Figure A.7.5.5.5.1-2: SSB_RP level variation for SSB-based beam failure detection and link recovery testing in non-DRX mode

A.7.5.5.5.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

A.7.5.5.6 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in non-DRX mode

A.7.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set q_0 configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.6.1-1, A.7.5.5.6.1-2 and A.7.5.5.6.1-3. There are two cells, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.6.1-1 shows the variation of the downlink SNR of the CSI-RS in set q_0 in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.6.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

Figure A.7.5.5.6.1-2: CSI-RS_RP level variation for CSI-RS based beam failure detection and link recovery testing for SCell in non-DRX mode

A.7.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.6.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set q_1. The UE shall not transmit PUCCH with an LRR with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.7 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

A.7.5.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set q_0 configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.7.1-1, A.7.5.5.7.1-2 and A.7.5.5.7.1-3. There are two cell, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.7.1-1 shows the variation of the downlink SNR of the CSI-RS in set q_0 in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.7.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

A.7.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 in A.7.5.5.7.1 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set q_1. The UE shall not transmit PUCCH with an LRR with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.8 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in DRX mode for UE fulfilling relaxed measurement criterion

A.7.5.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set q_0 configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.3.4 for UE fulfilling good serving cell quality relaxed measurement criteria. The test parameters are given in Tables A.7.5.5.8.1-1, A.7.5.5.8.1-2, A.7.5.5.8.1-3, and A.7.5.5.8.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.8.1-1 shows the variation of the downlink SNR of the CSI-RS in set q_0 in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.8.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for both low mobility and good serving cell quality defined in clause 5.7.13.2 in TS 38.331 [2]. At the beginning of T1, the UE has fulfilled the good serving cell quality relaxation measurements criterion and is performing relaxed measurements for beam failure detection.

- *goodServingCellEvaluationBFD* [2] criterion is configured according to the parameters listed in table A.7.5.5.8.1-2;
- *lowMobilityEvalutationcConnected* [2] criterion is configured according to the parameters listed in table A.7.5.5.8.1-2.

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.4.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband

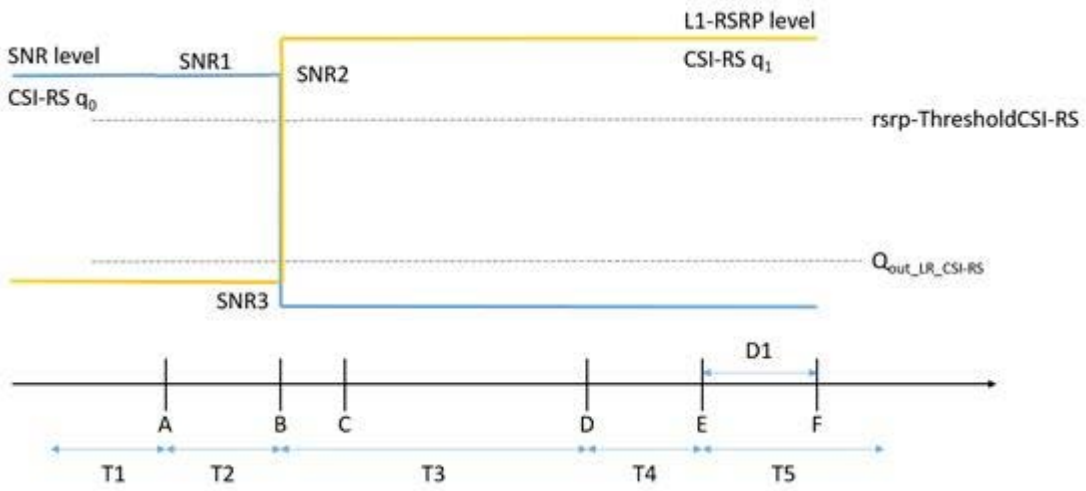

Figure A.7.5.5.8.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode

A.7.5.5.8.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery, and exit from relaxed measurements. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set q_1. The UE shall not transmit preamble on a beam associated with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.9 TRP specific Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

A.7.5.5.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP0 when DRX is used for an FR2 active SCell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.9.1-1, A.7.5.5.9.1-2 and A.7.5.5.9.1-3. There are two cell, cell 1 is the active PCell and cell 2 is the active SCell, in the test. SCell is configured with two TRPs. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.9.1-1 shows the variation of the downlink SNR of the CSI-RS in set $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ in the active SCell for TRP0 and TRP1 respectively. Figure A.7.5.5.9.11-1additionally shows the variation of the downlink L1-RSRP of the CSI-RS in $\bar{q}_{1,0}$ for TPR0. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

A.7.5.5.9.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.9.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP1 and TRP2.

During the period from time point A to time point B the UE shall transmit uplink signal in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP2.

During T3 the UE shall detect beam failure and initiate link recovery for TRP1. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{0,1}$.

No later than time point F occurring no later than D1 = [520]+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{0,1}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{0,1}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.10 TRP specific Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

A.7.5.5.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific SSB-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ for TRP1 with *schedulingRequestID-BFR-r17* configured, when no DRX is used for an FR2 serving cell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.10.1-1, A.7.5.5.10.1-2, A.7.5.5.10.1-3 and A.7.5.5.10.1-4 below. There is one active serving cell configured with two TRPs in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.10.1-1 shows the variation of the downlink SNR of the SSB in set $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP1 and TRP2 respectively. Figure A.7.5.5.10.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $\bar{q}_{0,1}$ for TPR1.

Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

Table A.7.5.5.10.1-1: Supported test configurations for FR2 PCell

Configuration	Description
1	TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth
2	TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth
NOTE: The UE is only required to pass in one of the supported test configurations in FR2

A.7.5.5.10.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 for TRP 0 and TRP1.

During the period from time point A to time point B the UE shall transmit uplink signal for TRP 0 and TRP1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission for TRP 1.

During T3 the UE shall detect beam failure and initiate link recovery for TRP 0. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{1,0}$.

No later than time point F occurring no later than D1 = 960+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{1,0}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{1,0}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.11 Beam Failure Detection and Link Recovery Test for FR2-2 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

A.7.5.5.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set q_0 configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2-2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.11.1-1, A.7.5.5.11.1-2, and A.7.5.5.11.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.11.1-1 shows the variation of the downlink SNR of the CSI-RS in set q_0 in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.11.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set q_1 of the candidate beam used for link recovery. Prior to the start of the time

duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

Table A.7.5.5.11.1-1: Supported test configurations for FR2-2 PCell

Configuration	Description
1	TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth
2	TDD duplex mode, 480 kHz SSB SCS, 400 MHz bandwidth
3	TDD duplex mode, 960 kHz SSB SCS, 400 MHz bandwidth
NOTE: The UE is only required to pass in one of the supported test configurations in FR2-2

A.7.5.5.11.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set q_1. The UE shall not transmit preamble on a beam associated with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.12 Beam Failure Detection and Link Recovery Test for FR2-2 PCell configured with CSI-RS-based BFD and LR in DRX mode

A.7.5.5.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set q_0 configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2-2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.12.1-1, A.7.5.5.12.1-2, A.7.5.5.12.1-3, and A.7.5.5.12.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.12.1-1 shows the variation of the downlink SNR of the CSI-RS in set q_0 in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.12.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

Table A.7.5.5.12.1-1: Supported test configurations for FR2-2 PCell

Configuration	Description
1	TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth
2	TDD duplex mode, 480 kHz SSB SCS, 400 MHz bandwidth
3	TDD duplex mode, 960 kHz SSB SCS, 400 MHz bandwidth
NOTE: The UE is only required to pass in one of the supported test configurations in FR2-2

A.7.5.5.12.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set q_1. The UE shall not transmit preamble on a beam associated with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.5.13 Scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2-2 PCell configured with SSB-based BFD and LR in non-DRX mode

A.7.5.5.13.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements in clause 8.5.7 and 8.5.8.

The test parameters are given in Tables A.7.5.5.13.1-1, A.7.5.5.13.1-2 and A.7.5.5.13.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.13.1-1 shows the variation of the downlink SNR of the SSB in set q_0 in the active cell to emulate SSB based beam failure. Figure A.7.5.5.13.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. This test will focus on the scheduling availability during beam failure detection) and candidate beam detection. In the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

Table A.7.5.513.1-1: Supported test configurations for FR2-2 PCell

Configuration	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations

Figure A.7.5.5.13.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode

A.7.5.5.13.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

A.7.5.5.14 TRP specific Beam Failure Detection and Link Recovery for FR2 PCell configured with CSI-RS-based BFD and LR and multi-Rx operation in DRX mode

A.7.5.5.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure and link recovery in the sets $\bar{q}_{0,0}$ and $\bar{q}_{1,0}$ for TRP0 and sets $\bar{q}_{0,1}$ and $\bar{q}_{1,1}$ for TRP1 when DRX is used for an FR2 PCell requirements in clause 8.18.

The test parameters are given in Tables A.7.5.5.14.1-1, A.7.5.5.14.1-2 and A.7.5.5.14.1-3. Cell 1 is the active PCell in the test. PCell is configured with two TRPs. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.14.1-3 shows the variation of the downlink SNR of the CSI-RS in set $\bar{q}_{0,0}$ and $\bar{q}_{0,1}$ in the PCell for TRP0 and TRP1 respectively. Figure A.7.5.5.14.1-3 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in $\bar{q}_{1,0}$ for TPR0. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms.

In the test, UE is capable of multi-Rx operation and configured with group-based beam reporting (GBBR) on the cell 1. During T1, UE shall be able to report via beam pair associated with sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1. After T5, UE shall be able to report via new beam pair associated with sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1

During T2 and T3, for beam failure detection, CSI-RS resources in the two sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1 are overlapped on the same OFDM symbol according to CSI-RS configuration in table A.7.5.5.14.1-2 and A.3.14.2-3, and the conditions in clause 8.18.3.2 are met, at least including:

- Both CSI-RSs are not in any CSI-RS resource set with repetition ON
- The CSI-RS in set $\bar{q}_{0,0}$ has same QCL source as the active TCI state of one PDSCH, and the CSI-RS in set $\bar{q}_{0,1}$ has same QCL source as the active TCI state of the other PDSCH
- Resources of the active TCI states for the two PDSCHs have been reported as a resource group in Rel-17 group-based RSRP report.

During T4 and T5, for candidate beam detection, CSI-RS resources in the two sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1 are also overlapped according to CSI-RS configuration in table A.7.5.5.14.1-2 and and A.3.14.2-3.

In addition, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.5.5.7.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 11: AoA1 and AoA3 are for TRP0 of PCell, AoA2 is for TRP1 of PCell. AoA1 and A0A2 are from the set of qualified AoA pairs according to A.3.15.6.

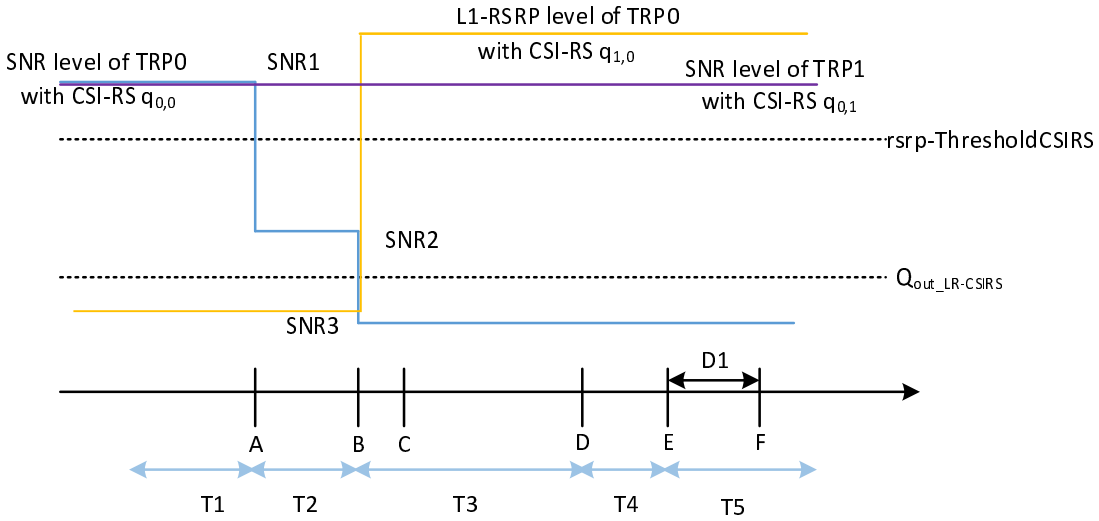

Figure A.7.5.5.14.1-1: SNR and L1-RSRP variation for beam failure detection and link recovery testing for PCell in DRX mode

A.7.5.5.14.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.14.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 with sets $\bar{q}_{0,0}$ for TRP0 and sets $\bar{q}_{0,1}$ for TRP1. During T1, UE reports via beam pair assoiated with sets $\bar{q}_{0,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

During the period from time point A to time point B the UE shall transmit uplink signal in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3, T4, T5, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1 with sets $\bar{q}_{0,1}$ for TRP1.

During T3 the UE shall detect beam failure and initiate link recovery for TRP0. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

No later than time point F occurring no later than D1 after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing beam associated with the candidate beam with sets $\bar{q}_{1,0}$ for TRP0. The UE shall not transmit PUCCH with an LRR with candidate beam set $\bar{q}_{1,0}$ for TRP0 earlier than time point B.

After T5, UE shall be able to report via new beam pair associated with sets $\bar{q}_{1,0}$ for TRP0 and $\bar{q}_{0,1}$ for TRP1.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6 Active BWP switch

A.7.5.6.1 DCI-based and Timer-based Active BWP Switch

A.7.5.6.1.1 NR FR2- NR FR2 DL active BWP switch of SCell with non-DRX in SA

A.7.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.1.1.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.1.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.1.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone. NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.			

A.7.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

A.7.5.6.1.2 NR FR1- NR FR2 DL active BWP switch of SCell with non-DRX in SA

A.7.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.2.1-1 below. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2). The general parameters are given in table A.7.5.6.1.2.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.2.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.2.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the begining of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

Table A.7.5.6.1.2.1-1: DL BWP switch supported test configurations

Config	Description
1	PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.

Parameter	Unit	Cell 1	Cell 2
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.			

A.7.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

If the UE doesn't support per-FR gap,

- During T1 and T3, the start time of SCell interruption during PCell active BWP switch shall not happen outside the BWP switch delay.
- The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

Otherwise no interruption due to BWP switch on SCell is allowed.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

A.7.5.6.1.3 NR FR2 DL active BWP switch with non-DRX in SA

A.7.5.6.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6. Supported test configurations are shown in table A.7.5.6.1.3.1-1.

The test scenario comprises of one cell (Cell 1) as given in table A.7.5.6.1.3.1-2. Cell-specific parameters of NR PCell is specified in table A.7.5.6.1.3.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.6.1.3.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell 1's slot # denoted *i*. The UE should switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell 1.

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

Table A.7.5.6.1.3.1-1: DL BWP switch supported test configurations

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: Void. NOTE 2: A UE which fulfils the requirements in test case A.7.5.6.1.1 or A.7.5.6.1.2 can skip the test cases in A.7.5.6.1.3.	

Table A.7.5.6.1.3.1-2: General test parameters for DL BWP switch in SA

Parameter	Unit	Value	Comment

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.6.1.3.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

A.7.5.6.1.4 NR FR2-2- NR FR2-2 DL active BWP switch of SCell with non-DRX in SA

A.7.5.6.1.4.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.1.4.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.1.4.1-2. NR Cell-specific parameters are specified in table A.7.5.6.1.4.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.4.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

Table A.7.5.6.1.4.1-1: DL BWP switch supported test configurations

Configuration	Description
1	NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz

NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.6.1.4.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

A.7.5.6.2 RRC-based Active BWP Switch

A.7.5.6.2.1 NR FR2 DL active BWP switch of PCell with non-DRX in SA

A.7.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.7.5.6.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.6.2.1.1-2. Cell-specific parameters of PCell are specified in table A.7.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PCell's BWP-1 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

A.7.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6.2.2 NR FR2-2 DL active BWP switch of PCell with non-DRX in SA

A.7.5.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.7.5.6.2.2.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.6.2.2.1-2. Cell-specific parameters of PCell are specified in table A.7.5.6.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

> Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PSCell's BWP-1 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

Table A.7.5.6.2.2.1-1: DL BWP switch supported test configurations

Configuration	Description
1	NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz
2	NR TDD, SSB SCS 480 kHz, data SCS 480 kHz, BW 400 MHz
3	NR TDD, SSB SCS 960 kHz, data SCS 960 kHz, BW 400 MHz
NOTE: The UE is only required to be tested in one of the supported test configurations

NOTE 6:	Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.6.2.2.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

A.7.5.6.3.1 Active BWP switch on multiple SCells with non-DRX in SA

A.7.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of DL BWP switch delay requirement defined in clauses 8.6.2A.1 and 8.6.2B.1, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in table A.7.5.6.3.1.1-1 below. The test scenario comprises one PCell (Cell 1) and two SCells (Cell 2 and Cell 3) as given in table A.7.5.6.3.1.1-2. NR cell-specific parameters are provided in table A.7.5.6.3.1.1-3, and OTA related test parameters in table A.7.5.6.3.1.1-4 below.

The test consists of three consecutive time periods with durations T1, T2 and T3, respectively.

PDCCHs indicating new transmissions shall be transmitted in PCell, SCell 1 and SCell 2 throughout time periods T1 and T3 to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell 1 and SCell 2. During T2, there shall be scheduling on PDSCH in PCell only.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (SCell 1) on radio channel 2 (SCC1), and Cell 3 (SCell 2) on radio channel 3 (SCC2).

UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1 (PCell). BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-1 and BWP-2, for Cell 2 (SCell 1). BWP-1 and BWP-2 include the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-3 and BWP-4, for Cell 3 (SCell 2). BWP-3 and BWP-4 include the bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell 1.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-3 in SCell 2.

UE is configured with a *bwp-InactivityTimer* timer value for SCell 1 and SCell 2, respectively.

All cells have constant signal levels throughout the test.

Time period T1 starts when the UE simultaneously receives DCI format 1_1 commands for DL BWP switch in SCell 1 and SCell 2, respectively, in a slot # denoted *m*. The UE shall switch its SCell 1 bandwidth part from BWP-1 to BWP-2, and its SCell 2 bandwidth part from BWP-3 to BWP-4. The UE shall be able to receive PDSCH in SCell 1 and SCell 2 starting from the first DL slot that occurs after slot ($m+T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2A.1, and to transmit ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after ($m+T_{BWPswitchDelay}+k1$) where *k1* is specified in [7]. The UE shall be continuously scheduled in SCell 1 BWP-2 and SCell 2 BWP-4 no later than in the first DL slot that occurs after slot ($m+T_{MultipleBWPswitchDelay}$). The starting time of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall fulfill requirements in clause 8.2.2.2.5.

Time period T2 starts when the test equipment ceases to schedule the UE on PDSCH in SCell 1 and SCell 2, thereby causing the *bwp-InactivityTimer* timers for SCell 1 and SCell 2 to be running until expiry.

Time period T3 starts at the beginning of the first DL half-subframe immediately after the earliest of the *bwp-InactivityTimer* timers expires, in a slot # denoted *n*. The UE shall switch its SCell 1 bandwidth part from BWP-2 to BWP-1, and its SCell 2 bandwidth part from BWP-4 to BWP-3. The UE shall be able to receive PDSCH in SCell 1 and SCell 2 starting from the first DL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2B.1, and to transmit ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}+k1$). The UE shall be continuously scheduled in SCell 1 BWP-1 and SCell 2 BWP-3 no later than in the first DL slot that occurs after slot ($n+T_{MultipleBWPswitchDelay}$). The starting time of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell 1 and SCell 2 shall fulfill requirements in clause 8.2.2.2.5.

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch commands are received or *bwp-InactivityTimer* timers expire until ACK/NACKs are sent in SCell 1 and SCell 2, respectively.

The test equipment verifies that potential interruptions of PCell due to DL BWP switching on SCell 1 and SCell 2 are carried out within the correct time span, and are within the correct length, by monitoring ACK/NACKs sent in PCell for PCell.

Table A.7.5.6.3.1.1-1: DL BWP switch supported test configurations

Config	Description

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SSB-RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after the beginning of DL slot ($m+T_{MultipleBWPswitchDelay}+k1$).

During T3, the UE shall start to send ACK/NACKs in SCell 1 and SCell 2 from the first UL slot that occurs after the beginning of DL slot ($n+T_{MultipleBWPswitchDelay}+k1$).

During T1 and T3, the start of any interruption on PCell due to active BWP switching on SCell 1 and SCell 2 shall not happen outside the BWP switching delay $T_{MultipleBWPswitchDelay}$, and the length of any interruption shall not exceed the length specified in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed active BWP switch delays in SCell 1 and SCell 2 to be considered correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6.4 SCell dormancy switch

A.7.5.6.4.1 NR FR2 PCell SCell dormancy switch of single FR2 SCell inside active time

A.7.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the Dormant SCell BWP switch delay requirements are within the requirements stated in clause 8.6 for UE configured with a single downlink SCell, when the dormancy indication is received in any of the first 3 OFDM symbols or is received after the first 3 OFDM symbols.

The Supported test configurations are given in table A.7.5.6.4.1.1-1. The test parameters are given in Tables A.7.5.6.4.1.1-2 and cell-specific parameters in A.7.5.6.4.1.1-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. There are two carriers both in FR2, with one cell on the PCC and 2 cells on SCC. Cell 1, Cell 2 and Cell 3 operate in either FDD or TDD duplex mode according to test configuration. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) with configured and activated SCell (SCell 1) on radio channel 2 (SCC1). The UE is not aware of Cell 3 on radio channel 2 (SCC1). The UE is reporting CSI and shall not report CQI index 0 (out-of-range) in the available uplink resources to report CQI for the SCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

The UE receives a DCI-based BWP switch command by which the SCell 1 (Cell 2) is requested to switch the active BWP to the dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted n, defines the start of time period T1. The UE shall accomplish the BWP switch to the dormant BWP latest in subframe (n + $T_{BWPswitchDelay}$ + X). The UE shall continue to shall report valid CQI if the UE has available uplink resources to report CQI for the dormant SCell. The UE shall continue to shall report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the Dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes n to (n+ $T_{BWPswitchDelay}$ + X).

Time T2 start at T1 + ($T_{BWPswitchDelay}$ + X). During T2 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Time T3 starts at T2 + 500 ms. During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Starting at T4 = T3 + 500 ms, Cell 3 becomes detectable. During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell. The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4. The UE is not required to read the neighbour cell SSB index in this test.

At time T5 starting at T4 + 1500 ms a a DCI-based BWP switch command by which the SCell 1 (Cell 2) is requested to switch the active BWP to the non-dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted n, defines the start of time period T6. The UE shall accomplish the BWP switch to the non-dormant BWP latest in subframe (n + $T_{BWPswitchDelay}$ + X). The UE shall continue to shall report valid CQI if the UE has available uplink resources to report CQI for the non-dormant SCell. The UE shall continue to shall report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the non-dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes n to (n+ $T_{BWPswitchDelay}$ + X).

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from L1-RSRP measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%

During T1, T2, T3, T4, T5 and T6, the UE shall be continuously scheduled in the SCell 1.

Table A.7.5.6.4.1.1-1: Supported test configurations

Configuration	Description

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: OCNG shall be used such that the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols

A.7.5.6.4.1.2 Test Requirements

During T1 the UE shall switch to the dormant BWP.

During T2, T3, T4 and T5 the UE shall not send ACK/NACK for the PDSCH data scheduled on the SCell.

During T2, T3, T4 and T5 the UE shall continue to send CSI reports for SCell 1 with non-zero CQI index.

During T2, T3, T4 and T5 the UE shall continue to send L1-RSRP reports for SCell.

During T4 the UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4.

During T2, T3, T4 and T5, the missing ACK/NACK sent in PCell shall be less than 1.5 % of the total number of the expected ACK/NACK.

During T6, the UE shall send ACK/NACK for the PDSCH data scheduled after subframe (n+ $T_{BWPswitchDelay}$ + X) for the SCell 1.

All of the above test requirements shall be fulfilled in order for the observed SCell 1 BWP switch delays, PCell interruption rate, correct CSI and L1-RSRP reporting and event triggeres reporting. The rate of correct observed SCell 1 hibernation delay, activation delay and SCell 1 deactivation delay during repeated tests shall be at least 90 %.

A.7.5.6.4.2 NR FR1 PCell SCell dormancy switch of two FR2 SCells outside active time

A.7.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of SCell dormancy switching delay requirements in clause 8.6.2A when the UE is triggered to switch between non-dormancy and dormancy outside DRX active time. In the tested scenario, the UE is connected to PCell in FR1and two SCells in FR2, and the SCells are switched from non-dormancy to dormancy, and vice versa, at a point in time before start of *onDuration*. The UE is configured to monitor PDCCH for DCI format 2_6 at *ps-Offset* before the start of *onDuration*. Two tests are specified, where a UE that only supports triggering within the first three OFDM symbols of a slot shall undergo Test1 only, and a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo both Test1 and Test2. In the tested scenario, *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.2A.

The supported test configurations are provided in table A.7.5.6.4.2.1-1 below. General test parameters are provided in table A.7.5.6.4.2.1-2, and cell-specific parameters are provided in table A.7.5.6.4.2.1-3 below. OTA-related test parameters are provided in table A.7.5.6.4.2.1-4.

The tests consist of four consecutive time periods, T1, T2, T3 and T4, respectively.

Three carriers are used in the test. Cell 1 (PCell) is on RF channel 1 (PCC) in FR1, and Cell 2 (SCell 1) and Cell 3 (SCell 2) are on RF channels 2 (SCC1) and 3 (SCC2) in FR2, respectively. All three cells have constant signal levels throughout the test.

Before the test starts,

- UE is connected to Cell 1 (PCell), Cell 2 (SCell 1) and Cell 3 (SCell 2).
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 2 and Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 1 is BWP-0.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 2 is BWP-0.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.
- UE is configured with DRX.
- UE is configured to monitor DCI format 2_6, and to be active during *onDuration* even when no DCI format 2_6 is detected (*ps-WakeUp*).

Time period T1 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2_6 carrying dormancy indication that indicates that SCell 1 and SCell 2 are to be switched from non-dormancy to dormancy. The UE shall switch active bandwidth parts for SCell 1 and SCell 2, respectively, from non-dormant BWP-0 to dormant BWP-1. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE continuously with new data indications in PCell starting from beginning of *onDuration*. The test equipment verifies that the UE is transmitting HARQ feedback for PCell from the beginning of *onDuration* and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration.*

Time period T2 starts when T1 is completed. The test equipment continues to schedule the UE continuously in PCell. The UE shall carry out CSI and RRM measurements on the dormant SCells. The UE shall report ACK/NACK in PCell in response to scheduled PDSCH, with the maximum loss of transmitted ACK/NACKs fulfilling the requirement in clause 8.2.2.2.12. The test equipment verifies that the loss of ACK/NACKs is no larger than 1.5 %.

Time period T3 starts when T2 is completed. During T3, the test equipment does not schedule the UE, by which the inactivity timer expires and the UE stops monitoring PDCCH except for signalling using DCI format 2_6 at wake-up signalling occasions.

Time period T4 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2_6 carrying dormancy indication that indicates that SCell 1 and SCell 2 are to be switched from dormancy to non-dormancy. The UE shall switch active bandwidth parts for SCell 1 and SCell 2, respectively, from dormant BWP-1 to non-dormant BWP-0. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE with new data indication in PCell, SCell 1 and SCell 2 during *onDuration*. The UE shall receive in PCell, SCell 1 and SCell 2 and send HARQ feedback for PCell, SCell 1 and SCell 2 via PCell. The test equipment verifies that the UE is transmitting HARQ feedback for PCell, SCell 1 and SCell 2 from the beginning of *onDuration*, and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration*.

Table A.7.5.6.4.2.1-1: Supported test configurations

Config	Description
1	PCell: 15kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	PCell: 15kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to undergo test for one of the supported test configurations.	

Table A.7.5.6.4.2.1-2: General test parameters

Parameter	Unit	Value		Comment
		Test1	Test2	
NR RF Channel Number		1, 2, 3		Three NR radio channels are used for this test
Active PCell		Cell 1		PCell on RF channel number 1 in FR1
Active SCell 1		Cell 2		SCell 1 on RF channel number 2 in FR2
Active SCell 2		Cell 3		SCell 2 on RF channel number 3 in FR2
CSI reporting periodicity, Non-dormant BWP	ms	2		CSI reporting periodicity for periodic reporting of CQI for PCell and non-dormant SCells
CSI reporting periodicity, Dormant BWP	ms	40		CSI reporting periodicity for periodic reporting of CQI for dormant SCells
CP length		Normal		
DRX		DRX.8		For both PCell and SCells. See clause A.3.3.8.
ps-Offset		Depending on UE capability		Monitoring of DCI 2_6 ahead of start of drx-onDurationTimer. Value of ps-Offset shall correspond to SCell dormancy switching time for switching of two SCells, as specified in clause 8.6.2A. Actual value depends on reported UE capabilities.
ps-WakeUp		true		Wake up for onDuration in case DCI format 2_6 is not detected.
Cell 2 timing offset to Cell 1	µs	<24		Timing offset shall be less than MRTD for FR1-FR2 CA, and leave margin for timing difference between Cell 2 and Cell 3.
Cell 3 timing offset to Cell 2	ns	<260		Timing offset shall be less than MRTD for FR2 intra-band non-contiguous CA.
OFDM symbol range in slot for transmission of DCI with dormancy indication		0 – 2	3 – 11	Test1 is based on that triggering DCI is received within the first three OFDM symbols of a slot.Test2 is based on that the triggering DCI is received later than within the first three OFDM symbols of a slot.

Parameter	Unit	Value		Comment
		Test1	Test2	
T1	s	0.2		During this time the SCells are switched from non-dormancy to dormancy.
T2	s	10		During this time the SCells are dormant.
T3	s	0.2		During this time the UE is not scheduled in PCell.
T4	s	0.2		During this time the SCells are switched from dormancy to non-dormancy.

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.				

A.7.5.6.4.2.2 Test Requirements

Starting from *onDuration* in time period T1, the UE shall transmit ACK/NACK in response to scheduling in PCell. There shall be no loss of ACK/NACK.

During time period T2, the UE shall transmit ACK/NACKs in response to scheduling in PCell and the rate of missed ACK/NACKs shall be no more than 1.5 %.

Starting from *onDuration* in time period T4, the UE shall transmit ACK/NACK in response to scheduling in PCell, SCell 1 and SCell 2. There shall be no loss of ACK/NACK.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

A.7.5.6.5.1 Active BWP switch on multiple SCells with non-DRX in SA

A.7.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A.

The supported test configurations are shown in table A.7.5.6.5.1.1-1. The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.5.1.1-2. NR cell-specific parameters are provided in table A.7.5.6.5.1.1-3, and OTA related test parameters in table A.7.5.6.5.1.1-4.

PDCCHs indicating new transmissions shall be transmitted in PCell and SCell throughout to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell), Cell 2 (SCell).

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition on Cell 1 (PCell), Cell 2 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 1 and Cell 2, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 1 and Cell 2.

The UE shall be able to receive PDSCH on Cell 1 and Cell 2 at the beginning of the DL slot right after PCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$). The UE shall be continuously scheduled on Cell 1's BWP-1and Cell 2's BWP-1 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

$T_{RRCprocessingDelay}$, $T_{BWPswitchDelayRRC}$ and D_{RRC} are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 1 and Cell 2 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

SSB-RP Note2	dBm/SCS	-85-	-85
Ês/Iot	dB	-18-	18
Io Note3	dBm/95.04 MHz	-56	-56

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SSB-RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the center of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell and SCell in the beginning of the DL slot right after slot $(i+\frac{T_{RRC processing Delay}+T_{BWP switch Delay RRC}+D_{RRC}}{NR\ slot\ length})$.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.6.5.2 NR FR2-2 Active BWP switch on multiple SCells with non-DRX in SA

A.7.5.6.5.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A.

The supported test configurations are shown in table A.7.5.6.5.2.1-1. The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as given in table A.7.5.6.5.2.1-2. NR cell-specific parameters are provided in table A.7.5.6.5.2.1-3, and OTA related test parameters in table A.7.5.6.5.2.1-4.

PDCCHs indicating new transmissions shall be transmitted in PCell and SCell throughout to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell), Cell 2 (SCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition on Cell 1 (PCell), Cell 2 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 1 and Cell 2, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 1 and Cell 2.

The UE shall be able to receive PDSCH on Cell 1 and Cell 2 at the beginning of the DL slot right after PCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$). The UE shall be continuously scheduled on Cell 1's BWP-1and Cell 2's BWP-1 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

$T_{RRCprocessingDelay}$, $T_{BWPswitchDelayRRC}$ and D_{RRC} are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 1 and Cell 2 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

Table A.7.5.6.5.2.1-1: DL BWP switch supported test configurations

Configuration	Description
1	NR TDD, SSB SCS 120 kHz, data SCS 120 kHz, BW 100 MHz
2	NR TDD, SSB SCS 480 kHz, data SCS 480 kHz, BW 400 MHz
3	NR TDD, SSB SCS 960 kHz, data SCS 960 kHz, BW 400 MHz
NOTE: The UE is only required to be tested in one of the supported test configurations.

NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone. NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.				

A.7.5.6.5.2.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell and SCell in the beginning of the DL slot right after slot $(i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length})$.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.7 PSCell addition and release delay

A.7.5.7.1 Addition and Release Delay of known NR PSCell

A.7.5.7.1.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is known to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.1.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.1.1-2, A.7.5.7.1.1-3 and A.7.5.7.1.1-4 below. The test consists of six time periods with durations T1, T2, T3, T4, T5 and T6, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. Before the start of T2, the test system shall send

measurement control information including measurement gap configuration and event-triggered reporting configuration for measurements on radio channel 2.

During T2, the Cell 2 becomes known to the UE. Therefore, during T2 the UE shall report Event triggered report.

The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added.

The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

During T4, the UE shall carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T5.

During T5, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T6.

During T6, the UE shall release the PSCell.

Table A.7.5.7.1.1-1: Supported test configurations for FR2 PSCell

Config	Description
1	FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
2	FR1 TDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
3	FR1 TDD SSB SCS 30kHz BW 40 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations	

Table A.7.5.7.1.1-2: General test parameters for PSCell addition and release delay

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	Two radio channels are used for this test
Active PCell			Cell 1	PCell on RF channel number 1 in FR1
Neighbour cell			Cell 2	Neighbour cell (PSCell-to-be) on RF channel number 2 in FR2
A4	Hysteresis	dB	0	Hysteresis for event A4
	Threshold RSRP	dBm	-118	Threshold for event A4
	Time to Trigger	s	0	Time to trigger for event A4
DRX			OFF	For both PCell and PSCell once activated
Measurement gap pattern ID			0	Gaps are configured before T2 and released before T3.
PRACH configuration in Cell 2			FR2 PRACH configuration 2	PRACH configuration as specified in Clause A.3.8.3.2.
CSI reporting periodicity and offset configuration for Cell 2		ms	2	
T1		s	5	During this time the PCell is known and Cell 2 is unknown.
T2		s	1	During this time the UE shall identify neighbour cell 2 and report event B1.
T3		s	3.5	During this time the test system transmits the RRC messages to release measurement gap and add PSCell.
T4		s	1	During this time the UE adds the PSCell.
T5		s	1	During this time the UE sends CSI reports for PSCell.
T6		s	1	During this time the UE releases the PSCell.

NOTE 2: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.5.7.1.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 112 ms into T4.

The UE shall transmit at least one periodic CSI report for PSCell during T5.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T6.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.7.2 Addition and Release Delay of unknown NR PSCell in

A.7.5.7.2.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is unknown to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.2.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.2.1-2, A.7.5.7.2.1-3 and A.7.5.7.2.1-4 below. The test consists of four time periods with durations T1, T2, T3 and T4, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. At the end of T1, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T2.

During T2, the UE shall identify PSCell and carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

Io Note 1, Note 2	dBm/95.04 MHz	1,2,3		N/A	-56.41		
NOTE 1: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 2: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation. NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.							

A.7.5.7.2.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 572 ms into T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.7.3 Addition and Release Delay of known NR PSCell in FR2-2

A.7.5.7.3.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is known to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.3.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2-2, respectively. Test parameters are given in Tables A.7.5.7.3.1-2, A.7.5.7.3.1-3 and A.7.5.7.3.1-4 below. The test consists of five time periods with durations T1, T2, T3, T4 and T5, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. Before the start of T2, the test system shall send measurement control information including measurement gap configuration and event-triggered reporting configuration for measurements on radio channel 2.

During T2, the Cell 2 becomes known to the UE. Therefore, during T2 the UE shall report Event triggered report.

The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added.

The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

During T4, the UE shall carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T4.

During T5, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T6

During T6, the UE shall release the PSCell.

Table A.7.5.7.3.1-1: Supported test configurations for FR2-2 PSCell

Config	Description
1	FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz

A.7.5.7.3.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest TBD ms into T3.

The UE shall transmit at least one periodic CSI report for PSCell during T4.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.7.4 Addition and Release Delay of unknown NR PSCell in FR2-2

A.7.5.7.4.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is unknown to the UE at the time of addition.

The supported test configurations are given in table A.7.5.7.4.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2-2, respectively. Test parameters are given in Tables A.7.5.7.4.1-2, A.7.5.7.4.1-3 and A.7.5.7.4.1-4 below. The test consists of four time periods with durations T1, T2, T3 and T4, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. At the end of T1, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T2.

During T2, the UE shall identify PSCell and carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

Table A.7.5.7.4.1-1: Supported test configurations for FR2-2 PSCell

Config	Description
1	FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2-2 TDD SSB SCS 120kHz BW 100 MHz

A.7.5.7.4.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest TBD ms into T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.8 Active TCI state switch delay

A.7.5.8.1 MAC-CE based active TCI state switch

A.7.5.8.1.1 NR PCell FR2 active TCI state switch for a known TCI state

A.7.5.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in table A.7.5.8.1.1.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.1.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.1.1.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCIstate 1 (QCL'd to SSB1), in Cell 1 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state
- Target TCI state is not in the active TCI state list.

The test consists of two time periods, T1 and T2. Figure A.7.5.8.1.1.1-1 and Figure A.7.5.8.1.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$)/*NR slot length*.

A.7.5.8.1.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on TCI state 1 after slot n+ T_{HARQ} +5$N_{slot}^{subframe,\mu}$ + $T_{first\text{-}SSB}$/*NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.8.2 RRC based active TCI state switch

A.7.5.8.2.1 NR PCell FR2 active TCI state switch for a known TCI state

A.7.5.8.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in table A.7.5.8.2.1.1-1.

The test scenario comprises of one NR PCell as given in table A.7.5.8.2.1.1-2. Cell-specific parameters of NR PCell is specified in table A.7.5.8.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.8.2.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 TCI state for PCell, PDCCH-TCI-state0 (QCL'd to SSB0)
- UE is indicated in TCI state0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.2.1.1-1 and Figure A.7.5.8.2.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI-state1 starts

transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to TCI-state1.

The test equipment verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ $(T_{RRC_processing} + T_{first\text{-}SSB})/NR\ slot\ length + 2N_{slot}^{subframe,\mu}$.

A.7.5.8.2.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with both SSB0 and SSB1.

After receiving RRC command in slot n, UE shall be able to start receiving on TCI state 1 after slot n+ ($T_{RRC_processing}$ + $T_{first\text{-}SSB}$) / *NR slot length* + $2N_{slot}^{subframe,\mu}$.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.8.3 MAC-CE based active TCI state switch for HST FR2 scenario

A.7.5.8.3.1 NR PCell FR2 HST active TCI state switch for a known TCI state

A.7.5.8.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3A for FR2 power class 6 UE. Supported test configuration is shown in table A.7.5.8.3.1.1-1. Furthermore, the purpose of this test is also to verify the one shot large timing adjustment requirement specified in clause 7.1.2.3 provided *highSpeedMeasFlagFR2-r17* is configured and *highSpeedLargeOneStepUL-TimingFR2-r17* is enabled for UE supporting FR2 power class 6 and *largeOneStepUL-timingFR2-r17* capability.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.3.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.3.1.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.3.1.1-4. During the test, *highSpeedMeasFlagFR2-r17* is configured to be *set2* and broadcast to UE.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), in Cell 1 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.3.1.1-1 and Figure A.7.5.8.3.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting, which has the relative timing delay compared to TCI state 0 by the absolute value of the one-way differential propagation time $|T_{old} - T_{new}| = 2.33\ \mu s$. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state. After the TCI state switch, the UE transmit timing accuracy shall be measured by the test equipment by using the SRS defined in table A.7.5.8.3.1-5.

The test equipment verifies that

- UE can be scheduled on PCell on TCI state 0 till n+ T_{HARQ} +3 ms.
- the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n + T_{HARQ} + 3 ms + $T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$ + T_{rs} + $T_{rs\text{-}proc}$.
- the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

Figure A.7.5.8.3.1.1-2: Time multiplexed downlink transmissions during T2

A.7.5.8.3.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After the TCI state switch, the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till n + T_{HARQ} + 3 ms
- be able to start receiving on TCI state 1 after n + T_{HARQ} + 7 ms + $T_{first\text{-}SSB}$ + T_{rs}

A.7.5.8.3.2 NR PCell FR2 HST active TCI state switch for PC6 UE supporting *tci-StateSwitchInd-r18* for a known TCI state

A.7.5.8.3.2.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3 applicable for FR2 power class 6 UE. Supported test configuration is shown in table A.7.5.8.3.2.1-1. Furthermore, the purpose of this test is also to verify the timing adjustment requirement specified in clause 7.1.2.3. In the test, *highSpeedMeasFlagFR2-r17* is configured and cross-RRH TCI state indicator for UE-specific PDCCH MAC *CE* as specified in Clause 6.1.3.77 of TS 38.321 [7] is set to '0' for the TCI state switch for FR2 power class 6 UE supporting *tci-StateSwitchInd-r18* capability.

The test scenario comprises of one NR PCell (Cell 1) and the general test parameters are specified in table A.7.5.8.3.2.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.3.2.1-3 below. The OTA related test parameters for FR2 are specified in table A.7.5.8.3.2.1-4. During the test, *highSpeedMeasFlagFR2-r17* is configured to be *set2*.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 2 different TCI states for PCell: PDCCH TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), and TCI state 0 is indicated as the active PDCCH TCI state.

The test consists of two time periods: T1 and T2. Figure A.7.5.8.3.2.1-1 and A.7.5.8.3.2.1-2 show the time multiplexed (allocation in frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. From the beginning of T2, the SSB corresponding to TCI state 1 is transmitted. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1 with cross-RRH TCI state indicator for UE-specific PDCCH *MAC CE* set as '0'. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state. After the TCI state switch, the UE transmit timing accuracy shall be measured by the test equipment by using the SRS defined in table A.7.5.8.3.2-5. TCI state 1 has relative timing delay of $4*64*T_c$ compared to TCI state 0.

The test equipment verifies that

- UE can be scheduled on PCell on TCI state 0 till n+ T_{HARQ} +3 ms.
- the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n + T_{HARQ} + 3 ms + $T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$.
- the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

Figure A.7.5.8.3.2.1-2: Time multiplexed downlink transmissions during T2

A.7.5.8.3.2.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After the TCI state switch, the UE transmission timing immediately after TCI state switch shall follow the requirements as specified in clause 7.1.2.3.

After receiving TCI state switch command with cross-RRH TCI state indicator for UE-specific PDCCH MAC CE set to '0' in slot n, UE shall:

- be able to continue to receive on TCI state 0 till n+ T_{HARQ} +3 ms
- be able to start receiving on TCI state 1 after n+ T_{HARQ} +5 ms + $T_{first\text{-}SSB.}$

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.8.4 DCI based active TCI state switch with m-DCI for simultaneous reception

A.7.5.8.4.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10E.4.2. Supported test configuration is shown in table A.7.5.8.4.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.8.4.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.4.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.4.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- The UE is configured with the following TCI states: TCI state 0 (QCL'd to SSB0), TCI state 1 (QCL'd to SSB1), TCI state 2 (QCL'd to SSB2) and TCI state 3 (QCL'd to SSB3).
- UE is indicated with the following TCI states for Cell 1 (PCell):
  - PDCCH TCI state 0 (QCL'd to SSB0), PDSCH TCI state 0 (QCL'd to SSB0) for CORESETPoolIndex 0, and
  - PDCCH TCIstate 1 (QCL'd to SSB1), PDSCH TCI state 1 (QCL'd to SSB1) for CORESETPoolIndex 1.
- UE is configured with groupBasedBeamReporting-r17 for SSB index 2 and SSB index 3.
- tci-PresentInDCI is configured in the PDSCH configuration.

The test consists of two time periods, T1 and T2. During T1, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions are scheduled from each Angle of Arrival (AoA1, AoA2 and AoA3) as shown in Figure A.7.5.8.4.1-1. UE is configured to transmit periodic L1-RSRP group-based beam reports on SSB index 2 and SSB index 3. After UE transmits the first L1-RSRP group-based beam report with SSB index 2 and SSB index 3 as a beam pair, TE sends TCI state activation MAC-CEs to activate TCI state 2 and TCI state 3 for PDSCHs.

T2 starts at a time that is not earlier than active TCI state list update delay (as defined in section 8.10E.6.2) from the time UE has received the TCI state activation MAC-CEs. At the beginning of T2, at slot n, UE receives DCI to switch PDSCH TCI state on CORESETPoolIndex 0 for indicating the TCI state switch of PDSCH to TCI state 3. At slot n+1, UE receives DCI to switch PDSCH TCI state on CORESETPoolIndex 1 for indicating the TCI state switch of PDSCH to TCI state 2. During T2, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival is shown in Figure A.7.5.8.4.1-2.

The test equipment verifies the TCI state switch time in PCell by scheduling the UE on TCI state 2 and TCI state 3 simultaneously after slot n + 1 + timeDurationForQCL

NOTE 2: SS B_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the center of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 7: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 8: Three probes are used to test dual to dual TCI state switch. One probe shall be used to emulate two different SSBs i.e SSB0 and SSB3. SSB3 is transmitted with same AoA as SSB0 with a time offset (x) and a different power from SSB0.

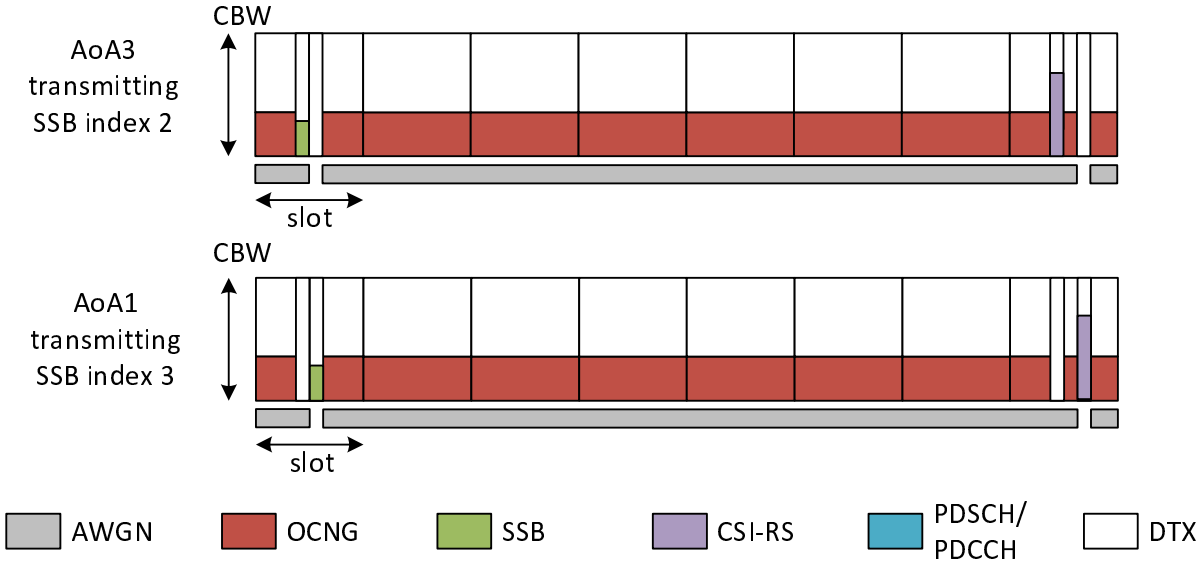

Figure A.7.5.8.4.1-1: Time multiplexed downlink transmissions during T1

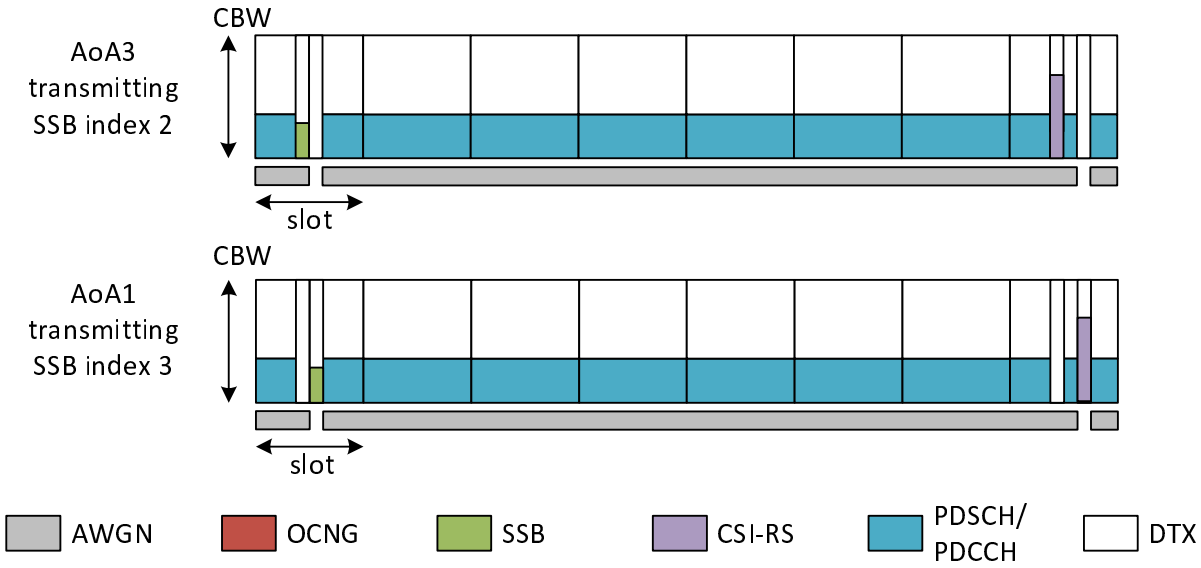

Figure A.7.5.8.4.1-2: Time multiplexed downlink transmissions during T2

A.7.5.8.4.2 Test Requirements

After receiving two DCIs in slot n and slot n+1 during T2, UE shall:

- be able to start receiving on TCI state 2 and TCI state 3 simultaneously after slot n + *timeDurationForQCL*

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.8.5 Single-DCI FR2 DCI based active TCI state switch with known target TCI states for simultaneous reception

A.7.5.8.5.1 Test Purpose and Environment

The purpose of this test is to verify the DCI based active TCI state switch delay requirement defined for sDCI in clause 8.10E.4.1 for simultaneous reception in DL, while also verifying that the UE can complete active TCI state list update within the delay requirement defined in 8.10E.6.1. Supported test configuration is shown in table A.7.5.8.5.1-1.

The test scenario comprises of one NR PCell (Cell 1) in FR2-1 as given in table A.7.5.8.5.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.8.5.1-3 below. The OTA related test parameters for FR2 are shown in table A.7.5.8.5.1-4.

PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with *groupBasedBeamReporting-r17* for SSB index 0 and SSB index 1
- UE is configured with 3 different TCI states for PCell in Cell 1 before starting the test:
  - PDCCH TCI state 0 (QCL'd to SSB0),
  - PDSCH TCI state 0 (QCL'd to SSB0),
  - PDSCH TCI state 1 (QCL'd to SSB1)
- UE is indicated TCI state 0 as the active PDCCH and PDSCH TCI state at the beginning of the test.
  - TCI state 1, which is one of the target TCI states, is not in the active TCI state list.

The test consists of two time periods, T1 and T2.

During T1, only SSBs to which PDCCH TCI state 0 and PDSCH TCI state 0 are QCL'd is transmitted (SSB0). During T1, SSB0 is transmitted on AoA1.

At the beginning of T2, the SSB corresponding to PDSCH TCI state 1 starts transmitting on AoA2. The UE is configured with *groupBasedBeamReporting-r17* to provide periodic group-based L1-RSRP reports for SSB0 and SSB1. In slot n, which is within 1280 ms of UE providing group-based L1-RSRP report with results for SSB0 and SSB1 as a beam pair, UE receives a MAC-CE command indicating activation of TCI state 0 and TCI state 1 in a single codepoint. *Tci-PresentInDCI* is configured as enabled in the PDSCH configuration.

After a time that equals to the active TCI state list update delay defined in section 8.10F.6.1 for sDCI, UE receives a DCI indicating TCI state 0 and TCI state 1 for PDSCH scheduling. The TE verifies that the UE can start receiving PDSCH with TCI state 0 (in AoA1) and TCI state 1 (in AoA2) simultaneously after *timeDurationForQCL* from receiving the DCI.

A.7.5.8.5.1.2 Test Requirements

During T2, UE shall send group-based L1-RSRP report with results for SSB0 and SSB1.

After receiving DCI indicating TCI state 0 and TCI state 1 for PDSCH in slot n, UE shall be able to start receiving TCI state 0 and TCI state 1 simultaneously after n + *timeDurationForQCL*.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.9 Uplink spatial relation switch delay

A.7.5.9.1 MAC-CE based Spatial Relation switch

A.7.5.9.1.1 NR PCell FR2 spatial relation associated with known DL-RS

A.7.5.9.1.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink spatial relation switch delay requirement defined in clause 8.12.3 by a UE capable of beam correspondence without the need for UL beam sweeping. The supported test configurations are shown in table A.7.5.9.1.1.1-1.

The test scenario comprises one PCell (Cell 1) as outlined in table A.7.5.9.1.1.1-2. Cell-specific parameters are provided in table A.7.5.9.1.1.1-3. OTA-related test parameters are provided in table A.7.5.9.1.1.1-4.

