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1 + \frac{T_{HARQ}}{NR\ slot\ length}$ and not occur after slot $n+1 + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$, where NR slot length is with respect to the numerology used in the SCell being deactivated.

Upon expiry of the *sCellDeactivationTimer* in slot n , the UE shall accomplish the deactivation actions for the SCell being deactivated no later than in slot $n + \frac{3ms}{NR\ slot\ length}$. The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1$ and not occur after slot $n+1 + \frac{3ms}{NR\ slot\ length}$, where NR slot length is with respect to the numerology used in the SCell being deactivated.

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

8.3.4 Direct SCell Activation at SCell addition

The requirements in this clause apply for UE being configured in the RRC reconfiguration message, TS 38.331 [2], with one SCell for which the parameter *sCellState* is set to *activated*. If the RRC reconfiguration message for direct SCell activation also configures PSCell addition or PSCell change, the direct SCell activation delay may be longer than the requirements defined in this clause.

If the RRC reconfiguration message for direct SCell activation also configures TCI state information, the requirements in section 8.3.2 based on that TCI state activation command is received at the same time as SCell activation command shall apply.

The UE shall configure the SCell in activated state upon successful completion of the RRC reconfiguration procedure within the specified delay. The UE shall be capable to transmit valid CSI report and apply actions for the directly activated SCell no later than in slot $n + \frac{N_{direct}}{NR\ slot\ length}$,

where:

- Slot n is the last slot overlapping with the PDSCH containing the RRC reconfiguration message,
- $N_{direct} = T_{RRC_Process} + T_1 + T_{activation_time} + T_{CSI_Reporting} - 3ms$ for the cases specified in clause 8.3.2 that TCI state is not indicated within $T_{activation_time}$; otherwise, $N_{direct} = T_{RRC_Process} + T_1 + T_{HARQ} + T_{activation_time} + T_{CSI_Reporting}$
- $T_{RRC_Process}$: RRC procedure delay as specified in clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC procedure delay defined in clause 12 of TS 38.331 [2],
- T_1 : Delay from slot $n + \frac{T_{RRC_Process}}{NR\ slot\ length}$ until the transmission of *RRCReconfigurationComplete* message,

Note: T_1 is UE implementation dependent.

T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],

If the SCell is known and belongs to FR1, $T_{CSI_Reporting}$ is specified in clause 8.3.2 and $T_{activation_time}$ is defined as:

- $T_{FirstSSB} + 5ms$, if the measurement period of the SCell being activated is equal to or smaller than 2400ms.
- $T_{FirstSSB_MAX} + T_{rs} + 5ms$, if measurement period of the SCell being activated is larger than 2400ms.

where,

the measurement period in Table 9.2.5.2-1 applies if the target SCell was in an intra-frequency layer corresponding to an activated SCell;

the measurement period in Table 9.2.5.2-3 applies if the target SCell was in an intra-frequency layer corresponding to a deactivated SCell;

the measurement period in Table 9.3.5-1 applies if the target SCell was in an inter-frequency layer.

- Otherwise, $T_{\text{activation_time}}$ and $T_{\text{CSI_Reporting}}$ are specified in clause 8.3.2, where the following definitions of T_{FirstSSB} and $T_{\text{FirstSSB_MAX}}$ shall override the existing ones:
 - T_{FirstSSB} : the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{\text{RRC_Process}} + T_1}{\text{NR slot length}}$
 - $T_{\text{FirstSSB_MAX}}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{\text{RRC_Process}} + T_1}{\text{NR slot length}}$
 - In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCell being activated is transmitting SSB burst.
 - In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS38.321 [7] for an SCell at the first opportunities for the corresponding actions once the SCell is activated.

The SCell in FR1 is known provided the following conditions are met for the SCell:

- During the last 5 seconds before the reception of the direct SCell configuration command:
 - the UE has sent a valid measurement report for the SCell being directly activated, and
 - the SSB measured remains detectable according to the cell identification conditions specified in sections 9.2 and 9.3,
- the SSB measured during the period equal to [5] seconds also remains detectable during the SCell activation delay according to the cell identification conditions specified in clause 9.2 and 9.3.

Otherwise, the SCell is unknown.

The SCell in FR2 is known provided it meets the corresponding conditions as defined in clause 8.3.2. Otherwise, the SCell is unknown.

The UE may be allowed to cause interruptions to serving cells on other component carriers during an interruption window, as specified in clause 8.2. The starting point of an interruption window on spCell or any activated SCell shall not occur before slot $n+1$, and shall not occur after slot $n+1 + \frac{T_{\text{RRC_Process}} + T_1 + T_X}{\text{NR slot length}}$, where NR slot length is with respect to the numerology of the SCell being activated, and T_X is:

- T_{FirstSSB} , for any scenario where $T_{\text{activation_time}}$ includes T_{FirstSSB} ;
- $T_{\text{FirstSSB_MAX}}$, for any scenario where $T_{\text{activation_time}}$ includes $T_{\text{FirstSSB_MAX}}$;
- $T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}}$, for any scenario where $T_{\text{activation_time}}$ includes $T_{\text{FineTiming}}$.

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

Starting from the slot $n + \frac{T_{\text{RRC_Process}} + T_1}{\text{NR slot length}}$ until the UE has completed the direct SCell activation, the UE shall report CQI index = 0 (out of range) if the UE has available uplink resources to report CQI for the SCell.

8.3.5 Direct SCell Activation at Handover

The requirements in this clause apply for UE being configured in the RRC reconfiguration message, TS 38.331 [2], for handover with one SCell for which the parameter *sCellState* is set to *activated*.

The UE shall configure the SCell in activated state upon successful completion of the RRC reconfiguration procedure within the specified delay. The UE shall be capable to transmit valid CSI report and apply actions for the directly activated SCell no later than in slot $n + \frac{N_{direct}}{NR\ slot\ length}$,

Where:

- Slot n is the last slot overlapping with the PDSCH containing RRC reconfiguration message.
- $N_{direct} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{activation_time} + T_{CSI_Reporting} - 3ms$ for the cases specified in clause 8.3.2 that TCI state is not indicated within $T_{activation_time}$; otherwise, $N_{direct} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{HARQ} + T_{activation_time} + T_{CSI_Reporting}$
- $T_{RRC_Process}$: RRC procedure delay as specified in clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC procedure delay defined in clause 12 of TS 38.331 [2],
- $T_{interrupt}$: Interruption time during handover as specified in clause 6.1.1,
- T_2 : Delay from slot $n + \frac{T_{RRC_Process} + T_{interrupt}}{NR\ slot\ length}$ until UE has obtained a valid TA command for the target PCell,
- T_3 : Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to $k+1$ slot, where k is defined in clause 4.2 in TS 38.213,
- T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],
- If the SCell is known and belongs to FR1, $T_{CSI_Reporting}$ is specified in clause 8.3.2 and $T_{activation_time}$ is defined as:
 - $T_{FirstSSB} + 5ms$, if the measurement period of the SCell being activated is equal to or smaller than 2400ms.
 - $T_{FirstSSB_MAX} + T_{rs} + 5ms$, if measurement period of the SCell being activated is larger than 2400ms.

where,

the measurement period in Table 9.2.5.2-1 applies if the target SCell was in an intra-frequency layer corresponding to an activated SCell;

the measurement period in Table 9.2.5.2-3 applies if the target SCell was in an intra-frequency layer corresponding to a deactivated SCell;

the measurement period in Table 9.3.5-1 applies if the target SCell was in an inter-frequency layer.

- Otherwise, $T_{activation_time}$ and $T_{CSI_Reporting}$ are specified in clause 8.3.2, where the following definitions of $T_{FirstSSB}$ and $T_{FirstSSB_MAX}$ shall override the existing ones:
 - $T_{FirstSSB}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{RRC_Process} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$
 - $T_{FirstSSB_MAX}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{RRC_Process} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$
 - In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCell being activated is transmitting SSB burst.
 - In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS 38.321 [7] for an SCell at the first opportunities for the corresponding actions once the SCell is activated.

The SCell in FR1 is known provided the following conditions are met for the SCell:

- During the last 5 seconds before the reception of the direct SCell configuration command:

- the UE has sent a valid measurement report for the SCell being directly activated, and
- the SSB measured remains detectable according to the cell identification conditions specified in sections 9.2 and 9.3,
- the SSB measured during the period equal to [5] seconds also remains detectable during the SCell activation delay according to the cell identification conditions specified in clause 9.2 and 9.3.

Otherwise, the SCell is unknown.

The SCell in FR2 is known provided it meets the corresponding conditions as defined in clause 8.3.2. Otherwise, the SCell is unknown.

The UE may be allowed to cause interruptions to PCell during an interruption window, as specified in clause 8.2. The starting point of an interruption window on PCell shall not occur before slot $n+1 + \frac{T_{RRC\ Processing} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$, and not occur after slot $n+1 + \frac{T_{RRC\ Processing} + T_{interrupt} + T_2 + T_3 + T_X}{NR\ slot\ length}$, where NR slot length is with respect to the numerology of the SCell being activated, and T_X is:

- $T_{FirstSSB}$, for any scenario where $T_{activation_time}$ includes $T_{FirstSSB}$;
- $T_{FirstSSB_MAX}$, for any scenario where $T_{activation_time}$ includes $T_{FirstSSB_MAX}$;
- $T_{uncertainty_MAC} + T_{FineTiming}$, for any scenario where $T_{activation_time}$ includes $T_{FineTiming}$.

The length of the interruption window depends on the frequency band relation between the aggressor SCell and the victim PCell.

Starting from the slot $n + \frac{T_{RRC_Process} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$ and until the UE has completed the direct SCell activation, the UE shall report CQI index = 0 (out of range) if the UE has available uplink resources to report CQI for the SCell.

8.3.6 Direct SCell Activation at RRCResume

The requirements in this clause apply for UE being configured in the RRC reconfiguration message in TS38.331 [2] for RRC Resume with one SCell for which the parameter *sCellState* is set to *activated*.

The requirements in clause 8.3.4 shall apply, except that the definition of T_1 shall be deemed to be replaced with

T_1 : Delay from slot $n + \frac{T_{RRC_Process}}{NR\ slot\ length}$ until the transmission of RRCResumeComplete message,

8.3.7 SCell Activation Delay Requirement for Deactivated SCell with Multiple Downlink SCells

The requirements in this clause shall apply for the UE configured with more than one downlink SCells.

In EN-DC, NE-DC, standalone NR carrier aggregation, or in one CG of NR-DC, the requirements in this clause shall apply when the following conditions are met:

- UE only receives one single MAC command for multiple SCell activation within the activation period defined in this clause
- in each single CG, there are no other SCell activation, deactivation, addition or release before activation is completed for all the SCells activated by the single MAC CE in this clause, and
- in EN-DC and NE-DC, there are no E-UTRAN SCell activation, deactivation, addition or release before multiple SCell activation is completed in this clause, and
- any to-be-activated unknown SCell has active serving cell(s) or known to-be-activated SCell(s) on the same band

In two CGs of NR-DC, the requirements in this clause shall apply when the following conditions are met:

- UE receives one MAC command per CG for multiple SCell activation within the activation period defined in this clause, and

- UE supports per-FR measurement gap capability, and
- any to-be-activated unknown SCell has active serving cell(s) or known to-be-activated SCell(s) on the same band

The delay within which the UE shall be able to activate the deactivated SCell with other downlink to-be-activated SCell(s) depends upon the specified conditions.

Upon receiving SCell activation command in slot n for more than one SCell, for each of the to-be-activated SCell, the UE shall be capable to transmit valid CSI report and apply actions related to the activation command for the SCell being activated no later than in slot $n + \frac{T_{\text{HARQ}} + T_{\text{activation_time_multiple_cells}} + T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, where:

T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3]

$T_{\text{activation_time_multiple_cells}}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario.

If the SCell is known and belongs to FR1 and the measurement period of the SCell being activated is equal to or smaller than 2400ms, $T_{\text{activation_time_multiple_cells}}$ is:

- $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{rs}} + 5\text{ms}$, if on the same band UE also has at least one parallel to-be-activated SCell which is FR1 known SCell with the measurement period larger than 2400ms but does not have any parallel to-be-activated SCell which is FR1 unknown SCell.
- $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} + 5\text{ms}$, if on the same band UE also has at least one parallel to-be-activated SCell which is FR1 unknown SCell
- otherwise, $T_{\text{FirstSSB_MAX_multiple_cells}} + 5\text{ms}$.

If the SCell is known and belongs to FR1 and the measurement period of the SCell being activated is larger than 2400ms, $T_{\text{activation_time_multiple_cells}}$ is:

- $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} + 5\text{ms}$, if on the same band UE also has at least one parallel to-be-activated SCell which is FR1 unknown SCell
- otherwise, $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{rs}} + 5\text{ms}$

If the SCell is unknown and belongs to FR1, provided that the side condition $\hat{E}_s/I_{\text{ot}} \geq -2\text{dB}$ is fulfilled, $T_{\text{activation_time_multiple_cells}}$ is:

- $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} + 5\text{ms}$, if the SCell is not counted in N_1
- The activation delay may be longer if SSB is not in the same half-frame on the SCell and the contiguous FR1 known cell or contiguous FR1 active serving cell

otherwise

- if the following conditions are met
 - ‘ssb-PositionInBurst’ indicates only one SSB is being actually transmitted, or
 - ‘ssb-PositionInBurst’ indicates multiple SSBs and TCI indication is provided in same MAC PDU with SCell activation,
- $T_{\text{activation_time_multiple_cells}}$ is:
 - $T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} * N_1 + T_{\text{rs}} + 5\text{ms}$,
- Otherwise:

$T_{\text{activation_time_multiple_cells}}$ is:

- $6\text{ms} + T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} * N_1 + T_{\text{L1-RSRP,measure}} + T_{\text{L1-RSRP,report}} + T_{\text{HARQ}} + \max(T_{\text{uncertainty_MAC_multiple_cells}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP_multiple_cells}})$, if semi-persistent CSI-RS is used for CSI reporting,

- $3\text{ms} + T_{\text{FirstSSB_MAX_multiple_cells}} + T_{\text{SMTC_MAX_multiple_cells}} + T_{\text{rs}} \cdot N_1 + T_{\text{L1-RSRP,measure}} + T_{\text{L1-RSRP,report}} + \max(T_{\text{HARQ}} + T_{\text{uncertainty_MAC_multiple_cells}} + 5\text{ms} + T_{\text{FineTiming}}, T_{\text{uncertainty_RRC_multiple_cells}} + T_{\text{RRC_delay}})$, if periodic CSI-RS is used for CSI reporting.

If the SCell being activated belongs to FR1 and if there is at least one active serving cell contiguous to the SCell on that FR1 band, if the UE is not provided with SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration for the target SCell, $T_{\text{activation_time_multiple_cells}}$ is same as single SCell activation delay requirement as defined in clause 8.3.2.

If the SCell being activated belongs to FR2 and if there is at least one active serving cell on that FR2 band, then $T_{\text{activation_time_multiple_cells}}$ is same as single SCell activation delay requirement as defined in clause 8.3.2.

If the SCell being activated belongs to FR2 and if there is no active serving cell on that FR2 band provided that PCell or PSCell is FR1:

If the target SCell is known to UE and semi-persistent CSI-RS is used for CSI reporting, then $T_{\text{activation_time_multiple_cells}}$ is same as single SCell activation delay requirement as defined in clause 8.3.2.

If the target SCell is known to UE and periodic CSI-RS is used for CSI reporting, then $T_{\text{activation_time_multiple_cells}}$ is same as single SCell activation delay requirement as defined in clause 8.3.2.

If the target SCell is unknown to UE and semi-persistent CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/\text{Iot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time_multiple_cells}}$ is:

- $3\text{ ms} + \max(T_{\text{uncertainty_MAC_multiple_cells}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP_multiple_cells}})$, if on the same band UE also has at least one parallel to-be-activated SCell which is FR2 known SCell. $T_{\text{uncertainty_MAC_multiple_cells}} = 0$ and $T_{\text{uncertainty_SP_multiple_cells}} = 0$ if:
 - UE receives the SCell activation command, semi-persistent CSI-RS activation command and TCI state activation commands at the same time, or
 - Provided this is the initial activation after SCell addition, and
 - TCI-ActivatedConfig is configured for the SCell, and UE receives the SCell activation command and semi-persistent CSI-RS activation command at the same time.

If the target SCell is unknown to UE and periodic CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/\text{Iot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time_multiple_cells}}$ is:

- $\max(T_{\text{uncertainty_MAC_multiple_cells}} + 5\text{ms} + T_{\text{FineTiming}}, T_{\text{uncertainty_RRC_multiple_cells}} + T_{\text{RRC_delay}} - T_{\text{HARQ}})$, if on the same band UE also has at least one parallel to-be-activated SCell which is FR2 known SCell. $T_{\text{uncertainty_MAC_multiple_cells}} = 0$ if:
 - UE receives the SCell activation command and TCI state activation commands at the same time, or
 - Provided this is the initial activation after SCell addition, and
 - UE receives the SCell activation command and TCI-ActivatedConfig is configured for the SCell.

The requirements for FR2 unknown SCells apply provided that the parameter *ssb-PositionsInBurst* is same for the SCell and the known serving cell on the same FR2 band. The activation delay FR2 unknown SCell may be longer if SSB is not in the same half-frame on the SCell and the FR2 known cell on the same band.

Where,

N_1 is the number counting for parallel FR1 unknown to-be-activated SCell(s) only except the ones which fulfilled the following conditions:

- contiguous to an active serving cell in the same band, or to a known SCell in the same band being activated by the same MAC PDU, and
- A single SSB is used in the unknown SCell; or multiple SSBs are used in the unknown SCell and TCI state indication for PDCCH is provided by the same MAC PDU used for SCell activation; and

- its *ssb-PositionInBurst* is same as the one of contiguous FR1 known cell or contiguous FR1 active serving cell, and
- its RTD with contiguous FR1 known cell or contiguous FR1 active serving cell is smaller than or equal to 260ns and its reception power difference with contiguous FR1 known cell or contiguous FR1 active serving cell is smaller than or equal to 6dB, and
- its SMTC offset is same as the one of contiguous FR1 known cell or contiguous FR1 active serving cell

However, when the following conditions are fulfilled, no activation requirement will be applied for this unknown SCell and other SCells being activated and counted in N_1 :

- contiguous to an active serving cell in the same band, or to a known SCell in the same band being activated by the same MAC PDU, and
- A single SSB is used in the unknown SCell; or multiple SSBs are used in the unknown SCell and TCI state indication for PDCCH is provided by the same MAC PDU used for SCell activation; and
- its *ssb-PositionInBurst* is same as the one of FR1 known cell or FR1 active serving cell, and
- its RTD with contiguous FR1 known cell or contiguous FR1 active serving cell is larger than 260ns or its reception power difference with contiguous FR1 known cell or contiguous FR1 active serving cell is larger than 6dB, and
- its SMTC offset is same as the one of FR1 known cell or FR1 active serving cell

$T_{\text{SMTC_MAX_multiple_cells}}$:

- In FR1, in case of intra-band SCell activation, $T_{\text{SMTC_MAX_multiple_cells}}$ is the longest SMTC periodicity between active serving cells and SCells being activated on the same band provided the cell specific reference signals from the active serving cells and the SCells being activated or released are available in the same slot; in case of inter-band SCell activation, $T_{\text{SMTC_MAX_multiple_cells}}$ is the longest SMTC periodicity of SCells being activated on the same band.
- In FR2, $T_{\text{SMTC_MAX_multiple_cells}}$ is the longest SMTC periodicity between active serving cells and SCell(s) being activated in FR2 intra-band CA.
- $T_{\text{SMTC_MAX_multiple_cells}}$ is bounded to a minimum value of 10ms.

$T_{\text{FirstSSB_MAX_multiple_cells}}$: is the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$, further fulfilling:

- In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCells being activated are transmitting SSB burst.
- In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

$T_{\text{uncertainty_MAC_multiple_cells}}$ is the time period between reception of the activation command for PDCCH TCI, PDSCH TCI (when applicable) and SCell activation command of this unknown SCell.

$T_{\text{uncertainty_SP_multiple_cells}}$ is the time period between reception of the activation command for semi-persistent CSI-RS resource set for CQI reporting and SCell activation command of this unknown SCell.

$T_{\text{uncertainty_RRC_multiple_cells}}$ is the time period between reception of the RRC configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) and SCell activation command of this unknown SCell.

T_{rs} , $T_{\text{FineTiming}}$, and $T_{\text{RRC_delay}}$ is defined in clause 8.3.2.

Longer delays for RRM measurement requirements, and in case of FR2 also SSB based RLM/BFD/CBD/L1-RSRP measurement requirements, can be expected during the cell detection time for unknown SCell activation.

The condition of known SCell in FR1 or FR2 is defined in clause 8.3.2.

If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the activation command, $T_{\text{SMTc_SCell}}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell being activated. $T_{\text{SMTc_MAX_multiple_scell}}$ follows *smtc1* or *smtc2* according to the physical cell IDs of the target cells being activated and the active serving cells.

The starting point and the end-point of an interruption window on PCell or any activated SCell in MCG for NR standalone mode, or on PSCell or any activated SCell in SCG for EN-DC mode is same as single SCell activation requirement in clause 8.3.2.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

Upon receiving SCell activation command in slot n , if the start of the first complete SSB used in the T_X in the different bands which have SCells being activated after $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ are not aligned on time domain among

- SCells in different bands being activated by the same MAC CE if UE does not support per FR gap, or
- SCells in different FR1 bands being activated by the same MAC CE if UE supports per FR gap,

additional interruptions may be expected for the activated serving cells, where

- The number of additional interruptions is no more than the number of FR1 bands which have both SCell being activated for which the activation requirements involve $T_{\text{FirstSSB_MAX multiple_scells}}$ with T_{rs} and the active serving cell, and
- In each interruption occasion, the interruption length is defined in clause 8.2.2.2.2, and
- Longer activation delay may be expected for multiple SCell activation under one MAC CE with multiple interruptions, and
- T_X is:
 - T_{FirstSSB} , for any scenario where $T_{\text{activation_time multiple_scells}}$ includes T_{FirstSSB} ;
 - $T_{\text{FirstSSB_MAX multiple_scells}}$, for any scenario where $T_{\text{activation_time multiple_scells}}$ includes $T_{\text{FirstSSB_MAX multiple_scells}}$;
 - $T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}}$ or $T_{\text{uncertainty_MAC multiple_scells}} + T_{\text{FineTiming}}$, for any scenario where $T_{\text{activation_time multiple_scells}}$ includes $T_{\text{FineTiming}}$.

Otherwise, no additional interruption is expected due to activation of multiple SCells.

Starting from slot $n + T_{\text{HARQ}} + 3 \text{ ms}$ where slot n is the slot where SCell activation command is received (as specified in clause 4.3 of TS 38.213 [3]) and until the SCell activation completion at UE, after at least one CSI-RS transmission occasion for the channel measurement and reporting (specified in clause 5.2.2.5 of TS 38.214 [26]), the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed a first L1-RSRP measurement, the UE shall report lowest valid L1 SS-RSRP range if the UE has available uplink resources to report L1-RSRP for the SCell.

8.3.8 SCell Deactivation Delay Requirement for Activated SCell with Multiple Downlink SCells

The requirements in this clause shall apply for the UE configured with multiple downlink SCells in EN-DC, or in standalone NR carrier aggregation, or in NE-DC, or in NR-DC, provided that,

- in each single CG, there are no other SCell activation, deactivation, addition or release before deactivation is completed for all the SCells deactivated by the single MAC CE in this clause, and
- in EN-DC and NE-DC, there are no E-UTRAN SCell activation, deactivation, addition or release before multiple SCell deactivation is completed in this clause, and

- in EN-DC, NE-DC, NR-DC and standalone NR, UE only receives one single MAC command for multiple SCell deactivation within the deactivation period defined in this clause, or, in NR-DC, per-FR measurement gap capable UE receives one MAC command per CG for multiple SCell deactivation within the deactivation period defined in this clause

Upon receiving SCell deactivation command in slot n , the UE shall accomplish the deactivation actions for the SCell being deactivated within the same delay as specified in clause 8.3.3.

The starting point and the end-point of an interruption window on PCell or any activated SCell in MCG for NR standalone mode, or on PSCell or any activated SCell in SCG for EN-DC mode is same as single SCell activation requirement in clause 8.3.3.

8.3.9 Direct SCell Activation of Multiple Downlink SCells at SCell addition

The requirements in this clause apply for UE being configured in the RRC reconfiguration message, TS 38.331 [2], with 2 SCells for which the parameter *sCellState* is set to *activated*.

In EN-DC, NE-DC, stand-alone NR, or in one CG of NR-DC, the requirements in this clause shall apply when the following conditions are met:

- UE only receives one RRC reconfiguration message for direct activation of SCells within the activation period defined in this clause,
- in each single CG, there are no other SCell activation, deactivation, addition or release before direct activation is completed for all the SCells activated by the single RRC reconfiguration message in this clause, and
- in EN-DC and NE-DC, there are no E-UTRAN SCell activation, deactivation, addition or release before the direct SCell activation of multiple SCells in this clause is completed.

In two CGs of NR-DC, the requirements in this clause shall apply when the following conditions are met:

- UE receives one RRC message per CG for direct activation of SCells within the activation period defined in this clause,
- UE supports per-FR measurement gap capability, and
- any to-be-activated unknown SCell has active serving cell(s) or known to-be-activated SCell(s) on the same band.

The UE shall configure the SCells in activated state upon successful completion of the RRC reconfiguration procedure within the specified delay. The UE shall be capable to transmit valid CSI report and apply actions for the directly activated SCell no later than in slot $n + \frac{N_{direct_multiple_scells}}{NR\ slot\ length}$,

where:

- Slot n is the last slot overlapping with the PDSCH containing the RRC reconfiguration message.
- $N_{direct_multiple_scells} = T_{RRC_Process} + T_1 + T_{activation_time_multiple_scells} + T_{CSI_Reporting} - 3ms$ for the cases specified in clause 8.3.7 that TCI state is not indicated within $T_{activation_time}$; otherwise, $N_{direct_multiple_scells} = T_{RRC_Process} + T_1 + T_{HARQ} + T_{activation_time_multiple_scells} + T_{CSI_Reporting}$
- T_1 and $T_{RRC_Process}$ are specified in clause 8.3.4,
- T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],
- $T_{activation_time_multiple_scells}$ and $T_{CSI_Reporting}$ are specified in clause 8.3.7, where the following definition of $T_{FirstSSB}$, $T_{FirstSSB_MAX}$, and $T_{FirstSSB_MAX_multiple_scells}$ shall override the existing ones:
 - $T_{FirstSSB}$ and $T_{FirstSSB_MAX}$: as specified in clause 8.3.4,
 - $T_{FirstSSB_MAX_multiple_scells}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{RRC_Process} + T_1}{NR\ slot\ length}$, further fulfilling:

- In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCells being activated are transmitting SSB burst.
- In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS38.321 [7] for an SCell at the first opportunities for the corresponding actions once the SCell is activated.

The UE may be allowed to cause interruptions to serving cells on other component carriers during an interruption window, as specified in clause 8.2. The starting point of an interruption window on spCell or any activated SCell shall not occur before slot $n+1+\frac{T_{HARQ}}{NR\ slot\ length}$, and shall not occur after slot $n+1+\frac{T_{RRC_Process}+T_1+T_X}{NR\ slot\ length}$, where NR slot length is with respect to the numerology of the SCell being activated, and T_X is:

- $T_{FirstSSB}$, for any scenario where $T_{activation_time_multiple_cells}$ includes $T_{FirstSSB}$;
- $T_{FirstSSB_MAX}$, for any scenario where $T_{activation_time_multiple_cells}$ includes $T_{FirstSSB_MAX}$;
- $T_{FirstSSB_MAX_multiple_cell}$, for any scenario where $T_{activation_time_multiple_cells}$ includes $T_{FirstSSB_MAX_multiple_cells}$;
- $T_{uncertainty_MAC} + T_{FineTiming}$, for any scenario where $T_{activation_time_multiple_cells}$ includes $T_{FineTiming}$.

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

Starting from the slot $n + \frac{T_{RRC_Process} + T_1}{NR\ slot\ length}$ until the UE has completed the direct SCell activation, the UE shall report CQI index = 0 (out of range) if the UE has available uplink resources to report CQI for the SCells.

8.3.10 Direct SCell Activation of Multiple Downlink SCells at Handover

The requirements in this clause apply for UE being configured in the RRC reconfiguration message, TS 38.331 [2], for handover with 2 SCells for which the parameter *sCellState* is set to *activated*.

In MCG of NE-DC, MCG of NR-DC, or in stand-alone NR, the requirements in this clause shall apply when the following conditions are met:

- UE does not receive any RRC reconfiguration message for direct activation of SCells within the activation period defined in this clause,
- there is no other SCell activation, deactivation, addition or release before direct activation is completed for all the SCells activated by the single RRC reconfiguration message in this clause, and
- in NE-DC, there is no E-UTRAN SCell activation, deactivation, addition or release before the direct activation of SCells in this clause is completed.

The UE shall configure the SCells in activated state upon successful completion of the RRC reconfiguration procedure within the specified delay. The UE shall be capable to transmit valid CSI report and apply actions for the directly activated SCells no later than in slot $n + \frac{N_{direct_multiple_cells}}{NR\ slot\ length}$ where:

- Slot n is the last slot overlapping with the PDSCH containing the RRC reconfiguration message,
- $N_{direct_multiple_cells} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{activation_time_multiple_cells} + T_{CSI_Reporting} - 3ms$ for the cases specified in clause 8.3.7 that TCI state is not indicated within $T_{activation_time}$; otherwise, $N_{direct_multiple_cells} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{HARQ} + T_{activation_time_multiple_cells} + T_{CSI_Reporting}$
- $T_{RRC_Process}$, $T_{interrupt}$, T_2 , and T_3 are specified in clause 8.3.5,
- T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],
- $T_{activation_time_multiple_cells}$ and $T_{CSI_Reporting}$ are specified in clause 8.3.7, where the following definitions of $T_{FirstSSB}$, $T_{FirstSSB_MAX}$, and $T_{FirstSSB_MAX_multiple_cells}$ shall override the existing ones:

- $T_{FirstSSB}$, $T_{FirstSSB_MAX}$: as specified in clause 8.3.5,
- $T_{FirstSSB_MAX_multiple_scell}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot $n + \frac{T_{RRC_Process} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$, further fulfilling:
 - In FR1, in case of intra-band SCell activation, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot; in case of inter-band SCell activation, the first occasion when the SCells being activated are transmitting SSB burst.
 - In FR2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS 38.321 [7] for an SCell at the first opportunities for the corresponding actions once the SCell is activated.

The UE may be allowed to cause interruptions to PCell during an interruption window, as specified in clause 8.2. The starting point of an interruption window on PCell shall not occur before slot $n+1 + \frac{T_{RRC\ Processing} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$, and not occur after slot $n+1 + \frac{T_{RRC\ Processing} + T_{interrupt} + T_2 + T_3 + T_X}{NR\ slot\ length}$, where NR slot length is with respect to the numerology of the SCell being activated, and T_X is:

- $T_{FirstSSB}$, for any scenario where $T_{activation_time_multiple_scells}$ includes $T_{FirstSSB}$;
- $T_{FirstSSB_MAX}$, for any scenario where $T_{activation_time_multiple_scells}$ includes $T_{FirstSSB_MAX}$;
- $T_{FirstSSB_MAX_multiple_scell}$, for any scenario where $T_{activation_time_multiple_scells}$ includes $T_{FirstSSB_MAX_multiple_scells}$;
- $T_{uncertainty_MAC} + T_{FineTiming}$, for any scenario where $T_{activation_time_multiple_scells}$ includes $T_{FineTiming}$.

The length of the interruption window depends on the frequency band relation between the aggressor SCell and the victim PCell.

Starting from the slot $n + \frac{T_{RRC_Process} + T_{interrupt} + T_2 + T_3}{NR\ slot\ length}$ and until the UE has completed the direct SCell activation, the UE shall report CQI index = 0 (out of range) if the UE has available uplink resources to report CQI for the SCells.

8.3.11 Direct SCell Activation of Multiple Downlink SCells at RRC Resume

The requirements in this clause apply for UE being configured in the RRC reconfiguration message in TS38.331 [2] for RRC Resume with 2 SCells for which the parameter *sCellState* is set to *activated*.

The requirements in clause 8.3.9 shall apply, except that the definition of T_1 shall be replaced by the corresponding definition in clause 8.3.6.

8.3.12 SCell Activation Delay Requirement for Deactivated PUCCH SCell

The requirements in this clause shall apply for the UE configured with one downlink SCell and when PUCCH is configured for the SCell being activated.

configured for the SCell being activated.

If the UE has a valid TA for transmitting on an SCell then the UE shall be capable to transmit valid CSI report and apply actions related to the activation command for the SCell being activated on the PUCCH SCell no later than in slot $n + \frac{T_{HARQ} + T_{activation_time} + \max((T_{First_available_CSI} + T_{CSI_processing}), 3 * T_{target_PL-RS}) + T_{CSI_Reporting_after}}{NR\ slot\ length}$,

Where:

- A TA is considered to be valid provided that the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running.
- T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

- $T_{\text{activation_time}}$ is the SCell activation delay in millisecond as specified in section 8.3.2 except the definition of $T_{\text{uncertainty_MAC}}$ is replaced with:
 - $T_{\text{uncertainty_MAC}}$ is the time period between reception of the last activation command for PDCCH TCI, PDSCH TCI (when applicable), UL spatial relation (for FR2) relative to
 - SCell activation command for known case;
 - First valid L1-RSRP reporting for unknown case.
- $T_{\text{target_PL-RS}}$ is the periodicity of the target pathloss reference signal determined during PUCCH SCell activation.
- $T_{\text{First_available_CSI}}$ is the delay uncertainty (in ms) in acquiring the first available downlink CSI reference resource.
- $T_{\text{CSI_processing}}$ is the UE processing time for CSI reporting.
- $T_{\text{CSI_reporting_after}}$ is the delay uncertainty (in ms) in acquiring the first available CSI reporting resources after end of $\max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), 3 \cdot T_{\text{target_PL-RS}})$
- If the UE does not have a valid TA for transmitting on an SCell then the UE shall be capable to perform downlink actions related to the SCell activation command as specified in [7] for the SCell being activated on the PUCCH SCell no later than in slot $n + \frac{T_{\text{HARQ}} + T_{\text{activation_time}}}{\text{NR slot length}}$, and shall be capable to perform uplink actions related to the SCell activation command as specified in [7] for the SCell being activated on the PUCCH SCell no later than in slot $n + \frac{T_{\text{HARQ}} + T_{\text{delay_PUCCH_SCell}}}{\text{NR slot length}}$ and shall transmit valid CSI report for the SCell being activated on the PUCCH SCell no later than in slot $n + \frac{T_{\text{HARQ}} + T_{\text{delay_PUCCH_SCell}}}{\text{NR slot length}}$, where:

$$T_{\text{delay_PUCCH_SCell}} = T_{\text{activation_time}} + \max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), (T_1 + T_2 + T_3), 3 \cdot T_{\text{target_PL-RS}}) + T_{\text{CSI_reporting_after}}$$

Where:

- $T_{\text{activation_time}}$ is the SCell activation delay in millisecond as specified in section 8.3.2 except the definition of $T_{\text{uncertainty_MAC}}$ is replaced with:
 - $T_{\text{uncertainty_MAC}}$ is the time period between reception of the last activation command for PDCCH TCI, PDSCH TCI (when applicable), UL spatial relation (when applicable in FR2) relative to
 - SCell activation command for known case;
 - First valid L1-RSRP reporting for unknown case.
- $T_{\text{target_PL-RS}}$ is the periodicity of the target pathloss reference signal determined during PUCCH SCell activation.
- $T_{\text{First_available_CSI}}$ is the delay uncertainty (in ms) in acquiring the first available downlink CSI reference resource.
- $T_{\text{CSI_processing}}$ is the UE processing time for CSI reporting.
- $T_{\text{CSI_reporting_after}}$ is the delay uncertainty (in ms) in acquiring the first available CSI reporting resources after end of $\max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), (T_1 + T_2 + T_3), 3 \cdot T_{\text{target_PL-RS}})$
- T_1 is the delay uncertainty in acquiring the first available PDCCH triggered PRACH occasion in the PUCCH SCell after the slot $n + \frac{T_{\text{HARQ}} + T_{\text{activation_time}}}{\text{NR slot length}}$.
 - T_1 is up to the summation of a delay uncertainty for reception of PDCCH order, SSB to PRACH occasion association period and 10 ms, where SSB to PRACH occasion association period is defined in the table 8.1-1 of TS 38.213
- T_2 is the delay from slot $n + \frac{T_{\text{HARQ}} + T_{\text{activation_time}} + T_1}{\text{NR slot length}}$ until UE has obtained a valid TA command for the target PUCCH SCell being activated. Slot n is the slot where the UE receives PUCCH SCell activation command.
- T_3 is the delay for applying the received TA for uplink transmission on target PUCCH SCell being activated, as specified in clause 4.2 in TS 38.213.

The pathloss reference signal is known for known PUCCH SCell during activation if the following conditions are met during the period between the last transmission of the RS resource used for L3 RSRP measurement reporting and the completion of PUCCH SCell activation, where the RS resource is the target pathloss reference signal or QCLeD (with Type D) to the target pathloss reference signal:

- The PUCCH SCell activation command is received within 1280 ms upon the last transmission of the RS resource used for L3 measurement reporting
- The target pathloss reference signal determination is based on the latest L3 RSRP measurement reporting
- The target pathloss reference signal remains detectable during the PUCCH SCell activation period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$
- The associated SSBs with the target pathloss reference signal remain detectable during the PUCCH SCell activation period
 - SNR of the associated SSB $\geq -3\text{dB}$

The pathloss reference signal is known for unknown PUCCH SCell during activation if the following conditions are met during the period between the last transmission of the RS resource used for L1-RSRP measurement reporting and the completion of PUCCH SCell activation, where the RS resource is the target pathloss reference signal or QCLeD (with Type D) to the target pathloss reference signal.

- The PUCCH SCell activation command is received within 1280 ms upon the last transmission of the RS resource used for L1-RSRP measurement reporting
- The target pathloss reference signal determination is based on the latest L1-RSRP measurement reporting
- The target pathloss reference signal remains detectable during the PUCCH SCell activation period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$
- The associated SSBs with the target pathloss reference signal remain detectable during the PUCCH SCell activation period
 - SNR of the associated SSB $\geq -3\text{dB}$

Otherwise, the pathloss reference signal is unknown.

The above delay requirement shall apply provided that:

- The target pathloss reference signal determined during PUCCH SCell activation is known otherwise longer activation time is expected if the pathloss reference signal is unknown; and
- The RA on PUCCH SCell is not interrupted by the RA on PCell otherwise additional delay to activate the SCell is expected; and
- No SRS carrier based switching or SRS antenna port switching occurs during the SCell activation procedure otherwise the PUCCH SCell activation delay can be extended.

The starting point and the end-point of an interruption window on PCell or any activated SCell in MCG for NR standalone mode, or on PSCell or any activated SCell in SCG for EN-DC mode is the same as the interruption in single SCell activation requirement in clause 8.3.2.

In addition to the interruption due to RF retuning during PUCCH SCell activation, if the UE is not capable of *parallelTxPRACH-SRS-PUCCH-PUSCH*, and PRACH on PUCCH SCell and PUCCH/PUSCH/SRS on other active serving cell are fully or partially overlapping in time, the UE shall transmit PRACH on PUCCH SCell and is allowed to drop or cause interruption to SRS or PUCCH or PUSCH transmission on the SpCell or on any activated SCell. Otherwise, UE is not allowed to drop or cause any interruption to SRS or PUCCH or PUSCH transmission on SpCell or on any activated SCell.

For unknown PUCCH SCell activation in FR2, the requirement only apply when UE supports CSI reporting cross PUCCH group capability, and UE is configured with CSI reporting via SpCell. For unknown PUCCH SCell activation in FR1, the requirement only applies when UE supports CSI reporting cross PUCCH group capability, and UE is

configured with CSI reporting via SpCell, if 'ssb-PositionInBurst' indicates multiple SSBs but TCI state indication is not provided in same MAC PDU with SCell activation.

The requirement for unknown SCell applies provided that the PDCCH order (when applicable) and the activation commands for TCI, UL spatial relation and PL-RS (when applicable) are based on the latest valid L1-RSRP reporting via Primary PUCCH group.

8.3.13 SCell activation delay Requirement for Deactivated PUCCH SCell with Multiple SCells

The requirements in this clause shall apply for the UE configured with multiple deactivated downlink SCells and PUCCH is configured for a SCell, and when PUCCH SCell with downlink SCell(s) are activated by one MAC command.

For EN-DC, NE-DC, and standalone NR, the requirements in this clause shall apply when the following conditions are met:

- UE only receives one single MAC command for multiple SCell activation within the activation period defined in this clause
- in each single CG, there are no other SCell activation, deactivation, addition or release before activation is completed for all the SCells activated by the single MAC CE in this clause, and
- in EN-DC and NE-DC, there are no E-UTRAN SCell activation, deactivation, addition or release before multiple SCell activation is completed in this clause, and
- any to-be-activated unknown non-PUCCH SCell in a different band from to-be-activated PUCCH SCell has active serving cell(s) or known to-be-activated non-PUCCH SCell(s) on the same band.
- All DL SCells being activated in the secondary PUCCH group are unknown if PUCCH SCell being activated is unknown.
- If the to-be-activated FR2 PUCCH SCell is unknown, and there is no to-be-activated FR1 SCell which is counted in N1 as defined in 8.3.7.

Upon receiving SCell activation command in slot n for more than one SCell and one among the multiple SCells is PUCCH SCell, the UE shall be able to transmit valid CSI report on PUCCH SCell and apply actions related to the SCell activation command as specified in [7] for the PUCCH SCell being activated no later than in slot $n + T_{\text{activate_total_PUCCH_SCell}}$.

The UE shall be capable to transmit valid CSI report of other SCell no later than in slot $n + T_{\text{activate_total_other_SCell}}$.

Where:

- $T_{\text{activate_total_PUCCH_SCell}}$ is $\frac{T_{\text{HARQ}} + T_{\text{delay_multiple_SCells_PUCCH_SCell}}}{\text{NR slot length}}$,
- $T_{\text{activate_total_other_SCell}}$ is $\frac{T_{\text{HARQ}} + T_{\text{delay_multiple_SCells_other_SCell}}}{\text{NR slot length}}$

Where:

$T_{\text{delay_multiple_SCells_other_SCell}}$ is the SCell activation delay for other SCell when PUCCH SCell is activated with multiple SCells and is given by $T_{\text{activation_time_multiple_scells}} + T_{\text{CSI_Reporting}}$.

$T_{\text{delay_multiple_SCells_PUCCH_SCell}}$ is the SCell activation delay for PUCCH SCell when it is activated with multiple SCells and is given as below.

If UE has a Valid TA for transmitting on PUCCH SCell,

- A TA is considered to be valid provided that the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running.

$$T_{\text{delay_multiple_SCells_PUCCH_SCell}} = T_{\text{activation_time_multiple_scells}} + \max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), 3 \cdot T_{\text{target_PL-RS}}) + T_{\text{CSI_reporting_after}}$$

If UE does not have valid TA for PUCCH SCell,

$$T_{\text{delay_multiple_SCells_PUCCH_SCell}} = T_{\text{activation_time_multiple_scells}} + \max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), (T_1 + T_2 + T_3), 3 \cdot T_{\text{target_PL-RS}}) + T_{\text{CSI_reporting_after}}$$

Where:

- Otherwise, when the to-be-activated PUCCH SCell is FR2 unknown SCell, $T_{\text{activation_time_multiple_scells}}$ is equal to $T_{\text{activation_time}}$ as defined in 8.3.12; otherwise, $T_{\text{activation_time_multiple_scells}}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in section 8.3.7.
- $T_{\text{target_PL-RS}}$ is the periodicity of PL-RS resource when PL-RS of target PUCCH SCell is known
- $T_{\text{first_available_CSI}}$: the delay uncertainty in acquiring the first available downlink CSI reference resources for secondary PUCCH group.
- $T_{\text{CSI_processing}}$: the UE processing time for CSI reporting of secondary group PUCCH SCells.
- $T_{\text{CSI_reporting_after}}$ the delay uncertainty in acquiring the first available CSI reporting resource after end of $\max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), 3 \cdot T_{\text{target_PL-RS}})$ if UE has a valid TA for PUCCH SCell or after end of $\max((T_{\text{First_available_CSI}} + T_{\text{CSI_processing}}), (T_1 + T_2 + T_3), 3 \cdot T_{\text{target_PL-RS}})$ if UE does not have a valid TA for PUCCH SCell.

T_1 is the delay uncertainty in acquiring the first available PDCCH triggered PRACH occasion in the PUCCH SCell after $T_{\text{activation_time_multiple_scells}}$.

- T_1 is up to the summation of a delay uncertainty for reception of PDCCH order, SSB to PRACH occasion association period and 10 ms, where SSB to PRACH occasion association period is defined in the table 8.1-1 of TS 38.213
- T_2 is the delay from slot $n + (T_{\text{HARQ}} + T_{\text{activation_time_multiple_scells}} + T_1)/\text{NR slot length}$ until UE has obtained a valid TA command for the target PUCCH SCell being activated. Slot n is the slot where the UE receives PUCCH SCell activation command.
- T_3 is the delay for applying the received TA for uplink transmission on target PUCCH SCell being activated, and greater than or equal to $k+1$ slot, where k is defined in clause 4.2 in TS 38.213. The starting point and the endpoint of an interruption window on PCell or any activated SCell in MCG for NR standalone mode, or on PSCell or any activated SCell in SCG for EN-DC mode is same as single SCell activation requirement in clause 8.3.2.

Starting from slot $n + T_{\text{HARQ}} + 3$ ms where n is the slot where SCell activation command is received (as specified in clause 4.3 of TS 38.213 [3]) and until the SCell activation completion at UE, after at least one CSI-RS transmission occasion for the channel measurement and reporting (specified in clause 5.2.2.5 of TS 38.214 [26]), the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

In addition to the interruption due to RF retuning during multiple SCell activation, if the UE is not capable of *parallelTxPRACH-SRS-PUCCH-PUSCH* for inter-band CA, and PRACH on PUCCH SCell and PUCCH/PUSCH/SRS on other active serving cell are fully or partially overlapping in time, the UE shall transmit PRACH on PUCCH SCell and is allowed to drop or cause interruption to SRS or PUCCH or PUSCH transmission on the SpCell or on any activated SCell. Otherwise, UE is not allowed to drop or cause any interruption of SRS or PUCCH or PUSCH transmission on SpCell or on any activated SCell.

Upon receiving SCell activation command in slot n , if the start of the first complete SSB used in the T_x in the different bands which have SCells being activated after $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ are not aligned on time domain among

- SCells in different bands being activated by the same MAC CE if UE does not support per FR gap, or
- SCells in different FR1 bands being activated by the same MAC CE if UE supports per FR gap,

additional interruptions may be expected for the activated serving cells, where

- The number of additional interruptions is no more than the number of FR1 bands which have both SCell being activated for which the activation requirements involve $T_{\text{FirstSSB_MAX multiple_cells}}$ with T_{rs} and the active serving cell, and
- In each interruption occasion, the interruption length is defined in clause 8.2.2.2.2, and
- Longer activation delay may be expected for multiple SCell activation under one MAC CE with multiple interruptions, and
- T_X is:
 - T_{FirstSSB} , for any scenario where $T_{\text{activation_time multiple_cells}}$ includes T_{FirstSSB} ;
 - $T_{\text{FirstSSB_MAX multiple_cells}}$, for any scenario where $T_{\text{activation_time multiple_cells}}$ includes $T_{\text{FirstSSB_MAX multiple_cells}}$;
 - $T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}}$ or $T_{\text{uncertainty_MAC multiple_cells}} + T_{\text{FineTiming}}$, for any scenario where $T_{\text{activation_time multiple_cells}}$ includes $T_{\text{FineTiming}}$.

Otherwise, no additional interruption is expected due to activation of multiple SCells.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed a first L1-RSRP measurement, the UE shall report lowest valid L1 SS-RSRP range if the UE has available uplink resources to report L1-RSRP for the SCell.

8.3.14 SCell Deactivation Delay Requirement for Activated PUCCH SCell

The requirements in this clause shall apply for the UE configured with one SCell configured with PUCCH in EN-DC, or in standalone NR carrier aggregation, or in NE-DC.

Upon receiving PUCCH SCell deactivation command in slot n , the UE shall accomplish the deactivation actions for the PUCCH SCell being deactivated no later than in slot $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$. The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ and not occur after slot $n+1 + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$, where NR slot length is with respect to the numerology used in the PUCCH SCell being deactivated.

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

8.3.15 SCell Deactivation Delay Requirement for Activated PUCCH SCell with Multiple Downlink SCells

The requirements in this clause shall apply for the UE configured with multiple downlink SCells and one SCell configured with PUCCH in EN-DC, or in standalone NR carrier aggregation, or in NE-DC, provided that,

- in each single CG, there are no other SCell activation, deactivation, addition or release before deactivation is completed for all the SCells deactivated by the single MAC CE in this clause, and
- in EN-DC and NE-DC, there are no E-UTRAN SCell activation, deactivation, addition or release before multiple SCell deactivation is completed in this clause, and
- in EN-DC, NE-DC and standalone NR, UE only receives one single MAC command for multiple SCell deactivation within the deactivation period defined in this clause

Upon receiving SCell deactivation command in slot n , the UE shall accomplish the deactivation actions for the SCells (including one SCell configured with PUCCH) being deactivated within the same delay as specified in clause 8.3.14.

The starting point and the end-point of an interruption window on PCell or any activated SCell in MCG for NR standalone mode, or on PSCell or any activated SCell in SCG for EN-DC mode are same as single SCell activation requirement in clause 8.3.14.

8.3.16 Fast SCell Activation Delay Requirement for Deactivated SCell

Aperiodic CSI-RS resources can be configured for fast SCell activation. The requirements in this clause shall apply for the UE configured with one downlink SCell in EN-DC, or in standalone NR carrier aggregation or in NE-DC or in NR-DC and when one SCell is being activated. The requirements in this clause shall apply for the UE provided with aperiodic CSI-RS resources for SCell activation for the target SCell.

Note: If UE is allocated A-TRS for fast SCell activation, the UE is not required to use the SSB of the target SCell.

The delay within which the UE shall be able to activate the deactivated SCell depends upon the specified conditions.

Upon receiving SCell activation command in slot n , the UE shall be capable to transmit valid CSI report and apply actions related to the activation command for the SCell being activated no later than in slot $n +$

$\frac{T_{\text{HARQ}} + T_{\text{activation_time}} + T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, where:

T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3]

$T_{\text{activation_time}}$ is the SCell activation delay in millisecond.

If the SCell is known and belongs to FR1, $T_{\text{activation_time}}$ is:

- $T_{\text{FirstATRS}} + 5\text{ms}$, if the measurement period of the SCell being activated is equal to or smaller than 2400ms.
- $T_{\text{FirstATRS}} + T_{\text{gap}} + T_{\text{ATRS}} + 5\text{ms}$, if the measurement period of the SCell being activated is larger than 2400ms.

Note: The RSs on the activated serving cell in the same band are not required to be transmitted in the same slot as the temporary RS.

Note: UE may report inaccurate non-zero CQI for any activated Cell and being activated SCell during the fast SCell activation procedure only if the RSs on the activated serving cell in the same band are not transmitted in the same slot as the aperiodic CSI-RS for fast SCell activation.

If the SCell is unknown and belongs to FR1, and SCell is contiguous to an active serving cell in the same band, provided that the side condition $\hat{E}_s/\text{Iot} \geq -2\text{dB}$ is fulfilled, $T_{\text{activation_time}}$ is:

- $T_{\text{FirstATRS}} + T_{\text{gap}} + T_{\text{ATRS}} + 5\text{ms}$, if the following conditions are met,
 - the SCell is contiguous to an active serving cell in the same band, and
 - its *ssb-PositionInBurst* is same as the one of contiguous FR1 active serving cell, and
 - its SMTC offset is same as the one of contiguous FR1 active serving cell, and
 - its RTD with contiguous FR1 active serving cell is smaller than or equal to 260ns with respect to the to-be-activated SCell's SSB numerology, and its reception power difference with contiguous FR1 active serving cell is smaller than or equal to 6dB;

Note: The RSs on the activated serving cell in the same band are not required to be transmitted in the same slot as the temporary RS.

Note: UE may report inaccurate non-zero CQI for any activated SCell and being activated SCell during the fast SCell activation procedure only if the RSs on the activated serving cell in the same band are not transmitted in the same slot as the aperiodic CSI-RS for fast SCell activation.

If the SCell being activated belongs to FR2 and if there is at least one active serving cell on that FR2 band, then $T_{\text{activation_time}}$ is $T_{\text{FirstATRS}} + 5\text{ms}$ provided:

- The UE is provided with aperiodic CSI-RS resources for SCell activation for the target SCell, and

- The SSBs in the serving cell(s) and the SSBs in the SCell being activated fulfil the condition defined in clause 3.6.3, and
- The parameter *ssb-PositionsInBurst* is same for the serving cell(s) and the SCell, and
- SSB is in the same half-frame on the SCell and the FR2 active serving cell

If the SCell being activated belongs to FR2 and if there is no active serving cell on that FR2 band provided that PCell or PSCell is in FR1 or in FR2, and assuming PDCCH TCI and PDSCH TCI (when applicable) are associated with the triggered aperiodic CSI-RS resources for fast SCell activation, and when the following conditions are fulfilled:

- One of the candidate TCI states configured in TCI-StatesPDCCH-ToAddList has the same QCL source of the triggered A-TRS,
- The QCL source of CSI-RS for CQI reporting is the same as the triggered A-TRS,
- The TCI state for PDCCH/PDSCH is the same as A-TRS remain unchanged during SCell activation,
- If the target SCell belongs to FR2 is known to UE and semi-persistent CSI-RS is used for CSI reporting, then $T_{\text{activation_time}}$ is:
 - $3\text{ms} + \max(T_{\text{FirstATRS}} + 2\text{ms}, T_{\text{uncertainty_SP}})$, where $T_{\text{uncertainty_SP}}=0$ if UE receives the SCell activation command and semi-persistent CSI-RS activation command at the same time.
- If the target SCell belongs to FR2 is known to UE and periodic CSI-RS is used for CSI reporting, then $T_{\text{activation_time}}$ is:
 - $\max(T_{\text{FirstATRS}} + 5\text{ms}, T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}} - T_{\text{HARQ}})$.

where,

$T_{\text{FirstATRS}}$: is the time to the end of the first complete CSI-RS burst for SCell activation after slot $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{NR \text{ slot length}}$, where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots.

T_{ATRS} is the CSI-RS burst for SCell activation where the CSI-RS burst is defined as four CSI-RS resources in two consecutive slots.

T_{gap} is a gap length between two aperiodic CSI-RS bursts,

- at least 2 slots for 15kHz and 30kHz
- at least 3 slots for 60kHz

$T_{\text{uncertainty_RRC}}$ is the time period between reception of the RRC configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) relative to SCell activation command.

$T_{\text{uncertainty_SP}}$ is the time period between reception of the activation command for semi-persistent CSI-RS resource set for CQI reporting relative to SCell activation command for known case.

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS38.331 [2].

$T_{\text{CSI_reporting}}$ is the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2].

SCell in FR1 is known if it has been meeting the following conditions:

- During the period equal to $\max(5 \cdot \text{measCycleSCell}, 5 \cdot \text{DRX cycles})$ for FR1 before the reception of the SCell activation command:
- the UE has sent a valid measurement report for the SCell being activated and

- the SSB measured remains detectable according to the cell identification conditions specified in clause 9.2 and 9.3.
- the SSB measured during the period equal to $\max(5 \cdot \text{measCycleSCell}, 5 \cdot \text{DRX cycles})$ also remains detectable during the SCell activation delay according to the cell identification conditions specified in clause 9.2 and 9.3.

Otherwise SCell in FR1 is unknown.

For the first SCell activation in FR2 bands, the SCell is known if it has been meeting the following conditions:

- During the period equal to 4s for UE supporting power class 1/5 and 3s for UE supporting power class 2/3/4 before UE receives the last activation command for PDCCH TCI, PDSCH TCI (when applicable) and semi-persistent CSI-RS for CQI reporting (when applicable):
 - the UE has sent a valid L3-RSRP measurement report with SSB index
 - SCell activation command is received after L3-RSRP reporting and no later than the time when UE receives MAC-CE command for TCI activation
- During the period from L3-RSRP reporting to the valid CQI reporting, the reported SSBs with indexes remain detectable according to the cell identification conditions specified in clauses 9.2 and 9.3, and the TCI state is selected based on one of the latest reported SSB indexes.

Otherwise, the first SCell in FR2 band is unknown.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS 38.331 [2] for a SCell at the first opportunities for the corresponding actions once the SCell is activated.

The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1+\frac{T_{\text{HARQ}}}{\text{NR slot length}}$ and not occur after slot $n+1+\frac{T_{\text{HARQ}}+3\text{ms}+T_X}{\text{NR slot length}}$, where NR slot length is with respect to the numerology used in the SCell being activated, and T_X is:

- $T_{\text{FirstATRS}}$, for any scenario where $T_{\text{activation_time}}$ includes $T_{\text{FirstATRS}}$;

The length of the interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

The requirements in this clause and requirements on interruption due to SCell activation in clause 8.x apply provided that the SSB and A-TRS of the to-be-activated SCell is within the first active DL BWP of the SCell.

Starting from slot $n + T_{\text{HARQ}} + 3 \text{ ms}$ where slot n is the slot where SCell activation command is received (as specified in clause 4.3 of TS 38.213 [3]) and until the SCell activation completion at UE, after at least one CSI-RS transmission occasion for the channel measurement and reporting (specified in clause 5.2.2.5 of TS 38.214 [26]), the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

8.3A SCell Activation and Deactivation Delay in Carriers with CCA

8.3A.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to activate a deactivated SCell operating with CCA and deactivate an activated SCell operating with CCA in EN-DC or in standalone NR carrier aggregation.

In the requirements of clause 8.3A, the term SMTC occasion not available at the UE refers to when the SMTC contains SSBs configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding period; otherwise the SMTC occasion is considered as available at the UE.

In the requirements of clause 8.3A, the term CSI-RS occasion not available at the UE due to DL CCA failures refers to when the CSI-RS is configured by gNB for the UE but not available at the UE due to DL CCA failures at gNB during the corresponding period.

The requirements shall apply for EN-DC and standalone NR carrier aggregation.

8.3A.2 SCell Activation Delay Requirement for Deactivated SCell

The requirements in this clause shall apply for the UE configured with at least one downlink SCell operating with CCA in EN-DC or in standalone NR carrier aggregation and when one SCell operating with CCA is being activated but none of the RRC parameters *CO-DurationPerCell-r16*, *SlotFormatIndicator*, and *CSI-RS-ValidationWith-DCI-r16* is configured and all of the CSI reporting resources for being-activated SCell are available.

The delay within which the UE shall be able to activate the deactivated SCell depends upon the specified conditions.

Upon receiving SCell activation command in slot n , the UE shall be capable to transmit valid CSI report and apply actions related to the activation command for the SCell being activated no later than in slot $n + (T_{\text{HARQ}} + T_{\text{activation_time_withCCA}} + T_{\text{CSI_reporting_withCCA}})/\text{NR_slot_length}$, where:

- T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3]. In the event of UE not being able to transmit the acknowledgment due to UL CCA failures: T_{HARQ} is extended to also include the time to all next HARQ feedback transmission and retransmission opportunities, until the time of its successful transmission, as specified in TS 38.213 [3]; no extension of T_{HARQ} due to UL CCA failures is allowed for Type 2C UL channel access procedure as defined in TS 37.213 [57].
- $T_{\text{activation_time_withCCA}}$ is the SCell activation delay in millisecond.
 - If the SCell is known and belongs to FR1, $T_{\text{activation_time_withCCA}}$ is:
 - $T_{\text{FirstSSB}} + L_1 \cdot T_{\text{rs}} + 5\text{ms}$, if the measurement period of the SCell being activated is equal to or smaller than 2400ms.
 - $T_{\text{FirstSSB_MAX}} + L_{2,1} \cdot T_{\text{SMTC_MAX}} + (1 + L_{2,2}) \cdot T_{\text{rs}} + 5\text{ms}$, if the measurement period of the SCell being activated is larger than 2400ms.
 - If the SCell is unknown and belongs to FR1, provided that the side condition $\hat{E}_s/I_{\text{ot}} \geq -2$ dB is fulfilled and the SCell can be successfully detected in one attempt, $T_{\text{activation_time_withCCA}}$ is:
 - $T_{\text{FirstSSB_MAX}} + (1 + L_{3,1}) \cdot T_{\text{SMTC_MAX}} + (2 + L_{3,2}) \cdot T_{\text{rs}} + 5\text{ms}$.
 - If the SCell being activated belongs to FR2-2 and if there is at least one active serving cell on that FR2-2 band, if the UE supporting *cellWithoutSSB* is not provided with any SMTC for the target SCell, $T_{\text{activation_time_withCCA}}$ is 3 ms, provided
 - the RS (s) of SCell being activated is (are) QCL-TypeD with RS (s) of one active serving cell on that FR2-2 band.
 - If the SCell being activated belongs to FR2-2 and if there is no active serving cell on that FR2-2 band provided that PCell or PSCell is in FR1 or in FR2-2:
 - If the target SCell is known to UE and semi-persistent CSI-RS is used for CSI reporting, then $T_{\text{activation_time_withCCA}}$ is:
 - $3\text{ms} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$, where $T_{\text{uncertainty_MAC}}=0$ and $T_{\text{uncertainty_SP}}=0$ if:
 - UE receives the SCell activation command, semi-persistent CSI-RS activation command and TCI state activation command at the same time, or
 - Provided this is the initial activation after SCell addition, and
 - TCI-ActivatedConfig is configured for the SCell, and UE receives the SCell activation command and semi-persistent CSI-RS activation command at the same time.
 - If the target SCell is known to UE and periodic CSI-RS is used for CSI reporting, then $T_{\text{activation_time}}$ is:

- $\max(T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}, T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}} - T_{\text{HARQ}})$, where $T_{\text{uncertainty_MAC}}=0$ if:
 - UE receives the SCell activation command and TCI state activation commands at the same time, or
 - Provided this is the initial activation after SCell addition, and
- UE receives the SCell activation command and TCI-ActivatedConfig is configured for the SCell.
- If the PCell/PSCell and the target SCell are configured as FR1-FR2-2 CA or if the PCell/PSCell and the target SCell are in a FR2-2 band pair with independent beam management, and the target SCell is unknown to UE and semi-persistent CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/\text{Iot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time_withCCA}}$ is:
 - $6\text{ms} + T_{\text{FirstSSB_MAX}} + (23+N*L_{4,1})*T_{\text{SMTC_MAX}} + (12+N*L_{4,2})*T_{\text{rs}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + T_{\text{HARQ}} + \max(T_{\text{uncertainty_MAC}} + T_{\text{FineTiming}} + 2\text{ms}, T_{\text{uncertainty_SP}})$.
- If the PCell/PSCell and the target SCell are configured as FR1-FR2-2 CA or if the PCell/PSCell and the target SCell are in a FR2-2 band pair with independent beam management, and the target SCell is unknown to UE and periodic CSI-RS is used for CSI reporting, provided that the side condition $\hat{E}_s/\text{Iot} \geq -2\text{dB}$ is fulfilled, then $T_{\text{activation_time_withCCA}}$ is:
 - $3\text{ms} + T_{\text{FirstSSB_MAX}} + (23+N*L_{5,1})*T_{\text{SMTC_MAX}} + (12+N*L_{5,2})*T_{\text{rs}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + \max\{(T_{\text{HARQ}} + T_{\text{uncertainty_MAC}} + 5\text{ms} + T_{\text{FineTiming}}), (T_{\text{uncertainty_RRC}} + T_{\text{RRC_delay}})\}$.

Where,

$T_{\text{SMTC_MAX}}$:

- In case of intra-band SCell activation, $T_{\text{SMTC_MAX}}$ is the longest SMTC periodicity between active serving cells and SCell being activated provided the cell specific reference signals from the active serving cells and the SCells being activated or released are available in the same slot;
- In case of inter-band SCell activation, $T_{\text{SMTC_MAX}}$ is the SMTC periodicity of SCell being activated;
- $T_{\text{SMTC_MAX}}$ is bounded to a minimum value of 10ms.

T_{rs} is the SMTC periodicity of the SCell being activated if the UE has been provided with an SMTC configuration for the SCell in SCell addition message, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement which involves T_{rs} is applied with $T_{\text{rs}} = 5\text{ms}$ assuming the SSB transmission periodicity is 5ms. There are no requirements if the SSB transmission periodicity is not 5ms

T_{FirstSSB} : is the time to the end of the first complete configured SSB burst indicated by the SMTC after slot $n + (T_{\text{HARQ}}+3\text{ms})/\text{NR_slot_length}$

$T_{\text{FirstSSB_MAX}}$: is the time to the end of first complete configured SSB burst indicated by the SMTC after slot $n + (T_{\text{HARQ}}+3\text{ms})/\text{NR_slot_length}$ when all active serving cells and SCells being activated or released have configured SSB bursts in the same slot for intra-band scenario. In case of inter-band SCell activation, $T_{\text{FirstSSB_MAX}}$ is the time to the end of the first complete configured SSB burst of the SCell being activated. In FR2-2, the occasion when all active serving cells and SCells being activated or released are transmitting SSB bursts in the same slot.

L_1 ($L_1 \leq L_{1,\text{max}}$) is the number of configured SMTC occasions not available at the UE. $L_{1,\text{max}} = 2$ if $T_{\text{rs}} \leq 40\text{ms}$; otherwise $L_{1,\text{max}} = 1$.

$L_{2,1}$ ($L_{2,1} \leq L_{2,1,\text{max}}$) and $L_{3,1}$ ($L_{3,1} \leq L_{3,1,\text{max}}$) are the numbers of configured SMTC occasions not available at the UE, for a known and unknown SCell activation respectively,

in the SCell being activated, for inter-band scenario, or

in any of the SCells already activated or being activated provided their cell specific reference signals are configured in the same slot, for intra-band scenario

and $L_{2,1,max} = 2$ if $T_{SMTC_MAX} \leq 40$ ms; otherwise $L_{2,1,max} = 1$. $L_{3,1,max} = 2$ if $T_{SMTC_MAX} \leq 40$ ms; otherwise $L_{3,1,max} = 1$.

$L_{2,2}$ ($L_{2,2} \leq L_{2,2,max}$) and $L_{3,2}$ ($L_{3,2} \leq L_{3,2,max}$) are the number of configured SMTC occasions not available at the UE in the SCell being activated. $L_{2,2,max} = 2$ if $T_{rs} \leq 40$ ms; otherwise $L_{2,2,max} = 1$. $L_{3,2,max} = 2$ if $T_{rs} \leq 40$ ms; otherwise $L_{3,2,max} = 1$.

$N = 12$ for an FR2-2 unknown SCell activation.

$L_{4,1}$ ($L_{4,1} \leq L_{4,1,max}$) and $L_{5,1}$ ($L_{5,1} \leq L_{5,1,max}$) are the numbers of SMTC occasions groups not available at the UE, for an FR2-2 unknown SCell activation,

in the SCell being activated, for inter-band scenario, or

in any of the SCells already activated or being activated provided their cell specific reference signals are configured in the same slot, for intra-band scenario

and $L_{4,1,max} = 2$ if $T_{SMTC_MAX} \leq 40$ ms; otherwise $L_{4,1,max} = 1$. $L_{5,1,max} = 2$ if $T_{SMTC_MAX} \leq 40$ ms; otherwise $L_{5,1,max} = 1$.

$L_{4,2}$ ($L_{4,2} \leq L_{4,2,max}$) and $L_{5,2}$ ($L_{5,2} \leq L_{5,2,max}$) are the number of SMTC occasions groups not available at the UE in the FR2-2 unknown SCell being activated. $L_{4,2,max} = 2$ if $T_{rs} \leq 40$ ms; otherwise $L_{4,2,max} = 1$. $L_{5,2,max} = 2$ if $T_{rs} \leq 40$ ms; otherwise $L_{5,2,max} = 1$.

$T_{FineTiming}$ is the time period between UE finish processing the last activation command for PDCCH TCI, PDSCH TCI (when applicable) and the timing of first complete available SSB corresponding to the TCI state.

$T_{L1-RSRP, measure}$ is L1-RSRP measurement delay $T_{L1-RSRP_Measurement_Period_SSB_CCA}$ ms as defined in clause 9.5A.4.1 with the assumption of $M=1$.

$T_{L1-RSRP, report}$ is delay of acquiring CSI reporting resources.

$T_{uncertainty_MAC}$ is the time period between reception of the last activation command for PDCCH TCI, PDSCH TCI (when applicable) relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

$T_{uncertainty_RRC}$ is the time period between reception of the RRC configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

$T_{uncertainty_SP}$ is the time period between reception of the activation command for semi-persistent CSI-RS resource set for CQI reporting relative to

- SCell activation command for known case;
- First valid L1-RSRP reporting for unknown case.

T_{RRC_delay} is the RRC procedure delay as specified in TS38.331 [2].

Longer delays for RRM measurement requirements, and in case of FR2-2 also SSB based RLM/BFD/CBD/L1-RSRP measurement requirements, can be expected during the cell detection time for unknown SCell activation.

When *absoluteFrequencySSB* is not configured in *DownlinkConfigCommon* for target SCell but SMTC for target SCell is configured, no requirements apply.

$T_{CSI_reporting_withCCA} = T_{CSI_reporting} + T_{CSI_ReportingDelay}$, where

$T_{\text{CSI_reporting}}$ is the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2].

$T_{\text{CSI_ReportingDelay}}$ is the additional delay in transmission of CSI reporting due to UL CCA failures at the UE. If there are no uplink resources for reporting the valid CSI, then the UE shall use the next available opportunities for reporting the corresponding valid CSI as specified in TS 38.213 [3].

Upon exceeding any of the maximum numbers $L_{1,\text{max}}$, $L_{2,1,\text{max}}$, $L_{2,2,\text{max}}$, $L_{3,1,\text{max}}$, and $L_{3,2,\text{max}}$ of SMTC occasions or CSI-RS occasions, respectively, not available at the UE, the UE shall abandon the SCell activation procedure.

SCell operating with CCA in FR1 is known if it has been meeting the following conditions:

- During the period equal to $\max(5 \text{ measCycleSCell}, 5 \text{ DRX cycles})$ before the reception of the SCell activation command:
 - the UE has sent a valid measurement report for the SCell being activated and
 - the SSB measured remains detectable in the SMTC occasions available at the UE, according to the cell identification conditions specified in clause 9.2A and 9.3A.
- the SSB measured during the period equal to $\max(5 \text{ measCycleSCell}, 5 \text{ DRX cycles})$ also remains detectable - the SSB measured during the period equal to $\max(5 \text{ measCycleSCell}, 5 \text{ DRX cycles})$ also remains detectable in the SMTC occasions available at the UE during the SCell activation delay according to the cell identification conditions specified in clause 9.2A and 9.3A.

Otherwise SCell operating with CCA in FR1 is unknown.

For the first SCell activation with CCA in FR2-2 bands, the SCell is known if it has been meeting the following conditions:

- During the period equal to 4s for UE supporting power class 1/5 and 3s for UE supporting power class 2/3/4 before UE receives the last activation command for PDCCH TCI, PDSCH TCI (when applicable) and semi-persistent CSI-RS for CQI reporting (when applicable):
 - the UE has sent a valid L3-RSRP measurement report with SSB index
 - SCell activation command is received after L3-RSRP reporting and no later than the time when UE receives MAC-CE command for TCI activation
- During the period from L3-RSRP reporting to the valid CQI reporting, the reported SSBs with indexes remain detectable according to the cell identification conditions specified in clauses 9.2 and 9.3, and the TCI state is selected based on one of the latest reported SSB indexes.

Otherwise, the first SCell with CCA in FR2-2 band is unknown. The requirement for unknown SCell applies provided that the activation commands for PDCCH TCI, PDSCH TCI (when applicable), semi-persistent CSI-RS for CQI reporting (when applicable), and configuration message for TCI of periodic CSI-RS for CQI reporting (when applicable) are based on the latest valid L1-RSRP reporting.

If the UE has been provided with higher layer in TS 38.331 [2] signaling of *smtc2* prior to the activation command, $T_{\text{SMTC_SCell}}$ follows *smtc1* or *smtc2* according to the physical cell ID of the target cell being activated. $T_{\text{SMTC_MAX}}$ follows *smtc1* or *smtc2* according to the physical cell IDs of the target cells being activated and the active serving cells.

In addition to CSI reporting defined above, UE shall also apply other actions related to the activation command specified in TS 38.331 [2] for a SCell at the first opportunities for the corresponding actions once the SCell is activated.

For intra-band CA, the starting point of an interruption window on SpCell or any activated SCell as specified in clause 8.2, shall not occur before slot $n+1+\frac{T_{\text{HARQ}}}{\text{NR slot length}}$ and not occur after slot $n+1+\frac{T_{\text{HARQ}}+3+T_{\text{X}}}{\text{NR slot length}}$, where T_{X} is:

- T_{FirstSSB} , for known SCell activation when SCell measurement cycle is equal to or smaller than 160ms;
- $T_{\text{FirstSSB_MAX}} + L_{2,1} * T_{\text{SMTC_MAX}}$ for known SCell activation when SCell measurement cycle is greater than 160ms;
- $T_{\text{FirstSSB_MAX}} + L_{3,1} * T_{\text{SMTC_MAX}}$ for unknown SCell activation

For inter-band CA, the starting point of an interruption window on SpCell or any activated SCell as specified in clause 8.2, shall not occur before slot $n+1+\frac{T_{HARQ}}{NR\ slot\ length}$ and not occur after slot $n+1+\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$, where T_X is:

- $T_{FirstSSB}$, for known SCell activation when SCell measurement cycle is equal to, or smaller than, 160ms.

For intra-band CA,

- While the SCell being activated is known with measurement cycle equal to or smaller than 160ms, no more than one interruption is allowed during SCell activation.
- While the SCell being activated is known with measurement cycle greater than 160ms, up to $1+L_{2,1}$ interruptions are allowed during SCell activation,
- While the SCell being activated is unknown, up to $1+L_{3,1}$ interruptions are allowed during SCell activation. When $L_{3,1}>0$, performance degradation may be expected on any activated intra-band victim cells during the SCell activation
- For a single interruption ($L=0$), interruption window length at SCell activation does not depend on DL CCA failures.

For inter-band CA,

- For any active cell in the same band with the SCell being activated, the interruption requirements (i.e. number of interruptions and starting point of an interruption) for intra-band CA apply.
- For any active cell outside the band with the SCell being activated, a single interruption applies

The number of interruptions and length of each interruption window may be different for different victim cells and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell. For a single interruption ($L=0$), the interruption window length at SCell activation does not depend on DL CCA failures.

Starting from slot $n + T_{HARQ} + 3$ ms where slot n is the slot where SCell activation command is received (as specified in clause 4.3 of TS 38.213 [3]) and until the SCell activation completion at UE, after at least one CSI-RS transmission occasion for the channel measurement and reporting (specified in clause 5.2.2.5 of TS 38.214 [26]), the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

Starting from the slot specified in clause 4.3 of TS 38.213 [3] (timing for secondary Cell activation/deactivation) and until the UE has completed a first L1-RSRP measurement, the UE shall report lowest valid L1 SS-RSRP range if the UE has available uplink resources to report L1-RSRP for the SCell.

The requirements in this section do not apply when *sCellDeactivationTimer* [2] is not configured and when $T_{activation_time_withCCA}$ exceeds 1280 ms.

8.3A.3 SCell Deactivation Delay Requirement for Activated SCell

The requirements in this clause shall apply for the UE configured with at least one downlink SCell operating with CCA in EN-DC or in standalone NR carrier aggregation and one SCell is deactivated.

Upon receiving SCell deactivation command in slot n , the UE shall accomplish the deactivation actions for the SCell being deactivated no later than in slot $n+(T_{HARQ}+3ms)/NR_slot_length$. The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1+\frac{T_{HARQ}}{NR\ slot\ length}$ and not occur after slot $n+1+\frac{T_{HARQ}+3ms}{NR\ slot\ length}$, where NR slot length is with respect to the numerology used in the SCell being deactivated.

Upon expiry of the *sCellDeactivationTimer* in slot n , the UE shall accomplish the deactivation actions for the SCell being deactivated no later than in slot $n + \frac{3ms}{NR\ slot\ length}$. The starting point of an interruption window on spCell or any activated SCell, as specified in clause 8.2, shall not occur before slot $n+1$ and not occur after slot $n+1+\frac{3ms}{NR\ slot\ length}$, where NR slot length is with respect to the numerology used in the SCell being deactivated. The length of the

interruption window may be different for different victim cells, and depends on the applicable scenario and on the frequency band relation between the aggressor cell and the victim cell.

The requirements in this section do not apply when *sCellDeactivationTimer* [2] is not configured and when SCell deactivation delay exceeds 1280 ms.

8.4 UE UL carrier RRC reconfiguration delay

8.4.1 Introduction

The requirements in this clause apply for a UE being configured or deconfigured with a supplementary UL carrier or NR UL carrier.

8.4.2 UE UL carrier configuration delay requirement

When the UE receives a RRC message implying NR UL or supplementary UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within $T_{UL_carrier_config}$ from the end of slot n .

Where

- Slot n is the last slot overlapping with the PDSCH containing the RRC command.
- $T_{UL_carrier_config}$ equals the maximum RRC procedure delay defined in clause 11.2 in TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it equals the maximum RRC procedure delay defined in clause 12 in TS 38.331 [2].

8.4.3 UE UL carrier deconfiguration delay requirement

When the UE receives a RRC message implying NR UL or supplementary UL carrier deconfiguration RRC signalling, the UE shall stop UL signalling on the deconfigured UL carrier within $T_{UL_carrier_deconfig}$ from the end of slot n .

Where

- Slot n is the last slot overlapping with the PDSCH containing the RRC command.
- $T_{UL_carrier_deconfig}$ equals the maximum RRC procedure delay defined in clause 11.2 in TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it equals the maximum RRC procedure delay defined in clause 12 in TS 38.331 [2].

8.5 Link Recovery Procedures

8.5.1 Introduction

The UE shall assess the downlink radio link quality of a serving cell based on the reference signal in the set $\bar{q}_0$ as specified in TS 38.213 [3] in order to detect beam failure on:

- PCell in SA, NR-DC, or NE-DC operation mode,
- PSCell in NR-DC and EN-DC operation mode,
- SCell in SA, NR-DC, NE-DC or EN-DC operation mode,
- Deactivated PSCell in NR-DC and EN-DC operation mode

The RS resource configurations in the set $\bar{q}_0$ on PCell, PSCell or deactivated PSCell (if configured with *bfd-and-RLM* with value *true*) can be periodic CSI-RS resources and/or SSBs. RS resource configuration in the set $\bar{q}_0$ on SCell shall

be periodic CSI-RS. UE is not required to perform beam failure detection outside the active DL BWP. UE is not required to meet the requirements in clause 8.5.2 and 8.5.3 if UE does not have set $\bar{q}_b$. UE is not required to perform beam failure detection on a deactivated SCell, and also not required to perform beam failure detection on resources which is implicitly configured for a deactivated SCell. When more than 2 periodic CSI-RS resources on a CC are configured in the set $\bar{q}_b$ for current SCell or implicitly configured in the set $\bar{q}_b$ for other SCell, it is up to UE implementation to select two of CSI-RS resources in active BWP in current CC to perform beam failure detection. UE is not required to perform beam failure detection on a SCell on which $\bar{q}_l$ is not configured.

On each RS resource configuration in the set $\bar{q}_b$, the UE shall estimate the radio link quality and compare it to the threshold Q_{out_LR} for the purpose of accessing downlink radio link quality of the serving cell beams.

When a CORESET that the UE uses for monitoring PDCCH includes two TCI states and the UE is provided *sfnSchemePdcch* set to 'sfnSchemeA' or 'sfnSchemeB', the UE shall estimate a single downlink radio link quality to derive a single SNR and compare it to the single thresholds Q_{out_LR} for the purpose of accessing downlink radio link quality of the serving cell beams. How to compute the single SNR based on two active TCI states is up to UE implementation.

The threshold Q_{out_LR} is defined as the level at which the downlink radio level link of a given resource configuration on set $\bar{q}_b$ cannot be reliably received and shall correspond to the $BLER_{out} = 10\%$ block error rate of a hypothetical PDCCH transmission. For SSB based beam failure detection, $Q_{out_LR_SSB}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5.2.1-1. For CSI-RS based beam failure detection, $Q_{out_LR_CSI-RS}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5.3.1-1.

Upon request the UE shall deliver configuration indexes from the set $\bar{q}_l$ as specified in TS 38.213 [3], to higher layers, and the corresponding L1-RSRP measurement provided that the measured L1-RSRP is equal to or better than the threshold Q_{in_LR} , which is indicated by higher layer parameter *rsrp-ThresholdSSB*. The UE applies the Q_{in_LR} threshold to the L1-RSRP measurement obtained from an SSB. The UE applies the Q_{in_LR} threshold to the L1-RSRP measurement obtained for a CSI-RS resource after scaling a respective CSI-RS reception power with a value provided by higher layer parameter *powerControlOffsetSS*. The RS resource configurations in the set $\bar{q}_l$ can be periodic CSI-RS resources or SSBs or both SSB and CSI-RS resources. UE is not required to perform candidate beam detection outside the active DL BWP. UE is not required to perform candidate beam detection on a SCell on which $\bar{q}_l$ is not configured.

For a deactivated SCG, the UE may be provided via an RRC reconfiguration message with *tci-info* for PDCCH/PDSCH reception at the transition from deactivated SCG to activated SCG while the SCG is deactivated. After the reception of the RRC reconfiguration message the UE shall perform the BFD on the PSCell of the deactivated SCG using the TCI states according to *tci-info* specified in clause 6.3.2 in TS38.331[2].

8.5.1.1 Introduction of Requirement on Link Recovery Procedures for UE configured with relaxed measurement criteria

For the UE supports *bfd-Relaxation-r17* and configured with dedicated signaling *goodServingCellEvaluationBFD*, which is always configured to the UE when the network enables BFD relaxation for the UE as specified in TS 38.331[2], the relaxed requirements defined in clause 8.5.2.4 for SSB based beam failure detection and the relaxed requirements defined in clause 8.5.3.4 for CSI-RS based beam failure detection are allowed to apply to the relaxed BFD measurements on the serving cell after fulfilling the following conditions:

- for the serving cells in intra-band carrier aggregation configured with SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell, when
- the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell in the intra-band carrier aggregation if the *lowMobilityEvaluationConnected* is not configured, or

- the UE is also configured with *lowMobilityEvaluationConnected* and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [2] is fulfilled for a period of $T_{\text{SearchDeltaP-Connected}}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell based on the measurements that are configured for SSB-based or CSI-RS based RLM on SpCell together with CSI-RS based BFD on SCell in the intra-band carrier aggregation.
- for other serving cells, when
 - the good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell configured with BFD-RS if the *lowMobilityEvaluationConnected* is not configured, or
 - the UE is also configured with *lowMobilityEvaluationConnected*, and both low mobility criterion defined in clause 5.7.13.1 of TS 38.331 [2] is fulfilled for a period of $T_{\text{SearchDeltaP-Connected}}$ and good serving cell quality criterion defined in clause 5.7.13.2 of TS 38.331 [2] is fulfilled for the serving cell configured with BFD-RS.

otherwise, UE shall apply the requirements defined in clause 8.5.2.2 for SSB based beam failure detection and the requirements defined in clause 8.5.3.2 for CSI-RS based beam failure detection. Note that when multiple resources are configured on a serving cell for RLM or BFD evaluation, the good serving cell quality criterion is considered as fulfilled for the serving cell when any resource configured for the cell fulfills the good serving defined in clause 5.7.13.2 of TS 38.331 [2].

The scenario and RS resource configurations in the set $\bar{q}_0$ defined in section 8.5.1 apply for this section.

The UE is no longer allowed to relax BFD measurements and apply the relaxed link recovery procedures provided that at least one of the following conditions is met:

- The timer *beamFailureDetectionTimer* is running.
- No DRX is configured or configured DRX cycle is longer than 80ms

Note: Applicability of DRX configuration follows TS38.331 Clause 5.7.13.0.

8.5.2 Requirements for SSB based beam failure detection

8.5.2.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_0$ configured for a serving cell, provided that the SSB configured for beam failure detection is actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5.2.2. The requirements in this clause could not be applicable if UE is required to perform beam failure detection on more than 1 serving cell per band.

Table 8.5.2.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	Same as the SCS of RMSI CORESET
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.5.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured SSB resource in set $\bar{Q}_0$ estimated over the last $T_{\text{Evaluate_BFD_SSB}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB}}$ within $T_{\text{Evaluate_BFD_SSB}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.5.2.2-1 or Table 8.5.2.2-4 (deactivated PSCell) for FR1.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.5.2.2-2 or Table 8.5.2.2-5 (deactivated PSCell) for FR2 with scaling factor $N=8$ for FR2-1 and $N=12$ for FR2-2, for FR2 power classes other than power class 6 or for FR2 power class 6 when *highSpeedMeasFlagFR2-r17* is not configured.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.5.2.2-3 for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*.

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a BFD-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any BFD-RS resource occasion:
 - N_{total} is the total number of BFD-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of BFD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
 - $N_{\text{available}}$ is the number of BFD-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
 - T_{L1} is periodicity of the target BFD-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB.
- $P=1$ when in the monitored cell there are no GAPS overlapping with any occasion of the SSB.

For FR2

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when BFD-RS resource is not overlapped with GAPS and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with GAP and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and
 - $T_{\text{SMTCperiod}} \neq xRP$ or
 - $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{SSB}} < 0.5 * T_{\text{SMTCperiod}}$

- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{SSB}} = 0.5 * T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{Min}(xRP, T_{\text{SMTCperiod}})}}$, when the BFD-RS resource is partially overlapped with GAP ($T_{\text{SSB}} < xRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with GAP.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with GAP ($T_{\text{SMTCperiod}} < xRP$)

where,

- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, given the SMTC offset of all CCs in FR2 provided the same offset.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - a BFD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $xRP = \text{MGRP}$
- Otherwise, when NCSG measurement gap is configured,
 - a BFD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
 - and
 - $xRP = \text{VIRP}$
- If the UE is configured with Pre-MG, a BFD-RS resource or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When concurrent gaps are configured, a BFD-RS resource or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

Longer evaluation period would be expected if the combination of BFD-RS resource, SMTC occasion and GAP configurations does not meet previous conditions. For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Table 8.5.2.2-1: Evaluation period $T_{\text{Evaluate_BFD_SSB}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_SSB}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(5 \times P) \times T_{\text{SSB}})$

DRX cycle $\leq 320\text{ms}$	$\text{Ceil}(7.5 \times P \times N) \times \text{Max}(\text{measCyclePscell}, T_{\text{DRX}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(5 \times P \times N) \times \text{Max}(\text{measCyclePscell}, T_{\text{DRX}})$
Note: DRX cycle is the configured DRX cycle of the PSCell. measCyclePSCell is the measurement cycle length of the deactivated PSCell.	

8.5.2.3 Measurement restriction for SSB based beam failure detection

The UE is required to be capable of measuring SSB for BFD without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB OFDM symbols used for BFD measurement fully or partially overlap with CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for BFD measurement without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for BFD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

For FR2, when the SSB for BFD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

For FR2, when the SSB for BFD measurement on one CC is in the same or adjacent OFDM symbol as SSB from cell with additional PCI for L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based BFD is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for BFD measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions on the other band, provided that UE is capable of independent beam management on this FR2 band pair.

8.5.2.4 Minimum requirement of SSB based beam failure detection for UE fulfilling relaxed measurement criteria

This clause contains minimum requirements for SSB based relaxed beam failure detection.

UE shall be able to evaluate whether the downlink radio link quality on the configured SSB resource in set $\bar{Q}_h$ estimated over the last $T_{\text{Evaluate_BFD_SSB_Relax}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB}}$ within $T_{\text{Evaluate_BFD_SSB_Relax}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB_Relax}}$ is defined in Table 8.5.2.4-1 for FR1.

The value of $T_{\text{Evaluate_BFD_SSB_Relax}}$ is defined in Table 8.5.2.4-2 for FR2 with scaling factor $N=8$

The value of P is defined in clause 8.5.2.2.

Longer evaluation period would be expected if the combination of BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Table 8.5.2.4-1: Evaluation period $T_{\text{Evaluate_BFD_SSB_Relax}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_SSB_Relax}}$ (ms)
---------------	---

$\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80 \text{ ms}$	$\text{Max}(50 \times K3, \text{Ceil}(7.5 \times K1 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
$80\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 160 \text{ ms}$	$\text{Max}(50, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
Note 1: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length and no longer than 80ms. Note 2: $K1$ is the relaxation factor. $K1 = 2$ for $40\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80 \text{ ms}$, $K1 = 4$ for $\text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 40 \text{ ms}$ Note 3: $K3$ is the relaxation factor for the lower bound. $K3 = K1$, if $1 < K1 \leq 2$; $K3 = 1$ otherwise.	

Table 8.5.2.4-2: Evaluation period $T_{\text{Evaluate_BFD_SSB_Relax}}$ for FR2

Configuration	$T_{\text{Evaluate_BFD_SSB_Relax}}$ (ms)
$\text{Mas}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 80 \text{ ms}$	$\text{Max}(50 \times K4, \text{Ceil}(7.5 \times K2 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
$80\text{ms} < \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}) \leq 160 \text{ ms}$	$\text{Max}(50, \text{Ceil}(7.5 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
Note 1: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length and no longer than 80ms. Note 2: $K2$ is the relaxation factor. $K2 = 2$. Note 3: $K4$ is the relaxation factor for the lower bound. $K4 = K2$, if $1 < K2 \leq 2$; $K4 = 1$ otherwise.	

8.5.3 Requirements for CSI-RS based beam failure detection

8.5.3.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_0$ of resource configurations for a serving cell, provided that the CSI-RS resource(s) in set $\bar{q}_0$ for beam failure detection are actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5.3.2. UE is not expected to perform beam failure detection measurements on the CSI-RS configured for BFD if the CSI-RS is not QCL-ed, with QCL-TypeD when applicable, with the RS in the active TCI state of any CORESET configured in the UE active BWP. The requirements in this clause apply when UE is required to perform beam failure detection on no more than 1 serving cell per band.

Table 8.5.3.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.5.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_CSI-RS}}$ within $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period.

The value of $T_{\text{Evaluate_BFD_CSI-RS}}$ is defined in Table 8.5.3.2-1 or Table 8.5.3.2-3 (deactivated PSCell) for FR1.

The value of $T_{\text{Evaluate_BFD_CSI-RS}}$ is defined in Table 8.5.3.2-2 or Table 8.5.3.2-4 (deactivated PSCell) for FR2 with $N=1$. The requirements of $T_{\text{Evaluate_BFD_CSI-RS}}$ apply provided that the CSI-RS for BFD is not in a resource set configured with repetition ON. The requirements shall not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for BFD and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a BFD-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any BFD-RS resource occasion:
 - N_{total} is the total number of BFD-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of BFD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
 - $N_{\text{available}}$ is the number of BFD-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W

T_{L1} is periodicity of the target BFD-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS.
- $P = 1$ when in the monitored cell there are no GAPS overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when the BFD-RS resource is not overlapped with GAP and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < xRP$)
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is not overlapped with GAP and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with GAP and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and
 - $T_{\text{SMTCperiod}} \neq xRP$ or
 - $T_{\text{SMTCperiod}} = xGRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$

- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{\min(xRP, T_{\text{SMTCperiod}})}}$, when the BFD-RS resource is partially overlapped with GAP ($T_{\text{CSI-RS}} < xRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with GAP.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when the BFD-RS resource is partially overlapped with GAP and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with GAP ($T_{\text{SMTCperiod}} < xRP$)

where,

- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - a BFD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $xRP = \text{MGRP}$
- Otherwise, when NCSG measurement gap is configured,
 - a BFD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
 - and
 - $xRP = \text{VIRP}$
- If the UE is configured with Pre-MG, a BFD-RS resource or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When concurrent gaps are configured, a BFD-RS resource or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

Note: The overlap between CSI-RS for BFD and SMTC means that CSI-RS for BFD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the BFD-RS resource, SMTC occasion and GAP configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{BFD} used in Table 8.5.3.2-1 and Table 8.5.3.2-2 are defined as

- $M_{\text{BFD}} = 10$, if the CSI-RS resource(s) in set $\bar{q}_0$ used for BFD is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{BFD} used in Table 8.5.3.2-1 and Table 8.5.3.2-2 are defined as

For each CSI-RS resource in the set $\bar{q}_0$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{\text{BFD}} = 1$.

For each CSI-RS resource in the set $\bar{q}_0$ configured for PSCell in NR-DC

- $P_{\text{BFD}} = 2$ if UE is configured for beam failure detection on SCell, 1 otherwise.

For each CSI-RS resource in the set $\bar{q}_0$ configured for a SCell

- $P_{\text{BFD}} = Z$ in EN-DC or NE-DC or SA.
- $P_{\text{BFD}} = 2 * Z$ in NR-DC.
- Where Z is the number of band(s) on which UE is performing beam failure detection only for SCell.

DRX cycle $> 320\text{ms}$	$\text{Ceil}(M_{\text{BFD}} \times P \times N \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, \text{measCyclePscell})$
Note: DRX cycle is the configured DRX cycle of the PSCell. measCyclePSCell is the measurement cycle length of the deactivated PSCell.	

8.5.3.3 Measurement restrictions for CSI-RS beam failure detection

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

The UE is required to be capable of measuring CSI-RS for BFD without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following scenarios.

For both FR1 and FR2, when the CSI-RS for BFD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for BFD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for BFD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for BFD measurement and the other CSI-RS. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.
 - The CSI-RS for BFD measurement or the other CSI-RS in a resource set configured with repetition ON, or
 - The other CSI-RS is configured in set $\bar{q}_l$ and beam failure is detected, or
 - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

8.5.3.4 Minimum requirement of CSI-RS based beam failure detection for UE fulfilling relaxed measurement criteria

This clause contains the minimum requirements for CSI-RS based relaxed beam failure detection.

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_CSI-RS}}$ within $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ ms period.

The value of $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ is defined in Table 8.5.3.4-1 for FR1.

The value of $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ is defined in Table 8.5.3.4-2 for FR2 with $N=1$.

The values of P , M_{BFD} and P_{BFD} is defined in clause 8.5.3.2.

Longer evaluation period would be expected if the combination of RLM-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{Identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{Identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Table 8.5.3.4-1: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ (ms)
$\text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80$ ms	$\text{Max}(50 \times K3, \text{Ceil}(K1 \times 1.5 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
Note 1: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length and no longer than 80ms.	
Note 2: $K1$ is the relaxation factor. $K1 = 2$ for $40 \text{ ms} < \text{MAX}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80 \text{ ms}$, $K1 = 4$ for $\text{MAX}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 40 \text{ ms}$	
Note 3: $K3$ is the relaxation factor for the lower bound. $K3 = K1$, if $1 < K1 \leq 2$; $K3 = 1$ otherwise.	

Table 8.5.3.4-2: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ for FR2

Configuration	$T_{\text{Evaluate_BFD_CSI-RS_Relax}}$ (ms)
$\text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}) \leq 80$ ms	$\text{Max}(50 \times K4, \text{Ceil}(K2 \times 1.5 \times M_{\text{BFD}} \times P \times N \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
Note 1: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length and no longer than 80ms.	
Note 2: $K2$ is the relaxation factor. $K2 = 2$	
Note 3: $K4$ is the relaxation factor for the lower bound. $K4 = K2$, if $1 < K2 \leq 2$; $K4 = 1$ otherwise.	

8.5.4 Minimum requirement for L1 indication

When the radio link quality on all the RS resources in set $\bar{q}_0$ is worse than $Q_{\text{out_LR}}$, layer 1 of the UE shall send a beam failure instance indication to the higher layers

The beam failure instance evaluation for the RS resources in set $\bar{q}_0$ shall be performed as specified in clause 6 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{\text{Indication_interval_BFD}}$.

When DRX is not used, $T_{\text{Indication_interval_BFD}}$ is $\text{max}(2\text{ms}, T_{\text{SSB-RS,M}})$ or $\text{max}(2\text{ms}, T_{\text{CSI-RS,M}})$, where $T_{\text{SSB-RS,M}}$ and $T_{\text{CSI-RS,M}}$ is the shortest periodicity of all RS resources in set $\bar{q}_0$ for the accessed cell, corresponding to either the shortest periodicity of the SSB in the set $\bar{q}_0$ or CSI-RS resource in the set $\bar{q}_0$.

When DRX is used, for SSB based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{\text{SSB-RS,M}})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

When DRX is used, for CSI-RS based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{\text{CSI-RS,M}})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

For deactivated PSCell,

when DRX is not used, $T_{\text{Indication_interval_BFD}}$ is $\text{Max}(2\text{ms}, \text{measCyclePSCell})$.

when DRX is used, for SSB based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times \text{measCyclePSCell})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{Max}(\text{DRX_cycle_length}, \text{measCyclePSCell})$, if $\text{DRX_cycle_length} > 320\text{ms}$.

When DRX is used, for CSI-RS based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times \text{measCyclePSCell})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{Max}(\text{DRX_cycle_length}, \text{measCyclePSCell})$, if $\text{DRX_cycle_length} > 320\text{ms}$.

8.5.5 Requirements for SSB based candidate beam detection

8.5.5.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_l$ configured for a serving cell, provided that the SSBs configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5.5.2. The requirements in this clause apply when UE is required to perform candidate beam detection on no more than 1 serving cell per band.

8.5.5.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured SSB resource in set $\bar{q}_l$ estimated over the last $T_{\text{Evaluate_CBD_SSB}}$ ms period becomes better than the threshold $Q_{\text{in_LR}}$ provided SSB_{RP} and SSB $\hat{E}_s/I_{\text{ot}}$ are according to Annex Table B.2.4.1 for a corresponding band.

The UE shall monitor the configured SSB resources using the evaluation period in table 8.5.5.2-1 and 8.5.5.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_SSB}}$ is defined in Table 8.5.5.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_SSB}}$ is defined in Table 8.5.5.2-2 for FR2 with scaling factor $N=8$ for FR2-1 and $N=12$ for FR2-2.