Throughout the test, PDCCH indicating new transmissions shall ge sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a single TCI state, TCI State-0, which is QCLed with SSB0.

- UE is configured with two spatial relation information configurations Spatial Relation Info-0 and Spatial Relation Info-1 for PUCCH, each associated with SSB0 and SSB1, respectively.

- UE is indicated via MAC-CE activation of *PUCCH-SpatialRelationInfoId* corresponding to Spatial Relation Info-0

- UE is configured with a CSI measurement configuration indicating L1-RSRP measurements on SSB0 and SSB1 with periodic reporting. The L1-RSRP measurement period is influenced by the following: the higher layer parameter *timeRestrictionForChannelMeasurement* is configured, measured SSBs are fully overlapping with SMTC window, and there are no conflicts with measurement gaps.

The test consists of two time periods, T1 and T2. During T1 only the SSB associated with PDCCH TCI state-0 and PUCCH Spatial Relation Info-0 is transmitted. At the beginning of T2, transmission of the SSB associated with PUCCH Spatial Relation Info-1 starts. The UE conducts periodic L1-RSRP measurements and *SSB-Index-RSRP* reporting for SSB0 and SSB1. In slot *n*, which is within 1280 ms after UE receiving both SSB0 and SSB1, and after reporting valid results for both the SSB0 and the SSB1, the UE receives a MAC-CE indicating a switch of spatial relation to PUCCH Spatial Relation Info 1.

The test equipment verifies that the UE transmits according to PUCCH Spatial Relation Info 0 up until slot n + T_{HARQ}/NR slot length + $3N_{slot}^{subframe,\mu}$, and according to PUCCH Spatial Relation Info 1 from slot n + T_{HARQ}/NR slot length + $3N_{slot}^{subframe,\mu}$ + 1 and onwards.

NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.					

A.7.5.9.1.1.2 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using PUCCH spatial relation associated with SSB0 up to and including slot *n* + T_{HARQ}/NR slot length + $3N_{slot}^{subframe,\mu}$
- Start transmitting using PUCCH spatial relation associated with SSB1 from slot *n* + T_{HARQ}/NR slot length + $3N_{slot}^{subframe,\mu}$ + 1 and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.9.2 RRC based spatial relation switch

A.7.5.9.2.1 NR PCell FR2 spatial relation switch associated with a known DL-RS

A.7.5.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the RRC based spatial relation switch delay requirement defined in clause 8.12.5 by a UE capable of beam correspondence without the need for UL beam sweeping. In the test the higher layer parameter *timeRestrictionForChannelMeasurements* is configured. Supported test configuration is shown in table A.7.5.9.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.9.2.1.1-2. Cell-specific parameters of PCell is specified in table A.7.5.9.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.7.5.9.2.1.1-4.

Periodic SRS is transmitted on PCell (Cell 1), and the SRS configuration is SRSConf.1 given in table A.5.4.1.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 SRS-SpatialRelation0 associated with SSB0.
- UE is indicated SRS-SpatialRelation0 as the active SRS spatial relation.

The test consists of two time periods, T1 and T2. During T1 only SSB0 to which SRS-SpatialRelation0 associated is transmitted. UE shall transmit periodic SRS with SRS-SpatialRelation0 on the UL of the PCell.

T2 start when the tester initiates transmission of SSB1 corresponding to SRS-SpatialRelation1. The UE is configured to transmit periodic L1-RSRP reports.

In slot n, which is within 1280ms of UE providing the L1-RSRP report with results for both SSB0 and SSB1, the UE receives an RRC command indicating a switch to transmit periodic SRS with target SRS-SpatialRelation1. The UE shall be able to transmit periodic SRS with target spatial relation (SRS-SpatialRelation1) on PCell in slot n + $T_{RRC_processing}$/NR slot length +1.

A.7.5.9.2.1.2 Test Requirements

During T1 UE shall send L1-RSRP report with SSB0 to which SRS-SpatialRelation0 is associated. During T2, UE shall send L1-RSRP report with SSB1 to which SRS-SpatialRelation1 is associated.

After receiving RRC command in slot n, UE shall be able to transmit target periodic SRS with SRS-SpatialRelation1 on the PCell in the slot $n + T_{RRC_processing}/NR\ slot\ length + 1$.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.10 UE specific CBW change

A.7.5.10.1 NR FR2 UE specific CBW change of PCell with non-DRX in SA

A.7.5.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13. Supported test configurations are shown in table A.7.5.10.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in table A.7.5.10.1.1-2. Cell-specific parameters of PCell are specified in table A.7.5.10.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK transmission.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 of initial condition in PCell.
- UE has been configured with UE-specific CBW (CBW-1)
- UE is indicated in SCS-SpecificCarrier [2] that the UE-specific CBW is CBW-1 as the initial condition in Cell 1 (PCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated CBW configuration, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its CBW with the updated CBW of final condition (CBW-2).

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.13.2 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PCell's BWP-1 on CBW-2 starting from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{CBWchangeDelayRRC}$ are defined in clause 8.13.

The test equipment verifies the UE specific CBW switch time in PCell by counting the time from the time when the RRC Reconfiguration message including updated CBW configurations sent till the time when RRC Reconfiguration Complete message is received.

Table A.7.5.10.1.1-1: UE specific CBW change supported test configurations

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.5.10.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{CBWchangeDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell UE specific CBW change delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.11 UE UL carrier RRC reconfiguration Delay

A.7.5.11.1 UE UL carrier RRC reconfiguration Delay

A.7.5.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that when the UE receives a RRC message implying NR UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within the time limits specified in clause 8.4.2 and 8.4.3 for configuring and deconfiguring, respectively. The test will also verify the interruption at UL carrier configuration requirements on PCell in clause 8.2.2.2.4.

There are two cells: FR2 PCell (Cell 1) on NR RF channel 1 and FR2 SCell (Cell 2) on NR RF channel 2. NR uplink is broadcast by *ServingCellConfigCommonSIB*. The test parameters for PCell and SCell are given in table A.7.5.11.1.1-1, table A.7.5.11.1.1-2 and table A.7.5.11.1.1-3 below. The test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, NR uplink of Cell 2 is not configured to UE. At the start of T2, a NR uplink of Cell 2 is configured to UE through *RRCReconfiguration*, then UE shall start transmission on the NR uplink of Cell 2. At the start of T3, the NR uplink is released through *RRCReconfiguration*.

The test equipment also verifies that potential interruption of PCell due to UL carrier configuration on SCell is carried out within the correct time span and within the correct length by monitoring ACK/NACK sent in PCell.

Table A.7.5.11.1.1-1: Supported test configurations

Configuration	PCell (Cell 1)	SCell (Cell 2)
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode	DL and UL: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.5.11.1.2 Test Requirements

The UE shall be ready to start transmission on the NR uplink carrier on SCell within 20 ms from the start of T2.

The UE shall stop the transmission on the NR uplink carrier on SCell within 20 ms from the start of T3.

During T2 and T3, the start of interruption of PCell due to UL carrier configuration or de-configuration on SCell shall not happen outside the UL carrier configuration delay which is 20 ms in this test, and the length of interruption shall not exceed the length specified in clause 8.2.2.2.4.

All of the above test requirements shall be fulfilled in order for the observed UE UL carrier configuration delay and UE UL carrier release delay to be counted as correct. The rate of correct observed UE UL carrier configuration delay and UE UL carrier release delay during repeated tests shall be at least 90 %.

A.7.5.12 Conditional PSCell addition and release delay (FR2 SA)

A.7.5.12.1 Addition and Release Delay of PSCell

A.7.5.12.1.1 Test purpose and environment

The purpose of this test is to verify that the conditional PSCell addition and release delays under SA are within the requirements stated in clause 8.9A.2.

A.7.5.12.1.2 Test Parameters

The supported test configurations are given in table A.7.5.12.1.2-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.12.1.2-2 and A.7.5.12.1.2-3 below. The test consists of four successive time periods, with time durations of T1, T2, T3, T4, respectively.

At the start of time duration T1, the UE does not have any timing information of cell 2. NR shall configure a condition implying addition to cell 2 during T1, at a time earlier than T_{RRC} before the beginning of T2.

At the start of T2, cell 2 becomes detectable and meets the addition condition. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send an RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

Table A.7.5.12.1.2-1: Supported test configurations for FR2 PSCell

Config	Description
1	FR1 FDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
2	FR1 TDD SSB SCS 15kHz BW 10 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
3	FR1 TDD SSB SCS 30kHz BW 40 MHz – FR2 TDD SSB SCS 240kHz BW 100 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations	

Table A.7.5.12.1.2-2: General test parameters for conditional PSCell addition and release delay

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	Two radio channels are used for this test
Active PCell			Cell 1	PCell on RF channel number 1 in FR1
Neighbour cell			Cell 2	Neighbour cell (PSCell-to-be) on RF channel number 2 in FR2
A4	Hysteresis	dB	0	Hysteresis for event A4
	Threshold RSRP	dBm	-118	Threshold for event A4
	Time to Trigger	s	0	Time to trigger for event A4
DRX			OFF	For both PCell and PSCell once activated
Measurement gap pattern ID			0	Gaps are configured before T2 and released before T3.
PRACH configuration in Cell 2			FR2 PRACH configuration 2	PRACH configuration as specified in Clause A.3.8.3.2.
CSI reporting periodicity and offset configuration for Cell 2		ms	2	
T1		s	5	During this time the PCell is known and Cell 2 is unknown.
T2		s	≤7	During this time Cell 2 meets the addition condition and UE adds this PSCell.
T3		s	1	During this time the UE sends CSI reports for Cell 2.
T4		s	1	During this time the UE releases the Cell 2.

NOTE 1: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.							
NOTE 2: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.							
NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.							
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.							

A.7.5.12.1.3 Test Requirements

$T_{RRC_delay} + T_{Event_DU}$ occurs during T1 as the addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms = 6720+10+62 ms=6792 ms (power class 1) or 4160+10+62 ms =4232 ms (power classes 2,3 and 4) from the start of T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed conditional PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.13 Unified TCI state switching delay

A.7.5.13.1 MAC-CE based active joint TCI state switching

A.7.5.13.1.1 NR PCell FR2 active joint TCI state switch for a known TCI state

A.7.5.13.1.1.1 Test Purpose and Environment

The purpose of this test is to verify both active downlink and uplinke TCI state switch delay requirement defined in clause 8.15 and 8.16, respectively, by using joint TCI state of unified TCI state switch framework. In this test, the target TCI state is not in the active TCI state list for PDSCH/PDCCH, and UE is capable of beam correspondence without the need for UL beam sweeping, i.e. *beamCorrespondenceWithoutUL-BeamSweeping* is set to 1. Supported test configuration is shown in table A.7.5.13.1.1.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.13.1.1.1-2. Cell-specific parameters of NR PCell are specified in table A.7.5.13.1.1.1-1 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.1.1.1-2.

Table A.7.5.13.1.1.1-1: Supported test configurations

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

Table A.7.5.13.1.1.1-2: General test parameters for TCI state switch

Parameter	Unit	Value	Comment

Active PCell		Cell 1	PCell on RF channel number 1.
CP length		Normal	
DRX		OFF	
L1-RSRP reporting period	slot	160	Periodic L1-RSRP reporting configured
Number of RS for L1-RSRP reporting		2	Two source RSs in TCI state 0 and 1.

T1	s	0.2	
T2	s	2	

A.7.5.13.1.1.2 Test parameters

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint*;
- UE is configured with 2 different joint TCI states for PCell, TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), and the TCI state 1 is not in the active TCI state list for PDSCH/PDCCH.
- UE is indicated TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. During T1 only source RS in TCI state 0 is transmitted. At the beginning of T2, source RS in TCI state 1 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for both source RSs in TCI state 0 and 1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies the following UE behavior for joint TCI state switch:

- UE shall be able to receive and transmit with TCI state 0 until slot slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and
- receive and transmit with TCI state 1 from slot $n+T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length*

A.7.5.13.1.1.3 Test Requirements

The test verifies that UE can be scheduled by PCell on TCI state 0 and TCI state 1.

During T2, UE shall send L1-RSRP report with results for source RSs in both TCI state 0 and 1.

After receiving MAC-CE command in slot n, UE shall:

- be able to receive and transmit with TCI state 0 until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with TCI state 1 after slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.13.2 MAC-CE based active uplink TCI state switch

A.7.5.13.2.1 NR FR2 PCell uplink TCI state switch for a known TCI state

A.7.5.13.2.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink TCI switch delay requirement defined in clause 8.16.3 by a UE capable of beam correspondence without the need for UL beam sweeping. The test scenario comprises one PCell (Cell 1).

Throughout the test, PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a unified DL TCI state, TCI State-0, and SSB0 is configured as QCL source for the TCI state. At the start of test UE is connected to DL TCI state 0.
- UE is configured with 2 UL TCI states, UL TCI state 0 and UL TCI state 1. QCL info to UL TCI state 0 and 1 is provided by SSB0 and SSB1, respectively. Initially only UL TCI 0 is in the active TCI states.
- PL-RS is configured for each of the UL TCI states. CSI-RS 0 and CSI-RS 1 are associated with UL TCI state 0 and 1 respectively as PL-RS.
- AT the start of the test UE connected to DL TCI state 0 and UL TCI state 0.

Index of CSI-RS#1 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 1. CSI-RS#1 is QCLed typeD with SSB#1. UE does not maintain CSI-RS#1 as pathloss RS before the uplink TCI state switching.

The test consists of two time periods, T1 and T2. During T1, only the SSB associated with DL TCI state-0 and UL TCI state 0 is transmitted. At the beginning of T2, transmission of the SSB 1 associated with UL TCI state 1 starts. The UE conducts periodic L1-RSRP (i.e., *SSB-Index-RSRP)* reporting for SSB0 and SSB1. In slot *n*, which is within 1280 ms after UE receiving both SSB0 and SSB1, and after reporting valid results for both the SSB0 and the SSB1, the UE receives a MAC-CE indicating a TCI state switch to UL TCI state 1.

The test equipment verifies that the UE transmits according to UL TCI state 0 up until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and according to UL TCI state 1 from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + NM^* (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length* and onwards. NM is equal to 1. Where, T_{HARQ} (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

A.7.5.13.2.1.2 Test parameters

The supported test configurations are provided in table A.7.5.13.2.1.2-1.

General test parameters are provided in table A.7.5.13.2.1.2-2.

Cell-specific parameters are provided in table A.7.5.13.2.1.2-3.

OTA-related test parameters are provided in table A.7.5.13.2.1.2-4.

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.					
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.					
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 5: As observed with 0 dBi gain antenna at the center of the quiet zone.					
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.					

A.7.5.13.2.1.3 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using UL TCI state 0 up to and including slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$
- Start transmitting using UL TCI state 1, from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length* and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %

A.7.5.13.3 MAC-CE based active downlink TCI state switch

A.7.5.13.3.1 NR PCell FR2 active downlink TCI state switch to cell with additional PCI for a known TCI state

A.7.5.13.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based active downlink TCI state switch delay requirement defined in clause 8.15.3. Supported test configuration is shown in table A.7.5.13.3.1.1-1.

Table A.7.5.13.3.1.1-1: Supported test configurations

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

A.7.5.13.3.1.2 Test Parameters

The test scenario comprises of one NR PCell (Cell 1) and one NR cell as the cell with additional PCI (Cell 2), as given in table A.7.5.13.3.1.2-1. Cell-specific parameters of NR PCell and the cell with additional PCI are specified in table A.7.5.13.3.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.3.1.2-3.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *separate*.
- UE is configured with SSB-based L1-RSRP measurements on cell with additional PCI (Cell 2)
- UE is configured with 2 different TCI states for PCell, TCI state 0 (QCL'd to TRS resource set 1, TCI state of which is QCLed to SSB0 of Cell 1) and TCI state 1 (QCL'd to TRS resource set 2, TCI state of which is QCLed to SSB1 of Cell 2), in Cell 1 before starting the test.

- UE is indicated in TCI state 0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.13.3.1.2-1 and Figure A.7.5.13.3.1.2-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 of Cell 1 and SSB1 of Cell 2, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$)/*NR slot length*.

A.7.5.13.4.1.2 Test parameters

The test scenario comprises of one NR PCell (Cell 1) as given in table A.7.5.13.4.1.2-1. Cell-specific parameters of NR PCell are specified in table A.7.5.13.4.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.4.1.2-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- PDCCHs indicating new transmissions shall be sent continuously on Pcell to ensure that the UE would have ACK/NACK sending.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint*.
- applyIndicatedTCI-State-r18 is set as {first} for TRP0 (CORESET index p associated with Joint TCI state 0 and Joint TCI state 1) and as {second} for TRP1 (CORESET index q associated with Joint TCI state 2 and Joint TCI state 3).
- tci-SelectionPresentInDCI-r18 is configured in the BWP configuration, i.e. TCI state for the PDSCH is indicated by DCI format 1_1 and PDSCHs on two TRPs are scheduled in TDM manner.
- UE is configured with two joint TCI states (TCI state 0 and TCI state 1) for TRP0 and two joint TCI states (TCI state 2 and TCI state 3) for TRP1. QCL info to Joint TCI state 0,1,2 and 3 are provided by SSB0, SSB1, SSB2 and SSB3, respectively.
- UE is indicated in TCI state 0 and TCI state 2 as the active TCI state for TRP0 and TRP1.

The test consists of two time periods, T1 and T2. During T1, SSB0 in joint TCI state 0 and SSB2 in joint TCI state 2 are transmitted.

At the beginning of T2, SSB1 in joint TCI state 1 and SSB3 in joint TCI state 3 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for SSB1 and SSB3 in joint TCI state 1 and joint TCI state 3, UE receives a MAC-CE command indicating a switch to dual joint TCI state 1 and TCI state 3 for two TRPs.

The test equipment verifies that UE can be scheduled by two TRPs on joint TCI state 0 and joint TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time for two TRPs by scheduling the UE on joint TCI state 1 and joint TCI state 3 after slot n+T_{HARQ} + 3$N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.

A.7.5.13.4.1.3 Test Requirements

During T2, the test verifies that UE can be scheduled by two TRPs on joint TCI state 1 and joint TCI state 3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive and transmit with joint TCI state 0 and joint TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with joint TCI state 1 and joint TCI state 3 after slot n+T_{HARQ} + 3$N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.
  - where NM1=1, NM2=1.

The rate of correct events observed during repeated tests shall be at least 90 %.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- PDCCHs indicating new transmissions shall be sent continuously on Pcell to ensure that the UE would have ACK/NACK sending.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint*.
- applyIndicatedTCI-State-r18 is set as {first} for TRP0 (CORESET index p associated with Joint TCI state 0 and Joint TCI state 1) and as {second} for TRP1 (CORESET index q associated with Joint TCI state 2 and Joint TCI state 3).
- tci-SelectionPresentInDCI-r18 is configured in the BWP configuration, i.e. TCI state for the PDSCH is indicated by DCI format 1_1 and PDSCHs on two TRPs are scheduled in TDM manner.
- UE is configured with two joint TCI states (TCI state 0 and TCI state 1) for TRP0 and two joint TCI states (TCI state 2 and TCI state 3) for TRP1. QCL info to Joint TCI state 0,1,2 and 3 are provided by SSB0, SSB1, SSB2 and SSB3, respectively.
- UE is indicated in TCI state 0 and TCI state 2 as the active TCI state for TRP0 and TRP1.

The test consists of two time periods, T1 and T2. During T1, SSB0 in joint TCI state 0 and SSB2 in joint TCI state 2 are transmitted.

At the beginning of T2, SSB1 in joint TCI state 1 and SSB3 in joint TCI state 3 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for SSB1 and SSB3 in joint TCI state 1 and joint TCI state 3, UE receives a MAC-CE command indicating a switch to dual joint TCI state 1 and TCI state 3 for two TRPs.

The test equipment verifies that UE can be scheduled by two TRPs on joint TCI state 0 and joint TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time for two TRPs by scheduling the UE on joint TCI state 1 and joint TCI state 3 after slot n+T_{HARQ} + 3$N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.

A.7.5.13.4.1.3 Test Requirements

During T2, the test verifies that UE can be scheduled by two TRPs on joint TCI state 1 and joint TCI state 3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive and transmit with joint TCI state 0 and joint TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with joint TCI state 1 and joint TCI state 3 after slot n+T_{HARQ} + 3$N_{slot}^{subframe,\mu}$ + max{NM1* ($T_{first_target\text{-}PL\text{-}RS1}$ + 4*$T_{target_PL\text{-}RS1}$ + 2 ms), NM2* ($T_{first_target\text{-}PL\text{-}RS2}$ + 4*$T_{target_PL\text{-}RS\ 2}$+ 2 ms) }/ *NR slot length*.
  - where NM1=1, NM2=1.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.13.5 MAC-CE based dual downlink TCI state switching delay for unified TCI for single-DCI mTRP

A.7.5.13.5.1 NR PCell FR2 dual downlink TCI state switch in sDCI for known case

A.7.5.13.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based dual downlink TCI state switch delay requirement defined in clause 8.21.3 when *tci-SeparateTCI-UpdateSingleActiveTCI-PerCC-r18* is supported. Supported test configuration is shown in table A.7.5.13.5.1.1-1.

Table A.7.5.13.5.1.1-1: Supported test configurations

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

A.7.5.13.5.1.2 Test Parameters

There is one active serving cell (Cell 1) configured with two TRPs in the test. Cell-specific parameters of Cell 1 are specified in table A.7.5.13.5.1.2-2 below. The OTA related test parameters for FR2 are shown in table A.7.5.13.5.1.2-3.

PDCCHs indicating new transmissions shall be sent continuously on TRP0 to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1 (PCC).
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *separate.*
- UE is configured with SSB-based L1-RSRP measurements on Cell 1
- applyIndicatedTCI-State-r18 is set as {first} for TRP0 (CORESET index p associated with Joint TCI state 0 and Joint TCI state 1) and as {second} for TRP1 (CORESET index q associated with Joint TCI state 2 and Joint TCI state 3).
- tci-SelectionPresentInDCI-r18 is configured in the BWP configuration, i.e. TCI state for the PDSCH is indicated by DCI format 1_1 and PDSCHs on two TRPs are scheduled in TDM manner.
- UE is configured with two TCI states (TCI state 0 and TCI state 1) for TRP0 and two TCI states(TCI state 2 and TCI state 3) for TRP1. QCL info to DL TCI state 0, 1 , 2 and 3 are provided by SSB0, SSB1, SSB2 and SSB3, respectively.
- UE is indicated in TCI state 0 and TCI state 1 as the active TCI state for TRP0 and TRP1

The test consists of two time periods, T1 and T2. During T1, source RS in TCI state 0 and TCI state 2 are transmitted. At the beginning of T2, source RS in TCI state 1 and source RS in TCI state 3 start transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms after the slot in which UE provides L1-RSRP report with results for source RSs in TCI state 1 and 3, UE receives a MAC-CE command indicating a switch to TCI

state 1 and 3 for two TRPs. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled by two TRPs on TCI state 0 and TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time for two TRPs by scheduling the UE on TCI state 1 and TCI state 3 after slot after slot n+ T_{HARQ} + 3$N_{slot}^{subframe,\mu}$+ max{TO_{k1}*($T_{first\text{-}SSB1}$ + AD_1*T_{SSB1} + $T_{SSB\text{-}proc}$), TO_{k2}*($T_{first\text{-}SSB2}$ + AD_2*T_{SSB2} + $T_{SSB\text{-}proc}$)} / NR slot length.

A.7.5.13.5.1.3 Test Requirements

During T2, the test verifies that UE can be scheduled by two TRPs on TCI state 1 and TCI state 3.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on DL TCI state 0 and DL TCI state 2 till slot n+ T_{HARQ} +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on DL TCI state 1 and DL TCI state 3 after slot n+ T_{HARQ} + 3$N_{slot}^{subframe,\mu}$ + max{TO_{k1}*($T_{first\text{-}SSB1}$ + AD_1*T_{SSB1} + $T_{SSB\text{-}proc}$), TO_{k2}*($T_{first\text{-}SSB2}$ + AD_2*T_{SSB2} + $T_{SSB\text{-}proc}$)} / NR slot length

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.13.6 MAC-CE based active uplink TCI state switch for single-DCI mTRP

A.7.5.13.6.1 NR FR2 PCell uplink TCI state switch for two known TCI states

A.7.5.13.6.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of the uplink TCI switch delay requirement defined in clause 8.23.3 by a UE capable of beam correspondence without the need for UL beam sweeping when *tci-SeparateTCI-UpdateSingleActiveTCI-PerCC-r18* is supported. The test scenario comprises one PCell (Cell 1) with two TRPs.

Throughout the test, PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with a unified DL TCI state, TCI State-0, and SSB0 is configured as QCL source for the TCI state. At the start of test UE is connected to DL TCI state 0.
- UE is configured with 4 UL TCI states, UL TCI state 0, UL TCI state 1, UL TCI state 2, and UL TCI state 3. QCL info to UL TCI state 0, 1, 2, and 3 is provided by SSB0, SSB1, SSB2, and SSB3, respectively. Initially only UL TCI 0 is in the active TCI state list.
- PL-RS is configured for each of the UL TCI states. CSI-RS 0, CSI-RS 1, CSI-RS 2, and CSI-RS 3 are associated with UL TCI state 0, 1, 2, and 3 respectively as PL-RS.
- At the start of the test UE is connected to DL TCI state 0, UL TCI state 0, and UL TCI state 1.

Index of CSI-RS#1 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 1. CSI-RS#1 is QCLed typeD with SSB#1. UE does not maintain CSI-RS#1 as pathloss RS before the uplink TCI state switching.

Index of CSI-RS#2 is configured for UE as PUSCH-PathlossReferenceRS-Id-r17 which is indicated in TCI-UL-State-r17 of uplink TCI state 2. CSI-RS#2 is QCLed typeD with SSB#2. UE does not maintain CSI-RS#2 as pathloss RS before the uplink TCI state switching.

The test consists of two time periods, T1 and T2. During T1, only the SSBs associated with DL TCI state-0, UL TCI state 0, and UL TCI state 1 are transmitted. At the beginning of T2, transmission of the SSB 2 associated with UL TCI state 2 and transmission of the SSB 3 associated with UL TCI state 3 start. The UE conducts periodic L1-RSRP (i.e., *SSB-Index-RSRP)* reporting for SSB0, SSB1, SSB2, and SSB3. In slot *n*, which is within 1280 ms after UE receiving SSB0, SSB1, SSB2, and SSB3, and after reporting valid results for the SSB0, the SSB1, the SSB2 and the SSB3, the UE receives a MAC-CE indicating a TCI state switch to UL TCI state 2 and to UL TCI state 3.

The test equipment verifies that the UE transmits according to UL TCI state 0 and UL TCI state 1 up until slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$, and according to UL TCI state 2 and to UL TCI state 3 from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + \max\{NM1^* (T_{first_target\text{-}PL\text{-}RS1} + 4^*T_{target_PL\text{-}RS1} + 2 \text{ ms}), NM2^* (T_{first_target\text{-}PL\text{-}RS2} + 4^*T_{target_PL\text{-}RS2} + 2 \text{ ms})\}$ / *NR slot length* and onwards. NM1 is equal to 1. NM2 is equal to 1. Where, T_{HARQ} (in slot) is the timing between DL data transmission and acknowledgement as specified in TS 38.213 [3].

A.7.5.13.6.1.2 Test parameters

The supported test configurations are provided in table A.7.5.13.6.1.2-1.

General test parameters are provided in table A.7.5.13.6.1.2-2.

Cell-specific parameters are provided in table A.7.5.13.6.1.2-3.

OTA-related test parameters are provided in table A.7.5.13.6.1.2-4.

NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.									
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.									
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.									
NOTE 5: As observed with 0 dBi gain antenna at the center of the quiet zone.									
NOTE 6: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.									

A.7.5.13.6.1.3 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot *n*, the UE shall:

- Continue transmitting using UL TCI state 0 and UL TCI state 1 up to and including slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$

- Start transmitting using UL TCI state 2 and UL TCI state 3, from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + \max\{T_{first_target\text{-}PL\text{-}RS1} + 4*T_{target_PL\text{-}RS1} + 2\text{ ms}, T_{first_target\text{-}PL\text{-}RS2} + 4*T_{target_PL\text{-}RS2} + 2\text{ ms}\}$ / *NR slot length* and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.5.14 PSCell RACH-less based Activation and deactivation for FR1+FR2 inter-band with target PSCell in FR2

A.7.5.14.1 Test Purpose and Environment

The purpose of this test case is to test the activation PSCell delay for a UE configured with one deactivated SCG in NR-DC and when PSCell in one SCG is being activated. The test also tests the deactivation delay. The test case tests the requirements within which the UE shall be able to activate the deactivated SCG in clause 8.17.2 for RACH-less based conditions when PSCell and TCI state are known. The PCell is in NR FR1 and the PSCell is in NR FR2.

The supported test configurations are defined in table A.7.5.14.1-1. The test parameters for NR cell are given in Tables A.7.5.14.1-2. And cell specific test parameters are described in Tables A.7.5.14.1-3. OTA related test parameters are defined in table A.7.5.14.1-4.

At the beginning of T1 the UE is configured with a PSCell which is activated. At T1 the PSCell is deactivated. PSCell is configured with *bfd-and-RLM* with value *true*.

An RRC message for activation of PSCell is sent by the test equipment 1 s after the RRC message deactivating the PSCell, in a slot # denoted m. The point in time at which the RRC message for activation of PSCell is received at the UE defines the start of time period T2.

During T2, the test equipment monitors for SR from the UE on the PSCell. The time when test equipment receives a scheduling request from the UE is denoted as slot T3.

Time period T4 starts when a RRC message for deactivation of the PSCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of the PSCell, respectively.

The test equipment verifies the activation time by when the SR from the UE is received in the activated PSCell.

The test equipment verifies the deactivation time by counting the slots from the time when the PSCell deactivation command is sent until UL transmission from the PSCell is discontinued.

Table A.7.5.14.1-1: Supported test configurations for FR2 PSCell activation case

Configuration	Description
1	PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to pass in one of the supported test configurations	

Table A.7.5.14.1-2: General Test Parameters for FR2 PSCell activation and deactivation

TBD

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Void
NOTE 7: Information about types of UE beam is given in clause B.2.1.3 and does not imit UE implementation or test system implementation.

A.7.5.14.2 Test Requirements

During T2 the UE shall send the first SR on PSCell in the first available uplink SR resource no later than T3 which is:

$T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

as defined on clause 8.17.2. In this test case:

$T_{processing}$ = 5 ms (no RRC parameter has been modified),

T_{search} = 0 ms (RACH-less based PSCell activation, with RLM and BFD are configured, PSCell and TCI state are known), and

T_{Δ} = 20 ms.

This allows T3 of $[T_{RRC_delay} + T_{IU} + 27]$ms

During T4 the UE shall stop all transmissions on the PSCell no later than in slot n + $\frac{T_{RRC_delay}}{NR\ slot\ length}$ as defined in 8.17.3.

During T2 the interruption of PCell during PSCell activation shall not happen outside the slot $m + T_{RRC_delay}$.

During T4 the interruption of PCell during PSCell deactivation shall not happen outside the slot $n + T_{RRC_delay}$.

The interruption duration on PCell due to activation and deactivation of PSCell shall not be more than the values specified for in Clause 8.17.2 and 8.17.3.

A.7.5.15 Void

A.7.5.16 UE L1-RSRP Scheduling and Measurement Restrictions on FR2-1

A.7.5.16.1 Test Purpose and Environment

The purpose of this test is to verify that the NR UE correctly follows the L1-RSRP scheduling restrictions requirements defined in clause 9.5.6.3 and measurement restrictions defined in clause 9.5.5.2.

There is no measurement gap and no DRX configured in the test. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. The test is for sDCI based sceneriao and consists of two time periods, T1 and T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with *groupBasedBeamReporting-r17* for SSB index 0 and SSB index 1.
- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL-ed to SSB0) and TCI state 1 (QCL-ed to SSB1).
- *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.During T1, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival (AoA1 and AoA2) is shown in Figure A.7.5.16.1-1. UE transmits periodic L1-RSRP group-based beam reports for SSB index 0 and SSB index 1. After UE transmits first valid L1-RSRP group-based beam report, TCI state 0 and TCI state 1 are activated for CORESET index p and CORSET index q which indicates for 2 PDSCH reception.

During T2, the time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival is shown in Figure A.7.5.16.1-2. At the beginning of T2, the CSI-RS resource index 0 and CSI-RS resource index 1 are configured for measurement resources for L1-RSRP. CSI-RS resource 0 is QCL-ed to SSB index 0, and CSI-RS resource 1 is QCL-ed to SSB index 1. During T2, CSI-RS resource 0 is transmitted on AoA1 and CSI-RS resource 1 is transmitted on AoA2. During T2, after the CSI-RS configuration, PDSCH is always scheduled on the symbols overlapping with CSI-RS resource symbols.

For scheduling restriction relaxation, the UE is required to receive both PDSCHs on the symbols overlapped with CSI-RS configured for L1-RSRP and sends ACK correctly.

For measurement restriction relaxation, the UE is required to measure both CSI-RS resource index 0 and CSI-RS resource index 1 at the same time from the beginning of T2.

The test parameters are given in table A.7.5.16.1-1, table A.7.5.16.1-2, table A.7.5.16.1-3 and table A.7.5.16.1-4 below.

Table A.7.5.16.1-1: Supported test configurations

NOTE 1: SSB Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 3: Calculation of Es/IotBB includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMBP from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 4: Calculation of Io does not consider the different power level between CSI-RS and SSB

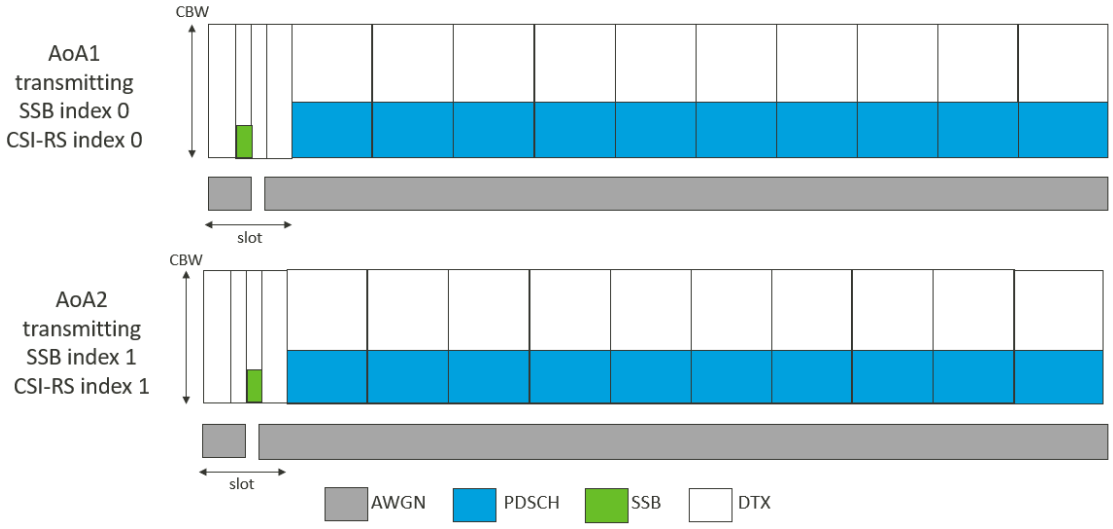

Figure A.7.5.16.1-1: Time multiplexed downlink transmissions during T1

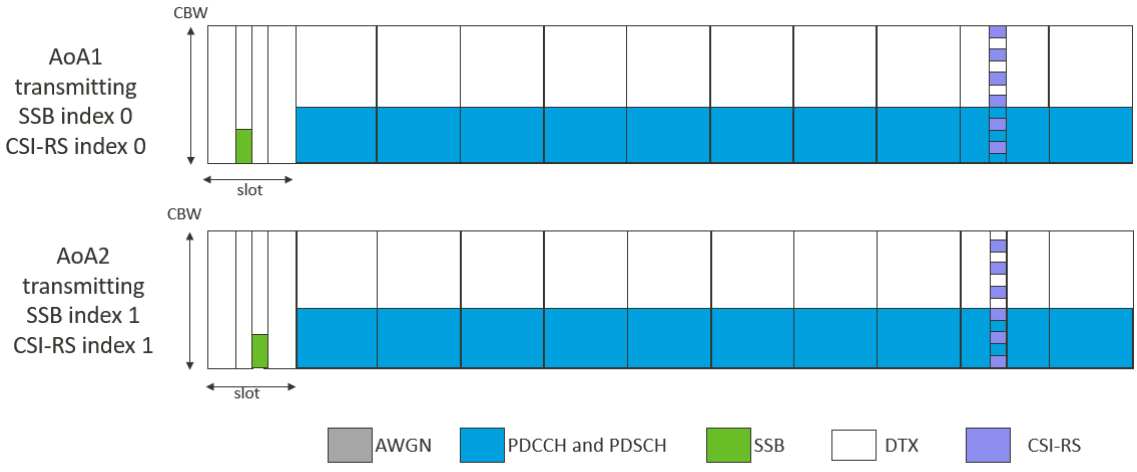

Figure A.7.5.16.1-2: Time multiplexed downlink transmissions during T2

A.7.5.16.2 Test Requirements

The UE behaviour follows the requirements defined in clause 9.5.6.3 and 9.5.5.2.

During T2,

- UE is required to receive both PDSCHs and send ACK correctly.
- No later than Y + 80 slot from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for both CSI-RS resource 0 and CSI-RS resource 1 while meeting the accuracy requirements defined in clause 10.1.X.
  - Y is the RRC processing delay, which is 10 ms

A.7.5.17 SCG Activation and deactivation for FR1+FR1 inter-band with target PSCell in FR1

A.7.5.17.1 Test Purpose and Environment

The purpose of this test case is to test the PSCell activation delay for a UE configured with one deactivated SCG in NR-DC and when PSCell in one SCG is being activated. The test also tests the deactivation delay. The test case tests the requirements within which the UE shall be able to activate the deactivated SCG in clause 8.17.2 for when PSCell is known and TCI state is known. The PCell is in NR FR1 and the PSCell is in NR FR1.

The supported test configurations are defined in table A.7.5.17.1-1. The test parameters for NR cell are given in Tables A.7.5.17.1-2. And cell specific test parameters are described in Tables A.7.5.17.1-3.

During T1 the PSCell is configured in deactivated state. The TE ensures that the deactivated PSCell remain known until the PSCell is activated.

At T2 an RRC message for activation of PSCell is sent by the test equipment.The point in time at which the RRC message, for activating of the PSCell , is received at the UE in slot n defines as the starting point of T2

During T2, the test equipment monitors for PRACH preamble from the UE on the PSCell. The time when TE receives a preamble from the UE is denoted as starting point of T3.

During T3 the TE monitoris the msg3, and after sending the msg4, the TE sends the RRC deactivation command to the UE. The point in time at which the RRC message for deactivating the PSCell is received at the UE in slot n defines the starting time of T4.

During the time period T4, the UE is configured with measCyclePscell , *bfd-and-RLM* with value true . And the TE sends the 2nd RRC activation command.

The time when UE receives the 2nd RRC activation command in slot n , defines as the starting time of T5.

During T5, the test equipment monitors for SR from the UE on the PSCell. The time when test equipment receives a scheduling request from the UE is denoted as the ending point of the test.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of the PSCell, respectively.

For 1 st time activation during T2, the test equipment verifies the activation time by when the Random Access preamble from the UE is received in the activated PSCell.

During T4 and T5 the TE ensures that that TCI state is known.

For the 2nd time activation during T5, the test equipment verifies the activation time by when the SR from the UE is received in the activated PSCell. The TE verifies the deactivation time by counting the slots from the time when the PSCell deactivation command is sent until UL transmission from the PSCell is discontinued.

Table A.7.5.17.1-1: Supported test configurations for FR1 PSCell activation case

Configuration	Description
1	PCell: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode

	Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	PCell: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	PCell: 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode Target PSCell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to pass in one of the supported test configurations	

Table A.7.5.17.1-2: General Test Parameters for FR1FR1 PSCell activation and deactivation

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	Two NR radio channels are used for this test, cell 1 and cell2 use RF channel 1 and 2, respectively.
Initial Condition	Active PCell		Cell 1	PCell on RF channel number 1.

A.7.5.17.2 Test Requirements

RRC message for activation of the PSCell is received in slot *n* at the UE and denotes the starting point of T2. During T2 the UE shall send the first preamble on PSCell in the first available PRACH occation no later than:

$T_{activation_time} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

After T2 as defined on clause 8.17.2.

In this test case:

$T_{processing}$ = 5 ms

T_{search} = 0 ms PSCell and TCI state are known, and

T_{Δ} = 20 ms.

Tiu = 10 ms.

This allows T2 of $T_{activation_time} = T_{RRC_delay}$ + 37 ms

The UE shall stop all transmissions on the PSCell no later than in slot n + $\frac{T_{RRC_delay}}{NR\ slot\ length}$ after T4, as defined in 8.17.3.

The 2nd RRC activation command is received in slot *n* at the UE as the starting time of T5. During T5 the UE shall send the first SR on PSCell in the first available uplink SR resource no later than T5 which is :

$T_{activation_time} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU}$ + 2 ms

as defined on clause 8.17.2. In this test case:

$T_{processing}$ = 5 ms (no RRC parameter has been modified)

T_{search} = 0 ms (RACH-less activation PSCell and TCI state are known), and

T_{Δ} = 20 ms.

Tiu = 10 ms.

This allows T5 PSCell activation time of $T_{activation_time} = T_{RRC_delay}$ + 37 ms

During T2 and T5 the interruption of PCell during PSCell activation shall not happen outside the slot $m + T_{RRC_delay}$.

During T4 the interruption of PCell during PSCell deactivation shall not happen outside the slot $n + T_{RRC_delay}$.

The interruption duration on PCell due to activation and deactivation of PSCell shall not be more than the values specified for in Clause 8.17.2 and 8.17.3.

A.7.5.18 Subsequent conditional PSCell addition/change

A.7.5.18.1 Intra-frequency subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC

A.7.5.18.1.1 Test purpose and environment

The purpose of this test is to verify that the subsequent conditional NR PSCell change under NR-DC is within the requirements stated in clause 8.11E.2.

For UE supporting subsequent conditional PSCell addition/change, UE only needs to pass either intra-frequency CPC from FR1-FR1 NR-DC to FR1-FR1 NR-DC defined in clause A.6.5.12.1. or intra-frequency CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC defined in clause A.7.5.18.1.1.

For UE which can pass this test, test of conditional PSCell addition and release delay defined in A.7.5.12 can be skipped.

Supported test configurations are shown in A.7.5.18.1.1-1. The test scenario comprises three NR cells, Cell 1, Cell 2 and Cell 3. Cell 1 is on radio channel 1 in FR1. Cell 2 and Cell 3 are on radio channel 2 in FR2. The test parameters for the NR Cell 1 are given in table A.3.7A. The NR Cell 1 once set up is not changed across time. The test parameters for NR Cell 2 and Cell 3 are given in Tables A.7.5.18.1.1-2, cell-specific parameters in A.7.5.18.1.1-3 and OTA parameters in A.7.5.18.1.1-4 below.

The test consists of three successive time periods with duration of T1, T2, and T3 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (NR PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell 1) and Cell 3 (NR PSCell 2) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell 1 is known to the UE.

At the start of time duration T1, the UE does not have any timing information of Cell 2. The TE shall configure subsequent conditional PSCell addition/change with Cell 2 and Cell 3 as target PSCells during T1, at a time earlier than T_{RRC_delay} before the beginning of T2.

At the start of T2, Cell 2 becomes detectable and meets the PSCell addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which it will transmit the PRACH preamble to Cell 2 during T2.

Upon PSCell addition complete (UE transmits SN RRCReconfigurationcomplete message), T3 starts. At the start of T3, Cell 3 becomes detectable and meets the PSCell change condition. UE shall be able to measure and detect that the condition is fulfilled, after which it will transmit the PRACH preamble to Cell 3 during T3.

Table A.7.5.18.1.1-1: Supported test configurations for Intra-frequency Subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC

Configuration	Description
1	PCell (Cell 1): NR FDD, 15 kHz SSB SCS, 10 MHz bandwidth PSCell (Cell 2 and Cell 3): NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth
2	PCell (Cell 1): NR TDD, 15 kHz SSB SCS, 10 MHz bandwidth PSCell (Cell 2 and Cell 3): NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth
3	PCell (Cell 1): NR TDD, 30 kHz SSB SCS, 40 MHz bandwidth PSCell (Cell 2 and Cell 3): NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz bandwidth
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.7.5.18.1.1-2: General Test Parameters for subsequent CPC from FR1-FR2 NR-DC to FR1-FR2 NR-DC

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	Three radio channels are used for this test. One for NR Cell 1, second for NR Cell 2 and Cell 3
Initial Condition	Active PCell		Cell 1, Cell 2	Cell 1: NR PCell on RF channel number 1. Cell 2: NR PSCell on RF channel number 2
	Neighbour cell		Cell 3	Neighbour cell on RF channel number 2.
Final Condition	Active PCell		Cell 1, Cell 3	Cell 1: PCell on RF channel number 1. Cell 3:NR PSCell on RF channel number 2
	Neighbour Cell		Cell 2	PSCell changed on RF channel number 2.
A4	Hysteresis	dB	0	Used to trigger conditional PSCell addition of Cell 2
	Threshold RSRP	dBm	-118	
	Time to Trigger	s	0	
A3		dB	0	Used to trigger conditional PSCell change from Cell 2 to Cell 3
DRX			OFF	Continuous monitoring of primary cell
Gap pattern ID			gp0	Gaps are configured during T1, T2 and released upon T3 starts.
PRACH configuration on cell2 and cell3			FR2 configuration 2	Captured in A.3.8.3.2
Cell-individual offset for cells on RF channel number 1		dB	0	Individual offset for cells on primary component carrier.
Cell-individual offset for cells on RF channel number 2		dB	0	Individual offset for cells on carrier frequency of cell2.
Cell-individual offset for cells on RF channel number 2		dB	0	Individual offset for cells on carrier frequency of cell3.
T1		s	1	During this time the PCell is known and Cell 2 is unknown.
T2		s	≤5	During this time Cell 2 meets the PSCell addition condition and UE adds this PSCell.
T3		s	≤5	During this time Cell 3 meets the PSCell change condition and UE sends PRACH to Cell 3.

NOTE 1: Void
NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 7: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.5.18.1.2 Test Requirements

T_{RRC_delay} +T_{Event_DU} for PSCell addition (Cell 2) occurs during T1 as the PSCell addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms from the start of T2.

The UE shall transmit the PRACH to Cell 3 less than $T_{config_PSCell_Subsequent_Change_Conditional}$ Note1 from the start of T3.

All the above test requirements shall be fulfilled for the observed PSCell change delay to be counted as correct. The rate of correct observed PSCell change delay during repeated tests shall be at least 90 %.

NOTE 1: The subsequent Conditional PSCell change delay during T3 can be expressed as follows:

$$T_{config_PSCell_Subsequent_Change_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

T_{Event_DU} = 0 ms

$T_{measure}$ = 6720 ms for power class 1 or 4160 for power class 2/3/4

$T_{UE_preparation}$ = 10 ms

$T_{processing}$ = 40 ms

T_{Δ} = 20 ms

T_{PSCell_DU} = 1*10+10 = 20 ms

A.7.5.18.2 Inter-frequency subsequent CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC

A.7.5.18.2.1 Test Purpose and Environment

The purpose of this test is to verify that the subsequent conditional NR PSCell addition under NR-DC is within the requirements stated in clause 8.9C.2.

For UE supporting subsequent conditional PSCell addition/change, UE only needs to pass either inter-frequency CPA from FR1-FR1 NR-DC to FR1-FR1 NR-DC defined in clause A.6.5.12.2 or inter-frequency CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC defined in clause A.7.5.18.2.

For UE which can pass this test, test of conditional PSCell addition and release delay defined in A.7.5.12 can be skipped.

Supported test configurations are shown in A.7.5.18.2.1-1. The test parameters for the NR cell 1 are given in table A.3.7A. The NR cell 1 once set up is not changed across time.

The test parameters for NR cell 2, NR cell 3 are given in Tables A.7.5.18.2.1-2, cell-specific parameters in A.7.5.18.2.1-3 and OTA parameters in A.7.5.18.2.1-4 below. The test comprises of three NR carrier. There are three cells and one cell on each carrier. Before the test starts the UE is connected to Cell 1 (NR PCell) on radio channel 1, but is not aware of Cell 2 (NR candidate NR PSCell 1) on radio channel 2 and Cell 3 (NR candidate PSCell 2) on radio channel 3. The test consists of four successive time periods with duration of T1, T2, T3, T4.

During T1, the UE does not have any timing information of Cell 2 and Cell 3. The TE shall configure subsequent conditional PSCell addition/change with Cell 2 and Cell 3 as target PSCells during T1, at a time earlier than T_{RRC_delay} before the beginning of T2.

At the start of T2, Cell 2 becomes detectable and meets the PSCell addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which the UE shall transmit the PRACH preamble to Cell 2. Upon PSCell addition complete (UE transmits SN RRCReconfigurationcomplete message), T3 starts.

During T3, the TE shall send a RRCRconfiguration message to the UE to release PSCell (Cell 2) on radio channel 2. Upon PSCell release complete (UE transmits SN RRCReconfigurationcomplete message), T4 starts.

At the start of T4, Cell 3 becomes detectable and meets the addition condition. UE shall be able to measure and detect that the condition is fulfilled, after which UE shall send PRACH to the PSCell (Cell 3).

Table A.7.5.18.2.1-1: Supported test configurations for Inter-frequency Subsequent CPA from FR1-FR2 NR-DC to FR1-FR2 NR-DC

Configuration	Description
1	Cell 1: FDD15 kHz SSB SCS, 10 MHz bandwidth, Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth
2	Cell 1: TDD 15 kHz SSB SCS, 10 MHz bandwidth, Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth
3	Cell 1: TDD 30 kHz SSB SCS, 40 MHz bandwidth, Cell 2: TDD 120kHz SSB SCS, 100 MHz bandwidth Cell 3: TDD 120kHz SSB SCS, 100 MHz bandwidth
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.7.5.18.2.1-2: General Test Parameters for subsequent CPA

Parameter		Unit	Value	Comment
RF Channel Number			1, 2, 3	Three NR radio channels are used for this test.
Initial Condition	Active serving cells		Cell 1	Cell 1: NR PCell on RF channel number 1
	Neighbour cell		Cell 2, Cell 3	Cell 2:NR PSCell on RF channel number 2 Neighbour cell on RF channel number 3

NOTE 7: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.5.18.2.2 Test Requirements

$T_{RRC_delay} + T_{Event_DU}$ for PSCell addition (Cell 2) occurs during T1 as the PSCell addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall transmit the PRACH to PSCell (Cell 2) less than $T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2$ msfrom the start of T2.

The UE shall transmit the PRACH to PSCell (Cell 3) less than $T_{config_PSCell_Addition_Conditional}$ Note1 from the start of T4.

All the above test requirements shall be fulfilled for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

NOTE 1: The PSCell addition delay during T2 can be expressed as follows:

$$T_{config_PSCell_Addition_Conditional} = T_{Event_DU} + T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

$T_{Event_DU} = 0$

$T_{measure}$ = 6720 ms for power class 1 or 4160 for power class 2/3/4

$T_{UE_preparation}$ = 10 ms

$T_{processing}$ = 40 ms

T_{Δ} = 20 ms

T_{PSCell_DU} = 1*10+10 = 20 ms

A.7.6 Measurement procedure

A.7.6.1 Intra-frequency Measurements

A.7.6.1.1 SA event triggered reporting test without gap under non-DRX

A.7.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.1.1-1.

Table A.7.6.1.1.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.1.1-2, A.7.6.1.1.1-3 and A.7.6.1.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Table A.7.6.1.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX

Parameter	Unit	Config	Value	Comment
Active cell		1, 2	PCell (Cell 1)

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Void NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.							

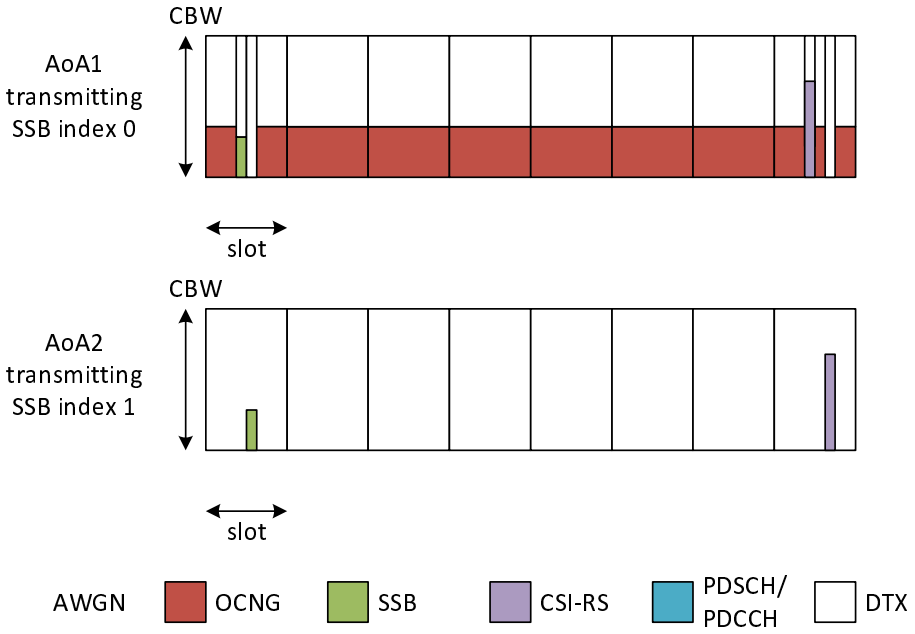

Figure A.7.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.2 SA event triggered reporting test without gap under DRX

A.7.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.2.1-1.

Table A.7.6.1.2.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.2.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

Table A.7.6.1.2.1-5: Void

Table A.7.6.1.2.1-6: Void

A.7.6.1.2.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.3 SA event triggered reporting test with per-UE gaps under non-DRX

A.7.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.3.1-1.

Table A.7.6.1.3.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.3.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

A.7.6.1.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.4 SA event triggered reporting test with per-UE gaps under DRX

A.7.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.4.1-1.