For a UE supporting concurrentMeasGap-r17 and when concurrent gaps are configured,

- P value for a CBD-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\text{max}(T_{\text{L1}}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any CBD-RS resource occasion:

- N_{total} is the total number of CBD-RS resource occasions within the window W , including those overlapped with measurement gap occasions or SMTC occasions within the window W , and
- $N_{\text{outside_MG}}$ is the number of CBD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is the number of CBD-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
- T_{L1} is periodicity of the target CBD-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB,
- $P = 1$ when in the monitored cell there are no GAPS overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- P is $P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with GAP and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and
 - $T_{\text{SMTCperiod}} \neq xRP$ or
 - $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{SSB}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{SSB}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\min(xRP, T_{\text{SMTCperiod}})}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with GAP
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with GAP ($T_{\text{SMTCperiod}} < xRP$)

where,

- $P_{\text{sharing factor}} = 1$, if the CBD-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

- not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCPERIOD}}$ follows *smtc2*; Otherwise $T_{\text{SMTCPERIOD}}$ follows *smtc1*. $T_{\text{SMTCPERIOD}}$ is the shortest SMTc period among all CCs in the same FR2 band, provided the SMTc offset of all CCs in FR2 have the same offset.
- If the UE is configured with Pre-MG, a CBD-RS resource or an SMTc occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - a CBD-RS resource or an SMTc occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $x_{\text{RP}} = \text{MGRP}$
- Otherwise, when NCSG is measurement gap configured,
 - a CBD-RS resource or an SMTc occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
 - and
 - $x_{\text{RP}} = \text{VIRP}$
- When concurrent gaps are configured, a CBD-RS resource or an SMTc occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according clause to 9.1.8.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTc occasion and GAP configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of P_{CBD} used in Table 8.5.5.2-1 and Table 8.5.5.2-2 are defined as

For each SSB resource in the set $\bar{q}_l$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{\text{CBD}} = 1$.

For each SSB resource in the set $\bar{q}_l$ configured for PSCell in NR-DC

- $P_{\text{CBD}} = 2$ if UE is configured for candidate beam detection on SCell, 1 otherwise.

For each SSB resource in the set $\bar{q}_l$ configured for a SCell

- $P_{\text{CBD}} = Z$ in EN-DC or NE-DC or SA.
- $P_{\text{CBD}} = 2 * Z$ in NR-DC.
- Where Z is the number of band(s) on which UE is performing candidate beam detection only for SCell

- P_{CBD} is the number of band(s) on which UE is performing candidate beam detection only for SCell.

Table 8.5.5.2-1: Evaluation period $T_{Evaluate_CBD_SSB}$ for FR1

Configuration	$T_{Evaluate_CBD_SSB}$ (ms)
non-DRX, DRX cycle ≤ 320 ms	$\text{Max}(25, \text{Ceil}(3 \times P \times P_{CBD}) \times T_{SSB})$
DRX cycle > 320 ms	$\text{Ceil}(3 \times P \times P_{CBD}) \times T_{DRX}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

Table 8.5.5.2-2: Evaluation period $T_{Evaluate_CBD_SSB}$ for FR2

Configuration	$T_{Evaluate_CBD_SSB}$ (ms)
non-DRX, DRX cycle ≤ 320 ms	$\text{Max}(25, \text{Ceil}(3 \times P \times N \times P_{CBD}) \times T_{SSB})$
DRX cycle > 320 ms	$\text{Ceil}(3 \times P \times N \times P_{CBD}) \times T_{DRX}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

8.5.5.3 Measurement restriction for SSB based candidate beam detection

For FR1, when the SSB OFDM symbols used for CBD measurement fully or partially overlap with CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for CBD measurement without any restrictions;
- If SSB and CSI-RS have different SCS-es,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for CBD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as SSB from cell with additional PCI for BFD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, if network configures same or mixed numerology between SSB for CBD measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

8.5.6 Requirements for CSI-RS based candidate beam detection

8.5.6.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_1$ configured for a serving cell, provided that the CSI-RS resources configured for candidate beam detection are actually transmitted within UE active DL BWP

during the entire evaluation period specified in clause 8.5.6.2. The requirements in this clause apply when UE is required to perform candidate beam detection on no more than 1 serving cell per band.

8.5.6.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in set $\bar{q}_l$ estimated over the last $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period becomes better than the threshold $Q_{\text{in_LR}}$ within $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period provided CSI-RS $\hat{E}_s/\text{Iot}$ is according to Annex Table B.2.4.2 for a corresponding band.

The UE shall monitor the configured CSI-RS resources using the evaluation period in table 8.5.6.2-1 and 8.5.6.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_CSI-RS}}$ is defined in Table 8.5.6.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_CSI-RS}}$ is defined in Table 8.5.6.2-2 for FR2 with scaling factor $N=8$ for FR2-1 and $N=12$ for FR2-2.

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a CBD-RS resource to be measured is defined as
 - $N_{\text{total}} / N_{\text{outside_MG}}$ in FR1
 - $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ in FR2 with $N_{\text{available}} = 0$
 - $N_{\text{total}} / N_{\text{available}}$ in FR2 with $N_{\text{available}} > 0$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any CBD-RS resource occasion:
 - N_{total} is the total number of CBD-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of CBD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
 - $N_{\text{available}}$ is the number of CBD-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
 - T_{L1} is periodicity of the target CBD-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- $P = 1$ when in the monitored cell there are no GAPS overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when candidate beam detection RS is not overlapped with GAP and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < xRP$)
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).

- $P = P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with GAP and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{xRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and
 - $T_{\text{SMTCperiod}} \neq xRP$ or
 - $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with GAP and $T_{\text{SMTCperiod}} = xRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{\text{Min}(xRP, T_{\text{SMTCperiod}})}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with GAP
- $P = \frac{3}{1 - \frac{T_{\text{CSI-RS}}}{xRP}}$, when candidate beam detection RS is partially overlapped with GAP and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with GAP ($T_{\text{SMTCperiod}} < xRP$)

where,

- $P_{\text{sharing factor}} = 1$, if the CBD-RS resource outside gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
 - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.
- If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smtc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.
- If the UE is configured with Pre-MG, a CBD-RS resource or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
 - When a measurement gap is configured and the measurement gap is not NCSG,
 - a CBD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if it overlaps the measurement gap occasion, and
 - $xRP = \text{MGRP}$
- Otherwise, when NCSG measurement gap is configured,
 - a CBD-RS resource or an SMTC occasion is considered to be overlapped with the GAP if
 - it overlaps the VIL1 or VIL2 of NCSG, or
 - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency

carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,

- and
- $xRP = VIRP$
- When concurrent gaps are configured, a CBD-RS resource or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

Note: The overlap between CSI-RS for CBD and SMTC means that CSI-RS for CBD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and GAP configurations does not meet previous conditions.

Longer evaluation period would be expected if the CSI-RS is on the same OFDM symbols with RLM, BFD, BM-RS, or other CBD-RS, according to the measurement restrictions defined in clause 8.5.6.3.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{CBD} used in Table 8.5.6.2-1 and Table 8.5.6.2-2 are defined as

- $M_{\text{CBD}} = 3$, if the CSI-RS resource configured in the set $\bar{q}_l$ is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{CBD} used in Table 8.5.6.2-1 and Table 8.5.6.2-2 are defined as

- For each CSI-RS resource in the set $\bar{q}_l$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC
- $P_{\text{CBD}} = 1$.
- For each CSI-RS resource in the set $\bar{q}_l$ configured for PSCell in NR-DC
- $P_{\text{CBD}} = 2$ if UE configured for candidate beam detection on SCell, 1 otherwise.
- For each CSI-RS resource in the set $\bar{q}_l$ configured for a SCell
- $P_{\text{CBD}} = Z$ in EN-DC or NE-DC or SA.
- $P_{\text{CBD}} = 2 * Z$ in NR-DC.
- Where Z is the number of band(s) on which UE is performing candidate beam detection only for SCell
- P_{CBD} is the number of band(s) on which UE is performing candidate beam detection only for SCell.

Table 8.5.6.2-1: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_CSI-RS}}$ (ms)
non-DRX, DRX cycle ≤ 320 ms	$\text{Max}(25, \text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{CSI-RS}})$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_l$. T_{DRX} is the DRX cycle length.	

Table 8.5.6.2-2: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS}}$ for FR2

Configuration	$T_{\text{Evaluate_CBD_CSI-RS}}$ (ms)
---------------	---

non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(\text{M}_{\text{CBD}} \times \text{P} \times \text{N} \times \text{P}_{\text{CBD}}) \times \text{T}_{\text{CSI-RS}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(\text{M}_{\text{CBD}} \times \text{P} \times \text{N} \times \text{P}_{\text{CBD}}) \times \text{T}_{\text{DRX}}$
Note: $\text{T}_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

8.5.6.3 Measurement restriction for CSI-RS based candidate beam detection

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

For both FR1 and FR2, when the CSI-RS for CBD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for CBD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS based CBD measurement for without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer measurement period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for CBD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for CBD measurement without any restriction.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and the other CSI-RS. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined.

8.5.7 Scheduling availability of UE during beam failure detection

Scheduling availability restrictions when the UE is performing beam failure detection are described in the following clauses.

8.5.7.1 Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to beam failure detection performed on SSB and CSI-RS configured for BFD with the same SCS as PDSCH or PDCCH in FR1.

8.5.7.2 Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to beam failure detection when SSB is configured as BFD. For UEs which do not support

simultaneousRxDataSSB-DiffNumerology [14] the following restrictions apply due to beam failure detection when SSB is configured as BFD.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for beam failure detection.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on FR1 serving PCell or PSCell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which PCell or PSCell is configured.

8.5.7.3 Scheduling availability of UE performing beam failure detection on FR2

The following scheduling restriction applies due to beam failure detection.

- For the case where no RSs are provided for BFD, or when CSI-RS is configured for BFD is explicitly configured and is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON
 - There are no scheduling restrictions due to beam failure detection performed based on the CSI-RS.
- Otherwise
 - For FR2-1 or the BFD-RS is not using 480 kHz SCS or 960 kHz SCS on FR2-2, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on BFD-RS resource symbols to be measured for beam failure detection.
 - For FR2-2 and the BFD-RS is using 480 kHz SCS or 960 kHz SCS, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on BFD-RS resource symbols to be measured for beam failure detection, and on one data symbol before each BFD-RS symbol to be measured and one data symbol after each BFD-RS symbol to be measured.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions on FR2 serving PCell or PSCell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to beam failure detection performed on FR2 serving cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for BFD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for BFD measurement.

8.5.7.4 Scheduling availability of UE performing beam failure detection on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR DC

There are no scheduling restrictions on FR1 serving cell(s) due to beam failure detection performed on FR2 serving PCell and/or PSCell.

There are no scheduling restrictions on FR2 serving cell(s) due to beam failure detection performed on FR1 serving PCell and/or PSCell.

8.5.8 Scheduling availability of UE during candidate beam detection

Scheduling availability restrictions when the UE is performing L1-RSRP measurement for candidate beam detection are described in the following clauses.

8.5.8.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as link recovery detection resource with the same SCS as PDSCH or PDCCH in FR1.

8.5.8.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as link recovery detection resource. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured as link recovery detection resource.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, TRS, CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for L1-RSRP.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on one serving cell apply to all other serving cells in the same band on the symbols that fully or partially overlap with the restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands.

8.5.8.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to candidate beam detection

- For FR2-1 or the reference symbols to be measured for candidate beam detection is not using 480 kHz SCS or 960 kHz SCS on FR2-2, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, CSI-RS for tracking or CSI-RS for CQI on reference symbols to be measured for candidate beam detection.
- For FR2-2 and the reference symbols to be measured for candidate beam detection is using 480 kHz SCS or 960 kHz SCS, the UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, CSI-RS for tracking or CSI-RS for CQI on reference symbols to be measured for candidate beam detection, and on one data symbol before each reference symbol to be measured for candidate beam detection and one data symbol after each reference symbol to be measured for candidate beam detection.

When intra-band carrier aggregation in FR2 is configured, the scheduling restrictions on to one serving cell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to candidate beam detection performed on FR2 serving cell(s) in different band(s), provided that the FR2 serving cell(s) and the FR2 serving cell(s) for candidate beam detection are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for CBD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for CBD measurement.

8.5.8.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC

There are no scheduling restrictions on FR1 serving cell(s) due to L1-RSRP measurement performed on FR2 serving cell(s).

There are no scheduling restrictions on FR2 serving cell(s) due to L1-RSRP measurement performed on FR1 serving cell(s).

8.5.9 Requirements for Beam Failure Recovery in SCell

8.5.9.1 Introduction

For the UE provided with a configuration of PUCCH transmission with a link recovery request (LRR) as described in clause 9.2.4 in TS 38.213 [3], if beam recovery procedure is triggered for any of SCells, the UE shall transmit SR for UL resource, followed by MAC CE providing one index for at least one corresponding SCell with radio link quality is worse than $Q_{out,LR}$, and the index q_{new} for a periodic CSI-RS configuration or for a SSB provided by higher layer, as described in clause 5.17 of TS38.321 [7], if any, for a corresponding SCell.

For the UE not provided with a configuration of PUCCH transmission with a link recovery request (LRR) as described in clause 9.2.4 in TS 38.213 [3], if beam recovery procedure is triggered for any of SCells, the UE shall transmit preamble for UL-SCH resource application, followed by MAC CE providing one index for at least one corresponding SCell with radio link quality is worse than $Q_{out,LR}$, and the index q_{new} for a periodic CSI-RS configuration or for a SSB provided by higher layer, as described in clause 5.17 of TS38.321 [7], if any, for a corresponding SCell.

8.5.9.2 Requirement

Provided that UE is configured by *schedulingRequestIDForBFR* a configuration for LRR in a PUCCH transmission, after BFR is triggered on any of SCells as described in clause 5.17 of TS38.321 [7], UE shall be capable of transmit PUCCH with a LRR within a period of T , where

- $T = T_1 \times \text{Ceil}((T_2 + D) / T_1)$ in which T_1 , T_2 and D are defined as
- T_1 is equal to the periodicity of PUCCH configured with *schedulingRequestIDForBFR*.
- $T_2 = T_{\text{Evaluate_CBD}}$ is the evaluation period specified in clause 8.5.5 or 8.5.6 for SSB or CSI-RS based candidate beam detection, that is $T_{\text{Evaluate_CBD_SSB}}$ or $T_{\text{Evaluate_CBD_CSI-RS}}$, depending on the applicable reference signal configured for candidate beam detection.
- $D = 2\text{ms}$ is the UE Processing time.

8.5.10 Minimum requirement at transitions for beam failure detection

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each BFD-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each BFD-RS resource.

When the UE transitions from a first configuration of BFD resources to a second configuration of BFD resources that is different from the first configuration, for each BFD resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the

second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each BFD resource present in the second configuration.

When the UE transitions from a first configuration of active TCI state of the CORESET to a second configuration of active TCI state of the CORESET, for each CSI-RS for BFD present in the second configuration, the UE shall use an evaluation period corresponding to the second configuration from the time of transition.

8.5A Link Recovery Procedures when CCA is used on target frequency

8.5A.1 Introduction

The requirements for link recovery procedure in the clause apply when CCA is used on a serving frequency on the downlink.

The UE shall assess the downlink radio link quality of a serving cell based on the reference signal in the set $\bar{q}_0$ as specified in TS 38.213 [3] in order to detect beam failure on:

- PCell in SA operation mode,
- PSCell in EN-DC operation mode.
- PSCell in NR-DC operation mode.

The RS resource configurations in the set $\bar{q}_0$ can be periodic SSBs. UE is not required to perform beam failure detection outside the active DL BWP. UE is not required to meet the requirements in clause 8.5A.2 and 8.5A.3 if UE does not have set $\bar{q}_0$.

On each RS resource configuration in the set $\bar{q}_0$, the UE shall estimate the radio link quality and compare it to the threshold $Q_{\text{out_LR,CCA}}$ for the purpose of accessing downlink radio link quality of the serving cell beams.

The threshold $Q_{\text{out_LR,CCA}}$ is defined as the level at which the downlink radio level link of a given resource configuration on set $\bar{q}_0$ cannot be reliably received and shall correspond to the $\text{BLER}_{\text{out,CCA}} = 10\%$ block error rate of a hypothetical PDCCH transmission. For SSB based beam failure detection, $Q_{\text{out_LR,SSB,CCA}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5A.2.1-1.

Upon request the UE shall deliver configuration indexes from the set $\bar{q}_1$ as specified in TS 38.213 [3], to higher layers, and the corresponding L1-RSRP measurement provided that the measured L1-RSRP is equal to or better than the threshold $Q_{\text{in_LR,CCA}}$, which is indicated by higher layer parameter *rsrp-ThresholdSSB*. The UE applies the $Q_{\text{in_LR,CCA}}$ threshold to the L1-RSRP measurement obtained from an SSB. The RS resource configurations in the set $\bar{q}_1$ can be periodic SSBs. UE is not required to perform candidate beam detection outside the active DL BWP.

In the requirements of clause 8.5A, the term CBD-RS SSB occasions not available at the UE refers to when the CBD-RS SSB is configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the set of configured CBD-RS resources are not available at the UE due to DL CCA failures at gNB during the corresponding evaluation period; otherwise the CBD-RS SSB is considered as available at the UE.

The requirements in clause 8.5A apply for any *channelAccessMode* configuration [TS 38.331, 2].

8.5A.2 Requirements for SSB based beam failure detection

8.5A.2.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_0$ configured for a serving cell, provided that the SSB configured for beam failure detection is actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5A.2.2, but occasionally may not be transmitted due to CCA operation.

Table 8.5A.2.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	Same as the SCS of RMSI CORESET
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.5A.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured BFD-RS SSB resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_SSB_CCA}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB,CCA}}$ within $T_{\text{Evaluate_BFD_SSB_CCA}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB_CCA}}$ is defined in Table 8.5A.2.2-1 for FR1.

The value of $T_{\text{Evaluate_BFD_SSB_CCA}}$ is defined in Table 8.5A.2.2-2 for FR2-2 with scaling factor $N=12$.

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a BFD-RS resource to be measured is defined as $N_{\text{total}} / N_{\text{outside_MG}}$
- For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gap and per-FR measurement gap within the same FR as serving cell, and starting at the beginning of any BFD-RS resource occasion:
 - N_{total} is the total number of BFD-RS resource occasions within the window W, including those overlapped with measurement gap occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of BFD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,
 - $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{xRP}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the BFD-RS SSB.
 - $P=1$ when in the monitored cell there are no GAPS overlapping with any occasion of the BFD-RS SSB.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - a BFD-RS resource is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $xRP = \text{MGRP}$
- Otherwise, when NCSG measurement gap is configured,
 - a BFD-RS resource is considered to be overlapped with the GAP if it overlaps the VIL1 or VIL2 of NCSG, and
 - $xRP = \text{VIRP}$

- If the UE is configured with Pre-MG, a BFD-RS resource is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When concurrent gaps are configured, a BFD-RS resource is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

For FR2-2,

- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$).
- $P = \frac{1}{1 - \frac{T_{SSB}}{MGRP} - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{SMTCperiod} \neq MGRP$ or
 - $T_{SMTCperiod} = MGRP$ and $T_{SSB} < 0.5 * T_{SMTCperiod}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{SSB}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod} = MGRP$ and $T_{SSB} = 0.5 * T_{SMTCperiod}$
- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the BFD-RS resource is partially overlapped with measurement gap ($T_{SSB} < MGRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{SSB}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} < MGRP$)

Where,

- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by SSB-ToMeasure and K data symbol before each consecutive SSB symbols indicated by SSB-ToMeasure and K data symbol after each consecutive SSB symbols indicated by SSB-ToMeasure, given that SSB-ToMeasure is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and K is defined in clause 9.2.5.3.3, and;
 - not overlapped with the RSSI symbols indicated by ss-RSSI-Measurement and K data symbol before each RSSI symbol indicated by ss-RSSI-Measurement and K data symbol after each RSSI symbol indicated by ss-RSSI-Measurement, given that ss-RSSI-Measurement is configured, and K is defined in clause 9.2.5.3.3.
- $P_{\text{sharing factor}} = 3$, otherwise.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2-2 band, given the SMTC offset of all CCs in FR2-2 provided the same offset.

Longer evaluation period would be expected if the combination of BFD-RS SSB resource, SMTC occasion and GAP configurations does not meet previous conditions.

Table 8.5A.2.2-1: Evaluation period $T_{\text{Evaluate_BFD_SSB_CCA}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_SSB_CCA}}$ (ms)	
	BFD-RS SSB Es/Iot ^{Note2} ≥ -7 dB	BFD-RS SSB Es/Iot ^{Note2} < -7 dB
no DRX	$\text{Max}(50, \text{Ceil}((10 \times P) \times T_{\text{SSB}}))$	$\text{Max}(50, \text{Ceil}((12 \times P) \times T_{\text{SSB}}))$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times 8 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$	$\text{Max}(50, \text{Ceil}(1.5 \times 10 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(7 \times P) \times T_{\text{DRX}}$	$\text{Ceil}(8 \times P) \times T_{\text{DRX}}$
Note 1: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.		
Note 2: BFD-RS SSB Es/Iot is the averaged BFD-RS SSB Es/Iot over the most recent previous evaluation period.		

Table 8.5A.2.2-2: Evaluation period $T_{\text{Evaluate_BFD_SSB_CCA}}$ for FR2-2

Configuration	$T_{\text{Evaluate_BFD_SSB_CCA}}$ (ms)
no DRX	$\text{Max}(200, \text{Ceil}(12 \times P \times N) \times T_{\text{SSB}})$
DRX cycle ≤ 320 ms	$\text{Max}(200, \text{Ceil}(1.5 \times 10 \times P \times N) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle > 320 ms	$\text{Ceil}(10 \times P \times N) \times T_{\text{DRX}}$
Note 1: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.	

8.5A.2.3 Measurement restriction for SSB based beam failure detection

The UE is required to be capable of measuring SSB for BFD without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following clauses.

For FR1, when the SSB for BFD measurement is in the same OFDM symbol as CSI-RS for BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for BFD measurement without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for BFD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure SSB for BFD measurement.

For FR2-2, when the SSB for BFD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

8.5A.3 Void

8.5A.4 Minimum requirement for L1 indication

When the radio link quality on all the RS resources in set $\bar{q}_0$ is worse than $Q_{\text{out_LR_CCA}}$, layer 1 of the UE shall send a beam failure instance indication to the higher layers.

The beam failure instance evaluation for the RS resources in set $\bar{q}_0$ shall be performed as specified in clause 6 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{\text{Indication_interval_BFD_CCA}}$.

When DRX is not used, $T_{\text{Indication_interval_BFD_CCA}}$ is $\text{max}(2\text{ms}, T_{\text{SSB-RS,M}})$, where $T_{\text{SSB-RS,M}}$ is the shortest periodicity of all RS resources in set $\bar{q}_0$ for the accessed cell, corresponding to either the shortest periodicity of the SSB in the set $\bar{q}_0$.

When DRX is used, for SSB based link quality measurement,

- $T_{\text{Indication_interval_BFD_CCA}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{\text{SSB-RS,M}})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,

- $T_{\text{Indication_interval_BFD_CCA}} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

8.5A.5 Requirements for SSB based candidate beam detection

8.5A.5.1 Introduction

The requirements in this clause apply for each CBD-RS SSB resource in the set $\bar{q}_1$ configured for a serving cell, provided that the SSBs configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5A.5.2, but occasionally may not be transmitted due to CCA operation.

8.5A.5.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CBD-RS SSB resource in set $\bar{q}_1$ estimated over the last $T_{\text{Evaluate_CBD_SSB_CCA}}$ ms period becomes better than the threshold $Q_{\text{in_LR,CCA}}$ provided SSB_RP and SSB $\hat{E}_s/\text{lot}$ are according to Annex Table B.2.4.1 for a corresponding band.

The UE shall monitor the configured SSB resources using the evaluation period in table 8.5A.5.2-1 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_SSB_CCA}}$ is defined in Table 8.5A.5.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_SSB_CCA}}$ is defined in Table 8.5A.5.2-2 for FR2-2 with scaling factor $N=12$.

For FR1,

- For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,
 - P value for a CBD-RS resource to be measured is defined as $N_{\text{total}} / N_{\text{outside_MG}}$
 - For a window W of duration $\max(T_{\text{L1}}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any CBD-RS resource occasion:
 - N_{total} is the total number of CBD-RS resource occasions within the window W, including those overlapped with measurement gap occasions within the window W, and
 - $N_{\text{outside_MG}}$ is the number of CBD-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,
 - $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{x \cdot \text{RRP}}}$, when in the monitored cell there are GAPS configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CBD-RS SSB,
 - $P = 1$ when in the monitored cell there are no GAPS overlapping with any occasion of the CBD-RS SSB.

For FR2-2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- P is P_{sharing} factor, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq \text{MGRP}$ or

- $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < \text{MGRP}$)
- $P_{\text{sharing factor}} = 1$, if the candidate beam detection RS outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and K data symbols before consecutive SSB symbols indicated by *SSB-ToMeasure* and K data symbols after consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and where K is defined in clause 9.2.5.3.3, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and K data symbols before each RSSI symbol indicated by *ss-RSSI-Measurement* and K data symbols after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured, and where K is defined in clause 9.2.5.3.3.
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

- If the high layer in TS 38.331 [2] signaling of *smc2* is present, $T_{\text{SMTCperiod}}$ follows *smc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2-2 band, provided the SMTC offset of all CCs in FR2-2 have the same offset.
- If the UE is configured with Pre-MG, a CBD-RS resource is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- When a measurement gap is configured and the measurement gap is not NCSG,
 - a CBD-RS resource is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
 - $x_{\text{RP}} = \text{MGRP}$
- Otherwise, when NCSG measurement gap is configured,
 - a CBD-RS resource is considered to be overlapped with the GAP if it overlaps the VIL1 or VIL2 of NCSG, and
 - $x_{\text{RP}} = \text{VIRP}$
- When concurrent gaps are configured, a CBD-RS resource is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

Table 8.5A.5.2-1: Evaluation period $T_{\text{Evaluate_CBD_SSB_CCA}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_SSB_CCA}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}((3 + L_{\text{CBD}}) \times P) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}((3 + L_{\text{CBD}}) \times P) \times T_{\text{DRX}}$

Note 1:	T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.
Note 2:	When DRX is not configured, L_{CBD} is the number of CBD-RS SSB occasions not available at the UE during $T_{Evaluate_CBD_SSB_CCA}$ where $L_{CBD} \leq L_{CBD,max}$. When DRX is configured, L_{CBD} is the number of DRX cycles in which at least one of the CBD-RS SSB occasions not available at the UE during $T_{Evaluate_CBD_SSB_CCA}$ where $L_{CBD} \leq L_{CBD,max}$. The UE, which is configured with DRX, is not required to determine the availability of SSB occasions more frequent than Once per $\text{Max}(25\text{ms}, P * T_{SSB})$ if DRX cycle $\leq 320\text{ms}$, Once per $P * T_{DRX}$ if DRX cycle $> 320\text{ms}$.
Note 3:	$L_{CBD,max}=7$ for $\text{Max}(T_{DRX}, T_{SSB}) \leq 40$ assuming $T_{DRX}=0$ for non-DRX, $L_{CBD,max}=5$ for $40 < \text{Max}(T_{DRX}, T_{SSB}) \leq 320$, $L_{CBD,max}=3$ for $T_{DRX} > 320$.
Note 4:	If $L_{CBD} > L_{CBD,max}$, the UE shall assume no new candidate beams are found for this evaluation period.

Table 8.5A.5.2-2: Evaluation period $T_{Evaluate_CBD_SSB_CCA}$ for FR2-2

Configuration	$T_{Evaluate_CBD_SSB_CCA}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}((3 + L_{CBD}) \times P \times N) \times T_{SSB})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}((3 + L_{CBD}) \times P \times N) \times T_{DRX}$
Note 1:	T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.
Note 2:	When DRX is not configured, L_{in} is the number of CBD-RS SSB occasions group which are not available at the UE during $T_{Evaluate_CBD_SSB_CCA}$, where $L_{CBD} \leq L_{CBD,max}$. A CBD-RS SSB occasions group consists of N consecutive CBD-RS SSB occasions, and the CBD-RS SSB occasions group is not available at the UE when at least one CBD-SSB occasion in the group is not transmitted by the gNB. When DRX is configured, L_{in} is the number of DRX cycles groups which are not available at the UE during $T_{Evaluate_CBD_SSB_CCA}$, where $L_{in} \leq L_{CBD,max}$. A DRX group consists of N DRX cycles, and the DRX group is not available when there is at least one DRX in which at least one CBD-RS SSB occasion is not available. The UE is not required to determine the availability of SSB occasions more frequent than once per DRX cycle length, when configured with DRX.
Note 3:	$L_{CBD,max}=7$ for $\text{Max}(T_{DRX}, T_{SSB}) \leq 40$ assuming $T_{DRX}=0$ for non-DRX, $L_{CBD,max}=5$ for $40 < \text{Max}(T_{DRX}, T_{SSB}) \leq 320$, $L_{CBD,max}=3$ for $T_{DRX} > 320$.
Note 4:	If $L_{CBD} > L_{CBD,max}$, the UE shall assume no new candidate beams are found for this evaluation period.

8.5A.5.3 Measurement restriction for SSB based candidate beam detection

For FR1, when the SSB for CBD measurement is in the same OFDM symbol as CSI-RS for BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for CBD measurement without any restrictions;
- If SSB and CSI-RS have different SCS-es,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for CBD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure SSB for CBD measurement.

For FR2-2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

8.5A.6 Void

8.5A.7 Scheduling availability of UE during beam failure detection

Scheduling availability restrictions when the UE is performing beam failure detection are described in the following clauses.

8.5A.7.1 Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH

In this clause, the same requirements apply as in Clause 8.5.7.1.

8.5A.7.2 Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH

In this clause, the same requirements apply as in Clause 8.5.7.2.

8.5A.7.3 Scheduling availability of UE performing beam failure detection on FR2-2

In this clause, the same requirements apply as in Clause 8.5.7.3.

8.5A.7.4 Scheduling availability of UE performing beam failure detection on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR DC

In this clause, the same requirements apply as in Clause 8.5.7.4.

8.5A.8 Scheduling availability of UE during candidate beam detection

Scheduling availability restrictions when the UE is performing L1-RSRP measurement for candidate beam detection are described in the following clauses.

8.5A.8.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

In this clause, the same requirements apply as in Clause 8.5.8.1.

8.5A.8.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

In this clause, the same requirements apply as in Clause 8.5.8.2.

8.5A.8.3 Scheduling availability of UE performing L1-RSRP measurement on FR2-2

In this clause, the same requirements apply as in Clause 8.5.8.3.

8.5A.8.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2-2 in case of FR1-FR2-2 inter-band CA and NR-DC

In this clause, the same requirements apply as in Clause 8.5.8.4.

8.5B Link Recovery Procedures for Redcap

8.5B.1 Introduction

The Redcap UE shall assess the downlink radio link quality of a serving cell based on the reference signal in the set $\bar{q}_0$ as specified in TS 38.213 [3] in order to detect beam failure on PCell in SA. The SSB and SMTC in this section applies for both CD-SSB and NCD-SSB if it is not additionally specified.

The RS resource configurations in the set $\bar{q}_0$ on PCell can be periodic CSI-RS resources and/or SSBs. UE is not required to perform beam failure detection outside the active DL BWP. UE is not required to meet the requirements in clause 8.5B.2 and 8.5B.3 if UE does not have set $\bar{q}_0$.

On each RS resource configuration in the set $\bar{q}_0$, the UE shall estimate the radio link quality and compare it to the threshold $Q_{\text{out_LR_Redcap}}$ for the purpose of accessing downlink radio link quality of the serving cell beams.

The threshold $Q_{\text{out_LR_Redcap}}$ is defined as the level at which the downlink radio level link of a given resource configuration on set $\bar{q}_0$ cannot be reliably received and shall correspond to the $\text{BLER}_{\text{out}} = 10\%$ block error rate of a hypothetical PDCCH transmission. For SSB based beam failure detection, $Q_{\text{out_LR_SSB}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5B.2.1-1. For CSI-RS based beam failure detection, $Q_{\text{out_LR_CSI-RS}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5B.3.1-1.

Upon request the UE shall deliver configuration indexes from the set $\bar{q}_1$ as specified in TS 38.213 [3], to higher layers, and the corresponding L1-RSRP measurement provided that the measured L1-RSRP is equal to or better than the threshold $Q_{\text{in_LR_RedCap}}$, which is indicated by higher layer parameter *rsrp-ThresholdSSB*. The UE applies the $Q_{\text{in_LR_RedCap}}$ threshold to the L1-RSRP measurement obtained from an SSB. The UE applies the $Q_{\text{in_LR_RedCap}}$ threshold to the L1-RSRP measurement obtained for a CSI-RS resource after scaling a respective CSI-RS reception power with a value provided by higher layer parameter *powerControlOffsetSS*. The RS resource configurations in the set $\bar{q}_1$ can be periodic CSI-RS resources or SSBs or both SSB and CSI-RS resources. UE is not required to perform candidate beam detection outside the active DL BWP.

8.5B.2 Requirements for SSB based beam failure detection for Redcap

8.5B.2.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_0$ configured for a serving cell, provided that the SSB configured for beam failure detection is actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5B.2.2.

Table 8.5B.2.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	16 for 1 Rx UE; 8 for 2 Rx UE
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	48 for 1 Rx UE; 24 for 2 Rx UE
Sub-carrier spacing (kHz)	Same as the SCS of RMSI CORESET

DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed
Note 1 : Note: SCS=60kHz is not applicable for FR1	

8.5B.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured SSB resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_SSB_Redcap}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB}}$ within $T_{\text{Evaluate_BFD_SSB_Redcap}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB_Redcap}}$ is defined in Table 8.5B.2.2-1 for FR1.

The value of $T_{\text{Evaluate_BFD_SSB_Redcap}}$ is defined in Table 8.5B.2.2-2 for FR2 with scaling factor $N=8$

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB.
- $P=1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC period ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq \text{MGRP}$ or
 - $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} < 0.5 * T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} = 0.5 * T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap ($T_{\text{SSB}} < \text{MGRP}$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < \text{MGRP}$)
- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by SSB-ToMeasure and 1 data symbol before each consecutive SSB symbols indicated by SSB-ToMeasure and 1 data symbol after each consecutive SSB symbols indicated by SSB-ToMeasure, given that SSB-ToMeasure is configured, where the SSB-ToMeasure

is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;

- not overlapped with the RSSI symbols indicated by ss-RSSI-Measurement and 1 data symbol before each RSSI symbol indicated by ss-RSSI-Measurement and 1 data symbol after each RSSI symbol indicated by ss-RSSI-Measurement, given that ss-RSSI-Measurement is configured.- Psharing factor = 3, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{\text{SMTCPeiod}}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{\text{SMTCPeiod}}$ corresponds to the value of higher layer parameter *smtc1*.

Longer evaluation period would be expected if the combination of BFD-RS resource, SMTc occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.	

8.5B.2.3 Measurement restriction for SSB based beam failure detection

The UE is required to be capable of measuring SSB for BFD without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB for BFD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for BFD measurement without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for BFD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

For FR2, when the SSB for BFD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC, UE is required to measure one of but not both SSB for BFD

measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

8.5B.3 Requirements for CSI-RS based beam failure detection for Redcap

8.5B.3.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_0$ of resource configurations for a serving cell, provided that the CSI-RS resource(s) in set $\bar{q}_0$ for beam failure detection are actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5B.3.2. UE is not expected to perform beam failure detection measurements on the CSI-RS configured for BFD if the CSI-RS is not QCL-ed, with QCL-TypeD when applicable, with the RS in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.5B.3.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	16 for 1 Rx UE; 8 for 2 Rx UE
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48 for 1 Rx UE; 24 for 2 Rx UE
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed
Note 1 : Note: SCS=60kHz is not applicable for FR1	

8.5B.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_CSI-RS}}$ within $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ ms period.

The value of $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ is defined in Table 8.5B.3.2-1 for FR1.

The value of $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ is defined in Table 8.5B.3.2-2 for FR2 with $N=1$. The requirements of $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ apply provided that the CSI-RS for BFD is not in a resource set configured with repetition ON. The requirements shall not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for BFD and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS.
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when the BFD-RS resource is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < MGRP$)
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq MGRP$ or
 - $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap ($T_{\text{CSI-RS}} < MGRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc1*.

Note: The overlap between CSI-RS for BFD and SMTC means that CSI-RS for BFD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{BFD} used in Table 8.5B.3.2-1 and Table 8.5B.3.2-2 are defined as

- $M_{\text{BFD}} = 10$, if the CSI-RS resource(s) in set $\bar{q}_0$ used for BFD is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{BFD} used in Table 8.5B.3.2-1 and Table 8.5B.3.2-2 are defined as

For each CSI-RS resource in the set $\bar{q}_0$ configured for PCell

- $P_{\text{BFD}} = 1$.

Table 8.5B.3.2-1: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ (ms) for Redcap UE with 2 Rx	$T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ (ms) for 1 Rx Redcap
no DRX	$\text{Max}(50, \text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{CSI-RS}})$	$\text{Max}(50, \text{Ceil}(2 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{CSI-RS}})$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$	$\text{Max}(50, \text{Ceil}(2 \times 1.5 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{DRX}}$	$\text{Ceil}(2 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.		

Table 8.5B.3.2-2: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ for FR2

Configuration	$T_{\text{Evaluate_BFD_CSI-RS_Redcap}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(M_{\text{BFD}} \times P \times N \times P_{\text{BFD}}) \times T_{\text{CSI-RS}})$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times M_{\text{BFD}} \times P \times N \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{BFD}} \times P \times N \times P_{\text{BFD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.	

8.5B.3.3 Measurement restrictions for CSI-RS beam failure detection

The UE is required to be capable of measuring CSI-RS for BFD without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following scenarios.

For both FR1 and FR2, when the CSI-RS for BFD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for BFD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for BFD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for BFD measurement and the other CSI-RS. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.
 - The CSI-RS for BFD measurement or the other CSI-RS in a resource set configured with repetition ON, or
 - The other CSI-RS is configured in set $\bar{q}_l$ and beam failure is detected, or
 - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

8.5B.4 Minimum requirement for L1 indication for Redcap

When the radio link quality on all the RS resources in set $\bar{q}_0$ is worse than $Q_{out_LR_Redcap}$, layer 1 of the UE shall send a beam failure instance indication to the higher layers,

The beam failure instance evaluation for the RS resources in set $\bar{q}_0$ shall be performed as specified in clause 6 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{Indication_interval_BFD_Redcap}$.

When DRX is not used, $T_{Indication_interval_BFD_Redcap}$ is $\max(2\text{ms}, T_{SSB-RS,M})$ or $\max(2\text{ms}, T_{CSI-RS,M})$, where $T_{SSB-RS,M}$ and $T_{CSI-RS,M}$ is the shortest periodicity of all RS resources in set $\bar{q}_0$ for the accessed cell, corresponding to either the shortest periodicity of the SSB in the set $\bar{q}_0$ or CSI-RS resource in the set $\bar{q}_0$.

When DRX is used, for SSB based link quality measurement,

- $T_{Indication_interval_BFD_Redcap} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{SSB-RS,M})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{Indication_interval_BFD_Redcap} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

When DRX is used, for CSI-RS based link quality measurement,

- $T_{Indication_interval_BFD_Redcap} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{CSI-RS,M})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{Indication_interval_BFD_Redcap} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

For HD-FDD UE, the above conditions and requirements for $T_{Indication_interval_BFD_Redcap}$ apply given that, for each BFD-RS configuration, at least one BFD-RS sample must fall with DL occasion within an indication period.

8.5B.5 Requirements for SSB based candidate beam detection for Redcap

8.5B.5.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_l$ configured for a serving cell, provided that the SSBs configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5.5.2.

8.5B.5.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured SSB resource in set $\bar{Q}_l$ estimated over the last $T_{\text{Evaluate_CBD_SSB}}$ ms period becomes better than the threshold $Q_{\text{in_LR_RedCap}}$ provided SSB_RP and SSB $\hat{E}_s/I_{\text{ot}}$ are according to Annex Table B.2.4.1 for a corresponding band.

The UE shall monitor the configured SSB resources using the evaluation period in table 8.5B.5.2-1 and 8.5B.5.2-2 corresponding to the non-DRX mode, if the configured DRX cycle ≤ 320 ms.

The value of $T_{\text{Evaluate_CBD_SSB_Redcap}}$ is defined in Table 8.5B.5.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_SSB_Redcap}}$ is defined in Table 8.5B.5.2-2 for FR2 with scaling factor $N=8$.

where,

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB,
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- P is $P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC period ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{MGRP} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq MGRP$ or
 - $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{SSB}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{MGRP}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{SSB}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{MGRP}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the candidate beam detection RS outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;

- not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTcperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTcperiod}}$ follows *smtc1*.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTc occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of P_{CBD} used in Table 8.5.5.2-1 and Table 8.5.5.2-2 are defined as

For each SSB resource in the set $\bar{q}_1$ configured for PCell

- $P_{\text{CBD}} = 1$.

Table 8.5B.5.2-1: Evaluation period $T_{\text{Evaluate_CBD_SSB_Redcap}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_SSB_Redcap}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

Table 8.5B.5.2-2: Evaluation period $T_{\text{Evaluate_CBD_SSB_Redcap}}$ for FR2

Configuration	$T_{\text{Evaluate_CBD_SSB_Redcap}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(3 \times P \times N \times P_{\text{CBD}}) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(3 \times P \times N \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

8.5B.5.3 Measurement restriction for SSB based candidate beam detection

For FR1, when the SSB for CBD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for CBD measurement without any restrictions;
- If SSB and CSI-RS have different SCS-es,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for CBD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

8.5B.6 Requirements for CSI-RS based candidate beam detection for Redcap

8.5B.6.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_l$ configured for a serving cell, provided that the CSI-RS resources configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5B.6.2.

8.5B.6.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in set $\bar{q}_l$ estimated over the last $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ [ms] period becomes better than the threshold $Q_{\text{in_LR_RedCap}}$ within $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ [ms] period provided CSI-RS $\hat{E}_s/\text{Iot}$ is according to Annex Table B.2.4.2 for a corresponding band.

The UE shall monitor the configured CSI-RS resources using the evaluation period in table 8.5B.6.2-1 and 8.5B.6.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ is defined in Table 8.5B.6.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ is defined in Table 8.5B.6.2-2 for FR2 with scaling factor $N=8$.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when candidate beam detection RS is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$ when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < MGRP$)
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
- $T_{\text{SMTCperiod}} \neq MGRP$ or

- $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{3}{1 - \frac{T_{\text{CSI-RS}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < \text{MGRP}$)
- $P_{\text{sharing factor}} = 1$, if the candidate beam detection RS outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smtc1*.

Note: The overlap between CSI-RS for CBD and SMTC means that CSI-RS for CBD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

Longer evaluation period would be expected if the CSI-RS is on the same OFDM symbols with RLM, BFD, BM-RS, or other CBD-RS, according to the measurement restrictions defined in clause 8.5.6.3.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{CBD} used in Table 8.5B.6.2-1 and Table 8.5B.6.2-2 are defined as

- $M_{\text{CBD}} = 3$, if the CSI-RS resource configured in the set $\bar{q}_l$ is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{CBD} used in Table 8.5B.6.2-1 and Table 8.5B.6.2-2 are defined as

For each CSI-RS resource in the set $\bar{q}_l$ configured for PCell

- $P_{\text{CBD}} = 1$.

Table 8.5B.6.2-1: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ for FR1

Configuration	$T_{\text{EvaluateC_CBD_CSI-RS_Redcap}}$ (ms)
---------------	--

non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{CSI-RS}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_l$. T_{DRX} is the DRX cycle length.	

Table 8.5B.6.2-2: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ for FR2

Configuration	$T_{\text{Evaluate_CBD_CSI-RS_Redcap}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(M_{\text{CBD}} \times P \times N \times P_{\text{CBD}}) \times T_{\text{CSI-RS}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(M_{\text{CBD}} \times P \times N \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_l$. T_{DRX} is the DRX cycle length.	

8.5B.6.3 Measurement restriction for CSI-RS based candidate beam detection

For both FR1 and FR2, when the CSI-RS for CBD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for CBD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS based CBD measurement for without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer measurement period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for CBD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for CBD measurement without any restriction.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and the other CSI-RS. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined.

8.5B.7 Scheduling availability of UE during beam failure detection for Redcap

Scheduling availability restrictions when the UE is performing beam failure detection are described in the following clauses.

8.5B.7.1 Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to beam failure detection performed on SSB and CSI-RS configured for BFD with the same SCS as PDSCH or PDCCH in FR1.

8.5B.7.2 Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to beam failure detection when SSB is configured as BFD. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to beam failure detection when SSB is configured as BFD.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for beam failure detection.

8.5B.7.3 Scheduling availability of UE performing beam failure detection on FR2

The following scheduling restriction applies due to beam failure detection.

- For the case where no RSs are provided for BFD, or when CSI-RS is configured for BFD is explicitly configured and is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON
 - There are no scheduling restrictions due to beam failure detection performed based on the CSI-RS.
- Otherwise
 - The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on BFD-RS resource symbols to be measured for beam failure detection.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for BFD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for BFD measurement.

8.5B.8 Scheduling availability of UE during candidate beam detection for Redcap

Scheduling availability restrictions when the UE is performing L1-RSRP measurement for candidate beam detection are described in the following clauses.

8.5B.8.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as link recovery detection resource with the same SCS as PDSCH or PDCCH in FR1.

8.5B.8.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as link recovery detection resource. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured as link recovery detection resource.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, TRS, CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for L1-RSRP.

8.5B.8.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to candidate beam detection

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, CSI-RS for tracking or CSI-RS for CQI on reference symbols to be measured for candidate beam detection.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for CBD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for CBD measurement.

8.5B.9 Minimum requirement at transitions for beam failure detection for Redcap

When the UE transitions between BFD CD-SSB resource and BFD NCD-SSB resource due to BWP switching during one evaluation period, the UE shall use an evaluation period that is the maximum of the evaluation period corresponding to the first SSB type and the second SSB type after the BWP switching. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second SSB type for each BFD-RS resource.

The requirements in clause 8.5.10 shall also apply except the scenarios described above.

8.5C Link Recovery Procedures for Satellite Access

8.5C.1 Introduction

The UE shall assess the downlink radio link quality of a serving cell based on the reference signal in the set $\bar{Q}_0$ as specified in TS 38.213 [3] in order to detect beam failure on PCell and the UE is configured with only PCell, which is served by satellite access node (SAN).

The RS resource configurations in the set $\bar{Q}_0$ on PCell can be periodic CSI-RS resources and/or SSBs.

On each RS resource configuration in the set $\bar{Q}_0$, the UE shall estimate the radio link quality and compare it to the threshold Q_{out_LR} for the purpose of accessing downlink radio link quality of the serving cell beams.

The threshold $Q_{\text{out_LR}}$ is defined as the level at which the downlink radio level link of a given resource configuration on set $\bar{q}_0$ cannot be reliably received and shall correspond to the $\text{BLER}_{\text{out}} = 10\%$ block error rate of a hypothetical PDCCH transmission. For SSB based beam failure detection, $Q_{\text{out_LR_SSB}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5.2.1C-1. For CSI-RS based beam failure detection, $Q_{\text{out_LR_CSI-RS}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.5C.3.1-1.

Upon request the UE shall deliver configuration indexes from the set $\bar{q}_1$ as specified in TS 38.213 [3], to higher layers, and the corresponding L1-RSRP measurement provided that the measured L1-RSRP is equal to or better than the threshold $Q_{\text{in_LR}}$, which is indicated by higher layer parameter *rsrp-ThresholdSSB*. The UE applies the $Q_{\text{in_LR}}$ threshold to the L1-RSRP measurement obtained from an SSB. The UE applies the $Q_{\text{in_LR}}$ threshold to the L1-RSRP measurement obtained for a CSI-RS resource after scaling a respective CSI-RS reception power with a value provided by higher layer parameter *powerControlOffsetSS*. The RS resource configurations in the set $\bar{q}_1$ can be periodic CSI-RS resources or SSBs or both SSB and CSI-RS resources.

8.5C.2 Requirements for SSB based beam failure detection

8.5C.2.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_0$ configured for a serving cell, provided that the SSB configured for beam failure detection is actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5C.2.2.

Table 8.5.2.1C-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	Same as the SCS of RMSI CORESET
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.5C.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured SSB resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_SSB}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB}}$ within $T_{\text{Evaluate_BFD_SSB}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.5C.2.2-1 for FR1.

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W , and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W , if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise
- T_{L1} is periodicity of the target RLM-RS
- $P_{\text{sharing factor}} = 3$.

Longer evaluation period would be expected if the combination of BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

Table 8.5C.2.2-1: Evaluation period $T_{\text{Evaluate_BFD_SSB}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_SSB}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(5 \times P) \times T_{\text{SSB}})$
DRX cycle $\leq 320\text{ms}$	$\text{Max}(50, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{\text{DRX}}, T_{\text{SSB}}))$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(5 \times P) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.	

8.5C.2.3 Measurement restriction for SSB based beam failure detection

The UE is required to be capable of measuring SSB for BFD without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB for BFD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for BFD measurement without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for BFD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

8.5C.3 Requirements for CSI-RS based beam failure detection

8.5C.3.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_0$ of resource configurations for a serving cell, provided that the CSI-RS resource(s) in set $\bar{q}_0$ for beam failure detection are actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.5C.3.2. UE is not expected to perform beam

failure detection measurements on the CSI-RS configured for BFD if the CSI-RS is not QCL-ed, with QCL-TypeD when applicable, with the RS in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.5C.3.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.5C.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in set $\bar{q}_0$ estimated over the last $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_CSI-RS}}$ within $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period.

The value of $T_{\text{Evaluate_BFD_CSI-RS}}$ is defined in Table 8.5C.3.2-1 for FR1.

The requirements of $T_{\text{Evaluate_BFD_CSI-RS}}$ apply provided that the CSI-RS for BFD is not in a resource set configured with repetition ON. The requirements shall not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for BFD and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise
- T_{L1} is periodicity of the target RLM-RS
- $P_{\text{sharing factor}} = 3$.

Note: The overlap between CSI-RS for BFD and SMTC means that CSI-RS for BFD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

The values of M_{BFD} used in Table 8.5C.3.2-1 and Table 8.5C.3.2-2 are defined as

- $M_{\text{BFD}} = 10$, if the CSI-RS resource(s) in set $\bar{q}_0$ used for BFD is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{BFD} used in Table 8.5C.3.2-1 and Table 8.5C.3.2-2 are defined as

For each CSI-RS resource in the set $\bar{q}_0$ configured for PCell SA

- $P_{\text{BFD}} = 1$.

Table 8.5C.3.2-1: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_CSI-RS}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{CSI-RS}})$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_0$. T_{DRX} is the DRX cycle length.	

8.5C.3.3 Measurement restrictions for CSI-RS beam failure detection

The UE is required to be capable of measuring CSI-RS for BFD without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following scenarios.

For FR1, when the CSI-RS for BFD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for BFD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for BFD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

8.5C.4 Minimum requirement for L1 indication

When the radio link quality on all the RS resources in set $\bar{q}_0$ is worse than $Q_{\text{out_LR}}$, layer 1 of the UE shall send a beam failure instance indication to the higher layers

The beam failure instance evaluation for the RS resources in set $\bar{q}_0$ shall be performed as specified in clause 6 in TS 38.213 [3]. Two successive indications from layer 1 shall be separated by at least $T_{\text{Indication_interval_BFD}}$.

When DRX is not used, $T_{\text{Indication_interval_BFD}}$ is $\max(2\text{ms}, T_{\text{SSB-RS},M})$ or $\max(2\text{ms}, T_{\text{CSI-RS},M})$, where $T_{\text{SSB-RS},M}$ and $T_{\text{CSI-RS},M}$ is the shortest periodicity of all RS resources in set $\bar{q}_0$ for the accessed cell, corresponding to either the shortest periodicity of the SSB in the set $\bar{q}_0$ or CSI-RS resource in the set $\bar{q}_0$.

When DRX is used, for SSB based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{\text{SSB-RS},M})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

When DRX is used, for CSI-RS based link quality measurement,

- $T_{\text{Indication_interval_BFD}} = \text{Max}(1.5 \times \text{DRX_cycle_length}, 1.5 \times T_{\text{CSI-RS},M})$, if $\text{DRX_cycle_length} \leq 320\text{ms}$,
- $T_{\text{Indication_interval_BFD}} = \text{DRX_cycle_length}$, if $\text{DRX_cycle_length} > 320\text{ms}$.

8.5C.5 Requirements for SSB based candidate beam detection

8.5C.5.1 Introduction

The requirements in this clause apply for each SSB resource in the set $\bar{q}_l$ configured for a serving cell, provided that the SSBs configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5C.5.2.

8.5C.5.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured SSB resource in set $\bar{q}_l$ estimated over the last $T_{\text{Evaluate_CBD_SSB}}$ ms period becomes better than the threshold $Q_{\text{in_LR}}$ provided SSB_{RP} and SSB_{Es/lot} are according to Annex Table B.2.19.1 for a corresponding band.

The UE shall monitor the configured SSB resources using the evaluation period in table 8.5C.5.2-1 and 8.5C.5.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_SSB}}$ is defined in Table 8.5C.5.2-1 for FR1.

where,

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise
- T_{L1} is periodicity of the target RLM-RS

- $P_{\text{sharing factor}} = 3$.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

The values of P_{CBD} used in Table 8.5C.5.2-1 and Table 8.5C.5.2-2 are defined as

For each SSB resource in the set $\bar{q}_1$ configured for PCell.

- $P_{\text{CBD}} = 1$.

Table 8.5C.5.2-1: Evaluation period $T_{\text{Evaluate_CBD_SSB}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_SSB}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the set $\bar{q}_1$. T_{DRX} is the DRX cycle length.	

8.5C.5.3 Measurement restriction for SSB based candidate beam detection

For FR1, when the SSB for CBD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for CBD measurement without any restrictions;
- If SSB and CSI-RS have different SCS-es,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for CBD measurement without any restriction;
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

8.5C.6 Requirements for CSI-RS based candidate beam detection

8.5C.6.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the set $\bar{q}_1$ configured for a serving cell, provided that the CSI-RS resources configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.5C.6.2.

8.5C.6.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in set $\bar{q}_1$ estimated over the last $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period becomes better than the threshold $Q_{\text{in_LR}}$ within $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period provided CSI-RS $\hat{E}_s/\text{Iot}$ is according to Annex Table B.2.19.2 for a corresponding band.

The UE shall monitor the configured CSI-RS resources using the evaluation period in table 8.5C.6.2-1 and 8.5C.6.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_CSI-RS}}$ is defined in Table 8.5C.6.2-1 for FR1.

P value for an RLM-RS resource to be measured is defined as

- $P_{\text{sharing factor}} * N_{\text{total}} / N_{\text{outside_MG}}$ with $N_{\text{available}} = 0$
- $N_{\text{total}} / N_{\text{available}}$ with $N_{\text{available}} > 0$

For a window W of duration $\max(T_{L1}, \text{MGRP_max})$, where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any RLM-RS resource occasion:

- N_{total} is the total number of RLM-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window W , and
- $N_{\text{outside_MG}}$ is the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{\text{available}}$ is
 - the number of RLM-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W , if UE does not support *parallelMeasurementWithoutRestriction* and LEO satellites are measured for intra-frequency measurement, and
 - same as $N_{\text{outside_MG}}$, otherwise
- T_{L1} is periodicity of the target RLM-RS
- $P_{\text{sharing factor}} = 3$.

Note: The overlap between CSI-RS for CBD and SMTC means that CSI-RS for CBD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For an FR1 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

The values of M_{CBD} used in Table 8.5C.6.2-1 and Table 8.5C.6.2-2 are defined as

- $M_{\text{CBD}} = 3$, if the CSI-RS resource configured in the set $\bar{q}_l$ is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{CBD} used in Table 8.5C.6.2-1 are defined as

For each CSI-RS resource in the set $\bar{q}_l$ configured for SA

- $P_{\text{CBD}} = 1$.

Table 8.5C.6.2-1: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS}}$ for FR1

Configuration	$T_{\text{EvaluateC_CBD_CSI-RS}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{CSI-RS}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(M_{\text{CBD}} \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the set $\bar{q}_l$. T_{DRX} is the DRX cycle length.	

8.5C.6.3 Measurement restriction for CSI-RS based candidate beam detection

For FR1, when the CSI-RS for CBD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for CBD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS based CBD measurement for without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer measurement period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for CBD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for CBD measurement without any restriction.

8.5C.7 Scheduling availability of UE during beam failure detection

Scheduling availability restrictions when the UE is performing beam failure detection are described in the following clauses.

8.5C.7.1 Scheduling availability of UE performing beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to beam failure detection performed on SSB and CSI-RS configured for BFD with the same SCS as PDSCH or PDCCH in FR1.

8.5C.7.2 Scheduling availability of UE performing beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to beam failure detection when SSB is configured as BFD. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to beam failure detection when SSB is configured as BFD.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for beam failure detection.

8.5C.8 Scheduling availability of UE during candidate beam detection

Scheduling availability restrictions when the UE is performing L1-RSRP measurement for candidate beam detection are described in the following clauses.

8.5C.8.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as link recovery detection resource with the same SCS as PDSCH or PDCCH in FR1.

8.5C.8.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as link recovery detection resource. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured as link recovery detection resource.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, TRS, CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for L1-RSRP.

8.5C.9 Minimum requirement at transitions for beam failure detection

When the UE transitions between DRX and no DRX or when DRX cycle periodicity changes, for each BFD-RS resource, for a duration of time equal to the evaluation period corresponding to the second mode after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation period corresponding to the first mode and the second mode. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second mode for each BFD-RS resource.

When the UE transitions from a first configuration of BFD resources to a second configuration of BFD resources that is different from the first configuration, for each BFD resource present in the second configuration, for a duration of time equal to the evaluation period corresponding to the second configuration after the transition occurs, the UE shall use an evaluation period that is no less than the minimum of evaluation periods corresponding to the first configuration and the second configuration. Subsequent to this duration, the UE shall use an evaluation period corresponding to the second configuration for each BFD resource present in the second configuration.

When the UE transitions from a first configuration of active TCI state of the CORESET to a second configuration of active TCI state of the CORESET, for each CSI-RS for BFD present in the second configuration, the UE shall use an evaluation period corresponding to the second configuration from the time of transition.

8.6 Active BWP switch delay

8.6.1 Introduction

The requirements in this clause apply for a UE configured PCell or any activated SCell in standalone NR or NE-DC, PCell, PSCell or any activated SCell in MCG or SCG in NR-DC, or PSCell or any activated SCell in SCG in EN-DC. The requirements in this clause also apply for a UE configured with more than one BWP on PCell or any activated SCell with CCA in standalone NR, or PSCell or any activated SCell with CCA in SCG in EN-DC. The requirements in 8.6.4 apply for a UE which is capable of *ul-LBT-FailureDetectionRecovery-r16* configured with more than one UL BWP on PCell with CCA in standalone NR or PSCell with CCA in EN-DC.

UE shall complete the switch of active DL and/or UL BWP within the delay defined in this clause.

8.6.2 DCI and timer based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with more than one BWP configurations configured.

For DCI-based BWP switch, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}} + Y$ which starts from the beginning of DL slot n . Where,

- $Y=0$, if the serving cell where UE receives DCI for BWP switch request is same as the serving cell on which BWP switch occurs.
- Y equals to the length of 1 slot, if the serving cell where UE receives DCI for BWP switch is different from the serving cell on which BWP switch occurs for any involved serving cell. In this scenario, $T_{\text{BWPswitchDelay}} + Y$ shall follow the smaller SCS of scheduling cell, scheduled cells before and scheduled cells after active BWP change. If both scheduling cell and scheduled cell are in FR2-2, Y shall follow the SCS of 120 KHz.

The UE is not required to transmit UL signals or receive DL signals until the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}}$ which starts from the beginning of DL slot n except DCI triggering BWP switch on the cell where DCI-based BWP switch occurs. The UE is not required to follow the requirements defined in this clause when performing a DCI-based BWP switch between the BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths.

For timer-based BWP switch, the UE shall start BWP switch at DL slot n , where slot n is the first slot of a DL subframe (FR1) or DL half-subframe (FR2) immediately after a BWP-inactivity timer *bwp-InactivityTimer* [2] expires on a serving cell, and the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active

BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}}$ which starts from the beginning of DL slot n .

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{\text{BWPswitchDelay}}$ after *bwp-InactivityTimer* [2] expires on the cell where timer-based BWP switch occurs.

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{\text{BWPswitchDelay}}$ defined in Table 8.6.2-1.

Table 8.6.2-1: BWP switch delay

μ	NR Slot length (ms)	BWP switch delay $T_{\text{BWPswitchDelay}}$ (slots)	
		Type 1 ^{Note 1}	Type 2 ^{Note 1}
0	1	1	3
1	0.5	2	5
2	0.25	3	9
3	0.125	6	18
5	0.03125	20	65
6	0.015625	39	129
Note 1: Depends on UE capability. Note 2: If the BWP switch involves changing of SCS, the BWP switch delay is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch.			

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10 in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10 in the new BWP.

Provided the UE does not have the required activated TCI-state(s) information to receive PDCCH/ PDSCH and to transmit PUSCH/PUCCH/SRS in the new BWP, the UE shall use old TCI-state(s) before the BWP switch until a new MAC CE updating the required activated TCI-state(s) information is received after the BWP switch.

If the BWP switch is triggered within or outside DRX active time, and one of the two BWPs in a BWP switching is a dormant BWP [TS 38.321, 7], UE shall be able to complete active BWP switching within the time duration of

- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X$, provided that the dormancy indication is received in any of the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is receiveds, or
- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X + Z$, provided that the dormancy indication is received after the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, where
- $T_{\text{BWPswitchDelay}}$ is defined in Table 8.6.2-1 corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs;
- X equals to the length of 1 slot corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs. If both scheduling cell and scheduled cell are in FR2-2, X shall follow the SCS of 120 KHz.
- Z equals to the length of 1 slot corresponding to the SCS of the serving cell where UE receives dormancy indication.

For DCI-based BWP switch, if the new BWP is a dormant BWP, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive CSI-RS (for DL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL slot occurs right after a time duration of $T_{\text{dormantBWPswitchDelay}}$ which starts from the beginning of DL slot n .

8.6.2A DCI based BWP switch delay on multiple CCs

The requirements in this clause only apply to the case when the same type of BWP switch (DCI based BWP switch) is performed on multiple CCs simultaneously or over partially overlapping time period.

8.6.2A.1 Simultaneous DCI based BWP switch delay on multiple CCs

The delay requirements for simultaneous DCI based BWP switch on multiple CCs in this clause apply only if the timing difference among the first symbol of slot carrying DCI for all CCs is received within the MRTD for inter-band CA as defined in clause 7.6.4.

For DCI-based BWP switch on multiple CCs, after the UE receives BWP switching request, UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWPs on the serving cells on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{MultipleBWPswitchDelay}}$ which starts from the beginning of DL slot n , where slot n is slot which UE receives the earliest BWP switching request among CCs on which UE is performing simultaneous DCI-based BWP switching.

The UE is not required to transmit UL signals or receive DL signals until the first DL or UL slot occurs right after a time duration of $T_{\text{MultipleBWPswitchDelay}}$ which starts from the beginning of DL slot n except DCI triggering BWP switch on the cell where DCI-based BWP switch occurs. The UE is not required to follow the requirements defined in this clause when performing a DCI-based BWP switch between the BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths on any serving cell.

UE shall finish BWP switch within the time duration $T_{\text{MultipleBWPswitchDelay}} + Y$, which is defined as:

$$T_{\text{MultipleBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + D \cdot (N-1)$$

Where:

- $T_{\text{BWPswitchDelay}}$ is the BWP switching delay on single CC defined in Table 8.6.2-1 depending on UE capability *bwp-SwitchingDelay* [2]. $T_{\text{BWPswitchDelay}}$ shall be based on the smallest SCS among SCS of all involved CCs before and after BWP switch. If the BWP switch on multiple CCs results in the change of the SCS on any CC among involved CCs, $T_{\text{BWPswitchDelay}}$ shall be based on the smallest SCS among all SCS values of all involved CCs.
- D is the incremental delay for each additional CC involved in simultaneous BWP switch and depends on UE capability *bwp-SwitchingMultiCCs-r16* [TS 38.306, 14] for switching between non-dormant BWPs, and *bwp-SwitchingMultiDormancyCCs-r16* for switching between non-dormant and dormant BWPs.
- For UE which is capable of per-FR gap, and no BWP switch involves SCS change, N is the number of CCs in same FR; For UE which is not capable of per-FR gap, or the BWP switches on any CC involves SCS changing, N is the number of CCs undergoing simultaneous BWP switch.
- $Y=0$, if the serving cell where UE receives DCI for BWP switch is same as the serving cell on which BWP switch occurs for each involved serving cell.

Y equals to the length of one slot at smaller SCS of scheduling cell, scheduled cells before and scheduled cells after active BWP change,

- if the serving cell where UE receives DCI for BWP switch is different from the serving cell on which BWP switch occurs for any involved serving cell. If both scheduling cell and scheduled cell are in FR2-2, Y shall follow the SCS of 120 KHz.

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10 in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10 in the new BWP.

Provided the UE does not have the required activated TCI-state(s) information to receive PDCCH/ PDSCH and to transmit PUSCH/PUCCH/SRS in the new BWP, the UE shall use old TCI-state(s) before the BWP switch until a new MAC CE updating the required activated TCI-state(s) information is received after the BWP switch.

If the BWP switch is triggered on multiple CCs simultaneously within or outside DRX active time, and one of the two BWPs on each CC in a BWP switching is a dormant BWP [TS 38.321, 7], UE shall be able to complete active BWP switching within the time duration of

- $T_{\text{DormantMultipleBWPswitchDelay}} = T_{\text{MultipleBWPswitchDelay}} + X$, provided that the dormancy indication is received in any of the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, or
- $T_{\text{DormantMultipleBWPswitchDelay}} = T_{\text{MultipleBWPswitchDelay}} + X + Z$, provided that the dormancy indication is received after the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, where
- $T_{\text{MultipleBWPswitchDelay}}$ is defined above corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs;
- X equals to the length of 1 slot corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs. If both scheduling cell and scheduled cell are in FR2-2, X shall follow the SCS of 120 KHz.
- Z equals to the length of 1 slot corresponding to the SCS of the serving cell where DCI for dormancy indication is received.

The number of CCs, N, on which the UE can simultaneously switch BWPs while still meeting the requirements, if any, related to allocations on downlink, uplink, or transmission of HARQ-ACK, depends on the UE reported capabilities related to BWP switching, the network configuration and the BWP switch method.

8.6.2A.2 Non-simultaneous DCI based BWP switch delay on multiple CCs

In non-simultaneous case, the DCI-based BWP switch on multiple CCs is triggered over partially overlapping time period between CCs or multiple CCs in different Cell groups. The delay requirements for non-simultaneous DCI based BWP switch on multiple CCs in this clause apply only if:

- the timing difference among the first symbol of slot carrying DCI for all CCs involved in non-simultaneous BWP switch is received exceeds the MRTD for inter-band CA as defined in clause 7.6.4, and
- UE is operating in NR-DC (FR1+FR2), and
- UE is capable of per-FR gap, and
- BWP switch does not involve SCS change

For non-simultaneous DCI based BWP switch on multiple CCs, BWP switching delay requirements defined in clause 8.6.2 apply when BWP switching occurs on single CC in the cell group. BWP switching delay requirements defined in clause 8.6.2A.1 apply when simultaneous BWP switching occurs on multiple CCs in the cell group.

8.6.2B Timer based BWP switch delay on multiple CCs

The requirements in this clause only apply to the case when the same type of BWP switch (timer based BWP switch) is performed on multiple CCs simultaneously or over partially overlapping time period.

8.6.2B.1 Simultaneous timer based BWP switch delay on multiple CCs

The delay requirements for simultaneous timer based BWP switch on multiple CCs in this clause apply only if the timing difference among the beginning of the slot where timer based BWP switching starts for all CCs is within the MRTD for inter-band CA as defined in clause 7.6.4.

For timer-based BWP switch on multiple CCs, UE shall start BWP switch at DL slot n , where slot n is the first slot of a DL subframe (in FR1) or DL half-subframe ((in FR2) immediately after the earliest BWP-inactivity timer *bwp-InactivityTimer* [2] expiration occurs on multiple serving cells, and the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWPs on the serving cells on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{MultipleBWPswitchDelay}}$ which starts from the beginning of DL slot n , where $T_{\text{MultipleBWPswitchDelay}}$ is defined in 8.6.2A.1.

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{\text{MultipleBWPswitchDelay}}$ after *bwp-InactivityTimer* [2] expires on the cell where timer-based BWP switch occurs.

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10 in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10 in the new BWP.

Provided the UE does not have the required activated TCI-state(s) information to receive PDCCH/ PDSCH and to transmit PUSCH/PUCCH/SRS in the new BWP, the UE shall use old TCI-state(s) before the BWP switch until a new MAC CE updating the required activated TCI-state(s) information is received after the BWP switch.

8.6.2B.2 Non-simultaneous timer based BWP switch delay on multiple CCs

In non-simultaneous case, the timer-based BWP switch on multiple CCs is triggered over partially overlapping time period.

The delay requirements for non-simultaneous timer based BWP switch on multiple CCs in this clause apply if the timing difference among the beginning of the slot where timer based BWP switching starts for all CCs is exceeds the MRTD for inter-band CA as defined in clause 7.6.4, and the BWP switch does not involve SCS change. The UE performs the non-simultaneous timer-based BWP switch on the CCs sequentially.

For non-simultaneous timer-based BWP switch, the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{MultipleBWPswitchDelayTotal}}$ which starts from the beginning of DL slot n , where slot n is the first slot of a DL subframe (in FR1) or DL half-subframe (in FR2) immediately after the earliest BWP-inactivity timer *bwp-InactivityTimer* [2] expires.

$$T_{\text{MultipleBWPswitchDelayTotal}} = T_{\text{Delay}} + T_{\text{MultipleBWPswitchDelay}}$$

Where:

T_{Delay} is the time required to complete the ongoing timer-based BWP switching on other CCs.

$T_{\text{MultipleBWPswitchDelay}}$ is the timer-based BWP switch delay on current single CC defined in clause 8.6.2 or simultaneously triggered on multiple CCs defined in clause 8.6.2B.1.

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{\text{MultipleBWPswitchDelayTotal}}$ after *bwp-InactivityTimer* [2] expires on the cell where timer-based BWP switch occurs.

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10 in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10 in the new BWP.

Provided the UE does not have the required activated TCI-state(s) information to receive PDCCH/ PDSCH and to transmit PUSCH/PUCCH/SRS in the new BWP, the UE shall use old TCI-state(s) before the BWP switch until a new MAC CE updating the required activated TCI-state(s) information is received after the BWP switch.

8.6.3 RRC based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with one or more than one BWP configuration(s) configured, with

- Active BWP switch or parameter change of its active BWPs for SpCell
- Parameter change of its active BWPs except parameter *firstActiveDownlinkBWP-Id* and *firstActiveUplinkBWP-Id* for SCell

For RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWP, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch occurs on the first DL or UL slot right after a time duration of $\frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$ slots which begins from the beginning of DL slot n , where

DL slot n is the last slot overlapping with the PDSCH containing the RRC command, and

$NR\ Slot\ length$ is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch if the BWP switch involves changing of SCS.

$T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in ms as defined in clause 11.2 in TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the length of the RRC procedure delay in ms as defined in clause 12 in TS 38.331 [2], and

$T_{BWPswitchDelayRRC} = 6ms$ is the time used by the UE to perform BWP switch.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ on the cell where RRC-based BWP switch occurs. When $T_{HARQ} > T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.6.3A RRC based BWP switch delay on multiple CCs

The requirements in this clause only apply to the case when the same type of BWP switch (RRC based BWP switch) is performed on multiple CCs simultaneously or over partially overlapping time period.

The requirements in this clause shall apply:

- Active BWP switching or parameter change of its active BWPs for SpCell
- Parameter change of its active BWPs except parameter *firstActiveDownlinkBWP-Id* and *firstActiveUplinkBWP-Id* for SCells

8.6.3A.1 Simultaneous RRC based BWP switch delay on multiple CCs

Requirements in this clause apply only if RRC based BWP switching on multiple CCs for NR-CA is triggered by a single RRC command.

For RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWPs, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWPs on the serving cells on which BWP switch occurs on the first DL or UL slot right after a time duration of $\frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC} * (N - 1)}{NR\ slot\ length}$ slots which begins from the beginning of DL slot n, where

DL slot n is the last slot overlapping with the PDSCH containing the RRC command, and

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3, and

$D_{RRC} = 0$ for UE which is capable of type 1 BWP switching delay depending on UE capability *bwp-SwitchingDelay* [2]. $D_{RRC} = D$ for UE which is capable of type 2 BWP switching delay depending on UE capability *bwp-SwitchingDelay* [2], where D is the incremental delay for each additional CC involved in simultaneous BWP switch and depends on UE capability [TS 38.306, 14].

N is the number of CCs within the NR-CA configured for performing simultaneous BWP switch.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC} * (N - 1)$ on the cells where RRC-based BWP switch occurs.

8.6.3A.2 Non-simultaneous RRC based BWP switch delay on multiple CCs

In non-simultaneous case, the RRC-based BWP switch on multiple CCs is triggered over partially overlapping time period in different Cell groups. The delay requirements in this clause apply only if:

BWP switching on multiple CCs in different cell groups are triggered by separate RRC commands, and

UE is operating in NR-DC (FR1+FR2), and

UE is capable of per-FR gap, and

BWP switch does not involve SCS change.

For non-simultaneous RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWPs, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWPs on the serving cells on which BWP switch occurs on the first DL or UL slot right after a time duration of

$\frac{T_{Waiting} + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC} * (M - 1)}{NR\ slot\ length}$ slots which begins from the beginning of DL slot n, where

DL slot n is the last slot containing the RRC command,

$T_{Waiting}$ is the waiting time for RRC based BWP switch which is upper bounded by the ongoing BWP switch time in the first CG defined in clause 8.6.3A.1,

M is the number of CCs within the NR-CA configured for performing simultaneous BWP switch in the second CG; M=1 if the BWP switch is performed on single CC,

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3, and

D_{RRC} is defined in clause 8.6.3A.1.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC} * (M - 1)$ on the cells in the second CG where RRC-based BWP switch occurs.

8.6.4 BWP switch delay on Consistent UL CCA recovery

Upon detection of consistent UL CCA failure is slot#n in SpCell when UE detects *lbt-FailureInstanceMaxCount* number of CCA failure within *lbt-FailureDetectionTimer*, the UE shall switch the active UL BWP to an UL BWP configured with PRACH occasion and for which consistent CCA failure has not been triggered as defined in TS 38.321 clause 5.21 [7]. The UE shall be ready to transmit PRACH on the new UL BWP of the SpCell on the first UL slot occurs right after slot n + $T_{BWPswitchDelay} + 1$, where $T_{BWPswitchDelay}$ is defined in Table 8.6.2-1. The UE shall finish the UL BWP switch within the time duration $T_{BWPswitchDelay}$ depending on UE capability *bwp-SwitchingDelay* [2].

Note: Additional delay in acquiring the first available RACH occasion will be derived in a way similar to that in handover in clause 6.1B.1.

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{\text{BWPswitchDelay}}$ on the SpCell in the UL BWP switch. The UE is not required to follow the requirements defined in this clause when performing a UL BWP switch between the UL BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths.

8.6A Active BWP switch delay for RedCap

8.6A.1 Introduction

The requirements in this clause apply for RedCap UE. UE shall complete the switch of active DL and/or UL BWP within the delay defined in this clause.

8.6A.2 DCI and timer based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with more than one BWP configurations configured.

For DCI-based BWP switch, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}} + Y$ which starts from the beginning of DL slot n . Where,

- $Y=0$, if the serving cell where UE receives DCI for BWP switch request is same as the serving cell on which BWP switch occurs.
- Y equals to the length of 1 slot, if the serving cell where UE receives DCI for BWP switch is different from the serving cell on which BWP switch occurs for any involved serving cell. In this scenario, $T_{\text{BWPswitchDelay}} + Y$ shall follow the smaller SCS of scheduling cell, scheduled cells before and scheduled cells after active BWP change.

The UE is not required to transmit UL signals or receive DL signals until the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}}$ which starts from the beginning of DL slot n except DCI triggering BWP switch on the cell where DCI-based BWP switch occurs. The UE is not required to follow the requirements defined in this clause when performing a DCI-based BWP switch between the BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths.

For timer-based BWP switch, the UE shall start BWP switch at DL slot n , where slot n is the first slot of a DL subframe (FR1) or DL half-subframe (FR2) immediately after a BWP-inactivity timer *bwp-InactivityTimer* [2] expires on a serving cell, and the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{\text{BWPswitchDelay}}$ which starts from the beginning of DL slot n .

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{\text{BWPswitchDelay}}$ after *bwp-InactivityTimer* [2] expires on the cell where timer-based BWP switch occurs.

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{\text{BWPswitchDelay}}$ defined in Table 8.6A.2-1.

Table 8.6A.2-1: BWP switch delay

μ	NR Slot length (ms)	BWP switch delay $T_{\text{BWPswitchDelay}}$ (slots)	
		Type 1 ^{Note 1}	Type 2 ^{Note 1}
0	1	1	3
1	0.5	2	5
2	0.25	3	9
3	0.125	6	18

Note 1:	Depends on UE capability.
Note 2:	If the BWP switch involves changing of SCS, the BWP switch delay is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch.

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10B in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10B in the new BWP.

If the BWP switch is triggered within or outside DRX active time, and one of the two BWPs in a BWP switching is a dormant BWP [TS 38.321, 7], UE shall be able to complete active BWP switching within the time duration of

- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X$, provided that the dormancy indication is received in any of the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, or
- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X + Z$, provided that the dormancy indication is received after the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, where
- $T_{\text{BWPswitchDelay}}$ is defined in Table 8.6.2-1 corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs;
- X equals to the length of 1 slot corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs.
- Z equals to the length of 1 slot corresponding to the SCS of the serving cell where UE receives dormancy indication.

For DCI-based BWP switch, if the new BWP is a dormant BWP, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive CSI-RS (for DL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL slot occurs right after a time duration of $T_{\text{dormantBWPswitchDelay}}$ which starts from the beginning of DL slot n .

8.6A.3 RRC based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with one or more than one BWP configuration(s) configured, with

Active BWP switch or parameter change of its active BWPs for PCell

For RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWP, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch occurs on the first DL or UL slot right after a time duration of $\frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ slots which begins from the beginning of DL slot n , where

DL slot n is the last slot overlapping with the PDSCH containing the RRC command, and

NR Slot length is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch if the BWP switch involves changing of SCS.

$T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in ms as defined in clause 11.2 in TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the length of the RRC procedure delay in ms as defined in clause 12 in TS 38.331 [2], and

$T_{BWPswitchDelayRRC} = 6ms$ is the time used by the UE to perform BWP switch.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ on the cell where RRC-based BWP switch occurs. When $T_{HARQ} > T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.6C Active BWP switch delay for satellite access

Editor's note: Applicability of frequency range, CA, DA, duplex mode, inter-RAT measurement, etc is subject to updates/changes based on the scope of the corresponding WID.

Editor's note: Terminology will be further clarified and selected between, e.g. NTN and satellite access, based on further agreements.

8.6C.1 Introduction

The requirements in this clause apply for a UE configured with only PCell, which is served by satellite access node (SAN). The requirements in this clause also apply for a UE configured with more than one BWP on PCell.

UE shall complete the switch of active DL and/or UL BWP within the delay defined in this clause.

8.6C.2 DCI and timer based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with more than one BWP configurations configured.

For DCI-based BWP switch, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay} + Y$ which starts from the beginning of DL slot n . Where,

- $Y=0$, if the serving cell where UE receives DCI for BWP switch request is same as the serving cell on which BWP switch occurs.
- Y equals to the length of 1 slot, if the serving cell where UE receives DCI for BWP switch is different from the serving cell on which BWP switch occurs for any involved serving cell. In this scenario, $T_{BWPswitchDelay} + Y$ shall follow the smaller SCS of scheduling cell, scheduled cells before and scheduled cells after active BWP change.

The UE is not required to transmit UL signals or receive DL signals until the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay}$ which starts from the beginning of DL slot n except DCI triggering BWP switch on the cell where DCI-based BWP switch occurs. The UE is not required to follow the requirements defined in this clause when performing a DCI-based BWP switch between the BWPs in disjoint channel bandwidths or in partially overlapping channel bandwidths.

For timer-based BWP switch, the UE shall start BWP switch at DL slot n , where slot n is the first slot of a DL subframe (FR1) immediately after a BWP-inactivity timer *bwp-InactivityTimer* [2] expires on a serving cell, and the UE shall be able to receive PDSCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL or UL slot occurs right after a time duration of $T_{BWPswitchDelay}$ which starts from the beginning of DL slot n .

The UE is not required to transmit UL signals or receive DL signals during time duration $T_{BWPswitchDelay}$ after *bwp-InactivityTimer* [2] expires on the cell where timer-based BWP switch occurs.

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in Table 8.6C.2-1.

Table 8.6C.2-1: BWP switch delay

μ	NR Slot length (ms)	BWP switch delay $T_{\text{BWPswitchDelay}}$ (slots)	
		Type 1 ^{Note 1}	Type 2 ^{Note 1}
0	1	1	3
1	0.5	2	5
2	0.25	3	9
Note 1:		Depends on UE capability.	
Note 2:		If the BWP switch involves changing of SCS, the BWP switch delay is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch.	

Provided the UE does not have the required TCI-state information to receive PDCCH and PDSCH in the new BWP, the UE shall use old TCI-states before the BWP switch until a new MAC CE updating the required TCI-state information for PDCCH and PDSCH is received after the BWP switch.

If UE has the information on the required TCI-state information to receive PDCCH and PDSCH in the new BWP,

- UE shall be able to receive PDCCH and PDSCH with old TCI-states before the delay as specified in Clause 8.10C in the new BWP.
- UE shall be able to receive PDCCH and PDSCH with new TCI-states after the delay as specified in Clause 8.10C in the new BWP.

If the BWP switch is triggered within or outside DRX active time, and one of the two BWPs in a BWP switching is a dormant BWP [TS 38.321, 7], UE shall be able to complete active BWP switching within the time duration of

- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X$, provided that the dormancy indication is received in any of the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, or
- $T_{\text{dormantBWPswitchDelay}} = T_{\text{BWPswitchDelay}} + X + Z$, provided that the dormancy indication is received after the first 3 OFDM symbols of a slot in the serving cell where DCI for dormancy indication is received, where
- $T_{\text{BWPswitchDelay}}$ is defined in Table 8.6C.2-1 corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs.
- X equals to the length of 1 slot corresponding to the smallest value among the SCS of the serving cell where UE receives dormancy indication and the SCSs of the dormant BWP and the active BWP immediately before or after switching the BWP of the serving cell where BWP switching occurs.
- Z equals to the length of 1 slot corresponding to the SCS of the serving cell where UE receives dormancy indication.

For DCI-based BWP switch, if the new BWP is a dormant BWP, after the UE receives BWP switching request at DL slot n on a serving cell, UE shall be able to receive CSI-RS (for DL active BWP switch) on the new BWP on the serving cell on which BWP switch on the first DL slot occurs right after a time duration of $T_{\text{dormantBWPswitchDelay}}$ which starts from the beginning of DL slot n .

8.6C.3 RRC based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the BWP switch is performed on a single CC with one or more than one BWP configuration(s) configured, with

- Active BWP switch or parameter change of its active BWPs for PCell

For RRC-based BWP switch, after the UE receives RRC reconfiguration involving active BWP switching or parameter change of its active BWP, UE shall be able to receive PDSCH/PDCCH (for DL active BWP switch) or transmit PUSCH (for UL active BWP switch) on the new BWP on the serving cell on which BWP switch occurs on the first DL or UL slot right after a time duration of $\frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ slots which begins from the beginning of DL slot n , where

DL slot n is the last slot containing the RRC command, and

$NR\ Slot\ length$ is determined by the smaller SCS between the SCS before BWP switch and the SCS after BWP switch if the BWP switch involves changing of SCS.

$T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in ms as defined in clause 12 in TS 38.331 [2], and

$T_{BWPs witchDelayRRC} = 6ms$ is the time used by the UE to perform BWP switch.

The UE is not required to transmit UL signals or receive DL signals during the time defined by $T_{RRCprocessingDelay} + T_{BWPs witchDelayRRC}$ on the cell where RRC-based BWP switch occurs. When $T_{HARQ} > T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.7 Void

8.8 NE-DC: E-UTRAN PSCell Addition and Release Delay

8.8.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to configure an E-UTRAN PSCell in NR - E-UTRA dual connectivity. The requirements are applicable to an NR - E-UTRA dual connectivity capable UE.

8.8.2 E-UTRAN PSCell Addition Delay Requirement

The requirements in this clause shall apply for the UE, which is configured with PCell, and may also be configured with one or more SCeLLs.

Upon receiving E-UTRAN PSCell addition in subframe n , the UE shall be capable to transmit PRACH preamble towards E-UTRAN PSCell no later than in subframe $n + T_{config_EUTRAN-PSCell}$:

Where:

$$T_{config_EUTRAN-PSCell} = T_{RRC_delay} + T_{activation_time} + 50ms + T_{E-UTRAN-PSCell_DU}$$

T_{RRC_delay} is the RRC procedure delay as specified in TS 38.331 [2].

$T_{activation_time}$ is the E-UTRAN PSCell activation delay. If the E-UTRAN PSCell is known, then $T_{activation_time}$ is 20ms. If the E-UTRAN PSCell is unknown, then $T_{activation_time}$ is 30ms provided the E-UTRAN PSCell can be successfully detected on the first attempt.

$T_{E-UTRAN-PSCell_DU}$ is the delay uncertainty in acquiring the first available PRACH occasion in the E-UTRAN PSCell. $T_{E-UTRAN-PSCell_DU}$ is up to 30ms.

E-UTRAN PSCell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the E-UTRAN PSCell configuration command:
 - the UE has sent a valid measurement report for the E-UTRAN PSCell being configured and
 - the E-UTRAN PSCell being configured remains detectable according to the cell identification conditions specified in clause 8.8 of TS 36.133 [15],
- E-UTRAN PSCell being configured also remains detectable during the E-UTRAN PSCell configuration delay $T_{config_EUTRAN-PSCell}$ according to the cell identification conditions specified in clause 8.8 of TS 36.133 [15].

otherwise it is unknown.

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.8.3 E-UTRAN PSCell Release Delay Requirement

also be configured with one or more SCells and/or E-UTRAN SCells.

Upon receiving E-UTRAN PSCell release in subframe n , the UE shall accomplish the release actions specified in TS 38.331 [2] no later than in subframe $n + T_{\text{RRC_delay}}$:

Where

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 38.331 [2].

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.9 NR-DC: PSCell Addition and Release Delay

8.9.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to configure an PSCell in NR dual connectivity. The requirements are applicable to an NR dual connectivity capable UE.

8.9.2 PSCell Addition Delay Requirement

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

Upon receiving PSCell addition in subframe n , the UE shall be capable to transmit PRACH preamble towards PSCell in FR2 no later than in slot $n + \frac{T_{\text{config_PSCell}}}{\text{NR slot length}}$.

where:

$$T_{\text{config_PSCell}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search}} + T_{\Delta} + T_{\text{PSCell_DU}} + 2 \text{ ms}$$

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 38.331 [2].

$T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 40 \text{ ms}$.

T_{search} is the time for AGC settling and PSS/SSS detection. If the target cell is known, $T_{\text{search}} = 0 \text{ ms}$. If the target cell is unknown and the target cell $\hat{E}_s/I_{\text{ot}} \geq -2\text{dB}$, $T_{\text{search}} = 3 \cdot N \cdot T_{\text{rs}}$ ms. $N = 8$ when the target cell is in FR2-1, and $N = 12$ when the target cell is in FR2-2

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = 1 \cdot T_{\text{rs}}$ ms for a known or unknown PSCell.

$T_{\text{PSCell_DU}}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{\text{PSCell_DU}}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [3].

T_{rs} is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}} = 5 \text{ ms}$ assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

In FR1 and FR2, the PSCell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the PSCell configuration command:
- the UE has sent a valid measurement report for the PSCell being configured and
- One of the SSBs measured from the PSCell being configured remains detectable according to the cell identification conditions specified in clause 9.3.
- One of the SSBs measured from PSCell being configured also remains detectable during the PSCell configuration delay $T_{\text{config_PSCell}}$ according to the cell identification conditions specified in clause 9.3.

otherwise it is unknown.

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.9.3 PSCell Release Delay Requirement

The requirements in this clause shall apply for a UE which is configured with PCell and one PSCell.

Upon receiving PSCell release in subframe n , the UE shall accomplish the release actions specified in TS 38.331 [2] no later than in slot $n + \frac{T_{RRC_delay}}{NR_slot_length}$:

where

T_{RRC_delay} is the RRC procedure delay as specified in TS 38.331 [2].

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.9A Conditional PSCell Addition Delay

8.9A.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to perform conditional PSCell addition in EN-DC or NR-DC. The requirements in this clause are applicable to EN-DC and NR-DC.

8.9A.2 Conditional PSCell Addition Delay Requirement

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

Upon receiving conditional PSCell addition in subframe n , the UE shall be capable to transmit PRACH preamble towards PSCell no later than in subframe $n + T_{\text{config_PSCell_Addition_Conditional}}$:

Where:

$$T_{\text{config_PSCell_Addition_Conditional}} = T_{RRC_delay} + T_{\text{Event_DU}} + T_{\text{measure}} + T_{\text{UE_preparation}} + T_{\text{processing}} + T_{\Delta} + T_{\text{PSCell_DU}} + 2 \text{ ms}$$

T_{RRC_delay} is the RRC processing delay defined in Clause 11.2 in 38.331 [16] which is the corresponding RRC message embedded in E-UTRA RRC message, otherwise it is the RRC procedure delay defined in clause 12 in TS 38.331 [2] for processing the conditional PSCell addition command.

$T_{\text{Event_DU}}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional PSCell addition command until a condition exists at the measurement reference point which will trigger the conditional PSCell addition.

T_{measure} is the measurements time stated in clause 8.9A.2.1.

$T_{\text{UE_preparation}}$ is the UE preparation time for conditional PSCell addition, and starts after UE realizes the condition of PSCell addition is met and identity of the PSCell is determined. $T_{\text{UE_preparation}}$ is up to 10 ms.

$T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 20 \text{ ms}$ when PSCell is in FR1, and $T_{\text{processing}} = 40 \text{ ms}$ when PSCell is in FR2.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = 1 \cdot T_{\text{Trs}}$ ms.

$T_{\text{PSCell_DU}}$ is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. $T_{\text{PSCell_DU}}$ is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [3].

T_{Trs} is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise T_{Trs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{Trs}} = 5 \text{ ms}$ assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

The PCell interruption specified in clause 8.2 is allowed only after the UE starts to execute a conditional PSCell addition.

8.9A.2.1 Measurement time

The measurement time delay is defined from the end of $T_{\text{Event_DU}}$ until UE executes a PSCell addition and interruption time starts.

The measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{\text{identify_inter_without_index}}$ or $T_{\text{identify_inter_with_index}}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{\text{identify_inter_without_index}}$ or $T_{\text{identify_inter_with_index}}$ for PSCell addition. If a cell, which has been detectable at least for the time period $T_{\text{identify_inter_without_index}}$ or $T_{\text{identify_inter_with_index}}$ for PSCell addition, becomes undetectable for a period and then the cell becomes detectable again and triggers a PSCell addition, the measurement time delay shall be less than $T_{\text{SSB_measurement_period_inter}}$ provided the timing to that cell has not changed more than $\pm 3200/2^\mu T_c$ while the measurement gap has not been available and the L3 filter has not been used, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

8.9B NR-DC: PSCell Addition and Release Delay in Carriers with CCA

8.9B.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to configure an PSCell in FR2-2 with CCA in NR dual connectivity. The requirements are applicable to an NR dual connectivity capable UE.

8.9B.2 PSCell Addition Delay Requirement

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

Upon receiving PSCell addition in subframe n , the UE shall be capable to transmit PRACH preamble towards PSCell in FR2-2 no later than in slot $n + \frac{T_{\text{config_PSCell_CCA}}}{\text{NR slot length}}$.

where:

$$T_{\text{config_PSCell_CCA}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search_CCA}} + T_{\Delta_CCA} + T_{\text{PSCell_DU}} + 2 \text{ ms}$$

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 38.331 [2].

$T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 40 \text{ ms}$.

$T_{\text{search_CCA}}$ is the time for AGC settling and PSS/SSS detection. If the target cell is known, $T_{\text{search}} = 0 \text{ ms}$. If the target cell is unknown and the target cell $\hat{E}_s/I_{\text{ot}} \geq -2\text{dB}$, $T_{\text{search}} = (3 \cdot N + L_1 \cdot N) \cdot T_{\text{rs}} \text{ ms}$, where L_1 is the number of SMTC occasions groups with at least one SSB/SMTC occasion in the group is not transmitted by the gNB during the AGC settling and PSS/SSS detection. N is the Rx beam sweeping factor for FR2-2.

T_{Δ_CCA} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = (1 + L_2) \cdot T_{\text{rs}} \text{ ms}$ for a known or unknown PSCell, where L_2 is the number of SMTC occasions not available at the UE during the time tracking period.

$T_{\text{PSCell_DU}}$ is the interruption uncertainty due to the random access procedure when sending PRACH to the new cell. $T_{\text{PSCell_DU}}$ can be up to: $(1 + L_3) \cdot T_{\text{SSB,RO}} + 10 \text{ ms}$ where $T_{\text{SSB,RO}}$ is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [3] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 3 UL channel access procedure as defined in TS 37.213 [33]. $L_3 = 0$ if *ra-ChannelAccess-r17* is not configured in FR2-2.

T_{TS} is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise T_{TS} is the SMTC configured in the *measObjectNR* having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{TS} = 5$ ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.

NOTE 1: The interruption time considering the potential extensions caused by L_1 , L_2 , L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

In FR2-2, the PSCell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the PSCell configuration command:
 - the UE has sent a valid measurement report for the PSCell being configured and
 - One of the SSBs measured from the PSCell being configured remains detectable according to the cell identification conditions specified in clause 9.3A.
- One of the SSBs measured from PSCell being configured also remains detectable during the PSCell configuration delay $T_{\text{config_PSCell_CCA}}$ according to the cell identification conditions specified in clause 9.3A.

otherwise it is unknown.

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.9B.3 PSCell Release Delay Requirement

The requirements in this clause shall apply for a UE which is configured with PCell in FR1 and one PSCell in FR2-2.

Upon receiving PSCell release in subframe n , the UE shall accomplish the release actions specified in TS 38.331 [2] no later than in slot $n + \frac{T_{RRC_delay}}{NR\ slot\ length}$.

where

- T_{RRC_delay} is the RRC procedure delay as specified in TS 38.331 [2].

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.10 Active TCI state switching delay

8.10.1 Introduction

The requirements in this clause apply for a UE configured with one or more TCI state configurations on serving cell in MR-DC or standalone NR. UE shall complete the switch of active TCI state within the delay defined in this clause.

8.10.2 Known conditions for TCI state

The TCI state is known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target TCI state to the completion of active TCI state switch, where the RS resource for L1-RSRP measurement is the RS in target TCI state or QCLed to the target TCI state
 - TCI state switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
 - The UE has sent at least 1 L1-RSRP report for the target TCI state before the TCI state switch command
 - The TCI state remains detectable during the TCI state switching period

- The SSB associated with the TCI state remain detectable during the TCI switching period
- SNR of the TCI state $\geq -3\text{dB}$

Otherwise, the TCI state is unknown.

8.10.3 MAC-CE based TCI state switch delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + TO_k \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / NR \text{ slot length}$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$. Where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3];

- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{\text{SSB-proc}} = 2 \text{ ms}$;
- $TO_k = 1$ if target TCI state is not in the active TCI state list for PDSCH, 0 otherwise.

If the target TCI state is unknown, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + T_{\text{L1-RSRP}} + TO_{\text{uk}} \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / NR \text{ slot length}$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$.

Where

- $T_{\text{L1-RSRP}} = 0$ in FR1 or when the TCI state switching not involving QCL-TypeD in FR2. Otherwise,
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
- $T_{\text{L1-RSRP_Measurement_Period_SSB}}$ for SSB as specified in clause 9.5.4.1,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$
- $T_{\text{L1-RSRP_Measurement_Period_CSI-RS}}$ for CSI-RS as specified in clause 9.5.4.2
 - configured with higher layer parameter *repetition* set to ON
 - with the assumption of $M=1$ for periodic CSI-RS
 - for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
 - with $T_{\text{Report}} = 0$
- $TO_{\text{uk}} = 1$ for CSI-RS based L1-RSRP measurement, and 0 for SSB based L1-RSRP measurement when TCI state switching involves QCL-TypeD
- $TO_{\text{uk}} = 1$ when TCI state switching involves other QCL types only
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE for other QCL types;
- The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state

8.10.3A MAC-CE based TCI state switch delay in HST FR2 scenarios

For FR2 power class 6 UE, if the target TCI state is known, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the symbol m of the first slot that is after slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + TO_k \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}} + T_{\text{rs}} + T_{\text{rs-proc}}) / NR \text{ slot length}$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$. Where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3];

- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE;
- $T_{\text{SSB-proc}} = 2 \text{ ms}$;
- T_{rs} is time to the first TRS or SSB transmission after the SSB transmission in the definition of $T_{\text{first-SSB}}$ is processed by the UE;
- $T_{\text{rs-proc}} = 2 \text{ ms}$;
- $TO_k = 1$, $m = 0$ if target TCI state is not in the active TCI state list for PDSCH; otherwise $TO_k = 0$, $m = 1$.

For FR2 power class 6 UE, if the target TCI state is unknown, the same requirement for unknown target TCI state case specified in clause 8.10.3 applies.

8.10.4 DCI based TCI state switch delay

If the target TCI state is known, when a UE is configured with the higher layer parameter *tci-PresentInDCI* which is set as 'enabled' for the CORESET scheduling PDSCH at slot n , UE shall be able to receive PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + \text{timeDurationForQCL}$, where, *timeDurationForQCL* is the time required by the UE to perform PDCCH reception and applying spatial QCL information received in DCI for PDSCH processing as described in TS 38.214 [26], the value of *timeDurationForQCL* is defined in TS 38.331 [2].

The known condition for TCI state defined in clause 8.10.2 is applied.

8.10.5 RRC based TCI state switch delay

If the target TCI state is known, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC-processing}} + TO_k \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}})) / NR \text{ slot length}$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC-processing}}$ is the RRC processing delay defined in Clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS 38.331 [2].
- $T_{\text{first-SSB}}$ is time to first SSB transmission after RRC processing by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state.
- $T_{\text{SSB-proc}}$ and TO_k are defined in clause 8.10.3.

If the target TCI state is unknown, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC-processing}} + T_{\text{L1-RSRP}} + TO_k \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}})) / NR \text{ slot length}$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in Clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS 38.331 [2].
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission after RRC processing time at the UE for other QCL types;
 - The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{\text{L1-RSRP}}$, TO_{uk} and $T_{\text{SSB-proc}}$ are defined in clause 8.10.3.