Table A.7.6.1.4.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.4.1-2, A.7.6.1.4.1-3 and A.7.6.1.4.1-4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.1.4.1-5: Void

Table A.7.6.1.4.1-6:Void

A.7.6.1.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.5 SA event triggered reporting test without gap under non-DRX for UE configured with *highSpeedMeasFlagFR2-r17*

A.7.6.1.5.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17* in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.5.1-1.

Table A.7.6.1.5.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.5.1-2, A.7.6.1.5.1-3 and A.7.6.1.5.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Time multiplexing of the downlink transmissions from each AoA		1, 2	Defined in figure A.7.6.1.1.1-1			

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Void
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

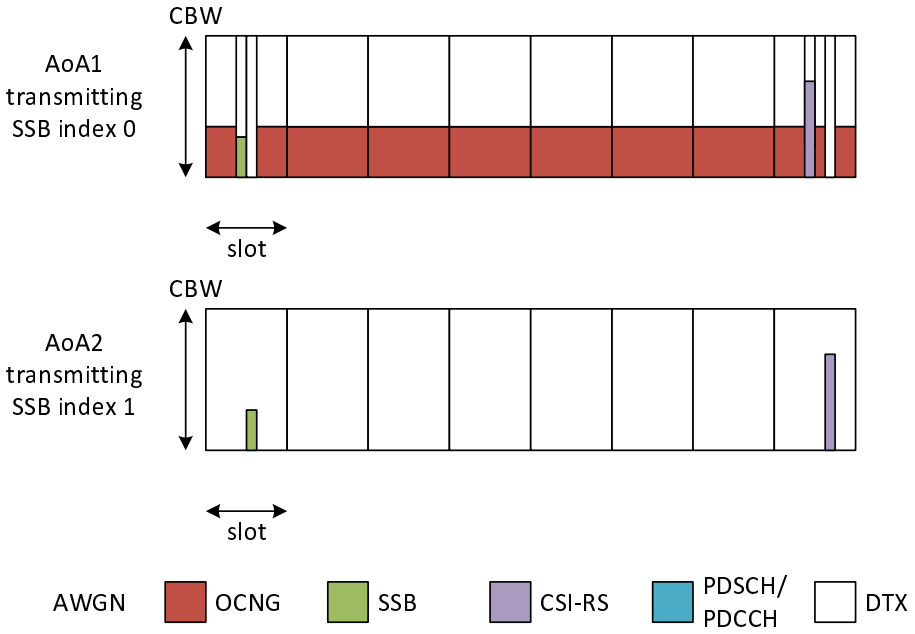

Figure A.7.6.1.5.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.5.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1140 ms from the beginning of time period T2.

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.6 SA event triggered reporting test without gap under non-DRX for FR2-2

A.7.6.1.6.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.6.1-1.

Table A.7.6.1.6.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.6.1-2, A.7.6.1.6.1-3 and A.7.6.1.6.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Figure A.7.6.1.6.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.6.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 2.4 s (60*20 ms+60*20 ms)for a UE supporting power class 1,

- 1.44 s (36*20 ms+36*20 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 3.6 s (120*20 ms+60*20 ms) for a UE supporting power class 1,
- 2.16 s (72*20 ms+36*20 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 4.8 s (180*20 ms+60*20 ms) for a UE supporting power class 1,
- 2.88 s (108*20 ms+36*20 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.7 SA event triggered reporting test without gap under DRX for FR2-2

A.7.6.1.7.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.7.1-1.

Table A.7.6.1.7.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.7.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.1.7.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 7.2 s (60*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 4.32 s (36*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 2,

- 10.8 s (120*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 6.48 s (72*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 3,

- 14.4 s (180*40 ms*1.5 + 60*40 ms*1.5) for a UE supporting power class 1,
- 8.64 s (108*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 76.8 s (60*640 ms +60*640 ms) for a UE supporting power class 1,
- 46.08 s (36*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 115.2 s (120*640 ms +60*640 ms) for a UE supporting power class 1,
- 69.12 s (72*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 153.6 s (180*640 ms + 60*640 ms) for a UE supporting power class 1,
- 92.16 s (108*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.8 SA event triggered reporting test with per-UE gaps under non-DRX for FR2-2

A.7.6.1.8.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.8.1-1.

Table A.7.6.1.8.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.8.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

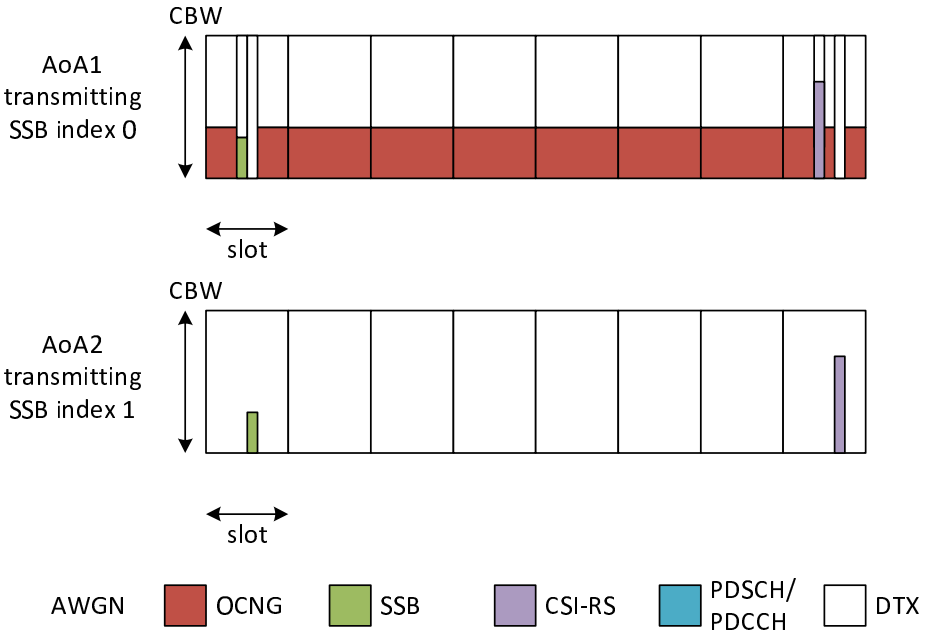

Figure A.7.6.1.8.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.8.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 4.8 s (60*40 ms+60*40 ms) for a UE supporting power class 1,
- 2.88 s (36*40 ms+36*40 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 7.2 s (120*40 ms+60*40 ms) for a UE supporting power class 1,
- 4.32 s (72*40 ms+36*40 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 9.6 s (180*40 ms+60*40 ms) for a UE supporting power class 1,
- 5.76 s (108*40 ms+36*40 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.9 SA event triggered reporting test with per-UE gaps under DRX for FR2-2

A.7.6.1.9.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.9.1-1.

Table A.7.6.1.9.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.9.1-2, A.7.6.1.9.1-3 and A.7.6.1.9.1-4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.1.9.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 7.2 s (60*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 4.32 s (36*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 2,

- 10.8 s (120*40 ms*1.5 +60*40 ms*1.5) for a UE supporting power class 1,
- 6.48 s (72*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

For Configuration 3,

- 14.4 s (180*40 ms*1.5 + 60*40 ms*1.5) for a UE supporting power class 1,
- 8.64 s (108*40 ms*1.5 + 36*40 ms*1.5) for a UE supporting power class 2 and 3

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

- 76.8 s (60*640 ms +60*640 ms) for a UE supporting power class 1,
- 46.08 s (36*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 2,

- 115.2 s (120*640 ms +60*640 ms) for a UE supporting power class 1,
- 69.12 s (72*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

For Configuration 3,

- 153.6 s (180*640 ms + 60*640 ms) for a UE supporting power class 1,
- 92.16 s (108*640 ms + 36*640 ms) for a UE supporting power class 2 and 3

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.10 SA event triggered reporting test with SSB time index detection without gap under non-DRX for FR2-2

A.7.6.1.10.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.10.1-1.

Table A.7.6.1.10.1-1: supported test configurations

Configuration	Description
1	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode

There are two cells in the test, PCell (Cell 1) and a FR2-2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.10.1-2, A.7.6.1.10.1-3 and A.7.6.1.10.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Time multiplexing of the downlink transmissions from each AoA		1	Defined in figure A.7.6X.1.3.1-1			
NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Void NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.							

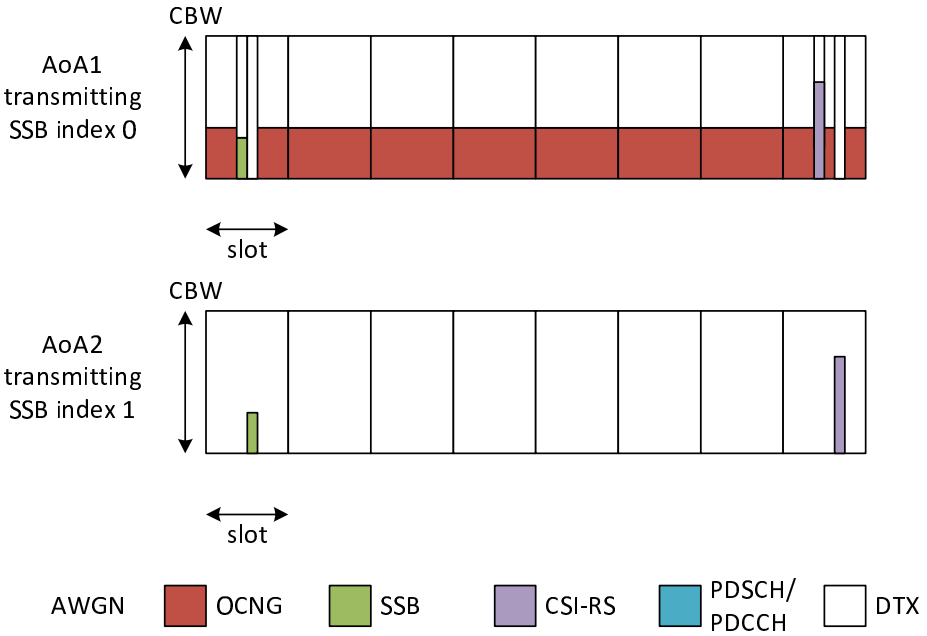

Figure A.7.6.1.11.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.11.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 12.48 s (180*40 ms +60*40 ms) for a UE supporting power class 1,
- 7.68 s (108*40 ms + 36*40 ms) for a UE supporting power class 2 and 3

The UE is required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.12 SA event triggered reporting test without gap under non-DRX when CD-SSB is outside active BWP

A.7.6.1.12.1 Test purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of an event when CD-SSB is outside active BWP. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.1.1-1.

The test environment is the same as in A.7.6.1.1 with following exceptions in table A.7.6.1.1.1-3.

Table A.7.6.1.12.1-1: NR Cell specific test parameters for intra-frequency event triggered reporting without gap under non-DRX when CD-SSB is outside active BWP

Parameter	Unit	Config	Cell 1		Cell 2	
			T1	T2	T1	T2
Initial BWP configuration		1, 2	DLBWP.0.1 ULBWP.0.1		-	
Active DL BWP configuration		1, 2	DLBWP.1.5		-	
Active UL BWP configuration		1, 2	ULBWP.1.5		-	

A.7.6.1.12.2 Test Requirements

The test requirements are the same as in A.7.6.1.1.2.

A.7.6.1.13 SA event triggered reporting test without gap under non-DRX with NCD-SSB

A.7.6.1.13.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements when NCD-SSB is configured in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.13.1-1.

Table A.7.6.1.13.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.1.13.1-2, A.7.6.1.13.1-3 and A.7.6.1.13.1-4 below.

The CD-SSB is configured outside active DL BWP and NCD-SSB is configured fully within active DL BWP of FR1 PCell. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Table A.7.6.1.13.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX

Parameter	Unit	Config	Value	Comment

NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

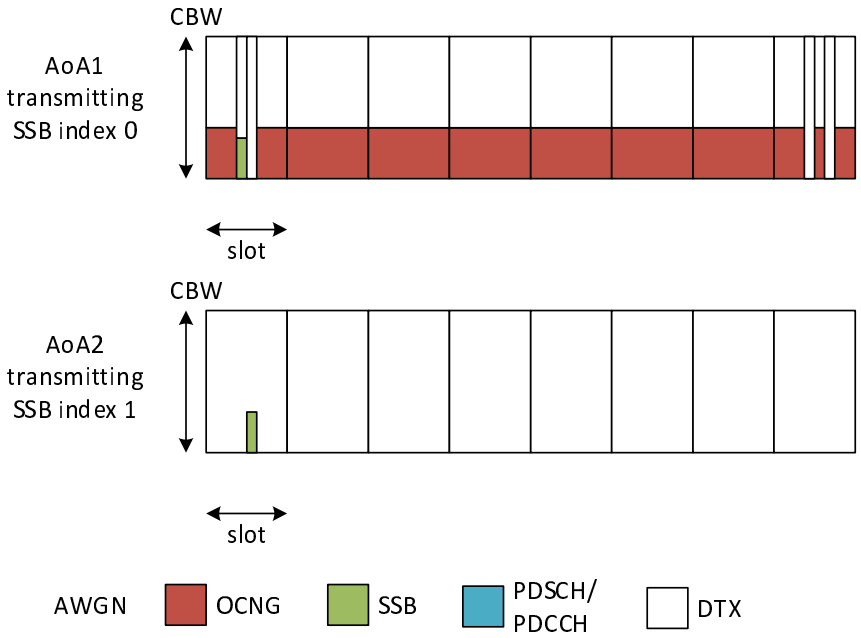

Figure A.7.6.1.13.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.13.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 9.6s for a UE supporting power class 1,
- 5.76s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.1.14 SA event triggered reporting test without gap under non-DRX for power class 6 UE supporting measEnhCAInterFreqFR2-r18

A.7.6.1.14.1 Test Purpose and Environment

The purpose of this test is to verify that the FR2 power class 6 UE makes correct reporting of an event. This test will partly verify the SA SCC intra-frequency NR cell measurement requirements specified in clause 9.2.5 for FR2 power class 6 UE supporting *measEnhCAInterFreqFR2-r18* and configured with *highSpeedMeasFlagFR2-r17*.

Three cells are deployed in the test: one FR2 PCell (Cell 1) on NR RF channel 1, one FR2 SCell (Cell 2) on NR RF channel 2, and one neighbouring cell (Cell 3) on NR RF channel 2. The supported test configurations are given in table A.7.6.1.14.1.1-1. The test parameters are given in tables A.7.6.1.14.1.1-2 and cell-specific parameters in A.7.6.1.14.1.1-3 below.

In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used.

This test consists of two successive time periods, with time durations of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

NOTE 2: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 3: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.6.1.14.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2 Inter-frequency Measurements

A.7.6.2.1 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is not used (PCell in FR2)

A.7.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.1.1-1, A.7.6.2.1.1-2, and A.7.6.2.1.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.1.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.1.1-1.

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.2 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is used (PCell in FR2)

A.7.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.2.1-1, A.7.6.2.2.1-2, and A.7.6.2.2.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.2.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.2.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.2.2.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.3 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is not used (PCell in FR2)

A.7.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.3.1-1, A.7.6.2.3.1-2, and A.7.6.2.3.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.3.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.3.1-1.

NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.3.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.4 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is used (PCell in FR2)

A.7.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.4.1-1, A.7.6.2.4.1-2, and A.7.6.2.4.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.4.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.4.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.2.4.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.5 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is not used (PCell in FR1)

A.7.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.5.1-1, A.7.6.2.5.1-2, and A.7.6.2.5.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 no gap pattern is configured as defined in table A.7.6.2.5.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.5.1-1.

Table A.7.6.2.5.1-1 SA event triggered reporting tests without SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
NOTE: The UE is only required to be tested in one of the supported test configurations

Propagation Condition		Config 1,2,3		No external noise (Note 9)	

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.5.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 2, without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

2560 for UE supporting power class 1, or

1600 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.6 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is used (PCell in FR1)

A.7.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.6.1-1, A.7.6.2.6.1-2, and A.7.6.2.6.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 no gap pattern is configured as defined in table A.7.6.2.6.1-2. If a UE supports per-FR gap it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.6.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.2.6.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
NOTE: The UE is only required to be tested in one of the supported test configurations

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

A.7.6.2.6.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.7 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is not used (PCell in FR1)

A.7.6.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

n this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.7.1-1, A.7.6.2.7.1-2, and A.7.6.2.7.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement no gap pattern is configured as defined in table A.7.6.2.7.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.7.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.2.8.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.9 SA event triggered reporting tests For FR2 without SSB time index detection when DRX is not used (PCell in FR2) (rel16 additional mandatory gap pattern 17)

A.7.6.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.9.1-1, A.7.6.2.9.1-2, and A.7.6.2.9.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.9.1-1.

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms (PC1) or 3200 ms (other than PC1) from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.10 SA event triggered reporting test without gap under non-DRX

A.7.6.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that if UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the network, the UE makes correct reporting of an event. This test will partly verify the inter-frequency without gap cell search requirements in clause 9.3.9. Supported test configurations are shown in table A.7.6.2.10.1-1.

Table A.7.6.2.10.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are two cells in the test, NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.2.10.1-2, A.7.6.2.10.1-3 and A.7.6.2.10.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: SSB_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.2.10.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.11 SA event triggered reporting test without gap under DRX

A.7.6.2.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD inter-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.2.11.1-1.

Table A.7.6.2.11.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test: PCell (Cell 1) on NR RF channel 1 and a FR2 neighbour cell (Cell 2) on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.2.11.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

A.7.6.2.11.2 Test Requirements

In test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4est

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.12 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is not used (PCell in FR2-2)

A.7.6.2.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.1.12-1, A.7.6.2.12.1-2, and A.7.6.2.12.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.12.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.12.1-1.

Table A.7.6.2.12.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2

Config	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.

NOTE 2: VoidNOTE 3: SSBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.12.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

7.68 s (96*40 ms + 96*40 ms) for UE supporting power class 1, or

4.8 s (60*40 ms +60*40 ms) for UE supporting other power class.

For Configuration 2,

11.52 s (192*40 ms + 96*40 ms) for UE supporting power class 1, or

7.2 s (120*40 ms +60*40 ms) for UE supporting other power class.

For Configuration 3,

15.36 s (288*40 ms + 96*40 ms) for UE supporting power class 1, or

9.6 s (180*40 ms +60*40 ms) for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.13 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is used (PCell in FR2-2)

A.7.6.2.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.63.2.13.1-1, A.7.6.2.13.1-2, and A.7.6.2.13.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.13.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2132.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.2.13.1-1: SA event triggered reporting tests without SSB index reading for FR2-FR2

Config	Description

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: Void

NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.2.13.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,

11.52 s (96*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

7.2 s (60*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 2,

17.28 s (192*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

10.80 s (120*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 3,

23.04 s (288*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

14.40 s (180*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuratiojn 1,

122.88 s (96*640 ms + 96*640 ms) for UE supporting power class 1, or

76.80 s (60*640 ms + 60*640 ms) for UE supporting other power class.

For Configuratiojn 2,

184.32 s (192*640 ms + 96*640 ms) for UE supporting power class 1, or

115.20 s (120*640 ms + 60*640 ms) for UE supporting other power class.

For Configuratiojn 3,

245.76 s (288*640 ms + 96*640 ms) for UE supporting power class 1, or

153.60 s (180*640 ms + 60*640 ms) for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.14 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is not used (PCell in FR2-2)

A.7.6.2.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.14.1-1, A.7.6.2.14.1-2, and A.7.6.2.14.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.14.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.14.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.						
NOTE 2: Void						
NOTE 3: SBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Void						
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone						
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone						
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.						
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].						

A.7.6.2.14.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,

10.56 s (96*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

6.72 s (60*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 2,

14.4 s (192*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

9.12 s (120*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 3,

18.24 s (288*40 ms + 96*40 ms+72*40 ms) for UE supporting power class 1, or

11.52 s (180*40 ms+60*40 ms+48*40 ms) for UE supporting other power class.

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.15 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is used (PCell in FR2-2)

A.7.6.2.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.15.1-1, A.7.6.2.15.1-2, and A.7.6.2.15.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.15.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.15.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.2.15.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2

Config	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.

A.7.6.2.15.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,

15.84 s (96*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

10.08 s (60*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 2,

21.6 s (192*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

13.68 s (120*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 3,

27.36 s (288*40 ms*1.5+96*40 ms*1.5+48*40 ms*1.5) for UE supporting power class 1, or

17.28 s (180*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,

168.96 s (96*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

107.52 s (60*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 2,

230.4 s (192*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

145.92 s (120*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 3,

291.84 s (288*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

184.32 s (180*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.16 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is not used (PCell in FR1)

A.7.6.2.16.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.16.1-1, A.7.6.2.16.1-2, and A.7.6.2.16.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.16.1-2 is provided for a UE that does not support per-FR gap and in test 2 no gap pattern is configured as defined in table A.7.6.2.16.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.16.1-1.

Table A.7.6.2.16.1-1 SA event triggered reporting tests without SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.16.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

7.68 s (96*40 ms+96*40 ms) for UE supporting power class 1, or

4.8 s (60*40 ms + 60*40 ms) for UE supporting other power class.

For Configuration 4,5,6

11.52 s (192*40 ms+96*40 ms) for UE supporting power class 1, or

7.2 s (120*40 ms + 60*40 ms) for UE supporting other power class.

For Configuration 7,8,9

15.36 s (288*40 ms+96*40 ms) for UE supporting power class 1, or

9.6 s (180*40 ms + 60*40 ms) for UE supporting other power class.

In test 2, without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

3.84 s (96*20 ms+96*20 ms) for UE supporting power class 1, or

2.4 s (60*20 ms + 60*20 ms) for UE supporting other power class.

For Configuration 4,5,6

5.76 s (192*20 ms+96*20 ms) for UE supporting power class 1, or

3.6 s (120*20 ms + 60*20 ms) for UE supporting other power class.

For Configuration 7,8,9

7.68 s (288*20 ms+96*20 ms) for UE supporting power class 1, or

4.8 s (180*20 ms + 60*20 ms) for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.17 SA event triggered reporting tests for FR2-2 without SSB time index detection when DRX is used (PCell in FR1)

A.7.6.2.17.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.17.1-1, A.7.6.2.17.1-2, and A.7.6.2.17.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.17.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 no gap pattern is configured as defined in table A.7.6.2.17.1-2. If a UE supports per-FR gap it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.17.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.2.17.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
4	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
5	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
6	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
7	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
8	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
9	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
NOTE: The UE is only required to be tested in one of the supported test configurations

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone

A.7.6.2.17.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,2,3

11.52 s (96*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

7.2 s (60*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 4,5,6

17.28 s (192*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

10.80 s (120*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

For Configuration 7,8,9

23.04 s (288*40 ms*1.5 + 96*40 ms*1.5) for UE supporting power class 1, or

14.40 s (180*40 ms*1.5 + 60*40 ms*1.5) for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,2,3

122.80 s (96*640 ms + 96*640 ms) for UE supporting power class 1, or

76.80 s (60*640 ms + 60*640 ms) for UE supporting other power class.

For Configuration 4,5,6

184.32 s (192*640 ms + 96*640 ms) for UE supporting power class 1, or

115.20 s (120*640 ms + 60*640 ms) for UE supporting other power class.

For Configuration 7,8,9

245.76 s (288*640 ms + 96*640 ms) for UE supporting power class 1, or

153.60 s (180*640 ms + 60*640 ms) for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.18 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is not used (PCell in FR1)

A.7.6.2.18.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

n this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.18.1-1, A.7.6.2.18.1-2, and A.7.6.2.18.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.18.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement no gap pattern is configured as defined in table A.7.6.2.18.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.18.1-1.

Table A.7.6.2.18.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.18.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

10.56 s (96*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

6.72 s (60*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 4,5,6

14.4 s (192*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

9.12 s (120*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

For Configuration 7,8,9

18.24 s (288*40 ms+96*40 ms+72*40 ms) for UE supporting power class 1, or

11.52 s (180*40 ms + 60*40 ms+48*40 ms) for UE supporting other power class.

In test 2 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

For Configuration 1,2,3

5.28 s (96*20 ms+96*20 ms+72*20 ms)for UE supporting power class 1, or

3.36 s (60*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

For Configuration 4,5,6

7.2 s (192*20 ms+96*20 ms+72*20 ms) for UE supporting power class 1, or

4.56 s (120*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

For Configuration 7,8,9

9.12 s (288*20 ms+96*20 ms+72*20 ms) for UE supporting power class 1, or

5.76 s (180*20 ms + 60*20 ms+48*20 ms) for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.19 SA event triggered reporting tests for FR2-2 with SSB time index detection when DRX is used (PCell in FR1)

A.7.6.2.19.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2-2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.19.1-1, A.7.6.2.19.1-2, and A.7.6.2.19.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in table A.7.6.2.19.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement no gap pattern is configured as defined in table A.7.6.2.19.1-2. If a UE supports per-FR gap , it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.19.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.2.19.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
4	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
5	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
6	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
7	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
8	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
9	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	
NOTE: The UE is only required to be tested in one of the supported test configurations

A.7.6.2.19.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

For Configuration 1,2,3

15.84 s (96*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

10.08 s (60*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 4,5,6

21.6 s (192*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

13.68 s (120*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

For Configuration 7,8,9

27.36 s (288*40 ms*1.5+96*40 ms*1.5+72*40 ms*1.5) for UE supporting power class 1, or

17.28 s (180*40 ms*1.5+60*40 ms*1.5+48*40 ms*1.5) for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

For Configuration 1,2,3

168.69 s (96*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

107.52 s (60*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 4,5,6

230.4 s (192*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

145.92 s (120*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

For Configuration 7,8,9

291.84 s (288*640 ms+96*640 ms+72*640 ms) for UE supporting power class 1, or

184.32 s (180*640 ms+60*640 ms+48*640 ms) for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.20 SA event triggered reporting tests for FR2 with measurement gap with priority and two periodic MUSIM gaps configured

A.7.6.2.20.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within a measurement gap when the UE is configured with two periodic MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.20.1-1, A.7.6.2.20.1-2, and A.7.6.2.20.1-3.

The three gaps, including a measurement gap and two periodic MUSIM gaps, are configured with different priority levels. In this test, the measurement gap has the lowest priority level, and the 2nd MUSIM gap has the highest priority level (i.e., priority of 2nd MUSIM gap > 1 st MUSIM gap > measurement gap) as defined in table A.7.6.2.20.1-2.

NOTE: the signaling procedure to trigger the UE to request MUSIM gaps before the test equipment configures MUSIM gaps to the UE is left to comformance test implementation.

Measurement gap pattern configuration defined in table A.7.6.2.20.1-2 is provided for a UE.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.20.1-1.

Table A.7.6.2.20.1-1: Supported test configurations.

Config	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SSBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.2.20.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.21 SA event triggered reporting tests for FR2 with measurement gap without priority and periodic MUSIM gap configured

A.7.6.2.21.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event on an inter-frequency layer based on measurement performed within measurement gaps, when UE is also configured with MUSIM gaps. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.2.21.1-1, A.7.6.2.21.1-2 and A.7.6.2.21.1-3.

Measurement gap and MUSIM gap pattern configurations defined in table A.7.6.2.21.1-2 are provided to the UE. When UE does not support per-FR gap, measurement gap pattern configuration is provided for a per-UE gap. When UE supports per-FR gap, measurement gap pattern configuration is provided for a per-FR2 gap. MUSIM gap is configured with shorter MGRP than the configured measurement gap.

NOTE: The interaction between the test equipment and UE before configuring the MUSIM gap to the UE is left to comformance test implementation.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

A.7.6.2.21.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 10240 for a UE supporting power class 1,
- 6400 for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.22 SA event triggered reporting tests with SSB time index detection when DRX is not used (PCell in FR2) for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

A.7.6.2.22.1 Test Purpose and Environment

The purpose of this test is to verify that the PC6 UE makes correct reporting of an event when UE supporting *measEnhCAInterFreqFR2-r18* is configured with *highSpeedMeasInterFreq-r17*. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR carrier 1(RF channel 1) and NR cell2 as neighbor cell in FR2 on NR carrier 2(RF channel 2). The test parameters and configurations are given in tables A.7.6.2.22.1-1, A.7.6.2.22.1-2, and A.7.6.2.22.1-3.

Measurement gap pattern configuration defined in table A.7.6.2.22.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

Supported test configurations are shown in table A.7.6.2.22.1-1.

A.7.6.2.22.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is 2160 ms according to the requirements defiend in table 9.3.4-9 and table 9.3.4-10 in clause 9.3.4

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.2.23 SA event triggered reporting tests without SSB time index detection when DRX is not used (PCell in FR2) for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

A.7.6.2.23.1 Test Purpose and Environment

The purpose of this test is to verify that the FR2 power class 6 UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements specified in clause 9.3.4 for a FR2 power class 6 UE supporting *measEnhCAInterFreqFR2-r18* and configured with *highSpeedMeasFlagFR2-r17*.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.2.23.1-1, A.7.6.2.23.1-2, and A.7.6.2.23.1-3.

The measurement gap pattern configuration defined in table A.7.6.2.23.1-2 applies to a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured to a UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are specified in table A.7.6.2.23.1-1.

NOTE 3: The AWGN 19444 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 19444 Hz.

A.7.6.2.23.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1 s from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.3 L1-RSRP measurement for beam reporting

A.7.6.3.1 SSB based L1-RSRP measurement when DRX is not used

A.7.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.1.2-1 and table A.7.6.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.7.6.3.1.2-1: General test parameters

Parameter	Config	Unit	Value

Io Note3	1	dBm/95.04 MHz	-63.97	-63.97	-66.98	-57.47
	2		-63.97	-63.97	-66.98	-57.47
$\hat{E}_s/N_{oc}$	1~2	dB	0	0	-Infinity	9
NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.6.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 1680 for UE supporting power class 1
- 1200 for UE supporting power class 2,3 or 4**.**

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.2 SSB based L1-RSRP measurement when DRX is used

A.7.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.2.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.2.2-1 and table A.7.6.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.7.6.3.2.2-1: General test parameters

Parameter	Config	Unit	Value

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.6.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.3 CSI-RS based L1-RSRP measurement when DRX is not used

A.7.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.3.1-1.

Table A.7.6.3.3.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.3.2-1 and table A.7.6.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 480 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.3.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.7.6.3.3.2-1: General test parameters

Parameter	Config	Unit	Value

Table A.7.6.3.3.2-1: CSI-RS specific test parameters

Parameter	Config	Unit	CSI-RS#0	CSI-RS#1
Angle of arrival configuration	1		Setup 1 according to A.3.15.1	
Beam Assumption Note 4	1		Rough	Rough
N_{oc} Note1	1	dBm/15 kHz	-105	
N_{oc} Note1	1	dBm/SSB SCS	-95.97	
$\hat{E}_s / I_{ot}$	1	dB	0	9
CSI-RS RSRP Note2	1	dBm/SSB SCS	-95.97	-86.97
Io Note2	1	dBm/95.04 MHz	-63.97	-57.47
$\hat{E}_s / N_{oc}$	1	dB	0	9

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.3.3.3 Test Requirements

After 480 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.6.3.3.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

Table A.7.6.3.3.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
CSI-RS0	CSI-RS _RP0 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + G_{max}
CSI-RS1	CSI-RS _RP1 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + G_{max}

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

A.7.6.3.4 CSI-RS based L1-RSRP measurement when DRX is used

A.7.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.4.1-1.

Table A.7.6.3.4.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.4.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.4.2-1 and table A.7.6.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 1440 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.3.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Io Note2	1	dBm/95.04 MHz	-63.97	-57.47
$\hat{E}_s/N_{oc}$	1	dB	0	9
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.				
NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.				
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation				

A.7.6.3.3.3 Test Requirements

After 1440 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.6.3.4.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

Table A.7.6.3.4.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
CSI-RS0	CSI-RS _RP0 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + G_{max}
CSI-RS1	CSI-RS _RP1 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + G_{max}
NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.6.3.5 SSB based L1-RSRP measurement when DRX is used for power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

A.7.6.3.5.1 Test Purpose and Environment

The purpose of this test is to verify that the power class 6 UE makes correct reporting of L1-RSRP measurement when *highSpeedMeasFlagFR2-r17* is configured. This test will partly verify the L1-RSRP measurement requirements for power class 6 UE configured with *highSpeedMeasFlagFR2-r17* in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.5.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.5.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test for power class 6 UE configured with *highSpeedMeasFlagFR2-r17*

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.5.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.5.2-1 and table A.7.6.3.5.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Parameter	Config	Unit	SSB#0		SSB#1	
			T1	T2	T1	T2
N_{oc} Note2	1	dBm/SSB SCS	-96			
	2		-93			
$\hat{E}_s/I_{ot}$	1~2	dB	0	0	-Infinity	9
SSB_RP Note3	1	dBm/SSB SCS	-96	-96	-Infinity	-87
	2		-93	-93	-Infinity	-84
Io Note3	1	dBm/95.04 MHz	-63.97	-63.97	-66.98	-57.47
	2		-63.97	-63.97	-66.98	-57.47
$\hat{E}_s/N_{oc}$	1~2	dB	0	0	-Infinity	9

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.3.5.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than 480 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -5 to [+44] dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.6 Inter-cell SSB based L1-RSRP measurements on FR2 SCell when DRX is not used

A.7.6.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.13.4.1, with the testing configurations for NR serving cell in table A.7.6.3.6.1-1.

The AoA setup of FR2 cell for this test is Setup 3 as defined in clause A.3.15.

Table A.7.6.3.6.1-1: Applicable NR configurations for inter-cell SSB based L1-RSRP test in FR2

Config	Description
1	NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	NR PCell 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode NR SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
4	NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
5	NR PCell 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
6	NR PCell 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode NR SCell 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.6.2 Test parameters

There are two cells in the test, Cell 1 is the serving cell in CA, including a FR1 PCC and FR2 SCC. Cell 2 is a FR2 cell with different PCI from Cell 1. The test parameters for Cell 1 are given in table A.7.6.3.6.2-1. The test parameters for FR2 Cell (Cell 2) are given in table A.7.6.3.6.2-2 and table A.7.6.3.6.2-3.

SSB#0 and SSB#1 is transmitted on Cell 1 FR2 SCC and Cell 2.In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on SSB#0, and report measurement results periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. At the beginning of T2, SSB#1 starts transmission and the UE is configured for L1-RSRP measurement on SSB#1. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured in CSI-ReportConfig and *additionalPCIList* configured in *CSI-SSB-ResourceSet*.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD on Cell 1 in FR1 and perform L1-RSRP measurements on the SSB#0in FR2.

Table A.7.6.3.6.2-1: Cell specific test parameters for FR1 PCell

Parameter	Config	Unit	Value
SSB ARFCN	1~6		freq1

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.3.6.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2160 for UE supporting power class 1
- 1680 for UE supporting power class 2, 3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.7 SSB based L1-RSRP measurement for FR2-2 when DRX is used

A.7.6.3.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.7.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.7.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 480 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
3	NR 960 kHz SSB SCS, 400 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.7.2 Test parameters

There is one cells in the test, the FR2-2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.7.2-1 and table A.7.6.3.7.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.3.7.3 Test Requirements

The UE shall send L1-RSRP report every TBD slots. No later than X ms plus TBD slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- TBD for UE supporting power class 1
- TBD for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.8 CSI-RS based L1-RSRP measurement when DRX is not used and when CD-SSB is outside active BWP

A.7.6.3.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.7.6.3.3.1-1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in A.7.6.3.3.

The test environment is the same as in A.7.6.3.3 with following exceptions in table A.7.6.3.3.2-1.

The value of parameter “Dedicated BWP configuration” is DLBWP.1.2 and ULBWP.1.2.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as in A.7.6.3.3.3.

A.7.6.3.9 SSB based L1-RSRP measurement when DRX is not used when CD-SSB is outside active BWP

A.7.6.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.1.1-1.

The test environment is the same as in A.7.6.3.1 with following exceptions in table A.7.6.3.1.2-1.

Parameter	Config	Unit	Value
Dedicated BWP configuration	1~2		DLBWP.1.5 ULBWP.1.5

A.7.6.3.9.2 Test Requirements

The test requirements are the same as in A.7.6.3.1.3.

A.7.6.3.10 SSB based L1-RSRP measurement for UE supporting NCD-SSB based L1 measurement outside active BWP when DRX is not used

A.7.6.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.7.6.3.10.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.10.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.10.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.10.2-1 and table A.7.6.3.10.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. During time duration T1, the UE shall not have any timing information of NR cell 2.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.7.6.3.10.2-1: General test parameters

Parameter	Config	Unit	Value

$\hat{E}_s / N_{oc}$	1~2	dB	0	0	-Infinity	9

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Parameter	Config	Unit	SSB#0		SSB#1	
			T1	T2	T1	T2
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.6.3.10.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- [3360] for UE supporting power class 1
- [2080] for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.3.11 SSB based L1-RSRP measurement when DRX is used for power class 6 UE supporting simultaneousReceptionTwoQCL-r18

A.7.6.3.11.1 Test Purpose and Environment

The purpose of this test is to verify that the power class 6 UE supporting *simultaneousReceptionTwoQCL-r18* makes correct reporting of L1-RSRP measurement when *highSpeedMeasFlagFR2-r17* is configured, and when *highSpeedDeploymentTypeFR2-r17* is configured as bidirectional. This test will partly verify the L1-RSRP measurement requirements for power class 6 UE configured with *highSpeedMeasFlagFR2-r17* for FR2 in clause 9.5.4.1 with the testing configurations for NR cells in table A.7.6.3.11.1-1.

Table A.7.6.3.11.1-1: Test configurations

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.3.11.2 Test parameters

There is one cell in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.3.11.2-1 and table A.7.6.3.11.2-2 below.

There are two SSBs configured in Cell 1. In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on two different QCL Type D SSBs simultaneously and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.7.6.3.11.2-1: General test parameters

Parameter	Config	Unit	Value
highSpeedMeasFlagFR2-r17	1~2		Set 2
highSpeedDeploymentTypeFR2-r17	1~2		bidirectional

	2		-68.37	-68.37	-71.38	-61.86
$\hat{E}_s / N_{oc}$	1~2	dB	0	0	-Infinity	9
NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.6.3.11.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than 880 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0, SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -5 to +44 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.4 CLI measurements

A.7.6.4.1 SRS-RSRP measurement with non-DRX

A.7.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in table A.7.6.4.1.1-1.

Table A.7.6.4.1.1-1: Applicable NR configurations for FR2 SRS-RSRP test

Configuration	Description
1	NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.6.4.1.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in table A.7.6.4.1.2-1 ~ A.7.6.4.1.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in table A.7.6.4.1.2-4 and the test parameters for the (virtual) neighbour cell UE in table A. 7.6.4.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

Table A.7.6.4.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PCell in FR2

Parameter	Unit	Test configuration	Value	Comment

A.7.6.4.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 60 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.4.2 CLI-RSSI measurement with non-DRX

A.7.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in table A.7.6.4.2.1-1.

Table A.7.6.4.2.1-1: Applicable NR configurations for FR2 CLI-RSSI test

Configuration	Description
1	NR 120 kHz SCS, 100 MHz bandwidth, TDD duplex mode

A.7.6.4.2.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in table A.7.6.4.2.2-1 ~ A.7.6.4.2.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 2 data symbols before. The CLI-RSSI measurement resource configuration is in table A.7.6.4.2.2-4.

Table A.7.6.4.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PCell in FR2

A.7.6.4.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 5 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on Io.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.5 NR Measurements with autonomous gaps

A.7.6.5.1 SA interfrequency CGI reporting in autonomous gaps test (PCell in FR2)

A.7.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an CGI. This test will partly verify the SA inter-frequency NR cell search requirements in clause 8.2.1.2.16 and 9.11

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.5.1.1-1, A.7.6.5.1.1-2, and A.7.6.5.1.1-3.

Measurement gap patterns are configured. During T1 the UE shall report event A3 for cell 2. Within 3 seconds of the event report, the test equipment shall add a measurement reporting configuration using *ReportConfigNR* which containsa ReportCGI IE with cellForWhichToReportCGI set to the physical Cell ID of cell 2 and including the optional IE useAutonomousGaps-r16

In the measurement control information, it is indicated to the UE to decode the CGI of the neighbour cell using autonomous gaps. The test consists of two time phases, T1 and T2. Time period T2 begins when the last TTI containing the RRC message implying SI reading is sent to the UE.

Supported test configurations are shown in table A.7.6.5.1.1-1.

Table A.7.6.5.1.1-1 SA interfrequency CGI reporting test in autonomous gaps

Config	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

Table A.7.6.5.1.1-2: General test parameters for SA interfrequency CGI reporting in autonomous gaps

Parameter	Unit	Test configuration	Value	Comment

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.5.1.2 Test Requirements

The UE shall report the CGI of cell 2 within 10 + 25*T_{smtc} + 6* $T_{RMSI\text{-}scheduling}$ +20 ms +2 ms= 652 ms from the start of T2, allow 655 ms. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 655 ms the number of interrupted slots shall not exceed the allowed number as defined in clause 8.2.2.2.14.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTI_{DCCH} higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.6 L1-SINR measurement for beam reporting

A.7.6.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is not used

A.7.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in table A.7.6.6.1.1-1.

Table A.7.6.6.1.1-1: Applicable NR configurations for FR2 CSI-RS based L1-SINR test

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.6.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.1.2-1 and table A.7.6.6.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 160 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.6.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.7.6.6.1.2-2: CSI-RS specific test parameters

Parameter	Config	Unit	CSI-RS#0	CSI-RS#1
Angle of arrival configuration	1		Setup 1 according to A.3.15.1	
Beam assumption Note 3	1		Rough	
N_{oc} Note1	1	dBm/15 kHz	-105	
N_{oc} Note1	1	dBm/SSB SCS	-95.97	
$\hat{E}_s/I_{ot}$	1	dB	0	9
CSI-RS RSRP Note3	1	dBm/SSB SCS	-95.97	-86.97
Io Note2	1	dBm/95.04 MHz	-63.97	-57.47
$\hat{E}_s/N_{oc}$	1	dB	0	9

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.6.1.3 Test Requirements

After 160 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is used

A.7.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in table A.7.6.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.6.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.2.2-1 and table A.7.6.6.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-IM resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

	2		-64	-64	-67	-57.5
$\hat{E}_s / N_{oc}$	1~2	dB	0	0	-Infinity	9
NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: SSB RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.6.6.2.3 Test Requirements

The UE shall send L1-SINR report every 640 slots. No later than X ms plus 640 slots from the beginning of time period T2, UE shall send L1-SINR report including the results for both SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 while meeting the accuracy requirements defined in clause 10.1.28.2, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTI_{DCCH} higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is used

A.7.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR cofigured in clause 9.8.4.3, with the testing configurations for NR cells in table A.7.6.6.3.1-1.

Table A.7.6.6.3.1-1: Applicable NR configurations for FR2 L1-SINR test with CMR and dedicated IMR

Config	Description
1	LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.6.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.6.6.3.2-1 and table A.7.6.6.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-RS as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources and the associated IMR. UE is also configured to measure L1-SINR based on SSB. After 1440 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.7.6.6.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-RS as IMR.

Table A.7.6.6.3.2-2: CSI-RS specific test parameters

Parameter	Config	Unit	CSI-RS#0	CSI-RS#1
Angle of arrival configuration	1~2		Setup 1 according to A.3.15.1	
Assumption for UE beams Note 3	1~2		Rough	
N_{oc} Note1	1~2	dBm/15 kHz	-105	
N_{oc} Note1	1~2	dBm/SSB SCS	-95.97	
$\hat{E}_s / I_{ot}$	1~2	dB	0	9
CSI-RS RSRP Note2	1~2	dBm/SSB SCS	-95.97	-86.97
Io Note2	1~2	dBm/95.04 MHz	-63.97	-57.47
$\hat{E}_s / N_{oc}$	1~2	dB	0	9

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.6.3.3 Test Requirements

After 1440 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-RS#0 as IMR and CSI-RS#1 as CMR + CSI-RS#1 as IMR while meeting the accuracy requirement in clause 10.1.28.3. The reported L1-SINR value shall consider the Rx antenna gain in the range of [-10 ~ +20] dB when calculated.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.7 CSI-RS based intra-frequency Measurements

A.7.6.7.1 SA event triggered reporting test without gap under DRX for CSI-RS based intra-frequency measurement

A.7.6.7.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency measurement requirements in clause 9.10.2 and 9.10.3. Supported test configurations are shown in table A.7.6.7.1.1-1.

Table A.7.6.7.1.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB and CSI-RS SCS, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.7.1.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.7.6.7.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX

Parameter	Unit	Config	Cell 1		Cell 2	
			T1	T2	T1	T2
NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: CSI-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Information about types of UE beam is given in B.2.1, and does not limit UE implementation or test system implementation.						

A.7.6.7.1.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

- 9.6 s for a UE supporting power class 1,
- 5.76 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.8 CSI-RS based inter-frequency Measurements

A.7.6.8.1 SA event triggered reporting tests for FR2 CSI-RS based measurement when non-DRX is used (PCell in FR2)

A.7.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for CSI-RS based L3 measurement. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.10.3.5.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.8.1.1-1, A.7.6.8.1.1-2, and A.7.6.8.1.1-3.

In test measurement gap pattern configuration # 13 as defined in table A.7.6.8.1.1-2 is provided for UE.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.8.1.1-1.

Table A.7.6.8.1.1-1: SA event triggered reporting tests for CSI-RS based L3 measurement for FR2-FR2

Config	Description
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

A.7.6.8.1.2 Test Requirements

In the test the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10880 for UE supporting power class 1, or

6720 for UE supporting other power class

The UE is required to read the SSB index indicated by associatedSSB in the neighbour cell in this test

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.9 RSTD measurements

A.7.6.9.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA

A.7.6.9.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.7.1.1-1. The test parameters are as given in table 7.6.7.1.1-2, table A.7.6.9.1.1-3 and , table A.7.6.9.1.1-4.

Table A.7.6.9.1.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

Table A.7.6.9.1.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.

NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

Table A.7.6.9.1.-5: Void

A.7.6.9.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

A.7.6.9.2 NR RSTD measurement reporting delay test case for dual positioning frequency layers in FR2 SA

A.7.6.9.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when dual positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.2.1-1. The test parameters are as given in table 7.6.7.2.1-2, table A.7.6.9.2.1-3 and table A.7.6.9.2.1-4.

Table A.7.6.9.2.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the 2 RF channels distributed in dual positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be

provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

Propagation Condition			AWGN		

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the subframes with transmitted PRS.
NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.9.3.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.1.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

A.7.6.9.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA without measurement gap

A.7.6.9.4.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the gapless RSTD measurement requirements specified in clause 9.9.2.7 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for N_{sample} = 4 and sub-test 2 is for N_{sample} = 1. For sub-test 2 LMF indicates UE to perform PRS measurement with reduced number of samples N_{sample} via *reducedDL-PRS-ProcessingSamples*.

Supported test configurations are shown in table A.7.6.9.4.1-1. The test parameters are as given in table A.7.6.9.4.1-2, table A.7.6.9.4.1-3, and table A.7.6.9.4.1-4.

Table A.7.6.9.4.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS processing window instance containing the PRS resources.

The UE is configured with PPW before T2.

Table A.7.6.9.4.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.
$BW_{channel}$	Config 1	MHz	200: $N_{PRB,c}$ = 132

NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.9.4.2 Test Requirements

The RSTD measurement time fulfils the gapless RSTD measurement reporting delay requirements specified in clause 9.9.2.7.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

A.7.6.9.5 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_CONNECTED state with Rx TEG

A.7.6.9.5.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the Rx TEG based measurement period requirements specified in clause 9.9.2.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.5.1-1. The test parameters are as given in table A7.6.9.5.1-2, table A.7.6.9.5.1-3 and, table A.7.6.9.5.1-4.

Table A.7.6.9.5.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layer.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The test applies to the UE supporting Rx TEG indicated via *NR-UE-TEG-Capability* and is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*. In the location request *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* is set to n0. The UE shall perform and optionally report the Rx TEG based RSTD measurements.

The UE is capable of performing Rx TEG based RSTD measurements. UE may or may not be able to receive same DL PRS resource from the same TRP simultaneously from multiple Rx TEGs.

Table A.7.6.9.5.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.

A.7.6.9.5.2 Test Requirements

The RSTD measurement time fulfils the Rx TEG based RSTD measurement period requirements specified in clause 9.9.2.5. The UE shall perform and report the Rx TEG based RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD1970049.

A.7.6.9.6 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_CONNECTED mode

A.7.6.9.6.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement performed by UE by aggregating PRS resources from two positioning frequency layers (PFLs) meets the requirements specified in clause 9.9.2.10 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.6.1-1.

Table A.7.6.9.6.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth per PFL, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Each cell is associated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, all cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS resources on two positioning frequency layers during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The UE is capable of performing RSTD measurements by aggregating PRS resources from two PFLs and is configured by the LMF to perform measurements by aggregating the PRS resources from two positioning frequency layers via *nr-DL-PRS-JointMeasurementRequestedPFL-List*. The *NR-DL-TDOA-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first measurement gap instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The general test parameters are listed in table A.7.6.9.6.1-2, and cell specific test parameters are listed in table A.7.6.9.6.1-3 during T1 and table A.7.6.9.6.1-4 during T2.

Table A.7.6.9.6.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.

PRP Note 4		dBm/SCS	-94.45	-100.67	-100.67
Propagation Condition			AWGN		

Note 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Note 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

Note 6: Carriers are intra-band and contiguous to each other.

A.7.6.9.6.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 9.9.2.10.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.2.10 starting from the beginning of time interval T2.

***NOTE**: The actual overall delays measured in the test may be up to 2×TTI_{DCCH} higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.*

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.2, i.e., between RSTD_000000000 and RSTD_126083073.

A.7.6.10 PRS-RSRP measurements

A.7.6.10.1 PRS-RSRP reporting delay test case for single positioning frequency layer

A.7.6.10.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 9.9.3.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.1.1-2, and table A.7.6.10.1.1-3.

A.7.6.10.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.6.10.2 PRS-RSRP reporting delay test case for dual positioning frequency layer

A.7.6.10.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 9.9.3.5 for dual positioning frequency layers under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.2.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the different frequency from the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.2.1-2, and table A.7.6.10.2.1-3.

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.10.2.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.6.10.3 PRS-RSRP reporting delay test case for reduced number of samples

A.7.6.10.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements for reduced number of samples specified in clause 9.9.3.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.3.1-1. In this test PRS is transmitted within the active BWP of the UE.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples N_{sample} via *reducedDL-PRS-ProcessingSamples.*

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.3.1-2, and table A.7.6.10.3.1-3.

			T1	T2	T1	T2
NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.						
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone						
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone						
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.10.3.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.6.10.4 PRS-RSRP reporting delay test case for single positioning frequency layer outside MG

A.7.6.10.4.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement outside MG requirements specified in clause 9.9.3.6 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

Supported test configurations are shown in table A.7.6.10.4.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In sub-test 1, *reducedDL-PRS-ProcessingSamples* shall be included in the location information request and set to '*requested*', and *lowerRxBeamSweepingThan8-FR2* shall be included.

During T1, a PPW shall be configured for the PCell and be activated via DL MAC CE. The last PDSCH containing the MAC CE shall be transmitted before slot #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PPW instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The general test parameters are as given in table A.7.6.10.4.1-2, and cell specific test parameters during T2 are listed in table A.7.6.10.4.1-3.

Table A.7.6.10.4.1-1: supported test configurations for PRS RSRP measurement for FR2

Config	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

Table A.7.6.10.4.1-2: General test parameters for PRS RSRP measurement reporting delay

Parameter	Unit	Test configuration	Value	Comment
NR RF Channel Number		Config 1	1: Cell 1 and Cell 2	One TDD carrier frequency is used for the NR cells.
Active cell		Config 1	NR Cell 1 (PCell)	Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data.
Neighbour cell		Config 1	NR Cell 2	Cell 2 is a neighbour cell in the positioning assistance data.
PPW configuration		Config 1	PPW.1	As specified in clause A.3.33
SMTC parameters		Config 1	SMTC.1	As specified in clause A.3.11
SSB parameters		Config 1	SSB.3 FR2	As specified in clause A.3.10.2
CP length		Config 1	Normal	
DRX		Config 1	OFF	DRX is not used
Time offset between serving and neighbour cells	µs	Config 1	0.58, 2.0 or 3 Note 1	
Expected RSTD	µs	Config 1	0	
Expected RSTD uncertainty	µs	Config 1	Same as time offset between serving and neighbour cells	
Number of cells provided in assistance data		Config 1	4	Including the reference cell
T1	s	Config 1	5	
T2	s	Config 1	7	
NOTE 1: If UE indicates support of CP length for the receive time difference threshold, the time offset is set to 0.58 us; If UE indicates support of 1/4 symbol length for the receive time difference threshold, the time offset is set to 2.0 us, otherwise 3 us.

A.7.6.10.4.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.6, with Nsample=1 for sub-test 1 and Nsample=4 for sub-test 2. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.6.11 UE Rx-Tx time difference measurements

A.7.6.11.1 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

A.7.6.11.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.7.6.11.1.1-1.

Table A.7.6.11.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.1.1-2 and table A.7.6.11.1.1-3 respectively.

Table A.7.6.11.1.1-2: General test parameters

A.7.6.11.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.6.11.3 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA with reduced sample number

A.7.6.11.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 with Nsample = 1 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured. In this test PRS is transmitted within the active BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples N_{sample} via *reducedDL-PRS-ProcessingSamples*.

The supported test configurations are listed in table A.7.6.11.3.1-1.

Table A.7.6.11.3.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.3.1-2 and table A.7.6.11.3.1-3 respectively.

Table A.7.6.11.3.1-2: General test parameters

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP, PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.11.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5 with Nsample=1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.6.11.4 UE Rx-Tx time difference measurements without gaps in FR2 SA

A.7.6.11.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.6 in AWGN propagation condition in FR2 in standalone scenario. There are two sub-tests in the test, sub-test 1 is to verify the delay requirements with Nsample=1, and sub-test 2 is to verify the delay requirements with Nsample=4.

The supported test configurations are listed in table A.7.6.11.4.1-1.

Table A.7.6.11.4.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of PRS processing window containing the PRS resources.

The UE is configured with PRS processing window before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.4.1-2 and table A.7.6.11.4.1-3 respectively.

Table A.7.6.11.4.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1	Cell 1	Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34].

NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.11.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.6.11.5 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA with RxTx TEG

A.7.6.11.5.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured, and when UE is requested to measure a PRS resource with RxTx TEG.

The supported test configurations are listed in table A.7.6.11.5.1-1.

Table A.7.6.11.5.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The test applies to the UE supporting RxTx TEG indicated via *NR-UE-TEG-Capability* and is requested to provide the RxTx TEG in the test via *nr-UE-RxTxTEG-Request-r17* in *nr-Multi-RTT-RequestLocationInformation*. The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request. In *nr-Multi-RTT-RequestLocationInformation, measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* shall be set to 'n2'.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.5.1-2 and table A.7.6.11.5.1-3 respectively.

Table A.7.6.11.5.1-2: General test parameters

A.7.6.11.5.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5, with $k_{multiTEG}$=2 if UE does not support or indicate value 'n1' for *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*, and $k_{multiTEG}$=1 otherwise.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.6.11.6 UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR2 SA

A.7.6.11.6.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 9.9.4.9 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations in listed in table A.7.6.11.6.1-1.

Table A.7.6.11.6.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel

#1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The general test parameters and cell specific test parameters are as given in table A.7.6.11.6.1-2 and table A.7.6.11.6.1-3 respectively.

Table A.7.6.11.6.1-2: General test parameters

Note 1:	OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
Note 2:	Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 3:	PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
Note 4:	The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
Note 5:	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
Note 6:	Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
Note 7:	Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 8:	As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.6.11.6.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.9.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.

A.7.6.12 PRS-RSRPP measurements

A.7.6.12.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR2 in RRC_CONNECTED state

A.7.6.12.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.12.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.1.1-2, and table A.7.6.12.1.1-3.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.12.1.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 9.9.6.5.The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

A.7.6.12.2 PRS-RSRPP reporting delay test case for reduced number of samples for single positioning frequency layer in FR2 in RRC_CONNECTED state

A.7.6.12.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.12.2.1-1. In this test PRS is transmitted within the active BWP of the UE. UE can support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the LMF indicates the UE to perform positioning measurements with reduced number of samples N_{sample} via *reducedDL-PRS-ProcessingSamples*.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.2.1-2, and table A.7.6.12.2.1-3.

A.7.6.12.2.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 9.9.6.5. The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

A.7.6.12.3 PRS-RSRPP reporting delay test case for gapless measurement in FR2

A.7.6.12.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 9.9.6.6 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Reporting delay test for gapless PRS measurement is conducted assuming that the PRS has higher priority, i.e., state 1, than all other DL signals/channels and is transmitted within active DL BWP of UE. Two sub-tests are defined, sub-test 1 is for $N_{sample} = 4$ and sub-test 2 is for $N_{sample} = 1$. For sub-test 2 LMF indicates UE to perform PRS measurement with reduced number of samples N_{sample} via *reducedDL-PRS-ProcessingSamples*.

The supported test configurations are shown in table A.7.6.12.3.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS processing window instance containing the PRS resources that is ΔT after slot #n, where $\Delta T = 50$ ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.12.3.1-2, and table A.7.6.12.3.1-3.

A.7.6.12.3.2 Test Requirements

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.6.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %.

A.7.6.13 UE Rx-Tx time difference measurements for PDC

A.7.6.13.1 UE Rx-Tx time difference measurement for propagation delay compensation using PRS in FR2

A.7.6.13.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement for RTT-based PDC meets the requirements specified in clause 9.12.4.1in AWGN propagation condition in FR2 in standalone scenario.

The supported test configurations in listed in table A.7.6.13.1.1-1.

Table A.7.6.13.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode

The test is considered with one cell (Cell 1) in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. If the test is based on PRS, the Cell 1 mutes PRS transmission during T1 and transmits PRS during T2.

The *MeasObjectRxTxDiff-r17* with *prs-Ref-r17* , *measObject* with *measObjectRxTxDiff-17,* and *NR-DL-PRS-PDC-Info as defined in TS 38.331* shall be provided to the UE during T1.

The last TTI containing the RRC configuration shall be provided to the UE ΔT ms before the start of T2, where ΔT = 10 ms.

The beginning of the time interval T2 shall be aligned with the beginning of the first PRS resources.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.13.1.1-2. The test parameters for PRS are given Table A.7.6.13.1.1-3.

Table A.7.6.13.1.1-2: General test parameters

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.13.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in 9.12.4.1.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1, for k=5.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.2 for Cell 1.

A.7.6.13.2 UE Rx-Tx time difference measurement for propagation delay compensation using TRS in FR2

A.7.6.13.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement with TRS for RTT-based PDC meets the requirements specified in clause 9.12.4.2 for measurement delay and clause 10.1.39.3 for measurement accuracy in AWGN propagation condition in FR2 in standalone scenario.

The supported test configurations in listed in table A.7.6.13.2.1-1.

Table A.7.6.13.2.1-1: Supported test configurations

Config	Description

1	120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode

The test is considered with one cell (Cell 1) in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 does not have TRS transmission during T1 and transmits TRS during T2.

The *MeasObjectRxTxDiff-r17* with *csi-RS-Ref-r17*, and *measObject* with *measObjectRxTxDiff-17 as defined in TS 38.331* shall be provided to the UE during T1.

The last TTI containing the RRC configuration shall be provided to the UE ΔT ms before the start of T2, where ΔT = [10] ms is the maximum processing time of the measurement request.

The beginning of the time interval T2 shall be aligned with the beginning of the first TRS resources.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.6.13.2.1-2. The test parameters for PRS are given Table A.7.6.13.2.1-3.

A.7.6.13.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in 9.12.4.2.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.39.3.

The reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1, for k=5.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %.

A.7.6.14 SA event triggered reporting tests with Pre-MG

A.7.6.14.1 Intra-frequency measurement test with SA event triggered reporting tests: with autonomous activation/deactivation of Pre-MG in FR2

A.7.6.14.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with autonomous activation/deactivation of Pre-MG. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

A.7.6.14.1.2 Test parameters

Supported test configurations are shown in table A.7.6.14.1.2-1. There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.14.1.2-2, A.7.6.14.1.2-3 and A.7.6.14.1.2-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A4 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB.

BWP-2 does not include bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules ontinuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

During time period T1, BWP-1 is the active BWP. The Pre-MG is expected to be deactivated. UE shall be able to measure neighbor cell without gap.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

During time period T3, BWP-2 is the active BWP. The Pre-MG is expected to be activated. UE shall be able to measure neighbor cell within Pre-MG.

NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.							

A.7.6.14.1.3 Test Requirements

During T1, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions.

During T2 and T3, the UE shall not report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 s^t complete Pre-MG occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

The UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than Y ms from the beginning of time period T3, where Y is

- 3.2 s for a UE supporting power class 1 and 5,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.14.2 Intra-frequency measurement test with SA event triggered reporting tests: with network-controlled activation/deactivation of Pre-MG in FR2

A.7.6.14.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with network-controlled activation/deactivation of Pre-MG. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

A.7.6.14.2.2 Test parameters

Supported test configurations are shown in table A.7.6.14.2.2-1. There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.14.2.2-2, A.7.6.14.2.2-3 and A.7.6.14.2.2-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘deactivated’.

BWP-2 does not include bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘activated’.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The time period T3 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted *j*. The UE shall switch its bandwidth part from BWP-2 to BWP-1.

A.7.6.14.2.3 Test Requirements

During T2, the UE shall not report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 s^t complete Pre-MG occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

During T3, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots overlapped with the Pre-MG occasions, starting from the 1 s^t complete Pre-MG occasion after the beginning of PCell's DL slot ($j+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2.

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T3, where X is

- 1.6 s for a UE supporting power class 1 and 5,
- 0.96 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.15 SA event triggered reporting tests with concurrent gaps

A.7.6.15.1 SA event triggered reporting tests For FR2 with fully non-overlapping concurrent MGs for SSB-based inter-frequency measurements

A.7.6.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with fully non-overlapping concurrent MGs for SSB-based inter-frequency measurements. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2, and NR cell 3 as neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.15.1.1-1, A.7.6.15.1.1-2, and A.7.6.15.1.1-3.

Two measurement gaps with pattern configuration # 14 as defined in table A.7.6.15.1.1-2 are provided for UE. The measurement object for NR RF channel 2 is associated with MG#1, and measurement object for NR RF channel 3 is associated with MG#2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 or NR cell 3.

Supported test configurations are shown in table A.7.6.15.1.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 6: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

A.7.6.15.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for each neighboring cell, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.15.2 SA event triggered reporting tests For FR2 with concurrent measurement gaps without SSB time index detection when DRX is not used (PCell in FR2)

A.7.6.15.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for each neighbour cell. This test will partly verify the SA inter-frequency NR cell search requirements and collision handling between two partially-partial overlapping gaps in clause 9.1.8.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2 and NR cell 3 as another neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.15.2.1-1, A.7.6.15.2.1-2, and A.7.6.15.2.1-3.

Two measurement gaps are configured to UE with measurement gap pattern configuration #13 and #14 respectively. Measurement gap with pattern #13 is associated with inter-frequency measurement on NR cell 2, and measurement gap with pattern #14 is associated with inter-frequency measurement on NR cell 3. Measurement gap pattern configuration # 13 and #14 as defined in table A.7.6.15.2.1-2 are provided to for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3.

Supported test configurations are shown in table A.7.6.15.2.1-1.

A.7.6.15.2.2 Test Requirements

For both NR cell 2 and NR cell 3, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.15.3 SA event triggered reporting tests for FR2 concurrent gap with partially partial overlapping scenario for SSB-based measurements and PRS-based measurement

A.7.6.15.3.1 Test Purpose and Environment

The purpose of this test is to verify that the concurrent gap capable UE makes correct reporting of events. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4 and PRS-RSRP measurement delay requirements specified in clause 9.9.3.5.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2, and NR cell 3 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.7.6.15.3.1-1, A.7.6.15.3.1-2 and A.7.6.15.3.1-3.

Two measurement gap patterns (MeasGapId #0 and MeasGapId #1) are configured with the gap pattern ID #0 and #1 as defined in table A.7.6.15.3.1-2. MeasGapId #1 is configured with a higher priority than MeasGapId #0. MeasGapId #0 and MeasGapId #1 are associated with the MOs for RF channel numbers #1 and #2, respectively.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used for carrier 2. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3. Cell 1 and cell 3 transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance of MeasGapId #1 containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

NOTE 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io values were derived for symbols without PRS.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.15.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The PRS RSRP measurement time fulfils the requirements specified in clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 3 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 9.9.3.5 starting from the beginning of time interval T2.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

IUE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.16 SA event triggered reporting tests with NCSG

A.7.6.16.1 SA event triggered reporting test with per-UE NCSG under non-DRX

A.7.6.16.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.7.1 and 9.2.7.2, and also verify the scheduling availability during intra-frequency measurement with NCSG in clause 9.2.7.3. Supported test configurations are shown in table A.7.6.16.1.1-1.

The serving frequency should be selected for which UE reports ‘ncsg’.

Table A.7.6.16.1.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.16.1.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

During T2, the UE is continuously scheduled with data on the PCell.

The UE is capable of NCSG and report ‘*ncsg*’ through *NeedForGapNCSG-InfoNR* for PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Table A.7.6.16.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE NCSG without DRX

Time multiplexing of the downlink transmissions from each AoA		1	Defined in figure A.7.6.16.1.1-1			

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Void
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

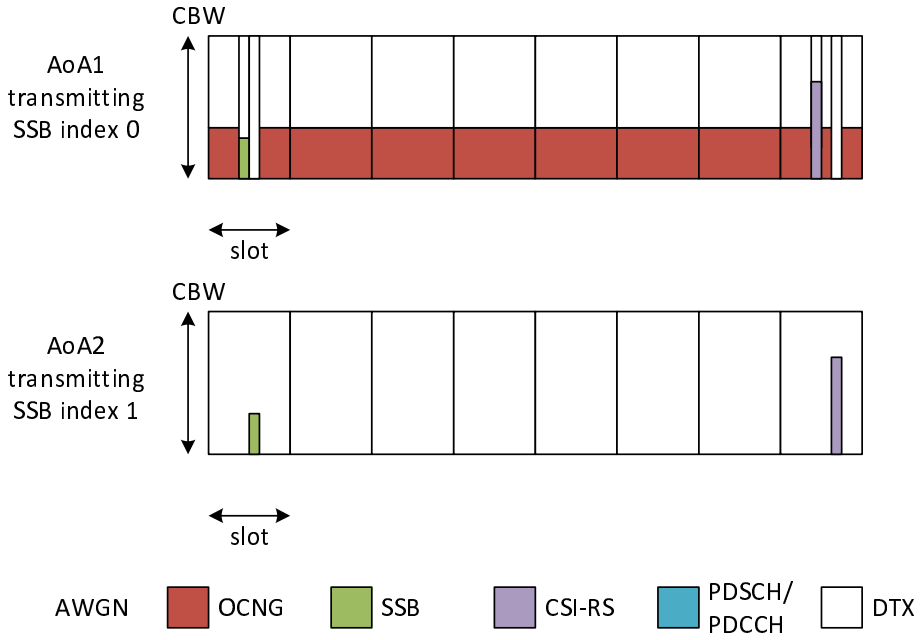

Figure A.7.6.16.1.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.16.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1 and 5,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T2, UE shall send HARQ ACK/NACK for the corresponding PDSCH scheduled in PCell in all the slots except for the case where PDSCH or PUCCH is overlapped with the VIL of NCSG pattern.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.16.2 SA event triggered reporting tests on inter-frequency measurement with NCSG for FR2 when DRX is not used (PCell in FR2)

A.7.6.16.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.10. The test will partly verify the interruption requirements on PCell in clause 9.1.9.1.

The serving frequency and the target frequency should be selected such that UE reports 'ncsg' for the target frequency given the serving frequency.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.7.6.16.2.1-1, A.7.6.16.2.1-2, and A.7.6.16.2.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.16.2.1-1.

NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.16.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1 and 5, or

3200 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the interruption on PCell shall not be more than the values specified for SA in clause 9.1.9.1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE: For a UE that supports per-FR NCSG, it only needs to pass test case with per-FR NCSG, otherwise, it only needs to pass test case with per-UE NCSG.

A.7.6.16.3 Event triggered reporting test on deactivated SCell measurement via NCSG in FR2 in non-DRX

A.7.6.16.3.1 Test Purpose and Environment

The purpose of this test is to verify that the delay and interruption requirements for deactived SCell measurement stated in clause 9.2.7 and 8.2 respectively, when both PCell and SCell are in FR2.

The supported test configurations are shown in table A.7.6.16.3.1-1 below. The general test parameters are defined in table A.7.6.16.3.1-2. Three cells are deployed in the test, which are one FR2 PCell (Cell 1) on frequency 1 and one FR2 SCell (Cell 2) on frequency 2 and one neighboring cell (Cell 3) on frequency 2. The cell-specific test parameters are given in A.7.6.16.3.1-3 below. OTA related test parameters are shown in table A.7.6.16.3.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used. The test consists of 2 successive time periods, with duration of T1 and T2, respectively.

Before the test starts the UE is connected to PCell (Cell 1) but is not aware of SCell (Cell 2) nor the neighboring cell (Cell 3). The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the deactivated SCC.

NCSG is configured with the NCSG pattern ID #0 as defined in table A.7.6.16.3.1-2.

Table A.7.6.16.3.1-1: Supported test configurations for FR2 deactivated SCell measurement via NCSG

Configuration	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 3: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4

A.7.6.16.3.2 Test Requirements

UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

12.8 s for UE supporting power class 1 and 5, or

7.68 s for UE supporting other power class.

UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

During the T1 and T2, UE be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those slots overlapped with

VIL1, ML and VIL2 of NCSG for intra-band FR2 CA

VIL1 and VIL2 of NCSG for inter-band FR2 CA

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.17 SA event triggered reporting tests for concurrent measurement gaps with Pre-MG in FR2

A.7.6.17.1 SA event triggered reporting test for FR2 with one pre-configured gap and one measurement gap

A.7.6.17.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with with one pre-configured gap and one measurement gap for SSB-based measurements. This test will partly verify the SA NR cell search requirements in clause 9.2.5 and 9.3.4, pre-configured gap activation delay in clause 8.19 and measurement gap collision handling in clause 9.1.12.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as intra-frequency neighbour cell in FR2 on NR RF channel 1, and NR cell 3 as inter-frequency neighbour cell in FR2 on NR RF channel 2.

Two measurement gaps with pattern configuration # 13 and 14 as defined in table A.7.6.17.1.1-2 are provided for UE. The measurement object #1 for NR RF channel 1 is associated with MG#1, and measurement object #2 for NR RF channel 2 is associated with MG#2. MG#1 is a pre-configured measurement gap, and with higher priority than MG#2.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘deactivated’ (*preConfGapStatus* of the pre-MG on BWP-1 is set to ‘0’).

BWP-2 does not include bandwidth of the initial DL BWP and SSB with the Pre-MG status set to ‘activated’ (*preConfGapStatus* of the pre-MG on BWP-2 is set to ‘1’).

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of 2 successive time periods, with durations of T1 and T2, respectively. Before the test starts, the UE shall not have any timing information of NR Cell 2 or NR Cell 3.

During T1, UE active DL BWP is BWP-1, and the pre-configured gap (MG#1) is deactivated. Cell 3 is switched ON from the beginning of T1, and UE is expected to search for Cell 3 in MG#2.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell’s slot # denoted by *i*. The UE shall switch its DL active BWP from BWP-1 to BWP-2, and the pre-configured gap shall be activated. Cell 2 is switched ON from the beginning of T2, and UE is expected to search for Cell 2 in MG#1.

Supported test configurations are shown in table A.7.6.17.1.1-1. The general and cell specific test parameters are given in tables A.7.6.17.1.1-2, and A.7.6.17.1.1-3.

A.7.6.17.1.2 Test Requirements

For UE supporting FG 32-2:

During T1, the UE shall report ACK/NACK for PDSCHs scheduled in the slots that are not overlapped with the MG#2 occasions. The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than X ms from the beginning of time period T1, where X is

5120 for UE supporting power class 1 and 5, or

3200 for UE supporting other power class.

X is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For UE not supporting FG 32-2:

During T1, the UE shall report ACK/NACK at least for PDSCHs scheduled in the slots that are not overlapped with the non-dropped MG#2 occasions. The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than X ms from the beginning of time period T1, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

X is derived based on the requirements for inter-frequency measurement in clause 9.3.4 and 9.3.5.

For both UE supporting FG 32-2 and not supporting FG 32-2:

During T2, the UE shall report ACK/NACK for PDSCHs scheduled in the slots that are not overlapped with the MG#1 occasions or non-dropped MG#2 occasions after MG#1 is activated, i.e. starting from the 1 s^t complete MG#1 occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.2. The UE shall send one Event

A3 triggered measurement report for Cell 2, with a measurement reporting delay less than Y ms from the beginning of time period T2, where Y is

6480 for UE supporting power class 1 and 5, or

3920 for UE supporting other power class.

Y is derived based on the requirements for intra-frequency measurement in clause 9.2.6 plus 80 ms, considering that the frist MG#1 occasion in T2 may collide with the pre-configured gap activation delay.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.17.2 Inter-frequency measurement test with SA event triggered reporting tests: with autonomous activation/deactivation of Pre-MGs in FR2

A.7.6.17.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event with autonomous activation/deactivation of Pre-MGs within FR2 concurrent gaps. This test will partly verify the TDD inter-frequency cell search requirements in clause 9.2.6.and 9.3.4. Also, this test will also jointly verify pre-configured measurement gap activation/deactivation delay in clause 8.19.2.

A.7.6.17.2.2 Test parameters

Two cells are deployed in the test, which are FR2 PCell (Cell 1) in FR1 on NR RF channel 1 and a neighbour cell (Cell 2) in FR2 on NR RF channel 2. The supported test configurations are shown in table A.7.6.18.1.2-1. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.17.2.2-2, A.7.6.17.2.2-3 and A.7.6.17.2.2-4 below.

Two pre-configured measurement gaps with same pattern (# 13) but different offset as defined in table A.7.6.18.1.1-2 are provided for UE. The measurement object for NR RF channel 1 is associated with MG#1, and measurement object for NR RF channel 2 is associated with MG#2.

In the measurement control information, two measurement object is configured for the frequency of the PCell and neihghbour cell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).

UE is configured with 2 different UE-specific bandwidth parts for Cell 1 (PCell), BWP-1 and BWP-2, before starting the test.

BWP-1 includes bandwidth of the initial DL BWP and SSBs.

BWP-2 does not include bandwidth of the initial either switched DL BWP and SSBs.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.

The TE schedules continuous DL data on PCell throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2 and T3, respectively.

During time period T1, BWP-1 is the active BWP. The Pre-MG#1 is expected to be deactivated and the Pre-MG#2 is expected to be activated. UE shall be able to measure Cell 1 without gap but Cell 2 with the activated Pre-MG#2.

The time period T2 starts when a DCI format 1_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*.

During time period T3, BWP-2 is the active BWP. Both Pre-MG#1 and Pre-MG#2 expected to be activated. UE shall be able to measure Cell 1 and Cell 2 with the activated Pre-MG#1 and Pre-MG#2 respectively.

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.6.17.2.3 Test Requirements

During T1, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the Pre-MG#2 occasions.

During T2 and T3, the UE shall be able to receive PDSCH and report corresponding valid ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the Pre-MG#1 or Pre-MG#2 occasions, starting from the 1 s^t complete Pre-MG#1 occasion after the beginning of PCell's DL slot ($i+T_{BWPswitchDelay}$) + 5 ms as defined in clause 8.19.5.

The UE shall send one Event A3 triggered measurement report for measurements on cell 2, with a measurement reporting delay less than Y ms from the beginning of time period T3, where Y is

- 5120 ms for a UE supporting power class 1 and 5,
- 3200 ms for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.18 SA event triggered reporting tests with concurrent gaps and NCSG

A.7.6.18.1 SA event triggered reporting tests For FR2 with concurrent measurement gaps and NCSG without SSB time index detection when DRX is not used (PCell in FR2)

A.7.6.18.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for each neighbour cell. This test will partly verify the SA inter-frequency NR cell search requirements and collision handling between partially-partial overlapped concurrent gaps and NCSG in clause 9.1.13.

In this test, there are three cells: NR cell 1 as PCell in FR2 on NR RF channel 1, NR cell 2 as neighbour cell in FR2 on NR RF channel 2 and NR cell 3 as another neighbour cell in FR2 on NR RF channel 3. The test parameters and configurations are given in tables A.7.6.18.1.1-1, A.7.6.18.1.1-2, and A.7.6.18.1.1-3.

During T2, the UE is continuously scheduled with data on the PCell when measuring within NCSG.

One measurement gap and one NCSG are configured to UE with measurement gap pattern #13 and NCSG pattern #14 respectively. Measurement gap with pattern #13 is associated with inter-frequency measurement on NR cell 2, and NCSG with pattern #14 is associated with inter-frequency measurement on NR cell 3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2 and NR cell 3.

Supported test configurations are shown in table A.7.6.18.1.1-1.

A.7.6.18.1.2 Test Requirements

For both NR cell 2 and NR cell 3, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

10240 for UE supporting power class 1 and 5, or

6400 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

During the T1 and T2, UE shall be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those slots overlapped with

VIL1 and VIL2 of NCSG

Measurement gap

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.19 SA event triggered reporting tests with NeedForGap in FR2

A.7.6.19.1 SA event triggered reporting test for UE indicating *NeedforInterruptionInfoNR* under non-DRX and no interruption outside configured measurement gaps

A.7.6.19.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test partly verifies the TDD intra-frequency cell search and measurement requirements in clause 9.2.6.1 and 9.2.6.2. This test also verifies that the UE does not cause interruption outside measurement gap when SMTC occasions overlap with measurement gap occassions. Supported test configurations are shown in table A.7.6.19.1.1-1.

The UE who passes this test can skip the corresponding Rel-15 test cases.

Table A.7.6.19.1.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are two cells in the test, a FR2 PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.19.1.1-2, A.7.6.19.1.1-3 and A.7.6.19.1.1-4 below. The serving frequency selected for this test case should be one in which the UE reports *NeedForGapsInfoNR-r16* = 'no-gap' and *NeedForInterruptionInfoNR-r18* = 'no-gap-with-interruption' for the PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The UE operates in an active BWP which does not contain cell-defined SSB so that the UE uses configured measurement gaps to measure on the intra-frequency target SSB.

The TE schedules continuous DL data on PCell throughout the test.

Figure A.7.6.19.1.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.19.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3200 ms for a UE supporting power class 1 and 5,
- 1920 ms for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

UE shall report corresponding HARQ-ACK/NACK for those PDSCHs scheduled in the slots that are not overlapped with the measurement gap. UE is not allowed to cause any interruption outside the configured measurement gap occasions.

A.7.6.19.2 SA event triggered reporting test without gap under non-DRX

A.7.6.19.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.19.2.1-1.

Table A.7.6.19.2.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.6.19.2.1-2, A.7.6.19.2.1-3 and A.7.6.19.2.1-4 below. The serving frequency selected for this test case should be one in which the UE reports *NeedForGapsInfoNR-r16* = 'no-gap' and *NeedForInterruptionInfoNR-r18* = 'no-gap-no-interruption' for the PCell.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

The TE schedules continuous DL data on PCell throughout the test.

Time multiplexing of the downlink transmissions from each AoA		1, 2	Defined in figure A.7.6.19.2.1-1			

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

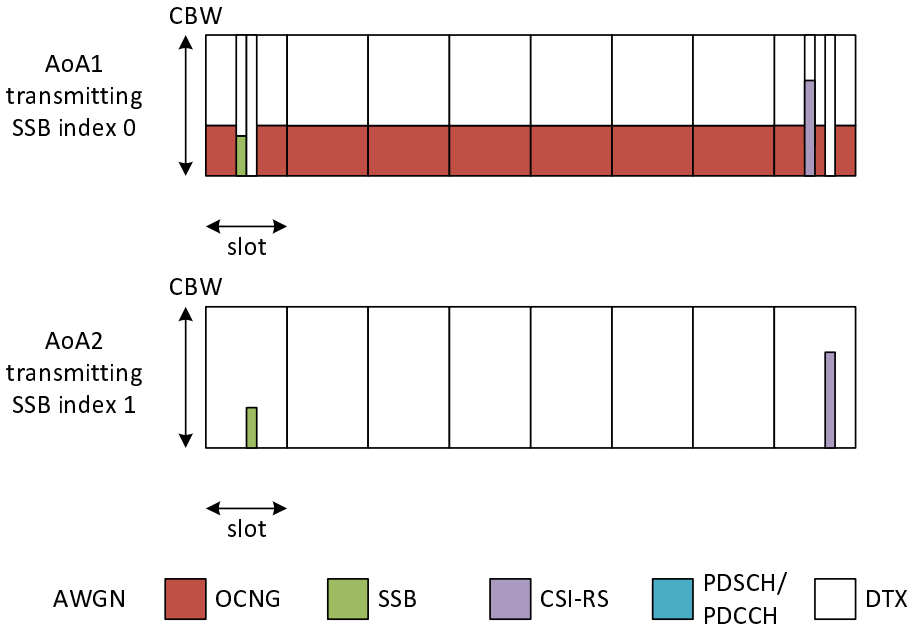

Figure A.7.6.19.2.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.19.2.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 1.6 s for a UE supporting power class 1 and 5,
- 1.08 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

UE shall report corresponding HARQ-ACK/NACK for all PDSCHs scheduled during the test.

A.7.6.19.3 SA event triggered reporting test without gap without interruption under non-DRX

A.7.6.19.3.1 Test Purpose and Environment

The purpose of this test is to verify that if UE reports "*no-gap*" via *interFreq-needForGap-r16* and reports "*no-gap-no-interruption*" via *interFreq-needForInterruption-r18*, the UE makes correct reporting of an event. This test will partly verify the inter-frequency without gap cell search requirements in clause 9.3.9. Supported test configurations are shown in table A.7.6.19.3.1-1.

Table A.7.6.19.3.1-1: supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are two cells in the test, NR cell 1 as PCell in FR2 on NR RF channel 1 and NR Cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters for the Cell 1 and Cell 2 are given in tables A.7.6.19.3.1-2, A.7.6.19.3.1-3 and A.7.6.19.3.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the neighbour cell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

Table A.7.6.19.3.1-2: General test parameters for inter-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without interruption

Parameter	Unit	Config	Value	Comment

Io	dBm/95.04MHz	1	-58.56		-55.38	

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: Information about types of UE beam is given in annex B.2.1.3, and does not limit UE implementation or test system implementation

A.7.6.19.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4s for a UE supporting power class 1,
- 1.44s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

During the T1 and T2, UE shall be able to report ACK/NACK for all slots with PDCCH/PDSCH on PCell excluding those symbles as defined in clause 9.3.9.4.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.7.6.20 LTM Intra-frequency L1-RSRP measurement

A.7.6.20.1 Intra-frequency SSB based L1-RSRP measurement in FR2

A.7.6.20.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SSB based intra-frequency L1-RSRP measurement on neighbor cell in FR2. This test will partly verify the L1-RSRP measurement requirements in clause 9.14, with the testing configurations for NR cells in table A.7.6.20.1.1-1.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

Table A.7.6.20.1.1-1: Applicable NR configurations for SSB based Intra-frequency L1-RSRP LTM measurement with activated TCI state test in FR2

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

A.7.6.20.1.2 Test parameters

There are two cells in the test, which are FR2 PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

Measurement period and measurement accuracy is tested by using the parameters in table A.7.6.20.1.2-1 and table A.7.6.20.1.2-2.

There are two tests in the test case, test 1 and test 2:

- In test 1, time offset between cells is within CP length.
- In test 2, time offset between cells is larger than CP length.

If a UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*, it is only required to pass test 1. Otherwise, it is only required to pass test 2.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs, and report measurement results periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. No gap patterns are configured in the test case.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- The UE has performed L3 measurement on Cell 2.

At the beginning of T2, SSB_RP of Cell 2 change to different values from T1. T2 starts at the beginning of a frame with an odd SFN.

Table A.7.6.20.1.2-1: General test parameters for SSB based intra-frequency L1-RSRP LTM measurement without activated TCI state test in FR2

NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.20.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. The UE shall start to report a larger L1-RSRP value of Cell 2 in no later than 960 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20A. The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.21 LTM Inter-frequency L1-RSRP measurement with measurement gap

A.7.6.21.1 Inter-frequency SSB-based L1-RSRP measurement with measurement gap for LTM in FR2

A.7.6.21.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter-frequency L1-RSRP measurement with MG for LTM. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.5, with the testing configurations in tables A.7.6.21.1.1-1, A.7.6.21.1.2-1, A.7.6.21.1.2-2 and A.7.6.21.1.2-3.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

Table A.7.6.21.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP measurement with measurement gap for LTM

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell	

A.7.6.21.1.2 Test parameters

There are two cells in the test, Cell 1 is the PCell on NR RF channel number 1 and Cell 2 is a neighbor cell NR RF channel number 2. The test parameters for Cell 1 and Cell 2 are given in table A.7.6.21.1.2-2 and table A.7.6.21.1.2-3.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. Measurement gap is configured in the test.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1.

Io Note3	1	dBm/95.04 MHz	-56	-56	-74	-56
	2		-56	-56	-74	-56

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Parameter	Config	Unit	Cell 1		Cell 2	
			T1	T2	T1	T2
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 5: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.21.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. The UE shall start to report a larger L1-RSRP value of Cell 2 in no later than 1280 ms plus 320 slots from the beginning of time period T2. UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20B.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.22 LTM Inter-frequency L1-RSRP measurement without measurement gap

A.7.6.22.1 Inter-frequency SSB based L1-RSRP measurement without measurement gap in FR2

A.7.6.22.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *interFreqSSB-L1-MeasWithoutGaps-r18* makes correct reporting of inter-frequency L1-RSRP measurement without gap for LTM. This test will partly verify the L1-RSRP measurement requirements in clause 9.15.6, with the testing configurations in tables A.7.6.22.1.1-1, A.7.6.22.1.2-1, A.7.6.22.1.2-2, A.7.6.22.1.2-3 and A.7.6.22.1.2-4.

The AoA setup of FR2 cell for this test is Setup 1 as defined in clause A.3.15.

Table A.7.6.22.1.1-1: Applicable NR configurations for SSB based inter-frequency L1-RSRP LTM measurement without gap in FR2

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations	
NOTE 2: Target NR cell has the same SCS, BW and duplex mode as NR serving cell	

A.7.6.22.1.2 Test parameters

There are two cells in the test, Cell 1 is the PCell on NR RF channel number 1 and Cell 2 is a neighbor cell NR RF channel number 2. The SSB of Cell 2 is completely within UE's active BWP BW. The PRBs containing SSB from Cell 1 and Cell 2 should be different in frequency location within the cell bandwidth. The test parameters for Cell 1 are given in table A.7.6.22.1.2-1. The test parameters for Cell 2 are given in table A.7.6.22.1.2-2 and table A.7.6.22.1.2-3.

There are two tests in the test case, test 1 and test 2:

- In test 1, time offset between cells is within CP length.
- In test 2, time offset between cells is larger than CP length.

UE not capable of *multiCellL1-measRTD-greaterThan-CP-r18* is only required to pass test 1. Otherwise, it is only required to pass test 2.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. SSB_RP of Cell 2 in T1 and T2 are different. No measurement gap is configured in the test.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on RF channel 1 (PCC).
- A measurement object is configured for the RF channel 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. Before the start of the T1, event is triggered, and UE has sent a measurement report for the Cell 2 with SSB Index.
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

At the beginning of T2, SSB_RP of Cell 2 changes to a different value from T1. T2 starts at the beginning of a frame with an odd SFN.

Table A.7.6.22.1.2-1: General test parameters for SSB based inter-frequency L1-RSRP LTM measurement test in FR2

Parameter		Unit	Value		Comment
			Test 1	Test 2	
Active cell			Cell 1

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2. NOTE 2: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.6.22.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots in T2. No later than 960 ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the valid results for Cell 2 while meeting the accuracy requirements defined in clause 10.1.20B.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.23 Idle Mode CA/DC Measurements

A.7.6.23.1 Test case for Idle mode fast CA/DC eEMR measurement for FR2 without valid reporting

A.7.6.23.1.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportEMR-r18*. This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measIdleValidityDuration* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as inter-frequency neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.1.1-1, A.7.6.23.1.1-2, A.7.6.23.1.1-3 and A.7.6.23.1.1-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

Before T1, the UE is connected to cell 1 and configured with inter-frequency measurement on cell 2 with periodic reporting. The time when a valid measurement report is received at TE defines the starting point of T1.

During T1, the UE is configured with early measurement reporting for cell 2 in *measIdleCarrierListNR-r16*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode. The time when T331 timer expires defines the ending point of T2.

At the beginning of T2, cell 2 becomes detectable however cell reselection shall not be performed. Signal level of cell 2 is set to the value given in table A.7.6.23.1.1-3. The time when T331 timer expires defines the ending point of T2.At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measIdleValidityDuration*.

The time when TE sends the paging message is defined as the starting point of T4. During T4, in this test the UE shall not send measurement report.

Table A.7.6.23.1.1-1: supported test configuration

Config	Description for serving cell	Description for neighbor cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell

A.7.6.23.1.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.23.2 Test case for Idle mode fast CA/DC cell reselection measurement for FR2 without valid reporting

A.7.6.23.2.1 Test Purpose and Environment

The purpose of this test is to verify UE measurement reporting behaviour as specified in clause 4.7 when the UE supports *measValidationReportReselectionMeasurements-r18* This test will partly verify the fast CA/DC measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are no measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as inter-frequency neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.2-1, A.7.6.23.2-2, A.7.6.23.2-3 and A.7.6.23.2-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

Before T1, the UE is connected to cell 1 and configured with inter-frequency measurement on cell 2 with periodic reporting. The time when a valid measurement report is received at TE defines the starting point of T1.

During T1, the UE is configured with early measurement reporting for cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode.

At the beginning of T2, cell 2 becomes detectable however no cell reselection is being performed. Signal level of cell 2 is set to the level according to Table A.7.6.23.2-3. The duration of T2 is set to fixed value according to the Table A.7.6.23.2-2.

At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measReselectionValidityDuration-r18.*

The time when TE sends the paging message defined as the starting point of T4.

During T4, UE shall not send measurement report.

Table A.7.6.23.2-1: supported test configuration

Config	Description for serving cell	Description for neighbor cell

1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell

A.7.6.23.2.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall NOT send early measurement report to the PCell in this test.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.23.3 Test case for Idle mode fast CA/DC cell reselection measurement for FR2 with valid reporting

A.7.6.23.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE performs the required measurements on the serving cell and the configured inter-frequency carrier for idle mode measurement reporting after the UE has entered Idle mode when the UE supports *measValidationReportReselectionMeasurements-r18*. This test will partly verify the fast CA/DC

measurement reporting requirements in clause 4.7 when *measReselectionValidityDuration-r18* is configured for the test case when there are measurement results to report at RRC connection setup.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters are given in tables A.7.6.23.3.1-1, A.7.6.23.3.1-2, A.7.6.23.3.1-3 and A.7.6.23.3.1-4.

The test consists of 4 successive time periods, with time duration of T1, T2, T3 and T4 respectively.

During T1, the UE is connected to cell 1 only and shall not have any timing information of cell 2. UE is configured with early measurement reporting for cell 2 in *MeasReselectionCarrierListNR-r18*. Beam level reporting for early measurements is not configured. The time point when UE receives RRC_Release message from the TE defines as the starting point of T2.

During T2, cell 2 becomes detectable however no cell reselection is being performed. Signal level of cell 2 is set to fixed value according to Table A.7.6.23.3-2. The duration of T2 is set to fixed value according to the Table A.7.6.23.3-2.

The duration of the T3 equals to the configured value *measReselectionValidityDuration-r18.* During T3, the signal level of cell 2 is set to another value according to the Table A.7.6.23.3-2.

The time when TE sends the paging message defines the starting point of T4.

During T4, UE shall send measurement report within the duration of T4.

Table A.7.6.23.3-1: supported test configuration

Config	Description for serving cell	Description for neighbor cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell

A.7.6.23.3.2 Test Requirements

During the period T2 and T3, the UE shall not perform reselection.

At the start of T4 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2.

The UE shall send early measurement report to the PCell with valid measurement results.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in clause 10.1.4B for SS-RSRP and in clause 10.1.8B for SS-RSRQ and test ends. In the test case, the reported measurements are considered valid if they fulfil measurement accuracy requirements according to Cell 2 signal level during T3.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.6.24 RSCPD measurements

A.7.6.24.1 NR RSCPD with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_CONNECTED state

A.7.6.24.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD measurement reported together with the RSTD measurement meets the requirements specified in clause 9.9.7 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.24.1.1-1.

Table A.7.6.24.1.1-1: Supported test configurations for NR DL RSCPD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layer.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. In *NR-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

The general test parameters are listed in table A.7.6.24.1.1-2. Cell specific parameters during T1 are listed in table A.7.6.24.1.1-3. Cell specific parameters during T2 are listed in table A.7.6.24.1.1-4.

Table A.7.6.24.1.1-2: General test parameters for RSCPD with RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.
SSB configuration	Config 1		SSB.3 FR2	
SMTC configuration	Config 1		SMTC.1	
PDSCH RMC configuration	Config 1		SR.1.1 FDD	
RMSI CORESET RMC configuration	Config 1		CR.3.1 TDD	As specified in clause A.3.1.2.1
Dedicated CORESET RMC configuration	Config 1		CCR.1.1 FDD	
PRS Configuration	Config 1		PRS.1.2 FR2	As specified in clause A.3.31
Physical cell ID PCI			(PCI of Cell 1 – PCI of Cell 2)mod6=0 and (PCI of Cell 1 – PCI of Cell 3)mod6=0	The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters
CP length			Normal	
DRX			OFF	
Measurement gap			GP#24 or GP#13	GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured
Time window configuration			MTW.1	As specified in clause A.3.38
Radio frame receive time offset between the cells at the UE antenna connector		µs	Cell 2 to Cell 1: 0 Cell 3 to Cell 1: 3	PRS are transmitted from synchronous cells
Expected RSTD		µs	Cell 2: 3 Cell 3: 3 Other neighbour cells: randomly between -3 and 3	The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD indicator

Expected RSTD uncertainty for all neighbour cells	μs	5	The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD-Uncertainty index
Number of cells provided in DL-TDOA assistance data		3	Including the reference cell
PRS muting info		Cell 1: '10' Cell 2: '01' Cell 3: '10'	Correponds to prs-MutingInfo defined in TS 37.355 [34]
PRS resource RE offset		Cell 1: 0 Cell 2: 0 Cell 3: 1	Cell 1 and Cell 3 are configured with different resource offsets
T1	s	3	The length of the time interval from the beginning of each test
T2	s	1.28	The length of the time interval that follows immediately after time interval T1
AoA setup		Setup 1	As defined in clause A.3.15.1
Beam assumption		Rough	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Table A.7.6.24.1.1-3: Cell-specific test parameters for RSTD measurement reporting delay during T1

Parameter		Unit	Cell 1	Cell 2	Cell 3

PRP Note 4		dBm/SCS	-94.45	-100.67	-100.67
Propagation Condition			AWGN		

Note 1: OCNG shall be used such that active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Note 4: PRP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

A.7.6.24.1.2 Test Requirements

The RSCPD reported together with RSTD measurement time fulfils the requirements specified in the clause 9.9.7.

The UE shall perform and report the RSCPD and RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 9.9.7 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2\times TTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The reported DL RSCPD measurement shall be within the DL RSCPD reporting range specified in the clause 10.1.43.3 and the reported RSTD measurement shall be within the RSTD reporting range specified in the clause 10.1.23.

A.7.6.25 RSCP measurements

A.7.6.25.1 DL RSCP with UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

A.7.6.25.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements meet the requirements specified in clause 9.9.8.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.7.6.25.1.1-1.

Table A.7.6.25.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources to be measured within the configured time window.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.7.6.25.1.1-2 and table A.7.6.25.1.1-3.

Table A.7.6.25.1.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1	Cell 1	Cell 1 is the PCell in NR-Multi-RTT-ProvideAssistanceData [34].
Neighbour cell		1	Cell 2	Cell 2 is a neighbour cell in NR-Multi-RTT-ProvideAssistanceData [34].

Propagation Condition		1	AWGN			

Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

Note 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.

Note 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Note 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

A.7.6.25.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.8 with Nsample=4 for UE Rx-Tx time difference.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 9.9.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%. The reported DL RSCP measurement shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

A.7.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in clause 10 for at least 90 % of the reported cases.
- Measurements are performed in RRC_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

A.7.7.1 SS-RSRP

A.7.7.1.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

A.7.7.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in table A.7.7.1.1.2-2 and A.7.7.1.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

Table A.7.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations

NOTE 5: Void					
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.					
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

Table A.7.7.1.1.3-1: SS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	$SSB_RP1 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP1 + \delta + G_{max}$
Cell 2	$SSB_RP2 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP2 + \delta + G_{max}$
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.1.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 and 10.1.5.1.2 for intrer-frequency measurements with the testing configurations for NR cells in table A.7.7.1.2.1-1.

Table A.7.7.1.2.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.1.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.1.2.2-1 and table A.7.7.1.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.1.2.2-1 and table A.7.7.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

Table A.7.7.1.2.2-1: SS-RSRP inter-frequency test parameters

Parameter	Config	Unit	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2
NOTE 8: The value in table B.2.3-2 is the Minimum SSB_RP for SCS_{SSB} = 120 kHz, selected according to the operating band of Cell 2 and UE power class, without $\Delta MB_{P,n}$ adjustment.						

A.7.7.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.1.1 and the relative requirements in clause 10.1.5.1.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

Table A.7.7.1.2.3-1: SS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3,4
Cell 1	$SSB_RP1 - \delta + G_{min} + X \le$ Reported RSRP(dBm) $\le SSB_RP1 + \delta + G_{max}$
Cell 2	$SSB_RP2 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le SSB_RP2 + \delta + G_{max}$
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.	

Table A.7.7.1.2.3-2: SS-RSRP relative accuracy test requirement

	Test requirement Notes1,2,3,4, 5, 6, 7
Cell 2 – Cell 1	$SSB_RP2 - SSB_RP1 - \delta - D - G_{inter} \le$ Reported RSRP(dB) $\le SSB_RP2 - SSB_RP1 + \delta + G_{inter} - (X) + E$
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration	
NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1	
NOTE 3: Void	
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.	
NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value.	
NOTE 6: G_{inter} is the margin due to different antenna gain caused by frequency separation. G_{inter} is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value	
NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams.	

A.7.7.1.3 SA inter-frequency measurement accuracy with FR1 serving cell and FR2 target cell

A.7.7.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 for inter-frequency measurements with the testing configurations in table A.7.7.1.3.1-1.

Table A.7.7.1.3.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test

Config	Description of serving cell	Description of target cell
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode	
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode	

A.7.7.1.3.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) in FR1 and Cell 2 in FR2 . The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.1.3.2-1 and table A.7.7.1.3.2-2 below. Absolute accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.1.3.2-1 and table A.7.7.1.3.2-2. The inter-frequency measurements are supported by a measurement gap.

Table A.7.7.1.3.2-1: SS-RSRP inter-frequency test parameters

Parameter	Config	Unit	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2

Io Note1	1~3	dBm/ 95.04 MHz		-50.18		SSB_RP+28.98
NOTE 1: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 2: Void						
NOTE 3: No additional noise is added by the test system in Test 2.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 5: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.7.1.3.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the Absolute requirement in clause 10.1.5.1.1.

Test 1:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.3.3.

Test 2:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.3.3.

Table A.7.7.1.3.3: SS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3,4
Cell 2	SSB_RP1 -δ +G_{min} +X ≤ Reported RSRP(dBm) ≤ SSB_RP1 +δ +G_{max}
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.	

A.7.7.2 SS-RSRQ

A.7.7.2.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.1.1.

A.7.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.2.1.2-1. . The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in table A.7.7.2.1.2-2 and table A.7.7.2.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.7.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations

Configuration	**Description**
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

Io Note2	dBm/95.04 MHz Note4	-50		-54	

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SS-RSRQ, SSB_RP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
NOTE 6: Void NOTE 7: Void NOTE 8: Void NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.2.1.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SS-RSRQ-2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal RSRQ+3.5 dB to Nominal RSRQ-3.5 dB according to the requirements in clause 10.1.8.1.1.Nominal RSRQ is the value shown in table A.7.7.2.1.2-3.

A.7.7.2.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

A.7.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2 for inter-frequency measurement.

A.7.7.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in table A.7.7.2.2.2-2 and table A.7.7.2.2.2-3.. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

Table A. 7.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations

A.7.7.2.2.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SS-RSRQ -2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ +3.5 dB to Nominal SS-RSRQ -3.5 dB according to the requirements in clause 10.1.10.1.1.

The SS-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.1.2.

A.7.7.3 SS-SINR

A.7.7.3.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.1.1.

A.7.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.3.1.2-1. . The absolute accuracy of SS-SINR intra-frequency measurement is test by using the parameters in table A.7.7.3.1.2-2 and table A.7.7.3.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SS-SINR, SSB_RP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.3.1.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3B to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.10.13.1.

A.7.7.3.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

A.7.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.1.1 and 10.1.15.1.2 for inter-frequency measurement.

A.7.7.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in table A.7.7.3.2.2-2 and table A.7.7.3.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.3.2.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR +3 dB to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.15.1.1.

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.1.2.

A.7.7.4 L1-RSRP measurement for beam reporting

A.7.7.4.1 SSB based L1-RSRP measurement

A.7.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.4.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.4.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.4.1.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.4.1.2-1 and table A.7.7.4.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.7.7.4.1.2-1 and table A.7.7.4.1.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

Table A.7.7.4.1.2-1: FR2 SSB based L1-RSRP general test parameters

Parameter	Config	Unit	Test 1	Test 2

$\hat{E}_s / N_{oc}$	1~2	dB	10	-2	n.a.	

NOTE 1: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: Void
NOTE 3: No additional noise is added by the test system in Test 2.

Parameter	Config	Unit	Test 1		Test 2 NOTE 3	
			SSB0	SSB1	SSB0	SSB1
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.7.4.1.3 Test Requirements

After 320 ms from the beginning of the test, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 1 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB resource reported by UE in L1-RSRP report (SSB0 or SSB1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

Table A.7.7.4.1.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
SSB0	$SSB_RP0 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq SSB_RP0 + \delta + G_{max}$
SSB1	$SSB_RP1 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq SSB_RP1 + \delta + G_{max}$
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

A.7.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.4.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.4.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.4.2.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.4.2.2-1 and table A.7.7.4.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.7.7.4.2.2-1 and table A.7.7.4.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

Table A.7.7.4.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters

Parameter	Config	Unit	Test 1	Test 2

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Parameter	Config	Unit	Test 1		Test 2 NOTE 3	
			CSI-RS0	CSI-RS1	CSI-RS0	CSI-RS1
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.						
NOTE 3: No additional noise is added by the test system in Test 2.						
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.7.4.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS resource reported by UE in L1-RSRP report (CSI-RS0 or CSI-RS1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

Table A.7.7.4.2.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
CSI-RS0	CSI-RS _RP0 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + G_{max}
CSI-RS1	CSI-RS _RP1 -δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + G_{max}
NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.5 CLI measurements

A.7.7.5.1 SA SRS-RSRP measurement accuracy with FR2 serving cell

A.7.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.1.1 with the testing configurations for NR cells in table A.7.7.5.1.1-1.

Table A.7.7.5.1.1-1: Applicable NR configurations for FR2 SRS-RSRP accuracy test

Config	Description
1	120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.5.1.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.5.1.2-1 and A.7.7.5.1.2-2 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in table A.7.7.5.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in table A.7.7.5.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

Table A.7.7.5.1.2-1: FR2 test parameters for SRS-RSRP accuracy

Parameter	Config	Unit	Test 1	Test 2
SSB ARFCN	1		freq1	freq1

A.7.7.5.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.1.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

During T2:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

Table A.7.7.5.1.3-1: SRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
SRS	$SRS_RP - \delta + G_{min} \leq$ Reported SRS-RSRP(dBm) $\leq SRS_RP + \delta + G_{max}$

NOTE 1: SRS_RP is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test

NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

A.7.7.5.2 SA CLI-RSSI measurement accuracy with FR2 serving cell

A.7.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.2.1 with the testing configurations for NR cells in table A.7.7.5.2.1-1.

Table A.7.7.5.2.1-1: Applicable NR configurations for FR2 CLI-RSSI accuracy test

Config	Description
1	120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.5.2.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.5.2.2-1 and A.7.7.5.2.2-2 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 2 data symbol before. The CLI-RSSI measurement resource configuration is in table A.7.7.5.2.2-3.

Table A.7.7.5.2.2-1: FR2 test parameters for CLI-RSSI accuracy

Parameter	Config	Unit	Test 1	Test 2
SSB ARFCN	1		freq1	freq1
Duplex mode	1		TDD	TDD

EPRE ratio of OCNG to OCNG DMRS Note 1				
Propagation condition	1		AWGN	AWGN
Antenna configuration	1		1x2	1x2
NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols. NOTE 2: OCNG is not transmitted in the CLI-RSSI measurement resources.				

Table A.7.7.5.2.2-2: CLI-RSSI accuracy OTA related test parameters

Parameter	Unit	T1	T2
Angle of arrival configuration		Setup 1 defined A.3.15.1	
Beam assumption Note 5		Fine	
N_{oc} on CLI-RSSI measurement resource Note1	dBm/15 kHz Note3	-100	
N_{oc} on CLI-RSSI measurement resource Note1	dBm/SCS Note3	-91	
$\hat{E}_s / N_{oc}$ on CLI-RSSI measurement resource	dB	-Infinity	
RSRP on CLI-RSSI measurement resource Note2	dBm/SCS	-Infinity	
$\hat{E}_s / I_{ot\ BB}$ on CLI-RSSI measurement resource Note4	dB	-Infinity	
Io on CLI-RSSI measurement resource Note2	dBm/95.04 MHz Note3	-62.01	
Io on CLI-RSSI measurement resource Note2	dBm/1.08 MHz	-81.46	

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 2 dB for UE multi-band relaxation factor $\sum MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

Table A.7.7.5.2.2-3: CLI-RSSI measurement resource configuration for FR2 CLI-RSSI accuracy

	Field	SRSConf.1
CLI-RSSI measurement resource	rssi-ResourceId	0
	rssi-SCS	120 kHz
	startPRB	0
	nrofPRBs	66
	startPosition	3
	nrofSymbols	11
	rssi-PeriodicityAndOffset	sl160, 25

A.7.7.5.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.2.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

During T2:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

Table A.7.7.5.2.3-1: CLI-RSSI absolute accuracy test requirement

	Test requirement Notes1,2,3
	Io -δ +G_{min} ≤ Reported CLI-RSSI(dBm) ≤Io +δ +G_{max}

NOTE 1: Io is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for 1.08 MHz
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test

NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

A.7.7.6 L1-SINR measurement for beam reporting

A.7.7.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

A.7.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.1 and clause 10.1.28.1 for L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.6.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.6.1.1-1: Applicable NR configurations for FR2 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.6.1.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.1.2-1 and table A.7.7.6.1.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.1.2-1 and table A.7.7.6.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

Table A.7.7.6.1.2-1: FR2 CSI-RS based L1-SINR general test parameters

Parameter	Config	Unit	Test 1

$\hat{E}_s / N_{oc}$	1~2	dB	10	-2
NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.				
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.				
NOTE 3: Void.				
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation				

A.7.7.6.1.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.1.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.1.3-1.