The requirements for RRC based TCI state switch delay apply when only 1 TCI state is configured in RRC TCI state list. When $T_{\text{HARQ}} > T_{\text{RRC_processing}}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.10.6 Active TCI state list update delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for activation/deactivation of UE-specific PDSCH TCI state as defined in clause 6.1.3.14 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH to schedule PDSCH with the new target TCI state at the first slot that is after $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + TO_k \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / NR \text{ slot length}$. Where T_{HARQ} , $T_{\text{first-SSB}}$, $T_{\text{SSB-proc}}$ and TO_k are defined in clause 8.10.3.

8.10A Active TCI state switching delay with CCA

8.10A.1 Introduction

The requirements in this clause apply for a UE configured with one or more TCI state configurations on serving cell in EN-DC with PSCell on a carrier frequency with CCA or SA NR with PCell on a carrier frequency with CCA. UE shall complete the switch of active TCI state within the delay defined in this clause.

In the requirements of clause 8.10A, the term SSB occasion not available at the UE refers to when the SSB is configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SSB index within the discovery burst transmission window are not available at the UE due to DL CCA failures at gNB during the corresponding period; otherwise the SSB occasion is considered as available at the UE.

8.10A.2 Known conditions for TCI state

The TCI state is known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target TCI state to the completion of active TCI state switch, where the RS resource for L1-RSRP measurement is the RS in target TCI state or QCLed to the target TCI state
 - TCI state switch command is received within 1280 ms of the last transmission of the RS resource for beam reporting or measurement
 - The UE has sent at least 1 L1-RSRP report for the target TCI state before the TCI state switch command
 - The TCI state remain detectable during the TCI state switching period in the SSB occasions available at the UE
 - The SSB associated with the TCI state remain detectable during the TCI switching period in the SSB occasions available at the UE
 - SNR of the TCI state is $\geq -3\text{dB}$

Otherwise, the TCI state is unknown.

8.10A.3 MAC-CE based TCI state switch delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{HARQ}} + T_{O_k} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}} + T_{\text{SSB}} * L_{\text{MAC,known}})) / NR \text{ slot length}$. The UE shall be able to receive on the old TCI state until slot $n + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{HARQ}} + T_{O_k} * (T_{\text{first-SSB}} + T_{\text{SSB}} * L_{\text{MAC,known}})) / NR \text{ slot length}$, where

T_{HARQ} (in ms) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3]. In the event of UE not being able to transmit the acknowledgment due to UL CCA failures: T_{HARQ} is extended to also include the time to all next HARQ feedback transmissions and retransmission opportunities, until the time of its successful transmission, as specified in TS 38.213 [3]; no extension of T_{HARQ} due to UL CCA failures is allowed for Type 2C UL channel access in TS 37.213;

$T_{\text{first-SSB}}$ is time to first SSB transmission occasion after MAC CE command is decoded by the UE, during which some SSB occasions may not be available at the UE due to DL CCA failures;

The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state;

$T_{\text{SSB-proc}} = 2 \text{ ms}$;

$T_{O_k} = 1$ if target TCI state is not in the active TCI state list for PDSCH, 0 otherwise;

$T_{\text{SSB}} = \text{ssb-periodicityServingCell}$;

$L_{\text{MAC,known}} \leq L_{\text{MAC,known,max}}$ is the corresponding number of SSB occasions not available at the UE;

$L_{\text{MAC,known,max}} = 2$ for $T_{\text{SSB}} \leq 40 \text{ ms}$, $L_{\text{MAC,known,max}} = 1$ for $T_{\text{SSB}} > 40 \text{ ms}$.

If the target TCI state is unknown, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{HARQ}} + T_{L1\text{-RSRP}} + T_{O_{uk}} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}} + T_{\text{SSB}} * L_{\text{MAC,unknown}})) / NR \text{ slot length}$. The UE shall be able to receive on the old TCI state until slot $n + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{HARQ}} + T_{O_{uk}} * (T_{\text{first-SSB}} + T_{\text{SSB}} * L_{\text{MAC,unknown}})) / NR \text{ slot length}$,

Where:

- $L_{\text{MAC,unknown}} \leq L_{\text{MAC,unknown,max}}$ is the corresponding number of SSB occasions groups not available at the UE;
- $L_{\text{MAC,unknown,max}} = 2$ for $T_{\text{SSB}} \leq 40 \text{ ms}$, $L_{\text{MAC,unknown,max}} = 1$ for $T_{\text{SSB}} > 40 \text{ ms}$;
- $T_{O_{uk}} = 1$.
- $T_{L1\text{-RSRP}} = 0$ in FR1 or when the TCI state switching not involving QCL-TypeD in FR2-2. Otherwise,
- $T_{L1\text{-RSRP}}$ is the time for Rx beam refinement in FR2-2, defined as
- $T_{L1\text{-RSRP_Measurement_Period_SSB_CCA}}$ for SSB as specified in clause 9.5A.4.1,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$
- $T_{O_{uk}} = 0$ for SSB based L1-RSRP measurement when TCI state switching involves QCL-TypeD
- $T_{O_{uk}} = 1$ when TCI state switching involves other QCL types only
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE for other QCL types;
- The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state

8.10A.4 DCI based TCI state switch delay

If the target TCI state is known, when a UE is configured with the higher layer parameter *tci-PresentInDCI* which is set as 'enabled' for the CORESET scheduling the PDSCH at slot n , UE shall be able to receive PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + \text{timeDurationForQCL}$, where, *timeDurationForQCL* is the time required by the UE to perform PDCCH reception and applying spatial QCL information received in DCI for PDSCH processing as described in TS 38.214 [26], the value of *timeDurationForQCL* is defined in TS 38.306 [14].

The known condition for TCI state defined in clause 8.10A.2 is applied.

8.10A.5 RRC based TCI state switch delay

If the target TCI state is known, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC_processing}} + T_{\text{Ok}} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}} + T_{\text{SSB}} * L_{\text{RRC,known}})) / \text{NR slot length}$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in Clause 11.2 of 36.331 [16] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS38.331 [2]
- $T_{\text{first-SSB}}$ is time to first SSB transmission occasion after RRC processing by the UE, during which some of the SSB occasions may not be available due to DL CCA failures;
 - The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state;
- $L_{\text{RRC,known}} \leq L_{\text{RRC,known,max}}$ is the corresponding number of SSB occasions not available at the UE;
 - $L_{\text{RRC,known,max}} = 2$ for $T_{\text{SSB}} \leq 40$ ms, $L_{\text{RRC,known,max}} = 1$ for $T_{\text{SSB}} > 40$ ms.
- $T_{\text{SSB-proc}}$, T_{Ok} , and T_{SSB} are as defined in clause 8.10A.3.

If the target TCI state is unknown, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC_processing}} + T_{\text{L1-RSRP}} + T_{\text{Ok}} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}} + T_{\text{SSB}} * L_{\text{RRC,unknown}})) / \text{NR slot length}$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where,

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in Clause 11.2 of 36.331 [16] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS38.331 [2].
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission occasion after RRC processing time at the UE for other QCL types, during which some SSB occasions may not be available at the UE due to DL CCA failures;
 - The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state;
- $L_{\text{RRC,unknown}} \leq L_{\text{RRC,unknown,max}}$ is the corresponding number of SSB occasions not available at the UE;
 - $L_{\text{RRC,unknown,max}} = 2$ for $T_{\text{SSB}} \leq 40$ ms, $L_{\text{RRC,unknown,max}} = 1$ for $T_{\text{SSB}} > 40$ ms.
- $T_{\text{L1-RSRP}}$, T_{Ok} , $T_{\text{SSB-proc}}$, and T_{SSB} are as defined in clause 8.10A.3

The requirements for RRC based TCI state switch delay apply when only 1 TCI state is configured in RRC TCI state list. When $T_{HARQ} > T_{RRC_processing}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.10A.6 Active TCI state list update delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for activation/deactivation of UE-specific PDSCH TCI state as defined in clause 6.1.3.14 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH to schedule PDSCH with the new target TCI state at the first slot that is after $n + 3N_{slot}^{subframe,\mu} + (T_{HARQ} + TO_k * (T_{first-SSB} + T_{SSB-proc} + T_{SSB} * L_{MAC,known})) / NR\ slot\ length$. Where T_{HARQ} , $T_{first-SSB}$, $T_{SSB-proc}$, T_{SSB} , $L_{MAC,known}$ and TO_k are as defined in clause 8.10A.3.

8.10B Active TCI state switching delay for RedCap

8.10B.1 Introduction

The requirements in this clause apply for a RedCap UE configured with one or more TCI state configurations on serving cell in standalone NR. UE shall complete the switch of active TCI state within the delay defined in this clause.

8.10B.2 Known conditions for TCI state

The TCI state is known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target TCI state to the completion of active TCI state switch, where the RS resource for L1-RSRP measurement is the RS in target TCI state or QCLed to the target TCI state
- TCI state switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target TCI state before the TCI state switch command
- The TCI state remains detectable during the TCI state switching period
- The SSB associated with the TCI state remain detectable during the TCI switching period
- SNR of the TCI state ≥ -3 dB

Otherwise, the TCI state is unknown.

8.10B.3 MAC-CE based TCI state switch delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + TO_k * (T_{first-SSB} + T_{SSB-proc}) / NR\ slot\ length$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$. Where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3];

- $T_{first-SSB}$ is time to first SSB transmission after MAC CE command is decoded by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{SSB-proc} = 2\ ms$;
- $TO_k = 1$ if target TCI state is not in the active TCI state list for PDSCH, 0 otherwise.

If the target TCI state is unknown, upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + T_{L1-}$

$\text{RSRP} + T_{\text{O}_{\text{uk}}} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / \text{NR slot length}$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe}, \mu}$.

Where

- $T_{\text{L1-RSRP}} = 0$ in FR1 or when the TCI state switching not involving QCL-TypeD in FR2. Otherwise,
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
- $T_{\text{L1-RSRP_Measurement_Period_SSB_RedCap}}$ for SSB as specified in clause 9.5B.4.1,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$
- $T_{\text{L1-RSRP_Measurement_Period_CSI-RS_RedCap}}$ for CSI-RS as specified in clause 9.5B.4.2
 - configured with higher layer parameter *repetition* set to ON
 - with the assumption of $M=1$ for periodic CSI-RS
 - for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
 - with $T_{\text{Report}} = 0$
- $T_{\text{O}_{\text{uk}}} = 1$ for CSI-RS based L1-RSRP measurement, and 0 for SSB based L1-RSRP measurement when TCI state switching involves QCL-TypeD
- $T_{\text{O}_{\text{uk}}} = 1$ when TCI state switching involves other QCL types only
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE for other QCL types;
- The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state

8.10B.4 DCI based TCI state switch delay

If the target TCI state is known, when a UE is configured with the higher layer parameter *tci-PresentInDCI* which is set as 'enabled' for the CORESET scheduling PDSCH at slot n , UE shall be able to receive PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + \text{timeDurationForQCL}$, where, *timeDurationForQCL* is the time required by the UE to perform PDCCH reception and applying spatial QCL information received in DCI for PDSCH processing as described in TS 38.214 [26], the value of *timeDurationForQCL* is defined in TS 38.331 [2].

The known condition for TCI state defined in clause 8.10.2 is applied.

8.10B.5 RRC based TCI state switch delay

If the target TCI state is known, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC_processing}} + T_{\text{O}_k} * (T_{\text{first-SSB}} + T_{\text{SSB-proc}})) / \text{NR slot length}$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in Clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS 38.331 [2].
- $T_{\text{first-SSB}}$ is time to first SSB transmission after RRC processing by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state.

- $T_{SSB\text{-}proc}$ and TO_k are defined in clause 8.10B.3.

If the target TCI state is unknown, UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{RRC_processing} + T_{L1\text{-}RSRP} + TO_k * (T_{first\text{-}SSB} + T_{SSB\text{-}proc})) / NR\ slot\ length$. The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{RRC_processing}$ is the RRC processing delay defined in Clause 11.2 of TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in Clause 12 of TS 38.331 [2].
- $T_{first\text{-}SSB}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{first\text{-}SSB}$ is time to first SSB transmission after RRC processing time at the UE for other QCL types;
 - The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{L1\text{-}RSRP}$, TO_k and $T_{SSB\text{-}proc}$ are defined in clause 8.10B.3.

The requirements for RRC based TCI state switch delay apply when only 1 TCI state is configured in RRC TCI state list. When $T_{HARQ} > T_{RRC_processing}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.10B.6 Active TCI state list update delay

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE for activation/deactivation of UE-specific PDSCH TCI state as defined in clause 6.1.3.14 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH to schedule PDSCH with the new target TCI state at the first slot that is after $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + TO_k * (T_{first\text{-}SSB} + T_{SSB\text{-}proc}) / NR\ slot\ length$. Where T_{HARQ} , $T_{first\text{-}SSB}$, $T_{SSB\text{-}proc}$ and TO_k are defined in clause 8.10B.3.

8.10C Active TCI state switching delay for satellite access

8.10C.1 Introduction

The requirements in this clause apply for a UE configured with one or more TCI state configurations on Pcell in satellite access. UE shall complete the switch of active TCI state within the delay defined in this clause.

8.10C.2 MAC-CE based TCI state switch delay

Upon receiving PDSCH carrying MAC-CE for indication of UE-specific PDCCH TCI state as defined in clause 6.1.3.15 of TS 38.321 [7] in slot n , UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + TO_k * (T_{first\text{-}SSB} + T_{SSB\text{-}proc}) / NR\ slot\ length$. The UE shall be able to receive PDCCH with the old TCI state until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$. Where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3];

- $T_{first\text{-}SSB}$ is time to first SSB transmission after MAC CE command is decoded by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{SSB\text{-}proc} = 2\ ms$;
- $TO_k = 1$ if target TCI state is not in the active TCI state list for PDSCH, 0 otherwise.

8.10C.4 DCI based TCI state switch delay

When a UE is configured with the higher layer parameter *tcI-PresentInDCI* which is set as 'enabled' for the CORESET scheduling PDSCH at slot n , UE shall be able to receive PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + \text{timeDurationForQCL}$, where, *timeDurationForQCL* is the time required by the UE to perform PDCCH reception and applying spatial QCL information received in DCI for PDSCH processing as described in TS 38.214 [26], the value of *timeDurationForQCL* is defined in TS 38.331 [2].

8.10C.5 RRC based TCI state switch delay

UE shall be able to receive PDCCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + (T_{\text{RRC_processing}} + \text{TO}_k * (T_{\text{first-SSB}} + T_{\text{SSB-proc}})) / \text{NR slot length}$, The UE is not required to receive PDCCH/PDSCH/CSI-RS or transmit PUCCH/PUSCH until the end of switching period.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command.
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in Clause 12 of TS 38.331 [2].
- $T_{\text{first-SSB}}$ is time to first SSB transmission after RRC processing by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state.
- $T_{\text{SSB-proc}}$ and TO_k are defined in clause 8.10C.2.

The requirements for RRC based TCI state switch delay apply when only 1 TCI state is configured in RRC TCI state list. When $T_{\text{HARQ}} > T_{\text{RRC_processing}}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.10C.6 Active TCI state list update delay

Upon receiving PDSCH carrying MAC-CE for activation/deactivation of UE-specific PDSCH TCI state as defined in clause 6.1.3.14 of TS 38.321 [7] at slot n , UE shall be able to receive PDCCH to schedule PDSCH with the new target TCI state at the first slot that is after $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe}, \mu} + \text{TO}_k * (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / \text{NR slot length}$. Where T_{HARQ} , $T_{\text{first-SSB}}$, $T_{\text{SSB-proc}}$ and TO_k are defined in clause 8.10C.2.

8.11 PSCell Change

This clause defines requirements for the delay within which the UE shall be able to change PSCell to other cell in EN-DC or NR-DC. The requirements in this clause are applicable to EN-DC and NR-DC.

The UE shall be capable of transmitting PRACH preamble towards the target PSCell no later than specified in clause 8.9.2 for the case of NR-DC and in TS 36.133 clause 7.31.2 for the case of EN-DC,, where the following values for slot n , $T_{\text{processing}}$ and $T_{\text{RRC_delay}}$ shall override the existing ones:

- Slot n is the last slot overlapping with the PDSCH containing PSCell change,
- $T_{\text{processing}} = 20$ ms when source and target cells are in the same FR,
- $T_{\text{processing}} = 40$ ms when source and target cells are in different FRs.
- $T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC procedure delay as specified in TS 38.331 [2].

If the SMTC periodicity of the target cell is not provided within the PSCell change message, and measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{rs} is the periodicity of one of the SMTC which is up to UE implementation.

The target PSCell is known if it has been meeting the conditions in clause 8.9.2 for the case of NR-DC and in TS36.133 clause 7.31.2 for the case of EN-DC.

The interruption on PCell and other serving cells specified in TS36.133 clause 7.32.2.1 for EN-DC and in TS38.133 clause 8.2.4.2.1 for NR-DC is allowed only during the RRC reconfiguration procedure [2].

8.11A PSCell Change in Carriers with CCA

This clause defines requirements for the delay within which the UE shall be able to change PSCell in FR2-2 with CCA to other cell in NR-DC. The requirements in this clause are applicable to NR-DC.

The UE shall be capable of transmitting PRACH preamble towards the target PSCell no later than specified in clause 8.9A.2 for the case of NR-DC, where the following values for slot n , $T_{\text{processing}}$ and $T_{\text{RRC_delay}}$ shall override the existing ones:

- Slot n is the last slot overlapping with the PDSCH containing PSCell change,
- $T_{\text{processing}} = 20$ ms when source and target cells are in the same FR,
- $T_{\text{processing}} = 40$ ms when source and target cells are in different FRs.
- $T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 38.331 [2].

If the SMTC periodicity of the target cell is not provided within the PSCell change message, and measObjectNRs having the same SSB frequency and subcarrier spacing configured by MN and SN have different SMTC, T_{TS} is the periodicity of one of the SMTC which is up to UE implementation.

The target PSCell is known if it has been meeting the conditions in clause 8.9A.2 for the case of NR-DC.

The interruption on PCell and other serving cells specified in TS38.133 clause 8.2.4.2.1 for NR-DC is allowed only during the RRC reconfiguration procedure [2].

8.11B Conditional PSCell Change

8.11B.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to perform conditional PSCell change in EN-DC or NR-DC. The requirements in this clause are applicable to EN-DC and NR-DC.

8.11B.2 Conditional PSCell Change delay

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

The UE shall be capable to transmit PRACH preamble towards the new target PSCell no later than in slot $n + T_{\text{config_PSCell_Conditional}}$:

Where:

- Slot n is the last slot overlapping with the PDSCH containing conditional PSCell change.
- $T_{\text{config_PSCell_Conditional}} = T_{\text{RRC_delay}} + T_{\text{Event_DU}} + T_{\text{measure}} + T_{\text{UE_preparation}} + T_{\text{processing}} + T_{\Delta} + T_{\text{PSCell_DU}} + 2$ ms
- $T_{\text{RRC_delay}}$ is the RRC processing delay defined in Clause 11.2 in 36.331 [16] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC procedure delay defined in clause 12 in TS 38.331 [2] for processing the conditional PSCell change command.
- $T_{\text{Event_DU}}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional PSCell change command until a condition exists at the measurement reference point which will trigger the conditional PSCell change.
- T_{measure} is the measurements time stated in clause 8.11B.2.1.
- $T_{\text{UE_preparation}}$ is the UE preparation time for conditional PSCell change, and starts after UE realizes the condition of PSCell change is met and identity of new PSCell is determined. $T_{\text{UE_preparation}}$ is up to 10ms.
- $T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 20$ ms when source and target cells are in the same FR, and $T_{\text{processing}} = 40$ ms when source and target cells are in different FRs.

- T_{Δ} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = 1 \cdot T_{rs}$ ms.
- T_{rs} is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{rs} = 5$ ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.
- T_{PSCell_DU} is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. T_{PSCell_DU} is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [3].

The PCell interruption specified in clause 8.2 is allowed only after the UE starts to execute a conditional PSCell change.

8.11B.2.1 Measurement time

The measurement time delay is defined from the end of T_{Event_DU} until UE executes a PSCell change to a target cell and interruption time starts.

For intra-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_intra_with_index}$ or $T_{identify_intra_without_index}$ defined in clause 9.2.5.1 or clause 9.2.6.2.

For inter-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ defined in clause 9.3.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PSCell change or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PSCell change. If a cell, which has been detectable at least for the time period $T_{identify_intra_without_index}$ or $T_{identify_intra_with_index}$ for intra-frequency PSCell change or the time period $T_{identify_inter_without_index}$ or $T_{identify_inter_with_index}$ for inter-frequency PSCell change, becomes undetectable for a period and then the cell becomes detectable again and triggers a PSCell change, the measurement time delay shall be less than $T_{SSB_measurement_period_intra}$ or $T_{SSB_measurement_period_inter}$ provided the timing to that cell has not changed more than $\pm 3200/2^{\mu}$ Tc while the measurement gap has not been available and the L3 filter has not been used, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3]. When L3 filtering is used, an additional delay can be expected.

8.11D Conditional PSCell Change in Carriers with CCA

8.11D.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to perform conditional PSCell in FR2-2 with CCA change in NR-DC. The requirements in this clause are applicable to NR-DC.

8.11D.2 Conditional PSCell Change delay

The requirements in this clause shall apply for the UE configured with only PCell in FR1.

The UE shall be capable to transmit PRACH preamble towards the new target PSCell no later than in slot $n + \frac{T_{config_PSCell_Conditional}}{NR_slot_length}$.

Where:

- Slot n is the last slot overlapping with the PDSCH containing conditional PSCell change.
- $T_{config_PSCell_Conditional} = T_{RRC_delay} + T_{Event_DU} + T_{measure_CCA} + T_{UE_preparation} + T_{processing} + T_{\Delta_CCA} + T_{PSCell_DU} + 2$ ms
- T_{RRC_delay} is the RRC procedure delay defined in clause 12 in TS 38.331 [2] for processing the conditional PSCell change command.

- $T_{\text{Event_DU}}$ is the delay uncertainty which is the time from when the UE successfully decodes a conditional PSCell change command until a condition exists at the measurement reference point which will trigger the conditional PSCell change.
- $T_{\text{measure_CCA}}$ is the measurements time stated in clause 8.11D.2.1.
- $T_{\text{UE_preparation}}$ is the UE preparation time for conditional PSCell change, and starts after UE realizes the condition of PSCell change is met and identity of new PSCell is determined. $T_{\text{UE_preparation}}$ is up to 10ms.
- $T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. $T_{\text{processing}} = 20$ ms when source and target cells are in the same FR, and $T_{\text{processing}} = 40$ ms when source and target cells are in different FRs.
- T_{Δ_CCA} is time for fine time tracking and acquiring full timing information of the target cell. $T_{\Delta} = (1+L_2) * T_{\text{rs}}$ ms, where L_2 is the number of SMTC occasions not available at the UE during the time tracking period.
- T_{rs} is the SMTC periodicity of the target cell if the UE has been provided with an SMTC configuration for the target cell in PSCell addition message, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}} = 5$ ms assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5 ms.
- $T_{\text{PSCell_DU}}$ is the interruption uncertainty due to the random access procedure when sending PRACH to the new cell. $T_{\text{PSCell_DU}}$ can be up to: $(1+L_3) * T_{\text{SSB_RO}} + 10$ ms where $T_{\text{SSB_RO}}$ is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [3] and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. $L_3 = 0$ for Type 3 UL channel access procedure as defined in TS 37.213 [33].

NOTE 1: The interruption time considering the potential extensions caused by L_2 , L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

The PCell interruption specified in clause 8.2 is allowed only after the UE starts to execute a conditional PSCell change.

8.11D.2.1 Measurement time

The measurement time delay is defined from the end of $T_{\text{Event_DU}}$ until UE executes a PSCell change to a target cell and interruption time starts.

For intra-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{\text{identify_intra_cca_with_index}}$ or $T_{\text{identify_intra_cca_without_index}}$ defined in clause 9.2A.5.1 or clause 9.2A.6.2.

For inter-frequency PSCell change, the measurement time delay measured without Time To Trigger (TTT) and L3 filtering shall be less than $T_{\text{identify_inter_cca_without_index}}$ or $T_{\text{identify_inter_cca_with_index}}$ defined in clause 9.3A.4. When TTT or L3 filtering is used an additional delay can be expected.

A cell is detectable only if at least one SSB measured from the cell being configured remains detectable during the time period $T_{\text{identify_intra_cca_without_index}}$ or $T_{\text{identify_intra_cca_with_index}}$ for intra-frequency PSCell change or the time period $T_{\text{identify_inter_cca_without_index}}$ or $T_{\text{identify_inter_cca_with_index}}$ for inter-frequency PSCell change. If a cell, which has been detectable at least for the time period $T_{\text{identify_intra_cca_without_index}}$ or $T_{\text{identify_intra_cca_with_index}}$ for intra-frequency PSCell change or the time period $T_{\text{identify_inter_cca_without_index}}$ or $T_{\text{identify_inter_cca_with_index}}$ for inter-frequency PSCell change, becomes undetectable for a period and then the cell becomes detectable again and triggers a PSCell change, the measurement time delay shall be less than $T_{\text{SSB_measurement_period_intra_cca}}$ or $T_{\text{SSB_measurement_period_inter_cca}}$ provided the timing to that cell has not changed more than $\pm 3200 T_c$ while the measurement gap has not been available and the L3 filter has not been used. When L3 filtering is used, an additional delay can be expected.

8.12 Uplink spatial relation switch delay

8.12.1 Introduction

The requirements in this clause apply for a UE configured with one or more spatial relation configurations on serving cell in MR-DC or standalone NR. There is no requirement when the UE is requested to switch to a spatial relation with the higher layer parameter *spatialRelationInfo* associated to SRS. UE shall complete the switch of active spatial relation within the delay defined in this clause when the UE is requested to switch to a spatial relation with the higher layer parameter *spatialRelationInfo* associated to a DL RS.

8.12.2 Known conditions for spatial relation when associated with DL-RS

The spatial relation associated to DL RS is known if the following conditions are met:

- During the period from the last transmission of the DL RS resource used for the L1-RSRP measurement reporting for the target spatial relation to the completion of active spatial relation switch, where the DL RS resource for L1-RSRP measurement is the DL RS in target spatial relation or QCLed to the target spatial relation with QCL type-D.
- Spatial relation switch command is received within 1280 ms upon the last transmission of the DL RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target spatial relation before the spatial relation switch command
- The DL RS configured in spatial relation remains detectable during the spatial relation switching period
 - SNR of the DL RS configured in spatial relation $\geq -3\text{dB}$
- The SSB associated with the spatial relation remain detectable during the spatial relation switching period
 - SNR of the SSB associated with the spatial relation $\geq -3\text{dB}$

Otherwise, the spatial relation is unknown.

8.12.3 MAC-CE based spatial relation switch delay

If the target spatial relation associated to DL RS is known, upon receiving PDSCH carrying MAC-CE activation command in slot n , for UL spatial relation switch for PUCCH or semi-persistent SRS transmission of serving cell with a target UL spatial relation, the UE shall be able to transmit PUCCH or semi-persistent SRS with the target UL spatial relation in the slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1 where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

If the target spatial relation associated to DL RS is unknown, upon receiving PDSCH carrying MAC-CE activation command in slot n , for UL spatial relation switch for PUCCH or semi-persistent SRS transmission of serving cell with a target UL spatial relation, the UE shall be able to transmit PUCCH or semi-persistent SRS with the target UL spatial relation in the slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + T_{\text{L1-RSRP}} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
 - $T_{\text{L1-RSRP_Measurement_Period_SSB}}$ for SSB as specified in clause 9.5.4.1,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$
 - $T_{\text{L1-RSRP_Measurement_Period_CSI-RS}}$ for CSI-RS as specified in clause 9.5.4.2

- configured with higher layer parameter *repetition* set to ON
- with the assumption of $M=1$ for periodic CSI-RS
- for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
- with $T_{\text{Report}} = 0$

The UE shall be able to transmit with the old UL spatial relation until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe}, \mu}$.

When the UL spatial relation info switch for PUCCH changes both the associated DL RS and *pucch-PathlossReferenceRS* with the same MAC-CE activation, and if both the DL RS and *pucch-PathlossReferenceRS* are known as specified in clause 8.12.2 and 8.14.2 respectively, the UE shall be able to transmit PUCCH with the target UL spatial relation after the delay specified in clause 8.14.3. If either the associated DL RS or *pucch-PathlossReferenceRS* are unknown, a longer switching delay is allowed. The UE is not required to transmit PUCCH with the target UL spatial relation until the DL RS and pathloss reference RS switch are completed.

8.12.4 DCI based spatial relation switch delay

If the target spatial relation associated to DL RS is known, when a UE receives the DCI triggering aperiodic SRS at slot n with the higher layer parameter *spatialRelationInfo*, UE shall be able to transmit aperiodic SRS with target spatial

relation of the serving cell on which spatial relation switch occurs in the slot $\left\lceil n \cdot \frac{2^{\mu_{\text{SRS}}}}{2^{\mu_{\text{PDCCH}}}} \right\rceil + k + 1$, where, k is configured

via higher layer parameter *slotOffset*[2] for each triggered SRS resources set and is based on the subcarrier spacing of the triggered SRS transmission, μ_{SRS} and μ_{PDCCH} are the subcarrier spacing configurations for triggered SRS and PDCCH carrying the triggering command respectively in TS 38.214 [26].

The known condition for spatial relation associated to DL RS defined in clause 8.12.2 is applied.

8.12.5 RRC based spatial relation switch delay

If the target spatial relation associated to DL RS is known, UE shall be able to transmit target periodic SRS with spatial relation of the serving cell on which periodic SRS with spatial relation reconfigured in the slot $n + T_{\text{RRC_processing}} / \text{NR slot length} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command,
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in TS38.331 [2].

If the target spatial relation associated to DL RS is unknown, UE shall be able to transmit target periodic SRS with spatial relation of the serving cell on which periodic SRS with spatial relation reconfigured in the slot $n + T_{\text{RRC_processing}} / \text{NR slot length} + T_{\text{L1-RSRP}} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command,
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in TS38.331 [2].
- $T_{\text{L1-RSRP}}$ is defined in clause 8.12.3

8.12A Uplink spatial relation switch delay for RedCap

8.12A.1 Introduction

The requirements in this clause apply for a RedCap UE configured with one or more spatial relation configurations on serving cell in standalone NR. There is no requirement when the UE is requested to switch to a spatial relation with the higher layer parameter *spatialRelationInfo* associated to SRS. UE shall complete the switch of active spatial relation within the delay defined in this clause when the UE is requested to switch to a spatial relation with the higher layer parameter *spatialRelationInfo* associated to a DL RS.

8.12A.2 Known conditions for spatial relation when associated with DL-RS

The spatial relation associated to DL RS is known if the following conditions are met:

- During the period from the last transmission of the DL RS resource used for the L1-RSRP measurement reporting for the target spatial relation to the completion of active spatial relation, where the DL RS resource for L1-RSRP measurement is the DL RS in target spatial relation or QCLed to the target spatial relation with QCL type-D.
- Spatial relation switch command is received within 1280 ms upon the last transmission of the DL RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target spatial relation before the spatial relation switch command
- The DL RS configured in spatial relation remains detectable during the spatial relation switching period
 - SNR of the DL RS configured in spatial relation $\geq -3\text{dB}$
- The SSB associated with the spatial relation remain detectable during the spatial relation switching period
 - SNR of the SSB associated with the spatial relation $\geq -3\text{dB}$

Otherwise, the spatial relation is unknown.

8.12A.3 MAC-CE based spatial relation switch delay

If the target spatial relation associated to DL RS is known and UE is configured with uplink resources for transmission on target spatial relation, upon receiving PDSCH carrying MAC-CE activation command in slot n , for UL spatial relation switch for PUCCH or semi-persistent SRS transmission of serving cell with a target UL spatial relation, the UE shall be able to transmit PUCCH or semi-persistent SRS with the target UL spatial relation no later than slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1 where T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

If the target spatial relation associated to DL RS is unknown and UE is configured with uplink resources for transmission on target spatial relation, upon receiving PDSCH carrying MAC-CE activation command in slot n , for UL spatial relation switch for PUCCH or semi-persistent SRS transmission of serving cell with a target UL spatial relation, the UE shall be able to transmit PUCCH or semi-persistent SRS with the target UL spatial relation no later than slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + T_{\text{L1-RSRP}} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- T_{HARQ} is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3],
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
 - $T_{\text{L1-RSRP_Measurement_Period_SSB_RedCap}}$ for SSB as specified in clause 9.5B,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$

- $T_{\text{L1-RSRP_Measurement_Period_CSI-RS_RedCap}}$ for CSI-RS as specified in clause 9.5.4.2
- configured with higher layer parameter *repetition* set to ON
- with the assumption of $M=1$ for periodic CSI-RS
- for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
- with $T_{\text{Report}} = 0$

The UE shall be able to transmit with the old UL spatial relation until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe}, \mu}$.

For RedCap UE in HD-FDD mode, if a downlink reception overlaps with PUCCH or semi-persistent SRS transmission of the serving cell with the target UL spatial relation then the UE is allowed to postpone the uplink transmission.

When the UL spatial relation info switch for PUCCH changes both the associated DL RS and *pucch-PathlossReferenceRS* with the same MAC-CE activation, and if both the DL RS and *pucch-PathlossReferenceRS* are known as specified in clause 8.12A.2 and 8.14.2 respectively, the UE shall be able to transmit PUCCH with the target UL spatial relation after the delay specified in clause 8.14.3. If either the associated DL RS or *pucch-PathlossReferenceRS* are unknown, a longer switching delay is allowed. The UE is not required to transmit PUCCH with the target UL spatial relation until the DL RS and pathloss reference RS switch are completed.

8.12A.4 DCI based spatial relation switch delay

If the target spatial relation associated to DL RS is known and UE is configured with uplink resources for transmission on target spatial relation, when a UE receives the DCI triggering aperiodic SRS at slot n with the higher layer parameter *spatialRelationInfo*, UE shall be able to transmit aperiodic SRS with target spatial relation of the serving cell on which

spatial relation switch occurs no later than slot $\left\lfloor n \cdot \frac{2^{\mu_{\text{SRS}}}}{2^{\mu_{\text{PDCCH}}}} \right\rfloor + k + 1$, where, k is configured via higher layer parameter

slotOffset[2] for each triggered SRS resources set and is based on the subcarrier spacing of the triggered SRS transmission, μ_{SRS} and μ_{PDCCH} are the subcarrier spacing configurations for triggered SRS and PDCCH carrying the triggering command respectively in TS 38.214 [26].

For RedCap UE in HD-FDD mode, if a downlink reception overlaps with aperiodic SRS with target spatial relation of the serving cell then the UE is allowed to postpone the uplink transmission.

The known condition for spatial relation associated to DL RS defined in clause 8.12A.2 is applied.

8.12A.5 RRC based spatial relation switch delay

If the target spatial relation associated to DL RS is known and UE is configured with uplink resources for transmission on target spatial relation, UE shall be able to transmit target periodic SRS with spatial relation of the serving cell on which periodic SRS with spatial relation reconfigured no later than slot $n + T_{\text{RRC_processing}} / \text{NR slot length} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command,
- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in 36.331 [16] if the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in TS38.331 [2].

If the target spatial relation associated to DL RS is unknown and UE is configured with uplink resources for transmission on target spatial relation, UE shall be able to transmit target periodic SRS with spatial relation of the serving cell on which periodic SRS with spatial relation reconfigured no later than slot $n + T_{\text{RRC_processing}} / \text{NR slot length} + T_{\text{L1-RSRP}} + 1$ when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1.

Where

- Slot n is the last slot overlapping with the PDSCH carrying RRC activation command,

- $T_{\text{RRC_processing}}$ is the RRC processing delay defined in 36.331 [16] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the RRC processing delay defined in TS38.331 [2].
- $T_{\text{L1-RSRP}}$ is defined in clause 8.12A.3

For RedCap UE in HD-FDD mode, if a downlink reception overlaps with target periodic SRS with spatial relation of the serving cell with periodic SRS with spatial relation reconfigured then the UE is allowed to postpone the uplink transmission.

8.12C Uplink spatial relation switch delay for satellite access

UL Spatial relation switch delay requirements do not apply for satellite access in FR1.

8.12C.1 Void

8.12C.2 Void

8.12C.3 Void

8.12C.4 Void

8.12C.5 Void

8.13 UE-specific CBW change

8.13.1 Introduction

The requirements in this clause apply for a UE receives reconfiguration of *offsetToCarrier* or *carrierBandwidth* to change channel bandwidth.

8.13.2 UE-specific CBW change delay

After the UE receives RRC reconfiguration involving *offsetToCarrier* or *carrierBandwidth* change on the old CBW, UE shall be able to receive PDSCH/PDCCH on the DL BWP with BWP ID *firstActiveDownlinkBWP-Id* or transmit PUSCH on the UL BWP with BWP ID *firstActiveUplinkBWP-Id* of the new CBW right after a time duration of $\frac{T_{\text{RRCprocessingDelay}} + T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ slots which begins from the beginning of DL slot *n*, where

DL slot *n* is the last slot overlapping with the PDSCH containing the RRC command, and

$T_{\text{RRCprocessingDelay}}$ is the length of the RRC procedure delay in millisecond as defined in clause 11.2 in TS 36.331 [6] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the length of the RRC procedure delay in millisecond as defined in clause 12 in TS 38.331 [2], and

$T_{\text{CBWchangeDelayRRC}} = 6\text{ms}$ is the time used by the UE to perform CBW change.

The UE is not required to transmit UL signals or receive DL signals during the above defined time duration

$\frac{T_{\text{RRCprocessingDelay}} + T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ on the cell where UE-specific CBW change occurs. When $T_{\text{HARQ}} >$

$T_{\text{RRCprocessingDelay}}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.13A UE-specific CBW change for RedCap

8.13A.1 Introduction

The requirements in this clause apply for a RedCap UE receives reconfiguration of *offsetToCarrier* or *carrierBandwidth* to change channel bandwidth.

8.13A.2 UE-specific CBW change delay

After the UE receives RRC reconfiguration involving *offsetToCarrier* or *carrierBandwidth* change on the old CBW, UE shall be able to receive PDSCH/PDCCH on an active DL BWP or transmit PUSCH on an active UL BWP of the new CBW right after a time duration of $\frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ slots which begins from the beginning of DL slot n, where

DL slot n is the last slot overlapping with the PDSCH containing the RRC command, and

$T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in millisecond as defined in clause 11.2 in TS 36.331 [6] is the corresponding RRC message is embedded in E-UTRA RRC message, otherwise it is the length of the RRC procedure delay in millisecond as defined in clause 12 in TS 38.331 [2], and

$T_{CBWchangeDelayRRC} = 6ms$ is the time used by the UE to perform CBW change.

The UE is not required to transmit UL signals or receive DL signals during the above defined time duration $\frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ on the cell where UE-specific CBW change occurs. When $T_{HARQ} >$

$T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.13C UE-specific CBW change for satellite access

Editor's note: Applicability of frequency range, CA, DA, duplex mode, inter-RAT measurement, etc is subject to updates/changes based on the scope of the corresponding WID.

Editor's note: Terminology will be further clarified and selected between, e.g. NTN and satellite access, based on further agreements.

8.13C.1 Introduction

The requirements in this clause apply for a UE receives reconfiguration of *offsetToCarrier* or *carrierBandwidth* to change channel bandwidth.

8.13C.2 UE-specific CBW change delay

After the UE receives RRC reconfiguration involving *offsetToCarrier* or *carrierBandwidth* change on the old CBW, UE shall be able to receive PDSCH/PDCCH on an active DL BWP or transmit PUSCH on an active UL BWP of the new CBW right after a time duration of $\frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ slots which begins from the beginning of DL slot n, where

DL slot n is the last slot containing the RRC command, and

$T_{RRCprocessingDelay}$ is the length of the RRC procedure delay in millisecond as defined in clause 12 in TS 38.331 [2], and

$T_{CBWchangeDelayRRC} = 6ms$ is the time used by the UE to perform CBW change.

The UE is not required to transmit UL signals or receive DL signals during the above defined time duration $\frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ on the cell where UE-specific CBW change occurs. When $T_{HARQ} > T_{RRCprocessingDelay}$ a longer switching delay is allowed. Where T_{HARQ} is the time between DL data transmission and acknowledgement as specified in TS 38.213 [3].

8.14 Pathloss reference signal switching delay

8.14.1 Introduction

The requirements in this clause apply for pathloss reference signal activated or updated on serving cell in MR-DC or standalone NR in clause 7.1.1 in TS 38.213 [3].

UE shall complete the switch of pathloss reference signal within the delay defined in this clause.

8.14.2 Known conditions for pathloss reference signal

In FR2, the pathloss reference signal is known if the following conditions are met during the period between the last transmission of the RS resource used for L1-RSRP measurement reporting and the completion of pathloss reference signal switch, where the RS resource is the target pathloss reference signal or QCLeD (with Type D) to the target pathloss reference signal.

- Pathloss reference signal switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target pathloss reference signal before the pathloss reference signal switch command
- The target pathloss reference signal remains detectable during the pathloss reference signal switching period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$
- The associated SSBs with the target pathloss reference signal remain detectable during the pathloss reference signal switching period
 - SNR of the associated SSB $\geq -3\text{dB}$

In FR1, the pathloss reference signal is known if the following conditions are met

- The target pathloss reference signal remains detectable during the pathloss reference signal switching period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$

Otherwise, the pathloss reference signal is unknown.

8.14.3 MAC-CE based pathloss reference signal switch delay

The requirements in this clause apply for a UE to update a pathloss reference signal by MAC-CE for PUCCH, PUSCH, semi-persistent SRS and aperiodic SRS.

If the target pathloss reference signal is known, upon receiving PDSCH carrying MAC-CE activation in slot n , UE shall be able to apply the target pathloss reference signal of the serving cell on which pathloss reference signal switch occurs no later than the slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + NM * \left\lceil \frac{5 * T_{target_PL-RS} + 2ms}{NR\ slot\ length} \right\rceil$. The UE shall be able to apply old pathloss reference signals until the slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$. Where

- T_{HARQ} is the timing between pathloss reference MAC-CE activation command and acknowledgement as specified in TS 38.321 [7].
- $NM = 1$, if the target PL-RS is not maintained by the UE, 0 otherwise.

In FR2, if the target pathloss reference signal is SSB, the requirements in this clause shall apply when the target pathloss reference signal is maintained by the UE.

- T_{target_PL-RS} is the periodicity of the target pathloss reference signal which would be SSB or NZP CSI-RS.
- PL-RS is maintained provided:
 - There are no more than 4 different RS activated as PL-RS per serving cell among all active spatial relations for PUSCH/PUCCH/SRS transmissions.
 - The target pathloss reference signal remains detectable during TCI state switching period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$
 - The associated SSBs with the target pathloss reference signal remain detectable during the TCI state switching period.
 - SNR of the associated SSB $\geq -3\text{dB}$

Note: longer application time is expected if measurement sample is not available due to measurement gap, DRX or other UE activities.

Note: longer application time is expected if the pathloss reference signal is unknown.

8.14C Pathloss reference signal switching delay for satellite access

Editor's note: Applicability of frequency range, CA, DA, duplex mode, inter-RAT measurement, etc is subject to updates/changes based on the scope of the corresponding WID.

Editor's note: Terminology will be further clarified and selected between, e.g. NTN and satellite access, based on further agreements.

8.14C.1 Introduction

The requirements in this clause apply for pathloss reference signal activated or updated on PCell in clause 7.1.1 in TS 38.213 [3] and the UE is configured with only PCell, which is served by satellite access node (SAN).

UE shall complete the switch of pathloss reference signal within the delay defined in this clause.

8.14C.2 Known conditions for pathloss reference signal

The pathloss reference signal is known if the following conditions are met during the period between the last transmission of the RS resource used for L1-RSRP measurement reporting and the completion of pathloss reference signal switch, where the RS resource is the target pathloss reference signal or QCLeD (with Type D) to the target pathloss reference signal.

- Pathloss reference signal switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target pathloss reference signal before the pathloss reference signal switch command
- The target pathloss reference signal remains detectable during the pathloss reference signal switching period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$

- The associated SSBs with the target pathloss reference signal remain detectable during the pathloss reference signal switching period
- SNR of the associated SSB $\geq -3\text{dB}$

Otherwise, the pathloss reference signal is unknown.

8.14C.3 MAC-CE based pathloss reference signal switch delay

The requirements in this clause apply for a UE to update a pathloss reference signal by MAC-CE for PUCCH, PUSCH, semi-persistent SRS and aperiodic SRS.

If the target pathloss reference signal is known, upon receiving PDSCH carrying MAC-CE activation in slot n , UE shall be able to apply the target pathloss reference signal of the serving cell on which pathloss reference signal switch occurs no later than the slot $n + T_{HARQ} + 3N_{\text{slot}}^{\text{subframe},\mu} + NM * \left\lceil \frac{5 * T_{\text{target_PL-RS}} + 2\text{ms}}{NR \text{ slot length}} \right\rceil$. The UE shall be able to apply old pathloss reference signals until the slot $n + T_{HARQ} + 3N_{\text{slot}}^{\text{subframe},\mu}$. Where

- T_{HARQ} is the timing between pathloss reference MAC-CE activation command and acknowledgement as specified in TS 38.321 [7].
- $NM = 1$, if the target PL-RS is not maintained by the UE, 0 otherwise.
- $T_{\text{target_PL-RS}}$ is the periodicity of the target pathloss reference signal which would be SSB or NZP CSI-RS.

Note: longer application time is expected if measurement sample is not available due to measurement gap, DRX or other UE activities.

Note: longer application time is expected if the pathloss reference signal is unknown.

8.15 Active downlink TCI state switching delay for unified TCI

8.15.1 Introduction

The requirements in this clause apply for a UE configured with *dl-OrJointTCI-StateList* configurations for DL channels on a serving cell. Further the requirements also apply for all the list of serving cells in *simultaneousU-TCI-UpdateList1*, *simultaneousU-TCI-UpdateList2*, *simultaneousU-TCI-UpdateList3*, *simultaneousU-TCI-UpdateList4* in MR-DC or standalone NR provided all serving cells in the list are configured with the same serving cell and BWP in *unifiedTCI-StateRef-r17*. UE shall complete the switch of active downlink TCI state within the delay defined in this clause.

When the target DL TCI state refers to an additional PCI different from the serving cell PCI in which this DL TCI-State is configured, the requirements in this clause are applicable provided that following conditions are met:

- Active BWP of the serving cell and a cell with the additional PCI are the same
- Center frequency, SCS and SFN offset of a cell with the additional PCI are as the same as serving cell - The cell with the additional PCI is known to the UE.

A cell with the additional PCI is known if the following conditions are met:

- During the last 5s before L1-RSRP measurement is configured, the UE has sent a valid L3 measurement report for the cell with the additional PCI
- Timing offset between serving cell and the cell with the additional PCI is within CP of the corresponding SCS

Otherwise, the cell with the additional PCI is unknown.

8.15.2 Known conditions for downlink TCI state

The downlink TCI state is known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target downlink TCI state to the completion of active downlink TCI state switch, where the RS resource for L1-RSRP measurement is the RS in target downlink TCI state or QCLed to the target downlink TCI state
- Downlink TCI state switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target downlink TCI state before the downlink TCI state switch command
- The target downlink TCI state remains detectable during the downlink TCI state switching period
- The SSB associated with the downlink TCI state remain detectable during the downlink TCI switching period
 - SNR of the downlink TCI state $\geq -3\text{dB}$
 - The SSB can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

Otherwise, the downlink TCI state is unknown.

8.15.3 MAC-CE based downlink TCI state switch delay

The requirements in this clause shall apply for DL TCI state switch using separate DL TCI state or joint TCI state of unified TCI state switch framework.

In case that source RS in DL TCI state or joint TCI state is associated with a PCI different from that of the serving cell, the requirements in this clause shall apply if the cell with different PCI satisfies the known cell condition defined in 8.15.1. If the known cell condition is not met, longer delay may be expected.

In case of joint TCI state switch, if the target PL-RS is not maintained, UE is not expected to receive on DL based on the target TCI state before UE completes the DL and UL TCI state switch.

If the target TCI state is known, upon receiving PDSCH carrying MAC-CE activation command in slot n , UE shall be able to receive UE-dedicated PDCCH/PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + T_{\text{OK}} \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}}) / \text{NR slot length}$. The UE shall be able to receive UE-dedicated PDCCH/PDSCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$ where T_{HARQ} (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3];

- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE; The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state
- $T_{\text{SSB-proc}} = 2 \text{ ms}$;
- $T_{\text{OK}} = 1$ if target TCI state is not in the active TCI state list for PDSCH/PDCCH, 0 otherwise.

If the target TCI state is unknown, upon receiving PDSCH carrying MAC-CE activation command in slot n , UE shall be able to receive UE-dedicated PDCCH/PDSCH with target TCI state of the serving cell on which TCI state switch occurs at the first slot that is after slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{L1-RSRP}} + T_{\text{OK}} \cdot (T_{\text{first-SSB}} + T_{\text{SSB-proc}})) / \text{NR slot length}$. The UE shall be able to receive UE-dedicated PDCCH/PDSCH with the old TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$.

Where

- $T_{\text{L1-RSRP}} = 0$ in FR1 or when the TCI state switching not involving QCL-TypeD in FR2. Otherwise,
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
- $T_{\text{L1-RSRP_Measurement_Period_SSB}}$ for SSB as specified in clause 9.5.4.1,
- with the assumption of $M=1$

- with $T_{\text{Report}} = 0$
- $T_{\text{L1-RSRP_Measurement_Period_CSI-RS}}$ for CSI-RS as specified in clause 9.5.4.2
- CSI-RS based L1-RSRP measurement only apply for TCI state switch when source RS is associated with serving cell
- configured with higher layer parameter *repetition* set to ON
- with the assumption of $M=1$ for periodic CSI-RS
- for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
- with $T_{\text{Report}} = 0$
- $TO_{\text{uk}} = 1$ for CSI-RS based L1-RSRP measurement, and 0 for SSB based L1-RSRP measurement when TCI state switching involves QCL-TypeD
- $TO_{\text{uk}} = 1$ when TCI state switching involves other QCL types only
- $T_{\text{first-SSB}}$ is time to first SSB transmission after L1-RSRP measurement when TCI state switching involves QCL-TypeD;
- $T_{\text{first-SSB}}$ is time to first SSB transmission after MAC CE command is decoded by the UE for other QCL types;
- The SSB shall be the QCL-TypeA or QCL-TypeC to target TCI state

8.15.4 DCI based downlink TCI state switch delay

When a UE is configured with the higher layer parameter with *dl-OrJointTCI-StateListor TCI-UL-State*, activated with TCI states for downlink transmission by MAC CE indication of more than one codepoints, and receives DCI format 1_1/1_2 with or without DL assignment providing indicated TCI-State or TCI state pair in the active TCI list for a CC, the UE transmits a PUCCH with HARQ-ACK information corresponding to the DCI carrying the TCI-State indication.

If the target TCI state is known, the downlink TCI switching to the indicated DL TCI state or joint TCI state in the DCI format shall be completed starting from the first slot that is at least *beamAppTime-r17* symbols after the last symbol of the PUCCH carrying HARQ-ACK in response to the DCI triggering TCI state activation. The first slot and the *beamAppTime-r17* symbols are both determined on the carrier with the smallest SCS among the carrier(s) applying the beam indication. The value of *beamAppTime-r17* is defined in TS 38.331 [2]. The known condition for TCI state defined in clause 8.15.2 is applied.

8.15.5 Active Downlink TCI state list update delay

The requirements specified in this clause are applicable if

- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*separate*', and a MAC CE activates more than one target separate TCIs, and at least one DL TCI is included, or
- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*joint*', and a MAC CE activates more than one target joint TCI.

If all the target TCI states in the active TCI state list are known, upon receiving PDSCH carrying MAC-CE active TCI state list update at slot n , UE shall have completed the TCI state list update in slot

$$n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + TO_k \cdot (T_{\text{first-SSB_List}} + T_{\text{SSB-proc}}) / NR \text{ slot length}.$$

If a subset of the target TCI states in the active TCI state list are unknown, upon receiving PDSCH carrying MAC-CE active TCI state list update at slot n , UE shall have completed the TCI state list update in slot

$$n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{L1-RSRP_list}} + TO_{\text{uk}} \cdot (T_{\text{first-SSB_List}} + T_{\text{SSB-proc}})) / NR \text{ slot length}.$$

If all target TCI states in the active TCI state list are unknown, the requirements specified in this clause are not applicable.

Where

- $T_{L1-RSRP_List}$ is the longest L1 measurement time ($T_{L1-RSRP}$) of the source RS among the unknown target TCI states, where $T_{L1-RSRP}$ is specified in clause 8.15.3
- If the number of cells associated with the target TCI states in the active TCI list is 2, and time to first SSBs associated to the TCIs are overlapped in FR2,
- $T_{first-SSB_List} = T_{first-SSB_SC} + \min(T_{SSB_SC}, T_{SSB_CDP})$.
- If the number of cells associated with the target TCI states in the active TCI list is 2, and time to first SSBs associated to the TCIs are not overlapped in FR1 or FR2,
- $T_{first-SSB_List} = \max(T_{first-SSB_SC}, T_{first-SSB_CDP})$
- Otherwise,
- $T_{first-SSB_List} = T_{first-SSB_SC}$.
- T_{SSB_SC} is the SSB periodicity of serving cell.
- T_{SSB_CDP} is the SSB periodicity of cell with different PCI from serving cell.
- $T_{first-SSB_SC}$ is the $T_{first-SSB}$ from serving cell
- $T_{first-SSB_CDP}$ is the $T_{first-SSB}$ from cell with different PCI from serving cell.
- T_{HARQ} , $T_{first-SSB}$, $T_{SSB-proc}$, TO_k , TO_{uk} are defined in clause 8.15.3. T_{SSB} is the SSB periodicity.

When UE receives PDSCH carrying MAC-CE for active TCI state list update, and

- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*joint*', or
- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*separate*', while the target TCI list comprises at least one DL TCIs and at least one UL TCIs,

UE is not expected to receive on DL based on the target TCI state before UE completes the DL and UL TCI state list update.

8.16 Active uplink TCI state switching delay for unified TCI

8.16.1 Introduction

The requirements in this clause apply for a UE configured with *dl-OrJointTCI-StateList* (if *unifiedTCI-StateType* is indicated as *Joint*) or *TCI-UL-State* configurations for UL channels/signals on a serving cell. Further the requirements also apply for all the list of serving cells in *simultaneousU-TCI-UpdateList1*, *simultaneousU-TCI-UpdateList2*, *simultaneousU-TCI-UpdateList3*, *simultaneousU-TCI-UpdateList4* in MR-DC or standalone NR provided all serving cells in the list are configured with the same serving cell and BWP in *unifiedTCI-StateRef-r17*. There is no requirement when the UE is requested to switch to a TCI state with the higher layer parameter *TCI-UL-State* associated to SRS. UE shall complete the switch of active uplink TCI state within the delay defined in this clause when the UE is requested to switch to a TCI state with the higher layer parameter *dl-OrJointTCI-StateList* or *TCI-UL-State* associated to a DL RS.

PL-RS may be associated with or included in UL TCI state or joint TCI state. The requirements in this clause shall apply if either of the following conditions are met:

- PL-RS is identical to source RS in UL TCI state or joint TCI state
- PL-RS and source RS in UL TCI state or joint TCI state are QCL-Type D

When the target UL TCI state refers to an additional PCI different from serving cell PCI in which this UL TCI state is configured, the requirements in this clause are applicable provided that the following conditions are met:

- Active BWP of the serving cell and a cell with the additional PCI are the same
- Center frequency, SCS and SFN offset of a cell with the additional PCI are as the same as serving cell
- The cell with the additional PCI is known to the UE.

A cell with the additional PCI is known if the following conditions are met:

- During the last 5s before L1-RSRP measurement is configured, the UE has sent a valid L3 measurement report for the cell with the additional PCI
- Timing offset between serving cell and the cell with the additional PCI is within CP of the corresponding SCS
- The SSB from the cell with the additional PCI remains detectable according to the cell identification requirements specified in clause 9.2

Otherwise, the cell with the additional PCI is unknown.

8.16.2 Known conditions for uplink TCI state

The uplink TCI state is known if the following conditions are met:

- During the period from the last transmission of the RS resource used for the L1-RSRP measurement reporting for the target uplink TCI state to the completion of active uplink TCI state switch, where the RS resource for L1-RSRP measurement is the RS in target uplink TCI state or QCLed to the target uplink TCI state
- Uplink TCI state switch command is received within 1280 ms upon the last transmission of the RS resource for beam reporting or measurement
- The UE has sent at least 1 L1-RSRP report for the target uplink TCI state before the uplink TCI state switch command
- The RS configured in target uplink TCI state remains detectable during the uplink TCI state switching period
 - SNR of the RS configured in target uplink TCI state $\geq -3\text{dB}$
- The target uplink TCI state remains detectable during the uplink TCI state switching period
- The SSB associated with the uplink TCI state remain detectable during the uplink TCI switching period
 - SNR of the uplink TCI state $\geq -3\text{dB}$
 - The SSB can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

Otherwise, the uplink TCI state is unknown.

8.16.3 MAC-CE based uplink TCI state switch delay

The requirements in this clause shall apply for UL TCI state switch using separate UL TCI state or joint TCI state of unified TCI state switch framework.

In case that source RS in UL TCI state or joint TCI state is associated with a PCI different from that of the serving cell, the requirements in this clause shall apply if the cell with different PCI satisfies the known cell condition defined in 8.16.1. If the known cell condition is not met, longer delay may be expected.

In case of joint TCI state switch, UE is not expected to transmit on UL based on the target TCI state before UE completes the DL and UL TCI state switch.

For separate UL TCI state switch or joint TCI state switch for PUCCH or PUSCH, or semi-persistent/aperiodic/periodic SRS, when *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1, upon receiving PDSCH carrying MAC-CE activation command in slot n on serving cell,

- If target TCI state is known,
- The UE shall be able to transmit uplink signal with the target TCI state in the slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + \text{NM} * (T_{\text{first_target_PL-RS}} + 4 * T_{\text{target_PL-RS}} + 2\text{ms}) / \text{NR slot length}$.
- If target TCI state is unknown,
- The UE shall be able to transmit uplink signal with the target TCI state in the slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{L1-RSRP}} + T_{\text{first_target_PL-RS}} + 4 * T_{\text{target_PL-RS}} + 2\text{ms}) / \text{NR slot length}$.
- The UE shall be able to transmit with the old UL TCI state until slot $n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu}$.

Where,

- T_{HARQ} (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].
- $\text{NM} = 1$, if the target PL-RS is not maintained by the UE, 0 otherwise.

In FR2, in case that the target PL-RS associated with or included in the target UL or joint TCI state is SSB, the requirements in this clause shall apply when this target PL-RS is maintained by the UE.

- PL-RS is maintained provided:
 - the target PL-RS is associated with or included in the UL or joint TCI states in the active TCI list for PUSCH/PUCCH/SRS transmissions
 - There are no more than 4 different RS activated as PL-RS per serving cell among all active UL TCI states (UL or joint TCI state) for PUSCH/PUCCH/SRS transmissions
 - The target pathloss reference signal remains detectable during TCI state switching period
 - SNR of the target pathloss reference signal $\geq -3\text{dB}$
 - The associated SSBs with the target pathloss reference signal remain detectable during the TCI state switching period.
 - SNR of the associated SSB $\geq -3\text{dB}$
- $T_{\text{first_target_PL-RS}}$ is time to first pathloss RS transmission after L1-RSRP measurement when target TCI state is unknown.
- $T_{\text{first_target_PL-RS}}$ is time to first pathloss RS transmission after MAC CE command is decoded by the UE for known TCI State.
- $T_{\text{target_PL-RS}}$ is the periodicity of the target pathloss reference signal which would be SSB or NZP CSI-RS when PL-RS is associated with serving cell
- $T_{\text{target_PL-RS}}$ is the periodicity of the target pathloss reference signal which would be SSB when PL-RS is associated with PCI different from serving cell
- $T_{\text{L1-RSRP}}$ is the time for Rx beam refinement in FR2, defined as
 - $T_{\text{L1-RSRP_Measurement_Period_SSB}}$ for SSB as specified in clause 9.5.4.1 or 9.13.4.1,
 - with the assumption of $M=1$
 - with $T_{\text{Report}} = 0$
 - $T_{\text{L1-RSRP_Measurement_Period_CSI-RS}}$ for CSI-RS as specified in clause 9.5.4.2
 - CSI-RS based L1-RSRP measurement only apply for TCI state switch when source RS is associated with serving cell

- configured with higher layer parameter *repetition* set to ON
- with the assumption of $M=1$ for periodic CSI-RS
- for aperiodic CSI-RS if number of resources in resource set at least equal to *MaxNumberRxBeam*
- with $T_{\text{Report}} = 0$

The requirements specified in this clause are applicable if no more than 4 different RSs are activated as PL-RS per serving cell among all active UL (or joint) TCI states.

8.16.4 DCI based uplink TCI state switch delay

When a UE is configured with the higher layer parameter with *dl-OrJointTCI-StateList* or *TCI-UL-State*, activated with TCI states for uplink transmission by MAC CE indication of more than one codepoints, and receives DCI format 1_1/1_2 with or without DL assignment providing indicated TCI-State or TCI state pair in the active TCI list for a CC, the UE transmits a PUCCH with HARQ-ACK information corresponding to the DCI carrying the TCI-State indication.

The requirements in this clause are applicable only if the DCI format indicating UL TCI state or joint TCI state switch is received by UE when

- target TCI state is known, and
- target TCI state is in active TCI state list, and
- target PL-RS is maintained as defined in clause 8.16.3

If the target TCI state is known, the uplink TCI switching to the indicated UL TCI state or joint TCI state in the DCI format shall be completed starting from the first slot that is at least *beamAppTime-r17* symbols after the last symbol of the PUCCH carrying HARQ-ACK in response to the DCI triggering TCI state activation. The first slot and the *beamAppTime-r17* symbols are both determined on the carrier with the smallest SCS among the carrier(s) applying the beam indication. The value of *beamAppTime-r17* is defined in TS 38.331 [2]. The known condition for TCI state defined in clause 8.16.2 is applied.

If a PL-RS is associated with or included in UL TCI state or joint TCI state, the UL TCI switching and PL-RS switching shall be completed at the same time.

8.16.5 Active Uplink TCI state list update delay

The requirements specified in this clause are applicable if

- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*separate*', and a MAC CE activates more than one target separate TCIs, and at least one UL TCI is included, or
- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*joint*', and a MAC CE activates more than one target joint TCI.

If all the target TCI states in the active TCI state list are known, upon receiving PDSCH carrying MAC-CE active TCI state list update at slot n , UE shall have completed the TCI state list update in slot

$$n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + NM * (T_{\text{first_target-PL-RS_List}} + 4 * T_{\text{target_PL-RS_List}} + 2\text{ms}) / NR \text{ slot length},$$

If a subset of target TCI states in the active TCI state list are unknown, upon receiving PDSCH carrying MAC-CE active TCI state list update at slot n , UE shall have completed the TCI state list update in slot

$$n + T_{\text{HARQ}} + 3N_{\text{slot}}^{\text{subframe},\mu} + (T_{\text{L1-RSRP_List}} + T_{\text{first_target-PL-RS_List}} + 4 * T_{\text{target_PL-RS_List}} + 2\text{ms}) / NR \text{ slot length}$$

If all target TCI states in the active TCI state list are unknown, the requirements specified in this clause are not applicable.

Where

- If all TCIs are known,
- if the target PL-RS associated with or included in any UL TCI is not maintained, $NM = 1$; Where maintained PL-RS is defined in clause 8.16.3
- if a subset of target TCI states in the active TCI state list are unknown,
- $T_{L1-RSRP_List}$ is the longest L1 measurement time ($T_{L1-RSRP}$) of the source RS among the unknown target TCI states, where $T_{L1-RSRP}$ is specified in clause 8.16.3
- if the number of cells associated with the target TCI states in the active TCI list is 2, and time to first PL-RS associated to the TCIs are overlapped in FR2,
- $T_{first_target-PL-RS_List} = T_{first_target-PL-RS_SC} + \min(T_{target-PL-RS_SC}, T_{target-PL-RS_CDP})$;
- $T_{target-PL-RS_List} = 2 * T_{target-PL-RS_SC}$, if $T_{target-PL-RS_SC} = T_{target-PL-RS_CDP}$
- $T_{target-PL-RS_List} = \max(T_{target-PL-RS_SC}, T_{target-PL-RS_CDP})$, if $T_{target-PL-RS_SC} \neq T_{target-PL-RS_CDP}$
- if the number of cells associated with the target TCI states in the active TCI list is 2, and time to first PL-RS associated to the TCIs are not overlapped in FR2,
 - $T_{first_target-PL-RS_List} = \max(T_{first_target-PL-RS_SC}, T_{first_target-PL-RS_CDP})$;
 - $T_{target-PL-RS_List} = \max(T_{target-PL-RS_SC}, T_{target-PL-RS_CDP})$
- Otherwise,
 - $T_{first_target-PL-RS_List} = T_{first_target-PL-RS_SC}$
 - $T_{target-PL-RS_List} = T_{target-PL-RS_SC}$.
 - $T_{first_target-PL-RS_SC}$ is $T_{first_target-PL-RS}$ for serving cell
 - $T_{first_target-PL-RS_CDP}$ is $T_{first_target-PL-RS}$ for cell with different PCI from serving cell
 - $T_{target-PL-RS_SC}$ is $T_{target-PL-RS}$ for serving cell
 - $T_{target-PL-RS_CDP}$ is $T_{target-PL-RS}$ for cell with different PCI from serving cell- T_{HARQ} , $T_{first_target-PL-RS}$, $T_{target-PL-RS}$ are defined in clause 8.16.3.

The requirements specified in this clause do not apply if more than 4 different RSs are activated as PL-RS per serving cell among all active UL (or joint) TCI states.

When UE receives PDSCH carrying MAC-CE for active TCI state list update, and

- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*joint*', or
- higher layer configuration '*unifiedTCI-StateType-r17*' is set to '*separate*', while the target TCI list comprises at least one DL TCIs and at least one UL TCIs,

UE is not expected to transmit on UL based on the target TCI before UE completes the DL and UL TCI list update.

The requirements in this clause are applicable when the source RS of the active UL TCI state is a DL-RS and this DL-RS is included as one of the source RSs in the DL active TCI list.

8.17 SCG Activation and Deactivation Delay

8.17.1 Introduction

This clause defines requirements for the delay within which the UE shall be able to activate one SCG and deactivate on SCG.

The requirements shall apply for NR-DC with an NR PCell, PSCell or SCell.

8.17.2 SCG Activation Delay Requirement

The requirements in this clause shall apply for the UE configured with one deactivated SCG in NR-DC and when PSCell in one SCG is being activated.

The delay within which the UE shall be able to activate the deactivated SCG depends upon the specified conditions.

Upon receiving SCG activation command in slot n , the UE shall be capable to transmit PRACH preamble or PUCCH or PUSCH towards PSCell no later than in slot $n + \frac{T_{\text{activation_time}}}{\text{NR slot length}}$,

where:

$$T_{\text{activation_time}} = T_{\text{RRC_delay}} + T_{\text{processing}} + T_{\text{search}} + T_{\Delta} + T_{\text{IU}} + 2 \text{ ms}$$

$T_{\text{RRC_delay}}$ is the RRC procedure delay as specified in TS 38.331 [2].

$T_{\text{processing}}$ is the SW processing time needed by UE, including RF warm up period. When PSCell is activated from deactivated state, if any PSCell parameter is modified, $T_{\text{processing}} = 20\text{ms}$. Otherwise, $T_{\text{processing}} = 5 \text{ ms}$.

T_{search} is the time for AGC settling and PSS/SSS detection.

For RACH based PSCell activation, if the FR2 PSCell is known, $T_{\text{search}} = 0 \text{ ms}$. If the FR2 PSCell is unknown and $E_s/I_{\text{ot}} \geq -2 \text{ dB}$, then $T_{\text{search}} = 24 * T_{\text{rs}} \text{ ms}$.

For RACH-less based PSCell activation, if *bfd-and-RLM* is configured and TCI state is known, $T_{\text{search}} = 0 \text{ ms}$. There are no requirements if TCI state is unknown.

T_{Δ} is time for fine time tracking and acquiring full timing information of the target PSCell. $T_{\Delta} = 1 * T_{\text{rs}} \text{ ms}$.

T_{IU} : When RACH based PSCell activation is configured, it is the delay uncertainty in acquiring the first available PRACH occasion in the PSCell. T_{IU} is up to the summation of SSB to PRACH occasion association period and 10 ms. SSB to PRACH occasion associated period is defined in Table 8.1-1 of TS 38.213 [3].

When RACH-less based PSCell activation is configured, it is the uncertainty in acquiring the first PUSCH transmission occasion [or SR on PUCCH].

T_{rs} is the SMTC periodicity of the PSCell if the UE has been provided with an SMTC configuration for the target cell in SCG activation command, otherwise T_{rs} is the SMTC configured in the measObjectNR having the same SSB frequency and subcarrier spacing. If the UE is not provided SMTC configuration or measurement object on this frequency, the requirement in this clause is applied with $T_{\text{rs}} = 5 \text{ ms}$ assuming the SSB transmission periodicity is 5 ms. There is no requirement if the SSB transmission periodicity is not 5.

In FR2, the PSCell is known if it has been meeting the following conditions:

- During the last 5 seconds before the reception of the SCG activation command:
- the UE has sent a valid measurement report for the PSCell being activated and
- One of the SSBs measured from the PSCell being activated remains detectable according to the cell identification conditions specified in clause 9.3.
- One of the SSBs measured from PSCell being activated also remains detectable during the PSCell activation delay $T_{\text{activation_time}}$ according to the cell identification conditions specified in clause 9.3.

otherwise it is unknown.

If the UE is configured to perform *bfd-and-RLM* while the SCG is deactivated

- The TCI state is known if all the following conditions are met:
 - During the period from the reception of the RRC command to deactivate the PCell to the first transmission towards PCell on PUCCH or PUSCH:
 - UE has not detected beam failure
 - The side condition $\hat{E}_s/I_{ot} \geq -3\text{dB}$ is fulfilled for the RSs configured for *bfd-and-RLM* for the PCell being activated
 - The SSB measured remains detectable according to the cell identification conditions specified in clause 9.2.
- Otherwise, the TCI state is unknown.

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.17.3 SCG Deactivation Delay Requirement

The requirements in this clause shall apply for a UE which is configured with at least PCell and PSCell.

Upon receiving RRC-based SCG deactivation command in subframe n , the UE shall accomplish the deactivation actions specified in TS 38.331 [2] no later than in slot $n + \frac{T_{RRC_delay}}{NR\ slot\ length}$:

where

T_{RRC_delay} is the RRC procedure delay as specified in TS 38.331 [2].

The PCell interruption specified in clause 8.2 is allowed only during the RRC reconfiguration procedure [2].

8.18 TRP specific Link Recovery Procedures

8.18.1 Introduction

The UE shall assess the downlink radio link quality of a serving cell based on the reference signal provided in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ as specified in TS 38.213 [3] in order to detect beam failure on:

- PCell in SA, NR-DC, or NE-DC operation mode,
- PSCell in NR-DC and EN-DC operation mode,
- SCell in SA, NR-DC, NE-DC or EN-DC operation mode.

The RS resource configurations in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ on PCell or PSCell can be periodic CSI-RS resources and/or SSBs. RS resource configuration in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ on SCell shall be periodic CSI-RS. UE is not required to perform beam failure detection outside the active DL BWP. UE is not required to meet the requirements in clause 8.18.2 and 8.18.3 if UE does not have configured sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. UE is not required to perform beam failure detection on a deactivated SCell, and also not required to perform beam failure detection on resources which is implicitly configured for a deactivated SCell. UE is not required to perform beam failure detection on a SCell on which $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ is not configured.

If *additionalPCIList* is configured for the serving cell, the SSBs in sets $\bar{q}_{0,1}$ and $\bar{q}_{1,1}$ can be associated to the same additional PCI other than serving cell PCI.

On each RS resource configuration in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$, the UE shall estimate the radio link quality and compare it to the threshold Q_{out_LR} for the purpose of accessing downlink radio link quality of the serving cell.

The threshold $Q_{\text{out_LR}}$ is defined as the level at which the downlink radio level link of a given resource configuration on two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ cannot be reliably received and shall correspond to the $\text{BLER}_{\text{out}} = 10\%$ block error rate of a hypothetical PDCCH transmission. For SSB based beam failure detection, $Q_{\text{out_LR_SSB}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.518.2.1-1. For CSI-RS based beam failure detection, $Q_{\text{out_LR_CSI-RS}}$ is derived based on the hypothetical PDCCH transmission parameters listed in Table 8.181.3.1-1.

Upon request the UE shall deliver configuration indexes from the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ as specified in TS 38.213 [3], to higher layers, and the corresponding L1-RSRP measurement provided that the measured L1-RSRP is equal to or better than the threshold $Q_{\text{in_LR}}$, which is indicated by higher layer parameter *rsrp-ThresholdSSB*. The UE applies the $Q_{\text{in_LR}}$ threshold to the L1-RSRP measurement obtained from an SSB. The UE applies the $Q_{\text{in_LR}}$ threshold to the L1-RSRP measurement obtained for a CSI-RS resource after scaling a respective CSI-RS reception power with a value provided by higher layer parameter *powerControlOffsetSS*. The RS resource configurations in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ can be periodic CSI-RS resources or SSBs or both SSB and CSI-RS resources. UE is not required to perform candidate beam detection outside the active DL BWP. UE is not required to perform candidate beam detection on a SCell on which $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ is not configured.

8.18.2 Requirements for TRP specific SSB based beam failure detection

8.18.2.1 Introduction

The requirements in this clause apply for each SSB resource in the set two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for a serving cell, provided that the SSB configured for beam failure detection is actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.18.2.2. The SSB(s) in set $\bar{q}_{0,1}$ can be associated with an additional PCI other than serving cell PCI.

Table 8.18.2.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average SSS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average SSS RE energy	0dB
Bandwidth (PRBs)	24
Sub-carrier spacing (kHz)	Same as the SCS of RMSI CORESET
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.18.2.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the configured SSB resource in two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ estimated over the last $T_{\text{Evaluate_BFD_SSB}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_SSB}}$ within $T_{\text{Evaluate_BFD_SSB}}$ ms period.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.18.2.2-1 for FR1.

The value of $T_{\text{Evaluate_BFD_SSB}}$ is defined in Table 8.18.2.2-2 for FR2 with scaling factor $N=8$

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB.

- $P=1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC period ($T_{SSB} = T_{SMTCperiod}$).
- $P = \frac{1}{1 - \frac{T_{SSB}}{MGRP} - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{SMTCperiod} \neq MGRP$ or
 - $T_{SMTCperiod} = MGRP$ and $T_{SSB} < 0.5 * T_{SMTCperiod}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{SSB}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod} = MGRP$ and $T_{SSB} = 0.5 * T_{SMTCperiod}$
- $P = \frac{1}{1 - \frac{T_{SSB}}{T_{SMTCperiod}}}$, when the BFD-RS resource is partially overlapped with measurement gap ($T_{SSB} < MGRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{SSB}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by SSB-ToMeasure and 1 data symbol before each consecutive SSB symbols indicated by SSB-ToMeasure and 1 data symbol after each consecutive SSB symbols indicated by SSB-ToMeasure, given that SSB-ToMeasure is configured, where the SSB-ToMeasure is the union set of SSB-ToMeasure from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by ss-RSSI-Measurement and 1 data symbol before each RSSI symbol indicated by ss-RSSI-Measurement and 1 data symbol after each RSSI symbol indicated by ss-RSSI-Measurement, given that ss-RSSI-Measurement is configured.
 - $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, given the SMTC offset of all CCs in FR2 provided the same offset.

Longer evaluation period would be expected if the combination of BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of P_{TRP} defined in table 8.18.2.2-2 is defined as 2, if SSB/CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ are overlapped, else it is 1.

Table 8.18.2.2-1: Evaluation period $T_{Evaluate_BFD_SSB}$ for FR1

Configuration	$T_{Evaluate_BFD_SSB}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(5 \times P) \times T_{SSB})$
DRX cycle $\leq 320\text{ms}$	$\text{Max}(50, \text{Ceil}(7.5 \times P) \times \text{Max}(T_{DRX}, T_{SSB}))$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(5 \times P) \times T_{DRX}$
Note: T_{SSB} is the periodicity of SSB in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. T_{DRX} is the DRX cycle length.	

Table 8.18.2.2-2: Evaluation period $T_{Evaluate_BFD_SSB}$ for FR2

Configuration	$T_{Evaluate_BFD_SSB}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(5 \times P \times N^*P_{TRP}) \times T_{SSB})$
DRX cycle $\leq 320\text{ms}$	$\text{Max}(50, \text{Ceil}(7.5 \times P \times N^*P_{TRP}) \times \text{Max}(T_{DRX}, T_{SSB}))$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(5 \times P \times N^*P_{TRP}) \times T_{DRX}$
Note: T_{SSB} is the periodicity of SSB in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. T_{DRX} is the DRX cycle length.	

8.18.2.3 Measurement restriction for SSB based beam failure detection

The UE is required to be capable of measuring SSB for BFD without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following scenarios.

For FR1, when the SSB for BFD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for BFD measurement without any restriction;
- If SSB and CSI-RS have different SCS,
 - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for BFD measurement without any restriction.
 - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined.

For FR2, when the SSB for BFD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for BFD measurement and CSI-RS. Longer measurement period for SSB based BFD measurement is expected, and no requirements are defined. When the SSB and CSI-RS for BFD measurements are from different sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$, UE shall be able to perform measure both SSB and CSI-RS for BFD measurements.

For FR2, when the SSB for BFD measurement on one CC is in the same or adjacent OFDM symbol as SSB with a different PCI for RLM, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs with the two different PCIs. Longer measurement period for SSB based BFD is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for BFD measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions on the other band, provided that UE is capable of independent beam management on this FR2 band pair.

8.18.3 Requirements for CSI-RS based beam failure detection

8.18.3.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ of resource configurations for a serving cell, provided that the CSI-RS resource(s) in two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ for beam failure detection are actually transmitted within the UE active DL BWP during the entire evaluation period specified in clause 8.18.3.2. UE is not expected to perform beam failure detection measurements on the CSI-RS configured for BFD if the CSI-RS is not QCL-ed, with QCL-TypeD when applicable, with the RS in the active TCI state of any CORESET configured in the UE active BWP.

Table 8.18.3.1-1: PDCCH transmission parameters for beam failure instance

Attribute	Value for BLER
DCI format	1-0
Number of control OFDM symbols	2
Aggregation level (CCE)	8
Ratio of hypothetical PDCCH RE energy to average CSI-RS RE energy	0dB
Ratio of hypothetical PDCCH DMRS energy to average CSI-RS RE energy	0dB
Bandwidth (PRBs)	48
Sub-carrier spacing (kHz)	SCS of the active DL BWP
DMRS precoder granularity	REG bundle size
REG bundle size	6
CP length	Normal
Mapping from REG to CCE	Distributed

8.18.3.2 Minimum requirement

UE shall be able to evaluate whether the downlink radio link quality on the CSI-RS resource in two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ estimated over the last $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period becomes worse than the threshold $Q_{\text{out_LR_CSI-RS}}$ within $T_{\text{Evaluate_BFD_CSI-RS}}$ ms period.

The value of $T_{\text{Evaluate_BFD_CSI-RS}}$ is defined in Table 8.18.3.2-1 for FR1.

The value of $T_{\text{Evaluate_BFD_CSI-RS}}$ is defined in Table 8.18.3.2-2 for FR2 with $N=1$. The requirements of $T_{\text{Evaluate_BFD_CSI-RS}}$ apply provided that the CSI-RS for BFD is not in a resource set configured with repetition ON. The requirements shall not apply when the CSI-RS resource in the active TCI state of CORESET is the same CSI-RS resource for BFD and the TCI state information of the CSI-RS resource is not given, wherein the TCI state information means QCL Type-D to SSB for L1-RSRP or CSI-RS with repetition ON.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS.
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when the BFD-RS resource is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < MGRP$)

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when the BFD-RS resource is not overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq MGRP$ or
 - $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when the BFD-RS resource is partially overlapped with measurement gap ($T_{\text{CSI-RS}} < MGRP$) and the BFD-RS resource is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when the BFD-RS resource is partially overlapped with measurement gap and the BFD-RS resource is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the BFD-RS resource outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ corresponds to the value of higher layer parameter *smtc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Note: The overlap between CSI-RS for BFD and SMTC means that CSI-RS for BFD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the BFD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer BFD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{BFD} used in Table 8.18.3.2-1 and Table 8.18.3.2-2 are defined as

- $M_{\text{BFD}} = 10$, if the CSI-RS resource(s) in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ used for BFD is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{BFD} used in Table 8.18.3.2-1 and Table 8.18.3.2-2 are defined as

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{\text{BFD}} = 1$.

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for PSCell in NR-DC

$P_{\text{BFD}} = 2$ if UE is configured for beam failure detection on SCell, 1 otherwise.

For each CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ configured for a SCell

- $P_{\text{BFD}} = Z$ in EN-DC or NE-DC or SA.
- $P_{\text{BFD}} = 2 * Z$ in NR-DC.

Where Z is the number of band(s) on which UE is performing beam failure detection only for SCell.

The values of P_{TRP} define in table 8.518.3.2-2 is defined as 2, if SSB/CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ are overlapped, else it is 1.

Table 8.18.2-1: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS}}$ for FR1

Configuration	$T_{\text{Evaluate_BFD_CSI-RS}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{CSI-RS}})$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{BFD}} \times P \times P_{\text{BFD}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. T_{DRX} is the DRX cycle length.	

Table 8.18.3.2-2: Evaluation period $T_{\text{Evaluate_BFD_CSI-RS}}$ for FR2

Configuration	$T_{\text{Evaluate_BFD_CSI-RS}}$ (ms)
no DRX	$\text{Max}(50, \text{Ceil}(M_{\text{BFD}} \times P \times N \times P_{\text{BFD}} * P_{\text{TRP}}) \times T_{\text{CSI-RS}})$
DRX cycle ≤ 320 ms	$\text{Max}(50, \text{Ceil}(1.5 \times M_{\text{BFD}} \times P \times N \times P_{\text{BFD}} * P_{\text{TRP}}) \times \text{Max}(T_{\text{DRX}}, T_{\text{CSI-RS}}))$
DRX cycle > 320 ms	$\text{Ceil}(M_{\text{BFD}} \times P \times N \times P_{\text{BFD}} * P_{\text{TRP}}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$. T_{DRX} is the DRX cycle length.	

8.18.3.3 Measurement restrictions for CSI-RS beam failure detection

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

The UE is required to be capable of measuring CSI-RS for BFD without measurement gaps. The UE is required to perform the CSI-RS measurements with measurement restrictions as described in the following scenarios.

For both FR1 and FR2, when the CSI-RS for BFD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for BFD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for BFD measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for BFD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for BFD measurement and SSB. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for BFD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for BFD measurement and the other CSI-RS. Longer measurement period for CSI-RS based BFD measurement is expected, and no requirements are defined.
 - The CSI-RS for BFD measurement or the other CSI-RS in a resource set configured with repetition ON, or
 - The other CSI-RS is configured in two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ and beam failure is detected, or
 - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for BFD measurement without any restriction.

When two CSI-RSs for BFD measurements are from different sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$, UE shall be able to perform measure both CSI-RSs for BFD measurements.

8.18.4 Minimum requirement for L1 indication

When more than one TRP is configured with different resource set for each TRP, requirements specified in 8.5.4 shall apply for each TRP.

8.18.5 Requirements for SSB based candidate beam detection

8.18.5.1 Introduction

The requirements in this clause apply for each SSB resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for a serving cell, provided that the SSBs configured for candidate beam detection (CBD) are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.18.5.2. The SSB(s) in set $\bar{q}_{1,1}$ can be associated with an additional PCI other than serving PCI.

8.18.5.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured SSB resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$, estimated over the last $T_{\text{Evaluate_CBD_SSB}}$ ms period becomes better than the threshold $Q_{\text{in_LR}}$ provided SSB_{RP} and SSB_{Es/Iot} are according to Annex Table B.2.4.1 for a corresponding band.

The UE shall monitor the configured SSB resources using the evaluation period in table 8.18.5.2-1 and 8.18.5.2-2 corresponding to the non-DRX mode, if the configured DRX cycle ≤ 320 ms.

The value of $T_{\text{Evaluate_CBD_SSB}}$ is defined in Table 8.18.5.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_SSB}}$ is defined in Table 8.18.5.2-2 for FR2 with scaling factor $N=8$.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB,
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$).
- P is $P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC period ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}} - \frac{T_{\text{SSB}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq \text{MGRP}$ or
 - $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = \text{MGRP}$ and $T_{\text{SSB}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{SSB}}}{\text{Min}(\text{MGRP}, T_{\text{SMTCperiod}})}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{SSB}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{SSB}}}{\text{MGRP}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{SSB}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < \text{MGRP}$)
- $P_{\text{sharing factor}} = 1$, if the candidate beam detection RS outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smtc2* is present, $T_{\text{SMTCperiod}}$ follows *smtc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smtc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of P_{CBD} used in Table 8.18.5.2-1 and Table 8.18.5.2-2 are defined as

For each SSB resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{\text{CBD}} = 1$.

For each SSB resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PSCell in NR-DC

- $P_{\text{CBD}} = 2$ if UE is configured for candidate beam detection on SCell, 1 otherwise.

For each SSB resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for a SCell

- $P_{\text{CBD}} = Z$ in EN-DC or NE-DC or SA.
- $P_{\text{CBD}} = 2 * Z$ in NR-DC.

Where Z is the number of band(s) on which UE is performing candidate beam detection only for SCell

- P_{CBD} is the number of band(s) on which UE is performing candidate beam detection only for SCell.

The values of P_{TRP} defined in table 8.18.5.2-2 is defined as 2, if SSB/CSI-RS resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ are overlapped, else it is 1.

Table 8.18.5.2-1: Evaluation period $T_{\text{Evaluate_CBD_SSB}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_SSB}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(3 \times P \times P_{\text{CBD}}) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$. T_{DRX} is the DRX cycle length.	

Table 8.18.5.2-2: Evaluation period $T_{\text{Evaluate_CBD_SSB}}$ for FR2

Configuration	$T_{\text{Evaluate_CBD_SSB}}$ (ms)
non-DRX, DRX cycle $\leq 320\text{ms}$	$\text{Max}(25, \text{Ceil}(3 \times P \times N \times P_{\text{CBD}} \times P_{\text{TRP}}) \times T_{\text{SSB}})$
DRX cycle $> 320\text{ms}$	$\text{Ceil}(3 \times P \times N \times P_{\text{CBD}} \times P_{\text{TRP}}) \times T_{\text{DRX}}$
Note: T_{SSB} is the periodicity of SSB in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$. T_{DRX} is the DRX cycle length.	

8.18.5.3 Measurement restriction for SSB based candidate beam detection

For FR1, when the SSB for CBD measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for CBD measurement without any restrictions.
- If SSB and CSI-RS have different SCS-es,
- If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for CBD measurement without any restriction.

- If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for CBD measurement and CSI-RS. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined. When the SSB and CSI-RS for CBD measurements are from different sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$, UE shall be able to measure both SSB and CSI-RS for CBD measurements.

For FR2, when the SSB for CBD measurement on one CC is in the same OFDM symbol as SSB with a different PCI for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs with the two different PCIs. Longer measurement period for SSB based CBD measurement is expected, and no requirements are defined.

For FR2, if network configures same or mixed numerology between SSB for CBD measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

8.18.6 Requirements for CSI-RS based candidate beam detection

8.18.6.1 Introduction

The requirements in this clause apply for each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for a serving cell, provided that the CSI-RS resources configured for candidate beam detection are actually transmitted within UE active DL BWP during the entire evaluation period specified in clause 8.18.6.2.

8.18.6.2 Minimum requirement

Upon request the UE shall be able to evaluate whether the L1-RSRP measured on the configured CSI-RS resource in sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ estimated over the last $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period becomes better than the threshold $Q_{\text{in_LR}}$ within $T_{\text{Evaluate_CBD_CSI-RS}}$ [ms] period provided CSI-RS $\hat{E}_s/\text{Iot}$ is according to Annex Table B.2.4.2 for a corresponding band.

The UE shall monitor the configured CSI-RS resources using the evaluation period in table 8.18.6.2-1 and 8.18.6.2-2 corresponding to the non-DRX mode, if the configured DRX cycle $\leq 320\text{ms}$.

The value of $T_{\text{Evaluate_CBD_CSI-RS}}$ is defined in Table 8.18.6.2-1 for FR1.

The value of $T_{\text{Evaluate_CBD_CSI-RS}}$ is defined in Table 8.18.6.2-2 for FR2 with scaling factor $N=8$.

For FR1,

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- $P = 1$ when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- $P = 1$, when candidate beam detection RS is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$ when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is not overlapped with SMTC occasion ($T_{\text{CSI-RS}} < MGRP$)

- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$).
- $P = P_{\text{sharing factor}}$, when candidate beam detection RS is not overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$).
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{MGRP} - \frac{T_{\text{CSI-RS}}}{T_{\text{SMTCperiod}}}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and
 - $T_{\text{SMTCperiod}} \neq MGRP$ or
 - $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} < 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{P_{\text{sharing factor}}}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is not overlapped with measurement gap and $T_{\text{SMTCperiod}} = MGRP$ and $T_{\text{CSI-RS}} = 0.5 \times T_{\text{SMTCperiod}}$
- $P = \frac{1}{1 - \frac{T_{\text{CSI-RS}}}{\text{Min}(MGRP, T_{\text{SMTCperiod}})}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is partially overlapped with SMTC occasion ($T_{\text{CSI-RS}} < T_{\text{SMTCperiod}}$) and SMTC occasion is partially or fully overlapped with measurement gap
- $P = \frac{3}{1 - \frac{T_{\text{CSI-RS}}}{MGRP}}$, when candidate beam detection RS is partially overlapped with measurement gap and candidate beam detection RS is fully overlapped with SMTC occasion ($T_{\text{CSI-RS}} = T_{\text{SMTCperiod}}$) and SMTC occasion is partially overlapped with measurement gap ($T_{\text{SMTCperiod}} < MGRP$)
- $P_{\text{sharing factor}} = 1$, if the candidate beam detection RS outside measurement gap is
 - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and;
 - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{\text{sharing factor}} = 3$, otherwise.

where,

If the high layer in TS 38.331 [2] signaling of *smc2* is present, $T_{\text{SMTCperiod}}$ follows *smc2*; Otherwise $T_{\text{SMTCperiod}}$ follows *smc1*. $T_{\text{SMTCperiod}}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Note: The overlap between CSI-RS for CBD and SMTC means that CSI-RS for CBD is within the SMTC window duration.

Longer evaluation period would be expected if the combination of the CBD-RS resource, SMTC occasion and measurement gap configurations does not meet previous conditions..

Longer evaluation period would be expected if the CSI-RS is on the same OFDM symbols with RLM, BFD, BM-RS, or other CBD-RS, according to the measurement restrictions defined in clause 8.18.6.3.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{\text{identify_CGI}}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer CBD evaluation period would be expected during the period $T_{\text{identify_CGI,E-UTRAN}}$ when the UE is requested to decode an LTE CGI.

The values of M_{CBD} used in Table 8.18.6.2-1 and Table 8.18.6.2-2 are defined as

- $M_{CBD} = 3$, if the CSI-RS resource configured in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ is transmitted with Density = 3 and over the bandwidth ≥ 24 PRBs.

The values of P_{CBD} used in Table 8.18.6.2-1 and Table 8.18.6.2-2 are defined as

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PCell or PSCell in EN-DC or NE-DC or SA; or PCell in NR-DC

- $P_{CBD} = 1$.

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for PSCell in NR-DC

- $P_{CBD} = 2$ if UE configured for candidate beam detection on SCell, 1 otherwise.

For each CSI-RS resource in the sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ configured for a SCell

- $P_{CBD} = Z$ in EN-DC or NE-DC or SA.
- $P_{CBD} = 2 * Z$ in NR-DC.

Where Z is the number of band(s) on which UE is performing candidate beam detection only for SCell

- P_{CBD} is the number of band(s) on which UE is performing candidate beam detection only for SCell.

The values of P_{TRP} defined in table 8.18.6.2-2 is defined as 2, if SSB/CSI-RS resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$ are overlapped, else it is 1.

Table 8.18.6.2-1: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS}}$ for FR1

Configuration	$T_{\text{Evaluate_CBD_CSI-RS}}$ (ms)
non-DRX, DRX cycle ≤ 320 ms	$\text{Max}(25, \text{Ceil}(M_{CBD} \times P \times P_{CBD}) \times T_{\text{CSI-RS}})$
DRX cycle > 320 ms	$\text{Ceil}(M_{CBD} \times P \times P_{CBD}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$. T_{DRX} is the DRX cycle length.	

Table 8.18.6.2-2: Evaluation period $T_{\text{Evaluate_CBD_CSI-RS}}$ for FR2

Configuration	$T_{\text{Evaluate_CBD_CSI-RS}}$ (ms)
non-DRX, DRX cycle ≤ 320 ms	$\text{Max}(25, \text{Ceil}(M_{CBD} \times P \times N \times P_{CBD} \times P_{TRP}) \times T_{\text{CSI-RS}})$
DRX cycle > 320 ms	$\text{Ceil}(M_{CBD} \times P \times N \times P_{CBD} \times P_{TRP}) \times T_{\text{DRX}}$
Note: $T_{\text{CSI-RS}}$ is the periodicity of CSI-RS resource in the two sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$. T_{DRX} is the DRX cycle length.	

8.18.6.3 Measurement restriction for CSI-RS based candidate beam detection

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI.

For both FR1 and FR2, when the CSI-RS for CBD measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for CBD measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for CBD measurement, the UE shall be able to perform CSI-RS based CBD measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS based CBD measurement for without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer measurement period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for CBD measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for CBD measurement without any restriction.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and SSB. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for CBD measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both CSI-RS for CBD measurement and the other CSI-RS. Longer evaluation period for CSI-RS based CBD measurement is expected, and no requirements are defined. When two CSI-RSs for CBD measurements are from different sets $\bar{q}_{1,0}$ and $\bar{q}_{1,1}$, UE shall be able to measure both CSI-RSs for CBD measurements.

8.18.7 Requirements for TRP specific Beam Failure Recovery

8.18.7.1 Introduction

For the UE provided with a configuration of PUCCH transmission with a link recovery request (LRR) as described in clause 9.2.4 in TS 38.213 [3], if beam recovery procedure is triggered for any of the TRPs, the UE shall transmit SR for UL resource, followed by MAC CE providing beam index for the corresponding TRP whose radio link quality is worse than $Q_{out,LR}$. The index, q_{new} , provided in the TRP specific BFR MAC CE is provided by higher layer for a periodic CSI-RS configuration or for a SSB, as described in clause 5.17 of TS38.321 [7].

For the UE not provided with a configuration of PUCCH transmission with a link recovery request (LRR) as described in clause 9.2.4 in TS 38.213 [3], if beam recovery procedure is triggered for any of TRPs, the UE shall transmit preamble for UL-SCH resource application, followed by MAC CE providing one index for the corresponding TRP whose radio link quality is worse than $Q_{out,LR}$, and the index q_{new} for a periodic CSI-RS configuration or for a SSB provided by higher layer, as described in clause 5.17 of TS38.321 [7], if any, for a corresponding TRP.

8.18.7.2 Requirement

Provided that UE is configured by *schedulingRequestID-BFR-r17* and/or *schedulingRequestID-BFR2-r17* for BFR set 1 (i.e., TRP1) and BFR set 2 (i.e., TRP2) respectively, a configuration for LRR in a PUCCH transmission, after BFR is triggered on any of the TRPs as described in clause 5.17 of TS38.321 [7], UE shall be capable of transmit PUCCH with a LRR within a period of T on any of the TRPs where BFR running. Where:

- $T = T_1 \times \text{Ceil}((T_2+D)/T_1)$ in which T_1 , T_2 and D are defined as
 - T_1 is equal to the periodicity of PUCCH configured with *schedulingRequestID-BFR-r17* for BFR set 1 *schedulingRequestID-BFR2-r17* for BFR set 2..
 - $T_2 = T_{\text{Evaluate_CBD}}$ is the evaluation period specified in clause 8.18.5 or 8.18.6 for SSB or CSI-RS based candidate beam detection, that is $T_{\text{Evaluate_CBD_SSB}}$ or $T_{\text{Evaluate_CBD_CSI-RS}}$, depending on the applicable reference signal configured for candidate beam detection.
 - $D = [2\text{ms}]$ is the UE Processing time.

8.18.8 Scheduling availability of UE during TRP specific beam failure detection

Scheduling availability restrictions when the UE is performing TRP specific beam failure detection are described in the following clauses.

8.18.8.1 Scheduling availability of UE performing TRP specific beam failure detection with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to TRP specific beam failure detection performed on SSB and CSI-RS configured for BFD with the same SCS as PDSCH or PDCCH in FR1.

8.18.8.2 Scheduling availability of UE performing TRP specific beam failure detection with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to TRP specific beam failure detection when SSB is configured as BFD. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to TRP specific beam failure detection when SSB is configured as BFD.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for TRP specific beam failure detection.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on FR1 serving PCell or PSCell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which PCell or PSCell is configured.

8.18.8.3 Scheduling availability of UE performing TRP specific beam failure detection on FR2

The following scheduling restriction applies due to TRP specific beam failure detection.

- For the case where no RSs are provided for BFD, or when CSI-RS is configured for BFD is explicitly configured and is type-D QCLed with active TCI state for PDCCH or PDSCH, and the CSI-RS is not in a CSI-RS resource set with repetition ON
- There are no scheduling restrictions due to TRP specific beam failure detection performed based on the CSI-RS.
- Otherwise
 - The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH or CSI-RS for tracking or CSI-RS for CQI on BFD-RS resource symbols to be measured for TRP specific beam failure detection.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions on FR2 serving PCell or PSCell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to beam failure detection performed on FR2 serving cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for BFD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for BFD measurement.

8.18.8.4 Scheduling availability of UE performing TRP specific beam failure detection on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR DC

There are no scheduling restrictions on FR1 serving cell(s) due to TRP specific beam failure detection performed on FR2 serving PCell and/or PSCell.

There are no scheduling restrictions on FR2 serving cell(s) due to TRP specific beam failure detection performed on FR1 serving PCell and/or PSCell.

8.18.9 Scheduling availability of UE during TRP specific candidate beam detection

Scheduling availability restrictions when the UE is performing L1-RSRP measurement for TRP specific candidate beam detection are described in the following clauses.

8.18.9.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as TRP specific link recovery detection resource with the same SCS as PDSCH or PDCCH in FR1.

8.18.9.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as TRP specific link recovery detection resource. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured as TRP specific link recovery detection resource.