Table A.7.7.6.1.3-1: L1-SINR absolute accuracy test requirement

	Test requirement Notes1,2
CSI-RS0	L1-SINR0-δ≤ Reported SINR(dB) ≤L1-SINR0+δ
NOTE 1: L1-SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS 0 under consideration	
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-1, selected according to the Io used in the test	

Table A.5.7.6.1.3-2: L1-SINR relative accuracy test requirement

	Test requirement Notes1,2

CSI-RS0 - CSI-RS1	L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ
NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration	
NOTE 2: σ is the SINR relative requirement from Table 10.1.28.1.2-1, selected according to the Io used in the test	

A.7.7.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR

A.7.7.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.2 and clause 10.1.28.2 for L1-SINR measurements with SSB based CMR and CSI-IM based IMR, with the testing configurations for NR cells in table A.7.7.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR

Config	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.6.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.2.2-1 and table A.7.7.6.2.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.2.2-1 and table A.7.7.6.2.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-IM resource set with two CSI-IM resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

Table A.7.7.6.2.2-1: FR2 L1-SINR general test parameters with SSB based CMR and CSI-IM based IMR

Parameter	Config	Unit	Test 1
SSB ARFCN	1~2		freq1
Duplex mode	1~2		TDD
TDD Configuration	1~2		TDDConf.3.1

EPRE ratio of PDSCH DMRS to SSS			
EPRE ratio of PDSCH to PDSCH DMRS			
EPRE ratio of OCNG DMRS to SSS Note 1			
EPRE ratio of OCNG to OCNG DMRS Note 1			

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Table A.7.7.6.2.2-2: FR2 L1-SINR SSB specific test parameters

Parameter	Config	Unit	Test 1	
			SSB0	SSB1
Angle of arrival configuration			Setup 1 according to A.3.15.1	
Assumption for UE beams Note 3			Rough	
N_{oc}	1~2	dBm/15 kHz	-100	
N_{oc}	1	dBm/SSB SCS	-91	
	2		-88	
$\hat{E}_s / I_{ot}$	1~2	dB	10	-2
SS-RSRP Note1	1	dBm/SCS	-81	-93
	2		-78	-90
Io Note1	1~2	dBm/95.04 MHz	-51.57	-59.86
$\hat{E}_s / N_{oc}$	1~2	dB	10	-2

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.6.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB#0+CSI-IM#0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.2.3-1.

Relative accuracy of SSB#0+CSI-IM#0 compared with SSB#1+CSI-IM#1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.2.3-2.

Table A.7.7.6.2.3-1: L1-SINR absolute accuracy test requirement

	Test requirement Notes1,2
SSB#0+CSI-IM#0	L1_SINR0 -δ ≤ Reported SINR(dB) ≤ L1_SINR0 +δ

NOTE 1: L1_SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#0+CSI-IM#0 under consideration
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-2, selected according to the Io used in the test

Table A.7.7.6.2.3-2: L1-SINR relative accuracy test requirement

	Test requirement Notes1,2
SSB#0+CSI-IM#0 - SSB#1+CSI-IM#1	L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ
NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#n+CSI-IM#n under consideration NOTE 2: σ is the SINR relative requirement from Table 10.1.28.2.2-1, selected according to the Io used in the test	

A.7.7.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

A.7.7.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in clauses 9.8.4.3 and clause 10.1.28.3 for L1-SINR measurements based on CSI-RS as both CMR and IMR with the testing configurations for NR cell in table A.7.7.6.3.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.6.3.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with CSI-RS based both CMR based IMR

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.6.3.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.6.3.2-1 and table A.7.7.6.3.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.7.7.6.3.2-1 and table A.7.7.6.3.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI-RS resource sets with two CSI-RS resources for each set. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as both CMR and IMR.

Table A.7.7.6.3.2-1: FR2 L1-SINR measurement test with CSI-RS based both CMR and IMR

Parameter	Config	Unit	Test 1

Io Note1	1~2	dBm/ 95.04 MHz	-51.57	-59.86
$\hat{E}_s / N_{oc}$	1~2	dB	10	0

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.6.3.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 for CMR +CSI-RS#0 for IMR and CSI-RS#1 for CMR +CSI-RS#0 for IMR of Cell 1 shall fulfil the requirements in clause 10.1.28.3. The following requirements are to be verified:

Absolute accuracy of CSI-RS#0 for CMR + CSI-RS#0 for IMR. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.7.7.6.3.3-1.

Relative accuracy of CSI-RS#0 for CMR + CSI-RS#0 for IMR compared with CSI-RS#1 for CMR + CSI-RS#1 for IMR. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.7.7.6.3.3-2.

Table A.7.7.6.3.3-1: L1-SINR absolute accuracy test requirement

	Test requirement Notes1,2
CSI-RS#0 for CMR + CSI-RS#0 for IMR	L1-SINR0 -δ≤ Reported SINR(dBm) ≤L1-SINR 0 +δ

NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#n under consideration
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.3.1-1.

Table A.7.7.6.3.3-2: L1-SINR relative accuracy test requirement

	Test requirement Notes1,2
(CSI-RS#0 for CMR + CSI-RS#0 for IMR) – (CSI-RS#1 for CMR + CSI-RS#1 for IMR)	L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ
NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the (CSI-RS#n for CMR + CSI-RS#n for IMR) under consideration NOTE 2: σ is the SINR relative requirement from Table 10.1.28.3.2-1, selected according to the Io used in the test	

A.7.7.7 CSI-RSRP

A.7.7.7.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.2.1 and 10.1.3.2.2 for intra-frequency measurements.

A.7.7.7.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.7.1.2-1. Both absolute and relative accuracy of CSI-RSRP intra-frequency measurements are tested by using the parameters in table A.7.7.7.1.2-2 and A.7.7.7.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

Table A.7.7.7.1.2-1: CSI-RSRP Intra frequency CSI-RSRP supported test configurations

Configuration	Description
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

Table A.7.7.7.1.2-2: CSI-RSRP Intra frequency general test parameters

Parameter	Unit	T1		T2

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: CSI-RS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

Parameter	Unit	T1		T2	
		Cell 1	Cell 2	Cell 1	Cell 2
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.7.1.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.2.1 and relative accuracy requirements in clause 10.1.3.2.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.2.2-1.

Table A.7.7.7.1.3-1: CSI-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	CSI-RS_RP1 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ CSI-RS_RP1 +δ +G_{max}
Cell 2	CSI-RS_RP2 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ CSI-RS_RP2 +δ +G_{max}
NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.2.1-1, selected according to the Io used in the test	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.7.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.2.1 and 10.1.5.2.2 for inter-frequency measurements with the testing configurations for NR cells in table A.7.7.7.2.1-1.

Table A.7.7.7.2.1-1: Applicable NR configurations for FR2 inter-frequency CSI-RSRP accuracy test

Configuration	Description
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.7.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.7.2.2-1 and table A.7.7.7.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.7.7.7.2.2-1 and table A.7.7.7.2.2-2. The inter-frequency measurements are supported by a measurement gap.

Table A.7.7.7.2.2-1: CSI-RSRP inter-frequency test parameters

Parameter		Unit	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: CSI-RS_RP, Es/Iot, Io, ($CSI\text{-}RS_RP_{Cell\ 2}$ – $CSI\text{-}RS_RP_{Cell\ 1}$) and ($Io_{freq\ 2}$ – $Io_{freq\ 1}$) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P or ΔMB_S from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.7.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.2.1 and the relative requirements in clause 10.1.5.2.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

Table A.7.7.7.2.3-1: CSI-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3,4
Cell 1	$CSI\text{-}RS_RP1 - \delta + G_{min} + X \le$ Reported RSRP(dBm) $\le CSI\text{-}RS_RP1 + \delta + G_{max}$
Cell 2	$CSI\text{-}RS_RP2 - \delta + G_{min} \le$ Reported RSRP(dBm) $\le CSI\text{-}RS_RP2 + \delta + G_{max}$

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.2.1-1, selected according to the Io used in the test
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.

Table A.7.7.7.2.3-2: CSI-RSRP relative accuracy test requirement

	Test requirement Notes1,2,3,4
Cell 2 – Cell 1	CSI-RS_RP2 – CSI-RS_RP1 – δ – D – G_{inter} ≤ Reported RSRP(dB) ≤ CSI-RS_RP2 – CSI-RS_RP1 + δ + G_{inter} – (X) + E

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration
NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.2.2-1
NOTE 3: Void
NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.
NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value.
NOTE 6: G_{inter} is the margin due to different antenna gain caused by frequency separation. G_{inter} is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value.
NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams.

A.7.7.8 CSI-RSRQ

A.7.7.8.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.2.1.

A.7.7.8.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.8.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is tested by using the parameters in table A.7.7.8.1.2-2 and table A.7.7.8.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.7.7.8.1.2-1: CSI-RSRQ Intra frequency CSI-RSRQ supported test configurations

Configuration	**Description**
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 2: CSI-RSRQ, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.					
NOTE 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.					
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone					
NOTE 6: NR operating band groups are as defined in clause 3.5.2.					
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.8.1.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5 dB to Nominal CSI-RSRQ-3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ+3.5 dB to Nominal CSI-RSRQ-4.5 dB according to the requirements in clause 10.1.8.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal RSRQ is the value shown in table A.7.7.8.1.2-3.

A.7.7.8.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

A.7.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.10.2.1 and 10.1.10.2.2 for inter-frequency measurement.

A.7.7.8.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.8.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test parameters in table A.7.7.8.2.2-2 and table A.7.7.8.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

Table A. 7.7.8.2.2-1: CSI-RSRQ Inter frequency supported test configurations

Configuration	Description
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

Table A.7.7.8.2.2-2: CSI-RSRQ Inter frequency general test parameters

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
SSB ARFCN		Freq1	freq2	freq1	Freq2
Duplex mode		TDD		TDD	
TDD configuration		TDDConf.3.1		TDDConf.3.1	
$BW_{channel}$	MHz	100: $N_{PRB,c}$ = 66		100: $N_{PRB,c}$ = 66	
PDSCH Reference measurement channel		SR.3.1 TDD	-	SR.3.1 TDD	-
RMSI CORESET Reference Channel		CR.3.1 TDD	-	CR.3.1 TDD	-
OCNG Patterns		OP.1	OP.1	OP.1	OP.1
Time offset with Cell 1	µs	-	0.58	-	0.58
SMTC configuration		SMTC.1	SMTC.1	SMTC.1	SMTC.1
CSI-RS configuration for RRM		CSI-RS.RRM.FR2.1 TDD			
PDSCH/PDCCH subcarrier spacing	kHz	120	120	120	120
EPRE ratio of PSS to SSS	dB	0	0	0	0

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
EPRE ratio of PBCH_DMRS to SSS					
EPRE ratio of PBCH to PBCH_DMRS					
EPRE ratio of PDCCH_DMRS to SSS					
EPRE ratio of PDCCH to PDCCH_DMRS					
EPRE ratio of PDSCH_DMRS to SSS					
EPRE ratio of PDSCH to PDSCH_DMRS					
EPRE ratio of OCNG DMRS to SSS Note 1					
EPRE ratio of CSI-RS to SSS					

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Table A.7.7.8.2.2-3: CSI-RSRQ Inter frequency OTA related test parameters

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
AoA setup		Setup 1 in clause A.3.15.		Setup 1 in clause A.3.15.	
Assumption for UE beams Note 6		Rough		Rough	
N_{oc} Note1	dBm/15 kHz Note4	-94.03		-94.03	
N_{oc} Note1	dBm/SCS Note3	-85.0		-85.0	
CSI-RSRP Note2	dBm/SCS Note4	-86.75	-86.75	-88	-88
CSI-RSRQ Note2	dB	-14.75	-14.75	-15.56	-15.56

$\hat{E}_s / N_{oc}$ for CSI-RS	dB	-1.75	-1.75	-3	-1.75
$\hat{E}_s / I_{ot}$ for SSB	dB	-1.75	-1.75	-3	-3
$\hat{E}_s / I_{ot}$ for CSI-RS	dB	-1.75	-1.75	-3	-3
Io Note2	dBm/95.04 MHz Note4	-53.8	-53.8	-54.25	-54.25

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: CSI-RSRQ, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.8.2.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5 dB to Nominal CSI-RSRQ -3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5 dB to Nominal CSI-RSRQ -4.5 dB according to the requirements in clause 10.1.10.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test.

The CSI-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.2.2.

A.7.7.9 CSI-SINR

A.7.7.9.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

A.7.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.2.1.

A.7.7.9.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.9.1.2-1. . The absolute accuracy of CSI-SINR intra-frequency measurement is test by using the parameters in table A.7.7.9.1.2-2 and table A.7.7.9.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.9.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations

Configuration	Description
1	120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.					
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.					
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone					
NOTE 6: NR operating band groups are as defined in clause 3.5.2.					
NOTE 7: Void					
NOTE 8: Void					
NOTE 9: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+XdB to Nominal CSI-SINR –X-1 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1 dB according to the requirements in clause 10.1.13.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. The relative CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.13.2.1.

Editor's note: The values of X and Y are pending on the accuracy requirement discussion

A.7.7.9.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

A.7.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

A.7.7.9.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.7.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test parameters in table A.7.7.9.2.2-2 and table A.7.7.9.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

A.7.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR +XdB to Nominal CSI-SINR –X-1 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1 dB according to the requirements in clause 10.1.15.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test.

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

A.7.7.10 RSTD measurements

A.7.7.10.1 RSTD measurement accuracy test case for single positioning frequency layer

A.7.7.10.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.1.1-1.

Table A.7.7.10.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

PRS $\hat{E}_s / I_{ot}$	dB	-6	-13	-6	-13
Io Note2	dBm/190.08 MHz Note3	-55.75	-55.75	-55.75	-55.75
NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{OC} to be fulfilled.					
NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.					
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.					
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.10.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.7.10.2 RSTD measurement accuracy test case for dual positioning frequency layer

A.7.7.10.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

The supported test configurations are specified in table A.7.7.10.2.1-1.

Table A.7.7.10.2.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR2. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test.

Table A.7.7.10.2.1-2: RSTD accuracy test parameters

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.					
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.10.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.7.10.3 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR2 in RRC_CONNECTED state

A.7.7.10.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.7.7.10.3.1-1.

Table A.7.7.10.3.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be longer than the UE measurement period as defined in clause 9.9.2.7.

NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.					
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.10.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.7.10.4 RSTD measurement accuracy test case with Rx TEG

A.7.7.10.4.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement when the measurements of reference cell and neighbor cell are within the same Rx TEG meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.4.1-1.

Table A.7.7.10.4.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test.

The UE is requested to provide the Rx TEG in the test via *nr-UE-RxTEG-Request-r17* in *NR-TDOA-RequestLocationInformation*.

The test applies to the UE supporting *Rx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same Rx TEG for the measurements of reference cell and neighbour cell.

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.7.10.4.2 Test Requirements

The RSTD measurement for Cell 1 and Cell 2 should both fulfil the absolute accuracy requirements with same Rx TEG for reference cell and neighbour cell defined in clause 10.1.23.2.

A.7.7.10.5 NR RSTD measurement accuracy test case for PRS aggregation in FR2 SA in RRC_CONNECTED mode

A.7.7.10.5.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement performed by UE by aggregating PRS resources from two positioning frequency layers (PFLs) meets the accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.7.10.5.1-1.

Table A.7.7.10.5.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth per PFL, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Each cell is associated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, all cells/TRPs transmit DL PRS in two

intra-band contiguous PFLs in RF channel #1 and RF channel #2. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The UE is capable of performing RSTD measurements by aggregating PRS resources from two PFLs and is configured by the LMF to perform measurements by aggregating the PRS resources from two PFLs via *nr-DL-PRS-JointMeasurementRequestedPFL-List*. The *NR-DL-TDOA-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test.

The test duration should be larger than the UE measurement period as defined in clause 9.9.2.10.

Table A.7.7.10.5.1-2: RSTD accuracy test parameters for PRS aggregation

Note 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over sub-carriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.
Note 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

A.7.7.10.5.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

A.7.7.11 PRS-RSRP measurements

A.7.7.11.1 SA measurement accuracy with PRS in FR2

A.7.7.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

A.7.7.11.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.11.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.7.11.1.2-2 and A.7.7.11.1.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.11.1.2-1: PRS-RSRP supported test configurations

N_{OC} Note1	dBm/SCS Note4	-89		-89	
PRS $\hat{E}_s / N_{oc}$	dB	-2	-10	-2	10
PRP Note2	dBm/SCS	-91	-99	-91	-99
PRS $\hat{E}_s / I_{ot}$	dB	-2.41	-12.12	-2.41	-12.12
Io Note2	dBm/190.08 MHz Note4	-54.62		-54.62	

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{OC} to be fulfilled.
NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.11.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.7.11.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

Table A.7.7.11.1.3-1: PRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +G_{max}

NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

A.7.7.11.2 SA measurement accuracy with PRS in FR2 with reduced sample number

A.7.7.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRP measurement with reduced sample number is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

A.7.7.11.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.11.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.7.11.2.2-2 and A.7.7.11.2.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.11.2.2-1: PRS-RSRP supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

NOTE 2: SSB_RP, PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.11.2.3 Test Requirements

In the test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.7.11.2.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

Table A.7.7.11.2.3-1: PRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +G_{max}

NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

A.7.7.12 UE Rx-Tx time difference measurements

A.7.7.12.1 UE Rx-Tx time difference measurement accuracy for single positioning frequency layer in FR2 SA

A.7.7.12.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.1.1-1.

Table A.7.7.12.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.7.12.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.1.2-1.

Table A.7.7.12.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters

Parameter	Unit	Test configuration	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2

NOTE 1: Void.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
NOTE 9: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

Table A.7.7.12.1.2-2: Void

A.7.7.12.1.3 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

A.7.7.12.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples in FR2 SA

A.7.7.12.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.2.1-1.

Table A.7.7.12.2.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *reducedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation* during the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.7.12.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.2.2-1.

Table A.7.7.12.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
NOTE 9: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.7.12.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

A.7.7.12.3 UE Rx-Tx time difference measurement accuracy with RxTx TEG

A.7.7.12.3.1 Test purpose and environment

The purpose of the test is to verify that the relative UE Rx-Tx time difference measurement accuracy when the two measurements are within the same RxTx TEG is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.3.1-1.

Table A.7.7.12.3.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is requested to provide the RxTx TEG in the test via *nr-UE-RxTxTEG-Request-r17* in *NR-Multi-RTT-RequestLocationInformation*.

The test applies to the UE supporting *RxTx TEG* defiend in *NR-UE-TEG-Capability* and reporting the same RxTx TEG for the two UE Rx-Tx measurements.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The UE Rx-Tx time difference is derived by the difference of the receiving timing and the transmit timing for each cell.

A.7.7.12.3.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.12.3.2-1.

Table A.7.7.12.3.2-1: UE Rx-Tx time difference measurement accuracy test parameters

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
NOTE 9: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.7.12.3.3 Test requirements

The relative accuracy is derived by the difference of the UE Rx-Tx measurements on the two cells.

The UE Rx-Tx time difference measurements for Cell 1 and Cell 2 fulfil the relative UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2.

A.7.7.12.4 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR2 SA

A.7.7.12.4.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations are listed in table A.7.7.12.4.1-1.

Table A.7.7.12.4.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured with measurement gap pattern ID #13 or ID #24 before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.7.7.12.4.1-2 and table A.7.7.12.4.1-3 respectively.

Table A.7.7.12.4.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1	Cell 1	Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34].
Neighbour cell		1	Cell 2	Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34].

RF Channel Number		1	1	For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel.
			2	For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel.
$BW_{channel}$	MHz	1	200: $N_{RB,c}$ = 132	For both RF channels
SSB configuration		1	SSB.2 FR2	
SMTC configuration		1	SMTC.1	
Measurement gap		1	GP#24 or GP#13 Note 1	
CP length		1	Normal	
DRX		1	OFF	
Time offset between serving and neighbour cells	µs	1	3	Synchronous cells/TRPs
Expected RSTD	µs	1	3	
Expected RSTD uncertainty	µs	1	5	
Note 1: GP#24 is configured if the UE supports it, otherwise GP#13 is configured.				

Table A.7.7.12.4.1-3: Cell specific test parameters

Parameter	Unit	Test configuration	Cell 1	Cell 2
AoA setup		1	Setup 1 as specified in clause A.3.15

PRS Resource slot offset (for both PFL1 and PFL2)	slot	1	0	4
SRS configuration		1	POS-SRS.3	N/A
N_{oc} Note 2	dBm/SCS	1	-89	

PRS $\hat{E}_s/I_{ot}$	dB	1	-3	-13
PRS $\hat{E}_s/N_{oc}$	dB	1	-3	-13
PRP Note 3	dBm/SCS kHz	1	-92	-102
Io Note 3 (on symbols where PRS is not allocated)	dBm/190.08 MHz	1	-55.10	-55.10
Propagation Condition		1	AWGN	

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
Note 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
Note 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.7.12.4.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

A.7.7.13 PRS-RSRPP measurements

A.7.7.13.1 SA measurement accuracy with PRS in FR2

A.7.7.13.1.1 Test Purpose and Environment

The purpose of this test is to verify that the accuracy of PRS-RSRPP measurement in RRC_CONNECTED is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

A.7.7.13.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.13.1.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.13.1.2-1: PRS-RSRPP supported test configurations

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.13.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.7.13.1.2-1.

Table A.7.7.13.1.3-1: PRS-RSRPP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +G_{max}

NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

A.7.7.13.2 SA measurement accuracy with reduced PRS samples in FR2

A.7.7.13.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with N_{sample} = 1 in FR2 is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the active BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within [6] dB, so that N_{sample} = 1 is assumed.

A.7.7.13.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.7.13.2.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.7.13.2.2-1: PRS-RSRPP supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.			

A.7.7.13.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.7.13.2.3-1.

Table A.7.7.13.2.3-1: PRS-RSRPP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +G_{max}
NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test.	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class	

A.7.7.14 L1-RSRP measurement for group-based beam reporting

A.7.7.14.1 SSB based L1-RSRP measurement

A.7.7.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy for group-based beam reporting is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.14.1.1-1.

The AoA setup for this test is Setup 5 as defined in clause A.3.15.5.

The UE which passes this test can skip A.7.7.4.1.

Table A.7.7.14.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.14.1.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.14.1.2-1 and table A.7.7.14.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements is tested by using the parameters in table A.7.7.14.1.2-1 and table A.7.7.14.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI resource sets with one SSB resource in each set. UE is configured to perform RLM, BFD measurement based on the SSB resources 0 and UE is configured to perform group-based L1-RSRP measurement based on the SSB resources 0 and 1.

Table A.7.7.14.1.2-1: FR2 SSB based L1-RSRP general test parameters

$\hat{E}_s/N_{oc}$	1~2	dB	10	-2	n.a.	
NOTE 1: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 2: Void NOTE 3: No additional noise is added by the test system in Test 2. NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.7.14.1.3 Test Requirements

After 320 ms from the beginning of the test, the UE shall send L1-RSRP measurement report with SSB0 and SSB1 as a resource group, where the accuracy of the reported measurement results for SSB0 and SSB1 of Cell 1 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0 and SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB resource reported by UE in L1-RSRP report (SSB0 or SSB1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

Table A.7.7.14.1.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
SSB0	SSB_RP0 - δ + G_{min} ≤ Reported RSRP (dBm) ≤ SSB_RP0 + δ + G_{max}
SSB1	SSB_RP1 - δ + G_{min} ≤ Reported RSRP (dBm) ≤ SSB_RP1 + δ + G_{max}
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.14.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

A.7.7.14.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy for group-based beam reporting is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.7.7.14.2.1-1.

The AoA setup for this test is Setup X1 as defined in clause A.3.15.X1.

Table A.7.7.14.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test

Config	Description
1	NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode

A.7.7.14.2.2 Test parameters

In this set of test cases there is one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in table A.7.7.14.2.2-1 and table A.7.7.14.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements is tested by using the parameters in table A.7.7.14.2.2-1 and table A.7.7.14.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI resource sets with one CSI-RS resource in each set. UE is configured to perform RLM and BFD based on SSB 0 and 1 and UE is configured to perform group-based L1-RSRP measurement based on the CSI resources. CSI-RS resources are not transmitted in the same OFDM symbols as SSB.

Table A.7.7.14.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters

Parameter	Config	Unit	Test 1	Test 2
SSB ARFCN	1		freq1	freq1
Duplex mode	1		TDD	TDD
TDD Configuration	1		TDDConf.3.1	TDDConf.3.1
$BW_{channel}$	1	MHz	100: $N_{PRB,c}$ = 66	100: $N_{PRB,c}$ = 66
PDSCH Reference measurement channel	1		SR.3.1 TDD	SR.3.1 TDD
RMSI CORESET Reference Channel	1		CR.3.1 TDD	CR.3.1 TDD
Dedicated CORESET Reference Channel	1		CCR.3.1 TDD	CCR.3.1 TDD

OCNG Patterns	1		OP.1	OP.1
Initial BWP Configuration	1		DLBWP.0.1 ULBWP.0.1	DLBWP.0.1 ULBWP.0.1
Dedicated BWP configuration	1		DLBWP.1.1 ULBWP.1.1	DLBWP.1.1 ULBWP.1.1
TRS Configuration	1		TRS.2.1 TDD	TRS.2.1 TDD
PDCCH/PDSCH TCI Configuration	1		TCI.State.2	TCI.State.2
SMTC configuration	1		SMTC.1	SMTC.1
CSI-RS resource sets	1		TBD	TBD
reportConfigType	1		periodic	periodic
reportQuantity	1		cri-RSRP	cri-RSRP
Number of reported RS	1		2	2
L1-RSRP reporting period	1		slot80	slot80
Propagation condition	1		AWGN	AWGN
Antenna configuration	1		1x2	1x2
EPRE ratio of PSS to SSS	1	dB	0	0
EPRE ratio of PBCH DMRS to SSS				
EPRE ratio of PBCH to PBCH DMRS				
EPRE ratio of PDCCH DMRS to SSS				
EPRE ratio of PDCCH to PDCCH DMRS				
EPRE ratio of PDSCH DMRS to SSS				
EPRE ratio of PDSCH to PDSCH DMRS				
EPRE ratio of OCNG DMRS to SSS Note 1				
EPRE ratio of OCNG to OCNG DMRS Note 1				

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Table A.7.7.14.2.2-2: FR2 CSI-RS based L1-RSRP OTA related test parameters

Parameter	Config	Unit	Test 1		Test 2 NOTE 3	
			CSI-RS0	CSI-RS1	CSI-RS0	CSI-RS1
Angle of arrival configuration			Setup 5 according to A.3.15.5		Setup 5 according to A.3.15.5	

Parameter	Config	Unit	Test 1		Test 2 NOTE 3	
			CSI-RS0	CSI-RS1	CSI-RS0	CSI-RS1
Assumption for UE beams Note 4			Rough		Rough	
N_{oc}	1~2	dBm/15 kHz	-100		n.a.	
N_{oc}	1~2	dBm/SSB SCS	-91		n.a. n.a.	
$\hat{E}_s / I_{ot}$	1~2	dB	10	-2	n.a.	
CSI-RS-RSRP Note1	1~2	dBm/SCS	-81	-93	As in table B.2.4-2	
Io Note1	1~2	dBm/ 95.04 MHz	-59.86		SS-RSRP+28.98	
$\hat{E}_s / N_{oc}$	1~2	dB	-51.57	-2	n.a.	

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.14.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS resource reported by UE in L1-RSRP report (CSI-RS0 or CSI-RS1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.14.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

Table A.7.7.14.2.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
CSI-RS0	CSI-RS _RP0 – δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 + δ + G_{max}
CSI-RS1	CSI-RS _RP1 – δ + G_{min} ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 + δ + G_{max}

NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

A.7.7.15 LTM L1-RSRP measurement

A.7.7.15.1 SSB based inter-frequency L1-RSRP measurement

A.7.7.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause10.1.20B.1.1] for inter-frequency L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.7.7.15.1.1-1.

Prior to the start of the test,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A4 is used.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- The UE has reported L3 measurement results and performed SSB based L1-RSRP measurement on Cell 2.

Table A.7.7.15.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

Config	Description
1	NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band	

A.7.7.15.1.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in table A.7.7.15.1.2-1 and table A.7.7.15.1.2-2 below. The absolute accuracy of inter-frequency L1-RSRP measurements are tested by using the parameters in table A.7.7.15.1.2-1 and table A.7.7.15.1.2-2. The inter-frequency L1-RSRP measurements are supported by a measurement gap.

Before the test, UE is configured L1-RSRP measurement on SSB0 of Cell 2.

Table A.7.7.15.1.2-1: FR2 SSB based inter-frequency L1-RSRP general test parameters

Parameter	Config	Unit	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SSB_RP, Es/Iot, Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Parameter	Config	Unit	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.7.15.1.3 Test Requirements

The L1-RSRP measurement accuracy for Cell 2 shall fulfil the absolute requirements in clause 10.1.20B.1.1.

Test 1:

Absolute accuracy of SSB0 in Cell 2. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.15.1.3-1.

Test 2:

Absolute accuracy of SSB0 in Cell 2. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.7.7.15.1.3-1.

Table A.7.7.15.1.3-1: L1-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
SSB0	SSB_RP0 -δ + G_{min} ≤ Reported RSRP(dBm) ≤ SSB_RP0 +δ + G_{max}
NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20B.1.1-1, selected according to the Io used in the test NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class	

A.7.7.16 RSCPD Measurements

A.7.7.16.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_CONNECTED

A.7.7.16.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.7.16.1.1-1.

Table A.7.7.16.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP [34] as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_CONNECTED, shall be provided to the UE before the start of the test.
The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

A.7.7.16.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.7.16.1.2-1 and table A.7.7.16.1.2-2.

Table A.7.7.16.1.2-1: RSCPD accuracy test parameters

Parameter	Unit	Test 1	
		Cell 1	Cell 2

EPRE ratio of OCNG to OCNG DMRS Note 1			
EPRE ratio of PRS to SSS	dB	0	0
Propagation conditions		AWGN	AWGN
Antenna configuration		1x2	1x2
Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.			

Table A.7.7.16.1.2-2: RSCPD accuracy OTA related test parameters

Parameter	Unit	Test 1	
		Cell 1	Cell 2
Angle of arrival configuration		Setup 1 according to clause A.3.15.1	
Assumption for UE beams Note 5		Rough	
N_{oc} Note1	dBm/SCS Note3	-89	
PRS $\hat{E}_s / N_{oc}$	dB	-5.7	-11.9
PRP Note2	dBm/SCS	-94.7	-100.9

PRS $\hat{E}_s/I_{ot}$ Note 4	dB	-6	-13
Io Note 2	dBm/190.08 MHz Note3	-55.75	-55.75

Note 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{OC} to be fulfilled.

Note 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.

Note 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

Note 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.7.16.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

A.7.7.17 RSCP with UE Rx-Tx time difference measurements

A.7.7.17.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR2 SA

A.7.7.17.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of DL RSCP measurement reported with UE Rx-Tx time difference measurement is within the specified limits. This test will verify the requirements in clause 10.1.44.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.7.12.2.1-1.

Table A.7.7.12.2.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData*, *NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP [34] and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC CONNECTED, shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.7.17.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.7.17.1.2-1.

Table A.7.7.17.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters

Io	dBm/190.08 MHz	1	-51.76	-51.76
Propagation Condition		1	AWGN	

Note 1:	Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 2:	PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 3:	PRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 4:	Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 5:	As observed with 0 dBi gain antenna at the centre of the quiet zone.
Note 6:	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
Note 7:	GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.
Note 8:	Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

A.7.7.17.1.3 Test requirements

The RSCP with UE Rx-Tx time difference measurements fulfils the RSCP measurement accuracy requirements specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

A.7.8 Measurement procedure in RRC_INACTIVE

A.7.8.1 RSTD measurements

A.7.8.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state

A.7.8.1.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in table A.7.8.1.1.1-1.

Table A.7.8.1.1.1-1: Supported test configurations for NR RSTD

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2 and Cell 3. During T2 UE shall be in RRC_INACTIVE state and all cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are listed in table A.7.8.1.1.1-2, and cell specific test parameters are listed in table Table A.7.8.1.1.1-3 and table A.7.8.1.1.1-4.

Table A.7.8.1.1.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.

Propagation Condition		AWGN		
NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.				
NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.				
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.				

A.7.8.1.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

A.7.8.1.2 NR RSTD measurement reporting delay test case with reduced number of samples in RRC_INACTIVE, FR1 SA

A.7.8.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in clause 5.6.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations are specified in table A.7.8.1.2.1-1.

Table A.7.8.1.2.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2. PRS resources from all three cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

NOTE: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The *nr-DL-TDOA-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The general test parameters are listed in table A.7.8.1.2.1-2, and cell specific test parameters are listed in table A.7.8.1.2.1-3 and A.7.8.1.2.1-4.

NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.					
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					
NOTE 4: Io levels apply only for symbols where PRS is transmitted.					

A.7.8.1.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3, i.e., between RSTD_0000000 and RSTD_1970049.

A.7.8.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_INACTIVE state

A.7.8.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_INACTIVE state meets the requirements specified in clause 5.6.2.6 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFL) are configured.

The supported test configurations are listed in table A.7.8.1.3.1-1.

Table A.7.8.1.3.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are 6 synchronous cells in the test: Cell 1, Cell 2, Cell 3 Cell 4, Cell 5 and Cell 6. Cell 1 is the PCell on NR RF channel 1 in FR2. Cell 2 and Cell 3 are neighbour cells on the same RF channel as Cell 1. Cell 4, Cell 5 and Cell 6 are the neighbour cells on a different NR RF channel, i.e., RF channel 2, in FR2. Cell 1 and Cell 4, Cell 2 and Cell 5, Cell 3 and Cell 6 are respectively intra-band contiguous and PRS resources are transmitted by the same Tx chain for each combination.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2, Cell 3, Cell 4, Cell 5 and Cell 6. During T2 UE shall be in RRC_INACTIVE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

In *NR-TDOA-ProvideAssistanceData*, there are three *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of PRS resource sets from Cell 1 and Cell 4, and the second list indicates aggregation of PRS resource sets from Cell 2 and Cell 5. The third list indicates aggregation of PRS resource sets from Cell 3 and Cell 6. In *NR-TDOA-RequestLocationInformation*, the IE *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included and indicates aggregation of PFLs on RF channel 1 and RF channel 2.

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are given in table A.7.8.1.3.1-2, and cell specific test parameters for T1 and T2 are listed in table A.7.8.1.3.1-3 and table A.7.8.1.3.1-4, respectively.

Table A.7.8.1.3.1-2: General test parameters for RSTD measurement with PRS aggregation reporting delay

Note 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 4: The values are defined separately for the cells from which the transmitted PRS resources are aggregated.

A.7.8.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in clause 5.6.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

A.7.8.1.4 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state with eDRX > 10.24s

A.7.8.1.4.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.2.5 for RSTD measurements in RRC_INACTIVE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.8.1.4.1-1.

Table A.7.8.1.4.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_INACTIVE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_INACTIVE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.8.1.4.1-2 and table A.7.8.1.4.1-3 respectively.

Table A.7.8.1.4.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Reference cell		1	Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.

Neighbour cells		1	Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.
RF Channel Number		1	1	For Cell 1, Cell 2 and Cell 3
$BW_{channel}$	MHz	1	100: $N_{RB,c}$ = 66	
SSB configuration		1	SSB.3 FR2	
SMTC configuration		1	SMTC.1	
CP length		1	Normal	
DRX	s	1	0.64	
eDRX cycle length (for both RAN and CN)	s	1	40.96	
PTW length (for both RAN and CN)	s	1	1.28	
Reporting periodicity	s	1	20	*reportingInterval* for periodic reporting defined in TS 37.355 [34].
Time offset between serving and neighbour cells	µs	1	Cell 2 to Cell 1: 0 Cell 3 to Cell 1: 3	Synchronous cells
Expected RSTD	µs	1	Cell 2: 3 Cell 3: 3 Other neighbour cells: randomly between -3 and 3	The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD indicator
Expected RSTD uncertainty	µs	1	5	
Number of cells provided in DL-TDOA assistance data		1	3	Including the reference cell
PRS muting info		1	Cell 1: '10' Cell 2: '01' Cell 3: '10'	Correponds to NR-MutingPattern-r16 in DL-PRS-MutingOption1-r16 defined in TS 37.355 [34]
PRS resource RE offset		1	Cell 1: 0 Cell 2: 0 Cell 3: 1	Cell 1 and Cell 3 are configured with different resource offsets
T1	s	1	5	
T2	s	1	41

Propagation Condition		1	AWGN					

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Note 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

A.7.8.1.4.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 5.6.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is considered complete after the UE has reported the first set of measurements based on the configured reporting interval.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

A.7.8.2 PRS-RSRP measurements

A.7.8.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_INACTIVE

A.7.8.2.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 5.6.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_INACTIVE. Supported test configurations are shown in table A.7.8.2.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring ΔT after the slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.2.1.1-2, and table A.7.8.2.1.1-3.

Table A.7.8.2.1.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						

A.7.8.2.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 5.6.3.5.The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.8.2.2 PRS-RSRP reporting delay test case with reduced number of samples in RRC_INACTIVE

A.7.8.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 5.6.3.5 in an environment with AWGN propagation conditions when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations are specified in table A.7.8.2.2.1-1.

Table A.7.8.2.2.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *DL-AoD assistance* data and location information request.

The *nr-DL-AoD-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The general test parameters are listed in table A.7.8.2.2.1-2, and cell specific test parameters are listed in table A.7.8.2.2.1-3.

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Void.

A.7.8.2.2.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 5.6.3.5, starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.7.8.2.3 PRS-RSRP reporting delay in RRC_INACTIVE with eDRX

A.7.8.2.3.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 5.6.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_INACTIVE when configured with eDRX. Supported test configurations are shown in table A.7.8.2.3.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring ΔT after the slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.2.3.1-2 and table A.7.8.2.3.1-3.

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
Note 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
Note 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
Note 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.8.2.3.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 5.6.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.3.5 with $T_{available_PRS}$ = 0.64s starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

A test is complete after the UE has reported the first set of results based on the configured reporting interval.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.8.3 UE Rx-Tx time difference measurements

A.7.8.3.1 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

A.7.8.3.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement in RRC_INACTIVE state meets the requirements specified in clause 5.6.4 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in table A.7.8.3.1.1-1.

Table A.7.8.3.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 is the first PRS resource occasion occurring ΔT after the slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.1.1-2 and table A.7.8.3.1.1-3 respectively.

Table A.7.8.3.1.1-2: General test parameters

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

A.7.8.3.1.2 Test requirements

The UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.4.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time specified in clause 5.6.4 starting from the beginning of time interval T2.

NOTE The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.8.3.2 UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE, FR2 SA

A.7.8.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 5.6.4.5 in AWGN propagation condition in FR2 in standalone scenario when single-sample measurements are requested by the LMF. This test is applicable to UEs that support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*.

The supported test configurations in listed in table A.7.8.3.2.1-1.

Table A.7.8.3.2.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2. PRS resources from both cells are transmitted within the initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the multi-RTT assistance data and location information request.

The *nr-Multi-RTT-RequestLocationInformation* IE should indicate to the UE that single-sample measurements are requested, i.e. requestedDL-PRS-ProcessingSamples-r17 is set to m1.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.2.1-2 and table A.7.8.3.2.1-3 respectively.

Table A.7.8.3.2.1-2: General test parameters

NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels apply only for symbols where PRS is transmitted.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: OCNG shall be used such that all active cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols, except for slots where PRS is transmitted by any of the cells.
NOTE 9: Void.

A.7.8.3.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90 %, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.8.3.3 UE Rx-Tx time difference measurements with PRS bandwidth aggregation in FR2 SA

A.7.8.3.3.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.6 for UE Rx-Tx measurements with PRS bandwidth aggregation. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations in listed in table A.7.8.3.3.1-1.

Table A.7.8.3.3.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The general test parameters and cell specific test parameters are as given in table A.7.8.3.3.1-2 and table A.7.8.3.3.1-3, respectively.

Table A.7.8.3.3.1-2: General test parameters

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.8.3.3.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.6.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.8.3.4 UE Rx-Tx time difference measurements for single positioning frequency layer with eDRX > 10.24s in FR2 SA

A.7.8.3.4.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.4.5 for UE Rx-Tx measurements in RRC_INACTIVE with eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations in listed in table A.7.8.3.4.1-1.

Table A.7.8.3.4.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and in RRC_INACTIVE state during T2. Cell 1 and Cell 2 transmit PRS only during the second time interval of duration T2. Similarly, the UE is configured to transmit positioning SRS during only during the second time interval of duration T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle in RRC_INACTIVE.

The general test parameters and cell specific test parameters are as given in table A.7.8.3.4.1-2 and table A.7.8.3.4.1-3 respectively.

Table A.7.8.3.4.1-2: General test parameters

Propagation Condition		1	AWGN			

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.

NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.

NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.8.3.4.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 5.6.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is complete after the UE has reported the first set of results based on the configured reporting interval.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

A.7.8.4 PRS-RSRPP measurements

A.7.8.4.1 PRS-RSRPP reporting delay test case for single positioning frequency layer in FR2 in RRC_INACTIVE state

A.7.8.4.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 5.6.5.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.8.4.1.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.4.1.1-2, and table A.7.8.4.1.1-3.

NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.8.4.1.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 5.6.5.5.The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.5.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.X, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

A.7.8.4.2 PRS-RSRPP reporting delay test with reduced number of samples for single positioning frequency layer in FR2 in RRC_INACTIVE state

A.7.8.4.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRPP measurement requirements specified in clause 5.6.5.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario for reduced number of samples. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples. Supported test configurations are shown in table A.7.8.4.2.1-1.

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall be in RRC_CONNECTED state and shall not have any timing information of Cell 2. During T2 UE shall be in RRC_INACTIVE state and both cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34] shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first DRX cycle containing the PRS resources that is ΔT after slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.8.4.2.1-2, and table A.7.8.4.2.1-3.

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.7.8.4.2.2 Test Requirements

The PRS RSRPP measurement time fulfils the requirements specified in clause 5.6.5.5. The UE shall perform and report the PRS RSRPP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 5.6.5.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90 %, where the reported PRS RSRPP measurement for each correct event shall be within the PRS RSRPP reporting range specified in clause 10.1.38, i.e., between PRS RSRPP_0 and PRS RSRPP_126.

A.7.8.4.3 PRS-RSPP reporting delay in RRC_INACTIVE state with eDRX > 10.24s in FR2

A.7.8.4.3.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 5.6.5.5 for PRS-RSRPP measurements in RRC_INACTIVE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform PRS-RSRPP measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.8.4.3.1-1.

Table A.7.8.4.3.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_INACTIVE state before the start of T2. Both cells transmit PRS only during the second time interval of duration T2.

The *NR-DL-AoD-ProvideAssistanceData* and *NR-DL-AoD-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the DL-AoD assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_INACTIVE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.8.4.3.1-2 and table A.7.8.4.3.1-3, respectively.

Table A.7.8.4.3.1-2: General test parameters

Note 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
Note 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.8.4.3.2 Test requirements

The PRS-RSRPP measurement time shall fulfill the requirements specified in clause 5.6.5.5.

The UE shall perform and report the PRS-RSRPP measurements for Cell 1 and Cell 2 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS-RSRPP measurement for each correct event shall be within the PRS-RSRPP reporting range specified in clause 10.1.38.3.

A.7.8.5 RSCPD Measurements

A.7.8.5.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_INACTIVE state

A.7.8.5.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in clause A.7.8.1.1 with the following additional configuration in table A.7.8.5.1.1-1 and description.

In *nr-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

Table A.7.8.5.1.1-1: Time window configuration

Parameter		Unit	Value	Comment
Indicated time window configuration	Config 1		MTW.1	As specified in clause A.3.38

A.7.8.5.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

A.7.8.6 RSCP Measurements

A.7.8.6.1 DL RSCP with UE Rx-Tx time difference measurements in RRC_INACTIVE for single positioning frequency layer in FR2 SA

A.7.8.6.1.1 Test purpose and environment

The purpose of the test is to verify that the DL RSCP and UE Rx-Tx time difference measurements in RRC_INACTIVE state meet the requirements specified in clause 5.6.8.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured for both DL RSCP measurement and UE Rx-Tx time difference measurement.

The supported test configurations are listed in table A.7.8.6.1.1-1.

Table A.7.8.6.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE during T1. In *NR-Multi-RTT-RequestLocationInformation*, the UE is configured to perform DL RSCP measurement via *nr-DL-PRS-RSCP-Request*. The UE is configured to perform both DL RSCP and UE Rx-Tx time difference measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*, but the time window periodicity is not configured. The last slot containing the two messages for the multi-RTTI assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_INACTIVE.

The beginning of the time interval T2 shall be aligned with the start of the configured time window containing the first PRS resource occasion occurring ΔT after the slot #n, where ΔT = 50 ms is the maximum processing time of the multi-RTT assistance data and location information request.

The UE is configured to transmit positioning SRS during T2.

The general test parameters and cell specific test parameters are listed in table A.7.8.6.1.1-2 and table A.7.8.6.1.1-3.

Table A.7.8.6.1.1-2: General test parameters

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 9: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

A.7.8.6.1.2 Test requirements

The DL RSCP with UE Rx-Tx time difference measurement time in RRC_INACTIVE state fulfils the requirements specified in clause 5.6.8.

The UE shall perform and report the DL RSCP and UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified DL RSCP with UE Rx-Tx time difference measurement time specified in clause 5.6.8 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported DL RSCP measurement for each correct event shall be within the DL RSCP reporting range specified in clause 10.1.44 and the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.

A.7.9 Measurement performance requirements in RRC_INACTIVE

A.7.9.1 RSTD measurements

A.7.9.1.1 RSTD measurement accuracy test case for single positioning frequency layer in FR2 in RRC_INACTIVE state

A.7.9.1.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.9.1.1.1-1.

Table A.7.9.1.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355[34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.9.1.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.9.1.2 RSTD measurement accuracy test case with reduced number of samples for single positioning frequency layer in FR2 in RRC_INACTIVE state

A.7.9.1.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement in RRC_INACTIVE state meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. In this test UE that supports *supportedDL-PRS-ProcessingSamples-RRC-Inactive* is configured by LMF to perform PRS measurement with reduced number of samples.

The supported test configurations are specified in table A.7.9.1.2.1-1.

Table A.7.9.1.2.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64 s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.9.1.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.9.1.3 RSTD measurement accuracy for PRS aggregation in FR2 in RRC_INACTIVE state

A.7.9.1.3.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation on two PFLs meets the accuracy requirements specified in clause 10.1.23A.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.9.1.3.1-1.

Table A.7.9.1.3.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are four synchronous cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR2. Cell 2 is a neighbour cell on the same NR RF channel as Cell 1. Cell 3 and Cell 4 are neighbor cells in a different NR RF channel #2 in FR2. Cell 1 and Cell 3 are intra-band contiguous, and PRS resources from Cell 1 and Cell 3 are transmitted by the same Tx chain. Cell 2 and Cell 4 are intra-band contiguous, and PRS resources from Cell 2 and Cell 4 are transmitted by the same Tx chain.

GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured. The UE is configured with DRX cycle of 0.64s.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34] shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.6.

In *NR-TDOA-ProvideAssistanceData*, there are two *NR-linkedDL-PRS-ResourceSetID-PRS-AggregationList*. The first list indicates aggregation of resource sets from Cell 1 and Cell 3, and the second list indicates aggregation of resource sets from Cell 2 and Cell 4. In *NR-TDOA-RequestLocationInformation*, *nr-DL-PRS-JointMeasurementRequestedPFL-List* is included and indicates aggregation of PFLs on NR RF channel #1 and NR RF channel #2.

Note 5:	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.9.1.3.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

A.7.9.2 PRS-RSRP measurements

A.7.9.2.1 SA measurement accuracy with PRS in FR2 in RRC_INACTIVE

A.7.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

A.7.9.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.9.2.1.2-2 and A.7.9.2.1.2-3. In all test cases, Cell 1 is the PCell.

Table A.7.9.2.1.2-1: PRS-RSRP supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

Table A.7.9.2.1.2-2: PRS-RSRP general test parameters

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
Cell ID		489	0	489	0
SSB ARFCN		freq1		freq1	
Duplex mode		TDD		TDD	
TDD configuration		TDDConf.3.1		TDDConf.3.1	
$BW_{channel}$	MHz	200: $N_{PRB,c}$ = 132		200: $N_{PRB,c}$ = 132

SMTC configuration		SMTC.1	SMTC.1	SMTC.1	SMTC.1
Time offset with Cell 1	μs	-	3	-	3
PRS configuration		PRS.1.3 FR2	PRS.1.3 FR2	PRS.1.4 FR2	PRS.1.4 FR2
PRS Resource slot offset	slot	0	4	0	4
PDSCH/PDCCH subcarrier spacing	kHz	120	120	120	120
EPRE ratio of PSS to SSS	dB	0	0	0	0
EPRE ratio of PBCH_DMRS to SSS					
EPRE ratio of PBCH to PBCH_DMRS					
EPRE ratio of PDCCH_DMRS to SSS					
EPRE ratio of PDCCH to PDCCH_DMRS					
EPRE ratio of PDSCH_DMRS to SSS					
EPRE ratio of PDSCH to PDSCH_DMRS					
EPRE ratio of OCNG DMRS to SSS Note 1					
EPRE ratio of OCNG to OCNG DMRS Note 1					
Propagation conditions		AWGN	AWGN	AWGN	AWGN
Antenna configuration		1x2	1x2	1x2	1x2
NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.					

Table A.7.9.2.1.2-3: PRS-RSRP OTA related test parameters

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
Angle of arrival configuration		Setup 1 according to clause A.3.15.1			
Assumption for UE beams Note 7		Rough		Rough	
N_{oc} Note1	dBm/15 kHz Note4	-98		Same as Test 1	
N_{oc} Note1	dBm/SCS Note4	-89		Same as Test 1	
$\hat{E}_s / N_{oc}$	dB	-2	-10	-2	-10
E_S	dBm/SCS Note4	-	-	-	-
PRS_RP Note2	dBm/SCS	-91	-99	-91	-99
$\hat{E}_s / I_{ot}$ BB Note6	dB	-2.41	-12.12	-2.41	-12.12
Io Note2	dBm/190.08 MHz Note4	-54.62		-54.62	
NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					
NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.					
NOTE 3: Void					
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone					
NOTE 5: Void					

Parameter	Unit	Test 1		Test 2	
		Cell 1	Cell 2	Cell 1	Cell 2
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.					
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation					

A.7.9.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.9.2.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

Table A.7.9.2.1.3-1: PRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	$PRS_RP1 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq PRS_RP1 + \delta + G_{max}$
Cell 2	$PRS_RP2 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq PRS_RP2 + \delta + G_{max}$
NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class	

A.7.9.2.2 PRS-RSRP measurements with reduced number of sample in RRC_INACTIVE

A.7.9.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

A.7.9.2.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.2.2.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in table A.7.9.2.2.2-2 and A.7.9.2.2.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.7.9.2.2.2-1.

Table A.7.9.2.2.2-1: PRS-RSRP supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

Table A.7.9.2.2.2-2: PRS-RSRP general test parameters

NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.9.2.2.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.9.2.2.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

Table A.7.9.2.2.3-1: PRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRP(dBm) ≤ PRS_RP2 +δ +G_{max}
NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the Io used in the test.	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class	

A.7.9.3 UE Rx-Tx time difference measurements

A.7.9.3.1 UE Rx-Tx time difference measurements in RRC_INACTIVE

A.7.9.3.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario.

The supported test configuration is listed in table A.7.9.3.1.1-1.

Table A.7.9.3.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test.

The UE is configured to transmit SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.9.3.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.9.3.1.2-1.

Table A.7.9.3.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters

Parameter	Unit	Test configuration	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2

Io	dBm/190.08 MHz	1	-54.62	-54.62	-54.62	-54.62
Propagation Condition		1	AWGN		AWGN	

Parameter	Unit	Test configuration	Test 1		Test 2	
			Cell 1	Cell 2	Cell 1	Cell 2
NOTE 1: Void.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.						
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone						
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone						
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation						
NOTE 8: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.						

A.7.9.3.1.3 Test requirements

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

A.7.9.3.2 UE Rx-Tx time difference measurement accuracy with reduced number of samples in FR2 SA

A.7.9.3.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy with reduced number of samples in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.9.3.2.1-1.

Table A.7.9.3.2.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12.1, shall be provided to the UE before the start of the test. The UE is configured to measure UE Rx-Tx time difference using reduced number of samples via *requestedDL-PRS-ProcessingSamples* in *NR-Multi-RTT-RequestLocationInformation*.

UE shall be configured to enter into RRC_INACTIVE state before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.9.3.2.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in table A.7.9.3.2.2-1.

Table A.7.9.3.2.2-1: UE Rx-Tx time difference measurement accuracy test parameters

A.7.9.3.2.3 Test requirements

The UE Rx-Tx time difference measurement with reduced number of samples in RRC_INACTIVE state fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

A.7.9.3.3 UE Rx-Tx time difference measurement accuracy with PRS bandwidth aggregation in FR2 SA in RRC_INACTIVE state

A.7.9.3.3.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25A. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform UE Rx-Tx measurements by aggregating two intra-band contiguous positioning frequency layers (PFLs) in FR2.

The supported test configurations are listed in table A.7.9.3.3.1-1.

Table A.7.9.3.3.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: Cell 1 (PCell) and Cell 2 (neighbor cell). Each cell is sssociated with a different TRP/DL PRS ID in the *NR-DL-PRS-AssistanceData* TS 37.355 [34]. Cell 1 transmissions other than DL PRS are allocated in RF channel #1. In addition, both cells/TRPs transmit DL PRS in two intra-band contiguous PFLs in RF channel #1 and RF channel #2.. PFL1 is allocated within RF channel #1 and PFL2 is allocated within RF channel #2. Except for the frequency offset between them, both PFLs have identical PRS configuration.

The *NR-Multi-RTT-ProvideAssistanceData* and *NR-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE before the start of the test.

The *NR-Multi-RTT-ProvideAssistanceData* message provided to the UE must include *NR-DL-PRS-AggregationInfo-r18* linking each PRS resource in PFL1 to the corresponding PRS resource in PFL2.

The *NR-Multi-RTT-RequestLocationInformation* message provided to the UE must request bandwidth aggregated measurements via *jointMeasurementsReq* and *nr-DL-PRS-JointMeasurementRequestedPFL-List.*

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

The general test parameters and cell specific test parameters are as given in table A.7.9.3.3.1-2 and table A.7.9.3.3.1-3, respectively.