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, TRS, CSI-RS for tracking or CSI-RS for CQI on SSB symbols to be measured for L1-RSRP.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on one serving cell apply to all other serving cells in the same band on the symbols that fully or partially overlap with the restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands.

8.18.9.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to TRP specific candidate beam detection

- The UE is not expected to transmit PUCCH, PUSCH or SRS or receive PDCCH, PDSCH, CSI-RS for tracking or CSI-RS for CQI on reference symbols to be measured for TRP specific candidate beam detection.

When intra-band carrier aggregation in FR2 is configured, the scheduling restrictions on to one serving cell apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to candidate beam detection performed on FR2 serving cell(s) in different band(s), provided that the FR2 serving cell(s) and the FR2 serving cell(s) for candidate beam detection are in a FR2 band pair and UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is

configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

For FR2, if following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for CBD measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for CBD measurement.

8.18.9.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA and NR-DC

There are no scheduling restrictions on FR1 serving cell(s) due to L1-RSRP measurement performed on FR2 serving cell(s).

There are no scheduling restrictions on FR2 serving cell(s) due to L1-RSRP measurement performed on FR1 serving cell(s).

8.19 Pre-configured measurement gap activation/deactivation delay

8.19.1 Introduction

The requirements in this clause apply for a UE configured with PCell or any activated SCell in standalone NR.

UE shall complete the activation/deactivation of pre-configured measurement gap within the delay defined in this clause.

8.19.2 Pre-configured measurement gap activation/deactivation upon DCI/timer-based BWP switch

8.19.2.1 Activation/deactivation upon DCI/timer-based BWP switch delay on a single CC

The requirements in this clause only apply to the case that the DCI/timer-based BWP switch is performed on a single CC with more than one BWP configurations configured on the CC.

When BWP switch occurs, which results in status change of pre-configured measurement gap according to clause 9.1.7, UE shall be able to finish pre-configured measurement gap activation or deactivation within 5 ms after the completion of the active BWP switch. The active BWP switch delay for single CC is defined in clause 8.6.2.

Activation/deactivation of Pre-MG takes effect from the first complete MG occasion after the activation and deactivation delay. If the end of activation/deactivation of Pre-MG is within a Pre-MG gap occasion, the Pre-MG status shall not be changed immediately. Instead, the Pre-MG status shall be changed prior to the next Pre-MG gap occasion.

8.19.3 Pre-configured measurement gap activation/deactivation upon SCell activation/deactivation

The requirements in this clause apply when one SCell or multiple SCells are activated/deactivated.

When one SCell or multiple SCells are activated/deactivated, which results in status change of pre-configured measurement gap according to clause 9.1.7, UE shall be able to finish pre-configured measurement gap activation or deactivation within 5 ms after the completion of SCell(s) activation/deactivation. The SCell(s) activation/deactivation delay for is defined in clause 8.3. Activation/deactivation of Pre-MG takes effect from the first complete MG occasion after the SCell(s) activation/deactivation delay. If the end of activation/deactivation of Pre-MG is within a Pre-MG gap occasion, the Pre-MG status shall not be changed immediately. Instead, the Pre-MG status shall be changed prior to the next Pre-MG gap occasion.

8.19.4 Pre-configured measurement gap activation/deactivation upon RRC reconfiguration

The requirements in this clause apply when UE is triggered by the RRC based events defined in clause 9.1.7.3.1 if UE supports autonomous activation/deactivation mechanism and/or in clause 9.1.7.3.2 if UE supports network-controlled activation/deactivation mechanism.

If the aforementioned RRC reconfiguration results in status change of pre-configured measurement gap according to clause 9.1.7, UE shall be able to finish pre-configured measurement gap activation or deactivation within 5 ms after RRC processing delay specified in [2]. If the end of activation/deactivation of Pre-MG is within a Pre-MG gap occasion, the Pre-MG status shall not be changed immediately. Instead, the Pre-MG status shall be changed prior to the next Pre-MG gap occasion.

9 Measurement Procedure

9.1 General measurement requirement

9.1.1 Introduction

This clause contains general requirements on the UE regarding measurement reporting in RRC_CONNECTED state. The requirements are split in intra-frequency, inter-frequency, inter-RAT E-UTRAN FDD, inter-RAT E-UTRAN TDD, and L1-RSRP measurements requirements. These measurements may be used by the NG-RAN. The measurement quantities are defined in TS38.215 [4], the measurement model is defined in TS38.300 [10], TS37.340 [17] and measurement accuracies are specified in clause 10. Control of measurement reporting is specified in TS 38.331 [2].

In the requirements of clause 9, the exceptions for side conditions apply as follows:

- for the UE capable of CA but not configured with any SCell, the applicable exceptions for side conditions are specified in Annex B, clause B.3.2.1 for UE supporting CA in FR1, and clause B.3.2.3 for UE supporting CA in FR2, respectively;
- for the UE capable of CA and configured with at least one SCell, the applicable exceptions for side conditions are specified in Annex B, clause B.3.2.2 for UE configured with CA in FR1, and clause B.3.2.4 for UE supporting CA in FR2, respectively;
- for the UE capable of SUL but not configured with SUL, the applicable exceptions for side conditions are specified in Annex B, clause B.3.4.1 for UE supporting SUL in FR1;
- for the UE capable of SUL and configured with at least one SUL, the applicable exceptions for side conditions are specified in Annex B, clause B.3.4.2 for UE configured with SUL in FR1.

9.1.2 Measurement gap

If the UE requires measurement gaps to identify and measure intra-frequency cells and/or inter-frequency cells and/or inter-RAT E-UTRAN cells, and the UE does not support independent measurement gap patterns for different frequency ranges as specified in Table 5.1-1 in [18, 19, 20], in order for the requirements in the following clauses to apply the network must provide a single per-UE measurement gap pattern for concurrent monitoring of all frequency layers.

If the UE requires measurement gaps to identify and measure intra-frequency cells and/or inter-frequency cells and/or inter-RAT E-UTRAN cells, and the UE supports independent measurement gap patterns for different frequency ranges as specified in Table 5.1-1 in [18, 19, 20], in order for the requirements in the following clauses to apply the network must provide either per-FR measurement gap patterns for frequency range where UE requires per-FR measurement gap for concurrent monitoring of all frequency layers of each frequency range independently, or a single per-UE measurement gap pattern for concurrent monitoring of all frequency layers of all frequency ranges.

If the UE is configured via LPP [34] to measure PRS for any RSTD, PRS-RSRP, UE Rx-Tx time difference measurement and PRS-RSRPP measurement defined in TS 38.215 [4], in order for the requirements in clauses 9.9.2, 9.9.3, 9.9.4 and 9.9.6 to apply, the network must provide

- a single per-UE measurement gap pattern for concurrent monitoring of all positioning frequency layers and intra-frequency, inter-frequency and/or inter-RAT frequency layers of all frequency ranges, or
- if UE supports independent measurement gap patterns for different frequency ranges for PRS measurement, i.e. supporting *independentGapConfigPRS-r17*, per-FR measurement gap pattern for the frequency range for concurrent monitoring of all positioning frequency layers and intra-frequency, inter-frequency cells and/or inter-RAT frequency layers in the corresponding frequency range.

During the per-UE measurement gaps the UE:

- is not required to conduct reception/transmission from/to the corresponding E-UTRAN PCell, E-UTRAN SCell(s) and NR serving cells for E-UTRA-NR dual connectivity except the reception of signals used for RRM measurement(s) and the signals used for random access procedure according to TS38.321 [7].

- is not required to conduct reception/transmission from/to the corresponding NR serving cells for SA (with single carrier or CA configured) except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to [7].
- is not required to conduct reception/transmission from/to the corresponding PCell, SCell(s) and E-UTRAN serving cells for NR-E-UTRA dual connectivity except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to [7].
- is not required to conduct reception/transmission from/to the corresponding NR serving cells for NR-DC except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to [7].

During the per-FR measurement gaps the UE:

- is not required to conduct reception/transmission from/to the corresponding E-UTRAN PCell, E-UTRAN SCell(s) and NR serving cells in the corresponding frequency range for E-UTRA-NR dual connectivity except the reception of signals used for RRM measurement(s) and the signals used for random access procedure according to TS38.321 [7].
- is not required to conduct reception/transmission from/to the corresponding NR serving cells in the corresponding frequency range for SA (with single carrier or CA configured) except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to TS38.321 [7].
- is not required to conduct reception/transmission from/to the corresponding PCell, SCell(s) and E-UTRAN serving cells in the corresponding frequency range for NR-E-UTRA dual connectivity except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to TS38.321 [7].
- is not required to conduct reception/transmission from/to the corresponding NR serving cells in the corresponding frequency range for NR-DC except the reception of signals used for RRM measurement(s), PRS measurement(s) and the signals used for random access procedure according to TS38.321 [7].

UEs shall support the measurement gap patterns listed in Table 9.1.2-1 based on the applicability specified in table 9.1.2-2 and 9.1.2-3. UE determines measurement gap timing based on gap offset configuration and measurement gap timing advance configuration provided by higher layer signalling as specified in TS 38.331 [2] and TS 36.331 [16].

Table 9.1.2-1: Gap Pattern Configurations

Gap Pattern Id	Measurement Gap Length (MGL, ms)	Measurement Gap Repetition Period (MGRP, ms)
0	6	40
1	6	80
2	3	40
3	3	80
4	6	20
5	6	160
6	4	20
7	4	40
8	4	80
9	4	160
10	3	20
11	3	160

13	5.5	40
14	5.5	80
15	5.5	160
16	3.5	20
17	3.5	40
18	3.5	80
19	3.5	160
20	1.5	20
21	1.5	40

22	1.5	80
23	1.5	160
24	10	80
25	20	160

Table 9.1.2-2: Applicability for Gap Pattern Configurations supported by the E-UTRA-NR dual connectivity UE or NR-E-UTRA dual connectivity UE

Measurement gap pattern configuration	Serving cell	Measurement Purpose ^{Note 5}	Applicable Gap Pattern Id
Per-UE Measurement gap	E-UTRA + FR1, or E-UTRA + FR2, or E-UTRA + FR1 + FR2	non-NR RAT ^{Note1,2}	0,1,2,3
		FR1 and/or FR2 ^{Note 6,7}	0-11, 24, 25
		non-NR RAT ^{Note1,2} and FR1 and/or FR2 ^{Note 6,7}	0, 1, 2, 3, 4, 6, 7, 8,10, 24
Per-FR measurement gap	E-UTRA and, FR1 if configured	non-NR RAT ^{Note1,2}	0,1,2,3
	FR2 if configured		No gap
	E-UTRA and, FR1 if configured	FR1 only ^{Note 6,7}	0-11,24,25
	FR2 if configured		No gap
	E-UTRA and, FR1 if configured	FR2 only ^{Note 6,7}	No gap
	FR2 if configured		12-25
	E-UTRA and, FR1 if configured	non-NR RAT ^{Note1,2} and FR1 ^{Note 6,7}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		No gap
	E-UTRA and, FR1 if configured	FR1 and FR2 ^{Note 6,7}	0-11,24,25
	FR2 if configured		12-25
	E-UTRA and, FR1 if configured	non-NR RAT ^{Note1,2} and FR2 ^{Note 6,7}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		12-25
	E-UTRA and, FR1 if configured	Non-NR RAT ^{Note1,2} and FR1 and FR2 ^{Note 6,7}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		12-25
Note: In E-UTRA-NR dual connectivity mode, if GSM or UTRA TDD or UTRA FDD inter-RAT frequency layer is configured to be monitored, only measurement gap pattern #0 and #1 can be used for per-FR gap in E-UTRA and FR1 if configured, or for per-UE gap. In NR-E-UTRA dual connectivity mode, if UTRA FDD inter-RAT frequency layer is configured to be monitored for SRVCC, only measurement gap pattern #0 and #1 can be used for per-FR gap in E-UTRA and FR1 if configured, or for per-UE gap. NOTE 1: In E-UTRA-NR dual connectivity mode, non-NR RAT includes E-UTRA, UTRA and/or GSM. In NR-E-UTRA dual connectivity mode, non-NR RAT means E-UTRA, and UTRA for SRVCC. NOTE 2: Void NOTE 3: When E-UTRA inter-frequency RSTD measurements are configured and the UE requires measurement gaps for performing such measurements, only Gap Pattern #0 can be used. NOTE 4: For UE supporting <i>supportedGapPattern-NRonly-NEDC</i> or <i>measGapPatterns-NRonly-ENDC-r16</i> but not supporting <i>supportedGapPattern</i> for the corresponding gap patterns among GP2-11, the corresponding gap patterns are not applicable to measurement of non-NR RATs as defined in NOTE 1. NOTE 5: Inclusion of positioning measurements: Measurement purpose which includes E-UTRA measurements includes also E-UTRA RSRP and E-UTRA RSRQ measurements for E-CID. NOTE 6: Measurement gap patterns #24 and #25 can be requested [2] only when the UE is configured at least with any of RSTD, UE Rx-Tx, PRS-RSRP or PRS-RSRPP measurements requiring such gaps and can only be used during the corresponding positioning measurement period NOTE 7: Inclusion of positioning measurements for measurement gaps: Measurement purpose which includes any of FR1 and FR2 measurements includes also RSTD, UE Rx-Tx, PRS-RSRP and PRS-RSRPP measurements			

In E-UTRA-NR dual connectivity mode,

- if per-UE measurement gap is configured with MG timing advance of T_{MG} ms, the measurement gap starts at time T_{MG} ms advanced to the end of the latest E-UTRA subframe occurring immediately before the configured measurement gap among MCG serving cells subframes.
- if per-FR measurement gap for FR1 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR1 starts at time T_{MG} ms advanced to the end of the latest E-UTRA subframe occurring immediately before the configured measurement gap among MCG serving cells subframes.
- if per-FR measurement gap for FR2 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR2 starts at time T_{MG} ms advanced to the end of the latest NR subframe occurring immediately before the configured measurement gap among SCG serving cells subframes in FR2.

In NR-E-UTRA dual connectivity mode,

- if per-UE measurement gap is configured with MG timing advance of T_{MG} ms, the measurement gap starts at time T_{MG} ms advanced to the end of the latest NR subframe occurring immediately before the configured measurement gap among MCG serving cells subframes.
- if per-FR measurement gap for FR1 is configured with MG timing advance of T_{MG} ms and UE has NR serving cell in FR1, the measurement gap for FR1 starts at time T_{MG} ms advanced to the end of the latest NR subframe occurring immediately before the configured measurement gap among MCG serving cells subframes in FR1.
- if per-FR measurement gap for FR1 is configured with MG timing advance of T_{MG} ms and UE doesn't have NR serving cell in FR1, the measurement gap for FR1 starts at time T_{MG} ms advanced to the end of the latest E-UTRA subframe occurring immediately before the configured measurement gap among SCG serving cells subframes.
- if per-FR measurement gap for FR2 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR2 starts at time T_{MG} ms advanced to the end of the latest NR subframe occurring immediately before the configured measurement gap among MCG serving cells subframes in FR2.

In NR-NR dual connectivity mode,

- If per-UE measurement gap is configured with MG timing advance of T_{MG} ms, the measurement gap starts at time T_{MG} ms advanced to the end of the latest MCG subframe occurring immediately before the configured measurement gap among MCG serving cells subframes.
- If per-FR measurement gap for FR1 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR1 starts at time T_{MG} ms advanced to the end of the latest MCG subframe occurring immediately before the configured measurement gap among MCG serving cells subframes.
- If per-FR measurement gap for FR2 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR2 starts at time T_{MG} ms advanced to the end of the latest SCG subframe occurring immediately before the configured measurement gap among SCG serving cells subframes in FR2.

T_{MG} is the MG timing advance value provided in *mgta* according to TS38.331 [2].

In determining the measurement gap starting point, UE shall use the DL timing of the latest E-UTRA or NR subframe occurring immediately before the configured measurement gap among E-UTRA or NR serving cells.

For per-FR measurement gap capable UE configured with E-UTRA-NR dual connectivity or NR-E-UTRA dual connectivity, when serving cells are in E-UTRA and FR1, measurement objects are in both E-UTRA/FR1 and FR2,

- If MN indicates UE that the measurement gap from MN applies to E-UTRA/FR1/FR2 serving cells, UE fulfils the per-UE measurement requirements for both E-UTRA/FR1 and FR2 measurement objects based on the measurement gap pattern configured by MN;
- If MN indicates UE that the measurement gap from MN applies to only LTE/FR1 serving cell(s),
 - UE fulfils the measurement requirements for FR1/LTE measurement objects based on the configured measurement gap pattern;
 - UE fulfils the requirements for FR2 measurement objects based on effective $MGRP=20ms$;

For per-FR measurement gap capable configured with E-UTRA-NR dual connectivity, NR-E-UTRA dual connectivity or NR-NR dual connectivity, when serving cells are in E-UTRA, FR1 and FR2, or in E-UTRA and FR2, or in FR1 and FR2, measurement objects are in both E-UTRA /FR1 and FR2,

- If MN indicates UE that the measurement gap from MN applies to E-UTRA/FR1/FR2 serving cells, UE fulfils the per-UE measurement requirements for both E-UTRA/FR1 and FR2 measurement objects based on the measurement gap pattern configured by MN.

Table 9.1.2-3: Applicability for Gap Pattern Configurations supported by the UE with NR standalone operation (with single carrier, NR CA and NR-DC configuration)

Measurement gap pattern configuration	Serving cell	Measurement Purpose ^{NOTE 2}	Applicable Gap Pattern Id
Per-UE measurement gap	FR1 ^{NOTE5} , or FR1 + FR2	non-NR RAT ^{NOTE3,6}	0,1,2,3
		FR1 and/or FR2 ^{NOTE 8,9}	0-11, 24, 25
		non-NR RAT and FR1 and/or FR2 ^{NOTE3,6,8,9}	0, 1, 2, 3, 4, 6, 7, 8,10, 24
	FR2 ^{NOTE5}	non-NR RAT only ^{NOTE3,6}	0,1,2,3
		FR1 only ^{NOTE 8,9}	0-11, 24, 25
		FR1 and FR2 ^{NOTE 8,9}	0-11, 24, 25
		non-NR RAT and FR1 and/or FR2 ^{NOTE3,6,8,9}	0, 1, 2, 3, 4, 6, 7, 8,10, 24
		FR2 only ^{NOTE 8,9}	12-25
Per-FR measurement gap	FR1 if configured	non-NR RAT only ^{NOTE3,6}	0,1,2,3
	FR2 if configured		No gap
	FR1 if configured	FR1 only ^{NOTE 8,9}	0-11,24,25
	FR2 if configured		No gap
	FR1 if configured	FR2 only ^{NOTE 8,9}	No gap
	FR2 if configured		12-25
	FR1 if configured	non-NR RAT and FR1 ^{NOTE3,6,8,9}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		No gap
	FR1 if configured	FR1 and FR2 ^{NOTE 8,9}	0-11, 24,25
	FR2 if configured		12-25
	FR1 if configured	non-NR RAT and FR2 ^{NOTE3,6,8,9}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		12-25
	FR1 if configured	non-NR RAT and FR1 and FR2 ^{NOTE3,6,8,9}	0, 1, 2, 3, 4, 6, 7, 8,10,24
	FR2 if configured		12-25

- NOTE 1: When E-UTRA inter-RAT RSTD measurements are configured and the UE requires measurement gaps for performing such measurements, only Gap Pattern #0 can be used.
- NOTE 2: Measurement purpose which includes E-UTRA measurements includes also inter-RAT E-UTRA RSRP and RSRQ measurements for E-CID; measurement purpose which includes E-UTRA measurements includes also E-UTRA RSRP and E-UTRA RSRQ measurements for E-CID.
- NOTE 3: Void
- NOTE 4: If per-UE measurement gap is configured with MG timing advance of T_{MG} ms, the measurement gap starts at time T_{MG} ms advanced to the end of the latest subframe occurring immediately before the configured measurement gap among all serving cells subframes. If per-FR measurement gap for FR1 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR1 starts at time T_{MG} ms advanced to the end of the latest subframe occurring immediately before the configured measurement gap among serving cells subframes in FR1. If per-FR measurement gap for FR2 is configured with MG timing advance of T_{MG} ms, the measurement gap for FR2 starts at time T_{MG} ms advanced to the end of the latest subframe occurring immediately before the configured measurement gap among serving cells subframes in FR2. T_{MG} is the MG timing advance value provided in *mgta* according to [2]. In determining the measurement gap starting point, UE shall use the DL timing of the latest subframe occurring immediately before the configured measurement gap among serving cells.
- NOTE 5: NR-DC in Rel-15 only includes the scenarios where all serving cells in MCG in FR1 and all serving cells in SCG in FR2.
- NOTE 6: In NR single carrier, NR CA, and NR-DC mode, non-NR RAT means E-UTRA, and UTRA for SRVCC. In NR single carrier, NR CA, and NR-DC mode, if UTRA FDD inter-RAT frequency layer is configured to be monitored for SRVCC, only measurement gap pattern #0 and #1 can be used for per-FR gap in E-UTRA and FR1 if configured, or for per-UE gap.
- NOTE 7: For UE only supporting *supportedGapPattern-NRonly* for any gap patterns among GP2-11, the corresponding gap patterns are not applicable to measurement of non-NR RATs as defined in NOTE 6.
- NOTE 8: Measurement gap patterns #24 and #25 can be requested [2] only when the UE is configured with any of RSTD, UE Rx-Tx, PRS-RSRP or PRS-RSRPP measurements requiring such gaps and can only be used during the corresponding positioning measurement period.
- NOTE 9: Inclusion of positioning measurements for measurement gaps: Measurement purpose which includes any of FR1 and FR2 measurements includes also RSTD, UE Rx-Tx, PRS-RSRP and PRS-RSRPP measurements.

For per-FR measurement gap capable UE in NR standalone operation (with single carrier, NR CA and NR-DC configuration), for per-FR gap based measurement, when there is no serving cell in a particular FR, where measurement objects are configured, regardless if explicit per-FR measurement gap is configured in this FR, the effective MGRP in this FR is used to determine requirements;

- 20 ms for FR2 NR measurements
- 40 ms for FR1 NR measurements
- 40 ms for LTE measurements
- 40 ms for FR1+LTE measurements

For per-FR measurement gap capable UE in NR standalone operation (with single carrier, NR CA and NR-DC configuration), when serving cells are in FR1 or FR2, measurement objects are in both E-UTRA /FR1 and FR2,

- If MN indicates UE that the measurement gap from MN applies to E-UTRA/FR1/FR2 serving cells, UE fulfils the per-UE measurement requirements for both E-UTRA/FR1 and FR2 measurement objects based on the measurement gap pattern configured by MN;

If measurement gap is configured in one FR but measurement object is not configured in the FR, the scheduling opportunity in the FR depends on the configured measurement gap pattern.

For single carrier or CA with aligned frame boundaries,

For E-UTRA-NR dual connectivity (with NR single carrier, NR CA configuration), if UE is not capable of per-FR-gap, total interruption time on SCG during MGL is defined only when $MGL(N) = 20\text{ms}, 10\text{ms}, 6\text{ms}, 4\text{ms}$ and 3ms . And if UE is capable of per-FR-gap, total interruption time on FR1 serving cells in SCG during MGL

is defined only when $MGL(N) = 20\text{ms}$, 10ms , 6ms , 4ms and 3ms , and total interruption time on FR2 serving cells in SCG during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 5.5ms , 3.5ms and 1.5ms .

For NR standalone operation (with single carrier, NR CA and NR-DC configuration), if UE is not capable of per-FR-gap, total interruption time on a serving cell during MGL is defined when $MGL(N) = 20\text{ms}$, 10ms , 6ms , 5.5ms , 4ms , 3.5ms , 3ms , and 1.5ms . And if UE is capable of per-FR-gap, total interruption time on FR1 serving cells during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 6ms , 4ms , and 3ms , and total interruption time on FR2 serving cells during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 5.5ms , 3.5ms , and 1.5ms .

For NR-E-UTRA dual connectivity (with NR single carrier, NR CA configuration), if UE is not capable of per-FR-gap, total interruption time on MCG during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 6ms , 4ms , and 3ms . And if UE is capable of per-FR-gap, total interruption time on FR1 serving cells in MCG during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 6ms , 4ms , and 3ms , and total interruption time on FR2 serving cells in MCG during MGL is defined only when $MGL(N) = 20\text{ms}$, 10ms , 5.5ms , 3.5ms , and 1.5ms .

For CA with non-aligned frame boundaries,

- The total interruption time on an SCC is the same as the case CA with aligned frame boundaries, if no SCC slots are partially overlapped with the measurement gap.
- The total interruption time on an SCC will be additionally extended by one SCC slot, if there exist SCC slots partially overlapped with the measurement gap.

(a) Measurement gap with $MGL = N(\text{ms})$ with MG timing advance of 0ms for all serving cells in synchronous EN-DC, NR standalone operation (with single carrier, NR CA and synchronous NR-DC configuration) and synchronous NE-DC, and for serving cells in MCG in NR standalone operation (with asynchronous NR-DC configuration)

(b) Measurement gap with $MGL = N(\text{ms})$ with MG timing advance of 0.5ms for all serving cells in synchronous EN-DC, NR standalone operation (with single carrier, NR CA and synchronous NR-DC configuration) and synchronous NE-DC, and for serving cells in MCG in NR standalone operation (with asynchronous NR-DC configuration)

(c) Measurement gap with MGL = N(ms) with MG timing advance of 0ms for all serving cells in asynchronous EN-DC and asynchronous NE-DC, and for serving cells in SCG in NR standalone operation (with asynchronous NR-DC configuration)

(d) Measurement gap with MGL = N(ms) with MG timing advance of 0.5ms for all serving cells in asynchronous EN-DC and asynchronous NE-DC, and for serving cells in SCG in NR standalone operation (with asynchronous NR-DC configuration)

Figure 9.1.2-1: Measurement GAP and total interruption time on serving cells for EN-DC, NR standalone operation (with single carrier, NR CA and NR-DC configuration) and NE-DC

The corresponding total number of interrupted slots on serving cells is listed in Table 9.1.2-4 for all serving cells in synchronous EN-DC, NR standalone (with single carrier, NR CA and synchronous NR-DC configuration) and NE-DC, and for serving cells in MCG in NR standalone operation (with asynchronous NR-DC configuration). The corresponding total number of interrupted slots on serving cells is listed in Table 9.1.2-4a for asynchronous EN-DC, and for serving cells in SCG in NR standalone operation (with asynchronous NR-DC configuration).

Table 9.1.2-4: Total number of interrupted slots on all serving cells during MGL for Synchronous EN-DC, NR standalone operation (with single carrier, NR CA and synchronous NR-DC configuration) and NE-DC, and on all serving cells in MCG for NR standalone operation (with asynchronous NR-DC configuration) with per-UE measurement gap or per-FR measurement gap for FR1

NR SC S (kHz)	Total number of interrupted slots on serving cells									
	When MG timing advance of 0ms is applied					When MG timing advance of 0.5ms is applied				
	MGL=20 ms	MGL=10 ms	MGL=6 ms	MGL=4 ms	MGL=3 ms	MGL=20 ms	MGL=10 ms	MGL=6 ms	MGL=4 ms	MGL=3 ms
15	20	10	6	4	3	21 ^{Note3}	11 ^{Note3}	7 ^{Note3}	5 ^{Note3}	4 ^{Note3}
30	40	20	12	8	6	40	20	12	8	6
60	80	40	24	16	12	80	40	24	16	12
120	160	80	48	32	24	160	80	48	32	24
480 ^{Note4}	640	320	192	128	96	640	320	192	128	96
480 ^{Note5}	641	321	193	129	97	641	321	193	129	97
960 ^{Note4}	1280	640	384	256	192	1280	640	384	256	192
960 ^{Note5}	1281	641	385	257	193	1281	641	385	257	193

NOTE 1: Void.

NOTE 2: NR SCSSs of 120 kHz, 480kHz and 960kHz are only applicable to the case with per-UE measurement gap.

- NOTE 3: Non-overlapped half-slots occur before and after the measurement gap. Whether a Rel-15 UE can receive and/or transmit in those half-slots is up to UE implementation.
- NOTE 4: For NR SCSs of 480kHz and 960kHz, total number of interrupted slots on all serving cells during MGL for single carrier, intra-band NR CA with per-UE measurement gap.
- NOTE 5: For NR SCSs of 480kHz and 960kHz, total number of interrupted slots on all serving cells in SCG for inter-band NR-CA and synchronous NR-DC with per-UE measurement gap.

Table 9.1.2-4a: Total number of interrupted slots on serving cells during MGL for Asynchronous EN-DC, and on all serving cells in SCG for NR standalone operation (with asynchronous NR-DC configuration) with per-UE measurement gap or per-FR measurement gap for FR1

NR SCS (kHz)	Total number of interrupted slots on serving cells									
	When MG timing advance of 0ms is applied					When MG timing advance of 0.5ms is applied

960 Note3	1281	641	385	257	193	1281	641	385	257	193
NOTE 1: Void.										
NOTE 2: NR SCSs of 120 kHz, 480kHz and 960kHz are only applicable to the case with per-UE measurement gap.										
NOTE 3: For NR SCSs of 480kHz and 960kHz, total number of interrupted slots on all serving cells in SCG for asynchronous NR-DC with per-UE measurement gap.										

In case that UE capable of per-FR measurement gap is configured with per-FR measurement gap for FR2 serving cells, total number of interrupted slots on FR2 serving cells during MGL is listed in Table 9.1.2-4b.

Table 9.1.2-4b: Total number of interrupted slots on FR2 serving cells during MGL for EN-DC, NR standalone operation (with single carrier, NR CA and NR-DC configuration) and NE-DC with per-UE measurement gap or per-FR measurement gap for FR2

NR SCS (kHz)	Total number of interrupted slots on FR2 serving cells									
	When MG timing advance of 0ms is applied					When MG timing advance of 0.25ms is applied				
	MGL=20ms	MGL=10ms	MGL=5.5ms	MGL=3.5ms	MGL=1.5ms	MGL=20ms	MGL=10ms	MGL=5.5ms	MGL=3.5ms	MGL=1.5ms
60	80	40	22	14	6	80	40	22	14	6
120	160	80	44	28	12	160	80	44	28	12
480 Note3	640	320	176	112	48	640	320	176	112	48
960 Note3	1280	640	352	224	96	1280	640	352	224	96
NOTE 1: The total number of interrupted slots is based on that SFN and subframe reference for per-FR gap in FR2 indicated by high layer parameter <i>refServCellIndicator</i> is an FR2 serving cell.										
NOTE 2: Slot occurs before or after the measurement gap may be interrupted additionally if SFN and subframe reference for per-FR gap in FR2 indicated by high layer parameter <i>refServCellIndicator</i> is an FR1 serving cell.										
NOTE 3: For NR SCSs of 480kHz and 960kHz, Total number of interrupted slots on FR2-2 serving cells during MGL for NR standalone operation (single carrier, NR CA and NR-DC) with per-UE measurement gap or per-FR measurement gap for FR2-2.										
NOTE 4: If UE is configured with per-UE measurement gap, the MG timing advance of 0.25 is applicable only for FR2 NR SA (with both single carrier and NR CA configuration).										

It is up to UE implementation whether or not the UE is able to conduct transmission in the following slot(s),

- when MGTA is not applied, in the L consecutive UL slots with respect to the SCS of the UL carrier with the same slot indices as the DL slots occurring immediately after measurement gap

- when MGTA is applied and the SCS of the UL carrier is other than 15kHz, in the L consecutive UL slots with respect to the SCS of the UL carrier with the same slot indices as the DL slots occurring immediately after measurement gap
- when MGTA is applied and the SCS of the UL carrier is 15kHz, in the L consecutive UL slots with respect to the SCS of the UL carrier with the same slot indices as the DL slots occurring immediately after the slot partially overlapped with measurement gap

where UL slot denotes that all the symbols in the slot are uplink symbols, and $L=1$ if $(N_{TA} + N_{TA\ offset}) \times T_c$ for the UL transmission is less than the length of one slot; $L=2$ otherwise.

Note: Network is supposed to take into account the possible difference between the estimated TA at network and actual TA at UE when scheduling UE in the above slot(s).

Table 9.1.2-5: (Void)

If a positioning measurement gap is configured via *PosGapConfig* and activated by MAC CE, the measurement requirements do not apply for RRM measurement that requires measurement gaps.

9.1.2.1 EN-DC: Measurement Gap Sharing

For E-UTRA-NR dual connectivity UE configured with per-UE measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on intra-frequency carriers for both SSB and CSI-RS based L3 measurement or when SMTC configured for intra-frequency measurement are fully overlapping with per-UE measurement gaps, and when UE requires measurement gaps to identify and measure cells on inter-frequency carriers or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-UE measurement gaps, E-UTRA gap-needed inter-frequency carriers and inter-RAT UTRAN carriers and/or inter-RAT GSM carriers.

For E-UTRA-NR dual connectivity UE configured with per-FR1 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR1 intra-frequency carriers or when SMTC configured for FR1 intra-frequency measurement are fully overlapping with per-FR1 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR1 inter-frequency carriers for both SSB and CSI-RS based L3 measurement or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR1 measurement gaps, E-UTRA gap-needed inter-frequency carriers, inter-RAT UTRAN carriers and/or inter-RAT GSM carriers.

For E-UTRA-NR dual connectivity UE configured with per-FR2 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR2 intra-frequency carriers or when SMTC configured for FR2 intra-frequency measurement are fully overlapping with per-FR2 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR2 inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR2 measurement gaps.

When network signals “01”, “10” or “11” with RRC parameter *MeasGapSharingScheme* [2][16] and the value of X is defined as in Table 9.1.2.1-1, and

- $K_{intra} = 1 / X * 100$,
- $K_{inter} = 1 / (100 - X) * 100$,

When network signals “00” indicating equal splitting gap sharing, X is not applied.

The RRC parameter *MeasGapSharingScheme* shall be applied to the calculation of carrier specific scaling factor as specified in clause 9.1.5.2.1.

Table 9.1.2.1-1: Value of parameter X for EN-DC measurement gap sharing

<i>measGapSharingScheme</i>	Value of X (%)
‘00’	Equal splitting
‘01’	25
‘10’	50

	'11'	75
Note:	It is left to UE implementation to determine which measurement gap sharing scheme in the table <i>to be applied</i> , when <i>MeasGapSharingScheme</i> is absent and there is no stored value in the field.	

9.1.2.1a SA: Measurement Gap Sharing

For NR standalone UE without NR-DC operation and configured with per-UE measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on intra-frequency carriers or when SMTC configured for intra-frequency measurement are fully overlapping with per-UE measurement gaps, and when UE requires measurement gaps to identify and measure cells on inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-UE measurement gaps, and/or inter-RAT E-UTRAN carriers, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers.

For NR standalone UE without NR-DC operation and configured with per-FR1 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR1 intra-frequency carriers or when SMTC configured for FR1 intra-frequency measurement are fully overlapping with per-FR1 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR1 inter-frequency carriers for both SSB and CSI-RS based L3 measurement and/or inter-RAT E-UTRAN carriers, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR1 measurement gaps, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers in FR1.

For NR standalone UE without NR-DC operation and configured with per-FR2 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR2 intra-frequency carriers or when SMTC configured for FR2 intra-frequency measurement are fully overlapping with per-FR2 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR2 inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR2 measurement gaps, and when UE is configured to measure positioning frequency layers in FR2.

When network signals "01", "10" or "11" with RRC parameter *MeasGapSharingScheme* [2] and the value of X is defined as in Table 9.1.2.1a-1, and

- $K_{\text{intra}} = 1 / X * 100$,
- $K_{\text{inter}} = 1 / (100 - X) * 100$,

When network signals "00" indicating equal splitting gap sharing, X is not applied.

The RRC parameter *MeasGapSharingScheme* shall be applied to the calculation of carrier specific scaling factor as specified in clause 9.1.5.2.2.

Table 9.1.2.1a-1: Value of parameter X for NR standalone measurement gap sharing

<i>measGapSharingScheme</i>	Value of X (%)
'00'	Equal splitting
'01'	25
'10'	50
'11'	75
Note:	It is left to UE implementation to determine which measurement gap sharing scheme in the table <i>to be applied</i> , when <i>MeasGapSharingScheme</i> is absent and there is no stored value in the field.

9.1.2.1b NE-DC: Measurement Gap Sharing

For NR-E-UTRA dual connectivity UE configured with per-UE measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on intra-frequency carriers or when SMTC configured for intra-frequency measurement are fully overlapping with per-UE measurement gaps, and when UE requires measurement gaps to identify and measure cells on inter-frequency carriers, E-UTRA gap-needed inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-UE measurement gaps, and/or inter-RAT E-UTRA carriers, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers.

For NR-E-UTRA dual connectivity UE configured with per-FR1 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR1 intra-frequency carriers or when SMTC configured for FR1 intra-frequency measurement are fully overlapping with per-FR1 measurement gaps, and when UE requires measurement gaps to identify and measure cells on inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR1 measurement gaps, E-UTRA gap-needed inter-frequency carriers, and/or inter-RAT E-UTRA carriers, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers in FR1.

For NR-E-UTRA dual connectivity UE configured with per-FR2 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR2 intra-frequency carriers or when SMTC configured for FR2 intra-frequency measurement are fully overlapping with per-FR2 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR2 inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR2 measurement gaps, and when UE is configured to measure positioning frequency layers in FR2.

When network signals “01”, “10” or “11” with RRC parameter *measGapSharingConfig* [2][16] and the value of X is defined as in Table 9.1.2.1b-1, and

- $K_{\text{intra}} = 1 / X * 100$,
- $K_{\text{inter}} = 1 / (100 - X) * 100$,

When network signals “00” indicating equal splitting gap sharing, X is not applied.

The RRC parameter *MeasGapSharingScheme* shall be applied to the calculation of carrier specific scaling factor as specified in clause 9.1.5.2.3.

Table 9.1.2.1b-1: Value of parameter X for NE-DC measurement gap sharing

<i>measGapSharingScheme</i>	Value of X (%)
‘00’	Equal splitting
‘01’	25
‘10’	50
‘11’	75
Note:	It is left to UE implementation to determine which measurement gap sharing scheme in the table <i>to be applied</i> , when <i>MeasGapSharingScheme</i> is absent and there is no stored value in the field.

9.1.2.1c NR-DC: Measurement Gap Sharing

For UE with NR-DC operation and configured with per-UE measurement gap, measurement gap sharing shall be applied when UE required measurement gaps to identify and measure cells on intra-frequency carriers or when SMTC configured for intra-frequency measurement are fully overlapping with per-UE measurement gaps, and when UE requires measurement gaps to identify and measure cells on inter-frequency carriers for both SSB and CSI-RS based L3 measurement, and/or inter-RAT E-UTRAN carriers, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-UE measurement gaps, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers.

For UE with NR-DC operation and configured with per-FR1 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR1 intra-frequency carriers or when SMTC configured for FR1 intra-frequency measurement are fully overlapping with per-FR1 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR1 inter-frequency carriers for both SSB and CSI-RS based L3 measurement and/or inter-RAT E-UTRAN carriers, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR1 measurement gaps, and/or inter-RAT UTRAN carriers for SRVCC, and when UE is configured to measure positioning frequency layers in FR1.

For UE with NR-DC operation and configured with per-FR2 measurement gap, measurement gap sharing shall be applied when UE requires measurement gaps to identify and measure cells on FR2 intra-frequency carriers or when SMTC configured for FR2 intra-frequency measurement are fully overlapping with per-FR2 measurement gaps, and when UE requires measurement gaps to identify and measure cells on FR2 inter-frequency carriers for both SSB and CSI-RS based L3 measurement, or when all of SMTC configured for inter-frequency SSB based measurement without measurement gaps are fully overlapping with per-FR2 measurement gaps, and when UE is configured to measure positioning frequency layers in FR2.

When network signals “01”, “10” or “11” with RRC parameter *measGapSharingConfig* [2] and the value of X is defined as in Table 9.1.2.1c-1, and

- $K_{\text{intra}} = 1 / X * 100$,
- $K_{\text{inter}} = 1 / (100 - X) * 100$,

When network signals “00” indicating equal splitting gap sharing, X is not applied.

The RRC parameter *MeasGapSharingScheme* shall be applied to the calculation of carrier specific scaling factor as specified in clause 9.1.5.2.4.

Table 9.1.2.1c-1: Value of parameter X for NR-DC measurement gap sharing

<i>measGapSharingConfig</i>	Value of X (%)
'00'	Equal splitting
'01'	25
'10'	50
'11'	75
Note: It is left to UE implementation to determine which measurement gap sharing scheme in the table <i>to be applied</i> , when <i>MeasGapSharingScheme</i> is absent and there is no stored value in the field.	

9.1.3 UE Measurement capability

9.1.3.1 EN-DC: Monitoring of multiple layers using gaps

The requirements in this clause are applicable for UE capable of and configured with the EN-DC operation mode.

When monitoring of multiple inter-frequency E-UTRAN, inter-RAT NR, GSM, UTRA FDD and UTRA TDD carriers as configured by E-UTRA PCell, and inter-frequency NR carriers (with or without CCA) as configured by PCell using gaps (or without using gaps provided the UE supports such capability or the effective MGRP is applied for per-FR measurement gap capable UE) is configured, the UE shall be capable of performing one measurement of the configured measurement type (SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, CSI-SINR, SFTD, E-UTRAN RSRP, E-UTRAN RSRQ, E-UTRAN RS-SINR measurements, UTRAN TDD P-CCPCH RSCP, UTRAN FDD CPICH measurements, GSM carrier RSSI, etc.) of detected cells on all the layers.

For UE configured with the EN-DC operation, the effective total number of frequencies excluding the frequencies of the PCell, SCells, E-UTRA PCell, and E-UTRA SCells being monitored is $N_{\text{freq, EN-DC}}$, which is defined as:

$$N_{\text{freq, EN-DC}} = N_{\text{freq, EN-DC, NR}} + N_{\text{freq, EN-DC, E-UTRA}} + N_{\text{freq, EN-DC, UTRA}} + M_{\text{EN-DC, GSM}},$$

where

$N_{\text{freq, EN-DC, E-UTRA}}$ is the number of E-UTRA inter-frequency carriers being monitored (FDD and TDD) as configured by E-UTRA PCell or via LPP [22],

$$N_{\text{freq, EN-DC, NR}} \leq N_{\text{freq, EN-DC, NR, inter-RAT}} + N_{\text{freq, EN-DC, NR, inter-freq}}$$

where

$N_{\text{freq, EN-DC, NR, inter-RAT}}$ is the number of NR inter-RAT carriers excluding NR serving carrier(s) being monitored as configured by E-UTRA PCell [15],

$N_{\text{freq, EN-DC, NR, inter-freq}}$ is the number of NR inter-frequency carriers being monitored as configured by PSCell,

$N_{\text{freq, EN-DC, UTRA}}$ is the number of UTRA inter-RAT carriers being monitored as configured by E-UTRA PCell (FDD and TDD).

$M_{\text{EN-DC, GSM}}$ is an integer which is a function of the number of GSM inter-RAT carriers as configured by E-UTRA PCell on which measurements are being performed. $M_{\text{EN-DC, GSM}}$ is equal to 0 if no GSM carrier is being monitored. For a MGRP of 40 ms, $M_{\text{EN-DC, GSM}}$ is equal to 1 if cells on up to 32 GSM carriers are being measured. For a MGRP of 80 ms, $M_{\text{EN-DC, GSM}}$ is equal to $\text{ceil}(N_{\text{carriers, GSM}} / 20)$ where $N_{\text{carriers, GSM}}$ is the number of GSM carriers on which cells are being measured.

9.1.3.1a SA: Monitoring of multiple layers using gaps

The requirements in this clause are applicable for UE configured with SA NR operation mode.

When monitoring of multiple inter-RAT E-UTRAN carriers, inter-frequency NR carriers (with or without CCA) and inter-RAT UTRA FDD carriers using gaps (or without using gaps provided the UE supports such capability or the effective MGRP is applied for per-FR measurement gap capable UE) is configured by PCell, the UE shall be capable of performing one measurement of the configured measurement type (SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, CSI-SINR, E-UTRAN RSRP, E-UTRAN RSRQ, E-UTRAN RS-SINR measurements, UTRAN FDD CPICH measurement, etc.) of detected cells on all the layers.

For UE configured with the NR SA operation, the effective total number of frequencies, excluding the frequencies of the PCell, PSCell and SCells being monitored, is $N_{\text{freq, SA}}$, which is defined as:

$$N_{\text{freq, SA}} = N_{\text{freq, SA, NR}} + N_{\text{freq, SA, E-UTRA}} + N_{\text{freq, SA, UTRA}}$$

where

$N_{\text{freq, SA, E-UTRA}}$ is the number of E-UTRA inter-RAT carriers being monitored (FDD and TDD) as configured by PCell or via LPP [22],

- $N_{\text{freq, SA, UTRA}}$ is the number of UTRA FDD inter-RAT carriers being monitored as configured by PCell,

$N_{\text{freq, SA, NR}}$ is the number of NR inter-frequency carriers being monitored as configured by PCell.

9.1.3.1b NE-DC: Monitoring of multiple layers using gaps

The requirements in this clause are applicable for UE capable of and configured with the NE-DC operation mode.

When monitoring of multiple inter-frequency E-UTRAN carriers as configured by E-UTRA PSCell, inter-RAT E-UTRAN carriers as configured by PCell, inter-RAT UTRA FDD carriers as configured by PCell, and inter-frequency NR carriers as configured by PCell using gaps (or without using gaps provided the UE supports such capability or the effective MGRP is applied for per-FR measurement gap capable UE) is configured, the UE shall be capable of performing one measurement of the configured measurement type (SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, CSI-SINR, SFTD, E-UTRAN RSRP, E-UTRAN RSRQ, and E-UTRAN RS-SINR measurements, UTRAN FDD CPICH measurements, etc.) of detected cells on all the layers.

For UE configured with the NE-DC operation, the effective total number of frequencies excluding the frequencies of the PCell, SCells, E-UTRA PSCell, and E-UTRA SCells being monitored is $N_{\text{freq, NE-DC}}$, which is defined as:

$$N_{\text{freq, NE-DC}} = N_{\text{freq, NE-DC, NR}} + N_{\text{freq, NE-DC, E-UTRA}} + N_{\text{freq, NE-DC, UTRA}}$$

where

$N_{\text{freq, NE-DC, NR}}$ is the number of NR inter-frequency carriers being monitored as configured by PCell,

$N_{\text{freq, NE-DC, UTRA}}$ is the number of UTRA FDD inter-RAT carriers being monitored as configured by PCell,

$$N_{\text{freq, NE-DC, E-UTRA}} \leq N_{\text{freq, NE-DC, E-UTRA, inter-RAT}} + N_{\text{freq, NE-DC, E-UTRA, inter-freq}}$$

where

$N_{\text{freq, NE-DC, E-UTRA, inter-RAT}}$ is the number of E-UTRA inter-RAT carriers (FDD and TDD) excluding E-UTRA serving carrier(s) being monitored as configured by PCell or via LPP [22],

$N_{\text{freq, NE-DC, E-UTRA, inter-freq}}$ is the number of E-UTRA inter-frequency carriers (FDD and TDD) being monitored as configured by E-UTRA PCell [15] or via LPP [22].

9.1.3.1c NR-DC: Monitoring of multiple layers using gaps

The requirements in this clause are applicable for UE configured with NR-DC operation mode.

When monitoring of multiple inter-RAT E-UTRAN carriers and inter-frequency NR carriers using gaps (or without using gaps provided the UE supports such capability or the effective MGRP is applied for per-FR measurement gap capable UE) as configured by PCell, inter-RAT UTRA FDD carriers as configured by PCell, and inter-frequency NR carriers as configured by PCell is configured, the UE shall be capable of performing one measurement of the configured measurement type (SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, CSI-SINR, E-UTRAN RSRP, E-UTRAN RSRQ, E-UTRAN RS-SINR measurements, UTRAN FDD CPICH measurements, etc.) of detected cells on all the layers.

For UE configured with the NR-DC operation, the effective total number of frequencies, excluding the frequencies of the PCell, PCell and SCells being monitored, is $N_{\text{freq, NR-DC}}$, which is defined as:

$$N_{\text{freq, NR-DC}} = N_{\text{freq, NR-DC, NR}} + N_{\text{freq, NR-DC, E-UTRA}} + N_{\text{freq, NR-DC, UTRA}},$$

where

- $N_{\text{freq, NR-DC, E-UTRA}}$ is the number of E-UTRA inter-RAT carriers being monitored (FDD and TDD) as configured by PCell or via LPP [22].
- $N_{\text{freq, NE-DC, UTRA}}$ is the number of UTRA FDD inter-RAT carriers being monitored as configured by PCell,
- $N_{\text{freq, NR-DC, NR}}$ is the number of NR inter-frequency carriers being monitored as configured by PCell and PCell.

9.1.3.2 EN-DC: Maximum allowed layers for multiple monitoring

If a UE is configured with EN-DC operation, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR SSB inter-frequency carriers configured by PCell, and
- Depending on UE capability, 8 NR inter-frequency carriers including SSB and CSI-RS in total configured by PCell, and
- Depending on UE capability, 7 NR SSB inter-RAT carriers excluding NR serving carrier(s) configured by E-UTRA PCell [15], and
- Depending on UE capability, 6 E-UTRA TDD inter-frequency carriers configured by E-UTRA PCell [15], and
- Depending on UE capability, 6 E-UTRA FDD inter-frequency carriers configured by E-UTRA PCell [15], and
- Depending on UE capability, 3 FDD UTRA carriers, and
- Depending on UE capability, 3 TDD UTRA carriers, and
- Depending on UE capability, 32 GSM carriers (one GSM layer corresponds to 32 carriers), and
- Depending on UE capability, 1 E-UTRA FDD inter-frequency carrier for RSTD measurements configured via LPP [22], and

- Depending on UE capability, 1 E-UTRA TDD inter-frequency carrier for RSTD measurements configured via LPP [22].