Table A.7.9.3.3.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1	Cell 1	Cell 1 is the PCell in *NR-Multi-RTT-ProvideAssistanceData* [34].
Neighbour cell		1	Cell 2	Cell 2 is a neighbour cell in *NR-Multi-RTT-ProvideAssistanceData* [34].
RF Channel Number		1	1	For both Cell 1 and Cell 2, all signals/channels except PRS in PFL2 are allocated within this channel.
			2	For both Cell 1 and Cell 2, only PRS in PFL2 is allocated within this channel.
$BW_{channel}$	MHz	1	200: $N_{RB,c}$ = 132	For both RF channels
SSB configuration		1	SSB.2 FR2	
SMTC configuration		1	SMTC.1	
CP length		1	Normal	
DRX	s	1	0.64	
Time offset between serving and neighbour cells	µs	1	3	Synchronous cells/TRPs
Expected RSTD	µs	1	3	
Expected RSTD uncertainty	µs	1	5

Note 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
Note 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
Note 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
Note 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
Note 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
Note 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.9.3.3.2 Test requirements

The UE Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25A for both Cell 1 and Cell 2.

A.7.9.4 PRS-RSRPP measurements

A.7.9.4.1 SA measurement accuracy in FR2 in RRC INACTIVE

A.7.9.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2.

A.7.9.4.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.4.1.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.7.9.4.1.2-1.

NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

A.7.9.4.1.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2. if the reported PRS-RSRPP is in the range shown in table A.7.9.4.1.3-1.

Table A.7.9.4.1.3-1: PRS-RSRPP absolute accuracy test requirement

	Test requirement [Notes1,2,3]
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +G_{max}

NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test.
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class

A.7.9.4.2 SA measurement accuracy with reduced PRS samples in FR2 in RRC INACTIVE

A.7.9.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRPP measurement accuracy with N_{sample} = 1 in FR2in RRC_INACTIVE state is within the specified limits. This test will verify the requirements in clauses 10.1.38.2. The UE under test should support *supportedDL-PRS-ProcessingSamples-RRC-Inactive*, and the TE indicates the UE to perform positioning measurements with reduced number of samples. The PRS bandwidth is contained within the initial DL BWP and the power difference between the serving cell SS-RSRP and neighbour cell PRS-RSRP is within 6 dB, so that N_{sample} = 1 is assumed.

A.7.9.4.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.9.4.2.2-1. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

Table A.7.9.4.2.2-1: PRS-RSRPP supported test configurations

NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.			

A.7.9.4.2.3 Test Requirements

In each test, the absolute PRS-RSRPP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.38.2 if the reported PRS-RSRPP is in the range shown in table A.7.9.4.2.3-1.

Table A.7.9.4.2.3-1: PRS-RSRPP absolute accuracy test requirement

	Test requirement [Notes1,2,3]
Cell 1	PRS_RP1 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP1 +δ +G_{max}
Cell 2	PRS_RP2 -δ +G_{min} ≤ Reported RSRPP(dBm) ≤ PRS_RP2 +δ +G_{max}
NOTE 1: PRS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.	
NOTE 2: δ is the RSRP absolute accuracy requirement from Table [10.1.24.Z.1-2], selected according to the Io used in the test.	
NOTE 3: G_{min} and G_{max} are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class	

A.7.9.5 RSCPD Measurements

A.7.9.5.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_INACTIVE

A.7.9.5.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.9.5.1.1-1.

Table A.7.9.5.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_INACTIVE, shall be provided to the UE before the start of the test.

A.7.9.5.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.9.5.1.2-1.

Table A.7.9.5.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters in RRC_INACTIVE

NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.			
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.			
NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.			
NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.			

A.7.9.5.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

A.7.9.6 RSCP Measurements

A.7.9.6.1 RSCP with UE Rx-Tx time difference measurement accuracy in FR2 SA

A.7.9.6.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of DL RSCP measurement reported with UE Rx-Tx time difference measurement in RRC_INACTIVE is within the specified limits. This test will verify the requirements in clause 10.1.44.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in table A.7.9. 6.1.1-1.

Table A.7.9.6.1.1-1: Supported test configurations

Config	Description
1	120 kHz SSB and PRS SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData , NR-Multi-RTT-RequestLocationInformation* with *nr-DL-PRS-RSCP-Request* from LMF via LPP and *NR-Multi-RTT-MeasurementCapability* as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCP in RRC INACTIVE, shall be provided to the UE before the start of the test.

The UE is configured to transmit positioning SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

A.7.9.6.1.2 Test parameters

The test parameters are given in table A.7.9. 6.1.2-1.

Table A.7.9. 6.1.2-1: RSCP with UE Rx-Tx time difference measurement accuracy test parameters

Parameter	Unit	Test configuration	Test 1	
			Cell 1	Cell 2
AoA setup		1	Setup 1 as specified in clause A.3.15

PRS-RSRP Note 2	dBm/SCS kHz	1	-91	-99
Io	dBm/190.08 MHz	1	-54.62	-54.62
Propagation Condition		1	AWGN	

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 6: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 7: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.

A.7.9.6.1.3 Test requirements

The RSCP measurement reported with UE Rx-Tx time difference measurements fulfils the RSCP measurement accuracy requirements specified in clause 10.1.44.2 for both Cell 1 and Cell 2.

A.7.10 Measurement Procedure in RRC_IDLE

A.7.10.1 RSTD Measurements

A.7.10.1.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state for non-RedCap UE

A.7.10.1.1.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 4.5.2.5 for RSTD measurements in RRC_IDLE without eDRX. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.10.1.1.1-1.

Table A.7.10.1.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_IDLE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s).

The UE is configured with DRX cycle of 0.64 s.

The general test parameters are listed in table A.7.10.1.1.1-2, and cell specific test parameters are listed in table A.7.10.1.1.1-2, table A.7.10.1.1.1-3, and table A.7.10.1.1.1-4.

Table A.7.10.1.1.1-2: General test parameters for RSTD measurement reporting delay

Parameter		Unit	Value	Comment
Reference cell			Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.
Neighbor cells			Cell 2 and Cell 3	Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.
$BW_{channel}$		MHz	200: $N_{RB,c}$ = 132	
SSB configuration	Config 1		SSB.2 FR2	
SMTC configuration	Config 1		SMTC.1	
PDSCH RMC configuration	Config 1		SR.1.1 FDD	
RMSI CORESET RMC configuration	Config 1		CR.3.1 TDD	As specified in clause A.3.1.2.1
Dedicated CORESET RMC configuration	Config 1		CR.1.1 FDD	
PRS Configuration	Config 1		PRS.1.4. FR2	As specified in clause A.3. 31
Physical cell ID PCI			(PCI of Cell 1 – PCI of Cell 2)mod6=0 and (PCI of Cell 1 – PCI of Cell 3)mod6=0	The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters
CP length			Normal	
DRX		s	0.64	
Radio frame receive time offset between the cells at the UE antenna connector		µs	Cell 2 to Cell 1: 0 Cell 3 to Cell 1: 3	PRS are transmitted from synchronous cells
Expected RSTD		µs	Cell 2: 3 Cell 3: 3 Other neighbour cells: randomly between -3 and 3	The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the expectedRSTD indicator
Expected RSTD uncertainty for all neighbour cells		µs	5	The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355 [34] is the

			expectedRSTD-Uncertainty index
Number of cells provided in DL-TDOA assistance data		3	Including the reference cell
PRS muting info		Cell 1: '10' Cell 2: '01' Cell 3: '10'	Correponds to prs-MutingInfo defined in TS 37.355 [34]
PRS resource RE offset		Cell 1: 0 Cell 2: 0 Cell 3: 1	Cell 1 and Cell 3 are configured with different resource offsets
T1	s	3	The length of the time interval from the beginning of each test
T2	s	1.28	The length of the time interval that follows immediately after time interval T1
AoA setup		Setup 1	As defined in A.3.15.1
Beam assumption		Rough	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation

Table A.7.10.1.1.1-2-3: Cell-specific test parameters for RSTD measurement reporting delay during T1

Parameter		Unit	Cell 1	Cell 2	Cell 3
NR RF Channel Number			1	1	1
Positiong frequency layer			1	1	1
Correlation Matrix and Antenna Configuration			1x2 Low	1x2 Low	1x2 Low
OCNG patterns defined in A.3.2.1			OP.5 FDD	N/A	N/A
N_{oc} Note 3	Config 1	dBm/SCS	-89		
PRS $\hat{E}_s/N_{oc}$		dB	-Infinity	-Infinity	-Infinity
Io Note 4	Config 1	dBm/ 190.08MHz	-54.00	-54.00	-54.00
SSB RP Note4	Config 1	dBm/SCS	-89	-Infinity	-Infinity
$\hat{E}_s/N_{oc}$		dB	0	-Infinity	-Infinity
Propagation Condition			AWGN		

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.
NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 4: SSB RP and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.

Table A.7.10.1.1.1-2-4: Cell-specific test parameters for RSTD measurement reporting delay during T2

Parameter	Unit	Cell 1	Cell 2	Cell 3
		T2	T2	T2

RF Channel Number			1	1	1
Positiong frequency layer			1	1	1

N_{oc} Note 3	Config 1	dBm/SCS	-89	-89	-89
PRS $\hat{E}_s/N_{oc}$	Config 1	dB	-5.44	-11.67	-11.67
Io	Config 1	dBm/ 19.08MHz	-55.48	-55.48	-55.48
PRS $\hat{E}_s/I_{ot}$		dB	-6	-13	-13
Propagation Condition			AWGN		

NOTE 1: OCNG shall be used such that active cells (all, except Cell 3 in T3) are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.

NOTE 2: The resources for uplink transmission are assigned after the end of time period T2 to UEs that do not support SDT for measurement reporting.

NOTE 3: Interference from other cells and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

A.7.10.1.1.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 4.5.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

A.7.10.1.2 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state with eDRX > 10.24s

A.7.10.1.2.1 Test purpose and environment

The purpose of the test is to verify the measurement requirements specified in clause 4.5.2.5 for RSTD measurements in RRC_IDLE with eDRX and periodic reporting. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.10.1.2.1-1.

Table A.7.10.1.2.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

There are three cells in the test: Cell 1 (PCell and RSTD reference cell), Cell 2 (neighbor cell) and Cell 3 (neighbor cell). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. The UE shall be in RRC_CONNECTED state during T1 and released to RRC_IDLE state before the start of T2. All cells transmit PRS only during the second time interval of duration T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *NR-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34], clause 6.5.12, shall be provided to the UE during T1. The last TTI of the last message shall be provided to the UE at least ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the DL-TDOA assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the start of the first PRS resource instance received after the UE has transitioned to RRC_IDLE.

The test concludes after the UE reports the first set of measurements based on the configured reporting periodicity.

The general test parameters and cell specific test parameters are as given in table A.7.10.1.2.1-2 and table A.7.10.1.2.1-3, respectively.

Table A.7.10.1.2.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Reference cell		1	Cell 1	Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case.

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
NOTE 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 5: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 6: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 7: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 8: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.10.1.2.2 Test requirements

The RSTD measurement time shall fulfill the requirements specified in clause 4.5.2.5.

The UE shall perform and report the RSTD measurements for Cell 1, Cell 2 and Cell 3 within the specified measurement period duration starting from the beginning of time interval T2. The requirement shall be evaluated based on the first measurement report received from the UE.

NOTE 1: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

NOTE 2: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

A test is considered complete after the UE has reported first set of measurement based on the configured reporting periodicity.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3.

A.7.10.1.3 NR RSTD measurement reporting delay test case for PRS aggregation in FR2 SA in RRC_IDLE state

A.7.10.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 4.5.2.6 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.7.8.1.3 except that UE shall be in RRC_IDLE state and all 6 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DLBWP during T2.

A.7.10.1.3.2 Test requirements

The RSTD measurement time with PRS aggregation in RRC_IDLE state fulfils the requirements specified in clause 4.5.2.6.

The UE shall perform and report the RSTD measurements by aggregating PRS resources from Cell 2 and Cell 5, Cell 3 and Cell 6 respectively with respect to the Cell 1 and Cell 4 from which the transmitted PRS resources are also aggregated, within the time duration specified in clause 4.5.2.6 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events observed during repeated tests shall be at least 90%, where the reported RSTD measurement with PRS aggregation for each correct event shall be within the RSTD reporting range specified in clause 10.1.23A.3.

A.7.10.2 PRS-RSRP Measurements

A.7.10.2.1 PRS-RSRP reporting delay test case for single positioning frequency layer in RRC_IDLE state for non-RedCap UE in FR2

A.7.10.2.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 4.5.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_IDLE state. Supported test configurations are shown in table A.7.10.2.1.1-1.

Table A.7.10.2.1.1-1: supported test configurations for PRS RSRP measurement for FR2.

Config	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

During T1 UE is in RRC_CONNECTED state, the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 [34], shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n. In the next DL slot after slot #n, UE is released into RRC_IDLE state.

The beginning of the time interval T2 is the first PRS resource occasion occurring ΔT after the slot #n, where ΔT = 50 ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.10.2.1.1-2 and table A.7.10.2.1.1-3.

Table A.7.10.2.1.1-2: General test parameters for PRS RSRP measurement reporting delay.

Parameter	Unit	Test configuration	Value	Comment
NR RF Channel Number		Config 1	1: Cell 1 and Cell 2	One TDD carrier frequency is used for the NR cells.
Active cell		Config 1	NR cell 1 (PCell)	Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP/PRS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone.
NOTE 7: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

A.7.10.2.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in clause 4.5.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in clause 4.5.3.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in clause 10.1.24.3, i.e., between PRS RSRP_0 and PRS RSRP_126.

A.7.10.2.2 PRS-RSRP reporting delay test case in RRC_IDLE state in FR2 when eDRX cycle > 10.24s

A.7.10.2.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in clause 4.5.3.5 for single positioning frequency layer under AWGN propagation conditions in RRC_IDLE when configured with eDRX.

The supported test configurations in table A.7.8.2.3.1-1 apply for this test.

The test procedure in clause A.7.8.2.3.1 apply for this test, except that during T2, UE is in RRC_IDLE state.

The general test parameters as specified in table A.7.8.2.3.1-2 apply for this test, except those specified in table A.7.10.2.2.1-1.

The cell specific test parameters as specified in table A.7.8.2.3.1-3 apply for this test.

Table A.7.10.2.2.1-1: General test parameters for PRS RSRP measurement reporting delay

Parameter	Unit	Test configuration	Value	Comment
CN eDRX configuration		Config 1	eDRX cycle = 40.96s PTW length = 1.28s	

A.7.10.2.2.2 Test Requirements

The test requirements in clause A.7.8.2.3.2 apply for this test, except that the time limits are specified in clause 4.5.3.5.

A.7.10.3 RSCPD Measurements

A.7.10.3.1 DL RSCPD reported with RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA in RRC_IDLE state

A.7.10.3.1.1 Test Purpose and Environment

The purpose of the test is to verify that the DL RSCPD reported with RSTD measurement meets the requirements specified in clause 5.6.7.5 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

The test environment is the same as in clause A.7.10.1.1 with the following additional configuration in table A.7.10.3.1.1-1 and description.

In *nr-DL-TDOA-RequestLocationInformation*, the UE is configured to perform DL RSCPD measurement via *dl-PRS-RSCPD-Request*. The UE also is configured to perform both RSCPD and RSTD measurements within the time window indicated to UE via *nr-DL-PRS-MeasurementTimeWindowsConfig*.

The beginning of the time interval T2 shall be aligned with the first DRX cycle containing a DL PRS resource(s) to be measured within the configured time window.

Table A.7.10.3.1.1-1: Time window configuration

Parameter		Unit	Value	Comment
Indicated time window configuration	Config 1		MTW.1	As specified in clause A.3.38

A.7.10.3.1.2 Test Requirements

The DL RSCPD reported with RSTD measurement time fulfils the requirements specified in clause 5.6.7.5.

The UE shall perform and report the DL RSCPD and DL RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in clause 5.6.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be higher than the time duration above because of the uncertainty in acquiring the first available PRACH occasion to transition to RRC_CONNECTED state to report the measurements.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in clause 10.1.23.3 and the reported RSCPD measurement for each correct event shall be within the RSCPD reporting range specified in clause 10.1.43.3.

A.7.11 Measurement Performance Requirements in RRC_IDLE

A.7.11.1 RSTD Measurements

A.7.11.1.1 NR RSTD measurement accuracy test case for single positioning frequency layer in FR2 SA in RRC_IDLE state for non-RedCap UE

A.7.11.1.1.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement in RRC_IDLE state without eDRX meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in table A.7.11.1.1.1-1.

Table A.7.11.1.1.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2. The UE is configured with DRX cycle of 0.64s. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 5.6.2.5.

The RSTD accuracy test parameters are listed in table A.7.11.1.1.1-2, and the RSTD accuracy OTA related test parameters are listed in table A.7.11.1.1.1-3.

Table A.7.11.1.1.1-2: RSTD accuracy test parameters

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2					

	of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 5:	Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.

A.7.11.1.1.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

A.7.11.1.2 RSTD measurement accuracy test case for single positioning frequency layer in FR2 SA in RRC_IDLE state with eDRX > 10.24s

A.7.11.1.2.1 Test purpose and environment

The purpose of this test is to verify that RSTD measurements performed in RRC_IDLE with eDRX and periodic reporting satisfy the measurement accuracy requirements specified in clause 10.1.23.2. The tests are conducted under AWGN propagation condition with the UE operating in FR2 stand-alone mode and configured to perform RSTD measurements on a single positioning frequency layer (PFL) in FR2.

The supported test configurations are listed in table A.7.11.1.2.1-1.

Table A.7.11.1.2.1-1: Supported test configurations

PCell configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two synchronous cells in the test: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 [34], shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 4.5.2.5.

The general test parameters and cell specific test parameters are as given in table A.7.11.1.2.1-2 and table A.7.11.1.2.1-3 respectively.

Table A.7.11.1.2.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Reference cell		1	Cell 1	
Neighbour cell		1	Cell 2	
RF Channel Number		1	1	For Cell 1 and Cell 2
$BW_{channel}$	MHz	1	200: $N_{RB,c}$ = 132	
SSB configuration		1	SSB.3 FR2

Propagation conditions		AWGN			
Antenna configuration		1x2	1x2	1x2	1x2

NOTE 1: OCNG shall be used such that active cell (Cell 1) is fully allocated and a constant total transmitted power spectral density is achieved on all OFDM symbols except those in which PRS is allocated.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: PRP and Io levels have been derived from other parameters and they are provided for information only. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in clause B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 6: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 7: As observed with 0 dBi gain antenna at the centre of the quiet zone.

A.7.11.1.2.2 Test requirements

The reported RSTD measurements shall fulfill the absolute accuracy requirements specified in clause 10.1.23.2.

A.7.11.1.3 NR RSTD measurement accuracy test case for PRS aggregation in FR2 SA in RRC_IDLE state

A.7.11.1.3.1 Test purpose and environment

The purpose of the test is to verify that the RSTD measurement results with PRS aggregation in RRC_IDLE state meets the requirements specified in clause 10.1.23A.2 in AWGN propagation condition in FR2 in standalone scenario when two intra-band contiguous positioning frequency layers (PFLs) are configured.

The test environment and configurations reuse the test case for RRC_INACTIVE state defined in clause A.7.9.1.3, except that UE shall be in RRC_IDLE state and all 4 cells transmit PRS resources within initial DL BWP of the UE and with the same numerology as the initial DL BWP during T2.

A.7.11.1.3.2 Test requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23A.2.

A.7.11.2 PRS-RSRP measurements

A.7.11.2.1 PRS-RSRP measurement accuracy test case for non-RedCap UE in FR2 in RRC_IDLE state

A.7.11.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy in RRC_IDLE is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

A.7.11.2.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.7.11.2.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in tables A.7.11.2.1.2-2 and A.7.11.2.1.2-3. In all test cases, Cell 1 is the PCell.

Table A.7.11.2.1.2-1: PRS-RSRP supported test configurations

Configuration	Description

Io Note2	dBm/190.08 MHz Note3	-54.62		-54.62	
NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					

NOTE 2: PRS_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 4: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.
NOTE 5: Information about types of UE beam is given in annex B.2.1.3 and does not limit UE implementation or test system implementation.

A.7.11.2.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.11.2.1.3-1. The relative PRS-RSRP measurement between the two PRS resources within the same cell shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

Table A.7.11.2.1.3-1: PRS-RSRP absolute accuracy test requirement

	Test requirement Notes1,2,3
Cell 1	$PRS_RP1 -\delta +G_{min} \le$ Reported RSRP(dBm) $\le PRS_RP1 +\delta +G_{max}$
Cell 2	$PRS_RP2 -\delta +G_{min} \le$ Reported RSRP(dBm) $\le PRS_RP2 +\delta +G_{max}$
Note 1:	PRS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.
Note 2:	δ is the RSRP absolute accuracy requirement from table 10.1.24.2.1-2, selected according to the Io used in the test.
Note 3:	G_{min} and G_{max} are the minimum and maximum UE gain values from table B.2.1.6.1-1, selected according to the UE power class.

A.7.11.2.2 PRS-RSRP measurement accuracy test case in RRC_IDLE state in FR2 for case 2 when eDRX cycle > 10.24s

A.7.11.2.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement in RRC_IDLE with eDRX meets the accuracy requirements specified in clauses 10.1.24.2.1 and 10.1.24.2.2 in an environment with AWGN propagation conditions.

A.7.11.2.2.1 Test parameters

The supported test configurations in table A.7.9.2.1.2-1 apply for this test.

The test procedure in clause A.7.9.2.1.2 apply for this test, except that UE is in RRC_IDLE state.

The general test parameters as specified in table A.7.9.2.1.2-2 apply for this test, except those additionally specified in table A.7.11.2.2.1-1.

The OTA related test parameters in table A.7.9.2.1.2-3 apply for this test.

Table A.7.11.2.2.1-1: PRS-RSRP test parameters

Parameter	Unit	Test configuration	Value	Comment
eDRX cycle length (for CN eDRX)	s	1, 2, 3	40.96	
PTW window length	s	1, 2, 3	1.28	

A.7.11.2.2.2 Test Requirements

The test requirements in clause A.7.9.2.1.3 apply for this test.

A.7.11.3 RSCPD measurements

A.7.11.3.1 RSCPD with RSTD measurement accuracy in FR2 SA in RRC_IDLE

A.7.11.3.1.1 Test purpose and environment

The purpose of the test is to verify that the accuracy of RSCPD measurement reported with RSTD measurement is within the specified limits. This test will verify the requirements in clause 10.1.43.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in table A.7.11.3.1.1-1.

Table A.7.11.3.1.1-1: Supported test configurations

Configuration	Description
1	120 kHz SSB SCS, 200 MHz bandwidth, TDD duplex mode

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Both cells are on the same RF channel in FR2.

The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* with *dl-PRS-RSCPD-Request* from LMF via LPP [34] as defined in TS 37.355 [34], clause 6.5.12, to enable UE to perform and report RSCPD in RRC_IDLE, shall be provided to the UE before the start of the test.

A.7.11.3.1.2 Test parameters

The RSCPD with RSTD accuracy test parameters are given in table A.7.11.3.1.1.2-1.

Table A.7.11.3.1.2-1: RSCPD with UE RSTD measurement accuracy test parameters in RRC_IDLE

Parameter	Unit	Test 1

EPRE ratio of OCNG to OCNG DMRS Note 1			
EPRE ratio of PRS to SSS	dB	0	0
Propagation conditions		AWGN	AWGN
Antenna configuration		1x2	1x2
NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols other than those in the slots with transmitted PRS.			

Table A.7. 11.3.1.2-1-2: RSTD accuracy OTA related test parameters

Parameter	Unit	Test 1	
		Cell 1	Cell 2
Angle of arrival configuration		Setup 1 according to clause A.3.15.1	
Assumption for UE beams Note 5		Rough	
N_{OC} Note1	dBm/SCS Note3	-89	
PRS $\hat{E}_s / N_{oc}$	dB	-5.7	-11.9
PRP Note2	dBm/SCS	-94.7	-100.9
PRS $\hat{E}_s / I_{ot}$ Note 4	dB	-6	-13
Io Note2	dBm/190.08 MHz Note3	-55.75	-55.75
NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{OC} to be fulfilled.			
NOTE 2: PRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The Io is calculated based only on the symbols in which PRS is transmitted.			
NOTE 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.			
NOTE 4: Calculation of Es/Iot includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] table 6.2.1.3-4.			
NOTE 5: Information about types of UE beam is given in clause B.2.1.3 and does not limit UE implementation or test system implementation.			

A.7.11.3.1.3 Test requirements

The RSCPD reported together with RSTD fulfils RSCPD measurement accuracy specified in clause 10.1.43.2 for Cell 2.

A.8 E-UTRA standalone tests for NR RRM

Editor notes: All NR RRM tests under E-UTRA standalone operations are included in this annex. All EN-DC related NR RRM tests are in A.4 and A.5.

A.8.1 Void

A.8.2 RRC_IDLE state mobility

A.8.2.1 Inter-RAT NR Cell re-selection

A.8.2.1.1 E-UTRA Cell reselection to higher priority NR target Cell in FR1

A.8.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in TS 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.1.1-1, A.8.2.1.1.1-2, A.8.2.1.1.1-3 and A.8.2.1.1.1-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. E-UTRA cell 1 is already identified by the UE prior to the start of the test. Cell 2 is of higher priority than cell 1.

Table A.8.2.1.1.1-1: Supported test configurations

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.8.2.1.1.1-2: General test parameters for E-UTRA cell re-selection FR1 NR cell test case

Parameter		Unit	Test configuration	Value	Comment
Initial condition	Active cell		1, 2, 3, 4, 5, 6	Cell 2	The UE camps on cell 2 in the initial phase
	Neighbour cell		1, 2, 3, 4, 5, 6	Cell 1	
T1 end condition	Active cell			Cell 1	During T1 period the UE reselects to cell 1
	Neighbour cell			Cell 2	
T3 end condition	Active cell		1, 2, 3, 4, 5, 6	Cell 2	The UE shall perform reselection to cell 2 during T3
	Neighbour cell		1, 2, 3, 4, 5, 6	Cell 1	
RF Channel Number			1, 2, 3, 4, 5, 6	1, 2	E-UTRAN radio channel (1) and NR radio channel (2) are used for this test
Time offset between cells			1, 4	3 ms	Asynchronous cells
			2, 5	3 μs	Synchronous cells
			3, 6	3 μs	Synchronous cells
Access Barring Information		-	1, 2, 3, 4, 5, 6	Not Sent	No additional delays in random access procedure.
DRX cycle length		s	1, 2, 3, 4, 5, 6	1.28	The value shall be used for all cells in the test.

Parameter	Unit	Test configuration	Value	Comment
NR PRACH configuration index		1, 2, 3, 4, 5, 6	102	The detailed configuration is specified in TS 38.211 clause 6.3.3.2
T1	s	1, 2, 3, 4, 5, 6	15	T1 needs to be defined so that cell re-selection reaction time is taken into account.
T2	s	1, 2, 3, 4, 5, 6	>7	During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3.
T3	s	1, 2, 3, 4, 5, 6	75	T3 needs to be defined so that cell re-selection reaction time is taken into account.

NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.				

A.8.2.1.1.2 Test Requirements

The cell reselection delay to a higher priority NR cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration updateon cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search}$ + $T_{evaluate,\ NR}$ + $T_{SI\text{-}NR,}$ and to a lower priority cell can be expressed as: $T_{evaluate,\ EUTRAN}$+ $T_{SI\text{-}EUTRA,}$

Where:

$T_{higher_priority_search}$ See clause 4.2.2 in TS 36.133 [15]

$T_{evaluate,\ NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

$T_{evaluate,\ EUTRAN}$ See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{SI\text{-}EUTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority NR cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

A.8.2.1.2 E-UTRA Cell reselection to lower priority NR target Cell in FR1 for UE configured with highSpeedInterRAT-NR-r16

A.8.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.2.1-1, A.8.2.1.2.1-2, A.8.2.1.2.1-3 and A.8.2.1.2.1-4. In SIB of the E-UTRA cell, highSpeedInterRAT-NR-r16 is configured and the carrier of NR cell is configured with highSpeedCarrierNR-r16. The test consists of two time periods, with time duration of T1 and T2 respectively. Both E-UTRA cell 1 and NR cell 2 are already identified by the UE prior to the start of the test. NR cell 2 is of lower priority than E-UTRA cell 1.

Table A.8.2.1.2.1-1: Supported test configurations for UE configured with highSpeedInterRAT-NR-r16

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode

6	LTE TDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.8.2.1.2.1-2: General test parameters in E-UTRA cell re-selection FR1 NR cell test case for UE configured with highSpeedInterRAT-NR-r16

Parameter		Unit	Test configuration	Value	Comment
Initial condition	Active cell		1, 2, 3, 4, 5, 6	Cell 1	The UE camps on cell 1 in the initial phase
T1 end condition	Active cell		1, 2, 3, 4, 5, 6	Cell 2	The UE shall perform reselection to cell 2 during T1
	Neighbour cells		1, 2, 3, 4, 5, 6	Cell 1	
T2 end condition	Active cell		1, 2, 3, 4, 5, 6	Cell 1	The UE shall perform reselection to cell 1 during T2 for iteration of the tests.
	Neighbour cells		1, 2, 3, 4, 5, 6	Cell 2	
RF Channel Number			1, 2, 3, 4, 5, 6	1, 2	E-UTRAN radio channel (1) and NR radio channel (2) are used for this test

NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: Void.			

A.8.2.1.2.2 Test Requirements

The cell reselection delay to a lower priority NR cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, NR_HST} + T_{SI-NR,}$

Where:

$T_{evaluate, NR_HST}$ See Table 4.2.2.5.6-2 in clause 4.2.2.5.6 in [15]

T_{SI-NR} Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority NR cell.

A.8.2.2 E-UTRA – NR Inter-RAT Early Measruement Reporting

A.8.2.2.1 E-UTRA – NR Early Measurement Reporting for NR in FR1

A.8.2.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in table A.8.2.2.1.1-1.

Table A.8.2.2.1.1-1: Supported test configurations

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in table A.8.2.2.1.1-4. The general test parameters and the cell specific test parameters for the NR cell are specified in table A.8.2.2.1.1-2 and table A.8.2.2.1.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

Table A.8.2.2.1.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1, 2, 3, 4, 5, 6	E-UTRAN Cell 1

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.8.2.2.1.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acqure the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as: $T_{higher_priority_search}$ + $T_{SSB_index,NR}$ + $T_{evaluate, NR}$.

Where:

$T_{higher_priority_search}$ See clause 4.2.2 in TS 36.133 [15]

$T_{SSB_index,NR}$ See Table 4.9.2.4-1 in clause 4.9.2.4 in TS 36.133 [15]

$T_{evaluate, NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 70.24 s, allow 71 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in section 9.1.2B in TS 36.133 [15] and section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.8.2.2.2 E-UTRA – NR Early Measurement Reporting for NR in FR2

A.8.2.2.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in table A.8.2.2.2.1-1.

Table A.8.2.2.2.1-1: Supported test configurations

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in table A.8.2.2.2.1-4. The general test parameters and the cell specific test parameters for the NR cell are speficied in table A.8.2.2.2.1-2 and table A.8.2.2.2.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

Table A.8.2.2.2.1-2: General test parameters

Parameter	Unit	Test configuration	Value	Comment
Active cell		1, 2	E-UTRAN Cell 1	E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.
Neighbour cell		1, 2	NR Cell 2	Cell 2 is of higher priority.
E-UTRA RF Channel Number		1, 2	1	One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2	1	One FR2 NR carrier frequency is used.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.				

A.8.2.2.2.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acqure the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as: $T_{detect, NR}$.

Where:

$T_{detect, NR}$ See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 128 s, allow 128 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in section 9.1.2B in TS 36.133 [15] and section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.8.3 RRC_CONNECTED state mobility

A.8.3.1 Handover

A.8.3.1.1 E-UTRAN - NR handover in FR1

A.8.3.1.1.1 Test Purpose and Environment

This test shall verify the E-UTRAN to NR FR1 handover requirements as specified in clause 6.1.2.1 specified in clause 5.3.4 in TS 36.133 [15].

The test comprises of one E-UTRA carrier and one NR carrier. There are two cells and one cell on each carrier. Cell 1 is the E-UTRAN and Cell 2 is an inter-RAT NR neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement

report. Gap pattern configuration with id #0 as specified in table 8.1.2.1-1 of TS 36.133 [15] is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.8.3.1.1-1. General test parameters are provided in table A.8.3.1.1-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.8.3.1.1-3 and A.8.3.1.1-4 respectively.

Table A.8.3.1.1-1: Supported test configurations for E-UTRAN inter-RAT NR handover

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.8.3.1.1-2: General test parameters for E-UTRAN inter-RAT NR handover

Parameter		Unit	Value	Comment
NR RF Channel Number			1	1 NR carrier frequency is used in the test
LTE RF Channel Number			2	1 E-UTRAN carrier frequency is used in the test
Initial conditions	Active cell		Cell 1	E-UTRAN cell
	Neighbouring cell		Cell 2	NR cell
Final condition	Active cell		Cell 2

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: $\hat{E}_s/I_{ot}$, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.8.3.1.1.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in TS36.133.

$T_{interrupt}$ = 62 ms in the test; $T_{interrupt}$ is defined in TS36.133 clause 5.3.4.3.

This gives a total of 112 ms.

A.8.4 Measurement procedure

A.8.4.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay

A.8.4.1.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay in non-DRX

A.8.4.1.1.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and no DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in table A.8.4.1.1.1-1 below. Test parameters and cell-specific parameters for the NR cell are provided in tables A.8.4.1.1.1-2 and A.8.4.1.1.1-3 below, respectively. Cell-specific parameters for the E-UTRA cell are provided in table A.3.7.2.1-1 in clause A.3.7.2.1.

Table A.8.4.1.1.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test

Config	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.8.4.1.1.1-2: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
E-UTRA RF Channel Number		Config 1,2,3,4,5,6	1		One E-UTRAN carrier frequencies is used.
NR RF Channel Number		Config 1,2,3,4,5,6	1		One NR FR1 carrier frequencies is used.
Active cell		Config 1,2,3,4,5,6	Cell 1		Cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		Config 1,2,3,4,5,6	Cell 2		Cell 2 is on NR RF channel number 1.
SSB configuration		Config 1,4	SSB.1 FR1		As specified in clause A.3.10.1

		Config 2,5	SSB.1 FR1		As specified in clause A.3.10.1
		Config 3,6	SSB.2 FR1		As specified in clause A.3.10.1
CP length		Config 1,2,3,4,5,6	Normal		Applicable to both cells.
DRX		Config 1,2,3,4,5,6	OFF		DRX is not used
Frame time offset between serving and neighbour cells	ms	Config 1,2,4,5	3	7	Asynchronous cells. The timing of Cell 2 relative to the timing of Cell 1.
	µs	Config 3,6	3		Synchronous cells.
SFN offset between serving and neighbour cells		Config 1,2,3,4,5,6	0	1	SFN of Cell 2 relative to SFN of Cell 1.
T1	s	Config 1,2,3,4,5,6	1		

Table A.8.4.1.1.1-3: Cell specific test parameters for Cell 2 in inter-RAT SFTD measurement delay test

Parameter	Unit	Test configuration	Cell 2
NR RF Channel Number		Config 1,2,3,4,5,6	1

$\hat{E}_s/N_{oc}$	dB	Config 1,2,3,4,5,6	4
Io Note 3	dBm/9.36 MHz	Config 1,2,4,5	-64.59
	dBm/38.16 MHz	Config 3,6	-58.50
Propagation Condition		Config 1,2,3,4,5,6	AWGN

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.1.1.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at $T_{RRC_procedure_delay} + T_{measure_SFTD1}$ after the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2\times TTI_{DCCH}$ longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.1.2 E-UTRA – NR Inter-RAT SFTD Measurement Delay in DRX

A.8.4.1.2.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in table A.8.4.1.2.1-1 below. Test parameters are provided in tables A.8.4.1.2.1-2 below. Cell-specific parameters for the E-UTRA and NR cells are provided in table A.3.7.2.1-1 in clause A.3.7.2.1, and table A.8.4.1.1.1-3 in clause A.8.4.1.1.1, respectively.

Table A.8.4.1.2.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX

Config	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.8.4.1.2.1-2: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
E-UTRA RF Channel Number		Config 1,2,3,4,5,6	1		One E-UTRAN carrier frequencies is used.
NR RF Channel Number		Config 1,2,3,4,5,6	1		One NR FR1 carrier frequencies is used.
Active cell		Config 1,2,3,4,5,6	Cell 1		Cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		Config 1,2,3,4,5,6	Cell 2		Cell 2 is on NR RF channel number 1.
SSB configuration		Config 1,4	SSB.1 FR1		As specified in clause A.3.10.1
		Config 2,5	SSB.1 FR1		As specified in clause A.3.10.1
		Config 3,6	SSB.2 FR1		As specified in clause A.3.10.1
CP length		Config 1,2,3,4,5,6	Normal		Applicable to both cells.

DRX		Config 1,2,3,4,5,6	DRX.4		DRX configuration as specified in clause A.3.3.4
Frame time offset between serving and neighbour cells	ms	Config 1,2,4,5	3	7	Asynchronous cells. The timing of Cell 2 relative to the timing of Cell 1.
	µs	Config 3,6	3		Synchronous cells.
SFN offset between serving and neighbour cells		Config 1,2,3,4,5,6	0	1	SFN of Cell 2 relative to SFN of Cell 1.
T1	s	Config 1,2,3,4,5,6	1		

A.8.4.1.2.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at the earliest DRX activity time following upon $T_{RRC_procedure_delay} + T_{measure_SFTD1}$ from the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2 \times TTI_{DCCH}$ longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2 E-UTRA – NR Inter-RAT Measurements

A.8.4.2.1 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

A.8.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.1.1-1, A.8.4.2.1.1-2, A.8.4.2.1.1-3 and A.8.4.2.1.1-4.

Measurement gap pattern configuration is defined in table A.8.4.2.1.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Number		1, 2, 3, 4, 5, 6	1	One E-UTRAcarrier frequency is used.
NR RF Chanel Number		1, 2, 3, 4, 5, 6	1	One FR1 NR carrier frequency is used.
Active cell		1, 2, 3, 4, 5, 6	E-UTRA cell 1 (PCell)	E-UTRA cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		1, 2, 3, 4, 5, 6	NR cell 2	NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2, 3, 4, 5, 6	0	As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2, 3, 4, 5, 6	39	As specified in TS 36.331 [16].
b2-Threshold1	dBm	1, 2, 3, 4, 5, 6	Note 1	E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]
b2-Threshold2NR	dBm	1, 2, 3, 4, 5, 6	Note 2	SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16]
Hysteresis	dB	1, 2, 3, 4, 5, 6	0	
CP length		1, 2, 3, 4, 5, 6	Normal	
TimeToTrigger	s	1, 2, 3, 4, 5, 6	0	
Filter coefficient		1, 2, 3, 4, 5, 6	0	L3 filtering is not used
DRX		1, 2, 3, 4, 5, 6	OFF	DRX is not used
Time offset between serving and neighbour cells		1, 4	3 ms	Asynchronous cells. The timing of Cell 2 is 3 ms later than the timing of Cell 1.
		2, 3, 5, 6	3μs	Synchronous cells.
T1	s	1, 2, 3, 4, 5, 6	5	
T2	s	1, 2, 3, 4, 5, 6	1	
NOTE 1: The value of b2-Threshold1 is defined in table A.8.4.2.1.1-3 NOTE 2: The value of b2-Threshold2NR is defined in table A.8.4.2.1.1-4				

Table A.8.4.2.1.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neigbour cell in FR1 without SSB time index detection

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.2.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.2 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

A.8.4.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.2.1-1, A.8.4.2.2.1-2, A.8.4.2.2.1-3 and A.8.4.2.2.1-4.

In tests 1 and 2, measurement gap pattern configuration is defined in table A.8.4.2.2.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
E-UTRA RF Channel Number		1, 2, 3, 4, 5, 6	1		One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2, 3, 4, 5, 6	1		One FR1 NR carrier frequency is used.
Active cell		1, 2, 3, 4, 5, 6	E-UTRA cell 1 (PCell)		E-UTRA cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		1, 2, 3, 4, 5, 6	NR cell 2		NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2, 3, 4, 5, 6	0		As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2, 3, 4, 5, 6	39		As specified in TS 36.331 [16].
b2-Threshold1	dBm	1, 2, 3, 4, 5, 6	Note 1		E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]
b2-Threshold2NR	dBm	1, 2, 3, 4, 5, 6	Note 2		SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16]
Hysteresis	dB	1, 2, 3, 4, 5, 6	0		
CP length		1, 2, 3, 4, 5, 6	Normal		
TimeToTrigger	s	1, 2, 3, 4, 5, 6	0		
Filter coefficient		1, 2, 3, 4, 5, 6	0		L3 filtering is not used
DRX		1, 2, 3, 4, 5, 6	DRX.9	DRX.12	As specified in clause A.3.3
Time offset between serving and neighbour cells		1, 4	3 ms		Asynchronous cells. The timing of Cell 2 is 3 ms later than the timing of Cell 1.
		2, 3, 5, 6	3μs		Synchronous cells.
T1	s	1, 2, 3, 4, 5, 6	5		
T2	s	1, 2, 3, 4, 5, 6	2	11	
NOTE 1: The value of b2-Threshold1 is defined in table A.8.4.2.2.1-3 NOTE 2: The value of b2-Threshold2NR is defined in table A.8.4.2.2.1-4					

Table A.8.4.2.2.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neigbour cell in FR1 without SSB time index detection

Parameter	Unit	Configuration	Cell 1	
			T1	T2

Propagation Condition		1, 2, 3, 4, 5, 6	TDL-C 300 ns 100 Hz	
Antenna Configuration and Correlation Matrix		1, 2, 3, 4, 5, 6	1x2 Low	

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

A.8.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.3.1-1, A.8.4.2.3.1-2, A.8.4.2.3.1-3 and A.8.4.2.3.1-4.

Measurement gap pattern configuration is defined in table A.8.4.2.3.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.3.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Number		1, 2, 3, 4, 5, 6	1	One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2, 3, 4, 5, 6	1	One FR1 NR carrier frequency is used.
Active cell		1, 2, 3, 4, 5, 6	E-UTRA cell 1 (PCell)	E-UTRA cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		1, 2, 3, 4, 5, 6	NR cell 2	NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2, 3, 4, 5, 6	0	As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2, 3, 4, 5, 6	39	As specified in TS 36.331 [16].
b2-Threshold1	dBm	1, 2, 3, 4, 5, 6	Note 1	E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]
b2-Threshold2NR	dBm	1, 2, 3, 4, 5, 6	Note 2	SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16]
Hysteresis	dB	1, 2, 3, 4, 5, 6	0	
CP length		1, 2, 3, 4, 5, 6	Normal	
TimeToTrigger	s	1, 2, 3, 4, 5, 6	0	
Filter coefficient		1, 2, 3, 4, 5, 6	0	L3 filtering is not used
DRX		1, 2, 3, 4, 5, 6	OFF	DRX is not used
Time offset between serving and neighbour cells		1, 4	3 ms	Asynchronous cells. The timing of Cell 2 is 3 ms later than the timing of Cell 1.
		2, 3, 5, 6	3μs	Synchronous cells.
T1	s	1, 2, 3, 4, 5, 6	5	
T2	s	1, 2, 3, 4, 5, 6	2	

NOTE 1: The value of b2-Threshold1 is defined in table A.8.4.2.3.1-3
NOTE 2: The value of b2-Threshold2NR is defined in table A.8.4.2.3.1-4

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.2.3.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1040 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

A.8.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.4.1-1, A.8.4.2.4.1-2, A.8.4.2.4.1-3 and A.8.4.2.4.1-4.

In tests 1 and 2, measurement gap pattern configuration is defined in table A.8.4.2.4.1-2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.4.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
E-UTRA RF Channel Number		1, 2, 3, 4, 5, 6	1		One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2, 3, 4, 5, 6	1		One FR1 NR carrier frequency is used.
Active cell		1, 2, 3, 4, 5, 6	E-UTRA cell 1 (PCell)		E-UTRA cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		1, 2, 3, 4, 5, 6	NR cell 2		NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2, 3, 4, 5, 6	0		As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2, 3, 4, 5, 6	39		As specified in TS 36.331 [16].
b2-Threshold1	dBm	1, 2, 3, 4, 5, 6	Note 1		E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
b2-Threshold2NR	dBm	1, 2, 3, 4, 5, 6	Note 2		SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16]
Hysteresis	dB	1, 2, 3, 4, 5, 6	0		
CP length		1, 2, 3, 4, 5, 6	Normal		
TimeToTrigger	s	1, 2, 3, 4, 5, 6	0		
Filter coefficient		1, 2, 3, 4, 5, 6	0		L3 filtering is not used
DRX		1, 2, 3, 4, 5, 6	DRX.9	DRX.12	As specified in clause A.3.3
Time offset between serving and neighbour cells		1, 4	3 ms		Asynchronous cells. The timing of Cell 2 is 3 ms later than the timing of Cell 1.

Antenna Configuration and Correlation Matrix		1, 2, 3, 4, 5, 6	1x2	
NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.				

A.8.4.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.5 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is not used

A.8.4.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.5.1-1, A.8.4.2.5.1-2 and A.8.4.2.5.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.5.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

Table A.8.4.2.5.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in non-DRX

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.5.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Number		1, 2	1	One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2	1	One FR2 NR carrier frequency is used.
Active cell		1, 2	E-UTRA cell 1 (PCell)	E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.
Neighbour cell		1, 2	NR cell 2	NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2	0	As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2	39	As specified in TS 36.331 [16].
b1-ThresholdNR	dBm	1, 2	Note 1	SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]
Hysteresis	dB	1, 2	0	
CP length		1, 2	Normal

Propagation Condition		1, 2	AWGN	

NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.8.4.2.5.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is not required to report SSB time index.

Table A.8.4.2.5.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX

Test case	Measurement reporting delay (ms)	
	Test 1: D1 ms	Test 2: D2 ms
UE power class 3	3200	1600

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.6 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is used

A.8.4.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.6.1-1, A.8.4.2.6.1-2 and A.8.4.2.6.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.6.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

Table A.8.4.2.6.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in DRX

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.6.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

A.8.4.2.6.2 Test Requirements

In test 1, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D3 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms and D4 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is not required to report SSB time index.

Table A.8.4.2.6.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX

Test case	Measurement reporting delay (ms)			
	D1 ms	D2 ms	D3 ms	D4 ms
UE power class 3	4800	51200	4800	51200

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.7 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is not used

A.8.4.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.7.1-1, A.8.4.2.7.1-2 and A.8.4.2.7.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.7.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.7.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in non-DRX

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.7.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Numbers		1, 2	1	One E-UTRA carrier frequency is used.
NR RF Channel Numbers		1, 2	1	One FR2 NR carrier frequency is used.
Active cell		1, 2	E-UTRA cell 1 (PCell)	E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.
Neighbour cell		1, 2	NR cell 2	NR cell 2 is on NR RF channel number 1.
Gap Pattern Id		1, 2	0	As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].
Measurement gap offset		1, 2	39	As specified in TS 36.331 [16].
b1-ThresholdNR	dBm	1, 2	Note 1	SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]
Hysteresis	dB	1, 2	0

Io Note3	dBm/95.04 MHz	1, 2	-66.7	-58. 0
Propagation Condition		1, 2	AWGN	

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

A.8.4.2.7.2 Test Requirements

the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

The UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

Table A.8.4.2.7.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX

Test case	Measurement reporting delay (ms)	
	D1 ms	D2 ms
UE power class 3	4160	2080

A.8.4.2.8 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is used

A.8.4.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.2.8.1-1, A.8.4.2.8.1-2 and A.8.4.2.8.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

Measurement gap pattern configuration defined in table A.8.4.2.8.1-2 is provided for a UE that does not support per-FR gap, and no gap pattern (Gap Pattern Id and Measurement gap offset) is configured for a UE capable of per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.8.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in DRX

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.8.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in DRX

Parameter	Unit	Test configuration	Value		Comment
			Test 1	Test 2	
E-UTRA RF Channel Number		1, 2	1		One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2	1		One FR2 NR carrier frequency is used.
Active cell		1, 2	E-UTRA cell 1 (PCell)		E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

A.8.4.2.8.2 Test Requirements

In test 1, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms and D3 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In test 2, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2 for a UE incapable of per-FR gap and for a UE capable of per-FR gap, respectively. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

In tests 1 and 2, the UE is required to report SSB time index.

Table A.8.4.2.8.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in DRX

Test case	Measurement reporting delay (ms)			
	D1 ms	D2 ms	D3 ms	D4 ms
UE power class 3	6240	66560	6240	66560

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.2.9 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection in DRX for UE configured with highSpeedInterRAT-NR-r16

A.8.4.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements when UE is configured with *highSpeedInterRAT-NR-r16*.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.2.9.1-1, A.8.4.2.9.1-2, A.8.4.2.9.1-3 and A.8.4.2.9.1-4.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.2.9.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1 for UE configured with highSpeedInterRAT-NR-r16

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.2.9.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection for UE configured with highSpeedInterRAT-NR-r16

Parameter	Unit	Test configuration	Value	Comment

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.2.9.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 4.8 s from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.3 E-UTRAN - NR Inter-RAT event-triggered without measurement gaps

A.8.4.3.1 NR Inter-RAT event triggered reporting tests for FR2 without MG nor DRX

A.8.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.29 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.30 of TS 36.133 [15] for E-UTRAN TDD-NR measurements, as well as the interruption requriements in clause 7.8.2.22.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in tables A.8.4.3.1.1-1, A.8.4.3.1.1-2 and A.8.4.3.1.1-3.

The cell specific test parameters for E-UTRA Cell 1 as PCell are defined in clause A.3.7.2.2.

No measurement gap is configured for the test. UE is continuously scheduled in DL in LTE PCell during the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

Table A.8.4.3.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in non-DRX

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.3.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without MG nor DRX

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Number		1, 2	1	One E-UTRA carrier frequency is used.
NR RF Channel Number		1, 2	1	One FR2 NR carrier frequency is used.
Active cell		1, 2	E-UTRA cell 1 (PCell)	E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.
Neighbour cell		1, 2	NR cell 2	NR cell 2 is on NR RF channel number 1.

NOTE 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SS B_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 6: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4.

A.8.4.3.1.2 Test Requirements

In the test, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2, where D1 = 12.8 s for UE power class 3.

During the test, the interruption ratio (number of interrupted subframes over the number of total subframes) in LTE PCell shall be less than 1.25 %, and each interruption shall not exceed 1 subframe.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

In the test, the UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.4.3.2 NR Inter-RAT event triggered reporting tests for FR1 without gaps when DRX is not used

A.8.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when performing inter-RAT NR measurements without gaps and with or without interruptions. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.29 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.30 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

The purpose of this test is also to verify that the interruption ratio does not exceed the limits for the LTE PCell during the inter-RAT NR measurement without gaps and with interruptions. This test will verify the interruption ratio for LTE PCell in standalone LTE specified in clause 7.8.2.22.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in tables A.8.4.3.2.1-1, A.8.4.3.2.1-2, A.8.4.3.2.1-3 and A.8.4.3.2.1-4.

The serving frequency should be selected for this test case should be one in which the UE reports UE capabilities interRAT-NeedForGapsNR-r16=FALSE and interRAT-NeedForInterruptionNR-r18=’nogap-interruption’ or interRAT-NeedForInterruptionNR-r18=’nogap-nointerruption’.

No measurement gap is configured for the test. UE is continuously scheduled in DL in LTE PCell during the test.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Table A.8.4.3.2.1-1: NR inter-RAT event triggered reporting tests without gaps and with interruptions

Configuration	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.8.4.3.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without gaps and with interruptions

Parameter	Unit	Test configuration	Value	Comment
E-UTRA RF Channel Number		1, 2, 3, 4, 5, 6	1	One E-UTRAcarrier frequency is used.
NR RF Chanel Number		1, 2, 3, 4, 5, 6	1	One FR1 NR carrier frequency is used.
Active cell		1, 2, 3, 4, 5, 6	E-UTRA Cell 1 (PCell)	E-UTRA Cell 1 is on E-UTRA RF channel number 1.
Neighbour cell		1, 2, 3, 4, 5, 6	NR Cell 2	NR Cell 2 is on NR RF channel number 1.
b1-ThresholdNR	dBm	1, 2, 3, 4, 5, 6	Note 1	SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]

Propagation Condition		1, 2, 3, 4, 5, 6	AWGN	
Antenna Configuration and Correlation Matrix		1, 2, 3, 4, 5, 6	1x2	

NOTE 1: OCNG shall be used such that the cell is fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.8.4.3.2.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1 and T2. During both time durations the interruption ratio should not exceed 2.5 %.

In the test, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2.

- D1 = 1280 for a UE that supports interRAT-NeedForInterruptionNR-r18='nogap-interruption'
- D1 = 800 for a UE that supports interRAT-NeedForInterruptionNR-r18='nogap-nointerruption'

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE is not required to report SSB time index.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.5 Measurement performance

A.8.5.1 SFTD accuracy

A.8.5.1.1 SFTD accuracy

A.8.5.1.1.1 Test Purpose

The purpose of this set of tests is to verify that the SFTD measurement accuracy is within the specified limits. This test will verify the requirements as specified in clause 9.1.27 in TS 36.133 [15] for inter-RAT FR1 SFTD measurements.

A.8.5.1.1.2 Test Environment

Supported test configurations are shown in table A.8.5.1.1.2-1. In this set of test cases there are two cells on different carriers. Cell 1 is E-UTRAN PCell and Cell 2 is inter-RAT NR FR1 target cell. The test parameters of cell 1 are given in clause A.8.5.1.1.2-2. The test parameters of cell 2 are given in table A.8.5.1.1.2-3. The SFTD between PCell and target cell shall be set by the test equipment to one of the time differences in table A.8.5.1.1.2-4.

Table A.8.5.1.1.2-1: Supported test configurations for SFTD accuracy

Configuration	Description
1	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD
2	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD
3	NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD
4	NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD
5	NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD
6	NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD
NOTE: The UE is only required to be tested in one of the supported test configurations

Propagation condition		1~6		AWGN
Antenna configuration		1~6		1x2
NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.				

Parameter	Config	Unit	Test 1
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.			
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.			
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.			
NOTE 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification			

Table A.8.5.1.1.2-4: Timing offsets for SFTD accuracy test

Condition	SFN offset between PCell and PSCell	Frame boundary offset between PCell and PSCell (Ts)
1	100	-122000
2	300	-60540
3	500	1000
4	700	62540
5	900	124000

A.8.5.1.1.3 Test Requirements

The SFTD reported by the UE consists of 2 elements, SFN offset and frame boundary offset between PCell and inter-RAT NR target cell. The reported SFTD accuracy shall fulfil the requirement in clause 9.1.27 in TS 36.133 [15].