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least 13 effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD, E-UTRA TDD, UTRA FDD, UTRA TDD and GSM (one GSM layer corresponds to 32 carriers) layers. The UE shall be capable of monitoring a total of at least $7 + N_{\text{CSI}}$ effective NR carrier frequency layers excluding NR serving carrier(s), comprising of any above defined combination of NR inter-RAT carriers excluding NR serving carrier(s) configured by E-UTRA PCell and NR inter-frequency carriers configured by PCell, N_{CSI} equals 1 if UE supports CSI-RS based L3 measurement, and $N_{\text{CSI}} = 0$ otherwise.

The number of SSB frequency layers configured by PCell equals to the total number of MOs with

- *ssb-ConfigMobility* configured, or
- *ssb-ConfigMobility* not configured but *csi-rs-ResourceConfigMobility* configured with *associatedSSB*.

If *ssbFrequency*, *smtc1*, *smtc2* and *ssbSubcarrierSpacing* are same in multiple MOs, the multiple MOs are counted as one SSB frequency layer.

The number of CSI-RS frequency layers equals to the number of MOs with *csi-rs-ResourceConfigMobility* configured assuming single MO is configured per frequency layer.

When the E-UTRA PCell and PCell configures the same NR carrier frequency layer to be monitored by the UE in synchronous intra-band EN-DC, this layer shall be counted only once to the total number of effective carrier frequency layers provided that the SFN-s and slot boundaries are aligned, unless the configured NR carrier frequency layers to be monitored have

- different RSSI measurement resources or
- different *deriveSSB-IndexFromCell* indications or
- different SMTc configurations or
- different *ssb-PositionQCL-Common-r16* indications or cell list of *ssb-PositionQCL* on NR carrier frequency layer with CCA or
- different *rmtc-Config-r16* indication on NR carrier frequency layer with CCA.

Note 1: The E-UTRA-NR dual connectivity capable UE configured with PCell shall fulfil the requirements defined in only one of clause 9.1.3.2 and clause 8.1.2.1.1b.1 of TS 36.133 [15].

9.1.3.2a SA: Maximum allowed layers for multiple monitoring

If a UE is configured with SA NR operation mode, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR SSB inter-frequency carriers configured by PCell, and
- Depending on UE capability, 8 NR inter-frequency carriers including SSB and CSI-RS in total configured by PCell, and
- Depending on UE capability, 7 E-UTRA TDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 7 E-UTRA FDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 3 UTRA FDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 1 E-UTRA FDD inter-RAT carrier for RSTD measurements configured via LPP [22], and
- Depending on UE capability, 1 E-UTRA TDD inter-RAT carrier for RSTD measurements configured via LPP [22].

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least [13] effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD, E-UTRA TDD and UTRA FDD layers.

The number of SSB frequency layers equals to the total number of MOs with

- *ssb-ConfigMobility* configured, or
- *ssb-ConfigMobility* not configured but *csi-rs-ResourceConfigMobility* configured with *associatedSSB*.

If *ssbfrequency*, *smtc1*, *smtc2* and *ssbSubcarrierSpacing* are same in multiple MOs, the multiple MOs are counted as one SSB frequency layer.

The number of CSI-RS frequency layers equals to the number of MOs with *csi-rs-ResourceConfigMobility* configured assuming single MO is configured per frequency layer.

9.1.3.2b NE-DC: Maximum allowed layers for multiple monitoring

If a UE is configured with NE-DC operation mode, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR SSB inter-frequency carriers configured by PCell, and
- Depending on UE capability, 8 NR inter-frequency carriers including SSB and CSI-RS in total configured by PCell, and
- Depending on UE capability, 6 E-UTRA TDD inter-RAT carriers excluding E-UTRA serving carriers configured by PCell, and
- Depending on UE capability, 6 E-UTRA FDD inter-RAT carriers excluding E-UTRA serving carriers configured by PCell, and
- Depending on UE capability, 6 E-UTRA TDD inter-frequency carriers configured by E-UTRA PSCell [15], and
- Depending on UE capability, 6 E-UTRA FDD inter-frequency carriers configured by E-UTRA PSCell [15], and
- Depending on UE capability, 3 UTRA FDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 1 E-UTRA FDD inter-frequency carrier for RSTD measurements configured via LPP [22], and
- Depending on UE capability, 1 E-UTRA TDD inter-frequency carrier for RSTD measurements configured via LPP [22].

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least 13 effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD, E-UTRA TDD and UTRA FDD layers. The UE shall be capable of monitoring a total of at least 6 effective E-UTRA carrier frequency layers, excluding E-UTRA serving carrier(s), comprising of any above defined combination of E-UTRA inter-RAT carriers excluding E-UTRA serving carrier(s) configured by PCell and E-UTRA inter-frequency carriers configured by E-UTRA PSCell.

The number of SSB frequency layers configured by PCell equals to the total number of MOs with

- *ssb-ConfigMobility* configured, or
- *ssb-ConfigMobility* not configured but *csi-rs-ResourceConfigMobility* configured with *associatedSSB*.

If *ssbfrequency*, *smtc1*, *smtc2* and *ssbSubcarrierSpacing* are same in multiple MOs, the multiple MOs are counted as one SSB frequency layer.

The number of CSI-RS frequency layers equals to the number of MOs with *csi-rs-ResourceConfigMobility* configured assuming single MO is configured per frequency layer.

9.1.3.2c NR-DC: Maximum allowed layers for multiple monitoring

If a UE is configured with NR-DC operation, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR SSB inter-frequency carriers configured by PCell, and
- Depending on UE capability, 8 NR inter-frequency carriers including SSB and CSI-RS in total configured by PCell, and

- Depending on UE capability, 7 NR SSB inter-frequency carriers configured by PCell, and
- Depending on UE capability, 8 NR inter-frequency carriers including SSB and CSI-RS in total configured by PCell, and
- Depending on UE capability, 7 E-UTRA TDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 7 E-UTRA FDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 3 UTRA FDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 1 E-UTRA FDD inter-RAT carrier for RSTD measurements configured via LPP [22], and
- Depending on UE capability, 1 E-UTRA TDD inter-RAT carrier for RSTD measurements configured via LPP [22].

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least 13 effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD, E-UTRA TDD and UTRA FDD layers. The UE shall be capable of monitoring a total of at least $7 + N_{\text{CSI}}$ effective NR carrier frequency layers excluding NR serving carrier(s), which are configured by PCell and PSCell, N_{CSI} equals 1 if UE supports CSI-RS based L3 measurement, and $N_{\text{CSI}} = 0$ otherwise.

The number of SSB frequency layers equals to the total number of MOs with

- *ssb-ConfigMobility* configured, or
- *ssb-ConfigMobility* not configured but *csi-rs-ResourceConfigMobility* configured with *associatedSSB*.

If *ssbfrequency*, *smtc1*, *smtc2* and *ssbSubcarrierSpacing* are same in multiple MOs, the multiple MOs are counted as one SSB frequency layer.

The number of CSI-RS frequency layers equals to the number of MOs with *csi-rs-ResourceConfigMobility* configured assuming single MO is configured per frequency layer.

When PCell and PSCell configures the same NR carrier frequency layer to be monitored by the UE in NR-DC, this layer shall be counted only once to the total number of effective carrier frequency layers provided that the SFN-s and slot boundaries are aligned, unless the configured NR carrier frequency layers to be monitored have

- different RSSI measurement resources or
- different *deriveSSB-IndexFromCell* indications or
- different SMTC configurations or
- different *ssb-PositionQCL-Common-r16* indications or cell list of *ssb-PositionQCL* on NR carrier frequency layer with CCA or
- different *rmtc-Config-r16* indication on NR carrier frequency layer with CCA.

9.1A.3.2 Void

9.1.3A UE Measurement capability under operation mode with CCA

9.1.3A.1 EN-DC: Monitoring of multiple layers using gaps under CCA

The requirements in clause 9.1.3.1 are also applicable for the UE capable of and configured with the EN-DC operation mode with CCA on PSCC.

9.1.3A.1a SA: Monitoring of multiple layers using gaps under CCA

The requirements in clause 9.1.3.1a are also applicable for UE configured with SA NR operation mode with CCA on PCC.

9.1.3A.2 EN-DC: Maximum allowed layers for multiple monitoring under CCA

If a UE is configured with EN-DC operation when CCA is used on PSCell, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR inter-frequency carriers configured by PSCell, and
- Depending on UE capability, 7 NR inter-RAT carriers excluding NR serving carrier(s) configured by E-UTRA PCell [15], and
- Depending on UE capability, 6 E-UTRA TDD inter-frequency carriers configured by E-UTRA PCell [15], and
- Depending on UE capability, 6 E-UTRA FDD inter-frequency carriers configured by E-UTRA PCell [15], and
- Depending on UE capability, 3 FDD UTRA carriers, and
- Depending on UE capability, 3 TDD UTRA carriers, and
- Depending on UE capability, 32 GSM carriers (one GSM layer corresponds to 32 carriers), and

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least 13 effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD, E-UTRA TDD, UTRA FDD, UTRA TDD and GSM (one GSM layer corresponds to 32 carriers) layers. The UE shall be capable of monitoring a total of at least 7 effective NR carrier frequency layers excluding NR serving carrier(s), comprising of any above defined combination of NR inter-RAT carriers excluding NR serving carrier(s) configured by E-UTRA PCell and NR inter-frequency carriers configured by PSCell.

When the E-UTRA PCell and PSCell configures the same NR carrier frequency layer to be monitored by the UE in synchronous intra-band EN-DC, this layer shall be counted only once to the total number of effective carrier frequency layers provided that the SFN-s and slot boundaries are aligned, unless the configured NR carrier frequency layers to be monitored have

- different RSSI measurement resources or
- different *deriveSSB-IndexFromCell* indications or
- different SMTC configurations or
- different *ssb-PositionQCL-Common-r16* indications or cell list of *ssb-PositionQCL* on NR carrier frequency layer with CCA or
- different *rmtc-Config-r16* indication on NR carrier frequency layer with CCA.

9.1.3A.2a SA: Maximum allowed layers for multiple monitoring under CCA

If a UE is configured with SA NR operation mode when CCA is used on PCell or SCell only, the UE shall be capable of monitoring at least:

- Depending on UE capability, 7 NR inter-frequency carriers configured by PCell, and
- Depending on UE capability, 7 E-UTRA TDD inter-RAT carriers configured by PCell, and
- Depending on UE capability, 7 E-UTRA FDD inter-RAT carriers configured by PCell, and

In addition to the requirements defined above, the UE shall be capable of monitoring a total of at least [13] effective carrier frequency layers comprising of any above defined combination of NR, E-UTRA FDD and E-UTRA TDD layers.

9.1.3C UE Measurement capability under operation mode with satellite access

Editor's note: Applicability of frequency range, CA, DA, duplex mode, inter-RAT measurement, etc is subject to updates/changes based on the scope of the corresponding WID.

Editor's note: Terminology will be further clarified and selected between, e.g. NTN and satellite access, based on further agreements.

9.1.3C.1a SA: Monitoring of multiple layers using gaps under satellite access

The requirements in this clause are applicable for UE configured with only PCell, which is served by SAN.

When monitoring of multiple SAN carriers and TN carriers using gaps (or without using gaps provided the UE supports such capability) is configured by PCell, the UE shall be capable of performing one measurement of the configured measurement type (SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, CSI-SINR) of detected cells on all the layers.

Note: for a cell served by SAN, the UE could only be configured to measure SS-RSRP, SS-RSRQ, SS-SINR.

For the UE configured with NR SA operation mode with only PCell served by SAN, the effective total number of frequencies, excluding the frequencies of the serving cell being monitored, is $N_{\text{freq, SA}}$, which is defined as:

$$N_{\text{freq, SA}} = N_{\text{freq, SA, SAN}} + N_{\text{freq, SA, TN}},$$

where

- $N_{\text{freq, SA, SAN}}$ is the number of SAN carriers being monitored as configured by the serving cell served by SAN,
- $N_{\text{freq, SA, TN}}$ is the number of TN carriers being monitored as configured by the serving cell served by SAN.

9.1.3C.2a SA: Maximum allowed layers for multiple monitoring for SAN

If a UE is configured with NR SA operation mode with SAN serving cell, the UE shall be capable of monitoring at least:

- Depending on UE capability, 3 NR SAN carriers including serving carrier, and
- Depending on UE capability, 7 NR SAN and TN carriers including serving carrier,
- The total number of NR SAN and TN carriers does not apply to VSAT UE.

FFS: the number of effective frequency layers UE shall be capable to monitor.

9.1.4 Capabilities for Support of Event Triggering and Reporting Criteria

9.1.4.1 Introduction

This clause contains requirements on UE capabilities for support of event triggering and reporting criteria. As long as the measurement configuration does not exceed the requirements stated in clause 9.1.4.2, the UE shall meet all other performance requirements defined in clause 9 and clause 10. The requirements in this clause also apply for a UE in EN-DC with PSCell on a carrier frequency with CCA or SA NR with PCell on a carrier frequency with CCA.

The UE can be requested to make measurements under different measurement identities defined in TS 38.331 [2]. Each measurement identity corresponds to either event-based reporting, periodic reporting, or no reporting. In case of event-based reporting, each measurement identity is associated with an event triggering criterion. In case of periodic reporting, a measurement identity is associated with one periodic reporting criterion. In case of no reporting, a measurement identity is associated with one no reporting criterion.

The purpose of this clause is to set some limits on the number of different event triggering, periodic, and no reporting criteria the UE may be requested to track in parallel.

9.1.4.2 Requirements

In this clause a reporting criterion corresponds to either one event (in the case of event-based reporting), or one periodic reporting criterion (in case of periodic reporting), or one no reporting criterion (in case of no reporting). For event-based reporting, each instance of event, with the same or different event identities, is counted as separate reporting criterion in Table 9.1.4.2-1.

The UE shall be able to support in parallel per category up to E_{cat} reporting criteria according to Table 9.1.4.2-1. For the measurement categories belonging to intra-frequency, inter-frequency, and inter-RAT measurements (i.e. without counting other categories that the UE shall always support in parallel), the UE need not support more than the total number of reporting criteria as follows:

- For UE configured with EN-DC: $E_{cat,EN-DC,NR} + E_{cat,EN-DC,E-UTRA}$, where

$E_{cat,EN-DC,NR} = 10 + 9 \times n$ is the total number of NR reporting criteria configured by PCell (NR intra- and inter-frequency reporting criteria) and by E-UTRA PCell on NR serving frequencies (NR intra-frequency reporting criteria) applicable for UE configured with EN-DC according to Table 9.1.4.2-1, and n is the number of configured NR serving frequencies, including PCell and SCells carrier frequencies,

$E_{cat,EN-DC,E-UTRA}$ is the total number of reporting criteria configured by E-UTRA PCell except PCell and SCells carrier frequencies, as specified in TS 36.133 [15] for UE configured with EN-DC.

- For UE configured with NE-DC: $E_{cat,NE-DC,NR} + E_{cat,NE-DC,E-UTRA}$, where

$E_{cat,NE-DC,NR} = 10 + 9 \times n$ is the total number of NR reporting criteria according to Table 9.1.4.2-1, and n is the number of configured NR serving frequencies, including PCell and SCells carrier frequencies,

$E_{cat,NE-DC,E-UTRA} = E_{cat,NE-DC,E-UTRA,inter-RAT} + E_{cat,NE-DC,E-UTRA,intra-RAT}$, where

$E_{cat,NE-DC,E-UTRA,inter-RAT}$ is the total number of inter-RAT E-UTRA reporting criteria configured by PCell except E-UTRA PCell and E-UTRA SCells carrier frequencies, according to Table 9.1.4.2-1,

$E_{cat,NE-DC,E-UTRA,intra-RAT}$ is the total number of E-UTRA reporting criteria including E-UTRA PCell and E-UTRA SCells carrier frequencies as specified in TS 36.133 [15] for UE configured with NE-DC.

- For UE configured with SA operation mode: $E_{cat,SA,NR} + E_{cat,SA,E-UTRA}$, where

$E_{cat,SA,NR} = 10 + 9 \times n$ is the total number of NR reporting criteria according to Table 9.1.4.2-1, and n is the number of configured NR serving frequencies, including PCell, and SCells carrier frequencies,

$E_{cat,SA,E-UTRA}$ is the total number of inter-RAT E-UTRA reporting criteria according to Table 9.1.4.2-1.

- For UE configured with NR-DC: $E_{cat,NR-DC,NR} + E_{cat,NR-DC,E-UTRA}$, where

$E_{cat,NR-DC,NR} = 10 + 9 \times n$ is the total number of NR reporting criteria according to Table 9.1.4.2-1, and n is the number of configured NR serving frequencies, including PCell, PCell and SCells carrier frequencies,

$E_{cat,NR-DC,E-UTRA}$ is the total number of inter-RAT E-UTRA reporting criteria according to Table 9.1.4.2-1.

Table 9.1.4.2-1: Requirements for reporting criteria per measurement category

Measurement category	E_{cat}	Note
Intra-frequency ^{Note 1,2,3,4,5}	9	Events for any one or a combination of intra-frequency SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, and CSI-SINR for NG-RAN intra-frequency cells
Inter-frequency ^{Note 2,3,4,5}	10	Events for any one or a combination of inter-frequency SS-RSRP, SS-RSRQ, SS-SINR, CSI-RSRP, CSI-RSRQ, and CSI-SINR for NG-RAN inter-frequency cells
Inter-RAT (E-UTRA FDD, E-UTRA TDD) ^{Note 2,4,5}	10	Only applicable for UE with this (inter-RAT) capability. These reporting criteria apply for any E-UTRA carrier frequencies other than the carrier frequency of the E-UTRA PCell or E-UTRA SCell.

Inter-RAT (E-UTRA FDD, E-UTRA TDD) RSTD ^{Note 2,4,5}	1	Inter-RAT RSTD measurement reporting for UE supporting OTDOA; 1 report capable of minimum 16 inter-RAT cell measurements. Only applicable for UE with this (inter-RAT RSTD via LPP [22]) capability. These reporting criteria apply for any E-UTRA carrier frequencies other than the carrier frequency of the E-UTRA PSCell or E-UTRA SCell.
Inter-RAT (E-UTRA FDD, E-UTRA TDD) RSRP and RSRQ measurements for E-CID ^{Note 2,4,5}	1	Inter-RAT RSRP and RSRQ measurements for E-CID reported to E-SMLC via LPP [22]. One report capable of at least in total 10 inter-RAT RSRP and RSRQ measurements. Applicable to UE capable of reporting inter-RAT RSRP and RSRQ to E-SMLC via LPP. These reporting criteria apply for any E-UTRA carrier frequencies other than the carrier frequency of the E-UTRA PSCell or E-UTRA SCell.
Intra-frequency RSSI and channel occupancy measurements with CCA ^{Note 1,2,3}	1	One report capable of one RSSI and one channel occupancy measurements over a channel [TS 37.213] with CCA. Applicable for UE capable of performing and reporting RSSI and channel occupancy on carrier frequencies under CCA.
Inter-frequency RSSI and channel occupancy measurements with CCA ^{Note 2,3}	1	One report capable of one RSSI and one channel occupancy measurements over a channel [TS 37.213] with CCA. Applicable for UE capable of performing and reporting RSSI and channel occupancy on carrier frequencies under CCA.
Intra-frequency SSB-based measurements for NR E-CID ^{Note 1,2,3,4,5}	1	Intra-frequency SS-RSRP and SS-RSRQ measurements for NR E-CID reported to LMF via LPP [34]. One report capable of at least in total 9 intra-frequency SS-RSRP and SS-RSRQ measurements. Applicable to UE capable of reporting at least one of SS-RSRP and SS-RSRQ to LMF via LPP.
Intra-frequency CSI-RS based measurements for NR E-CID ^{Note 1,2,3,4,5}	1	Intra-frequency CSI-RSRP and CSI-RSRQ measurements for NR E-CID reported to LMF via LPP [22]. One report capable of at least in total 9 intra-frequency CSI-RSRP and/or CSI-RSRQ measurements. Applicable to UE capable of reporting any of CSI-RSRP and CSI-RSRQ to LMF via LPP, as indicated in <i>nr-ECID-MeasSupported-r16</i> .
Inter-frequency SSB-based measurements for NR E-CID ^{Note 2,3,4,5}	1	Inter-frequency SS-RSRP and SS-RSRQ measurements for NR E-CID reported to LMF via LPP [34]. One report capable of at least in total 10 inter-frequency SS-RSRP and SS-RSRQ measurements. Applicable to UE capable of reporting at least one of SS-RSRP and SS-RSRQ to LMF via LPP.
Inter-frequency CSI-RS based measurements for NR E-CID ^{Note 2,3,4,5}	1	Inter-frequency CSI-RSRP and CSI-RSRQ measurements for NR E-CID reported to LMF via LPP [22]. One report capable of at least in total 10 inter-frequency CSI-RSRP and CSI-RSRQ measurements. Applicable to UE capable of reporting any of CSI-RSRP and CSI-RSRQ to LMF via LPP, as indicated in <i>nr-ECID-MeasSupported-r16</i> .

DL RSTD Note 2,4,5	1	DL RSTD measurement reporting; 1 report capable of multiple (within the UE PRS measurement capability, <i>nr-DL-TDOA-MeasCapability</i> , indicated via LPP [34]) DL RSTD measurements and if supported also multiple corresponding DL PRS-RSRP measurements configured for DL-TDOA. Only applicable for UE capable of reporting measurements for DL-TDOA to LMF via LPP [34].
UE Rx-Tx Note 2,4,5	1	UE Rx-Tx measurement reporting; 1 report capable of multiple (within the UE PRS measurement capability, <i>nr-DL-PRS-MeasCapability</i> , indicated via LPP [34] for multi-RTT) UE Rx-Tx measurements and if supported also multiple corresponding DL PRS-RSRP measurements configured for multi-RTT. Only applicable for UE capable of reporting measurements for multi-RTT to LMF via LPP [34].
DL PRS-RSRP Note 2,4,5	1	DL PRS-RSRP measurement reporting; 1 report capable of multiple (within the UE PRS measurement capability, <i>nr-DL-PRS-MeasCapability</i> , indicated via LPP [34] for AoD) DL PRS-RSRP measurements configured for DL-AoD. Only applicable for UE capable of reporting measurements for DL-AoD to LMF via LPP [34].
DL PRS-RSRPP Note 2,4,5	1	DL PRS-RSRPP measurement reporting; 1 report capable of multiple (within the UE PRS measurement capability, <i>nr-DL-PRS-MeasCapability</i> , indicated via LPP [34] for AoD) DL PRS-RSRPP measurements configured for DL-AoD. Only applicable for UE capable of reporting measurements for DL-AoD to LMF via LPP [34].
SRS-RSRP Note 2,3,4,5	1	SRS-RSRP measurement reporting for CLI; 1 report capable of up to 32 SRS resources measurements. Only applicable for UE supporting <i>cli-SRS-RSRP-Meas-r16</i> .
CLI-RSSI Note 2,3,4,5	1	CLI-RSSI measurement reporting for CLI; 1 report capable of up to 64 CLI-RSSI resources measurements. Only applicable for UE supporting <i>cli-RSSI-Meas-r16</i> .
NOTE 1: When the UE is configured with PSCell and SCell carrier frequencies, E_{cat} for Intra-frequency is applied per corresponding NR serving frequency. NOTE 2: Applicable for UE configured with SA NR operation mode. NOTE 3: Applicable for UE configured with EN-DC operation mode. NOTE 4: Applicable for UE configured with NE-DC operation mode. NOTE 5: Applicable for UE configured with NR-DC operation mode.		

9.1.5 Carrier-specific scaling factor

This clause specifies the derivation of carrier-specific scaling factor (CSSF) values, which scales the measurement delay requirements given in clause 9.2, 9.2A, 9.3, 9.3A, 9.4, and NR PRS-based positioning measurements in clause 9.9 and CSI-RS based L3 measurement in clause 9.10 when UE is configured to monitor multiple measurement objects. The CSSF values are categorized into $CSSF_{outside_gap,i}$, $CSSF_{within_gap,i}$ and $CSSF_{within_ncsg,i}$, for the measurements conducted outside measurement gaps, within measurement gaps and within NCSG, respectively.

If concurrent measurement gaps are configured by the network, subject to UE capability, [the term of the union of concurrent measurement gaps in the following clauses refer to non-dropped measurement gap occasions after accounting for measurement gap collisions as specified in clause 9.1.8.3 from all the configured measurement gap patterns. The term of the associated measurement gap in concurrent measurement gaps in the following clauses refer to non-dropped measurement gap occasions associated by measurement object i after accounting for measurement gap collisions as specified in clause 9.1.8.3].

9.1.5.1 Monitoring of multiple layers outside gaps

For a UE supporting concurrent gaps and when concurrent gaps are configured the carrier-specific scaling factor $CSSF_{\text{outside_gap},i}$ for measurement object i derived in this chapter is applied to following measurement types :

- SSB-based intra-frequency measurement with no measurement gap in clause 9.2.5 and 9.2A.5, when none of the SMTC occasions of this intra-frequency measurement object are overlapped by the union of concurrent measurement gaps.
- SSB-based intra-frequency measurement with no measurement gap in clause 9.2.5 and 9.2A.5, when part of the SMTC occasions of this intra-frequency measurement object are overlapped by the union of concurrent measurement gaps.
- CSI-RS based intra-frequency measurement in clause 9.10.2, when none of CSI-RS resources for L3 measurement of this intra-frequency measurement object are overlapped the union of concurrent measurement gaps.
- CSI-RS based intra-frequency measurement in clause 9.10.2, when all CSI-RS resources for L3 measurement of this intra-frequency measurement object are partially overlapped the union of concurrent measurement gaps.
- SSB-based inter-frequency measurement with no measurement gap in clause 9.3.9, when none of the SMTC occasions of this inter-frequency measurement object are overlapped or the union of concurrent measurement gaps, if UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the Network.
- SSB-based inter-frequency measurement with no measurement gap in clause 9.3.9, when part of the SMTC occasions of this inter-frequency measurement object are overlapped by the measurement gap or the union of concurrent measurement gaps, if UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the Network.

Otherwise, the carrier-specific scaling factor $CSSF_{\text{outside_gap},i}$ for measurement object i derived in this chapter is applied to following measurement types:

- SSB-based intra-frequency measurement with no measurement gap in clause 9.2.5 and 9.2A.5, when none of the SMTC occasions of this intra-frequency measurement object are overlapped by the measurement gap.
- SSB-based intra-frequency measurement with no measurement gap in clause 9.2.5 and 9.2A.5, when part of the SMTC occasions of this intra-frequency measurement object are overlapped by the measurement gap.
- CSI-RS based intra-frequency measurement in clause 9.10.2, when none of CSI-RS resources for L3 measurement of this intra-frequency measurement object are overlapped by the measurement gap.
- CSI-RS based intra-frequency measurement in clause 9.10.2, when all CSI-RS resources for L3 measurement of this intra-frequency measurement object are partially overlapped by the measurement gap.
- SSB-based inter-frequency measurement with no measurement gap in clause 9.3.9, when none of the SMTC occasions of this inter-frequency measurement object are overlapped by the measurement gap.
- SSB-based inter-frequency measurement with no measurement gap in clause 9.3.9, when part of the SMTC occasions of this inter-frequency measurement object are overlapped by the measurement gap.
- For a UE in E-UTRA-NR dual connectivity operation, NR SSB-based inter-RAT measurement object configured by the E-UTRAN PCell on an NR serving carrier
 - the SSB is completely contained in the active BWP of the UE, and
 - none or part of the SMTC occasions of this inter-RAT measurement object are overlapped by the measurement gap;
- Intra-frequency RSSI and channel occupancy measurement with no measurement gap on a carrier subject to CCA when SMTC and RMTC are overlapping and RMTCs are not fully overlapped with measurement gap.

The UE is expected to conduct the measurement of this measurement object i only outside the measurement gap(s).

For a UE in E-UTRA-NR dual connectivity operation, if a measurement object configured by PSCell and an NR inter-RAT measurement object configured by E-UTRAN PCell are on the same serving carrier, they shall be counted as one intra-frequency measurement object, provided that they meet the measurement object merging conditions in clause 9.1.3.2.

The number of frequency layers for SSB measurements shall include the total number of MOs with

- *ssb-ConfigMobility* configured, or
- *ssb-ConfigMobility* not configured but *csi-rs-ResourceConfigMobility* configured with *associatedSSB*.

If *ssbfrequency*, *smtc1*, *smtc2* and *ssbSubcarrierSpacing* are same in multiple MOs, the multiple MOs are counted as one SSB frequency layer.

If the higher layer signaling in TS 38.331 [2] of *smtc2* is present and *smtc1* is fully overlapping with measurement gaps and *smtc2* is partially overlapping with measurement gaps, $CSSF_{\text{outside_gap},i}$ and requirements derived from $CSSF_{\text{outside_gap},i}$ are not specified.

The UE cell identification and measurement periods derived based on $CSSF_{\text{outside_gap},i}$ in clauses 9.2.5.1, 9.2.5.2 and 9.10.2 may be extended for measurement objects of which the cell identification and measurement periods are overlapped with $T_{\text{measure_SFTD1}}$ specified in clause 9.3.8 when no measurement gaps are provided.

The requirements in this clause apply provided that

- The SMTC on all CCs and inter-frequency layers without measurement gap in FR2 have the same offset, and one of following conditions is met
 - If *smtc2* is configured on any FR2 CC,
 - All CCs have the same configuration for *smtc1*, and
 - All CCs configured with *smtc2* have the same configuration for *smtc2*
 - If *smtc2* is not configured on any FR2 CC,
 - The total number of different SMTC periodicities on all serving CCs and inter-frequency layers without measurement gap does not exceed 4
- The starting point of the first 5ms window for CSI-RS measurement as defined in clause 9.10.1 on all CCs in FR2 is same and one of following conditions is met
 - If any CSI-RS resource is configured in the second 5ms window for CSI-RS measurement as defined in clause 9.10.1 on any FR2 CC,
 - All CCs with CSI-RS resources only in the first 5ms window have the same CSI-RS resource periodicity, and
 - All CCs with CSI-RS resources both in the first and the second 5ms window have the same CSI-RS resource periodicity
 - If no CSI-RS resource is configured in the second 5ms window for CSI-RS measurement as defined in clause 9.10.1 on any FR2 CC,
 - The total number of different CSI-RS resources periodicities on all serving CCs does not exceed 3Note: Longer delays for cell identification and measurement periods derived based on $CSSF_{\text{outside_gap},i}$ in clauses 9.2.5.1, 9.2.5.2, can be expected, if the UE is configured with more than 4 different SMTC periodicities on FR2 serving carriers. The longer delay applies for the FR2 intra-frequency measurement objects with the longest SMTC periodicity/periodicities.

9.1.5.1.1 EN-DC mode: carrier-specific scaling factor for SSB-based, CSI-RS based L3 measurements and RSSI and channel occupancy measurements performed outside gaps

For UE configured with the E-UTRA-NR dual connectivity operation, the carrier-specific scaling factor $CSSF_{outside_gap,i}$ for intra-frequency SSB-based measurements, inter-frequency SSB-based measurements performed outside measurements gaps, intra-frequency CSI-RS L3 measurement and RSSI/channel occupancy measurement with no measurement gap on a carrier subject to CCA when SMTC and RMTC are overlapping will be as specified in Table 9.1.5.1.1-1.

Table 9.1.5.1.1-1: $CSSF_{outside_gap,i}$ scaling factor for EN-DC mode

Scenario	$CSSF_{outside_gap,i}$ for FR1 PSCC	$CSSF_{outside_gap,i}$ for FR1 SCC	$CSSF_{outside_gap,i}$ for FR2 PSCC	$CSSF_{outside_gap,i}$ for FR2 SCC where neighbour cell measurement is required ^{Note 2}	$CSSF_{outside_gap,i}$ for FR2 SCC where neighbour cell measurement is not required	$CSSF_{outside_gap,i}$ for inter-frequency MO with no measurement gap
EN-DC with FR1 only CA	$1+N_{PSCC_CSIRS}+N_{PSCC_CCA_RSSI/CO}$	$N_{SCC_SSB}+Y+2X$ $N_{SCC_CSIRS}+$ $N_{SCC_CCA_RSSI/CO}$	N/A	N/A	N/A	$N_{SCC_SSB}+Y+2X$ $N_{SCC_CSIRS}+$ $N_{SCC_CCA_RSSI/CO}$
EN-DC with FR2 only intra band CA	N/A	N/A	$1+N_{PSCC_CSIRS}$	N/A	$N_{SCC_SSB}+Y+2X$ N_{SCC_CSIRS}	$N_{SCC_SSB}+Y+2X$ N_{SCC_CSIRS}

Note 1: Only one NR FR1 operating band and one NR FR2 operating band are included for FR1+FR2 inter-band EN-DC. Note 2: Selection of FR2 SCC where neighbour cell measurement is required follows clause 9.2.3.2. Note 3: $CSSF_{outside_gap,i}=1$ if only one SCell is configured and no inter-frequency MO without gap and only SSB based L3 measurement is configured on SCC; $CSSF_{outside_gap,i}=2$ if only one SCell is configured and no inter-frequency MO without gap and either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement is configured on SCC. Note 4: Y is the number of configured inter-frequency MOs without MG that are being measured outside of MG; otherwise, it is 0. Note 5: Only two NR FR2 operating band are included for EN-DC with FR2 only inter-band CA Note 6: $N_{PSCC_CSIRS}=1$ if PSCC is with either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement configured; otherwise, $N_{PSCC_CSIRS}=0$. Note 7: N_{SCC_CSIRS}=Number of configured SCell(s) with either both SSB and CSI-RS based L3 measurement configured or only CSI-RS based L3 measurement configured Note 8: $N_{SCC_CSIRS_FR2_NCM}=1$ if FR2 SCC, where neighbour cell measurement is required, is with either both SSB and CSI-RS configured or only CSI-RS measurement configured; otherwise, $N_{SCC_CSIRS_FR2_NCM}=0$. Note 9: N_{SCC_SSB}=Number of configured SCell(s) with only SSB based L3 measurement configured, which is measured without MG. Note 10: $N_{PSCC_CCA_RSSI/CO}=1$ if PSCC is configured with RSSI/CO measurements without MG when RMTC and SMTC are overlapping; $N_{SCC_CCA_RSSI/CO}$ = Number of MOs for SCell(s) configured with RSSI/CO measurements without MG when RMTC and SMTC are overlapping. Note 11: If a measurement object configured by PSCell and an NR inter-RAT measurement object configured by E-UTRAN PCell are on the same serving carrier, they shall be counted as one intra-frequency measurement object, provided that they meet the measurement object merging conditions [in clause 9.1.3.2], otherwise they are counted separately as two measurement objects.						

9.1.5.1.2 SA mode: carrier-specific scaling factor for SSB-based, CSI-RS based L3 measurements and RSSI and channel occupancy measurements performed outside gaps

For UE in SA operation mode, the carrier-specific scaling factor $CSSF_{\text{outside_gap},i}$ for intra-frequency SSB-based measurements, inter-frequency SSB-based measurements performed outside measurements gaps, intra-frequency CSI-RS L3 measurement and RSSI/channel occupancy measurement with no measurement gap on a carrier subject to CCA when SMTC and RMTC are overlapping will be as specified in Table 9.1.5.1.2-1, which shall also be applied for a UE configured with NE-DC operation.

Table 9.1.5.1.2-1: $CSSF_{\text{outside_gap},i}$ scaling factor for SA mode

Scenario	$CSSF_{\text{outside_gap},i}$ for FR1 PCC	$CSSF_{\text{outside_gap},i}$ for FR1 SCC	$CSSF_{\text{outside_gap},i}$ for FR2 PCC	$CSSF_{\text{outside_gap},i}$ for FR2 SCC where neighbour cell measurement is required	$CSSF_{\text{outside_gap},i}$ for FR2 SCC where neighbour cell measurement is not required	$CSSF_{\text{outside_gap},i}$ for inter-frequency MO with no measurement gap
FR1 only CA	$1+N_{\text{PCC_CSIRS}} + N_{\text{PCC_CCA_RSSI/CO}}$	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}} + N_{\text{SCC_CCA_RSSI/CO}}$	N/A	N/A	N/A	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}} + N_{\text{SCC_CCA_RSSI/CO}}$
FR2 only intra band CA	N/A	N/A	$1+N_{\text{PCC_CSIRS}}$	N/A	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}}$	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}}$

FR1 +FR2 CA (FR1 PCell) Note 1	$1+N_{\text{PCC_CSIRS}}$	$2 \times (N_{\text{SCC_SSB}} + Y + 2X + N_{\text{SCC_CSIRS}} - 1 - N_{\text{SCC_CSIRS_FR2_NCM}})$	N/A	$2 \times (1 + N_{\text{SCC_CSIRS_FR2_NCM}})$ Note 3,5	$2 \times (N_{\text{SCC_SSB}} + Y + 2X + N_{\text{SCC_CSIRS}} - 1 - N_{\text{SCC_CSIRS_FR2_NCM}})$	$2 \times (N_{\text{SCC_SSB}} + Y + 2X + N_{\text{SCC_CSIRS}} - 1 - N_{\text{SCC_CSIRS_FR2_NCM}})$
FR1 +FR2 CA (FR2 PCell) Note 1	N/A	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}}$	$1+N_{\text{PCC_CSIRS}}$	N/A	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}}$	$N_{\text{SCC_SSB}} + Y + 2X$ $N_{\text{SCC_CSIRS}}$
Note 1: Only one FR1 operating band and one FR2 operating band are included for FR1+FR2 inter-band CA. Note 2: Selection of FR2 SCC where neighbour cell measurement is required follows clause 9.2.3.2. Note 3: $CSSF_{\text{outside_gap},i} = 1$ if only one SCell is configured and no inter-frequency MO without gap and only SSB based L3 measurement is configured on SCC; $CSSF_{\text{outside_gap},i} = 2$ if only one SCell is configured and no inter-frequency MO without gap and either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement is configured on SCC. Note 4: Y is the number of configured inter-frequency MOs without MG that are being measured outside of MG; otherwise, it is 0. Note 5: Only two NR FR2 operating bands are included for FR2 inter-band CA. Note 6: $N_{\text{PCC_CSIRS}} = 1$ if PCC is with either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement configured; otherwise, $N_{\text{PCC_CSIRS}} = 0$. Note 7: $N_{\text{SCC_CSIRS}} = \text{Number of configured SCell(s) with either both SSB and CSI-RS based L3 measurement configured or only CSI-RS based L3 measurement configured}$ Note 8: $N_{\text{SCC_CSIRS_FR2_NCM}} = 1$ if FR2 SCC, where neighbour cell measurement is required, is with either both SSB and CSI-RS configured or only CSI-RS measurement configured; otherwise, $N_{\text{SCC_CSIRS_FR2_NCM}} = 0$. Note 9: $N_{\text{SCC_SSB}} = \text{Number of configured SCell(s) with only SSB based L3 measurement configured, which is measured without MG.}$ Note 10: $N_{\text{PCC_CCA_RSSI/CO}} = 1$ if PSCC is configured with RSSI/CO measurements without MG when RMTC and SMTC are overlapping; $N_{\text{SCC_CCA_RSSI/CO}} = \text{Number of MOs for SCell(s) configured with RSSI/CO measurements without MG when RMTC and SMTC are overlapping.}$						

9.1.5.1.3 NR-DC mode: carrier-specific scaling factor for SSB-based and CSI-RS based L3 measurements performed outside gaps

For UE configured with NR-DC operation, the carrier-specific scaling factor $CSSF_{\text{outside_gap},i}$ for intra-frequency SSB-based measurement, inter-frequency SSB-based measurements performed outside measurements gaps and intra-frequency CSI-RS based L3 measurement will be as specified in Table 9.1.5.1.3-1.

Table 9.1.5.1.3-1: $CSSF_{\text{outside_gap},i}$ scaling factor for NR-DC mode

Scenario	$CSSF_{\text{outside_gap},i}$ for FR1 PCC	$CSSF_{\text{outside_gap},i}$ for FR1 SCC	$CSSF_{\text{outside_gap},i}$ for FR2 PSCC	$CSSF_{\text{outside_gap},i}$ for FR2 SCC where neighbour cell measurement is not required	$CSSF_{\text{outside_gap},i}$ for inter-frequency MO with no measurement gap
FR1 + FR2 NR-DC (FR1 PCell and FR2 PSCell) Note 1	$1+N_{\text{PCC_CSIRS}}$	$2 \times (N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}})$	$2 \times (1 + N_{\text{PSCC_CSIRS}})$ ^{Note}	$2 \times (N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}})$	$2 \times (N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}})$
Note 1: NR-DC in Rel-15 only includes the scenarios where all serving cells in MCG in FR1 and all serving cells in SCG in FR2. Note 2: $CSSF_{\text{outside_gap},i} = 1$ if no SCell is configured and no inter-frequency MO without gap and only SSB based L3 measurement is configured on PSCC; $CSSF_{\text{outside_gap},i} = 2$ if no SCell is configured and no inter-frequency MO without gap and either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement is configured on PSCC. Note 3: Y is the number of configured inter-frequency SSB based frequency layers without MG that are being measured outside of MG; otherwise, it is 0. Note 4: $N_{\text{PCC_CSIRS}} = 1$ if PCC is with either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement configured; otherwise, $N_{\text{PCC_CSIRS}} = 0$. Note 5: $N_{\text{PSCC_CSIRS}} = 1$ if PSCC is with either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement configured; otherwise, $N_{\text{PSCC_CSIRS}} = 0$. Note 6: $N_{\text{SCC_CSIRS}}$ = Number of configured SCell(s) with either both SSB and CSI-RS based L3 measurement configured or only CSI-RS based L3 measurement configured Note 8: $N_{\text{SCC_SSB}}$ = Number of configured SCell(s) with only SSB based L3 measurement configured, which is measured without MG.					

9.1.5.1.4 NE-DC mode: carrier-specific scaling factor for SSB-based and CSI-RS based measurements performed outside gaps

For UE configured with NE-DC operation, the carrier-specific scaling factor $CSSF_{\text{outside_gap},i}$ for intra-frequency SSB-based measurement and inter-frequency SSB-based measurements performed outside measurements gaps and intra-frequency CSI-RS based L3 measurement will be as specified in Table 9.1.5.1.4-1.

Table 9.1.5.1.4-1: $CSSF_{\text{outside_gap},i}$ scaling factor for NE-DC mode

Scenario	$CSSF_{\text{outside_gap},i}$ for FR1 PCC	$CSSF_{\text{outside_gap},i}$ for FR1 SCC	$CSSF_{\text{outside_gap},i}$ for FR2 PCC	$CSSF_{\text{outside_gap},i}$ for FR2 SCC where neighbour cell measurement is required	$CSSF_{\text{outside_gap},i}$ for FR2 SCC where neighbour cell measurement is not required	$CSSF_{\text{outside_gap},i}$ for inter-frequency MO with no measurement gap
NE-DC with FR1 only CA	$1+N_{\text{PCC_CSIRS}}$	$N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}}$	N/A	N/A	N/A	$N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}}$
NE-DC with FR2 only intra band CA	N/A	N/A	$1+N_{\text{PCC_CSIRS}}$	N/A	$N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}}$	$N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}}$
NE-DC with FR2 only inter band CA	N/A	N/A	$1+N_{\text{PCC_CSIRS}}$	$2 \times (1 + N_{\text{SCC_CSIRS_FR2_NCM}})$ ^{Note 3,5}	$2 \times (N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}} - 1 - N_{\text{SCC_CSIRS_FR2_NCM}})$	$2 \times (N_{\text{SCC_SSB}} + Y + 2 \times N_{\text{SCC_CSIRS}} - 1 - N_{\text{SCC_CSIRS_FR2_NCM}})$

NE-DC with FR1 +FR2 CA (FR1 PCell) ^{Note 1}	$1+N_{PCC_CSIRS}$	$2 \times (N_{SCC_SSB} + Y + 2 \times N_{SCC_CSIRS} - 1 - N_{SCC_CSIRS_FR2_NCM})$	N/A	$2 \times (1 + N_{SCC_CSIRS_FR2_NCM})$ ^{Note 3,5}	$2 \times (N_{SCC_SSB} + Y + 2 \times N_{SCC_CSIRS} - 1 - N_{SCC_CSIRS_FR2_NCM})$	$2 \times (N_{SCC_SSB} + Y + 2 \times N_{SCC_CSIRS} - 1 - N_{SCC_CSIRS_FR2_NCM})$
Note 1: Only one FR1 operating band and one FR2 operating band are included for FR1+FR2 inter-band CA. Note 2: Selection of FR2 SCC where neighbour cell measurement is required follows clause 9.2.3.2. Note 3: $CSSF_{outside_gap,i} = 1$ if only one SCell is configured and no inter-frequency MO without gap and only SSB based L3 measurement is configured on SCC; $CSSF_{outside_gap,i} = 2$ if only one SCell is configured and no inter-frequency MO without gap and either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement is configured on SCC. Note 4: Y is the number of configured inter-frequency MOs without MG that are being measured outside of MG; otherwise, it is 0. Note 5: Only two NR FR2 operating band are included for NE-DC with FR2 only inter-band CA. Note 6: $N_{PCC_CSIRS} = 1$ if PCC is with either both SSB and CSI-RS based L3 configured or only CSI-RS based L3 measurement configured; otherwise, $N_{PCC_CSIRS} = 0$. Note 7: N_{SCC_CSIRS} = Number of configured SCell(s) with either both SSB and CSI-RS based L3 measurement configured or only CSI-RS based L3 measurement configured Note 8: $N_{SCC_CSIRS_FR2_NCM} = 1$ if FR2 SCC, where neighbour cell measurement is required, is with either both SSB and CSI-RS configured or only CSI-RS measurement configured; otherwise, $N_{SCC_CSIRS_FR2_NCM} = 0$. Note 9: N_{SCC_SSB} = Number of configured SCell(s) with only SSB based L3 measurement configured, which is measured without MG.						

9.1.5.2 Monitoring of multiple layers within gaps

For a UE supporting concurrent gaps and when concurrent gaps are configured the carrier-specific scaling factor $CSSF_{within_gap,i}$ for a measurement object i derived in this chapter is applied to following measurement types for the associated measurement gap:

- SSB-based intra-frequency measurement object with no measurement gap in clause 9.2.5 and 9.2A.5, when
 - all of the SMTC occasions of this intra-frequency measurement object are overlapped with the associated measurement gap in concurrent measurement gaps, or
 - part of the SMTC occasions of this intra-frequency measurement object are overlapped with the associated measurement gap and all the SMTC occasions of this intra-frequency measurement object are overlapped with the union of concurrent measurement gaps.
- SSB-based intra-frequency measurement object with measurement gap in clause 9.2.6 and 9.2A.6.
- CSI-RS based inter-frequency measurement in clause 9.10.3, when CSI-RS resources for L3 measurement of this inter-frequency measurement object are overlapped by the measurement gap or the associated measurement gap in concurrent measurement gaps.
- CSI-RS based inter-frequency measurement in clause 9.10.3, when CSI-RS resources for L3 measurement of this inter-frequency measurement object are partially overlapped by the measurement gap or the associated measurement gap in concurrent measurement gaps.
- CSI-RS based intra-frequency measurement in clause 9.10.2, when all CSI-RS resources for L3 measurement of this intra-frequency measurement object are partially overlapped with the associated measurement gap and all CSI-RS resources for L3 measurement of this intra-frequency measurement object are overlapped with the union of the configured concurrent measurement gaps.
- SSB-based inter-frequency measurement object with measurement gap in clause 9.3.4.
- SSB-based inter-frequency measurement object without measurement gap for UE capable of *interFrequencyMeas-NoGap* in clause 9.3.9, when
 - all of the SMTC occasions of this inter-frequency measurement object are overlapped with the measurement gap or associated measurement gap in concurrent measurement gaps, or
 - part of the SMTC occasions of this inter-frequency measurement object are overlapped with the associated measurement gap and all the SMTC occasions of this inter-frequency measurement object are overlapped with the union of concurrent measurement gaps, or

- part of the SMTC occasions of this inter-frequency measurement object are overlapped by the measurement gap or associated measurement gap in concurrent measurement gaps and the flag *interFrequencyConfig-NoGap-r16* is not configured by the Network.
- NR PRS-based measurements for positioning in clause 9.9.
- E-UTRA Inter-RAT measurement object in clauses 9.4.2 and 9.4.3.

Otherwise, the carrier-specific scaling factor $CSSF_{\text{within_gap},i}$ for a measurement object i derived in this chapter is applied to following measurement types:

- SSB-based intra-frequency measurement object with no measurement gap in clause 9.2.5 and 9.2A.5, when all of the SMTC occasions of this intra-frequency measurement object are overlapped by the measurement.
- SSB-based intra-frequency measurement object with measurement gap in clause 9.2.6 and 9.2A.6.
- CSI-RS based inter-frequency measurement in clause 9.10.3, when CSI-RS resources for L3 measurement of this inter-frequency measurement object are overlapped by the measurement gap.
- CSI-RS based inter-frequency measurement in clause 9.10.3, when CSI-RS resources for L3 measurement of this inter-frequency measurement object are partially overlapped by the measurement gap.
- SSB-based inter-frequency measurement object with measurement gap in clause 9.3.4.
- SSB-based inter-frequency measurement object without measurement gap for UE capable of *interFrequencyMeas-NoGap* in clause 9.3.9, when
 - all of the SMTC occasions of this inter-frequency measurement object are overlapped by the measurement gap, or