A.8.5.2 E-UTRA – NR Inter-RAT Measurement Performance requirements

A.8.5.2.1 SS-RSRP

A.8.5.2.1.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

A.8.5.2.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR1 SS-RSRP measurements.

A.8.5.2.1.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.1.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.1.1.2-2.

Table A.8.5.2.1.1.2-1: SS-RSRP Inter-RAT SS-RSRP supported test configurations

Config	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.					
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.					
NOTE 3: SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.					
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.					
NOTE 5: NR operating band groups are as defined in clause 3.5.2.					
NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.					

A.8.5.2.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

A.8.5.2.1.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

A.8.5.2.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR2 SS-RSRP measurements.

A.8.5.2.1.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.1.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRP inter-RAT measurement are tested by using test setup in table A.8.5.2.1.2.2-2 and table A.8.5.2.1.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

Table A.8.5.2.1.2.2-1: SS-RSRP Inter-RAT SS-RSRP supported test configurations

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: Void NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. NOTE 5: Void NOTE 6: Void NOTE 7: SSB_RP is applied at 1 dB above the minimum level specified in table B.2.3-2 for beam peak. NOTE 8: Io is applied at $10\log_{10}(792)$dB+1 dB above the minimum level specified in table B.2.3-2 for beam peak. NOTE 9: Calculation of Es/Iot_{BB} includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor ΔMB_P from TS 38.101-2 [19] Table 6.2.1.3-4. Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.			

A.8.5.2.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

A.8.5.2.2 SS-RSRQ

A.8.5.2.2.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

A.8.5.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR1 SS-RSRQ measurements.

A.8.5.2.2.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.2.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.2.1.2-2.

Table A.8.5.2.2.1.2-1: SS-RSRQ Inter-RAT SS-RSRQ supported test configurations

Config	Description

Propagation condition			-	AWGN		
Antenna configuration			-	1x2		
NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 4: SS-RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port. NOTE 5: NR operating band groups are as defined in clause 3.5.2. NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.						

A.8.5.2.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

A.8.5.2.2.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

A.8.5.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR2 SS-RSRQ measurements.

A.8.5.2.2.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.2.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRQ inter-RAT measurement are tested by using test setup in table A.8.5.2.2.2.2-2 and table A.8.5.2.2.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

Io Note2	dBm/95.04 MHz Note4	-63.95	(Table B.2.3-2 Rx Beam Peak +35.22 dB) (Note 9)
NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 2: SSB_RP, SS-RSRQ, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: Void NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone. NOTE 5: Void NOTE 6: Void NOTE 7: N_{oc} for SCS 15kHz is applied at $-10\log_{10}(8)+4$ dB above the minimum level specified in table B.2.3-2 for beam peak. N_{oc} for SCS 120kHz is applied at 4 dB above the minimum level specified in table B.2.3-2 for beam peak. NOTE 8: SSB_RP is applied at 2.25 dB above the minimum level specified in table B.2.3-2 for beam peak. NOTE 9: Io is applied at $10\log_{10}(792)+6.22$ dB above the minimum level specified in table B.2.3-2 for beam peak. Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.			

A.8.5.2.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

In this test case there are two cells on different carriers and measurement gaps are provided

A.8.5.2.3 SS-SINR

A.8.5.2.3.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

A.8.5.2.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR1 SS-SINR measurements.

A.8.5.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.3.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in table A.8.5.2.3.1.2-2.

Table A.8.5.2.3.1.2-1: SS- SINR Inter-RAT SS- SINR supported test configurations

Config	Description
1	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
2	LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
3	LTE FDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
4	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode
5	LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode
6	LTE TDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Parameter	Unit	Test 1	Test 2	Test 3
		Cell 2	Cell 2	Cell 2
NOTE 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. NOTE 5: NR operating band groups are as defined in clause 3.5.2. NOTE 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.				

A.8.5.2.3.1.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

A.8.5.2.3.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

A.8.5.2.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR2 SS-SINR measurements.

A.8.5.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.8.5.2.3.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-SINR inter-RAT measurement are tested by using test setup in table A.8.5.2.3.2.2-2 and A.8.5.2.3.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

Table A.8.5.2.3.2.2-1: SS-SINR Inter-RAT SS-SINR supported test configurations

Configuration	Description
1	LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SSB_RP, SS-SINR, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone.
NOTE 5: Void
NOTE 6: Void
NOTE 7: N_{oc} for SCS 15kHz is applied at $-10\log_{10}(8)+4$ dB above the minimum level specified in table B.2.3-2 for beam peak. N_{oc} for SCS 120kHz is applied at 4 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 8: SSB_RP is applied at 3 dB above the minimum level specified in table B.2.3-2 for beam peak.
NOTE 9: Io is applied at level $10\log_{10}(792)+6.54$ dB above the minimum level specified in table B.2.3-2 for beam peak.
Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

A.8.5.2.3.2.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

A.9 V2X Tests

A.9.1 V2X Tests in FR1

A.9.1.1 Test for V2X UE Transmit Timing

A.9.1.1.1 Test for GNSS as Synchronization Reference Source

A.9.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE timing requirements as specified in clause 12.2.2, when the GNSS is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.1.1-1 defines test parameters for UE transmit timing accuracy tests for V2X. There is one GNSS based synchronization source during the test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

Table A.9.1.1.1.1-1: V2X Sidelink Test Parameters for UE Transmit Timing Tests for GNSS as Timing Reference

Parameter	Unit	Value	Comment
RF Channel Number		1	HD carrier in Band n47 or n38
Channel Bandwidth ($BW_{channel}$) Note 1	MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
SCS	kHz	30	
Active cell		None	
Active SyncRef UE		None	
V2X sidelink communication preconfiguration		As specified in section A.3.21.2	IE values unless specified otherwise in this test.
PSCCH Reference Measurement Channel		CC.1A HD	As specified in table A.3.21.3-1
PSSCH Reference Measurement Channel		CD.1A HD	As specified in table A.3.21.3-2
Propagation condition		AWGN	
NOTE 1: The UE is only required to be tested in one of the supported test configurations.			

A.9.1.1.1.2 Test requirements

For parameters specified in tables A.9.1.1.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.2. The timing accuracy is verified by using PSSCH transmissions.

A.9.1.1.2 Test for SyncRef UE as Synchronization Reference Source

A.9.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.5, when SyncRef UE is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.2.1-1 defines test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active SyncRef UE in this test without either serving cell and or GNSS signals. Before the test starts, the UE has been synchronized to the SyncRef UE. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

Table A.9.1.1.2.1-1: General Test Parameters for V2X UE Transmit Timing Test for SyncRef UE as Timing Reference

Parameter		Unit	Value	Comment
RF Channel Number			1	HD carrier in Band n47 or n38

Propagation condition			AWGN	
NOTE 1: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 2: S-PSS E_s/N_{oc} and S-SSS E_s/N_{oc} are set the same as PSBCH E_s/N_{oc}. NOTE 3: The UE is only required to be tested in one of the supported test configurations.				

A.9.1.1.2.2 Test requirements

For parameters specified in tables A.9.1.1.2.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.5. The timing accuracy is verified by using PSSCH transmissions.

A.9.1.1.3 Test for FR1 NR Cell as Synchronization Reference Source

A.9.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.3, when the downlink timing of the serving cell (RRC_IDLE) or PCell (RRC_CONNECTED) on a non-V2X sidelink carrier is used as timing reference. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X sidelink communication.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Table A.9.1.1.3.1-1, A.9.1.1.3.1-2 and A.9.1.1.3.1-3 define test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active cell (PCell) in this test. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

Table A.9.1.1.3.1-1: Supported test configurations for FR1 PCell

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
2	NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
3	NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE: The UE is only required to pass in one of the supported test configurations in FR1

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.9.1.1.3.2 Test requirements

For parameters specified in tables A.9.1.1.3.1-1 A.9.1.1.3.1-2 and A.9.1.1.3.1-3, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.3. The timing accuracy is verified by using PSSCH transmissions.

A.9.1.2 Test for Initiation/Cease of S-SSB Transmission with V2X Sidelink Communication

A.9.1.2.1 Test for FR1 NR Cell as synchronization reference source without gap under non-DRX

A.9.1.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the V2X UE meets the requirements related to the maximum evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.1, when the reference timing used for sidelink transmissions is a NR serving cell in FR1 on a non-V2X sidelink carrier.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Supported test configurations for FR1 NR cell are shown in table A.9.1.2.1.1-1.

Table A.9.1.2.1.1-1: Supported Test Configurations for FR1 NR cell as synchronization reference source

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
2	NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
3	NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1. NOTE 2: For NR SL, SL BW is one between 20 MHz and 40 MHz, and SL SCS is 30kHz.	

The test parameters are given in table A.9.1.2.1.1-2 and table A.9.1.2.1.1-3 below. There is one active cell in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the SS-RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting S-SSB.

During T2, the SS-RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate S-SSB transmissions.

During T3, the SS-RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease S-SSB transmissions.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

A.9.1.2.1.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.56 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.56 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

$T_{evaluate,SLSS}$ = 0.4 sec (as specified in clause 12.3.1.1);

S-SSB period = 160 ms.

A.9.1.2.2 Test for SyncRef UE as synchronization reference source

A.9.1.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE.

The test parameters are given in table A.9.1.2.2.1-1 and table A.9.1.2.2.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the V2X UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the V2X UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions.

	dBm/36 MHz	-60.6	-65.6	-60.6
Propagation condition		AWGN		
NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.				
NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for S-PSS/S-SSS/PSBCH symbols.				
NOTE 3: The UE is only required to be tested in one of the supported test configurations.				
NOTE 4: S-PSS Es/Noc and S-SSS Es/Noc are set the same as PSBCH Es/Noc.				

A.9.1.2.2.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.8 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.8 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in clause 12.3.1.4);
- S-SSB period = 160 ms.

A.9.1.2.3 Test for SyncRef UE as synchronization reference source when SL-DRX is used

A.9.1.2.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE and SL-DRX is used.

The test parameters are given in table A.9.1.2.3.1-1 and table A.9.1.2.3.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the V2X UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the V2X UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions.

Table A.9.1.2.3.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source when SL-DRX is used

Propagation condition		AWGN		
NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.				
NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for PSPSS/PSSSS/PSBCH symbols.				
NOTE 3: The UE is only required to be tested in one of the supported test configurations.				
NOTE 4: PSSSS Es/Noc and PSPSS Es/Noc are set the same as PSBCH Es/Noc.				

A.9.1.2.3.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 1.44 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 1.44 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as: $T_{evaluate,SLSS}$ + S-SSB period,

Where:

- $T_{evaluate,SLSS}$ = 1.28 sec (as specified in clause 12.3.1.4);
- S-SSB period = 160 ms.

A.9.1.2.4 Test for SyncRef UE as synchronization reference source with CCA

A.9.1.2.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3A.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE.

The test parameters are given in table A.9.1.2.4.1-1 and table A.9.1.2.4.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the sidelink UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the sidelink UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Two counters, l_{CCA_2} and l_{CCA_3}, as defined in A.3.26.4.1 will be used with time duration of T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions. The counter l_{CCA_2} is initialized as 0 at the beginning of T2 and tracks the number of unavailable SSB periods as defined in A.3.26.4.1 until the end of T2.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions. The counter l_{CCA_3} is initialized as 0 at the beginning of T3 and tracks the number of unavailable SSB periods as defined in A.3.26.4.1 until the end of T3.

Table A.9.1.2.4.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source with CCA

Parameter	Unit	Value	Comment
SCS	kHz	30	
Active cell		None

$\hat{E}_s / I_{ot}$	dB	5.5	-3.5	5.5
PSBCH $\hat{E}_s / N_{oc}$	dB	5.5	-3.5	5.5
PSBCH-RSRP Note2	dBm/30 kHz	-92.5	-101.5	-92.5
Io Note2	dBm/3.96 MHz	-70.2	-75.2	-70.2
Propagation condition		AWGN		

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: PSBCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for S-PSS/S-SSS/PSBCH symbols.
NOTE 3: The UE is only required to be tested in one of the supported test configurations.
NOTE 4: S-PSS Es/Noc and S-SSS Es/Noc are set the same as PSBCH Es/Noc.

A.9.1.2.4.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than $T_{evaluate,SLSS_CCA}$ + S-SSB period.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than $T_{evaluate,SLSS_CCA}$ + S-SSB period.

Where:

- $T_{evaluate,SLSS_CCA}$ = (4+L_{SLSS})×S-SSB periods [ms] (as specified in clause 12.3A.1.4) and L_{SLSS} = l_{CCA_2} or l_{CCA_3}, is the number of unavailable S-SSB period during time duration of T2 and T3 respectively;
- S-SSB period = 160 ms.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90 %.

A.9.1.3 Test for V2X Synchronization Reference Selection/Reselection

A.9.1.3.1 Test for GNSS configured as the highest priority

A.9.1.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when GNSS is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.3.1.1-1and A.9.1.3.1.1-2 below. There are no GNSS signals in this test. There are three active SyncRef UEs (SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3) in this test. The test system shall emulate SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is not synchronized to any SyncRef UE, then the V2X UE shall use the SLSS ID belonging to set id_oon. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 are all powered off before starting the test. During T1, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as synchronization source. During T2, SyncRef UE 2 is powered ON and the V2X UE will select SyncRef UE 2 as the synchronization source. During T3, SyncRef UE 3 is powered ON and the V2X UE will reselect to SyncRef UE 3 as the synchronization source.

Table A.9.1.3.1.1-1: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for GNSS configured as the highest priority

Parameter		Unit	Value	Comment
SCS		kHz	30	
Initial condition	Active synchronization source		Sync Ref UE 1	DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL.
T2 end condition	Active synchronization source		Sync Ref UE 2	DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 336 and in-coverage set as FALSE in MIB-SL.
Final condition	Active synchronization source		Sync Ref UE 3	UE transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as FALSE in MIB-SL.
Active SyncRef UEs			SyncRef UE 1 SyncRef UE 2 SyncRef UE 3	Transmitting S-SSB on RF channel number 1 (HD carrier in Band n47 or n38)
Timing offset among SyncRef UEs		µs	CP/2	Synchronous
Frequency offset of SyncRef UE 1,2,3		ppm	0

	dBm/36 MHz	-70.78	-70.78	-67.78	-73.79	-70.78	-70.78	-70.78	-70.78	-67.78
Propagation Condition		AWGN								

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: Es/Iot, Io, PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

A.9.1.3.1.2 Test Requirements

During T1, SyncRef UE selection delay is defined as the time from the beginning of T1 to the time UE is synchronized to SyncRef UE 1, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T1.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection delay can be expressed as:

SyncRef UE selection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T2, SyncRef UE reselection delay is defined as the time from the beginning of T2 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T2.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

3) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 2 to SyncRef UE 3, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 3 as the synchronization source. For the test configuration, the SLSS ID will still be 0 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T3.

The SyncRef UE reselection delay shall be less than 2.4 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 1.6 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 2.4 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6 % of its V2X data and S-SSB transmissions during the duration of T2, and does not drop or delay more than 30 % of its S-SSB transmissions during the duration of T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

A.9.1.3.2 Test for FR1 NR Cell configured as the highest priority

A.9.1.3.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when gNB is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

This test is applicable for V2X sidelink communication capable UEs that support gNB as synchronization source and sidelink operation.

Table A.9.1.3.2.1-1: Void

The test parameters are given in table A.9.1.3.2.1-2 and A.9.1.3.2.1-3 below. There are no active cells and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the V2X UE will select GNSS as synchronization source. During T2, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as the synchronization source. During T3, a higher priority SyncRef UE 2 is additionally powered ON and the V2X UE will reselect to the higher priority SyncRef UE 2 as the synchronization source.

Table A.9.1.3.2.1-2: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for FR1 NR Cell configured as the highest priority

Parameter		Unit	Value	Comment

NOTE 2: Es/Iot, Io, PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.							
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.							
NOTE 4: The UE is only required to be tested in one of the supported test configurations.							

A.9.1.3.2.2 Test Requirements

1) During T2, SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6 % of its V2X data and S-SSB transmissions during the duration of T2 and T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

A.9.1.3.3 Test for GNSS configured as the highest priority under SL-DRX

A.9.1.3.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when GNSS is configured as the highest priority and SL-DRX is configured. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.3.3.1-1and A.9.1.3.3.1-2 below. There are no GNSS signals in this test. There are three active SyncRef UEs (SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3) in this test. The test system shall emulate SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is not synchronized to any SyncRef UE, then the V2X UE shall use the SLSS ID belonging to set id_oon. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 are all powered off before starting the test. During T1, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as synchronization source. During T2, SyncRef UE 2 is powered ON and the V2X UE will select SyncRef UE 2 as the synchronization source. During T3, SyncRef UE 3 is powered ON and the V2X UE will reselect to SyncRef UE 3 as the synchronization source. SL-DRX is configured during the entire test period.

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

A.9.1.3.3.2 Test Requirements

During T1, SyncRef UE selection delay is defined as the time from the beginning of T1 to the time UE is synchronized to SyncRef UE 1, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T1.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection delay can be expressed as:

SyncRef UE selection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T2, SyncRef UE reselection delay is defined as the time from the beginning of T2 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T2.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

3) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 2 to SyncRef UE 3, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 3 as the synchronization source. For the test configuration, the SLSS ID will still be 0 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T3.

The SyncRef UE reselection delay shall be less than 2.4 sec. The SyncRef UE reselection delay can be expressed as:

SyncRef UE reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 1.6 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 2.4 seconds.

The test system will verify that the V2X UE does not drop its V2X data and SLSS transmissions at most in an aggregated window of 480 ms during the duration of T2, and does not drop or delay at most an aggregated window of 24 ms of its S-SSB transmissions during the duration of T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

A.9.1.3.4 Test for FR1 NR Cell configured as the highest priority under SL-DRX

A.9.1.3.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when gNB is configured as the highest priority and SL-DRX is configured. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

This test is applicable for V2X sidelink communication capable UEs that support gNB as synchronization source and sidelink operation.

The test parameters are given in table A.9.1.3.4.1-1 and A.9.1.3.4.1-2 below. There are no active cells and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the V2X UE will select GNSS as synchronization source. During T2, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as the synchronization source. During T3, a higher priority SyncRef UE 2 is additionally powered ON and the V2X UE will reselect to the higher priority SyncRef UE 2 as the synchronization source. SL-DRX is configured during the entire test period.

Table A.9.1.3.4.1-1: Test Parameters for V2X Synchronization Reference Selection/Reselection Tests for FR1 NR Cell configured as the highest priority

Parameter		Unit	Value	Comment
SCS		kHz	30	
Initial condition	Active synchronization source		GNSS	DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 0 and in-coverage set as TRUE in MIB-SL.
T2 end condition	Active synchronization source		Sync Ref UE 1	DUT transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 336+59 and in-coverage set as FALSE in MIB-SL.
Final condition	Active synchronization source		Sync Ref UE 2	UE transmits for V2X Sidelink Communication and S-SSB with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL.

Propagation Condition		AWGN					

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: S-PSS Es/Iot and S-SSS Es/Iot are set the same as PSBCH Es/Iot.
NOTE 4: The UE is only required to be tested in one of the supported test configurations.

A.9.1.3.4.2 Test Requirements

1) During T2, SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

2) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its S-SSB transmissions timing and SLSS ID

to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 8.8 sec. The SyncRef UE selection/reselection delay can be expressed as:

SyncRef UE selection/reselection delay = $T_{detect,SyncRef\ UE}$ + $T_{evaluate,SLSS}$ + S-SSB period

Where

- $T_{detect,SyncRef\ UE}$ = 8 sec (as specified in sub-clause 12.4)
- $T_{evaluate,SLSS}$ = 0.64 sec (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 8.8 seconds.

The test system will verify that the V2X UE does not drop or delay its V2X data and SLSS transmissions at most in an aggregated window of 480 ms during the duration of T2 and T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90 %.

A.9.1.4 Test for L1 SL-RSRP Measurement

A.9.1.4.1 Test for V2X UE Autonomous Resource Selection/Reselection

A.9.1.4.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.1.1-1and A. 9.1.4.1.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. At the beginning of whole test, the test equipment shall send one AT command to trigger the UE under test continuously transmits PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipement are configured such that

- he measured PSSCH-RSRP for 20 active V2X sidelink UEs(UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedureDuring T2, the signal from Test Equipement are configured such that
- the measured PSSCH-RSRP or the 20 active V2X sidelink UEs(UE10~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: Es/Iot, PSSCH-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: For UE 20 to 29, occupying subchannel #2
NOTE 4: For UE 0 to 19 and 30 to 49, occupying subchannel #0/1/3/4
NOTE 5: The UE is only required to be tested in one of the supported test configurations.

A.9.1.4.1.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

A.9.1.4.2 Test for V2X UE Resource Pre-emption

A.9.1.4.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource pre-emption for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A. 9.1.4.2.1-1and A.12. 9.1.4.1-2 below. There is one active V2X sidelink UE in this test. Both the UE under test and the active V2X sidelink UE select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test needs continuously transmit PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipement are configured such that the active V2X sidelink UE is not transmitting. The UE under test shall transmit SL data and reserve future resources. The resource reservation is decoded by the active V2X sidelink UE. The point in time at which resource reservation from the UE under test is decoded by the active V2X sidelink UE defines the start of time period T2. During T2, the active V2X sidelink UE reserves the same resource as the UE under test with high priority data no later than slot n- $T_{pre\text{-}empt}$.

Table A.9.1.4.2.1-1: Test Parameters for V2X UE Resource Pre-emption Tests for PSSCH-RSRP measurements

Parameter		Unit	Value	Comment
NR RF Channel Number			1	HD carrier in Band n47 and n38

PSSCH-RSRP Note 2	dBm/30kHz		-95
Io Note 2	dBm/18 MHz		-73.01
	dBm/36 MHz		-73.01
Antenna Configuration	-	1x2	
Propagation Condition	-	AWGN	
NOTE 1: Interference from other Ues and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.			
NOTE 2: Es/Iot, PSSCH-RSRP and Io have been derived from other parameters for information purposes. They are not settable parameters themselves.			
NOTE 3: The UE is only required to be tested in one of the supported test configurations.			

A.9.1.4.2.2 Test Requirements

The test time T1 and T2 should be long enough. The UE under test is required to trigger resource reselection and not to transmit on the reserved resource at slot n when the high priority reservation is transmitted by the active V2X sidelink UE before n-$T_{pre\text{-}empt}$, where

$T_{pre\text{-}empt} = T_3 + T_{proc,0}$

T_3 = 5 slots and $T_{proc,0}$= 1 slot for FR1.

The rate of PSSCH transmissions on the resources at slot n shall be less than 10 % during repeated tests.

A.9.1.4.3 Test for V2X UE Resource Re-evaluation

A.9.1.4.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource re-evaluation for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.3.1-1, A.9.1.4.3.1-2 and A.9.1.4.3.1-3 below. There are 130 active V2X sidelink UEs in this test. The first 100 active V2X sidelink UEs are scheduled with 50 ms periodicity. The last 30 active V2X sidelink Ues are aperiodic service UE with retransmission reservation period equaling 15 ms.

Both the UE under test and active V2X sidelink Ues select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink Ues. The test parameters for GNSS signals are defined in B.4.1.

The test consists of three duration T0, T1, T2.

During T0, the signal from Test Equipement are configured. The resource occupied by the active V2X sidelink UEs is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold. The test equipment shall just configure the resource pool for the test UE without the MAC PDU for transmission channel configuration.

During T1, the signal from Test Equipement are configured. Some of the resource occupied by the active V2X sidelink Ues is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold and some of the resource occupied by the active V2X sidelink Ues is expected to be included in

the resource selection procedure such that the measured PSSCH-RSRP is below the measurement threshold. The test system shall emulate the active V2X sidelink Ues to transmit PSCCH/PSSCH every 50 ms according to the RSRP level specified in the Table A. 9.1.4.3.1-2, but UE #0~29 will be silent during T2.

At the end of T1, where slot index mod 100 = 99, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test shall be scheduled to periodically transmit PSCCH/PSSCH.

During T2, the additional aperiodic active V2X sidelink UEs from Test Equipement are configured in the beginning 30 slots, and the resource occupied by these active V2X sidelink UEs is expected to be excluded in the resource re-evaluation procedure such that the measured PSSCH-RSRP is above the measurement threshold shown in table A. 9.1.4.3.1-2. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH with the maximum number of reserved PSCCH/PSSCH resources equalling n2 and time resource assignment interval as 15 ms.

During T2, the test UE is expeted to reselect the resources and transmit the PSCCH/PSSCH in the newly re-evaluated resources.

A.9.1.4.3.2 Test Requirements

The rate of PSSCH transmissions on the resources of the subchannels which are occupied by UE #65-84 shall be more than 90 % during T2.

A.9.1.4.4 Test for V2X UE Autonomous Resource Selection/Reselection with Periodic Sensing

A.9.1.4.4.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 with partial sensing support defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.4.1-1and A. 9.1.4.4.1-2 below. There are 100 active V2X sidelink UEs (UE0~UE99) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 10 ms. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7] and ensure that the UE under test needs to continuously transmit PSCCH/PSSCH with 10 ms period. Upon receiving the MAC PDU, UE starts resource selection to transmit PSCCH/PSSCH based on the available sensing results.

The test consists of two duration T1 and T2. During T1, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for 40 active V2X sidelink UEs(UE20~UE59) is above the measurement threshold, and the resource occupied by the 40 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 60 active V2X sidelink UEs(UE0~UE19, UE60~UE99) is low the measurement threshold, and the resource occupied by the 60 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 40 active V2X sidelink UEs(UE20~UE59) is below the measurement threshold, and the resource occupied by the 40 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 60 active V2X sidelink UEs(UE0~UE19, UE60~UE99) is above the measurement threshold, and the resource occupied by the 60 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

Table A.9.1.4.4.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests with Periodic Sensing

Parameter	Unit	Value	Comment
NR RF Channel Number		1	TDD carrier in Band n47 or n38
Channel Bandwidth ($BW_{channel}$) Note 2	MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
SCS	kHz	30	
V2X sidelink communication pre-configuration		As specified in table A.3.21.2-1 and A.3.21.2-3	IE values unless specified otherwise in this test.
sl-TimeResource-r16 included in SL-ResourcePool		1111111111	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
sl-NumSubchannel-r16 included in SL-ResourcePool		5	Indicates the number of sub-channels for TX resource pool
sl-SubchannelSize-r16 included in SL-ResourcePool		10	Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB
Number of Active Sidelink UEs		100	Active Sidelink UE i = 0, .., 49

Parameter		Unit	Value	Comment
SL-ThresPSSCH-RSRP			12	Corresponding -106 dBm as defined in section 6.3.5 in TS38.331[2]
Active Sidelink UEs (UE i = 0, .., 99)	V2X sidelink Communication preconfiguration		As specified in table A.3.21.2-1 And A.3.21.2-3	IE values unless specified otherwise in this test.
	sl-TimeResource-r16 included in SL-ResourcePool		$\{1_i\}$ Note1	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
	sl-NumSubchannel-r16 included in SL-ResourcePool		1	Indicates the number of sub-channels for TX resource pool
	sl-StartRB-Subchannel-r16 included in SL-ResourcePool		floor(i/20)x10	Indicates the lowest PRB index of the subchannel with the lowest index. UE 0~19 start PRB=0; UE 20~39 start PRB=10; UE 40~59 start PRB=20; UE 60~79 start PRB=30; UE 80~99 start PRB=40;
	sl-SubchannelSize-r16 included in SL-ResourcePool		10	Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB
	sl-ResourceReservePeriod2-r16	ms	10	
Timing offset among Active Sidelink UEs		μs	CP/2	Synchronous
NOTE 1: $\{1_i\}$ is a sequence of nine 0's with one 1 in (mod(i,10)+1'th position. NOTE 2: The UE is only required to be tested in one of the supported test configurations.

Propagation Condition	-	AWGN	

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: Es/Iot, PSSCH-RSRP and SL-RSSI levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: For UE 20 to 59, occupying subchannel #1/2
NOTE 4: For UE 0 to 19 and 60 to 99, occupying subchannel #0/3/4
NOTE 5: The UE is only required to be tested in one of the supported test configurations.

A.9.1.4.4.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

A.9.1.4.5 Test for V2X UE Autonomous Resource Selection/Reselection with Contiguous Sensing

A.9.1.4.5.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 performing contiguous sensing configured with M=31 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.5.1-1and A. 9.1.4.5.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. Starting from the beginning of whole test, the test equipment shall send a message with a SL-SCH MAC PDU every 5 ms as specified in clause 6.1.6 in TS 38.321[7] to schedule an aperiodic transmission and ensure that the UE under test needs continuously transmit PSCCH/PSSCH every 5 ms.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipment are configured such that

- the measured PSSCH-RSRP for 20 active V2X sidelink UEs (UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,

- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signal from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 20 active V2X sidelink UEs(UE10~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,

- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

Table A.9.1.4.5.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests with Contiguous Sensing

Parameter		Unit	Value	Comment

A.9.1.4.5.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2.

A.9.1.4.6 Test for V2X UE Autonomous Resource Selection/Reselection in SL-DRX

A.9.1.4.6.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in table A.9.1.4.6.1-1and A. 9.1.4.6.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) and another V2X sidelink UE as the receiver for the UE under test in this test. The UE under test, the receiver UE and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE, the receiver V2X sidelink UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5 ms. At the beginning of whole test, the test equipment shall send one message with a SL-SCH MAC PDU as specified in clause 6.1.6 in TS 38.321[7] and ensure that the UE under test needs continuously transmit PSCCH/PSSCH to the receiver SL UE.

The receiver UE runs one DRX cycle with 40 ms cycle length and 10 ms on time, 0 ms inactivity timer, and 10 ms offset. The UE under test and the 50 active UEs are in non-DRX mode.

The test consists of two duration T1 and T2. During T1, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for 20 active V2X sidelink UEs(UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signals from Test Equipment are configured such that

- the measured PSSCH-RSRP for the 20 active V2X sidelink UEs(UE20~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,

- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

A.9.1.4.6.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10 % during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90 % during T2. The PSSCH transmission should happen only in the receiver SL UE SL-DRX active time.

A.9.1.5 Test for Congestion Control Measurement

A.9.1.5.1 Test Purpose and Environment

The purpose of this test is to verify the congestion control measurement requirements in section 12.6. For UE supporting NR Uu and sidelink operation, this test will also verify that V2X UE makes correct reporting of an event.

The test parameters are given in table A.9.1.5.1-1, Table A.9.1.5.1-2 , A.9.1.5.1-3 and A.9.1.5.1-4 below. There are 4 active V2X sidelink UEs in this test. The test system shall emulate the active sidelink UE to transmit PSCCH/PSSCH every 50 ms. Additionally, For UE supporting NR Uu and sidelink operation, there is an active Cell (Cell 1) in this test. For UE only supporting NR sidelink, There are no active cell and GNSS is reliable during the whole test. The test

system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During T1, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with lower transmission power every 50 ms. During T2, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with higher transmission power every 50 ms.

For UE supporting NR Uu and sidelink operation, the UE under test and all active sidelink UEs select PCell as synchonization source In the measurement control information it is indicated to the V2X UE that event-triggered reporting with Event C1 is used.

For UE only supporting NR sidelink, the UE under test and all active sidelink UEs select GNSS as synchonization source. The UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

For UE supporting NR Uu and sidelink operation, Supported test configurations for FR1 NR cell are shown in table A.9.1.5.1.1-1.

Table A.9.1.5.1.1-1: Supported Test Configurations for FR1 NR cell (only for UE supporting both NR Uu and sidelink operation)

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
2	NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
3	NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE: The UE is only required to pass in one of the supported test configurations in FR1	

Table A.9.1.5.1-2: General test parameters for Congestion Control Measurement Test for V2X UE

Parameter		Unit	Value	Comment
NR RF Channel Number			1	HD carrier in Band n47 or n38
Channel Bandwidth ($BW_{channel}$)[Note 2]		MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
SCS		kHz	30	
V2X sidelink communication configuration			As specified in table A.3.21.2-1 and A.3.21.2-3	IE values unless specified otherwise in this test.
sl-TimeResource-r16 included in SL-ResourcePool			1111111111111111111 1111111111111111111 1111111111111111111 1111111111111111111 1111111111111111111	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
sl-NumSubchannel-r16 included in SL-ResourcePool			1	ENUMERATED {n1}
sl-SubchannelSize included in SL-ResourcePool			10	ENUMERATED {n10}
sl-StartRB-Subchannel-r16			0	
threshS-RSSI-CBR			19	Corresponding -74 dBm as defined in section 6.3.8 in TS38.331[2]
Active Cell [Note 3]			Cell 1	
Number of Active Sidelink UEs every 50 ms			4	Active Sidelink UE i, where i = 0, 1, 2, 3
Active Sidelink UEs (i = 0,1,2,3)	V2X sidelink Communication configuration		As specified in table A.3.21.2-1 and A.3.21.2-3	IE values unless specified otherwise in this test.
	sl-TimeResource-r16 included in SL-ResourcePool		$\{1_i\}$[Note1]	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
	sl-NumSubchannel-r16 included in SL-ResourcePool		1	
	sl-SubchannelSize included in SL-ResourcePool		10	

Parameter	Unit	Value	Comment
Timing offset between V2X UE and Active Sidelink UEs	μs	CP/2	Synchronous
c1-Threshold-r16 Note 3		2	Corresponding 0.02 as defined in section 6.3.2 in TS38.331[2]
sl-CBR-RangeConfigList-r16 Note 4		[2 100]	Two ranges are defined by this list: 0 to 0.02 and 0.02 to 1
sl-CR-Limit-r16 Note 4		10000 and 10	Corresponding to the two CBR ranges: if CBR > 0.02, CR ≤ 0.001, otherwise CR > 0.001
sl-Thres-RSRP-r16 Note 4		12	Configure threshold <-98.64 dBm/30kHz to ensure not blocking transmission
Hysteresis		0	
Time To Trigger	s	0	
Filter coefficient		0	L3 filtering is not used
T1	s	5	
T2	s	5	
NOTE 1: $\{1_i\}$ is a sequence of ninety nine 0's with one 1 in i+1'th position. NOTE 2: The UE is only required to be tested in one of the channel bandwidths. NOTE 3: Only for UE supporting both Uu and sidelink operation. NOTE 4: Only for UE supporting sidelink operation but not supporting Uu.			

Table A.9.1.5.1-3: Active sidelink UE specific test parameters for Congestion Control Measurement Test for V2X UE

Parameter	Unit	Active Sidelink UE *i* (*i* = 0, 1, 2, 3)	
		T1	T2
NR RF Channel Number		1	
Channel Bandwidth ($BW_{channel}$) Note 7	MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
PSCCH RMC (defined in A.3.21.3)		CC.1A HD	
PSSCH RMC (defined in A.3.21.3)		CD.1A HD	
N_{oc} Note1	dBm/30 kHz	-103	
$\hat{E}_s / N_{oc}$	dB	4.35	10.32
SL-RSSI1 Note 2,3	dBm/3.6 MHz	-76.5	-71.5
SL-RSSI2 Note 2,4	dBm/3.6 MHz	-82.21	-82.21
Io1 Note 2,5	dBm/18 MHz	-76.5	-71.5
	dBm/36 MHz	-76.5	-71.5
Io2 Note 2,6	dBm/18 MHz	-82.21	-82.21
	dBm/36 MHz	-82.21	-82.21
Propagation Condition	-	AWGN	
NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled. NOTE 2: SL-RSSI1, SL-RSSI2, Io1 and Io2 levels have been derived from other parameters for information purposes. They are not settable parameters themselves. NOTE 3: SL-RSSI1 is the SL-RSSI level measured on the slot# 0 - 3 with "SFN mod 5 = 0". NOTE 4: SL-RSSI2 is the SL-RSSI level measured on the slot# 4-9 with "SFN mod 5 = 0" and the slot# 0-9 with "SFN mod 5 = 1,…, 4". NOTE 5: Io1 is the Io level measured on the slot# 0 - 3 with "SFN mod 5 = 0". NOTE 6: Io2 is the Io level measured on the slot# 4-9 with "SFN mod 5 = 0" and the slot# 0-9 with "SFN mod 5 = 1,…, 4". NOTE 7: The UE is only required to be tested in one of the supported test configurations.

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.9.1.5.2 Test Requirements

For UEs that support NR Uu and sidelink operation, the UEs shall not send event C1 triggered measurement reports during T1 and shall send event C1 triggered measurement reports during T2.

For UEs that support sidelink operation only, the UE channel occupancy ratio shall be larger than 0.001 during T1, and the UE channel occupancy ratio shall be smaller than 0.001 curing T2.

The rate of correct events observed during repeated tests shall be at least 98 %.

A.9.1.6 Test for Interruption

A.9.1.6.1 Test for Interruption to WAN due to V2X Sidelink Communication

A.9.1.6.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to interruptions due to V2X sidelink communication defined in clause 12.7.1 under the following additional conditions:

- The UE is out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier

This test is applicable for V2X sidelink communication capable UEs that support inter-band concurrent V2X sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor V2X sidelink communication.

The test parameters are given in table A.9.1.6.1.1-1, table A.9.1.6.1.1-2, table A.9.1.6.1.1-3 and table A.9.1.6.1.1-4. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. On RF channel 2, the test consists of 8 active Sidelink UEs in this test transmitting V2X sidelink communication. The UE under test and all active sidelink UEs select the active cell as synchonization source.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC_IDLE and monitoring the V2X sidelink communication transmission from other active Sidelink UEs on the V2X sidelink communication resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE, and the UE is expected to transmit *SidelinkUEInformationNR* indicating *sl-RxInterestedFreqList*. On reception of *SidelinkUEInformationNR*, the test system shall send RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformationNR* for up to 2 second, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during V2X sidelink communication.

Table A.9.1.6.1.1-1: Supported test configurations for FR1 PCell

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
2	NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
3	NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE: The UE is only required to pass in one of the supported test configurations in FR1	

Table A.9.1.6.1.1-2: Test Parameters for Interruptions due to V2X Sidelink Communication

Parameter	Unit	Value	Comment
RF Channel Number	-	1, 2	RF channel 1 is non-V2X sidelink carrier RF channel 2 is V2X sidelink carrier
SCS	kHz	30	
Active cell	-	Cell 1	PCell on RF channel number 1

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.9.1.6.1.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during T3. During T3, the interruption on PCell shall not be more than the values specified in clause 12.7.1..

A.9.1.6.2 Test for interruption to WAN at transitions between active and non-active during SL-DRX in asynchronous case

A.9.1.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that when V2X sidelink is in SL-DRX and NR PCell is in non-DRX, NR PCell interruptions due to transitions of V2X sidelink UE from active to non-active and from non-active to active do not exceed the limits in terms of missing ACK/NACK. This test will verify the missing ACK/NACK rate on NR PCell in clause 12.7.4 under the following additional conditions:

- The UE is out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier.
- The UE is in sidelink resource allocation mode 1.

This test is applicable for V2X sidelink communication capable UEs that support inter-band concurrent V2X sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor V2X sidelink communication.

The test parameters are given in table A.9.1.6.2.1-1, table A.9.1.6.2.1-2, and table A.9.1.6.2.1-3. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. The UE under test selects GNSS as the synchonization source.

The test consists of one time period, with duration of T1. During T1, NR PCell is continuously scheduled in DL while V2X sidelink is not scheduled and has SL-DRX configured. Prior to start of T1 the SL-DRX inactivity timer for the V2X sidelink has already expired. PDCCH indicating a new transmission on PCell shall be sent continuously during the entire time duration to ensure UE would not enter DRX state on PCell.

Table A.9.1.6.2.1-1: Supported test configurations for FR1 PCell

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.9.1.6.2.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during the entire length of T1. UE shall not be scheduled in V2X sidelink during T1. During the time duration T1 the UE shall transmit at least 99.375 % of ACK/NACK on NR PCell.

Interruption on NR PCell shall not exceed X as defined in table A.9.1.6.2.2-1.

Table A.9.1.6.2.2-1: Interruption length X at transition between active and non-active during SL-DRX

μ	NR Slot length (ms)	Interruption length X
		Async
0	1	2
1	0.5	2
2	0.25	3

The rate of correct events observed during repeated tests shall be at least 90 %.

A.9.1.6.3 Test for Interruption at NR Sidelink Diccovery Configuration

A.9.1.6.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to interruptions due to NR sidelink discovery configuration defined in clause 12.7.8 under the following additional conditions:

- The UE is out of coverage on the NR sidelink carrier and is associated with a serving cell on a NR non-sidelink carrier

This test is applicable for NR sidelink discovery capable UEs that support inter-band concurrent sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor NR sidelink discovery.

The test parameters are given in table A.9.1.6.3.1-1, table A.9.1.6.3.1-2, table A.9.1.6.3.1-3 and table A.9.1.6.3.1-4. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. On RF channel 2, the test consists of 8 active Sidelink UEs in this test transmitting sidelink discovery. The UE under test and all active sidelink UEs select the active cell as synchonization source.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC_IDLE and monitoring NR sidelink discovery announcements from other active Sidelink UEs on NR sidelink discovery resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE, and the UE is expected to transmit *SidelinkUEInformationNR* indicating *sl-RxInterestedFreqListDisc*. On reception of *SidelinkUEInformationNR*, the test system shall send RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformationNR* for up to 2 second, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during NR sidelink discovery.

NOTE 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.9.1.6.3.2 Test Requirements

The UE shall be continuously scheduled on PCell on RF channel 1 during T3. During T3, the interruption on PCell shall not be more than the values specified in clause 12.7.8.

A.9.1.7 Selection / Reselection of relay UE

A.9.1.7.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to selection / reselection of relay UE defined in clauses 12.10. In the test, the UE under test is configured with PCell or an Sidelink UE but not both, based on the scenarios (U2N or U2U relay) UE supported, and is configured with resource pools for NR sidelink discovery message as required for remote UE operation.

This test is applicable to UEs capable of NR sidelink communication and sidelink discovery, and further support the optional feature of sidelink remote UE operation.

The test parameters are given in table A.9.1.7.1.1-0, table A.9.1.7.1.1-1, table A.9.1.7.1-2, table A.9.1.7.1-3, table A.9.1.7.1-4, table A.9.1.7.1-5, and table A.9.1.7.1-6 below. The test consists of one active serving cell (cell 1, configured as Table A.9.1.7.1-5) or an Sidelink UE (Sidelink UE 1, configured as Table A.9.1.7.1-6), one remote UE and two active Sidelink relay UEs (Sidelink Relay UE 1, Sidelink Relay UE 2). The relay UEs are configured in mode 2 to be transmitting relay discovery messages every discovery period, which is determined by resource reservation period indicated by sl-ResourceReservePeriodList.

The test system shall ensure that the remote UE under test has transmitted *SidelinkUEInformationNR* message and has been configured with the sidelink discovery resource pool and sidelink communication resource pool respectively for relay operation prior to the start of the test.

The tests consist of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively.

During T1, RSRP of cell 1 or SL-RSRP of Sidelink UE 1 is kept higher than *threshHighRemote* (within *sl-remoteUE-Config*), and the remote UE is not required to perform relay UE selection.

During T2, RSRP of cell 1 or SL-RSRP of Sidelink UE 1 is configured to be lower than *threshHighRemote*. The UE is expected to start looking for relay UE. The test system shall ensure that the UE under test has been configured the resource pool prior to end of T2 duration. During T2, the SD-RSRP of Sidelink Relay UE 1 and Sidelink Relay UE 2 is configured to be lower than the detection threshold and no relay UE will be available for the remote UE under test.

During T3, the SD-RSRP of Sidelink Relay UE 1 is raised above the threshold *sl-RSRP-Thresh* and the UE is expected to perform relay selection to Sidelink Relay UE 1. The test system can determine that the remote UE has selected a relay by monitoring the configured sidelink communication resource for the ProSe direct link establishment request message to the relay UE.

During T4, the UE is expected to complete the sidelink connection establishment with the relay UE. Note that the RSRP of the serving cell (cell 1) or SL-RSRP of Sidelink UE 1 and the SD-RSRP of sidelink relay UEs are kept unchanged during T3 and T4. The period T4 ends when Sidelink Relay UE1 sends the sidelink communication response message back to the remote UE.

During T5, SD-RSRP of Sidelink Relay UEs are modified such that the remote UE is expected to reselect to Sidelink Relay UE2.

Table A.9.1.7.1-0: Supported test configurations for FR1 PCell

Configuration	Description
1	NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
2	NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz
3	NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
Note: The UE is only required to pass in one of the supported test configurations in FR1	

Table A.9.1.7.1-1: Test parameters for selection / reselection of relay UE test for NR FR1

Parameter	Unit	Value	Comment
NR RF Channel Number		1	HD carrier in Band n47 or n38
Channel Bandwidth ($BW_{channel}$) Note 1	MHz	20 (NRB,c = 50) or 40 (NRB,c = 100)	
SCS	kHz	30	
Traffic destination		Cell 1 or Sidelink UE 1	Serving NR cell will broadcast SIB12. Sidelink UE 1 will use the configuration in SL-PreconfigurationNR.
Active Relay UEs		Relay UE 1, Relay UE 2	Transmitting relay discovery message
CP length of Cell 1 and Sidelink UE 1		Normal	
T1	ms	100	
T2	s	Up to receiving RRC reconfiguration setup complete from the UE, or up to 1 sec if UE does not transmit *SidelinkUEInformationNR* during this period.	
T3	s	1	
T4	s	2	
T5	s	1	
NOTE 1: The UE is only required to be tested in one of the supported test configurations.			

Table A.9.1.7.1-2: Sidelink discovery configuration for selection / reselection of relay UE test for NR FR1

Parameter	Unit	Value	Comment
NR RF Channel Number		1	HD carrier in Band n47 or n38
Channel Bandwidth ($BW_{channel}$) Note 1	MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
Resource pool configuration for sidelink discovery		As specified in table A.3.21.2-2 Note 2	IE values unless specified otherwise in this test.
sl-TimeResource included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17*		0000111100	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
sl-NumSubchannel included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17*		2	Indicates the number of sub-channels for TX resource pool
sl-SubchannelSize included in *sl-DiscTxPoolSelected-r17* and *sl-DiscRxPool-r17*		10	Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB
sl-ResourceReservePeriodList	s	0.04	Indicates the resource reservation period for discovery period
threshHighRemote within sl-remoteUE-Config		-91 dBm	
sl-RSRP-Thresh within sl-remoteUE-Config		-91 dBm	
NOTE 1: The UE is only required to be tested in one of the supported test configurations. NOTE 2: This test is according to the principle defined in section A.3.21.			

Table A.9.1.7.1-3: Sidelink Communication configuration for selection / reselection of relay UE test

Parameter	Unit	Value	Comment
RF Channel Number	-	1	HD carrier in Band n47 or n38

Channel Bandwidth ($BW_{channel}$) Note 1		MHz	20 ($N_{PRB,c}$ = 50) or 40 ($N_{PRB,c}$ = 100)	
Sidelink Communication configuration		-	As specified in section A.3.21.2	IE values unless specified otherwise in this test.
sl-TimeResource		-	0000000011	Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])
Number of Active Sidelink Relay UEs		-	2	Active Sidelink UE i = 0, 1
Active Sidelink Relay UEs (UE i = 0, 1) and Sidelink UE 1 Note 2	PSCCH Reference Measurement Channel	-	CC.1A HD	As specified in table A.3.21.3-1
	PSSCH Reference Measurement Channel	-	CD.1A HD	As specified in table A.3.21.3-2
	sl-NumSubchannel-r16 included in SL-ResourcePool	-	1	Indicates the number of sub-channels for TX resource pool
	sl-SubchannelSize-r16 included in SL-ResourcePool		10	Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB
	sl-StartRB-Subchannel-r16 included in SL-ResourcePool	-	floor(i)x10	Indicates the lowest PRB index of the subchannel with the lowest index for Sidelink Relay UE i = 0 starts PRB=0; Sidelink Relay UE i = 1 starts PRB=10. Sidelinke UE 1 i = 2 starts PRB=20.
	PSBCH-RSRP	dBm/30kHz	-95	

NOTE 1: The UE is only required to be tested in one of the supported test configurations.
NOTE 2: The parameters for Sidelink UE 1 are applicable only when it exists.

NOTE 3: PSCCH-DMRS Es/Iot is set the same as PSSCH-DMRS Es/Iot.
NOTE 4: This test is according to the principle defined in section A.3.21.2.

A.9.1.7.2 Test Requirements

Sidelink relay UE selection delay is defined as the time from the beginning of time period T3 to the moment when the UE selects the Sidelink Relay UE1 and transmits the PC5-SP direct communication setup message using Sidelink Communications.

The test system shall verify that the sidelink relay UE selection delay is less than 680 ms.

NOTE: The sidelink relay UE selection delay can be expressed as ($T_{evaluate, SL_Relay_Intra}$ + 40 ms).

Sidelink relay UE reselection time is defined as the time from the beginning of time period T5 to the moment when the UE reselects to Sidelink relay UE2 and transmits the direct communication setup message using Sidelink Communications.

The test system shall verify that the sidelink relay UE reselection delay is less than 840 ms.

NOTE: The sidelink relay UE reselection delay can be expressed as ($T_{measure, SL_Relay_Intra}$ + $T_{evaluate, SL_Relay_Intra}$ + 40 ms).

A.9A Tests for NR Sidelink Measurements for Positioning

A.9A.1 Tests for NR Sidelink Measurements for Positioning in FR1

A.9A.1.1 Measurement delay tests

A.9A.1.1.1 NR SL RSTD measurement reporting delay test case in FR1 SA

A.9A.1.1.1.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RSTD measurement meets the requirements specified in clause 12A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL RSTD measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.1.1-1.

Table A.9A.1.1.1.1-1: Supported test configurations for FR1 NR Cell 1

NR Uu configuration	Description
Uu_conf1	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode
Uu_conf2	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode
Uu_conf3	NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

The supported NR SL test configurations are specified in table A.9A.1.1.1.1-2.

Table A.9A.1.1.1.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

In the test, there is one target UE receiving SL-PRS and performing SL RSTD measurements and three anchor UEs (anchor UE 1, anchor UE 2, and anchor UE 3) transmitting SL-PRS for the SL RSTD measurements on NR SL RF channel 2. Anchor UE 1 is the reference anchor UE for the measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with duration of T1 and T2. Before T2 starts, the UEs have been synchronized to Cell 1. During time duration T1, the target UE shall not have any timing information of anchor UE 2 and anchor UE 3. All three anchor UEs transmit SL-PRS during T2.

The *SL-TDOA-ProvideAssistanceData* and *SL-TDOA-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-TDOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.1.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.1.1-4 and A.9A.1.1.1.1-5, respectively. Anchor UE specific test parameters for SL RSTD measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.1.1-6.

Table A.9A.1.1.1.1-3: General test parameters for SL RSTD measurement reporting delay

Parameter	Unit	Value	Comment
Serving cell		Cell 1	NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2, anchor UE 3), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test.
CP length		Normal	
DRX		OFF	
Measurement gap		OFF	
Target UE		UE 0	The performing SL RSTD measurements based on SL-PRS transmissions from anchor UEs
Reference anchor UE		UE 1	Reference anchor UE is the UE in the SL-TDOA assistance data with respect to which the SL RSTD measurement is defined, as specified in TS 38.215 [4] and TS 38.355 [37]. The reference anchor UE is UE 1 in this test case.
Other anchor UEs		UE 2 and UE 3	Anchor UE 2 and Anchor UE 3 appear at the first and second places in the anchor UE list SL-RTD-Info in the SL-TDOA assistance data.
Number of anchor UEs provided in SL-TDOA assistance data		4	Including the reference anchor UE
Sidelink communication configuration		As specified in table A.3.21.2-2	
Target UE antenna configuration		1 x 2	
Timing offset between the anchor UEs at the target UE antenna connector	µs	UE2 to UE1: 0 UE3 to UE1: 3	Synchronous transmissions
T1	s	3	The length of the time interval from the beginning of each test
T2	s	1.28	The length of the time interval that follows immediately after time interval T1

Propagation Condition			AWGN					

NOTE 1: The resources for NR Uu uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other UEs and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SL PRS-RSRP, PSCCH Received Power (RP), and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.
NOTE 6: Applicable only when *maxNumOfSlotsWithActiveSL-PRS-Resources* is larger than 2. If UE0 reports that *maxNumOfSlotsWithActiveSL-PRS-Resources* is 1, SL-PRS slot offset for anchor UE2 and anchor UE3 is *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 15kHz and 2**minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 30kHz. If UE0 reports that *maxNumOfSlotsWithActiveSL-PRS-Resources* is 2, SL-PRS slot offset is 1 slot for anchor UE2 and *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 15kHz and 2**minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* for SCS 30kHz for anchor UE3.

A.9A.1.1.1.2 Test Requirements

The SL RSTD measurement time fulfils the requirements specified in clause 12A.2.5.

The UE shall perform and report to LMF the SL RSTD measurements for anchor UE 2 and anchor UE 3 with respect to the reference anchor UE 1, within the time duration specified in clause 12A.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL RSTD measurement for each correct event shall be within the SL RSTD reporting range specified in clause 10.4A.2.1.1, i.e., between SL_RSTD_000000 and SL_RSTD_492513.

A.9A.1.1.2 SL Rx-Tx measurement delay tests

A.9A.1.1.2.1 Test Purpose and Environment

The purpose of the test is to verify that the SL Rx-Tx measurement meets the requirements specified in clause 12A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL Rx-Tx measurements.

The supported NR Uu test configurations in FR1 are shown in table A.9A.1.1.2.1-1.

Table A.9A.1.1.2.1-1: Supported Test Configurations for FR1 NR cell

Configuration	Description
1	NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode
2	NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode
3	NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode
Note 1: The UE is only required to pass in one of the supported test configurations in FR1.	

The supported NR SL test configurations are specified in table A.9A.1.1.2.1-2.

Table A.9A.1.1.2.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There is one NR active cell (Cell 1) and three active UEs (one target UE and two anchor UEs for SL positioning measurement) in this test. The target UE receives SL-PRS and performs the SL Rx-Tx time difference measurement. The two anchor UEs transmit the SL-PRS for the SL Rx-Tx time difference measurement on NR SL RF channel 2. The target UE and all anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. Before T2 starts, the UEs have been synchronized to the NR serving cell. And during T2, two anchor UEs transmit SL-PRS for positioning measurements.

The *SL-RTT-ProvideAssistanceData* and *SL-RTT-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the SL RTT assistance data and location information request.

The test parameters are given in table A.9A.1.1.2.1-3, A.9A.1.1.2.1-4, A.9A.1.1.2.1-5 and table A.9A.1.1.2.1-6 below.

Table A.9A.1.1.2.1-3: General Test Parameters for SL Rx-Tx measurement reporting delay

Parameter	Unit	Value	Comment
Serving cell		Cell 1	NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test.
CP length		Normal

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 2: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for SL PRS symbols.

NOTE 3: The UE is only required to be tested in one of the supported test configurations.

NOTE 4: In symbols containing SL-PRS.

NOTE 5: In symbols containing PSCCH.

A.9A.1.1.2.2 Test Requirements

The SL Rx-Tx time difference measurement time fulfils the requirements specified in clause 12A.4.5.

The UE shall perform and report the SL Rx-Tx time difference measurements for anchor UE 1 and anchor UE 2 within the specified SL Rx-Tx time difference measurement time starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL Rx-Tx measurement for each correct event shall be within the SL Rx-Tx reporting range specified in clause 10.4A.4.1.

A.9A.1.1.3 NR SL AoA measurements reporting delay test in FR1 SA

A.9A.1.1.3.1 Test Purpose and Environment

The purpose of the test is to verify that the SL AoA measurement meets the requirements specified in clause 12A.6 in an environment with AWGN propagation conditions in FR1 in NR Uu standalone scenario, when a single frequency layer is configured for SL positioning.

The test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL AoA measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.3.1-1.

The supported NR SL test configurations are specified in table A.9A.1.1.3.1-2.

Table A.9A.1.1.3.1-1: Supported Test Configurations for FR1 NR cell

Configuration	Description
1	NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode
2	NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode
3	NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode
NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1.	

Table A.9A.1.1.3.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

In the test there is one target UE receiving SL-PRS and performing SL AoA measurements and two anchor UEs (anchor UE 1, anchor UE 2) transmitting SL-PRS for the SL AoA measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with the duration of T1 and T2. During the duration T1, the target UE shall not have any timing information of anchor UE 1 and anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-AOA-ProvideAssistanceData* and *SL-AOA-RequestLocationInformation* as defined in TS 38.355 [37], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-AOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.3.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.3.1-4 and A.9A.1.1.3.1-5, respectively. Anchor UE specific test parameters for SL AoA measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.3.1-6.

NOTE 3: The UE is only required to be tested in one of the supported test configurations.

NOTE 4: In symbols containing SL-PRS.

NOTE 5: In symbols containing PSCCH.

A.9A.1.1.3.2 Test Requirements

The SL AoA measurement time fulfils the requirements specified in clause 12A.6.5.

The UE shall perform and report to LMF the SL AoA measurements for the anchor UE 1 and anchor UE 2, within the time duration specified in clause 12A.6.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL AoA measurement for each correct event shall be within the SL AoA reporting range specified in clause 10.4A.6.1.1, i.e., between A_AoA_0 and SL_AoA_3599, and between Z_AoA_0 and Z_AoA_1799.

A.9A.1.1.4 NR SL RTOA measurements reporting delay test in FR1 SA

A.9A.1.1.4.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RTOA measurement meets the requirements specified in clause 12A.7 in an environment with AWGN propagation conditions in FR1 in NR Uu standalone scenario, when a single frequency layer is configured for SL positioning.

The test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL AoA measurements.

The supported NR Uu test configurations are specified in table A.9A.1.1.4.1-1.

The supported NR SL test configurations are specified in table A.9A.1.1.4.1-2.

Table A.9A.1.1.4.1-1: Supported test configurations for FR1 NR Cell 1

NR Uu configuration	Description
Uu_conf1	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode
Uu_conf2	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode
Uu_conf3	NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

Table A.9A.1.1.4.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

In the test there is one target UE transmitting SL-PRS and performing SL RTOA measurements and one anchor UE (anchor UE 1) receiving SL-PRS for the SL RTOA measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with the duration of T1 and T2. During the duration T1, the target UE shall not have any timing information of anchor UE 1 and anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-TOA-ProvideAssistanceData* and *SL-TOA-RequestLocationInformation* as defined in TS 38.355 [37], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-TOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.1.4.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.1.4.1-4 and A.9A.1.1.4.1-5, respectively. Anchor UE specific test parameters for SL RTOA measurement reporting delay during T1 and T2 are listed in table A.9A.1.1.4.1-6.

Table A.9A.1.1.4.1-3: General test parameters for SL RTOA measurement reporting delay

Parameter	Unit	Value	Comment
Serving cell		Cell 1	NR PCell of the target UE and all anchor UEs (anchor UE 1), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test.
CP length		Normal	
DRX		OFF	
Measurement gap		OFF

Propagation Condition			AWGN	

NOTE 1: The resources for NR Uu uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other UEs and noise sources not specified in the test are assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters and are given for information purpose. These are not settable test parameters.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.

A.9A.1.1.4.2 Test Requirements

The SL RTOA measurement time fulfils the requirements specified in clause 12A.7.5.

The UE shall perform and report to LMF the SL RTOA measurements for the anchor UE 1, within the time duration specified in clause 12A.7.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL RTOA measurement for each correct event shall be within the SL RTOA reporting range specified in clause 10.4A.7.1.1, i.e., between SL_RTOA_0 and SL_RTOA_985024.

A.9A.1.1.5 NR SL PRS-RSRP measurement reporting delay test case in FR1 SA

A.9A.1.1.5.1 Test Purpose and Environment

The purpose of the test is to verify that the measurement time of both SL PRS PRS-RSRP and SL PRS RSTD measurements meet the requirements specified in clause 12A.3.5and 12A.2.5 respectively in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.1.1. And if UE passes this test case, then UE does not need to take the reporting delay test with RSTD measurement only defined in A.9A.1.1.1.

A.9A.1.1.5.2 Test Requirements

The SL PRS-RSRP and SL RSTD measurement times fulfil the requirements specified in clause 12A.3.5 and 12A.2.5 respectively.

The UE shall perform and report to LMF the SL PRS-RSRP measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.3.5 starting from the beginning of time interval T2. UE also performs and report to LMF the SL RSTD measurements for anchor UE 2 and anchor UE 3 with respect to the reference anchor UE 1, within the time duration specified in clause 12A.2.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL PRS-RSRP measurement for each correct event shall be within the SL PRS-RSRP reporting range specified in clause 10.4A.3.1.1, i.e., between SL_PRS_RSRP_0 and SL_PRS_RSRP_126, and the reported SL RSTD measurement for each correct event shall be within the SL RSTD reporting range specified in clause 10.4A.2.1.1.

A.9A.1.1.6 NR SL PRS-RSRPP measurement reporting delay test case in FR1 SA

A.9A.1.1.6.1 Test Purpose and Environment

The purpose of the test is to verify that the measurement time of both SL PRS PRS-RSRPP and SL Rx-Tx measurements meet the requirements specified in clause 12A.5.5 and 12A.4.5 respectively in an environment with two-tap propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.1.2, except that the propagation shall be two-tap channel. And if UE passes this test case, then UE does not need to take the reporting delay test case with SL Rx-Tx measurement only defined in A.9A.1.1.2.

A.9A.1.1.6.2 Test Requirements

The SL PRS-RSRPP and SL Rx-Tx measurement times fulfil the requirements specified in clause 12A.5.5 and 12A.4.5, respectively.

The UE shall perform and report to LMF the SL PRS-RSRPP measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.5.5 starting from the beginning of time interval T2. UE also performs and report to LMF the SL Rx-Tx measurements for anchor UE 2 and anchor UE 3 within the time duration specified in clause 12A.4.5 starting from the beginning of time interval T2.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the time duration above because of TTI insertion uncertainty of the measurement report in DCCH.

The rate of the correct events for each anchor UE observed during repeated tests shall be at least 90%, where the reported SL PRS-RSRPP measurement for each correct event shall be within the SL PRS-RSRPP reporting range specified in clause 10.4A.5.1.1, i.e., between SL_PRS_RSRPP_0 and SL_PRS_RSRPP_126, and the reported SL Rx-Tx measurement for each correct event shall be within the SL Rx-Tx reporting range specified in clause 10.4A.4.1.1.

A.9A.1.2 Measurement Accuracy Tests

A.9A.1.2.1 NR SL RSTD measurement accuracy test case in FR1 SA

A.9A.1.2.1.1 Test Purpose and Environment

The purpose of the test is to verify that the SL RSTD measurement meets the accuracy requirements specified in clause 10.4A.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL RSTD measurements.

The supported NR Uu test configurations are specified in table A.9A.1.2.1.1-1.

Table A.9A.1.2.1.1-1: Supported test configurations for FR1 NR Cell 1

NR Uu configuration	Description
Uu_conf1	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, FDD duplex mode
Uu_conf2	NR Uu: 15 kHz SSB SCS, 20 MHz bandwidth, TDD duplex mode
Uu_conf3	NR Uu: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

The supported NR SL test configurations are specified in table A.9A.1.2.1.1-2.

Table A.9A.1.2.1.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

In the test, there is one target UE receiving SL-PRS and performing SL RSTD measurements and two anchor UEs (anchor UE 1 and anchor UE 2) transmitting SL-PRS for the SL RSTD measurements on NR SL RF channel 2. Anchor UE 1 is the reference anchor UE for the measurements. The target UE and all the anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1. Cell 1 is also the synchronization source of the target UE and all anchor UEs in the test.

The test consists of two consecutive time intervals, with duration of T1 and T2. Before T2 starts, the UEs have been synchronized to Cell 1. During time duration T1, the target UE shall not have any timing information of anchor UE 2. All two anchor UEs transmit SL-PRS during T2.

The *SL-TDOA-ProvideAssistanceData* and *SL-TDOA-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where $\Delta T = 50$ ms is the maximum processing time of the *SL-TDOA assistance* data and location information request.

The general test parameters are listed in table A.9A.1.2.1.1-3. NR Uu specific test parameters for Cell 1 and NR Uu UE-specific test parameters for all UEs in the test are listed in table A.9A.1.2.1.1-4 and A.9A.1.2.1.1-5, respectively. Anchor UE specific test parameters for SL RSTD measurement accuracy during T1 and T2 are listed in table A.9A.1.2.1.1-6.

Table A.9A.1.2.1.1-3: General test parameters for SL RSTD measurement accuracy test

Parameter	Unit	Value	Comment
Serving cell		Cell 1	NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test.

NOTE 4: In symbols containing SL-PRS.							
NOTE 5: In symbols containing PSCCH.							

A.9A.1.2.1.2 Test Requirements

In each test, the SL RSTD measurement for anchor UE 2 shall fulfil the absolute accuracy requirement in clause 10.4A.2.2.

A.9A.1.2.2 SL Rx-Tx measurement accuracy test case in FR1

A.9A.1.2.2.1 Test Purpose and Environment

The purpose of the test is to verify that the SL Rx-Tx measurement meets the accuracy requirements specified in clause 10.4A.4 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

This test is applicable for UEs supporting NR Uu and V2X or 5G ProSe operation, which are capable of performing SL Rx-Tx measurements.

The supported NR Uu test configurations in FR1 are shown in table A.9A.1.2.2.1-1.

Table A.9A.1.2.2.1-1: Supported Test Configurations for FR1 NR cell

Configuration	Description
1	NR Uu: 15 kHz SSB SCS, 20 MHz BW, FDD duplex mode
2	NR Uu: 15 kHz SSB SCS, 20 MHz BW, TDD duplex mode
3	NR Uu: 30 kHz SSB SCS, 40 MHz BW, TDD duplex mode
NOTE 1: The UE is only required to pass in one of the supported test configurations in FR1.	

The supported NR SL test configurations are specified in table A.9A.1.2.2.1-2.

Table A.9A.1.2.2.1-2: Supported test configurations for NR SL UEs

NR SL configuration	Description
SL_conf1	NR SL: 15 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf2	NR SL: 30 kHz SSB SCS, 10 MHz bandwidth, HD duplex mode
SL_conf3	NR SL: 30 kHz SSB SCS, 20 MHz bandwidth, HD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.	

There is one NR active cell (Cell 1) and three active UEs (one target UE and two anchor UEs for SL positioning measurement) in this test. The target UE receives SL-PRS and performs the SL Rx-Tx time difference measurement. The two anchor UEs transmit the SL-PRS for the SL Rx-Tx time difference measurement on NR SL RF channel 2. The target UE and all anchor UEs are in RRC_CONNECTED state, with Cell 1 as their PCell in FR1 on NR Uu RF channel 1.

The test consists of two successive time periods, with time duration of T1 and T2 respectively. Before T2 starts, the UEs have been synchronized to the NR serving cell. And during T2, two anchor UEs transmit SL-PRS for positioning measurements.

The *SL-RTT-ProvideAssistanceData* and *SL-RTT-RequestLocationInformation* as defined in TS 38.355 [37, clause 6.9], shall be provided to the target UE via Cell 1 during T1. The last TTI containing the two messages shall be provided to the target UE ΔT ms before the start of T2, where ΔT = 50 ms is the maximum processing time of the *SL-RTT assistance* data and location information request.

The test parameters are given in table A.9A.1.2.2.1-3, A.9A.1.2.2.1-4, A.9A.1.2.2.1-5 and table A.9A.1.2.2.1-6 below.

Table A.9A.1.2.2.1-3: General Test Parameters for SL Rx-Tx measurement reporting delay

Parameter	Unit	Value	Comment
Serving cell		Cell 1	NR PCell of the target UE and all anchor UEs (anchor UE 1, anchor UE 2), in FR1 on NR Uu RF channel 1. This cell is also the synchronization source for SL operation for all UEs in the test.
CP length		Normal	
DRX		OFF	
Measurement gap		OFF	
Target UE		UE 0	The UE performing SL Rx-Tx measurements based on SL-PRS transmissions from anchor UEs
Other anchor UEs		UE 1 and UE 2	Anchor UE 1 and Anchor UE 2 appear at the first and second places in the anchor UE list SL-RTD-Info in the SL-RTT assistance data.
Number of anchor UEs provided in SL-RTT assistance data		3	Including the target UE
Sidelink communication configuration		As specified in table A.3.21.2-2	
Target UE antenna configuration		1 x 2	
Timing offset between the anchor UEs at the target UE antenna connector	μs	UE 2 to UE 1: 3	Synchronous transmissions
T1	s	3	The length of the time interval from the beginning of each test
T2	s	1.28	The length of the time interval that follows immediately after time interval T1

NOTE 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 2: SL PRS-RSRP, PSCCH Received Power (RP) and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io level is based on the allocated PRBs for SL PRS symbols.
NOTE 3: The UE is only required to be tested in one of the supported test configurations.
NOTE 4: In symbols containing SL-PRS.
NOTE 5: In symbols containing PSCCH.

A.9A.1.2.2.2 Test Requirements

The SL Rx-Tx time difference measurement fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.4A.4.2 for both anchor UE 1 and anchor UE 2.

A.9A.1.2.3 NR SL PRS-RSRP measurement accuracy test case in FR1 SA

A.9A.1.2.3.1 Test Purpose and Environment

The purpose of the test is to verify that the SL PRS PRS-RSRP measurement accuracy meets the requirements specified in clause 10.4A.3.2 in an environment with AWGN propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.2.1. During the test, both SL RSTD and SL PRS-RSRP measurements are requested by LMF.

A.9A.1.2.3.2 Test Requirements

In each test, the PRS-RSRP measurement accuracies shall fulfil the accuracy requirement defined in clause 10.4A.3.2.

A.9A.1.2.4 NR SL PRS-RSRPP measurement accuracy test case in FR1 SA

A.9A.1.2.4.1 Test Purpose and Environment

The purpose of the test is to verify that the SL PRS PRS-RSRPP measurement accuracy meets the requirements specified in clause 10.4A.5.2 in an environment with two-tap propagation conditions in FR1 in standalone NR scenario, with additionally configured single frequency layer for SL positioning.

The test environment and configurations refer to A.9A.1.2.2, except that the propagation shall be two-tap channel. During the test, both SL Rx-Tx and SL PRS-RSRPP measurements are requested by LMF.

A.9A.1.2.4.2 Test Requirements

In each test, the PRS-RSRPP measurement accuracies shall fulfil the accuracy requirement defined in clause 10.4A.5.2.

A.10 EN-DC Tests with NR PSCell under CCA and Other NR Cells in FR1

Editor's note: Test cases for EN-DC with NR PSCell under CCA and SCell under CCA are also included here.

A.10.1 RRC_CONNECTED state mobility

A.10.1.1 RRC connection mobility control

A.10.1.1.1 Random Access

A.10.1.1.1.1 4-step RA type contention-based random access for NR PSCell with CCA

A.10.1.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.1.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.1.1-2.

Table A.10.1.1.1.1.1-1: Supported test configurations for contention based random access test in FR1 for PSCell with CCA

Config	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability

W_{CCA_UL} Note 8				Inf	
Semi-static channel access config period Note 4, 6			ms	2	
Propagation Condition			-	AWGN	

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: L_{CCA_DL} and L_{CCA_UL} are chosen such that preambleTransMax > 5 + L_{CCA_DL} + L_{CCA_UL}.
NOTE 8: A window W_{CCA_DL}=W_{CCA_UL}=Inf is used to indicate that L_{CCA_DL} and L_{CCA_UL} are considered during the entire duration of a test run.

A.10.1.1.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

A.10.1.1.1.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in clause 6.2.2A.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.1.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.1.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2A.2.1.4, the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

A.10.1.1.1.1.2.5 Contention Resolution Timer expiry

To test the UE behavior specified in clause 6.2.2A.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

A.10.1.1.1.2 4-step RA type non-contention based random access for NR PSCell with CCA

A.10.1.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.2.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.2.1-2.

Table A.10.1.1.1.2.1-1: Supported test configurations for non-contention based random access test in FR1 for PSCell with CCA

Config	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability

NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: L_{CCA_DL} and L_{CCA_UL} are chosen such that preambleTransMax > 5 + L_{CCA_DL} + L_{CCA_UL}.
NOTE 8: A window W_{CCA_DL}=W_{CCA_UL}=Inf is used to indicate that L_{CCA_DL} and L_{CCA_UL} are considered during the entire duration of a test run.

A.10.1.1.1.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

A.10.1.1.1.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2A.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.2.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.

- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.2.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.2.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.3 2-step RA type contention-based random access for NR PSCell with CCA

A.10.1.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.3.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.3.1-2.

Table A.10.1.1.1.3.1-1: Supported test configurations for 2-step RA type contention based random access test in FR1 for PSCell with CCA

Config	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability	

Table A.10.1.1.1.3.1-2: General test parameters for 2-step RA type contention based random access test in FR1 for PSCell with CCA

Parameter			Unit	Test-1	Comments

L_{CCA_UL} Note 7				5	
W_{CCA_UL} Note 8				Inf	
Semi-static channel access config period Note 4, 6			ms	2	
Propagation Condition			-	AWGN	

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: L_{CCA_DL} and L_{CCA_UL} are chosen such that preambleTransMax > 5 + L_{CCA_DL} + L_{CCA_UL}.
NOTE 8: A window W_{CCA_DL}=W_{CCA_UL}=Inf is used to indicate that L_{CCA_DL} and L_{CCA_UL} are considered during the entire duration of a test run.

A.10.1.1.1.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

A.10.1.1.1.3.2.1 MsgA Transmission

To test the UE behaviour specified in clause 6.2.2A.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*, if the UL CCA is successful.

below are relevant for all cases of MsgA transmissions described within the clause A.10.1.1.1.3.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure. In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.3.2.2 MsgB Reception

To test the UE behaviour specified in clause 6.2.2A.3.1.2 the System Simulator shall transmit a MsgB with fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble .

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.3 the System Simulator shall transmit a MsgB with fallbackRAR containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.4 2-step RA type non-contention based random access for NR PSCell with CCA

A.10.1.1.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in table A.10.1.1.1.4.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in table A.10.1.1.1.4.1-2.

Table A.10.1.1.1.4.1-1: Supported test configurations for non-contention based random access test for 2-step RA type in FR1 for PSCell with CCA

Config	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.
NOTE 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.
NOTE 7: L_{CCA_DL} and L_{CCA_UL} are chosen such that preambleTransMax > 5 + L_{CCA_DL} + L_{CCA_UL}.
NOTE 8: A window W_{CCA_DL}=W_{CCA_UL}=Inf is used to indicate that L_{CCA_DL} and L_{CCA_UL} are considered during the entire duration of a test run.

A.10.1.1.1.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

A.10.1.1.1.4.2.1 MsgA Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2A.3.2.1 for MsgA transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.10.1.1.1.4.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the

MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.

- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.

- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.4.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.2 the System Simulator shall transmit a MsgB containing a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble after 5 MsgA transmissions have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB if the MsgB contains a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power if Random Access Responses Reception has not been considered as successful.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.1.1.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.3 the System Simulator shall transmit a MsgB corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be $0.6 + 3(\mu + 2)$ dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where μ indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

A.10.1.2 Handover with PSCell from EN-DC to EN-DC with known target PSCell using CCA

A.10.1.2.1 Test Purpose and Environment

This test is to verify the requirement for E-UTRA handover with NR PSCell change, where NR PSCell is on carrier with CCA. The requirements for EN-DC HO with PSCell change on CCA are specified in clause 5.9 in E-UTRA RRM specification [15] for the case when the target PSCell is on carrier with CCA. Supported test configurations are shown in table A.10.1.2.1-1.

Table A.10.1.2.1-1 gives general test configurations for Handover with PSCell from EN-DC to EN-DC, table A.10.1.2.1-2 provides general test parameters for Handover from E-UTRA to E-UTRA cell in EN-DC to EN-DC, table A.10.1.2.1-3 provides E-UTRAN cell specific test parameters for Handover with PSCell from EN-DC to EN-DC, table A.10.1.2.1-4 provides general test parameters for PSCell change from FR1 carrier under CCA to FR1 carrier under CCA, table A.10.1.2.1-5 provides cell specific test parameters for PSCell change from FR1 carrier under CCA to FR1 carrier under CCA.

In the test there are four cells: Cell 1 and Cell 2 are PCell and target PCell on E-UTRA carrier, Cell 3 and Cell 4 are PSCell and target PSCell on NR CCA carrier. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) and Cell 3 (NR PSCell) with EN-DC mode.

At the start of time duration T1, the UE do not have any information of cell 2 and cell 4. AT the end of T1, UE is configured with neighbour cell measurements on the Cell 3 and Cell 4 for Event A3 conditional measurement report.

During T2, UE acquires the timing information of Cell 3 and Cell 4 and performs L3-RSRP measurements on the configured neighbour cells. UE sends measurement report to the Cell 1 to indicate the event triggering condition A3 is satisfied for the configured for neighbour cells. By end of T2, E-UTRA PCell (Cell 1) shall send a RRC message implying handover with PSCell change.

The start of T3 is defined as the end of the last TTI containing the RRC message implying handover with PSCell. UE shall complete PRACH transmission to PCell and PSCell by end of T3.

Table A.10.1.2.1-1: General test configurations for Handover with PSCell from EN-DC to EN-DC with CCA on NR Cell

Config	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations depending on the UE capability	

Table A.10.1.2.1-2: General test parameters for Handover from E-UTRA to E-UTRA cell in EN-DC to EN-DC

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	One is E-UTRA RF channel and one is NR RF channel
Initial conditions	Active PCell		Cell 1	On E-UTRA RF channel number 1.
	E-UTRA Neighbouring cell		Cell 2	On E-UTRA RF channel number 1.
Final conditions	Active PCell		Cell 2	
CP length			Normal	Applicable to Cell 1, Cell 2, Cell 3 and Cell 4.
A3-Offset		dB	0	
Hysteresis		dB	0	
Time To Trigger		s	0	
Filter coefficient			0	L3 filtering is not used
DRX			OFF	Continuous monitoring of primary cell
Access Barring Information		-	Not Sent	No additional delays in random access procedure.
Time offset between same RAT cells		μs	3	Synchronous cells
T1		s	5	
T2		s	≤5	
T3		s	1	Tinterrupt is defined in clause 6.1B.1.2

NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

A.10.1.2.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 60 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover requirements for handover with PSCell for EN-DC is defined in clause 5.9 in [15] as:

$D_{HOwithPSCel_PCell} = T_{RRC_delay} + T_{search} + T_{IU} + T_{processing}$

Where:

T_{RRC_delay} = 20 ms for 'RRC connection reconfiguration (NR SCG establishment/ /modification/release)'.

T_{search} = 0 ms for known cell.

T_{IU} = 15 ms in the test configuration.

$T_{processing}$ = 25 ms for source Cell and target Cell are in the same FR.

This gives a total of 60 ms for handover delay.

The UE shall transmit the PRACH preamble to Cell 4 less than $D_{HOwithPSCell_PSCell}$ from the beginning of time period T3.

NOTE: The PSCell change delay for handover with PSCell for EN-DC is defined in clause 5.8 in [15] as:

$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU_PSCell} + 2$ ms

Where:

T_{RRC_delay} = 20 ms for 'RRC connection reconfiguration (NR SCG establishment/ /modification/release)'.

$T_{processing}$ = 25 ms for source Cell and target Cell are in the same FR.

T_{search} = 0 ms for known cell.

$T_{\Delta} = (1+ L_2) *20$ ms.

$T_{IU} = (1+ L_3) *10 + 10$ ms

L_2 is the number of SMTC occasions not available at the UE during the time tracking period where $L_2 \leq L_{CCA_DL}$, and L_3 is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where $L_3 \leq L_{CCA_UL}$. $L_3 = 0$ for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by L_1, L_2, L_3 and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2]. Test equipment should make sure that L_{CCA_DL} and L_{CCA_UL} are not exceeded during a test by monitoring the number of CCA failures and preventing additional CCA failures from happening after L_{CCA_DL} or L_{CCA_UL} is reached.

The rate of correct PSCell addition observed during repeated tests shall be at least 90 %.

A.10.2 Timing

A.10.2.1 UE transmit timing

A.10.2.1.1 UE Transmit Timing Test with PSCell under DL CCA

A.10.2.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeb when PSCell is subject to DL CCA and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2. Supported test configurations are shown in table 10.2.1.1.1-1.

Table A.10.2.1.1.1-1: Supported test configurations for UE transmit timing test

Config	Description

1	LTE FDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

The test consists of E-UTRA PCell and NR PSCell, which is subject to DL CCA. The configuration for E-UTRA is given in A.3.7.2.1. Table A.10.2.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.10.2.1.1.1-3.

A.10.2.1.1.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Set up E-UTRA PCell according to parameters given in table A.3.7.2.1-1 and setup NR PSCell according to parameters given in table A.10.2.1.1.1-1.

2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset})\times T_c \pm T_e$ of the first detected path of DL SSB.

   a. The N_{TA} offset value (in T_c units) is 25600

   b. The T_e values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1

3) The test system shall adjust the timing of the DL path by values given in table A.10.2.1.1.2-1

Table A.10.2.1.1.2-1: Adjustment Value for DL Timing

SCS of SSB signals (kHz)	Adjustment Value	
	Test1	Test2
30	$+32*64T_c$	$+16*64T_c$

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

A.10.2.2 UE timing advance

A.10.2.2.1 UE Timing Advance Adjustment Accuracy with PSCell under DL CCA

A.10.2.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

A.10.2.2.1.2 Test Parameters

Supported test configurations are shown in table A.10.2.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.10.2.2.1.2-2, A.10.2.2.1.2-3 and A.10.2.2.1.2-4. The configuration of Cell 1 (LTE PCell) is specified in clause A.3.7.2.1.

In all test cases, two cells are used. Cell 1 is the PCell in the primary Timing Advance Group (pTAG) and cell 2 is the PSCell which is subject to DL CCA is in the secondary Timing Advance Group (sTAG). Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands for sTAG are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.10.2.2.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured for PSCell in sTAG.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element for sTAG, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance for sTAG used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value specified in table A.10.2.2.1.2-2. This value shall result in changes of the timing advance for sTAG used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321, shall be configured so that it does not expire in the duration of the test.

Table A.10.2.2.1.2-1: Supported test configurations for timing advance test

Config	Description
1	LTE FDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations. NOTE 2: The UE supporting EN-DC only on NR band(s) with shared spectrum access is required to be tested	

Table A.10.2.2.1.2-2: General test parameters for timing advance test

Parameter	Unit	Value	Comment

NOTE: For further information see clause 6.3.2 in TS 38.331 [2].

A.10.2.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value for PSCell in sTAG to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy for PSCell in sTAG shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

A.10.3 Signalling characteristics

A.10.3.1 Radio link monitoring

A.10.3.1.1 Introduction

In the test cases specified in clause A.10.3.1, any uplink signal transmitted by the UE is used for detecting the in-/out-of-sync state of the UE. In terms of measurement, the uplink signal is verified based on the UE output power:

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means uplink signal

- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means no uplink signal.

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

A.10.3.1.2 Radio link monitoring out-of-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

A.10.3.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.10.3.1.2.1-1. The test parameters are given in tables A.10.3.1.2.1-2, A.10.3.1.2.1-3, and A.10.3.1.2.1-4 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of three successive time periods, with time duration of T1, T2 and T3, respectively. Figure A.10.3.1.2.1-1 shows the variation of the downlink SNR in the active Cell 2 to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in the test.

Table A.10.3.1.2.1-1: Supported test configurations.

Configuration	Description
1	LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE: The UE is only required to pass in one of the supported test configurations above.

A.10.3.1.2.2 Test requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

- During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.
- The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

A.10.3.1.3 Radio link monitoring in-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

A.10.3.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.10.3.1.3.1-1. The test parameters are given in tables A.10.3.1.3.1-2, and A.10.3.1.3.1-3 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model.

Table A.10.3.1.3.1-1: Supported test configurations.

Configuration	Description
1	LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE: The UE is only required to pass in one of the supported test configurations above.

A.10.3.1.4.2 Void

A.10.3.1.5 Void

A.10.3.1.5.1 Void

A.10.3.1.5.2 Void

A.10.3.2 Void

A.10.3.3 SCell activation and deactivation delay

A.10.3.3.1 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 160 ms SCell measurement cycle

A.10.3.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in table A.10.3.3.1.1-1.

The test parameters are given in table A.10.3.3.1.1-2 and cell-specific parameters for NR cells are provided in table A.10.3.3.1.1-3 below. Cell-specific parameters for EUTRA PCell are provided in clause A.3.7.2.1.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in E-UTRA, Cell 2 (PSCell) on radio channel 2 (PSCC) in NR, and Cell 3 (SCell) on radio channel 3 (SCC) in NR. Before the test starts the UE is connected to Cell 1 and Cell 2, but is not aware of Cell 3, as the UE is only monitoring PCC and PSCC. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 3) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted *m*, defines the start of time period T2. The UE shall be able to report a valid CSI in PSCell for the activated SCell at latest in slot *m* + (T_{HARQ}+ $T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, as defined in clause 8.3A.2. The UE shall start reporting CSI in PSCell in first available uplink resource for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting following slot $m+ \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PSCell interruption shall fall within the time window specified in clause 8.3A.2.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted *n*, defines the start of time period T3. The UE shall complete the activation at latest in slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$. Any PSCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

Table A.10.3.3.1.1-1: Supported test configurations for SCell Activation and Deactivation of known NR SCell with NR PSCell and SCell under CCA, 160 ms SCell measurement cycle

Configuration	Description
1	PCC: LTE FDD duplex mode; With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode; With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode

2	PCC: LTE TDD duplex mode; With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode; With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations	

Table A.10.3.3.1.1-2: General test parameters for known SCell activation case with NR PSCell and SCell under CCA, 160 ms SCell measurement cycle

Parameter	Unit	Value	Comment
RF Channel Number		1,2,3	Three radio channels (1, 2, 3) are used for this test
Active PCell		Cell 1	Primary cell on E-UTRAN RF channel number 1.
Active PSCell		Cell 2	Primary secondary cell on NR RF channel number 2.
Configured deactivated SCell		Cell 3	Configured deactivated secondary cell on NR RF channel number 3
CP length		Normal	
DRX		OFF	Continuous monitoring of primary cell

SCell measurement cycle (measCycleSCell)	ms	160	
Cell 3 timing offset to Cell 2	µs	0	
Time alignment error between Cell 3 and Cell 2	µs	≤ TAE as specified in TS 38.104 [13] clause 6.5.3.1.	The value of time alignment error depends upon the type of carrier aggregation.
T1	s	7	During this time PCell and PSCell shall be known and the SCell configured and detected.
T2	s	1	During this time the UE shall activate the SCell.
T3	s	1	During this time the UE shall deactivate the SCell.
T_{HARQ}	ms	k_1×NR slot length	k_1 is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of k should be the minimum value defined in TS 38.213 [3] depends on UE's capability
$T_{CSI_Reporting}$	ms	$10 + 5 \cdot 2^{\mu_{DL}}$	The delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] μ_{DL} is the subcarrier spacing configuration for DL

NOTE 1: OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 3: SS-RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 7: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.
NOTE 8: As specified in clause 8.3A for $L_{1,max}$, $L_{2,1,max}$, $L_{2,2,max}$, $L_{3,1,max}$, and $L_{3,2,max}$

A.10.3.3.1.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot m + (T_{HARQ}+ $T_{activation_time_withCCA}$ + $T_{CSI_Reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB} + L_1 * T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot m +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot m +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB}$.

During T3, interruption on PSCell shall not occur outside slot n +1+T_{HARQ}/NR_slot_length to slot n+1+(T_{HARQ} +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

A.10.3.3.2 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 640 ms SCell measurement cycle

A.10.3.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 640 ms.

The supported test configurations are same as in table A.10.3.3.1.1-1 above.

The test parameters are same as in table A.10.3.3.1.1-2 above, except for parameters listed below in table A.10.3.3.2.1-1. The cell-specific parameters are same as in table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

Table A.10.3.3.2.1-1: General test parameters for known NR SCell activation with NR PSCell and SCell under CCA, 640 ms SCell measurement cycle

Parameter	Unit	Value	Comment
SCell measurement cycle (measCycleSCell)	ms	640	

A.10.3.3.2.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot m + (T_{HARQ}+ $T_{activation_time_withCCA}$ + $T_{CSI_reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA} = T_{FirstSSB_MAX} + L_{2,1} * T_{SMTC_MAX} + (1 + L_{2,2}) * T_{rs}$ + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot m +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot m +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with $T_X = T_{FirstSSB_MAX} + L_{2,1} * T_{SMTC_MAX}$.

During T3, interruption on PSCell shall not occur outside slot n +1+T_{HARQ}/NR_slot_length to slot n+1+(T_{HARQ} +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

A.10.3.3.3 SCell Activation and Deactivation of unknown NR SCell with NR PSCell and NR SCell under CCA

A.10.3.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in table A.10.3.3.1.1-1 above.

The test parameters are same as in table A.10.3.3.1.1-2 above, except for parameters listed below in table A.10.3.3.3.1-1. The cell-specific parameters are same as in table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

Table A.10.3.3.3.1-1: General test parameters for unknown NR SCell activation with NR PSCell and SCell under CCA

Parameter	Unit	Value	Comment
T1	s	0.1	During this time period PCell and PSCell shall be known and the SCell configured, but not detected.

A.10.3.3.3.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot m + (T_{HARQ}+ $T_{activation_time_withCCA}$ + $T_{CSI_reporting_withCCA}$)/NR_slot_length, where $T_{activation_time_withCCA}$ = $T_{FirstSSB_MAX}$ + (1 + $L_{3,1}$)*T_{SMTC_MAX} + (2 + $L_{3,2}$)*T_{rs} + 5 ms, as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot $n + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot m +1+$\frac{T_{HARQ}}{NR\ slot\ length}$ to slot m +1+$\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$ with T_X = $T_{FirstSSB_MAX}$ + $L_{3,1}$* T_{SMTC_MAX}.

During T3, interruption on PSCell shall not occur outside slot n +1+T_{HARQ}/NR_slot_length to slot n+1+(T_{HARQ} +3 ms)/NR_slot_length.

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90 %.

A.10.3.4 Beam failure detection and link recovery procedures

A.10.3.4.1 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in non-DRX mode

A.10.3.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set q_0 configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.10.3.4.1.1-1, A.10.3.4.1.1-2, and A.10.3.4.1.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.1.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set q_0 in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

Table A.10.3.4.1.1-1: Supported test configurations for FR1 PSCell with CCA

Configuration	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to pass in one of the supported test configurations in FR1

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT window.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6A.
NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.
NOTE 13: As defined in table 8.5A.5.2-1.

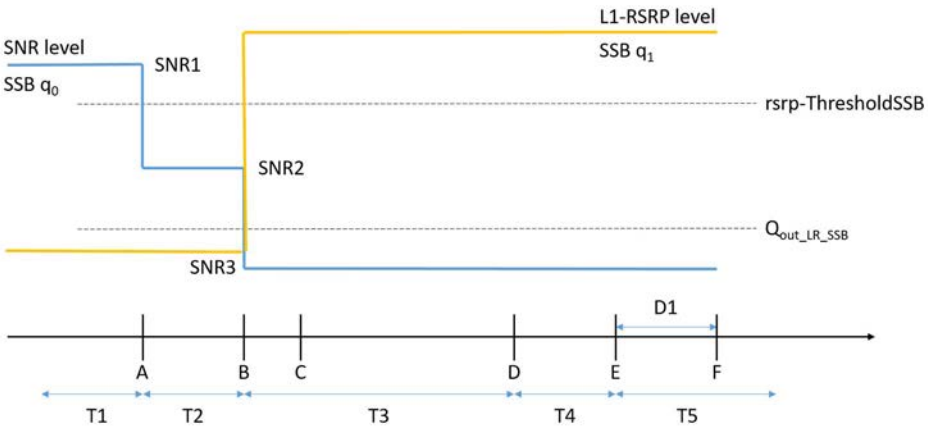

Figure A.10.3.4.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode

A.10.3.4.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 410 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set q_1. The UE shall not transmit preamble on a beam associated with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.10.3.4.2 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in DRX mode

A.10.3.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set q_0 configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set q_1. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in tables A.10.3.4.2.1-1, A.10.3.4.2.1-2, and A.4.5.5.2.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.2.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set q_0 in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set q_1 of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is enabled in PSCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

Table A.10.3.4.2.1-1: Supported test configurations for FR1 PSCell with CCA

Configuration	Description
1	LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to pass in one of the supported test configurations in FR1

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT window.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6A.
NOTE 10: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 11: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds P_{CCA_DL1} and the second value corresponds to the P_{CCA_DL2}.
NOTE 12: For UE supporting both semi-static and dynamic cannel access, the UE can be tested under dynamic channel occupancy only.

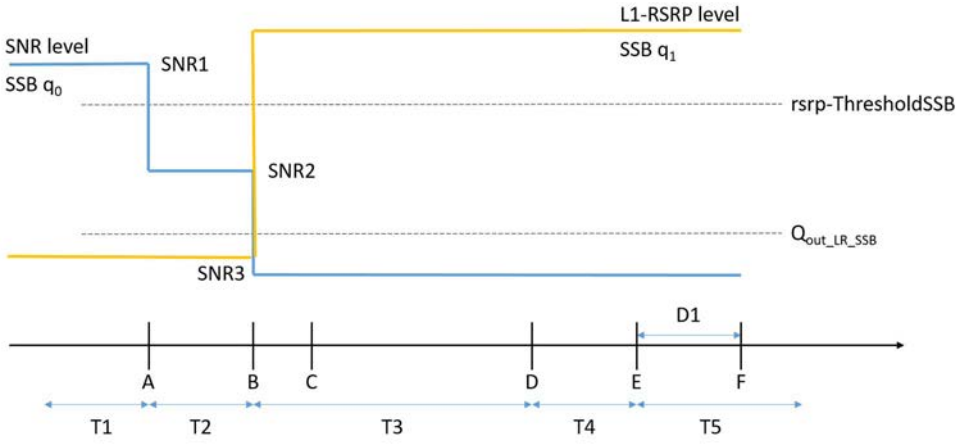

Figure A.10.3.4.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in DRX mode

A.10.3.4.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set q_1.

No later than time point F occurring no later than D1 = 3850 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set q_1. The UE shall not transmit preamble on a beam associated with the candidate beam set q_1 earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

A.10.3.5 Active BWP switching

A.10.3.5.1 UL active BWP switch delay with consistent UL LBT failure on PSCell subject to UL CCA in EN-DC

A.10.3.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the UL BWP switch delay requirement defined in clause 8.6.4.

The supported test configurations are shown in table A.10.3.5.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in A.10.3.5.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.10.3.5.1.1-2. SRS configuration used in the test is specified in table A.10.3.5.1.1-4.

The UE shall be configured with PRACH configuration on UL BWP on which the UE shall switch after the consistent UL LBT failure detection.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1 and Cell 2 on radio channel 2.
- UE is configured with 2 different UE-specific downlink and uplink bandwidth parts on Cell 2: DL BWP-1, DL BWP-2, UL BWP-1 and UL BWP-2 before starting the test. DL BWP-1 and DL BWP-2 always include bandwidth of the initial DL BWP and SSB. UL BWP-1 and UL BWP-2 always include bandwidth of the SRS.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is DL BWP-1.
- UE is indicated in *firstActiveUplinkBWP-Id* that the active UL BWP is UL BWP-1.
- UE is configured with *LBT-FailureRecoveryConfig* parameters for Cell 2.

The cell has constant signal levels throughout the test. The test consists of 2 successive time periods, with durations of T1 and T2, respectively.

During T1,

- Time period T1 starts when the UE has received the SRS configuration for periodic SRS transmission on active UL BWP-1.
- The UE shall perform UL CCA before SRS transmission.

- The parameter UL CCA probability P_{CCA} is set to 0 during T1. This requires the test system to set energy level above the detection level during portion of the UL slot where the UE performs UL CCA. This in turn forces the UE to fail the UL CCA. The UE consistently fails UL CCA during T1 and is therefore unable to transmit SRS.

During T2,

- T2 starts when the UE detects consistent UL LBT failures i.e. when total number of UL LBT failures in Cell 2 on active UL BWP-1 exceeds *lbt-FailureInstanceMaxCount* during *lbt-FailureDetectionTimer.*

- The UE upon detected consistent UL LBT failure starts the LBT recovery mechanism, which requires the UE to switch to active UL BWP-2 in Cell 2 and to send PRACH in the active UL BWP-2.

- Staring from T2, the UE shall be able to send PRACH in the active UL BWP-2 within the delay specified in clause 8.6.4.

Table A.10.3.5.1.1-1: Supported test configurations for UL BWP switch test in EN-DC

Config	Description
1	LTE FDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations.	

Table A.10.3.5.1.1-2: General test parameters for UL BWP switch in EN-DC

Parameter	Unit	Value	Comment
E-UTRA RF Channel Number		1	One E-UTRA radio channel is used for this test

cyclicShift-n2	0	
nrofSRS-Ports	port1	Number of antenna ports used for SRS transmission

NOTE: For further information see clause 6.3.2 in TS 38.331 [2].

A.10.3.5.1.2 Test Requirements

The UE capable of *bwp-SwitchingDelay type1* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 21.5 ms from the beginning of time period T1.

The UE capable of *bwp-SwitchingDelay type2* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 23 ms from the beginning of time period T1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The above delay is calculated as follows:'

The active UL BWP switch delay from UL BWP-1 to UL BWP-2 can be expressed as:

$$T_{BWPswitchDelay}*T_{slot} +1*T_{slot} + (1+ L_3)*T_{SSB,RO} + 10 \text{ ms}$$

Where:

- $T_{BWPswitchDelay}$ = 1 ms (2 slots) and 2.5 ms (5 slots) for *bwp-SwitchingDelay* [2] *type1* and *type2* UE capabilities according to clause 8.6.4.
- T_{slot} = It is the slot length. It is 0.5 ms for 30 kHz.
- L3 = It is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. L3= 0 during T2 since P_{CCA} = 1.
- $T_{SSB,RO}$ = 10 ms according to FR1 PRACH configuration 1.

This gives a total of 21.5 ms and 23 ms for *type1* and *type2* UE respectively.

A.10.3.5.2 DCI-based and Timer-based Active BWP Switch

A.10.3.5.2.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

A.10.3.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in TS38.133 clause 8.6, and interruption requirement for E-UTRA victim cell defined in TS36.133 clause 7.32.2.7. Supported test configurations are shown in table A.10.3.5.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.10.3.5.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.10.3.5.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after DL slot ($i+T_{BWPswitchDelay}$).

The starting time of PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after DL slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after DL slot ($j+T_{BWPswitchDelay}$).

The starting time of PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of PSCell, respectively.

Table A.10.3.5.2.1.1-1: DL BWP switch supported test configurations

Config	Description
1	LTE FDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations. NOTE 2: A UE which fulfils the requirements in test case A.10.3.5.2.2 can skip the test cases in A.10.3.5.2.1. NOTE 3: The UE supporting EN-DC with only NR band(s) with shared spectrum access is required to be test.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for Noc to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].
NOTE 5: Parameters P_{CCA_DL}, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and P_{CCA_UL} are defined in clause A.3.26.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

A.10.3.5.2.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell in the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell in the DL slot right after DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start time of PCell interruption during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start time of PCell interruption of during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS36.133 clause 7.32.2.7.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

A.10.3.5.2.2 E-UTRAN – NR PSCell FR1 DL active BWP switch with FR1 SCell in non-DRX in synchronous EN-DC

A.10.3.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirements for NR victim cell defined in clause 8.2.1.2.7 and interruption requirement for E-UTRA victim cell defined in clause 7.32.2.7 of TS 36.133 [15]. Supported test configurations are shown in table A.10.3.5.2.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.10.3.5.2.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in table A.10.3.5.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 3) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for SCell, BWP-0 in Cell 3 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}$).

PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}$).

PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell and NR SCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell and SCell during BWP switch of PSCell, respectively.

Table A.10.3.5.2.2.1-1: DL BWP switch supported test configurations

Config	Description
1	LTE FDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
2	LTE TDD, With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz
NOTE 1: The UE is only required to be tested in one of the supported test configurations NOTE 2: A UE which fulfils the requirements in test case A.10.3.5.2.2 can skip the test cases in A.10.3.5.2.1. NOTE 3: NR configuration is the same for PSCell and SCells. NOTE 4: The UE supporting EN-DC with only NR band(s) with shared spectrum access is required to be tested.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.			
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.			
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.			
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].			
NOTE 5: Parameters P_{CCA_DL}, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and P_{CCA_UL} are defined in clause A.3.26.2.			
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.			

A.10.3.5.2.2.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell in the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell in the DL slot right after slot ($j+T_{BWPswitchDelay}+k11$).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 7.32.2.7 of TS 36.133 [15].

During T1, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.6.2.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

Editor's note: FFS value of k1 for type 1 and type 2 UE.

A.10.3.5.3 RRC-based Active BWP Switch

A.10.3.5.3.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

A.10.3.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.10.3.5.3.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in table A.10.3.5.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in table A.10.3.5.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

> Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$) as defined in clause 8.6.3 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$).
>
> $T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when RRC Reconfiguration Complete message is received.

Table A.10.3.5.3.1.1-1: DL BWP switch supported test configurations

Config	Description

NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].
NOTE 5: Parameters P_{CCA_DL}, $P_{CCA_DL_1}$, $P_{CCA_DL_2}$ and P_{CCA_UL} are defined in clause A.3.26.2.
NOTE 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

A.10.3.5.3.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot ($i+ T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

A.10.3.6 PSCell addition and release delay

A.10.3.6.1 Addition and Release Delay of known NR PSCell on the carrier under CCA

A.10.3.6.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell addition and release delays on the carrier under CCA under EN-DC are within the requirements stated in clause 7.31A.2 [15] for the case when the PSCell is known by the UE at the time of addition.

Supported test configurations are shown in A.10.3.6.1.1-1. The test parameters for the E-UTRA cell are given in table A.3.7.2.1-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in tables A.10.3.6.1.1-2 and cell-specific parameters in A.10.3.6.1.1-3 below. The test consists of five successive time periods with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell 1 is known to the UE.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event B1 is configured for neighbour cell (Cell 2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell 2 becomes known to the UE during T2. Therefore, during T2 the UE shall report Event B1. The point in time at which the RRC message to release measurement gap is transmitted from the test system defines the start of period T3. During T3, after measurement gap is released, the test system transmits the RRC message to the UE to add PSCell on radio channel 2.

The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The point in time at which the RRC message to add PSCell (Cell 2) is received at the UE antenna connector defines the start of period T4.

The test system shall observe the periodic reporting of CSI for PSCell during T5. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T5.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell 2) shall be sent to the UE during period T5, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell 2) is received at the UE antenna connector defines the start of period T6.

Table A.10.3.6.1.1-1: Supported test configurations for FR1 PSCell

Configuration	Description
1	LTE FDD, NR SCS 30 kHz, BW 40 MHz, TDD
2	LTE TDD, NR SCS 30 kHz, BW 40 MHz, TDD
NOTE: The UE is only required to pass in one of the supported test configurations in FR1	

Table A.10.3.6.1.1-2: General Test Parameters for PSCell Addition and Release

Parameter		Unit	Value	Comment
RF Channel Number			1, 2	Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell on the carrier under CCA
Initial	Active PCell		Cell 1	PCell on RF channel number 1.

Parameter		Unit	Value	Comment
	Neighbour cell		Cell 2	Neighbour cell on RF channel number 2.
Final	Active PCell		Cell 1	PCell on RF channel number 1.
Condition	Neighbour Cell		Cell 2	PSCell released on RF channel number 2.
B1	Hysteresis	dB	0	Hysteresis for evaluation of event B1.
	Threshold RSRP	dBm	-93	Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.
	Time to Trigger	s	0	
DRX			OFF	Continuous monitoring of primary cell
DL CCA model	Dynamic channel access Note 1, 3			As specified in clause A.3.20.2.1
	Semi-static channel access Note 2, 3			
UL CCA model	Dynamic channel access Note 1, 3			As specified in clause A.3.20.2.2
	Semi-static channel access Note 2,3			
Measurement gap pattern Id			0	Gaps are configured before T2 and released before T3.
PRACH configuration on Cell 2			FR1 PRACH configuration 2	Captured in A.3.8.2.1
CQI/PMI periodicity and offset configuration index on Cell 2			2 ms	CQI reporting for PSCell every uplink subframe
Cell-individual offset for cells on RF channel number 1		dB	0	Individual offset for cells on primary component carrier.
Cell-individual offset for cells on RF channel number 2		dB	0	Individual offset for cells on carrier frequency of Cell 2.
T304		ms	500	
L_{CCA_DL}			5	
T1		s	1	During this time the PCell shall be known and Cell 2 shall be unknown.
T2		s	≥ $T_{identify_irat_cca_without_index}$	$T_{identify_irat_cca_without_index}$ is defined in clause 8.1.2.4.21A and 8.1.2.4.22A in TS 36.133 During this time the UE shall identify neighbour cell (Cell 2) and report event B1.
T3		s	3	During this time the test system transmit the RRC messages to release measurement gap and add the PSCell
T4		s	≥ $T_{config_PSCell_withCCA}$	During this time the UE adds the PSCell. $T_{config_PSCell_withCCA}$ is defined in clause 7.31A.2
T5		s	0.5	During this time the UE sends CSI reports for PSCell.
T6		s	0.5	During this time the UE releases the PSCell.

NOTE 1: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.
NOTE 2: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.
NOTE 3: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

$\hat{E}_s / N_{oc}$		1,2	-infinity	0			
SS-RSRP Note3	dBm/SCS	1,2	-infinity	-82			
Io Note3	dBm/38.1 MHz	1,2	N/A	-51			
Propagation condition		1,2	AWGN				

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.

NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.

Parameter	Unit	Config	Test				
			T1	T2	T3	T4	T5
NOTE 7: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.							

A.10.3.6.1.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest $T_{config_PSCell_withCCA}$ [Note1] into T4.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T5.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T5

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T6.

All the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

NOTE 1: The PSCell addition delay can be expressed as follows as specified in clause 7.31A.2 [15]:

$$T_{config_PSCell_withCCA} = T_{RRC_delay} + T_{processing} + T_{search_withCCA} + T_{\Delta_withCCA} + T_{PSCell_DU_withCCA} + 2 \text{ ms}$$

Where:

T_{RRC_delay} = 20 ms

$T_{processing}$ = 20 ms

$T_{search_withCCA}$ = 0

$T_{\Delta_withCCA}$ = (1+ L_2)*20 ms

$T_{PSCell_DU_withCCA}$ = 20 ms.

L_2 is the number of SMTC occasions not available at the UE for fine time tracking and acquiring full timing information, where $L_2 \leq L_{CCA_DL}$.

A.10.3.7 Void

A.10.4 Measurement procedure

A.10.4.1 Intra-frequency measurements

A.10.4.1.1 Event-triggered reporting tests on PSCC without gaps under non-DRX

A.10.4.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

A.10.4.1.1.2 Test parameters

Three cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and two cells on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model: PSCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.10.4.1.1.2-1 and A.10.4.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time

periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

Table A.10.4.1.1.2-1: Supported test configurations

Configuration	Description
1	LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in the slots with downlink transmission burst and is not transmitted during the muted slots or during DBT window.						
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.						
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.						
NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.						
NOTE 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.						
NOTE 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.						
NOTE 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.						

A.10.4.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than $T_{identify_intra_without_index_CCA}$ ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

$T_{identify_intra_cca_without_index} = (T_{PSS/SSS_sync_intra_cca} + T_{SSB_measurement_period_intra_cca})$ ms, where

$T_{PSS/SSS_sync_intra_cca}$: it is the time period used in PSS/SSS detection given in table 9.2A.5.1-1.

$T_{SSB_measurement_period_intra_cca}$: equal to a measurement period of SSB based measurement given in table 9.2A.5.2-1.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.10.4.1.2 Void

A.10.4.1.3 Void

A.10.4.1.4 Event-triggered reporting tests on PSCC with per-UE gaps under DRX

A.10.4.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

A.10.4.1.4.2 Test parameters

Three cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and two cells on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model: PSCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in table A.10.4.1.4.2-1, A.10.4.1.4.2-2 and A.10.4.1.4.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

Table A.10.4.1.4.2-1: Supported test configurations

Configuration	Description
1	LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
2	LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode
NOTE: The UE is only required to be tested in one of the supported test configurations.
